CAPITAL AND RESERVES OF BANKS

THE broad suggestions in the Reserve Bank's latest annual report on the trend and progress of banking in India for strengthening the banking structure, reviewed in these columns last week, have now been followed up by some detailed proposals. Indeed, these specific proposals had been communicated to the banking associations for eliciting their comments even before the publication of the aforesaid report, and the public would have known nothing about them even now but for the enterprise of a section of the daily Press. It would have been in the fitness of things had the Reserve Bank circulated its proposals to the Press as a whole along with its annual report on banking trends, for such action would have avoided the criticism that the authors of the report were merely repeating ideas that had been voiced earlier by the Governor of the Bank as well as others. The present proposals are two, one pertaining to banks' paid-up capital and reserves and the other to cash reserve and liquidity requirements. When they are enforced, along with deposit insurance, they will certainly make a significant contribution to enhance the protection for depositors.

The proposal for strengthening the capital funds of banks seeks to ensure that the paid-up capital and reserves do not fall below a specified percentage of total deposits. Under it, Indian banks are required to transfer each year not less than 20 per cent of their net profit (that is, profit before taxation) till (*a*) the reserves reach the level of paid-up capital and (*b*) the ratio of paid-up capital and published reserves (including share premium account) equals 7½ per cent of deposits from the public at the end of the preceding year. The minimum capital for starting a new bank will be Rs. 5 lakhs, instead of Rs. 50,000 as at present. If a bank wants to have an office at either Bombay or Calcutta, it must have a minimum capital of Rs. 20 lakhs, as against Rs. 10 lakhs at present. Foreign banks will have to maintain with the Reserve Bank a minimum "capital" of 5 per cent of deposits or Rs. 15 lakhs, whichever is higher, if they operate in centres other than Bombay or Calcutta and 5 per cent of deposits or Rs. 20 lakhs, whichever is higher, if they operate either in Bombay or Calcutta. This reserve can be kept in cash/or approved securities.

The case for this reform has been cogently argued by the Reserve Bank. The first point made by it is that the present level of banks' "own funds" is inadequate as compared with the quantum of deposits or with the risks taken by banks by extending their lending activities. Even after excluding P.L. 480 funds that have been with the State Bank of India, net deposits of banks have nearly doubled in the last ten years. During the same period, bank credit has risen by two and a half times, pushing up the ratio of credit to deposits from 49 per cent at the end of December 1950 to 69 per cent at the close of 1960. What is more, there has also been a perceptible change in the liquid character of bank credit. Thus, as on 30th October 1960, credit to industry formed 51 per cent of the total, as against 32 per cent ten years before. Further, a few of the commercial banks have been venturing into new lines of activity, such as term-lending to industry, underwriting of new issues with the concomitant risk of having to hold unsold shares, guaranteeing of deferred credit payments, etc. The second point made by the Reserve Bank is that, though the profits of banks have doubled during the fifties, there has not been a commensurate rise in the paid-up capital and reserves. Between 1950 and 1960, they went up by only Rs. 9 crores to Rs. 68 crores) of which the increase in the paid-up capital component was no more than Rs. 2.30 crores. Consequently, and, as mentioned in our last issue, the ratio of "own funds" to deposits is now only about a third of 13 per cent that obtained in 1939 and less than half of 9 per cent in 1950. As at the end of January 1961, according to the Reserve Bank, this ratio was below 5 per cent in the case of 23 banks of which nine were large banks having deposits over Rs. 25 crores. The ratio of paid-up capital alone to deposits was below 3 per cent in the case of these 23 banks of which ten were big banks. On page 3 of this issue, we have ourselves compiled and published the relevant data pertaining to some 15 leading banks which, we are sure, will be found interesting.

This journal has been of the view for sometime past that the need for raising the ratio of "own funds" to deposits is unquestionable. A comparative study of the position in other countries only serves to confirm this view. Even in highly developed economies such as the U.S., Germany, Canada, Belgium, Sweden, Switzerland and the Netherlands, the ratio is much higher than in this country, the actual figure (as of 1959) being 9 per cent, 7.3 per cent, 7.7 per cent, 7.8 per cent, 7.9 per cent, 8 per cent, and 11.7 per cent, respectively. In some of the Latin American countries, the ratio is over 20 per cent and in the Philippines, Indonesia and Brazil, it is 13.6 per cent, 18.1 per cent, and 14.3 per cent, respectively. In the U.K., the ratio is only 3.6 per cent, but it is better than the 2.7 per cent that prevailed in 1954. In any case, India cannot afford to follow the example of the U.K. for a number of reasons. To mention only two of them: (*a*) The secret reserves of British banks is of a high order. And (*b*) banking in the U.K. is compact, there being not more than a handful of institutions. Nevertheless, in recent years, British banks themselves took steps to raise their paid-up capital substantially. All the aforesaid information also supports the view that the ratio of 7.50 per cent proposed by the Reserve Bank is not unduly high. It is quite a fair and ideal one.

There is, however, room for difference of opinion on the specific manner in which the Reserve Bank wants the banks to attain this ideal. This is a very important issue, both in terms of principle and the magnitude of the task involved. Must there be statutory compulsion and if so to what extent? The Reserve Bank's solution is rigid and the degree of compulsion envisaged is unnecessarily high. It would be quite in keeping with the needs of the situation, if compulsion were to be confined only to the percentage of profit which a bank must set apart every year to reserve fund. The level of this fund need not be related to the paid-up capital as it is now and proposed to be continued under the Reserve Bank's move. As stated in these columns last week, all banks must be put under a statutory obligation to keep on transferring to reserve fund year after year a specified percentage of profit—20 per cent sounds reasonable—even if the fund happens to be in excess of the paid-up capital. The definition of net profit, however, should be changed to mean profit after taxation, for, with taxation taking away nearly 50 per cent of profit, it would be hard on banks if they were asked to earmark 20 per cent of the untaxed profit, especially when they are required to raise their paid-up capital as well. Unless the banks are able to show their shareholders that, under the new formula, they would be in a position to maintain the dividend on the increased capital at fairly reasonable level, it would be pretty difficult for them to get additional capital. It would be pertinent to point out, in this connection, that, in order to attain the ratio of 7.5 per cent of "own funds" even on the level of deposits that prevailed at the end of 1960, the banks would have to find about Rs. 60 crores, of which the major portion will have to be in the form of addition to paid-up capital through issue of new shares/or calling up the uncalled liability. And this may have to be done in a period of three or four years. What is more, in these years, there may be a further substantial rise in deposits.

It would be extremely difficult in practice to operate a statutory ratio of paid-up capital and reserves to deposits, inasmuch as the latter will vary from year to year. In the context of the plans for the development of this country, it would be reasonable to assume that the variation would invariably be upward. The Reserve Bank's proposal would, therefore, mean that, every year, most of the banks would have to raise additional capital. This cannot be a pleasant prospect for managements of banks and may act as a disincentive to garnering more deposits. It would also mean placing the State-owned banks in a highly advantageous position *vis-a-vis* the banks in the private sector, as the former would have no difficulty in complying with the Reserve Bank's formula. It is true that the Reserve Bank's proposal envisages only the creation of reserve powers to be used at its discretion according to the needs of the situation and in a convenient manner. The relevant portion in the Reserve Bank's *communique* to the banks' associations reads thus:

"With regard to the existing banking companies, it is noticed that some of the banks have not entered the market for fresh capital for the last ten or fifteen years. Moreover, in the case of some banks, a good part of the subscribed capital remains uncalled. Taking into account the fact that, in the case of banking companies whose ratio of capital funds to deposits is very low (say, below 3 per cent) it would take a long time (5-10 years) to attain the minimum proposed ratio of 7½ per cent through addition to reserves, it is proposed to empower the Reserve Bank to require such banks to increase their paid-up capital either through new issues of capital or through calls on uncalled capital. Whether the latter is possible. Naturally, the

will bear in mind the prevailing conditions on the stock market and other relevant circumstances before directing a bank on the former course."

While the aforesaid assurance sweetens the pill to some extent, it does not meet the objection mentioned above. The best thing to do would be to recommend to banks the 7.5 per cent ratio as the ideal to be attained as early as they could. It is unnecessary to invoke the aid of Parliament for this purpose. There is good reason to feel that persuasion and exhortation by the Reserve Bank, coupled with the creation of appropriate conditions for raising new capital such as favourable terms for issue of new shares and some fiscal relief on profits ploughed back at least for a period of five years, will be sufficient to achieve the object in view within a reasonable period of time. The remaining proposals of the Bank on this question, namely, raising the minimum capital requirements for starting new banks and for opening branches in Bombay or Calcutta and maintenance of minimum cash reserves with the Reserve Bank by foreign banks deserve to be supported. Foreign banks need not feel concerned over this new requirement, as it is not impracticable. Besides, it will not give cause for complaint by the domestic banks that they are being discriminated against.

The proposals for increasing the cash reserves and liquidity requirements of banks are also controversial in part, though they may not impose any significant hardship on the vast majority of banks, as the levels proposed are well within the limits that are normally maintained by them as a matter of prudence. They will be examined in these columns in our next issue.

SAVING FOR ECONOMIC GROWTH

NO single theme is of more absorbing and continuing interest than the one relating to economic growth. The problems accompanying such growth and the means of achieving it constitute a fascinating, though controversial, field of study. The entire subject has gained further importance, inasmuch as it has been dealt with, from a global perspective, in successive issues of the *World Economic Survey* since 1955. The latest Survey, that for 1960—an advance copy of which was issued by the United Nations Secretariat this week—has examined the sources and trends of saving for economic growth. This study is a complement to the previous year's study relating to post-war investment trends and policies for economic development and is contained in three chapters—the first covering industrial countries, the second underdeveloped countries and the third centrally-planned economies. These chapters are preceded by an introduction which examines the relationship between growth, stability and the rate of saving.

It is in this introduction that the researchers of the U.N. Secretariat have approached the related issues of growth and stability in a manner which seeks to steer clear of controversy and strike a proper balance in national economic objectives between price stability and long-term economic growth. Whether their arguments are all uniformly sound may be open to dispute, because on issues of this kind contradictory, but more or less equally valid, conclusions based on almost identical facts and figures are quite possible. But these arguments are not any the less important for that reason.

First in the chain of arguments is the meaning that the special study has attached to growth. "What is required," it says "is not merely to maintain a high level of output and employment but to sustain a steady rate of growth that is adequate to absorb each year's new entrants into the labour force as well as the manpower released by advancing technology and rising productivity." Whether steady growth of such magnitude can be promoted without sacrificing stability in the process is the supreme question. It is here that the U.N. researchers come straight into the most controversial area of debate, that pertaining to inflation which has usually been equated with "an excess of aggregate demand over supply." According to the authors of the special study, "a growing consensus has emerged around the thesis that, in the real world, as distinct from the theoretical model of a perfectly competitive system, inflation cannot be automatically equated with an excess of aggregate demand over supply." This part of their argument continues:

"In the real world, where prices are determined by conventional markups over costs, by collective wage-bargaining and by government regulations, demand in some markets may exceed, and in others fall short of, supply. In such cases, inflation is not necessarily symptomatic of a general excess of demand over supply; though price increases may originate in markets where demand is strong, they may spread to other markets, even where supply is excessive. A cumulatively rising price trend may thus develop, despite considerable slack in production and employment. Under these circumstances, it will not always be possible to resort to a policy of restraint of demand for the stabilisation of prices without adversely affecting production and employment. Where inflation is, in fact, due to excess demand, it may be eliminated by demand restraint without such adverse effects. Where, however, as has been true of the creeping inflation of the nineteen fifties, a cumulatively rising price trend develops side by side with slack in production and employment, inflation can no longer be eliminated by restraint of demand without adding to the slack. This does not necessarily mean that an objective of rapid economic growth cannot be reconciled with a goal of price stability; it only means that it cannot be reconciled with a policy of restraining demand when there is already slack in the economy."

From this extract it may be easily seen that the U.N. study does not accept the conservative view that the security of price stability is preferable to the risk-taking growth-oriented policy. At the same time, it does not also countenance the opposite view that capital formation for economic growth can be financed through forced saving from large-scale inflation. Instead, it takes the middle line that "a rapidly growing economy may, through the stimulus it provides to high rates of investment, technological innovation and increasing productivity, be more conducive to price stability than is a sluggish economy." How this is expected to work out is described in the following passage:

"Such a growth-oriented policy, it may be noted, does not necessarily mean sacrificing price stability and embracing inflation. Rather it involves a shift in the methods of fighting inflation from primary reliance on measures to restrain demand to the inclusion of policies designed to accelerate the rate of expansion of incomes and the available supplies of goods and services. In a world in which inflationary pressures are so largely the result of mutually frustrating attempts of various income-earning groups to increase their respective shares of the national product, it is not unreasonable to expect that an increase in the size of the total share to be divided will contribute to some relaxation of the pressure. To the extent to which an increase in prices results from a larger rise in wages than in productivity, the stimulus to output per man that is imparted by higher investment and a higher rate of growth of national product may very well slow down rather than accelerate the rising trend in prices."

But the U.N. researchers seem to be aware of an element of risk even in their middle-of-the-road approach. They have, therefore, sought to answer the likely criticism that it might not be possible to achieve high peacetime rates of growth without introducing direct price and wage controls for the purpose of preserving price stability. Their answer is that a greater emphasis on economic growth need not involve an unsound monetary and fiscal policy and that, even if some inflationary pressures result from the very process of expediting growth, the Government's moral influence and its powers of education, persuasion and general regulation would suffice to maintain "reasonable price stability along with economic growth based on the full realisation of the production potential." This seems to be a rather facile assumption. So long as there is an element of risk, in the sense of instability in any attempt to accelerate growth, monetary and fiscal procedures aimed at ensuring efficient use of capital and minimising waste may continue to commend themselves to a considerable segment of public opinion in non-Communist countries. If budget deficits are caused by an acceleration in the rate of growth, the risk of inflation cannot be entirely ruled out, especially where the rate of saving is not otherwise adequate.

That brings one to the subject of adequacy of saving and its correlation with investment and growth. Here some broad conclusions emerge from the U.N. study. As far as the industrial countries are concerned, the U.N. finding is that there has been no tendency among them for high rates of growth of national product to be accompanied by budget deficits. The tendency has, if anything, been the other way round, that is, for high growth rates to be accompanied by relatively large budget surpluses. Both private saving—particularly of households—and public saving appear to have been positively correlated with rates of growth. High rates of investment and growth have tended to be associated with relatively large budget surpluses, and low rates of growth with relatively low budget surpluses. That high rates of growth are likely to involve *permanent* deficit financing does not find any support in the post-war evidence of most industrial countries. The data demonstrate that some countries have achieved rates of growth as much as two or even three times as high as that prevailing in other countries without incurring any greater degree of price inflation, or relying upon permanent budget deficits, or encountering balance of payments difficulties, or introducing a system of direct controls that is inimical to private enterprise. On the contrary, it is concluded, the higher rates of growth have themselves contributed, through increasing productivity, towards lessening the inflationary pressure from rising costs of production. And they have also afforded a powerful stimulus to private saving, partly by raising incomes faster than consumption levels could be adjusted and partly by bringing within reach of mass incomes such items as major durable goods and housing for which saving is necessary. That the fairly high rates of domestic saving registered in the industrial countries have made the relatively high rates of investment possible, may be seen from Table I on the next page. Again, that such rates of investment have also made possible relatively high rates of growth in a number of countries may also be seen from this table.

The second broad conclusion of the U.N. study pertains to underdeveloped countries. It is that their post-war experience does not conclusively establish that they can sustain high rates of growth under conditions of stability. The data no doubt indicate that, on an aggregate, though not on a *per capita*, basis, some of these countries attain a rate of growth comparable in percentage terms to that of the industrial countries. But it will be seen from Table II on the next page that the increases that have taken place in the rate of investment of underdeveloped countries have been largely financed by increases in foreign saving in the form of excess of imports over exports of goods and services. Very few underdeveloped countries, according to the data examined in the U.N. study, have registered an increase in domestic saving from the beginning to the end of the nineteen-fifties. That India stands at a very low level in this respect should be obvious.

The crucial question, thus, is how domestic savings can be promoted in the underdeveloped countries. The U.N. study has provided the answer in the form of some concrete suggestions. One of these is that land assessments should be revised upwards as they have remained stagnant for many years. Secondly, pricing in public enterprises may be more appropriately geared to the goal of higher domestic saving. Thirdly, saving in the corporate sector should be promoted through accelerated depreciation allowances and tax exemptions for reinvested profits. And, above all, monetary stability should be maintained to prevent a decline in the tendency to save in the household sector. These are eminently worthwhile suggestions, for, in the final analysis, economic growth of a self-sustaining character must rest on the cornerstone of domestic saving. But this does not mean that there is no need for an expanded flow of international private and public funds to the underdeveloped countries. In fact, the need for such funds to pay for the large volume of imported machinery and other essential goods is great at the present time, as the U.N. study itself has recognised. These international funds, though they may be of only marginal significance in relation to domestic saving, are bound to have catalytic effects in the earlier phase of industrialisation. Here the U.N. study's finding that foreign investors have continued to confine their activities to a relatively small number of underdeveloped countries is rather disquieting. It would appear that the ability to attract foreign private capital is related not only to incentives and guarantees by the capital-needy countries but also to economic and political stability.

MARKET GOSSIP

Speculation in Shares

THE bulls in the Share Market seem to be continuing their retreat. The stalling tactics adopted by the Stock Exchange authorities in regard to the Government's pronounced desire for strengthening the defences against excessive speculation are providing the bulls with an excellent cover, enabling them to get out of their commitments with as much profit, or as little loss, as possible. It would appear that the meeting which the President of the Bombay Stock Exchange had with Mr. Morarji Desai, Union Minister for Finance and Mr. L. K. Jha, I.C.S., Secretary for Economic Affairs, early this week was not successful, in that he could not convince them that there was no need for taking any further steps for restraining speculation. On the contrary, the Finance Minister is said to have reiterated his dislike for speculation, though he conceded that it would be desirable for the stock exchanges themselves to take appropriate steps. Apparently, the Bombay Stock Exchange President has gained further time to discuss and come to a decision on the proposals put forward by the Stock Exchange Division of the Department of Economic Affairs.

The substantial decline in the prices of leading counters since Monday, 26th June, only serves to support the contention of those that, in recent weeks, there had been excessive speculative buying and that the margins that were being imposed and collected were ineffective. The fall in values this week may be put forward as an argument for not enforcing the proposals of the Stock Exchange Division. But this will not hold good, since the idea of the Division must be to prevent recurrence of speculative manipulations by introducing a system of checks and balances that will automatically operate and not to deal with undesirable situations after they have arisen by adopting *ad hoc* measures. Surely, prevention is better than cure.

The scope for controversy over the extent of speculation in shares at any given time could be narrowed, if not eliminated, if the stock exchanges promptly publish data about the daily turnover, the total volume of business done in every settlement, the amount of outstanding business, the amount of margins collected, the number of brokers paying the margins, the stamp duty paid both on cash shares and clearing scrips and the number of shares tendered to clearing house. At present, data pertaining to only the last mentioned item are being given, but they are not of much use in the absence of information on the other aforesaid aspects. There is no earthly reason why there should be so much secrecy about the stock exchange business as there is now. It is this secrecy that stands in the way of informed comments and building up favourable public opinion. It is to be hoped that the Stock Exchange Division of the Union Finance Ministry will take up this question with all the stock exchanges. It is also to be hoped that the Division, too, will publish its proposals for keeping speculation under check, so that they may be critically examined by the Press. It will be all to the advantage of the Government, if it can mobilise public opinion in its favour.

Vanaspati Exports

The export incentive scheme for *vanaspati*, which was to expire at the end of June, has now been extended for a further period of six months. Under the scheme, which provides for a system of currency retention, exporters of every ton of *vanaspati* will be granted import licence for an equal amount of copra. The price disadvantage faced by the exporters of *vanaspati* is thus sought to be compensated for by the apparently sizable premium that may be fetched on the sale of copra in the domestic market.

The incentive offered under the scheme has, however, fallen far short of the expectations of the industry. In the first place, the profit-margin received from the import of one ton of copra is only about Rs. 600, whereas the loss suffered by the *vanaspati* exporter is estimated at about Rs. 900 per ton. This is not surprising, since the price of groundnut oil—this accounts for about 90 per cent of the cost element in the exportable *vanaspati*—is currently ruling high at about £173 (Rs. 2,300) per ton in India. But the foreign price for groundnut oil is substantially low. At Rotterdam, it is only £116. Apart from the lower price for groundnut oil, the foreign manufacturers of hydrogenated oil have the advantage of using cheaper varieties of oil also, such as soyabean oil (current world market price of which is only about £97 per ton) and palm oil (£83). In India, cheaper oils constitute only a negligible proportion of hydrogenated oil, owing to factors beyond the control of producers. This again tends to reduce the competitive capacity of India. The Government of India could have at least restored the level of copra imports to 1.8 ton per every ton of exported *vanaspati*, as in 1960.

Under the stimulus of the incentive scheme prevailing last year, exports of *vanaspati* made remarkable headway. Total exports aggregated 6,500 tonnes in 1960, which compare quite favourably with no more than 2,800 tonnes in 1959. But, since the beginning of this year, the tempo of exports has slowed down, due mainly to the reduction in the incentive, coupled with further increase in groundnut prices. During the first five months of the current year, exports of *vanaspati* were of the order of only 2,000 tonnes, or an annual rate of about 4,800 tonnes.

India's overseas customers are mainly some of the countries in West Asia, although some hardened oil is bought by Australia or Italy, depending on price parity position. It may be noted here that the incentive scheme is not applicable to *vanaspati* exports to countries with which India has rupee payment arrangements. This is not in keeping with the very purpose of export promotion. Burma, for instance, was one of the leading buyers of Indian *vanaspati* in the past. But its offtake has considerably declined since the introduction of special payment arrangements between the two countries. The export promotion measures should be designed with the purpose of at least safeguarding, if not expanding, traditional markets.

Another handicap of the present scheme is the periodical revision of its basis by the Government and the consequent uncertainty which hinders exporters from entering into long-term commitments. There is no sufficient reason why the scheme should not be made valid for at least one year, instead of six months as at present. Finally, it is not clear why the Government waited until the penultimate week of the expiry of the existing scheme, merely to extend the scheme without any alteration. It is a pity that the Government has turned a deaf ear to the plea of the industry to announce the scheme at least two months in advance. Half-hearted measures of this type may do more harm than good to Indian exports.

Freedom for Speculators In Oilseeds

There seems to be a tendency in Government circles to prevent prices of agricultural commodities from falling under pressure of better crops, even if there is need for some sizable fall as a corrective to the unduly high levels they touched in the past year or two. With general elections due to take place during the harvesting season of the 1961-62 crops, it is but natural that politicians in power should be particularly careful to see that agricultural prices do not decline, lest that should adversely affect their election prospects. They have also to see that operators in forward markets are kept in good humour, for the latter contribute a significant amount to the Party's election chest. Viewed in this context, the decision of the Forward Markets Commission to relax the existing restrictions on oilseeds on the lines suggested by the trade is not surprising. The Commission, of course, can contend that crop prospects are encouraging enough to give a larger degree of freedom to speculators than they had hitherto. But we wonder whether anyone can anticipate at this time of the year the size of the next oilseeds crop, with any degree of reasonable certainty, merely on the basis of good reports of rainfall in the initial days of monsoon. By removing the margin restrictions and ceiling rates on hedge contracts in oilseeds, the Commission has eliminated the major obstacles in the way of unimpeded futures trading. Only events can tell whether the Commission has been right in its judgment and wise in its action.

Be that as it may, it may be useful to say a few words about the genesis of restrictions on futures trading in this important cash-cum-food crop. In view of the steadily rising prices in oilseeds, particularly in groundnut, the Commission suspected unhealthy speculation and imposed deterrent special margins on hedges contracts at higher levels. Irrespective of this measure, values in the oilseeds market continued to rise, as there was a real shortage. But the rise in prices might have been greater had not the Commission intervened. While heavy margins served to keep the small fry out of business, those who were better off, obviously the minority, paid the penalty and remained in business. Price rise was not halted, owing to the cumulative effect of low rate of growth of output, rapidly increasing demand, and, of course, export promotion measures for groundnut oil. So the traders argued that the Commission was barking at the wrong tree.

In another bid to restrict the boom in oilseeds prices, the Commission imposed ceiling rates on groundnuts. This resulted in complete stoppage of futures business. Forward trading in groundnuts in Bombay, for instance, has been officially closed for months together. It is against this background that the trade has widely welcomed as realistic the decision of the Commission to do away with all ordinary and special margins as well as ceilings in respect of hedge trading in new crop contracts scheduled to begin on the 7th inst. There will, however, be limits on daily fluctuations for groundnuts, cottonseed and groundnut oil.

The oilseeds market has put on a cheerful appearance, following the announcement of the aforesaid decision. It is, however to be hoped that the oilseeds trade all over the country will avoid creating conditions which will necessitate the revival of official intervention.

Paid-up Capital and Reserves of Some Banks
(Rupees in lakhs)

	As on 31st December 1960			
	1 Total Deposits	2 Paid-up Capital	3 Reserves and Surplus	4 Ratio of 2+3 to 1

TABLE I
Industrial Countries (1950-59)

Country	Supply of saving as per cent of gross domestic product at current prices			Gross investment as per cent of gross domestic product at current prices	Annual rate of growth in real gross domestic product (per cent per annum)
	Gross domestic saving	Foreign saving	Total		
Australia	26.1	2.3	28.4	28.4	4.3
Austria	20.4	1.4	21.8	21.8	5.7
Belgium	17.6	—1.4	16.2	16.3	2.7
Canada	22.5	2.5	25.0	24.5	3.9
Denmark	18.5	0.2	18.7	18.9	2.7
Finland	26.7	—1.1	25.6	—	4.2
France	18.4	0.2	18.6	18.6	4.0
Germany (West)	26.8	—3.1	23.2	23.9	7.5
Italy	19.5	1.3	20.8	20.8	5.7
Japan	28.7	—1.2	27.5	28.5	9.1
Netherlands	25.7	—1.4	24.3	24.3	4.6
New Zealand	22.5	0.7	23.2	23.2	3.1
Norway	27.1	2.6	29.7	29.7	3.4
Sweden	21.4	—0.3	21.1	21.1	3.8
United Kingdom	15.2	—0.5	14.7	15.6	2.5
United States	18.6	—0.6	18.0	18.0	3.3

Note: (a) Foreign saving is equal to payments for imports of goods and services *minus* receipts from exports of goods and services. A positive foreign saving reflects an excess of such payments over receipts and a negative foreign saving an excess of receipts over payments.

(b) Total saving ratios in Canada, West Germany, Japan and the U.K. are slightly different from their respective gross investment ratios because of statistical discrepancies.

EQUITIES DRIFT LOWER

(From Our Own Correspondents)

BOMBAY, *29th June*

RESUMING on a firm note on Friday the 23rd inst., equities on the Bombay Stock Exchange drifted lower on subsequent days, following reports that in his talks with the President of the Bombay Stock Exchange, the Union Finance Minister had expressed his concern over the growing speculative tendency in the stock market. This gave some basis for the fears that the Government might definitely tighten the margin regulations to curb unhealthy speculation. The other damper was the aproaching book closure *badlis* in a number of speculative scrips in the steel and engineering sections. Steel shares were subdued on discouraging Calcutta advices; the textile section continued to display a mixed trend this week as in the previous one, but the losses in a number of popular scrips were much higher than the gains. The cement section showed some firmness on account of the support extended to Associated Cements and the expectations about higher retention prices. Rayons were firm, with the exception of that speculative scrip, National Rayon. Chemicals, engineerings, and automobiles receded on stale bull liquidation.

In the steel section, Tata Ordinaries which opened at Rs. 163 received some buying support on Friday, 23rd inst., but receded on the following days to close at Rs. 160 as a result of lack of fresh interest and sizable offerings. Over the week, the loss was Rs. 2.25. Indian Irons also displayed almost the same trend. Its value rose from Rs. 27.80 to Rs. 28.20 on Monday the 26th but the higher levels met with renewed offerings both from local and Calcutta interests. The scrip sagged to finish at Rs. 27.50, showing a net loss of 30 nP. Mukand Irons were a steady feature and put on 25 nP to Rs. 32.

Among textiles, Centurys opened with appreciable gains and advanced further on sizable fresh buying to Rs. 715 on *Monday the 26th.* At this level, bull liquidation ensued and the scrip was hammered down to close at Rs. 675; the net loss being as much as Rs. 32.50. Standards also slumped further by Rs. 25 to Rs. 1,430. Morarjees met with selling pressure and lost Rs. 23 to Rs. 435. Mafatlals also receded by Rs. 15 to Rs. 905. Khataus eased by Rs. 13.75 to Rs. 585. Kohinoors evinced some interest in the initial sessions and hardened to Rs. 321, but, on the following days, the bulls lost their grip and the scrip fell to Rs. 313; the net loss during the week was Rs. 5. *Models* also lost a like amount to close at Rs. 70. Swadeshis, in spite of better results, closed lower by Rs. 3 at Rs. 277. Osmanshahis and Moderns each lost Rs. 2 to Rs. 63 and Rs. 80.50, respectively. Bombay Dyeings firmed up by 60 nP in the initial two days but lost ground on lack of support to close lower at Rs. 68.30. Among the textile shares that hardened during the week, the most prominent was Central Indias which received good buying support and put on as much as Rs. 11 to Rs. 124. Podars and B.R. Cottons gained Rs. 3 each to Rs. 153 and Rs. 58, respectively. Simplex received good support on the view that the Company was contemplating a bonus issue, and gathered Rs. 2 to Rs. 211. Finlays, Gokaks, Mysores and Vishnus also reported similar gains to Rs. 328, Rs. 186.50, Rs. 70 and Rs. 130 respectively. Tata Mills, on news of better results (the dividend has been raised from Rs. 2.50 to Rs. 5) gained Re. 1.20 to Rs. 68. Bradburys, Sassoons and Apollos made minor gains of 80 nP, 75 nP and 20 nP each to be quoted at Rs. 138.75, Rs. 65.30 and Rs. 1.68, respectively.

Sugar shares continued to be depressed, with the exception of Walchandnagars. Belapurs received some support on the first two days and advanced to Rs. 276 from Rs. 273.50, but, on the subsequent days, met with selling pressure and closed easy at Rs. 268, showing a loss of Rs. 6 during the week. Maharashtras were neglected and dropped Rs. 2 to Rs. 183. Phaltans eased by 50 nP to Rs. 132.50. Walchandnagars, however, evinced keen buying enquiry and advanced by Rs. 8 to Rs. 171.

As a result of the new proposals of the Reserve Bank of India to raise the ratio of paid-up capital and reserve funds to deposits, bank shares experienced some gains. Centrals advanced by Rs. 2 to Rs. 60. Bank of Indias put on Re. 1.50 to Rs. 125, United Commercials and Barodas went up a rupee each to Rs. 91 and Rs. 102 respectively. Punjab Nationals gained 12 nP to Rs. 22.36 and Unions 4 nP to Rs. 6.52.

In the cement section, Associated Cements received good speculative-cum-investment support, on account of the revival of expectation of bonus issue. The bullish sentiment was also the result of the belief in market circles that the Tariff Commission is likely to raise the retention prices of cement. Associated Cements steadily advanced to Rs. 168.50 on Wednesday the 28th. Today some bull liquidation caused the value to drift lower to Rs. 166, the net gain over the week being Re. 1.75. Digvijays also moved up in sympathy, gaining Rs. 3 to Rs. 160. Orissas, Bagalkots, Ashoks, Jaipur Udyogs all have maintained a steady front at Rs. 14.40, Rs. 8.48, Rs. 8.88 and Rs. 11, respectively.

The shipping section showed some signs of activity, as Scindias evoked fresh buying support after opening at Rs. 14.44, the scrip advanced to Rs. 14.84 on the opening day. It, however, eased on the following days to close at Rs. 14.44. Great Eastern gained Re. 1 to Rs. 14.80; Bharat Lines [illegible] Rs. 5.06.

In the automobile section, Premier Autos lost Rs. 3 to Rs. 169.50 despite the report that the Company's expansion plans were going on satisfactorily. Hindustan Motors eased by 56 nP to Rs. 22.16, on discouraging Calcutta advices.

In the rayon group, National Rayons, which opened at Rs. 570, were well fancied till Wednesday and the scrip advanced to Rs. 574.50. At this level, however, profit taking ensued and the quotation eased to Rs. 561, showing a net loss of Rs. 4 over the week. Other rayon shares displayed marked firmness. Thus, South Indian Viscoses spurted by Rs. 12 to Rs. 186, Baroda Rayons moved up by Rs. 11 to Rs. 137, Indian Rayons and Raymonds gained a rupee each to Rs. 62 and Rs. 126 and Gwaliors put on 50 nP to Rs. 52.50.

The chemical section displayed an easy trend, with prices falling on a wide front. Alembics were hammered down by Rs. 6.25 to Rs. 260. Amar Dyes and Indian Dyestuffs suffered a setback of Rs. 5 each to Rs. 385 and Rs. 522.50, respectively. Citrics receded by Rs. 2 to Rs. 50. Tata Chemicals showed a minor loss of 28 nP to Rs. 19.96. Adarsh were steady at Rs. 102. But Synthetics were keenly bid and appreciated by Rs. 11 to Rs. 184. Colour Chems met with good buying support and gathered Rs. 2.50 to Rs. 370. Dhrangadhras put on Rs. 2 to Rs. 132.50. Ultra Marines gained a rupee to Rs. 80. Polychems also met with a fair measure of support and advanced by Rs. 3.75 to Rs. 247.50.

In the engineering section, Telcos which opened at Rs. 382 were keenly bid on Friday, 23rd inst., when it touched Rs. 384. Thereafter, the week-end announcement of Rs. 5-crore debenture issue was interpreted that the prospects of a rights issue in the near future was distant. This had a bearish effect and the scrip declined on subsequent days to close at Rs. 369. Voltas also declined in sympathy by Rs. 8.50 to Rs. 286. Alcock Ashdowns, despite hints of promising outlook by the Chairman, eased by Rs. 2 to Rs. 300. Khandelwals lost a rupee to Rs. 77. Larsen and Toubros and Chase Brights suffered only minor setbacks of 25 nP and 4 nP, Rs. 41.25 and Rs. 13, respectively. Some engineering scrips, however, received support and showed gains. Notable among them were Coopers which spurted by Rs. 9 to Rs. 172. Greaves Cottons and Tractors hardened by a rupee each to Rs. 179 and Rs. 40, respectively. Laxmi Ratans gained just 24 nP to Rs. 3.76 and Texmacos put on 8 nP to Rs. 20.04.

In the miscellaneous section, Bombay Burmahs attracted buyers in the first few days and rose to Rs. 629, but declined subsequently due to bull liquidation to close at Rs. 616. The net loss over the week was Rs. 6.50. Sirpur Papers lost just 40 nP to Rs. 14.88. Killicks dropped 75 nP to Rs. 99.50. Indian Hume Pipes and Ceat Tyres were unaltered at Rs. 178.50 and Rs. 212.50. But B. Oxygens gained Rs. 2 to Rs. 59.50 and Shivrajpurs hardened by Re. 1.50 to Rs. 72.50. Tata Oils gained 50 nP to Rs. 75. The Directors have decided to maintain the dividend at Rs. 5.75, subject to tax, in spite of lower profits.

* * * *

Calcutta Stock Exchange

CALCUTTA, *28th June*

Prices moved zig-zag on the Calcutta Stock Exchange during the week under review, following alternate bouts of selling and buying and the indication of passing holders' desire to book profits. One result, of this development is that the technical position has become all the healthier, though investment buying has declined insignificantly. However, with the possibility of money conditions easing in the near future, bullish fervour may reappear, unless something else happens. The news that, instead of further tightening the margin system in Bombay, the *status quo* would be maintained, was greeted with enthusiasm. Market circles stated that, inasmuch as normal trading conditions have been maintained here, there is no question of Calcutta emulating Bombay and introducing a margin system. A feature of this week's trading was the absence of selling pressure, since long-term holders thought that their possessions were attractive in relation to prospective yields. This factor was further explained by the acute shortage of good scrips and the absence of selling by the L.I.C. which holds large blocks of first class scrips. Thus, although investment support was inadequate, the absence of selling by investors checked declines. Generally, confidence in the future is being sustained by hopes of continued economic progress, hopes which have been underlined by firm commitments of foreign aid for the next two years.

* * * *

Madras Stock Exchange

MADRAS, *28th June*

Barring a few shares which elicited special support, the Madras Stock Exchange ruled quiet during the week under review. Both investors and professional operators were reluctant to enter into fresh commitments in view of the non-too-encouraging advices from Bombay and Calcutta, and the anxiety over a possible Berlin crisis. At the same time, offerings were also limited as sellers preferred to wait and watch. Reports of good support extended by the Life Insurance Corporation to certain blue chips did not have any perceptible effect on the market. Sugars ruled distinctly easy, notwithstanding the hopes of securing further import quota from the U.S. Teas moved within narrow margins, with the turnover remaining quite moderate. Coffees were weak, in view of the over-supply position of coffee. Rubbers moved down in sympathy. Textiles came in for selling, although a few shares met with speculative buying. In the miscellaneous section, engineerings and cements were generally dull, but a few scrips under the leadership of chemicals, elicited selective inquiries.

Among sugars, United Breweries suffered a setback of Rs. 4.50 to Rs. 103.50. Cauverys lost a rupee to Rs. 129.50. Deccans drifted lower by 15 nP to Rs. 13.85. East India Distilleries declined by 13 nP to Rs. 43.37. Travancores dropped 5 nP to Rs. 10.20. Mysores were neglected at Rs. 57.75. Indias, however, moved up by 15 nP to Rs. 13.90.

Among teas, Twyfords moved down by 88 nP to Rs. 12.12. Haileyburias fell by 40 nP to Rs. 14.85. Neelamalais eased by 31 nP to Rs. 4. Devons were lower by 13 nP at Rs. 14.37, reflecting the disappointment of operators at the dividend of 12 per cent. taxable, announced this week for the year ended March 1961, which compares with 15 per cent distributed in the previous year. Blue Mountains declined from Rs. 3.30 to Rs. 3.20, before closing at Rs. 3.23 with a net loss of 7 nP. Periakaramalais were lower by 4 nP at Rs. 3.84. But Parksides put on 15 nP to Rs. 29.25, as also Kil Kotagiris 6 nP to Rs. 4.86. Nonsuch Teas hardened by 5 nP to Rs. 28.20.

In the coffee group, Consolidated Coffees fell initially from Rs. 22.25 to Rs. 21.85, but later improved slightly to finish at Rs. 21.90, the net loss being 35 nP. Balanoors moved down by 30 nP to Rs. 16.30, following the announcement of a lower dividend of 12 per cent, taxable, for the year ended March 1961, as compared with 15 per cent in the previous year. Ouchterlony Valleys shed 4 nP to Rs. 3.74. Amalgamateds and Mysores were dull, the former at Rs. 12.50 and the latter at Rs. 5.45. Anaparais, however, improved by 10 nP to Rs. 4.10.

Among rubbers, Cochin Malabars drifted lower by 3 nP to Rs. 7.80. Midlands shed 2 nP to Rs. 11.83. Malankaras were quiet at Rs. 18.75, as also Travancore Rubbers at Rs. 10.09 and T.R. and Ts at Rs. 9.85.

Among textiles, Lakshmis gave way from Rs. 170 to Rs. 169; the quotation was ruling still lower at Rs. 168.50 earlier in the week. Travancore Rayons fell by 50 nP to Rs. 40.10. Radhakrishnas lost a like amount to Rs. 33.50. Maduras gradually retreated from Rs. 39.50 to Rs. 39.15. Kotharis shed 10 nP to Rs. 12.50. Metturs were unchanged at Rs. 400 and Premiers at Rs. 269. Coimbatore Pioneers were quoted at Rs. 348.80 and Coimbatore Spinnings at Rs. 51. South India Viscose, however, were pushed up by Rs. 12 to Rs. 185 on speculative support. Buckinghams hardened by a rupee to Rs. 225. Bangalore Woollens rose by 50 nP to Rs. 202.50.

In the miscellaneous section, Travancore Cements lost 20 nP to Rs. 8.10. Orissas shed 5 nP to Rs. 14.50. But Indias rose by 29 nP to Rs. 12.35. Chemicals, as already observed, ruled steady. Travancores rallied by Re. 1.88 to Rs. 17.75. F.A.C.Ts improved by 25 nP to Rs. 10.60. Mysore Fertilisers were higher by 15 nP at Rs. 11.50. Among others, Western India Plywoods reacted by 50 nP to Rs. 231. Mysore Papers sagged by 50 nP to Rs. 21.25. The Directors of the Company have announced a dividend of 15 per cent taxable, for the year ended March 1961, same as that paid in the previous year. Ashok Leylands moved down by 9 nP to Rs. 9.37 and Aluminium Industries by 5 nP to Rs. 23.55. Tube Investments were dull at Rs. 265 and Standard Motors at Rs. 14.75.

UNIVERSAL CABLES LTD.

Universal Cables Ltd. has secured and industrial licence for the establishment of a plant at Satna, Madhya Pradesh, for the manufacture of paper-insulated lead-covered power cables. The Company has entered into a collaboration agreement with the well-known British cable manufacturers, Messrs. British Insulated Calender's Cables Ltd., under which the latter will provide complete technical know-how, permit the use of patents and processes, supply technicians and set the plant going. The plant will have a capacity to produce 624 miles of cables annually. The total investment in the project is estimated at Rs. 250 lakhs, of which a sum of Rs. 170 lakhs will be spent on land, building and machinery, the balance consisting the working capital.

In order to finance a part of the project, the Company has entered the capital market, with an issue of 700,000 equity shares of Rs. 10 each at par. Of this, 350,275 shares (Rs. 35,02,750) are being offered for public subscription, the balance of 349,725 shares (Rs. 34,97,250) having been allotted to the existing members of the Company. The subscription list will open on Monday, 3rd July 1961.

As regards the balance of funds required for the project the Company has commenced negotiations with the I.C.I.C. of India, and also the Commonwealth Development Finance Company of the U.K. for raising a foreign exchange loan of Rs. 80 lakhs. The working capital will be met from borrowings from banks.

The prospects for the cable industry in this country are, indeed, bright. It is proposed to increase the total generating capacity of electric power from about 5.8 million kw. at the end of the second Plan to 13.4 million kw. by the end of the third Plan. Distribution of this power-load to industrial and domestic consumers will require an enormous amount of paper and other insulated cables. The production target for the type of cable proposed to be manufactured by the Company is laid in the third Plan at 4,000 miles per annum. The actual domestic output of these cables in 1960 was no more than 570 miles, and the present installed capacity is placed at 1,000 miles. Due to shortage of foreign exchange, imports are bound to be restricted for several years to come. The Company is thus assured of a market for its manufacture.

NEWS IN BRIEF

THE U.S. Government has approved of a special D.L.F. loan of Rs. 10 crores ($20 million) to India for the purchase of non-ferrous metals. The repayments will be made in rupees.

The acreage under jute in West Bengal has increased from about 800,000 in 1960 to one million acres in 1961, according to a rough estimate made by the State Government.

The Government of India is considering a proposal to set up a Central Housing Corporation to co-ordinate housing programmes in different States, according to Mr. Nanda, Union Labour and Planning Minister.

A two-day all-India convention of representatives of the recognised forward markets and exchanges is expected to be held at New Delhi in October next. It will discuss at some length the problems facing forward trading.

The twelfth annual general meeting of the Indian Non-ferrous Metal Manufacturers' Association will be held on the 7th inst., at India Exchange, Calcutta, and will be inaugurated by Mr. Manubhai M. Shah, Union Minister for Industry.

A branch of the Union Finance Ministry Stock Exchanges Division has been opened at Mission Row Extension, Calcutta, and will look after the administration of the Securities Contracts (Regulation) Act mainly as it relates to Calcutta and Madras.

It is reported that the millowners of Coimbatore have agreed to pay two naye paise per point increase in dearness allowance for the textile workers from 1st June 1961. Following this, the strike notice, served by the National Textile Workers' Union, has been withdrawn.

The Government of Kerala has decided to set up an Export Industries Development Corporation and a Small Industries Corporation with an authorised capital of Rs. 5 crores and Rs. 50 lakhs, respectively. The Export Industries Development Corporation is intended to promote new industries.

The first batch of 70 teleprinters assembled by the Hindustan Teleprinter Factory, Guindy, Madras, will be ready for supply by next week. Of these 50 teleprinters will be supplied to the Posts and Telegraphs Department and the rest to the Overseas Communications Department and the Railways.

The benefits of compulsory contributory Provident Fund Scheme will be extended to industries engaged in cinemas, including preview theatres, film studios, film production concerns and film processing laboratories employing 20 or more persons with effect from 31st July 1961.

The next meeting of the Industrial Committee on Plantations will be held on the 4th inst. The Committee will, *inter alia*, discuss the housing schemes for plantation workers, fixing the wages on the basis of eight hours a day, abolition of contract system, payment for sick leave and wage-fixing in minor plantations.

A seven-man delegation, sponsored by the National Productivity Council and led by Mr. M. G. Menon, Chemical Engineer, Indian Refineries Ltd., has left for the Soviet Union and Czechoslovakia. The team will study the productivity of oil industry in all its aspects in those countries.

An agreement for the avoidance of double taxation of income between India and Finland has been signed. The agreement now requires to be ratified after which it will become effective in India in respect of taxes for assessment years beginning on or after the 1st April of the year in which the exchange of instruments of ratification takes place.

A sum of Rs. 36.08 crores has been allocated for dairy development, research and education in the third Plan. It is also proposed to start 66 new milk schemes, eight creameries, four milk products factories and two cheese factories. It is envisaged to increase milk production upto 25 million tons, and its *per capita* consumption from 4.70 ounces at present to 6 ounces.

A delegation, led by Mr. Cheddi Lal, Joint Secretary, Ministry of Steel, Mines and Fuel, will proceed to Washington next week to negotiate a World Bank loan for the coal industry in the private sector. The other members of the delegation will include representatives of various local mining associations.

The cotton textile mills' production during May 1961 is provisionally placed at 70 million kgs. of cotton yarn and 394 million metres of cotton cloth. At the end of May 1961, the composite mills of the cotton textile industry held an estimated stock of 117,000 metric bales as unsold and 129,000 metric bales as sold but not lifted.

The National Shipping Board (Chairman, Mr. G. L. Mehta) will review, at its ninth meeting to be held at Bombay on the 7th inst., the general tonnage position and also discuss the acquisition of additional ships for our coastal and overseas trade, particularly in view of the need for transporting an additional one million tons of coal on the coast and about eight million tons of foodgrains from the U.S.

The first supersonic fighter, fully designed and produced in India at the Hindustan Aircraft factory, Bangalore, made its inaugural flight on 24th [illegible] 1961. To mark the occasion of the successful flight, the Board of Management of H.A.P. has announced a payment of Rs. 20 per head to all employees drawing a salary of less than Rs. 500 and a special payment of Rs. 50 each to employees who had been connected directly with the construction of the fighter.

The last date for submission of applications by associations concerned with the regulation and control of business relating to forward contracts in commodities, to get themselves registered under Section 14A of the Forward Contracts (Regulation) Act, 1952 has been extended by three months beyond 27th June. All associations should, therefore, submit their applications to the Secretary, Forward Markets Commission, before 27th September 1961, in the manner prescribed under the Forward Contracts (Regulation) (Amendment) Rules, 1961.

The International Tea Convention, which will be organised by the Indian Tea Board, is expected to be held at Calcutta in November next. As many as 30 countries are expected to take part in the convention. The subjects to be discussed will, *inter alia*, include world prospects for tea, tea research, the role of the State in promoting the Indian tea industry, outlook for tea in the U.K., U.S.A., and the U.S.S.R. and the question of the introduction of instant tea in the world market.

The first block closure of about 70 jute mills in and around Calcutta of the Indian Jute Mills Association began on 28th June and will continue for a week, because of the acute raw jute shortage. During the closure period, manufacturing operation in the mills will be completely stopped. The permanent workers who are at work and workers on leave but due to join during the closure period will be given lay-off benefits even if they have not completed 240 days of work in the year. Another block closure for a week is scheduled from the 23rd inst.

The production of iron ore during April 1961 was 944,000 metric tons. This brings the total output during January-April 1961 to 3.84 million metric tons which was higher by about 8 per cent as compared with the output during the corresponding period last year. Orissa was the leading producing State with an output of 321,000 metric tons followed by Bihar 264,000 metric tons, Madhya Pradesh 169,000 metric tons, Mysore 122,000 metric tons and Maharashtra 45,000 metric tons. During the month, despatches for consumption in the iron and steel plants and for export aggregated 678,000 metric tons and 184,000 metric tons, respectively.

* * * *

From Abroad

The U.S. Government has abolished the restrictions on the sale of surplus farm products to the Soviet Union and the Eastern European countries.

The Government of Israel has approved of the construction of a medium-sized oil refinery, with an annual refining capacity of 50,000 tons in Eilat, Israel's Red Sea port.

Soviet engineers have designed the world's largest three-phase three electrode electric furnace, capable of producing about 250,000 tons of top quality steel per annum. The furnace is to be put into operation in 1965.

Nepal will receive a development loan of $400,000 from the Government of the U.S. The D.L.F. will also give a loan of one million dollars in Indian rupees to the Nepal Industrial Development Corporation.

Crude oil consumption in West Germany went up by 25.6 per cent to 27.95 million tons in 1960. The comparative percentage rise in western European countries are Italy 22, Belgium 21, U.K. 18, the Netherlands 14 and France 11.

West Germany's exports during the first five months of 1961 amounted to DM 27,000 million, which is still 8 per cent more than in the corresponding period last year. Imports aggregated DM 17,700 million or 3.8 per cent more than in the first five months of 1960.

A £3-million modernisation scheme of the Kingston (Port Glasgow, Scotland) yard has been completed. The modernised yard can now turn out ships up to 60,000 tons deadweight as compared with the 20,000-ton limit a few years ago. The scheme has taken four years to complete.

The countries of Central African Republic, Chad, Congo Republic, Garbon and the Cameroons have signed a treaty binding them in a common market. The first in a series of meetings on tariff and fiscal regulations is expected to be held in October next in Brazzaville, Congo Republic, and the common customs tariffs are expected to be fixed before 1st January 1962.

Formal work has begun on a 620-mile oil pipeline to be laid from Genoa to Switzerland and South Germany. The cost of the work is expected to be in the neighbourhood of £28 million. The pipeline, claimed to be the biggest in Europe, on completion, will carry between 12 million and 18 million tons of crude and fuel oil to refineries to be built at Aigle, Switzerland, Ingolstadt and Bietigheim, South Germany.

No local bank will be permitted to operate in Singapore unless it has a minimum paid-up capital of two million Malayan dollars, according to a new Banking Bill. In respect of foreign banks it stipulates that it should have a paid-up capital of five million Malayan dollars, of which at least two million Malayan dollars must be held in Singapore in the form of immovable property or such other kinds of assets as the Government may approve.

PERSONAL

MR. William J. Handley will take over as Chief of the U.S.I.S. from Dr. William Bunce in September next.

Dr. R. Balakrishna, Professor of Economics, University of Madras, has been appointed a member of the Tariff Commission.

Major-General Tara Singh Bal, Indian Ambassador to Argentina, has been appointed concurrently Ambassador of India to Paraguay.

Sir Paul Gore-Booth, High Commissioner for the U.K. in India, has returned from London after his routine consultations with the U.K. Government.

Mr. James Coyne, at present Governor of the Bank of Canada, is expected to resign once the Government Bill to remove him from the post, receives the Royal assent.

Mr. Chinoobhai C. Javeri and Mr. Suryakant C. Vakil have been elected President and Vice-President, respectively, of the All-India Exporters' Chamber for the year 1961-62.

Mr. K. M. Wilcox, Deputy Managing Director, British India Corporation Ltd., Kanpur, has been elected President of the Upper India Chamber of Commerce, Kanpur, for the current year.

Mr. C. L. Jhunjhunwala and Mr. C. L. Khandelwal, have been re-elected President and Vice-President, respectively, of the Calcutta Stock Exchange for the year 1961-62.

Mr. Peter Thorneycroft, U.K.'s Minister for Aviation, will arrive in India on the 12th inst. for discussion with this country about U.K.'s likely participation in the European Common Market.

Mr. Joseph B. Gobber has been appointed Minister of State for Foreign Affairs of the U.K. Cabinet, in succession to Mr. David Ormsby-Gore who is to be the next British Ambassador to the U.S.

Mr. K. M. Philip has been elected President of the Indian Rubber Industries Association for the year 1961. Mr. D. Bose and Mr. V. S. Vaidya have been elected Vice-Presidents of the Association.

Mr. Henry George Nelson, Managing Director of the English Electric Co., has been appointed a Director of the Bank of England *vice* Earl of Cromer who succeeds Lord Cobbold as Governor of the Bank.

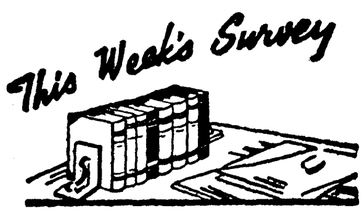
Leyland Motors, Ltd., the U.K., has entered into a contract with the Government of Israel for the production of Leyland buses and trucks in Israel. The new company will be known as Leyland Ashdod Motor Corporation. The construction of the factory, which is expected to begin immediately at Ashdod, will cost about £300,000. Under the contract, the Israel Government undertakes to protect the factory's products for five years by preventing competitive imports.

The International Finance Corporation has sold its $1.2 million investment in Companhia Mineira de Cimento Portland S.A., a cement company in Brazil. This is the first sale of an investment by I.F.C. in a project which has been completed and is in the production stage. I.F.C's investment was sold on terms which provided a satisfactory return. The I.F.C. investment was made in December 1958 to help finance the construction and operation of a cement plant with a capacity of 200,000 tons per annum.

Tariffs between European Free Trade Association (E.F.T.A.) countries have been reduced by a further 10 per cent, bringing E.F.T.A. into line, in this respect, with the European Economic Community (the Common Market). At the same time, the remaining quotas on imports have been enlarged in total by over $30 million (nearly twice the minimum 20 per cent increase required under the Stockholm convention). The tariff reductions apply primarily to industrial goods. Studies are going on to see what can be done to facilitate a parallel extension of trade in agricultural and fishery products.

A two-year survey of traffic in the Greater London area is to begin this summer at a cost of £425,000 and is expected to cover an area of 900 square miles with a population of nearly 9 million people. The purpose of the survey is to secure better planning of London's road programmes extending over the next 10 to 20 years. The survey will be conducted by a private company in consultation with the London County Council (L.C.C.) Roads Committee. It will involve 200,000 home and roadside interviews, traffic counts, a commercial-vehicle survey and journey-time analysis, linked with information on the use of public transport.

The new Department of Technical Co-operation, U.K., will soon have a minister in charge and a permanent head. The Bill establishing the department has received the Royal assent. The Department of Technical Co-operation will co-ordinate requests for technical assistance which were dealt with by the Foreign Office. Thus it will become a single channel dealing with all calls for technical assistance from developing and underdeveloped countries inside and outside the Commonwealth. The aid which the department will consider will be the provision of technical advisers, consultants, or expert missions, facilities for training in special subjects and the supply of equipment for training, administration pilot schemes, and surveys. The department will not, however, provide capital aid, which will remain the responsibility of the three overseas departments.



CONFERENCE OF TEXTILE IMPORTERS

INDUSTRIALISED countries of Western Europe and North America are understandably exercised over the unsatisfactory conditions in world textile trade. Representatives of these countries met at Washington last week, apparently to thrash out an agreed formula among themselves, before they came face to face with the Asian textile exporters at the conference scheduled to be held later this month at Geneva under the auspices of the G.A.T.T. At the instance of the U.S., it is learned, the representatives of the U.K., Canada and the five Continental textile importers (West Germany, France, Italy, Belgium and the Netherlands) have agreed to recommend to their Governments the urgent need for granting an increasing share in their markets to manufactures from the so-called "low-wage" textile producing nations. If the reported agreement is true, it would mean that these countries have moved a step forward in furthering the goal set by the G.A.T.T. Still, there is a long way to go before the goal can be reached.

Apart from the much-publicised objective of ensuring expanding markets for textiles from developing countries, the meeting was also concerned with the problem of avoiding what is called domestic "market disruption," following larger supplies from Asia. This latter question will crop up in the G.A.T.T. conference and, perhaps, only then will the world know what transpired between the Western countries on this question. In almost all the industrialised countries, including the U.S., there has been growing pressure from their domestic textile industries for additional protection against "market disruption." In view of this, it is possible that the Governments of industrialised countries may not go much farther than expressing sympathy for developing countries. If they continue to sit tight on the existing artificial barriers in the way of textile trade, it will not be wholly surprising.

It is precisely these uncertainties that have enhanced the interest of several countries in the outcome of the proposed G.A.T.T. textile conference. Even a facile optimist will refuse to entertain hopes of any abrupt improvement in import restrictions, particularly in Western Europe. This is not without reason. Barring marginal readjustments, any move towards liberalisation in the commercial policies of the industrialised countries may not be quite easy, unless, of course, prior modifications are effected in the very structure of their industrial set-up. In the ultimate analysis, the only relevant issue is whether the industrialised countries are prepared to switch over a part of their resources in men and materials now devoted to the production of textiles to more profitable sources. The time is now ripe for a clear-cut decision on this issue, particularly in view of the industrial integration now under way in Western Europe.

CEMENT INDUSTRY

The problems confronting the cement industry came in for expert treatment at the hands of Mr. V. H. Dalmia last week. Addressing the shareholders of Dalmia Cement (Bharat) Ltd., at Dalmiapuram (Madras State), Mr. Dalmia tried to dispel the impression that the cement industry was enjoying boom conditions or making large profits. Paradoxically, the opposite, he declared, was the case. This should, in fact, be clear to anyone who has cared to study the trend of prices of the ordinary shares of cement companies. During the last three financial years, the Reserve Bank index of cement shares has advanced only by 18 per cent, while the general index of equities has moved up by more than double this percentage. The present plight of the cement industry is primarily due to the Tariff Commission's price formula adopted in 1958. Contrary to earlier expectations that this formula (based as it was on employed capital as against the much-maligned 'cross block criterion) would help the industry to expand its capacity and output, the retention prices have proved to be uneconomic and have, to a large extent, retarded the growth of the industry.

The chief explanation for the Tariff Commission's formula failing to meet the industry's requirements is to be found in the fact that it determined the prices on the assumption that the production of cement factories would be equal to the installed capacity. But this assumption has gone wrong, as a result of intervention of several factors over which the industry itself has no control. The railways, for example, have been unable to supply sufficient wagons both for the movement of raw materials and finished products. Secondly, allocation and receipts of coal were not adequate for full-capacity production. The upshot was that the output of cement in 1960 was 7.84 million tons only, as compared with the installed capacity of 8.70 million tons.

Mr. Dalmia pointed out that the lower production, as mentioned above, had hit the industry, inasmuch as its costs had gone up and the profit-margin, already meagre, had been further squeezed. That the uneconomic retention prices have impaired the capacity of the industry to build adequate reserves for meeting future contingencies and financing expansion projects, is clearly borne out by the financial results of the Dalmia Cement Company itself, which are reviewed elsewhere in this issue. It will be seen from Mr. Dalmia's speech that, during the last five years, the Company was actually compelled to draw Rs. 20 lakhs from the dividend equalisation reserve and general reserve to enable the payment of even a modest dividend to the shareholders. Mr. Dalmia has, therefore, rightly urged the Tariff Commission to consider the financial needs of the industry more sympathetically than it did on the previous occasion.

As the growth of the cement industry is vitally important for the fulfilment of investment targets in the third Plan, it will be appropriate for the Tariff Commission to fix the retention prices at levels which would provide adequate return on employed capital as well as enable the industry to plough back sufficient resources for financing future expansion. The formula should have sufficient built-in flexibility, so that, whenever unforeseen increases in costs arise in future, they could be covered by a suitable rise in retention prices without time lag which now results in a depletion of the reserves and unattractive returns to shareholders. If these conditions are not assured, the industry would find it extremely difficult to expand its output to meet the growing demand for cement. The result would only be a thriving black market and profiteering as is happening today.

U.S. INTEREST IN BOKARO STEEL PLANT

Quite a few heartening announcements—all the more heartening because of their rather unexpected character—were made last week by Prof. John Kenneth Galbraith, U.S. Ambassador to India, at a Press conference in New Delhi soon after his return from Washington where he had held discussions at the highest level on questions relating to economic aid to this country. By far the most cheering piece of news he gave was about the near-certainty of American financial assistance to the proposed steel plant at Bokaro in the third Plan period. Although such financing of the foreign exchange cost of the Bokaro plant would be subject to the passage of the new long-term Aid Bill in the U.S. Congress and to the enlistment of support of the private U.S. steel industry for setting up the steel plant in the public sector, it was pretty clear from the Ambassador's replies that the U.S. would only be too glad to be associated with a big, basic and spectacular project of the kind. If the Soviet Union, West Germany and the U.K. have associated themselves with the respective steel plants at Bhilai, Rourkela and Durgapur and appropriated, in the process, a lot more of credit than what would have been strictly due to them on account of their aggregate aid totals, there is all the more reason why the U.S., which has thus far provided aid to this country aggregating Rs. 1,843 crores for a wide range of unspectacular development projects, should appropriately finance a big steel project in order not to be deprived of the whole credit due to that country for the vastly greater aid it has given. This, of course, should not be the only reason, for there is the more relevant consideration that the Government of India would be otherwise compelled to seek Russian aid for putting up its fourth steel plant. American interest in the Bokaro steel plant has, thus, its abundant justification. It is to be hoped that there would be no insuperable obstacles in the way of negotiations with the U.S. steel corporations for setting up the Bokaro plant. Already Prof. Galbraith has met the Union Minister for Steel, Mines and Fuel and discussed the possibilities of U.S. participation in the setting up of the Bokaro plant, and this is a further development which points to a possible early finalisation of the details of financing.

Another cheering piece of information given by the U.S. Ambassador was regarding the allocation of $200 million for financing maintenance imports (raw materials and components for industries) out of the $545 million which the U.S. has agreed to provide in the first year of India's third Plan, under the Aid-India Consortium's programme. The recognition by the United States that substantial aid would have to be given as untied assistance for balance of payments support is, indeed, welcome. The presumption here is that such non-project aid for the purpose of maintenance imports is related to the growth and expansion of the Indian economy. It will be seen that on both these counts, namely, aid for the Bokaro steel plant and earmarking a part of the Consortium aid for maintenance imports, the stand of this journal is being vindicated.

AUSTRALIAN FLOATING FAIR

The Australian floating fair, arranged on board the ship *Straat Banka*, which was on display this week at Ballard Pier, Bombay, was, indeed, a picturesque exhibition of the Australian economy in a nutshell. Organised by the Australian Chambers of Commerce Export Council, in collaboration with the Australian Manufacturers' Export Council, the venture is the largest and most comprehensive trade mission ever to leave Australia, and the first of its kind to India, if we exclude the airborne Australian trade fair which arrived in Bombay in 1957. The displays on the trade ship, numbering 115, included a large number of foodstuffs and other primary products such as wool, meat, dairy products and canned fruits, in which Australia is traditionally an accredited leader in world markets. What was still more striking was the wide range of exportable manufactured goods exhibited in the fair, including both capital goods and consumer products. All this reflects the rapid strides Australia has made in the industrial sphere during the post-war period. Accompanying the fair were forty-eight leading businessmen, under the leadership of Mr. A. P. Whitington. The Prime objective of the trade mission is to acquaint the countries of South-East Asia with the products which Australia can export to those markets. The ship has already visited several ports, including Singapore and Colombo. It has now sailed for Karachi. During its three-day halt in Bombay it was visited by thousands of businessmen. There were a large number of enquiries, too, seeking collaboration with Australian capital and technical know-how, particularly in the fields of engineering and pharmaceuticals.

At a Press Conference held on board the ship, Mr. Whitington observed that the mission was exploring the possible lines in which Australia could collaborate with Indian enterprise in the field of industry and trade. He did not, however, spell out any specific scheme for the purpose. The contacts already made between businessmen of the two countries, it is to be hoped, will result in further economic co-operation between the two countries to their mutual advantage. Like India, Australia is making a strong bid to expand its exports and correct the adverse balance of payments position. The tempo of export promotion has been stepped up, of late, following the Government's decision to do away with import licensing. The Australian Government apparently has come to believe that its balance of payments position should be secured not so much by imposing import restrictions as by increasing exports. Hence the renewed emphasis on overseas sales promotion.

There is certainly much scope for expanding the two-way trade between India and Australia—both members of the Commonwealth community and the sterling area. At present, India's imports from Australia consist mainly of non-ferrous metals, wheat, dairy products, transport equipment, etc. Over a period, they have remained at a stagnant level. An important reason for this apparently is the relatively unfavourable terms offered by Australia for its exports. For instance, in view of India's foreign exchange difficulties, this country has had to display interest in imports on deferred payment basis. The Australian Government would, therefore, do well to examine the possibility of granting long-term credits for its exports of capital goods to developing countries.

The following table shows the trend of trade between the two countries during the last eight years:

(Value in crores of rupees)

	Exports	Imports	Balance of trade
1960	21.72	22.43	— 0.71
1959	19.44	13.55	+ 5.59
1958	21.43	15.32	+ 6.11
1957	24.73	16.41	+ 8.32
1956	22.66	11.65	+11.01
1955	25.98	18.49	+ 7.49
1954	22.61	14.42	+ 8.19
1953	19.01	26.06	— 7.05
1952	23.59	15.10	+ 8.49

As will be seen from the table, the growth of India's exports to Australia was of a halting nature over a long period. The balance of trade continued to deteriorate, particularly since 1956. In 1960, exports were, however, higher at Rs. 22 crores, as compared with Rs. 19 crores in the previous year. But this increase is not impressive, considering the sizable increase in Australia's total imports last year, following the exemption of 90 per cent of its imports from quota restrictions with effect from February 1960. But one cannot blame Australia for this trend. Most of the increase in Australian imports took place in capital equipment and specialised consumer goods and certain raw materials for industry. And, in most of these things, India had little to offer. Some improvement was made in respect of cotton textiles as well as in some minor items, such as cashewnuts, carpet wool, goat hair, etc. But earnings from coffee were lower because of higher Indian prices, as also kapok and goatskins which met with reduced demand. Increased competition from Pakistan, the U.S. and Netherlands accounted for the setback in India's export of cotton waste. Another disquieting feature has been the steady decline in India's major export item to Australia, namely, jute goods. Be that as it may, the Australian market still offers good opportunites to Indian exporters. As pointed out by Mr. H. A. Sujan, India's Trade Commissioner in Australia, in the course of an article on Indo-Australian trade in the April issue (Trade Prospects Number) of the *Journal of Industry and Trade*, published by the Union Ministry of Commerce and Industry, there are greater possibilities for stepping up India's exports to Australia than are generally thought of. He specifically mentioned cotton textiles, woollen carpets, vegetable oils, tea, engineering goods and handloom materials, as promising lines of export. Needless to add, quality and timely deliveries are essential requirements in exports to Australia, which is a fashion and quality-conscious market.

FERTILISER CONSUMPTION

Several countries striving to step up agricultural production are increasingly realising the importance of mineral fertilisers. The world output of fertilisers, consequently, is expected to expand from just 26 million tons now to about 100 million tons annually by the end of this country, representing an increase of about four times in about forty years. A significant feature of fertiliser development is the unprecedented emphasis laid on it by developing countries in the Far East, South-East Asia, Africa, Central and South America. India, as readers are aware, proposes to take a big leap forward in fertiliser production in the third Plan. The qualities of chemical fertilisers admittedly are distinctly different from those of conventional manures and, therefore, consumers in the rural area may have some may aversion to the synthetic products in the initial stages. The absence of a well-knit distribution system, particularly transportation and storage, aggravates the situation, as is pointed out in a survey on fertiliser industry in Asia brought out by the F.A.O. recently. The essential problem, therefore, is to bridge the gulf that separates the producer and the potential consumer. This will call for efficient channels of distribution and an effective propaganda drive designed to educate farmers in the proper application of fertilisers and demonstrate to them the additional yield derived from their use.

While governments in these countries have taken steps to popularise new fertilisers, their impact will only be of marginal significance. This work can certainly be undertaken more expeditiously and effectively, if the manufacturing units themselves make it a point to devote a part of their resources for this purpose, as self-help is the best help possible. Some of the steps taken by the Fertilisers and Chemicals, Travancore Ltd. (F.A.C.T.), in this direction, are, indeed, commendable. For they are designed to ensure better exploitation of consumption potential by providing appropriate links between the factory and the field. Mr. T. A. Joseph, Chairman of the F.A.C.T., in his speech at the annual meeting of the Company (the text of which appears elsewhere in this issue), gave a brief account of the two-pronged drive launched by the Company to expand the market, first, by improving the distribution organisation and, secondly, by establishing demonstration plots. The F.A.C.T. has now taken up the responsibility for distribution of all Government fertilisers in the Kerala State, under an agreement reached with the Government. The object of the Company is to provide a sufficient number of distribution points throughout the State, so that the cultivator can get his requirements of fertilisers within a distance of four to five miles of his home. The services of co-operative societies are also expected to be availed of for the purpose.

In the sphere of agronomical work, the Company has made impressive progress. It has already set up 400 demonstration plots distributed all over Kerala with the purpose of educating the farmers on the principles of scientific manuring. Besides, fertiliser officers are stationed in each district to render advice and assistance to farmers. Elaborate soil surveys are also being made. These steps are in the right direction and, therefore, deserve to be encouraged, particularly in view of the Company's plans for rapid expansion and diversification of production lines already under way. It may be noted here that several countries have launched similar measures. Pakistan, for instance, has already organised 4,000 fertiliser demonstration centres since 1957, under the direction of the F.A.O., with the object of conducting soil surveys side by side with popularising the use of fertilisers. Much work in this field is being done in India, too, under a T.C.M. project. But there is much more to be done. The Fertiliser Association of India itself must consider the possibility of pooling some resources of manufacturing units for conducting soil surveys and rationalising the distribution system. The Government-owned Fertiliser Corporation would also do well to give a lead in this direction, which will not only ensure ready sales of its products, but, in turn, increase the productivity of Indian agriculture as a whole.

INCENTIVES FOR TEA INDUSTRY

The Food and Agriculture Organisation of the United Nations has estimated that the world production of tea (including the estimated quantity exported from China to countries other than the U.S.S.R.) by 1965 would be about 930,000 metric tons, whereas the then consumption would only be 880,000 tons. According to another expert study, the estimated annual surplus by the end of 1965 would be 4½ per cent of the then world consumption of tea. It is against this background of a possible excess of production over consumption that the Indian tea industry has been called upon to step up its exports. Considering the present deplorable circumstances of the industry, this is, indeed, a tall order. Under the third Plan, it is laid down that India's tea industry should produce 900 million lbs. and export 610 million lbs. out of that production annually by the end of the Plan. Compared with these targets for production and export, the production of tea in 1960 was 705 million lbs. and exports were only about 430 million lbs., as against 472 million lbs. in 1959. It would appear that Indian teas are already losing ground in foreign markets. The reasons for this state of affairs are not far to seek. These, it is noteworthy, have just been exhaustively examined by Mr. S. M. Mohta at the fifth annual general meeting of the Tea Association of India held at Calcutta on 26th June 1961. Besides examining the causes for the decline in tea exports, Mr. Mohta has also presented the basic requirements for tea export promotion.

First and foremost is the consideration that Indian teas are not competitive in foreign markets because of the heavy incidence of taxation on the industry. Indian teas are subjected to a number of Central and local taxes, such as export duty, excise duty, cess, sales tax, West Bengal octroi, and Assam road tax. These taxes add to the prices of Indian teas in foreign markets and affect their competitive character. It may be well to remember here that other competing countries provide tax incentives for their tea exports. For instance, East African teas are exempted from export duty, Indonesia subsidises its tea exports, and Ceylonese teas selling below a certain price are not to pay export duty. As far as Indian tea is concerned, the position in this respect is that the Government has reduced the export duty by 9 nP per kg. in the Budget for 1961-62. Although this amounts to a welcome recognition by the Government of the deterrent character of the export duty from the point of view of export promotion, the gesture of reduction in the rate of duty has been nullified by a simultaneous enhancement in the excise duty on tea. This excise duty is not refundable, even if the tea is meant for export. This is something strange, for tea is the only industry which is denied this facility of excise duty refund. The textile industry, for instance, has also to pay excise duty, but the same is refundable when its products are exported. In the case of engineering industry, even the import duty on raw materials is refunded when the finished articles made from these raw materials are exported; this facility is in addition to the refund of the excise duty when such articles are exported. If a similar facility is not extended to the tea industry, Indian teas will continue to be priced higher in foreign markets. If the kind of misfortune which overtook the jute industry (which was subjected to a heavy export duty till the fifties) is not to repeat itself in the case of tea exports, it is of the utmost importance that the Government should do away with such duties as have the effect of increasing the prices of Indian teas in foreign markets. This plea was also strongly advanced by Mr. N. Bhagwandas, Chairman, Nilgiri Planters' Association, at the seventieth annual general meeting of the Association held at Coonoor on 26th June 1961. According to Mr. Bhagwandas, it is high time the *raison d'etre* of the export duty was critically reviewed.

Apart from the incidence of taxation on tea industry, there is the question of increasing burdens placed upon the industry by way of amenities for labour and increases in wages unrelated to work-load or productivity. The Wage Board for the Tea Plantations Industry, which has been set up to work out a new wage structure for tea garden employees, may have to take note of the extent to which the workers in this industry have been pampered all along. One has only to quote the following passages in Mr. Mohta's presidential address in this context:

"Over a million workers are employed in tea gardens in India. They are given rent-free houses free education to their children, free medical aid to them and their families, foodgrains at concessional rates, liquid tea while they are on duty, free tea for their off-days, fuel for household use, land to cultivate paddy, chowkidars to guard their fields against cattle and their houses against theft cowherds to look after their cattle, free pasture land for their cattle, playgrounds for their children club houses for their recreation, creches for their young children, and canteen to cater food on no-profit basis, etc. Over and above these amenities they are also paid yearly bonus, provident fund wages for earned leave, wages while they are sick maternity allowance and wages to female workers for 12 weeks. The staff and artisans, apart from the abovementioned facilities, are given servant allowance—a system which, I believe, is not prevalent in any other industry in India. The employment in tea gardens is on family basis The wife, son, daughter, etc., are given jobs. If all these are taken into account, you will find that the workers are paid more than what they should be paid for the work they do.

"In 1959, an increase in minimum wages was imposed on the planters by the West Bengal Government. After that, the industry had to accede to the demands of tea workers in Assam Valley and in the same year wages had to be raised there also. Recently, the Assam Government have increased the minimum wages in Cachar. All these revisions in wages have, however, I regret to say not helped in the least to increase the productivity of labour. The work-load of tea garden workers is hardly three to four hours a day, whereas in other industries they work for eight hours daily The tea garden workers do not turn out even the minimum work-load to enable them to earn the minimum wages as laid down under the Minimum Wages Act."

Mr. Mohta is thus on firm ground when he refutes the prevalent feeling that the tea industry pays comparatively low wages. His contention is that, if the various amenities provided to the tea garden workers are taken into account, it will be found that the real wages paid to them are higher than in any other industry in the country. All this the tea industry has been called upon to provide, in spite of the circumstance that it is largely an agricultural industry which is affected by natural calamities, such as drought, pests, etc. Surely the element of wage cost would have to be carefully appraised so that fresh burdens on the industry might not be placed in a light-

Trend and Progress of Banking in India

THIS annual publication of the Reserve Bank came out last week and has been reviewed widely in the Press. Those who looked for the narration of facts and developments and for the conventional statistical tables have been satisfied, and quite rightly too. Others who expected to discover some new ideas and bright suggestions on the 'perspective' have been disappointed, all quite rightly too. There is the usual recital of conventional platitudes under each topic, but the suggestions thrown out and remedial measures proposed remind one of the methodology of a general practitioner of medicine who invariably sets down his prescriptions with one or other combinations such as: Pot. Iodide and Ammon Carb or Soda Salicylas and Soda Bicarb, or Pot. Bromide and Liqr. Ammon. Acet, or Soda Bicarb, Tinct. Camphor and Vine. Ipecac and so on. Here are a few statements for illustration. "The banking system has to gear itself to meet the challenge of the third Plan." "The immediate task of the banking system is to strengthen further its financial position so as to enable it to undertake its increased responsibilities in the next quinquennium." "The large order of increase in banking business envisaged in the third Plan period would give rise to a variety of problems to be tackled by banks, especially in the sphere of management, personnel, accommodation, mechanisation, etc." This is repeated in the next paragraph beginning with the sentence "In tune with the rising requirement of a developing economy banks would be called upon to extend a variety of services to cater to the varying needs of business and individuals." The optimistic finale lacks only an 'Amen' to read like the end of a sermon. "The banking system can confidently look forward successfully to meet the challenge thrown up by the third Plan." The whole chapter on 'perspective' is full of pedestrian pedanticism. Many sentences like those extracted above will, however, impress an examiner of the Institute of Bankers Associateship Examination, if a candidate aspiring for the Pochkanawala Prize or Norman Murray Gold Medal used them in appropriate places, but, alas, the examination for this year is over.

The points of substance in the chapter on 'perspective' are five. (i) Banks should increase their resources and paid-up capital in order to improve the ratio of capital funds to deposits. (ii) The phased programme of compulsory amalgamation has to go on with determination. (iii) More branches of banks should be opened as there are still 1,400 townships without banking facilities. (iv) Staff training facilities and mechanisation have to be improved. (v) Facilities for remittances and payments at reasonable cost have to be increased, and there is scope for a credit transfer system. All these constitute exhortations to managements of banks and have been superficially dealt with as in a preliminary memorandum of objectives. No attempt has been made to analyse each issue in the light of the practical difficulties inherent in the implementation of the several proposals, none of which are new. Nor is there a single line of exhortation to the staff of banks, supervisory and clerical, to the former to observe all canons of safety and propriety in advancing moneys and performing services, and to the latter to discharge their duties and responsibilities with more zeal and devotion than when claiming their rights and privileges.

Even at the risk of increasing the size of the publication, it seems to me that a chapter on the broad trends which were visible in the cases of the thirty and odd banks on whom moratoria were clamped in recent months, and the extent to which their weaknesses were the result of avoidable mistakes committed in their day-to-day working over a period of years, could have been usefully included. For, when a bank is liquidated or even amalgamated, the staff suffers, and the suffering could have been avoided if members had been more alert or less lackadaisical. Again, what I miss in the book is also a chapter on the role of the public, both depositors and borrowers, in the future banking structure of the country. A country gets the banking system it deserves. If the mass of people in any locality do not develop the culture which recognises banks as temples of economic prosperity (sacred for the entire community) and bank credit as a privilege of profound distinction, any banking system will collapse like a pack of cards. Cases have come to light recently of persons who have been dealing with several banks at the same time and cheating them of borrowed funds, unmindful of the inevitable penal consequences round the corner. The law may take its course, but that can be no solace to the banks which will suffer in the meantime. The resultant weakening of the banking system may have unpleasant repercussions all round. Since preventive action against undisclosed fraudulent *intentions* is not possible, the only course seems to be to institute a well-knit system of exchange of 'credit information' amongst banks as protection against commercial and financial 'philanderers.' The question is as important for the future of a healthy banking system as deposit insurance is for a healthy credit system, and should have the attention of the Reserve Bank at the highest level.

The question of a proper ratio between capital funds (paid-up capital and reserves) and deposits appears to be a bee in the bonnet of the Reserve Bank. There seems to be no evidence of very clear thinking on the subject. Nothing precise can be stated as a general rule. The ratio need not be the same for every bank and would depend on the kind of business predominantly undertaken by a bank. Exhortation to banks to accumulate reserves reduces itself to a meaningless slogan when banks are victims of an environment in which staff emoluments and working expenses are continuously on the increase, interest rates for deposits have to be kept high even to retain the latter at existing levels, advances have shrunk in accordance with central banking directives, adequate provisions have to be made for unforeseen contingencies and dividends have to be retained at previous levels or even bettered to maintain a facade of prosperity. These are issues which have to be faced squarely by the Reserve Bank, but, obviously, it is not quite so conversant with the difficulties which confront commercial banks, or it would not be making the suggestion so naively.

The recommendation to open more branches in the 1,400 townships which are without any banking facilities is facile and lacks a proper appreciation of the several issues involved. It is an oversimplification of a very complicated problem. It is incorrect to presume that savings and hoarded money can be attracted into banks merely by the extension of branch banking. The fact of the matter is that savings are being diverted to other channels of greater profitability which provide a measure of capital appreciation in addition to more attractive yields. In refusing to recognise this obvious trend, the Reserve Bank is encouraging the banking system to indulge in costly wishful thinking. The apparent higher rate of deposit growth of bank branches in centres with a population of less than 50,000 during the scond Plan period does not warrant the conclusion that a similar trend will continue. Many changes have taken place since. Further, the expense incurred in extension of branch banking is out of all proportion to the financial results achieved. The State Bank has been able to implement its expansion programme mainly through the subvention system, and it is impossible for other banks to follow suit. The difficulties they have to face as regards accommodation, staffing, clearing of surplus cash balances, accumulations of small notes, etc., prevent them from rendering versatile services in the new localities.

The statement that the small man in the country does not enjoy adequate facilities for remittances and payments at reasonable cost is full of fallacies. It is a contradiction in terms to talk of a 'small' man needing facilities for remittance, for he has the post office. The credit transfer scheme as obtaining in the U.K. need not be brought in for solving the problem of small remittances. The charges made by banks in India for business remittances are much lower than in more advanced countries, and the grievance that facilities are poor has been flogged over and over again. The trouble in India is that most people consider banks as philanthropic institutions bound in duty to perform a variety of services at no cost even for a depositor with a ten-rupee savings account. As far as I know, most banks would do very well with less of contacts with such people. The final sentence in paragraph 87, namely, "such a scheme, apart from ensuring facilities of remittance at low cost to the public, would also open up avenues of contact between banks, on the one hand, and members of the public who have no bank accounts, on the other," seems to be based on the kind of thinking that is responsible for allowing large numbers of villagers at the small airports to walk into aircrafts, in order to make them air-minded

Packing of Cement

The question of cement packing has been subjected to a see-saw of loose thinking. The original requirement prior to the Tariff Commission's investigation in 1958 was that the gunny used for packing cement should be of heavy quality. The price allowed by the Government provided for the use of this quality, but several producers used only inferior gunny. Factories were also permitted to use second-hand gunny bags, provided the question of price was settled between buyers and sellers. Actually, however, all units kept the profits arising from the use of second-hand bags to themselves without even a semblance of negotiation with or consideration for the consumer. Those that used the lighter type of gunny benefited both on the rounds and on the swings. As the use of second-hand bags resulted in considerable wastage of cement in transit and buyers had to bear the loss without demur, the Tariff Commission recommended that the use of second-hand bags should be discontinued. Government ordered accordingly, and till about six months ago the healthy change-over continued. Unfortunately, however, the jute industry got into trouble and there was scarcity of supply of cement bags. Old bags came into circulation again. It is now reported that the jute industry faces the other kind of trouble, namely, the problem of clearing stocks, as foreign demand is sluggish. The agitation is on for reimposing the ban on old bags. This is not going to be an easy matter, because cement units would, perhaps, represent, that they require time to use up all their accumulations of second-hand bags.

Cement users have been silent sufferers in the past in this regard. A look at the inside of a railway wagon containing cement bags, or a lorry transporting, say, a three-ton load of the commodity would reveal to anyone the large percentage of spill-over that takes place. Even the small user of cement who is handed a wobbly bag in a purchase of five bags meekly submits to Hobson's choice in the transaction. Government will revel in the see-saw of administrative solution, unless the enlightened section among cement producers devise a more permanent and less wasteful method of packing cement.

U.N.I.C.E.F. Milk Powder

A recent news item reveals that the U.N.I.C.E.F. has been forced to reduce its quota of milk powder supply donated to this country from 15 million pounds last year to 11 million pounds this year. It is stated that the arrangements for utilising them in certain States for providing milk to school children were inadequate. This seems a tragedy, and the incompetence of State authorities deserves severe censure. It should be a very easy matter for each State to have a small processing establishment for converting the powder into liquid milk and even converting the latter into curd or buttermilk. What with elaborate schemes for supplying midday meals to school children which seem to have drawn approbation from the highest quarters, there should be no difficulty in mobilising the organisational effort required to use milk powder. Distribution of milk might involve requisitioning of sugar and, therefore, be somewhat expensive; but distribution of curd or buttermilk or *lassi* involves no such extra expense. Curd and buttermilk are the commonest, and, when sour, the safest drinks in our country. The decision of the U.N.I.C.E.F. to reduce our quota is a sure pointer to the bankruptcy of our organisational capacity towards building up the health of our underprivileged children.

The Swedish Cellulose Company has acquired 50 per cent of the shares of the Spanish forest industry company, Papelera Navarra, at a cost of Kr. 13.5 million (£930,000). The Spanish company, situated in the province of Navarra, includes a paper mill with an annual capacity of 24,000 tons of Kraftliner and corrugated board and a boardbox factory. The latter has recently been put into test operation while the former is scheduled to be completed early next year. Technical staff from the Swedish Company will be provided to the Spanish plant. While at present using exclusively Spanish raw materials, Papelera Navarra may later also import Swedish raw materials.

IMPLICATIONS TO INDIA OF U.K.'S MOVE TO JOIN COMMON MARKET

CREATION OF NEW TRADE BARRIERS WILL BE STRONGLY OPPOSED

From Our Special Correspondent

NEW DELHI, *27th June*

DELHI LETTER

THE time is approaching when New Delhi will have to take up a definite stand in regard to Britain's proposed entry into the Common Market. Mr. Peter Thorneycroft is expected here in the middle of July; he is an enthusiastic supporter of Britain's entry and there is little doubt that he will present the case in the most able manner. He may even be agreeably surprised by the comparative lightness of his task; in Malaya, for example, he will almost be preaching to the converted, since that country, as an exporter of raw materials like rubber and tin, looks forward to the advantages of duty-free entry in a larger and growing European Common Market. Pakistan has been finding it difficult to come to a decision but has preferred to show apprehensions; for Ceylon, much depends on how tea exports to the U.K. will be affected, but there is always the consolation that her main competitors in this commodity will not secure any better position.

Not Clear-cut

India's position is on a different footing and is not quite clear-cut. Some indecisiveness in the Government's attitude in earlier discussions on the subject was probably due to the realisation that one Commonwealth country cannot exercise any right to veto on another's policy based on its own national interests. If the British Parliament and Government decided upon full entry into the Six-nation European Economic Community as the best course in the present circumstances (thereby taking a definite risk in respect of Commonwealth interests), the next question will be how the individual interests of each member could be reconciled with the changes in trading relations. On this aspect, there are clear indications in the pronouncements of Mr. Macmillan and other members of his Cabinet, that the utmost effort will be made in the ensuing negotiations with the Six to safeguard Commonwealth trade from sudden disruption. These assurances will doubtless be reiterated in the bilateral talks but their value will depend eventually on the concessions that British negotiators are able to extract from the Six; it is possible to be either optimistic or pessimistic according to one's own inclinations, but the chances of securing a fair compromise need not be ruled out altogether.

Thus, however strongly any Commonwealth country may feel on the possible threat to its exports to the U.K. market, it has to accept the excellent intentions behind Britain's policy and hope for the best. It is wrong to think that the Government of India can achieve anything more through emphatic protests in the way Canada has made. The Federation of Indian Chambers of Commerce and Industry, for example, has frequently expressed its fears about the danger to Indian exports and it has even now issued a warning that the Government should consult business opinion and associate it closely with the proposed talks. Obviously, the Government cannot ignore the opinions of the Chambers of Commerce which ought to know how trade is likely to be affected. There is nothing to prevent the Federation and its sister body, the Calcutta Associated Chambers, from drawing up a memorandum on the subject showing the possible adverse effects and suggesting the specific safeguards needed. The Government of India seems to be quite willing to be thus helped and strengthened, but it is unlikely to accept the view that it should just plead for the continuance of the *status quo*.

The Other Side

The system of preferences has so far played a very important role in expanding Commonwealth trade, but it cannot be described as indispensable to the Association. Legal sanction for it is derived from bilateral trade agreements with each country and the Indo-British Trade agreement can always be modified after proper notice on either side. No greater sanctity can be claimed for preferences and the Government of India has thus wisely realised that it should be prepared to reconcile itself to the loss, if inevitable. At the same time, one must take into account the other side of the picture also. Britain has been feeling that the Commonwealth share of her trade has been declining; Lord Home pointed out in his speech during the Lords' debate that, in the last decade, this share has declined from 28 per cent to 22 per cent of British exports. Britain has not been slow to realise the reasons behind this decline. First, there are drastic import cuts to save foreign exchange, especially on consumer goods. Commonwealth countries have also to sell more of their products to others to earn foreign exchange—India's expanding trade with the Soviet Union and the East European countries is one example—and have consequently to import other products for reasons of reciprocity. Also, imports of capital goods on the basis of cheapness, suppliers' credit or other private and public capital aid have increased; the consecutive large deficits in India's trade and payments with Western Europe, especially West Germany, show lesser reliance on Commonwealth sources. Obviously, Commonwealth considerations would not have been allowed to interfere with such diversification of trade and freedom to choose the sources of supply in accordance with the national interest of each country.

Matter of Principle

Indian trade bodies can, however, take a much stronger line in their representations than the Government and expect that these will be communicated to the appropriate quarters. The Government of India, too, will be legally and morally on strong ground in opposing the creation of any new system of preferences. When G.A.T.T. was formed, there was a specific provision in its charter that, though the members can continue to maintain existing systems of preference, they should not create new ones. That understanding has been violated by the formation of trade blocs by powerful member countries and G.A.T.T. has remained powerless to take exception to them, though the issue has been raised frequently since the Rome Treaty and the formation of E.F.T.A. This debate will continue in G.A.T.T. meetings; meanwhile, Mr. Thorneycroft will in all probability be told firmly that the Government of India is resolutely opposed to the creation of new preferences for European as against Commonwealth goods.

This is a matter of principle rather than of quantitative assessment. The bilateral talks in Commonwealth capitals by Mr. Duncan Sandys or Mr. Thorneycroft will be restricted to finding out to what extent the various exports of each country to Britain will be affected and on what principles concessions can be claimed from the Six to mitigate the severity of the loss. Very few raw materials present any difficulty, since, with only about five exceptions (like lead, zinc and aluminium), they are all imported duty-free both into the E.E.C. and into the U.K. Tropical products, especially foodstuffs, will be affected by the preferences which the associated overseas territories of the Six will enjoy in the Common Market countries. Mr. Edward Heath, Lord Privy Seal, stated in the Commons last month that he had hopes of securing favourable terms for them; besides, there is also the American plan for the eventual abolition of all customs duties on tropical products to benefit developing countries.

Temperate Foodstuffs

The real difficulties concern manufactured goods and temperate foodstuffs which together represent nearly half of British imports from the Commonwealth. If India's exports of manufactured goods to the U.K. should become as difficult as those to Western Europe, the results can be quite serious, especially at a time when India is preparing to launch a vigorous export drive in these products. The problem is complicated; the proposed textile conference to be convened on the American initiative may provide an occasion to discuss the future policy relating to this particular item, but current attempts to make European countries take more textiles (in order to reduce the American offtake) may exhaust the scope for increase in this trade in Europe. The voluntary quota agreed upon by India, Pakistan and Hong Kong does not restrict the freer access which these countries now enjoy to the U.K. market; even a low external tariff may not prove a serious hindrance to sales of manufactured products where costs can be reduced but quantitative restrictions in the Common Market will be a formidable obstacle.

Canada

Although Canada fears even more that her manufactures may be kept out of the British market, she is still in some respects in a more favourable position, since there will be only tariffs against Canadian manufactures (unlike the quotas in the case of textiles) and a general lowering of the common external tariff may considerably reduce the threat to exports. Another hopeful factor is the E.E.C's offer, at the recent G.A.T.T. meeting, of a 20 per cent linear cut on industrial products if other industrial countries are prepared to offer something equivalent in their own tariffs. If this more opened the way to a general reduction of tariffs on manufactures, Canada's chemicals and machinery need not suffer much, though that country's main problem will in any event continue to be one of reducing costs.

More serious difficulties will arise in regard to British imports from Commonwealth of temperate foodstuffs. West Indies sugar, Australian wheat, and New Zealand's dairy and farm products will be affected and the last named country has received much sympathy in Britain because its entire economy depends on supplies to the British market. In all other cases, informed opinion in Britain is inclined to take the view that what is lost on the swings of preferences will be more than made up on the roundabouts of the larger Common Market, in view of its potentialities for rapid economic growth.

Perhaps, at the end of the bilateral talks, there will emerge some questions of major principle, requiring a Commonwealth meeting at the political level, as Canada insists. The Conference of Finance Ministers at Accra in September may provide an opportunity to discuss some of these and by then something more definite will be known about the prospects for Britain securing fair terms for the Commonwealth from the Six.

SURVEY

(*Concluded from page 7*)

hearted manner. Incidentally, it may also be recalled here that Mr. Bhagwandas referred, in his speech at the annual meeting of the Nilgiri Planters' Association, to this element of increasing wage cost which militated against the industry's efforts to bring down the cost of production so as to promote exports.

Among other incentives for which Mr. Mohta has put in cogent pleas in his presidential address may be mentioned the need for the supply of sufficient quantities of ammonium sulphate (which is stated to be the most useful fertiliser for tea bushes) at prices at which agriculturists in general receive them and also the need for the supply of good quality coal which alone can produce the required heat in the driers and thus ensure the quality of tea. Granting of loans for replantation and for rehabilitation of old plant and machinery more expeditiously and the supply of power and irrigation facilities to the industry on the required scale, especially in West Bengal and Assam, are two other requirements on which Mr. Mohta has laid particular emphasis in his address. The cost of transport of tea from the gardens in Assam and West Bengal to the port at Calcutta would also need to be reduced, for the incidence of freight rates charged by the joint steamer companies has been calculated at 18 nP per kg. of tea, as compared with 22 nP per kg. in the case of transport of tea from Calcutta to London. If thus the various disincentives to which the tea industry is now subjected are removed and some positive incentives are provided for reducing the costs of production, as well as prices, it may still happen that the industry will be able to secure a proportionate share of new business in the countries to which it has been a traditional exporter and where the consumption of tea has gone up in the last 10 years. The export targets set for the industry will still be attainable, if its vital basic requirements are met with expedition.

U.K. AND COMMON MARKET—II

THE BALANCE OF INTEREST

From Our Own Correspondent

LONDON, *20th June*

LONDON LETTER

THE lines of cleavage which crisscross the political parties in this country on the Common Market broadly follow lines of interest. It is the same interest which this week has been agitating the Breton farmers in France. These men have risen in peaceful revolt against the Government and are seeking guarantees against the possibility of having their markets spoilt as the tariff walls between the Six Common Market countries run down. The wine growers of Bordeaux are in similar case. This is a reminder to British agricultural interests of the difficulties which will effect them if and when Britain joins the Common Market. The farmers of this country are not slow to argue that, if even within the Six producers with a higher standard of living are likely to be undercut by those with a lower, then how much worse is the British farmer likely to be affected who has the highest standard in Europe.

And since the Conservative Party in this country is traditionally the farmers' party, so the constituency representatives for the rural areas tend to be against their own Government in fighting shy of the Common Market. Many small industrial interests are also afraid of the abolition of protection. These, too, have their parliamentary spokesmen.

Industrial Interests

But the larger industrial interests in the U.K. are no longer averse to joining. They are taking a long-term view that competition will have to be faced through a reduction of costs in this country—and this means wages. They see the advantages of free access to the whole of Europe. They are confident that their techniques and scale of operation entitle them to a premier place in a European economy and that the only element in production that may have to be squeezed is labour cost. The Government is admittedly only exploring the desirability of entering the Common Market but this exploration is alleged to be weighted with intent to join and with this intent can now be numbered the mass of large-scale industry.

The same reasons which prompt large-scale industry to join are now making the Labour Party look askance at the project. They see a predominantly Conservative and Catholic Europe and don't much like the idea of becoming an integral part. They know that the Common Market will not stop short of economic arrangements. Already there is a Council of European Ministers and, in time, members of the Common Market will no doubt delegate certain aspects of their external affairs to this Council which will become a supra-international body.

Labour Party

The idealistic branches of the Labour Party welcome the thought of federation with Europe, but, materially, the party is wondering more and more whether it is worthwhile. Hence the extraordinary exchange in the House of Commons last week when the Prime Minister was accused by an ex-Labour Minister of "selling the Commonwealth down the river." The Prime Minister, of course, is very much concerned to keep Commonwealth interests to the fore in considering whether to join Europe or not. He does not, nor would any sensible man, wish to enter Europe at the cost of leaving the Commonwealth. But, since only a tiny proportion (perhaps 5 per cent) of British/Commonwealth trade is done on a preferential tariff, it should not be impossible to make special arrangements covering these commodities. Nor is it clear why political allegiance which Britain gives to Europe must mean allegiance taken away from the Commonwealth. Yet these are arguments heavily quoted against entering into the Common Market.

Hence some of the thinkers in the Labour Party are casting about for a resuscitation of Commonwealth and sterling area ties coupled with schemes to increase the volume of self-supplied investment inside the sterling area so that the Commonwealth could be regarded as a viable unit to stand against the Common Market and America. It is hard to see how the course of economic history can be reversed in such a way, and the better course might be to link a strengthening of Commonwealth ties with entry into the Common Market. There are still sections of the Labour Party which regard that as possible. At the moment, the pattern is confused and one must hope that the maximum publicity will be given to the Government's exploration of the problem with the Commonwealth and other countries.

COMMON MARKET IN OPERATION

(By a West German Correspondent)

The need for the economic integration of Western Europe as a first step on the way towards intermeshing all national economies of the Free World is no longer disputed by most West European politicians, economists and business executives. Admittedly, there are differences of opinion on the technical procedure which should be applied to reach this aim. But it is also growingly realised throughout Western Europe that the merger of the two existing economic areas—the Six-nation Common Market and the Seven-nation European Free Trade Area (E.F.T.A.)—in one form or the other, will represent the solution.

Meanwhile, the Common Market, the older of the two economic associations in Europe, is already exemplifying economic integration of free nations of the Western World. The period of more than three years the Common Market is now in existence allows a review of what has actually been achieved and how much progress has been made to reach one of the main aims, namely, the removal of trade barriers within the market.

Official statistics show one of the key features of Common Market activity: A regrouping of trade which has led to a considerably stronger rise in the exchange of goods among the market's members than in their trade with countries outside the market.

As regards Western Germany, for example, the figures show that between 1957 (the year before the Common Market came into existence) and 1960, the growth rate of imports from other Common Market members was about double the rate of increase of total West German imports. This trend markedly progressed in the first quarter of this year. W. German imports from the Common Market were 4.4 per cent higher than in the first quarter of 1960, while imports from E.F.T.A. were 1.2 per cent lower. Exports to the Common Market rose by 19.1 per cent, but those to E.F.T.A. only by 10.2 per cent in the period under review.

Another indication of the growing weight of the Common Market as one economic unit is its increasing attractiveness for foreign investments. Foreign, primarily U.S. investments, in the Common Market amounted to $166 million and in the rest of Europe to $293 million in 1958. The corresponding figures in 1960 were $269 million in the Common Market and $231 million in the rest of Europe.

The West German industry's attitude towards the Common Market continues to be one of wholehearted, full support for the basic principles of this scheme, though it considers it to be only the first stage of European economic integration. Fritz Berg, the President of the Federation of German Industries, has just underscored that industry was now equally determined to work for the economic integration of the whole of Europe.

DIFFICULTIES OF BRITISH ECONOMY

MR. SELWYN LLOYD URGES RESTRAINT ON SPENDING

TO those who have been following the developments in the economic situation in Great Britain in the course of the last few weeks, the stern warning given by Mr. Selwyn Lloyd, Chancellor of the Exchequer, on 22nd June, to cut the overseas military expenditure, restrain public sector spending at home and stop the wage spiral caused by leap-frogging pay claims, would not come as a surprise. Speaking at the Association of British Chambers of Commerce in London, the Chancellor categorically declared that Britain intended to maintain sterling at its present parity. The recent announcement of the Canadian Government to devalue the Canadian dollar, he stated, would also not in any way affect Britain's decision to remain at the existing parity. In view of the sizable dollar and gold reserves currently held by Britain, its large drawing rights in the International Monetary Fund and its overseas assets, Mr. Lloyd felt that his country was in a strong position to defend the pound sterling. The Chancellor, however, admitted that from the long-term point of view the trends in the British economy, especially in regard to the balance of payments, were causing concern to him. Dealing with the fall in Britain's invisible earnings, he drew the following conclusions :

(1) Britain must reduce its overseas military expenditure, and also find some means of reducing the foreign exchange burden of the cost of its forces.

(2) Britain must reduce other Government expenditure overseas.

(3) Britain must say clearly for all to hear that a country without a satisfactory surplus on its balance of payments just cannot provide unlimited quantities of aid. Even if some of it is tied, there will have to be a limit.

(4) Britain must seek ways of increasing the earnings of its service industries (shipping, banking, insurance, etc.) so that its total invisible earnings may move up again.

Implications

The implications of some of these conclusions are, indeed, serious from the point of view of the underdeveloped countries. The third conclusion, in particular, would mean that the flow of aid to underdeveloped countries might be reduced. Some commentators in Britain are also trying to press home the point that net receipts by way of dividend and interest from abroad should be augmented by the Government taking suitable steps. If this suggestion were implemented, it would clearly mean less reinvested earnings in countries where British capital is now invested.

Internal Remedies

The remedies suggested for improving the economic situation internally are quite appropriate in the prevailing situation. The entire blame for the worsening balance of payments position cannot be put on the overseas military expenditure or the aid commitments to less developed countries. In any case, Britain cannot afford, for political reasons, to make any drastic reduction in either of these two items of external expenditure. It has to readjust its living standards, the highest in Europe, to levels that will be compatible with its external obligations. It may be noted here that, in the past one year, costs and prices in Britain have risen faster than output and, though the speculative attack on the pound sterling has shown some welcome signs of abatement after the statement of Dr. Per Jacobsson at Basle on Monday, 19th June, several expert observers are still not certain that the crisis has been permanently staved off. Obviously, Mr. Jacobsson's statement does not provide any solution to the basic defects in the U.K.'s economy. Judged in this light, Mr. Lloyd's suggestion to reduce the excessive internal demand for goods and commodities is quite sound. It is only a different way of saying that the British people have to spend less and save more than they are doing.

Excessive Demand

Elucidating his statement, Mr. Selwyn Lloyd observed that excessive domestic demand was bad for the balance of payment, as it impeded the growth of exports and drew in more imports. It was also bad from the point of view of the competitive position, because it affected wages and costs. And quite apart from the effect that excessive pressure had directly on wages, there was the present built-in tendency for wages to be pushed up independently of any relation to output, thus forcing up industrial costs. A part of the answer to the problem of costs was to see that, first, best use was made of the existing productive capacity. In the second instance, British workers must be very restrained in their demands for more wages. Over the past year, wage and salary income had been rising at an annual rate of 8½ per cent, that is, at an annual rate of £1,200 million. At the same time, there had also been a substantial rise in personal income from property, especially dividends. The Chancellor, therefore, emphatically stated that price stability or a healthy state of balance of payments could not be assured when the upward trend in money income was so much larger than the rise in productivity. He added :

"Thus workers as a body and shareholders as a body have both enjoyed substantial increases in their money incomes. In the long run we cannot have price stability or keep our balance of payments in a healthy state if the upward trend on our money incomes remains so much larger than the upward trend in our productivity. To get a better relation between these two trends is one of the essential conditions of a sound economy. It is not enough to rely on taxation as a force restraining the growth of disposable incomes. There must also be restraint over the growth of pre-tax incomes. Profits have fallen away somewhat since early 1960. But this has not yet shown up in a check to the rise of dividends. No doubt it will do so in due course. But to get dividends into the right perspective I should point out that total income from employment in 1960 was 68 per cent of total domestic costs—or, in amount, over 14 times total gross dividends from ordinary and preference shares. Equally, I do not think that as a nation we can go on with wages and salaries rising at the rate at which they have been increasing lately and seem likely to increase in the near future.

"Sooner or later—and I think the day cannot be put off much longer—we have to recognise that this eternal leap-frogging process by which all in the various groups try to improve their incomes does them no good as individuals and can do us great harm as a nation. It does nothing to improve real standards. It threatens to undermine the whole basis of our prosperity. It can only weaken our balance of payments and hence jeopardises full employment. And it brings real hardship to those living on fixed incomes. Next, it is important that consumers continue to show their awareness of the national situation by the way they plan their personal expenditure. Savings have been running at a high level, but we want them to rise still higher. It is too easily forgotten that demand at home is largely the aggregate of millions of individual demands."

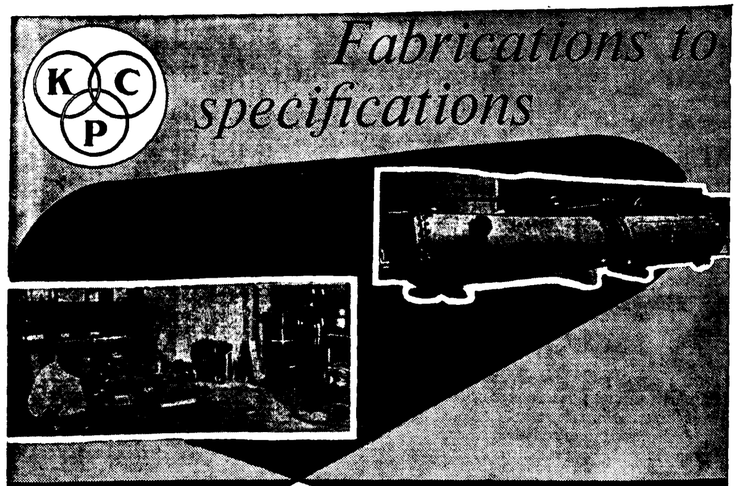
Public Expenditure

Referring to the expenditure in the public sector, Mr. Lloyd stressed that its increase must also be restrained. Some necessary programmes would have to be postponed. Britain he said, had reached a position in which taking on any substantial commitment to spend public money would mean, sooner or later, the curtailment or abandonment of something else. Summing up the position neatly, he observed :

"I will sum up as simple as I can. For national economic survival, we must grow. To grow we must export. To export we must be competitive. To be competitive we must make the best use of our productivity. We must ensure that adequate resources are available for our exports. We must see that increases in wages, salaries and other incomes remain within the limits justified by increased productivity. Those are the challenges. I ask for your help in meeting them."

The foregoing observations constitute a moving exhortation, but one wonders whether mere appeal to people will yield the results desired. It has failed in the past and there is no convincing reason to think that the outcome will be different this time.

India is negotiating with the World Bank for a loan of $20 million to finance development of coal in the private sector. The amount mentioned is to cover only the first two years of the third Five-year Plan. A delegation, headed by Mr. Chedi Lal, Joint Secretary in the Union Ministry for Steel, Mines and Fuel, will soon leave for Washington to negotiate the terms of the proposed loan. Other members of the delegation will include Mr. Prem Prasad of the Indian Mining Association, Mr. N. Mookerjee of the Indian Mining Federation and Mr. U. H. Vohra of the Indian Colliery Owners' Association. The delegation is scheduled to stay in the U.S. for only three weeks.



THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

No subscriptions are invited on the basis of this announcement. Intending subscribers should obtain from the Registered Office or any one of the Bankers or Brokers referred to hereunder, copies of the Prospectus, and the Forms of Application.

Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of the Prospectus, along with documents attached thereto, has been delivered to the Registrar of Companies, West Bengal, as required, by section 60 of the Companies Act, 1956.

The shares of the Company are already quoted on the Delhi Stock Exchange. Applications have been made to the Calcutta and Bombay Stock Exchanges for permission to deal in and for official quotations of the shares of the Company.

The subscription list will open at the commencement of Banking hours on Monday the 3rd July 1961 and will close at the close of Banking hours on Saturday 8th July 1961 or earlier at the discretion of the Directors, if the issue is fully subscribed, but not before the close of the Banking hours on Wednesday the 5th July 1961.

UNIVERSAL CABLES LIMITED

(INCORPORATED ON 6TH MARCH 1945 AT CALCUTTA UNDER THE INDIAN COMPANIES ACT, 1913.)

SHARE CAPITAL AUTHORISED

Rs. 5,00,00,000 divided into 30,00,000 Equity shares of Rs. 10/- each and 2,00,000 Preference Shares of Rs. 100/- each	Rs.	5,00,00,000

SUBSCRIBED AND PAID-UP CAPITAL

3,49,725 Equity Shares of Rs. 10/- each. These shares are fully paid up, payment having been received in cash	Rs.	34,97,250

PRESENT ISSUE

7,00,000 Equity Shares of Rs. 10/- each at par	Rs.	70,00,000

Out of the Present Issue :—

(a) Offered to the existing members of the Company pursuant to Section 81(1) of the Companies Act, 1956, 3,49,725 Equity shares of Rs. 10 each for cash	Rs.	34,97,250
(b) Offered to the public under the Prospectus for subscription in cash 3,50,275 Equity shares of Rs. 10 each	Rs.	35,02,750
	Rs.	70,00,000

Such of the shares offered to the existing members of the Company as are not taken up by them and/or their nominees will also be available for subscription to the public.

(The aforesaid new Equity shares shall rank in all respects *pari passu* with the existing ordinary shares of the Company except that they shall not be entitled to share in any dividend in respect of the year ending 31st March 1961 or any previous period. The dividend payable in any year would be in proportion to the amount paid on the shares from time to time).

DIRECTORS

1. **SHRI M. P. BIRLA**, 18, Gurusaday Road, Calcutta, Industrialist and Merchant.
2. **SHRI D. P. GOENKA**, 145, Muktaram Babu Street, Calcutta, Industrialist and Merchant.
3. **SHRI A. M. M. ARUNACHALAM**, 'The Laurels,' Chittaranjan Road, Madras 18, Industrialist and Merchant.
4. **SHRI ARVIND NAROTTAM LALBHAI**, 'Shalimar,' Shahibagh, Ahmedabad, Industrialist and Merchant.
5. **SHRI P. R. SARKER**, P/165, Block 'C', New Alipore, Calcutta, Industrialist and Merchant.

(PROPOSED) MANAGING AGENTS:
BIRLA GWALIOR PRIVATE LIMITED.
Baijal's Kothi, Morar, GWALIOR.

Subscribed and Paid-up Capital: 2,50,000 Ordinary Shares of Rs. 10 each.. .. .. .. Rs. 25,00,000

REGISTERED OFFICE :
8, India Exchange Place, Calcutta-1.

BANKERS FOR THE ISSUE :
1. **The State Bank of India**, 1, 2, and 3, Strand Road, Calcutta.
2. **The United Commercial Bank, Ltd.**, 2, India Exchange Place, Calcutta.
3. **The Central Bank of India Ltd.**, 33, Netaji Subhas Road, Calcutta.
4. **The Bank of Baroda Limited**, India Exchange Place, Calcutta.
5. **The Bank of India Limited**, 23-B, Netaji Subhas Road, Calcutta.

SOLICITORS :
Messrs. Khaitan & Co., 1 and 2 Old Post Street, Calcutta.

AUDITORS :
Messrs. S. R. Batliboi & Co., Chartered Accountants, 1B, Old P. O. Street, Calcutta.

APPLICATIONS AND SUBSCRIPTIONS

Applications for shares by members of public must be for a minimum of 25 shares or multiples of 25 shares.

TERMS OF PAYMENT OF ABOVE SHARES

On application ..	Rs. 5 per share.
Balance	Rs. 5 per share on call to be made not earlier than 6 months after allotment.

Rs. 10 PER SHARE.

OBJECTS AND PROFITABILITY OF THE COMPANY

The particular immediate object is to manufacture Paper Insulated Lead Covered Power Cables with an annual capacity of 624 Miles.

India's dynamic growth under the First and Second Five-Year Plans and the progressively increasing tempo under the Third Plan is associated with the rapid expansion of electricity in the country in which cables play a vital role. If power is not available in ample sufficiency to meet demand, a very serious restriction on the proper growth of all industries will occur and its effect will be even more seriously felt in the processing industries which offer the greatest scope for increasing employment. Equally, if agricultural improvement and rural development take place as they should, there will be a vast and important demand for increasing quantities of power for villages and agricultural development. Therefore, a concern such as this, should do well in a country which has huge electrical programme in hand. The phenomenal progress of electricity has led to a corresponding demand for cables.

Power development has been given top priority in the Third Five-Year Plan. It is proposed to increase the total generating capacity of power from 5.8 million kW at the end of the Second Plan to 13.4 million KW at the end of the Third Plan. It is expected that 25,000 additional towns and villages will be electrified during the Third Plan period bringing the total to 44,000.

POTENTIAL DEMAND

Distribution of this power load to consumers—industrial and domestic—would involve heavy requirements of Paper Insulated Cables. The production target of these cables at the end of the third Five-Year Plan has been laid down at 4,000 miles per annum. Indigenous production in 1960 was only 570 miles and there is, therefore, a considerable gap between supply and demand. Hitherto, a major requirement of these cables was being met by imports from foreign countries, which have had to be severely curtailed owing to the shortage of foreign exchange. Therefore, there should be no difficulty in selling the Company's total output.

The industrial advancement of a country is measured in terms of *per capita* consumption of electric energy and from this point of view, our present consumption of electricity is awfully low. Both in the 'take-off' stage as also in subsequent plan periods, rapid industrialisation would mean a substantial increase in the production of PILC Cables to bring the energy to the consumers and, as such, prospects for future expansion of this industry are excellent.

The Company has also been investigating the prospects of production of other electrical items used for the dissemination of electric energy and on the basis of such investigations application for the required Industrial Licence under the I.D.R. Act has already been made.

Production in the normal course is expected to commence by December 1962. The Directors hope that barring unforeseen factors, they will be in a position to pay a reasonable dividend on the equity capital.

TECHNICAL COLLABORATION

British Insulated Callender's Cables Ltd., of U.K. are the foreign technical collaborators in this project. They are specialists in this line and as is well known, are the largest manufacturers of cables in the world. The U.K. collaborators will assist in setting up the Factory and shall provide technical assistance, know-how, use of patents and processes to ensure that the Company's products are of the highest quality. British Insulated Callender's Cables will send technicians from U.K. to the Company's Works to train Indian personnel and also to assist in the production. B.I.C.C. will keep the Company in the forefront technically and would permit employees of the Company to be trained in their U.K. factories and laboratories.

The Central Government's approval has been obtained for their appointment.

LOCATION.

The Plant shall be located at Satna in the State of Madhya Pradesh. Satna is geographically well situated and enjoys all the facilities of rail and road transport. The site has excellent facilities in regard to power and water and sufficient land is available to provide for the present needs and also for future expansion. A Railway Siding already exists near the site which shall be extended to our Works at a small cost.

UNDERWRITING

The entire issue of Rupees Seventy Lakhs has been fully underwritten, the names of the Underwriters and the amount of the shares underwritten by them being as stated below :—

	Names	Amount Underwritten (Rs. in Lakhs).
(1)	**Messrs. Investment Corporation of India Limited**, 'Ewart House,' Bruce Street, Bombay-1	22.00
(2)	Messrs. G. M. Pyne, 14, India Exchange Place, Calcutta-1	8.00
(3)	Messrs. Navalchand T. Shah & Co., 102, Stock Exchange New Building, Dalal Street, Bombay-1	8.00
(4)	Messrs. Chimanlal J. Dalal & Co., Stock Exchange New Building, Dalal Street, Bombay-1	8.00
(5)	Messrs. Devkaran Nanjee & Co., Horniman Circle, Bombay-1	8.00
(6)	Messrs. Batliwala & Karani, Union Bank Building, Dalal Street, Bombay-1 ..	8.00
(7)	Messrs. A. B. Pandit & Co., 32, Apollo Street, Bombay-1	8.00

In the opinion of the Directors, the resources of the said Underwriters are sufficient to discharge their underwriting obligations.

UNDERWRITING COMMISSION

A commission at the rate of 2.5% shall be paid to the underwriters in the case of 3,50,275 Equity Shares offered to the Public and also a commission at the same rate shall be paid on such Equity Shares which are not taken up by the existing shareholders or their nominees and are allotted to the Public.

BROKERAGE

Brokerage will be paid by the Company to members of the recognised Stock Exchanges and to Banks at the rate of 1% on the nominal value of the aforesaid Equity Shares offered to the Public in respect of the shares allotted against applications bearing their stamp. No brokerage is payable in respect of the shares which may be allotted to the existing shareholders and/or their nominees as right shares.

Brokerage on the same basis will be payable to the Underwriters who are also Brokers to this issue in respect of the shares allotted against applications made or procured by them provided that the relative forms of application bear their respective stamps, and in such case no brokerage will be payable to any other party in respect of the shares so allotted.

CAPITAL REQUIREMENT

Capital outlay for the Project is given below :—

	Rs. (in lakhs)
Land	3.00
Buildings	28.50
Plant and Machinery	135.97
Preliminary Expenses	2.53
Working Capital	80.00
	250.00

The above sum will be met in the following manner :—

From Equity Share Capital	105.00
„ Foreign Exchange Loans I.C.I.C.I. and C.D.F.C. (under negotiation) ..	80.00
„ Borrowings from Banks	65.00
	250.00

The minimum subscription in respect of the present issue on which the Directors will proceed to allot is Rs. 70 lakhs which is the total amount of the present issue offered to the existing members and to the public.

IMPORT LICENCE AND FOREIGN EXCHANGE

The Company has made an application for import licence for the requisite plant and machinery.

Applications have been made to Messrs. I.C.I.C.I., Bombay, and Messrs. C.D.F.C., London, for foreign exchange loan to the value of Rs. 80 lakhs, and the same are under their consideration.

APPLICATIONS AND ALLOTMENT

Applications must be for 25 shares or multiples of 25 shares. All applications must be made on the form accompanying this Prospectus which can be had from the Company's Bankers and Brokers. All application forms properly completed must be lodged together with the amount payable on application with any of the following Banks or at their branches as mentioned below :—

BANKS IN BOMBAY

1. THE STATE BANK OF INDIA.
2. THE UNITED COMMERCIAL BANK LTD.
3. THE CENTRAL BANK OF INDIA LTD.
4. THE BANK OF BARODA LTD.
5. THE BANK OF INDIA LTD.

BANKS' MAIN OFFICES AT :

CALCUTTA, BOMBAY, DELHI, MADRAS, AHMEDABAD, RAJKOT, POONA, BANGALORE AND BHOPAL.

The remittance should be made by cheque or draft drawn on any Bank in the aforesaid towns (i.e. Calcutta, Bombay, Delhi, Madras, Ahmedabad, Rajkot, Poona and Bangalore and Bhopal) only and deposited with the above Banks or their above Branches.

Cheques or drafts should be drawn in favour of any one of the above Banks Account The Universal Cables Ltd. For the applicant's protection, cheques or drafts should be crossed 'Account Payee only.' A separate cheque or draft must accompany each application.

Allotment will be notified by the despatch of an allotment letter but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part in either case without assigning any reason. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded within two months from the date of the closing of the Subscription list, to the applicant in which event Bank commission, if any, will be payable by the applicant.

INCOME-TAX AMENDMENT BILL—III

SOME CHANGES SUGGESTED

By A. C. Sampath Iyengar

[This is the third and final instalment of the notes suggesting changes in some sections of the Income-tax Amendment Bill which is now under the consideration of a Joint Select Committee of Parliament.—ED.]

Clause (i) of Section 64 (Income of Spouse from Partnership)

THIS clause requires the inclusion of the share-income from a partnership of one spouse, in the total income of the other spouse. But the question is in whose total income is the income of the other spouse to be included? Is the husband's income to be included in the total income of the wife, or the wife's income to be included in the total income of the husband? Tax incidence would differ in the two cases. The matter may not rest there. It may be that the husband is being assessed in one circle and the wife in another. The Income-tax Officer in the former circle may aggregate the income in the husband's total income, while the Income-tax Officer in the latter circle might aggregate the income in the wife's total income. Silence on this topic would inevitably create litigation

Clause (ii) of Section 64

This clause directs the inclusion of the share-income of a minor child admitted to the benefits of a partnership, in the total income of the parent-individual. Supposing (1) the minor, (2) the father and (3) the mother are partners with or without strangers in the partnership business: is the minor's income to be included in the total income of the father or in the total income of the mother? Tax incidence would vary according as minor's income is aggregated with that of the mother or the father.

Section 64(iii) and (iv) Read with Section 27

Clauses (iii) and (iv) of Section 64 are general in language. They apply to transfers of all assets whether they are of house property or otherwise. The enactment of Section 27(i) in the circumstances creates an overlapping.

Clause (iii) of Section 64 saves from aggregation the asset transferred by a husband to the wife "for adequate consideration *or in connection with an agreement to live apart.*" These latter italicised words do not appear in clause (i) of Section 27. The reason for the omission is not clear. The omission would lead to a conflict in the assessment proceedings.

Again, clause (iv) of Section 64 saves from its operation the transfer of assets to a married daughter, though a minor child. That saving is not to be found in clause (i) of Section 27.

Clause (iii) of Section 64 begins with the preface "subject to the provisions of Section 27." That preface is lacking in the very next clause (iv) of Section 64. Does it imply that whereas clause (iii) of Section 64 does not apply to transfer of house property, clause (iv) in relation to a minor child does apply? With what consequence?

Clause (v) of Section 64

The indefinite article 'a' in the expression "or *a* minor child" requires to be removed and substituted by "his or her" so as to make the language precise and intelligible. As per the proposed amendment, the relevant portion of the clause would read as follows: "for the immediate or deferred benefit of his or her spouse or *his or her* minor child." See the remarks of the Supreme Court in *Sodra Devi's Case*, 1957 32 I.T.R. 615, at pp. 625 and 639.

Sections 68 and 69

The phraseology employed for bringing into charge unexplained cash credits or unexplained investments is that the assessee's explanation "is not *in the opinion* of the Income-tax Officer satisfactory." This would make the Income-tax Officer's order non-justiciable, and deprive the assessee of his right to have the Income-tax Officer's decision reviewed by a higher authority. The words "in the opinion of the Income-tax Officer" hence in both the above sections should be deleted.

Section 11 (1) (i) (a) (New Provision): Accumulation in Charity

The words, "to the extent to which the income so accumulated," are capable of being understood as referring to the consolidated sums of accumulation year after year, i.e. to say, as including brought-forward accumulations. In order to avoid the confusion, it is suggested that the latter part of clause (*a*) may be re-cast as follows:

"and where any such income is *set apart* for application in future, to such purposes in India, to the extent to which the income so *set apart* is not in excess of twenty-five per cent of the income from the property."

Section 17 (2), Clause (v) (Old Section 7 (1), Explanation 1, cl. (v)): Perquisite

This clause baldly runs:

"any sum payable by the employer . . . to effect an assurance on the life of the assessee or to effect a contract for an annuity."

The beneficiary under the contract for the annuity is in no way linked up with the assessee, either as being the assessee himself or his nominees or dependants, etc. Even the former words "to effect an assurance on the life of the assessee" would require precision that the benefit under the assurance enures either to the assessee or to his nominees or dependants.

Section 23 (1), 2nd Proviso (New Provision): Annual Value of a Building comprising One or More Residential Unit

The language of the latter part of the second proviso to Section 23(1), which talks of reduction in terms of an aggregate of two sums, is capable of simplification as follows:—

"the annual value as determined under this sub-section shall, for a period of three years from the date of the completion of the building, *be further reduced by a sum not exceeding Rs. 600 for each residential unit*, so however that the income in respect of any residential unit is in no case a loss."

The words italicised here indicate the change suggested.

The relief under the second proviso to Section 23(1) is to last for a period of three years from the date of completion of the building. It is not clear whether this period of three years refers to three calendar years comprising 36 months, or three accounting years after the completion of the building. The matter requires clarification.

Section 24 (1), Clause (v) (Old Section 9 (1) (iv)): Ground Rent

Clause (vii) of Section 24(1) in relation to the allowance of land revenue permits the same in respect of "*any sums paid.*" Ground rent, clause (v), is also a similar item. This may also be allowed in respect of "sums *paid.*" Words to such effect are now lacking.

Section 24 (1), Clause (x) (New Provision): Deduction for Unrealised Rents

This deduction was previously provided for by virtue of a notification issued under old Section 60. The validity of any such notification—or for that matter, of any notification issued under the old Act—after the passing of this Act of 1961, is doubtful. Moreover, this being a regular deduction in the computation of income under the head "House Property," it is essential that the deduction should be self-contained in this Section. Hence, clause (x) should be re-cast so as to specify the amount of lost rent which can be deducted and the conditions under which the deduction may be claimed.

Section 36 (1) (Old Section 10 (2) (x)): Deduction in Business of Bonus or Commission Paid to an Employee

The Law Commission inserted a useful clause permitting specifically as a deduction any payment made to an employee "in pursuance of the award of an industrial or other tribunal constituted under any law for the settlement of industrial disputes." See page 127 of the Law Commission's Report. This is an eminently fair and justifiable deduction in the computation of business income. The Bill, however, has omitted this. Non-allowance of such expenditure would lead to an artificial profit.

Section 56 (2) (iii) (Old) Section 12 (4):

The words "and lands appurtenant thereto" have to be inserted in both places in lines 2 and 3 where the word "buildings" occurs, so as to accord with the language of Section 22.

Section 110: Determination of Tax in Certain Special cases

The marginal heading to this Section 110 is a contradiction in terms. When no tax is payable on a certain income, talking of determination of tax thereon is unintelligible.

Section 139 (1), Proviso, Clause (ii): Extension of Time for Furnishing Return

In line 2 of clause (ii) of the proviso, the word "simple" has been omitted before the word "interest".

Section 139 (4) (Old Section 22 (3)): Voluntary Return

This section is a departure from the old section which permitted furnishing of a voluntary return at any time before the assessment is made. The present section restricts the period of furnishing a voluntary return to a period of four assessment years from the end of the assessment year to which the voluntary return relates. It is in the interests of the Revenue to gather tax whensoever it is offered. In that light, the expediency of this restriction requires consideration.

Section 140 (New Provision): Signing and Verification of Returns

This section grants power to an authorised agent of the assessee to sign and verify the return where the assessee—an individual or a karta—is *mentally incapacitated*. There may be a *physical incapacity* too, as for example, due to blindness or an incapacity to use the fingers owing to paralysis, leprosy, etc. So, along with the word "mentally", the word "physically" may also be inserted.

Section 153 (1) (b) (Old Section 34 (3)): Time Limit for Making an Assessment in the Regular Course

The Law Commission recommended that any assessment in the regular course (old Section 23 assessments) should be made within four years from the end of the assessment year in which the income was first assessable (and the same has been accepted in the Bill—see Section 153(1) (a).

After having done so, the Law Commission enlarged the period for making an assessment in cases where the Income-tax Officer during the course of his inquiry found that there was a concealment of the particulars of income (old Section 28(1) (c)). In this latter event, the Law Commission stated that the assessment could be completed *within four years from the date of the issue of a penalty notice in respect of the concealment.* See the Law Commission's Report, page 20 and Section 283(1) at page 253. *This link-up of the extendible period* with the issue/service of a penalty notice *is essential* in order to prevent an Income-tax Officer from sleeping over the assessment for four years and then after the lapse of the four-year period trying to avail himself of the extended period by putting forward a plea of concealment, as if the concealment had been detected by him before the expiry of four years. If the bar of time had begun to operate on the expiry of the four years as provided for in clause (*a*) of Section 153(1), it should not be permitted to be by-passed by this dubious procedure of the Income-tax Officer. In any case, the Legislature should not leave any room by which such a by-passing may be effected. The only means hence by which the extended period is granted to cases of concealment genuinely discovered before the end of the four years, would be to link up the extension with the issue/service of the penalty notice. This salutary recommendation of the Law Commission, fair to the assessee as well as to the Department, has been given the go-by in the Bill.

Next, clause (*b*) of Section 153(1) of the Bill states that the assessment can be made within the "expiry of eight years from the end of the assessment year in which the income was first assessable, in a case falling within clause (*c*) of sub-section (1) of Section 271" (old Section 28(1)(c)). With reference to this provision, it may be remarked that there is no reason to extend the period to eight years if the concealment of income was discovered, say, in the first or second financial year, following the assessment year. If the discovery of concealment was made, say, in the second financial year, according to the Law Commission's draft the assessment should be completed within six years after the relevant assessment year. There is no warrant for granting a period of eight years for the completion of the assessment in such instance. Apart from this objection there is the other fundamental objection afore-pointed out that, on the language of the Bill as it at present

DIM OUTLOOK FOR LANCASHIRE TEXTILE TRADE

MODERNISATION SCHEME BEING JEOPARDISED

From Our Special Correspondent

MANCHESTER, 20*th June*

MANCHESTER LETTER

BEFORE Lancashire mills can compete with the best textile industries in the West, radical changes will have to take place, according to a Lancashire cotton leader.

Mr. H. B. Harrison, Chairman of the Cotton and Rayon Merchants' Association, said in Manchester that Continental cloth could be imported at prices which compared favourably with those being asked in Lancashire, even after import duties had been paid. He told the annual meeting of the Association that before Lancashire mills could compete they would have to be fully equipped with modern machinery, adequate manpower for three-shift working would be needed and labour would have to be employed much more efficiently. Mr. Harrison said he could not remember ever before having operated in circumstances where, in many cases, purchases of loom-state cloth from Lancashire mills did not reach merchants' warehouses as grey cloth for many months—yet at the same time, supplies had been readily obtainable overseas. And he continued:

"Converters have been forced to look overseas for their supplies of loom-state cloth if they wish to retain even a percentage of their normal business.

"From the merchant converter's point of view, the purchase of this cloth is only helping him to provide for his customers until such time as supplies in Lancashire are placed on a sounder footing.

"Even so, from the industry's point of view, the potential threat of low-priced foreign cloth places Lancashire mills in a dangerous position."

Mr. Harrison said that while the import agreement with Hong Kong ended next January, the full benefits of the modernisation scheme in the Lancashire cotton industry would not be felt until 1964. This in itself was reason enough for imports from Commonwealth Asian countries to be restricted for at least another three years and he also urged that duty-free goods should be restricted in any future agreement.

Dim Outlook

Those whose task is to comment on current trends in business are just as disappointed as their confidants in having to report from week to week a disappointing offtake and an absence of forward operations worth recording. Although this is a not uncommon state of affairs during the summer months, the arrival of the holiday season frequently presents an opportunity of assessing the outlook. At the moment it is no use disguising the fact that this appears to be rather disconcerting.

Not without significance is the fact that in April the level of sales recorded by the Wholesale Textile Association showed a contraction of 5.8 per cent compared with the same month last year. Earlier gains maintained the improvement over the year as a whole and for the four months the offtake was 4½ per cent up on 1960. Stocks held, however, were nearly 10½ per cent higher at the end of April this year than twelve months previously.

There have been numerous complaints from many sections of the trade that buyers are still withholding their purchases on a far larger scale than had been anticipated in the earlier months of the year. Some revival in activity had been hoped for, even though any substantial broadening in demand was considered unlikely. Various aspects of current economic and political affairs, however, have resulted in a general lack of initiative among customers, who are quite content to await a less disturbing prospect.

Restraining Features

Most of the factors which have a bearing on the situation have been in the picture long enough already. The direct statement by Hong Kong about the future of the pact on imports did a great deal of harm, despite its subsequent partial retraction.

The hovering attitude towards the European Common Market pursued by the British Government has also caused further hesitation. Recent pressure on sterling, combined with rumblings of possible international disputations, made distributors singularly unwilling to put down additional contracts to follow on their extensive lines which were booked last year and which are only now being completed.

As always, however gloomy the immediate prospect, the possibility of a "snow-ball" movement, should buyers suddenly change their minds, cannot be ignored. The market for cotton goods remains incorrigibly governed by sentiment.

Although the mood at the moment foreshadows no sudden reversal of policy, distributors can be swayed by a change in atmosphere which is subtle rather than practical in tone. It only needs a few of the bigger buyers to take a snap decision for others to follow and create an entire change in mentality from caution to widespread interest.

Rising Import Danger to Man-made Fibres

A warning that rising imports of garments and fabrics represent a danger to the Lancashire textile trade in man-made fibres has been given by the British Man-Made Fibres Federation. Low-priced imports were more likely to affect garments of spun fabric than filament.

The Federation forecast in a statistical survey that apparel fabric deliveries from Lancashire are unlikely to show any immediate rise unless there is a sharp rise in retail sales.

In the first quarter of 1961 production of spun yarn was down by 15 per cent, woven fabric by 10 per cent and converters' delizeries by 4 per cent compared with the final quarter of 1960. The share of spun fabrics in retail sales of all woven apparel was estimated to have fallen from 13 per cent to 12 per cent over the past year.

In the filament section, production and final offtake of woven fabric were both higher in the first quarter. Stocks increased by nearly 2,000,000 yards, largely by converters who were re-stocking after a long period of stock reduction.

Government Must Help

With doubts and uncertainty striking at the confidence which has been slowly and expensively re-established in the future of the Lancashire industry, it now seems clear that only a positive lead by the British Government can help to break the virtual deadlock which apparently exists at the moment in the matter of reopening industry-to-industry negotiations with Hong Kong for a renewal of the voluntary agreement now in the final six months of its three-year term.

From the outside, little seems to be happening (frequent cold blasts from Hong Kong apart) at official level at the present time. Behind the scenes there is a good deal of activity. In his almost daily consultations with the Board of Trade at the present time Lord Rochdale, Chairman of the Cotton Board, must have made it clear that the long-term future of the industry rests very much on a favourable solution being found to present difficulties; otherwise the pace of re-equipment, already too slow, may well come to a standstill. On this most important aspect, Mr. Harrison, Chairman of the Cotton and Rayon Merchants' Association, said in his annual report: "Government backing will be essential when the voluntary trade agreements are reviewed. Otherwise the Government-sponsored and financed Reorganisation Scheme will have failed in its objectives."

Meanwhile further evidence that the modernisation scheme is being jeopardised has come from Mr. Philip L. Wright, Chairman of the Bleachers' Association. "Exports continue to shrink and imports of made-up goods of foreign origin continue to grow," he says in his statement with the accounts. "Unless and until stringent and long-term limits are placed on imported finished cloth and made-up garments of Asiatic origin we shall be hesitant in spending large sums on re-equipment to qualify for Government grant."—*All Rights Reserved.*

INCOME-TAX AMENDMENT BILL—III

(*Concluded from page 14*)

stands, it is open to an Income-tax Officer to plead discovery of concealment of income, though he might not have in fact discovered any such concealment within the initial period of four years. Hence, it is absolutely necessary that the extended period should be linked up with the issue/service of the penalty notice.

Section 153 (3), Clause (i) (Old Section 34 (3), 2nd Proviso): Making of an Assessment without Bar of Time Consequent on the Setting Aside of an *ex-parte* Assessment (Old Section 27)

Not infrequently it happens that an *ex-parte* assessment is made for lack of time to complete the inquiry within the time limit, on the understanding that on an application being made by the assessee to reopen the assessment such reopening would be granted. Such a case does not stand on the same footing as an assessment to be made in consequence of, or to give effect to, an appellate or revisional order, a genuine cause. The refusal of the extended period to cases of reopening of *ex-parte* assessments, would speed up assessments.

Section 153, Explanations 2 and 3 (Old Section 34 (3), 2nd Proviso) : Removal of Bar of Time-limit in Certain Cases

Apart from the contingencies contemplated in Explanations 2 and 3, for the reopening of assessments of back years without the bar of time, there is another set of contingencies not noticed, and they are: (1) an order passed on a writ application under Article 226 of the Constitution by a High Court or (2) by the Supreme Court on appeal therefrom or (3) orders passed by the Supreme Court under Article 32 of the Constitution. To take the instance of the *Bidi Supply Case*, 1956 29 I.T.R. 717, S.C., where the Supreme Court set aside the assessment on the technical ground that the order of transfer of the assessee's file to the Income-tax Officer who made the assessment was without jurisdiction, power should exist for the Revenue to take steps through the appropriate Income-tax Officer to assess or re-assess the assessee, without the bar of limitation under Section 149 or Section 153(1) and (2). Conceivably and most often the proceedings by way of writ may and do last a good long time, and meantime, the four-year limit would have expired.

The main part of sub-section (3) of Section 153 combines two different ideas from two different standpoints, ill-cohering together. It is suggested that the words "which may be completed at any time," in line 3 of sub-section (3), may be deleted; and instead, after clause (iii) of sub-section (3), a new paragraph may be opened to run as follows:—

"In these three cases, the assessment may be completed at any time."

Section 176 (4) Contrasted with Section 28 (i) : Charge of a Discontinued Profession

Sub-section (4) of Section 176 (giving effect to the recommendation of the Direct Taxes Administration Enquiry Committee) enacts that at whatever period a profession might have discontinued, still, if any income in relation thereto were received during the accounting year, the same would be chargeable. It is immaterial that the profession ceased even prior to the accounting year in question. But if we now turn to Section 28, which deals with the charge of the composite head "Business or profession," the profession is required to have been exercised at least "at any time during the previous year." This latter provision was inserted to adopt the majority view taken in *Kamdar's Case*, 1946 14 I.T.R. 10, but since then, much water has flown under the bridge of the Direct Taxes Administration Enquiry Committee. To avoid the conflict between the aforesaid two provisions (Section 28 and Section 176(4)), clause (i) of Section 28 should be re-cast as follows:

"(i) profits and gains of any business carried on by the assessee at any time during the previous year and the profits and gains of any profession carried on at any time whether before or during the previous year;"

Section 179 (2) (New Provision) : Liquidation of a Company

The closing words of the sub-section, viz., "the total capital of the company" refer to the *paid-up* capital of the company. The same may be made explicit, by insertion of the above italicised word.

Section 253 (4) and (5) (New Provision) : Memorandum of cross objections to the Appellate Tribunal

This is a new provision enabling the filing of a memorandum of cross objections to the Appellate Tribunal. Such memorandum has to be filed after "receipt of the notice" by the respondent. In order to exclude any unofficial notice given to the respondent by the appellant, it is necessary that the following words should be inserted after the words "receipt of the notice":—

"from the Appellate Tribunal fixing the date of hearing of the appeal."

The change suggested is in keeping with the corresponding language of Order 41 Rule 22 of the Civil Procedure Code.

The language of sub-section (5) of Section 253 requires correction. The time limit for permitting a memorandum of objections is provided in sub-section (4), namely, thirty days of the receipt of the notice of appeal. So, sub-section (5) should be changed so as to substitute for the words "after the expiry of the relevant period referred to in sub-section (3)" the following words:—

"after the expiry of the relevant *periods* referred to *in sub-section (3) and* (4)."

Section 256 (1) (Old Section 66 (1)): "Question of Law Arising out of an Order of" the Tribunal

The interpretation of the words "any question of law arising out of such order" has been a matter of intense difference of opinion amongst the High Courts of India, in the context of raising a new question of law before the High Court for the first time. The Supreme Court noticing this conflict of views in *C.I.T. vs. Ogale Glass Works Ltd.*, 1954, 25 I.T.R. 529, at page 540, observed: "In the view we have taken, it is not necessary for us, on this occasion, to express any opinion on the larger question as to the scope, meaning and import of the words 'any question of law arising out of' the Tribunal's order, on the interpretation of which there exists a wide divergence of judicial opinion." Referring to this divergence in a later case in *United Commercial Bank Ltd. vs. C.I.T.*, 1957 32 I.T.R. 688, at 703-4, the Supreme Court interpreted the words in a liberal manner. The conflict of views, however, remains. This is a fit subject-matter for the Legislature to clear up.

Advisability of Scrutiny of the Bill by the Law Commission

The Law Commission has made recommendations in several respects, some of which have not been adopted in the Bill. But quite apart from that category of cases, there are new departures made by the Bill in respect of which the Law Commission's views would be extremely helpful. Instances are:

(1) Introduction of the words "wholly, necessarily and exclusively" in several places where they did not occur before.

(2) Introduction of Section 13 which is in direct conflict with Section 11 (relating to Charity).

(3) Conflict in the charge of spouses—Section 64(1).

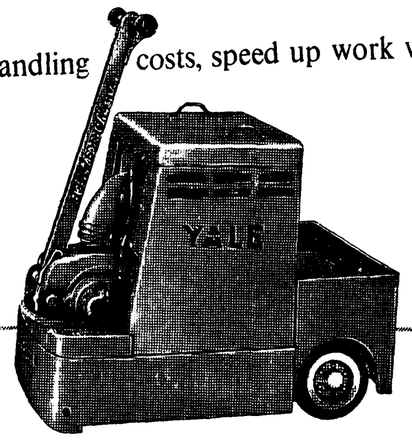
(4) Conflict in the charge of minor partner's share—Section 64(2); etc.

Besides, in several places in the Bill wherever there has been a departure from the scheme or the language of the Law Commission, as for instance, in Section 22 relating to house property, in Section 45 relating to capital gains, etc., the drafting is capable of improvement, and for this purpose also, the scrutiny by the Law Commission would be helpful, so as to make the new drafting to accord with the general pattern set by the Law Commission in other places.

Finally, the Bill is not just a reproduction of the existing tax structure simplified or analysed. It has made several changes in the substantive law which would require close attention at the hands of not only the members of the Select Committee, but also everyone concerned in the framing of the Bill, to wit, the Law Commission, the Finance Ministry and the Law Ministry.

(*Concluded*)

Reduce handling costs, speed up work with



YALE Heavy Duty Electric Tractors

You can save as much as 50% in costs by mechanising handling and movement of materials with YALE 'Worksaver' Tractors in factories, warehouses, railways...in fact in any place where materials are required to be moved.

This lightweight, manoeuvrable electric tractor can draw a train of loaded trailers over any distance...promote a smooth flow of goods...release workers for more productive jobs. The savings effected in time alone will more than pay for your YALE Electric Tractor.

VOLTAS, Sole Distributors for the *complete* line of YALE Industrial Lift Trucks and Hoists, will be glad to offer expert advice on your materials handling problems.

INVESTORS' GUIDE

The 1961 Edition of the Calcutta Stock Exchange Official Year Book is just now out. It is India's most up-to-date and comprehensive work of reference on investments. Contains detailed information relating to the securities of all companies quoted on the Calcutta and Bombay Stock Exchanges. Also contains information on economic matters, tax rules and rates, names and addresses of Liquidators of Companies wound up since 1944, preference dividends in arrears. Special features of this Edition: (1) Information relating to all Bombay Companies and (2) List of Companies which accept vernacular signatures on transfer deed.

Copies available from the Stock Exchange, 7, Lyons Range, Calcutta, at a price of Rs. 12.50 nP per copy. Postage Rs. 2 extra.

FREE with each copy "Trading in Cleared Securities."

CO-OPERATIVE SUGAR FACTORIES

HIGH COSTS SHOULD BE A MATTER OF CONCERN TO THEM TOO

THE Committee on Co-operative Processing, appointed by the National Co-operative Development and Warehousing Board, recently examined the promotional and organisational aspects of co-operative societies handling the *processing of sugarcane and other agricultural* commodities. Its recommendations, covering co-operative sugar factories, have been framed on the basis that co-operative processing, like any other co-operative activity, needs preferential treatment in a variety of ways. In the first place, it is recommended that State Finance Corporations should be induced to provide assistance by way of loans to processing units for block investment and that these loans be guaranteed by the State Governments. There is no need, it would appear, for this recommendation, for already the 57 co-operative sugar factories, existing as of 1959-60, have secured liberal loan assistance (Rs. 1.16 crore from the Government, Rs. 10.72 crores from central financing agencies, Rs. 2.21 crores from the State Bank of India, Rs. 12.19 crores from the Industrial Finance Corporation and Rs. 3.04 crores from others). That the relatively slender resources of State Finance Corporations should be mostly available to medium or small enterprises in the private sector is not the only consideration here, for there is also the related point that enterprises in the co-operative sector should be mostly financed by central co-operative agencies. If there is to be an expanding co-operative sector, the financing activities in that sector should obviously be done mainly by co-operative agencies themselves. After all, these co-operative agencies also derive some of their resources from the Government.

The second recommendation made by the Committee is that the co-operative sugar factories should be exempted from the cane cess and the grower-members from sales tax liability. It is further recommended that these factories should also get some concessions in the matter of sales tax on the import of machinery. This is a kind of preferential treatment which would be rightly questioned by the sugar in-industry in the private sector, as well as by the *general taxpayer*. Whether a sugar factory is in the co-operative sector or in the private sector, there should be no discrimination in the matter of taxation as between the two sectors. The co-operative sugar factories should thus be placed on a footing of equality with the private factories in this regard. It looks as though the Committee has recommended these concessions in taxation in the background of the rather poor working results of co-operative sugar factories. It will be seen from Table 1 (which has been constructed out of the figures given in the *Statistical Statements Relating to the Co-operative Movement in India 1959-60, recently* published by the Reserve Bank of India) that as many as 14 co-operative sugar factories incurred losses aggregating Rs. 38.6 lakhs in 1959-60 and that eight factories worked without profit or loss during that year. Only 31 factories made profits aggregating Rs. 85.7 lakhs. Of course, the results were better in 1959-60 than in 1958-59 and only 26 factories were actually working in 1959-60. Still, the point needs to be emphasised that co-operative sugar factories do not seem to be very promising in terms of profit-making. Perhaps this explains the Co-operative Processing Committee's recommendation that co-operative sugar factories be exempted from the cane cess. To confer a fiscal advantage of the kind on the co-operative sugar factories while the private factories continue to pay a cane cess working out to about Rs. 2 per maund of sugar would be to discriminate against the latter, not to speak of the loss to the Exchequer.

However, the co-operative sugar factories are already a substantial factor to be reckoned with. In 1956-60, they produced 2.84 lakh tons of sugar and effected sales of the value of about Rs. 23.4 crores. Their sugar production in the year 1959-60 represented 11.8 per cent of that year's total sugar production in the country. Obviously, when all the co-operative sugar factories are working, their total production will reach a level of about 6 lakh tons or even more. But, whether they produce more or less sugar, their problems in respect of cost of production will not be any different from those of factories in the private sector. It is this aspect which Prof. D. R. Gadgil, Director of the Gokhale Institute of Politics and Economics and President of the National Federation of Co-operative Sugar Factories, rightly emphasised in a three-day seminar, conducted at Kolhapur by the Maharashtra Federation of Co-operative Sugar Factories. Prof. Gadgil observed that the problem of parity between price of Indian sugar and international sugar market was of the utmost importance. In his view, serious efforts should be made to sell Indian sugar at international prices; this, he said, should be done not by incurring losses in export of sugar, but by bringing down the high cost of sugarcane while *simultaneously increasing the recovery* of sugar. He even went to the extent of warning the co-operative factories of sugarcane growers that a time might come when they themselves would have to request the Government to reduce sugarcane prices.

The issue, thus, is one of reducing sugarcane prices in the first instance by reducing the cost of production of sugarcane. Here Prof. Gadgil's complaint is that a cane grower has not made any deliberate effort to reduce the cost of production of his crop. The point made by a representative at the Seminar that the rising cost of fertilisers and the increasing wages would not permit any reduction in the cost of production of sugarcane is obviously something to be examined; but it cannot be taken at its face value. The need for a dependable survey of the *cost of production* of sugarcane was, however, not emphasised at the Seminar. If, in the light of a cost of production survey, sugarcane prices can be reasonably reduced, the effect of that reduction on the price of sugar will be quite substantial because the cost of raw material in sugar production constitutes the major element. In the final analysis, therefore, the key to a solution of the sugar prices problem would appear to lie mainly in a reduction in the cost of production and price of sugarcane, as well as in the quantum of taxation on sugar. If this solution is not found as early as possible, the Indian sugar industry will not be able to export sugar on a long-range basis to other countries. Prof. Gadgil's plea that the Government should deal with this question as if it were a serious crisis, certainly merits consideration.

TABLE 1

Co-operative Sugar Factories—Operations During 1959-60

	1959-60	1958-59
Total number of factories	57	50
Number of factories working	26	N.A.
Sugarcane crushed (in lakh tons)	20	17
Sugar produced (weight in lakh tons)	2.84	1.75
Sugar produced (value in crore Rs.)	28.9	15.4
Salaries and wages (in Rs. lakhs)	104	55
Other expenses (in Rs. lakhs)	479	98
Number of factories making profit	31	32
Number of factories incurring loss	14	15
Number of factories without profit or loss	8	3
Total profit of profit-making factories (in Rs. lakhs)	86	47
Total losses of losing factories (in Rs. lakhs)	39	100

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

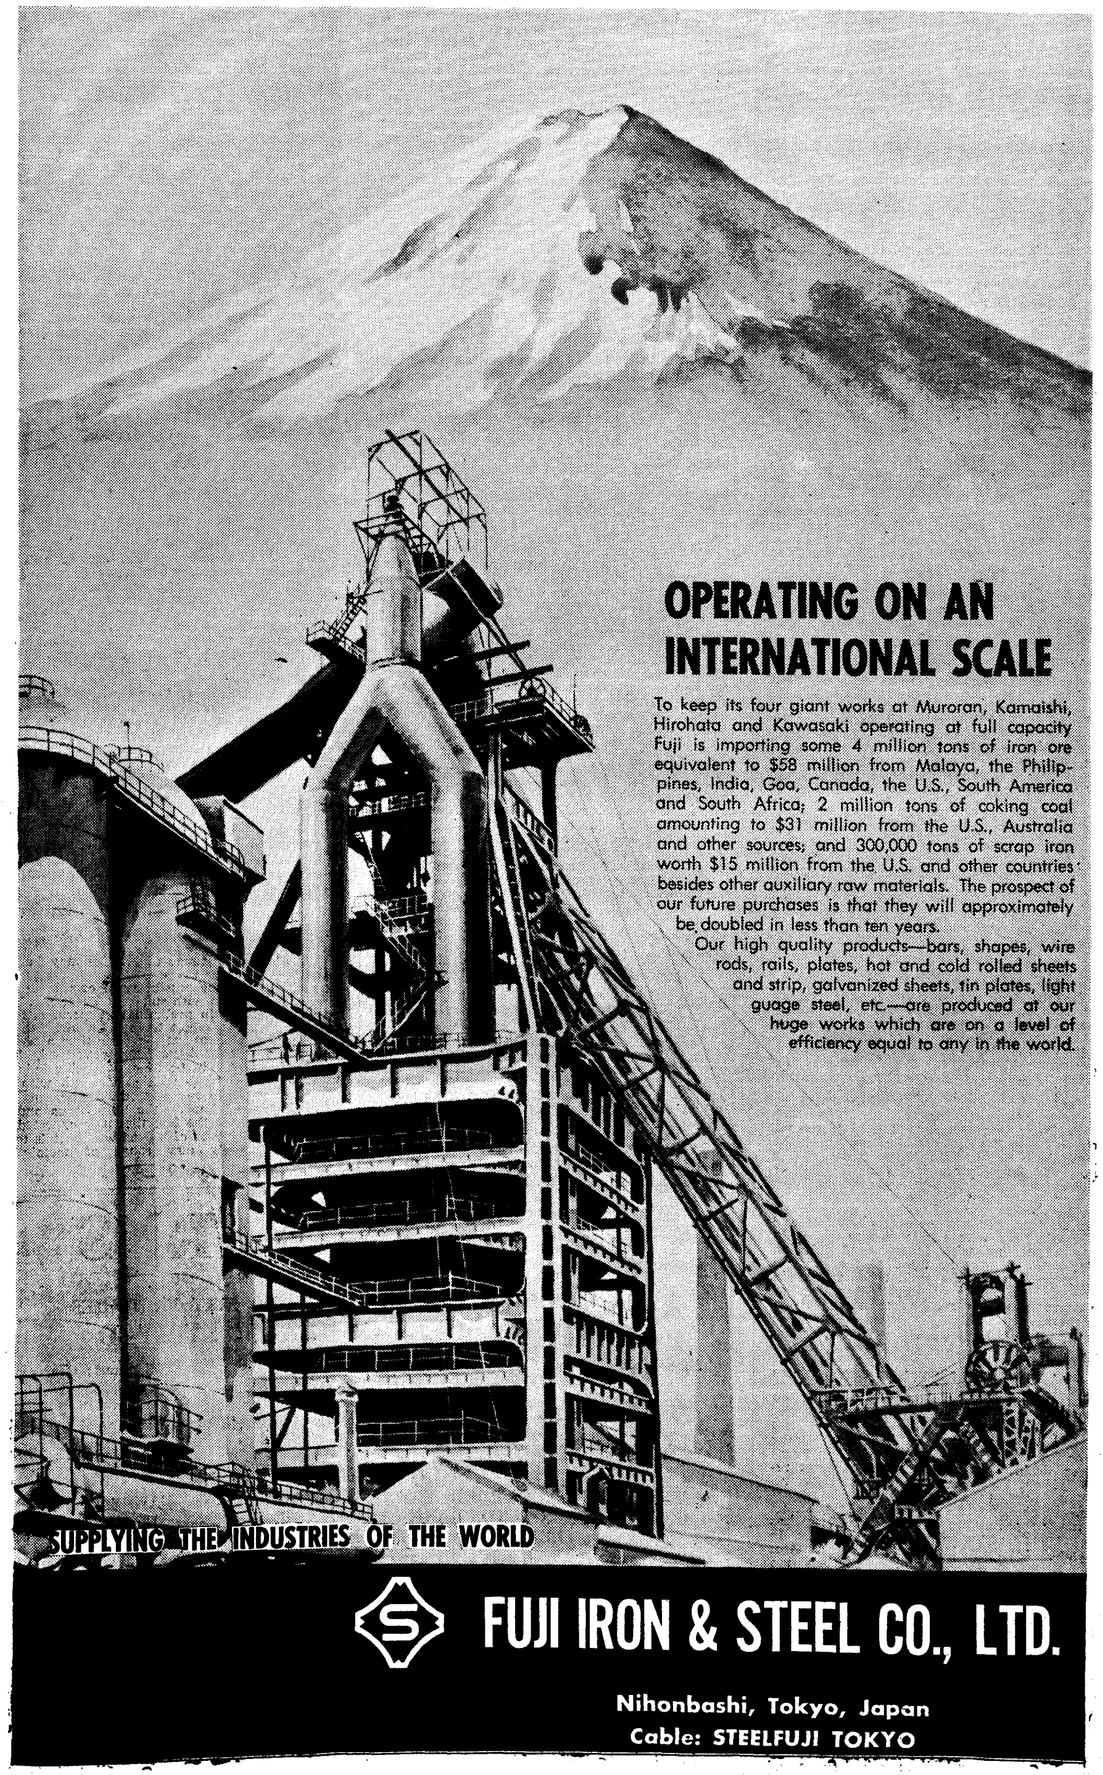
HEAD OFFICE: TEHERAN, IRAN (PERSIA). (P.O. BOX 1680)



NEW PRODUCTS AND PROCESSES

Electrically-Conductive Paint

AN electrically conductive paint said to provide a coating with good conductivity, high mechanical strength and excellent flexibility has been developed in Japan. The paint consists of a mixture of very small metallic particles and slightly larger granules of thermoplastic resin dispersed in a liquid. Although the liquid does not act as a solvent—the granules are not actually dissolved in it—it can be evaporated from the coated surface by the application of heat. This heating also causes the resin granules to fuse and act as a binder for the metallic particles. It is claimed that the paint can be applied to almost any surface—including cloth—and, if special case is taken, an electrolytic coating can be applied on top of it.

Progress in Road Lighting

Conflicting demands frequently have to be reconciled in the planning of an efficient road lighting system, such as, for example, regularity and economy and the various advantages possessed by each of the different types of lighting. In order to overcome these difficulties a Swiss firm in Lucerne has developed a double light, with two light sources and two reflectors giving a length and width of radiation. The great efficiency of the Moos patented lamp-post allows illumination points to be placed further apart, resulting in a saving of material, erection costs and electric current. In addition, during the middle of the night when there is little traffic, it is possible to switch off one lamp on each standard, so that the intensity of lighting can be diminished without affecting the number of points of illumination. Moreover, the standards can be fitted with two different types of light. The use of a 60-watt sodium gas lamp in conjunction with a 125-watt mercury lamp is particularly recommended. With this combination, full use is made of the advantages of both types of lamp, and the light is neither too bright nor too dull.

No-ribbon Typewriter

A typewriter working on an entirely new principle—it has no inky ribbon—has been patented by one of America's biggest manufacturers of business machines. It is reported, however, that there are no plans for production. In operation, a metal letter is pressed against an endless magnetic tape, recording the shape of the letter in magnetic form. Powdered metallic ink is then blown against the tape, sticking to the outline of the letter. When a complete line of type has been prepared, the magnetic tape is pressed against the paper, the ink coming off on to the paper to form the printed line. Advantages claimed are quiet operation and ease of erasure. Since the typist sees the entire line in a mirror before it is transferred to the paper, mistakes can be detected at this stage. If an error is made the letter can be erased by removing the magnetic charge from the tape and inserting the correct letter in its place.

Accident Bed

A bed on which a patient can be treated through all stages between a casualty department and convalescence has been designed by a nurse at a U.K. hospital. It consists of a metal framework but has a fibre-glass base instead of the usual wire mesh mattress. The firmness of the fibre-glass serves also as a fracture board. It is non-opaque to X-rays and for comfort, plastic foam mattresses one inch thick are used as required, these also being non-opaque to X-rays. The bed, called the Woolwich Accident Bed, has several features including a metal cassette tray under the fibre-glass base for holding X-ray plates and a tipping device for either end of the bed, worked by a central handle which can be folded back out of the way of the staff. The head and foot of the bed can be quickly removed, allowing medical and nursing staff to perform necessary surgical and toilet examinations with ease which is especially valuable in dealing with severe head injuries. Shoulder supports may be fitted at the head to prevent slipping when the patient has to remain tipped. And the bed is supplied with fittings so that a transfusion stand can be fixed at any of the four corners.

Aluminised Steel

A new process for aluminising steel surfaces with corrosion and heat-resistance properties to such surfaces, has been developed at the National Metallurgical Laboratory, Jamshedpur. Aluminised steel can be used to replace galvanised steel in sheet, strip, wire, tube and hardware coating plants as the import of zinc for galvanising forms a serious drain on India's foreign exchange resources. About 30,000 tons of zinc per year, representing more than half the total annual imports, are employed for galvanising steel sheets and other ferrous products. Aluminised steel has bright prospects of replacing galvanised steel in commercial and farm buildings, rolling shutters and silo covers as the aluminium coatings are much superior to zinc coatings when exposed to industrial and highly humid atmospheres. Resistance to fire damage is also better in aluminised steel as compared to galvanised steel. Most of the raw material for aluminising steel such as hydrochloric acid, linseed oil and commercial aluminium are available in India.

Plastics Container for Chemicals

An all-plastics container, for the road transportation of hydrochloric acid or sodium hypochlorite has been produced by Tough Plastics Ltd., Surrey, England. Manufacture of the tank entails forming plastic sheeting to the required shape and supporting them with a glass-fibre laminate bonded with polyester resin. The grey, pigmented laminate is then given a coating of isocyanate resin. While the manufacturers of the container have been using this method of constructing chemical storage tanks for the past 2½ years, and there are many hundreds in service, it is only the second road-tanker made by the firm. The first was made for a chemical company in Germany, the Elektrochemische Werke, Munich. Special measures have been taken to control "surge," or serious weight transference, which takes place under heavy braking. Rubber-lined steel is the conventional material for chemical containers, but the inevitable splashing of the metal casing means that the exterior of the tank must constantly be repainted to guard against corrosion. Apart from the advantage of long life, the plastics container can mean a further advantage in reducing the operating costs of a road-tanker. It is estimated that on empty return runs the fuel saving should be considerable, with only a fifth of the usual deadweight to be hauled.

Selective Breeding of Trees

As a first step to selective breeding in timber cultivation, specimens of wood taken from trees grown in various parts of Britain are being examined by radio-isotope methods at the Forest Products Research Laboratory of the U.K.'s Department of Scientific and Industrial Research. The laboratory, a few miles west of London, has an apparatus which has been developed for this purpose. It is completely automatic and micro-scale measurements of density which would formerly have been a very laborious process can easily be made without human intervention, by measuring the transmission of beta particles (electrons) through a thin specimen of wood. A D.S.I.R. spokesman says that density is probably the best single measure of timber quality. In this connection, variation within the individual growth rings, as well as the overall density of the wood, has to be taken into consideration. Samples are obtained by means of a tool similar to an auger. A microtome is then used to cut sections 100 microns thick, and these are mounted on a plastic slide for examination. The method makes use of radioactive isotope (Carbon 14) as the source of beta particles; an anthracene crystal; a photomultiplier; and an electronic counter. Many of the beta articles are absorbed, the number depending on the density of the wood. Each beta particle which passes through the specimen produces a flash of light as it emerges and impinges on the crystal. The flash of light, directed on the cathode of the photomultiplier, releases electrons, which, at the next stage of the photomultiplier, release more, until an appreciable pulse is built up. An electronic amplifier further magnifies the output pulses, whose rate is then registered on a counter. The variation of density in the specimen as it moves automatically through the beam can thus be recorded on a graph, and when the operation is complete, the instrument is automatically switched-off.

Sewage Disposal Unit

A compact unit for the complete disposal of crude sewage, the Biogest, has been introduced into Britain by G. D. PETERS AND CO. LTD. from the U.S. The Biogest was originally developed by the American Ship Building Company of Ohio to abate sewage pollution from shipping in the Great Lakes. The opening of the St. Lawrence seaway to ocean-going vessels aggravated this pollution. Since its introduction, Biogest has been installed in over a score of ships. Sewage pollution has caused much concern in Britain and there has recently been a much stronger trend among port and health authorities to take steps to tackle the problem. G. D. Peters has further developed the Biogest and hopes that it will prove attractive for application to all types of small-scale sewage flows, for example, shipping, hospitals, hotels, camps and factories. The Biogest employs a mixed culture of aerobic bacteria, and other micro-organisms specially acclimatised to their diet, for the purification of crude sewage into an odourless, innocuous effluent. Very simply, the bacteria, kept alive by pumping oxygen into the sewage, feed on the waste matter until a clear effluent is left. Sewage entering the unit is first crushed to particles of less than ¼ in. dia. Sludge containing the micro-organisms is mixed with the incoming sewage as it is crushed and the mixture passes into an aeration compartment. Air is pumped into the compartment and the activated sludge floc oxidizes the putrescible components of the mixture. The mixture in the aeration compartment spills over at a certain level into a settlement hopper where separation of the activated sludge floc and the purified effluent takes place. The purified effluent spills over into the final collection chamber and the activated sludge floc settles to the bottom from where it is pumped to join fresh incoming sewage again. When the purified effluent reaches a certain level in the collection chamber, a pressure switch is operated and it is discharged. The Biogest is a continuous automatic unit and needs little maintenance.

Sealing Fluid for Safety in Mines

A new safety aid for miners—a tough non-inflammable "skin" which can be sprayed on to underground stoppings to prevent air being fed to heatings or harmful fumes reaching other parts of a pit—was demonstrated recently at a mine in the north English midlands. The sealing fluid—a synthetic rubber latex spray—is the result of 'three years' research and practical experiments by the West Midlands division of the U.K.'s National Coal Board and the Dunlop Chemical Products Division. It has already been used successfully at various mines. The idea of using some form of self-adhering outer coating as the final sealant, similar to the "cocooning" process for equipment preservation, originated in the Warwickshire area of the West Midlands division. The help of the Dunlop Chemical Products Division was sought in developing a suitable material. It had to be water-based to prevent toxic or fire hazards, yet capable of drying out in a reasonable time in humid conditions. It had to be fireproof and capable of adhering to any material for a long period, and the method of applying it had to be rapid and adaptable to coal face conditions. It also had to be tough. A Chloroprene Latex spray was developed in the Dunlop Laboratories and for the past two years trials have been carried out successfully on heatings in several collieries in the West Midlands Division. The sealant, contained in drums, can be applied by any mine with a splatter-spray of the type used for applying underbody seal to a car. The film applied has air retaining properties roughly equal to those of a natural rubber inner tube of a car.

High Strength Plastics

A whole new range of plastics may be developed in the U.K. as the result of research now being carried out into the possibility of combining phosphorus and carbon with sulphur. These new materials have shown in preliminary experiments indications that they might have great strength even at high temperatures. At the same time a series of cyano-fluorocarbons have been developed. These are also expected to be of considerable industrial importance and combine high strength with temperature resistance and great dimensional stability. One advantage of using the phosphorus and carbon compounds is the fact that it is expected that they could readily be combined with metals to produce an entirely new range of metal-plastic materials.

RAMTIRTH (HINDI MONTHLY)

Editor: Yogiraj Shri Umeshchandraji

Published every month by Shri Ramtirth Yogashram — Bombay

MORE THAN 160 PAGES PER ISSUE

THE MAIN IDEA BEHIND THIS MAGAZINE IS TO DEVELOP THE PHYSICAL, MENTAL AND MORAL ASPECT OF THE COMMON MAN

Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN

(First Part)

In Four Languages: English, Hindi, Gujarati and Marathi

(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL

Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

EXPORT PROMOTION MEASURES

G.A.T.T. WANTS ABOLITION OF SUBSIDIES

EVERY country in the world is out to increase its exports and has been adopting various measures designed to give its primary produce and manufactured goods an advantage over those of its competitors. As readers are aware, recent years have witnessed a return to world marketing conditions in which buyer's choice is a more active force, resulting in intensified competition among sellers. Hence export promotion techniques have assumed an increasing significance in international trading relations. India has also sought to put into effect a wide range of export incentive schemes. Industry and trade have called upon the Government several times to extend the scope of these schemes to cover a still larger number of exports. The issue will be taken up for consideration by the Import and Export Policy Committee (Chairman: Dr. A. Ramaswamy Mudaliar) *now investigating India's commercial* policy. Export incentives can at best be only palliatives. They are certainly not capable of strengthening the basic structure and organisation of industry, without which exports cannot be developed and sustained for long in a highly competitive world. They have, however, some role to play in overcoming temporary shortcomings, albeit in an artificial way. Irrespective of the merits or demerits, several countries, both industrialised and developing, have resorted to some form of export incentives, and to a lesser extent, direct subsidies.

Special Facilities

Although there are a variety of special facilities provided by governments, financial or otherwise, for promoting exports, they fall mainly under three heads, namely, subsidies, export incentives, and programmes for the disposal of surplus stocks. The use of subsidies is widespread in the field of agriculture, particularly in Western Europe and North America. They are granted mostly to domestic producers in the form of either direct payments or price support schemes and are usually intended to stabilise income and output, to meet import competition or to stimulate the production of items in short supply. They are not aimed mainly at increasing exports, although the more profitable conditions of production tend to build up surpluses which make it necessary to find export markets for them. Sometimes, the assistance to producers takes the form of "deficiency payments," which permit the domestic producer to sell at competitive prices, despite higher cost of production.

Apart from subsidy on production or exports, there are several governmental measures designed to stimulate export trade, without involving any direct payment by the Governments to exporters. The export incentives, generally arranged by Governments, include currency retention schemes, multiple currency practices and export credit guarantees. The *third type of artificial export promotion* measure relates to the surplus disposal programmes for agricultural commodities. The U.S. has many typical examples of this method.

Abolition of Subsidies

It may be noted here that the G.A.T.T. has been keeping a close watch on the various measures of export promotion adopted by its members and non-members, and has been studying their effects on world trade. In September 1960, it may be recalled, the G.A.T.T. Council *reviewed the position regarding* the provision of Article XVI which envisages the eventual prohibition of export subsidies on goods other than primary products. Hitherto, there has only been a standstill arrangement in operation from year to year, whereby certain Contracting Parties have undertaken not to increase the scope and extent of export subsidies on any such products. At the seventeenth session, Contracting Parties felt the urgent need for putting into full effect the Article XVI and, therefore, drew up and opened for signature a *Declaration, which sought to prohibit the use of export subsidies on industrial products. The declaration will come into force only when fourteen industrial countries have accepted it. The countries affected are Austria, Belgium, Canada,* Denmark, France, Italy, Luxembourg, the Netherlands, Norway, Sweden, Switzerland, the U.K., the U.S. and West Germany. At the eighteenth session of the G.A.T.T. held at Geneva (referred to in these columns previously) last month, the Executive Secretary reported that the instruments of acceptance had been deposited by only six countries. It is to be hoped that his appeal to the remaining countries to take "positive action without further delay" will receive their due response.

Meanwhile, a panel, specially set up in 1958 to examine the extent and range of subsidies maintained by Contracting Parties, have already completed its report. This report will come in for detailed discussion at the nineteenth session of the G.A.T.T. to be held in November-December next.

G.A.T.T. Survey

It will not be out of place in this context to review briefly the nature and extent of subsidies and other export promotion measures prevailing in the world. The *Developments in Commercial Policy,* the second semi-annual survey brought out by the G.A.T.T. Secretariat, published a few weeks ago, gives an account of some of the important measures. Although the present review deals with changes in commercial policies effected *in the second half of 1960,* it has also covered the important changes made earlier in that year. The bulk of this information is collected from annual notification submitted to the G.A.T.T. by member-countries. In its review, the survey points out that no major changes have occurred in the policy of Government subsidisation, although some adjustments have been made with respect to the items involved and the amount of the subsidy. As regards other export incentives, it adds that there is a general tendency towards energetic export promotion drives in many countries.

The subsidies include those granted on production and on exports. To take subsidies on exports first. For the first time since the establishment of the Wheat Stabilisation Scheme in 1948, the Australian Government subsidised in 1960 wheat exports. The reasons given for this move were an increase in the guaranteed prices paid to growers for the crop in that season, lower world prices for wheat and "near exhaustion" of the Wheat Price Stabilisation Fund. In the fiscal year 1959-60 through 31st May 1960, the U.S. used two general types of export subsidy programmes for agricultural commodities and products thereof. The two types were, payments on export sales under the International Wheat Agreement and sales of Government-owned price support stocks at less than the domestic market price. The second group includes the payment-in-kind made in connection with exports of cotton and grains from commercially-owned supplies. During the same period, the average rate of subsidy on feed-grains exported under the payment-in-kind programme was gradually reduced. In the case of each of the principal feed-grains (corn, oats, barley and grain sorghums) the average rate of subsidy was no more than half as large dur*ing July 1959-May 1960 as in the comparable* earlier period. At various times during 1959-60, each of these feed-grains were exported without subsidisation. The average rate of subsidy for *wheat exports under the International Wheat* Agreement in 1959-60 through 31st May, amounted to 61.3 cents per bushel. The U.S. reduced as of 1st August 1960 its support price for cotton and made a corresponding reduction in the rate of export payments. During the period under review, all countries in Western Europe granted direct or indirect aids to exports of butter and these aids were raised in the summer of 1960. The other important changes which came into force in this field recently included the cancellation in Iran of the subsidisation of railroad freight rates for export of shipments of dried fruits and the abolition of subsidy on cement exports in Turkey. Among the production subsidies, Argentina, Brazil, Canada, Chile, France, Greece, Italy, the Netherlands, the U.K. and the U.S. were among those countries which continued to grant some assistance or other to domestic agricultural producers.

Export Incentives

To turn now to the recent developments in the sphere of export incentives. In this sphere, *currency retention schemes or similar arrange*ments involving import entitlements were introduced by a few countries. India's incentive schemes for export of textiles and groundnut oil are instances in point. In Pakistan, exporters of cotton yarn qualified for a 10 per cent bonus with effect from 22nd January 1960, the previous rate of 20 per cent being granted by the State Bank on merit. Burma introduced an incentive plan early last year, under which exporters are entitled to receive import licences valued at 25 per cent of foreign exchange which they earned from exports in 1959.

The Survey observes that there is a clear tendency towards gradual abolition of the complicated multiple currency practices of late. In several countries, however, multiple currency arrangements are still being applied with the object of promoting certain exports by providing more favourable rates for conversion of the foreign currency proceeds of these exports than of others. A decision taken by the Executive Board of the I.M.F. in June 1957 urged that early and substantial steps should be taken to simplify complex multiple rate systems. Action in accordance with this decision has been taken by an increasing number of countries. The important changes in 1960 may be summarised as follows: in Brazil, the exchange premium payable on exports of the first category goods, specifically green or roasted coffee and cocoa beans, was increased from 57.64 to 71.64 cruzeiros to the U.S. dollar, effective 1st July 1960. The increased premium, when added to the official exchange rate of 18.36 cruzeiros to the U.S. dollar, would result in an overall rate of 90 cruzeiros to the dollar. On 13th May 1960, the Central Bank of Colombia raised the exchange rate for the coffee dollar from 6.10 to 6.50 pesos. In Colombia, the coffee dollar is the rate of exchange which exporters are required to use in converting dollars earned from exports of coffee into pesos. On 19th February 1960, the Government of Iceland adopted a comprehensive stabilisation programme which was *prepared in consultation* with the I.M.F. and the O.E.E.C. The programme included, among other things, the elimination of multiple currency practices and the introduction of new par value for Krona. The Government of Turkey announced that, effective 20th August 1960, the exchange rate of 9 lira per U.S. dollar would apply to tobacco exports and to opium exports. Previously, the rate for these commodities was 5.60 lira per dollar. All other trade (as well as invisibles) was already carried out at 9 lira per dollar; thus the new measure has ended the multiple exchange rate system maintained by Turkey in various forms.

Credit Guarantee Schemes

Another important aspect of export promotion, which received particular attention last year was the expansion and certain standardisation of export credit guarantee schemes. These schemes have been widely adopted by many countries. In Western Europe, for example, all countries, except, perhaps, Portugal and Greece, have introduced export credit guarantee schemes. *In West Germany the maximum* value of exports which could be guaranteed was raised from no more than $29 million to $2.9 billion. In Austria, a special scheme for guaranteeing exports came into force in July 1960. Under the scheme, the Government will take over the liability of financing export *transactions to a value of sch. one milliard,* for which payment period is five years or less. This period, however, can be extended to eight years by allowing for a three-year production period. *Further progress of varying nature was made* in similar schemes in the U.K. and Denmark.

Among the other measures of export promotion, mention may be made of reduction of sales tax in Argentina on exports of meat from June 1960. In Italy, a new rate schedule for refund of taxes and duties was introduced from September 1960. South Africa granted specially reduced freight rates for the transportation of export commodities. In addition, agreements were reached with different shipping lines concerning the granting of special rates for its export commodities. Another instance is the granting of drawback of customs and Central excise duties in respect of several items as is the case in India.

QUESTIONNAIRE OF THE MUDALIAR COMMITTEE

The Import and Export Policy Committee, set up by the Government of India in March last, with Dr. A. Ramaswamy Mudaliar as Chairman, has now published a comprehensive questionnaire, with a view to eliciting public opinion on the various facets of India's commercial policy. The questionnaire, brought out in the form of a booklet by the Union Ministry of Commerce and Industry, is divided into two sections, the first dealing with import policy and the second with export policy.

In view of the rather wide terms of reference assigned to the Committee, it is not surprising that there are well over 150 questions in the list. But everybody is not expected to answer all questions. One may select his topic of special interest and reply to the questions within that group. The Committee has asked for as many as fifteen spare copies of replies. The last date for submitting the answers is 31st July 1961.

37,255 Equity Shares of Rs. 100 each	37,25,500

The shares now to be issued will rank as regards dividends and in all other respects *pari passu* with the existing Equity Shares of the Company save that the Shares now to be issued will not rank for any dividend that has been declared in respect of the Company's financial year ending 31st March 1961.

Out of the issue of Rs. 37,25,500 offered to the public the Central Bank of India Limited, Bombay, has underwritten the same to the extent of Rs. 18,62,700 and the Bank of Baroda Limited, Bombay, has underwritten the same to the extent of Rs. 18,62,800.

The amount payable in respect of shares comprising the present offer is as follows :—

(a) With Application .. .. Rs. 25 per share.

(b) On allotment .. .. Rs. 25 per share.

The balance of Rs. 50 in respect of equity shares shall be payable in such calls as may be determined by the directors provided that no call shall exceed the sum of Rs. 25 per share and that prior notice of at least 15 days shall be given in respect of each call and that there shall be a minimum interval of three months between any two calls.

DIRECTORS

1. *Shri Ratilal Nathalal, (Chairman).* Near Sharda Mandir, Ellis Bridge, Ahmedabad.
2. **Shri Jaykrishna Harivallabhdas,** Industrialist. Shahibaug, Ahmedabad.

REGISTERED OFFICE OF THE COMPANY

TAKTAWALA HOUSE, GANDHI ROAD. AHMEDABAD.

CONSENT

The letters giving the consent in writing of the Auditors, Bankers, Brokers and Solicitors to the Company to act in their respective capacities *have been obtained, and the same are* filed with the Registrar of Companies, Gujarat, Ahmedabad. None of them have withdrawn their consent so given.

OBJECTS AND HISTORY OF THE COMPANY

The Company was incorporated as a private limited company on 24th December, 1957 to carry on all or any of the object or purposes. mentioned in the Memorandum of Association and more particularly to carry on the business as manufacturers and dealers in sheet, wired and figured glasses, glass building blocks and all sort of glass and glasswares. The Company was promoted by Messrs. Tribhovandas Manekla! Taktawala who are in the business of import *and distribution of* glass since last 70 years. The Company had installed a plant at Andheri, Bombay, and commenced production on 1st April, 1959.

The Company is being managed by Managing Directors, Shri J. A. Taktawala and Shri M. J. Taktawala since 13-2-1958, who are connected with glass business since 20 years and has considerable experience in the line.

The present capacity of the plant of the Company at Andheri is of processing of about 1,00,000 sq. ft. of sheet and plate toughened glass per month and about 50,000 sq. ft. or mirrors per month. The plant has also the capacity of processing per month 10,000 pieces of sight glasses and 10,000 pieces of protector glasses used in ship and furnaces.

At present the Company is processing the famous 'Tufex' brand toughened safety glass which are widely used by the Automobile Manufacturers, Bus Body Builders, State Transport, P.W.D. vehicles, etc. The Government has granted Import Licences for the value of Rs. 1,95,000 for the Import of machinery for the manufacture of laminated safety glasses and for the import of machinery of the value of Rs. 1,96,000 for the manufacture of bent toughened glasses. This will increase the activities of the present works of the Company situated at Andheri.

SCOPE OF THE INDUSTRY

The Tariff Commission has estimated the total demand of sheet glasses in the country at about 110 million sq. ft. in 1960. The present production is round about 85 million sq. ft. The present production and demand has already increased owing to expansion in building programme and there will be sufficient demand for sheet glass. At present, all plants in India which are engaged in manufacturing activity similar to that of the Company are situated near about Calcutta. There is no similar plant in Western India. The cost of Transport of their finished products is about 20% of their sale price. Western India is an important market for the consumption of items which the Company proposes to manufacture. During the period of Second Five-Year Plan, the demand of glass has also been increased at a rate faster than envisaged either by the Tariff Commission or Planning Commission. During the period of Third Five-Year Plan it is estimated that the demand will be considerably higher than the present installed capacity in the country and the Company believes that there is adequate market for the type of sheet glasses proposed to be manufactured by the Company. Furthermore, the Company proposes to manufacture wired and figured glass which most probably at present are not being manufactured in India. This type of glasses are at present imported from abroad. This project will perhaps be the first of its kind simultaneously making sheet glass and wired glasses in India.

ESTIMATE OF PROFITS

The Directors have estimated the costs of production of glasses of all types on liberal basis. They are satisfied that after meeting all expenses, a fair profit may be available on the basis of normal selling price of glass.

SITE

Keeping in view the availability of power, water, raw materials, labour, transport facilities etc. arrangements have been made to obtain by way of purchase about 1 lakh sq. yards or more of land near about Anand.

MACHINERY AND TECHNICAL COLLABORATION

The Company has finalised negotiations to supply the machinery and technical know-how with **Messrs. Industrieofen and Maschinen G.M.B.H. Garatsch Partenkirchen,** West Germany, who has wide experience in glass technology, and has designed similar plants all over the world, which to the Company's information are functioning satisfactorily.

The said foreign firm has agreed in principle to assist the Company in the manufacture of sheet glass and wired glass, and in designing the layout of the plants and will render necessary assistance in technical know-how, to enable the Company to work its plant satisfactorily. Moreover, the said foreign firm, has agreed to arrange for the theoritical and practical training of qualified persons of the Company with regard to the manufacture of glass.

FOREIGN EXCHANGE REQUIREMENTS

The Industrial Credit and Investment Corporation of India Ltd., Bombay have agreed in principle, subject to the approval of the International Bank for Reconstruction and Development. to lend to the Company an amount in foreign currencies equivalent to U.S. $7.81,000 (about Rs. 37,19,000) to pay for the cost of imported machinery and capital equipment.

CAPITAL OUTLAY

The capital estimated to be required to commence production will be as follows:—

	Rs.
(1) Land, building and power installation	35,00,000
(2) Complete cost of plant and machinery including designing, engineering fees, transport and erection	55,00,000
(3) Working capital	23,00,000
(4) Expenses of issue	2,00,000
Rs.	1,15,00,000

Out of total project of Rs. 1,15,00,000, the Company is raising additional capital of about Rs. 72,00,000 by way of Equity Capital. The Company has an existing equity capital of Rs. 4,03,000. As regards the balance of about Rs. 39,00,000 the same will be met by way of foreign exchange loan from the Industrial Credit and Investment Corporation of India Ltd. and by way of borrowing from Banks.

MINIMUM SUBSCRIPTION

The minimum subscription in respect of public issue on which the Directors will proceed to allot shares is Rupees 37.25,000. The minimum subscription amount is assured by reasons of the Directors and their friends and The Industrial Credit & Investment Corporation of India Ltd. having agreed to subscribe to the capital and the underwriting of subscription of 37,255 Equity Shares jointly by the Central Bank of India Ltd., Bombay, and the Bank of Baroda Ltd., Bombay.

DIRECTORS AND THEIR INTERESTS

The Company has given an option to The Industrial Credit & Investment Corporation of India Ltd. to appoint a director during the continuance of the loan. All the directors are interested in the fees and travelling expenses payable to them and for meetings attended by them.

(1) Directors Shri Ratilal Nathalal, Shri Ambalal T. Taktawala, Shri Madhukant Jethalal Taktawala and Shri Jayvadan Ambalal Taktawala are interested in the firm of M/s. Krishnavadan & Bros., Sole Selling agents of the Company so far as their relatives are the partners of the said firm.

(2) Managing Directors Shri Madhukant J. Taktawala and Shri Jayvadan A. Taktawala are also interested in the remuneration payable to them as Managing Directors according to agreement executed by the Company with them on 22nd March 1961.

(3) Directors Shri Krishnavadan Ambalal Taktawala is interested as a partner of sole selling agents firm of M/s. Krishnavadan & Bros., and for the remuneration payable to him as Technical Adviser of the Company by the agreement dated 17th April 1961 executed between the Company and himself.

(4) Director Shri Jaykrishna Harivallabhdas is interested in the Central Bank of India, underwriters and Bankers of the Company as a Director and member thereof.

The Copies of the agreements with above said Directors are open for inspection at the Registered Office of the Company.

UNDERWRITING COMMISSION AND BROKERAGE

The public issue of Rs. 37,25,500 has been underwritten by the Central Bank of India Ltd., Bombay to the extent of Rs. 18,62,700 and by the Bank of Baroda Ltd., Bombay to the extent of Rs. 18,62,800 and each of them will be paid at 2½% by way of Underwriting commission. In the opinion of the directors the resources of the said underwriters are sufficient to discharge their underwriting obligations. Brokerage at the rate of 1% will be paid on allotments in respect of applications bearing the stamp of a bank or a member of a recognised stock exchange. Brokerage at the rate of 1% will be paid to underwriters in addition to their underwriting commission on allotment in respect of application made or produced by them and bearing their respective stamps.

SELLING ARRANGEMENTS

The Company has appointed M/s. Krishnavadan & Bros., a partnership firm, as sole selling agents of the Company for a period of 5 years to promote the sales of the Company on the terms and conditions mentioned in the agreement dated 7th June 1961 which is open for inspection of the public at the Registered Office of the Company. The sole selling agents have a considerable experience in the line.

EXPENSES OF THE ISSUE

The estimated amount of the expenses of the issue is Rs. 2,00,000.

Extract from the Report of Messrs. C. C. Chokshi & Co.

DIVIDEND:

In respect of the first two periods, no dividend was paid by the Company. Interim dividend has been paid at the rate of 6% (subject to deduction of tax) on 4,030 Equity Shares. In respect of the profits of the year ending 31st March 1961. The final dividend at the rate of 9% (subject to deduction of tax) on the Equity Shares has been proposed in respect of the year ending 31st March 1961. The above dividends have been paid and proposed respectively out of the profits of the Company for the year ending 31st March 1961.

INSPECTION OF DOCUMENTS

Copies of prospectus and documents mentioned therein are open for inspection at the Registered Office of the Company during office hours till the subscription list is closed.

APPLICATION FOR SHARES

Application for shares must be made on the printed forms. Application forms duly filled in along with remittance must reach either the Brokers or Bankers of the Company for this issue at their Head Office or any of their branches at Ahmedabad, Anand, Allahabad, Amritsar, Bangalore, Broach, Baroda, Bulsar, Bhavanagar, Bombay, Calcutta, Coimbatore, Delhi, New Delhi, Gwalior, Hyderabad, Indore, Jaipur, Kanpur, Lucknow, Madras, Madurai, Mehsana, Nagpur, Nadiad, Poona, Rajkot, Surat, Sidhpur, Trivandrum, Unjha, before the closing date of the subscription list. Cheques and drafts should be drawn in favour of "The Central Bank of India Ltd." A/c. "Shree Vallabh Glass Works Ltd." or "The Bank of Baroda Ltd.", A/c. "Shree Vallabh Glass Works Ltd."

Copies of this Prospectus and Forms of Application may be obtained from the Registered Office of the Company or at the Office of Brokers and Bankers to the issue.

The share certificates will be issued within 4 months from the date of the last allotment.

THE SUBSCRIPTION LIST WILL OPEN AT COMMENCEMENT OF BANKING HOURS ON 5-7-1961 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 15-7-1961 OR EARLIER AT THE DISCRETION OF DIRECTORS BUT NOT EARLIER THAN 8-7-1961.

SHREE VALLABH GLASS WORKS LIMITED—*(Continued)*

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

THE PHENOMENON OF INFLATION

A THEORETICAL DISCUSSION

By Baidyanath Misra, M.A.
LECTURER IN ECONOMICS, RAVENSHAW COLLEGE, CUTTACK

INFLATION is commonly understood to be a "substantial and rapid rise of the general level of prices." Strictly speaking, this definition is not correct, because there can be rising prices without inflation at the time of recovery and inflation without rising prices at a time of repressed inflation. According to Mr. A. P. Lerner (in his *Essays in Economic Analysis*), inflation should mean an inordinate and unforeseen rise of price level or a tendency towards this direction in case of repressed inflation. If the rise in price is foreseen, there is no difficulty. The rising price-level would be just offset by a correspondingly higher rate of interest. What is really harmful about inflation is not the rise in prices, but the failure to anticipate and offset them. Though Lerner's definition has greater validity from the point of view of anti-inflationary measures, the popular definition throws adequate light on the meaning of the term. However, for the sake of convenience, we will accept this popular definition and analyse the reason why it occurs.

Money Supply and Inflation

The explanation to this question is diverse. One type of explanation runs in terms of monetary supply and explains inflationary trends in prices in terms of an increase in the supply of money. This is generally called classical theory of inflation and the leading member of this group is Fisher. Fisher's quantity theory of money (MV=PT) is a clear indication of this approach. In his famous book *Inflation*, Fisher points out that "price level almost invariably shifts with monetary factors—gold, silver, paper, credit—and very little with commodity factors. The latter control only the deviations of individual prices from the average price movement. In a word, supply and demand dictate each individual price relative to the price-level, but money dictates the price-level itself." This means that, when there is an increase in the total supply of money without a commensurate increase in the supply of goods, there would be an inevitable rise in prices.

Inflation occurs when the volume of money actively bidding for goods and services increases faster than the available supply of goods, when the growth of national income in money units is greater than its growth in physical units, according to Mr. Golden Wieser who wrote on "Inflation" in the April 1941 issue of the *Federal Reserve Bulletin*.

But this definition is now more or less rejected. In Germany, the price level rose to dizzy heights during the early twenties. It has been calculated that prices increased 13,300 million times between May 1921 and October 1923. A two-ounce bar of chocolate cost 330 million pounds during this period. But the total supply of money increased only to a small extent. It is said that prices in Germany, far from being pushed up by the volume of money, actually constituted the active factor drawing out into circulation an ever-increasing volume of money.[1]

In other words, the cause and effect relationship between money supply and prices was reversed. This is the reason why Dr. Einzig distinguishes between money inflation and price inflation. The first relates to that stage of inflation, the first stage as it were, in which overexpansion of money beyond the normal requirements for it pushes up prices; the second relates to the next stage, in which prices get out of control and rise so rapidly that money supply lags behind. And he defines inflation, as "a state of disequilibrium in which an expansion of purchasing power tends to cause, or is the effect of, an increase of the price-level."[2] This interpretation of inflation takes into account not only the rise in money supply but also the other and the more vicious aspect of the problem of a wage, cost of production and price spiral in which each becomes at the same time the cause and effect.

Demand-pull

Keynes gives a different theory to explain the cause and consequences of inflation. According to Keynesians, the quantity theory approach is defective in the sense that it only takes into account the cause of inflation; but does not explain how the cause works itself out. Moreover, the quantity theory approach indicates that an increase in the quantity of money could increase the price-level and thus offset the depressionary tendencies in the economic system. But the experiences of the thirties clearly showed that this is not correct and something more than increase in money supply was necessary to promote recovery. Keynes's definition, therefore, runs in terms of excess demand and this is the hallmark of inflation. Excess demand is the difference between quantity demanded and quantity supplied at a given price. In other words, it is an "excess demand over supply." This excess demand is a common factor to both repressed and open inflation; in the first case prices are fixed by the institution of direct controls, whereas such controls are not in operation under open inflation. Open inflation appears naked in the form of excessive money prices. In other words, open inflation maintains the excess demand, to use the words of Prof. Lerner, by fraud while suppressed inflation maintains the excess demand by force.

Cost-push

The Swedish writers, on the other hand, emphasise the role of factor prices as the cause of inflation. According to Keynes, inflation takes it origin in the form of excess demand in the commodity markets. Price increase in the commodity markets then spreads itself to the factor markets. The Swedish writers feel that excess demand in the factor markets is an essential link in the chain of causation which leads to rise in commodity prices and factor prices.[3] Now this difference in approach has different policy implications. If we feel that excess demand arises in commodity markets the policy implication is that there should be increased production, better distribution, rationing and price control. On the other hand if the trouble starts in the factor market, factorial prices must be controlled in order to maintain stability in price-level.

If we agree that inflation begins from the factor market due to excess demand for factors, it comes to the same thing as saying that inflation is a pure cost inflation. In the discussion of inflation since the war the theory that prices bore the first brunt of inflation has fallen into the background and the emphasis has been gradually transferred to wages. By now the typical picture is probably not that of high prices and high profits drawing up wages, but of high wages pushing up prices. It is true that there is demand inflation in labour market but product prices are regarded as cost determined because they could rise only when costs had risen first.

A variant of cost-push is provided by Charles Schultze's "demand shift" theory of inflation. His model is that there is a shift of demand away from some sectors of the economy, whose output declines, towards others whose output rises. Prices and wages are presumed to be flexible upward but not downward. They will thus increase in sectors whose demand is increasing and these increases will not be offset by the declines in the shrinking sectors. Thus the average level of wages and prices must rise. Further, the sectors faced with a sagging demand will be forced to keep roughly in step with the rising wage level of the expanding industries. Their cost will rise and if cost-plus pricing methods are used, one may find the paradox of rising prices in the face of falling demand. (See Charles L. Schultze, "Recent Inflation in the United States reproduced in Wage Push and All that," by L. G. Reynolds, A.E.R., *Papers and Proceedings*, May 1960.)

Futile Controversy

Now this controversy whether inflation arises due to demand-pull or cost-push seems to be futile. It is possible to show that both factors are necessary to generate an inflationary situation. Dow has analysed four types of demand inflation and has shown how prices and wages behave under different situations. (See J. C. R. Dow. "The Cohen Council on Inflation," *The Economic Journal*, Sept. 1958, pp. 615-18.) The conclusion that he has arrived at is that in some cases price increase is linked to costs, in some cases to prices and in other cases, they are jointly determined by costs and prices. For example, if prices respond freely to demand, they cannot be rigidly linked to costs but if prices are not flexible, they may be fixed with reference to costs. Wherever prices are neither perfectly rigid nor perfectly flexible, it is possible to regard them as being jointly determined, in part by demand and in part by cost influences. Since the last case is generally the usual case, we can take it for granted that inflation is not only a function of demand, it is also a function of cost. What the Governor of the Bank of England said in a speech at the Lord Mayor's dinner to the Bankers and Merchants of the City of London in 1957 may be recalled here:—

"My Lord Mayor, I hear and read much learned discussion about whether we are in a 'cost-push' or 'demand-pull' inflation. I suspect myself that they are parts of the same animal and I am reminded of a fascinating creature in one of the nursery books called the 'push-me-pull you.' If we can shoot one end of that animal, the other end will not long survive."

The Cohen Report emphasises demand as the main cause of price inflation. (See First Report of the Council on Prices, Productivity and Incomes, H.M.S.O., February, 1958.) The idea is probably that cost pressures are never in fact effective except when there is excess demand. But there are cases when prices and wages can rise even though demand is not excessive. For example, trade unions can demand higher wages even in times when there is no rise in cost of living to improve the general economic condition of the labourers. If their demands are conceded due to political or other non-economic causes in one industry, this may spread to other industries and when all firms in an industry are affected by higher wages, there is a general increase in cost of production. This increase in costs brings about a rise in prices all round. It is obvious from this that cost pressure may also be one possible cause of rising prices.

Robbins has argued that price inflation either due to 'cost-push' or 'demand-pull' cannot arise without an elastic money supply. This is another variant of quantity theory of money. But if the quantity of money is not increased, the velocity of money might increase due to pressure of demand for commodities. Now suppose we assume that there is an absolute limit to the velocity of money (which is yet to be proved) and as such fixed quantity of money cannot increase demand to an unlimited extent, there is a possibility that costs will rise due to increased interest rates. So rise in costs might produce a cost-push inflation.

It is therefore better to say that "inflation is a process in which rising costs and prices mutually interact upon each other over time with a spiral effect."[4] Inflation has both the attributes of demand-pull and cost-push. If there is a demand-pull, cost must move upwards in order to increase prices. If there is a cost-push, demand must be sufficient to keep the spiral moving. Otherwise the marking up of prices in one sector of the economy would be offset by a reduction of prices in other sectors. If we accept this analysis, Prof. Robbins and Prof. Paish's objection to cost-push inflation would disappear. Both of them contend that if inflation is primarily due to cost-push, profits would have been adversely affected and since after the Second World War profits have been more or less stable, cost inflation does not stand the test.[5] But if cost inflation, according to our analysis, leads to increase in prices, profits cannot be adversely affected.

We may also go a step further and point out that inflation might also arise due to international factors. National economies are no longer sheltered from international repercussions. Inflation in one economy may spread to other economies and there may be a cumulative process of inflationary development in all inter-related economies. Because, if prices of imported commodities show signs of rise, internal prices may move upwards. It is, therefore, not desirable to explain inflation only by one or two causes. We have to take all the repercussions which affect prices of commodities and factors of production in order to determine the cause and consequence of inflation.

BURMAH-SHELL REFINERIES LIMITED

STATEMENT OF MR. L. D. MUDIE, CHAIRMAN, AT THE EIGHTH ANNUAL GENERAL MEETING

THE demand growth of petroleum products in recent years, accompanied by a projection of the demand during the third Plan period, was analysed by Mr. L. D. Mudie, Chairman of the Burmah-Shell Refineries Ltd., in his statement at the Eighth Annual General Meeting of the Company, held at Bombay, on Monday, 26th June, 1961. Mr. Mudie also examined the implications of this demand growth to the economy in terms of investment, transport and marketing. He observed that massive efforts on all fronts would be required to meet the fast expanding demand for oil and that it would be prudent "to enlist help from all who are willing to contribute, on terms which are reasonable and still in keeping with the avowed objectives of Indian economic development."

The following is the full text of Mr. Mudie's statement:

"GENTLEMEN:

"The Directors' report and statement of accounts for the year are before you. The crude oil intake of the refinery was 366,035 metric tons more in 1960 than in 1959, with income from refining increasing from Rs. 10.91 crores in 1959 to Rs. 12.33 crores in 1960. As from 1st January 1960 your Company ceased to benefit from the relief provided under Section 15 (c) of the Income-tax Act and, in consequence, has had to set aside Rs. 2.61 crores for taxation on 1960 profits as compared with Rs. 1.90 crores charged in the 1959 accounts.

"An interim dividend of 15 nP per rupee was declared and paid in November 1960 on the paid-up ordinary share capital absorbing Rs. 207.3 lakhs and the Board now recommend a final dividend of 5 nP per rupee which will absorb a further Rs. 69.10 lakhs; income-tax at 20 per cent will be payable on these dividends.

Growth of Demand for Oil

"I do not think further comments are required in respect of the details of our 1960 statement of accounts which are set out fully in the documents already circulated to you. I would now like to take this opportunity to give a few figures regarding the growth of oil demand during the last five years under the dynamism of the second Plan period and also project this picture into the third Plan to see what contribution your Company has to make in this context.

"In the process of the many-sided development through which the Indian economy has been passing, oil has effectively played its part. Total inland oil consumption will have risen to about 7.8 million metric tons in 1961 from 4.9 million in 1956, a 59 per cent increase during this period. The percentage rise in consumption has varied from product to product; thus, demand for High Speed Diesel Oil will have risen by 162 per cent, while the demand for Furnace Oil will have gone up by 57 per cent, that for Light Diesel Oil by 48 per cent, Lubricants by 47 per cent and Kerosine by 36 per cent.

"There appears to be much support for the view that we should provide for an annual compound growth rate of about 12 per cent during the third Plan period, as compared with the rate of 10 per cent experienced in the second Plan. These projections will naturally require revision at regular intervals, but it is generally recognised that energy is an essential overhead of economic growth and the growing importance of oil in the Indian pattern of energy consumption has been well demonstrated during the last decade.

"At the meeting of the Oil Advisory Committee held in May this year, a figure of 13.55 million metric tons was agreed as the likely inland demand in 1966. Including the provision for international bunkers, total demand for refined petroleum products will be about 14.14 million metric tons representing a crude oil equivalent of about 15.27 million metric tons. The Oil Advisory Committee will review their forecasts at regular intervals and experience may well show an upward revision is necessary. Your Company attaches much weight to these figures, for, with such targets before us, the exchange of ideas and plans between the public and private sectors is greatly facilitated, thus leading, it is hoped, to an understanding that a full contribution from both sectors is essential, if the task ahead is to be completed in time.

"While opinions may differ in regard to priorities, one incontrovertible fact emerges, namely, that to meet a demand of the order of 15 million metric tons of crude equivalent by the end of the third Plan, investment on a large-scale in all phases of the business is required not only now but as a recurring need into the long-term future. The oil industry is highly capital-intensive and experience has proved that to find, produce, refine and distribute to the consumer one million tons of oil calls for a capital investment of approximately Rs. 60 crores. It is apparent, therefore, that an increase in consumption by about 7 million tons over the third Plan period calls for a capital investment of some Rs. 400 crores if this increase alone is to be assured.

Time Factor

"Investment is only one aspect of the problem. Equally important is the time factor; here, there are no short-cuts. There is no way of finding oil without drilling; the risk of failure is great and even successful ventures take many years and consume much money before the fruits of success in the form of commercial production of crude oil are ready to reach the consuming market.

"From the moment of inspiration, to engineer, construct, staff, and bring on full stream a new refinery, is the work of years.

"The distribution of oil presents its own special problems in a country the size of India; here is a railway system doing a magnificent job but nevertheless unable always to cater for the full traffic. The road system is still in the development stage. An oil distribution network must therefore provide innumerable upcountry storage points to ensure the smooth flow of supplies throughout the country.

"I am convinced that for prompt, effective action to meet these challenges there is need for a massive effort, attacking the problem from as broad a front as possible, and enlisting help from all who are willing to contribute, on terms which are reasonable and still in keeping with the avowed objectives of Indian economic development.

Company's Offer and Government's Reply

"In his speech at this meeting last year the Chairman said that, provided we were permitted to go ahead with our expansion proposal, there might be room for further modification in the terms of the 1951 Refinery Agreement in addition to the Duty Protection which we had agreed to forgo.

"Arising from the above statement the Ministry of Steel, Mines and Fuel informed the Company that the question of revising the Refinery Agreement and a proposal to expand the capacity of the refinery would have to be treated quite separately and that it would not be desirable to link them together. This letter was dated 14th September 1960.

"In February this year, the Company received an official reply to its original proposal for the expansion, but, in this instance, Government stated that they were unable to consider any proposal for the expansion of the refinery in terms of the 1951 Agreement. The letter went on to state that, as the total refinery capacity likely to be available by the end of the third Five-year Plan period would be about 10.75 million metric tons and product demands at that date had been variously indicated as 10 to 14 million metric tons per annum, Government had decided, subject to reconsideration in the light of a more accurate forecast of product demand by the Oil Advisory Committee, that further increase in refining capacity in the private sector was not considered necessary. As mentioned earlier, the Oil Advisory Committee has now estimated product demand in 1966, including international bunkers, at about 14.14 million metric tons.

"Revised cost estimates, which have more recently been communicated to Government show that the additional million tons of refining capacity will cost only Rs. 2.83 crores, a fraction of the cost of constructing a new refinery of comparable capacity, and that the project to manufacture Lubricating Oil, now stepped up from 60,000 to 100,000 metric tons capacity per annum, will cost Rs. 6.47 crores. The total cost of the two projects has therefore been reduced by Rs. 2.28 crores and I would remind you that there will be no request to Government for foreign exchange, which will be provided from our own resources.

"Despite the cool reception which these proposals have received so far, I feel they are so sound and their acceptance is so much in the country's interest that we should be optimistic about the final outcome.

A Notable Achievement

"It will, perhaps, be useful again to refer to the sustained increase in Middle Distillate production and reduction in yield of Motor Spirit achieved by your Company between its commencement of operations and the year under review:

	1955	1960
Motor Spirit (% production on crude intake on weight basis)	22	14.9
Middle Distillates (% production on crude intake on weight basis)	33.5	45.1

"Continued improvements in manufacturing techniques increased crude throughput, as already stated, by 366,035 metric tons to a total of 2,843,010 metric tons in 1960, producing an additional 295,000 tons of essential Middle Distillates and only a marginal extra quantity of Motor Spirit. This represents a substantial contribution towards minimising the import of deficit products. Today, your Refinery is operating at a rate equivalent to an annual crude intake of 3 million metric tons and this further achievement is in logical conformity with the concept of utilising the country's capital assets to the maximum—a cardinal principle in a capital hungry world.

Encouraging Indications

"While there will be a critical period of product imbalance with a considerable surplus of Motor Spirit following the commissioning of the Gauhati and Barauni Refineries, there are encouraging indications in the longer term. One favourable factor is the development of chemical and fertiliser industries based on a light petroleum feedstock and, in this connection, a contract has been concluded by our Marketing Associates with F.A.C.T. for the supply of naphtha to their Fertiliser Plant at Alwaye. Also of interest is a contract recently signed by our Marketing Associates with the Fertiliser Corporation of India for the supply of 50,000 metric tons of refinery gas annually to their Trombay Plant.

"Before I close, I would like to refer to four further points of interest.

"During last year, negotiations were undertaken with Government for permission to manufacture Jute Batching Oil and I am happy to report that the necessary licence has now been received and the Refinery has already commenced production of a high quality which conforms to the very special requirements of the jute industry.

"Our Marketing Associates are in negotiation with the Oil and Natural Gas Commission for processing at our refinery indigenous crude from the Ankleshwar oilfields. Many important details have yet to be settled, but the Railway Authorities have in hand the laying of sidings at the refinery site to handle this crude oil traffic in tankwagons.

"Your Company offered to train 18 operators for the Gauhati Refinery and also to accept two of their senior staff for study visits. These offers have been accepted and training will commence shortly.

"Your Managing Director, Mr. G. B. Stanger, was honoured to accept the invitation extended to him last year by the Council of Scientific and Industrial Research to serve as a member of the Governing Council of the Indian Institute of Petroleum. I have no doubt that he will bring to bear on the deliberations of the Council his wide experience in the oil industry acquired over many years in different countries.

"It remains for me to thank the Managing Director and those who worked for him for the considerable achievements of the year under review. The encouraging financial and technical results referred to earlier are the result of their hard work and ingenuity and, in the full expectation that these qualities will be with us in the years to come, we look to the future with confidence."

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN, MR. K. C. MAHINDRA

THE Twenty-eighth Annual General Meeting of The Metal Box Company of India Limited will be held on Wednesday the 19th July 1961 at 59C Chowringhee Road, Calcutta. The following is a copy of the Review by the Chairman, Mr. K. C. Mahindra, which has already been circulated to members:

"We have concluded another satisfactory year, with a rise in sales from Rs. 830 lakhs to Rs. 970 lakhs, 17 per cent over the last year, but of this increase some Rs. 52 lakhs or 6 per cent represents an increase in the price of raw materials, largely due to the substantial excise duties imposed last year on two of our basic materials—tinplate and aluminium. The Company's sales emphasis during the year has been on earning or saving foreign exchange. A substantial expansion in exports was achieved following vigorous promotional efforts. Calcutta No. 2, a factory devoted to foreign exchange saving products, namely, industrial components and machinery (previously imported) and plastics (made from local materials) achieved an 85 per cent increase in turnover. For the rest of the business the net increase was 8 per cent, reflecting the steadily growing demand for packaged goods.

"The Company has maintained its position despite increasing competition due to its continued ability to offer high quality products and service. Production resources, however, were extended in the latter half of the last calendar year, as a consequence of a temporary deterioration in the flow of tinplate supplies which was beyond our control. We are aware and sincerely sorry that our customers in certain areas were seriously inconvenienced during this period. However towards the end of the financial year the position improved and customer goodwill has, by and large, been regained.

"I feel constrained to repeat the emphasis I laid in my review last year on the question of pilferproofing. Newspapers report almost every day the widespread extent of adulterated and spurious products in the country, possibly affecting the health of the nation. The consumer package of which we offer such a large variety is perhaps the only sure means of beating the traffic in spurious goods. Typically its brand name is indelibly marked by lithography applied direct on to the metal; once factory-sealed it is tamperproof. The extension and improvement in the range of these packages is constantly engaging the engineering and research resources of your Company, but the high price, inflated by indirect taxation, of such essential packing materials as tinplate, aluminium and polyethylene favours the use of bulk packings. Since the product is dispensed loose from these, they constitute a standing invitation to adulteration and substitution.

"The change-over to the metric system during the year provided some challenges to our production and marketing departments, but with the assistance of the Indian Standards Institution to the industry and the enlightened co-operation of our customers, our tasks have so far proved simpler than we anticipated.

Role of Containers

"It is necessary for me to reflect here on the factors governing the operation and growth of a Company like ours, at a time when there appears to be an insufficient appreciation, by the planning authorities, of the role an efficient container-making industry can and needs to play in India's developing economy. Owing to lack of foreign exchange and insufficiency of home production of tinplate, your Company is unable to expand and diversify its production of containers using this metal as base. It is not realised that the production of apparently simple cans and closures, to the absolutely consistent quality standards essential for modern packaging systems, necessitates a complex industry employing engineering and technological skills of a high order. How complexity is rendered simple is told in the short illustrated story of a prawn can published with this review.

"This impression of insufficient appreciation is reinforced by a list issued earlier this year by the Ministry of Commerce and Industry which includes, amongst the manufacturing licence applications which may *ordinarily* be rejected without reference to the Licensing Committee, those concerning tin containers, collapsible and rigid tubes, *excepting* where the fabrication is to be done by the packer himself. This policy decision is misconceived. It is vain to expect a packer to install the highly complicated and automated machinery required for producing Open Top food cans or lithographed General Line tin-containers and tubes to modern quality standards, for he will not have the requisite volume over which to spread the costs of expensive installation and overheads. Except in the case of plain unlithographed cans, usually large ones where freight considerations are overriding, packers almost invariably find it to be in their own interest to buy their containers from specialists who through larger-scale operation and continuous technological improvements can offer a better and more efficient product which will satisfy the requirements of the home demand as well as the highly competitive export markets.

"This has undoubtedly been the experience in such countries as Britain, the United States, Japan, Canada, France, Germany, Holland, Australia and Malaya. To quote but one instance, over the last seven years Japan has developed her annual canning of processed foodstuffs from 700 million labelled cans, mostly unlacquered and undecorated, to 2,000 million cans, most of which now are either internally coated with protective lacquer or decorated outside with process-resistant lithography. This spectacular advance, both technological and quantitative, could not have taken place but for the existence of a progressive, responsive, and highly organised can-making industry. I suggest that Indian packers, and food-packers in particular, need behind them a well-equipped and equally capable can-making industry, as an essential pre-condition to their playing their proper part in conserving food which at present goes to waste. Your Company aims at providing this service of supply backed by its Research Laboratories and can-closing machinery building operation in Calcutta. It is rational that packers of food—or, for that matter, or pharmaceuticals and other packs—should devote their energies and talents to developing the quality and volume of their production, rather than diverting them to the specialised business of can- or tube-making.

Aid to Export Promotion

"Nor should the package-makers' role in developing the country's export markets be underestimated. It is a simple fact that Indian manufacturers will only succeed in selling their products abroad if they are packaged to international standards. In this context it is necessary to stress the important point that high quality in the can-making industry is achieved by complex mechanised methods, justified only by a large volume. High quality in these markets is essential for competition there is fierce and we are up against foreign manufacturers who have all the advantages stemming from a massive volume of domestic production. For these reasons it is not possible to produce a utility standard for the domestic market and a higher standard for export. The quality standards in an exporting nation must be such that its products in the domestic market are increasingly worthy of exporting. Only if they are well packaged can consumer goods exports grow as they should; approximately Rs. 4 crores per annum of such exports are made possible today by your Company's packages and their is room for massive growth if we analyse the factors favouring exports correctly and act accordingly.

"I, therefore, hope that the authorities, in the interest of superior and more economical supplies in the home market and the more vigorous development of exports, will take a realistic view in their licensing policy for India's container-manufacturing industry.

Raw Materials

"The overall availability of tinplate throughout most of the year was maintained at a satisfactory level. The crisis that developed at mid-year in Bombay was due to the delayed shipment of plate procured from overseas under D.L.F. arrangements. Although every effort was made to achieve maximum production from the resources available, the operational efficiency of our Bombay factory was thereby adversely affected for several months.

"Although the year opens with a satisfactory stock level, the outlook for the current year cannot be without anxiety. If Tatas proceed with the planned closure for overhaul of their billet mill, the Tinplate Company of India will be required to obtain their tinbar from unfamiliar sources. It is not difficult to visualise the manufacturing problems that could ensue. Rourkela is not expected to commence tinplate production until the end of the year and the continuing gap between indigenous supply and current demand can only be met by imports. This is not a situation which allows complacency in the face of the critical foreign exchange position.

Tinplate and Aluminium

"Looking beyond the current year, Rourkela will provide only short-term relief, as the demand for tinplate is rising at a rapid rate. The National Council of Applied Economic Research have estimated that by the end of the third Plan tinplate demand will have reached 250,000 tons and we have no reason to disagree with this estimate. It is believed that to meet this the Government of India contemplate licensing production capacity of 320,000 tons. Until a really substantial expansion of production capacity is put into effect, the import bill for tinplate will be heavy, notwithstanding the considerable efforts being made to utilise alternative packaging materials. Meanwhile, if the means of providing adequate imports are not found, the effect on the many industries dependent on tinplate containers for their packaging will be far-reaching with corresponding repercussion on the economy as a whole.

"The Company's consumption of aluminium, although to an extent limited by availability, again increased. Arrangements have since been made to procure a somewhat larger tonnage during the present year. Compared with the prices ruling elsewhere, the cost of Indian aluminium is very high. As the additional sources of supply now planned come into production this is a factor which will require the industry's consideration if the use of aluminium as a packaging material is to be properly developed.

"Supplies of deep drawn mild steel were obtained during the second half of the year in sufficient quantity to allow increased production of industrial components. The outlook for the current year is at present uncertain but every possible effort is being made to ensure availability either from D.L.F., rupee payment or barter sources. It is to be hoped that the Company's representations on this score will not be ignored as the range of components now produced for the automotive, electrical and other industries represent in most cases direct saving of foreign exchange.

"Co-operation between the Company's Research Laboratories and the suppliers of ancillary materials continued fruitfully during the year. As a result the Company's usage of wholly indigenous materials has broadened satisfactorily as quality has been brought up to the required standards.

Development

"The Company's Technical Development Section contributed significantly during the year to the improvement of manufacturing methods and the design and introduction of new products.

"Calcutta No. 2 at which the Company's development projects are concentrated had a satisfactory year of consolidation. In the Plastics Works the range of products has been extended.

"The expansion of machinery building facilities was continued. The range of plant for customers' use was increased and a start has been made on the building of replacement equipment for internal use. Foreign exchange savings are directly proportionate to the output of this section.

"A small expansion of the Bombay factory building was completed and occupied while construction of an additional floor to the Bombay administrative block was started. These additions will facilitate improved plant layout and develop to the full the existing Worli site.

"The transfer of plant to Faridabad was largely completed during the year; only a small reforming operation now remains at Azadpur. The availability of power did not improve as anticipated and in order to work a day shift generating equipment had to be installed.

Board Changes

"In April 1961 Mr. R. W. Westbrook retired to return to an appointment in the United Kingdom. A member of the Board for fifteen years and Managing Director for the last three, he had served your Company with great loyalty, enthusiasm and skill for over twenty-five years. It was with regret that we said farewell to him.

"The Board have appointed Mr. H. K. S. Lindsay as Managing Director and Mr. J. N. de N. Cochrane-Barnett as Deputy Managing Director. Both have wide knowledge and experience of the Company's affairs. Mr. Lindsay has been a Director since 1951 and Mr. Cochrane-Barnett since 1957.

Employee Relations

"Good relations between management and employees have continued: it is gratifying that the latter and their representatives have as much faith in bipartite negotiations as the former. In pursuance of the Company's policy of keeping well abreast of area practices, agreements were concluded on the reclassification of occupations, wages and salary, dearness allowance, and other conditions of service. Regrettably the daily rated employees in Madras constitute a solitary exception to this pleasant picture: for the third consecutive year no bipartite negotiations have been possible notwithstanding the settlement of a five-year agreement covering the revision of salaries and grades with the Madras monthly rated employees.

"Training remains an important feature of personal policy. During the year the Company strengthened its own training arrangements and took every available opportunity for its staff to participate in suitable outside seminars, productivity teams and courses calculated to improve job knowledge, performance and potential for promotion. The scope of this activity has covered literally every category of personnel from the daily rated worker to the Managing Director. The latter, for example, attended the I.L.O./N.P.C. Conference of Industrial Leaders convened for 'heads of organisations of national importance' in the public and private sectors. Other participants in outside courses were two members of top management in the N.P.C's Three-day Seminar on Top Management; one manager at the Administrative Staff College in Hyderabad; three in advanced management courses; sixteen in courses for middle and junior management and salesmen. Nineteen of our Indian managers and technologists went abroad; three to programmes sponsored by the N.P.C. and sixteen under training, one holding a short-term appointment, with our U.K. associates. Arrangements have been concluded under which the Company's training staff were able to commence regular residential courses of two to three weeks' duration for managers, management trainees, salesmen and foremen. So far thirty-four have undergone residential courses, twenty-eight men other training courses. The Company has continued to support the Workers' Education Scheme: Calcutta No. 1 has been the most active, their Unit Level Centre has now trained its third batch of workers.

"It is gratifying for me to record the valuable co-operation of the Company's employees in our growing activities and I thank them and management for a year of hard and constructive work."

INDIAN BUS FLEETS EXPAND

Two of the largest bus undertakings in India have ordered a total of 140 single-deck buses from Ashok Leyland Ltd., of Madras. Thus, the Uttar Pradesh Roadways, the largest operator of Leyland Comet buses in India, has placed a repeat order for another 100 Comets valued at over £285,000. The Roadways already operate over 640 of these buses, which are reported to be returning the extremely satisfactory average fuel consumption of 18.5 m.p.g. They also operate 17 underfloor-engined, 43-seat Leyland Tiger Cubs on inter-city services.

The Ahmedabad Municipal Transport Service had ordered 40 Leyland Royal Tiger Cub chassis for operation on a new service between Ahmedabad and the newly rising capital city of Gujarat, Gandhinagar. These underfloor-engined chassis are powered by the 125 h.p. Leyland 0.600 diesel engine and equipped with Pneumo-Cyclic "no clutch" gearboxes. They will augment Ahmedabad's fleet of nearly 200 Leyland Comets and 40 Royal Tiger Cubs with synchromesh gearboxes.

PREMIER FERTILISERS LTD.

The first annual meeting of the members of the Premier Fertilisers Ltd., in accordance with the provisions of the Companies Act 1956, was held on 19th June 1961, at the registered office of the Company, when the audited balance-sheet and the expenditure during the construction account for the period ended 31st December 1960 was adopted. Mr. M. Ct. Muthiah, Chairman, reviewed the progress made so far and observed, in the course of his speech, that the contract for the civil work had been finalised and that the actual execution will start in the next few days: In the meantime, arrangements for other services like water and power supply were being attended to.

According to the latest information received, one shipment, consisting of two instalments of machinery due, has been despatched from Germany and it is expected that the same will be received in a month or so. The indigenous items ordered are also getting ready and it is expected that the scheduled regarding the erection of the machinery and the target fixed for the commencement of production sometime in January 1962 could be adhered to.

KAMANI ENGINEERING CORPORATION LTD.

CHAIRMAN, MR. R. H. KAMANI, STRIKES AN OPTIMISTIC NOTE

THE Fifteenth Annual General Meeting of the shareholders of the Kamani Engineering Corporation Ltd., was held at Bombay on 29th June 1961. Addressing the meeting, Mr. R. H. Kamani, Chairman, observed that the Company was in a sound financial position since all arrears of depreciation have been cleared and the whole of the assets of the Lahore factory have been fully recouped. He struck a note of optimism so far as the current year was concerned and said that the trend of higher production was being maintained in the current year and every effort was being made to increase it further provided raw materials like steel, zinc, bolts and nuts were available in time. He disclosed that the agency business booked by the Corporation upto now was satisfactory and the value of orders already secured was 60 per cent higher than the orders secured in the corresponding period of 1959-60. Mr. Kamani was of the view that the third Five-year Plan would provide plenty of opportunities for the Company to expand its business, in view of the large provision in the Plan for power projects with a total outlay of Rs. 1,000 crores.

The following is the full text of Mr. Kamani's speech:

"GENTLEMEN,

"It gives me great pleasure in extending to you all a cordial welcome on behalf of my colleagues and myself to this 15th annual general meeting of your Company.

"The Directors' report, audited profit and loss account and balance-sheet for the year ended 30th September 1960 have been in your hands for some time and with your permission, I propose to take them as read.

Profits Rise

"The net earnings of the Company before providing for Managing Agents' remuneration, taxation and depreciation for the year under review has reached a record figure of Rs. 20.89 lakhs as against Rs. 19.49 lakhs in the previous year. The amount set aside for depreciation is Rs. 4.89 lakhs and for taxation Rs. 6.70 lakhs. The balance of Lahore assets amounting to Rs. 2.88 lakhs has been written off completely in this year's account. In spite of this, rate of ordinary dividend has been slightly raised from 7.75 per cent taxable to 8 per cent taxable. You will please observe that the Company is now in a more sound position since all the arrears of depreciation and the whole of the Lahore assets have been fully recouped.

Record Production

"All previous records of factory production have been broken. Production during the year under review was 13,485 metric tons, over 30 per cent higher than the previous year's production. This trend of higher production is being maintained during the current year and effort is being made to increase it still further provided raw materials like steel, zinc, bolts and nuts are available in time.

Highlights of 1960-61

"Having presented to you a brief picture of the financial and production achievements of the year under review and the production trends of the current year, I would like to take this opportunity of conveying to you some of the highlights of important events of the current year. In doing so, I am limiting myself only to the achievements during the current year, as the important achievements for the year under review have already been included in the Directors' report.

"Agency business booked during the current year uptil now is satisfactory and the value of orders secured is about 60 per cent higher than the orders secured in the corresponding period of the year under review. This includes an additional order for the third generating set of 15 M.W. capacity for the Barauni Thermal Power Station and an order for a complete hydro-electric plant of 9 M.W. capacity for the Trisuli Project for Nepal.

"The Company is also fortunate to secure the orders of over Rs. 6 crores from the Government of India placed on their principals in Europe for supply of railway materials on which the Company would earn substantial commission.

Foreign Orders

"Our entry into the export market under global competition has been quite encouraging. As stated in the Directors' report, apart from Canada, West Indies and Thailand, sizable orders for 1,100 tons of transmission line towers from the New Zealand Electricity Department and further 650 tons of transmission line towers from the Government of Nigeria have been secured. There are other much larger orders under negotiations from other countries which your Company is hopeful of receiving during the current year.

"Regular production and sales for the newly developed Mark II Kamani-Twose Tractamount Road Roller have been undertaken and the department is progressing well.

Participation in Third Plan Projects

"The total outlay of expected expenditure for the power projects of the third Five-year Plan amounts to about Rs. 1,000 crores including about Rs. 220 crores of the continuing schemes of the previous Plan. The above figures include an outlay of Rs. 190 crores for transmission and distribution lines and about Rs. 100 crores for rural electrification. Your Company is keenly interested in participating in the above national developments to the maximum possible extent by (*a*) supply of power plant requirements of the various projects and (*b*) supply and erection of transmission and distribution lines and supply of equipments for rural electrification schemes. Plans are being prepared for equipping your Company to achieve the above objective.

Fruitful Technical Guidance

"During the current year the Company was fortunate in having as visitors several management and technical experts who, besides commending the methods and procedures of the production department, gave valuable advice for improving further the methods of production to render high production at lower cost with minor additions to the existing plant facilities. The Research and Development Department specially set up for studying these suggestions and planning to implement them has done considerable work, the benefits of which would be realised in the coming years. Besides, the newly appointed Technical Advisory Board under the able chairmanship of Mr. N. N. Iengar, (B.E.), M.I.E.E., ex-Chairman of the Central Water and Power Commission, has made very valuable recommendations which, when implemented, will further improve the manufacturing methods resulting in improved quality of the products and considerable economy in cost of production making our products highly competitive in the home and international markets.

Brighter Future

"Our present achievements and hopes for brighter future are a result of good efforts and co-operation of workers and staff of your Company and the encouragement and backing that your Company has received from all of you from time to time, for which I sincerely thank one and all."

Note:—*This does not purport to be a report of the proceedings of the general meeting.*

The U.S. Government has given its approval for a loan of Rs. 4 crores ($8.1 million) to Air-India International Corporation towards meeting a part of the cost of two Boeing 707 inter-continental jet aircraft. The credit has been channelled through the U.S. Export-Import Bank. Air-India at present has four jet aircraft. The addition of two more planes will go a long way towards meeting Air-India's goal of operating an all-jet air fleet. As the operation of piston-engined aircraft is becoming increasingly non-competitive, the Corporation is planning to retire its Super-Constellation planes and replace them with jet airliners. Three of the jet aircraft in service were brought with credits extended by the World Bank and certain commercial banks in the U.S. The fourth plane, which entered service in April last, was financed in part by a loan of $4.1 million extended by the U.S. Export-Import Bank.

AMAR DYE-CHEM LIMITED MAKING STEADY PROGRESS

PRODUCTION EXPANDING—LICENCE FOR MAKING INTERMEDIATES OBTAINED

MR. A. K. DOSHI, CHAIRMAN, ON ISSUE OF NEW SHARES AT A PREMIUM

ADDRESSING the Seventh Annual General Meeting of the Amar Dye-Chem Ltd., held at Bombay on Thursday, 29th June 1961, Mr. A. K. Doshi, Chairman, expressed satisfaction over the import policy for the period April-September 1961, which, according to him, was favourable for the growth of the dyestuff industry. He said that both production and sales were expanding and that the position in regard to raw materials was satisfactory. Alluding to the Company's expansion programme, he disclosed that the Company had already obtained licence for the manufacture of 2,155 tons of intermediates for dyestuffs. He also stated that one of the Directors of the Company, Mr. J. H. Doshi, was finalising arrangements for securing the requisite technical know-how for the intermediate and Beta-Naphthol projects with foreign firms. He made some pertinent points on the Government's policy of compelling companies to collect a premium on the issue of fresh equity capital on the basis of prevailing market values.

The following is the full text of his speech:

"GENTLEMEN,

"On behalf of the Directors, management of the Company and myself, I have great pleasure in welcoming you all here this afternoon, at the seventh annual general meeting of the Company. The Directors' report and the audited accounts for the year ended 31st December 1960 have been in your hands for some time and with your permission, I shall take them as read.

"This is the fifth year of our commercial production and in keeping with the trend of progress, this is another year with encouraging records of achievements for your Company. This is due, in large measure, to improvements in the process and methods of production, new product development and streamlining of equipments.

Profits Satisfactory

"The profits realised have been satisfactory. They amount to Rs. 62,11,093, as against Rs. 58,81,002 in 1959. These record profits have enabled your Directors to add to the general reserve fund, created last year, a substantial sum of Rs. 14,99,206.

Improvement in Sales

"The turnover position of the Company is found satisfactory. It effected sales of 764.5 tons of finished products, as against 685.3 tons in the previous year. The amount in value aggregates to Rs. 1,76,14,572 as against Rs. 1,72,40,182 in the previous year. This anomaly is due to various factors. The sellers' market gave way to the buyers' market. Further there was keen competition due to imports under licences for export promotion scheme, bilateral trade agreement, etc., and the prices of a number of items had to be reduced. In view of all these, the fact that there is a slight increase in the sale proceeds of 1960 should be considered immensely satisfactory.

"In 1960 the factory achieved production of:

429 tons of Naphthols,
408 tons of Fast Bases and
217.8 tons of BON Acid

as against

385.6 tons of Naphthols,
380.7 tons of Fast Bases and
182.1 tons of BON Acid

during the previous year. There is thus a remarkable improvement in the production capacity of the factory. And this shall be particularly apparent from the fact that, during the year under report, there was some loss of production for about two months on account of the extra floors being constructed on each of the Naphthol and Fast Base Plants. You will be pleased to know that efforts are being made to reach the installed capacity, as continued improvements are being made in processes and methods and the plants are being modernised. Here we presume that everything would go well with the imports of raw materials.

"The Company has also been able to set apart a sum of Rs. 5,00,000 towards redemption of 20,000 redeemable cumulative 6 per cent (tax-free) preference shares of Rs. 100 each and thus create a fund called 'redemption reserve fund.'

Exemption from Income-tax

"I am in a position to inform you that the Income-tax authorities have issued a provisional certificate that the amount eligible for exemption under Section 15(C) of the Income-tax Act will be Rs. 10,40,000 only, which is in fact the amount provided for distribution of dividends on preference and equity shares. Thus, the dividends that will be distributed to the shareholders shall be out of the exempted profits and shall be without deduction of income-tax as required under Section 18(3f) of the Income-tax Act. The Company, however, estimated such profits at Rs. 13,56 196 and the same were transferred to reserve account styled 'special reserve—profits under Section 15(C).' The matter is being further pursued and, if approval is not granted to the balance of Rs. 3,16,196, this amount or any part thereof will have to be added back to the general reserve account.

Import Policy

"The import policy of the Government of India so far as products of the Company are concerned, took an unfavourable turn from October 1959-March 1960 onwards. Not only the imports of items manufactured by the Company were liberalised but a ban enforced from October 1957-March 1958 to April-September 1959 was removed. This had put the Company in a very difficult position, as it had to meet severe competition from cheap imported materials. Ever since the reversal of the well-established policy of the Government to extend protection to the growing dyestuff industry, the Company tried hard to impress upon the Government to revise the retrograde policy. I am glad to inform you that the Company's efforts have borne fruit. The licensing policy for April-September 1961 is favourable to the growth of the dyestuff industry. Not only the imports of dyes have been curtailed from 20 to 12½ per cent, but also the import of fast bases manufactured by the Company have been restricted to the symbolic 5 per cent. There is also a salient feature that enforces compulsory import of intermediates to the extent of 35 per cent of the face value of the licences issued under export promotion scheme. This will go a long way towards easing the situation created by the reduction in the raw materials quota by the Government.

"In the last quarter of the year 1960, the Government of India instituted Tariff enquiry to review continuance of protection of the dyestuff industry. A very comprehensive questionnaire has been issued, calling for detailed information about production, sales, cost, etc., from the manufacturers and the same have been furnished by the Company. It was brought to the notice of the Government that the inquiry at this juncture was premature. Dyes are at present manufactured from imported penultimate intermediates. When dyes come to be manufactured from indigenous intermediates, the position will completely change and the decisions taken on the basis of present cost, price and profits will have no bearing whatsoever. However, it is contended by the Government that the inquiry has been postponed sufficiently long and cannot be postponed further.

Heavy Incidence of Excise Duty

"Faced with the task of bridging a large gap between expenditure and revenue and in pursuance of a policy of broadening the base of indirect taxation, the Finance Minister has, in the latest budget imposed an excise on coal tar dyes. The new excise at 15 per cent *ad valorem* was imposed from 1st March 1961 and has no effect on the operations of the year under report. Care has been taken that indigenous dyestuff industry does not get adversely affected. With that end in view, a countervailing duty of 15 per cent is levied on dyes imported into the country. But the dyestuff industry is still in its initial stages of development and is it not too much to expect of it to bear the imposition of such a heavy excise? The Government proposes to realise a sum of Rs. 67 lakhs from the excise levy imposed on the coal tar dyes. If that is their objective, I am sure, an excise levy of 5 per cent would have served the purpose.

Expansion Programme

"In my speech last year I referred to the expansion programme of the Company. I am sorry to state that there has been some delay in the implementation thereof. As reported by the Directors, the Company has secured a loan of Rs. 15 lakhs in foreign currency for import of capital goods required for TPM Plant and new BON Acid Project. Thereafter an application for licence has been made and about five months have gone by, but the licence is yet in the process of coming. You are aware that the capital goods required for the dyestuff industry are of highly specialised nature and the suppliers take as much as a year after receipt of the firm order. This, then, is the way how work gets unnecessarily delayed. I would further cite another instance. The Company submitted a proposal to the Government for the manufacture of intermediates for dyes as early as on 15th January 1960. The Government has taken more than 15 months to process the application and, ultimately, a licence for manufacture of 2,155 tons has been granted to us on 15th April 1961. Your Director, Mr. J. H. Doshi, has been visiting Japan, U.S.A., U.K. and U.S.S.R. for finalising, among other things, the negotiations for technical know-how for dyes intermediates and Beta-Naphthol projects.

Fresh Issue of Capital

"As to the issue of large capital to cope with the requirements, it was proposed so early as in October 1960 by the Directors to issue fresh capital of Rs. 80 lakhs. An application to the effect was made to the Controller of Capital Issues. Government insisted on according permission to the issue of fresh capital only at a very high premium.

"Regarding issue of new shares at a premium, it is generally based on stock market quotation at the moment of launching the issue. This is not equitable. It should rather be based on the existing asset value of the shares, the time likely to be taken for the new capital to earn income and the range of profit likely to be earned in the future; all these should be taken into consideration. To ignore these considerations and to fix the principle of loading the issue with a premium rigidly on speculative values would mean that the Government, while trying to help the Company, is indirectly helping the speculator and are placing even honest investors on the horns of a dilemma. The latter may be willing to invest in this particular investment, as they know its potentialities, but they know also that, in business, there are cycles of taxation that have been eating into distributable profits. They would have to pay the high premium that may be fixed by the Government even then and in order to reimburse themselves they have to look to the speculator. The policy for consent to issue of new capital should, therefore, be flexible and the point of view of the Company concerned should be given due consideration.

"I hope you will realise that, under the present circumstances, the Directors have taken the wisest course they can adopt and, in the meanwhile, it is hoped that the tendency to accord consent to new issue at a premium will take a turn for the better.

"As referred to in the Directors' report, an agreement for revision of wage scale of workers at the factory has been already concluded.

Prospects for 1961

"I may add that, during the current year, production is satisfactory and the sales, after the setback in the first quarter, have picked up after the announcement of the import policy.

"I shall be failing in my duty if I do not express my gratitude to my colleagues and the Board for their unstinted help and co-operation at all times.

"I now move that the Directors' report, audited accounts, balance-sheet and profit and loss account of the Company for the year ended 31st December 1960 with the Auditors' report thereon be adopted."

Note: *This is not a report of the proceedings at the above annual general meeting.*

FERTILISERS & CHEMICALS, TRAVANCORE LTD.

SPEECH OF CHAIRMAN, MR. T. A. JOSEPH

IMPRESSIVE SCHEMES FOR EXPANSION

ADDRESSING the Seventeenth Annual General Meeting of the Fertilisers and Chemicals, Travancore Ltd., held at Eloor, Kerala State, on 20th June 1961, Mr. T. A. Joseph, Chairman, gave a succinct account of the impressive expansion programmes undertaken by the Company. He disclosed that the third stage of expansion of the unit would be completed by 1963-64, when its capacity would have increased by seven times that in 1959. The first stage of the expansion programme, which provided for doubling the plant's capacity for the production of ammonia and for commencing the manufacture, for the first time in India, of the complex fertiliser, namely, ammonium phosphate (16-20 grade), had been completed by the end of 1960. The second stage of expansion, now under execution, would be completed in the first quarter of 1962, which, according to Mr. Joseph, would raise the capacity for the production of ammonia to three times that in 1959.

The following is the full text of Mr. Joseph's speech:

"GENTLEMEN,

"I am glad to welcome you to this, the seventeenth annual general meeting of the Company and to present to you the accounts of the Company and the report of the Directors for the year ended 31st December 1960.

"The year 1960 was an important landmark in the history of this Company. It was at the close of this year that the Company completed its first stage of expansion doubling its capacity for the production of ammonia and introducing ammonium phosphate (16-20 grade), a new complex fertiliser for the first time in the country. As the programme was completed by the months of November and December 1960, the fruits of this expansion will be available to us only from this year. While on this, I would like to pay a tribute to Messrs. Seshasayee Brothers (Travancore) Private Limited who were in charge of the management of the affairs of this Company till 15th August 1960 for their wisdom and foresight in planning this expansion programme, as a result of which the Company has become a very versatile producer of fertilisers in the country today.

Peak Production

"The year 1960 is important for another reason too. During the year the Company has achieved the highest figures of production so far in all its departments. The general financial results of the Company have also shown noticeable improvement as you must have seen from the statements of accounts circulated to you. Compared to the previous year the production of ammonia registered an increase of about 34 per cent, ammonium sulphate 36 per cent, ammonium chloride 13 per cent and mixed fertilisers 100 per cent. These achievements have become possible only due to the wholehearted co-operation and hard work of the executives and workers of the Company. The expansion programme of the Company has contributed but little to this increase, as the works in that connection were completed only towards the end of the year. I would take this opportunity to congratulate them on their performance and express our appreciation of the efforts made by them.

Sales At New High

"Our realisations from sales during the year have also reached a new high, in spite of the reductions in the retention price of ammonium sulphate and the sale price of superphosphate effected by the Government of India in April 1960.

"The recent amendment to the Company Law that came into effect in the year has made it necessary for us to revise our method of charging depreciation. You will notice from the Directors' report that we have provided an amount of Rs. 25,09,798 for depreciation this year, as against Rs. 22,11,223 for 1959. We have also provided an amount of Rs. 23,55,000 as development rebate, as against Rs. 3,36,000 for 1959, and you will be pleased to note that our reserves at the end of 1960 will be standing at Rs. 64,30,156, as against Rs. 34,20,917 at the end of the previous year.

"The second stage of expansion now under execution is expected to be completed in the first quarter of 1962, when the capacity for production of ammonia would increase to three times what it was in 1959. The Company has also taken preliminary steps towards the implementation of a third stage of expansion which if taken in hand now can be completed by 1963-64. The capacity envisaged at the end of the third stage of expansion is about seven times that in 1959. Keeping these present and future commitments in view, the Directors considered it prudent to provide for reasonable reserves. Hence they have recommended that the dividend for the year be pegged at the same rate as for the previous year in spite of the better working results. I have no doubt you will appreciate the objective of the Directors and approve of the dividend recommended.

"During this year, the Company is working with augmented capacity as I have indicated earlier. The teething troubles of the new plants commissioned at the end of 1960 are being overcome, and I hope that the results of this year would be quite satisfactory, in spite of the fact that we are not yet getting the full power supply as mentioned in my last year's speech. To add to our discomfiture we have also had to face a power cut in May which fortunately was not for a long duration.

Distribution Organisation

"During this year the Company has expanded considerably its fertiliser distribution organisation in the Kerala State. By an agreement with the Government of Kerala, the responsibility for the distribution of all Government fertilisers throughout the State of Kerala has been entrusted with this Company from April this year. It is our intention to provide sufficient number of distribution points throughout the State so that the cultivator can get his requirements of fertilisers within a distance of four to five miles of his home. The Company is working in close collaboration with the Department of Agriculture to ensure that the policy of Government in regard to the utilisation of co-operative societies and service co-operatives for distribution of fertilisers is fully implemented. The Department of Agriculture of the Government of Kerala has been extending to the Company its wholehearted co-operation and support in its effort to establish a sound distribution system for fertilisers in Kerala State. We are indeed grateful to the Department in this matter.

"As I mentioned last year, the Company has been engaged also in extensive agronomical work throughout the State. We have at present more than 400 demonstration plots distributed all over the State with the purpose of educating the farmers of Kerala on scientific principles of manuring. We have fertiliser officers stationed in each district to render advice and assistance to agriculturists. We have also endeavoured to provide facilities for speedy analysis of soils with a view to arriving at proper dosage of fertilisers for different crops according to the characteristics of the soils in the different parts of Kerala. I am glad to inform you that the response to the measures we have taken in this regard has been encouraging. In Kerala State, which continues to import as much as Rs. 50 crores worth of foodgrains in a year, it is necessary to plan for the production of the maximum possible quantity of foodgrains. With the limitations in the availability of fresh land for extension of cultivation, the only way to achieve the targets of food production is by intensive and scientific manuring. It is our policy to colaborate with the Department of Agriculture in developing the necessary consciousness in our farmers towards the application of fertilisers on a scientific basis so that in course of time, Kerala State should be able to produce the bulk, if not the whole, of its food requirements locally.

Expansion Programmes

"I take it you would like to know something of our expansion programmes. The first stage of expansion has been completed by the end of last year. The second stage of expansion involving the installation of an oil gasification plant to produce ammonia based on naphtha available from Indian Refineries is well on its way. To facilitate the supply of naphtha to the factory, the suppliers, Messrs. Burmah-Shell Oil Company, are laying a pipeline from their Ernakulam installation to the factory site. The construction works are proceeding at a rapid pace and it is expected that the expansion will be completed within the target date.

"The third stage of expansion is still only in the exploratory stage. It contemplates a capital outlay of nearly eight to ten crores of rupees. Negotiations are proceeding at present to obtain the additional capital and foreign exchange required for the expansion. Meanwhile, the Company has already started preliminary investigations to avoid delay in implementation.

"These expansion programmes have been envisaged primarily with a view to reducing the cost of production of ammonia. As I have explained earlier, the production of fertilisers is likely to expand considerably in the immediate future. There is an assured market for all this increased production, as the value of fertilisers for better crops is being realised more and more by the cultivators. In fact, within a short time, fertilisers will become a *must* to every cultivator. When any commodity becomes a *must*, particularly on the food front, it will not be long before its price structure becomes fully controlled by the State, whose constant endeavour will be to progressively scale down the prices. The new firms coming into the field will presumably be having the most modern equipment, and the latest techniques, to keep down the prices. In order to enable us to keep up our competitive position, it is very necessary that we should also have the best available equipment, and simultaneously increase our production to spread our overheads. If we take steps in this direction, with our experience in the field of nearly two decades, and the splendid well-trained and willing team of operatives that we have, I feel confident we can keep ahead in the race, and set standards for the newcomers in the field. Incidentally, in this connection, it would be a great advantage to us if we can get the bulk of our production consumed locally in this State, as it would give us considerable freight advantage *vis-a-vis* our competitors. As I have mentioned earlier, we are already working in close collaboration with the Department of Agriculture, to develop fertiliser consciousness amongst Kerala agriculturists.

Labour Welfare

"I am glad to say that the Company has been devoting considerable attention during the year towards increased amenities to the employees. The Company has undertaken a house-building programme with a view to providing more residential accommodation in its township. Fifty houses have been completed and occupied and fifty more are nearing completion. The intention is that, in the course of a few years, there should be a sufficient number of quarters to accommodate all the employees who require such accommodation.

"During the year, the Company has also accepted the recommendations of the Industrial Relations Committee for the linking of dearness allowance to the working class cost of living index. The average annual earnings of an employee in 1960 stood at Rs. 2,283 compared to Rs. 2,114 in 1959 and Rs. 1,520 in 1955. During the year, the Company has disbursed to its employees an amount of Rs. 8.39 lakhs as bonus. Besides, as a result of the completion of our first stage of expansion, we have been able to provide additional permanent employment to 384 persons.

"The Company has also introduced a scheme for the grant of loans to employees for construction of houses. The Government of Kerala has been pleased to recognise the upgrading of the Upper Primary School in the F.A.C.T. Township to a high school. In all the classes, education is provided through both English and Malayalam media of instruction.

"I would take this opportunity to inform you that a Joint Council of Management has been functioning in this Company since May 1959. The Council has been successful in developing a proper atmosphere of industrial relations. The Council has also been able to create productivity-consciousness among the employees. Useful measures like suggestion schemes, safety awards, etc., have been introduced on the recommendations of the Council. I hope the Council would continue to function on healthy lines and to sustain good industrial relations and to promote better productivity.

"I would take this opportunity to express our thanks to the executives and workers of F.A.C.T. for their good work and devotion to duty."

N.B.—*This does not purport to be a report of the preceedings of the general meeting.*

JUGGILAL KAMLAPAT COTTON SPG. & WVG. MILLS CO. LTD.

SPEECH OF MR. PADAMPAT SINGHANIA

RAYON IS AS IMPORTANT AS COTTON

SPEAKING at the Thirty-eighth Annual General Meeting of the Juggilal Kamlapat Cotton Spinning and Weaving Mills Company Ltd., held at Kanpur on 9th June 1961, Mr. Padampat Singhania, Chairman, called upon the Government to give all help and encouragement to the development of rayon industry which, according to him, was no less important than the cotton industry. He deprecated the tendency among some people, especially in the Government, to consider rayon as a luxury article. He emphasised that as, in the present conditions, it was not possible to produce cotton cloth to fulfil the entire requirements of the people, some substitute fibre had to fill the gap. Rayon, he hastened to add, was the right fibre for this purpose.

The following is the text of the speech of Mr. Padampat Singhania:

"GENTLEMEN,

"It gives me great pleasure to welcome you all to this thirty-eighth annual general meeting of your Company. The Directors' report and the audited accounts of the Company for the year ended 31st December 1960 have been with you and with your permission, I shall take them as read.

"The Company's working results of the year and other important matters such as renovation and expansion programmes undertaken by it have been adequately explained in the Directors' report which is in your hands. It would suffice to say that the results of the year under review are quite encouraging and we hope to report better results next year. However, it would not be out of place, if, as Chairman of the Company, I were to inform you that the Company floated new shares in April 1960 and within a short span of time, say nine months, the Directors' recommendation to distribute a dividend of 12½ per cent even on new shares which ought to be viewed by the shareholders as an evidence not only of the soundness of their investments but also of the efficiency of the management. The management has always been keen not only to modernise the plant and machinery of your cotton unit, but also to expand it. During the year under review, the Company has installed combing machines and also a sanforising plant. The management has also considered schemes for replacement of machinery and other equipments of spinning, preparatory and weaving sections and wet processing department. On this occasion, I would like to make a few general observations on the cotton textile industry and the rayon industry in which your Company is interested.

"With a view to clothing the growing population of our country, increase in the production of cotton textiles is the greatest need of today and all-out efforts are necessary to achieve this objective. In the third Five-year Plan, the target of cloth consumption has been fixed at 16½ yards per head per annum. To reach this target we will require about 1,200 million yards of cloth more. Besides, we have not only to meet the entire internal requirement, but have also to strive to push the exports of cloth, in order to earn the much-needed foreign exchange. This would be possible only if we organise our industry on modern lines by effecting renovations and expansions with the latest machinery and are able to compete with other countries of the world in the level of price and production; otherwise our export trade is bound to suffer. I hope the Government of India would envisage an additional production of about 800 million yards of cloth by the textile industry.

Market Research

"Another point which has to be borne in mind is that the industry must be able to produce cloth to suit the consumers' tastes. Since the standard of living of our people is going up, quality goods are needed in the market. It is, therefore, essential for the industry to study closely the market trends and produce goods according to the changing tastes of consumers in design, colour and fabric. It is only then that we can increase the productivity, profitability and capital of the cotton textile industry and also earn valuable foreign exchange by augmenting our exports. Your Company is striving to work in these directions with whatever resources are available to it. In fact, it is very difficult for the organised industry to stand in competition with the handloom industry, because the former has to pay heavy excise duty and has to face direct competition. This is a great handicap of the industry and merits thoughtful attention of the Government.

"In the sphere of rayon industry, I notice with regret that there is a tendency among people, including some people in the Government of India, to think that rayon is a luxury article and is not suitable to provide cheap clothing for the masses. This notion, in my opinion, is not correct. It is obvious that we must have a suitable and cheap fibre to clothe the rapidly increasing population of the country. What is available to us at present for this purpose is 'cotton.' If we cannot get sufficient supply of cotton from what may be called 'small trees,' we have got to tap 'bigger trees' and find fibre out of them. Similarly some people are of the view that since rayon yarn is produced out of wood, it is not a real clothing fibre but an artificial one. I feel that, with the growth of population and increasing standard of living of our people, it is necessary that they should get varieties of things for their use. As, in the present conditions, it is not possible for the country to produce cotton cloth to fulfil the entire requirements of the people, we have naturally to find out some substitute cheap fibre to fill the gap; and 'rayon' is the right solution of the problem.

"The rayon industry in India which is still in its infancy needs all support and encouragement for its development. If the industry is allowed to develop, it will ultimately be able to produce cheaper cloth to meet the increasing demand of the people. I feel that the present prices of cotton cloth, though they are quite reasonable considering the manufacturing costs of the industry, are rather high in comparison to the purchasing power of the consumers. The prices of cotton also are much too high. I think they cannot be reduced till we are able to find some other substitute fibre and develop its production. For imported cotton, we have to pay about Rs. 2 per lb., whereas rayon pulp costs us only about 50 nP per lb. In other words, for importing rayon pulp, we have to spend Rs. 25 only for every Rs. 100 spent in importing cotton. It will thus be seen that, if we develop the rayon industry, our imports will be curtailed by 75 per cent, which will mean a considerable saving in foreign exchange. In short, the importance of rayon industry in India cannot be overemphasised. It would be unfortunate and detrimental to the interests of the country to discourage the growth of this important industry simply because of the wrong impression that 'rayon' is a luxury article. To my mind rayon industry is no less important than cotton industry and deserves all help and encouragement by the Government. I hope it will receive careful attention of the Government of India and the Planning Commission and will get its rightful place in the industrial expansion programmes of the country.

Sodium Sulphate Plant

"So far as the Company's rayon unit is concerned, the management has decided to put up a plant for the manufacture of sodium sulphate to be recovered as by-product from the rayon plant. Orders have been already placed for the import of the requisite plant and machinery from West Germany and the same are expected to be shipped shortly.

"The Company has received licences for:

(i) Expansion of the existing rayon plant from 5 tons to 10 tons per day.

(ii) Plant for producing rayon grade pulp from cotton linters, with 10 tons per day capacity.

(iii) Fertiliser plant for manufacture of superphosphate, with a capacity of 40,000 tons per annum.

"In conclusion, I have sincerely to thank my colleagues on the Board and to express my appreciation to the officers, staff and workers of the Company for the valued co-operation extended by them during the year."

NEW GREAT INSURANCE CO. OF INDIA LTD.

SPEECH OF MR. AMBALAL KILACHAND

MR. Ambalal Kilachand presided over the Eighteenth Annual General Meeting of the shareholders of the Company held at Baroda on 23rd June 1961, in the unavoidable absence of the Chairman, Mr. Tulsidas Kilachand. In his speech, Mr. Ambalal referred to some of the problems facing the insurance industry.

Removal of Restrictive Regulations

He appealed to the Executive Committee to recommend to the Government to review the Insurance Act as a whole, remove all the provisions such as restriction on commission, etc., and to enact new insurance legislation in a simplified form based more or less on the laws prevailing in a highly developed country like the United Kingdom as, in his view, it was the existing restrictive regulations which hampered the smooth working of the insurance industry.

Quantum of Expenses Limit

Mr. Ambalal also appealed to the authorities to re-examine the provisions of Section 40C of the Insurance Act and Rule 17E of the Insurance Rules pertaining to the quantum of expenses which were fixed over ten years ago at a time when the cost of living and the prices of commodities were very much lower, and to effect the necessary changes in the formula by making it more flexible, so that the industry could conduct the business smoothly under present-day conditions.

Compulsory Cessions to Approved Reinsurers

Mr. Ambalal then referred to the passing of the Insurance (Amendment) Act whereby Government has made it compulsory for all insurers in India to reinsure a certain percentage of their business with the Indian Guarantee and General Insurance Company Ltd., in addition to the reinsurance already being placed with the India Reinsurance Corporation which had been formed a few years ago at the instance of the Government by companies working in India who subscribed to the Corporation's capital and also undertook to reinsure with it a certain agreed percentage of business. He mentioned that companies were spreading out their liability in as wide a geographical area as possible and were getting reciprocity to the fullest extent, particularly in the fire department, which had enabled them to build up a profitable reciprocal portfolio. On the other hand, they would be receiving only 50 per cent reciprocity from the India Re and the Indian Guarantee. As the main object for which the Amendment Act was passed was to conserve and earn foreign exchange, and with a view to making good to the companies the reduction in reciprocity, Mr. Ambalal felt that the India Re and the Indian Guarantee should concentrate on bringing to the Indian market an increasing volume of profitable business from abroad.

Mr. Ambalal took the opportunity to mention that there had been certain unavoidable delay and difficulties in starting the construction of the Company's building, but once we surmounted these initial handicaps, the building would be completed as quickly as possible.

Company's Accounts

Dealing last with the departmental accounts, Mr. Ambalal stated that the gross direct premium for the year 1960 was Rs. 48,14,879 in fire, Rs. 37,24,835 in miscellaneous insurance, and Rs. 38,20,963 in marine, whilst the net premiums were Rs. 42,24,023, Rs. 31,99,405 and Rs. 19,50,504, respectively. After providing for losses and expenses and reserves at 50 per cent in respect of fire and miscellaneous insurance and 100 per cent for marine, and after adding the balance brought forward from the previous year, the net amount to the credit of the profit and loss appropriation account in all was Rs. 3,20,736. The Directors had transferred Rs. 40,000 to the staff gratuity account and had proposed to pay the twelfth dividend on ordinary shares at Rs. 2.50 per share, less deduction of tax, amounting to Rs. 2,50,000.

N.B.—*This does not purport to be a record of the proceedings of the annual general meeting of the Company.*

ALEMBIC CHEMICAL WORKS COMPANY LIMITED

PENICILLIN PLANT COMMISSIONED

CHAIRMAN, MR. RAMANBHAI B. AMIN DEPLORES HEAVY EXCISES ON MEDICINES

PRESIDING over the Fifty-fourth Annual General Meeting of the Alembic Chemical Works Company Ltd., held at Baroda on Thursday, 22nd June 1961, Mr. Ramanbhai B. Amin, Chairman, stated that the most important event for the Company during the year 1960 was the commissioning of its Penicillin plant. He struck an optimistic note regarding the expansion scheme of the Company and confidently predicted that work on expansion projects of Yeast, Sulphuric acid, Superphosphate and Ethyl Alcohol plants would commence at an early date. He deplored the imposition of heavy excise duty on medicines and pointed out that there was multiple indirect taxation on pharmaceutical products as a result of levying excises on raw materials and excises as well.

The following is the full text of Mr. Amin's speech:

"LADIES AND GENTLEMEN,

"I have pleasure in welcoming you to the 54th annual general meeting. The Directors' report and the audited accounts for the year ended 31st December 1960, together with the Auditors' report, have been circulated to you, and with your permission, I shall take them as read.

Capital Expenditure

"The year under review has been one of expansion and growth. The expenditure on fixed capital block increased by over Rs. 50.00 lakhs to Rs. 237.00 lakhs and the year's sales increased to Rs. 2.61 crores from Rs. 2.48 crores. As could be expected for any expansion, there were teething troubles, but they were overcome. The most important event of the year under review was, of course, the commissioning of the Penicillin Plant to production. Here also we had our share of troubles, but it is gratifying to record that they are all being met with by the Company's technical staff. The plant was formally inaugurated by the Honourable Home Minister, Mr. Lal Bahadur Sastri, in April of the current year and he paid a handsome tribute to the Company's technical staff who designed and fabricated the entire plant and commissioned it to production.

Expansion Schemes

"You may recall that the licence granted to us was for a production of 10 M.M.U. per annum. We had asked for a higher capacity, and I am glad to say that the Government has very recently issued a licence for doubling our capacity from 10 M.M.U. to 20 M.M.U. per annum. Necessary steps for the installation of the increased capacity are being taken.

Yeast Plant

"The expansion of the Yeast Plant was referred to by me in my last year's address to you. Due to paucity of foreign exchange, it was difficult to commence work on this expansion. The necessary foreign exchange will soon be available and the work on this project will commence as soon as the import licences are obtained.

"Though many other developments have been held up due to the country's difficulty in getting the foreign exchange requirements, the Company is trying to proceed with its projects of the expansion of Sulphuric Acid, Superphosphate and Ethyl Alcohol Plants.

Excise Burden

"As you are aware, Central excise duties were imposed on proprietary and patent medicines (not containing alcohol) with effect from the 1st March of this year. It was also imposed on glass containers (at 15 per cent *ad valorem*) and on some of the raw materials of the pharmaceutical industry. Due to levy of excise on the main components, namely, glass containers and raw materials, the costs have increased to a very considerable extent. It is difficult to imagine the justification for imposing such a high levy on medicines, thus making them more and more beyond the reach of the general public.

"No provision has yet been made for drawbacks or refunds on material which goes into the finished product, and on which duty is again leviable. I suggest that it will be worth examining whether duty should not be levied at one consolidated rate on the final product only in place of the present multipoint levy on materials going into manufacture. Further, where duty is leviable *ad valorem*, there should be some definite basis for determining the value on the basis of which duty is to be calculated. The present provisions of the Central Excise Act in this behalf are far from satisfactory and have given rise to various interpretations. The taxpayer is at least entitled to demand certainty, if not equity, in a taxing statute. I hope that the Central Excise Reorganisation Committee, which at the moment is examining the organisational and administrative set-up of the Central Excise Department would consider these and other aspects and recommend the adoption of a simple, just and equitable procedure.

Committees and Commissions

"Various committees and commissions are being appointed for making recommendations to the Government on numerous matters of administration, but it is apparent that much purpose will not be served if the terms of reference of such committees are unduly restricted. The Law Commission which was asked to recommend simplification of the Tax Acts was restricted by its terms of reference from examining the question of any alteration in the tax structure. As the Commission remarked, 'It is certainly not possible to make the Act simpler without encroaching upon at least the fringe and verge of the tax structure.' The Direct Taxes Administration Enquiry Committee which followed in 1959 was also handicapped by the restrictions of not suggesting any change in the substantive provisions of the statute, except in administrative and organisational matters. The results of such restrictions could be a mere rearrangement and regrouping of sections, and I do feel that attempts to make merely superficial changes is a waste of time and public money.

Housing Scheme

"I had referred to the steps the Company was taking to house its employees. The progress in this respect during the year has not been very satisfactory, because of the acute shortage of cement. Unless the Government grants some priority to industrial housing, it is going to be a little difficult to house the workers in spite of the avowed wishes of all concerned.

Thanksgiving

"Barring unexpected difficulties, the expansion in the various directions already taken in hand will be consolidated during the current year. I would like to take this opportunity of thanking my colleagues on the Board and officers, staff and workers of the Company for the last year's satisfactory results. Thanks are also due to the new Managing Agents, Messrs. Rayuma Services, who, as you are aware, took office from the 15th August 1960.

"I now commend the balance-sheet and profit and loss account of the Company and the Directors' report for your consideration."

GOODYEAR EQUITY SHARES

The recent offer by Goodyear India Limited to the public of 4,00,000 Equity Shares to raise Rs. 68 lakhs is significant from three aspects.

It has produced the second largest number of shareholders of any public company in the private sector in India. Secondly, no prior allotments were made to Directors, friends or employees, all the shares being offered to the Indian public.

Although the issue was oversubscribed by about 25 times, letters of allotment and regret with balance of refunds to unsuccessful applicants were all posted within two months of the closing date, indicating the prompt efficiency with which the entire issue was handled.

Offering Equity Shares of Rs. 10 each at a premium of Rs. 7 per share, the Company received applications aggregating Rs. 17 crores against the requisite subscription of only Rs. 68 lakhs. This reflects the Indian investor's confidence in Goodyear management. 89,000 applicants were reviewed and processed, representing a total of about 10 million shares from which 49,231 applicants were allotted shares.

DALMIA CEMENT (BHARAT) LIMITED

CHAIRMAN, MR. V. H. DALMIA, OUTLINES CAUSES FOR CEMENT SCARCITY

PLEA FOR RAISING RETENTION PRICES

IN his address to the Ninth Annual General Meeting of the Dalmia Cement (Bharat) Limited, held at Dalmiapuram (Madras State) on Thursday, 29th June 1961, Mr. V. H. Dalmia, Chairman, referred to the causes for cement production falling short of capacity and urged the Tariff Commission to revise the formula for determining the ex-works retention prices of cement in a manner that would enable the Company, a highly efficient producer of cement, to get a better margin of profit, without which it would not be possible for the industry to play the role expected of it in the third Plan. His observations on the Company's iron ore business and the working of Dalmia Magnesite Corporation—a subsidiary of the Company—made encouraging reading.

The following is the full text of Mr. Dalmia's speech:

"GENTLEMEN,

"I am happy to welcome you to Dalmiapuram on the occasion of the ninth annual general meeting of your Company. We are meeting somewhat earlier this year than in the past and this is how it will be in the years to follow, because, under the Company Law as recently amended, the annual accounts are required to be presented within six months from the close of the financial year of the Company.

"The accounts of your Company for the year 1960 have been with you for some time now. In the Directors' report, which has also been circulated, the working results for the year under report have been discussed and information has been given on the salient features of the operations of your Company. During the last five years, approximately Rs. 20 lakhs have been drawn from the dividend equalisation reserve and general reserve to enable payment of the dividend to the shareholders. This year, for the first time since 1956, it has been possible to make a small allocation of Rs. 2 lakhs to the General Reserve. As mentioned in the Directors' report, despite the substantial expansion in cement production and despatches following the installation at heavy cost of the third kiln, profit from the cement business has remained at the 1959 level. I hope that the position will be better during the current year and more so in the following years, if the ex-works price of the cement produced by your Company is increased adequately as a result of the enquiry which is being made now into the price question by the Tariff Commission. I shall come to this again later, when I deal with the subject of price taxation.

Tax Exemption Benefit

"It has been mentioned in the report of the Directors that a portion of the dividend would be exempt from tax deduction as the Company was entitled to the benefit of tax exemption on a portion of its income pursuant to Section 15C of the Indian Income-tax Act. A preliminary estimate of the exemption has been made by the Income-tax Officer assessing the Company and deduction is required to be made on 88 per cent of the dividend amount. This means that, as against 30 per cent deduction ordinarily to be made from the dividends, the deduction in the case of your Company out of the dividend for the year 1960 would amount to 26.4 per cent. A notice to this effect was inserted in the annual accounts as the determination for the tax exemption was obtained just before the despatch of the accounts.

Cement Shortage

"Since last year, acute shortage of cement is being experienced almost all over the country, despite the fact that the annual installed capacity of the cement industry has touched 8.70 million tons and there are now 33 factories spread in all parts of the country manufacturing cement. Most people carry the impression that cement industry is enjoying boom conditions and making huge profits. Nothing can be further from the truth. Paradoxically, quite the opposite is the case. As against the annual installed capacity of 8.70 million tons, due largely to inadequate supply of wagons for both the supply of raw materials and despatch of finished products, as also inadequate allocation and receipts of coal, the actual production of the industry in 1960 was only 7.84 million tons. In other words, the actual production has lagged behind the installed capacity by about 10 per cent or about 8.6 lakh tons.

"The ex-works retention prices for the cement industry were fixed in the last price examination on the basis of production of the cement factories being equal to their installed capacities. Lower production has, therefore, hit the industry hard, in that its costs have gone up and the profit margin, already meagre, has been further squeezed. Besides, there have been increases in costs all round, with the rise in railway freights, increase in coal price and several other factors. The difficulties of the industry and the uneconomic retention prices have, to a large extent, retarded the growth of the industry and slowed down the tempo of expansion. The ex-works prices payable to the cement producers are due for revision with effect from the first of July and the Tariff Commission is now engaged in a study of the production costs of the different units. Next month, the Commission will hold a public enquiry and I hope they will take a sympathetic view while recommending the revised ex-works prices. This would strengthen the position of the industry and enable it to play its expected role in the development programmes of the third Plan.

"I am glad to inform you that the Indian Standards Institution has granted a licence to your Company to use the I.S.I. certification mark which carries with it the assurance to the users that our cement conforms to the standard specifications and is of the highest quality. The certification mark is being placed on each and every bag which goes out from the factory. This will further strengthen the confidence of the cement users in the quality of the cement manufactured by your Company.

Iron Ore Business

"Your Company's iron ore business has made satisfactory progress and it is hoped that it will continue to do so. Tremendous expansions in the steel industry are being planned and are being projected on a global basis during the present decade. Concurrently, several new sources of iron ore for the steel industry are being discovered and exploited, notably in Africa, while supplies of ore from many traditional sources, such as South America, are being expanded further. The consequent varying patterns of demand and supply are reflected in the increased complexity of negotiations on an international level for large-scale sales and purchases of iron ore. The State Trading Corporation of India Limited are to be congratulated on their notable success in concluding agreements with various countries for large exports of iron ore. It is hoped that the State Trading Corporation of India Limited will continue to pursue its policy of entering into long-term agreements for the supply of Indian iron ore to foreign buyers and your Company will be given fresh contracts for the supply of high grade iron ore on a long-term basis. Such an arrangement would allow of more extensive introduction by your Company of mechanisation in their mining and transport operations. The resources of the Indian railways are heavily overtaxed by the need for meeting the increasing demands of the country's expanding economy and at the same time of finding movement capacity for export. The hoped-for increase in the railway movement available for iron ore has therefore not come up to expectations although there has been a slight improvement which it is hoped will be accelerated later in the third Five-year Plan as a result of measures which the authorities have taken and are taking, when your Company may also look forward to increased exports of their iron ore and thus to making still greater contribution to the earnings of foreign exchange.

"The results achieved for their last financial year by Messrs. Dalmia Magnesite Corporation, in which your Company is a partner, augur well for the future of the dead-burnt magnesite industry. Apart from the anticipated very substantial increase in the demand for this material from the indigenous consumers, such as the steel industry and the refractory industry, about which I had spoken last year, there is a possibility of an export market in view of the world-wide expansion in the steel industry. These developments are being followed with very close interest and, in the meantime, the proposal to double the production capacity at Salem Works is being processed further.

Productivity Studies

"I am glad to say that increasing emphasis is being laid now on improving the skills not only of the operatives in industry but also of the supervisors and managers who are responsible for the efficient working of our industries and businesses. A large number of training programmes is being organised by the productivity councils and management associations for different levels of management. Selected trainees are being sent abroad for advanced training. Your Company is taking advantage of these facilities and our Executives have participated in the various programmes with advantage. I consider that the development of competent executives in adequate numbers is of the highest importance for the success of our plans for industrial development. Our Minister of Industries, Shri Manubhai Shah, with his usual foresight, was quick to realise that the shortage of trained personnel may well become a major obstacle to the rapid development of our industries and that a low level of productivity would, sooner or later, price out our exports from the highly competitive world markets. It was at his initiative that the National Productivity Council was established. Under the dynamic presidentship of Shri Manubhai Shah, the National Productivity Council has, in a short span of time, created a large degree of enthusiasm for better management practices and higher productivity. Both the National Productivity Council and the All-India Management Association deserve our appreciation of the excellent work they are doing in educating and training the men who are in-charge of the industries. Your Company is rendering its fullest co-operation and assistance to the local Productivity Councils and Management Associations. I would like to add that it is our constant endeavour to develop and encourage our employees and provide them with fullest opportunity for progress in the Company. Mr. L. Swaroop, a senior officer of your Company, is shortly going to the U.S.A. and the Continent as a member of the Productivity Team sponsored by the National Productivity Council for study of the cement industry in those countries.

"I am glad to say that our relations with our staff and workers continued to be cordial both at the works and offices. I would like to express our appreciation of the services rendered to the Company by all the executives, staff and workers. I wish to mention, in particular, the devoted and capable way in which the affairs at your Dalmiapuram Works have been managed by Mr. R. N. Roy, who is retiring on grounds of health from the post of Works Manager after nearly 20 years of service in our organisation. His advice and guidance will, however, continue to be available to the Company as he will from now on hold charge of the office at Madras where the work does not call for so much exertion. Shri B. V. Raju, our Chief Engineer, will take over from Mr. Roy as Works Manager.

"We may now take up consideration of the annual accounts and other subjects on the agenda of the meeting."

N.B.—*The above extract of the speech does not purport to be the report of the proceedings of the ninth annual general meeting of the Company held on the 29th June, 1961.*

Aluminium Limited of Canada has just agreed to sell to A/B Svenska Metallverken for about $7 million, its one-half interest in the aluminium-smelting company in Sweden known as A/B Svenska Aluminiumkompaniet, thereby transferring full ownership to the Swedish interests. Svenska Metallverken is the largest fabricator of aluminium in Sweden and normally uses the bulk of the output of the Swedish smelters, about 16,500 tons per year, supplemented by imports as required.

THE TRAVANCORE RAYONS LIMITED

MR. AR. RAMANATHAN, CHAIRMAN, REVIEWS EXPANSION PLANS

COUNTRY'S DEMAND FOR CELLULOSE FILM WILL BE FULLY MET

THE expansion plans of the Travancore Rayons Limited were highlighted by Mr. AR. Ramanathan, Chairman of the Company, in his speech delivered at the Fifteenth Annual General Meeting of the Company held at Rayonpuram (Kerala State) on Wednesday, 28th June 1961. Mr. Ramanathan referred to the cotton linter plant under construction for producing 3,600 tons of linter pulp per year in the beginning. He also stated that the Company's capacity for rayon yarn would rise to 13.6 tons per day, as compared with the present 8.6 tons, with the implementation of the sanctioned expansion scheme. Another noteworthy development, about which Mr. Ramanathan spoke with some confidence, was the recent installation of a third cellulose film plant which would enable the Company to meet the country's entire demand for cellulose film, besides leaving a surplus for export.

The following is the full text of Mr. Ramanathan's speech:

"I am happy to extend to you all a warm welcome on the occasion of this fifteenth annual general meeting of your Company. With your kind permission, I propose to take as read the annual report and accounts for the year ended 31st December 1960.

Tempo of Progress Maintained

"The results of the year 1960 show that the tempo of progress has been well maintained. The working for the year has resulted in a profit of Rs. 61.62 lakhs, after providing a sum of Rs. 36.47 lakhs for depreciation, Rs. 15.70 lakhs for development rebate reserve and Rs. 1.50 lakhs for gratuity reserve, and after paying Rs. 23.95 lakhs as excise duty.

Distribution of Revenue

"With the balance of Rs. 2.29 lakhs brought forward from the previous year, the total profit amounted to Rs. 63.90 lakhs and your Directors recommend the following appropriations:

(1)	Provision for taxation	Rs. 27.30 lakhs
(2)	Additional dividend for 1959 on the preference shares at 1.5 per cent	„ 0.75 „
(3)	Dividend on preference shares for 1960 at 6.5 per cent	„ 3.25 „
(4)	Dividend on equity shares at 20 per cent ...	„ 20.00 „
(5)	Transfer to general reserve	„ 10.00 „

"The balance of Rs. 2.61 lakhs will be carried forward.

"The dividends, both preference and equity, when declared, will be paid subject to the statutory deduction of 30 per cent at source as per Section 18(3D) of the Income-tax Act.

"Having regard to the expansion of the Company which has already taken place, it is only legitimate that you should expect higher returns on your capital. But, you will appreciate that the heavy development rebate reserve we had to set apart during the period under review, the need for more funds for expansion and rehabilitation, the steep rise in the excise duty on rayon and imposition of excise duty on cellulose film, have underlined the need for great caution and conservatism. Hence, your Directors have been obliged to maintain the equity dividend at the last year's level.

Heavy Excise Duty

"The Central Government have, in their last budget, increased the excise duty on rayon steeply, by 66⅔ per cent and also imposed an equally high excise duty of 20 per cent *ad valorem* on our cellulose film. Further, by a recent notification, the spinning units have been asked to bear 60 per cent of the increase in the duty on rayon, and pass on only 40 per cent to the consumers. This, coupled with the fact that the cost of manufacture of rayon yarn is already going up on account of increase in the cost of raw and auxiliary materials bearing excise duty, is harsh and I share the view that this rather exceptional treatment to rayon yarn producers alone is not fair. The profits earned by a few units because of certain initial advantages should not lead the Government to a wrong impression; and it has also to be remembered that rehabilitation of machinery at the current increased prices will involve the rayon yarn manufacturers in considerable capital expenditure. I would appeal to the Government to reconsider their decision, taking all facts into consideration.

Financial Position

"As all of you may be aware, the Preference Shares (Regulation of Dividends) Act 1960 has been put on the Statute Book and, according to it, the preference dividend has been increased to 6.5 per cent subject to the statutory deduction of 30 per cent tax. The benefit of this increased rate has already been given in respect of the 1959 dividend also. The financial liability to the Company on this account has gone up by Rs. 75,000 per annum.

"You will notice that your Directors have transferred a sum of Rs. 10,00,000 to general reserve, bringing this reserve up to Rs. 70,00,000. Together with the sum of Rs. 26,55,000 under development rebate reserve and the gratuity reserve of Rs. 4,00,000, the total reserves stand at Rs. 1,00,55,000 which is about 67 per cent of the paid-up capital of the Company. The debenture and loan liabilities to the Kerala Government have been completely wiped out as on date. You will appreciate this is a good achievement, especially as the amount originally borrowed was as much as Rs. 96,00,000. Besides, we have made fixed capital additions to the tune of about Rs. 95 lakhs during the last year.

Production

"The production of your factory, as a whole, has been satisfactory and the upward trend has been maintained during the year under review also. In October 1960, a third plant for production of cellulose film was opened by His Excellency the Governor of Kerala, Sri V. V. Giri. This machine is a modern, high speed machine. With the installation of this third machine, the total production capacity for film has risen to 10 tons per day. I might say with confidence that the Travancore Rayons can not only meet the entire demands of the country for cellulose film, but also export some quantity. The sulphuric acid plant, which was commissioned over a year ago, has helped the Company to become self-sufficient in its needs of sulphuric acid, leaving also a surplus for sale outside.

Third Plan and Export Promotion

"We have now just entered the third Five-year Plan, which has as its target a total investment of Rs. 10,200 crores, of which Rs. 6,200 crores will be in the public sector and Rs. 4,000 crores in the private sector. The principal aim of the third Five-year Plan is to secure a marked advance towards self-sustaining growth. Increasing efforts will have to be made to develop the basic and heavy industries and machine-building capacity. This leads to the need for large foreign exchange during the period of such development. It is heartening to find that the progress which the country has made so far and the way the moneys have been usefully spent, have infused great confidence in the outside world and many friendly countries are coming forward to help India with foreign aid. At the same time, it is obviously quite necessary that the means of increasing exports have to be developed to the greatest extent possible. You will be pleased to know that your Company is also making a modest beginning in this direction.

"The establishment of an export market for our cellulose film is being seriously pursued, although this may mean that, for the time being, some loss may have to be suffered in facing the severe competition by longstanding and established industrial countries with vast resources and advancement. But, for ultimate success in this endeavour, Indian industries will have to keep abreast of the latest technological progress and, what is more, the efficiency of the Indian labour will have to improve quite a lot. I am one of those who believe in giving to labour an increasing share of the industry's fortunes, but production has, obviously, to precede distribution. Production of quality goods at cheap cost is the need. It is an acknowledged fact that at the moment the productivity of the Indian labour is very low, compared to other advanced countries.

Expansion Plans

"The expansion plans of your Company are progressing well. I have already referred, earlier, to the inauguration of a third cellulose film plant. The cotton linter plant, about which I mentioned at the last general meeting, is scheduled to go into production by the latter part of 1962. To start with, we will produce 3,600 tons of linter pulp per year. Provision is being made to enable increase of the output to 7,200 tons per year. This project will stand us in good stead by reducing our dependence on imports, by saving foreign exchange for the country and by giving superior quality pulp and, hence, better quality yarn and film.

"Our application to the Government of India for licence for increasing our rayon yarn by five tons per day has been sanctioned and negotiations are in progress for implementing the scheme. The increase in capacity is expected to take effect only from the end of 1962 or early in 1963, as all the necessary formalities, import and erection will take time. With this increase, our total capacity for rayon yarn will rise to 13.6 tons per day.

Increase of Capital

"To meet the rupee funds which may be needed to meet all these expansion schemes, your Directors are considering the issue of further capital but they have not so far come to a definite decision. I have thought it better to mention this at this meeting as there is considerable speculation in the market regarding this.

Labour Relations

"Your Company has done its best to foster cordial relations with labour, but I regret to inform you that despite the 1958 long-term agreement (which will expire on 31st December 1961), more demands have already been made on the Company and in certain cases the management had to yield, thereby imposing additional burden on the Company. Recently, a time and motion study was made in a few departments, and it is found that in certain departments the efficiency is only about 30 to 35 per cent and in some 40 to 45 per cent.

"With this state of affairs, and especially now when the Company is called upon to meet heavy tax liabilities, it is to be seen how efficient the factory's working results will be in the future. The wastage of valuable material and indifference to work is more evident not only in the lower cadre of employees but also at the middle management level. I hope that all concerned will appreciate the position; and if better production and quality are not maintained, they will only be killing the goose that lays the golden egg. I now propose that the Directors' report, balance-sheet and profit and loss account for 1960 be approved and adopted.'

Note: *This does not purport to be the report of the proceedings of the general meeting.*

Delegates from 21-member export credit insurance organisations in 18 countries attended the annual general meeting of the Union d'Assureurs des Credit Internationaux (Berne Union) which took place in Vienna from the 3rd to the 8th inst. The important feature of the discussion was the consideration given to the measure devised by several Governments for facilitating the guarantees, in exceptional cases, for exports on terms exceeding five years. The meeting recognised that these various governmental measures would assist particularly the economic growth and stability of the developing countries. The meeting reaffirmed that Berne Union members would continue to co-operate in restricting any general lengthening of terms of credit beyond five years in their field of operation. India was represented in this meeting by Mr. T. C. Kapur, Managing Director of the Export Risks Insurance Corporation Ltd.

NEW COMPANY FORMATIONS IN 1960-61

SECOND PLAN TRENDS REVIEWED

THE Research and Statistics Division of the Department of Company Law Administration (Union Ministry of Commerce and Industry) has just provided a comprehensive review of trends in new company registrations in 1960-61, the last year of the second Plan. The more relevant figures pertaining to the authorised capital of Government and non-Government companies, the size pattern of new companies, the distribution of new companies according to *industrial groups* and the regional distribution of new companies are to be found in four tables in this article. These tables, giving the relevant figures for each of the five years since 1956-57, also provide a picture of trends in new company formations over the entire second Plan period. An analysis of the figures has led to two broad conclusions. First, the new company formations (1,683) during 1960-61 had reached a new peak which was twice as high as the level of new company registrations recorded in 1956-57—the first year of the coming into force of the present Companies Act. The rate of increase in new company formations during the second Plan period indicates, according to the Research and Statistics Division, that the new registrations in the current year (1961-62) may outstrip the highest decennial record of 1,866 new companies registered in 1951-52. Secondly, the continuous rise of new registrations during the period 1956-61, according to the Division, conclusively establishes that the apprehensions expressed in commercial circles in the early stages of the enforcement of the Companies Act, 1956, that the provisions of the new Act would discourage new company formations were misconceived. This conclusion is a reiteration of what the Company Law Administration has been saying in recent years.

Coming specifically to the year under review, namely, 1960-61, it will be found that as many as 1,683 new companies were formed during the year, as compared with 1,452 in 1959-60. The new registrations in 1960-61 were also the highest in nine years. But this increase in the formation of new companies was accompanied by a decrease in the total number of companies at work from 26,921 in 1959-60 to 26,108 in the year under review. This decrease is attributed to the Company Law Administration's continued efforts at weeding out the moribund companies and striking them off the registers. The decline in the number of companies at work should not, of course, be construed as a decline in the level of corporate activities, for, actually, their aggregate paid-up capital had increased, at the same time, from Rs. 1,593 crores as on 31st March 1960, to Rs. 1,725 crores as on 31st March 1961. The total number and paid-up capital of companies at work in the second Plan period are given below to bring out the trends in operation since the enforcement of the new Companies Act:

(Paid-up capital in rupees crores)

As on	Public*		Private*		Total	
	No.	Paid-up capital	No.	Paid-up capital	No.	Paid-up capital
31st March, 1956	9,575	690	20,299	334	29,874	1,024
" " 1957	8,810	715	20,547	363	29,357	1,078
" " 1958	8,296	774	19,984	533	28,280	1,306
" " 1959	7,760	784	19,719	726	27,479	1,510
" " 1960	7,300	812	19,615	782	26,921	1,593
" " 1961	6,745	876	19,363	849	26,108	1,725

* In both the private and public sectors.

What is noteworthy in the above figures is that the paid-up capital of public companies (which belong mostly to the private sector) had increased much more substantially in 1960-61 than in 1959-60. The paid-up capital of private companies, too, had registered large increases in the two relevant years; but, then, they must have been largely due to "giant-sized" private companies in the public sector. A further split-up of Government and non-Government companies as between public and private companies confirms this. This split-up is as follows:

(Paid-up capital in rupees crores)

As at the end of	Public companies				Private companies			
	Government		Non-Government		Government		Non-Government	
	No.	Paid-up capital	No.	Paid-up capital	No.	Paid-up capital	No.	Paid-up capital
1958-59	37	19.1	7,723	765.0	66	406.1	19,653	320.6
1959-60	35	25.2	7,271	768.4	90	443.2	19,525	338.3
1960-61	34	33.4	6,711	842.7	105	465.0	19,258	383.5

Of the increase to the tune of Rs. 701 crores in the aggregate paid-up capital of all companies in the period 1956-61, the major portion was, of course, largely accounted for by companies in the public sector, their share being as much as Rs. 433 crores. If, however, out of this figure the paid-up capital of the Hindustan Steel Ltd., which is a class by itself, were excluded, the total increase in the paid-up capital of Government companies during the same period was only Rs. 132 crores, working out to an average annual increase of about Rs. 26 crores. On the other hand, the share of non-Government companies in the total increase of paid-up capital during the period was Rs. 268 crores, working out to an average of about Rs. 54 crores a year.

In terms of aggregate authorised capital, the 86 new Government companies formed during the period 1956-61 accounted for Rs. 293.1 crores. Of these new Government companies, as many as 29 were "giant-sized" companies (with an authorised capital of Rs. 1 crore and more), accounting for 96.7 per cent of the relevant aggregate authorised capital of Rs. 293.1 crores. As for new non-Government companies, 5,953 of them were formed during the period, with an aggregate authorised capital of Rs. 752.3 crores. Of these, as many as 169 were "giant-sized" companies (with an authorised capital of Rs. 1 crore and more), accounting for 63.7 per cent of the relevant aggregate authorised capital of Rs. 752.3 crores. It is worthy of note that, in 1960-61 alone, 82 "giant-sized" non-Government companies were formed, as compared with 87 such companies formed in the entire four-year period 1956-60. The statistics pertaining to the increases in both authorised capital and paid-up capital in the private corporate sector thus show that there has been a steady revival of market confidence in recent years.

The other trends emerging from the statistics presented in Tables 2, 3 and 4 may now be

MARKED IMPROVEMENT IN RAYMOND WOOLLEN'S SALES

DIVIDEND SLIGHTLY ENHANCED

THE turnover of the Raymond Woollen Mills Ltd. (Managing Agents: J. K. Bombay Private Ltd.) increased substantially during the year ended 31st December 1960. Thus, receipts from sales of cloth, yarn and files rose by 16.5 per cent, from Rs. 262.26 lakhs to Rs. 305.69 lakhs. It is gratifying to note that the export sales were well maintained. The Company's foreign markets include even West European countries such as Sweden and Denmark. The increase in sales has led to an improvement in gross profit by 20.7 per cent, from Rs. 42.20 lakhs to Rs. 50.95 lakhs and the ratio of gross profit to sales is slightly higher at 16.60 per cent, as against 16 per cent in 1959. The net profit has also increased by Rs. 2.00 lakhs to Rs. 18.48 lakhs, even after higher provisions for depreciation, taxation and managing agents' commission at Rs. 11.56 lakhs, Rs. 17 lakhs and Rs. 3.91 lakhs, respectively, as compared to Rs. 9 lakhs, Rs. 13.50 lakhs and Rs. 3.22 lakhs in the previous year.

The dividend on ordinary shares has been raised from Rs. 11.50, subject to deduction of tax, to Rs. 12, subject to deduction of tax or a net of Rs. 8.40 as compared with Rs. 8.05 per share in the previous year. The dividend of 5 per cent tax-free preference shares has been declared at 6.50 per cent subject to deduction of tax as against 7.143 per cent subject to deduction of tax paid in the previous year.

The operating results of the Company show an overall improvement over the previous years. Of the allocation to depreciation, a sum of Rs. 9.32 lakhs is in accordance with the amended Section 350 of the Companies Act 1956, and the balance of Rs. 2.24 lakhs represents arrears of previous years. The written-down values of the fixed assets as at the end of the year is identical with the written-down values as computed in accordance with the amended provisions of Section 350.

The results of the Company have steadily improved, as will be seen from the following comparative table for the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales of cloth, yarn, files	305.69	262.26	216.72	208.75
Excise duty	23.20	18.27	15.25	7.45

	(12%)†	(11½%)†	(8%)	..
Carry forward	1.12	0.57	2.20	0.12

* For 3 years. † Subject to deduction of tax.

It is heartening to find that the Company has been regularly transferring a part of the profit to reserves. The Directors rightly "consider it advisable to build up adequate resources over the next few years, in order to finance the cost of further replacement and modernisation of the Company's plant which is very necessary in order to obtain greater productivity and efficiency as well as to reduce the cost of manufacture and improve the quality of production." The complete automatisation would enable the woollen industry to compete effectively in foreign markets.

The import quotas for raw materials for the woollen industry suffered further cuts during the year. The Company's Woollen Mills, however, have been able to increase the level of production by obtaining higher entitlements under the Export Promotion Scheme and larger utilisation of indigenous raw wool. With the establishment of combing plants in India, one could expect fairly regular supplies of wool tops.

There has been a progressive increase in the excise duty paid by the Company year after year, as will be noted from the aforesaid table. The Central Budget for the financial year 1961-62 introduced a new excise levy from 1st March 1961, at 10 per cent *ad valorem* on worsted yarn and 5 per cent *ad valorem* on woollen yarn. This fresh imposition over and above the existing 11¼ per cent *ad valorem* duty on woollen fabrics will result in a rise in consumers' prices of woollen yarns and fabrics and this in turn may give additional strength to consumer resistance.

The Engineers' Files Division of the Company worked satisfactorily, in spite of the dislocation caused by implementation of the expansion scheme. A licence has been obtained for doubling the capacity of this division to 48,000 dozen files per year. The production at the full rated capacity is likely to be attained by the middle of 1962.

The net block of the Company stands at Rs. 93.77 lakhs after providing almost an equal amount (Rs. 93.32 lakhs, to be precise) for depreciation. The investments of the Company have not yet begun to give fruitful results, inasmuch as the market value of quoted investments of Rs. 10.83 lakhs is more than 50 per cent lower at Rs. 4.60 lakhs. The value of unquoted investments is Rs. 12.16 lakhs out of the total investments of Rs. 22.99 lakhs. The paid-up capital has remained unchanged at Rs. 100 lakhs, which is made up of Rs. 25 lakhs in preference shares of Rs. 100 each and Rs. 75 lakhs in ordinary shares of Rs. 100 each. The reserves and surplus have advanced from Rs. 20.27 lakhs to Rs. 28.07 lakhs. The secured and unsecured loans have gone down from Rs. 98.61 lakhs to Rs. 72.62 lakhs. The current liabilities at Rs. 148.31 lakhs are well covered by current assets at Rs. 182.61 lakhs.

The good progress made by the Company in recent years and the popularity which its products have attained among the consumers have begun to attract the attention of investors, resulting in a perceptible rise in the market value of its equity shares, with a face value of Rs. 100 each. At the current quotation of Rs. 125 *cum-div.* this scrip gives a net yield of 6.7 per cent taking the net dividend at Rs. 8.40 per share.

(*Concluded from next column*)

ever, have risen from Rs. 354.67 lakhs to Rs. 459.36 lakhs. Fixed assets have been depreciated from Rs. 26.60 crores to Rs.17.14 crores. Current assets are shown at Rs. 21.91 crores, of which cash and bank balances alone are Rs. 16.20 crores. The most important change over the year is the decline in sundry debtors from Rs. 15.67 crores to Rs. 3.57 crores and this has been responsible for the high degree of liquidity in the Company's assets.

UNITED WIRE ROPES LTD.

The statutory meeting of United Wire Ropes Ltd. was held at Bombay on 19th June 1961. Reviewing the progress made towards implementation of the Company's steel wire rope project, Mr. Murarji J. Vaidya, Chairman, announced that arrangements for underwriting the equity and preference shares to be offered for public subscription had been completed and that the Company would be entering the capital market in the middle of July 1961. He stated that the acquisition of land for location of the factory at Thana had made considerable headway and the land was expected to be delivered to the Company within the next three months.

Mr. C. H. Gandhi, a chartered engineer and one of the Directors of the Company, was in Europe recently to sign the collaboration agreement with Messrs. Lepage Consulting Engineers of Antwerp, Belgium. The agreement provides for furnishing technical know-how, layout and engineering and erection of the wire rope plant under the supervision of the consultants. The consultants will also undertake the responsibility of supervising the various processes of manufacture of wires and wire ropes at the Company's plant for a period of five years after the start-up. The collaboration agreement between the Company and Messrs. Lepage Consulting Engineers has the approval of the Government of India.

While in Europe, Mr. Gandhi also availed himself of the opportunity to visit the works of manufacturers in the United Kingdom, West Germany, France and Belgium, countries from which the Company proposes to import the plant and machinery for its wire rope plant. The orders will be placed shortly on the basis of the discussions Mr. Gandhi had with the machinery manufacturers. The machinery to be imported will be of the latest type both in respect of design and technique of production of wires and wire ropes. The import of machinery, it is learned, will be financed with the foreign currencies loan equivalent to about Rs. 30 lakhs granted by the Industrial Credit and Investment Corporation of India Limited, Bombay.

(*Continued in previous column*)

BURMAH-SHELL REFINERIES

PRODUCTION UP, BUT PROFIT DOWN

LARGER production but lower profit was the experience of the Burmah-Shell Refineries Ltd. (Managing Director: G. B. Stanger, Bombay) during the year ended 31st December 1960. For the second year in succession, both the throughput of refinery and the yield of finished products recorded a substantial increase. Nevertheless, the gross, as well as net, profit dwindled further. As will be seen from the comparative table in this column, the crude oil intake (throughput) increased from 2.47 million metric tons to 2.84 million metric tons and, with it, the production of finished products expanded from 2.43 million metric tons to 2.77 million metric tons. As compared with the performance in 1958, the increase is even more impressive, being of the order of about 600,000 tons in throughput and 340,000 tons in products turned out. As against these increases, there is actually a fall, albeit modest, in sale proceeds, from Rs. 13.08 crores in 1958 and Rs. 12.77 crores in 1959 to Rs. 12.32 crores in 1960. The gross profit, which was Rs. 7.35 crores in 1958, and had shrunk to Rs. 7.21 crores in 1959, has fallen further to Rs. 6.99 crores. The decline in net profit is heavier still; at Rs. 2.67 crores, it means a fall of Rs. 93 lakhs, or 26 per cent, over 1959. But for the substantial increase in other income from Rs. 16.95 lakhs to Rs. 50.30 lakhs, the fall in profits would have been heavier still.

The downward trend in profit, despite the increase in production, is the outcome of (*a*) expiry of tax benefits under Section 15(*c*) of the Indian Income-tax Act and (*b*) the effect of voluntary surrender of all duty protection (as from 1st July 1959) over the whole year. In other words, the Government has benefited most by the enhanced operation of the Refineries. This is only as it should be, now that the Company has passed the stage of infancy when it had to be given certain incentives and a reasonable measure of protection. The attainment of this stage also implies that, if the Company is allowed to expand further, it will be in a position to contribute more to the income of the Exchequer. Unfortunately, the Government does not seem to realise this point.

The table below shows the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Income from refining	12,32.58	12,76.91	13,08.84	14,07.29
Other income	50.30	16.95	23.87	22.52
Expenses	5,33.40	5,72.54	5,97.90	6,75.06
Gross profit	6,99.48	7,21.32	7,34.81	7,54.75
Provision for—				
Depreciation	1,71.55	1,71.67	1,70.76	1,68.43
Taxation	2,61.00	1,90.00	2,50.83	1,62.52
Net profit	2,66.93	3,59.65	3,13.21	4,23.80
Transfer from tax equalisation reserve	76.00	..	..	..
To reserves	1,04.12	9.12	93.60	1,80.00
Preference share issue expenses	..	0.17	..	..
Dividend	2,76.40 (20%)*	2,48.76 (18%)*	2,07.30 (15%)	2,07.30 (15%)
Carry forward	1,13.98	1,55.57	55.97	41.66
Throughput of refinery (metric tons)	2,843,010	2,476,975	2,268,435	2,333,614
Yield of finished products (metric tons)	2,768,126	2,429,528	2,225,910	2,283,876

* Subject to deduction of tax.

It is noteworthy that, as compared with 1958, expenses in 1960 were perceptibly lower, even though the crude intake and finished products turned out were appreciably higher. This apparently reflects, to a considerable extent, the improvement in the operational efficiency of the Company, though lower prices for crude must have been the main cause. While this is only an inference on our part, it will be pertinent to draw attention to the Chairman's statement published on an earlier page, that, through continued improvement in manufacturing techniques, the Refinery was able to step up the crude throughput, yielding an additional 295,000 tons of essential middle distillates so badly needed by the country.

In view of the heavier incidence of taxation for reasons already mentioned, the Company could not make any *net* addition to the reserves. The dividend on equity shares has been raised from 18 per cent taxable to 20 per cent taxable, but the net dividend is still below the 15 per cent per annum, tax-free, paid for 1958 and 1957.

Over the year, the paid-up capital of the Company stands unchanged at Rs. 13.82 crores, but the reserves and surplus are a shade lower at Rs. 12.17 crores. There is no change in the secured loan of Rs. 8 crores, nor in unsecured loans which are standing at Rs. 71.72 lakhs. Other current liabilities and provisions, however, [illegible]

LARSEN AND TOUBRO MAKES STEADY PROGRESS

EXPANSION SCHEMES MAKE HEADWAY

OVER the years, Larsen and Toubro Ltd. (Managing Agents: L. & T. (Management) Private Ltd., Bombay) has come to be regarded as a small enterprise that is fast on its way to becoming a big concern by following prudent expansion policies without, in any way, jeopardising the interest of its shareholders. The confidence the Company has created in the minds of investors is fully reflected in the market price of its ordinary shares, which currently stands above Rs. 40 notwithstanding a book value of less than Rs. 15 per share. How well L. & T. merits this confidence and its reputation as a growth Company will be evident from its annual report for the year ended 31st March 1961. Thanks to the satisfactory performance of its workshop at Powai and the other manufacturing units which went into production during the year, gross trading receipts consisting of sales, charges for completed contracts, and serving and service fees, have shown a rise of Rs. 30.43 lakhs to Rs. 351.08 lakhs. A modest increase of Rs. 2.30 lakhs to Rs. 19.48 lakhs is also seen in other income derived chiefly from commission, compensation and engineering fees. A large portion of this increase has, however, been absorbed by rising cost of raw materials and stores consumed, and other items of expenditure, so that the gross profit shows only a moderate improvement of Rs. 6.48 lakhs to Rs. 55.53 lakhs. With a somewhat reduced provision for managing agents' commission (Rs. 3.77 lakhs, as against Rs. 4.17 lakhs), and higher provisions for depreciation (Rs. 11.52 lakhs, as against Rs. 7.09 lakhs) and taxation (Rs. 17.40 lakhs as compared with Rs. 16.00 lakhs), the net profit stands marginally improved by about Rs. 1.06 lakh at Rs. 22.84 lakhs. It is to be noted, however, that the method of computing depreciation on fixed assets for the year has been changed, such having been taken at the rates prescribed under the Income-tax Act 1922. The Directors state, in a note appended to the profit and loss account, that, if depreciation for 1959-60 had been computed on a similar basis, the charge for that year would have been Rs. 4.17 lakhs as against Rs. 7.09 lakhs actually earmarked. It appears from this that the net profit for the year under review is actually lower than that for 1959-60, despite improved sales.

After crediting back to the profit and loss account Rs. 1.27 lakh (Rs. 1.02 lakh during the previous year) being provisions in excess of anticipated liabilities and transferring Rs. 8.32 lakhs (Rs. 8.07 lakhs during 1959-60) to reserves, the balance available for distribution to the various classes of shareholders amounts to Rs. 16.35 lakhs inclusive of the carryforward from the previous accounting period. Out of this sum, Rs. 97,000 have been earmarked towards preference dividends for the year, and Rs. 14.40 lakhs are absorbed by the proposed dividends payable to equity shareholders. Although the rate of ordinary dividend has been maintained at 18 per cent (Re. 1.80 per share of Rs. 10 each) subject to deduction of tax, it is to be remembered that a full year's dividend is payable on the two lakh ordinary shares issued in 1959 as against a half-year's dividend payable in 1959-60. After making the appropriations, there remains a balance of Rs. 98,848, which is being carried forward.

The following comparative table presents synoptically the progress made by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales and servicing charges, etc.	3,51.08	3,20.65	2,78.25	3,93.29
Other income	19.48	17.18	13.84	12.81
Raw materials, trading goods and stores consumed	1,61.76	1,50.08	1,54.25	2,05.18
Salaries, wages and bonus	94.31	88.93	59.09	38.59

* Subject to deduction of tax.

With the issue at par of a further three lakh equity shares, the share capital of the Company stands enhanced, as at 31st March 1961, to Rs. 125 lakhs. This is supplemented by Rs. 37.76 lakhs in reserve, which amount includes Rs. 1.39 lakh credited to the share premium account being part realisation on the sale of 4,631 ordinary shares at Rs. 40 each. All current liabilities including secured loans and unsecured loans are placed at Rs. 361.17 lakhs. The net additions to fixed assets during the year amounted to Rs. 43.60 lakhs whereafter the total cost of investment in fixed assets amounts to Rs. 121.61 lakhs written down to Rs. 84.18 lakhs as on the date of balance-sheet, excluding capital work in progress amounting to Rs. 4.91 lakhs. Investments, current assets, loans and advances total Rs. 434.84 lakhs and are more than adequate to cover all liabilities other than the paid-up capital.

The Company's plans for expansion and diversification are going apace. In the course of the year 1960-61, it acquired at par 3.12 lakh shares of Rs. 10 each of the Utkal Machinery Ltd., Bombay, and a further lot of 2,550 shares of Rs. 100 each of Messrs. Christensen-Longyear (India) Ltd., Bombay. It will be recalled that the former Company has been licensed to manufacture plant and equipment required by the paper, chemical, steel, and similar processing industries. Negotiations were also completed during the year for the production in the Company's Powai workshop of equipment for sulphuric acid and superphosphate plant, of drilling equipment and diamond bits, and of lubricating taper plug valves, all in collaboration with leading overseas manufacturers.

As regards the future, the Directors express themselves as follows:

"By continuing to develop and employ the resources and the talents of the Company in support of the industrial development of the country, which—it may be expected—for many years will continue to provide a rich field of opportunities for enterprising and competent engineering firms, your Directors view the future prospects of the Company and its subsidiaries as secured and promising."

The present market quotation of the Company's Rs. 10 fully paid ordinary shares is Rs. 41.50 *cum-div.* The net return on investment on an *ex-div.* basis works out to 4.1 per cent per annum.

(Concluded from next column)

Rs. 10.20 lakhs being the cost of work under construction and machinery awaiting installation. The net block thus amounts to Rs. 168.10 lakhs. Current assets, inclusive of investments, and loans and advances are estimated at Rs. 220.54 lakhs and are sufficient to cover total current liabilities in the proportion of 1.3 to one.

During 1960, new plant and machinery of the value of about Rs. 31 lakhs was installed. This included production chambers, padders, steam ager, jet printing machine, double winders, etc. The Company continued its efforts to impress on the authorities its need for 25,000 additional spindles to balance its plant which, incidentally, consists today of 75,036 spindles and 2,000 looms inclusive of 560 automatic looms. The Government has not so far responded to the Company's request with the result that the Company is unable to run the third shift to full capacity. Nevertheless, the Company has been allotted 48 automatic looms as replacements against its application for 240 looms, the import licences for which are awaited. In addition, 96 looms have been allotted against an application for 200 looms, but the necessary import licence has been turned down for the present.

The market price for the Company's Rs. 100 fully paid-up ordinary shares was constantly upward during the past few months on reports of higher profits and dividends. How well-informed these anticipations were has already been stated. The present quotation of Rs. 281 is *cum-div.* and yields, on an *ex-div.* basis, a net return of 4.4 per cent per annum.

RESULTS OF SVADESHI MILLS

DIVIDEND RAISED AGAIN

TO all those who had been under the impression that the Tata group of mills produces only a utility range of cloth, the financial results disclosed by the annual report of the Svadeshi Mills Company Ltd., a unit belonging to this group, for the year ended 31st December 1960, will no doubt come as something of a surprise. For, despite a somewhat lower production as compared with the previous year, the gross sales of cloth, yarn and waste, inclusive of the subsidy received under the export promotion scheme, have actually increased by Rs. 14.57 lakhs to Rs. 446.75 lakhs and are the highest on record so far. These improved financial results have been principally due to such factors as production of better finished and finer variety of goods, full utilisation of productive capacity and better demand for cloth at higher prices. Although the cost of different varieties of Indian cotton was unusually high during the early part of the year, there was a more than corresponding increase in the price of cloth in the domestic market. As a result the gross profit shows an increase of as much as Rs. 23.93 lakhs to Rs. 68.35 lakhs, an increase of more than 50 per cent over its previous level.

Higher profit has naturally meant a bigger provision for the managing agents' commission. Accordingly, a sum of Rs. 4.61 lakhs has been set aside to meet this contingency, as against Rs. 2.71 lakhs a year before. The provision for depreciation is set higher at Rs. 18.49 lakhs against Rs. 15.32 lakhs in 1959, and that for tax liabilities also has been stepped up from Rs. 10.50 lakhs to Rs. 17.50 lakhs. In spite of these larger provisions, the net profit shows an impressive rise of Rs. 11.86 lakhs to Rs. 27.75 lakhs. Transfers to reserves have been to the tune of Rs. 8.84 lakhs, consisting of Rs. 6 lakhs to the development rebate reserve and Rs. 2.84 lakhs to the general reserve. A small sum of Rs. 70,000 has been added to the already created provision for workmen's retiring gratuity.

After making the aforesaid adjustments, and adding the sum of Rs. 1,506 brought forward from the previous year's accounts, the distributable profit amounts to Rs. 18.22 lakhs. From the sum available, Rs. 97,000 have been allocated towards the payment of preferred dividends in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act 1960, leaving a balance of Rs. 17.25 lakhs for the payment of ordinary dividends. In view of the higher net profit, the rate of ordinary dividend has been stepped to 17 per cent from 14 per cent declared a year ago, both subject to deduction of tax.

The following comparative table gives at a glance the progress made by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

The financial position of the Company, as disclosed by its balance-sheet as at 31st December 1960, is impressive. The issued and subscribed share capital of Rs. 115.00 lakhs, consisting of Rs. 15 lakhs in 5 per cent preference shares and the balance in equities, is backed by Rs. 106.03 lakhs in reserves. Current liabilities, excluding provision for retiring gratuity, amount to Rs. 110.10 lakhs, while the liability on account of secured and unsecured loans is placed at Rs. 53.01 lakhs. Fixed assets are carried in the books of the Company at a cost of Rs. 350.99 lakhs, and since depreciation provided so far is Rs. 193.09 lakhs, the net block is Rs. 157.90 lakhs. To this has to be added

(Continued in previous column)

BIG JUMP IN SALES OF DALMIA CEMENT

PROFIT RATIO, HOWEVER, DECLINES

THE low profit-margin of cement companies has been the subject of much comment in recent years. The consumer pays a stiff price, but the producer gets a margin of profit which is unremunerative. The reason for this state of affairs is to be traced to the fact that the Government has been profiteering in its role as a middleman and inadequate provision is made in the retention price for the rise in cost of production. The financial results of Dalmia Cement (Bharat) Ltd. for the year ended 31st December 1960 provide further proof, if proof were needed, of the major handicap to the growth of this basic industry.

Sales of the Company (Managing Agents: Messrs. Hari Brothers Ltd., New Delhi) in 1960 staged a record increase of 49 per cent. In absolute terms, they fetched Rs. 391.02 lakhs, as against Rs. 262.29 lakhs in the previous year and Rs. 190.32 lakhs in 1958. The production of cement also touched a record level at 389,407 tonnes, as against 272,932 tonnes in the previous year and 237,386 tonnes in 1958. In other words, as against an increase of 14.9 per cent in the previous year, the production of the Company during the year under review increased by as much as 42.6 per cent. But the increase in gross profit is only 38.4 per cent, much lower than the increase in production and sales, and the ratio of gross profit to sales has fallen from 23 per cent to 21.4 per cent. The ratio would have been lower still but for the marked increase in income from the other activities of the Company.

There are two principal reasons for the drop in the ratio of gross profit to sales. One is the sharp rise in expenses. The other is to be found in clinker production falling behind capacity. While sale proceeds went up by 49 per cent, as mentioned above, expenses shot up by 56.5 per cent, from Rs. 206.94 lakhs to Rs. 324.03 lakhs.

The receipts from other income have risen by Rs. 11.66 lakhs to Rs. 16.86 lakhs mainly because the share of profit from the Dalmia Magnesite Corporation during the year under review was Rs. 10.46 lakhs, as against a mere Rs. 13,000 in the previous year. The operating difficulties of this Corporation, mentioned in last year's report, were recently overcome to a great extent and there has been improvement in the production of dead burnt magnesite. The Corporation has been licensed to expand the plant by doubling its capacity.

The increase in gross profit from Rs. 60.55 lakhs to Rs. 83.85 lakhs has been more than offset by larger provisions for depreciation, taxation and managing agents' commission at Rs. 26.07 lakhs, Rs. 19.50 lakhs and Rs. 5.26 lakhs, respectively, as against Rs. 10.34 lakhs, Rs. 10.85 lakhs and Rs. 5.21 lakhs. The net profit is, therefore, actually lower by Rs. 1.14 lakhs at Rs. 33.02 lakhs. The result is that neither record production nor record sales has meant any improvement in the shareholders' lot. The dividend on ordinary shares has only been maintained at 12 per cent, subject to deduction of tax, or a net dividend of Re. 0.84 per share. This year's dividend, however, will have a part of it exempted from the tax deduction in pursuance of Section 15C of the Indian Income-tax Act. The exact percentage of the dividend which will be free from tax deduction will be stated in the dividend warrants.

The following comparative table for the last four years underlines the improvement in the working results of the Company:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

Carry forward	0.97	0.25	0.22	7.59

† Subject to deduction of tax.

In pursuance of the statutory provision made for stepping up the preference dividend by 30 per cent with passing of the Preference Shares (Regulation of Dividends) Act 1960, Article 7 of the Company has been changed by a special resolution. As a result, the preference shareholders are now entitled to a fixed cumulative dividend of 7.8 per cent subject to deduction of tax at source, with the right to a larger dividend in the event of dividend on ordinary shares being declared at 15 per cent or more.

The paid-up capital of the Company, which was last increased in 1959, has remained unchanged at Rs. 232.59 lakhs. It consists of Rs. 61.58 lakhs in preference shares of Rs. 10 each, Rs. 166 lakhs in ordinary shares of Rs. 10 each and Rs. 5 lakhs in deferred shares of Re. 1 each. Reserves and surplus have increased by Rs. 7.74 lakhs to Rs. 73.35 lakhs. In view of the expansion in production, the secured and unsecured loans have also gone up from Rs. 142.85 lakhs to Rs. 181.31 lakhs, but other current liabilities and provisions are lower at Rs. 79.57 lakhs, as against Rs. 118.37 lakhs a year before. The gross block of the Company, which stands at Rs. 285.75 lakhs, has been depreciated to Rs. 199.41 lakhs by providing Rs. 86.34 lakhs for the purpose. The total investments of the Company are shown at Rs. 202.97 lakhs of which Rs. 30.73 lakhs are in Dalmia Magnesite Corporation. Excluding investments, the current assets aggregate Rs. 150.74 lakhs.

The major part of the Company's investments—Rs. 150 lakhs to be exact—is in Dalmia Cement Ltd. operating in Pakistan from which hardly any return is obtained. It would be a good thing if the management could dispose of its assets in Pakistan as the A.C.C. has done. A study of the Directors' report on the Company's operations in India shows that the third kiln of 500 tons daily capacity had the first year of its full operation. The total production of clinker and cement was, therefore, higher as compared with the previous year. The clinker production remained well below the rated capacity as the production in the other two kilns had to be stopped for varying periods for want of coal. Production was also affected due to the stoppage of one of the slurry mills for replacements of the slide ring.

The Company has implemented the recommendations of the Central Wage Board for the cement industry. In order to enable the Company to meet the incidence of these wage increases, a suitable increase in the ex-works price of cement has been allowed by the Government with retrospective effect from 1st January 1960, the date from which the recommendations of the Wage Board came into effect.

With the Government of India declining to allow an increase in the ex-works price of "Dalmia Cement," further representations have been submitted by the Company. The whole question of cement price for the next price period commencing from 1st July 1961 has been referred to the Tariff Commission. The Company has drawn the attention of the Commission to the all-round increase in costs. The Commission has also been requested to reconsider and revise the formula adopted during the last price fixation for computing the profit-margin to be allowed to the different units, which had worked to the detriment of units operating with lower cost of production and thus acted as a disincentive to cost reduction.

The development of mining and export of high grade iron ore from the Company's mines in the Bellary-Hospet area continues to make good progress. Shipments during the year amounted to 1.88 lakh tons. In the current year, upto the end of April, shipments were 88,000 tons approximately. Supplies under the 2.40-lakh tons contract negotiated by the Company with the State Trading Corporation of India Ltd. last year have been completed. It hopes to receive further contracts for the supply of iron ore from the Corporation. The Company has introduced a certain amount of mechanisation in the iron ore mines.

The current market quotation for the Rs. 10 paid-up ordinary shares of the Company is Rs. 11.87 *cum-div.* On a dividend of Re. 0.84 per share, the net yield works out to 7.1 per cent which is rather attractive.

METTUR INDUSTRIES LIMITED

SALES EXPAND—DIVIDEND MAINTAINED

THE financial results of the Mettur Industries Ltd. (Managing Agents: W. A. Beardsell & Co. (Private) Ltd., Madras) for the twelve months ended 31st March 1961 are encouraging. Thanks to the popularity of the products of the Company and the generally satisfactory trading conditions for textile goods, sales of cloth, yarn and waste have risen from Rs. 163.75 lakhs in 1959-60 to Rs. 175.79 lakhs in the year under review. But, as the value of raw cotton consumed went up by Rs. 6.62 lakhs to Rs. 65.94 lakhs, and other expenses by Rs. 5.64 lakhs to Rs. 64.31 lakhs, the gross profit has suffered a setback, albeit slight, from Rs. 47.98 lakhs to Rs. 47.18 lakhs. Of the rise in other expenses, that on account of the wage bill was as high as Rs. 4.75 lakhs. This was clearly the result of the recommendations of the Textile Wage Board, which were implemented by the Company with effect from 1st January 1960.

In view of the lower gross profit, the commission to managing agents is lower by Rs. 47,000 at Rs. 3.59 lakhs. For the same reason, the provision for taxation is also less by as much as Rs. 2.67 lakhs at Rs. 13.73 lakhs. The sum allocated to depreciation is almost unchanged at Rs. 2.04 lakhs, as against Rs. 2.03 lakhs in the previous year.

Primarily because of the reduction in the provision for taxation, the net profit has moved up from Rs. 25.49 lakhs to Rs. 27.82 lakhs. A large part of the net profit, Rs. 9.29 lakhs or more than 33 per cent to be precise, is absorbed by the provision for bonus to staff. In addition, a sum of Rs. 54,000 has been set aside for the payment of gratuity. The Directors have not been able to add anything to the general reserve but, unlike in the previous three years, they have not withdrawn any sum from the reserves. The development rebate reserve is credited with just Rs. 2,000. The dividend to shareholders has been maintained at the previous year's level of 30 per cent (taxable) which is equivalent to a tax-free return of 21 per cent. This takes up Rs. 18 lakhs.

An idea of the Company's progress during the past four years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958

* Includes a special dividend of 50 per cent. paid in April, 1958.

† Subject to deduction of tax.

The Company's financial position as disclosed by its balance-sheet as on 31st March 1961, is quite sound. The paid-up capital of Rs. 60 lakhs, all in ordinary shares of Rs. 100, is supported by reserves and surplus of the order of Rs. 31.14 lakhs. The gross block of Rs. 68.96 lakhs has been written down to Rs. 15.78 lakhs, by providing as much as Rs. 53.18 lakhs for depreciation. The Company has no outstanding borrowings and the current liabilities and provisions at Rs. 48.79 lakhs are more than adequately covered by current assets aggregating Rs. 124.16 lakhs. Of which investments (all in Government Securities) alone account for Rs. 18.92 lakhs and cash balances for Rs. 34.31 lakhs. Very few companies in India today have such a high degree of liquid assets.

In view of the excellent dividend record of the Company, the popularity enjoyed by its products and its excellent financial condition, its share has been commanding a high premium. The current market value of the scrip (Rs. 100 fully paid-up) is Rs. 402 *cum-div.* On an *ex-div.* basis and at the current rate of dividend, the net return on the scrip works out to 5.5 per cent per annum.

TATA MILL EARNS MORE

DIVIDEND DOUBLED—RESERVES REPLENISHED

EXCELLENT results are disclosed by the accounts of the Tata Mills Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay) for the year ended 31st December 1960. Thus, the sales are a record in the history of the Company, amounting as they did to Rs. 405.52 lakhs, as against Rs. 385.34 lakhs in the previous year. The gross profit at Rs. 44.83 lakhs is, in fact, more than double that earned in 1959 and fully reflects the fruits of the successful completion of the various schemes for reorganisation and renovation of production facilities in the mills as well as of the introduction of several new lines of production. The gross earnings would have been still higher but for the sharp rise in manufacturing expenses of Rs. 21.30 lakhs to Rs. 190.71 lakhs, of which as much as Rs. 18.23 lakhs are accounted for by the payment to and provisions for employees. Furthermore, the value of raw cotton and stores consumed rose from Rs. 178.48 lakhs to Rs. 194.63 lakhs, reflecting the higher prices which the Mills were required to pay in the earlier part of 1960, due to the failure of the cotton crop.

The net profit at Rs. 32.35 lakhs, after providing Rs. 2.39 lakhs for managing agents' commission (as against Rs. 50,000 in 1959) and Rs. 10.09 lakhs for depreciation (Rs. 12.62 lakhs in the previous year), is almost four times the net profit of Rs. 8.11 lakhs for 1959. It must, however, be noted that, in view of the carry forward of losses and unabsorbed depreciation of past years, no provision has been made for taxation in the accounts for the year under review. It may also be recalled at this stage that the Company was having arrears of depreciation amounting to Rs. 11,25,403 as on 1st January 1960. The following extract from the Directors' report will clearly show that the Company has now provided for depreciation in full in accordance with the new provisions of the Company Law (Amendment) Act of 1960:

"The Companies Act, 1956 did not provide for any norm in connection with depreciation, and adequate depreciation had to be provided thereunder to present a true and fair view in the accounts. The Act, however, provided that in determining profits for payment of agency commission, the normal depreciation allowable under the Indian Income-tax Act should be deducted. Consequently, the Directors had adopted this normal depreciation, including extra-shift allowance, as adequate depreciation for each year. The accounts were compiled accordingly, and where such depreciation could not be provided, a note was inserted in the accounts to show the amount of estimated inadequacy. The Companies (Amendment) Act, 1960, has introduced a new section under which depreciation under certain specified methods has to be provided before any dividend can be paid. One of these methods permits the determination of depreciation by dividing 95 per cent of the cost of each asset by the number of years at the end of which the cost of the asset comes to 5 per cent or less, if calculations are to be made at income-tax rates. Detailed calculations for all assets since the inception of the Company have been duly made, and these calculations reveal that as on 1st January 1960, the depreciation underprovided by the Company to that date came to Rs. 11,25,403 as against Rs. 31,95,000 estimated and noted in the accounts of 1959. The shortfall of Rs. 11,25,403 has now been made good by an equivalent transfer from General Reserve No. 2, and the Directors are of the opinion that with this adjustment the provision to 1st January 1960 is adequate. Consequently, the note as regards inadequacy of depreciation appearing in the past accounts has ceased to operate *in toto*. Further, the Directors have decided that depreciation under this method shall hereafter be the norm for adequate depreciation each year."

The net profit of Rs. 32.35 lakhs is supplemented by Rs. 10.53 lakhs, comprising (*a*) Rs. 9.13 lakhs being the transfer from General Reserve No. 1 for part payment of proposed dividend for 1960, (*b*) Rs. 1.22 lakh being excess provisions for previous years no longer required, and (*c*) Rs. 18,000 being the balance brought forward from the previous years' accounts. This makes available for appropriations and distribution an amount of Rs. 42.88 lakhs. Out of this amount, the Directors have transferred as much as Rs. 21.65 lakhs to general reserves and Rs. 7.25 lakhs to development rebate reserve, as against just Rs. 1.01 lakh and Rs. 6.50 lakhs, respectively, in 1959. The provision for gratuity takes up Rs. 60,000, which is the same as in the previous year. Making allowance for the transfer from reserve of Rs. 9.13 lakhs, the amount actually ploughed back out of the earnings for 1960 is as much as Rs. 19.77 lakhs or more than 60 per cent of the net profit earned in 1960. But such a heavy transfer to reserves has not meant a poor dividend to shareholders, for the Directors have doubled the dividend from 10 per cent (taxable) in 1959 to 20 per cent (taxable), representing a tax-free dividend of 14 per cent, as against the tax-free dividend of 6 per cent for 1958 and 8 per cent for 1957.

The following comparative table for the last four years will give a clear idea of the trend of earnings and appropriations of the Company:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds (gross)	4,05.52	3,85.34	3,33.32	3,34.41

*Subject to deduction of tax.

The renovation of the plant and machinery of the Tata Mills has been making steady progress. In addition to the expenditure of Rs. 12.61 lakhs on machinery and plant incurred in 1959, the Company installed new plant and machinery of the value of about Rs. 38 lakhs during the year under review, which included Whitin combers, cards, ring frames, variable speed motors, a humidification plant, fluorescent lighting, singeing machine and drying ranges with mangles. Besides this, machinery of the value of about Rs. 7 lakhs was awaiting installation.

The Tata Mills applied to the Government of India for permission to install 20,000 additional spindles to enable the Mills to balance production facilities. The current imbalance between the spinning and weaving sections is hampering production, as the Mills are unable to operate all looms in the third shift. The Government of India has not yet granted this request. News about the progress of rationalisation plans is better. An agreement was signed with the Rashtriya Mills Mazdoor Sangh for running four sides on 28s counts and above. The Mills further introduced another rationalisation method on 24th September 1960, when the workers' union agreed to work four looms to a weaver. This measure was initially applied to 200 looms in each of the three shifts, but, gradually, it has been extended to 770 looms in each of the first and second shifts, and 650 looms in the third shift.

The Company's paid-up capital of Rs. 65.58 lakhs is supported by reserves and surplus of the order of Rs. 62.02 lakhs. The gross block of the value of Rs. 299.73 lakhs, which includes an addition of Rs. 41.35 lakhs during the year, has been written down to Rs. 174.42 lakhs, by providing depreciation of the magnitude of Rs. 125.31 lakhs. The secured loans, including 5 per cent 3,951 convertible debenture bonds (1966-71) of Rs. 1,000 each aggregating Rs. 39.51 lakhs, amount to Rs. 53.53 lakhs; unsecured loans stand at Rs. 102.80 lakhs. In addition, other current liabilities and provisions are of the order of Rs. 84.07 lakhs. As against these, the current assets amount to Rs. 192.85 lakhs only. It will, thus be noted that, financially, the Company is in a pretty tight position and that, for some years to come, it will have to continue to set aside a large part of its profit to the reserves.

The Rs. 25 fully paid-up ordinary shares of the Company are commanding a good premium on the Bombay Stock Exchange and are quoted at Rs. 67 *cum-div.* On an *ex-div.* basis and at the current rate of dividend, the yield works out to 5.5 per cent per annum, free of tax.

NEW SWADESHI MILLS OF AHMEDABAD

The considerable improvement in the trading conditions of the cotton textile industry during the major part of 1960 is fully reflected in the results of the New Swadeshi Mills of Ahmedabad Ltd. (Secretary: Mr. S. K. Agrawal, Ahmedabad) for the twelve months ended 31st March 1961. The sale proceeds have jumped up from Rs. 267.60 lakhs during 1959-60 to Rs. 313.97 lakhs, representing a rise of more than 17 per cent over the previous year. The closing stock has shown a welcome decline of Rs. 4.14 lakhs to Rs. 20.57 lakhs. In keeping with the larger volume of production and the higher prices of raw cotton during the early part of 1960, the value of raw materials and stores consumed has risen steeply by Rs. 22.42 lakhs to Rs. 159.63. Other expenses, which include wages, salaries and contribution to provident fund, has also gone up, albeit more modestly, by Rs. 5.37 lakhs to Rs. 158.21 lakhs. But wage bill alone shows a sharp rise from Rs. 85.87 lakhs in 1959-60 to Rs. 91.08 lakhs.

The gross profit has more than doubled from Rs. 11.68 lakhs to Rs. 25.01 lakhs. But a large part of the rise in gross earnings is neutralised by the heavier provision for depreciation at Rs. 6.58 lakhs and for tax liability at Rs. 8.00 lakhs, as against Rs. 4 lakhs and Rs. 2.50 lakhs, respectively in 1959-60. After making these essential provisions, the net profit amounts to Rs. 10.43 lakhs, which is slightly more than double the net profit of Rs. 5.18 lakhs earned in the previous year. Out of this net profit, a sum of as much as Rs. 6.00 lakhs has been transferred to the general reserve against *nil* in 1959-60. Besides Rs. 2.12 lakhs (Rs. 2.50 lakhs in the previous year) have been credited to the development reserve account. The dividend has only been maintained at 9 per cent subject to tax. This absorbs Rs. 2.35 lakhs, leaving Rs. 42,000 to be carried forward to next year.

A synoptic view of the Company's progress in the last two years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March	
	1961	1960
Sales proceeds	3,13.97	2,67.60
Closing stocks	20.57	24.71

Depreciation	6.58	4.00
Taxation	8.00	2.50
Net profit	10.43	5.18
To general reserve	6.00	..
To development rebate reserve	2.12	2.50
Dividend—		
Ordinary	2.35 (9%)*	2.35 (9%)*
Carry forward	0.42	0.46

*Subject to deduction of profits.

The Company spent Rs. 15.03 lakhs during 1960-61 on new plant and machinery, which included mercerising machine, 144 automatic looms, five automatic jiggers, one ager for the printing department, one boiler and economiser set and one transformer of 1,000 KVA. The Company has applied to the Government of India for permission for additional spindles to feed the new looms received by the mills under the Export Promotion Scheme. The Company, it is interesting to note, has secured a licence to start a cast iron spun pipe factory with an initial capacity of 36,000 tons per annum. The implementation of this scheme will be taken up in the near future. The Company also intends to set up a textile mill with an initial capacity of 20,000 spindles and 300 automatic looms at a suitable place in the Gujarat State. The necessary application for the industrial licence has already been made to the Government of India.

The balance-sheet as on 31st March 1961 reveals a satisfactory financial position. The paid-up capital of Rs. 26.15 lakhs is supplemented by reserves and surplus of the order of Rs. 48.18 lakhs. The gross block of the Company has increased from Rs. 102.46 lakhs to Rs. 120.72 lakhs and stands depreciated at Rs. 59.00 lakhs, the depreciation provided so far amounting to Rs. 61.72 lakhs. The current liabilities and provisions together with secured and unsecured loans of Rs. 49.43 lakhs and Rs. 15.79 lakhs respectively, aggregate Rs. 123.70 lakhs and are fully covered by current assets of the magnitude of Rs. 139.04 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted on the Ahmedabad Stock Exchange at Rs. 140 *cum-div.* The net return on them, on an *ex-div.* basis and taking the tax-free dividend at Rs. 6.30 per share, works out to 4.7 per cent per annum.

NEW COMPANY FORMATIONS IN 1960-61

(*Concluded from page 36*)

briefly pointed out. Table 2, for instance, shows that new companies are overwhelmingly private limited ones and that small companies (with an authorised capital of Rs. 10 lakhs and below) continue to predominate among the private limited companies. It will be seen from Table 3 that the major industrial group of "processing and manufacturing" continues to account for the largest number of new company formations; in 1960-61, as many as 817 new companies belonged to this group. As for regional distribution of new companies, the figures within brackets in Table 4 show that, in 1960-61, as in previous years, Delhi in the Northern region, West Bengal in the Eastern region, Bombay in the Western region and Madras in the Southern region accounted for the larger proportion of new companies formed in the respective regions. The regional totals, by themselves, do not, however, lend themselves to any significant interpretation from the point of view of concentration or dispersal of new industries.

SYNOPSES OF COMPANY REPORTS

Haileyburia Tea Estates Ltd.

(*Managing Agents*: Messrs. Parkins (Private) Ltd., Kottayam, Kerala State)

Annual General Meeting—29th June. Dividend payable on 29th July.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	40,79	28,09
Closing stock	6,40	8,07
Gross profit	11,64	5,70
Transfer to Managing Agents' commission	58	48
,, ,, depreciation	1,34	94
,, ,, development rebate reserve	78	15
,, ,, taxation	4,30	2,00
Net profit	4,84	2,13
Adjustments	2	1,19*
Appropriations:		
Total available balance	4,86	3,32
Proposed dividends (taxable)—		
5% Preference	14	18
Ordinary	3,75 (15%)	3,12 (12½%)†
Carry forward	77	2

N.B.—Adjustments include the balance brought forward from the previous year.

* Includes Rs. 1,00,000 transferred from dividend equalisation fund.

† On the increased ordinary capital of Rs. 25,00,000.

Extracts from the Directors' report: *Machinery*: The addition during the year amounts to Rs. 83.085 and the total cost of machinery standing at Rs. 9,29,319 includes machinery in the course of erection Rs. 1,61,679.

Crop and Price: 10,47,000 lbs. tea was produced from Semni Valley Estate and 7,81,493 lbs. from Haileyburia (total 18,28,493 lbs. or 8,29,390 Kgms.) during the year under report against an estimate of 12,00,000 lbs. from Semni Valley and 9,00,000 lbs from Haileyburia. The shortfall in crop is due to adverse weather conditions. The average cost of production was 137.74 cents per lb. against 163.54 cents in 1959. The net average sale price realised was 208.77 cents per lb. as against 204.02 cents per lb. in 1959. The stock of tea remaining unsold as at 31st December, 1960 was 1,20,353 Kgms. all of which have since been sold.

The estimates for the period ending 31st December, 1961 provide for a crop of 11,50,000 lbs. (5,21,630 Kgms.) tea to be produced at a cost of 164.98 cents per lb. from Semni Valley and 8,00,000 lbs. (3,62,873 Kgms.) at a cost of 160.63 cents from Haileyburia Estate.

The crop as at 20th May 1961 is 99.347 Kgms. from Haileyburia and 1,88,764 Kgms. from Semni Valley as against 1,16,692 Kgms. and 1,76,161 kgms. respectively as on 20th May 1960.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	27,50,000	Gross block	56,71,656
Reserves and surplus	19,32,635	—Depreciation	10,31,863

Adjustments	1,83	4,83*
Appropriations:		
Total available balance	15,26	5,68
To adjustment of loss on assets sold and discarded	10	1
To adjustment of debits relating to previous year	1,50	..
To arrears of depreciation (past years)	4,64	..
To provision for taxation (previous year)	1,85	90
Proposed dividend (taxable)	7,50 (12½%)	4,50 (7½%)
Carried forward	37	27

N.B.—Adjustments include the balance brought forward from the previous year; amount transferred from dividend equalisation reserve if any; refund of taxes relating to previous years and other credit items relating to previous years.

* Includes Rs. 4,25,000 transferred from dividend equalisation reserve.

Extracts from the Directors' report: The Company has repaid during the year under report in full the amount of loan taken on the mortgage of the land and fixed assets of the Deepchand Mills and the Binod Power Sub-Station from the Madhya Pradesh Financial Corporation, Indore. It will thus be observed that the land and fixed assets of Deepchand Mills are now free from all encumbrances.

The directors have pleasure in reporting that against the loan of Rs. 20 lakhs sanctioned by the N.I.D.C. Ltd., Rs. 17,82,000 have been received and the balance is expected to be received in the near future.

Operations: During the year under report the working of the Company was satisfactory. The first six months were good for the Textile Industry. Owing, however, to the scarcity of Indian Cotton, prices of coarse and medium cloth reached a high level. At this the Central Government recommended to the Indian Cotton Mills' Federation to check the rising prices and accordingly as decided by the Federation the Company's Mills together with other Mills of the Centre, agreed to a voluntary cut, from August 1960, in prices to bring them on the level of a formula based on prices prevailing during the August 1959 period. A second cut in prices was again effected, as recommended, in December 1960. On the other hand the cost of production of the industry has been steadily rising owing to rise in prices of stores, chemicals and dyes and coal, and increase in dearness allowance. The implementation of the recommendations of the Cotton Textile Wage Board have also considerably added to the burden, which in case of this Mills amounts to about rupees five lakhs.

The third shift of the Deepchand Mills has been started from 22nd March to meet the demand for increased cloth production. This has also helped in providing employment for idle labour. It is further contemplated to start the third shift of the Binod Mills to meet current shortage of yarn, as well as to run more looms to help increase production of cloth.

Export Market: During the past two years the management has been following the policy of expanding and maintaining the export markets for this Company's products. In view of this policy, the exports during the year under report were more or less maintained at last year's level even if the prices at times were not competitive with those of the home markets. The product of the Mills have proved popular and repeat orders have been received. The total sales in the year 1960 were 85,36,610 yds. of the value of Rs. 54,04,500. The total percentage of exports to total production of cloth being 21 per cent the export incentive earned for the year 1960 is Rs. 8,17,678 as against Rs. 5,65,923 in the year 1959.

Expansion: The Government has granted permission for installing 17,506 spindles and 380 looms as major expansion. The total cost of this expansion plan is estimated to be over Rs. 1 crore which is proposed to be met in part from the Company's resources and in part by raising a loan from the Industrial Financial Corporation, New Delhi. It is the endeavour of the directors that a modern and well equipped Unit comprising the above spindles and looms should be put up. It will be the effort of the Management to commission the new plant as early as possible.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.

Ordinary	5,40 (18%)	5,40 (18%)
Carried forward	33	40

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: Demand throughout 1960 continued at a high level except in common firebricks. A scheme for the modernisation and expansion of the old Fireclay Works has been considered and approved by the Board and after discussions with the Company's consultant in the U.K. it has been decided to proceed with the installation of a new *Tunnel Kiln* and the demolition and reconstruction of the old *Tunnel Kiln*. The old *Tunnel Kiln* was fired in May, 1946 and constitutes a record for continuous service. The expansion and modernisation also envisages a completely separate milling and grinding section for the old Fireclay Works and the scheme is expected to be completed by the end of 1962. The output of firebricks will increase by about 25 per cent by 1963 during which year the plant will be capable of manufacturing a range of special bricks.

A small expansion in the Silica Section was completed in 1960. This has enabled the Works to step up production of *Sillimanite Refractories* to meet the high demand.

Towards the middle of the year labour unrest developed as the Union refused to accept a revised incentive bonus scheme as a result of the expanded Silica output. This eventually led to a strike which lasted for approximately five weeks. In the settlement reached the Management's stand was vindicated and the directors are glad to report that the overall production during 1960 was slightly in excess of the tonnage turned out in 1959. Relations with labour have since been satisfactory and output has been maintained at a high level.

The term of office of the managing agents terminated on the 15th August 1960, by virtue of the provisions of Sections 330 of the Companies Act, 1956 and Messrs. Bird & Co. (Private) Limited were re-appointed the managing agents of the Company for a further period of five years commencing on 15th August 1960.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	34,00,000	Gross block	1,23,10,947

Baradighi Tea Co., Ltd.

(*Managing Agents*: Messrs. Jardine Henderson Ltd., Calcutta.)

Annual General Meeting—29th June.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sale proceeds (gross)	33,65	34,76
Closing stock	11,56	8,93
Gross profit	12,39	10,21
Transfer to Managing Agents' remuneration	1,07	87
,, ,, depreciation	1,61	1,55
,, ,, taxation	3,98	3,14
,, ,, development rebate reserve	7	13
Net profit	5,66	4,52
Adjustments	69	67
Appropriations:		
Total available balance	6,35	5,19
Transfer to reserves	2,00	1,50
Proposed dividend (taxable)	3,60 (30)%	3,00 (25%)
Carried forward	75	69

N.B.—Adjustments include the balance brought forward from the previous year and refund of wealth tax if any.

Extracts from the Directors' report: *Outturn*: The following statement shows the amount of tea manufactured from the crops of leaf harvested over the last three years and estimated crop for 1961:—

1958	1959	1960	1961 estimated
Kgms.	Kgms.	Kgms.	Kgms.
6,77,558	6,99,059	7,21,568	6,71,310

In spite of the drought in the early part of 1960 the amount of tea manufactured during the season exceeded both the estimate and that of the previous year. The result for the year can, therefore, be considered as very satisfactory.

Sales: The quantity of tea sold for season 1960 was 6.98.076 kgs. and the average sale price obtained per kilogram was Rs. 5.20. This compares with 6,79,193 kgs. sold in 1959 at an average sale price of Rs. 4.83 per kgm.

Development: The main items of development carried out during 1960 were the construction of 60 pucca labourers' houses and the sinking of a large tube-well for irrigation purposes. Although there will unfortunately be delay in obtaining the engines required, arrangements have been made to make available temporarily two Ruston engines so that irrigation can be introduced on a limited scale. A start was made in supplying equipment for a controlled withering plant. Vegetative propagation work is rapidly expanding and showing very satisfactory results. With regard to future development the directors consider that priority should be given to irrigation, controlled withering, housing and to improving hospital facilities. As is inevitable in this Industry, schemes of this sort are costly to implement and present estimates show that a figure in excess of Rs. 20,00,000 will require to be spent during the course of the next five years.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	12,00,000	Gross block	48,98,021

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE following posts in the Bank:

(A) **POSTS AND SCALES OF PAY:**

(i) Banking Officers—Rs. 375-55-815 E.B. 55-925-60-1,045

(ii) Probationary Assistants—Rs. 250-25-450 E.B. 25-650

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) **QUALIFICATIONS:**

(i) **Banking Officers:**

(*a*) Applicants should have a minimum of five years' commercial banking experience out of which not less than three years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy, or

(*b*) They should be Chartered Accountants with a minimum standing of 5 years.

Preference will be given to those who have passed the examinations of the English or Indian Institute of Bankers.

(ii) **Probationary Assistants:** Applicants should have a good academic record and a first or high second class Master's degree of a recognised Indian or foreign University with Economics, Banking, Commerce or Accountancy as a special subject and should also have some proficiency in drafting. Educational qualifications may be slightly relaxed in the case of candidates who have passed the Institute of Bankers' examinations and/or possess practical banking experience in a supervisory capacity in a commercial bank.

Candidates who have applied for these posts in response to previous advertisements issued in 1960 need not apply again.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) **AGE LIMITS AS ON 1st JULY 1961:**

(i) **Banking Officers:** Candidates should not ordinarily be over 35 years of age but the age limit may be slightly relaxed in the case of candidates with exceptionally good experience of value to the Bank.

(ii) **Probationary Assistants:** Between 21 and 25 years.

In the case of (ii) the maximum age limit is relaxable but not beyond 30 years in the case of:

(i) candidates possessing special qualifications and experience of value of the Bank;

(ii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iii) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and

(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit *separate* applications accompanied by separate application fees and *should clearly indicate the post for which they have applied.*

3. Applicants for the posts of Banking Officers and Probationary Assistants must remit with their applications a fee of Rs. 7.50 for each *posts* by cheque or bank draft on a *Scheduled Bank* payable at Bombay or by Postal Order. *The application fee is in no case refundable.* Bonafide refugee candidates *not in employment* applying through Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Trivandrum and Patna accompanied by copies (*originals should not be sent*) *of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post-Graduate degree examinations and two testimonials* should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1, so as to reach him on or before 22*nd July* 1961.

5. *Candidates should also indicate in their applications whether they had applied previously for a similar post in the Reserve Bank and if so with what result.*

6. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected, at the time of their appointment in the Bank's service.

7. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

8. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing will be regarded as a disqualification.

SHAW WALLACE & COMPANY, LTD.

NOTICE IS HEREBY GIVEN THAT THE Fifteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on 26th July, 1961, at 3 p.m., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1960, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To declare a Dividend on the Ordinary Shares.
3. To appoint Auditors and to fix their remuneration.
4. To elect Directors in the places of two Directors retiring.
5. AS A SPECIAL BUSINESS: To consider and if thought fit to pass with or without modification the following two Resolutions, of which two Notices have been received by the Company from a Member under Section 257 of the Companies Act, 1956, which will be proposed as ordinary resolutions:

(1) "That Mr. C. M. A. Bathurst be and is hereby appointed a Director of the Company."

(2) "That Mr. J. L. Capper be and is hereby appointed a Director of the Company."

EXPLANATORY STATEMENT

With regard to Item No. 5 above it is pointed out that Messrs. C. M. A. Bathurst and J. L. Capper were appointed as additional Directors. In terms of Section 260 of the Companies Act, 1956, they now vacate their offices and in view of their vast experience of the affairs of the Company, your Directors recommend the adoption of the resolutions in the best interest of the Company.

The Share Transfer Register of the Company's Ordinary Shares will be closed from 17th July to 26th July 1961, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
D. A. HOUGHTON,
Calcutta Director and Secretary.

4, BANKSHALL STREET,
CALCUTTA, *Dated 26th June*, 1961.

SWASTIK TEXTILE MILLS LIMITED

CHAIRMAN'S STATEMENT

THE Fourteenth Annual General Meeting of the shareholders of the Swastik Textile Mills Ltd. was held at Bombay on Thursday, 22nd June 1961. In his brief address to the shareholders, Mr. P. K. Divekar, Chairman of the Company, disclosed that the Company's plant and machinery were being rapidly modernised and that steps were being taken to expand the productive capacity. Arrangements were under way for getting the Company's shares listed on the Stock Exchange, so that they might be readily marketable. The following is the text of Mr. Divekar's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you today to the fourteenth annual general meeting of the Company.

Dividend Maintained

"With your permission, I will take the Directors' report and the accounts for the year ended 31st December 1960 as read. You will be pleased to note that, in spite of paying bonus amounting to Rs. 73,749.49 to the employees of the Company for the year 1958 and after providing for development rebate reserve to the extent of Rs. 83,262, the Company has maintained the same dividend in respect of ordinary and deferred shares and has also paid increased dividend at Re. 0.55 per preference share for the year 1959 and at Rs. 5.55 per preference share for the year 1960 as required by the Preference Shares (Regulation of Dividends) Act, 1960 without utilising the reserves.

"I am glad to inform you that there was no change in the rate of excise duty on cotton powerlooms during the year 1960 and the concession of compounded rates of excise duty continues to be applicable to cotton powerlooms over 100 and upto 300 looms units.

Mercerising Plant

"The Benninger-Maneklal Chainless Mercerising Plant has already started working from 13th December 1960 on a restricted scale. This is due to the fact that the shrinkage in the width of grey cloth after mercerising cannot be made good on our existing ordinary type stentering machines. The Hot Air Stentering and Drying Range manufactured by Messrs. Famatex India Private Ltd., Bombay, is being delivered in parts to our Chembur factory which is expected to be erected and will start working in about 4-6 months' time from now. After this is complete, we will be able to work the mercerising plant to its full capacity in co-ordination with the Famatex Hot Air Stentering Machine.

Modernisation

"Our programmes for modernisation and renovation of plant and machinery are going on apace. We will shortly undertake the construction of first floor on the new shed at our Chembur factory to accommodate the existing and also additional machinery for efficient and economical working. The provision of canteen is also contemplated.

"It may be noted that the shares of the Company are not quoted on the market and hence are not easily negotiable which results in undue inconvenience to our shareholders. The Company is quite aware of the fact and hence efforts in this direction are being made.

"I will now conclude my speech after expressing my gratitude and thanks to you all and other shareholders of the Company, our valued customer-merchants and also to the members of staff and labour for the co-operation the Company has received and continues to receive in its day-to-day activities."

N.B.—This does not purport to be a report of the proceedings of the general meeting.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, *28th June*

The short-term money market continued to display an easy trend throughout the week. The supply position has improved further as the inflow of funds from Calcutta and Madras has increased. The demand for funds is on a modest scale. The inter-bank call rate among Exchange and Indian banks ruled at 4½ per cent which is the same as last week. But, as there is an excess supply in the market it is expected that this rate will go down further in the coming weeks. The other rates, too, did not undergo any change. For purposes of record the rates are given below:

	Per cent
Inter-bank call money:	
Exchange and other large Indian banks	4½
Other banks	4¾
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3¼
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91 days' Treasury bills of the Government of India sold through weekly tenders showed that as against an invitation for Rs. 2 crores, an equivalent amount was offered and accepted. The average rate of accepted tenders remains the same, at 2.650 per cent per annum. 91 days' intermediate Treasury bills sold from the 21st to 23rd June aggregated Rs. 80 lakhs. Their sales are being continued.

A contraction of as much as Rs. 23.24 crores in notes in circulation is disclosed by the statement of the Reserve Bank of India for the week-ended 23rd June 1961 as compared with the previous week. As the notes held in the Banking Department have gone up by Rs. 14.77 crores, the total notes issued are down by Rs. 8.46 lakhs only. Foreign securities are unaltered at Rs. 108.01 crores, but, as balances held abroad have receded by Rs. 3.13 crores, the aggregate foreign assets are lower by that amount at Rs. 120.66 crores. Deposits of banks with the Reserve Bank of India have further also fallen by Rs. 4.20 crores to Rs. 82.05 crores.

The statement of the Scheduled Banks for the week-ended 16th June 1961 shows an expansion of Rs. 6.54 crores in demand deposits and a contraction of Rs. 16.51 crores in time deposits. The deposits of the State Bank of India have fallen by Rs. 11.78 crores. Borrowings from the Reserve Bank have declined by Rs. 1.53 crore to Rs. 19.82 crores, of which those against usance bills are lower (by Rs. 25 lakhs) at Rs. 13.78 crores. Borrowings from the State Bank of India of demand and time nature have shrunk by Rs. 1.35 crore and Rs. 5 lakhs, respectively. On the assets side, advances and bills discounted (bank credit) have experienced a contraction of Rs. 3.46 crores to Rs. 1,277.51 crores. A year ago, they were of the order of Rs. 1,134.19 crores. But as the advances of the State Bank of India are lower by Rs. 3.54 crores, it is clear that the advances of the other Scheduled banks must have actually risen, albeit slightly, by Rs. 9 lakhs. Investments of the Scheduled banks as a whole went down by Rs. 8.21 crores, but, as the investments of the State Bank shrunk by Rs. 9.90 crores, the investments of the other Scheduled banks must have risen by Rs. 1.69 crore.

The gilt-edged market continued to remain dull, with business reduced to a small scale. Interest was mainly confined to short-dated securities. In the Central loan section, 3 per cent conversion loan receded further by 30 nP to Rs. 71.70 owing to absence of buyers. There was some enquiry for 3½ per cent 1964 National Plan loan and its price advanced by 5 nP to Rs. 99.95. All other Central loans were unchanged. In the State loan section, sinking fund enquiry for some issues persisted and some modest price rises were noted.

In the foreign exchange section, the rupee recovered some ground in relation to the U.S. dollar in sympathy with sterling. Banks' selling and buying rates for ready T.T. on New York were Rs. 479.75 and Rs. 476.25 per 100 dollars, respectively, as against Rs. 480 and Rs. 476.50 last week. In the New York market, the pound sterling (spot) gained further strength *vis-a-vis* the dollar. The rates as on 28th June were: 279.050-279.080 cents per £ for spot and 276.550-276.580 per £ for three months' forward. As compared with the rates last week, the pound shows a gain of 0.18 cent in the spot and a loss of 0.46 cent in the forward.

LINSEED MOVES UP

(Messrs. A. Bradley and Co.)

CALCUTTA. *26th June*

In sympathy with the advancing trend in other oilseeds markets locally and at the other main centres, linseed prices have continued to rise and sellers have been very reserved. Crushers have shown a keen interest and small quantities have been changing hands daily for ready goods with buyers over.

The oil market has been firm in sympathy with seeds; prices have advanced and stocks are low.

There has been very little activity in the oil cake market at present except for local buyers, but latest advices from foreign markets show that the market is firming up for forward deliveries and some business may be expected in the near future.

BULLION QUIET

(From Our Own Correspondent)

BOMBAY, *28th June*

An important development of the week in the bullion market was the introduction of the three-monthly contract with effect from Monday, 26th inst. By "three-monthly" is meant that the settlement of transactions in this contract will be done at the end of three months from the date of commencement. Accordingly, the first contract under this new facility will fall due for being wound up on 24th September. The object of replacing the monthly contract with a three-monthly one is to facilitate smooth working of futures trading in bullion, in the face of limited supply of precious metals in relation to the demand. The bears can have a relatively freer hand than hitherto, because they can be squeezed by the bulls only once in three months, instead of every month. In short, the scope for unhealthy speculation which was limited by the steady shrinkage in the volume of bullion has now been widened.

The first three-monthly contract, called *Bhadrapad*, falls due at a time when the demand for bullion is usually slack. This is a positive encouragement to bears.

Before the commencement of business in the new contract, the Forward Markets Commission issued the following Press *communique* setting out the terms under which trading would be allowed:

"With the introduction of the three monthly contract in bullion from 26th June 1961, in the Bombay Bullion Association Ltd., Bombay, the Forward Markets Commission has relaxed the special margins payable by 'longs' both in respect of gold and silver. The rates of margins payable in respect of gold and silver are Rs. 20 per 10 grams and Rs. 300 per bar of 10 kgs., whenever their prices rule above Rs. 115 and Rs. 195, respectively. The said margin is payable on an 'ex-parte basis', that is, on the net open position held by the member on his own account, including the appropriated business of the clients and on account of the long open position held on account of each of his constituents.

"The free limits given to the members have also been liberalised. In respect of gold, every member is given a free limit of 60 kgs., and it can be availed of by those members who hold an open position upto 90 kgs. Similarly, in the case of silver, the liberalised free limit is 320 bars which could be availed of by an operator holding an open position upto 480 bars.

"The Commission hopes that the aforesaid concessions will not be abused by the trade. The Commission is keeping a continuous watch on bullion prices and will not hesitate to tighten the regulatory measures should the situation so warrant."

According to market circles, the liberalisation of margins and free limits is well below their expectations. It may be noted here that the Board of the Bullion Association had requested the Commission to raise the free limit for silver to 600 bars and for gold to 85 bars. Further, as the price limits above which margin operates are appreciably below the prevailing rates, futures trading cannot be done without payment of special margin. Indeed, in the case of gold, the penal margin, which is related to the carry-forward rate, began to operate in gold on the very first day of business in the new contract, as the backwardation rate at Re. 1.40 was above the specified limit of one rupee. Hence, the bulls had to pay a penal margin of Rs. 20 per 10 grams.

Before the new contract came into force, the market was fairly steady, but, since Monday, the trend has been distinctly quiet. It is said that the chief reason for this trend is the disappointment of bulls over the terms of the contract and the consequent liquidation of a part of their commitments. That may be so. But, basically, the contract is weighted in favour of bears and the downward trend depicted by it is in keeping with this feature.

The following table shows the trend of prices during the week under review:

	28-6-1961 (closing)	High	Low	21-6-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.995fine)	120.65	121.30	120.10	121.75
Forward:				
Jeth 2nd*	—	120.95	119.85	120.70
Bhadrapad	119.25	119.50	118.60	—
Sovereign	94.50	94.75	94.50	94.50
SILVER				
Ready (.996 fine)	201.85	203.65	201.45	203.00
Forward:

Bhadrapad†	203.10	204.55	202.85	—
London—	27-6-1961			20-6-1961
Silver Ready	79¾d.	—	—	79¾d.
Silver Forward	79¾d.	—	—	79¾d.
Gold	251s.4¼d.	251s. 6¼d.	251s. 4¼d.	251s. 5¼d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 24th September settlement. † 24th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

It will be noted that, over the week, both gold and silver are perceptibly lower.

COTTON NARROWLY ERRATIC

(From Our Own Correspondent)

BOMBAY, *28th June*

Limited turnover and narrow, but erratic, movements in prices have been the feature of the cotton market. During the first half of the week under review, the futures section moved up by seven points. In the second half of the week, it came down by nine points, though towards the close today there was a fractional recovery, by some 2½ points, from the lowest level. The initial steadiness was due to good enquiry from mills in the spot section and the subsequent weakness was attributed to reports of good rainfall in the producing areas, delay in the Government's announcement of further export quotas and the usual urge among the *sattawalas* to book profit wherever they see some. I.C.C. Jarilla August contract moved as under:—

	Rs.
Last week's closing	579.00
Highest level (touched on 23rd June)	585.50
Lowest level (touched on 27th and 28th June)	576.50
This week's closing	578.75

In the spot section, there has been a fair amount of buying, especially of Gujarat varieties and U.S. short-staples. The trend, however, was quiet. Here are the latest rates—in rupees per candy of 784 lbs.—for some of the varieties, with figures in brackets reflecting the position a week ago:

Hubli Laxmi 940 (970); Amravati L.147 1,020 (1,025); Moglai Zoda 460 (490); Digvijay 970 (975); Gadag Laxmi 935 (965); Dhulia Zoda 470 (500); and Kalyan 840 (840).

Distinctly easy conditions prevailed in the Karachi cotton market during the week under review, thanks mainly to bearish crop forecasts and lack of any encouraging overseas enquiries. July 1961 contract declined by Re. 1.75 to Rs. 64.30. January 1962 contract fell by 80 nP to Rs. 76.85. Among spots, Sind *Deshi* and Punjab *Deshi* lost Rs. 2 each to Rs. 89 and Rs. 86, respectively. The following are the latest available quotations—in rupees per maund of 92 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi, the figures in brackets being last week's rates:

Sind *Deshi* 89; Punjab *Deshi* 86 (88); 4F Punjab Roller 80.65 (83.90); S.G. 84.65 (87.90); L.S.S. Roller 82.65 (85.90); S.G. 87.15 (90.40).

The Alexandria market suffered a severe jolt this week, with the suspension of futures market until further notice, under an official Bill passed by the United Arab Republic's National Assembly last week. According to the Bill, a State organisation, called the Egyptian Committee for Cotton, will become the buyer and exporter of the cotton crop. Outstanding contracts are liquidated as on 21st June. From that date until 31st August, the Committee for Cotton will buy all stocks that are offered at the prices prevailing on 21st June. This development came as no surprise, in view of the steady extension of State control over the purchase and disposal of Egypt's cotton crop in the past. Last month, cotton exporting firms were put under overall control of the State Economic Development Organisation which acquired 35 per cent of their capital, and many of the firms have been amalgamated. The futures market, it may recalled, was closed after the July 1952 revolution, but was reopened in September 1955 largely in response to the wishes of foreign buyers.

Some of the other important features of the new regulations are:

(1) From 1st August, the Cotton Committee will buy all new crop cotton (1961-62) at the following base prices (in tallaris per metric cantar of 50 kilos): *Karnak* G./F.G. 78; *Menoufi* G./F.G. 77; *Giza* 30 Good 67; *Lotus Good* 67; *Dendera Good* 65; *Ashmouni Good* 65.

(2) After 1st January next all purchase prices will be increased by one tallari per cantar.

(3) Sales will be made with the co-operation of the Cotton Commission which will provide cotton at internationally competitive prices.

(4) The market will remain open and function normally within the structure of the new trading system.

(5) The Cotton Committee will be reorganised to assume its new responsibilities among which would be the regulation of cotton exports. Within one year, all exporting firms must become joint-stock limited companies with a minimum capital of £E200,000 of which at least 35 per cent must be subscribed by the Government.

Explaining the move, the U.A.R. Government observed in the course of a statement that the market had failed in its function "due to the attitude adopted by some buyers who conclude big deals at certain periods in order to put pressure on the market. This has made the cotton market incapable of sound coverage and unable to undertake equilibrium operations with foreign markets. Our market has thus lost the flexibility essential for proper functioning." This appears to be a reference to the Soviet bloc, the concentrated buying bouts of which frequently sent Alexandria prices above levels regarded in the West as competitive. During this season, about 70 per cent of the total exports have gone to Communist countries, though the Government's aim has always been to have at least half the exports sold in the West in exchange for hard currencies. The authorities are also said to be disturbed by the reported reselling of Egyptian cotton by some Communist countries to Western buyers at prices below Alexandria levels thereby acquiring hard currencies.

The Liverpool cotton market displayed listless conditions. The turnover remained very modest with both sellers and buyers reserved on account of annual mill holidays in upcountry centres. July position declined from 23.70d. to 23.60d. October position closed subdued at 24.10d. as compared with

24.15*d*. July (Sudan) position was neglected at 31.75*d*.

Price movements in the New York cotton futures market were confined to a narrow groove. The undertone, at any rate, remained quiet. Commission houses were sellers on reports of continuing favourable weather conditions in major producing centres. The spot section was, however, well maintained.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	27-6-61	20-6-61	13-6-61
Spot	34.55	34.50	34.40
July	33.20	33.25	33.43
October	34.08	34.08	34.24

STAPLE FIBRE YARN RALLIES

(From Our Own Correspondent)

BOMBAY, 28*th June*

Virtually buoyant conditions prevailed in the staple fibre yarn section during the week under review, thanks mainly to the pronounced scarcity of supplies and the steadily increasing demand from mills. Reports of better overseas demand for staple fibre clothes imparted further strength. There was, consequently, heavy short-covering in staple fibre yarns during the major part of the week. Art silk yarns were also well maintained. J. P. Bemberg yarns were in the forefront, following persistent scarcity of floating supplies and the prevailing high rate of premia on import licences. It may be noted here that the Development Council for Art Silk Industry has decided to place the Indigenous Art Silk Yarn Distribution Committee and its Secretariat on a permanent footing. The Committee will work under the direct supervision of the Textile Commissioner's Office, and will submit reports of its activities from time to time to the Development Council. The Committee has received several complaints from the handloom sector, doublers, twisters, hosiery units, as well as ancillary industry, about their difficulties in obtaining yarn. The Committee has recommended the issue of allocation cards to all categories of actual users of art silk yarn. It is expected that the Office of the Textile Commissioner would, therefore, shortly issue a Press Note inviting applications from all categories of actual users for July-September 1961 quarter. Imports of rayon yarn into Bombay rose from only 270,000 kgs. in April to 1.08 million kgs. during May. Dull conditions continued to prevail in the cotton yarn section.

Among staple fibre yarns, (40 x 2) August contract forged ahead by Rs. 118 to Rs. 1,058. The spot section was also firm. Spot Hinds put on Re. 1.03 to Rs. 11.55. Kohinoors rose by 94 nP to Rs. 12.36. Nainis hardened by 79 nP to Rs. 11.70. In view of this rally, margin rules were tightened today.

Among imported yarns, 120 Italy advanced by a rupee to Rs. 1,764. Both 120 Japan and 150 Japan were steady at Rs. 1,874. Among indigenous yarns, National Rayons 120 bright cones first grade improved by 39 nP to Rs. 19.51, 150 bright cones first grade picked up 16 nP to Rs. 16.70. Cupressa Bemberg yarn (60 x 1), however, ruled easy. June and August contracts lost Rs. 10 each to Rs. 2,645 and Rs. 2,700, respectively. Spot Cupressa was quiet at Rs. 2,659. In contrast, (40 x 1), J.P. Bemberg yarn continued to make headway. August 1961 contract was marked up by Rs. 22 to Rs. 3,205. June contract advanced by Rs. 12 to Rs. 3,135.

Among cotton yarns, ten counts Podars changed hands at Rs. 17.37. Twenty counts Gokaks were neglected at Rs. 22.50, as also New Greats at Rs. 21.25. Forty counts Maduras were quoted unchanged at Rs. 32.87.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	28-6-1961	21-6-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
June	2,645.00	2,655.00
August	2,700.00	2,710.00
Spot	2,650.00	2,659.00
40 x 1 JP June	3,135.00	3,123.00
August	3,205.00	3,183.00
120 Japan (per 100 kg.)	1,874.00	1,874.00
150 Japan (per 100 kg.)	1,874.00	1,874.00
120 Italy	1,764.00	1,763.00
Staple fibre yarn (40 x 2)—		
August (per 20.72 kg.)	1,058.00	940.00
Kohinoor (per kg.)	12.36	11.42
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.37	17.37
20s New Great	21.25	21.25
30s Simplex	—	27.00
40s Madura	32.87	32.87
60s Finlay	65.00	65.00
80s Moderns	60.50	69.50

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 28*th June*

A welcome news to the oilseeds trade was the decision of the Forward Markets Commission to withdraw special margins and ceiling rates on new crop contracts, scheduled to be commenced on 7th July. The details of the measures taken by the Commission are as follows: (1) The daily rise in price will be limited to Rs. 4 per 250 kgs. whenever the price of the groundnut contract rose above Rs. 225 per 250 kgs. in Bombay, and to Rs. 3 per 250 kgs. above the level of Rs. 250 per 250 kgs. Corresponding limits on the daily fluctuation in prices have been fixed for groundnut and groundnut oil traded at other centres like Rajkot, Delhi, Sangli, Hyderabad, Adoni and Madras. (2) Two contracts in the new crop will simultaneously run in certain associations and one in certain others, depending upon the requirements of each case. In Bombay, two contracts will run simultaneously from the commencement of trading in the new crop. (3) There will be no ceiling or special margins. (4) In associations where there is in vogue a system of collecting trading deposits for preventing over-trading or defaults, the same would continue.

With regard to trading in the new season's cottonseed crop, the daily rise in price will be limited to Rs. 2 per 250 kgs. whenever the price of the contract rose above Rs. 105 per 250 kgs. Trading in the new season's castorseed and linseed crop will not be subjected to any special margins or limit on daily price fluctuation. The above concessions have been agreed to by the Commission on a purely experimental basis, and the Commission hopes that the trade will conduct itself in the ensuing months in such a manner as to make it unnecessary for the Commission to intervene. The Commission has, however, made it clear to the representatives of the trade that it will not hesitate to resort to more stringent restrictions should the market behaviour necessitate the same.

The special margins have found to be of no avail in restricting unbridled speculation. They have served merely to drive away the small fry out of business. In view of the substantial increase in the output of groundnuts anticipated in the 1961-62 season, the Commission's move must be considered appropriate. It is now for the trade to see that healthy marketing practices are maintained, without which there will be revival of official intervention.

This measure had a stimulating effect on the market and the undertone remained quite firm during the week under review. In addition to this, there were two important developments of interest to trade. One was the extension of the export promotion scheme for *vanaspati* till the end of this year. Under the scheme, import of one ton of copra will be allowed against the export of every ton of *vanaspati* or hydrogenated oil. Secondly, the Government of India has decided to extend the validity period of the quota for groundnut oilcake (expeller variety) up to the end of the year. The Government, it may be recalled, released a quota of 20,000 tons of groundnut oilcake on 25th January last for export during the period January-June 1961. Immediate prospects for exports of both *vanaspati* and oilcake are rather bleak in view of the distinctly higher domestic prices, as compared with overseas prices.

To turn now to the market trend. As already mentioned, groundnuts displayed firm conditions, thanks mainly to the tight statistical position. Local stocks were too small, whereas arrivals from the South had already tappered off. Bulls, however, turned rather nervous towards the close on expectations of larger crops in the next season; they felt that the high prices for groundnuts, as against heavy stocks and consequent weakness in raw cotton, would lead to larger sowings of the former crop in preference to the latter in certain areas. Castor, too, presented firm conditions on reports of some overseas inquiries for castor oil. Reports of smaller crop from Gujarat during this season too induced some strength. Linseed, cottonseeds and sesame moved up in sympathy.

Among groundnuts, Nizam bold firmed up from Rs. 54.75 to Rs. 56 before closing at Rs. 55.75. Both Coromandel and Khandesh quality gathered 50 nP each to Rs. 56. Oil ex-mill put on 20 nP to Rs. 23.25.

In the castorseed section, September 1961 contract rallied from Rs. 180 to Rs. 181.62. Ready Madras hardened by 39 nP to Rs. 36. Oil B.S.S. improved by 15 nP to Rs. 16.35 and Commercial by 10 nP to Rs. 15.20.

Among linseed, September 1961 contract rose by 38 nP to Rs. 40.69. Bold ready put on 13 nP to Rs. 40.25. Linseed oil closed higher at Rs. 17.25, as compared with Rs. 17.10.

Among cottonseeds, September 1961 contract moved up by 75 nP to Rs. 96.25. Among spots, whites scored a gain of 65 nP to Rs. 20.25. Both non-whites and Berars were quoted today higher at Rs. 20, as compared with Rs. 19.60 last week-end.

In the sesame section, bold ready forged ahead by Rs. 8 to Rs. 378. Sesame oil rose by 50 nP to Rs. 28.25 on scarcity of supplies and good demand from the South.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	28-6-1961	21-6-1961	14-6-1961
	Rs.	Rs.	Rs.
Groundnut			
Nizam bold	55.75	54.75	55.00
Coromandel ready	56.00	55.50	55.25
Khandesh quality	56.00	55.50	55.00
Oil ex-mill ready*	23.25	23.05	23.25
Railway receipts*	21.20	22.80	23.10
Castorseed			
September 1961	181.62	180.00	179.62
Ready Madras	36.00	35.62	35.60
Ready Kanpur	34.62	33.87	33.75
Oil B.S.S.†	16.35	16.20	16.20
Oil commercial†	15.20	15.10	15.10
Linseed			
September 1961	40.69	40.31	39.75
Bold ready	40.25	40.12	39.00
Oil ready†	17.25	17.10	17.05
Cottonseed			
September 1961	96.25	95.50	95.00
Niger seed	42.50	42.25	41.50
Kardi seed	27.80	28.00	26.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA WELL MAINTAINED

(Messrs. Forbes, Ewart and Figgis Private Ltd.)

COCHIN, 20*th June*

Approximately 63,700 kilograms were on offer in sale No. 25 held today. Quality from the Nilgiris, was well maintained with the later invoices showing a slight improvement. From the other districts it was about maintained. There was strong and general demand. The best highgrowns received keen competition and sold at fully firm to dearer rates whilst the lesser sorts, although well supported, were irregular following quality. Mediums were sought after and sold readily at slightly dearer prices. Plainest descriptions were taken up at rates which were 5-10 nP above those ruling last week. Black leaf teas were in demand at enhanced levels. Whole leaf grades were strong and dearer. C.T.C. and legg-cut types sold at around last prices.

	1961	1960
	Rs.	Rs.
Low mediums	4.20-4.35	3.22-3.53
Mediums	4.35-4.50	3.64-3.86
Good mediums	4.50-4.70	3.86-4.08
Nilgiri B.O.P.	Rs. 4.50-5.45	

The average price realised in sale No. 25 was Rs. 4.44 per kilo as against Rs. 4.37 a week ago and Rs. 3.81 in the corresponding sale last year.

Dust Sale No. 25: Offerings amounted to 276,000 kilograms in dust sale No. 25 held on Thursday, 22nd inst. There was strong and active demand at dearer rates. Highgrowns continued to sell well at fully firm to slightly dearer rates. C.T.C. and legg-cut teas shared in the general upward trend of the market.

The average price realised in dust sale No. 25 was Rs. 4.14 per kilo as compared with Rs. 4.01 a week ago and Rs. 3.74 in the corresponding sale last year.

Export Quota: The market for new season's quota remains quiet and there are still sellers at 3 nP per kilo. No business has yet been done.

Colombo: Just under 7 million pounds were offered in the export sale. There was good general demand with the few best South West Highgrown B.O.Ps selling at dearer rates, whilst lesser types were generally steady. Better Uvas and mediums are quoted ¾ cent dearer but lowgrowns inclined lower B.O.P.Fs followed a similar trend to their respective brokens.

London—North Indian and other growths: There was fair demand with last season's Assams selling at irregular rates. African teas tended lower. Plain broken pekoe is quoted at 3/8½*d*.

Ceylon and South Indians: In Tuesday's sale 35,328 packages were offered of 8,082 packages were from South India. There was fair demand but prices generally declined by 1d. to 2d.

As we go to Press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:

"*Sale No. 26*: 744,000 kilograms. Good general demand. Plain and low medium brokens fully firm, occasionally 5 nP dearer. Similar fanning barely steady. Medium and good medium sold at steady rates. Nilgiris irregular and easier."

TEA STEADY

(From Our Own Correspondent)

CALCUTTA, 27*th June*

The general demand improved during yesterday's export sales, and as a result prices were steady. Meanwhile, a further improvement in tea bookings was recorded during the week, although freight occupied by other exports were insignificant, as compared to tea. The fact that two liners to the U.K. were declared full clearly shows that bookings to that country were very heavy.

The weaker trend in last week's auctions of Ceylon and South Indian teas was taken note of. The weakness was due to a decline in quality. Ceylon teas fell by 1*d*. to 3*d*. a lb. while the decline in South Indian growths was generally by ½*d*. to 1*d*. per lb. Tea stocks in the U.K. fell to 132 million lbs. in the week ended 16th June from 136 million lbs. in the previous week, and this was taken as an indication that as quality of offerings improves there would be increased demand at hardening rates.

According to tea trade circles, India's share in the increased offtake of tea by Egypt has been less as compared to Ceylonese or Chinese teas. This is attributed to the pronounced preference of the Egyptian to Ceylonese and Chinese teas. This indicates that Indian promotional measures should be pursued more vigorously than hitherto. It was only a month ago that the Indian Tea Board opened a tea centre in Cairo and, from reports reaching here, the Centre has become very popular with the Egyptians for one reason or another within such a short time of its opening. Trade circles felt that the Tea Board should take propaganda to the countryside also, so that the Egyptians should get convinced that Indian tea can be compared favourably in quality and everything else to other teas. The fact that the Egyptian blender has to mix Indian tea with Ceylonese or Chinese tea and has to sell as the latter shows how popular Ceylonese and Chinese teas have become in the Egyptian market.

There is also the need to strengthen the promotional measures in the United States. It is stated by Mr. R. B. Smallwood, Chairman of the U.S. Tea Council, that tea imports into his country in 1960 at 116 million lbs. represented an increase of 7½ million lbs. or 7 per cent over the figure for 1959 and touched a new high in 43 years. How much of this increase is accounted for by Indian tea is not stated, but tea trade circles said that in view of the lower output in 1960, India's share in the increase would have been paltry, if not nothing. It is felt that India's share in the budget for the U.S. Tea Council should be made in proportion to India's share in the total increased offtake by the U.S.A.

Offerings during yesterday's export sales amounted to 23,605 packages, which met with good general demand. Generally, prices improved. Legg-cut teas met with increased support and prices were higher. Whole leaf grades were paid particular attention with prices moving up. Strong support was accorded to stylish B.Ps. Dar-jeelings of good quality met with good demand at dearer rates; but the tea from lower elevations were easy on meagre support leading to withdrawals. Among C.T.Cs, the better liquoring teas were fully steady. Medium and the poorer teas met with support at rates which were above their fannings. Plainer orthodox teas were firm, the better descriptions realising valuations and brokens receiving keener attention. Tippy teas recorded gains. The quotations inclusive of excise duty were: plain fannings Rs. 4.60 to Rs. 4.65, plain B.P. Rs. 4.70 to Rs. 4.80, and clean plain pekoe Rs. 5.10 to Rs. 5.20.

JUTE RISES

(From Our Own Correspondent)

CALCUTTA, 27*th June*

Reports of heavy rains in several jute districts in India and Pakistan and the absence of intervals of bright sunshine, which is so very essential for the proper growth of the plants, led to a sharp rise in fibre prices, and the balance varieties of the old crop yet to be disposed of closed Rs. 2 a maund higher on balance. It is realised that the above phenomenon will not reduce the expected crop appreciably but that there is the genuine fear that the quality of a portion of the crop will be affected in the absence of an alternative other than the cutting down of immature crop. Weaker advices from the New York burlap market and the indifference of American buyers to offers coupled with the poor consumption in the U.S. in May led to a featureless hessian market, but, following keen activity, prices of sacking constructions gained. Cuban interest acted as a retarding influence to depression in hessian, and this accounted for prices being maintained at around previous levels. For a time, speculative interest in Calcutta steadied up the New York burlap market, but the fact that primary consumers were indifferent caused stagnation subsequently. In New York, the 7½ oz. hessian after receding to 9.25 cents a yard regained to 9.30 cents, with the heavier hessian closing at 12.15 cents a yard against 12.10 cents earlier. The fall in U.S. burlap consumption by 2 million yards to 57 million yards in May 1961 caused concern. In January and February consumption was maintained at 73 million yards each but these compared with 71 and 75 million yards respectively in the corresponding previous months. In March last, consumption fell by 3 million yards to 70 millions as against 81 millions in March 1960. In April, at 59 millions as against 72 millions a further fall was recorded. The total consumption for the first five months of this year was 332 millions, representing a fall of 41 million yards.

The fact that such an impressive fall of 41 million yards was not followed by an economic depression led to the inference that the reason for lower consumption was greater attempts at bulk handling methods in view of high prices for hessian in Calcutta. As compared with May 1960, bag cut-up in the U.S. declined by 8 million yards, and piecegoods delivered by 9 million yards. At the end of May U.S. burlap stocks amounted to 218 million yards, a fall of 10 million yards from the stocks of the previous month-end. This showed that the U.S. is consuming a good portion of the monthly needs from stocks rather than buying hessian from Calcutta at the present inflated prices. What is of greater concern to Calcutta trade circles is the apprehension that when once methods to reduce consumption of burlap have succeeded, it would be difficult to set back the trend even if prices decline in the new season commencing from next month.

The statement in Dacca by Mr. K. S. Islam, Chairman of the Pakistani Jute Board, that the 1960-61 crop in Pakistan was only 4¼ million bales against the earlier official forecast of 5.6 million bales did not cause any surprise here as this was only a confirmation of the trade estimate, which, at that time, led to rumours that the lower estimate was being circulated for interested purposes. As a result of the high prices in Pakistan, Mr. Islam stated that the Pakistani growers benefited considerably, receiving the all-time high price of Rs. 72.92 per maund in the last week of February. As a result, Pakistan also earned increased foreign exchange as compared with the last year when a greater quantity was exported. Mr. Islam was not at all happy at this, and hoped that prices during this season would be fair for the foreign buyer since he was able to confirm the anticipation of the higher crop at 7.4 million bales, that is, an increase of 3 million bales over the current crop. The coming crop in Pakistan is going to be the highest since 1947. The previous highest crop was in 1952-53 when 6.9 million bales were harvested. Damages as a result of the recent cyclones were insignificant, as an official review in Pakistan disclosed the damage as being not more than 68,000 bales. As a result of the higher crop, no problems were anticipated. In the last month, arrivals of fibre in mills' stations in India were only 242,100 bales, of which 8,000 bales were from Pakistan, thus representing a total decline of 74,500 bales (13,600 bales from Pakistan and 60,900 bales from India) compared with April 1961. Total arrivals in the 11 months to May were only 4,724,050 bales (401,200 bales from Pakistan and 4,322,850 bales from India) as against the estimated consumption by mills of 5,445,000 bales, the short-receipt amounting to 720,950 bales. These details are given here since the publication of the same in the week was a factor for the hardening trend in fibre prices.

The news from Pakistan of the Government's decision to strengthen and expand the Jute Board was construed here as meaning the intention of the authorities to place restrictions on internal trade. Evidently, what is proposed is Government control by licensing of jute dealers, internal marketing, and warehousing and other functions over the internal trade. According to Pakistani trade, it is unfortunate that the Government is contemplating to exercise control over internal trade, which has been running smoothly. If at all Government's attention is necessary it should be devoted to export trade, according to these circles. If only Government accepts all export orders, it can ensure fair prices both to the growers and to the foreign buyer; at the same time the country will benefit by full repatriation of foreign exchange earnings in this regard. Viewed in this light, the Pakistani trade has also criticised Government's permission to the Pakistani Jute Association to set up an office in London. There has also been a report that Pakistan is proposing to create a buffer stock for which purpose a cess on the crop is said to be in contemplation.

The rise in prices of jute goods during this week should also be attributed to the withdrawal by the Reserve Bank of restrictions relating to the maintenance of minimum margins in respect of advances by scheduled banks against jute goods. This action by the Reserve Bank followed the declining trend in sacking and hessian prices as a result of diminishing demand by foreign buyers. It should be said that this week's rise in prices had not been substantial and in the long run the withdrawal of the restrictions by the Reserve Bank should not lead to an uptrend in prices. In the first two weeks of this month, prices declined, and this week's gain should be considered a temporary phase, as, with the commencement of fresh crop arrivals as from the end of next month, prices are expected to decline. However, the announcement by the Reserve Bank stated that regulatory provisions relating to the advances against raw jute would continue. On Tuesday last, prices of goods recorded small gains following buying in ready goods and in the futures market. Earlier in the day, prices were quiet. Ready B. twills steadied around Rs. 154.50 and ready hessian 40" 10 oz. around Rs. 48.25. Following keen interest displayed by local operators on the following day, B. twills gained to Rs. 156.00 although, despite small interest by U.S. buyers, hessian 40" 10 oz. was quiet at Rs. 48.30. Activity in the futures market increased and the feature on Thursday was that B. twills against guaranteed June shipment was priced as high as Rs. 160. In the ready market, the price spurted to close at Rs. 158.50. In sympathy, hessian 40" 10 oz. hardened to Rs. 48.75. At higher levels, mills sold liberally against both ready and forward deliveries. This caused prices to fall on Friday with B. twills being quoted at Rs. 157.00 and hessian 40" 10 oz. at Rs. 48.00. The market was closed on Saturday on account of the public holiday. Prices gained yesterday with futures receiving greater attention. Also the closure of mills for one week commencing from yesterday was a factor. B. twills hardened to Rs. 158 and hessian 40" 10 oz. to Rs. 48.75. Mills were keen sellers in several constructions against ready delivery.

A sharp uptrend was in evidence in fibre prices. The gains were more in sympathy with goods and weather reports than due to actual demand. Mills showed interest in small lots only. However, subsequently reports of absence of sunshine after heavy rainfalls in jute districts also contributed to the gain in prices. Opening and closing quotations for the old crop are given below:

(In Rs. per maund against ready delivery)

	Opening	Closing	Gain
Daissee bottoms	50.00	52.00	2.00
Northern bottoms ...	47.00	48.50	1.50
Assam bottoms	48.00	49.50	1.50

TIN RALLIES

(From Our Own Correspondent)

CALCUTTA, 27*th June*

The remarkable development in the metal market during the week under review was the jump in tin prices. On the London Metal Exchange, the price shot up to as high as £939 a ton from a modest opening of £879½, then representing a gain of £59½ in the course of five days. A more or less similar rise was recorded in the Singapore market too. The advance in London followed the withdrawal by the Buffer Stock Manager, as a seller, at his ceiling price of £880, as he had exhausted his stocks. This development, it was thought here, would result in the evolution of the price as determined by the application of the natural law of supply and demand. If Government stocks are not released in the U.S. or the U.K. in the near future, the price is bound to rise further.

It should be noted that this week's rises in London and Singapore have taken the rate to the highest level since the Korean boom. In accordance with the International Tin Agreement arrived in 1956 by all producing countries, a buffer stock was created in London and its Manager was authorised to buy if the price dropped below £730 a ton, and sell if the market price moved above £880. In view of production having failed to keep pace with increasing world demand, stocks with the Manager became low in recent months, and it is evident the scheme has failed. It follows from this that any attempt to hold down the price line beyond the level as determined by the natural law of supply and demand is bound to meet with failure in the long run.

The metal trade and industry have hailed the simultaneous announcement in New Delhi and Washington that the U.S. has approved of a loan to India of $20 million through the Development Loan Fund, for the procurement of copper, zinc and aluminium from that country during the current year. The imports would be used in the manufacture of electrical equipment and on projects in power, transport and communications. This loan, it was thought here, would be used to increase the imports of non-ferrous metals. It is to be hoped that the existing quotas are not cut down and that the Government's proposal that cable manufacturers should in future consume more aluminium and that their copper quotas would be cut down by 50 per cent is slowly pursued.

The difficulties facing the small-scale industries in Calcutta as a result of the meagre allotments to them of copper and zinc were referred to by Mr. T. Ghose in his presidential address to the annual meeting of the Small-scale Non-ferrous Industries Association held here in the last week. He said that several of these industries consuming copper and zinc had practically closed down and the remaining few were working much below their capacity. He earnestly pleaded for increased allotments. The meeting was also addressed by the West Bengal Minister for Commerce and Industry, Mr. Bhupati Majumdar, who urged the Government of India for more generous treatment in regard to the requirements of the small-scale manufacturers.

The copper scrap supply position in the local market continued to be tight, and prices were steady. On the London Metal Exchange, spot copper opened at £233¾ a ton, and after rising to £236 closed at £235. Electrolytic zinc was quoted here around Rs. 330.75 per 100 kgs. with the London price closing fractionally higher at £77⅞, as against the opening price of £77½. The London price of lead closed higher at £65 a ton, as against opening of £64½.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 26*th June*

Quiet conditions were witnessed in foodgrain prices during the week ending 26th June. Arrivals of *rabi* grains were small but demand, too, was slack. Rains during the week have brightened prospects of *kharif* crops and large-scale sowings are being done now. Wheat average quality prices here registered a fall of 25 nP per maund during the week to Rs. 14 to Rs. 14.50 per maund while superior farm produce was being lifted at almost unchanged prices at Rs. 15.25 to Rs. 16.25 a maund. Daily arrivals of wheat dropped during the week to an average of 500 to 600 maunds partly due to inclement weather and rains but mostly due to the fact the producers were retaining their produce expecting better prices later. Consumers' demand, however, is reported slack and local wheat stock is put at 25,000 maunds. Superior rice prices registered a hardening trend during the week on good demand from consumers. Rice was still reaching here in small quantity from the producing areas of the State and local stock is put at 8,000 maunds with week-end prevailing prices at: rice *mainpuri sela* Rs. 22 to Rs. 23 *gaindakutcha* Rs. 22, *ramajwayan sela* Rs. 24.50, *raimunia sela* Rs. 25.50, *basmati sela* Rs. 29 to Rs. 31, *superior* Rs. 33 to Rs. 39 a maund.

Gram prices ruled quietly downwards at Rs. 13.75 a maund for Punjab variety and Rs. 13.25 for inferior local produce. Gram was still reaching here in small quantity from Punjab and local gram stock is estimated at 50,000 maunds. Barley prices were almost stagnant at Rs. 11 to Rs. 11.25 a maund and while inferior *bejhar* was quoted at Rs. 10.37 *moongia* variety was being lifted upto Rs. 11.50 a maund. Arrivals of these coarse grains were poor at an average of 100 maunds which are all being lifted by consumers. *Jowar* was quoted higher at Rs. 13 to Rs. 16 a maund and *bejhar* at Rs. 16.50 to Rs. 17.50 a maund, thanks to good demand as, following recent rains, large-scale sowings are being done for these grains. Maize is also being sown. *Methi* continued to attract good support from Rajasthan side and prices were steady at Rs. 26 to Rs. 27 a maund while prices of other grains were quiet at: oats Rs. 11.50 to Rs. 12, maize old Rs. 12, *bajra* Rs. 16 a maund.

In pulses, peas prices ruled quietly depressed as following continued loading restrictions demand is now slack. Daily arrivals have dropped to an average of 400 to 500 maunds and local stock is estimated at 90,000 maunds.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 26*th June*

Sugar prices ruled quietly steady during the week at Rs. 107.25 per bag for E-29 Simbhauli of 2 mds. 30 seers and in retail at Re. 1 per seer. Supply position of sugar was reported easy as the Union Government continues to release two lakh tons, in its monthly quota. Export prospects were better as details of exports of U.S.A., Pakistan and other Middle Asian countries were being worked out. Production season has finished and stocks with factories were reported heavy.

Steady conditions were also witnessed in sugar market at Muzaffarnagar during the week as seasonal demand was reported brisk and week-end prices, for dry quality were Rs. 107.50 to Rs. 107.69 per bag. Sugar prices were also steady in Kanpur market during the week when D-29 was quoted at Rs. 109.50 per bag.

Steady to firm conditions were witnessed in *khandsari* market during the week following brisk demand from Punjab and Rajasthan. Prices firmed up Re. 1.75 to Rs. 2.50 per maund during the last fortnight. Stocks were declining and week-end prices were:—inferior Rs. 29 to Rs. 31, medium Rs. 32 to Rs. 33.25, superior Rs. 35 to Rs. 37.50, crystal Rs. 35.50 to Rs. 38.50, old *khandsari* Rs. 29 to Rs. 33, *Boora* Rs. 40.50 per maund.

Ready *gur* prices ruled quietly steady during the week due to brisk demand from consuming areas of the South, but loading is not available. About 50 per cent of stocks here were ready for despatch as soon as loading is available. Cane crop as yet in early stages which was adversely affected due to Salai pest and drought has now improved, thanks to good timely rains during the week. Week-end prices were:—*gur* dry Rs. 16.25, *kotha* selected dry Rs. 15.75, dry-wet Rs. 15.12, wet Rs. 14.50, *shakker* Rs. 16.25 a maund.

Ready *gur* prices hardened during the week in Muzaffarnagar market, thanks to good demand from Gujarat and Punjab. Although loading on broad-gauge was not available, for Punjab destinations it was free. Stocks were declining and week-end prices were:—*Chaku* dry Rs. 19 to Rs. 20 *kotha* medium Rs. 18 wet Rs. 14.75, *rusket* Rs. 7 to Rs. 9 *shakker dara* Rs. 17 to Rs. 18.50, *masala* Rs. 21 to Rs. 23 per maund.

While *gur ashad* delivery prices ran down on bear pressure influenced by early delivery date, *fagun* delivery prices were bullish as cane crop prospects were as yet not clear following losses due to pest. *Gur ashad* is now quoted at Rs. 14.46 and *fagun* Rs. 13.95 as against week's opening at Rs. 14.57 and Rs. 13.83 respectively, having touched the highest in mid-session at Rs. 14.62 and Rs. 13.95.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 23rd June, 1961

BANKING DEPARTMENT

LESSONS FOR INDIA'S COAL INDUSTRY

THE Coal Productivity Team, sponsored by the National Productivity Council in collaboration with the U.S. Technical Co-operation Mission, had the unenviable task of studying, in a short period of about eight weeks during September-October 1959, the complex coal mining industry, with its advanced techniques, in four Western countries—United States, United Kingdom, France and West Germany. The terms of reference of the Team were, of course, restricted to the study of bituminous coal mining, and so it did not have to concern itself with lignite or anthracite coal mining. But the technical aspects of the industry that the Team had to study were so many that it could not do full justice to its assignment. As much is frankly admitted in the Team's report which has just been published by the National Productivity Council. The report, therefore, suffers from certain limitations and shortcomings, the first of which is that it does not say much about open-cast mining under varied conditions. The need for studying open-cast methods in the United States and the United Kingdom arises from the likelihood of a large number of mechanised open-cast mines being started in this country in the third Plan period. Secondly, the report does not assess the possibilities in the matter of applying the caving methods, used in some American coalfields with their thick and highly inclined coal seams, to some of the Indian coalfields with similar seams. The report otherwise deals comprehensively with the various aspects of bituminous coal mining in the four Western countries, draws relevant lessons from their mining methods, organisation and management practices, wage systems, safety measures, and so on, and suggests suitable measures considered essential for increasing the productivity in India's own coal industry.

The Team has assigned, at the outset, some importance to the question of amalgamation of smaller collieries. Here the experience of the nationalised French coal industry which has carried out reorganisation and amalgamation of smaller units with considerable success has provided the basis for the Team's recommendation that the work of amalgamation already launched in the Indian coal industry should be carried out with greater speed for the purpose of achieving higher productivity and larger percentage of extraction. Whether the French example can be easily emulated in India is the question. For instance, according to the Team's report itself, in the large coalfield of Nord-Pas-De Calais, covering a territory of about 1,860 square miles, there were as many as 114 mining units before nationalisation in 1946. These 114 mines have since been reorganised into 76 units, and it is expected that, by 1965, these would be reduced to just 41, with an average coal production of 2,500 tons per day per mine. It would appear from this French experience that, even in the conditions of nationalisation, it takes a very long time to amalgamate smaller collieries into larger units. How in the private sector of India's coal industry amalgamation can be carried out with greater speed is by no means clear. That amalgamation of collieries, like consolidation of fragmented land-holdings, is a difficult and time-consuming enterprise could be inferred from the fact that the Committee set up by the Government of India in August 1958 to promote voluntary amalgamation of collieries and adjustment of boundaries has approved, upto 31st March 1961, only 30 proposals. Actual amalgamation has taken place so far in 16 cases, involving 32 collieries with an aggregate annual production of about 1.2 million tons which, again, is just a fortieth of the total annual production of all the private collieries in India. Voluntary amalgamation, thus, is bound to be dreadfully slow. But, at the same time, compulsory consolidation does not seem to be a better alternative. In fact, the Government has decided to defer, for the time being, the introduction of legislation providing for compulsory amalgamation of collieries, on the ground that it may cause physical hold-ups which would be to the detriment of the scale and tempo of the production efforts needed during the third Plan. The Team's recommendation in respect of amalgamation does not seem to have, in the circumstances, much relevance from the point of view of a possible early "achievement of higher productivity and larger percentage of extraction" by that method.

But two other recommendations pertaining to organisation and management are immediately more relevant and practicable. One of these is based on the experience of the nationalised coal industry in France and is applicable only to the public sector of India's coal industry. The organisational structure in France consists of a central policy-making body and autonomous coal mining companies, one in each region. If a structure of this kind is established in the public sector of India's coal industry, regional companies, so formed, would facilitate the exercise of effective administrative control which, in turn, would contribute to higher productivity. The other recommendation, based on the experience of the predominant private sector in West Germany's coal industry, is applicable only to the private sector in India's coal industry. As the majority of collieries in the private sector in India are owned by proprietors who do not have adequate finance for utilising the services of technical experts for advising on specific technical problems, the Team has suggested the formation of a central co-ordinating body for rendering common services on the lines of the S.K.B.V. in West Germany. Such an organisation would have to be formed in India, too, on a voluntary basis to advise the various mining companies on all major technical problems concerning production, safety, beneficiation, marketing and utilisation. The Team has not clarified how the work of this body is to be financed. Presumably its finances would have to be derived from the voluntary contributions of the coal companies. But a better alternative would be for the Government to encourage the formation of such a body by announcing its readiness to provide the required financial assistance from out of the proceeds of the coal cess which has been progressively increased.

Another valuable lesson, which is germane to organisation and planning, has been drawn by the Team from the experience, in particular, of the private sector in the United States and West Germany. This part of the Team's finding is quoted below:

"In the U.S. and West Germany, planning in large companies which produce an output of 2 to 5 million tons per year is carried out at two separate levels of managements. The long-term planning is entrusted to the top level management of Directors, who s

either belt conveyors, locomotives and mine cars or by direct haulage using large-size cars. As far as surface transport is concerned, the mounting pit-head stocks which are slowing down production in the mines have focussed attention on the widening gap between the production capacity of the industry and the transport capacity of the railways. This does not call for fresh comment here, as it has been dealt with in this journal repeatedly in recent months. But it needs to be added that the Team's suggestion that the canal system between Durgapur and Calcutta be developed intensively for coal transport from the Raniganj coalfield could be usefully pursued.

Lastly, the question of payment of wages to productive workers on piece-rate basis, wherever practical, would have to be given greater consideration. If piece-wages are paid at least to coal-face workers as in the U.K., France and West Germany and if special incentive schemes are introduced to increase the productivity of the categories of workers paid on day-rate basis, it may be that overall productivity in terms of output in tons per man-shift will increase, howsoever slightly, on that account. Of course, this can be only one of the required methods for increasing such overall labour productivity which in India is a little less than half-a-ton per man-shift, as compared with 11.3 tons in the United States where mechanisation has reached the farthest limit and 1.3 tons in the United Kingdom where mechanisation has not reached such a high level. With better underground transport, some degree of mechanisation of mining and loading operations, better organisation and planning and, above all, piece-wages and incentives to the extent possible, it should not be difficult for the Indian coal industry to attain a higher level of productivity. But it is arguable if this is possible of achievement without the kind of long-term planning for which the Coal Productivity Team has so well and ably pleaded in its report.

LIQUIDITY RATIO FOR BANKS

UNDER existing laws, banks in India are required to maintain a minimum liquidity ratio of 20 per cent of their total liabilities, excluding "own funds" and borrowings from the Reserve Bank. This means that each bank must have cash balances, unencumbered investments in Government securities and gold (if any) up to an amount which is equal to 20 per cent of their total liabilities. For calculating this 20 per cent, banks can, of course, take into account the statutory minimum cash balances they have to keep with the Reserve Bank. This minimum is 5 per cent of demand liabilities and 2 per cent of time liabilities. In actual practice, most banks maintain liquid assets at levels well above the legal minima. For a long time, it has been the convention among banks to maintain a cash ratio of 10 per cent. In more recent years, under the pressure of demand for bank credit and the need for improving their earnings to meet the upward trend in the cost of their operations, they have been ignoring this convention, allowing their cash ratio to sink to such low levels as 6.5 to 7 per cent. There has been no convention so far as investments in Government securities are concerned. But, generally speaking, 30 per cent is considered as quite adequate. This means an aggregate liquidity ratio of 40 per cent, leaving 60 per cent of deposits to be lent to trade and industry. Nowadays, as in cash, so also in investments, even a lower level is not regarded as something unorthodox or contrary to canons of sound banking. Although, in actual practice, the investments ratio of banks in India has been well above 30 per cent even during the busy season when the demand for bank credit is at its peak, it did fall below that level in one or two years in the latter half of the 'fifties. The annual average for 1957, for instance, was 29.2 per cent, as against 38 per cent in 1954. By 1959, it had come up to 40 per cent, but, during the closing weeks of the 1960-61 busy season, it again fell below 30 per cent to stand in the neighbourhood of 29 per cent. A low level of 29.2 per cent, for instance, was touched in the week ended 9th June 1961. Data compiled by the Reserve Bank show that, if the State Bank's figures are excluded, the position of other scheduled banks as a whole does not compare favourably with the conventional limits mentioned above. It is seen that, in their case, the ratio of liquid assets (cash balances, gold and unencumbered Government securities) to total deposit liabilities has significantly fallen from 43.3 per cent in 1951 (annual average) to 33.1 per cent in 1960. Since the cash ratio alone fell from 11.1 per cent to 7.5 per cent, it is obvious that the investments ratio must have dropped from 32.2 per cent to 25.6 per cent. A table compiled by us for 15 leading Indian banks and published on page 60 shows that, in the case of some of the big banks, the ratio of unencumbered investments is much lower than even this 25.6 per cent.

There are two main purposes in laying down a specific liquidity ratio: One, to enable a bank to meet any sudden large withdrawals of deposits, and, two, to prevent banks from overtrading. In theory, this reasoning can be questioned. One can say that a statutory liquidity ratio leads to illiquidity, especially in times of heavy withdrawals, as the assets involved will not be available for use. One can further argue that, if a high level of liquidity ratio is insisted upon, banks will be tempted to go in for more of risky business in order to maintain their profits, an outcome contrary to the object of preventing them from overtrading and ensuring the safety of deposits. A third argument could be that, since bank credit is backed by collaterals the market price of which is very much above the value of loans and advances, it offers better protection to depositors than Gilt-edged securities, which, in times as the present, are liable to capital depreciation. Impressive though these arguments are, they are nevertheless fanciful. Many countries have found from experience that banks must invest a sizable part of their funds in Gilt-edged securities, besides keeping a part of them in the form of till-money and balances with the central banking institution. It is this realisation that led to legislation in this country, specifying the limits mentioned at the outset. The liquidity ratio of 20 per cent was thought appropriate by the legislators in 1948, when the Banking Companies Act of 1949 was on the anvil. In fact, the authors of the original Banking Bill in 1944 had proposed a limit of 25 per cent, but this was reduced to 20 per cent by the Select Committee.

The Reserve Bank of India now feels that the limit of 20 per cent is too low in the prevailing circumstances and the situation that is likely to arise in the coming years. It is of the view that, "in the years to come, with the continuous growth of the economy, particularly the manufacturing sector, there is likely to be a further rapid rise in bank credit which may outpace the growth in deposits" and that, "while it is necessary to provide for all genuine credit requirements of the economy, it is essential in such a situation to safeguard the soundness of banking system through measures to raise somewhat the minimum requirements in regard to both cash reserves and liquid assets." An additional consideration adduced by the Reserve Bank in support of its proposal is that it "might also stimulate more effective mobilisation of resources of banks to meet expanding credit needs." The assumption here is that, in order to earn more, banks will have to increase their turnover and this in turn will compel them to intensify their efforts for securing more deposits.

The Bank's proposal for raising the liquidity ratio of banks consists of three major parts. These, in summary form, are as follows:

1. Both the cash reserves and the liquidity ratio (for which purpose the cash reserves kept with the Reserve Bank will be included, as is the case at present) will be related to total deposits from the public, instead of liabilities as at present. This is a welcome change, in that the term "liabilities" includes also funds other than deposits and causes a certain amount of confusion. Besides, total deposits are less than total liabilities, so that the amounts to be kept in the form of cash and liquid assets will be a little smaller.

2. Now the cash reserve requirement is at 5 per cent of demand liabilities and 2 per cent of time liabilities, which currently averages at 3.4 per cent on total liabilities and at 3.8 per cent on total deposits. This minimum reserve requirement for scheduled banks is to be raised to 5 per cent of total deposits, with power to the Reserve Bank to vary it up to a maximum of 15 per cent under the variable reserve ratio scheme. The provision requiring the maintenance of reserves against additional deposits, as per Section 42(1A) of the Reserve Bank of India Act, will remain unchanged, subject to the maximum of 15 per cent of total deposits. The proposed rate for non-scheduled banks also is a minimum of 5 per cent of total deposits.

The reasons for these proposed changes are: (a) The present rates are low in comparison with those in most other countries. (b) They were deliberately fixed at these low levels 25 years ago, in order to help banks to get used to the new system. (c) There has been, in recent years, a pronounced shift in favour of time deposits and the present system of lower cash reserve requirement for such deposits only serves to accentuate the trend.

The aforesaid changes do not call for any serious adjustments, as banks usually keep with the Reserve Bank larger balances than the minimum statutory requirement. On the contrary, it will make the calculation of reserve requirements simpler. It would, however, be desirable to allow some interest on these balances, since deposits have become costlier to banks and since the Reserve Bank is able to employ these funds gainfully. The move to refine the weapon of variable reserve ratio by raising the cash reserve, subject to a ceiling, is also a right one, as it will make the operation of this control smoother and easier.

3. The minimum liquidity ratio (ratio of cash + balances with Reserve Bank of India + gold + unencumbered Government securities to deposits) is to be raised from 20 per cent to 27½ per cent. Since 20 per cent is now related to total liabilities, and the proposal is to relate the 27½ per cent to total deposits, the extent of increase, according to the Reserve Bank's calculation, is only 5 per cent and not 7½ per cent as appears on the surface. It has been made clear by the authors of the proposal that, when increases are made in the cash reserve ratio under the provisions of variable reserve control, such would be over and above the 27½ per cent. In other words, the minimum ratio of the other components of liquid assets (namely, till-money, gold, excess cash reserves held with the Reserve Bank and unencumbered Government securities) will always have to be 22½ per cent.

It is the last mentioned point that makes the Reserve Bank's proposal a little too hard. If the legal requirement of liquid assets were pitched at such a high level, the banks would have to maintain an additional 5 to 10 per cent of such assets, in order to permit their smooth working without being worried by the prospect of infringing the law as a result of any sudden increase in their business. This would mean that the effective level of their liquid assets would have to be not less than 40 per cent. The adverse impact of such a high proportion of low interest-earning assets on the income of banks will be rather heavy, having regard to the fact that, unlike in the past when banks were maintaining an even higher level of liquid assets of their own free will, they have to pay higher rates of interest on deposits and their establishment expenses have gone up tremendously. Further, the banks will have a higher capital structure to be remunerated, if the Reserve Bank's proposal, discussed in these columns last week, is accepted. They will perforce be compelled to increase the cost of their credit to trade and industry and, if their deposits do not expand as fast as the demand for accommodation, they would even have to refuse credit lines to some of the borrowers. The Reserve Bank itself envisages that the demand for credit will outpace the growth of deposits. It is, therefore, not clear how it expects the banking system to take care of even "the genuine" credit needs of the private sector and yet maintain a higher level of liquidity ratio. A further increase in interest rates will, of course, not be undesirable; in this country, interest rates are still appreciably lower than what they should be, taking into account the demand and supply position of capital and the enormous waste of capital that is being indulged in by both the sectors. But the cost of money to the public sector cannot be so disproportionately low as is the case at present, as compared with that paid by the private sector. If the imposition of higher liquidity ratio is designed to perpetuate the undue advantage which the public sector has been having over the private sector, it would be most unfair in the short run and self-defeating in the long run. For the kind of artificial support that is now being kept up for Government securities cannot be sustained for ever. Like water, interest rates will ultimately find their level. Any impediments placed in the way of this inexorable economic law will only be at the cost of somebody or other and the cumulative effect of such distortion on the economy as a whole when the necessary correction has to be carried out will be much more painful than timely adjustments. If, however, the Reserve Bank's proposal means that the Government, too, would pay rates of interest on its borrowings that are in tune with the prevailing cost of money for other borrowers, it would sound less objectionable to banks. As the latter is far from likely, it may be necessary to fix the minimum liquidity ratio at a lower level. Perhaps, 25 per cent of total deposits—the level contemplated in 1944—would be found acceptable by banks as something that cannot be helped in the prevailing, as well as forthcoming, circumstances.

MARKET GOSSIP

T.E.L.Co. Cheers The Bulls

THE financial results of the Tata Engineering and Locomotive Company Ltd. for the year ended 31st March 1961, made public late in the evening of Tuesday last, have brought much needed succour to the tired bulls and forced the bears to retreat. They have offset the adverse effects of the T.E.L.Co.'s decision (which reached the market last week) to raise debenture capital of Rs. 5 crores to finance its expansion plans. This decision had led the market to infer that the Company was not likely to issue right shares in the near future, the prospect of which was one of the reasons for the consistent, large-scale speculative buying of this scrip.

The preliminary report issued by the Company for 1960-61 makes impressive reading. The Company's turnover was up by Rs. 9.29 crores at Rs. 37.55 crores. Profit before taxation has improved from Rs. 221.57 lakhs to Rs. 312.68 lakhs and the reserves have been strengthened by Rs. 75.02 lakhs, as against a mere Rs. 20 lakhs a year ago. The return to shareholders has been enhanced to 10.15 per cent, free of dividend tax, from 8.75 per cent, free of dividend tax. The increase in dividend has strengthened the hope that the Directors of the T.I.S.Co. also may recommend a respectable increase in the Company's dividend for 1960-61. Tata Ordinaries, which had gone down to Rs. 160 early this week, has come up to Rs. 166. It remains to be seen whether this hope will materialise. The production performance of the T.I.S.Co. also justifies this hope, though much will depend on the attitude of the Government, which, in past years, was averse to even a modest upward revision of the dividend rate.

More On G.A.T.T. Textile Conference

The attention of textile interests in India and elsewhere is now focussed on the forthcoming G.A.T.T. textile conference scheduled to be held at Geneva from the 17th to 21st of this month. The countries invited to participate at the conference are Australia, Austria, Britain, Canada, India, Japan, Pakistan, Spain, Sweden, the U.S. and the member-countries of the six-nation Common Market. It is learned that India will be represented by Mr. T. Swaminathan, I.C.S., Minister for Economic Affairs in the Indian High Commissioner's Office in London. The E.E.C. Commission has also been invited as a separate entity and, likewise, a special invitation has gone to the Secretary-General of the O.E.C.D. Expectations regarding the outcome of the conference run pretty high. Here is what Mr. George W. Ball, U.S. Under-Secretary of State for Economic Affairs, remarked at Hong Kong on Monday the 3rd inst: "I am confident that the Geneva conference would work out a satisfactory solution to *solve* (italics ours) the difficult problems of the world cotton textile trade." The aim of the conference, he added, should be to seek an arrangement under which there would be increasing acceptance of textiles from low-income countries but at a rate which would not cause the disruption of the domestic markets of importing countries.

Will the G.A.T.T. conference fulfil the high expectations referred to above? This is an important question in the context of the widely divergent attitudes of importing and exporting countries. It will be interesting to see how far and to what extent these attitudes will be reconciled at the Geneva conference.

In the meantime, the leading textile manufacturers in Hong Kong, one of the major exporting countries in the world, are reported to have rejected outright the latest British Government's proposal for extending the three-year Hong Kong-Lancashire export limitation pact for eleven months after 31st January next. The proposal envisages the following two modifications:

1. An increase in the total basic quota from the annual rate of 164 million square yards to 185 million square yards, of which a minimum of 100 million square yards is to be in the form of piecegoods and 65 million square yards in garments, the remaining 20 million yards being used at Hong Kong's discretion.

2. Arrangements for a periodic review, with Government participation, to agree on supplementary quotas for piecegoods whenever the state of the U.K. import trade warrants it. Under this proposal, a supplementary grey cloth quota of 10 million square yards, it is said, will be granted as soon as Hong Kong agrees to extend the pact as suggested.

Commending the British proposal for the acceptance of the textile interests in the course of a circular addressed to them, Mr. H. A. Angus, the Colony's Director of Commerce and Industry, states that the Hong Kong Government does not see any significant scope for further modification. He has, therefore, asked the local textile trade to consider the proposal and reach a conclusion quickly. He adds: "It (the Hong Kong Government) considers that, in all circumstances, the industry will be ill-advised to reject it."

But the Hong Kong textile interests are in no mood to accept the proposal. The garment makers feel that the limit of exports to 65 million yards annually is contrary to the spirit of the present pact. On behalf of shippers, concern is expressed to the effect that those who have a share of about 30 per cent of the present quota allocation may have no share under the proposed arrangement. The opposition of spinners is on the ground that the provision in the U.K. Government's proposal for some restrictive action, in case there were to be a sudden and sharp increase in imports of yarn into Britain, marks a distinct departure from the original official line laid down in the present undertaking. The Hong Kong textile interests are said to be similarly not inclined to accept the U.S. Administration's suggestion for an overall cut of 30 per cent on the 1960 exports of piecegoods from the Colony to the U.S.

When the issue of limiting imports of textiles is widely discussed in the U.K., the U.S. and other Western countries, it is somewhat surprising that millowners in this country continue to be silent, as though they are not affected at all. It is, of course, not in the interests of India to fly against world opinion. But, if it is at all to agree to any scheme of restriction on exports of textiles on a world-wide basis, it should do so only if two conditions are satisfied, as mentioned by this journal sometime ago. One, all the other exporting countries must undertake to abide by the scheme. Two, the quota allocated to India must be a reasonable one, due account being taken of the size of its industry, its population, and its pressing foreign exchange needs in the coming years. It is also necessary to make sure that the quota will be of a progressively rising nature for future years and not a diminishing one.

Lac Exports

Lac, particularly shellac, has traditionally been an important item in India's export trade. India, in fact, had a virtual monopoly in this commodity until recently. Thailand has, of late, become a sizable competitor in shellac. Apart from the Thai competition, what has affected India's lac exports far more adversely has been the rapid development of synthetic substitutes like plastics in industrialised countries. The value of India's exports of different varieties of lac (including shellac, sticklac, seedlac, etc.) were only Rs. 4.7 crores in 1960, which compares unfavourably with about Rs. 6 crores in 1959. It may be recalled that, a decade ago, when purchasing power of money all over the world was very much higher than it is today, lac earned about Rs. 15 crores a year. The following table shows the trend of India's exports of lac since 1957:

(Value in '000 rupees)

	1960	1959	1958	1957
Shellac	20,698	32,575	28,822	44,870
Seedlac	13,133	24,291	26,746	21,220
Button lac ..	1,371	1,515	1,321	1,705
Garnet lac ..	889	1,211	1,034	1,298
Stick lac	155	357	119	106
Keri, etc.	831	991	818	1,532
Total ..	46,077	58,940	58,860	70,731

The trend of exports so far in the current year, too, is disappointing. In particular, India's exports to the U.S., by far its largest market, have tended to lag behind. Apart from the U.S., exports to Communist countries have also declined. In the April-June quarter (1961), India's exports of lac were only 45,000 packages, as compared with 97,000 packages in the corresponding period in 1960. Thus, the hope that the Lac Exporters Association (which was set up in 1958), through its various measures of export control, would be able to arrest the rot that has set in in the lac trade, has been belied. But this does not seem to be entirely the fault of the Association. All sections of the trade have probably not co-operated fully with the Association. Such an inference is possible from the widespread speculation and undercutting which prevail, despite the Association's control measures, including the imposition of a minimum export price. As Mr. H. P. Lohia, Vice-President of the Association, pointed out in the course of his speech at its annual meeting at Calcutta on Monday this week, there were also allegations of widespread evasion of export prices "without the Association being able to do anything about it." He added that the unhelpful export policy of the Government of India further undermined the effectiveness of the Association.

Another disquieting feature is the marked decline in the internal prices of lac of late, owing mainly to the improved supply position. T.N. Shellac is now quoted at only Rs. 162 (per 100 kgs.) in Calcutta, as against Rs. 200 early in the year. This raises the important question of stabilisation of internal prices. Owing to reasons not quite clear to us, the Association's scheme for buffer stock has been shelved. Mr. Lohia has rightly called for Government's assistance to implement the buffer stock programme, as it could eliminate wide fluctuations in prices and, thereby, revive the confidence of overseas buyers in India's lac trade.

Progress Of I.F.C.

It is heartening to note that the Industrial Finance Corporation of India has made a substantial increase in its business during the twelve months ended 30th June 1961, surpassing the levels reached in earlier years in respect of loans, guarantees for deferred payments and underwriting. This was disclosed by Mr. K. R. K. Menon, who retired from the chairmanship of the Corporation on 1st July 1961, after being at the helm of its affairs for the last six years. Speaking to representatives of the Press at New Delhi on 29th June, Mr. Menon stated that loans disbursed during the year ended 30th June 1961 amounted to Rs. 21.21 crores, as against Rs. 17.92 crores in the preceding year. The guarantees for deferred payments showed a rise of Rs. 6.05 crores to Rs. 13.92 crores and underwriting was of the order of Rs. 2.33 crores, as against just Rs. 25 lakhs in the previous year. Reflecting the higher tempo of industrialisation, the Corporation received as many as 76 loan applications, exactly twice as many as in 1959-60. Of

THE DEMISE OF A DOYEN

MR. Purshotamdas Thakurdas, who passed away on Tuesday the 4th inst., a little over eighty-two years after he was born on 30th May 1879, was, indeed, an illustrious personality, a doyen of businessmen, with a long, distinguished career throughout. Multifarious were his activities in the fields of industry, commerce, banking and insurance and remarkable were his achievements in other fields too—in the Provincial (old Bombay) and Central legislatures, on the various Royal Commissions, committees of enquiry, and second and third Round Table Conferences, as a director of the Reserve Bank of India and Chairman of the Oriental Government Life Assurance Company, Ltd. for quite a number of years. He served as director or chairman on the boards of institutions engaged in a variety of undertakings which included banks, insurance companies, and transport, cement, iron and steel and hydro-electric undertakings. It is said that he was actively associated with as many as 70 companies in the 1940s. Even during the later days of his life, he continued to attend the board meetings of several companies with which he was associated, unmindful of the limitations imposed by age on his capacity for sustained hard work.

Mr. Purshotamdas Thakurdas started his career in 1901 as an apprentice in the well-known cotton trading firm of Messrs. Narandas Rajaram and Company, of which he ultimately became its boss. The contribution he made to cotton trade until he resigned the 34-year chairmanship of the East India Cotton Association in 1956 was something unique. It was he who was mainly instrumental in the establishment of this Association in 1922 and earning for it the reputation of being the best-organised commodity futures market in the East. The severing of his connection with the E.I.C.A. was said to have been prompted by what he considered as undue interference by Government. He was not opposed to Government control of forward markets; only, he did not like the arbitrary manner in which the Government interfered with the functioning of a hedge market which set at naught the sanctity of contracts. He also rendered valuable service as the head of the Cotton Contracts Board during the First World War. Vice-President of the Central Cotton Committee and member of the Indore Plant Research Institute's Governing Body. He was one of the founder-members of the Indian Merchants' Chamber, Bombay, and the Federation of Indian Chambers of Commerce and Industry. He was also a Trustee of the Bombay Port Trust for over 30 years and Sheriff of Bombay as early as in 1920. He served on a number of commissions and committees—Atlay Committee which enquired into the working of the Bombay Stock Exchange, Inchcape Committee on Government expenditure (1922-23), Acworth Committee on railway finances (1920), Royal Commission on Indian Currency and Finance (1926), Central Baking Enquiry Committee (1931) and the Rural Banking Enquiry Committee, to mention only a few. He brought to bear on the reports of these bodies a high sense of devotion to duty, prodigious industry, and independence of views. The role he played in the currency ratio battle three decades ago is still fresh in one's memory and forms a brilliant chapter in India's monetary history. He strongly advocated the fixation of the rupee-sterling exchange rate at 1s. 4d., instead of at 1s. 6d. Mr. Purshotamdas Thakurdas might not have succeeded in convincing the Government of that day, but the currency battle "highlighted," as has been pertinently remarked, "his many gifts of character and intellect, bringing into bold relief his courage and fearlessness, the untiring industry and perseverance with which he pursued an objective, his keen analytical mind, his habit of probing deep into a problem, and the dogged tenacity which enabled him to persist against overwhelming odds." The selfless services he rendered during the two great famines (of 1911 and 1919), his contribution to the spread of education, and his other public services and philanthropy will all be gratefully remembered.

The career of Mr. Purshotamdas Thakurdas has thus many facets and "offers," to quote a contemporary writer, "an illuminating example of versatility." The measure of the man was aptly described by the late Raja Maharaj Singh, ex-Governor of Bombay, while unveiling the bust of Mr. Purshotamdas at the Bombay Office of the Oriental Life Assurance Company in 1949. He said: "May we have at least a portion of the energy, interest, intellect and integrity of Sir Purshotamdas!" It is needless to add that the country badly needs a large number of leaders with all these fundamental qualities. Speaking on the same occasion, the late Sir Joseph Kay, Chairman and Managing Director of *Commerce*, had this to say: "The administration of such a large company as the Oriental, with its vast resources and thousands of policyholders, who have in all good faith placed their trust in the management, calls for great strength of character. I consider that the Oriental is exceptionally fortunate in having Sir Purshotamdas to guide the affairs of the Company for so many years."

The tributes paid to Mr. Purshotamdas Thakurdas were well deserved. He led a simple life and helped the country in his own way to attain both political and economic independence. To give just one instance. During the second World War, when Gandhiji and other leaders took to direct action and went to jail, Mr. Purshotamdas Thakurdas, as a director of the Reserve Bank, fought behind the scenes the attempts made by some Britishers to dissipate the sterling balances, which were then fast accruing to India, in a number of ways. The esteem with which he was held by the business community of this country is reflected in the suspension of business by a large number of markets, trade associations and industrial concerns on Wednesday this week.

SHARE MARKET FIRM

TEXTILES AND STEELS WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, *6th July*

IN refreshing contrast to the declining trend noted last week, equities on the Bombay Stock Exchange registered sizable gains, thanks to renewed bull support and professional bear covering. The volume of business put through was quite substantial. The higher gross dividend of Rs. 14.50 proposed by T.E.L.Co. for the year ended 31st March 1961 as against Rs. 12.50 distributed in the previous year bolstered up the sentiments of operators. Anticipations of a higher dividend of Tata Steel also helped the recovery further. Textiles were firm. Persistent support for Centurys *induced* a better feeling which caused other textile shares to move up in sympathy. The miscellaneous section put on a cheerful appearance under the leadership of National Rayons and Voltas. Bank shares, too, edged forward. The only exception was provided by sugar and shipping shares which failed to elicit fresh enquiries from investors.

In the steel section, Tata Ordinaries opened at Rs. 161 on Monday the 3rd inst. (the market remained closed on Friday and Saturday), and induced by renewed buying support on expectations of higher dividend, spurted to Rs. 167 today. At this level, some profit-taking set in and the closing rate was lower at Rs. 166. The net rise over the week was Rs. 6. Indian Irons moved from Rs. 27.70 to Rs. 28.35, or a gain of 85 nP. Mukand Irons, however, were subjected to selling pressure and fell by Rs. 2.25 to Rs. 29.75.

Among textiles, Centurys advanced from Rs. 682 to touch a high of Rs. 706 today, before finishing at Rs. 701, the net gain over the week being as much as Rs. 26. Vishnus were also highly *fancied* and jumped up from Rs. 130 to Rs. 160. Standards, which had slumped by Rs. 25 last week, recovered Rs. 18 to Rs. 1,448. Bradburys hardened by Rs. 11.25 to Rs. 150 and Morarjees by Rs. 11 to Rs. 446. Mafatlals improved by Rs. 7.50 to Rs. 912.50, Phœnix by Rs. 7 to Rs. 155 and Shree Niwas by Rs. 6 to Rs. 271. Central Indias, Kohinoors and Dawns rose by Rs. 5 each to Rs. 129, Rs. 318 and Rs. 145, respectively. Gokaks moved up from Rs. 186.50 to Rs. 192. Simplex strengthened by Rs. 4 to Rs. 215. Khataus received good speculative support and gathered Rs. 3.75 to Rs. 588.75. Tatas and Svadeshis gained Rs. 2.50 each, the former to Rs. 70.50 and the latter to Rs. 279.50. Bombay Dyeings opened at Rs. 68.60 and rose gradually to Rs. 69.40 today before closing at Rs. 69.20, showing a gain of 90 nP over the week.

Sugar shares encountered selling. Hindustan Sugars were the weakest feature and were hammered down by Rs. 20 to Rs. 320. Belapurs opened at Rs. 268 and declined gradually to Rs. 262 on Wednesday. Today some buying support was in evidence and the scrip recovered to Rs. 264.50. During the week, however, the scrip suffered a setback of Rs. 3.50. Phaltans lost Rs. 2.50 to Rs. 130 and Maharashtras Rs. 3 to Rs. 180. Walchandnagars shed 25 nP to Rs. 170.75. Kesars were quiet at Rs. 207.50.

Among banks, Bank of Indias advanced by Rs. 2.50 to Rs. 127.50. Following the news of higher dividend, Dena Banks put on Rs. 2 to Rs. 60. Central Banks *improved by Re. 1.30* to Rs. 59.50. Punjab Nationals gained 28 nP to Rs. 22.64. United Commercials 20 nP to Rs. 91.20 and Union Banks 8 nP to Rs. 6.60.

In the cement section, the revival of bullish interest in Associated Cements noted last week was well sustained during the week under review. The scrip opened at Rs. 166.75 on Monday the 3rd inst., as against the closing rate of Rs. 166, and advanced steadily to touch Rs. 167 today, a net gain of one rupee over the week. Digvijays were done at Rs. 154 *ex-div.* Making allowance for the *ex-div.* quotation, the shares show a fractional gain of 30 nP. Orissas and Jaipur Udyogs were firm at Rs. 14.40 and Rs. 11, respectively. Dalmia Cements, however, dropped 72 nP to Rs. 11.40. Sone Valleys were subdued at Rs. 4.60.

Among shippings, Scindias received some support and advanced from Rs. 14.44 to Rs. 14.60. Bharat Lines were steady at Rs. 5.04. But Great Easterns lost 8 nP to Rs. 14.52. In the automobile group, Premiers gained Re. 1.75 to Rs. 171.25. Hindustan Motors picked up 92 nP to Rs. 23.08.

Rayon shares were well favoured. National Rayons which had gone down from Rs. 562 on Monday to Rs. 553 yesterday, moved up swiftly today to touch a high of Rs. 571.50. Over the week, the net gain was Rs. 10.50. Other rayon shares improved in sympathy. South Indian Viscose spurted by Rs. 9 to Rs. 195 and Barodas by Rs. 3 to Rs. 140. Gwalios gained Rs. 2.50 to Rs. 55. Indian Rayons rose by Re. 1.50 to Rs. 63.50. Rayons put on a rupee to Rs. 127 and New Centrals 92 nP to Rs. 20.12.

The chemical section displayed a mixed trend. Polychems were pushed down by Rs. 37.50 to Rs. 210, on account of heavy bull liquidation. Colour-Chems lost Rs. 2.50 to Rs. 367.50. Alembics eased by Re. 1.25 to Rs. 258.75. Dhrangadhras shed a rupee to Rs 131.50. Tata Chemicals lost 4 nP to Rs. 19.92. But some chemical shares received good support. Indian Dyestuffs, for instance, advanced by Rs. 11.25 to Rs. 533.75. Adarshs gained a rupee or Rs. 103. Citrics increased from 50 nP to Rs. 52.

The feature of trading in the engineering section was the handsome rise in T.E.L.Cos. from Rs. 389 on Monday the 3rd inst. to Rs. 383.50 today. At this level, there was some profit-taking and the value declined to Rs. 381. Over the week the gain was Rs. 12. Coopers were marked up by Rs. 7 to Rs. 179. Alcocks showed a gain of Rs. 3.04, today's closing rate being Rs. 290 *ex-div.* Larsen and Toubros put on 75 nP to Rs. 42. Greaves Cottons were steady at Rs. 179, Tractors at Rs. 40.50, Mahindras at Rs. 19.24 and Zeniths at Rs. 5.68. Kirloskars fell by Rs. 11.50 to Rs. 42.50. New Standards lost a rupee to Rs. 193.

In the miscellaneous section, Bombay Burmahs attracted good support and rallied from Rs. 619 to Rs. 625. They, however, finished lower at Rs. 623.50 today, showing a gain of Rs. 7.50 over the week. Voltas spurted by Rs. 11 to Rs. 297. Wimcos advanced by Rs. 5.50 to Rs. 265.50. Shivrajpurs were keenly bid Rs. 5 higher at Rs. 77.50. Ceat Tyres rose by a like amount to Rs. 217.50. Isaac Holdens gained Re. 1.12 to Rs. 18.24. Bombay Oxygens advanced by 50 nP to Rs. 60. Phillips Carbons gathered 28 nP to Rs. 20.52. Hindustan Levers improved by 25 nP to Rs. 47.75. Tata Oils put on 50 nP to Rs. 75.50.

Madras Stock Exchange

MADRAS, *5th July*

Equities on the Madras Stock Exchange ruled easy during the week under review, thanks mainly to fears of possible restrictions on credit supply, following the Reserve Bank's move to strengthen the position of banks through several measures. Sugars were depressed, in view of the continuing uncertainty regarding exports of surplus stocks. Teas lacked fresh support, as it was reported that exports of tea from Cochin (particularly to the U.K.) during the months of May and April were lower at 5.6 million kgs., as against 6.3 million kgs. in the corresponding period last year. *Coffees and rubbers moved* down in sympathy. Textiles were subdued with the exception of a few shares which elicited special support on dividend considerations, prospects of improvement in power supply and settlement of bonus dispute in Coimbatore mills. In the miscellaneous section, there was some selling in cements and engineerings, whereas chemicals presented a firm front.

Among sugars, East India Distilleries encountered selling and declined by 87 nP to Rs. 42.50. Indias receded by 15 nP to Rs. 13.75. Deccans which had risen initially from Rs. 13.85 to Rs. 13.95, moved down subsequently to Rs. 13.80. Cauverys were dull at Rs. 129.50, as also Mysores at Rs. 57.75 and Travancores at Rs. 10.20. United Breweries, however, picked up 50 nP to Rs. 104.

In the tea group, Highlands suffered a loss of 25 nP, today's closing rate being Rs. 14.20. Kil Kotagiris eased by 19 nP to Rs. 4.67. Neelamalais dropped 15 nP to Rs. 3.95. Waterfalls were lower by 12 nP at Rs. 3. Chembras shed 3 nP to Rs. 4. Peermades were neglected at Rs. 22.48 and Nonsuchs at Rs. 28.20. Udayagiris were dull at Rs. 21.25. The dividend of the Company for 1960 is only 1 per cent (instead of 10 per cent as announced previously). Devasholas changed hands at Rs. 30.75 and Haileyburias at Rs. 14.85.

Coffees drifted lower. Cowcoodys lost 14 nP to Rs. 4.71. Consolidated Coffees fell from Rs. 21.90 to Rs. 21.75, before closing at Rs. 21.80, with a net loss of 10 nP. Anaparais too shed a like amount to Rs. 4. Ouchterlony Valleys, which were well maintained earlier in the week, came in for selling later and finished lower at Rs. 3.72. Rajendras were quiet at Rs. 12.12, Mysores at Rs. 5.45 and Balanoors at Rs. 16.30.

In the rubber group, Midlands moved down by 8 nP to Rs. 11.75. T.R. and Ts dropped 5 nP to Rs. 9.80. Malankaras were subdued at Rs. 18.75 and Vaikundams at Rs. 31.25. Kailas, however, hardened by 15 nP to Rs. 5.35, following the announcement of the final dividend of 15 per cent, making a total of 25 per cent, taxable, for the year ended February 1961, which compares favourably with 22.50 per cent, distributed in the previous year.

Textiles failed to attract support. Janardanas receded by Rs. 2.75 to Rs. 72.50. Maduras lost Re. 1.05 to Rs. 38.10. *Radhakrishnas* were lower by 35 nP at Rs. 33.15. Travancore Rayons declined from Rs. 40.10 to Rs. 39.75, but improved to Rs. 39.90 towards the close. Loyals dropped a like amount to Rs. 42.50. Metturs were neglected at Rs. 400. Cannanores at Rs. 167.50. Coimbatore Pioneers at Rs. 348.80 and Vasantas at Rs. 250. Pankajas were dull at Rs. 65. The Company has passed over the dividend for the year 1960. But Rajapalayans spurted by Rs. 9 to Rs. 150, following good dividend news. The Directors of the Company have declared a dividend of 16 per cent, taxable, for the year ended March 1961, which compares well with 9 per cent, taxable, distributed in the previous year. Premiers advanced by Rs. 6 to Rs. 285, reflecting satisfaction of operators over the increase in the dividend to 24 per cent, taxable, for the year ended March 1961, as against 18 per cent, taxable, for 1959. Lakshmis put on Rs. 2 to Rs. 171. The Company has maintained the dividend for the year ended March 1961 at the previous year's level of 20 per cent taxable.

Among miscellaneous industrials, cement shares were listless. Dalmias shed 25 nP to Rs. 12.10 and Orissas 10 nP to Rs. 14.40. Indias retreated from Rs. 6.69 to Rs. 6.65 before winding up the week at Rs. 6.68. Andhras were quiet at Rs. 9.95. Chemicals, however, were well maintained, Travancores rising by 35 nP to Rs. 18.10, Metturs by 7 nP to Rs. 14.62, and Mysore Fertilisers by 5 nP to Rs. 11.55. Mysore Chemicals were steady at Rs. 24. Among others, Western *India Plywoods* fell by Rs. 2 to Rs. 229. Aluminium Industries eased by 20 nP to Rs. 23.35, and Ashok Leylands by 9 nP to Rs. 9.28. Tube Investments and Indian Steel Rollings were dull at Rs. 265 and Rs. 10.76, respectively. United India Fires were *unchanged* at Rs. 6.75, notwithstanding the announcement of a dividend of 12 per cent, taxable, for 1960, as compared with 10½ per cent for 1959. But Textools put on a rupee to Rs. 182.50 on support extended by certain quarters.

Calcutta Stock Exchange

CALCUTTA, *5th July*

Although there was a notable decline in the volume of business following apprehensions that the Government of India was contemplating to take more measures to put down speculative trading, equities maintained a firm trend, as the lower levels were considered to be attractive. Weaker advices from Bombay were attributed to the proposed abolition of free margin limit and introduction of minimum brokerage. Operators felt that the opening of a Stock Exchange Division of the Union Finance Ministry here sprang from the official desire to introduce measures similar to those enforced in Bombay. There was, however, no selling pressure. In fact, many a good scrip, particularly in the miscellaneous section, was difficult to be located. Several units have benefited from expansion and diversification and, although cost of production has tended to be higher, the products have found ready markets, thanks to import restrictions. The seriousness of the foreign exchange situation was, of course, noted with alarm, and it was feared that, if essential imports were to be cut further, production would be hampered. The fact that the L.I.C. had put large parcels of blue chips in its "safety vault" added to the shortage of scrips. Further, some industries such as cement, paper and coal were expected to benefit from price rises to be granted by the Government. New steel prices would also be announced in the near future. The shares of coal companies to be benefited by the World Bank loan of $60 million were difficult to locate, while jutes continued to be neglected following the possibility of one more week's closure in August, in addition to the one week each in June and July allowed by the Government. Selected counters in engineerings attracted greater attention and cotton textiles remained fully firm. Good corporate news toned up sentiment in teas.

NEWS IN BRIEF

THE Bharat Industrial Bank Ltd., Poona, has been amalgamated with the Bank of Maharashtra with effect from the 1st inst.

The Government of Bihar proposes to introduce cattle insurance as part of its third Plan for agriculture. The Centre has to go ahead with the project by giving its blessings.

It is reported that a joint-stock company with an authorised capital of Rs. 20 crores has been registered at Bangalore to take over the State-owned Iron and Steel Works. The new company is named "The Mysore Iron and Steel Ltd."

Production of finished steel is likely to reach 3.5 million tons by 1962 and about 800,000 tons of finished steel are proposed to be imported to meet the internal demand, according to Mr. A. N. Banerji, Iron and Steel Controller.

As a measure of export promotion, the Government of India has decided to allow drawback of customs and central excise duty on the export of *books printed on imported paper* and of hacksaw blades, fireworks and alumina ferric.

The Government of India has extended the Cement Control Order 1958, for a further period of three years with effect from the 1st inst. pending a comprehensive review of the industry by the Tariff Commission.

A *nine-member Co-operative Industries Commission* with Prof. D. R. Gadgil, as Chairman, has been appointed by the Maharashtra State Co-operative Bank Ltd. to investigate the potentialities of development of industries on a co-operative basis in the Maharashtra State.

The U.K. imported from India goods worth £66 million during the first five months of 1961, as compared with £61 million in the corresponding period of 1960, according to the figures released by the British Board of Trade. Its exports to India, however, declined from £66 million to £64 million.

Under an agreement signed between the Government of Indonesia and the State Trading Corporation of India, the S.T.C. will export cotton yarn worth one crore of rupees. Indonesia will pay for this yarn in the form of American cotton to the extent of 65 per cent of the total value and in sterling for the remaining 35 per cent.

The Wankaner Bank Ltd. has been taken over by the Devkaran Nanjee Banking Company, Ltd., with effect from 17th June 1961, under the scheme of amalgamation sanctioned by the Central Government. All the depositors have received full credit for their deposits from the Dena Bank.

A Dutch fertiliser expert has been invited by the Union Government to help the official committee (Chairman: Mr. Zaheer Hussain) which is now investigating the causes of the steep decline in production at the Sindri fertiliser factory in order to suggest corrective measures designed to ensure full production.

A committee of 19 industrialists and officials headed by Prof. M. S. Thacker, Secretary to the Union Minister of Scientific Research and Cultural Affairs, has been appointed to recommend measures for encouraging the development or research in industries. The Committee is expected to submit its report within six months.

India's exports aggregated Rs. 56.73 crores in May 1961, representing an increase of Rs. 3 crores and Rs. 9 crores, as compared with the previous month and the corresponding month of 1960, respectively. Imports at Rs. 85.57 crores were lower by Rs. 13 crores as compared with May 1960, and only fractionally less than those in April.

The Union Government has provided a sum of Rs. 28.5 crores for the development of fisheries during the third Plan. Of this sum, Rs. 7 crores have been earmarked for Central schemes. The fisheries contribute Rs. 60 crores to national income and provide employment to over a million persons. The target of fish production in the third Plan is put at 1.8 million tons. The production of fish in this country has gone up from 500,000 tons in 1950 to 1.2 million tons in 1960.

The Government of India is understood to have decided to introduce a scheme of production incentive awards to public industrial enterprises. The objective of the scheme is to enthuse these enterprises to aim at surpassing production targets. Prizes will be awarded every year by the Union President. Under the scheme, certificates of merit will be awarded to five best industrial undertakings for any outstanding performance. In doing so, factors like the cordiality of the employee-employer relationship and any noteworthy contribution of research or discovery of new industrial processes and new designs of machinery will be taken into consideration.

A Family Planning Day will be observed on 18th December 1961 by medical and health centres and family planning clinics spread over the various parts of the country. Sponsored by the Central Ministry of Health, the observance of the day is meant to focus public attention on the importance of family planning. The organisation of symposia on family planning and the launching and intensification of welfare programmes will be highlighted. Family planning centres will be declared as "open house" to enable the public to visit the institutions, such as training centres and contraceptive testing units. Besides general meetings for the public, branches of the Indian Medical Association and the Family Planning Association will also arrange meetings and symposia for selected groups.

A new licence has been issued by the Central Government covering imports of five additional items from Pakistan. The items are: hides and skins, raw or salted; *kapok*; fish, salted, wet; fish, not otherwise specified; and live tortoise. Under the licence the Central Government has given general permission to all persons to import from Pakistan any of these goods which are produced or processed in Pakistan. All goods should be shipped or despatched on through consignment to India on or before 30th September 1961. There will be no grace period whatsoever. Also, nothing in this licence shall affect any prohibition or regulation affecting the import of any of the goods specified and in force at the time when such goods are imported. Payments for imports of *kapok* and live tortoise will be made in non-convertible Indian rupees as provided for in the protocol to the trade agreement between the Governments of India and Pakistan signed on 21st March 1960.

From Abroad

The Bank rate in Rhodesia and Nyasaland has been raised from 5 to 5½ per cent with effect from 30th June 1961.

Greece will join the European Common Market (the Six) early next week. It is expected to sign the agreement on 9th July 1961.

The International Labour Conference has adopted a recommendation calling for a 40-hour week without any reduction in wages.

The Government of Ceylon is preparing a draft legislation which envisages the setting up of a State Trading Corporation to handle exports of Ceylon produce, especially to Communist countries.

The total number of foreign workers in West Germany during 1960 is 400,000, as compared with 163,000 in 1959. In the first half of this year, about 85,100 foreign workers have been hired.

The World Bank has approved a $15-million loan to the Pakistan Industrial Credit and Investment Corporation for meeting the foreign exchange requirements of projects financed by the Corporation.

Britain imported about 24 million tons of crude oil valued at £167 million, from Kuwait during the 12-month period ended 31st May 1961, which represents 39 per cent of the total volume of British oil imports.

Britain has asked the Hong Kong textile industry to accept an eleven-month extension of the three-year voluntary limitation of exports with certain modifications. The agreement is to expire on 31st January 1962.

About 12 to 13 per cent of the total joint-stock companies in West Germany are owned by foreigners, according to the West German statistical office. The largest ownership is recorded in the motor vehicles, crude oil and electrical equipment industries.

The Sudan Government will receive DM 75 million from West Germany for the construction of the Roseires dam. An agreement to this effect was signed recently. A part of the financial aid for the project is to be met by the World Bank and the International Development Association.

The Governments of Ceylon and Soviet Russia have signed a contract under which the Soviet Union will provide a loan of Rs. 142 million, repayable in 12 annual instalments at 2½ per cent interest, for the supply of equipment for the first stage of the proposed iron and steel mill to be put up in the island.

The new £20-million Schwechat refinery of the O and V., the Austria State Oil concern, has commenced operation. The refinery has an annual capacity of 1.6 million tons. With the completion of the main installations, the Austrian oil industry will be able to produce for the first time 230,000 tons of *premium grade gasolene* yearly.

Under an agreement approved by the Council of Ministers, Greece will form a customs union with the Six which will be transformed into an economic union after a transitional period ranging from 12 to 22 years. The agreement provides for the payment by the Common Market of a grant of $125 million as economic aid to Greece over a five-year period.

Passenger fares between Europe and the Far East on member shipping lines of the Far Eastern Passenger Conference are proposed to be raised by 5 to 7½ per cent with effect from 1st September next. The increase will also be made applicable to all terminal ports between Europe and Singapore and *Hongkong* and Japan.

An agreement has been entered into between the Governments of the Soviet Union and Cuba, under which a nickel and cobalt plant will be built in Cuba. The Soviet Union will lend $100 million and Cuba has undertaken to repay the loan in the form of metal shipments over a five-year period.

The construction work of the brewery of Guinness Nigeria Ltd. has begun in the Ikeja industrial area of Western Nigeria. The brewery is estimated to cost about £1.8 million and will go into production on 1st October 1962. All the raw materials for the brewery will be imported in the initial stage.

The meeting of experts on the problems of common rivers in the eastern sub-continent is scheduled to commence at Dacca on the 11th inst. The Indian delegation will be headed by Mr. K. Framji, Chief Engineer and Joint Secretary, Government of India. At the meeting, the Pakistani delegation is expected to seek India's assistance for taming the Gumti River in Tipperah district.

The Government of Pakistan announced a revised import policy on 28th June. Under the policy, out of the 230 industries 173 will be given licences for raw materials on the basis of their own estimates of requirements. Of the remaining 58 industries, 19 will be licensed on an automatic basis of 100 per cent assessed requirements. The total allocation of export bonus is estimated at Rs. 12 crores.

The Transport Ministers of the six Common Market countries discussed the feasibility of formulating a common transport policy and the projected network of oil pipelines within "Little Europe." A draft report on transport will be submitted to the Ministerial Council meeting scheduled for October, and another on the pipeline project in December.

The members of the European Free Trade Association have extended to Finland the 30 per cent tariff reductions they grant each other. Finland will reduce by 30 per cent its tariffs on the bulk of its imports from the E.F.T.A. countries, and by 20 per cent its tariffs on certain specified commodities. The agreement creating an association between the E.F.T.A. members and Finland came into force on 26th June 1961.

A kraft paper mill equipped with a 100-metre-long Fourdrinier machine with an annual capacity of no less than 65,000 tons has just been put into operation by the large timber processing company *Wifstavarf*, near Sundsvall, North Sweden. Previously producing sulphate and sulphite pulp, hardboard and timber—based largely on raw material from own vast forest areas—the company with this mill has added another production line to its activities. The machine, built by the Finnish Wartsila Company, has a maximum output of 600 metres (656 yards) of paper per minute with a clean cut width of 530 cms. (208 in.), making it the largest and fastest one at present in operation in Sweden.

The modernisation of plants for the initial processing of cotton has begun in Uzbekistan, the principal centre of Soviet cotton growing. After the automation, every such plant will be operated by one man from a central desk. The complete automation of these plants will be effected by means of special radioactive isotope instruments. The Central Cotton Industry Institute in Tashkent has designed a set of such instruments. These apparatuses, using nuclear radiation, regulate the work of pneumatic transport, prevent the choking up of equipment with raw cotton and fibre, give impulses for automatically switching the machine 'on' or 'off'. By the end of the Seven-year Plan period (1965), over one thousand radioactive isotope instruments and a large amount of other automation facilities are to be installed in Uzbekistan's cotton plants.

PERSONAL

MR. K. D. Malaviya, Union Minister for Mines and Oil, arrived in Bombay on the 2nd inst. after a 14-day European tour.

Mr. C. C. Shah has been elected Chairman of the Board of Directors of the Press Trust of India for the year 1961-62.

Dr. B. C. Roy, Chief Minister of West Bengal, left Calcutta on the 1st inst. on a six-week tour of Europe and the Soviet Union.

Mr. R. H. Belcher has been appointed Deputy High Commissioner for the U.K. in India in succession to Mr. J. M. C. James.

Mr. M. V. Krishnappa, Union Deputy Minister for Agriculture, has returned to New Delhi after an eight-week tour of Australia, New Zealand, the U.S., Canada, the U.K. and Israel.

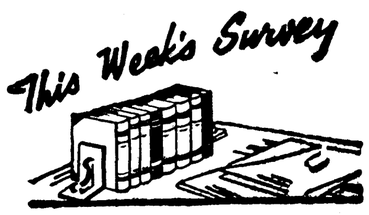
Mr. R. Fell, an Assistant Secretary in the Tariff and Import Policy Division of the U.K. Board of Trade, has been appointed U.K. Trade Commissioner at New Delhi in the place of Mr. R. R. D. McIntosh.

Dr. Shambhu Merani, International Labour Adviser to the Government of India at Geneva, has been elected Chairman of the Governing Body of the International Labour Organisation for the year 1961-62.

Mr. K. P. Matharani, Additional Secretary, Economic Affairs Department, Finance Ministry, has been appointed Chairman of the Industrial Finance Corporation *vice* Mr. K. R. K. Menon who has retired.

Mr. P. L. Tandon, Vice-Chairman, Hindustan Lever Ltd., has taken over charge as Chairman of the Company *vice* Mr. S. H. Turner who has relinquished the post for health reasons. Mr. J. B. Davies, Technical Director of the Company, succeeds Mr. Tandon as Vice-Chairman.

Mr. Tej Kumar Sethi, Governing Executive of the Binod Mills Co., Ltd., Ujjain, has left for Russia on the 6th inst. as the alternate leader of a Textile Productivity Team, sponsored by the National Productivity Council to study the textile industry in Russia and Czechoslovakia.



PAKISTAN'S GENERAL AND RAILWAY BUDGETS

PAKISTAN'S General Budget for the fiscal year July 1961-June 1962 was announced by Mr. Mohammed Shoaib, Finance Minister, at Rawalpindi on 30th June. With its revenue surplus estimated at Rs. 22.5 crores (revenue being Rs. 214.4 crores and expenditure Rs. 191.9 crores) and with defence expenditure remaining at the same level as in the previous year, namely Rs 98.6 crores, the Budget could very well do without any fresh taxation. If the Finance Minister found the financial state of affairs so comfortable that he could announce a series of reductions in personal and corporate tax burdens, it was happily due to the fact that the multiple tax changes—enhanced levies on luxury and non-essential articles and a few other taxation measures—proposed in the Budget for 1960-61 had yielded much more revenue than the anticipated Rs. 9.9 crores and contributed, in the main, to the surplus of about Rs. 23 crores in the revised estimate for the year—a surplus representing an increase of Rs. 14.7 crores over the original Budget estimate. If the buoyancy in revenue in the last fiscal year is partly attributed to the tax concessions then given, it would not be wide of the mark, for the buoyancy in business activity resulting from tax reliefs and concessions should have produced more absolute revenue in spite of tax reductions. Again, if such tax concessions as the reduction in the tax payable by companies from 55 per cent to 50 per cent, the levy of corporate tax at a uniform rate of 16 per cent as against the previous varying rates of 15 to 20 per cent, the cut of 5 to 10 per cent in the tax payable by industrial and commercial concerns started after the partition, the relief provided to small investors through the exemption of their first Rs. 1,000 of dividend income from taxation and the stepping up of investment allowance from Rs. 8,000 to Rs. 12,000 for the purpose of calculating the tax-free income of middle-class investors—if all these have been justified by results in the form of greater economic activity and savings for investment, the further concessions announced in the Budget for 1961-62 may be logically expected to bring about still more progress in the same direction.

The latest concessions which would involve a loss of Rs. 1.2 crore in revenue during the year 1961-62 are, thus, of immediate interest. In the first place, concessions in personal taxation include the lowering of the highest marginal rate of income-tax from 80 per cent to 75 per cent and the granting of an increase of 10 per cent in the 20 per cent investment allowance now deductible from the total income prior to the calculation of the tax payable. In regard to the increase in the investment allowance, the stipulation is that the additional amount would have to be directly invested in insurance policy only. Secondly, to encourage speedier industrialisation, the tax holiday now afforded to new companies will be graded to four, six and eight years applicable to the three zones into which the country is to be divided, depending on the present level of development. And the minimum share capital limit of Rs. 2 lakhs hitherto enforced to make a company entitled to the tax holiday applicable to new companies has also been lowered to Rs. 50,000. Another concession to the corporate sector is that companies would be permitted to invest their special reserves in their own expansion. It is rightly expected that these and other concessions will have the effect of attracting more capital investment, both foreign and domestic, for the country's industrial development. That new foreign capital investments in 1960 in Pakistan were as much as Rs. 30 crores (as compared with about Rs. 45 crores in India in the same year) may be recalled in this connection.

The public sector in Pakistan has been receiving, and will continue to receive, substantial capital aid from external sources. Such aid in the budget year will account for Rs. 74 crores out of the total capital receipts of about Rs. 240 crores. Another bright feature of Pakistan's external finances is that the foreign exchange reserves have increased to Rs. 125 crores, as of March 1961, from Rs. 73 crores in September 1958, despite liberalisation of imports.

Pakistan's first separate Budget for railways is also characterised by the same buoyancy in the matter of revenue receipts as in the case of its General Budget. With the total revenue receipts for 1961-62 estimated at Rs. 70.6 crores (as compared with Rs. 67.3 crores in the revised estimate for 1960-61), there will be a 5 per cent improvement over the previous year even though there is to be no increase in fares or freight charges. But this improvement in revenue will not, however, be reflected in the railway profits, for such profits in 1961-62 will only be Rs. 9.5 crores after providing for interest charges and appropriating Rs. 12.2 crores to the Depreciation Reserve Fund, as compared with the profit of Rs. 12.3 crores in 1960-61. And so the contribution of railways to the general revenues of the Pakistan Government will only be Rs. 7.2 crores in the Budget year. On the capital side, the expenditure proposed in the Railway Budget is Rs. 34.6 crores, of which as much as Rs. 30.8 crores will be on account of rolling stock and other stock. It looks as though Pakistan's railways, which have a heavy backlog in the matter of replacement of old rolling stock and rehabilitation of track and other assets, are in need of a more ambitious plan than its Rs. 140-crore second Five-year Plan. But, at the same time, a more ambitious plan may be beyond Pakistan's borrowing capacity, for the foreign exchange component of the present Plan itself amounts to Rs. 90 crores, representing nearly two-thirds of the entire outlay. In the Budget year alone, the foreign exchange component of the capital programme accounts for Rs. 21.5 crores, for which sufficient external resources are yet to be assured. India's third Railway Plan, it may be noted here by way of comparison, will involve a far less foreign exchange component, representing 12.5 per cent of its aggregate outlay on development and replacement, in view of the fact that indigenous manufacture of rolling stock, stores and equipment has reached the level of self-sufficiency in several lines in this country. Pakistan, on the other hand, will have to depend heavily on foreign suppliers for its requirements of railway rolling stock and equipment at least for the next five years.

INDIA AND NIGERIA

The three-day visit to New Delhi of the Nigerian Economic Mission, headed by the Federal Finance Minister, Mr. F. S. Okotie-Eboh, has opened out new, and more purposeful, vistas of economic and commercial co-operation between the two countries. Nigeria, which attained independence last year, is currently drafting a five-year development Plan (1962-67). India, being one of the senior partners in the Commonwealth, has, of course, certain obligations towards the newly independent countries which are late-comers in the field of development, notwithstanding its own limitations in the matter of capital and technical know-how. It is probably this consideration which has induced New Delhi to decide in favour of providing facilities for training Nigerian technical personnel, apart from making available the services of experts, particularly in the field of oil industry. Although Nigeria struck oil only three years ago, it is already exporting about 500,000 tons of crude annually. It has now ambitious schemes on hand for the further development of its oil industry, and, in this context, India's gesture, modest though it is, is bound to be appreciated by Nigerians. Meanwhile, Nigeria is likely to invite a team of Indian experts to assess the technical manpower needs. India has already sent a railway team for the reorganisation of railway system in that country. Similar expert teams in the field of irrigation and agriculture are also likely to be sent.

India's technical assistance to Nigeria may also lay the foundations for a healthy growth of mutual trade between the two countries. In fact, they have now agreed to expand such trade. India is likely to buy non-ferrous metals from Nigeria and export to it manufactured goods and machinery, possibly on suitable credit terms. The stress now laid on expanding trade has come not a day too soon. Both the countries have reasons to feel dissatisfied with the recent trends in mutual trade. The total volume of trade is now quite small, being no more than Rs. 5 crores. In particular, India's imports from Nigeria have been only moderate for a long time and, consequently, the latter has had an adverse balance of trade from year to year. Although India has a trade surplus with Nigeria, its exports, too, have suffered a distinct setback, of late. Thus, India's exports in 1959 and 1960 were no more than half of what they were in 1958 and in the preceding quinquennium, as will be seen from the following table:

(Value in lakhs of rupees)

	Exports to Nigeria	Imports from Nigeria	Balance of trade
1960	4,99	51	+4,48
1959	4,14	27	+3,87
1958	8,90	34	+6,56
1957	6,90	*Nil*	+6,90
1956	7,35	17	+7,18
1955	8,43	31	+8,12
1954	8,63	1,16	+7,47
1953	8,01	29	+7,72
1952	6,48	*Nil*	+6,48

The major Nigerian exports are groundnut oil, palm oil and non-ferrous metals, particularly tin. These products are in short supply in India and, therefore, if the Government permits imports of items other than groundnut oil, it will ease the domestic supply position and thereby serve the interests of consumers in this country. This list of items for imports is by no means exhaustive, but only illustrative. The scope for expanding exports to Nigeria is also quite substantial. The total population of Nigeria is about 40 million and it is rising by about half-a-million every eighteen months. *Per capita* income is also going up. This apparently widens the market for goods and services. But there is keen competition in that market from the U.K., West Germany, Japan, China, etc. India's major export item has been textiles, comprising mainly greys. But the development of indigenous textile industry, mainly in the field of greys, among others, has brought down the level of Indian textile exports. The domestic production in Nigeria is, however, still below its total demand. Here again, it may be noted that several countries, including some of the Communist countries, are offering greys, drills and bleached cloth at a relatively cheaper price. Still, India has good scope in that market, if only our textile industry is willing to cater to its special needs.

As has been pointed out by the Indian Cotton Textile Delegation (leader Mr. Chinoobhai C. Javeri), which recently visited West Africa, the position can be retrieved to some extent by diversifying India's textile exports to cover prints, fancy varieties and quality cloths. African and wax prints have a good market in West Africa, but these varieties are not being manufactured in India. Indian textile interests would, therefore, do well to consider the question of manufacturing these types of cotton cloth. Apart from textiles, a wide range of light engineering goods, capital equipment, diesel engines, etc., are bound to sell well in the expanding market of Nigeria, provided they are competitive in price, quality and delivery. Now, the only worthwhile agency representing Indian trade interests in Nigeria is an overseas office of the Cotton Textile Export Promotion Council in Lagos. In view of the good scope for expanding trade between the two countries, the Government of India should consider the possibility of entering into a bilateral agreement with Nigeria and establish a full-fledged trade centre in Lagos.

COLOMBO PLAN REPORT

Last Saturday (1st July) was a red-letter day in the history of the Colombo Plan, as it marked the completion of ten years of planned co-operative economic development in South and South-East Asia. Appropriately enough, the day was called "Colombo Plan Day" which was celebrated in all the 21 member-countries. Inhabiting these countries are as many as 700 million people who together account for more than one-fourth of the world's population, whereas the land area is just one-sixteenth of the world's total area. The region is one of the most densely populated, the average number of persons per square kilometre of arable land being 375, as against the average world density of 198.

The sponsors of the Colombo Plan have certainly reason to feel gratified at the progress actually achieved in the past decade, though it must be emphasised that the progress would have been more spectacular but for political strifes and turmoils. Large-scale capital investments have been made in many fields, new industries established, large numbers of people trained, and modern techniques have been adopted to improve agricultural processes and to revitalise handicrafts. Irrigation projects have brought water to parched fields, additional power has been generated to facilitate industrialisation and illiteracy is being reduced and health conditions improved. More important is the growing awareness of the urgent need for rapid economic development and for conscious effort to that end.

While all this is encouraging, the task that yet lies ahead is, indeed, a colossal one. The magnitude of the problems involved is impressively highlighted in the ninth annual report of the Colombo Plan Consultative Committee. Income levels and *per capita* income, according to the report, remain low. The trade of many countries in the area has lagged behind the growth of world trade and some of them have experienced a continuing pressure on their balance of payments. Inefficient techniques, inadequate numbers of trained people in administration, management and production, and shortage of food still remain. Similarly, such problems as the need for stimulating investment capital, to increase exports and to mobilise domestic resources are as real today as they were ten years ago.

The aforesaid task calls for the most effective means of international co-operation. The primary responsibility for development rests, of course, on the peoples and Governments of the area. This aspect is well brought out in the Colombo Plan report under reference. The report says: "Wise and efficient use of available resources, including individual energies and initiatives, willingness to change outmoded traditions while preserving human dignity, and willingness to save and invest are some of the fundamental determinants of the course of progress." The report has done well to warn that there are no short cuts to success in the task of raising the rate of economic growth and of stimulating the various sectors of economies, so that growth may continue; there are tasks which call for financial stability, as well as fiscal and monetary discipline to maximise savings and mobilise resources for development.

The review of the recent developments in the South and South-East Asian region, as contained in the report, shows that a number of countries have no doubt taken financial measures in order that further sound development may proceed and that the dissipation of scarce resources of savings and foreign exchange may be avoided. Nevertheless, it is pointed out, the dangers of inflation, the uncertainties of weather, shortages of technical skills and capital, and balance of payments fluctuations, all indicate the continuing need for a flexible and realistic approach to the planning and implementation of development policies and programmes. The report, while it records the evidence of increasing concern in the free world capital exporting countries about the importance of stimulating the flow of capital for development, urges both the aid giving and the aid receiving countries to understand each other's problems. It is in this context that the report has drawn pointed attention to the need for the underdeveloped countries to make every effort to attract outside capital not only from public but also from private sources. "Progress made in expanding credit and investment facilities from public and private sources," to quote it, "is an indication of increased confidence in the economic future of countries of the area." The report also stresses the vital fact that the answer to the difficult and complex question of wide fluctuations in foreign exchange earnings arising from sharp movements in the prices of primary products lies partly in the sound economic diversification of the production of developing countries. At the same time, the report rightly emphasises that the problem is not only one of production and the search for export outlets but is also related to the issue of eliminating artificial impediments to the freest possible flow of world trade.

INDIA—U.K.—C.M.

The time has come for the Government of India to assess precisely the effects on India's foreign trade of the possible British entry into the Common Market of the Six and to plan appropriate steps for safeguarding this country's interests. The Government, it must be borne in mind, has no power of veto over a British decision, though it can express the hope that Commonwealth preferences, which have served the interests of all trading partners in the group for about three decades, will not be thrown overboard peremptorily. The Commonwealth countries have a genuine fear that, in the event of the U.K. joining the Common Market, not only will they lose all the privileges which they enjoy in the British market but also that it would lead to "reverse" preferences, favouring European as against Commonwealth goods.

The consequences of such a development would be quite unsavoury, particularly to developing countries like India. The U.K. Government has given plenty of evidence of its awareness of the anxieties of the Commonwealth countries and of its desire to safeguard their interests. It has deputed three of its Ministers to visit them and ascertain their wishes. Mr. Duncan Sandys, Commonwealth Relations Secretary, is contacting Canada, Australia and New Zealand. Mr. John Hare, Minister for Labour, is leading the mission to Africa, and Mr. Peter Thorneycroft, Aviation Minister and a former Chancellor of the Exchequer, is tackling the Asian partners of the Commonwealth. He is due to arrive in India next week for a discussion with the representatives of the Government of India.

In the meantime, the Federation of Chambers of Commerce and Industry has conveyed its apprehension to the Government regarding the impact of the possible British entry on India's trade. A 12-man delegation of the Federation which met officials of the Government of India this week, made it clear that India's exports of manufactured and semi-manufactured items to the U.K. and other countries would go down, in case the U.K. joined the Common Market. The Federation seems to hold the view that, apart from losing exports, India will be compelled to compete with the U.K. itself on the Continent, particularly in textiles and jute. Mr. G. L. Bansal, Secretary-General of the Federation, in a talk with the newsmen after the aforesaid meeting, pointed out that the average rate of import duty in the Common Market was as high as 23 per cent, which compared unfavourably with liberal trade terms offered by the U.K. To give an instance. While there is no import duty on tea in the U.K., it is as high as 35 per cent in the Common Market.

The other points made by the Federation will be clear from the following extract from the Press *communique* issued by it on Monday:

"It is well known that the treatment by the countries of the Common Market to imports from India has not been such as to generate confidence in Indian trading circles in regard to the possibilities of greater absorption of Indian manufactures and other items of exports by the Common Market countries. Besides high rates of tariffs, they have continued to maintain quota restrictions on imports of goods from India despite protests at the various G.A.T.T. meetings. There is reason to fear that, should the U.K. join the Common Market, India's exports of manufactured and semi-manufactured items to the U.K. and other Common Market countries would go down. What India's export trade desires is not so much a preferential treatment, but a fair opportunity to compete on equal terms in world markets. This will be denied to her in many cases, such as cotton textiles, jute manufactures and even some of the engineering items which will now bear import duties even in the U.K. market, while the trade between the countries of the Common Market will be gradually duty-free. India is now emerging as an exporter of manufactured and semi-manufactured products, and it is being hoped that, with the growth of industrial development within the country, India's export trade would broaden itself out, in order to meet the growing adverse trade balance with the Central European countries. The U.K.'s participation in the Common Market would give a setback to this prospect, with the result that India would not be able to buy as much as she is doing and wants to for her developmental programmes. . . It will not also be in the interests of expansion of world trade, inasmuch as the Commonwealth represents a trading system which is much more liberal than the arrangements at present being worked out by the Common Market countries."

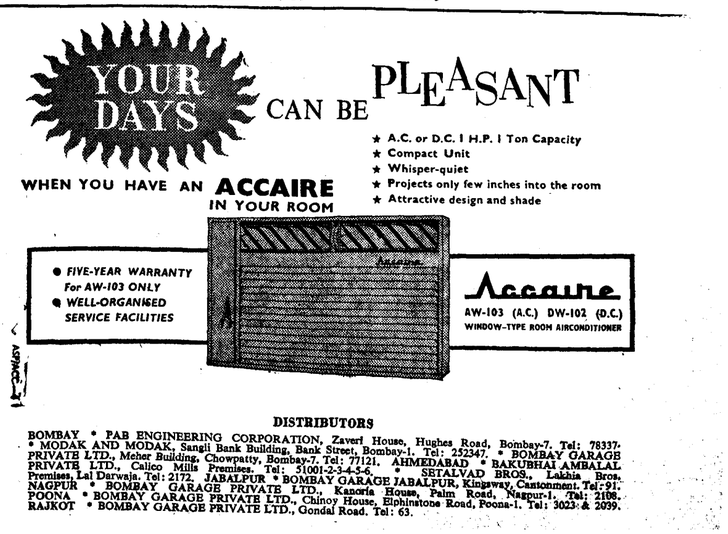
A glaring defect in the current discussion on the problem is that much of it is vague and general. The Federation should have made a special study of the specific Indian goods that would be affected, more or less on the lines of its report on the impact of the Common Market on Asian exports, submitted to the Commission on Asian and Far Eastern Affairs of the International Chamber of Commerce last year. A useful reference book, in this connection, is the one brought out in London by the Economist Intelligence Unit, entitled *The Commonwealth and Europe*. While the book is a commendable research work, it it also not sufficiently comprehensive in respect of the trade of individual Commonwealth countries. Still some of its observations on India are worth recalling:

"Among the more important of India's exports to the Six, hides and skins, manganese ore, raw wool, coir yarn and raw cotton will enter duty-free and there are many items in the enormous range of minor Indian exports of raw materials—iron ore, mica, shellac, hemp and a miscellany of vegetable and animal products—which will also continue to do so. Sales of jute and cotton textiles to the Six are very small and are unlikely to be much affected by the change in tariff levels though they could be wiped out by unfavourable quota treatment. Foodstuffs are inevitably more vulnerable. Coffee sales are safeguarded against French African competition by the excellent quality of the Indian product, but some Indian common tea, though not the higher grade leaf, might be displaced by tea from the Belgian Congo. If, on the other hand, the E.E.C. could be persuaded to reduce internal taxation on tea, the market might grow sufficiently to permit a substantial increase in Indian sales. India's small tobacco exports to the Six are again protected from French African competition by their superior quality, while French Africa does not compete on any significant scale in such items as pepper, cashew nuts, castor and linseed oil. On the whole, then, the effect of the E.E.C. on India's trade is likely to be slight.

"The effect of a merger of the U.K. tariff with that of the Six would also be negligible so far as raw material exports to Britain are concerned. The loss of Commonwealth Preference on tea and tobacco would be no great matter since it is shared with India's chief competitors, but a duty fixed at the E.E.C. level on tea imported into Britain would damage India's trade by raising the price of tea and so depressing consumption. It seems unlikely, however, that Britain would in practice be asked to take such a step, the two markets could be kept separate in this instance.

"Manufactures present a more difficult problem. Few Indian goods other than jute textiles are sufficiently competitive to maintain their footing in the U.K. market, if they had to sell across a tariff on equal terms with the Chinese and the Japanese and meet duty-free competition from the Continent. If trade were not to be damaged fairly severely by a merger between Britain and the Six, India would have to have a duty-free quota for grey cloth sold to the U.K. and liberal quota treatment on the Continent for jute manufactures to offset the loss of trade with Britain in other goods. The U.K. participation in a wider European association on these terms would probably mean that any Indian losses would be neutralised; but the structure of India's exports is such that it is unlikely to secure much positive gain from more rapid economic expansion in Europe. Nor has it much to give in return for European concessions; Commonwealth Preference on Indian imports is strictly limited."

While India should, along with other Commonwealth countries, seek to secure safeguards for exports in Western Europe, trade and industry will do well to be prepared to face any eventuality. In the ultimate analysis, the competitive capacity of India's exports will depend upon the productive efficiency of its agriculture and industry.



ON THE ARENA

By The Archer

Fasts Should Be Banned

I HAVE just finished reading *The Guide*, a novel by R. K. Narayan, published in 1958, which won for him the writers' award a few months ago. I am not attempting to review it, for, it has won great merit at better hands, but I must say that I found it eminently readable and very enjoyable. The story is true to life, the characters are real and the theme entirely topical. Raju, the son of a petty shopkeeper, becomes a tourist guide through having established his business on the railway station platform; he translates himself into an impressario through infatuation for a dancing girl; he slips into crime and goes to jail; when he is released from prison, he occupies a vacant temple having nowhere else to go, and slowly acquires a reputation as a holy man; later, he reluctantly undertakes a fast to propitiate the rain gods and eventually becomes a saint. It is this last portion of the hero's story that has turned my thoughts to the subject of fasting as a means of forcing someone to do something which, otherwise, he will not do. The points that I wish to make are concerned with exerting pressure through fasting—pressure on individuals or groups or the community or established authority—and not fasting for expiation or invocation of divine grace or as penance. To this extent I am not drawing a parallel from the fast described in *The Guide*, which was undertaken in prayerful supplication.

Broadly speaking, we got acquainted with the technique of fasting through Gandhiji who used it in his heroic efforts for our political and social emancipation. The high ethical standards that he established in conducting his fasts brought about spectacular success for his endeavours. We have noted the measure of his success but have discarded the standards set by him. We have accepted the weapon but not the manner of, or justification for, wielding it. The result has been that the technique of fasting, which, in its original concept, was like a sharp knife or a pointed rapier, has gradually been mis-shaped into a bludgeon, and is being wielded by lesser mortals who can claim neither the sagacity nor the saintliness of that great man.

Without meaning to refer to or drawing conclusions from the course of any of the fasts which were undertaken in recent years, I would draw attention to some factors of great importance in connection with publicly announced fasts. A fast is anti-social if it is undertaken for redressal of a private grievance or for the betterment of sectional interests, especially when the larger interests of the entire country or community are likely to be impaired in the process. The disturbance to peace and harmony inside the community, which all public fasts invariably bring about, is a factor of great importance to be observed. Employing a fast for the purpose of settling a difference is like filling old wine into new bottles. It is unsuited to the workings of a democratic society in which agreement is normally reached through discussion, argument and persuasion. On the other hand, a fast, which involves mortification of the flesh, employs pressure instead of persuasion, and generates emotion and passion instead of discussion. The position at the end of a fast is like that at the end of a war. It invariably results in one side being vanquished, discomfited and therefore sullen. More often than not, it results in a measure of capitulation by the party against whom the fast was undertaken. In the meantime, the pressure that is exercised on various groups or sectors when the fast is on leaves sore spots everywhere, and a variety of emotional upsets, which start chain reactions of unpredictable nature.

Many fasts are started in haste and repented at leisure. The person who starts a fast rarely envisages what imponderable situations may arise during its duration; and, when, indeed, they do, his physical and mental faculties are usually at such a low ebb that he is not able to remedy them. The fasting hero is invariably in the hands of a circle of sympathisers (a caucus) surrounding him. The stakes being high, he becomes a leaf in the storm which he has himself raised. He would be unable to end the fast, even if he were so inclined, because of the emotional tension in which he gets involved. He is very much like a silkworm inside a cocoon.

Wide publicity is essential for the success of any fast, for it is not what the fasting person goes through that creates public interest, but the bally-hoo raised by the people supporting him. Hence, the whole atmosphere is enveloped in a blaze of publicity in which the Press plays its part with gusto. Large numbers of people get involved, many parts of the country get charged with an emotional bias in favour of the martyr, and the rights or wrongs of his self-imposed test of endurance are never seen in their proper perspective.

There is no doubt that a ban on fasts is very necessary, if national integration is to proceed at an even pace. Fasts destroy the basis of democratic life and might eventually lead to dictatorship. Most of them, so far, have been undertaken for political purposes, and there is not much hope of the political groups in the country arriving at a common agreement to eschew fasting in the future. One very effective way would be for all the newspapers in the country to arrive at an irrevocable and common understanding to the effect that no fast will be announced, commented on or publicised in any newspaper, and all news relating to fasts will be blacked out. Fasts serve no purpose if they are not publicised. If the proprietors and editors of newspapers are genuinely interested in the country's political and economic progress and integration, and in the spread of a democratic way of life, they should have no objection to impose on themselves a uniform code of conduct in this regard.

* * *

All In The Day's Work

A despatch from London published in an Indian newspaper might have found its way as an advertisement for the B.O.A.C., but it reveals a very heart-warming performance and can bear reproduction here. An order for a rare drug produced by a British chemical firm was rushed to London from a Bombay hospital for emergency execution. When the order was received in London late in the evening, the regular staff of the firm had left the premises. The order was taken by a night watchman who contacted the concerned officials of the company at their homes and apprised them of the emergency. The drug was picked and rushed to London Airport, and caught a B.O.A.C. Comet airliner whose take-off was delayed for its receipt by five minutes. It is stated that the B.O.A.C. has made special arrangements for giving priority to "life-or-death" orders if the relative drugs are delivered for despatch within ten minutes of take-off time. The drug eventually reached Bombay within 24 hours of its despatch, and probably saved a human life. The co-ordination of effort at various levels both in the drug manufacturing firm and in the B.O.A.C. organisation deserves the highest praise, and is evidence of the high sense of social purpose achieved by the organisations in their day-to-day work.

In this context, I cannot resist the impulse to record, by way of contrast, two very distressing instances which point out the complete absence of any solicitude for the sick and needy in two of our metropolitan hospitals, one in Bombay and the other in Madras. I am sure others will be able to recall several instances of this type, as, indeed, they often do in newspapers in recent months. The first instance occurred about five years ago on a Sunday morning when a young woman, the daughter of a class I Government officer, was taken to a hospital in Bombay with high fever, suspected to be due to a virus infection. The medical officer in attendance found it necessary to administer penicillin, but was unable to lay his hands on a phial of the drug from the hospital stock for some obscure administrative difficulty. The father ran from pillar to post in the city for some hours before procuring the drug which was eventually injected late in the afternoon. The patient did not recover. The second instance is of recent occurrence in Madras. On a Friday afternoon, an old lady yawned, opening her mouth much too widely, and got her jaw dislocated. She was taken to hospital immediately for the simple job of restoring the jaw to its position. The medical officer on duty gave her a sedative to swallow, warned her not to move her jaw nor eat solid food (both of which she couldn't anyway) and asked her to get back on Monday morning for attention. The jaw was set right (with just a whack) on Monday afternoon, and, during the intervening seventy hours, the patient presented a pathetic sight with a half open mouth, saliva dripping from the corners, and tears trickling from her eyes.

Temporis ars medicina fere est. The art of medicine is a question of timeliness.

In any society, the steps taken to alleviate suffering, and especially physical suffering, with the utmost expedition possible, is the only sure index of the degree of civilisation which permeates it. When individuals or groups of persons fail to react with kindness and solicitude to persons in distress, they are obviously less than human. Judged by these standards, we in India are still, by and large, very primitive, because our public institutions are wooden, cold, callous and unresponsive. The high-faluting exhibitionism which generates support for charitable institutions aiming at mass amelioration is not reflected in the individual's sensitivity to relieve suffering, when he comes face to face with it. Yet, it is the development of individual character which strengthens group performance in institutions.

A wag tells me that things will get better at the end of the Third Five-Year Plan. I wonder!

* * *

All Set! Thumbs Up!

Pre-election pep talk is bound to contain many bits of permissible exaggeration, but, even, so, what the Madras Minister for Industries said a few days ago about Madras State having arrived at the "take-off stage" beats the band. It may be that Madras has reason to be pleased about the progress it has made in regard to a number of engineering industries in the city, some heavy projects in the districts in the offing, and the encouraging reports received from Neiveli, but these, in themselves, do not seem to warrant the sanguine assurance of being ready to "take off." What with its recurrent shortage of electric power and annual power cuts, its transport difficulties, its dependence on the weather for the success of agricultural operations and its large number of educated unemployed continuously migrating elsewhere for sustenance, Madras cannot yet boast of a self-generating economy which would warrant a take off. It is only the unemployed that "take off," and they do in large numbers.

I am reminded of a war-time story which seems to provide a suitable comment, perhaps cynical, on this brave assertion. A young pilot officer of the R.A.F., who was doing fairly well on his bombing exploits, wrote to his old father in England describing his success (or as much of it as he was permitted to) and ended by saying; "This is a feather in my cap; so, dear dad, will you please send me five pounds." The father was happy and sent him the money. A week later, came a second letter on the same lines with another request for five pounds. The father again sent the money. A third letter and yet a fourth and more letters with requests for more money arrived in regular succession and made the father sit up and do something. So, he wrote back to the son: "My dear boy, I am delighted with your exploits and have been sending you all the money you wanted. It is difficult to send any more, but I don't want to be ungracious. I see that you have collected quite a few feathers in your cap. Why don't you pluck them out, stick them on your backside and fly home?"

GLOBE AUTO ELECTRICALS LTD.

A new enterprise for the manufacture of auto-electrical equipment is being launched in Maharashtra State. The Company will be known as Globe Auto Electricals Ltd., sponsored by Mr. Ratilal Zatakia, Chairman of the Globe Industries Private Ltd. The capital outlay on the project is estimated at Rs. 30 lakhs. It is proposed to manufacture windshield wipers with motors, ignition coils, voltage regulators, ignition distributors, breakers for horns, condensers, breakers for regulators and distributors, and similar auto electrical equipment. The necessary industrial licence has been received from the Government of India. At present, almost all these items are imported from abroad. Plans have been formulated for the further rapid expansion of the enterprise immediately after it goes into production. The factory will be situated in Greater Bombay and the necessary land and power have been assured by the Maharashtra Government.

The Company has entered into technical collaboration agreement with Magneti Marelli of Italy, who are among the select internationally renowned manufacturers of auto electrical requipment for motor cars, scooters, aeroplanes, etc. The Marelli electrical equipment is incorporated as original equipment in the Fiat cars produced in the country.

The Company has approached the Industrial Credit and Investment Corporation of India Ltd. for a loan of Rs. 8 lakhs to meet the foreign exchange cost of machinery and plant and the company's application is under active consideration. The issued capital of the Company will be Rs. 17 lakhs, divided into 17,000 equity shares of Rs. 100 each, of which the offering to the public will be Rs. 10 lakhs. The entire public issue has been underwritten by Messrs. R. R. Nabar & Co., managing brokers to the issue.

"Here are five ways

BOAC Air Cargo can help your business!"

★ *Fast* BOAC jetliners slash transit time by *hours.*

★ *Direct* BOAC city-to-city freighting cuts out time-wasting journeys to and from docks.

★ *Simple* (cheap) packaging is all that's needed with careful BOAC handling.

★ *Safe*, efficient BOAC freighting means lower insurance costs, wider coverage.

★ *Experienced* BOAC staff give all goods *individual* attention all the way.

We deliver your goods in hours, instead of days or weeks! And that's only one of the things you gain. Speed alone may not be enough for you—but BOAC Air Cargo gives more and more successful businessmen these extra advantages...advantages that can help and benefit *your* business!

Ask for details now—from your Forwarding Agent or BOAC offices at:

DISQUIETING DROP IN STERLING RESERVES

EXPORT PROMOTION CALLS FOR BOLD INNOVATION

From Our Special Correspondent

NEW DELHI, *4th July*

DELHI LETTER

THE further drop in India's sterling reserves towards the end of the first half of this year (to about Rs. 115 crores) shows that in spite massive aid offers, the immediate foreign exchange position is perilous. Exports have not fared as well as they should have. Though some portions of foreign aid especially that of U.K. and West Germany, have been left untied to facilitate maintenance imports (and Ambassador Galbraith has also mentioned that $200 million of U.S. aid will be similarly offered), the interval between now and their availability will create some anxious moments. An irreducible minimum of currency reserves will have to be kept and the margin left in the foreign exchange reserves for current transactions is becoming thinner every day.

This will doubtless further emphasize the importance of improving the export effort. A psychological change in the attitude to exports is already apparent in the higher target for exports adopted by the Planning Commission (of Rs. 3,750 crores). An official working party has been inquiring into the practical aspects of such export promotion and its conclusions, if any, may not be known for some time. Unfortunately, the Ministry of Commerce and Industry has lacked a Minister with the vigour and drive needed to try out new ideas, to overrule departmental and other scruples based on narrow-minded calculations of advantages and to make the State Trading Corporation a real, though a residual, instrument of export promotion. Mr. Lal Bahadur Shastri sincerely tried to do his best while he controlled this portfolio but his other preoccupations and a habit of slow decisions were hardly suited to the requirements of this task. His successor may have even less aptitude for the work ahead; particularly in the field of housing, in which the obstacles to achievement were fewer and easier to surmount, he had very little to claim eventually when he handed over charge. There is now the additional uncertainty caused by the next General Election so that there is little incentive to show results.

First Thing To Be Done

Export promotion is a task involving many political decisions, whether the issue is one of cutting down industrial costs or domestic consumption, offering subsidies or other incentives and concessions to exporters, or any of the numerous other measures that have been recently considered as worthy of trial. Something is being done at the departmental levels but there are severe limitations to the capacity of even senior officials for innovation and decision. Almost the first thing to be done for export promotion is, therefore, to make it the responsibility of a separate and sufficiently imaginative Minister familiar with industry and trade; it hardly matters whether or not he is of Cabinet rank but he should be kept at the post long enough to earn his laurels.

Serious Neglect

The nation's most important task at the moment—of laying the foundations of an export policy which may bear results at the end of the third Plan and during the fourth—is therefore suffering serious neglect. The Planning Commission has only made a preliminary study of the trends in India's trade during the last decade and though it has expressed the pious wish that exports should be stepped up to an annual rate of about Rs. 750 crores, it has not offered any practical suggestions. The figures in Table II show that there has not been any improvement in the earnings on agricultural exports and cotton and jute manufactures.

The year 1950-51, however, hardly provides a proper basis for comparison since the Korean war boom pushed up these prices to unusual levels; but the decline since 1955-56 is disconcerting enough. On the other hand, exports of manufactures, old and new, and of minerals have increased and it is now generally accepted that in future expansion should be expected and positively stimulated in this sector by a judicious combination of special measures.

A major hurdle to more exports of these products is the strong pull of the internal market. So long as high prices can be obtained locally in a market protected by import restrictions, no manufacturer will be inclined to sell abroad at a loss or take the painful and often politically inexpedient measures to cut costs. Sugar exports have at last become feasible only because of certain favourable international circumstances and the bold and imaginative efforts of the Minister concerned, but such alertness will have to be shown on a very wide front, commodity-wise and country-wise.

The Government has realised the necessity for exports of the order of Rs. 1,400 crores by 1971 or the beginning of the fifth Plan to finance current imports of equal value and to service India's external obligations estimated at an annual average of Rs. 200 crores. If the basic features of Sir Donald MacDougall's proposals—for achieving a rate of increase in exports of about 8 per cent per year—are accepted, a substantial percentage of the additional output must be set apart for purposes of export and should actually be exported.

One Favourable Factor

One of the favourable factors is the improved prospects for foreign aid to underdeveloped countries; though a good part of it will be tied to purchases in the country providing the aid, many of the recipients will be improving their own foreign exchange earnings and capacity to import intermediate products and consumer goods. If there is an imaginative wage policy based on trends in productivity, it should not be too difficult to take advantage of the relatively lower wage levels in India, the possibilities of reducing the unit cost of manufactures as production increases in scale and of subsidising raw materials or other cost factors to the extent necessary.

Another step, complementary to these, is to ensure that the entire advantage from lower costs is not passed on to the internal market—either to the consumer, or what is worse, the middleman. Controls on distribution are neither popular nor efficient but where cheapness to the domestic consumer is regarded as paramount, they cannot be avoided; the alternative is the adoption of system of price rationing under which either the manufacturer can adopt differential prices for exports and local sales (so as to subsidise the former from the latter) or the Government can curb consumption through sufficiently high taxes. In the former case the scope for abuse is great and there will be nothing to prevent the more selfish from choosing a course of self-enrichment through larger internal sales (except when raw material or machinery imports are linked to such exports); in the latter case that is, of taxation, the Government will have to face criticisms for adding burdens on the consumer in which the manufacturers have always made common cause.

Though business interests often take the Government to task for failures in export promotion, they have always supported pleas for giving up the idea of curbs on consumption. A bolder policy of letting exporters retain a part of their foreign exchange earnings for imports may encourage many to revise their ideas; on the other hand, a policy of subsidy, direct or indirect, may encourage uneconomic methods of production. Rebate of tax on income from additional earnings is another incentive which not only calls for some political courage on the part of any Finance Minister in persuading Parliament but also for safeguards against collusive transactions for purposes of tax evasion.

Many Untried Measures

The point is that there are many untried measures which require imaginative implementation, and informed observers abroad are inclined to take the view that, though difficulties exist, the Government of India has done little to overcome them. Some new dangers to the lowering of the cost structure and hence of export promotion, may arise if, as a result of the stress laid on avoiding concentration of economic power, large-scale production is prevented by a wrong licensing policy. Also, the adoption of labour-intensive methods, either to save capital costs or to provide employment, should be avoided in those sectors in which exports are regarded as possible at some future date.

Those who take a defeatist attitude to this subject tend to ignore some of the factors favouring India which can be turned to advantage. In some of the newly developing countries in Africa and Asia, Indian technology may be better suited to their present requirements than that of the more advanced countries; there are still unexplored opportunities in the Communist countries. A major error committed so far is that of assuming that a solution should be sought merely through import-saving, by the establishment of industries to produce the goods received from abroad; it is now established that this is not enough.

TABLE I—*Pattern of Exports*—1951-60

THE HINDUSTAN COMMERCIAL BANK LTD.

Head Office at **Birhana Road, Kanpur**

and

38 BRANCHES AT IMPORTANT CENTRES

All types of banking business transacted. Locker facilities available at Agra, Calcutta (Netaji Subhas Road), Hardoi, Kanpur (Birhana Road), Kanpur (Aryanagar), Lucknow (Aminabad), Meerut Cantt., New Delhi and Varanasi Branches.

Attractive rates offered for deposits and reasonable rates charged on advances

Loans against Post Office Savings Certificates and Treasury Savings Certificates granted at low rates of interest.

EFFICIENT SERVICE

Sir Padampat Singhania, Kt., *Chairman.* **S. S. Rachhpal,** *General Manager.*

AMERICAN LETTER

INFLATION POSSIBILITY WORRIES BUSINESSMEN

HEAVY DEFICIT FINANCING FEARED

(From Our Special Correspondent)

NEW YORK, *1st July*

AMID rising economic indices in nearly all sectors of the United States economy, the shadow of domestic and international politics is casting from the Atlantic to the Pacific coast. There is preoccupation in business and financial circles over several issues. They include the Russian-generated crisis over West Berlin, Laos, the gloomy reports about the state of Latin American affairs submitted by Ambassador Stevenson after his fact-finding tour of the area, proposals to reorganise various phases of the Government in Washington and agencies and, finally, the enormous spending programmes which have been placed before Congress by President Kennedy.

To take the latter point first, the House of Representatives has approved without a dissenting voice a defence bill of nearly $43,000 million. This figure was short by about $6 million of what the White House had asked. Then, there was an increase in the Federal debt ceiling which will come in handy for the fiscal year from 1st July 1961 to 30th June 1962.

Other major Government expenditures involve an accelerated highway construction programme and low and middle income housing projects which will pump additional thousands of million dollars into the American economy.

The possible inflationary implications of the domestic programme, coupled with what looks like official vacillation over the burning issues abroad, has created a good deal of uncertainty. This, in turn, has led to caution and postponement of business decision pending further developments and clarification of Government policy.

Shipping Strike

On top of these relatively long-range issues, the U.S. is beset by the devastating effects of a shipping strike which has tied up more than 250 American-flag vessels along this country's seaports. At this writing, a Presidential fact-finding board is engaged at laying the groundwork for a possible 80-days' court injunction which would provide a return to work of seamen, thereby providing a cooling-off period during which negotiations could be resumed.

One of the issues of the strike is the demand by U.S. trade unions to organise crews of American-owned foreign flag vessels. Most of these, particularly tankers and other freighters, are registered under the flags of Liberia, Honduras or Panama which exempts them from the proviso of American-flag ships to recruit union labour at U.S. scales.

These scales are so far out of line with foreign wage scales that the American merchant marine cannot exist without subsidies. All American owners of foreign-flag vessels have an agreement with Washington to make available their tonnage to the Government in the event of a national emergency. If the unions succeed in this issue, many of these foreign-flag vessels would be sold to foreign shipowners who, of course, have no obligation to place their tonnage at the disposal of the U.S. Government.

The Seafarer Log, a trade union publication, said the other day that Soviet merchant seamen get the equivalent of $55 a month. For Red Poland, the figure is $8.10, while the U.S. wage scale now calls for $286.72 a month. The unions, by their demands, may be talking themselves out of more jobs as they have done already. In a wider sense, it would be a contributing factor in pricing U.S. services and goods still further out of world markets. In my opinion, only a real emergency can bring about a reversal of this trend.

The New Frontier

Another factor which has had a depressing psychological effect in business thinking is the spend and spend philosophy of the advisers to the new Administration and their conception of Mr. Kennedy's New Frontier.

A typical example is provided by the on and off the record remarks recently made by Mr. Douglas Dillon, President Eisenhower's Under Secretary of State, who now graces the Kennedy Cabinet as Secretary of the Treasury. He expresses no concern over the deficits in the Federal Budget for the fiscal year just ended nor for that of the next accounting period. He called the combined deficits for the two years of about $7,000 million, as estimated by him, "inevitable and appropriate."

The use of appropriate is symptomatic of the New Frontier. Mr. Dillon who, up to now, was looked upon as the sound money man of the Kennedy Administration, admits that he looks upon this kind of deficits as not particularly inflationary in the "classic" sense. If inflation comes, it will be the fault of management and labour in not holding the line on wages and prices and not the fault of Washington.

Roosevelt's Tactics To Be Repeated?

In effect, this lays the groundwork for any possible future attacks on business and industry as profiteers and being too big for the country's good. This is the old record played by Franklin Delano Roosevelt. It has no basis in fact, but has proven to be an effective vote-getting device. In this respect, Mr. Kennedy is not overlooking a trick.

He has created, for example, more than 100 new Federal judgeships. It gives him more patronage and places him in a position to bestow favours upon future followers in areas where support is needed most.

In all official prognostication, strong emphasis is being placed on boom conditions next year. Mr. Dillon now figures on a gross national product at an annual rate of $570,000 million by the end of 1962. Conversely, he expects higher revenue for the Treasury out of higher industrial profits.

He never said what is to be when higher profits do not materialise to the extent of his expectations. He is thinking in terms of $90,000 million for next year in Treasury revenues, against the present $81,000 million. Another angle which gives business food for caution and thought is that Mr. Dillon was an influential member of the Eisenhower team which predicted a boom in 1961 but which did not materialise.

United Nations News

The replacement of Mr. Andrew Cordier by Mr. Chakravarthi V. Narasimhan as executive assistant to U.N. Secretary General Dag Hammarskjoeld was well received. As was his predecessor, the representative from India, will be the Secretary's *Chef de Cabinet*. His duties include the exacting and essential job of running the U.N.'s operational machinery in New York and elsewhere.

The move represents an acknowledgement of the shifting balance of power as well as expansion of U.N membership, notably in Asia and Africa. Appointment of Mr. Narasimhan was followed by further shake-ups in the U.N. staff to bring the organisation more in line with the realities of the world situation and of the political and economic changes which have taken place in the last few years. In the parlance of politics, all new appointments may be regarded as a "balanced ticket." Replacing a man from the U.S. with a man from India is a long way from what the Kremlin wants, but it is held to be a realistic step in the right direction.—*All Rights Reserved.*

Of interest to fire fighting services is the latest Leyland Firemaster appliance which has been delivered to the City of Glasgow Fire Service. Powered by a 6-cylinder Leyland horizontal diesel engine developing 150 b.h.p. at 2,200 r.p.m. the Firemaster is equipped with semi-automatic transmission with 2-pedal control. Finger-tip operation of gears is provided to give ease of handling in traffic with maximum performance. A specially designed power take-off is mounted forward of the engine for the front mounted pump. Braking is by compressed air through diaphragms adjacent to each wheel.

THE JITTERS OF EXPANSION

(*From Our Own Correspondent*)

LONDON, *30th June*

LONDON LETTER

THE City is suffering from a pincer movement of which one arm is the fall in equity prices of well over 10 per cent in the past month, and the other arm is the threat by the Chancellor of the Exchequer to make life more difficult for credit seekers and would-be expansionists because of his fears of a new epidemic of inflation.

The Government's alarm has been enhanced by the production of the first quarter's balance of payments figures which show an overall deficit on the current balance of trade of £56 million. Those who look on the bright side of things point out that this is only half the deficit of the fourth quarter of 1960. But it is perhaps slightly more realistic to make the comparison with the same period a year ago when the deficit was £37 million. The deterioration is almost equally divided between the balance of visible trade and the invisible items.

Imports in the first quarter totalled £1,045 million, as against £1,012 million a year ago; exports totalled £987 million, as against £966 million. Thus, both sides of the account have grown, but imports rather faster than exports to the tune of some £12 million.

Turning to the invisible income of the country, this shows little change at £87 million for this first quarter against £84 million a year ago. On the other hand, Government expenditure which is the principal adverse item in our invisibles continues to rise largely because of military expenditure overseas and is £10 million more in this quarter than a year ago.

It is this last fact which has now decided the Government to be tougher with Western Germany over the cost of the forces kept on the Continent. They may, perhaps, really insist that Germany pays a much larger share.

Apart from this weak trade balance, the country lost, in the first quarter, £75 million of its gold reserves through the outflow of hot money, and suffered an increase of £60 million in her external liabilities. On the other hand, the overseas sterling holdings (principally those of non-sterling countries) were reduced by £164 million—a welcome reduction in this country's sterling liabilities.

The trade figures for April and May do not, unfortunately, give any hope that the trend of balance of payments is being reversed in this country's favour.

At the same time as we have this sorry picture on the external front, at home the industrial giant has stirred. The index of industrial production jumped in April by one point from its long-term plateau of 121 to 122. This may not seem a great increase, but, when it is realised that for the past year the index has fluctuated between 120 and 121, the movement is significant, marking the fact that there is a real resumption of growth. This is borne out by other indications such as the tightness of the labour market. The odd thing is that, up to now, the Treasury's desire, born from the external position, to put the economy on a tighter reign has been countered by the evidence of industrial stagnation. Now that production is moving upwards, the Chancellor will, with utter absence of logic, be able to go ahead to curb the economy. So, once again, we seem about to witness the miserable picture of an expanding economy being hit on the head because externally its balance of payments is weak. No doubt, the Chancellor will still struggle to find financial weapons to help him both to allow the internal economy to expand and to keep the external economy in balance. It is beyond the realms of probability that he will succeed.—*All Rights Reserved.*

To date, the U.S. has given assistance totalling $486.6 million (Rs. 231.6 crores) for the development of India's power resources. This includes both dollar and rupee loans and grants. Eight projects with a total installed capacity of about 1.2 million kilowatts are being entirely financed by the U.S; these include thermal power stations at Chandrapura, Durgapur, Baruani and Talcher, and the hydro-electric projects at Barapani and Sharavathi (stage II). Thirteen projects, producing a total of over 1.6 million kilowatts, are financed in part by the U.S.

RANDOM THOUGHTS ON BANKING PROBLEMS

RATIO OF CAPITAL FUNDS TO DEPOSITS

By "Kuber"

ONCE again, the Reserve Bank has proposed further banking legislation. In view of the recent trends, already discussed in this journal it has found the Indian banks wanting in regard to their ratios of capital and liquid funds to deposits. In fact, the arguments which it has marshalled and presented quite cogently would appear to show that the Bank should have done something about it very much earlier and that it has waited too long to make these proposals.

In fairness to the Reserve Bank, let me mention the reasons—although the Reserve Bank has not said so, in so many words—which have prompted it to make the proposals in regard to the bank's capital-reserve ratio, with which only I am concerned for the present. There is no doubt that the banks' capital-reserve ratio to deposits has been steadily coming down mainly due to the rise in their deposits, but banks themselves are not free from blame, as they have not been sufficiently vigilant about it. They had all the chances of strengthening their capital resources while the going was good, and the share market was in a responsive mood. They missed the bus during the last few years. They knew all along that something like the present proposal was bound to come up. But they preferred to drift along. That is not all. On a vital matter like this, it was upto them to have to come out with proper suggestions, as they very well know what was happening; instead, they were content to leave, as usual, everything to the Reserve Bank, including the initiative.

One also cannot deny, as will have been seen from the table given in this journal last week, that some of the banks have allowed things to go too far, as their ratio of capital to deposits has sunk as low as about 2 per cent and, what is more important, some of these banks happen to be big banks, which normally are expected to set an example to smaller banking institutions.

Inner Reserves

It has been said that, after all, why should the Reserve Bank attach so much importance as it does to the ratio of capital to deposits, especially as the bigger institutions always possess a large measure of what is called inner reserves. That may be true, though to a small extent, and that, too, in case of a very few banks. I believe I would be quite justified in saying that, by and large, inner reserves, as we understand the phrase in British banking, simply do not exist in Indian banking. The less we talk of it, therefore, the better. In the case of most of the small banks, with which presumably the Reserve Bank's proposed legislation would appear to be mainly concerned, the inner reserves exist in a kind of reverse order; they have mostly "inner losses" in the sense that they are not revealed in the balance-sheet.

I am not blaming the bigger banks very much on this score, for the reason that the sources from which the banks usually build up the inner reserves are denied to them. These sources are, first, the rising prices of Government securities, enabling the banks to show their book values which would naturally be lower and, second, the comparatively lower rates on deposits giving them a very much higher margin of profit on their loans and advances. Indian conditions are just the reverse. Government securities have a tendency of going down and that is bound to remain so in the near future. The rates of interest at which they can obtain their deposits are going up all the time and this also appears to be a permanent feature of the Indian money market, in view of the prevailing conditions. The banks are, therefore, sandwiched between these two important phenomena. It is, therefore, absurd to blame the Reserve Bank or anybody else on this score. The banks can build up the so-called inner reserves as they like. It is entirely left to them. The Reserve Bank at no stage comes into the picture. It would be unfair, therefore, to either blame the Reserve Bank or even to seek its support. If one is not to get lost in side issues, it is better to leave the problem of inner reserves out of account for the present.

Importance of Capital Structure

Likewise, it will be irrelevant to argue, as some do, that it is unnecessary to attach so much importance to capital structure as the Reserve Bank does, inasmuch as it is only when banks fail that their capital will be of any use. From this thought flows the suggestion that the Reserve Bank should see that banks do not fail. Well, that sounds very much like saying which comes first, the chicken or the egg. The banks fail because they have insufficient capital structure as the Reserve Bank will in all circumstances lend freely to banks having an adequate capital base. Looking at it, therefore, from all angles, a great deal can be said for the Bank's proposal for an increase in the capital-reserve ratio of banks. Frankly speaking, very little can be said against it, unless one prefers to confuse the issues by bringing in all sorts of irrelevant arguments.

Is Legislation Justified?

What one objects to, however, is something else and that is, first, whether a ratio of 7.5 per cent, as now proposed by the Reserve Bank, or any other ratio that may be decided upon, should be brought about by legislation; second, whether the Bank is justified in applying the same yardstick to all banks—good, bad and indifferent—and of varying sizes. If the present proposal were to be conceded it would complicate matters further, apart from some sort of heart-burning among the bigger banks, for the smaller banks may get away, because, even if they were made to increase their capital upto the required ratio, it would not help matters much, in the sense that their capital would disappear almost immediately after it is increased, in view of their tendency to make indiscriminate advances. The Reserve Bank is fully aware of this position from the various inspections that it conducts into their affairs. If that is so, would it not be highly unjust to the bigger banks, particularly to those which are well managed, to bracket them with smaller banking institutions?

Present Powers Adequate

Let me deal first with my contention that there is no need for any legislation at all. The Reserve Bank is fully aware, particularly from its inspections, as to which of the banks is the guilty party and why. The Reserve Bank has got ample powers, direct or indirect, for pulling up such banks. It may, for instance, refuse to permit such banks to open any branches at all, telling them in so many words that the required permission is being denied to them, on the score of inadequacy of their capital structure. In fact, that is what is implied by Section 23 of the Banking Companies Act, under which the Reserve Bank need not permit banks to open branches if it is not in the interests of depositors, and the interests of depositors obviously imply adequate capital structure. That is what appears to be the spirit of the aforesaid section governing branch banking. Secondly, the Reserve Bank may very well deny the rediscount facilities to a bank having inadequate capital structure and can tell the bank bluntly that the capital of the bank applying for such a facility is too meagre to deserve this facility. The Reserve Bank is not bound to extend this facility to any and every bank, regardless of its overall condition; even if it does grant such a facility, it may be limited to a nominal amount, so that the bank concerned may know well in advance what the Bank does not like about it.

Gentle Hints

I am not very much in favour of having an unwieldy banking legislation, particularly because the Bank has already got plenty of weapons at its command. The Reserve Bank has merely to sharpen them and, if I may say so, learn to make use of them. It reminds me of the story of a famous surgeon in England years ago who refused to buy the latest and new-fangled instruments which other lesser surgeons were using on the ground that the instruments that he possessed were giving him quite satisfactory results. In other words, it is up to the Reserve Bank to use its existing weapons—good and proper—before embarking on any further legislation, and asking for more and more powers which are not strictly necessary. Too many powers are liable to confuse the institution using them, as, sometimes, it may not quite know which weapon to use. Besides, such powers unnecessarily give a central banking institution a bad name. What I would, therefore, prefer is that the Reserve Bank should use the technique of what is generally called "dropping gentle hints" according to the traditions of the Old Lady. It is surprising what this invisible power can do, particularly when the central banking institution has got several sharp weapons to use against the bank which does not listen.

To come to my second point, namely, the common yardstick. My feeling is that the purpose in view would be better served if the erring banks were made to conform to the required ratio, informally. I would very much prefer a smaller ratio, say, about 5 per cent for bigger well-known banks, over a particular figure of deposits and the ratio to go up in the case of smaller banks; a sort of sliding scale. It would be in the fitness of things if the bigger banks which are well managed are treated on a different plane than the smaller banks, as the latter are more vulnerable to attacks of panicky withdrawal of deposits than the former. In passing, it may also be mentioned that, in practice, the banks will have to increase their capital very much more than the required ratio, in order to cover the future increase in their deposits and as they cannot go to the market every now and then. According to the figures embodied in the *Trend and Progress of Banking in India*, there were, as at the end of 1960, 88 banks with capital and reserves ranging from over Rs. 5 lakhs to less than Rs. 50 lakhs. Their combined capital and reserves were Rs. 11.5 crores and they held deposits aggregating Rs. 148.3 crores. The ratio of their capital to public deposits would, therefore, be about 8 per cent. On the other hand, there were 28 banks with capital and reserves of over Rs. 50 lakhs. Their combined paid-up capital and reserves were Rs. 60.3 crores, but their deposits were as large as Rs. 1,518.4 crores. In their case, ratio of "own funds" to public deposits works out to 4 per cent. In the case of these banks, a ratio of 5 per cent of "own funds" will be quite ample. It may be mentioned here that the proposed ratio of 7.5 per cent would mean that a bank like the State Bank of India would have to have capital and reserves of the order of Rs. 30-40 crores. So why hitch the wagon to a star so high that even the largest bank, and that a State-owned institution, will be unable to reach it.

Situation Not Alarming

The situation, therefore, is not either alarming or so imperative as to warrant any further legislation on this score; "the gentle hints" of the Bank, as mentioned above, would do the trick. The Reserve Bank's proposal for increasing capital of small banks to Rs. 5.00 lakhs and to Rs. 20.00 lakhs if they are operating in Bombay and Calcutta is commendable, although this sort of thing could have been done years ago, in view of the falling value of money. I am not making any mention as to which of these banks would be included in the Second Schedule, as the problem is not so simple as it looks. Nor is it possible in this article to deal with the various implications arising from setting aside to the reserves out of net profits before taxation. Nor is it possible to deal with the other very important problem of requiring the banks to call up their uncalled capital. If the shares, particularly of bigger banks, are held by well-to-do investors, the uncalled capital in my opinion should serve the same purpose as the published reserves and that might even enable the banks to issue more capital on easier and better terms. I am not very much worried about their ability to get sufficient capital; most of them can get the capital for the asking. Their capital issue can never be a flop. What I am concerned with in this article is the more fundamental problem of the need for legislation as well as the quantum of capital required to be increased. As in these vital matters, the initiative and, therefore, the responsibility has passed on to the Reserve Bank, it is up to the Reserve Bank to study the problem in all its implications. I may remind the present management of the Reserve Bank of what its predecessor a few years ago was very fond of telling the banks, and that too quite often, that sound banking is not built up through legislation but efficient and honest bankers.

WORLD BANK LENDS TO ARGENTINA

A sixteen-year loan for $48.5 million, carrying interest at 5¾ per cent, including the one per cent commission which is allocated to the Bank's special reserve, has been granted by the World Bank to Argentina for the development of roads. Amortisation will begin on 15th July 1965. The funds will help to finance improvements on about 1,600 miles of some of the country's most important highways, and will pay for equipment required for the maintenance of roads throughout Argentina. The works to be undertaken will overcome some of the most critical deficiencies in the highway system.

Five private banks are participating in the loan, without the World Bank's guarantee, for a total amount of $625,000 representing part of the first maturity which falls due on 15th July 1965. The participating banks are the National Bank of Washington (Washington, D.C.), the New York Agency of the Royal Bank of Canada, the Philadelphia National Bank, the First Pennsylvania Banking and Trust Company and Grace National Bank of New York.

STRAINS AND POSSIBLE RESTRAINTS

MOVE ABOUT CANADIAN DOLLAR MISUNDERSTOOD

By W. T. C. King
EDITOR OF THE "BANKER"

LONDON, 2nd July

THE pressures on the pound sterling and the weakness of London stock markets, to which I referred in my last letter, have been rather sharply accentuated in this past month. Early in June, a new crop of rumours gained currency in international exchange market circles about the possibility of various currency adjustments, and this put a heavier selling pressure on sterling. Part of this speculation reflected the market anticipation of the gathering of central bankers in Basle for the annual general meeting of the Bank for International Settlements, and, after this meeting, Dr. Per Jacobsson, chief executive of the International Monetary Fund, seized an opportunity to give an unusually comprehensive denial of all such rumours.

The key passage in Dr. Jacobsson's speech, which was made to the Basle Economic Society, deserves putting on record:

> In the past three months (i.e., since the revaluation of the D-Mark) the economic world has been plagued by rumours of further currency changes. These rumours seem to me entirely baseless. They are, however, very damaging to confidence . . . I happen to know that, in all the major financial centres, the monetary authorities are determined to maintain existing parities. There is no foundation whatever for the rumours that there are some new plans under international discussion for currency adjustment, whether by revaluation, devaluation, widening of margins, or in any other way."

This far-reaching and obviously authoritative denial did have the immediate effect of arresting the speculative pressure against sterling; but, unfortunately, there followed a few days later a rather disheartening pointer to the trend of Britain's external trade, which caused some revival of the pressure.

About the middle of June, the sterling-dollar rate dipped to a new low point since 1957, touching 2.7813/16, and the premium on the forward dollar widened further to well beyond the "parity" at which it would just offset the difference in short-term interest rates between New York and London.

Canadian Move

Soon after this, it seemed that sterling might come under further stress from an entirely extraneous influence, the decision of the Canadian Government to bring about an immediate depreciation of the Canadian dollar; partly because of the misreporting of this action as "devaluation," it was at first taken in some market circles to have destroyed the value of the Jacobsson denial. But the Canadian dollar was cut adrift from its gold mooring in 1950 and, since then, its gold value has been free to "float"—in principle, in accordance with the decisions of the Canadian authorities as implemented by their interventions in the exchange markets. In fact, until last month, the Canadian dollar had been at a premium over the U.S. dollar, though a fluctuating one. This exchange, therefore, was demonstrably outside the scope of Dr. Jacobsson's statement.

When this was realised, the depreciation of the Canadian dollar—from a premium of about 1 per cent to a discount of about 3 per cent in terms of the U.S. dollar—proceeded without setting up any apparent strain on confidence in other currencies. Towards the end of the month, sterling has indeed enjoyed a notable rally, partly perhaps in response to clear reaffirmations from the Chancellor and from other Treasury spokesmen of determination to maintain the present parity and of capacity to do so.

Dr. Jacobsson's statement has made it clear that the arrangements entered into last March by the central banks for mutual support of currencies against short-term speculative movements of funds—the so-called Basle agreement—were still continuing "with the warm support of the International Monetary Fund." And, since then, it has been reported that the arrangements have been extended, both in time and amount. Sterling can, therefore, count on the availability of these facilities, as well as on its normal first and second-line reserves—the holdings of gold and convertible currencies, and its recently enlarged drawing rights at the I.M.F. "We intend," said the Chancellor, "to use that strength to defend our currency."

These assurances, and the firmer tone of sterling, have not, however, arrested the fall in stock markets. The new bout of weakness in Gilt-edged securities that started with the pressure on sterling in May became more pronounced early last month, gathered momentum about mid-month, and had still not been entirely checked when this letter was written. The Government securities index of the *Financial Times* has dropped to new low points day by day. By 28th June, it had reached 75.01, as compared with 77.63 at the end of May and 79.18 at this year's best (in February).

On 3½ per cent war loan, which lacks the protection of a fixed "date," being redeemable only at the option of the Government, the flat yield is now around 6⅝ per cent. At the same time, there has been a pronounced accentuation of the weakness of equities. As I noted last month, they had reached an all-time peak, as measured by the *Financial Times* industrial share index, of 365.7 at mid-May, but, by the end of that month, had dipped to 351.5. Four weeks later, they had come back to under 320, making a total fall from the peak of some 12½ per cent. Roughly, five-eighths of the ground so rapidly gained over five months has been lost again in under six weeks.

This weakness mainly stems from the recently accumulating evidence of strains on Britain's economy and from apprehensions of the domestic measures the Government may deem it necessary to take to arrest these tendencies. The chief underlying strains are the same now as those that have been present for some time, but, recently, City opinion has become more pessimistic about them—or, at least, more aware of them. The first in importance is the trend of the balance of payments.

Balance of Payments

I recorded in this correspondence three months ago the big revisions in the official estimates, which put the identified current balance for the full year 1960 at a deficit of £344,000,000. Given the disquieting extent of this gap (even after allowing for the fact that, during the year, the economy had added £600,000,000 to its stocks of materials, work in progress, and finished goods), all official policy and all market thinking has been based on the hypothesis that, during the current year, there would be a very marked improvement. What especially worried the City a fortnight or so ago was the indication that the rate of improvement visible early in the year might be tailing off. In fact, the adverse contrast between May and April trade figures was very largely due to distorting factors, so that the market disappointment was to be exaggerated; but it is undeniable that the rate of gain up to date has not been sufficient to eliminate the current deficit—and, on a long view, Britain must have a substantial current-account surplus to keep in equilibrium, because of its commitments to provide development loans and aid to relatively underdeveloped countries.

In the first quarter of this year, for which full but provisional estimates were released recently, the current account showed a deficit of £56,000,000, a much smaller deficit than during the two preceding (and seasonally unfavourable) quarters, but a larger one than in the corresponding quarter of 1960 (when it was £37,000,000); the rate of net outgo of long-term capital, if the effects of the recent special Ford transaction are left out of account, was, however, substantially increased. The other major source of worry has been the upturn of prices and wages in the past 12 months (and especially since last autumn), putting an end to the longest phase of price stability (from 1958 to 1960) which Britain has enjoyed for many years; and there are many signs recently that this upward trend may be steepening.

In recent weeks, there have been increases in the prices of bread, beer and tobacco, and in iron and steel products; and increases are impending in rail and bus fares. This tendency, it is feared, may give an added impetus to the wage claims now being tabled. Moreover, whereas a short while ago it was widely felt that the economy was running perceptibly below the full capacity, now there is evidence that demand is beginning to press pretty hard against available resources in some sectors. The Government is plainly aware of these dangers, but has evidently not yet disclosed its full intentions towards them.

In an important speech a few days ago, Mr. Selwyn Lloyd has, however, flanked his reaffirmations of sterling policy by the warning that, so long as the balance of payments is under strain, the Government will have to take a tighter grip on its expenditures overseas, including military expenditures. Moreover, "we must say clearly for all to hear that a country without a satisfactory surplus on its balance of payments just cannot provide unlimited quantities of aid, even if some of it is tied; there must be a limit to what we can do in that respect." The Chancellor has also observed that, in the home economy, capital outlays by the public sector are rising rather faster than had been expected "and beyond what the Government can afford." Therefore, he had stated, some necessary programmes will have to be postponed; and he has also reaffirmed his budget promise to seek maximum economies in administrative expenditures and to devise new techniques for longer-range planning and control over Government outlays in general.

The markets now await details of these proposals; but they are also waiting even more anxiously to see what restraints, if any, are being prepared for the private sector—and in particular whether the Chancellor will resort to one or both of his new fiscal regulators when these instruments are made available to him by the final passing of the Finance Bill in a few weeks' time.

WORLD BANK LOAN TO PAKISTAN

The World Bank has given a loan equivalent to $15 million to the Pakistan Industrial Credit and Investment Corporation Limited (P.I.C.I.C.). Like two earlier Bank loans to P.I.C.I.C. aggregating $14.2 million, the latest loan will be used to meet foreign exchange requirements of industrial enterprises financed by the Corporation.

The Bank loan has no fixed schedule for repayment and no fixed interest charge. Each part of the loan committed for a particular project will be repaid by semi-annual instalments according to a schedule to be determined at the time of the commitment. Interest will be applied to each portion of the loan at the Bank's current rate when such portion is committed for one of P.I.C.I.C.'s projects. The loan is guaranteed by the Government of Pakistan.

The rising importance of industry in Pakistan is reflected in its contribution to the gross national product which rose from 7 per cent to 14 per cent during the decade 1950-60. The Pakistan Industrial Credit and Investment Corporation has been an important factor in the rapid growth of industry in recent years. Organised with the advice and assistance of the Bank to promote the growth of private industry, P.I.C.I.C. was established in September 1957 by private investors of Pakistan, United Kingdom, United States, Canada and Japan. Its purpose is to make loans and equity investments, help industry to obtain managerial, technical and administrative services, and assist generally in the creation of a capital market.

From the start of operations in 1957 to the end of December 1960, P.I.C.I.C. had approved 176 loans for a total of 160.7 million Pakistan rupees ($33.7 million). Since P.I.C.I.C. has been virtually the only regular source of foreign currency for private industrial enterprises in Pakistan, foreign currency lending has been its most important activity. Such loans account for four-fifths of the total number approved. About a quarter of the total loans approved have been for the manufacture of textiles and jute products and the remainder have been for engineering industries, for food products and processing plants, and for plants producing chemicals, pharmaceuticals, cement, ceramics, glass, paper products and miscellaneous items.

In addition to its lending activities, the P.I.C.I.C. has purchased equity shares in 23 industrial concerns at a total cost of 7.3 million rupees, and in 1960 it underwrote its first securities issue. Most of its share holdings have been acquired by the exercise of options under loans. Underwriting and equity participation, both directly and through options, are likely to show marked increases in the next two years.

The rapid expansion of private industry is reflected in the rising flow of applications to P.I.C.I.C. for foreign exchange loans. P.I.C.I.C. estimates that it will need about $30 million of new funds in foreign exchange over the next two years to finance its lending activities. This foreign exchange will be provided by the $15 million World Bank loan made this week, a $7.5 million loan from the United States Development Loan Fund made in May 1961, and the balance by borrowings from other sources.

As at 31st December 1960, P.I.C.I.C.'s resources amounted to Rs. 187 million ($39.3 million) made up of Rs. 20 million of paid-in share capital (of which Rs. 12 million is held by Pakistani investors and the balance by American, British, Canadian and Japanese private interests); a 30-year interest-free advance of Rs. 30 million from the Pakistan Government; loans of $14.2 million from the World Bank and $14.2 million from the Development Loan Fund; and Rs. 1.9 million of retained earnings.

The P.I.C.I.C. has recently taken steps to raise its paid-up share capital by Rs. 10 million; the relative participation of Pakistani and foreign shareholders will remain the same after the new share issue. The present foreign shareholders have agreed in principle to take up only half their rights in the new issue, renouncing Rs. 2 million in favour of the Deutsche Bank of Germany. In addition, the Government has agreed to make P.I.C.I.C. another 30-year advance of Rs. 30 million, but with an interest charge on amounts withdrawn. Including the new share capital, the Government advance, the loans from the Bank and the Development Loan Fund, the P.I.C.I.C.'s resources will be increased to Rs. 324.2 million ($70.2 million).

SAVING-INVESTMENT DILEMMA

INFLATIONARY POTENTIAL OF THIRD PLAN MUCH HIGHER THAN PRESUMED

By Dr. Om P. Nijhawan

SAVINGS are important not only as a source of investment funds but for an economy with an extensive investment programme they are also essential to provide a check against inflation. The inadequacy of savings in India has not only necessitated very large-scale foreign aid but has limited our investment efforts and created considerable inflationary tendencies in the economy. Varying savings estimates, on the other hand, make it difficult to assess correctly the inflationary potential inherent in a given investment programme. While the Planning Commission has estimated current savings in the economy at 8 per cent of the national income, a recent study by the National Council of Applied Economic Research estimates savings at 10 per cent of the National Income and suggests, in this context, that the intended investments during the third Plan should present no problem. An analysis of the savings-investments estimates of the third Plan made by the Planning Commission, however, points to a considerable inflationary potential.

At the beginning of third Five-year Plan when inflationary pressures pose a challenging problem to our planners and policy makers, it would be instructive if an attempt is made to assess the inflationary potential of the third Plan in relation to savings and investments estimates. This would also bring out the implicit assumptions underlying the Plan targets and may be suggestive of measures that may be taken to bring about the desired results.

For the purposes of this analysis, savings estimates made by the Planning Commission are taken as working figures. If the estimates of savings made by N.C.A.E.R. are more correct, the inflationary potential of the third Plan brought out in this paper should be lower accordingly.

The third Plan programme aims at securing a rise in national income of a little over 5 per cent per annum. This is expected to result in an increase in savings from 8 per cent of the national income during the last year of the second Plan to 11 per cent of the National Income during the last year of the third Plan.

Foreign Aid

The above income and savings objectives are sought to be achieved by an investment effort of Rs. 11,500 crores; Rs. 7,500 crores in the public sector including Rs. 1,050 crores of developmental expenditure and Rs. 4,000 crores in the private sector. Although the proposed total expenditure of Rs. 11,500 crores is relatively modest in terms of the results it is expected to achieve, it may seem rather ambitious in comparison with the low level of savings estimated by the Planning Commission. It would thus involve either greater foreign aid than anticipated by the Planning Commission or efforts to mobilise domestic savings will have to be stepped up considerably.

In order to mobilise resources for the third Plan, the collection of taxes has to be increased by Rs. 1,710 crores. Deficit financing during the third Plan has, however, been limited to Rs. 550 crores. Heavy reliance to the extent of Rs. 2,200 crores has been placed on foreign aid.

Even if foreign exchange resources to the extent of Rs. 2,200 crores are forthcoming, for non-inflationary development, net domestic savings during the third Plan must amount to Rs. 9,300 crores. For the purpose of this paper, however, it is not important if savings are mobilised through increased taxation or they are channelled for investment purposes by other means. The significant thing is that if inflation is to be avoided, Rs. 9,300 crores shall have to be saved during the third Five-year Plan. Savings of this magnitude would require average net domestic savings of Rs. 1,860 crores per annum. To achieve such a rate of savings as compared with net domestic savings estimated at Rs. 890 crores in 1958-59, and Rs. 1,006 crores in 1960-61 (8 per cent of the National Income) would seem to require special efforts. According to the estimates of the Planning Commission, however, savings in the last year of the third Plan would reach only Rs. 1,771 crores (11 per cent of the estimated national income); much below the average amount required for non-inflationary development. Even to attain this target, total savings during 1965-66 shall have to be 76 per cent higher than in 1960-61.

A Challenge

Our experience of the first two Plans would, however, reveal that this may be rather difficult of attainment. While net domestic savings at the end of the first Plan were Rs. 291 crores higher than at the beginning of the Plan, resulting in an increase of 66 per cent in annual net savings during the Plan period, savings during the last year of the second Plan are expected to be only Rs. 273 crores higher than the last year of the first Plan, resulting in an increase of only 37 per cent. Furthermore, a 76 per cent increase in savings during the third Plan would require net domestic savings to grow at 11.98 per cent.* This rate compares with 6.7 per cent in the second Plan and 10.64 per cent in the first Plan. The similar rates of growth of national income during the first and the second Plan work out to be 3.5 per cent and 3.9 per cent, respectively. It may, however, be underlined that, though the rate of growth of national income was higher, during the second Plan, the growth rate of savings was lower than the one experienced during the first Plan. This may have been due in part to the lower availability of consumer goods during the first Plan than in the second Plan and in part due to a relatively less favourable agricultural income during the second Plan. Although the estimated rate of growth of national income during the third Plan at a little over 5 per cent is more than that attained during the first two Plans, it is more likely that the savings experiences of second Plan may be repeated during the third Plan, especially when people are becoming more conscious of a higher standard of living. Thus, the problem of accumulation of savings during the third Plan poses a challenge to the administrative capacity of the Government. If the current inflationary pressures in the economy are to be curbed and the inflationary potential of the third Plan minimised, it is crucial that new devices be thought of by which savings can be mobilised on an increasing scale.

Looking from a different angle also, the analysis of the estimates of savings and income contained in the Draft Outline of the Third Plan would point to the same conclusion. According to the income and savings estimates in the Draft Outline, the anticipated marginal propensity to save works out to 21.73 per cent. Again, this compares very unfavourably with our experience of the past two Plans. During the first Plan, the marginal propensity to save worked out to 17.85 per cent and in the second Plan it may come to 13.02 per cent. With the increasing desire of the people for a higher standard of living and the commitment of the Government for a reduction in inequalities of income, the marginal propensity to save during the third Plan may at best be the average of the first two Plans. Thus, if the rate of growth of savings of 11.98 per cent implicit in the estimates of the Planning Commission is to be realised, some drastic measures will have to be taken.

Heavy Shortfall

But, even if the rate of growth of savings implicit in the estimates of the Draft Plan is realised, total savings during the third Plan will amount to Rs. 7,155 crores only (calculated at the implicit rate of growth of 11.98 per cent per annum), falling short of the requirements by Rs. 1,895 crores. Thus, if the proposed investment targets of the third Plan are to be carried out, deficit financing will have to be more than Rs. 550 crores, the figure estimated by the Planning Commission.

The inflationary potential of the Plan, thus, may not be judged by the estimated Rs. 550 crores of deficit financing, but by the fact that, even if the estimated rate of growth of savings of 11.98 per cent is somehow achieved, total savings will fall short by Rs. 1,895 crores. For non-inflationary development, total savings during the third Plan must reach Rs. 9,300 crores. For this magnitude of total savings to be realised, a rate of growth of over 19† per cent per annum is essential. This rate of growth of savings for the Indian economy, where the marginal propensity to consume due to the existing low standard of living is rather high, seems fantastic. This rate is much higher than that attained even by most of the very highly developed countries of the world.

Gloomy Picture

The conclusions of the above analysis, though they depict a rather gloomy picture of the saving-investment dilemma, certainly do not mean that the investment effort of Rs. 11,500 crores during the third Plan is ambitious. The target of an increase in national income of a little over 5 per cent per annum against India's experience of the first two Plans is quite modest. Such a growth rate is imperative just to maintain the social stability in the country. These conclusions only point to the hard truth that some serious thinking for increasing the savings rate in the economy is required. Whether or not actual savings will equal planned domestic investment will depend, to a great extent, upon the increase in national income. At this stage, it is not possible to visualise fully the possibilities of bringing about an equality between planned investments and planned savings. A planned effort is, however, required to increase savings to provide a check against the inherent inflationary potential of the third Plan. If the savings estimates made by the Planning Commission are correct, existing channels for the mobilisation of savings need to be improved, strengthened and expanded. More administrative and organisational vigilance would be essential. Incentives to increase savings and direct controls may have to be devised. In case inflation develops, the inadequacy of resources may be greater still.

If real resources to the extent postulated in financial spending are, however, forthcoming, the fear of inflation may be lessened. The limiting factors in economic development appear mostly at physical or technical levels of economic activity. If real resources are forthcoming, the inflationary impact of deficit spending that will be required to achieve the investment targets will be reduced.

*The geometric rates of growth have been calculated by the formula

$$r = n\text{-}1.\ \frac{l}{a}$$

where l is the last term in the series, a the first, n the number of terms and r the rate of growth.

†Calculated by the general formula

$$Sn = \frac{a(r^n - 1)}{r - 1}$$

where Sn is the sum of the geometric series, a the first term, n the number of terms in the series and r the rate of growth.

WORLD BANK BORROWS FROM ITALY

The first issue of Italian Lire bonds of the International Bank for Reconstruction and Development was offered for public subscription in Italy this week. The list opened on 3rd July and continued till 6th July. The results were not known at the time of writing. The offering consisted of Lit. 15 billion (approximately $24 million) of 15-year 5 per cent bonds at par to the public. A syndicate of seven Italian banks, headed by the Bank of Italy, are serving as underwriters. The other banks in the syndicate are Banca Nazionale del Lavoro, Banco di Napoli, Banco di Sicilia, Banca Commerciale Italiana, Credito Italiano and Banco di Roma.

The new bonds are dated 1st July 1961 and will mature on 1st July 1976. They will be subject to redemption in whole or in part, at par, on and after 1st July 1966. In the event of partial redemption, bonds to be redeemed will be chosen by lot. The World Bank has the right at any time to purchase bonds in the market, at or below par. The loan will be listed on the Rome and Milan Stock Exchanges.

The aforesaid issue is the first foreign flotation on the Italian market in more than 25 years past.

With the loan raised from Italy, the total outstanding funded debt of the World Bank aggregates the equivalent of about $2,255,000,000, including $1,700,000,000 of U.S. dollar bonds and notes and the equivalent of $555,000,000 in obligations denominated in seven currencies other than U.S. dollars. Mr. Eugene R. Black, President of the World Bank, stressed the importance of the Bank's entry into the Italian investment market. As an international agency, he pointed out, "it is vital that the Bank be able to tap the widest possible pool of investment funds throughout the world's capital markets. The willingness of Italy to permit this export of capital is a further indication of the impressive growth of her economy."

LANCASHIRE AND U.A.R. NEGOTIATING SEMI-BARTER DEAL

GENEVA CONFERENCE OF TEXTILE IMPORTERS

From Our Special Correspondent

MANCHESTER, 27th June

LEADERS of the raw cotton merchanting trade in Lancashire are optimistic that a £10,000,000 semi-barter deal with the United Arab Republic will shortly be concluded. Mr. William Williams, President of the Manchester Cotton Association, has said: "I believe something will happen." Under the deal, which is at present being negotiated by the Government of the United Arab Republic and a London firm of merchant bankers, raw cotton and capital goods would be exchanged. Provided the United Kingdom took £2,500,000 of raw cotton, the United Arab Republic would be prepared to take £10,000,000 worth of British capital goods, of which half would be spent on ships. "Thus for every £1 of cotton imported under the deal, the United Kingdom would be able to export £4 of capital goods," said a Cotton Association spokesman.

MANCHESTER LETTER

In terms of raw cotton it would involve about 25,000 bales, said Mr. Williams. A representative of the London banking firm has already visited the Manchester and Liverpool Cotton Associations. Lancashire would be expected to take the raw cotton over the next twelve months but the export of £10,000,000 of capital goods to the United Arab Republic would be spread over five years.

Commenting on the suspension of the Alexandria raw cotton futures market and the setting up of a State organisation to buy and export the cotton crop, Mr. Williams said it was not felt that this would affect the proposed deal. It was a further step in the direction already taken by the Government to obtain closer control of raw cotton trading. "They want to sell their own cotton and they are making very friendly overtures towards Lancashire—friendlier than for some time," said Mr. Williams.

In the six months to the end of April Lancashire bought 4,470 bales of cotton from the U.A.R.

Setback to Shift-working

High hopes of a rapid extension of shift-working in a reorganised cotton industry, for long a feature of the mills of so many of Lancashire's overseas competitors, have had a setback. The pace has slowed down and, on the weaving side at least, the movement in some districts has gone into reverse with the withdrawal of a number of shifts and the shelving of plans for others.

In the past month the Weavers' Amalgamation has dealt with only one application for double-day or night shift-working. A survey carried out by the union shows that a number of shifts already operating have been cancelled. Several of them are the evening "housewives' shifts," normally started only in times of peak demand and as such expendable, but a number of night shifts have also been withdrawn. The survey has also shown, as might be expected, some adjustments in the doubling trade, including mills on double-day shifts falling back to single-shift operation. One or two mills are also "playing off" operatives a week in turn.

In the face of labour shortages and the time lag in completing re-equipment programmes, it may be said that hopes of widespread shift-working in Lancashire mills were based on a good deal of optimism, at least in the short-term. But the significance of the present developments is that they are attributed not so much to staffing difficulties as to the state of trade in the industry.

The picture is patchy: while shifts in some mills are coming to an end and there are stories of order books down to six weeks, elsewhere—and sometimes just around the corner—there are mills clamouring for workers and under pressure to narrow delivery periods.

All This and Formosa, Too . . .

The situation at the production end of the trade is a reflection of what has been happening in the Manchester market. In the present state of caution and uncertainty, few customers are prepared to risk stock-building on any sizable scale and the scrappy, hand-to-mouth pattern of day-to-day business can be expected to continue until there is more confidence and buyers can be persuaded to take a forward view.

Meanwhile, there is no lull in the arrivals of overseas cotton goods in the United Kingdom, the most unsettling factor in the present situation. A breakdown published by the Cotton and Rayon Merchants' Association of sources of supply gives point to the remark of the cotton man who said the other day: "We don't know where it will be coming from next."

Even Formosa is now stepping up the pressure, with shipments in the first quarter, equal to an annual rate of 28 million yards, showing a ninefold increase over last year's figure. Numerically, the "league table" was just sufficient to field two football teams with one man in reserve, headed by India followed by Hong Kong and then Spain, with a grand tour of Asia and Europe to follow by way of Japan, Pakistan, China, Yugoslavia, Hungary, Bulgaria and Turkey.

The figures for May, just issued, show a further upward swing with arrivals of woven cotton fabric, basically grey, rising to more than 71 million yards, the third highest total on record for a single month. With these heavy shipments the aggregate for the first five months of the year jumped to more than 352,500,000 yards, imported at a cost of almost £30 million, an increase of more than 55 million yards on the corresponding period of last year. Cotton yarn imports were also higher in the first five months of 1961—19,065,000 lbs. against 16,648,000.

Seeking an International Solution

If President Kennedy should be looking around for a ready-made illustration of the "disruptive effects" of unrestrained textile imports into a country, he need look no further than Britain. Within the next day or two Lancashire trade leaders will be involved in briefings for next month's Geneva conference, to be held within the framework of G.A.T.T. at which delegates will be expected to get to grips with the hard realities involved in translating President Kennedy's lofty hopes of an international agreement on world textile trade into positive action.

The conference will have a threefold purpose: first, to increase significantly access to markets which at present are subject to import restrictions; secondly, to maintain orderly access to markets where restrictions are not at present maintained; finally, to secure from exporting countries a measure of restraint in their export policy so as to avoid disruptive effects in import markets.

Lancashire has had its fair share of sitting around international conference tables: in the past, not always with conspicuous success, especially when high ideals and the hard world of competitive trading have somehow been thrown together, as in this case. British delegates will travel to Geneva in the knowledge that the textile industry of this country has much to gain if the low-cost textile producers of Asia can be persuaded to exercise restraint in their shipments, while at the same time a number of European countries can be persuaded to "share the load" with Lancashire.

But whatever happens at Geneva, any solution based on a wide international understanding is likely to have a decisive effect only in the long term. Lancashire's problem is immediate. For this reason, the Geneva conference should not be allowed to cloud or confuse the pressing issue of what is to happen when the voluntary undertaking with Hong Kong, India and Pakistan runs out in six months' time, even though some of these countries might try to take refuge beneath the international conference table.

Man-made Fibres: Production Figures

Production of man-made fibres increased to 46,030,000 lbs. last month, an improvement of nearly 4 million lbs. on the April figure, which was affected by holidays. The May output was slightly above the average of the first five months of the year but was still considerably below the high levels achieved during much of 1960, according to returns from the British Man-made Fibres Federation.

Production of filament yarn during May totalled 22,810,000 lbs. and staple 23,220,000 lbs. The Federation said there was a particularly brisk call for acetate filament yarns at present and demand for rayon filament yarns was at a satisfactory level for the time of the year both in textile and tyrecord types. The May production figures for staple reflected limited short-time working at the largest rayon staple factory to counterbalance some accumulation of stocks. The Federation said the general outlook remained encouraging. Production could not be expected to increase until after August because of summer holidays at production centres.—*All Rights Reserved.*

STATE BANK OF BIKANER

(Subsidiary of the State Bank of India)

Head Office: **BIKANER**

OFFERS

a comprehensive Banking service through collection of bills and issue of demand drafts on all places in India where there is a branch of the State Bank of India or of any subsidiary of that Bank.

Cumulative deposits accepted on attractive terms

THE STATE OF HANDLOOM INDUSTRY

WORKING GROUP'S ESTIMATES OPEN TO DISPUTE

THE Union Government's decisions on the recommendations of the Working Group on Handloom Industry, it may be recalled, were briefly commented upon in the issue of *Commerce* dated 13th May 1961 (*vide* page 886). As the findings and conclusions on which the Group's recommendations were based have since become available in summary form, it would be useful to our readers to deal with them at some length here. Some of these findings, especially the ones bearing on the quantum of cloth production in the handloom sector, cannot, however, be critically examined in the absence of the full report. For instance, it is stated that "the handloom industry is estimated to be increasing its production at an annual rate of 130 million yards." But it is not known on what basis or bases this estimate has been made. If the reliability of this estimate is seriously questioned, the validity of the Working Group's consequential finding that handloom cloth production should have increased by 650 million yards during the second Plan period, as compared with the target of an additional 700 million yards per annum by the end of that Plan, will be open to dispute.

The Working Group, taking its stand on the aforesaid estimate, has reached the conclusion that "the handloom industry has fulfilled the role assigned to it in the National Plan." This is far from the truth. Presumably on this questionable basis, the Group has estimated handloom production at the end of the third Plan at 2,800 million yards, representing an increase of 675 million yards over the present level. For reaching this level of production (2,800 million yards) in the handloom sector, the yarn requirement would be of the order of 1.56 million bales. Of course, the Working Group seems to be aware of the limitations of its estimates, as will be seen from the following recommendations:

"While the conversion factor of 4½ yards of cloth per pound of indigenous yarn corresponds to the pattern of production obtaining in the industry at present, the percentage of free yarn delivered to and consumed by the handloom industry would require verification.

"It is necessary that the scheme for collection of statistics should be implemented by all the State Governments so that the figures of production obtained therefrom could be compared with the estimated figures of production.

"A system whereby returns from powerloom units could be enforced would be helpful in assessing the percentage of yarn consumed by the powerloom industry.

"It will be useful if the pattern of distribution of the imported yarn to the various consumers is studied."

Employment Estimates

If estimates of production in the handloom sector are not dependable, so also are the estimates of employment in that sector. The Working Group itself has given the finding that, for various reasons, it becomes difficult to measure the character and magnitude of employment obtaining in the industry. Still it has made some estimates on the basis of production figures which themselves are open to dispute. These employment estimates have been made in the following manner:

An idea of the extent to which underemployment has decreased may be obtained by expressing it in terms of the number of persons required for producing the extra production.

Taking the figure of 5.3 yards as the level of full-time employment, it would require 2.48 lakh persons to produce the extra quantity of 394 million yards.

The increased production would have given rise to employment for 3.72 lakh persons in the preparatory processes.

The reduction in underemployment achieved in the industry can be regarded as equivalent to full-time employment for 6.20 lakh new workers.

The total full-time employment generated as a result of development schemes can be reckoned at nearly 9,700 persons.

It is estimated that the short-time employment provided will be equivalent to the employment of 1,300 persons for a period of 12 months.

It is estimated that the reduction in underemployment in the handloom industry by the end of the second Plan period would be equivalent to new employment for 10.33 lakh persons.

Earnings

The Working Group has also given the finding that there has been a uniform rise in the earnings of the weaver. At the same time, it has recommended that "it is necessary to set up a machinery to collect data regarding employment and earnings of weavers at frequent intervals." Obviously, the estimates of earnings are also not quite reliable. It would appear that our statistical knowledge of the handloom industry is derived more from guesswork than from reliable data.

Scheme of Rebate

The findings and conclusions of the Working Group in regard to assistance for the handloom industry in the second Plan period show that the total allocation to States during that period would reach Rs. 26.5 crores and that the performance in the matter of enlisting weavers within the co-operative fold is satisfactory. The Group's findings and recommendations regarding the scheme of subsidy are summarised below:

It was the scheme of rebate which was primarily responsible for increasing the sale of handloom cloth.

There is no likelihood of the inherent handicap of the handloom industry *vis-a-vis* the mill industry being reduced or eliminated in the immediate future.

The repercussions of any increase in the excise duty on mill cloth will be felt by the textile industry as well as by the community.

Unless a protected market by total reservation of *dhotis* and *saris* is given to the handloom industry (other than powerlooms), rebate or other alternative schemes to reduce the cost of production of handloom cloth and thereby the inherent handicap of the handloom industry will have to continue.

Since November 1958, the rebate on handloom cloth is only 6 nP per rupee. This, combined with the lower level of excise duty on mill cloth from July 1958, has widened the gap between the price of mill cloth and handloom cloth.

There is no force in the contention that the rebate scheme has not benefited the consumer.

Bearing in mind the fact that the scheme is being implemented by a large number of selling units throughout the country, allegations about possible abuses of the scheme do not provide sufficient ground for abandoning it.

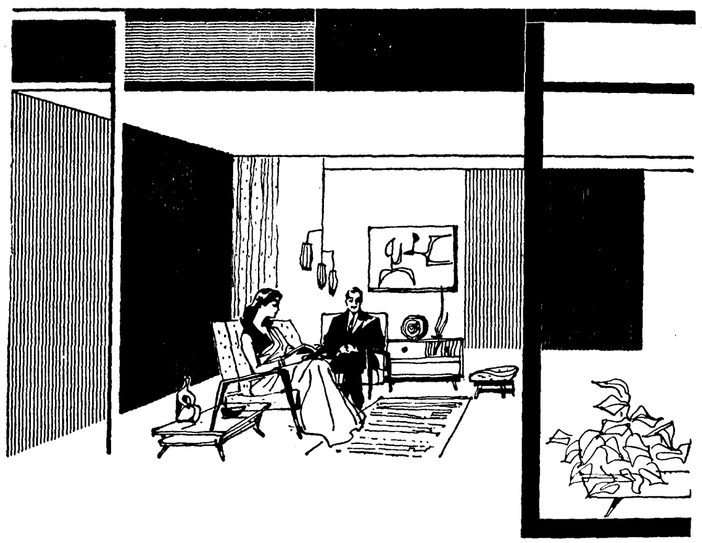
The suggestion to limit rebate to periods of large-scale accumulation of stocks may not be workable.

The suggestion that with mill production having been pegged, the handloom industry should not need any form of financial assistance may not be acceptable.

The Group's recommendations have not fully found favour with the Government, as will be seen from the following passage in the Government's resolution:

"The Government of India agree with the Working Group that the scheme of rebate on sales of handloom cloth has contributed a good deal to the increase in the sale of handloom cloth and that it will have to be continued for some time. However, it cannot continue as a permanent form of subsidy to the industry. It was with this objective that Government decided to effect a gradual reduction in the rate of rebate from six nP in the rupee to five nP in the first instance, so that the funds thus saved could be diverted to other more important developmental schemes, which will, in the long run, be of far greater advantage to the industry. This policy will continue to govern Government's approach to this scheme during the third Five-year Plan period."

The Working Group has noted the disappointing progress in the implementation of the powerloom schemes. No more than 5,000 powerlooms are estimated to have been installed before the end of the second Plan. According to the Group, a realistic estimate of the number of powerlooms that can be installed by the end of the third Plan would be only about 13,000, including those installed in the second Plan period. It has, however, made some salutary recommendations in this connection, namely, that the number of powerlooms per society be increased from 10 to 25, that no restriction on the introduction of the powerloom scheme to cities be imposed on account of population and that there be no expansion of loomage in the handloom industry. The Group's estimate of the possibilities in the matter of installing powerlooms seems, however, to err too much on the side of caution and realism.



Glass makes a distinct difference

Any home can be modernised—with glass. And not in appearance alone. Glass seals out moisture, noise and irritating dust and, fitted cleverly, filters through healthy, natural light. Glass is easily cleaned, too!

Versatile—glass has numerous other uses in the office, factory, school, hospital and store.

The finest and most durable in India, HPG sheet glass is tested for unvarying quality at every stage of manufacture.

Available in a wide variety of sizes and thicknesses.

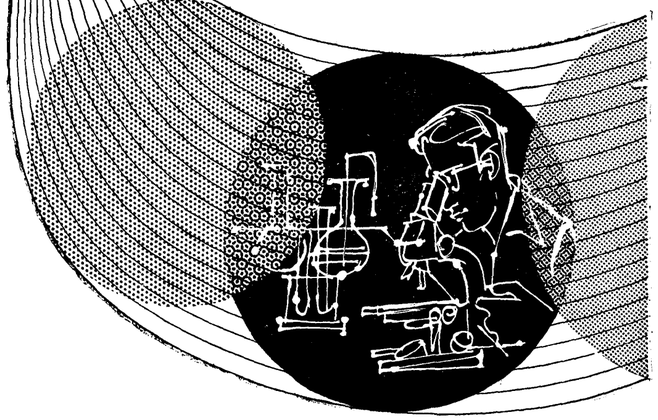
Dyestuffs The Key to Industrial Prosperity



Dyes play a key role in the manufacture of textiles, paints, plastics, paper and ink—all necessities of day-to-day life. Until Independence, India depended on imported dyes.

AMAR DYE started manufacturing dyes in 1956. Today, by dint of intensive research we can offer dyes comparable in quality to the imported products... and at the most competitive prices.

The rising tempo of industrial activity will generate an overwhelming demand for Dyestuffs. We shall ensure that this demand is fully satisfied.

MARKED RISE IN NEW INDIA ASSURANCE'S PREMIUM INCOME

CLAIMS EXPERIENCE, HOWEVER, DISAPPOINTING

THE results of the operation of the New India Assurance Company Ltd. (Managing Director: Mr. B. K. Shah, Bombay) as disclosed by the statement of accounts for the year ended 31st December 1960 give rise to mixed feelings. The Company undoubtedly did more business, as is evidenced by a gratifying rise in premium income. But the claims experience was quite unfavourable. The net profit (after provision for taxes) is also substantially lower and it would have been lower still but for the profit made through sale of investments.

The combined net premium income from the three departments, namely, fire, miscellaneous and marine, has jumped up by Rs. 2.01 crores to stand at the impressive figure of Rs. 10.86 crores. As in the previous year, the bulk of expansion in the premium was accounted for by the miscellaneous department, the exact increase being of the order of Rs. 1.27 crore. The fire premium experienced a rise of Rs. 60 lakhs, while the marine premium, which had remained almost stationary last year, registered an increase of Rs. 14 lakhs.

Excepting for the marine department, the claims ratio of which dropped from 76.7 per cent in 1959 to 63.7 per cent in 1960, the claims experience, as a whole, in the year under review showed a marked deterioration. The incurred claims ratio for the fire department went up from 34.6 per cent in 1959 to 43.4 per cent in 1960, thanks to the unfavourable results of the Company's reinsurance acceptances from the U.K. and Continental markets, and that for the miscellaneous department from 50.7 per cent to 55.5 per cent. Consequently, the aggregate claims cost of the three departments rose from 50.2 per cent in 1959 to 52.6 per cent in the year under review. The costs of commission and the expenses of management, however, declined fractionally from 36.4 per cent in 1959 to 36.2 per cent in 1960. But this improvement was too negligible to offset the effects of unfavourable claims experience. The underwriting profit, therefore, has received a sharp setback from Rs. 72.94 lakhs to Rs. 45.37 lakhs. The net profit is, therefore, markedly lower at Rs. 45.69 lakhs, as compared with Rs. 55.06 lakhs for 1959. As stated above, it would have been lower still but for the larger profit made from sale of investments. Such profit for 1960 amounted to Rs. 15.14 lakhs, as against Rs. 9.61 lakhs in 1959. The lower assessable profit has meant smaller provision for taxation, namely, Rs. 24.05 lakhs, as compared with Rs. 37.75 lakhs for the previous year. The Directors have, however, credited a sum of Rs. 13.33 lakhs to the profit and loss account being refund of taxes for previous years. This credit has raised the balance available for appropriation to Rs. 59.02 lakhs, some Rs. 4 lakhs more than that a year ago.

The Directors have sought to maintain the net dividend unchanged at Rs. 3.99 per share of Rs. 15 each, by supplementing the dividend of Rs. 4.50 with a bonus of Re. 1.20, both subject to deduction of tax at 30 per cent. The proposed distribution to shareholders requires Rs. 56.96 lakhs. A sum of Rs. 15 lakhs has been transferred to the dividend equalisation reserve, but, having regard to the fact that the Directors have withdrawn Rs. 11.39 lakhs from the capital reserve of the Company, the net addition to the reserves is only Rs. 3.61 lakhs.

Department-wise Analysis

The premium income of the fire department has risen by Rs. 60.20 lakhs to Rs. 4.07 crores. Claims amounted to 43.4 per cent, as against 34.6 per cent in the previous year. As noted earlier, the increase is due to unfavourable results pertaining to reinsurance acceptances from the European countries. In fact, 1960 turned out to be quite an abnormal year for fire business in these countries, because of the incidence of a large number of catastrophic fires. The Company's fire business in India and other overseas markets, however, was quite satisfactory. The commission account showed a rise of 2.3 per cent and the cost of expenses of management, taxes and other charges experienced a decline of 1.1 per cent. The profit earned by the department has fallen considerably from Rs. 66.2 lakhs in 1959 to Rs. 29.0 lakhs in the year under review. The fire funds have been increased by Rs. 31 lakhs to Rs. 2.45 crores and, in terms of the premium income, it works out to 60.2 per cent.

The underwriting business of the miscellaneous department has increased very substantially from Rs. 3.43 crores to Rs. 4.70 crores. The cost of commission has risen by 0.2 per cent, whereas the ratio of expenses of management, taxes and other charges has declined by 1 per cent. But, reflecting the higher claims ratio, which has gone up by 4.8 per cent, the profit of this department has fallen sharply from Rs. 7.9 lakhs in 1959 to Rs. 1.2 lakh. The fund of the miscellaneous department now stands at Rs. 2.47 crores, as against Rs. 1.92 crore a year ago and, in terms of the premium income, it works out to 52.6 per cent.

The performance of the marine department from the point of view of business underwritten showed a welcome improvement over the previous year. The net premium income increased by Rs. 14 lakhs to Rs. 2.10 crores. Claims experience was also better, the claims ratio having dropped by 13 per cent to 63.7 per cent following the corrective measures which were undertaken by the Company. Expenses of management, taxes and other charges increased by 1.1 per cent but cost of commission showed a reduction of 2.7 per cent. After providing 100 per cent premium reserve for unexpired risk and taking credit for interest on the marine fund, the department earned a profit of Rs. 15.2 lakhs, as against a loss of Rs. 1.2 lakh incurred in 1959. The marine fund has increased by Rs. 14 lakhs to Rs. 2.11 crores.

The following table will give an idea of the working of the Company during the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Fire:				
Net premium	407	347	307	324
Claims paid and outstanding	177	120	110	142
Commission and expenses, etc.	179	148	135	151
Fire fund	245	214	194	205
Miscellaneous:				
Net premium	470	343	249	164
Claims paid and outstanding	261	174	115	85
Commission and expenses	161	120	88	60
Miscellaneous fund	247	192	145	102
Marine:				
Net premium	210	197	197	142
Claims paid and outstanding	134	151	133	101
Commission and expenses	55	54	53	36
Marine fund	211	197	197	176
Net profit*	46	55	53	28
Drawn from capital reserve	11	11	..	..
Refund of taxes for previous years	13	..	..	..
Dividend	54	54	38	21
Provision for taxation	24	38	13	12
Carry forward	3	1	1	1

* After taxation.

Over the year, the total funds of the Company have increased by Rs. 1.05 crore to Rs. 11.19 crores. How the various funds of the Company have been strengthened in the last five years will be clear from the following table:

(In lakhs of rupees)

	As at 31st December				
	1960	1959	1958	1957	1956
Funds					
Fire department	245	214	194	205	188
Miscellaneous department	247	192	145	102	92
Marine department	211	197	197	176	165
Total	703	603	536	483	445
Free Reserves					
Capital reserves	42.39	53.8	51.6	51.6	..
General reserves	100.0	100.0	100.0	100.0	100.0
Premium on shares	0.6	0.6	0.6*	36.2	36.2
Dividend equalisation reserves	45.0	30.0	30.0	22.0	22.0
Exchange reserve	15.0	15.0	8.0	5.0	5.0
Investment reserve	25.0	25.0	22.0	22.0	22.0
Total	228.0	224.4	212.2	236.8	185.2

* In 1958, a sum of Rs. 35.60 lakhs out of the premium on shares was utilised for issue of bonus shares.

The book value and market value of the Company's investments amount to Rs. 7.25 crores and Rs. 7.93 crores, respectively, as on 31st December 1960, showing a rise in value of Rs. 68.30 lakhs. Besides, there is a free investment reserve of Rs. 25 lakhs.

Insurance in India—A Study of Insurance Aspect of Social Security in India. By Dr. A. N. Agarwala. Published by Allahabad Law Journal Press, Allahabad. Pages: 628, Price: Rs. 27.50.

Even though insurance is one of the oldest corporate professions in this country, there is very little analytical material on it, except for the *Year Books* and reports of committees appointed by the Government. This book by Prof. Agarwala is, therefore, a welcome addition to the meagre literature on the subject and it is hoped that research students in our universities will follow up this lead by doing further study into the nature and growth of insurance in India.

The title of this book is misleading in some ways; the book makes no reference to general (non-life) insurance, which is the most important branch of insurance from the point of view of uninhibited growth as related to various aspects of the economy. The sub-title, which terms the book a study of the insurance aspect of social security, is again misleading, as social security in India has made a very small and halting beginning in the form of Employees' State Insurance Scheme and Maternity Benefits. So, naturally, a part of the section on social security consists of a summary of the reports of various Government committees.

Two-thirds of this voluminous publication deals with various aspects of life insurance in this country. Here again the utility of the whole collection is limited by the fact that there is very little analysis of the growth of life insurance since nationalisation. Most of the statistics are upto 1955, even though the book was published late in 1960. Again, this publication is a good example of the pitfalls that pure academicians should look for when drawing conclusions from published statistics on any aspect of a very practical business. It is often unrealistic to group Indian statistics on the lines of American life insurance literature. Economic phenomena are complex and it is easy to jump to hasty conclusions from inadequate data. For example, the author concludes that Indian life offices were careless and unable to invest cash properly. This conclusion was drawn from a high coefficient of correlation between the annual increase in life fund and the annual change in the amount of the cash held. Probably, the real reason for any change in investment pattern lay in the fact of lopsided development of the market—where one single company, the Oriental Life, did a preponderant percentage of total business and invested eighty per cent of its funds in Government securities. It is possible to arrive at unrealistic conclusions regarding an apparent change in the investment pattern as soon as one forgot that the Oriental's share in the total business was falling. It would have been useful if practical men of affairs had been consulted before the book was published. It would have given the author an insight into the capable handling of the investment affairs of some of the companies.

The author arrives at the conclusion that, in pre-nationalisation days, the medium-sized, and not the biggest, insurance companies were the most efficient. Surely, the best known method of judging the overall efficiency of a life insurance office is to find out the highest level of surplus (i.e., divisible profits) for any given level of premium and this would automatically take care of diverse factors such as expense ratios, interest rates and premium rates. It is possible to miss the main principle in a maze of partially related statistics which are often converted into coefficients of correlations.

It is to be hoped that future authors would set a better example by producing a more compact and reasonably priced book which can easily make its point better. Over the six hundred pages of this book, the same statistics are repeated first as a table, then as a graph and then as written material without much new light being thrown. While this attempt is most welcome, it is necessary that our authors learn to be precise, to the point and not out of touch with people who run the insurance business.

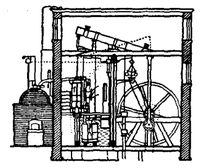
Steam...
Industry's greatest power



SINCE 1782, when the first Rotative Steam Engine enabled the use of steam power to motivate machinery, steam has played an ever increasing part in industry throughout the world.

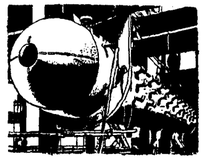
Not only is steam today's most important source of power for the civilised world, but it must remain so for many years to come. Even atomic power is yet in its infancy and can only be applied as an alternative source of heat. Steam is indeed the real power of industry.

While this is but an outline of the extensive and continually growing part that steam plays in power generation and industry throughout the world, it indicates quite clearly the unparalleled importance of steam power in the industrial growth of India... and, therefore, the urgent need to manufacture vital steam-raising plant in this country to meet the demands of expanding industry.

This is one of the needs which has led to the formation of a new and powerful industrial group, ACC-Vickers-Babcock Limited (AVB). The vast technical knowledge and extensive practical experience available to it will enable the new company to make an important contribution to Indian industry—and help Indian engineers overcome some of the difficulties which have faced them for so long.

The new AVB plant is nearing completion on a 700-acre site at Durgapur. The workshops, designed on modern lines, will have built into the structure electric overhead travelling cranes with 70 tons lifting capacity. All workshops have been designed to allow for progressive expansion so that it will be possible to lift 200 tons without making structural alterations. Up-to-date machine tools are being installed. When completed, they will include a 3000 ton hydraulic press capable of bending steel plates up to 5" thick for use in the manufacture of high pressure boiler drums, and pressure vessels required for the fertiliser, chemicals and oil refining industries. The new plant will make it possible to manufacture steam-raising equipment in the high pressure range—for the first time in India.

ACC-VICKERS-BABCOCK LTD. offers the industrialist his best chance to ensure a fully *integrated* installation comprising the boiler plant itself and a wide range of equipment from the fuel handling and preparation plant to the ash plant and dust disposal installation.



Besides, the industrialist has the confidence that he will get after-sales service of the highest quality from AVB!

FRESH WATER FROM THE SEA

PILOT PLANT IN U.S. GOES INTO OPERATION

By John Kerigan

THERE is no such thing as a five-minute shower bath for a small boy—25 would be more like it—but if there were, that shower would use up 95 litres, or 25 gallons, of fresh water. Roughly 140 litres of water are needed to grow enough grain for one single slice of bread. If a man sprinkles his lawn for an hour in the evening, it takes 1,100 litres of water. Thirty-two thousand litres are needed to produce a kilogram of beef, 840,000 for a ton of alfalfa, nearly three million litres for a ton of synthetic rubber.

Water is valuable—and its price is going up. The U.S. uses a staggering one million million litres every day—six times the amount used 40 years ago. The figure is expected to become 2,300,000 million litres daily by 1980. That one million million litres used each day represents about 60 per cent of the total supply available. It is estimated that by 1975 the U.S., with a population of perhaps 235 million, will be using about 90 per cent of the total supply.

But there is no shortage of water. Three-fifths of our planet is covered by water, and most of the land-mass is underlaid with oceans of water now unused. What is needed is the economical means to make usable this vast quantity of water which incredibly, almost completely, surrounds us—in short, a cheap and feasible way to take fresh water from the sea.

President Kennedy pressed a button in the White House on 21st June and opened a plant in the State of Texas which makes fresh water from salt water. The President regarded his action as one of great importance. "I can think of no cause and no work," he said, "which is more important (than this), not only to the people of this country but to people all around the globe, especially those who live in deserts or on the edge of oceans."

The $1,255,000 plant at Freeport, in Texas, is the first of five saline water conversion demonstration units planned or being built by the U.S. The others will be located at San Diego, California; Webster, South Dakota; Roswell, New Mexico; and Wrightsville Beach, North Carolina. Each will experiment with a different method of water desalinisation. The Freeport plant uses the "long-tube vertical multiple-effect distillation method"—a complicated name for a simple, efficient process. It produces 3.8 million litres (one million gallons) of fresh water a day.

The new plant, although a rather forbidding tangle of pipes and valves, actually operates on a simple principle. Think of a tea kettle: all you need for distillation is salt water and a flame. The flame will heat the water until it reaches its boiling point. Some of the water will then vaporise. If you condense this vapour or steam, you will have distilled (fresh) water. The plant at Freeport pulls water from the salty Gulf of Mexico. Then, 12 times in 12 different tanks within the plant, the water is distilled. The briny residue is returned to the gulf. For every 12 litres of sea water drawn into the plant, nine litres of fresh water are recovered.

The Freeport plant is not the end-all answer to the problem of taking fresh water out of the sea. Although it is nearly twice as efficient as any other plant, its product still costs about one dollar per 3,800 litres of water, whereas costs in U.S. cities range from 25 to 75 cents for a similar amount. Other methods—solar distillation, salt removal by membrane processing, purification by varying freezing methods—may prove more efficient.

The important fact is that a long step was taken last week in Texas toward realisation of one of the oldest dreams of man—extracting fresh water from the seas.

The President had further words of encouragement for countries around the world, more than 60 of which embrace arid or semi-arid areas where water shortage is a heavy brake upon economic development and social progress. "I want to assure the people of the world," he said, "that we will make all the information that we have available to all people. We want to joint with them, with the scientists and engineers of other countries, in their efforts to achieve one of the greatest scientific breakthroughs of history." He said he hoped that "before this decade is out," man's efforts at taking fresh water from the sea "will literally see the deserts bloom.

World-wide research (stepped up enormously in the past few years) led to the development of the Freeport plant. The same holds for the four additional demonstration plants soon to be constructed for the U.S. Office of Saline Water and for the 17 or so major conversion plants now in operation around the world.

Dramatically different techniques will depend on basic research into the nature of salt water, about which surprisingly little is known. In this regard, a month-long symposium is scheduled during June-July, at the Woods Hole Oceanographic Institution, for dissemination of knowledge and the outlining of new scientific pathways.

Technologists, meanwhile, are continuing to apply existing knowledge in the development of salt water conversion methods better than that at Freeport. Here is a sampling of systems coming out of technological research laboratories:

The General Electric Company has developed a "wiped film" technique of distillation. The machine consists essentially of two tubes, one inside the other, and a set of blades similar to those of an automobile windshield wiper. The blades extend the length of the inner tube.

Sea water is pumped through narrow outlets at the edges of the blades, which rotate around the interior wall of the inner tube, thus spreading the water in a thin film. The wall is heated by a steam confined in the space between the two tubes. Vapour given off by the now hot film of sea water is directed into a cooler where it condenses into fresh water.

A freezing technique is being utilised by the Fairbanks Whitney Corporation in the manufacture of a series of plants which will produce fresh water at the edge of the Negev Desert in Israel. Credit for the technique goes to Israeli scientist Alexander Zarchin who left his homeland, Soviet Russia, in 1947.

The central idea for the project is an old one, the fact that when sea water freezes the resultant ice is free of salt. In operation, cooled sea water is sprayed into a vacuum tank. Some of it evaporates and is sucked into a condenser where it becomes fresh water. Part of the sprayed water is frozen by the cooling effect of the evaporation. It drops to the bottom of the tank and mixes with the remaining brine. The two are separated by screening, and the ice is melted.

Another freezing process, under test by the Blaw-Know Company, involves a salt water-butane mixture. Since butane boils at a temperature just below the freezing point of sea water, it is used in both its liquid and gaseous forms to freeze the water and mealt the ice. Because of the closeness of the critical temperature points, little additional energy is needed to keep the process going.

Syracuse University is studying a method of separating water from salt by addition of chemicals. The product of the reaction is a solid which takes up water, but not salt, into its crystalline structure. The solid is melted to remove the water, and the chemical is reused in the process.

Among the many other possible techniques for sea water purification is that of biological removal of salt. Experiments at the University of California, Los Angeles, have shown that algæ (microscopic one-celled plants) ingest the salt, considerably reducing its concentration in sea water. One advantage of this process, should it prove workable, is that little or no outside energy (for heat, refrigeration, etc.) would be needed.

What scientists and technologists are striving for in these efforts is not simply ways to change salt water into fresh, but rather, ways to do it at the smallest possible expense. They are working long and hard, and each success, small as it may be, is a step toward progress for all nations in drawing vital fresh water from the unlimited resource of the sea.

One who did not waver...

Jamshedpur's latest blast furnace needed a 'big bell'—a 20-ton component requiring highly skilled casting and machining. A difficult operation even if the right machine tools were available, but in 1958 they were not, and import seemed the only solution to all but one determined and resourceful young engineer, N. P. Naik.

Working on this problem in his leisure hours, Naik gradually crystallised his ideas into mathematical formulae and blue-prints. He developed, at the same time, a new machine tool to do the job by remodelling a small boring machine, stage by stage. Then started the casting and intricate machining, until, in a short time, Naik and his colleagues succeeded in producing a 'big bell', fully meeting the technical specifications to the last detail. As a tribute to Naik's fine endeavour, Tata Steel gave him an award of Rs. 10,000, the highest made under a ten-year old scheme to encourage initiative from the shop floor.

Men like Naik are carrying forward a fine Jamshedpur tradition, recalling Jamsetji Tata's exhortation: "Let the Indian learn to do things for himself."

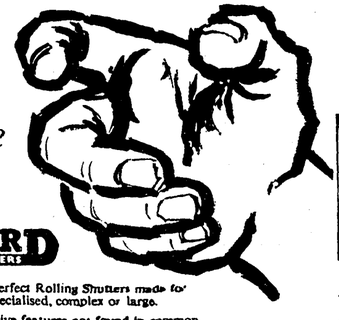
Built like a Gun...



STANDARD
ROLLING SHUTTERS

Built like a gun

Precise, Quick-acting, Perfect Rolling Shutters made for all purposes, however specialised, complex or large.
STANDARD has exclusive features not found in common rolling shutters. They are built to face, for a lifetime, every hazard encountered. And STANDARD is *guaranteed* for one year, with FREE SERVICE during that period.
See how much more you get with STANDARD - first name in Steel Shutters.
STANDARD manufactures M.S. Rolling Shutters, Rolling Grills, Collapsible Gates, Shutter Gates, Alligator Doors and Fire-proof Doors (electrically operated).

SPACE SCIENCE IN THE UNITED STATES

NEW TECHNOLOGY USHERING IN SECOND INDUSTRIAL REVOLUTION

THE United States will be spending, within the next 10 years, as much as $50 billion for both civil and military space programmes. This colossal expenditure will be neither a waste nor beyond the capacity of that country. It may well be repaid many times over in the long run. Already, the new technology of space science has achieved some peace-time benefits which, together with the potential ones, are described as "tremendous." Some of these benefits in the treasure-house of new techniques, materials and inventions, which have found or will soon find practical uses, have been presented in summary form as follows:

(1) New lines of instant communication: World-wide TV reception. Speed letters and communications around the world.

(2) Conquering the weather: Tiros I—an artificial earth satellite launched by the United States—has already proved that it is feasible to employ satellites for observing clouds, cloud patterns and related atmospheric conditions. Coming: 7 to 30-day forecasts that can vitally affect and help business and agriculture.

(3) New boons for everyday living: New metals for both industry and home. New materials for both building and clothes.

(4) For health and well-being: Concrete benefits have already resulted from the national space programme. These are: radiation immunization drugs; electronic systems for "watching" hospital patients; improved photographic records for doctors and other advanced medical techniques.

(5) Many new materials and methods for industry.

(6) Economic advantages: New techniques, new jobs, new frontiers. For example, the X-15, the rocket craft designed to "fly" beyond the atmosphere at altitudes up to 100 miles, is a product of 400 different firms and contractors.

Negative Thinking No Good

This brief narration of benefits is contained in a background note distributed at the First National Conference on Peaceful Uses of Space, sponsored by the National Aeronautics and Space Administration and the Tulsa Chamber of Commerce of the United States. It may be recalled that a brief reference to this Conference, held on 26th and 27th May 1961, at Tulsa in Oklahoma, was made in this page of *Commerce* dated 3rd June 1961. Some of the papers read at the Conference have since been received from the United States, and these are bound to interest the scientist and the layman alike. For instance, the address of Senator Robert S. Kerr, Chairman of the Committee on Aeronautical and Space Sciences, is interesting for its discussion of the opportunities for industry and education in the Space Age. Describing those "who judge our space effort in the light of their aversion to spending public and private funds to find and explore new frontiers because they cannot see an immediate profit" as "negative thinkers," Senator Kerr observes:

"Discoveries made by the space researchers may have more significance to our future economy than any other single factor. When Michael Faraday showed Prime Minister Gladstone his new electrical generator, Gladstone asked, 'Of what use is it?' Faraday replied, 'Some day you may tax it.'

"Faraday had a sharp eye for the future and there are many among us with equal vision. This country is not only indebted to Dr. Werhner Von Braun and his group of German scientists for the decisive part they have played in developing our system of rocket weapons, it is also indebted to him and other men of great skill and imagination for their spirit and daring vision in assessing the space exploration programme's role in our total national effort. Dr. Von Braun put it like this: 'Our entire civilisation and particularly our economy depend vitally upon the continual discoveries we make. If we do not discover new things, then we cannot develop new markets and new needs, and our industry soon would be unable to employ all the many people it does. We have to keep stoking the machinery of our economy with new inventions, if we do not want to run head on into a depression.'

"Economists tell us that the rate of growth of our economy depends to a large extent upon the investments made in new processes and in new product manufacture. The Department of Commerce reports that, although no exact statistics are available, the causes of the great complexity are our new product practices. At least a tenth of the goods comprising our gross national product this year represent new designs, model change-overs or recent evolutionary changes resulting from research and development. Research and development activities in the United States this year will exceed 13 billion dollars, of which approximately 8 billion will be financed by the people through our federal government. The remainder is being sponsored by private enterprise."

Senator Kerr's paper is also notable for a striking fact contained therein. This is related to the manufacture of a wide range of electronic equipment for the space research programmes. Thanks to the impetus provided by space research, instrument firms in the United States are coming to have a huge stake in the computer industry which is often described as the heart of Space Age technology. This branch of science is growing faster today than any other, for the computer is now the basic instrument in the acceleration of scientific knowledge. The industrial potential of the Space Age is, of course, not exhausted by this example alone, for the "second Industrial Revolution" (so described by Mr. Donald W. Douglas, Jr., President, Douglas Aircraft Company, California, in his paper read at the Tulsa Conference) that is being caused by space research involves the development of new materials, new processes, new techniques, new machinery and new facilities.

Employment Implications

To adjust to this technical revolution, industry in the United States is employing constantly increasing numbers of engineers, scientists and technicians. In the Douglas Aircraft factory, for instance, engineering and scientific employees made up only 3 per cent of its total employment during World War II; five years later, this force amounted to 10 per cent of all employees; with the arrival of missiles, the number of engineers and scientists rose to 15 per cent and, with the addition of space programmes, now amounts to 20 per cent of its total employment. According to Mr. Douglas Jr., this proportion, in all likelihood, will grow in the next 10 years to one technical employee to every two shop and clerical employees. He continues:

"The second Industrial Revolution has left us no alternative. We need men of knowledge, talent and creativity to spearhead our advance deeper into the Space Age.

"Things just aren't as simple as before.

"Almost as dramatic as the rise of the engineer and scientist has been the growing importance of the manufacturing technician at the expense of the assembly-line worker.

"Today, manufacturing is confronted with demands for new steels, plastics and exotic metals, for new forming, casting, bending, welding and bonding techniques, for printed circuits and for clean rooms, high-altitude chambers and other environmental test facilities. The long production runs of ten years ago—with the need for thousands of assembly-line personnel—have almost vanished. Rather, the jobs are short-term and much more complex and sophisticated."

How the second Industrial Revolution is being stimulated in the United States has also been succinctly described by Mr. Edgar M. Cortright, Assistant Director for Lunar and Planetary Programmes. The great majority of N.A.S.A. funds, he says, are spent with U.S. industry, and the successful exploration of space rests heavily on this group which is being called upon to solve many difficult technological problems, to achieve new standards of quality and reliability and to devise new approaches to low volume manufacture of complex equipment.

Communications

In the field of communications, satellites can and will provide adequate broadband circuits for transoceanic telephony within the means of the telephone systems of the world. It is said that their ultimate cost will be considerably less than that for providing such circuits by cable. Already a number of telephone and telegraph companies in the United States have proposed to the Federal Communications Commission a variety of methods for the technical operation and business management of a world-wide satellite system. The American Telephone and Telegraph Company, for instance, has announced its willingness to pay the cost of communication satellite experiments, including launching cost, and to bear its share of the cost of an operating system. The General Telephone and Electronics has proposed a highly flexible world-wide communication system in which each ground station is capable of communicating with every other ground station. If and when satellite circuits are thus established, they will be highly valuable for transoceanic television and data transmission as well as for telephony.

Meteorology is yet another field which will benefit greatly by space research. Thanks to the pioneering knowledge of Tiros I and Vanguard satellites which studied storms and clouds, it will be possible in another year to map simultaneously the entire cloud cover and heat balance of the whole earth. An immense problem lying ahead is translating the detailed information thus acquired in a form in which the interactions of storms one on the other can be interpreted and predicted. According to Mr. L. V. Berkner, Chairman of Space Science Board, National Academy of Sciences (U.S.), no one can doubt that with this vast new power to see the weather of the whole of the earth, man's knowledge of meteorology will be expanded enormously and his ability to predict the weather and the climate increased noticeably. Incidentally, a passage in Mr. Berkner's paper sums up the prospects for practical applications of space research, and this deserves to be quoted here:

"Let me comment briefly on the applications emerging from this scientific exploration of space. Immediately ahead we see a multiplication of long-distance communications by a hundred times and at a fifth of the cost. The applications in meteorology of which I have spoken must be valued in the hundreds of millions. Space applications in the military field may well reduce the danger of war, with a consequent value beyond estimate. New forms of navigation will appear and space science will produce new industry in a myriad of ways. So we must look at our space expenditures as investments to be repaid many times over in better products, services, employment and convenience."

Above all, there will be some very valuable applications in the medical field. Already, according to Mr. Alfred M. Mayo, Deputy Director, Office of Life Science Programmes, advanced miniature sensing, analysis, and display devices, stimulated by the bio-medical requirements of the space programme, are showing potential for direct use by the medical profession to improve the health of people on earth. If the new frontiers of space exploration thus lead to "new frontiers" of happiness and welfare for mankind, the outstanding contribution of the United States to that result will be warmly acclaimed throughout the world.

O.E.E.C. SURVEYS SHIPPING SITUATION IN 1960

The Maritime Transport Committee of the Organisation for European Economic Co-operation has recently issued its annual report. This report covers developments in the shipping sphere during the calendar year 1960 and, in addition, gives an analysis of world trade over the last ten years, indicating its effect on the supply of and the demand for shipping.

In 1960, according to the report, world trade increased by about 10 per cent. but, as a result of the continuing flow of new tonnage from the world's shipyards (over 8 million gross registered tons in 1960) and the fact that about 3 million gross registered tons of vessels were withdrawn from layup, there is still a surplus of tonnage which maintains a depressing effect upon the freight market.

The world fleet has increased by 4 per cent during the year, and within this total the tanker fleet has increased by 10 per cent. There is, furthermore, a large amount of tanker tonnage under construction and on order.

The report forecasts that, as a result of steadily increasing trade, the demand for and supply of dry cargo tonnage will come closer together in the months ahead. But this will not apply to the tanker market, where the supply of tonnage is still well in excess of requirements.

The report describes the effect of increasing competition from the air on the sea passenger trades and gives details of the situation in the North Atlantic trade, where the number of passengers travelling by sea has decreased slightly during the past three years, whereas in the same period air passengers have increased by almost 100 per cent. It is emphasised, however, that passenger liner operators are confident that there will be a continuing demand for sea travel in general, particularly in the field of tourism, which justifies the replacement of their fleets by modern, faster and more economical vessels.

In a chapter on international shipping problems, the report refers particularly to flag discrimination, and notes that many governments have continued during the year to follow restrictive and discriminatory shipping practices in order to secure cargoes for shipment to the national flag. The report points out that a solution to this problem will be even longer in coming if the normal commercial processes continue to be disturbed by governmental discriminatory action of this nature. One of their effects is to keep in operation or bring into existence tonnage which is not required for the most efficient and economical carriage of international trade, and thus to aggravate the surplus tonnage situation.

The report also refers to the problems raised by the registration of vessels under flags of convenience. It is noted that total tonnage registered under these flags has been reduced in 1960 and that, under present conditions in the freight market, when profits are small or non-existent and consequently exemption from taxation is of less consequence, the inducement to register ships under flags of convenience is diminished. It is pointed out, however, that the main basic problems inherent in the use of flags of convenience still remain.

NEW PRODUCTS AND PROCESSES

Machine for Road Surfacing

AN automatic spreading unit which can be built on to a tandem diesel road roller to lay tarred chippings has been developed by the Aveling—Barford Ltd., England. The new unit eliminates haphazard hand spreading and the mechanical discharge results in more uniform, skid-resistant surfaces. The spreading unit consists of a two-ton capacity hopper, an hydraulic motor-driven eight-blade rotor to control discharge, an agitator to prevent solidification, and a pump to operate the hydraulic motor. The rate of discharge is adjustable between 80 and 150 sq. yds. a ton by means of a variable flow valve.

Copying Documents

Price lists, pamphlets, business letters and forms can be produced quickly, it is claimed, with the aid of the latest document copying system developed by Kodak and known as the Ektalith method. Key to the method is a transfer paper which allows a sharp image to be formed from almost any type or size of copy and transferred to an "offset master" in two minutes. The operator exposes a sheet of the transfer paper to the original copy, processes it for 20 seconds, and then transfers the photo-image direct to the paper "master." It is stated that more than 2,000 copies can be produced from one "masters." The process can be undertaken in ordinary room lighting and there are also two processing units for use in darkrooms. When a number of direct copies are required for limited circulation before the press run they can be made by using an Ektalith copy unit.

Electro-Integrator

An electro-integrator, re-creating models of any part of the earth's crust under investigation, has been designed at the Riga Polytechnical Institute, Riga, Soviet Russia. On these models it makes measurements which geophysicists could hitherto obtain only in field conditions. The mathematical machine analyses electrical, magnetical and gravitational fields. Such an analysis is indispensable for an interpretation of the data of indirect geological prospecting. The device can solve systems of linear algebraical equations with several thousand unknown quantities. The new device, it is claimed, is one of the biggest integrating instruments of various purposes. It considerably facilitates and expedites the analytical work of geophysicists, makes for a sharp reduction of trial drilling and at the same time increases the precision of the location of mineral deposits and reserves. The first laboratory model of the machine will be installed at the Leningrad Institute of Methods and Techniques of Geological Prospecting.

Novel Filter

A filtering agent which was originally developed as a "molecular sieve" compound has been produced in a new form in the U.K. It can now be made into the form of a core of material. This, it is claimed, can be used in refrigeration systems where streams of liquids or gases must be dried. Previously these materials were produced in the form of a bead in order to make the "molecular sieve." In their new form the compounds can be regenerated at temperatures of from 400 to 600 degrees Fahrenheit and are said to be as cheap as the original "molecular sieve" material. Handling and replacement is simpler. The cores contain three different sizes of pore openings, ranging from 4, to 5, and 10 Angstroms. These different sizes of pore openings function, it is claimed, as selective absorbents. The new core materials are expected to be especially important in chemical engineering processes, as well as in atomic energy and possibly also in certain aspects of guided weapons construction.

Airport Safety Device

A new airport safety device called the visual glide slope indicator lights, has been recommended for use on a world-wide scale by the International Civil Aviation Organisation (I.C.A.O.). The lights white in the upper portion and red in the lower, help aircraft pilots in making a proper approach to an airport. The first installation of the new system, developed by the British engineers, has gone into operation at New York's La Guardia airport. Four rows of the two-coloured lights are mounted on each side of the runway. If an airplane pilot brings his craft in for landing at too great a height he will be able to see only the white portion of the lights. If his altitude is too low, he will see only the red portion. A proper approach will allow the pilot to see both red and white portions.

De-salting Water

A novel process is being experimented in the U.K. for use in de-salting water which is said to yield a higher quantity of fresh water with a more compact plant. The process possesses the advantage that plant is of exceptionally small size. It is claimed, that it is only about half the size and weight of many de-salting systems currently used. The system is said to be exceptionally efficient in operation, and the fresh water it produces is very pure containing only one-millionth part of salt. The process depends on the use of what is known as "thin film distillation" which takes place in two cylindrical tubes one of which is placed inside the other. Sea water is fed into the tube system from the bottom and is spread by means of a series of blades into a film scarcely a thousandth of an inch thick on the inside of the tube. All the bubbles are removed from the sea water by means of the blades. Instead of using distillation, the new process uses evaporation by applying heat in the form of steam to a specially designed fluted outside of the tube. As the heat is applied, the thin film of sea water vapour rises in the tube, evaporates, and is converted into pure water by normal scientific processes. More than half the water processed is said to be produced as pure water. Plant of this type is claimed to be capable of processing sea salt water very cheaply.

High-speed Packaging Machine

A cartoning machine designed to meet the needs of manufacturers of powders, soap flakes, cereals, garden fertilisers and other granular products will be among a score of machines to be displayed by the Rose Brothers (Gainsborough) Ltd., England at the International Packaging Exhibition to be held at Olympia, London, in September next. The machine, it is claimed, erects, glues, fills and seals cartons at speeds of up to 55 per minute. Special attachments such as automatic weighers, volumetric fillers and vibratory conveyors can be fitted if required. Also on show will be machines for wrapping bakery products, sweets, and cigarettes. For the sugar confectionery trade there will be a machine which provides a twist or sachet wrap for various types of sweets of irregular shape. Output of double and twist wraps is up to 450 a minute and sachet wraps 350 a minute. The machine can use cellulose film with or without under strip, wax paper or foil. All that is required for alteration of sweet sizes is a change of one feed plate. Another machine for the confectionery trade is for the high speed foiling of soft-centred chocolates of varying shapes. It is fitted with an automatic belt in-feed so that it can take chocolate direct from an enrober belt, thus avoiding handling. The cigarette packing machine is designed to assemble, fill and deliver the slide and shell type of cigarette packet. The cigarettes can be packed with or without an interior wrapper. A vane type cigarette feed is used with a gentle oscillating movement which enables the cigarettes to be counted and fed without damage. The model can be built to produce any size of packet to hold up to 25 cigarettes.

Synthetic Rubber Blend

An interesting blend of synthetic rubber with polyvinol chloride is produced by British Geon, Devonshide House, Piccadilly, London, W.1. It is called Polyblend 503. The synthetic rubber is a butadiene/acrylonitrile polymer containing some 32 to 34 per cent of the second component. The ratio of P.V.C. to rubber in the final blend is 11:9. Polyblend 503 can be used either as a P.V.C. or a rubber. As P.V.C. it is a thermoplastic with the rubber acting as plasticiser. As rubber it can be used normally and vulcanised. It can be processed at 110° C., but if higher temperatures are used a stabiliser must be added to protect the P.V.C. When blended with additional nitrile rubber Polyblend 503 makes a compound resistant to ozone and oil.

KURASHIKI RAYON CO., LTD.

2, Umeda, Kitaku, Osaka, Japan Cable Address: "KURARAY OSAKA"

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS. APPLICATIONS FOR SHARES ARE INVITED ON THE BASIS OF PROSPECTUS.

A copy of the Prospectus together with the documents required to be attached thereto by Section 60 of the Companies Act, 1956 has been duly filed with the Registrar of Companies, Maharashtra, for registration.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking for the manufacture of steel wire ropes (black and galvanized) with a rated capacity of 3,600 tons per annum (working on two-shift basis).

An application will be made to the Stock Exchange, Bombay, for permission to deal in the shares now offered and in due course for an official quotation.

UNITED WIRE ROPES LIMITED

(INCORPORATED ON 19TH OCTOBER 1960 UNDER THE COMPANIES ACT, 1956.)

AUTHORISED CAPITAL:

	Rs.
1,00,000 Shares of Rs. 100 each	1,00,00,000

ISSUED CAPITAL:

45,000 Equity Shares of Rs. 100 each	45,00,000
10,000 9.5% Cumulative Redeemable Preference Shares of Rs. 100 each (free of Company's Income-tax but subject to deduction of taxes at source at the prescribed rates) ...	10,00,000
Total ...	55,00,000

Shares already issued to and subscribed by the signatories to the Memorandum of Association and taken up by Directors as Qualification Shares:

420 Equity Shares of Rs. 100 each fully paid-up ...	42,000

CAPITAL AGREED TO BE TAKEN UP:

A. By Promoters, Directors, Friends and Associates ...	17,08,000
B. By Life Insurance Corporation of India—	
5,000 Equity Shares of Rs. 100 each	5,00,000
5,000 9.5% (free of Company's Income-Tax but subject to deduction of taxes at source at the prescribed rates)	5,00,000
Total ...	27,50,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION:

	Rs.
22,500 Equity Shares of Rs. 100 each	22,50,000
and	
5,000 9.5% Cumulative Redeemable Preference Shares of Rs. 100 each (free of Company's Income-Tax but subject to deduction of taxes at source at the prescribed rates) ...	5,00,000
Total ...	27,50,000

The 44,580 Equity Shares and 10,000 Preference Shares being issued will be payable as under :

On application	Rs. 25 per share
On allotment	Rs. 25 per share

The balance of Rs. 50 per share is payable in two calls of Rs. 25 each, the first of such calls to be made not earlier than 3 months after the date of allotment and the second call to be made not earlier than 3 months from the date of payment of the first call.

The Calls on Equity and Preference Shares shall be made simultaneously and proportionately.

APPLICATION FOR SHARES

Application for Equity and Preference Shares should be made on the printed form accompanying the Prospectus. Applications must be for a minimum of 5 shares or multiple thereof.

BOARD OF DIRECTORS

Shri Morarji Jadavji Vaidya (*Chairman*), Industrialist, 3, Cuffe Parade, Colaba, Bombay 5.

LEGAL ADVISERS

Messrs. Daru Hemany & Co., Alli Chambers, Tamarind Lane, Bombay 1.

AUDITORS

Messrs. Gondalia & Mandviwalla, Hamam House, Hamam Street, Bombay 1.

REGISTERED OFFICE

MEHTA BUILDING, MEDOWS STREET, FORT, BOMBAY 1.

UNDERWRITING COMMISSION

The Underwriters will each be paid an underwriting commission of 2½% on the face value of all the shares underwritten by them respectively besides brokerage of 1% on shares allotted on application bearing their stamp.

BROKERAGE

Brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised Broker. Brokerage on the same basis is payable to the Underwriters in addition to the underwriting commission on all allotments in respect of applications made or procured by them and bearing their rubber stamp.

OBJECTS OF THE COMPANY

The Company was incorporated on the 19th October 1960 for carrying on all or any of the objects and purposes mentioned in the Memorandum of Association including in particular to manufacture steel wires and wire ropes (both black and galvanized).

COMMENCEMENT OF BUSINESS

The Company has obtained a Certificate to Commence Business bearing No. 11851 dated 22nd December, 1960 from the Registrar of Companies, Maharashtra.

PROSPECTS

Steel wire ropes are a specialised product and are used by various industries such as mines and mining, shipping, engineering, ropeways, oil exploration, lifts, cranes and for other haulage purposes. The major portion of India's domestic requirement of wire ropes is at present met through imports with the resultant continuous drain on the country's foreign exchange. With the increasing tempo of industrialisation envisaged in the successive Five-Year Plans the demand for wire ropes is likely to increase considerably in the near future. According to estimates of the Planning Commission the country's demand for wire ropes at the end of the Second Plan will be about 25,000 tons a year which is expected to rise to approximately 40,000 tons per year at the end of the Third Plan. This ever-increasing demand leaves a wide gap between the supply and demand and thus assures this proposed factory a good market for its products which will eventually assist the country's foreign exchange position.

The Company's plant will be most up-to-date in design and technique of production of steel wires and wire ropes of the best quality and will have an initial capacity of 3,600 tons per annum. At a nominal additional capital cost it is also proposed to manufacture High Tensile steel wire for use in prestressed concrete construction and an application has already been made to the Government of India for issue of a Licence for an annual production capacity of 2,100 tons.

ESTIMATE OF PROFITS

On the basis of the existing prices the Directors are of the opinion that, in the absence of any unforeseen circumstances, the Company should be in a position to pay reasonable dividends on Equity Shares.

TAX BENEFITS

The Company will enjoy the special benefits under the Indian Income-tax Act, 1922 as regards development rebate, in addition, as a new industrial undertaking, it will enjoy exemption from Income-tax for profits upto 6% on the capital employed for the first five years of the Company's operation.

Shareholders of the Company would also be exempt from Wealth-tax on their holdings for a period of five years under the Wealth-tax Act and may also be exempt from tax on such dividend paid from the Company's profit exempted from tax under Section 15C of the Indian Income-tax Act.

FOREIGN COLLABORATION

With the approval of the Government of India the Company has entered into a (1) Technical Services Agreement and (2) Assistance to the Management Contract with **Messrs. Lepage Consulting Engineers of Antwerp (Belgium)** who have been working as specialist consultants in the field of wires and wire ropes for over 20 years. Under the Technical Services Agreement the consultants will provide all technical know-how, layout and other engineering and the plant will be erected under their supervision. They will advise the Company in respect of machinery, raw materials and staff necessary for operation of the plant and will train the Company's technicians in Europe and India. This Agreement expires when the plant is installed and the quantity and quality of products are proved. For these services the consultants will be paid a remuneration of £23,520.

The Assistance to the Management Contract comes into force immediately after the expiry of the Technical Services Agreement. As per the Contract Messrs. Lepage Consulting Engineers will provide their experts to look after the various processes of manufacture at the Company's plant for a period of 5 years from the start-up. For these services called "technical assistance in the management of the plant," the consultants will be paid at the rate of Rs. 75,000 per year.

Thus the Company has been assured of continuous availability of technical know-how and assistance in the production of wire ropes. A beneficial feature of the collaboration agreements with Messrs. Lepage Consulting Engineers is that about 70% (Rs. 4,85,000) of the payments to be made to them as stated above will be invested by them in the equity capital of the Company.

LOCATION

The factory is to be located at Thana, near Bombay, where all facilities like transport, power, water, etc. are adequately available.

START OF PRODUCTION

The plant is expected to go into production late in the year 1962.

CAPITAL OUTLAY AND SOURCES

Capital outlay and working capital :

The estimate of requirements is as follows :

	Rs.
(a) Land, buildings, roads, etc.	11,00,000
(b) Plant and machinery, imported and indigenous, including import duty, transport to site and erection charges.	56,85,000
(c) Cost of technical services and know-how	3,15,000
(d) Pre-operating expenses	4,15,000
(e) Preliminary Expenses including Underwriting Commission, Brokerage, and Issue Expenses	2,45,000
(f) Working capital	19,40,000
Total ...	97,00,000

The above requirements will be met from the following sources :

	Rs.
(a) Equity Capital	45,00,000
(b) Preference Capital	10,00,000
(c) Foreign exchange loan from the Industrial Credit and Investment Corporation of India Ltd.	30,00,000
(d) Loan from Company's Bankers and from other sources	12,00,000
Total ...	97,00,000

LOAN IN FOREIGN CURRENCIES FOR IMPORT OF MACHINERY

The Industrial Credit and Investment Corporation of India Ltd., Bombay, have agreed in principle, subject to the approval of the International Bank for Reconstruction and Development, to lend to the Company an amount in foreign currencies equivalent to U.S. $630,000 (approximately Rs. 30 lakhs) to pay for the cost of imported machinery and capital equipment. The loan will bear interest at 7¾% per annum and is repayable in 15 half-yearly instalments commencing from November 1, 1963 and ending in November 1, 1970. The loan will be secured by a first legal mortgage of the Company's present and future assets subject to the hypothecation of movables to secure bank borrowings for working capital. So long as the loan or any part thereof is outstanding I.C.I.C.I. shall be entitled to appoint a Director who shall not be liable to retire by rotation nor shall be required to hold qualification shares.

PAYMENT TO PROMOTERS

No payment is to be made to Messrs. C. H. Gandhi and Sons, Promoters of the Company, except for the reimbursement of the actual out-of-pocket expenses incurred by them and no profit or benefit has been given to any other person as promoter of the Company.

MANAGING AGENTS

The Government of India by their letter No. 9(5)-C.III/60 dated 2nd June, 1961 have given their approval to the appointment of Messrs. C. H. Gandhi and Sons Private Limited as the Managing Agents of the Company for a period of 10 years from 2nd June 1961.

MINIMUM SUBSCRIPTION

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 27,50,000. Subscription of the amount is assured as the entire public issue has been underwritten.

REDEMPTION OF PREFERENCE SHARES

The Redeemable Cumulative Preference Shares of the face value of Rs. 10 lakhs being issued under this Prospectus shall be redeemed by the Company at par at the expiry of 10 years from the date of issue.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON THE 17th JULY 1961 AND WILL CLOSE AT THE CLOSING OF BANKING HOURS ON THE 24th JULY 1961 OR EARLIER BUT NOT BEFORE THE 19th JULY 1961.

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

PATTERN OF COMPANY DIRECTORSHIPS–I

FINDINGS OF PILOT STUDY OF BIG COMPANIES IN WESTERN REGION

By Dr. Raj K. Nigam, Director of Research and Statistics and **N. D. Joshi,** Research Officer

[The authors, both of whom belong to the Department of Company Law Administration, Union Ministry of Commerce and Industry, recently conducted a pilot study of the composition and characteristics of boards of directors of the big-sized joint-stock companies in Gujarat, Maharashtra and Madhya Pradesh. Their findings are set out in this article against the background of trends in the U.S. and the U.K. As the article is too long to be conveniently accommodated in one issue, it has been split into two parts. The second part will appear in our next issue. The authors have brought out the interesting point that there is scope for a detailed study of the subject, taking into account all the regions. Here is a worthwhile suggestion for writers on joint-stock companies in India which, if implemented, may prove to be quite a rewarding job.—ED.]

IN law, the Board of directors is the "seat of authority" and the "locus of legal responsibility" in the company. It is the highest policy-making body of a company and, for this reason, the company directors are very powerful people indeed in a company. To a certain extent, however, their position has, of late, been seen to have whittled down in the big-sized companies in Europe and America. Taking cognisance of the fact that the company directors hold great powers within a company or a group of associated companies, the Company Law in all those countries where it exists, prescribed suitable safeguards and restrictions against the possible misuse of authority by the directors in a way detrimental to the interests of shareholders of the company whom the directors in law represent; at the same time, the law also defines their legal responsibility for the compliance of the provisions of the law and for the direction of the affairs of the company. According to an eminent author on "Business Management," the board of directors has become a "tired fiction." In most of the large companies, it has in effect been deposed and its place has been taken by executive management. But, notwithstanding this, by and large, the company directorship, continues to be a privileged position which is of considerable interest and attraction to the men in business, and the board of directors continues to be under the unremitting vigilance of the investing public and the Government Administration. Failure to meet the various legal obligations cast on the directors makes them liable to certain specific penalties prescribed in the Act.

Desirable Attributes of a Director

It is essential that the board should comprise a body of competent people. The competence of the directors is reflected in their understanding of the problems of the enterprise with which they are connected, in their integrity and moral trustworthiness as also in their fairness and pragmatism. Further, since "directors are responsible paramountly for the long-term survival of the business, they should be men habituated to long-term thinking." It is, however, not necessary that every director on a board should concern himself mainly with long-term planning, but it is nevertheless essential that at least a few members of the board should be thinking chiefly about the pattern the company must follow if it is to be successful in years to come. Also some directors on the board must have technical knowledge concerning the industrial processes, management and accounting.

Nominal Directors

But, while it is true that the board of directors should be manned by persons with the necessary qualifications, to function as really effective directors, in actual practice, there is a body of directors who function as nominal directors under the board of the company. They come to hold a place on the board for a variety of reasons. For example, there are the 'hereditary' directors, who, on attaining the age of majority, become the directors of companies which their parents had started. Another class of directors is 'fee' or interest directors who are simply concerned with their fees for attending meetings of the board and the return on the shares of the company subscribed by them. A third type is of the exalted directors on whom the directorships are imposed, the reason for which vary according to circumstances. Such persons are usually chairmen of the boards of directors. The designation of 'guinea-pig directors' has also been given to the directors who are directors in name only.

In our country, the managing agents followed the practice of putting their nominees on the boards of companies and these persons carried out the orders and instructions of the managing agents. Such directors come particularly very handy to form quorums to get certain matters through at the board meetings. The prevalence of this practice which in reality resulted in the total eclipse of the personality of the board of directors by the directing hand of the managing agents in the past led to abuses and weaknesses in the corporate management in the country.

Eventually, Government had to take notice of the unsavoury aspects of the management of companies resulting from this practice and to lay down certain restrictions in the Companies Act. Thus, the present Company Law has set a limit on the number of nominee directors. Proviso (1) to Section 377 of the Companies Act, 1956 lays down that "the managing agent of a company may, if so authorised by its articles, appoint not more than two directors where the total number of directors exceeds five, and one director where the total number does not exceed five." Some more limitations on the powers of managing agents to send their nominees are prescribed in Section 261 of the Act, which, *inter alia*, states that an associate, or officer or employee of the managing agents can be appointed directors by the passing of a special resolution by the general body of the company, the required majority for such resolution being 75 per cent, as against the simple majority of 51 per cent of the members present at the meeting.

Present trends in the composition of boards of directors in the West, in Europe and America, reveal that, in the case of big-sized companies, attempts are now made to balance the board of directors in three principal directions, namely, (*a*) the age distribution of the directors, (*b*) the proportion between executive and non-executive directors, and (c) the balance between the representation of different functions and interests. As Seymour says, "a board can be expected to be most effective when its membership is carefully balanced as regards age, and the proportion of its executive to its non-executive directors and when the specialist knowledge which the directors can collectively contribute covers the whole of the company's activities." The age is said to be an important imponderable in creating confidence in the investing public. Older men on the board are favoured because of their ripe experience. "It is quite extraordinary how older men are sometimes able to bring their collections of methods used many years ago to the solution of current problems; often display the knack of indicating some crucial factor that has been entirely overlooked by the younger men. The ability to visualise the total situation is an accomplishment that matures with the years." As against this, the advantages of having younger directors on the board are, of course, those naturally attached to youth, energy, enterprise, enthusiasm, knowledge of the present and interest in the future. In addition, by appointing men as directors at a reasonably early age, a company ensures that, in the ensuing years, it will have men of mature experience in its affairs.

Inside Directors *vs.* Outside Directors

In the selection of executive and non-executive directors, the question of outside *versus* inside directors and of part-time *versus* full-time directors comes up. The chief reason for selecting outsiders as directors is that "both the large and small business need board members whose experience, outlook and interests are different from those of the management." As Peter Drucker says, "what is needed on a board is not people who agree with management anyhow, but people who are likely to see things differently, to disagree and to question, especially to question the assumptions on which the chief executive team acts without, usually, knowing these assumptions." The presence of insiders in an overwhelming number would place the management in a position of isolation. Outside directors, because of their eminence, known integrity and professional experience and ability are believed to raise the prestige of the company. As against this, inside directors from the executive and full-time salaried top technical cadres are seen to import a greater degree of co-ordination within the whole organisation and a unity of purpose in achieving greater efficiency, better productivity and accelerated expansion of productive capacity of the enterprise. Full-time executive directors owe their ascendancy to the complexities of operation and working of large-scale corporate businesses. They are nowadays conspicuously seen on the boards of large corporations in the U.S. and are slowly creeping into the boards of companies in other countries. Competent opinions, however, favour their presence as a small minority on the boards. To quote Drucker: "The board must also be detached from operations. It must view the company as a whole." This means that working executives of the company should not dominate the board. In fact, the board will be stronger and effective if it is genuinely an 'outside' board, the bulk of whose members have never served as full-time officers of the company. In selecting outside directors, a further precaution is also to be taken that they would give the affairs of the corporation the attention that it needs. Outsiders can easily become yes-men for the chief executive, whether through friendship or inertia. They may even be selected in the first place by the chief executive to be essentially a dummy board.

Interlocking Directorships and Plural Directorships

Two other important issues are also associated in the selection of outside directors on the board. These are the questions of interlocking directorships and plural directorships. Sometimes, certain persons or directors are offered directorships on the boards of several companies for their reputation for shrewdness, sound executive judgment and general experience of business. For control over financial resources or eminence in the financial circles also, certain persons are offered plural directorships. As persons with such qualifications and calibre are indeed few, their scarcity accentuates a trend towards pluralism and interlocking. The phenomenon of interlocking directorates is very common among the largest British and American companies. Interlocking directorates are only one of the many ways in which intimate ties are established between separate corporate bodies. Apart from the common directors, corporations become related to one another through intercorporate stock ownership and through the ownership of stocks in separate companies by the same institutional or individual stock owner. Business enterprises, both corporate and non-corporate, may be enduringly tied to each other by agency arrangements, long-term supply contracts, patent licensing agreement and similar other contractual arrangements which establish, in fact, though not in legal theory, a permanent bond between the parties. All such links of ownershship and enduring contracts are as relevant as inter-linked directorates in making the structure of corporate alliances, which accentuate the tendencies of concentration of economic power. In our country too, this trend is noticeable among the companies controlled and managed by big business houses. Through the device of interlocking directorates, a "community of interests" between firms or companies is formed. This no doubt facilitates closer co-ordination and rationalisation among the interlocked companies, but, at the same time, it often leads to reduction of competition and to concentration of economic power in fewer hands which would be detrimental to the general interests of the public.

Types of Interlocking Directorships

The interlocking relationships among corporations through persons associated with those corporations are of various types, depending upon the character of the enterprises that are linked, the directness of the linkage, the frequency of the linkage, and the responsibilities of the persons who constitute the links. Corporations that are linked together may be actual or potential competitors, buyers and sellers of commodities, users and suppliers of services, including banking and transportation services, or not engaged in dealings with each other. Here, it may be mentioned that all the interlocks established through common directorships are not to be regarded as significant, since they may be of a fortuitous nature. In the U.S., the various studies of interlocking directorates have named seven broad patterns of interlockings

Note: The views expressed in this paper are entirely the personal views of the authors and the Department of Company Law Administration is in no way committed to them.

Secured through common directors, namely (*a*) interlockings between competitors which tend to limit or eliminate competition between the competing concerns; (*b*) interlockings between companies in the same or closely related industries but not in competition with each other; (*c*) interlockings between companies that face similar problems; (*d*) vertical interlocks among common companies engaged in the distribution of materials in short supply; (*e*) vertical interlocks among companies that sell or distribute the products of another and thus create preferential access to market outlets; (*f*) interlocks between manufacturing corporations and financial institutions such as banking and insurance companies that may assure adequate credit to favoured companies and result in withholding credit and capital from other competing concerns; and (*g*) interlocking relationship to protect an investment.

Safeguards Against Interlocking Directorates

The phenomenon of interlocking directorates is fraught with great dangers to the community. As Florence says, "When the interlocking directorates and the holding-plus-subsidiary combines are added to the trade associations and the complete merger, the reduction of competition appears formidable." The possibilities of resurgence of such a harmful phenomenon have been reduced in our country by the provisions of the Companies Act. Section 275 of the Companies Act lays down that no person, save as otherwise provided in Section 276, would hold office at the same time as director in more than 20 companies as determined by the provisions of Section 278 of the Act. This would thus appear to be a very significant development, considering the earlier position when some directors were seen to have more than fifty directorships. During the debate on the Companies Bill in 1955, great interest was shown in Parliament in this question which was examined against the background of the accepted socio-economic objective of socialistic pattern of society.

Research Studies in the U.K. and U.S.

There is not, however, adequate realisation of the various problems connected with the selection of directors for the company boards. There are no full-dress studies on this subject in our country as are available in the U.K. and the U.S. In those countries, with the help of survey techniques, research inquiries have been made into the following aspects of the composition of board of directors of big and medium-sized corporations:

(*a*) Sizes of the boards of directors of companies of different trades and ages;

(*b*) the frequency of change in the composition of the boards;

(*c*) the considerations at work in making appointment to the boards;

(*d*) the proportion of executive and non-executive directors on the boards;

(*e*) the total number of directorships held by directors; and

(*f*) interlocks between companies created by the phenomenon of plural directorships.

Aspects of Board Composition Studied

In this paper, we have attempted to throw light on a few of the foregoing questions with the help of the materials available to us from the returns filed by the companies in Form No. 32, as required by the provisions of Section 303, during the year 1956-57. This is a pilot inquiry, limited to a sample of only big and giant-sized companies. It may be admitted here that had the study been modelled on the basis of a comprehensive questionnaire issued to the companies to secure copious statistical data and biographical notes on the company directors in consultation with them, as several writers like Sargant Florence, John Seymour, H. T. Copland. A. R. Towl, Mabel Newcomer and others have attempted in the U.K. and the U.S., the authors would have no doubt got a lot more detailed information on the company directors which would have thrown greater light on the socio-economic problems of company managements in the country.

(To be concluded)

The third largest State Transport Undertaking in India. Mysore Government Road Transport, has placed a repeat order for 30 Comet bus chassis with Ashok Leyland Ltd., of Madras. Powered by Leyland 0.350 diesel engines, the long-wheelbase chassis will bring the fleet of Ashok Leyland Comets ordered by Mysore since the State nationalisation of passenger transport to over 200.

AMBIKA SILK MILLS CO. LTD.

NOTABLE SUCCESS IN EXPORTS

MR. RAVINDRA MAGANLAL MEHTA, CHAIRMAN, WANTS LIBERAL IMPORTS OF MACHINERY

THE success achieved on the export front enabled the Ambika Silk Mills Company Ltd. to solve its problem of raw material, namely, art silk yarn, fairly satisfactorily during the year ended 31st December 1960. This point was made by Mr. Ravindra Maganlal Mehta, Chairman of the Company, in his speech at the Twenty-second Annual General Meeting of the Company held at Bombay on 15th June 1961. The outlook for the Company depends upon prompt delivery of yarn by art silk spinners, who have been allowed to get a share of foreign exchange earned by weaving mills under the export incentive scheme, and liberal imports of machinery for modernisation of its weaving and processing equipment.

The following is the full text of Mr Maganlal Mehta's speech:

"GENTLEMEN,

"It gives me great pleasure in welcoming you all to this twenty-second annual general meeting of your Company. The Directors' report, audited profit and loss account and the balance-sheet of the Company for the year ending 31st December 1960, have been in your hands for some time and, with your permission, I take them as read.

"During the year under review, you will observe and appreciate, the results have shown marked improvement. The most important development in your Company's business to which I should like to draw your pointed attention is its success in building up export trade. Your Company exported material worth Rs. 7,46,681 which enabled your Company to earn very valuable foreign exchange and to benefit itself by receiving licences for importing raw material, i.e., yarn under the Export Promotion Scheme.

Importance of Exports

"Shortly we are entering the period of the Third Five-year Plan which represents a crucial step in the fulfilment of our country's basic socio-economic objectives. Success of this Plan will depend upon what each one of us contributes towards its working. What will be of paramount importance is to earn foreign exchange not only to continue to develop the already established industries but also to put up new industries and thus ultimately make our country self-sufficient in many respects, raising at the same time the standard of living. Your Directors were cautious and had foreseen the difficulties which would have to be experienced due to shortages of essential raw materials for your Company. As anticipated, this has happened and at the present time you are aware that art silk/synthetic yarns required for the working of the Company are in acute shortage. Had the Company not resorted to exports, the results would have been very gloomy.

"It becomes imperative that concentrated efforts in all spheres of activity in our country are made, each one of them being treated as deserving top priority. In my opinion, every effort in connection with the development of the country deserves the same priority as the rest and attention of the Government should be focussed to such items which are lagging behind so that all efforts are well co-ordinated and success as desired obtained. I would not hesitate to say that, if little percentage of the profit is to be sacrificed for achieving larger production, one should rather welcome it than allow the shortage of things to be created.

Export Incentive

"Recently, the Government have further amended the Export Scheme and raised the target of exports from Rs. 6,000 to Rs. 7,500 per installed loom for getting the benefit of export incentive. It is also provided that 30 per cent should be allotted to the rayon yarn spinners for importing rayon grade pulp. This scheme is said to be effective from 1st April 1961 and, since our industry will be called upon to surrender valuable foreign exchange which they will have earned at a great sacrifice, it should be rewarded by the rayon spinners by making prompt supplies of rayon yarn to which they will be entitled under the scheme. I am certain that the Government is aware of the acute position. The Government should see to it that supplies of indigenous yarn are augmented, if not before, at least simultaneously with the surrender of foreign exchange by the industry.

"Your Company will continue to export and I am glad to say that your Company's products have been very much liked and are in great demand in foreign countries. The products go to such countries as Fiji Island, Afghanistan, Mauritius, Sudan, Ceylon, West Indies, Thailand, British East Africa, Iran, Burma, Aden and Hongkong.

Machinery Imports

"Last but not the least, I am constrained to remark that many problems concerning and vitally affecting our industry still remain unsolved, the most important thereof being the immediate need for replacement of old machinery by modern machinery. In this respect, I am afraid that justice is not being accorded to us and, during the last three years, nothing, in terms of essential machinery, is allowed to be imported. If this state of affairs is allowed to be continued, our achievement from export side is bound to suffer and it is of paramount importance that what we export, which we must, is of quality equal to other technically advanced countries and this can only be achieved if we are equipped with modern plant and machinery. Recently a survey has been conducted by a team of experts who went into the question of requirements of machinery by our industry and I only hope that, with the contribution to foreign exchange earning by our industry, the Government will be pleased to allow imports of machinery not only for the replacement but also for new items which are fast developing in foreign countries.

"Working of an industry in the present period and in the periods to come requires continuous watch, co-ordination and efforts of not only the management in charge but also of technical, administrative staff and operatives. I am glad to state that all these people have contributed unsparingly in giving co-operation. On the labour front we had a peaceful working throughout the year. I take this opportunity of conveying my thanks to all of them."

TRAVANCORE CEMENTS LTD.

SPEECH OF Mr. C. S. LOGANATHAN

SHORTAGE OF COAL HITS CEMENT INDUSTRY

POINTED reference to the problem of high cost of production confronting the cement industry was made by Mr. C. S. Loganathan, Chairman of the Travancore Cements Ltd., in his speech at the Fourteenth Annual General Meeting of the Company held at Nattakam, Kottayam (Kerala State), on 23rd June 1961. The major increase in cost, he added, was caused by the fuel element. Other items, such as spare parts, hardware materials, lubricants and packing materials had also become more expensive, inflating the cost. Referring in particular to the question of fuel, Mr. Loganathan observed that, in view of the difficulties in getting its entire requirement of coal by rail, which is the cheapest mode of transport, the Company had been forced to get a part of the supply of coal by resorting to the more expensive means of coastal shipping or, alternatively, to use furnace oil, which again was a very costly fuel. Had the railways been able to provide the Company with its entire coal requirements, according to him, the profit of the Company would have gone up by as much as Rs. 2 lakhs.

The following is the full text of Mr. Loganathan's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you all to the fourteenth annual general meeting of our Company.

"The audited balance-sheet as on 31st December 1960 and the profit and loss account for the year ended that date and your Directors' report have been in your hands for some time and with your permission I shall take them as read.

Cost of Production

"Our net profit for the year 1960 is Rs. 5,21,843. Even though the operation of the factory during 1960 had been as efficient as possible, the cost of production had been high due to various factors which were beyond our control. The major increase in the cost is that of fuel, while other items like spare parts, hardware materials, lubricants, packing materials, etc., have also become costlier, inflating the cost.

"As we are not getting our entire requirements of coal by rail, which is the cheapest mode of transport, we have been forced either to get part of our requirements of coal by steamer, which is very expensive, or use furnace oil, a very costly fuel. During 1960, due to the serious problem posed by the unsatisfactory coal supply position, we were forced to operate the factory more than half the time with furnace oil. If we had been enabled to obtain our entire requirements of coal by rail route and thus avoid the use of fuel oil and seaborne coal, our profit would have been more by about Rs. 2 lakhs. The Government of India is seized of the coal transport situation and there is a proposal of Government arranging supply of coal by steamer under a subsidised freight scheme, but it has not been put into practice so far.

Cement Prices

"The price of cement payable to each producer is fixed by the Government of India based on the cost of production and the price for our cement was last fixed in June 1958 and is in force till 30th June 1961. We have submitted to the Tariff Commission all facts and figures relating to our cost of production to revise the price payable to us from July 1961. The Tariff Commission will be holding meetings with the cement producers shortly to finalise their inquiry and submit their recommendation to Government for the revision of cement price.

Cost of Packing

"While the cost of naked cement is usually revised once in three years, the cost of packing payable to the producers was revised once in three months—based on the actual cost of gunnies without altering the f.o.r. destination price of packed cement. When the price of gunnies shot up by about 60 per cent from the fourth quarter of 1960, the Government felt that it was impossible to accommodate the increase within the then existing f.o.r. destination price and it was not possible for the industry also to run without an enhanced packing allowance. Under the circumstances, the Government permitted the producers to use second-hand bags

FERRO ALLOYS CORPORATION LTD.

CHAIRMAN, MR. DURGAPRASAD SARAF, URGES FREIGHT CONCESSION

SCOPE FOR EXPORT OF FERRO-MANGANESE

AN appeal to the authorities to reduce the incidence of heavy railway freights, now borne by the ferro-manganese industry in respect of both finished products and raw materials, was made by Mr. Durgaprasad Saraf, Chairman of the Ferro Alloys Corporation Limited, in his speech at the Fifth Annual General Meeting of the Company held at Tumsar on Monday 26th June 1961. Railway freights alone, according to him, constituted 15 per cent of the production cost. Drawing attention to the still heavier cost of electricity, he urged the Government to charge concessional rates for power consumed by the industry. On the question of export, Mr. Saraf pointed out that ferro-manganese had much scope for earning foreign exchange if the requisite assistance was provided by Government. He called upon the Government to devise a scheme of export subsidy or to fix the internal price of ferro-manganese at a higher level than the price prevailing in the international market "so as to secure a sound and firm foundation for the industry."

The following is the text of Mr. Saraf's speech:

"GENTLEMEN,

"It gives me great pleasure to extend to you a cordial welcome at this fifth annual general meeting of the Company.

"The Directors' report and the audited balance-sheet for the year ended 31st December 1960 have been in your hands for some time and, with your permission, I shall take them as read.

Progress Satisfactory

"On a perusal of the same, you will agree with me that the progress made by your Company has been quite satisfactory. As you are aware, two furnaces were already in commission by the end of 1959, and the third one was also switched on in January 1960. The working of the furnaces has been satisfactory. The entire plant was thus in full production during 1960 and the total output of ferro-manganese was more than double that of the preceding year. The turnover increased to Rs. 326.40 lakhs, as against Rs. 42.43 lakhs in 1959. This increase was largely due to supplies made by your Company under the Indo-U.S. barter through the agency of the State Trading Corporation. The local demand from the steel plants and other small consumers in India showed quite appreciable improvement. As a result of this favourable trend, your Company has made a net profit of Rs. 30.41 lakhs.

"After providing for a development rebate reserve, your Directors have set aside a sum of Rs. 9.99 lakhs for payment of dividends which would wipe out the entire accumulated liability in respect of preference shares and also leave sufficient balance for the ordinary shareholders who will get a dividend of Rs. 8 per share, subject to income-tax. The surplus balance of profit during 1960 has been utilised as a set-off against the carried forward losses which have been reduced from Rs. 25.65 lakhs to Rs. 5.54 lakhs. As against this, the development rebate reserve stands at Rs. 14.50 lakhs, which represents 75 per cent of the claim of the Company in respect of the development rebate under the Indian Income Tax Act.

Shipment

"Even this small carried forward loss could have been wiped out in the very year, if the buyers had made arrangements for lifting the cargo which was lying ready for shipment. However, I am happy to report that, by now, we have been able to ship the same as also some production of the current year.

"The Directors' report has already dealt with the salient features of the statement of accounts, and hence I do not think it necessary to comment on the same here over again. I would, therefore, like to confine my speech to review the ferro-manganese industry in general.

Production Target

"As you are perhaps aware, the ferro-manganese industry was projected in the first Five-year Plan with a target for installed capacity of 172,000 tons and a production of 160,000 tons by 1960-61. It was expected that about one-third of the production would be consumed in India and the balance would be made available for export. The industry, which owes its existence to Government encouragement, has done its best to reach these targets. Unfortunately, when the industry started production, the international price level was at its low ebb and internal demand very poor. This has naturally affected the industry adversely. This situation has not shown much improvement. Although neither the Government nor the industry is responsible for such a situation, it is of paramount importance to find out ways and means to overcome the hurdles that beset the path of progress of this nascent industry. In my view, it is not difficult to remove the handicaps if proper measures and policies are evolved and correctly implemented.

Railway Freight Heavy

"In my speech last year, I had referred to some problems of the industry pertaining to transport, railway rates, power costs, labour and taxation. It is distressing to note that very little has been done to solve these problems. The industry has to bear a heavy burden of railway freight on the finished product and the various raw materials such as manganese ore, coke, limestone, dolomite, carbon paste, etc., which have to be transported from distant places to the manufacturing centre. The railway freight alone constitutes as much as 15 per cent of the production cost. Still heavier is the cost of supply of electricity. These two items in particular call for immediate attention of the authorities and require a considerable reduction in the rates to enable the industry to stabilise itself.

Export Promotion

"The ferro-manganese industry has much scope for earning valuable foreign exchange for the country which we now need most, and, as such, this industry is entitled to certain special concessions and relief. In many countries, export industries are given preferential treatment. Unless the industry has developed some inherent strength, it cannot successfully face world competition. It is, therefore, necessary to devise a scheme of export subsidy or for fixing the internal price of ferro-manganese at a higher level than the price prevailing in the international market so as to secure a sound and firm foundation for the industry. Unless bold and definite policies are adopted, it is futile to speak of improvement in export trade.

Barter Deal

"We are thankful to the Government and the State Trading Corporation for the Indo-U.S. barter which has given some breathing time to the industry. We hope that the authorities will see that it is successfully concluded. It is also understood that another barter deal is under negotiation and the chances of putting it through are fair. Such transactions require a great deal of co-ordination and co-operation, and it would be in the mutual interest if the industry is taken into confidence and consulted before these are finalised. The proposed barter would offer good opportunity under the prevailing circumstances, provided it is handled with promptness, efficiency and business acumen.

Electrolytic Manganese

"Before I conclude, I would like to report with pleasure that your factory has been successful in producing electrolytic manganese and manganese sulphate on a pilot plant. Since these products have great potential for the internal and external market, an application has also been submitted for grant of an industrial licence for manufacture of these items in large scale.

"Your Directors have also kept plans ready for diversion of one or two furnaces for production of ferro-chrome and ferro-silicon, as and when necessary.

"Finally, I thank you, gentlemen, for the interest you have shown in the affairs of the Company."

Note:—*This does not purport to be a record of the proceedings of the annual general meeting.*

INDORE MALWA UNITED MILLS LIMITED

CHAIRMAN, MR. K. G. SEKSARIA, PLEADS FOR LIBERAL MACHINERY IMPORTS

PROSPECTS BETTER FOR CURRENT YEAR

IN his address to the Fifty-fourth Annual General Meeting of the Indore Malwa United Mills Ltd., held at Bombay on Tuesday, 27th June 1961, Mr. Kudilal Govindram Seksaria refuted the suggestion that the cotton textile industry was making huge profits and added that voluntary price reduction, effected by the industry in September 1960, combined with the rising cost of materials and higher wages, had, in fact, considerably affected the profitability of cotton mills. Mr. Seksaria also alluded to the subject of exports and called upon the Government of India to give its wholehearted support and encouragement to the mills to modernise and rehabilitate their machinery. For this purpose, he suggested that the Government should grant liberal import licences to mills against their exports of cloth and yarn for importing the requisite machinery and spares so as to enable them to produce quality goods at competitive prices. This, he averred, could halt the declining trend in textile exports. As regards the prospects of his Company for the current year, Mr. Seksaria struck a note of optimism.

The following is the full text of Mr. K. G. Seksaria's speech:

"LADIES AND GENTLEMEN,

"I welcome you to the fifty-fourth annual general meeting of the Company. The Directors' report and the annual accounts of the Company for the year ended 31st December 1960 have been in your hands for sometime and with your permission, I take them as read.

Profit Improves

"You will be no doubt gratified to observe from the Directors' report and the audited accounts that in spite of high expenses, the Company, has been able to show a profit of Rs. 27.69 lakhs before providing for depreciation and development rebate as compared to a meagre profit of Rs. 9,583 made last year. This has enabled the Company not only to wipe out the previous years' losses of Rs. 12.53 lakhs but also to provide depreciation for the year and for the years 1958 and 1959 amounting to Rs. 10.36 lakhs.

Rising Costs

"Although better trading conditions prevailed during the year 1960, the same were largely offset by the increase in the prices of raw cotton, heavier wage bill and enhanced price for stores, chemicals, dyeing materials and coal, not to speak of the continued heavy tax imposts, direct or indirect. Due to unfavourable weather conditions prevailing in the 1959-60 cotton season, the production of cotton crop was lower by about 10 lakhs bales as compared to the previous year. As a result, the prices of most of the varieties pierced ceilings and the industry had to experience considerable difficulties in securing adequate and regular supplies of raw cotton. Although the Government allowed liberal imports of foreign cotton to the tune of about 12 lakh bales, the prices of cotton ruled higher rendering difficult for the mills to produce cloth at economic prices. However, the position of raw cotton at the end of the year 1960 is fairly bright, thanks mainly to better prospects for the 1960-61 cotton season. It is estimated that the crop will be of about 54 to 55 lakh bales and with the import of about 10 lakh bales of foreign cotton, the supply position would be comfortable. In this connection I further would like to point out that due to the rising standard of living of the masses in the country, demand for quality goods has sprung up. For this need is felt for long-staple cotton. We have at present to depend mainly on foreign imports and it would be in the best interests of the country if the Government takes positive steps by giving more assistance to the growers for producing larger quantities of long-staple cotton.

Higher Wages

"The next constituent of the cost of production is wages. As a result of increase in the cost of living, the dearness allowance payable to the workers continued to rise during the year 1960. Over and above, as a result of the recommendations of the Central Wage Board for Cotton Textile Industry, the industry was saddled with Rs. 14 crores per annum on account of the stepping up of the basic monthly wages of a mill worker by Rs. 8 as from 1st January 1960 in some areas and Rs. 6 in others. As stated in the Directors' report, the increase in the monthly basic wage of a worker in the Madhya Pradesh region was Rs. 6. Moreover, there has been an upward revision in the grades of the clerical and supervisory staff too. All these have increased the wage bill of the Company by about Rs. 5 lakhs per year.

Voluntary Price Cut

"In spite of all these factors, the production of cloth has gone up by about 93 million yards. However, the total supply of mill cloth available for domestic consumption and export was less in 1960 than in 1959, being 5,432 million yards as against 5,805 million yards. This was due to the appreciable fall in the opening stocks with the mills. This together with the steeply enhanced cost of production and rising pressure of demand stimulated by increased population and money supply, the prices of cloth hardened. In some cases, due to speculation prices were boosted. This could have been avoided if the industry was allowed to expand its weaving capacity by the Government of India. The industry itself recognised the need for checking the upward trend in prices and announced its decision on 7th August 1960 to lower the retail prices of coarse and medium varieties in short supply. The Government being not satisfied, threatened to take coercive measures in case the industry failed to reduce prices further. Ultimately, on the 3rd September 1960 a revision in prices of cloth and yarn was made by the industry agreeing not to charge wholesale prices higher than the stipulated percentages over August 1959 contract, namely, coarse 25 per cent, lower medium 22 per cent, higher medium 18 per cent, fine 11½ per cent, and superfine 9 per cent. The prices of yarn were similarly revised. Not content with the reduction agreed to by the industry, the Government threatened again and at the end of the year further reduction in the stipulated percentages from 3 to 2 in aggregate and in case of popular varieties, which is 25 per cent of the total production, 3 per cent to 2 per cent more than the above reduction was made. Further, the industry agreed to stamp new prices on pieces of cloth and bundles of yarn together with the retail prices, calculated at 15 per cent over the ex-mill prices in case of cloth. This was done to ensure that the price reduction made by the industry is passed on to the consumers. All these price reductions have considerably affected the profitability of the industry. During the current year too further reduction in the prices of cloth and yarn was made by the industry.

Misconceptions Cleared

"As lot of misconception regarding the profitability of the industry is prevalent not only amongst the politicians but also amongst the higher circles, and as the industry has now and then been a target of baseless criticisms, the Government of India has been persuaded to refer to the Tariff Board the questions of determination of fair prices for cloth and yarn and fair profits to be allowed to the industry. The report of the Tariff Board is eagerly awaited. In this connection it would not be improper to refer to the *Bulletin* of the Reserve Bank of India for September 1960, which has disclosed the incontrovertible fact that in the matter of industrial profits, cotton textiles are among the enterprises that occupy the lowest rung of the ladder. It is precisely because of the low profitability of the cotton mill industry that it has become so hard for it to attract new capital for purposes of rehabilitation and modernisation. I am confident that the Tariff Board's report will dispel the wrong belief persisting in high circles that the industry is blessed with the good fortune of always riding on the crest of prosperity.

Exports

"It is rather distressing that India's export of cotton textiles should have declined considerably during the year 1960, being 693 million yards against 814 million yards in the year 1959. Although during the first six months there was a notable improvement in the export of cloth, being 350.73 million yards as against 303.76 million yards in the same period last year, the pace of export bookings since the beginning of July 1960 slowed down considerably in spite of some refinements in the export incentive scheme permitting imports of certain types of dyes more easily than before. This, as you are aware, was due mostly to the higher prices ruling in the domestic market and the high cost of production in India as compared with that in other countries. I may also point out that the Export Incentive Scheme has not proved of much help to boost the exports. Government should be well advised that unless it gives its wholehearted support and encouragement to the mills to modernise and rehabilitate its machinery by granting them liberal licences against their exports to import the requisite machinery and spares to enable them to produce quality goods at competitive prices, I am afraid that unless the Government rises to the occasion by granting further incentives, the declining trend in exports is likely to persist in years to come.

All-round Improvement

"Turning to the affairs of the Company, the profit shown, as stated above, is of Rs. 27.69 lakhs, as compared to a meagre profit of Rs. 9,583 last year. The cotton consumption has gone up by Rs. 36.80 lakhs and the salaries and wages by Rs. 7.65 lakhs, largely due to the increase in monthly basic wages on account of the award of the Central Textile Wage Board and the consequential upward revision in the salary of clerical staff and supervisory staff. Further, the bonus for the year 1958, amounting to Rs. 1.60 lakh, and the gratuity and retrenchment compensation to labour, amounting to Rs. 91,171, have been adjusted against the profits. As regards the office and selling expenses, although the same have gone up by Rs. 3.68 lakhs, it is mostly due to interest paid to banks on loans. As regards the prospects for the current year, I would say that they would have been much better than those of the last year, had it not been for the reduction in prices in the beginning of the current year. However, I am confident that the results would be somewhat better.

"As indicated last year, the Company had started producing additional yarn to cater to the fast growing needs of the decentralised sector of the industry, and for this purpose the mills have started the third shift of its spinning section since May 1960. Although in the last year yarn worth Rs. 17.50 lakhs was sold, it is estimated that in the current year the same will be sold to the tune of Rs. 50 lakhs. Further, the Company has recently begun manufacturing yarn to cater to the needs of hosiery cloth manufacturers as well and it is hoped that a large portion of the total yarn meant for sale to the decentralised sector will be sold to them.

New Plant and Machinery

"In order to rehabilitate and modernise old and outdated machinery, the Company had placed orders upto the date of the issue of the Directors' report of about Rs. 26 lakhs during the current year and out of which orders of about Rs. 10 lakhs were placed for replacing the old spinning frames by new ring frames of 8" lift with SKF or GX2 drafting and Simplex Fly Frames. Since then further orders worth Rs. 20 lakhs were placed, out of which Rs. 11.5 lakhs for 10,800 spindles and Rs. 8.5 lakhs for electric motors, switch gears, cables and transformers to enable the Company to use power to be obtained from Chambal Hydel Project.

"As intimated to you in the notice, we would be transacting some special business in the meeting, including the adoption of a set of new articles to be substituted for the existing Articles of Association. In the explanatory note annexed to the notice, the nature of the business as well as important alterations made in the new set of articles have been fully explained to you. I hope in the larger interest of the Company you will accord your approval thereto.

"On behalf of the Board of Directors and on my own, I thank all the officers and other employees of the Company for the good work they have put in during the year."

SELECTED SATGRAM COLLIERIES LIMITED

CHAIRMAN MR. S. D. SHETHIA'S SPEECH AT ANNUAL MEETING

THIRD PLAN TARGET FOR COAL CAN BE REACHED IF OBSTACLES ARE REMOVED

THE inadequate allotment of wagons for coal loading in the Bengal-Bihar region and the resulting accumulation of pithead stocks might turn out to be a major obstacle to coal production itself. This timely warning is contained in the speech of Mr. S. D. Shethia, Chairman of Selected Satgram Collieries Ltd., at the 16th Annual General Meeting of the Company held at Calcutta on 28th June 1961. The Chairman also dealt comprehensively with the third Plan target for coal production and emphasised that the private sector could achieve its target if the Government removed all the obstacles in time and provided some incentives, especially in the matter of coal prices. In this connection, he described the Company's own third five-year plan under which the annual target of coal production would be at least 7 lakh tons.

The following is an abstract of the Chairman's speech:—

"I take pleasure in welcoming you to the sixteenth annual general meeting of the Company. May I have your permission in taking as read the audited statement of accounts and the Directors' report for the year ended 31st December 1960.

"At the very outset I have to make a sad announcement of the demise of Shri L. Hirji, a Director of your Company for a very long time, and whose services would be ever remembered.

Trading and Production

"Raisings during the year under review were 2,83,851 tons, nearly 23 per cent increase on the previous year's output, as against 10 per cent increase in the country's output. This was achieved by scientific planning and efficient execution in the face of heavy odds. Despatches have come up by 43,161 tons to 2,63,931 tons—a record figure so far. This manifests in higher sales figures and ultimate increase in trading results. The profit before taxation is Rs. 5,17,915 against Rs. 4,54,758 last year. The ratio of profit to raising is slightly lower, for the reasons I shall deal with later in my speech. After providing Rs. 1,89,000 for taxation and transferring Rs. 1,03,000 to reserves, your Directors have recommended a final dividend of Rs. 8 per share on 13,000 old ordinary shares and *pro rata* Rs. 2.62 on 6,500 newly issued ordinary shares, i.e. 16 per cent gross dividend as declared last year on increased capital.

"Contingent liabilities in the shape of tax matters mentioned in the accounts of last year have been removed, owing to your Company's appeal being upheld in the Income-tax Tribunal.

Development Work

"The raising in the collieries in 1960 was obtained by development work requiring continued dose of capital investment resulting in comparatively higher cost. In New Satgram Colliery expectations were not fully realised owing to Satgram seam being declared gassy by the Department of Mines towards the end of the year. More expenditure, both of revenue and capital nature, had to be incurred in taking extra precaution as required by the Mines Act. The reflection of this in the cost was apparent. In Sripur seam, one level stone drift through the faults, which, as had been reported last time, was stopped by the Department of Mines, has now been taken up. After a couple of months on its completion, the output there would go up. This year Sripur seams might also be entitled to the Coal Board's subsidy of Re. 0.60 per ton similar to Satgram Seam.

"Electricity had come to South Joyramdanga Colliery towards the end of 1960 when the increase in output recorded a new level. In the last two months of the year 5,000 tons were raised. As against that, 6,500 tons, on an average, have been raised from January 1961. The coal was upgraded from grade II to grade I resulting in an increase of Re. 1 in the sale price approximately per ton.

"Manoharbahal seam has been fitted with the required machinery and is capable of yielding 6,000 to 7,000 tons per month, subject to pilot capacity and transport position. An application for grading this coal was made to the Coal Board on 5th September 1960 and their decision is awaited. Loading accommodation for this colliery has been increased to 25 wagons and every effort is being made to increase the pilot capacity from 65 wagons to 85 wagons.

"The workings of the New Jamuria Colliery during the year under review, I am afraid, did not yield expected results owing to the thinness of the seam and extremely bad roof conditions. The machine mining having not succeeded resulting in high cost, pick mining method has been adopted. This colliery is also entitled to the Coal Board's subsidy of Re. 0.50 per ton on its output.

"The output per man shift of our group of collieries is .91 as against .72 of the all-India figure. We are making every attempt to improve this.

Housing and Amenities

"Most of the construction work taken in hand during last year have now been completed. Having obtained further sanction for 100 more houses at all our collieries, the construction has been started in the face of the shortage of construction personnel. Houses under cheap housing scheme have been sanctioned for New Jamuria Colliery. The co-operation received from the Housing Board and the Office of the Labour Welfare Commissioner has been spontaneous, and now, to some extent, the acute accommodation problem has been solved. Adult education centre, canteen, creche, pithead bath and multi-purpose co-operative society, open-air cinemas are showing satisfactory results. Distribution of sweets to labourers and special confectioneries to children under seven years is also continued.

"In the field of sports your Company has maintained its standard and New Satgram Colliery has again retained its Zonal Championship, stood well in the Raniganj Central Sports and participated actively in the All India Coalfield events.

"In honour of Shri Jagan, your Company's old and loyal sardar of the surface trammers who retired during the year under review, Pit No. 1 at New Satgram Colliery has been named after him as 'Jagan Pit.'

"At New Satgram Colliery the residential colony is fast coming up and it has been decided to name it Devchand-Nagar to commemorate the sacrifices and services of the late Shri Devchand D. Shethia, J.P., the first Chairman of your Company, who guided it capably during his tenure.

"Labour-management relations, despite the labour unrest in the neighbourhood, have remained cordial.

Transport Situation—a Baffling Problem

"The second Five-year Plan target of 60 million tons, about which I had expressed my doubts, has fallen short by 8 million tons, the share of the private and public sectors in the shortfall, according to figures available being, .8 million tons and 7.2 million tons respectively. However, one must say, there has been tremendous efforts on the part of the industry as a whole to come up nearer to the target level. Little those who were behind this herculean task realised that a most critical situation would develop in the country due to acute transport shortage. One wonders whether this was the reward for all sacrifices and tightening of the belts. As against the total daily requirement of 6,000 wagons for coal loading in Bengal/Bihar coalfields and 5,000 wagons committed by the railways, only 4,694 wagons on an average are loaded from January 1961 causing shortfall and short supply of 1,306 and 306 wagons per day respectively. The accumulation of pithead stocks amounts to over 5 million tons, locking up a huge capital. A high power committee was appointed by the Union Government to find out the solution. Change in the allotment system, more movements by rail-cum-sea routes, increased use of road transport, two tons extra loading in wagons and proposed increase in above Mughalsarai movement, are expected to relieve somewhat the acute shortage. Further, a suggestion has been made to find out the possibility of movement of coal down country by Durgapur canal. It would not be out of place to suggest the expeditious construction of the proposed Express Highway between Durgapur and Calcutta, and taking of coal by road by all priority consumers within 100 miles radius to further relieve the bottleneck. This movement might also be subsidised from the increased excise duty recently imposed. In any case, I am glad that this acute problem is receiving the attention it deserves by all concerned and with efforts made in all spheres, it should not be incapable of solution.

"With all the force at one's command, efforts must be made to relieve the bottlenecks mentioned above and prevent consumers from hand-to-mouth stock position and ultimate closures, and ever-increasing heavy accumulation of pithead stocks exposed to quality deterioration and spontaneous combustion. This might otherwise be a main obstacle to coal production.

Third Five-year Plan for the Industry

"The target fixed by the third Five-year Plan of 97 million tons is no less ambitious than the second Five-year Plan's target and to fulfil it, very careful planning in all its spheres and its expeditious execution with frequent reviews from time to time would be necessary. Our experience for all these years, particularly for the last five years, must be carefully remembered. The target of the private sector can be achieved with unstinting support of the Government in removing all the obstacles.

A Few Obstacles

"As is well known, the correct dose of finance supported by a realistic price policy for which the industry had been clamouring is the condition precedent to such achievement. Recent increase in coal price from 1st June 1961 by Re. 0.06 nP per tonne against the industry's demand of Re. 0.40 nP per tonne has been made to meet the increased incidence of labour wages. An appeal has been made to the Government in this connection by the industry.

"The foreign exchange requirement of the private sector for the third Five-year Plan period is estimated at Rs. 28 crores. The Government as well as the Joint Working Committee of the industry are sending a delegation to finalise the World Bank loan. The word 'loan', I must, however, point out, is a misnomer for the industry as this loan is to the Government and not to individual collieries.

Our Next Five-year Plan

"The Company's target is 44,000 tons per month from the existing units excluding Dishergarh seam which has finally been explored and is expected to yield selected grade of blendable coal of good use for metallurgical purpose. Negotiations are afoot with foreign experts for its final exploration. Between 25/30,000 tons per month can be obtained from this mine. Thus the total target fixed would be at least 7,00,000 tons annually. This substantial increase has necessitated increasing our authorised capital from Rs. 30,00,000 to Rs. 2 crores and subscribed capital from Rs. 19.50 lakhs to Rs. 40 lakhs. Necessary permission has been obtained from the Government for this purpose. Your Directors are considering a proposal for purchase of a colliery in Chanda coalfield in Maharashtra State presently mining grade III coal for which there is heavy and persistent demand. This colliery consists of 40 lakhs tons of coal, out of which approximately 12 lakhs tons can be obtained by development scheme and would be able to raise about 30,000 tons per month during the third Five-year Plan. The proposal for engineering works referred to in my last speech has encountered serious legal hindrances not being specifically provided for in the object clause of the Company. Alternatives are being considered by your Directors.

"The last issue of 6,500 ordinary shares was oversubscribed, manifesting the confidence of the public in the Company's management.

"Your Company's staff, both at the collieries headed by Shri J. Singh, General Manager of the Collieries, and its registered office, has shown a good deal of effort and commendable earnestness to cope with problems arising out of the expansion work taken in hand. Lectures, film shows, demonstration by the foreign technicians and short courses organised by the Productivity Council and British Insti-

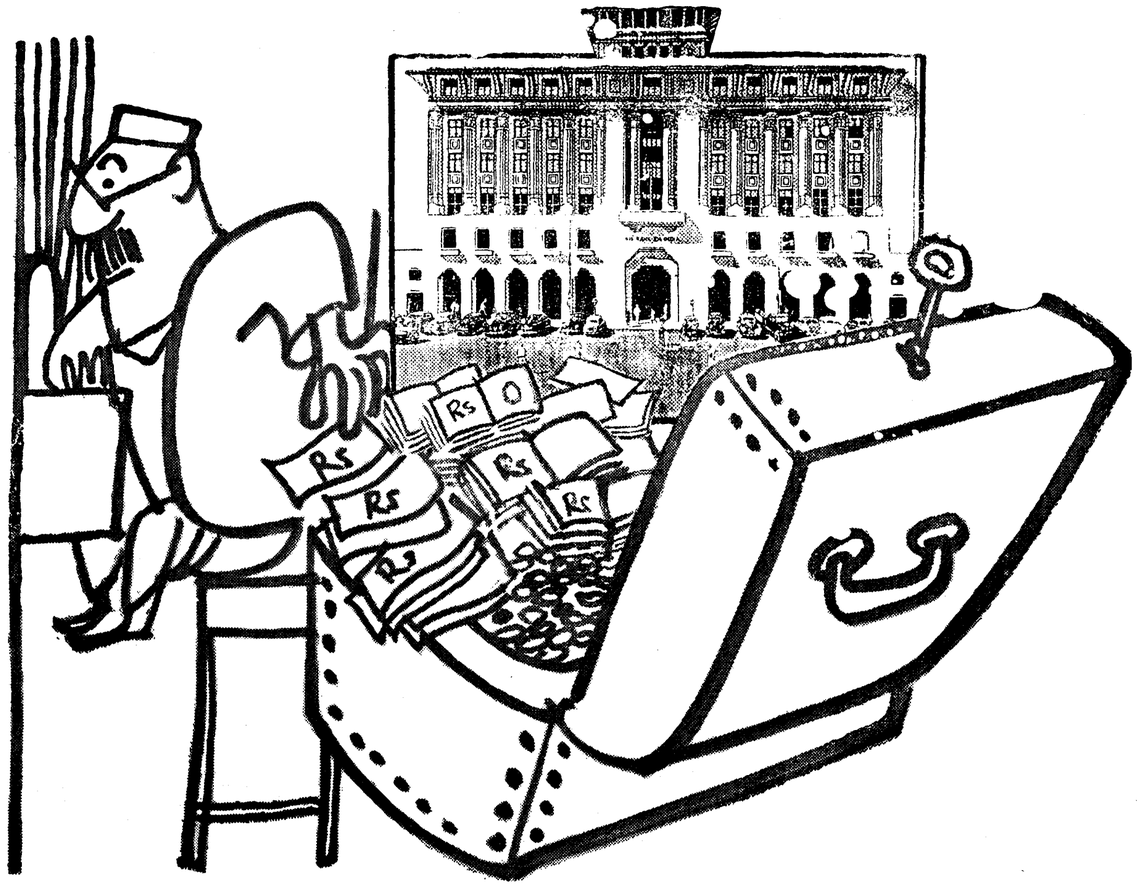
Carrier are a hidden asset at the Bank of India Limited, Bombay



We may not be entered in the books. But we are a hidden asset in many of India's leading banks. We're air conditioning people. Operate behind the scenes. Balancing, not the books, but temperature and humidity. This adds up to cool, dust-free working conditions. Increased staff efficiency and goodwill.

"A sound investment," people say. "You can always bank on dependable Carrier equipment, Voltas' design, installation and service." Not customary for us to indulge in grandiose claims. Leave it to bankers (among others) to say: "Carrier and Voltas are the people who know air conditioning best".

Some other banks air conditioned by us:
Bombay Mercantile Co-operative Bank Ltd., Bombay
National City Bank of New York, Calcutta and Bombay
Netherlands Trading Society Ltd., Calcutta
Reserve Bank of India, Bombay, Madras, Nagpur and New Delhi
State Bank of Mysore Ltd., Madras
United Bank of India Ltd., Bombay.

PROSPECTS FOR PRIMARY EXPORTS

HARD FIBRES MAY FARE BETTER

A HIGH level of economic activity in industrial countries generally results in better trade for primary producers. But there are periods when this does not happen; for the development of synthetic products and other substitutes for primary produce and improved production techniques, has curtailed the market for natural produce. It is common knowledge that the recovery of industrial economies from the depression of 1957-58 was not followed by a corresponding improvement in the exports of primary producers. This trend was repeated in 1960, too, though in the preceding year, there was a marked expansion in the world demand for the products of the primary exporting countries. After a rise of about an eighth between the end of 1958 and mid-1960, the price index of raw materials in world trade began to recede again, without having regained the pre-recession average of 1957. The price index of all primary commodities had risen by about 3 per cent between the beginning of 1959 and the middle of 1960, but even that small gain was lost in the second half of last year. The unit value of exports from the primary exporting countries recorded an even smaller rise and that too was reversed in the second half of 1960 and by the third quarter, this index had dropped below the corresponding level in 1959, and 9 per cent below the 1957 average. In short, the expansion in world demand for the products of the primary exporting countries, which was pronounced in 1959, began to slow down after the first quarter of 1960. The reasons for this unsatisfactory experience of primary producers were the stagnant level of imports by the U.S. and the cessation of the vigorous demand from Western Europe which was quite perceptible in the initial months of 1960.

Cautious Optimism

Although the first half of 1961 is over, it will still be interesting to discuss the prospects for the primary produce for the current year. An assessment made by the U.N. experts shows cautious optimism. *The World Economic Survey 1960*, published by the U.N. Secretariat, expresses the view that the demand for primary products from industrial countries "is unlikely, in the aggregate, to fall below the 1960 level." This forecast is based on the assumption that the resumed recovery in North American demand will compensate for such slackening in demand in other industrial countries as may be caused by "either the changed inventory position or a slowing down in the high rates of growth that characterised it in 1960." In other words, "the overall stability in primary commodities that emerged from the gentle rise in 1959 and the equally gentle decline in 1960 may well continue for 1961."

A study of the supply conditions and policies, according to the Survey, leads to a similar conclusion with regard to the outlook for primary exports. On the one hand, supplies —in being or potential, from existing capacity— are generally appreciably in excess of probable consumption. On the other hand, where the imbalance is greatest, the rate of capacity utilisation and the flow of supplies to world markets are generally under the firmest control. Thus, while the possibility of a marked rise in average price is reduced by the availability of supplies —from stocks, if not from current production— the possibility of a substantial fall is reduced by marketing policies which in general have been internationally accepted, tacitly if not in terms of a formal agreement. Overall stability of price and an average rate of offtake at least up to the 1960 level, the Survey points out, will serve to set a floor to the total receipts of the primary exporting countries. But this will not ensure stability or expansion in the receipts of individual countries; here, prospects are by no means uniform, differences in market conditions among the various traded commodities being compounded by the usual diversity in production outcome and domestic demand. By and large, the degree of uniformity, in the opinion of the U.N. experts, is highest among the countries exporting mainly foodstuffs, partly because total demand for food fluctuates less than total demand for industrial materials and partly because it is among the major food items that the largest surpluses have recently been accumulating. But even among the food exporters prospects differ widely.

In the case of cereals, there are now more net importers than net exporters among the primary exporting countries. Crop changes are, therefore, more of consequence in terms of local food supply than in terms of their repercussions on foreign exchange earnings. Moreover, in view of the large and still increasing stocks, held predominantly in North America, the possibility of a significant rise in price is ruled out. The import demand for wheat in Western Europe is expected to be higher in 1961, in view of the sizable decline in its own wheat crop. This shortfall will, however, be made good mainly by North America. Among primary exporting countries, only Australia and Turkey are expected to increase earnings from wheat exports to any substantial extent. The principal wheat exporting countries of Latin America and North Africa are not expected to increase their export earnings, owing to smaller crop in 1960-61.

On the rice situation, which has been made rather uncertain by the trend in Chinese imports, the Survey points out as follows:

"The changes in rice production between 1959-60 and 1960-61 are likely to induce a higher rate of consumption but a smaller volume of international trade: the reductions in output are concentrated mainly in the exporting countries, notably Burma, Cambodia, mainland China, the Republic of Korea and the United Arab Republic (Egypt); the importers have all reaped an appreciably larger harvest. The principal exception is Pakistan where the crop is somewhat below the high 1959-60 level; this may tend to raise import requirements since the wheat crop—because of drought in the West—also promises to be smaller than in 1960. The principal unknown in the rice situation is the impact of the crop reductions in mainland China: to meet domestic needs, some 2 million tons of wheat and a large quantity of barley were purchased—from Australia and Canada —early in 1961. In May 1961, Canada agreed to provide mainland China with 6 million tons of wheat and barley over a period of two-and-a-half years. These purchases, though large, need to be compared with the end-of-season stocks in the hands of major exporters if their impact is to be assessed; in mid-1960 such stocks totalled 66 million tons, with a further large increase in prospect for 1960-61. About 400,000 tons of rice were also ordered from Burma; but this may be used—at least in part—to ship against previous commitments to other countries. Exports from mainland China had dropped back in 1960 from the high level of the previous year, but this did not prevent an appreciable decline in price; in view of the larger crops in most deficit countries, a further reduction in net exports from mainland China may not greatly affect the market. Nevertheless, as in the case of wheat and barley, prices in the first quarter of 1961 were slightly above both the corresponding 1960 level and the average for the preceding quarter."

Sugar Exports

The U.N. Survey observes that, in respect of sugar, the most important development that is bound to depress international markets is a bumper European crop in 1960-61, which will reduce its import demand. The impact of this will, however, be softened to the extent that purchases of Cuban sugar by the Centrally planned countries "represent a net addition to total demand and are not offset by a rise in exports." Production outside Europe is also well above the previous year's level. Consequently, free market prices have also been lower. Unit values of sugar exports in Cuba, in particular, is bound to be appreciably less than in 1960. By the same token, unit values for the countries that have obtained a larger share of the protected U.S. market—particularly Peru, Mexico, Brazil, Formosa, West Indies, British Guiana and the Philippines, as well as India and Australia, both of which have been allotted quotas for the first time—will be higher this year. Commonwealth exporters—notably Australia, Fiji, Mauritius and West Indies—will also earn more from sales to the U.K. as a result of a slight increase in the negotiated price. But this may well be offset, if the free market price falls further.

Tea and Coffee

Among beverages, stocks of tea are said to be at normal levels and, with world production and consumption expected to register a moderate increase in 1961, export proceeds may well exceed the 1960 figure. Tea prices in the first quarter of 1961 were higher by 5 per cent, as compared with the corresponding period in 1960. In the case of coffee, stocks have been successfully isolated by the principal producers, and prices—at least of *arabica* types—are likely to be sustained in 1961 as they were in 1960. The fact that 1960-61 Brazilian crop was a third smaller than the preceding one should not prevent coffee earnings from being fully maintained; stocks on hand are in excess of a normal year's world trade. North American imports, which receded in 1960 from their high 1959 level, may well rise again, thus increasing Latin American earnings. However, a further increase in African production—of about 8 per cent—may bring *robusta* prices, which weakened considerably in 1960 and early 1961, under added stress, notwithstanding the agreement to limit exports. In expectation of this, some countries reduced the prices paid to growers for the 1960-61 crop.

Export earnings from vegetable oils and seeds of underdeveloped countries are expected to go up in 1961, reflecting a continuing growth of demand, especially in Europe, a larger output in several of the primary exporting countries—notably groundnuts in West Africa and copra in the Philippines—smaller stocks of soyabeans in the U.S. and the crop failure in China. This last-mentioned country which was seller of oilseeds and oil in world markets, has now become a net buyer, which has tended to strengthen world oilseeds market.

Raw Cotton

Earnings from raw material exports are subject to much more erratic impulses from the demand side than are those from food. But the increased activity in industrial countries is expected to "provide an unusual degree of stability" in 1961. In 1961, net cotton earnings of the primary exporting countries, according to the Survey, may well exceed those of 1960, which were reduced by the poor 1959-60 crops in Central America and India. The small increase in world cotton production in 1960-61 is concentrated in primary exporting countries, their combined crop being higher by 11 per cent over 1959-60.

Wool earnings are less likely to show any improvement. Prices in the early months of 1961 were as much as 9 per cent below the corresponding 1960 average and the 1960-61 clip in the primary exporting countries was slightly smaller than the preceding one. The outcome for 1961 as a whole, however, is subject to two moderating influences. Argentina and Uruguay may ship rather more than in 1960, when there was some accumulation of stocks. And, potentially more significant, auction prices tended to rise towards the end of the 1960-61 season, leading to the surmise that the 1961-62 season might open at a higher level of prices; the gain in earnings in the last quarter of 1961 might then make good part or all of the loss—relative to 1960—registered in the first quarter.

Another important raw material in which India has a vital interest is raw jute. The U.N. Survey says that earnings from export of jute will not be much lower than in 1960 (notwithstanding the larger crop expected in 1961-62 season), thanks to virtually depleted stocks. In the aggregate, earnings from hard fibres, says the U.N. Survey, will be well maintained, with increased industrial demand from North America compensating for a reduction in agricultural demand from Western Europe.

EXPORTS OF MANGANESE ORE

As a measure of export promotion, it has been decided to provide incentive to exporters of manganese ore. Exporters of manganese ore are to be permitted to import mining equipment and machinery for improvement of their manganese mines to the extent of 5 per cent of the foreign exchange earned by them through the export of manganese ore in case of straight sales against cash. An additional import entitlement not exceeding 5 per cent (thus making a total of 10 per cent) will also be considered on merits in individual cases, where the actual users establish the need for it.

In the case of exports of manganese ore under barter also, import of machinery will be allowed to the extent indicated above, on condition that the value of the imports under the barter agreement is reduced to the extent of the machinery entitlements.

FIBRE AND CHIP BOARDS

The Government of India has decided to permit the setting up of new units to manufacture plants for the production of fibre and chip boards. This step has been taken because considerable scope exists in this field, with the licensing of a number of schemes under the Industries Act for the production of fibre boards (hard boards and insulation boards) and chip boards (particle boards). Many more such schemes are awaiting licences. The average annual capacity of a fibre board plant will be 6,000 tons and that of a chip board plant 757.500 tons. Government feel that a substantial number of these plants can be manufactured in the country itself by leading engineering firms, if they arrange for technical know-how and designs and drawings from leading international firms who are specialists in this field.

Engineering firms, which are interested in undertaking the manufacture of such plants may investigate possibilities of foreign technical collaboration and submit applications for licences to the Ministry of Commerce and Industry before 31st October next. Applications should indicate the number and type of plants to be turned out annually, the phased manufacturing programme, foreign exchange requirements for establishing fabrication capacity and for imported raw materials, components and finished machinery per unit, draft terms of collaboration and also a brief account of previous experience in fabricating machinery.

METAL BOX MAINTAINS PROGRESS

RAW MATERIAL POSITION GIVES CAUSE FOR CONCERN

THANKS, in the main, to the Company's continued ability to provide high quality products and services, its pioneering spirit, and vigorous promotional efforts in domestic and overseas markets, the Metal Box Company of India Ltd. (Managing Director: Mr. H. K. S. Lindsay, Calcutta) has been able, during the year ended 31st March 1961, to maintain its position as the leading enterprise in India's fast growing packaging industry, despite severe and increasing competition. Sales of products, which had shown a sharp uptrend, in recent years in sympathy with the growing emphasis on packages of international standards, has recorded a further rise of as much as Rs. 140.51 lakhs to Rs. 970.03 lakhs, representing an increase of 17 per cent over their 1959-60 level. But, of this improvement, some Rs. 52 lakhs or 6 per cent represents an increase in the cost of raw materials, largely due to the substantial excise duties imposed last year on two of the Company's basic raw materials—tinplate and aluminium. It will be recalled that the Chairman of the Company, Mr. K. C. Mahindra, had in his statement to the shareholders last year, dwelt at some length on the adverse effects of the intended excise duties on the Company's raw materials. It is, indeed, distressing to find that, despite its strenuous and pioneering efforts in spreading the healthy habit of selling consumer goods in pilfer-proof packages at low cost, the Company's profits should at all have been subjected to these cost inflationary factors.

As a result of the increase in cost of raw materials and a further rise in cost of services, the gross profit has shown only a moderate improvement of Rs. 21.29 lakhs to Rs. 149.36 lakhs. The provision for depreciation has been slightly increased to Rs. 16.10 lakhs from Rs. 14.78 lakhs, while a higher provision for taxation (Rs. 60 lakhs as against Rs. 51 lakhs last year) has to be made in view of higher taxable profits. After these essential provisions, the net profit stands improved by Rs. 10.97 lakhs at Rs. 73.26 lakhs. The transfer to the general reserve has been maintained at Rs. 15 lakhs and that to the development rebate reserve reduced by Rs. 25,000 to Rs. 3 lakhs.

With the changes introduced in the mode of calculating the dividends payable on preference shares, an allocation of Rs. 1.60 lakhs, as against Rs. 1.80 lakhs a year ago, has been found sufficient to cover the liability on this account. Ordinary dividend, which has been maintained at 25 per cent subject to the deduction of tax, absorbs Rs. 40.25 lakhs. Although no change has been proposed in the rate of ordinary dividend, it is well to remember that a full year's dividend stands payable on the 460,000 shares issued in 1959. The following table presents the progress made by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Product sales	9,70.03	8,29.52	6,96.85	6,11.79
Other income	22.57	16.84	14.59	11.52
Closing stocks of finished goods	15.61	7.85	7.95	6.45
Raw materials and stores consumed	5,69.29	4,72.91	4,01.68	3,60.77
Salaries, wages and bonus	2,17.32	1,83.97	1,44.08	1,28.72
Other expenses	64.39	61.31	50.59	46.68
Gross profit	1,49.36	1,28.07	1,16.59	86.16
Provision for—				
Depreciation	16.10	14.78	14.02	13.04
Taxation	60.00	51.00	56.00	41.50
Net profit	73.26	62.29	46.57	31.62
Excess provisions written back	1.47	3.50	..	2.50
Provision for retiring gratuity	10.00	5.00	5.00	..
Transfer to reserves	18.00	18.25	17.50	12.00
Dividends—				
6% taxable preference	1.60†	1.80†	1.24	1.24
Ordinary	40.25 (25%)†	36.11 (25%)†	20.12 (17½%)	20.58* (17½%)
Carry forward	28.86	23.97	19.34	16.68

† Subject to deduction of tax.
* Includes additional dividends of Rs. 46,000 for 1955-56.

The issued and subscribed share capital of the Company consists of Rs. 161 lakhs in Rs. 10 fully paid ordinary shares and Rs. 30 lakhs in 6 per cent preference shares of Rs. 100 each. This is supported by Rs. 211.61 lakhs in reserves and surplus which sum includes the amounts transferred from the profit for the year under review. Current liabilities, provisions and loans, aggregating Rs. 303.55 lakhs are sufficiently covered by current assets, inclusive of investments, loans and advances, amounting to Rs. 484.81 lakhs. Investment in fixed assets to the extent of Rs. 361.58 lakhs has been written down to Rs. 221.35 lakhs.

In theory, the outlook for the Company is, indeed, bright. The demand for containers is growing and, despite growing competition from other producers, the Company can be expected to get a good share of the expanding market because of its ability to produce high quality packaging materials and scientific marketing methods. But, in actual practice, the picture is not as simple and as rosy as all that. The biggest uncertain factor pertains to availability of raw materials. In his statement to shareholders this year, *vide* pages 28 and 29 of *Commerce* dated 1st July, 1961, Mr. K. C. Mahindra, Chairman, has drawn pointed attention to the short-sighted policy of the Government in not giving high priority for the import of raw materials required by the packaging industry. The Company has no doubt been devising ways and means whereby it can reduce its dependence on imports both for machinery and raw materials. But there is a limit to what can be done in this direction when the basic materials are not available in sufficient quantity. In this connection, the following extract from Mr. Mahindra's speech will show the position:

"Although the year opens with a satisfactory stock level, the outlook for the current year cannot be without anxiety. If Tatas proceed with the planned closure for overhaul of their billet mill, the Tinplate Company of India will be required to obtain their tinbar from unfamiliar sources. It is not difficult to visualise the manufacturing problems that could ensue. Rourkela is not expected to commence tinplate production until the end of the year and the continuing gap between indigenous supply and current demand can only be met by imports. This is not a situation which allows complacency in face of the critical foreign exchange position.

"Looking beyond the current year, Rourkela will provide only short-term relief, as the demand for tinplate is rising at a rapid rate. Until a really substantial expansion of production capacity is put into effect, the import bill for tinplate will be heavy, notwithstanding the considerable efforts being made to utilise alternative packaging materials. Meanwhile, if the means of providing adequate imports are not found, the effect on the many industries dependent on tinplate containers for their packaging will be far-reaching with corresponding repercussion on the economy as a whole.

"Supplies of deep drawn mild steel were obtained during the second half of the year in sufficient quantity to allow increased production of industrial components. The outlook for the current year is at present uncertain, but every possible effort is being made to ensure availability either from D.L.F., rupee payment, or barter deals. It is to be hoped that the Company's representations on this score will not be ignored...."

While experience in recent years suggests that the Company has somehow managed to overcome the problem of raw material shortage fairly successfully and been able to report progressively rising profits, a certain degree of caution is necessary in taking a view of the prospects for investment in the Company's equity at the prevailing market price. Currently, the Rs. 10 fully paid ordinary shares, which are listed on the Calcutta Stock Exchange, are quoted at Rs. 51.00 *cum-div.* On an *ex-div.* basis, the net yield works out to 3.5 per cent per annum.

(Concluded from next column)

machinery was nearly Rs. 40 lakhs. Current assets inclusive of investments, loans and advances, aggregate Rs. 107.24 lakhs.

An extract given below from the Directors' report will help one to form a better picture of the outlook for the Company:

"The machinery for extending the Dextrose plant is already at site and it is expected to be commissioned during the current year. The sulphuric acid plant capacity has been increased to 60 tons and it will be fully commissioned when the extension of the superphosphate and alum plants are completed... The Government has sanctioned an increase in the superphosphate plant capacity from 30 tons to 100 tons a day, alum plant capacity to 50 tons a day and has licensed the manufacture of 74 tons per annum of sodium and zinc silico-fluoride. The orders for the machinery for these plants will be placed shortly.... The Company has also been licensed to manufacture citric acid with a plant capacity 1,500 tons per annum. The negotiations for foreign collaboration are proceeding."

The Rs. 100 fully paid ordinary shares of the Company, which are listed on the stock exchange at Ahmedabad, are currently being quoted at Rs. 775. At this price the net return to an investor works out to 2.7 per cent per annum.

HIGHER PROFITS FOR ANIL STARCH

SHAREHOLDERS TO GET MORE

THE financial results of Anil Starch Products Ltd. (Managing Agents: Messrs. Kasturbhai Lalbhai & Co., Ahmedabad) for the year ended 31st December 1960, are quite in consonance with the Company's reputation as the leading manufacturers of starch products, textile auxiliaries, chemicals, and fertilizers. Thanks to the allotment of American maize under P.L. 480 and the satisfactory working of the plants, the Company's sales have registered an impressive rise of over 16 per cent or Rs. 37.48 lakhs to Rs. 267.70 lakhs. There has, however, been a corresponding rise in the cost of raw materials and stores consumed, salaries and wages, and other expenses. Even so, the gross profit shows an improvement of as much as Rs. 10.82 lakhs to Rs. 44.40 lakhs. In view of this increase in profit, the provision for managing agents' commission has been raised to Rs. 3.55 lakhs from Rs. 2.47 lakhs made for 1959. A slightly lower provision of Rs. 8.87 lakhs has been made to cover the depreciation of the fixed assets as compared with Rs. 9.00 lakhs a year ago, while the provision for tax liabilities has been stepped up to Rs. 13.54 lakhs as compared with Rs. 10.15 lakhs during the previous year. The net profit shows an improvement of Rs. 6.48 lakhs to Rs. 18.44 lakhs. Out of this allocable profit, a sum of Rs. 8 lakhs has been credited to the general reserve while Rs. 1.17 lakh has been transferred to the development rebate reserve under the provisions of the Income-tax Act.

It will be recalled that, with the change in mode of payment of corporate dividends introduced by the Finance Act, 1959, the Company had declared for that year a dividend of Rs. 7.143 per share on the 5 per cent cumulative preference shares so as to give the preference shareholders a net return at the stipulated rate. Parliament has since then passed legislation under which it will suffice to pay 6¼ per cent, subject to the deduction of tax, to the preference shareholders for the year under review. The Company has, however, elected to pay preference dividend at the rate of 7 per cent, subject to the deduction of tax, and has accordingly appropriated a sum of Rs. 35,000 to meet this liability. In view of the substantial improvement in the balance available for distribution to the equity shareholders, the rate of ordinary dividend has again been raised to Rs. 20 per share *plus* a bonus of Rs. 10 per share, both subject to deduction of tax, as compared with Rs. 20 and Rs. 8 per share, respectively for 1959.

The following table gives a synoptic view of the progress made by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales	2,67.70	2,30.22	1,95.39†	1,91.17

† Subject to deduction of tax.

A persual of the Company's balance-sheet, as at 31st December 1960, shows that its share capital of Rs. 34.89 lakhs is supported by Rs. 34.54 lakhs in the reserves, giving the total capital funds invested in the business as Rs. 69.43 lakhs. Against this, the outside interest, as represented by secured and unsecured loans and the current liabilities, is placed at an aggregate of Rs. 143.08 lakhs. Of this, fixed deposits from the public accounted for Rs. 37.02 lakhs. The gross block is carried in the Company's books at a cost of Rs. 163.91 lakhs and the net block stands at Rs. 105.21 lakhs after the deduction of Rs. 58.70 lakhs as depreciation. It may be noted here that, during 1960, the Company invested no less than Rs. 45.36 lakhs on fixed assets of which the share of

(Continued in previous column)

10 JUL 1961 PUBLIC DEPARTMENT

BHARAT LINE DISAPPOINTS

DIVIDEND PASSED OVER AGAIN

THE year ended 31st December 1960 was really a bad one for Indian shipping. The trading conditions deteriorated with a further decline in the volume of cargo and also loading and discharging operations. These conditions are reflected in the results of the Bharat Line Limited (Managing Agents: Messrs. Dinshaw Private Limited) for 1960. Its operations during the year under review deteriorated due to all these factors and the ever-mounting cost of operations, resulting in a net loss of Rs. 31 lakhs, as against a loss of Rs. 10.29 lakhs in the previous year. This brings the total loss carried forward to Rs. 38.11 lakhs. It would rather be difficult for the Company to wipe off this loss in a year's time, as conditions in shipping trade reveal no perceptible change for the better.

The drop in freight earnings since 1959 has not stopped yet, though the only consolation is that the acceleration is slower. The freight earnings of the Company dropped during the year by 3.1 per cent (from Rs. 172.97 lakhs to Rs. 167.59 lakhs) as compared with a drop of 6.1 per cent in the previous year (from Rs. 184.37 lakhs to Rs. 172.97 lakhs) and 26.8 per cent in 1958 (from Rs. 252.11 lakhs to Rs. 184.37 lakhs). The expenses of the Company, however, have been rising. The unfortunate part of it is the rise in acceleration also. Thus, the expenses have increased by 9.7 per cent during the year (from Rs 157.67 lakhs to Rs. 173.02 lakhs), as against only 0.9 per cent in the previous year (from Rs. 156.20 lakhs to Rs. 157.67 lakhs).

With the deficit further augmented by the heavy loss for the year under review, the Directors had no other alternative but to pass over the dividend. The depletion of the reserves to meet this recurring loss has made the Directors conscious to that. In case the trading conditions do not improve in the current year, the Directors may be compelled to seek the wishes of the shareholders at the next annual general meeting as regards the operations of the Company and its future. Due to the uncertainty about the future of the industry in general, and the Company in particular, the quotation for the Rs. 10 paid-up ordinary shares of the Company has receded to as low as Rs. 5.

The following comparative table of figures for the last four years confirms the deterioration in the working results of the Company.

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Freight earnings	1,67.59	1,72.97	1,84.37	2,52.11

Dividends	..	..	12.00 (D. 6% +B. 6%)	12.00 (D. 6 % +B. 6%)
Carry forward	—38.11	—7.11	3.18	4.06

As against the paid-up capital of Rs. 1 crore in 10 lakh ordinary shares of Rs. 10 each, the reserves and surplus stand at the depleted level of Rs. 62.96 lakhs; a year ago, they were Rs. 94.04 lakhs and two years ago Rs. 114.81 lakhs. With the continuous increase in the fleet of the Company, the gross block has risen to Rs. 436 lakhs. The net block stands at Rs. 202.43 lakhs, after deducting from the gross block Rs. 233.57 lakhs for depreciation. The total investments have remained steady at Rs. 62.20 lakhs, of which Rs. 54.05 lakhs is in quoted investments and Rs. 8.15 lakhs in unquoted investments. The market value of quoted investments has dropped by Rs. 1.31 lakhs to Rs. 46.77 lakhs. With the increase in loss and acquisition of further ships, the secured loans have risen to Rs. 159.25 lakhs from Rs. 135.93 lakhs in the previous year and Rs. 77.19 lakhs as at the close of 1958.

The fleet of the Company has increased to 12 units, aggregating 56,819 g.r.t. and 87,535 d.w.t.

Due to continuous worsening of the Hooghly river over the last four years, there has been a gradual decline in the quantity of coal carried per steamer from Calcutta, as can be seen from the following figures:

1957	...	6,440 tons
1958	...	6,201 tons
1959	...	5,611 tons
1960	...	5,589 tons

This reduction in the cargo permitted to be carried by the Hooghly river as against the capacity of 7,000 to 9,500 tons of the Company's steamers has contributed, to a great extent, to the adverse results of the Company. The carriage of coal, which is the mainstay of the coastal trade, over and above the limitations imposed upon it by the Hooghly river conditions, has had to contend with vastly deteriorating environments at the discharging ports. Thus, the enforced diminution of the quantity of cargoes permissible as shiploads, arising out of the deteriorating conditions in the Hooghly river, and the unhappy position of working at the various coastal ports, have combined to make the freight rates awarded by the Government, on the recommendations of the Rail-Sea Co-ordination Committee, not only uneconomic but positively loss-producing. The Directors have, therefore, suggested that the Government should appoint, without loss of any further time, an independent inquiry committee to examine the prevailing facts of coastal trade and fix economic freight rates. The Burma-India trade, in which carriage of rice on Government account forms the bulk, also continues to be unprofitable and the attempts of the Near Trades Conference to obtain favourable freight rates from the Government have not been fruitful so far.

SALES OF AMBIKA SILK CROSS ONE-CRORE MARK

The crossing of sales of rupees one-crore-mark is the feature of working of the Ambika Silk Mills Co., Ltd. (Managing Agents: Messrs. Maganlal Bhagwandas and Co., Bombay) for the year ended 31st December 1960. The sales increased for the fourth year in succession and, as compared with the performance in 1959, have risen by 12.5 per cent to Rs. 104.38 lakhs in the year under review. The receipts from dyeing, bleaching and other charges have likewise increased to Rs. 4.85 lakhs from Rs. 3.65 lakhs in the preceding year. The closing stocks of finished goods, though higher at Rs. 11.52 lakhs as against Rs. 10.23 lakhs a year earlier, are maintained at 11 per cent of sales.

The increase in sales has resulted in a higher gross profit of Rs. 10.27 lakhs, as against Rs. 6.38 lakhs for the previous year. The better working results are reflected in the rise in the ratio of gross profit to sales from 6.8 per cent to 9.8 per cent. The higher profit has enabled the directors to recommend a substantial increase in the dividend, from 12 per cent (for 1959) to 15 per cent, subject to deduction of tax, for both the years.

The following comparative table for the last four years shows at a glance the improvement in the working results of the Company:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds of cloth and waste	1,04.38	92.77	85.43	66.82

* Subject to deduction of tax.
† On the higher capital of Rs. 17.33 lakhs raised by a further issue of 5,775 shares of Rs. 100 each.
‡ On the higher capital of Rs. 11.51 lakhs raised by a fresh issue of 3,815 shares of Rs. 100 each.

The paid-up capital of the Company, which was increased in the previous two years, stands at Rs. 17.32 lakhs, consisting of 17,325 equity shares of Rs. 100 each. The reserves and surplus show a minor improvement to Rs. 9.91 lakhs. The secured and unsecured loans have advanced from Rs. 17.85 lakhs to Rs. 19.59 lakhs. The total of current liabilities is Rs. 39.73 lakhs and are comfortably covered by current assets amounting to Rs. 51.24 lakhs. The gross block account of Rs. 40.70 lakhs stands depreciated at Rs. 15.36 lakhs, the depreciation so far provided being Rs. 25.34 lakhs.

The exports under the Export Incentive Scheme amounted to Rs. 7.47 lakhs and that enabled the Company to obtain foreign exchange for import of raw material (art silk yarn) and coal tar dyes.

In order to meet the expansion programme, the Directors have decided to enlarge the authorised and the subscribed capital alike. The authorised capital is proposed to be increased from Rs. 20 lakhs to Rs. 30 lakhs divided into 30,000 equity shares of Rs. 100 each. The subscribed and paid-up capital will be enhanced by the issue of 2,675 equity shares. These will be offered at par in the ratio of one share for every seven shares held.

At the current market price of Rs. 149, the Rs. 100 paid-up ordinary shares give a net yield of 7 per cent, taking the net dividend to be Rs. 10.50 per share.

AHMEDABAD ADVANCE CHANGES ACCOUNTING YEAR

RATE OF DIVIDEND ENHANCED

BEING the only mill whose accounting year was July-June in Ahmedabad, the Ahmedabad Advance Mills Ltd. (Secretaries and Treasurers: Tata Industries Private Limited) has decided to change the accounting period to the calendar year. As all the other mills in the region observe the calendar year, the Company was at a disadvantage in negotiations with the Textile Labour Association in the matter of computing the quantum of bonus. The change in the accounting year would facilitate comparison and maintenance of statistical records for furnishing information to the Millowners' Association of Ahmedabad and the Government.

The latest Directors' report and statement of accounts is for the six months ended 31st December 1960. The trading conditions during the half-year under review were on the whole favourable, with fairly sustained demand for cloth. The receipts from sales of cloth, yarn and waste amounted to Rs. 154 lakhs as compared to Rs. 281.41 lakhs during the whole of the previous year. The gross profit of the Company for the six months is Rs. 14.93 lakhs, as compared with Rs. 29.11 lakhs for the preceding whole year. Thus, the working results for the period have been reasonably satisfactory and well maintained. This steady performance has prompted the Directors to transfer to General Reserve No. 2 a sum of Rs. 6.74 lakhs as against Rs. 9 lakhs for the previous whole year. The dividend to ordinary shareholders has also been enhanced from Rs. 10, subject to tax, for the whole year to Rs. 6, subject to tax, or from 10 per cent per annum to 12 per cent per annum.

Working Results

The following comparative table for the last three and a half years confirms the improvement in the working results of the Company:

(In lakhs of rupees)

	Half-year ended 31-12-1960	For the year ended		
		30-6-1960	30-6-1959	30-6-1958

* Subject to deduction of tax.

The paid-up capital of Rs. 50 lakhs consists of Rs. 10 lakhs in 10,000 five per cent preference shares of Rs. 100 each and Rs. 40 lakhs in 40,000 equity shares of Rs. 100 each. The reserves and surplus have increased from Rs. 38.09 lakhs to Rs. 46.97 lakhs. It is interesting to note that the unsecured loans of the Company are rising and the secured loans are falling. The unsecured loans of the Company stand at Rs. 100.94 lakhs, as against Rs. 95.22 lakhs and the secured loans stand at Rs. 30.01 lakhs as against Rs. 36.86 lakhs. The other current liabilities amount to Rs. 47.58 lakhs, bringing the total liabilities to Rs. 178.53 lakhs. As against this total, current assets are no more than Rs. 146.94 lakhs. The gross block of the Company which has risen to Rs. 213.83 lakhs from Rs. 209.06 lakhs six months earlier stands depreciated at Rs. 119.51 lakhs, the depreciation provided being Rs. 94.32 lakhs. The value of works under construction and machinery awaiting installation is Rs. 9.05 lakhs. It will thus be noted that the Company is undercapitalised.

During the period under review, a Sucker sizing machine, a humidification plant in the combing department, a double winding frame and two dyeing jiggers have been installed.

The current market quotation of Rs. 100 paid-up ordinary shares at Rs. 190 gives a net yield of 4.4 per cent per annum or a net dividend of Rs. 4.20 per share for the half-year.

SYNOPSES OF COMPANY REPORTS

Murphulani (Assam) Tea Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Andrew Yule and Co., Ltd., Calcutta.)

Annual General Meeting—12th July.

* The proposed additional dividend on preferred ordinary shares for the year 1959 absorb Rs. 1,260 and works out at Re. 0.063 per preferred ordinary share.

† Balance carried forward after deducting the loss of Rs. 50,761 for the year.

Extracts from the Directors' report: The garden was seriously affected by the exceptionally severe droughts which occurred in the Golaghat district of Assam. As a result of these droughts, the crop for the year amounted to only 1,223 quintals (3,370 maunds) compared with 1,808 quintals (4,982 maunds) secured in 1959. The crop sold at an average price of Rs. 5.87 per Kg. compared with an average price of Rs. 5.56 per Kg. for the 1959 crop.

Capital expenditure during the year amounted to Rs. 3,88,067 of which Rs. 1,91,000 represents the cost of a new leaf house and Rs. 80,000 the completion of the modernisation and re-equipment of the factory, while the balance relates mainly to the construction of labour and staff quarters and other buildings.

Estimates for the current season have been framed for a crop of 1,800 quintals (4,960 maunds). Rainfall to the middle of May 1961, amounted to 58.58 cms. (23.06 inches) which is satisfactory and, provided normal weather conditions continue during the season, the estimated crop should be secured.

Andrew Yule & Co., Ltd. ceased to act as Managing Agents of the Company on 15th August 1960, and at an Extraordinary General Meeting of the Company held on 29th June 1960, they were appointed Secretaries & Treasurers of the Company with effect from 15th August 1960.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	3,75,000	Gross block	20,39,734

Carried forward	2	3

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Crop and Price*: 4,02,000 lbs. (3,53,888 lbs for 1960) or 1,82,344 Kgms. of tea were produced during the year under report against the estimate of 3,65,000 lbs. The tea was produced at a cost of 146.32 nP per lb. (322.58 nP per Kg.) against 162.32 nP (357.85 nP per Kg.) for the previous year. The net average sale price realised works out to 231 nP per lb. (509.26 nP per Kg.) compared to 228.35 nP per lb. (503.42 per Kg.) during the previous year. The stock of tea remaining unsold as at 31st March 1961 was 87,904 lbs. (39,870 Kgs.) the whole of which has been valued at all-in-cost of Rs. 3.83 per Kg.

Coffee: 258 bushels of Dry Cherry were harvested during the year which gave an out-turn of 2,010 tonnes. The revenue expenditure incurred on coffee amounted to Rs. 18,743.30. The loss on coffee working for the year was Rs. 13,718.30.

The Estimates for the year ending 31st March 1962 provide for a crop of 1,70,100 Kgms. made tea to be produced at a cost of 339.61 nP per Kg. and 8-ton coffee to be produced at a cost of Rs. 3,907.43 nP per ton. The Estimates also provide for a capital expenditure of Rs. 47,743.

Accounts in brief as at 31st March 1961 are as under:—

Proposed dividend (taxable)	Nil	6,76
		(8%)
Carried forward	(—)17,34	(+) 2

N.B.—Adjustments include the balance brought forward from the previous year and other credit items if any.

Extracts from the Directors' report: Although the second kiln was taken into operation in May 1960 and worked only partially during the year, mainly due to shortage of coal, the directors have provided for full depreciation for the original plant and machinery and for the Company's hundred percent capacity expansion effected in the year 1960. The total depreciation provided, according to Income Tax Rules for the original plant as also for hundred percent expansion during the period of its operation, amounted to Rs. 20,59,467, the balance of Rs. 1,33,584 being surplus for the year.

Production and Despatches:—Production of clinker and cement during the year was 134,645 (94,326) tons and 134,901 (96,717) tons, respectively. The increased capacity, during the eight months of the year 1960, could not be fully utilised on account of shortage of coal. Despatches of cement for the year were 132,231 (98,001) tons. Shortage of coal continued to affect production throughout the first few months of the year 1961. Inspite of strenuous efforts, it has not been possible to get enough coal for running the factory to its full capacity.

Expansion:—The Company has been granted, by the Government of India, a licence to increase its production capacity from the existing 2 lakh tons per year to 4 lakh tons per year. The directors do not feel justified in implementing the additional capacity when its existing capacity is not being fully utilised. The Company has, therefore, informed the Government that the Company has to defer its decision regarding implementation of additional capacity until the coal situation has eased and the Company is in a position to receive its supply of electric power from the Sharavathi Power Project, which is due towards the end of 1963.

Accounts in brief as at 31st December 1960 are as under:—

* Loss after providing Rs. 35,000 for Managing Agents' remuneration.

† This includes Rs. 16,500 being the share due to Messrs. Peirce Leslie & Co., Ltd. (the former managing agents) for the period from 1st January to 14th June 1960.

‡ Of the total loss of Rs. 21,79,050, the Company adjusted an amount of Rs. 19,00,000 by transfer of a like amount from the general reserve and carried forward a final loss of Rs. 2,79,050.

§ Represents preference dividends for the years 1958, 1959 and 1960.

Extracts from the Directors' report: Messrs. G. N. Sam & Co., took over the management of the Company as managing agents on and from 15th June 1960.

In the year under report additions were made to the Company's buildings by constructing a godown at a cost of over Rs. 90,000. In the blow-room, entire group drive was converted into individual drive and also in the spinning department last batch of frames on group drive were also converted to individual drive at a cost of Rs. 68,000. It is proposed to purchase in the current year one set of blow-room machinery to replace the present set which is very old and one set of combing equipment at an estimated cost of about Rs. 8 lakhs. Orders have already been placed for the said machinery. With a view to meet the cost of machinery to be purchased as aforesaid and to repay the fixed deposits held by the Company by arranging for a loan on a long term basis, it has been arranged to borrow a loan of Rs. 12 lakhs from The Madras Industrial Investment Corporation Limited. The loan has been sanctioned and an amount of Rs. 6 lakhs has been drawn and applied in repaying the fixed deposits. It is intended to draw the balance of the loan as and when the time arrives to pay for the machinery ordered as aforesaid.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	21,00,000	Gross block	26,37,397

* Depreciation amounts to Rs. 788.

† Loss after providing for depreciation.

Extracts from the Directors' report: During the period under review the Company issued a further capital of Rs. 7,50,000 divided into fully paid 75,000 equity shares of Rs. 10 each to the general public with the consent of the then shareholders. The directors are pleased to report that the issue was oversubscribed.

Activity during the major part of the year was mainly devoted to organisation and preparatory work connected with the erection of the Company's new unit at Port Blair in the Andamans. The Company's Calcutta unit went into production of tea chest shooks in January 1960 and the construction of the Port Blair unit was completed much earlier than expected. This unit was inaugurated on the 16th May 1960 by Mr. M. V. Rajwade, I.A.S., Chief Commissioner of the Andamans & Nicobar Islands. Since then regular shipments of tea chest veneers have started coming and the bulk of production of tea chests in Calcutta factory has been carried on with such veneers. This has obviously reduced dependence on local supplies of timber to a great extent. As this is the first working year of the Company and as hereinafter stated factories are still under erection it is hoped that the shareholders will find the result satisfactory with a promising future ahead. At present the Company has been carrying on its production of tea chest shooks and this business is likely to yield better results in the current year compared with that of the year under report.

In the last report, it was pointed out that the Company had obtained an Import Licence for machinery worth about Rs. 7,72,000 from the Government of India. The directors are glad to report that the Company's scheme for the setting up of a complete modern plant, for manufacture of commercial plywood, decorative plywood and flush doors for which there is demand in the country is now in the process of full implementation. For this, the Company has already acquired about 19 bighas of land in Behala (near Calcutta) where the construction work is proceeding smoothly. Bulk of the imported machinery has arrived and the balance is expected shortly. According to progress made so far the erection work will be completed by October 1961 and this unit will start regular production by the year end. Therefore, a better working result can reasonably be expected from next year onwards. The Company has not yet drawn any part of the loan of Rs. 13,00,000 granted to it, by Industrial Finance Corporation. The Company will begin to draw on the said loan, in instalments, according to its requirement from time to time.

In order to extend the Company's activities further the production of chip-board has been planned. A suitable plant is expected to be erected on the same site at Behala, where the company has sufficient spare land. Necessary application has been made to the Government of India for an import licence. The Industrial Finance Corporation has agreed to give the company a dollar loan to the extent of a sum of Rs. 7,92,000 to finance this project.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.

* Only Rs. 242.

† After transferring Rs. 1,50,000 to general reserve.

Extracts from the Directors' report: 1960 was a good year from the point of view of sales, gross and net profits. Compared to 1959, the increases were: Vehicle sales (including direct deliveries) 37.4 per cent; volume 41.4 per cent; gross profit 41.5 per cent; and net profit after taxation 37.3 per cent.

In spite of the fact that automobile dealerships had to contend with diminishing margins, due to Government controls, and increasing overheads, it was possible to show better results mainly due to the larger turnover. Supplies from manufacturers were satisfactory throughout. The Company received all the co-operation from them. Government five-year plans have generated activities throughout the country which should help to maintain and develop the strength through 1961. There are, however, one or two adverse factors which affect the automobile trade as such. They are: (1) Increasing cost of production and operation; (2) Direct or indirect restrictions on road transport development; and (3) Shrinking of financing facilities. Considering the vastness of the country and the quantum of goods to be moved, the potential for road haulage is tremendous.

The Company's activities are confined to operations in West Bengal and Assam. As a result of improved sales and consequently larger vehicle population, the responsibility for giving better type of representation and service is increasing. The Company has plans to enlarge activities where direct operations now exist and open new branches where such representations are necessary. This, however, would involve in substantial capital investment in coming months or years. The programme consists of enlargement of workshops in Calcutta and Siliguri as well as opening additional branches in Assam and West Bengal.

Compared to turnover, the paid-up Capital of the Company represents 3.63 per cent, or the turnover equals 27.53 times of the paid-up Capital, in spite of which it was possible to handle the high volume only by keeping fully employed the reserves prudently built up in previous years supported by substantial bank overdraft. In most months of the year under review, the demand for finance remained fairly high. It has been found necessary to further strengthen the reserves to sustain and improve the ability to handle larger turn over. Allocations have accordingly been made with the above objective in view.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	10,51,000	Gross block	13,85,807
Reserves and surplus	25,88,390	—Depreciation	9,51,870
Other liabilities	50,38,925	Net block	4,33,937
		Current assets	74,01,164
		Investments	1,27,080
		Cash	7,46,134
	Rs. 87,08,315		Rs. 87,08,315

Rungiee Rungliot Tea Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Duncan Brothers & Co., Ltd., Calcutta.)

Annual General Meeting—26th June.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales (gross proceeds of tea)	6,01	5,18

	(35%)	(10%)
Carry forward	21	30

N.B.—Adjustments include the balance brought forward from the previous year and other credit items like interest earned and profit on sale of fixed assets, investments, etc.

Extracts from the Directors' report: Tea crop was 1,06,900 kgs. as compared with 86,691 kgs. in 1959. The average selling price realised was Rs. 7.00 per kg. as against Rs. 6.83 per kg. in the previous year. Planted area remains at 341 acres.

Estimates for 1961 provide for a crop of 83,500 kilograms at an outlay of Rs. 5,58,140, including inland freight and sale charges.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	1,40,000	Gross block	4,72,085
Reserves and surplus	5,63,701	—Depreciation	2,07,057

Proposed dividends (taxable) 6% preference	10*	13
" " " ordinary	3,83	3,83
	(22½%)	(22½%)
Carry forward	37	44

N.B.—Adjustments include the balance brought forward from the previous year; tax provision no longer required and other credit items if any.

* Preference dividend worked at 6.765 per cent. in accordance with the Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: Crop. Tea crop harvested during the year was 10,05,181 kgs. which is 52,638 kgs. above the estimate, but 35,057 kgs. less than 1959 crop. But for unfavourable weather conditions during October/December the 1960 crop might well have exceeded 1959.

The results of the last three years compare as under:

Year	Crop Kgs.	Estate expenditure nP. per kg.	All-in cost nP. per kg.	Average sale price nP. per kg.	Nett profit nP. per kg.
1958	9,49,363	287.89	350.02	358.80	14.06
1959	10,40,238	277.22	383.73	409.88	48.25
1960	10,05,181	299.69	384.07	428.93	47.33

For 1961 the Manager has estimated a crop of 9,97,900 kgs. at an Estate expenditure of 292.45 nP. per kg. The crop secured for the year represents an overall yield of 646 kgs. per acre.

Pirmed Factory has been completely electrified and is working satisfactorily. Oil firing has been installed in Pirmed Factory and this will help to conserve the Company's fuel reserve.

Accounts in brief as at 31st December 1960 are as under:

Liabilities	Rs.	Assets	Rs.
Capital	18,50,000	Gross block	43,52,475
Reserves and surplus	11,94,852	—Depreciation	15,21,846

Notices

WESTERN BENGAL COALFIELDS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta, on Monday the 7th August 1961, at 3.00 p.m., for the following purposes:

1. To consider and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March 1961.
2. To consider declaration of dividend.
3. To elect Directors in place of Raja B. N. Ray Chowdhury and Shri S. R. Daga who retire by rotation but being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. Singh & Co., the retiring Auditors being eligible, offer themselves for re-appointment.
5. As special business to consider and if thought fit, to pass, with or without modification the following resolutions:

AS ORDINARY RESOLUTIONS:

(a) "Resolved that Shri D. N. Bhattacherjee be and is hereby appointed a Director of the Company."

(b) "Resolved that the Board of Directors of the Company be and are hereby authorised to borrow from time to time moneys for the purposes of the Company upto a maximum of Rs. 75 lakhs outstanding at any time on account of principal notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (excluding temporary loans taken from Banks in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say reserves not set apart for any specific purpose."

(c) "Resolved that the Board of Directors be and are hereby authorised to contribute and/or subscribe to any institution or fund for any national, charitable, benevolent, public or general purposes, not directly relating to the business of the Company or to the welfare of its employees from time to time such amounts upto a total of Rs. 50,000 in any financial year notwithstanding that such amounts in any financial year will exceed Rs. 25,000 or 5 per cent of the Company's average net profits as determined in accordance with the provisions of the Companies Act 1956 during the three financial years immediately preceding whichever is greater."

AS SPECIAL RESOLUTION

(d) "Resolved that the Company do hereby approve of and authorise the payment of commission at 1 per cent of the net profits of the Company computed in accordance with the provisions of the Companies Act, 1956 to the Directors of the Company for the year ending on 31st March 1961 and all subsequent years provided such payment is approved by the Central Government."

6. To transact any other business which may be brought forward at the meeting with the permission of the Chairman.

The Register of Members will remain closed from the 22nd July 1961 to the 7th August 1961. both days inclusive.

By Order of the Board,

HINDUSTAN INVESTMENT CORPORATION LTD.,
R. K. CHHAOCHHARIA,
Managing Director,
Managing Agents.

8, INDIA EXCHANGE PLACE,
CALCUTTA 1,
Dated the 27th June, 1961.

Note: (i) The dividends, if declared at the meeting, will be posted to the Registered addresses of the shareholders whose names appear on the Company's register on the 7th August 1961 or to their order or to their bankers.

(ii) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE ABOVE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(iii) The instrument appointing a proxy shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the aforesaid meeting.

(iv) EXPLANATORY STATEMENT WITH *REGARD TO THE SPECIAL BUSINESS*:—

Item 5(*a*)—Sri D. N. Bhattacherjee was appointed an Additional Director of the Company by the Board of Directors in terms of Article No. 126(*a*) of the Articles of Association of the Company. As per the provisions of Section 260 of the Companies Act 1956 Sri Bhattacherjee vacates office at the next Annual General Meeting. The Company has, however, received a notice from a member under Section 257 of the Companies Act 1956 regarding Sri Bhattacherjee's appointment to the Board at the next Annual General Meeting.

Item 5(*b*)—As per the provisions of Section 293 of the Companies Act 1956, as amended by the Companies Amendment Act 1960 the Directors of the Company can borrow moneys in excess of the Paid-up Capital and Free Reserves of the Company only if they are authorised in that behalf by the Company in General Meeting by resolution which specifies the limit for such borrowings. In view of the development programmes of the Company the Directors may have to borrow moneys upto the limit specified in the Resolution.

Item 5(c)—Section 293 of the Companies Act 1956 as amended by the Companies (Amendment) Act 1960 further provided that the Directors can contribute to charitable or other institutions in excess of Rs. 25,000 or 5 per cent of the Company's average net profits computed as mentioned in the Resolution only if authorised by the Company in general meeting by resolution which specifies the limit for such contributions. The resolution is proposed in view of this provision.

Item 5(*d*)—Article No. 117 of the Articles of Association of the Company provides for payment of commission to the Directors of the Company upto 1 per cent of the net profits in each year. As per Sections 309 and 310 of the Companies Act 1956, the approval of the Company in General Meeting by special resolution and also approval of the Central Government are required for making such payment.

BURN AND COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the sixty-seventh Ordinary General Meeting) of the Company will be held on Friday, the 28th July, 1961, at 11 a.m. at the Registered Office, 12 Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the audited accounts for the year ended 30th April, 1961, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend on the ordinary shares. The dividend, if declared, will be paid on or after the 7th August, 1961, to the Shareholders whose names are on the Company's Register on the 28th July, 1961, or to their mandatees.
3. To appoint a Director in place of the retiring Director, Mr. T. C. Hornby.
4. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass the following resolutions as Special Resolutions.

5. Special Resolution No. 1.

That Article 114 be deleted and the following substituted therefor.

"114. Unless otherwise determined by the Company in general meeting each Director shall receive the sum of Rs. 250 for every meeting of the Board of Directors attended by him. The Board of Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Board of Directors may be held and who shall come to that place for the purpose of attending such meeting such sum as the Board of Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the meeting in addition to his remuneration as specified above."

6. Special Resolution No. 2.

That subject to the approval of the Central Government pursuant to Section 360 of the Companies Act, 1956, the Company do hereby approve of a contract between the Company of the one part and Mr. Sitendu Gupta, an associate of Martin Burn Limited, the Managing Agents of the Company, within the meaning of the Companies Act, 1956, of the other part the material terms of which are:

(a) Mr. Sitendu Gupta, who is an Assistant of the Company, at Howrah Works, shall continue to be such assistant for a period of five years with effect from the 1st December, 1960; during this period he shall enjoy the same privileges, amenities and perquisites and be subject to the same liabilities and obligations as are applicable to other assistants of the Company in the same grade of employment and with the same status.

(b) Mr. Sitendu Gupta's basic monthly salary will be on the scale Rs. 900-1,000-1,100-1,200-1,300 during the first and successive years of service, plus dearness allowance at the rate allowable under the Company's rules from time to time, medical expenses and, at the discretion of the Company, an annual bonus.

He will be entitled to two months' leave on full pay and will be paid return railway fares for himself and his wife after completing the second and fourth year of his contract of service.

The Ordinary Share Register of the Company will be closed from the 20th July, 1961 to the 28th July, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board

MARTIN BURN LIMITED
S. GUPTA
Managing Director
Managing Agents

Calcutta, 1st *July,* 1961

An Explanatory Statement as required under the Companies Act, 1956 has been forwarded to the members of the Company.

BOMBAY, 1st *July,* 1961.

SELECTED SATGRAM COLLIERIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Selected Satgram Collieries Limited will be held on Monday, the 24th July 1961 at 3 p.m., at its Registered Office, F-2, Gillander House, 8, Netaji Subhas Road, Calcutta 1, for the purpose of considering the following resolutions and if thought fit, to pass with or without modifications as Special and Ordinary Resolutions:

AS SPECIAL RESOLUTIONS

1. "RESOLVED that 20,500 Equity Shares of Rs. 100 each be issued and offered for subscription on the following terms and conditions:

(a) 19,500 Equity Shares shall be offered for subscription at par to the existing shareholders on the Register of Members of the Company on 21st July, 1961 with right to renounce in favour of a person or persons approved by the Directors in the ratio of one new Equity Share for every one existing ordinary share held by such holders respectively and subject to the consent of the Controller of Capital Issues to the modification, the balance of 1,000 Equity Shares be disposed of by the Board of Directors at par in such manner as they think most beneficial to the Company and subject to Memorandum and Articles of Association of the Company.

(b) The offer aforesaid shall be made by the Board by notice, specifying the number of shares which each existing member shall be entitled to apply for and take up and limiting the time not being less than one month from the date of offer within which the offer if not accepted will be deemed to have been declined, with liberty to the Directors from time to time to extend the time for acceptance as aforesaid either generally or in respect of any particular holder or holders.

(c) The amount of Rs. 50 per share on the aforesaid Equity Shares shall be payable with the application, Rs. 25 on allotment and the balance of Rs. 25 shall be called as and when the Directors think it necessary.

(d) The new Equity Shares shall confer on the holders thereof the right to any dividend declared for the year ended 31st December, 1961 and shall entitle such holders to rank from the date or dates of allotments to all dividends in proportion to the capital for the time being and from time to time paid up on such shares and such shares shall for all other purposes rank *pari passu* with the existing Equity Shares of the Company.

(e) The certificates in respect of new Equity Shares shall be completed and be ready for delivery within nine months after the last allotment thereof.

(f) For the purpose of giving effect to this resolution the Directors be and are hereby authorised to prescribe forms of application and renunciation and other documents in respect of such new Equity Shares and to give such other directions as may be necessary or desirable and settle any difficulty that may arise in regard to issue and allotment of new Equity Shares as they think fit."

2. "RESOLVED that the Directors be and are hereby authorised and empowered, subject to the consent of the Controller of Capital Issues, to issue, offer and allot any of the said Equity Shares, which remain undisposed of out of the 20,500 Equity Shares, after the offer to the members of the Company as provided in the last resolution to such person or persons and in such manner whether shareholders of the Company or not, as the Directors may think fit at a price that shall not be less than the par value and at such price or prices as the Directors shall consider at their absolute discretion fair and reasonable in respect of the said Equity Shares."

AS ORDINARY RESOLUTION

3. "RESOLVED that the consent of the Company under the provisions of Section 293 (1) (d) of the Companies Act, 1956 as amended by the Companies (Amendment) Act, 1960 be and is hereby accorded to the borrowings by the Board of Directors of the Company from time to time of all monies deemed by it to be requisite from such person or persons and on such terms and conditions as the Board shall deem it fit and proper for the purpose of carrying on the business of the Company but not exceeding rupees one crore notwithstanding that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans, if any, in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

At a meeting held on this day, the Board of Directors have declared an interim dividend at Rs. 8 per share, subject to deduction of tax, for the year ended 31st December, 1961 and decided to issue 20,500 Equity Shares of Rs. 100 each at par to the existing shareholders on the terms and conditions mentioned in the aforesaid special resolutions.

The Share Transfer Registers of the Company will be closed from the 22nd July to the 5th August, 1961, both days inclusive.

By Order of the Board,
For and on behalf of
SELECTED SATGRAM COLLIERIES LTD.,
For S. D. SHETHIA & CO. PRIVATE LTD.,
B. S. SHETHIA,
Director,

Notes:—(*a*) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

(*b*) The explanatory statements pursuant to Section 173 of the Companies Act, 1956 have been forwarded to the members of the Company.

THE MANDYA NATIONAL PAPER MILLS LIMITED

Amendment to the Notice of the Extraordinary General Body Meeting to be held on 28*th July* 1961

ISSUE OF 8 LAKH EQUITY SHARES OF RS. 10 EACH AT PAR

IN ACCORDANCE WITH THE NOTICE dated 9th June 1961 for convening the General Meeting of the Company on the 28th July 1961, already circulated to the Members, it was proposed that new Equity Shares shall be offered to the Shareholders whose names appear in the Company's Register of Members on the 28th July 1961. According to the advice of the Stock Exchange, Bombay, it has been decided that the Transfer Books will be closed for the purpose of new issue only after the proposed issue has been approved by the Shareholders and the shares will be offered to such persons whose names appear in the Company's Register of Members *on such day as may be fixed by the Directors.*

Accordingly, in para (i) of the First Resolution, as proposed, the words "such day as may be fixed by the Directors" will be substituted for "the 28th July 1961." The Share Transfer Register of the Company will now be closed from the 24th July 1961 (instead of 12th July) to 28th July 1961.

S. W. G. OLPHERTS FORRESTER,
Secretary.

14, PALACE ROAD,
BANGALORE-1.
21*st June,* 1961.

An international research project on the position of underdeveloped countries in the world economy has been organised by the Chr. Michelsens Institute in Gergen, Norway, at an estimated cost of one million kroner (£50,000). The American Rockefeller Foundation has given a grant of $100,000 and the expenses beyond this are expected to be covered from Norwegian sources. The research project covers three aspects, namely, the effect on world trade of the economic growth in underdeveloped countries, the extent, composition and effect of aid projects and the international trade theory in relation to the economic growth in underdeveloped countries.

ADVANCE INSURANCE COMPANY LTD.

SPEECH OF CHAIRMAN, MR. DEBIPRASAD PODDAR

A PLEA to amend Sections 40-A and 40-C of the Insurance Act 1938 was made by Mr. Debiprasad Poddar, Chairman of the Advance Insurance Company Ltd., while speaking at the Eighteenth Annual General Meeting of the Company held at Bombay on 28th June 1961. He stressed, in particular, the need for reducing overall cost, as allowed under Section 40-C read with rule 17-E of the Act. The following is an extract from the speech of Mr. Poddar:

"From the report of the Directors on the business of the Company, you would observe that the Company has made all-round progress as regards business of the Company is concerned.

Premium Income Doubled

"The net premium income in all the departments for the year 1960 is nearly double than what it was in the year 1958.

"The foreign premium income has increased from Rs. 6,88,485 in the year 1959 to Rs. 8,66,560 in the year 1960.

Non-diversion Scheme

"As regards current Insurance topics, I would like to inform you that there is under contemplation a scheme called non-diversion scheme whereby no insurance company would accept renewal of those businesses which are already insured with another company. In short, the existing insurance of each company will be renewed with them only. In my opinion, this idea is very good in the interest of the industry as a whole, and I am sure every company, big and small, would work it out with all sincerity and in the true spirit in which it is contemplated.

"Another important thing is that the Insurance Department of the Government of India is trying its best to put the insurance industry on a healthy footing and all their present restrictions and regulations are directed towards the achievement of this end.

Insurance Act

"My humble suggestion in this respect would be to make some changes in the existing Insurance Act by suitably amending Sections 40-A and 40-C of the Insurance Act 1938. If this is done, I feel a lot of improvement would be made in the trade. First of all, overall cost, as allowed under Section 40-C read with rule 17-E of the Act, should be reduced gradually, say by 5 per cent every year for two to three years.

Tax Exemption

"My other humble suggestion is to approach the Central Board of Revenue to exempt taxations on further increased reserves for unexpired risks, say to the extent of 200 per cent of the net premium income on the marine business and 100 per cent of the net premium income on the fire, accident and miscellaneous business. If this be done, the financial position of the Company would be very strong and naturally it would be in a position to accept larger risks and retain higher amounts for its own retentions thereby increasing its own net premium income. This would not only make the position of the insurance companies very sound, but would also place the shareholders of the insurance companies in a happier position as regards the return on their investments is concerned.

"If these humble suggestions of mine are given a trial, I am sure all insurance companies, small and big, would get an opportunity to grow in a healthy manner and at the same time there will be ample scope for each individual company to make progress and expansion."

Note: *This does not purport to be the report of the proceedings of the general meeting.*

THE INDIA SUGARS AND REFINERIES LIMITED

SPEECH OF MR. RAJESWARA PATEL, M.P., OFFICIATING CHAIRMAN

EXPORT OF SURPLUS SUGAR WILL GIVE RELIEF TO INDUSTRY

A REFERENCE to the Government's effort to export surplus sugar was made in the speech delivered by Mr. Rajeswara Patel, M.P., officiating Chairman of the India Sugars and Refineries Ltd., at the Twenty-seventh Annual General Meeting of the Company held at Hospet on 29th June 1961. Mr. Patel expressed the hope that the Government would be able to export all the surplus sugar this year on the basis that, according to its own announcement, the loss on such export would be borne fully by it. Referring to the Company's application for expansion, he said that the matter would not be pursued if the cane growers, who were anxious to start a co-operative sugar factory of their own and whose wish the Company wanted to respect, agreed to supply the minimum quantity of cane required by the Company.

The following is the full text of Mr. Rajeswara Patel's speech:

"In the absence of our Chairman I am asked to perform the pleasant duty of welcoming you all to this twenty-seventh annual general meeting of the Company. In deference to the wishes of the shareholders expressed in this behalf, the registered office of the Company was transferred to this place and thus, after an interregnum of five years, the annual general meeting is again being held in Hospet.

"The Directors' report and the audited accounts for the year ended 30th September 1960 have been with you for sometime now, and, with your permission, I shall take them as read.

Results Better

"From the accounts you must have noticed that though our sugar recovery was much better during the year under review, the net profits are less by Rs. 1,43,487 and you would naturally like me to say a word about it. The main reason for this fall in the net profit is the payment of bonus amount to the cane growers under the S.I.S.M.A. formula. The amount paid under this formula for the year under review is Rs. 12,32,836 as against Rs. 6,26,221 for the previous year. This alone makes a difference of Rs. 6,06,615. Then we have also made increased provision for depreciation during the year, the increase being approximately Rs. 1,06,000. If you make an allowance for these two items, you will find the working results for the year under review are better than that of the previous year. Out of the net profits we had also to provide a sum of Rs. 2.92 lakhs for taxation as against a sum Rs. 50,000 only for the previous year.

"In spite of these factors and slight reduction in the net profits, your Directors have recommended a higher dividend of 14 per cent to the shareholders for this period. This 14 per cent dividend is payable subject to deduction of 30 per cent tax on your personal account which sum will be adjusted at the time of your personal assessment. Those of you who have obtained the exemption certificates from the Income-tax authorities will no doubt receive this dividend without any deduction.

Late Crushing

"In the Directors' report a reference has been made to the late starting of the current season. The crushing of cane still continues and is expected to be completed by the first week of next month. Due to late starting and delayed crushing, the sugar recovery is bound to be low and this in turn, is sure to affect the overall working results of the Company. The factory started late, because the cane growers were not prepared to supply cane to the factory till the question of cane bonus under S.I.S.M.A. formula was settled. That settlement became possible only after the intervention of the State and Central Governments. Valuable time was lost in these negotiations and, as a result, all interests concerned stand to suffer. I am sure, you would all approve the action of the management in accepting all the cane, honouring their moral obligation even if technically they were in a position to reject some of this cane.

Trading Conditions

"Another difficulty which your Company is presently facing is about the sales and stock lifting of sugar. As you know, the sales are controlled by the Central and State Governments and the permit holders do not lift stocks in time. Sometimes the permit expires and even when a fresh permit is issued the stocks are still not lifted. This has naturally created working difficulties and some bottlenecks. Fortunately, till now we have been able to carry on without any dislocation of work. So, while I do not want to draw any pessimistic picture of the current year, I consider it my duty to be frank with you and to take you into confidence by apprising you of the exact position obtaining.

"The production of sugar in the country was phenomenal last year and it is likely to go up still higher during the current year. The efforts of the Government and the Sugar Mills Association to export sugar have succeeded only partially. The main hurdle in our export is, as you all know, our high cost of production. Even though the Government is prepared to export it at a much sacrificial price, yet we cannot make our sales very competitive or sufficiently attractive in the world market. Perhaps you will be surprised to know that, while a bag of sugar which costs you and me about Rs. 115 here in this country where it is produced, we are prepared to sell it to the foreign purchasers for less than Rs. 35 only.

"The redeeming feature, however, is that this year the Government has announced that the loss on export of sugar will be borne fully by them and the factories would not be called upon to pay any percentage thereof. Your Directors sincerely hope that the Government would be able to export all the surplus sugar on this basis. This export, besides earning foreign exchange for our country, would give much needed relief to the sugar industry.

"Another important point which we have already mentioned in our Directors' report is the Central Wage Board Award for the Sugar Industry which came to be implemented from 1st November last year. Your Directors have since taken necessary steps to implement it and it is estimated that this will increase the annual wage bill of your Company by more than a lakh of rupees.

Subsidiary A Success

"I would now say a word about our subsidiary company, the Salar Jung Sugar Mills Ltd. I am very happy to be able to inform you that this Company has achieved record crushing this year. It has crushed more than 1,20,000 tons and has produced about 1,08,000 bags of sugar. It has been a thrilling performance when one compares the same with its production only a few years back, viz., in the year 30th June 1956, when the total production was less than 21,000 bags. It is not only a question of emotional thrill but financially also the company has been fully rehabilitated. Your Directors hope that, within not too distant a future, the losses of this Company would be completely written off and that this subsidiary company would soon become a perpetual source of steady revenue to your Company.

Expansion Plans Not to be Pursued

"Last year, on a similar occasion, our Chairman made a reference to the expansion scheme and you would, perhaps, expect me to let you know as to where the matter stands at present. Our application with the Government is still pending, but, in the meantime, your Directors are negotiating an agreement with cane growers, their co-operative societies and their leaders in this area, under which, if your factory is assured of certain minimum supply of cane every year, we would not press the application for expansion. It is the wish of these people to start a co-operative sugar factory of their own. In the larger interests of the factory and to maintain harmonious relations between the cane growers and our factory, we have agreed not to expand the present capacity provided our minimum quantity is assured to us and an agreement to this effect is finally approved by the State as well as the Central Government. Actually, the agreement is under draft by the lawyers and, when it is finalised, further action would be taken in the matter.

"In your Directors' report, we have mentioned that two of your Directors, Sarvashri M. R. Morarka and Madanlal Somani, are retiring by rotation under Article 105 of the Company and are eligible for re-election. Since then we have received an intimation that Sri M. R. Morarka is not seeking re-election. Hence you have to re-elect only Sri Madanlal Somani.

"Before I conclude I must express my heartfelt thanks on behalf of all of you and the Board, to our Managing Agents, to our staff, to our workers and to the cane growers and merchants for their industry and hard work without which these results would not have been achieved.

"Gentlemen, I now formally move the adoption of the Directors' report and audited accounts for the year ended 30th September 1960."

Note: This does not purport to be a report of the proceedings of the annual general meeting referred to.

SWASTIK TEXTILE MILLS LTD.

The year ended 31st December 1960 witnessed, once again, lower profits for the Swastik Textile Mills Limited (Managing Agents: Messrs. P. Kashinath & Co., Bombay). The gross profit for the year dropped for the second year in succession to Rs. 6.82 lakhs from Rs. 7.63 lakhs for 1959 and Rs. 7.80 lakhs for 1958. The drop in 1960 was more pronounced than in the previous year, chiefly because of payment of bonus for 1958 amounting to Rs. 0.74 lakh.

The sale proceeds of saris, dhotis, cloth and waste declined from Rs. 66.55 lakhs to Rs. 63.98 lakhs. The receipts by way of dyeing and printing charges, however, were slightly better at Rs. 19.66 lakhs, as against Rs. 18.94 lakhs in the previous year.

The financial position of the Company in the fourteen years of its existence has improved perceptibly. As against the paid-up capital of Rs. 26.51 lakhs (which has remained stationary), the Company has reserves and surplus amounting to Rs. 10.27 lakhs. The net block stands at Rs. 24.41 lakhs, after depreciation aggregating Rs. 22.01 lakhs. The total of current assets at Rs. 24.52 lakhs shows an excess of Rs. 13.92 lakhs over current liabilities at Rs. 10.60 lakhs. It will thus be noted that the Company is enjoying a sound financial status.

The brand new Benninger Mercerising Plant, which was installed in December last, has started working now. Full and satisfactory results are likely to be achieved after the erection and working of Famatex Hot Air Stentering and Drying Machine, which are likely to be received during the current year.

NEW COMPANY TO MAKE TUNGSTEN CARBIDE AND DIAMOND DIES FORMED

A new company, Gannon Norton Metal and Diamond Dies Ltd., Bombay, a joint venture of Gannon Dunkerley & Co., Ltd. Bombay, and Wire Drawing Dies (Manchester) Ltd., a subsidiary of Sir James Farmer Norton & Co. Ltd., of the U.K., has been formed to manufacture wire drawing dies of tungsten carbide and diamonds. The Company has an authorised capital of Rs. 5 lakhs and has already erected at Mahul in Bombay a plant designed to manufacture 150 diamond dies and 400 to 450 tungsten carbide dies (for wire drawing purposes) per month on a single-shift basis.

The plant is expected to manufacture dies valued about Rs. 7.2 lakhs every year, which, allowing for the essential imports of certain parts, would help in the saving of foreign exchange to the tune of £40,000 per annum. Experimental and trial production started sometime ago. The Company, it is stated, is now in a position to start production on a commercial basis on a small scale.

MANDYA NATIONAL PAPER MILLS LTD.

Sardar Anup Singh Bedi, Managing Director of the Mandya National Paper Mills Ltd. (Mysore State), is now in France from where he will later proceed to Germany. The Company's factory, with an original production capacity of 35 tons of paper a day, is under erection and about 1,000 people are working day and night under the supervision of the engineers of the Company's American collaborators, Messrs. Parsons and Whittemore, who have offices on the Continent, too. The factory is expected to go into production towards the end of October.

The Company has drawn up expansion plans to double the production capacity, that is, to 70 tons of paper per day. For this purpose, sanction and assistance from the relevant Government departments and agencies have been obtained. Mr. Bedi will be meeting the President of Messrs. Parsons and Whittemore, who is also flying to France and Germany, to finalise negotiations for the purchase of extra machinery and technical collaboration.

While in Europe, Mr. Bedi will also discuss similar collaboration with Messrs. Parsons and Whittemore for the establishment of another paper mill, with a production capacity of 100 tons of superior grade paper a day, at Panipat near Delhi. It is likely that an appeal will be made to the public for shares some time at the end of this year and this new concern may go into production two to three years hence.

UNION CO-OPERATIVE INSURANCE SOCIETY LTD.

CHAIRMAN, MR. J. L. MEHTA'S SPEECH AT ANNUAL MEETING

THE Union Government's inactivity in the matter of cattle and crop insurance was deplored by Mr. J. L. Mehta, Chairman, The Union Co-operative Insurance Society Ltd., in his speech at the Twelfth Annual General Meeting of the Society held at Bombay on 28th June 1961. In this connection, Mr. Mehta referred to the Society's own experiment, started during the latter part of last year, in cattle and crop insurance. An appeal was also made by the Chairman to all co-operative institutions for the diversion of co-operative business to the Society.

The following is the full text of Mr. Mehta's speech:

"The Society's balance-sheet and profit and loss account have been with you for some time and I take it that you have gone through the same.

"You have got the information about the premium income, share capital, claims, etc. and I would be satisfied by only stating that the net premium income during the last three years in all the departments has risen from Rs. 8,47,542 in 1958 to Rs. 20,98,343 in 1960.

"The premium income has gone up considerably mainly due to the changes that have been made in the reinsurance arrangements and because of development and expansion undertaken. Being comparatively new in the field, we have to fight against various odds. Joint-stock insurers have large capital and reserves, and it is difficult for us to enter their area of operations where they have the backing of big business interests and financial undertakings, controlling large premium income. We, on the other hand, have to depend on the business of small co-operative institutions offering small premium. This adds to our costs to a large extent. Our per-policy premium is low compared to per-policy premium of joint-stock insurers. This disadvantage, I am sure, is likely to remain in future also. The only way out is to increase the premium income in the areas to such an extent that the overhead costs would be reduced. I would, therefore, appeal to all co-operative institutions and even the Co-operative Departments of the various State Governments to see that at least co-operative business is diverted to the Society.

Business Expansion

"The Society has tried to develop business in practically all the parts of the country, but we find that in the new areas it is becoming difficult to break the ties of co-operatives with joint-stock insurers. However, from experience we find that due to the consistent effort made by our staff and agency force we have succeeded in breaking the tendency of the co-operative societies continuing their relations with the joint-stock insurers. This, however, adversely affects the cost structure but, in my opinion, it is an avoidable cost if the co-operatives change their attitude. We, on our part, are trying our best to have a network of organisations throughout the country which is likely to strain even further our financial resources, but it is a good investment and the results would be reflected only when the expansion is stabilised.

"It is a matter of pleasure for me to inform you that the Society has continued to get support from a large number of co-operative institutions, but I am sorry to say that the Government of Maharashtra and the Government of Gujarat, to our surprise, have not yet finalised the question of placing the business of sugar factories with us. Even some of the warehousing corporations are placing their insurance with joint-stock insurers. Whereas, on the one hand, the Government pleads of assisting co-operative insurers, on the other, some of the departments actually are against the interest of co-operative insurance in particular. My only suggestion is that no decision should be taken by any department without consulting the Ministry of Co-operation at any level on all matters in which interests of co-operative organisations are likely to be affected.

Cattle and Crop Insurance

"During the latter part of the year the Society started a new experiment, viz., that of cattle and crop insurances. Cattle insurance was undertaken, as you well know, about 40 years back in Broach, but the scheme failed as the same was not worked out on a scientific basis. In the year 1948, the Government of India appointed two committees to study the scope of cattle and crop insurances and to formulate a scheme for the purpose. The sub-committee, which is known as "Priolkar Committee," had submitted the proposals, but they have remained in the archives of the Government till date.

"Our Society is also transacting machinery breakdown insurances and has devised a particular policy to protect agriculturists against losses suffered on breakdown of engines and pumps.

"Since ours is an all-India organisation, we are having our activities in almost all the States. I have pleasure to inform you that we have appointed one such advisory committee in Kerala and arrangements are being made to appoint such advisory committees in other States. Co-operators of the areas, however, feel that this is not enough and that they should take some interest in overall development. It may be worthwhile to consider whether any Central Advisory Board will be useful or not.

"You must have seen from the balance-sheet that the same profit margin has been maintained this year also. Due, however, to a jump in the net premium, a larger amount had to be transferred to the reserve fund. In spite of this, the Directors thought it fit to pay an additional dividend of .25 per cent and 1.6 per cent more as bonus to the policyholders.

Healthier Competition

"It would not be out of place to mention here about some problems that the industry is facing. In my opinion, the recent move of some of the Indian insurers of having a non-diversion pact will not solve the problem. The problem that the industry faces is to bring about a fair competition and not avoid competition and I would, therefore, request insurers to take active steps which would result in healthier competition. In my opinion, a 10 per cent rise in the premium as assumed in the scheme may not be enough to meet the added cost which is always high and always increasing, by 15 per cent to 20 per cent.

"So far as this Society is concerned, it would not be possible for us to enter into any non-diversion agreement as we are specially started with a view to bring co-operative business within our fold. I would welcome any move which would avoid inter se competition and assure us of our claimed slice.

"I assure my colleagues in the industry deck that this Society is always prepared to have fair competition and will always be with the industry in bringing about any change which could make competition healthier and reduce the cost of operation."

Notice

SHAW WALLACE AND COMPANY LIMITED

DIVIDEND ON PREFERENCE SHARES

THE DIRECTORS HAVE DECLARED IN accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 an Interim Dividend of Rs. 2.664 per share subject to deduction of Tax under Section 18(3) (D) of the Income Tax Act, 1922, on the Company's Preference Shares in respect of the year ending 31st December, 1961, payable to Members whose names appear in the Preference Shares Register of the Company on the 15th July, 1961. Warrants will be posted on or after the aforementioned date to the addresses or in accordance with the instructions recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 8th to the 15th July 1961, both days inclusive.

By Order of the Board,
D. A. HOUGHTON,
Calcutta Director & Secretary.

TRAVANCORE CEMENTS LTD.

(Concluded from page 85)

up to 30th June 1961 for packing cement with effect from 1st January 1961 which was not permitted till then. We are now allowed Rs. 18 per tonne of cement as packing cost, as against Rs. 13 fixed for the fourth quarter of 1960. We are trying our utmost to collect as many second-hand bags as possible to avoid any loss under this item and it is hoped that the Government will permit the producers the use of second-hand bags even after 30th June 1961, the time limit fixed at present.

Quality

"I am also very happy to report that our White Cement sale is gradually increasing and the users of our "Vembanad" brand cement are very much satisfied about the quality of our cement.

"It was felt an association of the cement manufacturers is necessary to promote and protect the industry, to solve the various problems facing the industry and to have a common policy of all the cement manufacturers in the interest of the producers, Government and the public. I am now glad to inform you that an Association of the cement manufacturers has been formed and your Company is also a member of this Association.

Labour Relations

"By the implementation of the recommendations of the Central Wage Board, the salaries and grades of the operatives and staff have been fixed on an all-India basis and although we, as an uneconomical unit, do not produce so much quantity of cement as other cement companies produce, yet we are paying the same salaries and wages paid by others as recommended by the Central Wage Board and the employees of our Company are in par with the employees of other cement companies in India in the matter of their salaries. I am very glad to inform you that labour-management relations have been cordial during the year 1960.

"Gentlemen, I thank you all for coming here to attend this meeting.

"I now request that the Directors' report and the audited accounts for the year 1960 may be taken up for consideration and adoption."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

ALUMINIUM USED IN TRAWLER

The technique of fitting fishrooms for trawlers with aluminium components has long been accepted as a progressive step in the fishing industry. The light metal is easy to clean which makes it simple to maintain the fishroom in first-class condition. In addition, it is light, strong and readily moved, so that the arrangement of compartments within the trawler can be altered with ease and speed. Against this background, it is not surprising that Vosper Ltd. of Portsmouth recently has equipped a trawler, the 126-ft. Winmarleigh, with aluminium for pound boards, shelf boards and fishroom stanchions. The trawler was built for Fleetwood Near Trawlers Ltd., using sections designed and supplied by Alcan Industries Ltd. The fishroom is 36 ft. in length, with a capacity of 7,400 cu. ft. and a height from tank top plating to the deckhead of 12 ft. In the room are four rows of eight pillars each and a total of 48 fish pounds, together with the ice pound at the extreme forward end. Most of the pounds are fitted for closed space shelving, the rest angles being supported by cleats attached to the stanchions. The stanchions are of hollow design with tapered jaws. The shelf board sections are of a special flat-surfaced type, originally designed by Alcan Industries to the requirements of Boston Deep Sea Fisheries. The design was intended to eliminate any possible damage to the fish. The arrangements in the Winmarleigh worked so successfully that a sister ship, the Haselbech, built by the same company for the same owners, is equipped in exactly the same manner. Both vessels operate from Fleetwood.

EXPORTS OF IRON AND STEEL GOODS

In order to encourage exports further, the Government of India has reduced the floor price of exports of articles manufactured from iron and steel which are entitled to receive pig iron and steel at concessional prices. Thus, the revised minimum value is Rs. 350 per metric ton of iron articles, as against Rs. 400 hitherto in force, and Rs. 600 for articles manufactured out of steel other than sheets and wires, as against Rs. 800 previously. The floor price of articles manufactured from sheets and wires, however will continue to be Rs. 800. The floor prices have been fixed in order to ensure that only manufactured articles, and not merely pig iron or steel with a little processing, is exported.

FOREIGN ASSETS AT NEW LOW

(From Our Own Correspondent)

BOMBAY, *5th July*

Thanks to the increasing flow of funds from the seasonal borrowers which has further improved the supply of loanable funds, conditions in the short-term money market continued to remain comfortable throughout the week. The demand for funds was moderate, but the rates of interest showed no variations. The inter-bank call money rate among Exchange and Indian banks ruled at 4½ per cent, same as last week. Other rates also remained unchanged. For ready reference, we give them below:

	Per cent
Inter-bank call money:	
Exchange and other large Indian banks	4½
Other banks	4½
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-days Treasury bills of the Government of India sold through weekly tenders showed no new features. As against an invitation for Rs. 2 crores, the amount offered and accepted was of the same order. The average rate of accepted tender remained at the same level as last week, namely 2.650 per cent per annum. There was no demand for 91-days intermediate Treasury Bills. Their sales, however, will be resumed on the 5th inst. and continued up to the 8th.

A further contraction of Rs. 12.34 crores in notes in circulation is revealed by the statement of affairs of the Reserve Bank of India for the week ended 30th June 1961. The notes held in the Banking Department have risen by Rs. 3.41 crores; consequently, the total notes issued show a decline of Rs. 8.93 crores only. Foreign securities have contracted by Rs. 5 crores to Rs. 103.01 crores, and as balances held abroad are also down by Rs. 1.88 crore, the total foreign assets have dwindled by Rs. 6.88 crores to as low as Rs. 113.78 crores, which represents a new low level. Deposits of banks with the Reserve Bank improved by Rs. 12.67 crores to *Rs. 94.73 crores.*

An expansion of Rs. 2.31 crores in demand deposits and of Rs. 7.91 crores in time deposits is disclosed by the statement of the Scheduled Banks for the week ended 23rd June 1961. Only a part of this expansion is due to the rise in the deposits of the State Bank of India which went up by Rs. 2.10 crores in the same week. Banks continued to repay their borrowings from the Reserve Bank of India, the exact reduction in the week under review being Rs. 8.23 crores. Bulk of this repayment—Rs. 5.30 crores to be exact—was against usance bills. Borrowings from the State Bank of demand nature were lower by Rs. 1.17 crore, but those of time variety were up, though by Rs. 95 lakhs only. Advances and bills discounted (bank credit) contracted further, by Rs. 9.22 crores to Rs. 1,268.29 crores. A year ago this portfolio stood at Rs. 1,124.22 crores. The share of the State Bank of India in this decline was Rs. 4.67 crores. Investments of the scheduled banks as a whole improved by as much as Rs. 16.48 crores; but, as the investment of the State Bank jumped up by Rs. 16.99 crores, this portfolio of other Scheduled Banks must have actually suffered a slight setback of Rs. 51 lakhs.

The gilt-edged market was steady with interest confined to selected loans only. On account of special buying, State loans recorded further gains. In the Central loans section, the downward trend of 3 per cent Conversion Loan was checked, thanks to revival of interest at lower levels and the loan was marked up by 55 nP to close at Rs. 72.25. 3½ per cent 1968 put on 10 nP to Rs. 98.80. 3 per cent 1970-75 first development loan, 3½ per cent 1974 and 4 per cent 1972 gained 5 nP each to close at Rs. 91.05, Rs. 99.70 and Rs. 100.50 respectively. But 3¼ per cent 1963 shed 5 nP to Rs. 100 each. 3½ per cent 1965 lost 10 nP to Rs. 99.85. In the State loans section 4 per cent medium-dated loans met with good enquiry and showed gains. 4 per cent Maharashtra improved by 25 nP to Rs. 99.50. 4 per cent 1967, 1968, 1969 and 1971 Madras Loans made gains ranging from 10 nP to 50 nP. 4 per cent 1967 and 1968 Andhra loans rose by 10 nP and 25 nP to Rs. 98.85 and Rs. 98.75, respectively. 4 per cent 1967, 1968, 1969 and 1971 loans of Madhya Pradesh, Bihar, Punjab, Orissa and Mysore also went up by 10 to 50 nP. Other State loans were unchanged.

In the foreign exchange section, the rupee weakened in relation to the U.S. dollar in sympathy with the pound sterling. Banks' selling and buying rates for ready T.T. on New York were Rs. 480 and Rs. 476.75 per 100 dollars, respectively, as against Rs. 479.75 and Rs. 476.25 last week. In the New York market, the pound sterling lost 0.13 cent in the spot and 0.23 in the three months forward market, as compared with last week. The latest available rates (4th July) are: 278.920-278.950 cents per £ for spot and 276.320-276.350 cents per £ for three months forward.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, *3rd July*

There was no appreciable change in the Madras kip market. Importers of cow hides were keeping out of the market, but there was moderate demand for cow calf skins both from U.K. and Continent. Arrivals of buffalo hides were small and met with ready clearance.

Inquiries for tanned goat skins were more for lower grades than for higher selections, and moderate quantities were sold to U.S. and the Continent. Demand for prime sheep skins was small and for other classes unchanged.

In the London public auctions last week, clearances of goat skins were small and were mostly for fresh parcels at prices 6d. to 12d. below current c.i.f. levels. Best marks of sheep skins, however, realised current c.i.f. prices, while others were neglected.

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, 5th *July*

The past week, that is, Thursday, 29th June to Wednesday the 5th inst., was the first "full" week after the three-monthly contract in bullion was introduced on 26th June 1961. The week witnessed an irregular trend in the market. Thus, silver tended to ease while gold ruled firm, though a part of the gains recorded by it earlier was erased towards the closing sessions. The easiness of white metal was due principally to pressure of increased arrivals. The average daily rate of arrivals was 49 bars, as against 32 bars in the previous week, but actual offtake was unchanged at 5 bars per day. Consequently, prices suffered a setback. Gold was firm early in the week, thanks to tense situation in West Africa and good spot house buying. The upward trend was, however, checked on Monday on reports of heavy arrivals. The trend persisted till the close. The average daily arrivals and offtake of gold were 4,000 tolas and 3,200 tolas, respectively, same as last week.

Adjustment rates fixed yesterday (4th inst.) were Rs. 121.00 per 10 grams of gold and Rs. 200.35 per kilogram of silver. The corresponding rates for Wednesday last week were Rs. 120.40 and Rs. 201.85, respectively. The market was closed today as a mark of respect to Mr. Purshotamdas Thakurdas who passed away on Tuesday the 4th inst.

The *Bhadrapad* (25th September) settlement in gold began the week at Rs. 119.45, as against the previous close of Rs. 119.25, and rallied to Rs. 120.10 on Saturday. Thereafter, it declined to touch Rs. 119.20 yesterday before finishing better at Rs. 119.55. Ready gold continued to command a premium over the forward throughout the week, the actual premium rising from Re. 1.40 to Re. 1.70 yesterday when the closing rate for the metal stood at Rs. 121.25, as against Rs. 120.65 on Wednesday last; the highest level of the week was Rs. 122.40 on Saturday the 1st inst.

In silver, the *Bhadrapad* (26th September) settlement encountered selling and receded from Rs. 203.10 last week-end to Rs. 201.45 yesterday. At this level, some support ensued and the settlement closed at Rs. 201.75. The net loss over the week was Re. 1.35. Ready silver was quoted at a discount under the forward, the actual discount yesterday being Re. 1.40, as against Re. 1.25 last week. The ready rate fluctuated between Rs. 201.85 and Rs. 119.95 before finishing the week at *Rs. 200.35.*

The world price of gold in the London bullion market improved from $35.07½ to $35.08½ per fine ounce during the week under review. Ready gold also moved up from 251s. 4½d. to 251s. 7½d. Ready and forward silver, however, were unchanged, the former at 79¾d. and the latter at 79¾d. Silver in New York, too, was unaltered at 91.375 cents.

The following table shows the trend of prices during the week under review:

GOLD	4-7-1961 (closing)	High	Low	28-6-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	121.65	122.40	120.90	120.65
Forward:				
Bhadrapad *	119.55	120.10	119.20	119.25
Sovereign	94.00	94.50	94.00	94.50
SILVER				
Ready (.995 fine)	200.35	201.85	199.95	201.85
Forward:				
Bhadrapad *	201.75	203.10	201.45	203.10
London—	4-7-1961			27-6-1961
Silver Ready	79¾d.	—	—	79¾d.
Silver Forward	79¾d.	—	—	79¾d.
Gold	251s. 7½d.	251s. 8¼d.	251s. 4½d.	251s. 4½d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

LINSEED SUPPLIES SCARCE

(Messrs. A. Bradley and Co.)

CALCUTTA, *3rd July*

Owing to continued scarcity of supplies, the undertone of the linseed market was very firm throughout the week under review. Only small local business was reported with buyers and sellers reserved.

The oil market remained steady; prices showed little change. But enquiries were limited, and only small transactions were being done.

The oilcake market was steady, owing to good local demand and small stocks with millers.

Ready July delivery was quoted at Rs. 30.25 per maund.

RESTRICTED ACTIVITY IN COTTON

(From Our Own Correspondent)

BOMBAY, *5th July*

Activity in the cotton futures market continued to be restricted during the week under review, with values moving narrowly. For operators were not inclined to enter into large fresh commitments either way, as they preferred to await the emergence of a clear picture regarding the new season's cotton crop. There was, besides, the uncertainty regarding the grant of additional export quota. The Board of the East India Cotton Association decided, at its meeting held on Thursday, 29th June, to request the Government to permit exports of an additional 40,000 bales of Bengal *deshi* and 50,000 bales of ¾" staple length. The Board also unanimously accepted the amendments to the by-laws of the Association as proposed by the Sub-Committee. After these amendments receive the approval of the general body, as well as the Forward Markets Commission, business in the new contract will commence.

The I.C.C. Jarilla August contract met with support early in the week and rose from Rs. 578.75 on Wednesday, 28th June, to Rs. 580.25 on Friday. Following, however, the reported move of the Centre to establish a cotton purchase corporation and good rains in some cotton-growing tracts, the contract was subjected to selling and eased to Rs. 576.25 on Saturday. At this level, there was again some support and the contract recovered to *Rs. 380.50 yesterday before closing at Rs. 379.* The market was closed today, owing to the death of Mr. Purshotamdas Thakurdas who was the President of the East India Cotton Association for 34 years until 1956.

Good quality cottons evoked interest of mills in the spot section. The varieties particularly sought after were Berar, Kalyan, Surti, Vijay-Digvijay, Khandesh and Laxmi. Stray transactions were put through in 197/3 and Wagad. The export section was generally dull, excepting for some business in cotton stapling 25/32" on rumours about an early release of a large export quota. In the import section, attention of mills was focussed on American short-staple cotton. There was also some mill demand for African and Sudan varieties.

The latest available rates—in rupees per candy of 784 lbs.—quoted for some of the varieties in the spot market are given below, the figures in brackets relating to prices prevailing a week ago:

Hubli Laxmi 940 (same); Amravati 1,010 (1,020); Moglai Zoda 450 (460); Digvijay 960 (970); Gadag Laxmi 935 (same); Dhulia Zoda 450 (470); Kalyan 830 (840); Surties 960 (950); Moglai Jarilla 780 (775).

The Karachi cotton market ruled distinctly easy during the week under review, thanks mainly to bearish crop reports. The fourth estimate of Pakistan cotton for 1960-61 placed the total crop higher at 1,698,000 bales (American 1,513,000 bales and *deshi* 185,000 bales), as compared with 1,583,000 bales (American 1,374,000 bales and *deshi* 209,000 bales) in the previous season. The higher production is anticipated, despite a decline in the area sown to cotton from 3,391,000 acres in 1959-60 to 3,236,000 acres in 1960-61. The July contract was marked down by Rs. 5.70 to Rs. 58.60. January 1962 contract eased by Re. 1.90 to Rs. 74.90. In the spot section, Sind *deshi* and Punjab *deshi* lost a rupee each to Rs. 88 and Rs. 85, respectively. The following are the latest available quotations—in rupees per maund of 92 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi, the figures in brackets being last week's rates: Sind *deshi* 88 (89); Punjab *deshi* 85 (86); 4F Punjab Roller 77.10 (80.65); S.G. 81.10 (84.65); L.S.S. Roller 79.10 (82.65); S.G. 83.60 (87.15).

Trading in the Alexandria cotton futures market continued to be suspended, as was pointed out in these columns last week. The crop reports suggest the possibility of a sizable increase in raw cotton output in Egypt. New crops in both Upper and Lower Egypt are progressing satisfactorily owing to favourable weather conditions. Export sales this season upto the middle of June aggregated 979,848 bales (of 720 lbs.), as compared with 1,130,418 bales in the corresponding period of the previous year.

The Liverpool cotton market was moderately active during the week under review, mainly due to some support extended by commission houses. The October 1961 position rose from 24.10*d.* to 24.20*d.* July 1961 position was higher at 23.65*d.*, as against only 23.60*d.* July (Sudan) 1961 position was maintained at 31.75*d.*

The New York cotton market displayed quietly steady conditions during the week. Commission houses extended better support in the distant positions. The operators noted reports that the U.S. Export-Import Bank had proposed to grant a loan of $60 million to Japan for buying about 460,000 bales of U.S. cotton during the next season beginning on 1st August. Japan's aggregate purchases of U.S. cotton during 1961-62 was expected to be of the order of 3 million bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	3-7-61	27-6-61	20-6-61
Spot	34.60	34.55	34.50
July	33.28	33.20	33.25
October	34.17	34.08	34.08

OILSEEDS REACT

(From Our Own Correspondent)

BOMBAY, *5th July*

In distinct contrast to the firmness depicted last week, oilseeds suffered a sharp setback during the week under review. There was nervous bull liquidation, induced chiefly by reports of favourable rains at the major oilseeds producing centres, Gujarat in particular. Groundnuts were especially weak. Crushers and *vanaspati* manufacturers were reluctant to enter into fresh commitments on hopes of a further decline in values. Meanwhile, the Government announced that the ceiling of 20,000 tons of H.P.S. groundnuts kernel for export had been reached. This quota was released in January last. Castorseeds also moved down, despite shortage of supplies. The absence of enquiries for castor oil from both the U.S. and the U.K. dampened the enthusiasm of bulls. The exports of castor oil in the first six months were substantially lower at 14,891 tons, as compared with the first half of 1960. In sympathy with groundnut and castorseed, linseeds ruled easy. Even reports of unfavourable dry spell in the linseed growing areas in Canada and the consequent strengthening of world linseed markets failed to have any perceptible effect on the market. The Argentine linseed crop of 1960-61 was only 561.000 tons, or a decline of 20 per cent, as compared with the previous year. Cottonseed, sesame and other oilseeds and oils ruled dull.

Among groundnuts, both Coromandels and Khandesh quality fell by Re. 1.50 to Rs. 54.50. Nizam Bold declined by Re. 1.50 to Rs. 54.50. Oil railway receipts lost 65 nP to Rs. 22.75. Ex-mill eased by 25 nP to Rs. 23.

Castorseeds September 1961 contract dropped Rs. 2.87 to Rs. 178.75. Madras small declined by 50 nP to Rs. 35.50. oil commercial shed 30 nP to Rs. 14.90 and B.S.S. 15 nP to Rs. 16.20.

In the linseed section, September 1961 fell from Rs. 40.69 to Rs. 39.44, before closing at Rs. 40.12. Bold ready lost 75 nP to Rs. 39.50. Linseed oil decreased by 35 nP to Rs. 16.90.

Cottonseeds September 1961 contract closed lower at Rs. 95.50, as against Rs. 96.25. Both Berars and non-whites shed 25 nP to Rs. 19.75. Whites were neglected at Rs. 20.25.

Sesame bold lost Rs. 8 to Rs. 370. Sesame oil eased by 75 nP to Rs. 27.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	5-7-1961	28-6-1961	21-6-1961
	Rs.	Rs.	Rs.
Groundnut			
Nizam bold	54.50	55.75	54.75
Coromandel ready	54.50	56.00	55.50
Khandesh quality	54.75	56.00	55.50
Oil ex-mill ready*	23.00	23.25	23.05
Railway receipts*	22.75	23.20	22.80
Castorseed			
September 1961	178.75	181.62	180.00
Ready Madras	35.50	36.00	35.62
Ready Kanpur	33.87	34.62	33.87
Oil B.S.S.†	16.20	16.35	16.20
Oil commercial†	14.90	15.20	15.10
Linseed			
September 1961	40.12	40.69	40.31
Bold ready	39.50	40.25	40.12
Oilready†	16.90	17.25	17.10
Cottonseed			
September 1961	95.50	96.25	95.50
Niger seed	42.50	42.50	42.25
Kardi seed	27.50	27.80	28.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

ALLOCATION OF ART SILK YARN

(From Our Own Correspondent)

BOMBAY, *5th July*

Two important Press notes pertaining to the allocation of indigenous art silk yarn have been issued this week by the Office of the Textile Commissioner. One of them requires all actual users of yarn (including hosiery manufacturers, handlooms, doubling and twisting units and ancillary industries) to submit to the Indigenous Art Silk Yarn Distribution Committee their applications for the supply of yarn together with a sum of Rs. 2 being the service charges for such applications. The last date for submitting applications is 31st June 1961. After scrutinising these applications, the Committee will issue the allocation cards. The other Press note lays down that the allocation of indigenous art silk yarn for the quarter July-September 1961 will be made only to units which are holding valid installation permits or registration certificates issued by the Textile Commissioner's Office to work powerlooms on art silk-staple fibre yarns. It is made clear that no yarn will be distributed to powerloom units that are working purely on stale fibre yarn.

Meanwhile, some suggestions designed to step up exports of art silk fabrics have been put forward to the authorities by the weaving interests. The suggestions are: (1) If advance licences for art silk yarn can be renewed on the basis of quarterly export performance, the time lag between inspection of goods to be exported and the date when benefit of export performance becomes available can be minimised, recurring shortages of art silk yarn largely avoided and exports expanded. The new scheme will mean no unnecessary blocking up of capital for unduly long periods. (2) Actual user quotas for yarn granted to weavers should be sufficient at least for the working of one shift, as has been agreed to by the Development Council. The weavers should, moreover, be allowed to use a portion of their licences for the import of the newly developed synthetic fibres. (3) The quantum of export ceiling should be raised and arrangements made to make indigenous yarn immediately available on surrendering yarn entitlements for the import of pulp. (4) A separate foreign exchange ceiling for import of art silk textiles machinery is required. (5) Benefits under various credit schemes offered by foreign countries should be made equally available to art silk units as to cotton textile mills. (6) Imports of machinery to the extent of 10 to 15 per cent should be allowed against exports as an additional incentive. The scheme of revolving advance licences for art silk yarn is expected to augment exports of fabrics from Rs. 3.5 crores to Rs. 7.8 crores annually.

Art silk yarn attracted excellent support induced largely by fears of a possible scarcity in supplies developing in the coming weeks. Cupressa Bemberg yarn (60 x 1) August delivery forged ahead from Rs. 2,700 to Rs. 2,820 per 100 kg. Spot cupressa was firm at Rs. 2,659. J.P. Bemberg yarn August contract, however, eased by Rs. 19 to Rs. 3,186. Among imported art silk yarns, 120 Italy jumped up from Rs. 1.764 to Rs. 1,806. 150 Japan rallied from Rs. 1,874 to Rs. 1,971. 120 Japan was fully maintained at Rs. 1,874.

Staple fibre yarn was dull, despite prospects of enlarged demand from powerlooms following the official decision not to allocate art silk yarn to those units which are working purely on staple fibre yarn. Operators noted reports that the Textile Commissioner had assured the Ludhiana weavers supply of 1,500 bales of staple fibre yarn at control prices. These reports and the rumours of a possible enforcement of official controls on prices and distribution of fibre yarns had, however, no effect. 40 x 2 August delivery was quoted today at Rs. 1,055 per 90.72 kg., as against Rs. 1,058 last week-end.

Cotton yarns were generally easy owing to sales by a few mills. Only certain select medium and superfine counts elicited some support.

TEA FIRM

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *27th June*

Offerings in sale No. 26 held on 27th June 1961 aggregated 744.000 kilograms. Teas from Nilgiri district were well maintained in quality whilst there was no change in teas from other districts. The market met with good general demand. Plain and low mediums brokens were well competed for and were fully firm and sometimes dearer by 5 nP. Similar fannings however are quoted barely steady. There was good support for mediums and good mediums which were steady on last week's rates. Highgrowns although meeting a useful enquiry were irregular and sold at easier rates. Whole leaf grades sold readily and frequently were dearer. C.T.C. and legg-cut types tended little easier.

	1961	1960
	Rs.	Rs.
Low mediums	4.20-4.40	3.40-3.50
Mediums	4.40-4.50	3.65-3.85
Good mediums	4.60-4.70	3.85-4.20
Nilgiri B.O.P.	Rs. 4.50-5.50	

The average price realised in sale No. 26 was Rs. 4.44 per kilogram against Rs. 4.44 a week ago and Rs. 3.77 in the corresponding sale last year.

Dust Sale No. 26: 274.000 kilograms were offered in dust sale No. 26 held on 29th June 1961. The market met with strong general demand and prices were dearer for most descriptions. Low mediums and mediums advanced by 10 nP. There was good enquiry for highgrowns at dearer rates. Milled and poorer descriptions met with keen competition and were the strongest feature of the sale, sometimes advancing by 20 to 25 nP. C.T.Cs were firm whilst C.T.C. types and legg-cut types sold 10 to 15 nP above last.

The average price realised in Dust Sale No. 26 was Rs. 4.28 per kilo as compared with Rs. 4.14 a week ago and Rs. 3.59 in the corresponding sale last year.

Export Quota: The market remained quiet and there are still sellers at 2½ nP per kilo with no ready buyers.

Colombo: Approximately 7½ million pounds were offered. There was good demand. Best westerns were steady. Uvas and mediums were easier by 5 cents. Lowgrowns were firm to dearer.

London: *North Indian and other growths*: There was fair demand and prices were generally steady. However new season's dooars sold below valuations.

Ceylon and South Indians: In Tuesday's sale 31,449 packages were offered of which 7,926 packages came from South India. There was fair demand with prices ruling strong at the bottom particularly for fannings.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No. 27*: 5,64,000 kilograms. Strong and active demand. Plain low mediums and mediums 10 to 15 nP dearer. Good mediums 5 to 10 nP higher. Nilgiris fully firm and dearer where quality improved."

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *4th July*

Good demand was again in evidence in the internal sales held last week and following keen competition, exportable varieties added modest gains to prices. The increased tempo in tea bookings in Calcutta port was fully maintained during the week, indicating the season's gathering momentum. At least two liners destined to the United Kingdom reported good in-take of teas.

Trade circles have enthusiastically noted the statement by the General Manager of the N.F. Railway at the recent meeting of the Zonal Railway Users' Consultative Committee held in Pandu that shortage of wagons for movement of tea from the Dooars and Darjeeling areas was not anticipated. It was stated that the N.F. Railway had requisitioned an adequate number of broad-gauge engines from other Railways to cope with the needs of the tea industry.

A further fall in U.K. tea stocks to 129 million lbs. in the week ended 23rd June from 132 million lbs. in the previous week was reported. This indicated that arrivals were falling short of issues, but with the increased shipments a reversal of this trend was anticipated.

The Union Health Ministry's interpretation that food (including tea) clearly marked for export is outside the scope of the Food Adulteration Act and the rules made therein has caused some practical difficulties to the tea trade. In accordance with this interpretation which is contained in a letter addressed by the Secretary of the Union Ministry to the Chief Coffee Marketing Officer, a copy of which was forwarded to the Calcutta Corporation by the West Bengal Government, the Tea Board desired of the Calcutta Corporation to get tea packages containing more than 15 per cent stalk marked as "for export only." This was in an attempt to remove the difficulties of exporters to the Sudan.

It was pointed out that if such marking was done, tea packages containing such marking was liable for seizure while in transit within India since such tea came under the purview of the Act. The Calcutta Corporation has since made a representation in this regard, and has urged that the interpretation of the Union Health Ministry should be re-examined.

Tea circles looked forward for increased offtake of tea by Iran from India. For, it was reported that Iranian interest in Ceylonese tea would not be expected as Ceylon had failed to conclude a trade agreement with Iran. Iran's offtake of Ceylonese tea had amounted to 10 million lbs. of midland and lowland teas. Ceylon was reported endeavouring to make good this loss by increasing shipments to Syria and Saudi Arabia. Prices during last week's auctions held in Colombo recorded gains of 5 to 8 cents per lb. for plainer varieties. Low grown teas met with stronger demand.

At the internal sale held here last week, dusts on offer amounting to 13,444 packages, comprising 1,049 packages and 12,395 packages of old and new seasons' teas respectively, met with good general demand. There was keen competition for exportable and better liquoring teas, prices of which gained. However, there was less demand for green and thin liquoring teas. Flavoury Darjeelings were a strong feature. Although orthodox teas opened easy, prices gained as the sale progressed. The brighter lines met with special attention. Among legg-cut teas, the bright lots were fully steady However, prices for the poorer varieties eased by 10 nP. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.30 to Rs. 7.00, medium Assam C.T.C. dust Rs. 5.70 to Rs. 6.20, medium Assam dust Rs. 4.50 to Rs. 5.00 (nominal), legg-cut dust Rs. 4.45 to Rs. 4.90, and plain orthodox dust Rs. 4.20 to Rs. 4.35.

Leaf offerings amounted to 152 chests including 93 chests of new season's manufacture. There was good demand.

The feature during yesterday's export sales was keener competition for quality teas prices of which improved. Offerings totalled 18,347 packages. Orthodox teas were fully steady and modest additions to prices were recorded. Whole leaf grades were taken at dearer rates with tippy teas being firm at about last rates. In an irregular trend the best C.T.Cs eased, while keen competition was in evidence to the medium and poorer lots. Legg-cut teas were higher. Flavoury Darjeelings met with keener attention, but others in this category eased. The quotations per 1 kg. inclusive of excise duty were: plain fannings Rs. 4.70 to Rs. 4.75, clean plain pekoe Rs. 5.20 to Rs. 5.30, and plain B.P. Rs. 4.75 to Rs. 4.85.

Export quota chanded hands at 2½ nP per kg. with few buyers.

JUTE RECOVERS

(From Our Own Correspondent)

CALCUTTA, *4th July*

Following selling pressure in the futures market, jute goods against ready delivery recorded a marked decline earlier in the week under review. Subsequently, however, as a result of covering business, some recovery was in evidence. In sympathy, fibre also fell, but, with recovery in goods, no gains were recorded in fibre prices subsequently too. Although prices of goods declined, overseas buyers continued to show interest only in minimum quantities for meeting day-to-day requirements. For, with good weather reports from jute growing areas in both India and Pakistan, they felt convinced that prices must decline to more reasonable levels within the coming two months or so. It should be noted that the block closure of about 70 mills belonging to the membership of the Indian Jute Mills Association for the whole of last week failed to have any effect on the prices of goods. For the stocks of goods with mills awaiting disposal were fairly comfortable, and overseas buyers did not anticipate any difficulty to meet their requirements as and when necessary. The decline in prices despite loss of production on account of closure, it should be noted, belied the earlier fears in certain quarters that prices were bound to move up in the event mills curtailed production by closure—fears which were dismissed offhand by the Association. After the closure, the mills resumed operations yesterday. They would close again for another week commencing from 23rd inst. Towards the end of this month, fibre from the new crop is expected to move, and it is expected that the fibre position would ease by September.

The closure of jute mills last week meant reduced production, but cost of production for the quantity produced in the month should be higher as compared with the previous month, in view of lay-off compensation in accordance with the provisions of the Industrial Disputes Act. This factor is cited in support of mills, as this goes to prove that the mills had to take this step for genuine shortage of raw material. The declining price of goods with increasing cost of production is the present problem facing mills, and this is fully reflected in the absence of investment support for the shares of jute mills on the stock

exchange. Hence any suggestion that mills closed down unrealistically lacks consideration of the fact of financial loss to mills as a result of closure. Labour has put forward the suggestion that State trading should be introduced in raw jute and that a floor price should be fixed in order to "protect farmers from the caprices of private enterprise." The jute industry is as keen as labour leaders to ensure that growers get a fair price for their produce. In fact, it has already made no secret of its opinion as to a fair price. The mills themselves are aware that on the fair price to growers depends the key to the problem of fibre shortage for all time to come. Needless to say that, with prosperity among growers, the propensity to stock has been shifting from big traders and landlords to medium-scale cultivators and this has been one of the factors for the abnormal increase in fibre prices this year.

It is understood that the Indian Jute Mills Association is contemplating to ask the Government of India for a week's closure in August also. This is considered necessary in order to prevent any rise in prices for end-season fibre. Early imports from Pakistan are not anticipated, since the early arrivals will be taken up by mills across the border. Market circles are a little perturbed at the absence of good sunshine in jute districts, and the trade estimate places the crop lower than the earlier anticipation. However, this does not in way prejudice the estimate that the crop would prove to be the largest on record in both India and Pakistan. If fibre prices are reasonable and if the demand for goods from overseas buyers revives to earlier proportions, the mills will be too pleased to unseal more looms and increase working hours. The high prices of fibre and the consequent high prices of goods are cited as the cause for the decline in the exports of goods. In 1960, gunny cloth exports aggregated 412,000 tonnes, representing a decline of 20,000 tons as compared with 1959. However, the foreign exchange earned was higher at Rs. 73 crores, as against Rs. 65.2 crores. Constructionwise, hessian cloth exports declined to 399,000 tons from 416,000 tons and sacking cloth to 13,000 tons from 26,000 tons. The cause for an impetus to the bulk handling methods among India's foreign buyers, including the U.S., is obvious. Viewed in this light, it is apprehended that a decline in prices of goods will not alone lead to greater business from overseas buyers. If reasonable prices are maintained for at least two seasons, that would be a sufficient incentive for crying halt to bulk handling methods.

Earlier advices from the New York burlap market showed some improvement following last week's rise in prices here. However, the improvement was only nominal, as there was no follow-up demand. As a result, a declining trend set in in New York where the 40" 7½ oz. hessian moved down to 9.50 cents a yard from 9.65 cents and the 10 oz. hessian to 12.20 cents from 12.40 cents. The market here opened easy on Tuesday last, in view of selling pressure for forward deliveries. Ready B. twills declined from Rs. 158 to Rs. 154.50 and hessian 40" 10 oz. from Rs. 48.75 to Rs. 48. On the following day, there was selling pressure in the futures market too. Prices declined, but overseas buyers' reply to offers was a firm "no". Ready B. twills slipped to Rs. 152.25 and hessian 40" 10 oz. to Rs. 47.25. On Thursday, the selling pressure in futures was more pronounced, forcing down ready B. twills to Rs. 149.50 and hessian 40" 10 oz. to Rs. 46.80. The market was closed on Friday. The feature over the week-end was a fair amount of covering business in ready and near delivery goods, as a result of which ready B. twills recovered to Rs. 152.50 and hessian 40" 10 oz. to Rs. 48.25. Steadier conditions were in evidence yesterday, following covering business in ready delivery goods. Some business in hessian with the U.S. also took place. Ready B. twills recovered to Rs. 154.25 and ready hessian 40" 10 oz. to Rs. 49.00.

In line with the trend in goods, fibre prices eased. Only small business took place. Prices paid at times were lower than even the quoted rates. The apprehension that the mills are not likely to buy old crop fibre in a big way nerved stockists at a time. The possibility that mills would close down for a week in August was also a factor which restrained the reserve of sellers. The report that area under jute in West Bengal alone has increased by 200,000 acres to 1,000,000 acres too, was a factor which forced down fibre prices. On the other hand, the Narayanganj market was firmer during the week under review, thanks to greater support from overseas buyers. The opening and closing quotations for old crop in the Calcutta market are given below:

(In Rs. per maund against ready delivery)

	Opening	Closing	Decline
Daissee bottoms ...	50.50	49.00	1.50
Assam bottoms ...	48.50	47.50	1.00
Northern bottoms ...	48.00	46.50	1.50

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *4th July*

Metal prices were maintained firm at around previous levels during the week, despite fall in demand, a usual feature just at the advent of the monsoon. The course of price movement in world markets showed that the climax of the upward trend in the price of tin was over. On the London Metal Exchange, tin opened at £931 a ton and gradually receded to close at £919. The decline does not suggest that the supply position has eased. The fact that the price exceeded the ceiling fixed for the London Buffer Stock Manager to sell clearly indicates that supplies have fallen short of demand. When the Manager announced the exhaustion of his stocks, it was clear the effectiveness of the International Tin Agreement is to prevent the price from falling, but not necessarily to prevent the price from moving up. Production has failed to keep pace with the increasing world demand and, if only the U.S. Government were to release a portion of its stockpile of tin, the supply position would ease. How far efforts to find satisfactory substitutes will prove successful remains to be seen. It was reported during the week that the U.S. Government planned to stockpile lead.

Tin opened here at Rs. 1,679.00 per 100 kgs. and, after being higher at Rs. 1,698.75, closed lower on balance at Rs. 1,673.00. Virgin lead was unchanged at Rs. 137.75 per 100 kgs. On the London Metal Exchange, lead opened at £65½ per ton and closed firm at £65⅝, after touching a high of £66⅜. Electrolytic zinc was firm, but unchanged throughout at Rs. 326.75 per 100 kgs. In London, the price closed nearly a point higher on balance at £79¾ per ton.

"RABI" GRAIN ARRIVALS POOR

(From Our Own Correspondent)

HAPUR, *3rd July*

Foodgrains ruled quiet during the week under review. Despite poor arrivals of *rabi* grains, wheat, rice and gram were almost unchanged, as demand was slack. Although widespread rains have benefited large-scale sowings of *kharif* crops and standing crop prospects, too, have brightened, rains were now badly needed for the healthy progress of *kharif* crops. Wheat was stagnant at Rs. 14 to Rs. 14.50 a maund for *dara* average quality and Rs. 15 to Rs. 16 for superior farm produce. Daily arrivals were small at an average of 500 maunds which were being lifted by local consumers and trade stocks were reported to be stationary around 25,000 maunds. Demand for wheat, however, was reported from east U.P., but there were no despatches, as loading by rail was not available.

Rice ruled quietly steady on good demand in the face of poor local stocks at about 8,000 maunds. Rice was reaching here in small quantities from east U.P. growing areas. The week-end quotations—in rupees per maund—were: *mainpuri sela* Rs. 23; *gaindakutcha* Rs. 22.25; *ramajwayan sela* Rs. 24.50; *raimunia sela* Rs. 25.50; *basmati sela* Rs. 29 to Rs. 31; superior Rs. 33 to Rs. 38.

Gram ruled quiet. Punjab variety continued unchanged at Rs. 13.75 and local produce lower at Rs. 13.25 a maund. Gram was still reaching here from Punjab at an average of 300 maunds daily which is being picked up by consumers and local stock was unchanged at 50,000 maunds. Barley was idle at Rs. 11 to Rs. 11.25, as also *bejhar materreli* stood at Rs. 10.50 and *moongia* variety at Rs. 11.37 a maund. Arrivals of these coarse grains were small at an average of 100 maunds each which were being lifted for daily needs by consumers. *Methi* continued to be in request at Rs. 26 to Rs. 27 a maund, while *jowar* and *guwar* sought lower levels at Rs. 13 to Rs. 15 and Rs. 15 to Rs. 17 per maund, respectively, thanks to fall in demand for seed purposes, as sowings had nearly finished. Other grains were featureless at: oats Rs. 11.50 to Rs. 12; old maize Rs. 12.50; *bajra* Rs. 16 a maund.

Among pulses, peas and *arhar* were depressed. Although demand for peas was reported from Madras side, loading facilities were not available. Daily arrivals of peas were about 500 maunds average and those of *arhar* about 200 maunds. Local stock was put at 90,000 maunds and 45,000 maunds, respectively. The week's offtake was the wagonloads of peas to Bihar. *Urd* and *moong dal* improved on good demand. The week-end prices (in rupees per maund) were: peas *dara* 10.50 to 10.75; farm white 11 to 12.37; peas *dal* 12.50; *arhar* 12.50 to 13; *arhar dal* 16; gram *dal* 16; *urd* 21 to 23; *urd dal* 25; *moong* 21.50 to 24.50; *moong dal* 24 to 27; *massoor* 13 to 15; *massoor dal* 16.50.

SUGAR BETTER

(From Our Own Correspondent)

HAPUR, *3rd July*

Sugar registered gains during the week to be quoted on Monday at Rs. 108.25 per bag (E-29 Simbhauli); in retail, sugar was quoted at 97 nP per seer. Good seasonal demand, demand for marriage season and early export prospects were the main influencing factors. Production in U.P. also finished and the factories in the State have crushed all-time record figure of cane at 401.1 million maunds.

Quiet trend prevailed in the Muzaffarnagar sugar market during the week. Although seasonal demand was good, prices failed to rise owing to comfortable supply position. Some quantity of sugar was despatched to east U.P. and week-end prevailing prices per bag were: dry sugar Rs. 107.50 to Rs. 107.69, old damaged variety Rs. 100 to Rs. 103.

Khandsari ruled quietly depressed during the week, as, following arrivals of sugar quotas in the Punjab and Rajasthan, demand subsided. Production from *galawat* was being continued and week-end prices were:—non-crystal inferior Rs. 31 to Rs. 33; superior Rs. 33.25 to Rs. 37; crystal Rs. 34 to Rs. 38; *boora* Rs. 40 per maund.

Ready *gur* continued to rule steady to firm at Hapur during the week, thanks to brisk demand for selected dry quality from Rajasthan, Gujerat and M.P. But loading facilities here were not available. Despatches were being arranged by road to Meerut and other centres and from there by railway to destinations. Two wagons were loaded here also to Gujarat on Sunday and local stock ran down to 23,000 maunds. The condition of the standing cane crop is still far from satisfactory, as, apart from the injury to crop by pest, rainfall, too, has been as yet deficient. Week-end prevailing prices here were:—*gur* dry Rs. 16.50; selected dry *kotha* Rs. 17; dry-wet Rs. 15.50; wet Rs. 14.50; *shakker* Rs. 16 to Rs. 16.75 a maund.

Owing to booking restrictions and rains in Gujarat, demand for *gur* in the Muzaffarnagar market was slack during the week and prices were depressed. Punjab and M.P. also showed little interest. Stocks there were put at 120,000 maunds and week-end prices were:—*Chaku* dry Rs. 19 to Rs. 20; *kotha* wet Rs. 15; *rusket* Rs. 6 to Rs. 8; *shakker dara* Rs. 17.50 to Rs. 18.25; *masala* Rs. 21 to Rs. 23 per maund.

WEEK'S STOCK EXCHANGE TREN

THE following quotations indicate the trend o transactions on the Bombay Stock Exchang during the week ended 6th July 1961.

tutes are affording both the technical and administrative staff with opportunity for enhancement of ideas and their practical applicability. I take this opportunity in according our sincere appreciation to them and to your Managing Agents who have forthwith arranged for much required finance during this year and for successfully negotiating for enhancement of credit facility for supply of machinery and equipment.

"Last, but in no way the least, mention must be made of the very able and mature guidance given by the Board of Directors from time to time who have, I am sure, our hearty thanks. Let us hope we shall have their continued assistance and co-operation in future.

"With your permission I now propose that the audited statement of accounts and the reports of the Directors for the year ended 31st December 1960 be hereby approved and adopted."

Note: *The aforesaid note does not purport to be a record of the proceedings of the annual general meeting. It is merely an abstract from the Chairman's speech. The detailed speech is available at the Company's registered office.*

MARKET GOSSIP

(Concluded from page 59)

these, it sanctioned 57, as compared with a bare 27 in the previous year.

Mr. K. R. K. Menon revealed that the Corporation had so far not purchased shares in any company to which it granted loans, though it has been given the power to do so. The Corporation had hitherto confined itself to underwriting business. He, however, hinted that the Corporation's Board was actively considering the question of inserting a provision in the loan agreements with future borrowers for converting a part of the loan into equity capital. It may be recalled here that earlier also the spokesmen of the I.F.C. had indicated that they wanted the Corporation to have the option of converting the loans into ordinary shares, so that the Corporation could get a share in the profits of the Company and also have a hedge against inflation. It is, however, necessary to point out that, if such an option is included as one of the terms of the agreements with borrowers, there is a danger that many good companies would not prefer to secure loans from the Corporation, because they would consider the bargain as a very expensive one. Further, the possibility of the I.F.C. securing permanent control over the management would act as a positive deterrent to seeking accommodation from it. As readers are aware, a similar provision introduced by the International Finance Corporation did not work successfully, even though it did not want any say in, or control over, the management of its borrowers. A better way for gaining equities into the portfolio of the Industrial Finance Corporation would be to develop underwriting of capital issues, a function which has also long neglected.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2623 BOMBAY, 15th JULY 1961 PRICE Rs. 2

nufacture of petro-chemicals on a vast scale as an integrated part of oil industry. A French professor, according to him, will soon be visiting the country to advise the Government on this subject. Apparently, Mr. Malaviya does not want even the domestic private enterprise to come anywhere near the oil industry, even if it relates only to a by-product, and, given a chance, he would see to the cancellation of licences already given to a few entrepreneurs for establishing petro-chemical units. The Government would doubtless be making a serious mistake, if it listened to his advice, for that would slow down the country's progress in chemical industry, too.

How unreliable are Mr. Malaviya's estimates or foresight will be evident from a recent instance. On 28th April 1961, he explained at great length why the Government decided not to accept Burmah-Shell's offer to expand the capacity of its refinery by a further million tons to four million tons. His argument was that the existing capacity of refineries in the private sector and the capacity planned for the units in the public sector would be sufficient to take care of the country's requirements of refined products in the third Plan period. He estimated the demand to reach an annual rate of 13 million metric tons (in terms of crude) by 1966. But, in less than a month after his statement, the Oil Advisory Committee estimated the product demand in 1966 (including the international bunkers) at 14.14 million metric tons of refined oil, representing a crude oil equivalent of about 15.27 million metric tons. Experience in the past two years, in particular, has clearly shown that, for a rapidly growing economy, it is absolutely essential to keep a safety margin in estimating the power requirements, so that the pace of growth may not be held up by shortage of an essential overhead like energy. And yet Mr. Malaviya has continued to underestimate the demand requirements of petroleum products, obviously for the purpose of not allowing the existing refineries to expand.

Now that the Oil Advisory Committee has clearly stated that his earlier estimate is an underestimate and that there is no provision in the third Plan for further expansion of the refineries planned by the public sector, there is no reason why he should not allow the Burmah-Shell Refineries' scheme for expansion to be implemented. The merits of Burmah-Shell's scheme are clearly outlined by Mr. L. D. Mudie in his annual statement a fortnight ago (vide page 27 of Commerce dated 1st July 1961). The scheme involves no drain on India's already meagre foreign exchange resources. It requires only a fraction of the capital expenditure that would be needed to put up a new refinery. It will serve as a safeguard against any possible delay in consummation of the public sector's plans or underestimation of future demand. Burmah-Shell has also expressed its readiness to negotiate further modifications in the terms of the 1951 Refinery Agreement in addition to the Duty Protection which it had already surrendered. The capital required by the Government to expand its share in oil industry and trade may as well be given to railways, shipping and road transport for improving their capacity to carry more oil which is now hopelessly inadequate. Indeed, there are a hundred and one projects on which the Government can invest its funds more usefully and profitably than on discovery of oil, which is a gamble, and on refining and marketing of oil, which is a highly capital-intensive business. If, in spite of all these facts, the Government still decides not to let Burmah-Shell expand its refinery, how can it contend that its petroleum policy is not dictated by doctrinaire considerations?

SHIPPING IN THIRD PLAN

THE National Shipping Board, which has been repeatedly described in official pronouncements as "the highest policy-making body" relating to shipping and which was reconstituted in May last under the continued chairmanship of Mr. G. L. Mehta, held its ninth meeting at Bombay on the 7th inst. While the Board heard Mr. Mehta say, with some pride, that it had made, in the last two years of its work, "a notable, even if modest, contribution towards the formulation of a national shipping policy," it also heard him say, with not a little disappointment, that its recommendations in regard to shipping in the third Plan "ought to have received much greater weight and attention than was apparently given" by the Planning Commission and the Government. As a permanent statutory body charged with the responsibility of advising Government on all matters relating to shipping, the Board would, therefore, be justified in its expectation that its advice may yet be accepted in the interests of a certain desirable pace of expansion of the shipping industry in the third Plan period.

This desirable pace of expansion would, in fact, be no higher than what was achieved in the last two years of the second Plan. That would mean an addition of 100,000 g.r.t., on an annual average, to Indian shipping tonnage during the third Plan period, taking the total to 1.4 million tons by the end of March 1966, as compared with 900,000 tons at the end of the second Plan. But the actual allocation of Rs. 55 crores for shipping in the third Plan (as against Rs. 104 crores recommended by the National Shipping Board) would now be adequate only for a net addition of about 200,000 g.r.t., after providing for the replacement of obsolescent tonnage. The Board has, therefore, done well to reiterate its view that the country's tonnage should continue to expand at the rate of about 100,000 g.r.t. per annum during the third Plan period. Since shipping deserves to be given a high priority and the companies in the private sector may be able to raise only Rs. 14 crores from their own resources, an additional allocation of Rs. 55 crores should not be grudged.

The need for such an additional allocation is also being increasingly underlined by the difficult transport situation, particularly in the matter of coal haulage by the railways. The Government's recent decision to move an additional one million tons of coal through coastal shipping has focussed attention on the current shortage of tonnage in this sector. The coastal tonnage now is only of the order of 250,000 g.r.t., and this is just sufficient for transporting 2.5 million tons of cargo (consisting of 1 million tons of coal, 300,000 to 400,000 tons of salt and about 1.1 million tons of general merchandise) in a year. As coastal shipping is now suddenly called upon to move an additional one million tons of coal, it finds it difficult to secure the required additional tonnage of about 100,000 g.r.t. in an emergency. This situation would not have arisen if the Board's advice, given two years ago, had been heeded. If the Board has now laid renewed emphasis on its former recommendation that a consistent and long-term policy for coastal shipping was called for, it has done so on the ground that there should be no uncertainty in regard to the likely volume of coal and other cargoes which could be made available to coastal shipping. As, however, the present pattern of increased movement of coal is expected to continue on a long-term basis, the Board's suggestion that the target for coastal shipping should be reviewed would logically involve an upward revision of the third Plan allocation for shipping. Unless the coastal tonnage is increased in the third Plan period to 450,000 g.r.t., it is doubtful if it will be able to serve as an adequate and efficient adjunct to the inland transportation system. The Rail-Sea Co-ordination Committee's recommendations, which are yet to be implemented, have not lost their relevance in this connection.

The problems facing Indian shipping in overseas trade are no less pressing than those facing coastal shipping. These problems, as highlighted by Mr. G. L. Mehta in his introductory speech at the Board's meeting, relate to the absence of vital shipping statistics, the transportation of P.L. 480 foodgrains from the United States, and the relationship between the public sector and the private sector in shipping. The problem relating to shipping statistics is that data covering the payment of freight and the transportation of cargoes in national and foreign ships are yet to be authoritatively compiled and maintained. Of course, it is fairly well known that only a very small proportion of India's foreign trade is carried by its own shipping, that, though Indian shipping has made some progress in liner trades, its share of the tramp trade is very small and that this country is not even represented so far in the overseas tanker trade. But the statistics covering these aspects are by no means authoritative and dependable. If the pattern of development of Indian shipping in the years to come is to involve an expansion of tonnage in the fields of tramp trade and tanker trade, the kind of detailed statistics for which Mr. Mehta has pleaded would appear to be very necessary. Otherwise the acquisition of different types of tonnage for different kinds of trade may not be strictly according to the respective needs. The Board, however, does not seem to have suggested any special machinery for the purpose of compiling and maintaining the necessary statistics. Presumably this work should be the responsibility of the Union Ministry of Transport, which has under it the Director-General of Shipping.

The problem of transporting the P.L. 480 foodgrains from the United States is a pretty complex one. Although India is theoretically free to transport 50 per cent of these foodgrains in its own ships and thereby save about $50 million of foreign exchange which will otherwise be used up in freight payments to foreign shipping companies, there are several practical difficulties in the way. The first difficulty is the relative inadequacy of India's own overseas tonnage. And the second is that, even when some tonnage is made available by the Indian shipping companies for this purpose, there will generally be no cargo available for the ships from India to the United States. Here, of course, there will be an opportunity for Indian ships to carry a part of the agreed sugar exports (225,000 tons) to the United States in the current year. But this sugar cargo will be so small in relation to the foodgrain imports that even its availability would not resolve the problem which is one of making it worthwhile for shipowners to place their vessels on this trade.

It may be recalled, in this connection, that at the recent annual meeting of the Indian National Steamship Owners' Association, the President of the Association suggested that "the opportunity provided by P.L. 480 agreement should be availed of by the Government of India to expand the Indian fleet by asking the Indian shipping companies to lift as much of the foodgrain imports as possible at economic rates of freight instead of the present low, uneconomic, world tramp market rates." The Finance Minister, in his reply at the I.N.S.O.A. meeting, ruled this out on the ground that, "since half the cargo is to be carried in the U.S. ships whose rates are subsidised by the U.S. Government, the Government of India would be put in a difficult position with the U.S. Government if rates higher than world tramp rates were paid to Indian ships." Representatives of Indian shipowners have since clarified that "the economic rate asked for by their shipping companies is to enable them to operate economically the foodgrain vessels which they may acquire, so that, without incurring heavy losses resulting from the present low world tramp market rates, they can add to the Indian fleet." They have also argued, in reply to the Finance Minister, that "the U.S. Government, which subsidises U.S. ships to enable them to get their higher rates of freight, is not likely to discourage other Governments from adopting similar measures to develop their nascent shipping." Mr. G. L. Mehta, however, has tried to steer clear of this controversy by asking whether it would not be possible to consider some compensation wherever ballast voyages are involved in one direction. Obviously, the question requires further examination, and the Committee which the National Shipping Board has set up under the chairmanship of Dr. A. Ramaswami Mudaliar to review the target for coastal shipping is also expected to suggest a suitable freight policy for foodgrain imports. By all accounts, this is a crucial problem, for, if it is satisfactorily resolved, it will give a fillip to the expansion of India's overseas shipping in the third Plan.

As for the problem of establishing a suitable relationship between the public sector and the private sector in India shipping, Mr. Mehta's practical approach is contained in the following passage:

> "The old policy of keeping the public sector corporations confined to the relatively unremunerative routes no longer finds favour either with Parliament or with Government. Personally, I consider that the public sector corporations should have opportunities of employing their tonnage in those routes which are remunerative if they are not to be a burden on the nation. But I am clear in my mind that the entry of the Corporations in the more remunerative routes where private sector companies are already operating should be secured by supplementing rather than by displacing the existing tonnage of the shipping companies. This I consider would be fair to the corporations as well as to other companies."

Mr. Mehta has taken the line that, since not even 10 per cent of India's foreign trade is carried in national ships, there is room for both the sectors to expand. Here, again, the issue is probably not that simple. It is, therefore, to be expected of the second committee, appointed by the National Shipping Board, to recommend an appropriate policy that will enable shipping in both the sectors to work in harmony and thereby promote its rapid growth.

MARKET GOSSIP

Equities React

THE recovery in equities last week, following the declaration of higher ordinary dividend by the T.E.L.Co., has faded. On the contrary, there have been sizable losses over a wide front. Quite a large number of investment shares has also depreciated. In retrospect, it would appear that the T.E.L.Co.'s higher dividend was used by the bulls to manipulate the market in such a way as to enable them to get out nicely. The bears, too, have entered the market on a fairly substantial scale. The fear that the Government might take stringent measures to restrain speculation is said to be the main cause for the market's volte face this week. It is not understandable as to why the Government should take such a long time to come to a decision on this issue. Its own hesitation to act has become a veritable source of speculation. The measures proposed by it are by no means drastic. Introduction of minimum brokerage and abolition of exemption limits for the application of margins —the two main proposals reportedly put forward by the Stock Exchange Directorate—are not such revolutionary measures as to require consultations back and forth for weeks and months and appointment of sub-committees, etc. These are only tactics adopted by the bulls, who have always dominated the governing bodies of stock exchanges, to stall the issue. It is deplorable that the Government should be so soft and weak in controlling speculation on stock exchanges.

Among the other causes for the fall in equities this week, mention may be made of the growing shortage of working funds for speculators, saturation of investment demand, heavy damages inflicted by floods in Mysore, Kerala, Madras, Maharashtra, Orissa and Assam, the sinking of India's foreign assets to a new low level, reports of increasing scarcity of power, transport and industrial raw materials, the clear prospect of a further rise in interest rates after the present slack season in the light of the Reserve Bank's proposals for strengthening the banking sector, and the revival of Indo-Pakistan cold war. The climate against the bulls is quite formidable and that at a time when they are still suffering from overtrading.

The dividends announced by the Tata Iron and Steel Company Ltd. for 1960-61 reflect the anxiety of its Directors to do something for the shareholders who have become impatient, justifiably, over the delay in getting the fruits of their investment on the expansion projects of the Company. The increase of 45 np in the net dividend on ordinary shares—from Rs. 6.80 per share to Rs. 7.25 per share—is only a token of the Directors' desire to sustain the shareholders' morale. Even that small increase requires an additional amount of the order of nearly a crore of rupees—Rs. 88 lakhs to be precise—and that should give one an idea of how much more the Company should earn, if it were to raise the dividend to the level which used to prevail before it undertook the plan to double its productive capacity. It must be borne in mind that the dividends for 1960-61 are on the increased capital for the whole year, whereas those for the previous year covered the new capital for only three months.

A significant feature of the increase in T.I.S.Co.'s equity dividend is that it is in the form of bonus to be paid not out of the profit for 1960-61 but out of tax refunds. Since these refunds are because of dividends paid out of taxed reserves, the increase in dividend is really the benefit of the Company's performance in the past. It is no wonder, therefore, that there is a sense of disappointment in the share market, though the speculators themselves are partly to blame, in that they had pitched their expectations rather high. The long-term outlook for the Company is undoubtedly bright, but the question is: What is the conception of "long-term"? That differs from investor to investor. For the L.I.C., which is reported to have bought T.I.S.Co. equities at Rs. 150 a few weeks ago, it may mean anything between 10 and 15 years. Has the ordinary individual investor the patience to wait that long?

Crucial Shortages

Last year, industrial production in India attained a record level, representing an increase of about 12 per cent as compared with 1959—a rate which was the highest in ten years. It could easily have been greater still, if there had been no shortages in several crucial fields. For instance, the shortfall in coal production in the earlier half of 1960 in the public sector had the effect of slowing down the production of iron and steel. The shortfall (as compared with installed capacity and expectations) in iron and steel production, in its turn, caused a steep fall in the production of engineering industries. And there were also shortages of imported industrial raw materials and spares—maintenance imports as they are otherwise called—and these affected production in a wide range of industries. The close of that year and the beginning of 1961 have set in train or brought to the fore some more crucial shortages. The transport shortage, reflected in an inadequate railway capacity, has caused a crisis in coal movement, leading to a countrywide shortage of this vital fuel at a time when its production has actually increased. This shortage of coal supplies has affected production in a wide range of industries, including electricity generation. The shortage of power, both hydro and thermal, has not only begun to affect production in the collieries themselves but in many other industries. How, for instance, the engineering industries in and around Calcutta have had to curtail their production drastically in recent months for want of adequate power supply was dealt with in these columns of Commerce of 3rd June 1961. There is the latest instance of the re-rolling industry which is passing through a crisis for want of adequate supplies of billets from the steel plants. The news that the supply of billets during the last quarter has been hardly 50 per cent of the approved capacity is, indeed, disquieting, for the shortage affects 93 registered re-rollers whose requirements of billets are estimated at 70,000 tons per month. And there has also come about a critical shortage in cement—a shortage which is affecting construction activity in the private as well as the public sector.

All these shortages—both those which were in evidence last year and the ones which have manifested themselves this year—seem to have been cumulatively responsible for varying degrees of under-utilisation of installed capacities. The British economist, Sir Donald MacDougall, it may be recalled, had studied this question and given the finding that, as many as 36 out of 94 industries working on single-shift basis had utilised in 1959-60 only 60 per cent of their production capacity or less. If that was the position in a year when the major shortage was only of industrial raw materials and spares, the extent of underutilisation of capacities must have been greater still in 1960-61. If installed capacities are thus not fully utilised for want of either imported or indigenous supplies of essential materials, the tempo of establishment of new industrial enterprises is bound to slow down sooner or later. If it is recognised by the authorities that most of the crucial shortages are due to wrong policies flowing either from an ideological bias against the private sector or from uneconomic pricing, the first step will have been taken to provide greater incentives to the private sector and accord a bigger role to it in several fields of basic importance—coal, power, oil, road transport, fertilisers, non-ferrous metals, and so on. It is high time a reorientation of industrial policy was brought about by amending the Industrial Policy Resolution of 1956 in a suitable manner and by laying down the outlines of a pricing policy for the guidance of the Tariff Commission. It is here that a beginning should be made to break the recurring vicious circle caused by crucial shortages.

Sugar Exports

As these lines are written, the Committee of the Indian Sugar Mills Association is meeting at Calcutta (on Thursday, 13th inst.) to consider, among other subjects, the question of footing the loss on sugar exports to the U.S. It is said that the discussions centre round a tentative scheme for compensation worked out by the Union Food Ministry in consultation with the representatives of the I.S.M.A. The details of the scheme are, however, not available. All that is known is that the scheme provides for the payment, by the Government, of a lump-sum amount to the Export Agency Division of the I.S.M.A. as compensation for meeting the export loss. The actual amount will depend on the price that the U.S. pays for Indian sugar. The price usually paid for refined sugar supplied by the quota-holding countries is about Rs. 630 ($132) per short ton (of 2,204 lbs. each) which is 50 to 60 per cent higher than the world market price. But since Indian sugar is considered to be only 96 per cent of the accepted "standard" sugar in the U.S., the American price comes to less than the "usual" price, approximately Rs. 602 ($127) per ton. As against this price, the currently ruling average Indian price of D29 grade sugar, even after the full remission of excise duty and cane cess together amounting to Rs. 327 per short ton, is as high as Rs. 735. In other words, the loss per ton of sugar works out to Rs. 133. The total loss on the quota of 225,000 short tons allocated to India for the current calendar year by the U.S. amounts to about Rs. 2.39 crores, which represents the subsidy that will have to be borne by the Union Government. The subsidy should not be grudged in the least, in view of the large-scale generous economic development assistance rendered by the U.S.

After the Government announces its final decision on the issue of compensation, shipments of sugar to the U.S. will begin in right earnest. It is the delay in finalising the mechanism for effecting sugar exports and the question of meeting export losses that has so far been responsible for the slow pace of shipment. The Government had two alternatives regarding the mechanism of exports: to entrust the business to the State Trading Corporation or to route them through the I.S.M.A. The second alternative has been chosen and, as a compromise, the S.T.C. has been asked to effect sales of 150,000 tons to countries other than the U.S., such as Pakistan, Malaya, Iran and Afghanistan, during 1961. There was also some delay in signing the International Sugar Agreement. Six weeks, it will be recalled, have elapsed since the U.S. Secretary of Agriculture announced the authorisation of a quota of 225,000 tons to India for the year 1961. During this period, not more than 3,000 tons have actually been shipped; the first shipment left Calcutta port only on the 3rd inst., with the *Jala Krishna* carrying 3,000 tons. This quantity represents part of the 3,920 tons bought by an American firm at a reported price of $6.41 per 100 lbs. delivered at New York. Under the Indo-U.S. sugar deal, the entire quota of 225,000 tons will have to be delivered at U.S. ports before the end of the year; the last shipments have, therefore, to leave Indian ports by November.

The quota of 225,000 short tons allocated to India for 1961 is only on *ad hoc* basis. For the U.S. has yet to announce a permanent quota for Indian sugar; only an act of the U.S. Congress can put any country on the permanent list from which the U.S. makes its purchases. The chances of allotment of such a quota are, indeed, very bright. This is the impression one gets from the statement of Mr. S. K. Patil, Union Minister for Food and Agriculture, on his return from a foreign tour. At a Press conference at New Delhi on Wednesday this week, Mr. Patil is reported to have said:

> "One of the main objects of my visit to the U.S. was to explore the possibility of securing a permament quota for Indian sugar. I have explained to the U.S. leaders that India is now in the sugar market permanently and that it has to dispose of a surplus of 500,000 to 1,000,000 tons of sugar every year. I am confident that the U.S. Government will pass legislation before the end of this year and allot a permanent quota to India. I met the leaders of the important farmers lobby of the U.S. Congress and other Congressional leaders, including the Chairman of the Agricultural Committee, and explained to them India's need for sugar export. They have assured me that India would be allotted a permanent quota."

As for sugar exports to countries other than the U.S., entrusted to the S.T.C., the loss will be much greater, since the price will be well below not only the U.S. price but the world market price. The Central Government is believed to have decided to permit the S.T.C. to meet the loss by marking up prices of certain commodities which it will be specially importing by utilising the foreign exchange earned from sugar exports. The nature of commodities is now being examined by the Government. Of the quota of 150,000 tons allocated to the S.T.C. for 1961, the Corporation has already participated in the tenders called for by Pakistan which is to import 25,000 tons. The first shipment of sugar to Malaya is expected to move shortly. This country normally imports 30,000-50,000 tons of sugar. Iran and Afghanistan are the two other countries to which the S.T.C. hopes to export some quantities of sugar.

An assured market for Indian sugar particularly in the U.S. every year is certainly of great importance, in that it will (a) yield much precious foreign exchange which can be used for buying machinery, spare parts and raw materials from the U.S. or for repaying the loans taken from it; (b) give a price 50 to 60 per cent higher than the ruling world market price; and (c) reduce the pressure of heavy stock accumulations with mills. But such large exports as are now contemplated will involve a heavy loss of rupee resources. The only way to reduce the incidence of such loss is to encourage domestic consumption and to increase the production of sugar per acre. The larger the domestic market the smaller will be the export subsidy which every pound of sugar that is consumed in this country has to bear.

Revision Of Cement Prices

The tariff inquiry into the question of revision of cement prices, held this week in Bombay, has aroused interest as much among consumers as among producers. Consumers of cement are now faced with the problem of shortage of supply and high prices. As Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, himself has observed in his opening speech at the inquiry, there is acute shortage of cement at present in wide areas and not merely in isolated pockets. Cement is, therefore, said to be sold in the market at more than double the controlled price. The demand is expected to go up further, in the wake of greater steel production. The major problem, therefore, is to expand output. But it is disquieting that, of late, production of cement has not kept pace with the growing demand. The reasons for this are not far to seek. The cement industry's stand is that the fair price formula, suggested by the Tariff Commission in 1958, has turned uneconomic, with the subsequent increase in cost of production. Lack of coal and power and also shortage of wagons for movement of raw materials have aggravated the industry's difficulties.

In view of the deteriorating cost situation, the industry has been making strong representations for well over a year for revision of the fair prices fixed in 1958. In fact, the validity period of the 1958 price formula expired at the end of June 1961, and has now been extended, pending the result of the present enquiry. It is not clear why the Government did not ask the Tariff Commission to hold the enquiry and submit its recommendations in time so as to ensure the implementation of the revised price formula from this month onwards. The industry's grievances, it would appear, have been too serious to brook any delay in redressing them. But the delay is there and this will only maintain existing uncertainties and impede the progress of the industry at a time when it needs to be accelerated.

The growth of the industry, although substantial, has not been commensurate with the expectations of the Commission at the time of the previous inquiry. There are at present thirty-four cement factories, with an aggregate annual rated capacity of 8.85 million tonnes, as against twenty-eight factories, with 8.42 million tonnes in 1958. The Commission had anticipated that, by the end of 1960, sixteen of the existing factories would expand their capacity and another sixteen new units would come into existence, bringing the total capacity to 12.03 million tonnes. But only ten of the old factories have increased their capacities and only six new factories have been established. The actual production of cement ground at the factories amounted to 2.72 million tonnes during January-April 1961, or an annual rate of 8.16 million tonnes, which compares with 7.78 million tonnes in 1960, 6.92 million tonnes in 1959 and 6.13 million tonnes in 1958. There are several expansion plans now under way. If they progress according to the present estimates, there will be 44 factories, with an aggregate annual capacity of 11.76 million tonnes by the end of June 1964, and, when these schemes are completed, the number of factories will rise to 49 and the capacity to 14.62 million tonnes. By the end of the third Plan (1965-66), the total annual capacity of the industry is expected to touch 15 million tonnes. But all these are only expectations and they may not materialise, as experience hitherto has shown, if the present policy

SHARE MARKET WEAK

VALUES SUFFER DISTINCT SETBACK

(From Our Own Correspondents)

BOMBAY, 13th July

THE firm trend noted on the Bombay Stock Exchange last week abated during the week under review. In fact, the market ruled distinctly easy, almost all counters suffering a distinct setback to values. The sentiment of operators was depressed notwithstanding news of promising corporate results. For the current discussions between Mr. Peter Thorneycroft, British Minister for Aviation, and Government of India officials at New Delhi about the U.K.'s move to join the Commom Market acted as a great damper. The general apprehension of market circles appeared to be that the exports of cotton textiles, jute goods and other products would be hit by U.K.'s participation in the Common Market. Disappointment was expressed over the report that the Centre was not inclined to accept the plea for higher retention prices of steel. The uncertainty regarding the prices of cement, paper, and other commodities and the fear that the authorities might not permit any increase in their prices also chilled the enthusiasm of operators. To add to these, there were reports of widespread floods in several regions which, it was thought, would adversely affect the working of industrial establishments. Consequently, selling was quite pronounced and equities drifted downward. The undertone of the market was weak.

In the steel section, the dividend announcement of Tata Steel was keenly awaited. Late in the evening today, the Directors of the Company announced a net dividend of Rs. 7.25 per share for the year ended March 1961, which compares favourably with Rs. 6.80 distributed in the previous year. Tata Steels opened at Rs. 164.75 as against the previous close of Rs. 166 and after a modest improvement to Rs. 165.75 due to short-covering, moved down to touch a low of Rs. 160.25 today. *The net loss over the week was Rs. 5.75.* Indian Irons receded from Rs. 28.15 to Rs. 27.60. Mukand Irons fell by Rs. 2.50 to Rs. 27.25 reflecting disappointment of operators over dividend which for the year ended March 1961 has been maintained at the previous year's level of 12 per cent subject to tax, as well as their concern at the acute raw material shortages, especially billets, faced by the Company. This Company and other firms like National Steel, Taj Iron and Krishna Steel have urged the Government of India to permit imports of the appropriate varieties of billets.

Textiles suffered heavy losses. Standards were hammered down by Rs. 88 to Rs. 1,360. In the cash section, Mafatlals receded by Rs. 37.50 to Rs. 875 on account of heavy bull liquidation. Centuries fell from Rs. 694 to Rs. 672. Khataus were subjected to liquidation by tired bulls and dropped Rs. 21.50 to Rs. 567.50. Morarjees fell by Rs. 18 to Rs. 428. Kohinoors by Rs. 17 to Rs. 301, Svadeshis by Rs. 11.50 to Rs. 268, and Shree Niwas by Rs. 10 to Rs. 261. Finlays lost Rs. 7 to Rs. 324. Gokaks shed a like amount to Rs. 185. Tatas eased by Rs. 4 to Rs. 66.50. Simplex were marked down by Rs. 15 to Rs. 200, despite the encouraging news that the Company had decided to give bonus shares in the ratio of one new share for every two shares held in lieu of the ordinary dividend and the report that the Company's gross profit had jumped up from Rs. 11.69 lakhs in 1959 to Rs. 34.78 lakhs in 1960. Podars slipped by Rs. 2 to Rs. 143. The Company has confirmed the earlier reports suggesting the increase of the issued capital by Rs. 10 lakhs by issuing 10,000 ordinary shares of Rs. 100 at par in the ratio of two new shares for every nine shares held. Central Indias declined by Rs. 3 to Rs. 126. B.R. Cottons shed an equal amount to Rs. 52.

Contrary to the general depressing trend of the market, bank shares ruled firm, thanks to better working results in the first half of 1961. Bank of Indias spurted by Rs. 4.50 to Rs. 132. The Directors have proposed an interim dividend of Rs. 4 for the year 1961, the corresponding dividend for 1960 being Rs. 3.75. Bank of Barodas gathered a rupee to Rs. 103. Union Banks made a fractional gain of 16 nP to Rs. 6.76. Central Banks put on 50 nP to Rs. 60. United Commercials, however, were easy and lost 20 nP to Rs. 91.

Sugars continued to be neglected. Belapurs were the weakest feature of the market and were hammered down by Rs. 18.50 to Rs. 246. Phaltans receded by Rs. 5 to Rs. 125. Walchandnagars lost Rs. 4.75 to Rs. 166. Only Kesar Sugars elicited keen enquiry and spurted by Rs. 12.50 to Rs. 220.

In the cement section the uncertainty regarding the Tariff Commission's recommendation for revising prices continued to depress sentiment. Associated Cements opened lower at Rs. 166.50, as against Rs. 167 last week-end, and drifted down in the subsequent sessions to finish at Rs. 162.75 today, showing a net loss of Rs. 4.25. Digvijays were neglected at Rs. 154, Bagalkots at Rs. 8.48, Jaipur Udyogs at Rs. 11 and Ashokas at Rs. 8.88. But Sone Valleys put on 20 nP to Rs. 4.80. Orissas gained 4 nP to Rs. 14.44.

Shipping shares encountered selling. Scindias moved down from Rs. 14.60 to Rs. 14.04, showing a loss of 56 nP. Great Easterns slipped by 48 nP to Rs. 14.04. In the automobile group, on account of heavy bull liquidation, Premium Automobiles were hammered down by Rs. 10.25 to Rs. 161. Hindustan Motors suffered a setback of 84 nP, today's closing rate being Rs. 22.24.

Rayon shares, too, were subdued. National Rayons opened lower at Rs. 570.50 as against the previous close of Rs. 571.50. After rising to Rs. 574 on Friday due to short-covering, they were subjected to selling pressure and moved down to Rs. 551. The net loss over the week was Rs. 20.50. South Indian Viscoses receded by Rs. 6 to Rs. 189. Gwaliors lost Rs. 3.50 to Rs. 51.50. Barodas eased by Rs. 3 to Rs. 137. The reported move of the Company to put up a plant for the manufacture of caustic soda with a capacity of 20 tons per day had no effect. Indian Rayons declined by Rs. 2 to Rs. 61.50.

Chemical shares encountered heavy selling. Indian Dyestuffs suffered a setback of as much as Rs. 53.75 to Rs. 480. There was disappointment over the dividend of 6 per cent for the year ended 31st March 1961, same as in the previous year. At the current market price, the share gives a poor yield of less than one per cent (net). Amar Dyes were hammered down by Rs. 23.75 to Rs. 358.75. Colour Chems dropped Rs. 12.50 to Rs. 355. Alembics were done at Rs. 246.25 *ex-div.*, showing a net loss of Rs. 2.70 over the week. Dhrangadhras shed a rupee to Rs. 110. Tata Chemicals lost 84 nP to Rs. 19.08. But Polychems gathered Rs. 5 to Rs. 215 on news of a higher dividend of 15 per cent taxable for the year ended 31st March 1961 as against 11 per cent paid in the previous year.

A sharp drop of Rs. 25 to Rs. 356 in the quotation for Telcos was the feature of trading in the engineering section this week. Alcocks encountered selling and receded by Rs. 18 to Rs. 272. Larsen and Toubros lost Rs. 4.50 to close at Rs. 37.50. Copper Engineerings eased by Rs. 3.50 to Rs. 175. New Standards were lower by Rs. 3 at Rs. 190. Kamanis shed 72 nP to Rs. 16.52. Jyotis were hammered down by Rs. 11.00 to Rs. 175. But T. Maneklals attracted excellent attention and forged ahead from Rs. 525 to Rs. 600. Josts gained Re. 1.50 to Rs. 96. Mahindras put on 40 nP to Rs. 19.64.

In the miscellaneous section, Bombay Burmahs retreated from Rs. 623.50 to Rs. 606. Voltas suffered loss of Rs. 11 to Rs. 286. Ceat Tyres eased by Rs. 5 to Rs. 12.50. Escorts slipped by 88 nP to Rs. 24.12. Killicks shed 50 nP to Rs. 98.50. Indian Hume Pipes and Bombay Oxygens were dull at Rs. 178 and Rs. 60. respectively. But Wimcos gained Rs. 2.50 to Rs. 268 on special support. Permanent Magnets put on a rupee to Rs. 87. Isaac Holdens gathered a like amount to Rs. 19.24.

* * * *

Madras Stock Exchange

MADRAS, 12th July

There was all-round improvement in equity values during the week under review, thanks mainly to good investment support induced by favourable corporate news. Operators welcomed the decision of the Madras Government to accept in principle the scheme put forward by a group of industrialists to set up a 60,000-kw. thermal power plant in Madras, with British collaboration. Higher levels, no doubt, attracted some profit-taking, but the closing prices were still higher, as compared with those a week ago. New Delhi reports suggesting possibility of further control on speculation did not have any effect. Textiles came in for good attention, following the decision of the State Government to supply additional electric power to all textile mills for third-shift working. Plantation shares were also quite strong, despite reports of damage to some plantations as a result of recent floods. Coffees and rubbers were fully steady, although operators felt that the awards of wage boards for these two industries, constituted recently, might ultimately raise the wage bill of plantations. Teas were well maintained. Investors were inclined to feel that exports of tea from India to Britain, the largest importer of Indian tea, might not be affected as a result of the U.K.'s entry into the Common Market, in view of the repeated assurances regarding the safeguarding of Commonwealth interests. Sugars were well sought after on hopes of better prospects for sugar exports. There were good inquiries for select bank and electrical shares. The miscellaneous section ruled strong.

Textiles were well supported. Metturs advanced by Rs. 12 to Rs. 382 *ex-div.* Coimbatore Cottons rose by Rs. 6.75 to Rs. 182. South India Viscose rallied from Rs. 189 to Rs. 198, before closing at Rs. 195. Lakshmis put on Rs. 3.50 to Rs. 174.50. Buckinghams scored a gain of Rs. 3 to Rs. 230. Coimbatore Spinnings gathered Rs. 2.50 to Rs. 53.50. Dhanalakshmis and Premiers improved by Rs. 2 each to Rs. 241 and Rs. 287, respectively. Travancore Rayons hardened by 65 nP to Rs. 38.50 *ex-div.* Radhakrishnas strengthened by 60 nP to Rs. 33.75, Loyals by 50 nP to Rs. 43 and Kotharis by 10 nP to Rs. 12.60. Bangalore Woollens were fully steady at Rs. 205, Cannanores at Rs. 167.50 and Janardanas at Rs. 72.50. Maduras rose from Rs. 38.10 to Rs. 38.40 initially, but declined subsequently to Rs. 37.75.

Among teas, Devasholas rose by 30 nP to Rs. 30.05 *ex-div.* Kil Kotagiris picked up 13 nP to Rs. 4.80. Periakaramalais put on 12 nP to Rs. 3.97, following the announcement of a final dividend of 12½ per cent, making a total of 20 per cent for the year ended March 1961, which compares with 13½ per cent for the previous year. Peermades improved by 12 nP to Rs. 22.60. Nonsuchs were fully maintained at Rs. 28.20. Parksides at Rs. 29.57 and Haileyburias at Rs. 14.85. Blue Mountains, however, shed 5 nP to Rs. 3.23. Neelamalais declined by 2 nP to Rs. 3.93.

In the coffee section, Consolidated Coffees increased from Rs. 21.80 to Rs. 22, but finished lower at Rs. 21.85, with a net gain of 5 nP. Ouchterlony Valleys were firm at Rs. 3.72. Cowcoodys changed hands at Rs. 4.71. Rajendras at Rs. 12.12 and Balanoors at Rs. 16.30. Coffee Lands, however, receded by 27 nP to Rs. 18.60.

Among rubbers, T.R. & Ts elicited good support, and moved up by 15 nP to Rs. 9.95. Mercaras hardened by 10 nP to Rs. 8.30. Cochin Malabars rose by 4 nP to Rs. 7.87. The Directors of the Company have announced a final dividend of 11 per cent, making a total of 20 per cent for the year ended February 1961, as against 17½ per cent distributed in the previous year. Malankaras were steady at Rs. 18.75, as also Midlands at Rs. 11.75, and Travancores at Rs. 10.37.

Sugars were generally quite active. Cauverys were marked up by 50 nP to Rs. 130. Indias strengthened by 42 nP to Rs. 12.77. Deccans picked up 5 nP to Rs. 13.85. United Breweries were fancied at Rs. 104, Mysores at Rs. 57.75 and Travancores at Rs. 10.20. East India Distilleries, however, lost 75 nP to Rs. 41.75, notwithstanding the announcement of an interim dividend of 7-1/7 per cent for the year ending September 1961.

Among miscellaneous industrials, India Cements rose from Rs. 6.68 to Rs. 6.72 before closing at Rs. 6.70. Andhras were well maintained at Rs. 9.95, Orissas at Rs. 14.40 and Travancores at Rs. 7.68. Travancore Chemicals rose by 55 nP to Rs. 18.65. Metturs were a shade better at Rs. 14.63. Mysore Chemicals and Mysore Fertilisers were held firm, the former at Rs. 24 and the latter at Rs. 11.55. But F.A.C.Ts shed 6 nP to Rs. 12.04. Among others, Textools advanced by Rs. 2.50 to Rs. 185. Aluminium Industries improved by 22 nP to Rs. 23.57. Ashok Leylands gathered 21 nP to Rs. 9.09. India Steel Rollings gained 10 nP to Rs. 10.85. Western India Plywoods were steady at Rs. 229 and Tube Investments at Rs. 265.

* * * *

Calcutta Stock Exchange

CALCUTTA, 12th July

Following interested support, steadier conditions were in evidence on the Calcutta Stock Exchange during the week under review. Shortage of good scrips and publication of good corporate news were the factors which aided sentiment. Resistance to selling, brokers said, sprang from the belief that, as development gathered momentum and inflation increased, share prices would definitely go up. The capital gains tax is also a restraining factor against selling. At one time Bombay's dull reports, caused by reports that the Government proposed to take steps to curb speculation, imparted a weakening trend here, but, since offerings were limited, losses were difficult to be felt. Market circles thought that, since the number of transactions had shown a perceptible tendency to fall recently in view of greater institutional support, the above rumours would be baseless. Activity around Indian Irons continued, inspired on hopes of an imminent announcement of higher steel retention prices, although the more shrewd among investors would hardly expect a higher dividend on this score. If as many features as usually record did not take place in miscellaneous industrials, it was due to the difficult foreign exchange situation and apprehensions of a cut in maintenance imports. The fear that shortage of power and essential imports such as steel, which affected certain units last year, would again be reflected in the current accounting period resulted in a diminution of interest in engineerings, while coals looked forward since the World Bank loan would ensure for the industry sufficient imports of mining equipment for development.

UNITED WIRE ROPES LTD.

The public issue of the United Wire Ropes Limited, Bombay (Chairman: Mr. Murarji R. Vaidya), which proposes to set up a steel wire rope plant at Thana near Bombay, will open for subscription on Monday next. The issue is of the order of Rs. 27.50 lakhs, divided into 22,500 equity shares of Rs. 100 each and 5,000 9½ per cent cumulative redeemable preference shares of Rs. 100 each. This represents half the total issued capital of Rs. 55 lakhs. Of the other half, the Life Insurance Corporation of India has agreed to take up 5,000 equity shares and 5,000 preference shares, thus subscribing Rs. 10 lakhs to the Company's capital. The remaining amount of Rs. 17.50 lakhs, all in 17,500 equity shares, will be subscribed by the promoters, directors and their friends and associates. The entire public issue, it may be noted, has been underwritten by the L.I.C., the Investment Corporation of India Ltd. belonging to the House of Tatas, and several other prominent brokers and underwriting firms.

A sum of Rs. 25 per share is payable on application and an equivalent amount on allotment. The balance will be called up in two equal instalments subsequently.

The wire ropes which the Company intends to manufacture will, it is stated, command a good market. According to the estimates of the Planning Commission, the demand for wire ropes by the end of the third Plan will be about 40,000 tons per year. With the rapid growth of industries, particularly the spectacular advance which is taking place in mining and development of petroleum industry, the demand for wire ropes for haulage, mining, shipping, ropeways, lifts, cranes is expected to increase considerably. The Company is also likely to receive a big order from the Government of India for special type of wire ropes required by the fishing industry. Such wire ropes are not being currently manufactured in India by the existing two units.

NEWS IN BRIEF

THE Government of Bihar proposes to set up a Rs. 4-crore low temperature coal carbonisation plant at Chota Nagpur during the third Plan period.

A sago delegation (leader: Mr. B. Srinivasa Rao), sponsored by the Government of Madras, will visit Singapore and Malaya shortly to study the sago industry in these countries.

A test of oil recently struck in Gujarat, conducted by a local firm, revealed that the oil was found to contain no sulphur, according to Dr. Jivraj Mehta, Chief Minister of Gujarat.

The retention price of cement manufactured by Travancore Cements Ltd. has been raised from Rs. 80.50 to Rs. 82.60 per long ton in order to compensate for the implementation of the Wage Board's proposals.

The Government of India has decided to extend the procedure for export of goods under claim for rebate of duty on the excisable contents thereof to utensils and other articles of copper and copper alloys. It has also decided to permit the manufacture in bond of the above articles for the purpose of export.

A project for erecting a 60,000-kw. capacity power plant in North Madras, sponsored by a group of industrialists with British collaboration, has been accepted in principle by the Madras Government. According to the present plan, power will be made available by 1963. The initial outlay on the project is estimated at Rs. 5 crores, a part of which will be contributed by the Madras Industrial Investment Corporation.

The storage capacity of foodgrains will be increased from 2.5 million tons to 8.6 million tons during the third Plan period, according to Mr. Shriman Narayan, Member, Planning Commission. The capacity of the Central and State Government Warehouses will also be increased from 350,000 tons to 1.6 million tons, and that of co-operative marketing societies and primary societies from 800,000 tons to 2 million tons.

The U.N. Special Fund has decided to grant $1.44 million to the Indian Government to meet a part of the $8.10 million National Aeronautical Research Laboratory to be built at Bangalore. The amount will be utilised to buy the equipment required for the transonic, supersonic and hypersonic wind tunnels, the air-storage and wind-power system, instrumentation and computation laboratories and auxiliary research facilities.

A 12-member productivity team on textiles (leader: Mr. S. N. Hada), sponsored by the National Productivity Council, left for Russia on the 6th inst., at the invitation of the Soviet Government. The team will make an extensive study of the factors and conditions governing productivity and the various incentive schemes introduced in both Russia and Czechoslovakia with a view to speeding up production. The team is expected to stay for 40 days in Russia and 10 days in Czechoslovakia.

The Government of Maharashtra has accepted the recommendations of the National Co-operative Farming Advisory Board and the Union Government in respect of co-operative farming societies. Accordingly, the membership of a co-operative farming society will be not less than ten, with a minimum area of 50 to 60 acres for *"jirayat"* land and 36 acres for irrigated land. The total landholding of a member should not exceed the ceiling fixed under the tenancy legislation. Provision is to be made for encouraging the establishment of industries allied to agriculture.

The Advisory Committee of the Coal Mines Labour Welfare Fund has approved the grant of loans and subsidies from the Fund to co-operative credit societies and co-operative consumer stores, in colliery areas. The object is to make alternative sources of cheap credit available to workers and meet their day-to-day requirements, at prices lower than those charged by shopkeepers. This will also help in correct weighment and supply of unadulterated articles. The Committee has also approved in principle the third Plan of the Fund involving an expenditure of Rs. 13.11 crores.

The first inland petroleum storage depot set up at Nagpur in Maharashtra State by the Government-owned Indian Oil Company (I.O.C.) was formally commissioned on Tuesday this week. It will help deliver vital oil products to consumers in large areas surrounding Nagpur with "speed, efficiency and at very competitive prices." The Nagpur depot is the fifth inland oil storage and dispensing installation to be set up in India by the I.O.C. Other such depots are now functioning at Ahmedabad and Baroda in Gujarat and at Indore and Ratlam in Madhya Pradesh. Work is now apace to set up similar depots at nine other places in Maharashtra, namely Poona, Amraoti, Sholapur, Akila, Manmad, Kolhapur, Chanda, Belapur and Nasik. The I.O.C., it is stated, will sell kerosene primarily through co-operatives, while it will market diesel oil through private traders.

From Abroad

Canada's House of Commons has passed the Bill which seeks the removal of Mr. James Coyne, Governor of the Bank of Canada. The Bill now goes to the Senate.

Imperial Chemical Industries, U.K., is to set up at Ikeja in Lagos, Nigeria, a £500,000 paint making plant as well as a plant for the production of weed and pest killers on a nearby site.

The Governments of Pakistan and the Soviet Union have signed an agreement under which Pakistan will receive from Russia equipment and services of experts for oil and gas exploration in the public sector.

Laos has become a member of the International Monetary Fund and the World Bank. Its quota in the I.M.F. is $7.5 million and subscription to the capital stock of the Bank is 100 shares with a total par value of $10 million.

Three more airlines, namely, Air Guinee of Conakry, Air Mali of Bamako and Trans Atlantica Argentina of Buenos Aires have joined the International Air Transport Association. The I.A.T.A. now has 92 members.

The United Arab Republic has nationalised the biggest privately owned shipping company, the Khedival Mail Line. The company's vessels link Egyptian ports with the ports of Eastern Mediterranean countries. It operates eight vessels at present.

The U.S.A. and the U.S.S.R. have agreed to hold talks starting from the 18th inst. on a direct New York-Moscow commercial air route. The establishment of such a route will provide the first direct air link between the two countries.

The American Independent Oil Company has a scheme for erecting an oil refinery in the Federation of Southern Rhodesia with a capital investment of £13 million. The refinery is expected to go into production by the end of 1963.

About 7,757 enterprises in West Germany have contributed a total of DM 1,180 million to be used as development aid. The share of industry alone is as much as DM 935 million. Banks and insurance companies have contributed DM 100 million each.

The Union of Burma Shipping Board, a State-owned enterprise operating five steamers on coastal service and between Burma, Pakistan, India, Malaya and Singapore, will be dissolved at the end of this month, as the Board has been incurring loss ever since its inception in 1952. The actual loss last year was Rs. 54 lakhs.

A 7.5 million sterling Anglo-U.A.R. trade level deal was signed at Cairo on the 9th inst. The U.K. has undertaken to sell ships, planes, fertiliser plant and heavy textile machinery in exchange for £2.5 million worth of Egyptian cotton from the 1961-62 crop. The agreement is for one year with payments spread over a period of five years financed by Close Brothers, London Merchant Bankers.

PERSONAL

MR. M. C. Chagla, till recently Indian Ambassador to the U.S., returned to Bombay on Sunday this week.

Mr. Himchand K. Shah has been elected President of the All-India Non-ferrous Metal Industries Association for 1961.

Mr. S. K. Patil, Union Minister for Food and Agriculture, returned on the 9th inst. after a tour of Soviet Russia, U.S., U.K., and the Continent.

Mr. N. M. Wagle, President of the Bombay Chamber of Commerce, has been elected President of the Maharashtra Economic Development Council for the year 1961-62.

Mr. George Ferdinand Duckwitz, head of the Western Division, Foreign Office, Bonn, who has been appointed Ambassador of West Germany to India, has arrived at New Delhi.

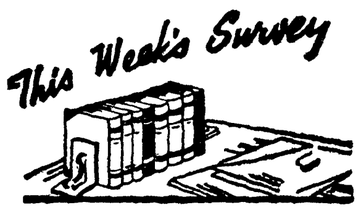
Mr. Nicola and Mr. Charles Maclennan, two experts of the World Bank, arrived in Bombay last week on a six-week tour of the country to examine and assess the progress of projects financed by the World Bank.

Mr. Ramdas Kilachand has been elected President of the Bombay Oilseeds and Oils Exchange Ltd. for the current year. Mr. Chanulal Kasturchand and Mr. Gokalchand J. Agrawal have been elected Senior and Junior Vice-Presidents, respectively.

Mr. Gordhandas Jethalal Shah, Mr. Chhotalal Kushaldas Joshi and Mr. Mohanlal Hargovindas Shah have been elected President, Senior Vice-President and Vice-President, respectively, of the Bombay Metal Exchange Ltd., for the current year.

Mr. L. K. Jha, Secretary, Economic Affairs Department, Government of India, has been appointed a Director of the State Bank of India *vice* Mr. K. P. Mathrani, who has assumed charge as the Chairman of the Industrial Finance Corporation of India.

Dr. S. Bhagavantam, Director of the Indian Institute of Science, Bangalore, has been appointed Honorary Scientific Adviser to the Defence Ministry in place of Dr. D. S. Kothari, who has become the Chairman of the University Grants Commission.



CZECHOSLOVAKIAN AID FOR MACHINE BUILDING

CZECHOSLOVAKIA, which was renowned for its heavy and light industries even in pre-war years, has made further progress in heavy industrialisation under Communist planning. So great is this progress that the country now occupies the third place in the world—after the U.S. and West Germany—in the production of machines (measured by the consumption of steel) *per capita*. It is also claimed that Czechoslovakia produces more than half a million types and sizes of machines, representing four-fifths of the total number of machine types and sizes in the world. If accessories and spares are taken into account, as many as one million different engineering products are being produced in the country. Having thus changed the structure of its industry in favour of engineering, Czechoslovakia is now changing the structure of the engineering industry itself in favour of heavy engineering. It may, therefore, be expected that this Communist country will make a determined bid to export machines and equipment on a larger scale than hitherto. Already it is a major exporter of machines, occupying the ninth place—after the U.S., West Germany, Great Britain, U.S.S.R., France, East Germany, Italy and Japan—in such exports which, in the 1956-60 period, aggregated $900 million. Already, again, Czechoslovakia has developed its trade with the developing countries in such a way as to pay for its imports from these countries with machines to the extent of about 75 per cent. It is not also surprising that developing countries, with their insatiable hunger for machinery and equipment, have turned to Czechoslovakia for a part—as yet comparatively small—of their requirements of heavy and light machinery. India, too, has turned to this source for the supply of heavy machinery and equipment for four of its heavy industry projects in the public sector.

But the Indo-Czech agreement covering the establishment of these plants is much more than a trade agreement. It is, on the contrary, an agreement covering aid for and collaboration in the setting up of the relevant projects in the third Plan period. The long-term credit that will be extended by Czechoslovakia for the major purpose of supplying machinery and equipment will amount to a total of Rs. 40 crores. At the same time, Czechoslovakia will collaborate in the establishment of the four heavy industry units by providing the technical know-how for their erection and production.

The projects covered by the agreement will all be in the public sector. The first of these is the Foundry Forge Plant which will be set up at Ranchi (Bihar) in three stages with ultimate annual production capacities of 46,600 tons of grey iron castings, ingot moulds and rolls, 88,382 tons of steel castings, rolls and ingots and 32,954 tons of forgings. The maximum piece weight will be 100 tons in the case of grey iron castings, 90 tons in the case of steel castings and 30 tons in the case of forgings. Such heavy castings and forgings will be mainly used as semi-products in the Heavy Machine Building Plant and the Heavy Machine Tool Plant, both at Ranchi in the public sector; they will not, therefore, be available on any substantial scale for the machinery manufacturing units in the private sector. The second project, namely, the Heavy Machine Tool Plant will also be located at Ranchi, with an annual capacity of 10,000 tons of heavy machine tools like lathes, horizontal boring machines, radial drilling machines, grinding machines, and so on, in the first stage and 20,000 tons in the second stage.

The Heavy Power Equipment Plant, for which the site is yet to be finally selected, is the third project figuring in the agreement. It will produce steam turbines and alternators with an output of 12,000 kw. and 25,000 kw. and its annual capacity, after the completion of the first stage, will be 620,000 kw. (10 pieces of turbines and 10 pieces of alternators with an output of 12,000 kw. and 20 pieces of turbines and 20 pieces of alternators with an output of 25,000 kw.), besides some capacity for producing condensate extraction pumps, cooling pumps, water-jet air pumps and feed pumps. And it will be designed for possible expansion so as to double the annual production capacity and for the manufacture of steam turbines and alternators of 60,000 kw. capacity in the second stage. The fourth project, namely, the High Pressure Boiler Plant, for which, too, the site is yet to be selected, will produce, in the first stage, high pressure boilers of the capacity of output from 125 tons/hour to 330 tons/hour and valves and fittings. Its annual capacity will be equal to the production of 12 high pressure boilers, with an average output of 200 tons/hour and 2,435 tons of valves and fittings. This plant, too, will be designed in such a way that its capacity could be doubled in the second stage. All the four projects, it may be reasonably hoped, will be established according to schedule during the third Plan period by the experienced heavy machinery manufacturing country that Czechoslovakia is. There can be no gainsaying that these four projects, which are in the category of basic industries, will impart further strength to India's industrial base in both the sectors—public and private.

REPORT ON COMMERCE EDUCATION

The suggestions contained in the report of the special committee for Commerce Education (Chairman: Dr. V. K. R. V. Rao), which submitted its report on the 5th inst., should prove quite useful in evolving a sound and reasonably uniform system of commerce education suited to the needs of our developing economy. The sixteen-member committee, it may be recalled, was appointed in 1958 by Professor Humayun Kabir in his capacity as Chairman of the All-India Council for Technical Education, for enquiring into the position of commerce education in all its aspects and suggesting measures for its reorganisation and improvement. The recommendations of the Committee have been made after a fairly comprehensive inquiry and they cover an extensive field ranging from elementary diploma courses to B.Com. and M.Com. degree courses and specialised courses in business administration like the M.B.A.

There will be a wide measure of agreement over the Committee's approach towards the underlying objective of commerce education, which should be to provide the student with such knowledge as would make him interested in the practical affairs of the economy of the country and enable him to acquire the initial equipment for making himself serviceable for that purpose. As the present-day economy requires both general executives and specialist officers, the Committee feels that the aim of commerce education should be to help in providing the equipment that would be useful for these twin purposes. While the aim of education in arts and science, the report rightly states, is primarily liberal, commerce education has also to satisfy, in addition, the expectation that is entertained of it, namely, that it should specifically equip the student for employment in commerce and industry.

The Committee, however, is opposed to making the B.Com. course purely vocational. Although it does not approve of the present tendency of an indiscriminate combination of vocational and liberal subjects included in that course, the Committee is of the view that the B.Com. course should be so revised as to give the student a more liberal education, more opportunity for the cultivation of logic and intelligence, more adequate grounding in the basic commerce subjects and also opportunity for obtaining a better command over expression and exposition in both English and a regional language. Whether the kind of reorientation suggested by the Committee would achieve the aforesaid aims and whether it would be superior to the existing amalgam of vocational and liberal subjects, could be judged only when the detailed scheme of subjects is published.

One result of the recommendation of the Committee would be that specialisation in banking, accountancy, actuarial science, etc., could be done only at the post-graduate stage, that is, at the M.Com. level. Here it has appropriately recommended that facilities should be provided to graduates in commerce, who are employed and have at least three years experience, for studying M.Com. in the evening, in areas of commercial and industrial importance. The other two suggestions of the Committee pertaining to the institution of a two-year national diploma course in commercial practice after the S.S.C. class and the incorporation of the business administration course as a separate discipline in the university are also calculated to meet the requirements of industrial and business houses for trained clerical, supervisory and higher executive cadres. The Rao Committee has also done well in opposing the suggestion of the Secondary Education Commission that commerce education should be introduced in the ninth class. The Committee's insistence that commerce as a group should be taught in the eleventh class and should consist only of commercial geography and the elements of book-keeping at that stage shows a better grasp of the need for imparting a strong basic foundation in elementary knowledge to every student at a stage when he can take it and before he starts specialising for a vocation or a profession.

EXPORTS OF MANGANESE ORE

The World Trade Department of the Indian Chamber of Commerce, Calcutta, has urged the Government of India to reorient its policy on exports of manganese ore in such a way as to restrict the activities of the State Trading Corporation and permit the private sector to maintain, if not augment, the export of this commodity. This plea is contained in a study on the overseas "*Markets for Manganese Ore*," just issued by the Chamber. It is common knowledge that India's exports of manganese ore have suffered a setback, following the intervention of the S.T.C. in the export trade from July 1956. Although the professed objectives of the S.T.C.'s intervention, namely, prevention of fragmentation of holdings and facilitating bulk movements, were apparently well conceived, in actual practice the Corporation has miserably failed to achieve these objectives. This has resulted in heavy loss of foreign exchange to the country. Earnings from the export of manganese ore fell from as much as Rs. 32 crores in 1957 to about Rs. 13 crores by 1959. There was, of course, a slight improvement in 1960 from this rockbottom level with exports at about Rs. 14 crores. As compared with 1957, shipments to all the major markets declined. The offtake by the U.S. was lower at Rs. 6 crores in 1960, as compared with Rs. 16 crores in 1957. Similar disquieting features have been in evidence in exports to the U.K., Japan, France, and other West European countries.

The following table shows the country-wise picture of exports of manganese ore from India since 1957:

(Value in lakhs of rupees)

	1960	1959	1958	1957
U.S.	606.26	573.39	730.37	1,459.85
U.K.	199.32	167.75	167.74	304.58
Japan	184.14	204.31	118.55	215.94
France	121.34	145.78	156.65	461.24
Czechoslovakia ..	58.60	28.33	40.01	16.32
West Germany ..	27.44	30.54	64.77	43.73
Belgium	31.04	10.62	55.44	148.35
Yugoslavia ..	28.00	12.03	21.91	14.33
Netherlands ..	18.40	67.57	102.31	195.49
Sweden	11.04	5.27	9.95	10.89
Total ..	1,399.60	1,274.17	1,658.44	3,192.91

Of course, in fairness to the S.T.C., it should be said that there were several factors, besides its own mismanagement, that led to the debacle in the manganese ore export trade. U.S. purchases, for instance, had been steadily declining since 1953, that is, even before the S.T.C. came into being, due, in some measure, to the fall in steel production in that country and the decline in the offtake for stockpiling. Besides, the U.S. turned to its neighbour, Brazil, for regular supply. Brazil's share in the U.S. market rose from only 5 per cent in 1953 to 25 per cent in 1959, thereby making it the largest single source of U.S. imports of manganese ore. This switch was necessitated by the difficulties experienced by the U.S. importers and consumers in getting regular and adequate supplies. The uncertainty created in India's supply of ore by the fluctuating export duties and quantitative restrictions on exports acted as a further disincentive to the U.S. buyers. Owing, more or less, to these factors, the U.K. also found a better supplier in Russia, and Japan in Australia and Indonesia.

The increasing competition in world markets did affect the prospects for India's exports of manganese ore to some extent. But, if the export trade had not been bogged down by Government intervention, the more enterprising sections of export business would have met the challenge. But the S.T.C. has only "made bad worse," according to a recent study on this organisation by the Economist Intelligence Unit, London. The latter has pointed out glaring instances of the S.T.C.'s technical incompetency, disregard for contractual obligations, delay in delivery and, above all, inadequate inspection of quality of exports. Based, as it was, on interviews the E.I.U. staff had with importers of India's manganese ore in various countries, the study stresses that "the S.T.C. has a bad reputation among importers in the major consuming countries." It adds: "If it (S.T.C.) does not improve its performance, it will lose India more trade." The E.I.U.'s study, which is factual and objective, is not based on hearsay. It is prepared to quote "chapter and verse" to prove its criticisms. If the Government persists in imposing the S.T.C. on the export trade in manganese ore, even after finding it unsuitable for the work, it will be acting not on economic considerations but on politically-inspired doctrinaire policies.

Apart from eliminating the S.T.C.'s tentacles from the trade, there is need for bringing down the price of Indian manganese ore, for it does not compare well with that of its major competitors. At present, the price of Brazilian and South African product (46-48 per cent ore) is quoted in the U.S. port at $34.50 per ton on c.i.f. basis, as against $38 for the Indian product. The Indian Merchants' Chamber feels that the price of the Indian product can be brought down if the heavy incidence of railway freight, port charges, etc., are reduced by at least 50 per cent. Another important suggestion made by it is that, in order to improve the productivity of their mines, mine-owners should be permitted to import machinery and spare parts against their earnings of foreign exchange. It may be noted here that, a few days ago, the Government announced a scheme of this sort, seeking to allow 5 per cent (10 per cent in special cases) of the export earnings for importing mining machinery. This has fallen far short of the expectations of trade. Five per cent is regarded as too negligible a share to be of any significance in importing costly mining equipments. The mine-owners feel that they will be fully justified in asking for at least 25 per cent of export earnings to be set apart for importing the machinery needed by them.

TRAINING PERSONNEL

An important lesson taught by the history of economic development in Western countries is that the progress achieved would not have been so phenomenal but for the utmost attention paid to the training of technical personnel of all grades and skills. It is true that, in India, too, the first and second Five-year Plan periods (1950-60) have witnessed a notable expansion of facilities for technical education, the number of engineering colleges having risen from 61 (total annual intake of 4,256 students) in 1949-50 to 86 (13,165 students) in 1960 and polytechnics from 81 (5,900 students) to 197 (24,020 students). But there is still considerable dearth of adequately trained persons in a number of fields, particularly in the engineering industries, the estimated requirements of engineering personnel in the third Plan being 45,000 graduates and 80,000 diploma-holders. The position is bound to deteriorate in the coming years, unless energetic action is taken from now alone simultaneously to improve the two basic forms of training personnel, namely, training at regular educational establishments and on-the-spot training in the processes of production. Mr. Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs, certainly struck a note of realism when he declared, in his speech at the fourteenth annual meeting of the All-India Council for Technical Education held at New Delhi last week, that "we should take a long-range view of industrialisation and the training of the correct type of technical personnel in order to accelerate it." Alluding to the rapid advances of science and technology, as also to the changing ideas, beliefs and values, he urged that "we should plan for a system of technical education that is both vigorus and capable of meeting the challenge of new situations that can be but dimly visualised today."

There is, thus, an urgent need for a multi-fold approach to the problem of technical education: (a) expansion of existing institutions; (b) setting up of new ones; and (c) provision of greater and better facilities in research laboratories, technical Government organisations (such as those of the Ministries of Defence, Railways, Irrigation and Power, Transport and Communications, and Public Works Departments), and industrial establishments in both the public and private sectors for training additional personnel. All this will entail large-scale expenditure. The Planning Commission has done well, therefore, to step up the outlay on technical education from Rs. 60 crores in the second Plan to Rs. 141.38 crores in the third Plan; the first Plan outlay was no more than Rs. 20 crores. Of the third Plan outlay, States account for Rs. 71.38 crores. In regard to the Central sphere of technical education, the Commission has indicated a programme limit of Rs. 70 crores and a financial provision of Rs. 45 crores. Experts are of the view that, if the financial provision is restricted to Rs. 45 crores, it will be extremely difficult to carry out most of the programmes. Here is what Mr. Humayun Kabir himself said:

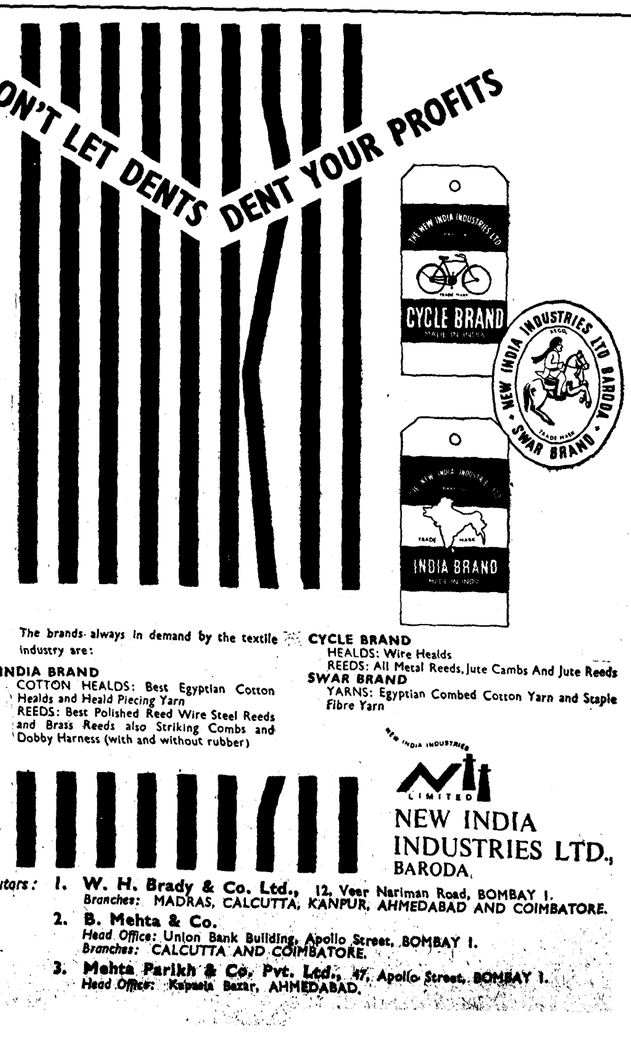
"The gap of Rs. 25 crores will cause difficulties in implementing the programme. I am not able to understand how there could be much a difference between the two figures. The reduction in Central provision will require drastic revision of schemes, especially in respect of phasing. It will mean that many proposed new institutions will have to be started in the latter half of the Plan period and scholarships for technical students reduced."

Mr. Kabir's view was widely shared by several members. Indeed, during the discussions, Dr. V. K. R. V. Rao plainly stated that the two sets of figures referred to above might be due partly to political reasons and partly to "ingrained delays and inefficiency in Government where sanctioned amounts could not always be spent." Whatever be the reason, the Planning Commission must raise the financial provision for technical education to Rs. 70 crores so as to be on a par with the programme limit.

Besides provision of adequate funds, steps should also be taken to remove certain disquieting features in the implementation of technical education scheme. The position in respect of the calibre of students admitted especially to polytechnics is said to be unsatisfactory. Not only are the students of a decidedly inferior quality but, in a number of cases, the seats are not being filled up. As a result, the wastage in polytechnics is high and the facilities created at considerable expenditure are not being fully utilised. Concern over this aspect was expressed by the Council which rightly recommended that a detailed investigation into the question of admissions to polytechnics should be carried out as a research project by a suitable agency and that, on the basis of this investigation, the future policy regarding starting of new institutions and the most effective way of utilising the existing facilities must be formulated.

Two other pertinent recommendations pertained to grant of sufficient foreign exchange for the purchase of equipment by the technical institutes and the reorganisation of polytechnic courses. Owing to difficulty of foreign exchange, several technical institutions are unable to obtain the equipment needed by them. Since technical education and training are directly related to development in industrial and other sectors, any lowering of standards due to lack of equipment will have serious repercussions on the development programmes. If the institutes are to maintain correct standards, they must equip themselves according to the prescribed standards. Further, as the Council stressed, the entire question of aims and objects of diploma courses, their contents and standards of education, etc., have to be examined in relation to the changing pattern of technical personnel in industry. It is for this purpose that the Council decided to constitute a special committee. The Council also approved of schemes for the establishment of 19 additional engineering colleges and 67 polytechnics, expansion in the capacity of existing ones, the setting up of a Central Institute of Printing Technology at a cost of Rs. 142 lakhs, and opening of three new centres for conducting courses in industrial and business management. It also commended for acceptance a uniform scale of fees charged by technical institutes.

The series of recommendations made by the Council will doubtless expand facilities for technical education. But the results actually obtained will depend to a great extent on the availability of teachers with requisite qualification and experience. As it is, there is an acute shortage of competent teachers and it is disquieting to learn that the situation is becoming more difficult because the measures suggested by the Central Government and the Council have not yet been fully implemented in the States. Surely, there is no exaggeration in the warning given by Mr. Kabir that, unless the existing institutions are adequately staffed, it will be futile, and perhaps harmful, to expand facilities for technical education at the present accelerated rate.



ON THE ARENA

By "Archer"

Houses For Middle-Class Families

WE see a great deal of house-building activity in almost all the major cities of India, though the pattern is not the same everywhere. Where there is limited land available, the accent is on raising vertical blocks of three to seven floors containing two to four flats on each floor, each flat being taken over on ownership basis, and the whole block being maintained and serviced by a co-operative society consisting of the owners. Where such congestion has not set in, and vacant land is still available, individual houses are springing up, each built to suit individual tastes and requirements, some with two or three bedrooms, and others with four or five of them, the former built on a single ground floor and the latter with a floor above. In Madras, for instance, many recently built houses for middle-class families have only ground floor accommodation, the smaller costing about Rs. 30,000 (exclusive of land) and others averaging from Rs. 40,000 to Rs. 70,000 each with fittings and flooring of inexpensive variety. But owners get tired and, in most cases, almost broke (both physically and financially) after completing the houses, the reason being that technical supervision of even the minimum type is costly and perfunctory, workmen are truculent and wayward, materials are difficult to obtain and never flow evenly, while their prices have not remained steady for more than three months at a time. Prices have been continuously on the increase since early last year. House-building has turned out to be a financially hazardous enterprise wherein the imponderables are far too many for anyone with limited resources. Many retired persons have built houses with the intention of living in them, but have eventually sold them, because estimates were exceeded, loans were obtained to complete construction, and amortisation of the loans broke their backs.

It seems to me that one way of easing the situation lies in evolving a "*Do it yourself*" method which will dispense with elaborate technical know-how, save in cost of labour and materials, and minimise the time involved. I have been picking the brains of some knowledgeable people in this regard and find that, in a modern house costing about Rs. 50,000, almost 25 per cent represents cost of labour (not including supervision), and the time taken is anywhere from nine months to one year; it would also seem that about 20 per cent of the cost of materials used could be saved, consistent with safety standards, if mass-produced prefabricated windows, doors, panels and roofing were used. The Mayor of Madras, who recently visited Soviet Russia, has stated, in an interview, that six workers were able to put up a multi-floor apartment in that country in twelve days by using prefabricated panels not only for walls but also for flooring. He visited a factory in Leningrad employing over 10,000 persons which manufactured these panels. The revolutionary feature in Soviet house construction was the minimum quantity of steel used. To us in India who have been embarking on a sort of *Bhagiratha's penance* for procuring scarce materials like steel and cement, not to mention sand and gravel for which lorry owners have to be propitiated and paid fantastic sums in advance, the easy way in which things are done in countries like the Soviet Union and the U.S. seem almost unbelievable.

Comparatively speaking, we in India have to provide for much less resistance to weather conditions than those in the West. All that we need is a good hard flooring which can be kept clean and termite-proof, and solid foundations well and truly laid. Most of us can make do with standard sizes of doors and windows for our tropical climate. In America, with the wonderful developments that have taken place in the versatile use of aluminium, hardboard and plywood, house-building is greatly simplified with readily available fabricated fittings. "Homart ensembles," supplied by Sears, Roebuck & Co. of Philadelphia, provide for every conceivable house-building requirement for living rooms, bedrooms, bathrooms and kitchens, while panel windows, door frames, railings and columns, all made of aluminium, doors and partitions made of hardboard, and tiles made of asphalt in various colours and designs, are available off the shelf for all standard requirements. Montgomery Ward of Chicago are also well-known suppliers of house fittings. If only house-builders in India will reconcile themselves to the use of standard sizes in doors and windows, and conform to some manner of type designs in house construction, a beginning could be made by enterprising engineering companies in our large towns to manufacture wall panels, door and window frames, doors and windows, floor tiles and sundry fittings; they can even provide technical advice and supervision for erection. When this kind of integrated enterprise is started on an organised scale, hundreds of middle-class people will be greatly benefited. Cement, asbestos, wood and small quantities of steel being the main raw materials required, such enterprises will be in a position to plan for a continuously expanding demand. (It will, however, be a far cry for aluminium for several years to come.) There is no dearth of engineering talent in the country for ventures of this type. Here is a field in which either sector, public or private, can embark on a profitable basis with a socially satisfying purpose. Standardised house-building schemes in several local areas in the United Kingdom have succeeded in lowering construction costs and contributing to middle-class welfare to a remarkable extent. Many such colonies of houses, fifty and more in number, each looking exactly like the other, are seen on the motorways in England, and stand out as monuments to a sensible way of middle-class living. Bourgeois vanity may look askance at such standardisation, but, then, vanity is an easy way of emptying the pocket; and, in these days of unpredictable inflation, when money gets disintegrated even in storage, should not some way be found to stop spending more than necessary on brick, mortar, steel and cement?

Belated Praise In Madras

Madras has always been noted for its great parsimony in praising its sons. In fact, most of its scholars, scientists, professors, politicians and journalists have blossomed out in the past only after they went away from Madras in frustration, and have won laurels and recognition outside the State. Inside Madras, brilliance is occasionally feted only by a large Committee of Hosts, not by individuals, perhaps due to a reluctance to speak words of praise except in good company, wherein responsibility could be shared! A good write-up about a reputed person who has distinguished himself in the field of art, science or humanities, or in service to the country is a rare occurrence, and is, in most cases, posthumous. The saying that a prophet is not honoured in his own country has been very true of Madras for a long time. Some people think it is an indication of sobriety; perhaps so, but, to the extent that several very distinguished sons of Madras go away and do not wish to come back to contribute to its social or cultural life, it is a drawback.

It is, therefore, heartening to see that Mr. T. T. Krishnamachari's services to the cause of industrialisation of the country, in general, and Madras, in particular, has now been publicly acclaimed by the Madras Chief Minister and Industries Minister, when a portrait of his was unveiled under the auspices of the Small-Scale Industries Association last week. Mr. Krishnamachari was referred to as "The father of the Industrial Estates Scheme" in India, the protector of the handloom industry against unfair competition from textile mills, one of India's most intelligent statesmen, with a forthright manner and very firm in his decisions. And, with this very belated, yet full-throated and eulogistic praise of one of its brilliant men, Madras goes to rest with the conviction that it has discharged its duty.

It was recently announced on the authority of a senior journalist's interview with him (*vide Salivati Newsletter* dated 23rd June 1961) that Mr. Krishnamachari had decided to resign his seat in Parliament in October next, and will not stand for election again. It seems a pity, therefore, that he was praised for his firmness in sticking to decisions, for that would only make him more determined than ever to live up to his reputation! There are many like me who still feel that he should be persuaded, at the highest level, to change his mind, or that some way should be found to utilise his great talents for the good of the nation. There must be several people throughout this country, and particularly in Delhi, who remain indebted to him for many practical suggestions of timely wisdom, obtained by them in their enjoyment of his generous and delicate friendship, official and political, not to talk of personal. Do they still feel that, in the conventional working of democratic traditions, the country should continue to submit to so much sacrifice? For, indeed, it is the country that stands to lose by Mr. Krishnamachari's self-effacement, not he.

"Buy Indian" To Aid India

In his foreword to a pamphlet, entitled *Trade and Aid to India*, published in Germany by the Foreign Service of Chambers of Commerce and Industry, Mr. P. Achutha Menon, our Ambassador in that country, is reported to have written:

"It is evident that the ability of a developing country to repay the financial assistance obtained from other countries depends, to a certain extent, on increased exports. A conscious effort by Germany to buy as much as possible of the products of India would perhaps be one of the most useful forms of development assistance."

The Ambassador has also pointed out that our country's need for German equipment and machinery will mean a certain imbalance in our trade with Germany for some time to come, but there is no reason for this imbalance to remain unremedied. He suggests that the Government of the Federal Republic might increase imports from India by inducing the Defence Ministry, the Railway Administration and other State-owned undertakings to place a part of their orders for equipments, outfits and clothes with Indian firms.

The suggestion is, indeed, practicable, at least insofar as textiles are concerned, because textiles are among the commonest items which Continental tourists pick up in India, of course, after careful selection. As we all know, the average German is a stickler for quality, and anything sub-standard is anathema to German businessmen. If a working arrangement could be evolved by responsible groups of Indian manufacturers, in consultation with Trade Representatives of the Federal Government stationed in this country, for assuring consistency in the maintenance of standard quality, there is no reason why enlightened Germans will not be prepared to implement the suggestion of the Ambassador to foster a two-way traffic in exports.

My arrangement with my milkman was that I should advance him money for buying a milch buffalo and adjust the amount towards his monthly milk bill in six instalments. It worked well over two transactions, but not after that, because he was very clever in diluting milk with water, and also starved the animal, so that the fat content in milk became negligible. Eventually, I stopped getting milk from him and switched over to the Government dairy supply; the repayment arrangement got spread over a period of eighteen months. I daresay my milkman was quite happy about the alteration of our mutual contractual obligations, because there were other customers who were less finicky about quality. But I have no doubt that his day of reckoning is not far off; when the Government dairy extends its operations and elbows out most milkmen, my man will come back to me whining for my custom or help to get rehabilitated. There is a moral in this story for our exporters.

Notice

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

THE ORDINARY SHARE REGISTER AND Transfer Books of the Company will be closed from Saturday the 5th August, 1961, to Monday the 28th August, 1961, both days inclusive, for the purpose of payment in due course of dividend on Ordinary Shares in the Company for the year ended 31st March, 1961. The dividend when declared will be paid to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 28th August, 1961, or to their mandatees.

By Order of the Board,
MARTIN BURN LIMITED,

FLOODS AND FLOOD CONTROL SCHEMES

IS PROVISION IN THIRD PLAN INADEQUATE?

From Our Special Correspondent

NEW DELHI, 11*th July*

THE season for floods has started earlier than usual this year. In Orissa, floods are becoming a regular feature at this time of the year, but, this year, they have been faced with imagination and prompt measures by the new State Government. For Madras and Kerala, the experience this year was unusual; it is long since the Cauvery posed a threat on so vast a scale as the one experienced this week, but, even so, the measures taken to prevent and close breaches and to provide relief to victims have been prompt. During the next three months, there may be more floods, especially in Northern India, and the question will be asked all over again as to what the Plan proposes to do about flood control. Kerala, for example, had reported last year that it had executed about nine schemes at a cost of Rs. 25 lakhs, but it is doubtful whether these had proved profitable. An annoying aspect of floods is that they generally threaten areas where they are least expected and safeguards are few.

DELHI LETTER

Hitherto, State Governments were sanctioning flood control schemes costing less than Rs. 10 lakhs each without detailed technical scrutiny at the Centre. Last year, it was decided to raise that limit to Rs. 100 lakhs to enable State Governments to take up more schemes on their own. The Draft Outline of the Third Plan had made a provision of Rs. 75 crores for flood control, drainage and anti-waterlogging measures; but the Plan had given—and rightly—a high priority for drainage and anti-waterlogging measures, since, otherwise, the benefits from irrigation projects would be neutralised. These schemes, when executed, had the additional merit of providing employment to unskilled workers.

Value in Doubt

When all this is granted, the value of flood control schemes will remain in doubt, in view of the unpredictability of the natural factors causing floods, except in areas where they occur almost year after year when river water levels rise beyond certain limits. The primary need is to establish a warning system which will reach in time the people living in areas liable to be affected. There has been some lack of vigilance in this respect during the Kerala floods. A second need is to co-ordinate the warnings and preventive measures to be taken by those in charge of irrigation dams. Kerala's complaint that the Periyar dam engineers of Madras had let out too much water causing danger to the towns on the banks of that river may have some substance, but it is obviously wrong to expect the dam authorities to regulate the flow in a way which might threaten the dam itself or deplete the dam far in advance of the rains when water supplies were inadequate and had to be conserved. This episode emphasises the need for co-ordination between the two States.

Rains in the catchment areas of the Cauvery and Periyar have been nearly double the normal levels, but, even so, the quick filling-up of the two major dams raises doubts whether enough attention was being paid to the sediment load in the rivers. Soil conservation schemes in the catchment areas could also have helped in reducing the extent of the damage.

The comprehensive national programme for flood control was launched in 1954 and, since then, 3,000 miles of embankments have been completed in various States; in terms of the protection given to agricultural land, about 6.2 million acres are said to have been benefited. About 51 towns and 4,280 villages are reported to have been protected but unless these areas can be identified and compared with the reports of flood havoc, it is not possible to determine the value of the measures taken. States have been revising their programmes in the light of the recommendations of High Level Committee on Floods and the Centre has asked them to prepare comprehensive plans for river basins.

Since complete protection against floods is hardly possible and financial resources are very limited to undertake ambitious schemes of flood control (as in the U.S.), the Centre should not remain content with offers to share a part of the expenditure on relief work but take a direct interest in inter-State co-ordination of measures. At present, there are 13 State Flood Control Boards, assisted by their Technical Advisory Committees at the State level, four River Commissions at the inter-State level and a Central Flood Control Board, besides a Flood Wing in the Central Water and Power Commission. With such an elaborate set-up, some results should have been shown and they are not quite clearly visible since what is prevented is not usually reported as news. The Central Board has been nearly deciding matters referred to it by the River Commissions; the latter now only assesses flood damage and the effects on existing dams and bridges.

Financial Provision

Wherever floods affect any area, there are suggestions in the Press that provision for flood control is not enough. State Flood Control Boards set up in 13 States (except Madras and Rajasthan) have examined schemes costing Rs. 65 crores; the Flood Wing of the Central C.W.P.C. has examined 66 of them estimated to cost Rs. 36.55 crores and approved them for Central loan assistance in addition to 600 minor schemes costing Rs. 14.66 crores. So far 3,000 miles of embankments have been constructed in eight States and the expenditure incurred in recent years is shown below:

	Rs. crores
1954-55	1.95
1955-56	8.32
1956-57	8.89
1957-58	7.74
1958-59	5.79
1959-60	4.48
1960-61	7.27

The provision made in the third Plan is thus in keeping with the pace of utilisation of funds and preparation and execution of schemes. The Government of India considers it necessary that the whole question should be viewed in the proper perspective. While measures which are obviously desirable should be taken in the light of experience, it is felt that attention and resources should not be diverted to preparations against uncertain contingencies.

* * * *

National Unity

In New Delhi now, it is neither the floods nor Assams's language nor Britain's entry into the Common Market that is causing to much anxiety as the question of "emotional integration." The Prime Minister's appeal to the services contained a fervent plea for national unity based on the historical fact of Indian unity amidst diversity in language and religion. Mr. Nehru did not elaborate on how the ideal of integration could be translated into official policy or everyday attitudes, but, simultaneously, a meeting of the Committee on Emotional Integration, of which Dr. Sampurnanda is the Chairman, was held and many views were expressed. The Chairman said that the elements in our religion and culture that work strongly towards uniting the various parts of the country should be conserved; Mrs. Indira Gandhi, who was the Chairman of the Congress Party's Committee of National Integration, wisely recognised that group loyalties existed everywhere but that in strong nations, they were made subservient to larger loyalties and that similar attempts should be made here. Such sentiments, however, are more easily said than translated into practice.

The Committee was primarily concerned with the educational aspects of integration and hence the views of Dr. K. L. Shrimali, the Union Education Minister, are of some significance for showing the kind of reaction it can produce in some quarters. Dr. Shrimali thought it would be helpful to have a cadre in the educational service with a wide and all-India outlook; the Centre, he said, could not remain indifferent where the question of national integration was involved. So teachers must not remain content with giving factual information to their students but should "mould their minds," so that they become worthy citizens. Whether the poor underpaid teacher, who is not even doing enough to provide the factual information, can take on these higher responsibilities is another matter.

Apparently, this determined all-out bid to make schools the instruments for the realisation of the larger ideals will not be relaxed, until at least textbooks are altered to make up for the obvious deficiencies of teachers. Perhaps, the prominence given in textbooks to local celebrities who have served only local causes or promoted regional languages of cultures will in future be avoided by substituting more of the so-called national figures. This reliance on more propaganda, to be supplemented by other media of publicity, is one of the direct consequences of the report of the Congress Committee on National Integration. What has been overlooked in all this is that, even if the schools succeed in instilling national consciousness through these means, the atmosphere outside is such that it can undo the good work in a moment.

The Committee on Integration realised that the way party politics is being conducted in various areas, increases communal consciousness and parochial attitudes. Instead of beginning at this end to disinfect the sources of pollution in the body politic, attempts are being made to interfere in the educational field, as if it has not had enough interference already from politicians in the matter of linguistic media of instruction. Two doubting voices at the meeting of the Committee asked the question whether we wanted a monolithic culture, condemning all present loyalties wholesale, or whether we confirmed some of these at least partially. Mr. Nehru's appeal provided the answer by emphasising the diversity as much as the unity that was possible amidst it. It is wrong to say that textbooks or teachers understand this truth insufficiently now; the danger of so assuming is that, under the influence of enthusiasts like Dr. Shrimali, textbooks will become tools of propaganda (like the History of the Freedom Movement sponsored by another Ministry).

RANDOM THOUGHTS ON BANKING PROBLEMS

LIQUIDITY RATIO AND STATUTORY BALANCES

By "Kuber"

AT first sight, there is nothing very strange in the Reserve Bank's proposals for increasing the minimum liquidity ratio of banks from 20 per cent to 27½ per cent; in fact, most of the big banks have in practice been maintaining the proposed ratio during most of the year and, as such, the Bank's proposals would appear to be quite harmless on the surface. As the details of the proposed changes were indicated in this journal last week, it is unnecessary to cover them here. Suffice it to say, as a preliminary remark, that the move to vary the statutory reserves to a maximum of 15 per cent of total deposits, instead of 20 per cent of demand and 8 per cent of time liabilities as at present, is only of theoretical interest at present, as it is more of an emergency type and may be distinguished from the first two proposals which will affect the banks in their day-to-day working.

Minimum Cash Reserves

The most important criticism of the proposal for raising the minimum cash reserves is this: Why should the banks statutorily maintain any cash balances at all with the Reserve Bank, when they are also expected to maintain, at the same time, an overall liquidity of 27½ per cent" The banks very well know that, in practice, they have to keep very much larger balances than required by law and, generally, these balances work out to about 2 to 3 per cent more, as it is not always possible for the banks to know their deposits exactly. There may have been some justification for making this obligation statutory when the Reserve Bank was started, because, in the beginning, the Reserve Bank had to have some sort of working capital for effectively carrying out its policy of controlling currency and credit; that is no longer the case now. We are supposed to follow, and draw inspiration from, the practices of the Bank of England and yet the banks in Britain are not statutorily required to maintain with their central bank any balances; whatever balances they maintain are purely voluntary. Normally, the bigger banks would keep about the same balances with the Reserve Bank just the same, as can be seen from the excess balances left by them with the Reserve Bank most of the year; so why make them statutory at all? Those in charge of banks very well know what a headache it is, to keep on shuttlecocking their funds to and from the Reserve Bank just to see that they are on the right side of the law. More often, the banks have had to borrow either from the inter-bank call loan market or from the Reserve Bank to meet this obligation. That has been the experience of most of the banks during the last busy season. In effect, during the last few months, the banks have been borrowing from the Reserve Bank at 6 per cent and from the call loan market at 5 per cent more or less continuously in order to maintain these balances, free of interest, with the Reserve Bank. It will thus be seen that, in the present-day conditions, the Reserve Bank's proposal makes no sense at all. The earlier it is discarded the better.

Smaller Banks

It is said that, if the statutory balances are done away with altogether, the smaller banks may be tempted to carry on with very meagre cash resources. This sort of argument will not hold water, because the overall ratio of 27½ per cent in liquid assets will operate just the same. In any case, considering the nature of their operations, a small increase in their cash ratio is not going to make much difference. The statutory balances, therefore, are either of no use, as in the case of small banks, or are redundant, as in the case of larger banks. This requirement merely adds to the difficulties of banks. Its only purpose, in the context of present-day conditions, is to benefit the Reserve Bank at the cost of the banks. It is true that, if the banks are not statutorily required to maintain cash balances with the Reserve Bank, some of them may increase their holding of Government securities at the expense of their cash resources. But why should they not do so, if that gives them a bit of extra income? Indeed, that should be welcomed by the Reserve Bank.

I suggest that the Indian Banks' Association should study this point very closely and stoutly oppose the proposal for the maintenance of any statutory cash reserve with the Reserve Bank. Let the Reserve Bank, however, have all the powers to enforce and vary the statutory reserves to a maximum of 15 per cent of total deposits during emergencies; but, in normal times, the banks should maintain their balances with the Reserve Bank purely on a voluntary basis, as in Britain.

Secondary Liquidity Ratio

One often overlooks a very important point about any statutory ratios, in general, and liquidity ratio, in particular, and that is that the moment a ratio becomes statutory, it very often misses the purpose for which it is intended. When you legislate that a specified portion of banks' deposits has to be kept in cash and Government securities at all times, it ceases to be liquid, however paradoxical it may sound. The banks cannot encumber such assets, no matter how much they may be in need of finance even temporarily for meeting their genuine seasonal or other requirements. To put it differently, such assets can be utilised by the banks only when they cease to be banks! In practice, the banks have to have what may be called the "secondary liquid resources," which can be utilised by them from time to time to meet their requirements. In Britain, as the banks are required to maintain a liquidity ratio of 30 per cent, they also maintain, at the same time, an additional ratio of 15 to 20 per cent of their deposits in Government securities; it is in fact this ratio which is really liquid, in the sense that they can make use of it as and when required. The statutory liquidity ratio, therefore, always implies a secondary liquidity ratio for banks.

Similarly, in practice, the Indian banks, too, will have to maintain very much more than 27½ per cent of overall liquidity to be on the right side of the law. Besides, the banks will also have to have free and unencumbered securities for their own general requirements either for the purpose of meeting sudden demands for cash in their upcountry centres or for getting temporary finance from the Reserve Bank from time to time, as, obviously, the Government securities that they may be required to hold for maintaining their liquidity requirements, cannot be borrowed against. It is assumed, therefore, that 27½ per cent liquidity ratio will work out in practice to something like over 30 per cent and that the member-banks will also have to hold in practice more than 10 per cent of their deposits in Government securities to meet their own requirements. Accordingly, the Reserve Bank's proposals imply that member-banks will have to maintain more than 40 per cent of their deposits in cash and Government securities; as banks usually hold about 10 per cent of their deposits in cash and balances with other banks and the Reserve Bank, they will be required to hold a little more than 30 per cent of their deposits in Government securities.

The Economics Of It

Now, we all know that, on an average, banks get hardly 3½ per cent return on Government securities, while on their time deposits they are paying anything between 4 and 5 per cent. In the busy season, they are required to pay to the State Bank and the Reserve Bank 6 per cent on the loans obtained from them. In effect, what the proposals come to is that the banks should pay, on an average, about 4 per cent on their time deposits, 4 to 5 per cent on inter-bank loans and 6 per cent to the Reserve Bank and lend money to the Government at less than 3½ per cent, if the risk of capital depreciation inherent in such investment is taken into account. It is thus abundantly clear that the Reserve Bank's proposal is not feasible at all. It will throw the entire banking system out of gear.

Incidentally, if the banks are made to suffer loss in this way, how are they, at the same time, expected to maintain their dividends and induce the shareholders and the public to subscribe increased capital which the Reserve Bank wants them to have? It must be borne in mind that, by compelling the banks to invest in Government securities, the banks are, at the same time, being deprived of utilising their funds in commercial loans and advances on which they are able to get about 7½ per cent per annum at present.

Private Sector Will Be Hit

The Reserve Bank has been extending rediscount facilities to banks in the last busy season to the tune of over Rs. 100 crores on the assumption that such a facility, resulting in an increased bank credit, was obviously warranted by our economic conditions. If the banks lock up more than 40 per cent of their deposits, how will the requirements of trade and industry be met in the busy season? At present, deposits of scheduled banks, excluding P.L. 480 funds, are approximately Rs. 1,600 crores and, if the above proposal of the Reserve Bank is implemented, it will lock up over Rs. 640 crores in cash and Government securities, leaving a balance of Rs. 960 crores to the banks, out of which the banks could safely lend out only Rs. 900 crores as against the total bank credit of Rs. 1,300 crores at the end of April last; Somebody will have to finance the remaining Rs. 300 to Rs. 400 crores to trade and industry. Who will provide this facility if banks cannot do it?

It is clear, therefore, that the Reserve Bank's proposal in regard to liquidity ratio is impracticable, judged from any angle. It will increase the bank's expenses heavily; it will strangle trade and industry, as their requirements of bank credit cannot be met in full; it will make it impossible for banks to increase their capital; it will indirectly increase the cost of banks' credit to the private sector; and it will destroy the resilience in banks' operations in the busy season.

A Suggestion

If the Reserve Bank desires that the banks' liquidity should be increased, without bringing about the aforesaid undesirable consequences, it will have to modify its proposal. The banks, I feel, may be permitted to include short-dated bills also for calculating the liquidity ratio. It is suggested that certain inland sight bills (supported by relevant documents), export bills and *Multani* bills are ideal short-dated investments for this purpose. On these bills, the banks get a return of about 7 per cent now. They are self-liquidating and safe enough. No banker has ever lost anything in *Multani* bills in the last 50 years. As they are self-liquidating and as some of them mature almost every day, they will enable the banks to regulate their cash requirements from day-to-day.

After all, in England, the banks' liquidity ratio consists mostly of cash and bills and not Government securities. So, why have different bases of liquidity in India and confine liquidity only to Government securities, which are never deemed to be "liquid" anywhere in the world. It is, therefore, suggested that the banks be allowed to invest to the tune of 7½ per cent of their deposits in bills of the type mentioned above, leaving the overall ratio of Government securities, bullion and cash to deposits to continue to remain at 20 per cent, as at present.

The banks in India will naturally work out all the implications of the Reserve Bank's proposal from various angles and offer their criticisms and/or counter-proposals through their respective associations. Whatever be the case, they cannot possibly accept the Reserve Bank's proposals as they stand, because they are completely divorced from the realities of the banking world.

GERANIUM CULTIVATION

Enormous potentialities for the cultivation of geranium, an important oil-bearing plant, in India, are indicated in a study carried out by the Essential Oils Research Committee of the Council of Scientific and Industrial Research. Geranium oil is used extensively in perfumes, soaps and other toilet preparations. Imports of the oil at present are valued at about Rs. 10 lakhs annually. Geranium is now cultivated in the Sheveroy Hills and the Nilgiris in South India. Efforts have also been made to introduce the plant in Jammu and Kashmir State.

In order to ensure the production of good quality geranium, the National Chemical Laboratory, Poona, makes available to the public specially reared plants. Estimates of working costs show that an investment of about Rs. 6,800 per hectare over a period of six years in the production of geranium could yield a profit of about Rs. 6,900.

Fish production in India during 1960 has been the highest ever recorded. Sea fish landings were about 880,000 metric tons. Marketable surplus of inland catches, including estuarine tracts, was about 280,000 tons. These, together with subsistence fishing in inland water and small ponds, have placed the total fish yield in India well over 1,400,000 tons, which was the target for the final year of the second Plan period. The highlights of the 1960 fishery season were the excellent yields of sardines and mackerel. Mechanisation of fishing craft and introduction of synthetic fibres like nylon are the chief avenues of increased marine production.

U.S. MONETARY AND CREDIT SYSTEM

ENQUIRY COMMISSION FAVOURS MORE POWERS TO PRESIDENT

THE recommendations of the Commission on Money and Credit which was appointed in May 1958 under the sponsorship of the Committee for Economic Development for reviewing the U.S. monetary and credit system have been comprehensively reviewed in the latest issue (July 1961) of the *Monthly Bank Letter* of the First National City Bank of New York. The need for a thorough study of the American monetary system had been felt for a long time. President Eisenhower himself had proposed a similar enquiry under governmental ægis, but the proposal was drowned in a bitter political controversy. The Commission on Money and Credit—C.M.C. for short—the report of which was submitted to President Kennedy on 19th June 1961, functioned as an unofficial inquiry body composed of 25 citizens drawn from business, finance, labour, agriculture and education. It had the benefit of co-operation from Government agencies, the Congress, business and educators in collecting valuable information. The report (282 pages) is, therefore, said to represent the deliberations of a diverse group of American citizens. The initial reaction of President Kennedy is reported to be that it could make an important contribution to the health and strength of the U.S. economy. The comment of the *Monthly Bank Letter* is that the report contains much solid economic analysis and embodies many provocative ideas.

Centralisation Favoured

The Commission does not favour a wholesale overhaul of the U.S. financial structure. But it does propose changes in the Federal Reserve System whereby more power would be centralised in the Federal Reserve Board and less emphasis would be given to the voluntary, private and regional character of the American central banking structure. If the suggestions of the Commission are carried out, the role of the regional Reserve Banks would become almost exclusively operational and advisory and the discount rates which are currently established by each Reserve Bank, subject to the review and determination of the Federal Reserve Board would also come to be fixed by the Board of Governors of the Federal Reserve System at Washington. One advantage of this reform would be that the central bank discount rate would be uniform for the whole country and decided in Washington. At present, the discount rate for each region is decided by the regional Reserve Bank and, though the decision of the majority of Reserve Banks is usually followed by others under the advice of the Federal Board, thereby bringing about uniformity in the rate for the whole country, there is a time lag of anything from two to four weeks. Further, in law, there could be different discount rates for different regions. Another suggestion of the C.M.C. is that the Federal Open Market Committee, which now has five of its twelve seats occupied by Reserve Bank presidents, should be abolished and its functions taken over by the Board.

Wider Powers to the President

Besides strongly expressing itself in favour of centralisation within the Federal Reserve System, the Commission also wants the American President to be given more influence over the more powerful, smaller Federal Board. With this object in view, the Commission has suggested that the four-year terms of office of the Chairman and Vice-Chairman of the Board of Governors should coincide with the President's tenure and that the term of members of the Board should be reduced from 14 to 10 years. The Commission's basic idea is that the President should be the central organisational focus of all Government policies aimed at reducing unemployment to the minimum level and guaranteeing an adequate rate of economic growth combined with reasonable price stability.

The aforesaid suggestions, which aim at giving wide powers to the highest political executive in the U.S., differ widely from those held by the former President, Mr. Eisenhower, who was clearly opposed to subordinating the powers of the Board to the authority of the President. Mr. Eisenhower, who was a banker himself, has sought the permission of Parliament to dismiss the Governor of the Bank of Canada.

The *Monthly Letter* itself seems to be in favour of continuing the *status quo*. It feels that, while concentration of power might speed decisions, it also involves dangers, especially as the U.S. is a big country, and approvingly quotes Chairman Martin who once said thus :

"The genius of the framers of the Federal Reserve Act lies in the creation of regional banks, knit together by a national governing body in Washington rather than in the establishment of a central institution with authoritarian powers. Each Federal Reserve Bank and each branch office is a regional and local institution as well as part of a nation-wide system. Through their boards of directors, the banks are in a position to represent the views and interest of the particular region to which they belong and, at the same time, they are the administrators of nation-wide banking and credit policies.

"Instead of functioning from the centre outward, we function through an interdependence of all our parts. The life blood of the Federal Reserve System is in its members."

Political Implications

The *Monthly Letter* further avers that an independent Federal Reserve Board can take necessary but unpopular restrictive actions to which the Treasury would object and for which a President might not wish to take political responsibility. In other words, an independent Federal Reserve Board will serve as a convenient instrument for the President for enforcing politically unpopular decisions without himself having to become politically unpopular. Another reason why *The Monthly Letter* views this proposal with apprehension is that, "when a power to create money is vested in the Executive, it tends to be exercised by the Treasury Department which, with large and continuing borrowing problems, has an occupational bias in favour of cheap money."

Instruments of Credit Control

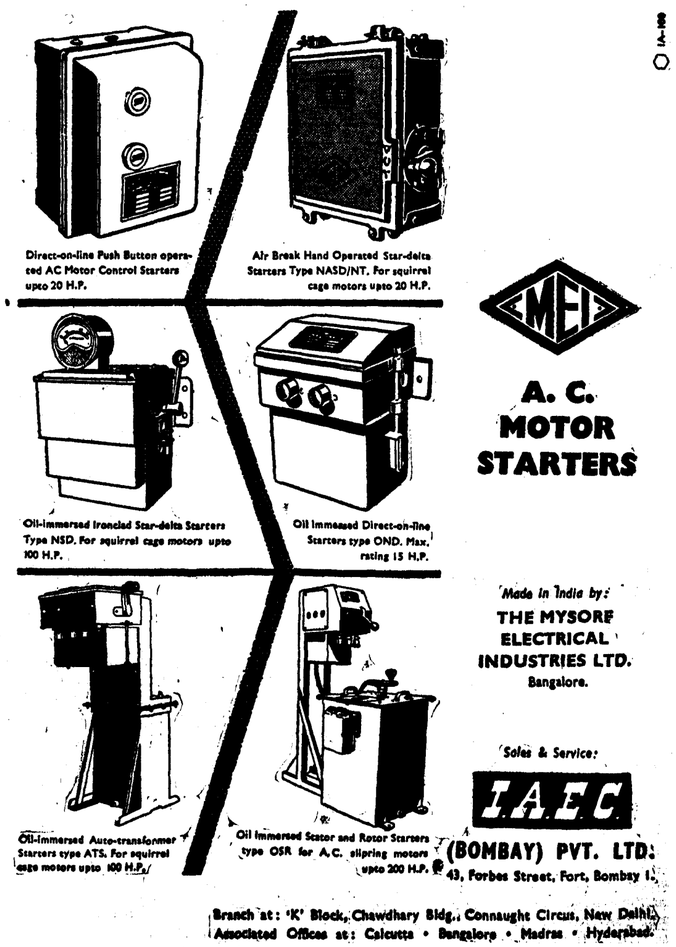
The Commission also considered a wide variety of proposals for new devices to regulate credit. But it has concluded that there is no need for any change in the existing instruments, which are (1) the discount rate (the rate of interest charged to member-banks on borrowings from Federal Reserve Banks), (2) purchases or sales of Government securities in the open market, and (3) changes in cash reserve requirements of 6,174 member-banks.

The controversial question of the broadening of the open market operations to include longer-term Treasury obligations came in for discussion at the Commission. Its guidance on this subject is as under :

"Instead of relying on a 'bills-only' policy, the Federal Reserve should be willing, when domestic or international conditions warrant, to influence directly the structure as well as the level of interest rates in pursuit of countercyclical monetary policies and should deal in securities of varied maturities. This recommendation does not mean a return to a pegged structure of prices and yields for Government securities."

In actual fact, it may be noted, the policy of the Federal Reserve was never "bills-only," though regular dealings in other securities of longer term have been undertaken only from the latter part of 1960, when the Federal Reserve began to purchase longer-term securities with the double purpose of maintaining free reserve in the banking system and strengthening the undertone of the bond market.

The Commission has approved of the principle of basing reserve requirements on the volume of net demand deposits. But it does not favour the absence of uniformity in these requirements. It suggests that the demand deposit requirements for all member-banks be made identical and that the classification of banks into country banks and reserve city banks be eliminated. The Commission, however, is not impressed with the policy of making frequent changes in the reserve requirement percentages.



Expressing itself strongly against this practice, the Commission declares :

"While changes in reserve requirements are a powerful instrument of credit control, they are awkward and cumbersome . . . and present difficult problems of adjustment for many medium-sized and small banks."

On the question of desirability of granting the Reserve Board stand-by authority over consumer instalment credit, the Commission found itself almost evenly divided. The main objections taken by those who opposed such control were (1) the difficulty of efficient administration of the control and (2) the large scope for its evasion. As regards control over business investment in inventories and in plant and equipment, the Commission is of divided opinion. The majority would appear to be in favour of a controlled economy, as they have recommended that the Government should investigate "possible methods of influencing inventory and business investment expenditures on a selective basis." Opposing this view, one of the members, Mr. Fred Lazarus Jr., asserts :

"The attempt to control business investment in inventories and in plant and equipment would lead to a Government-controlled economy and the end of private enterprise as we know it today."

Public Debt

The Commission had also to deal with the question of the enormous growth of public debt and the multiplication of financial institutions and intermediaries which perform banking or quasi-banking functions and create liquid assets regarded by holders as "money." It is one of the peculiarities of the legal structure encompassing the financial systems in most countries that such institutions are not subject to the control and regulations that circumscribe the operations of commercial banks. Nevertheless, the Commission has rejected the idea of extending Federal Reserve control to insurance companies, savings banks, savings and loan associations and other non-bank intermediaries, though it is of the view that the Federal Reserve does influence non-bank lenders, albeit indirectly. The Commission has, however, expressed concern over the unevenness of regulation of various classes of financial institutions which has the effect of distorting the pattern of growth. In particular, the commercial banks have been fenced in by restrictions on branch banking, high cash reserves requirements, heavier taxation, and restrictions on interest payable on deposits. It has, therefore, proposed that the authorities should secure uniform conditions for the different financial institutions, so that they could have balanced growth.

Ceiling on Interest Rates

Commenting on the Federal Reserve's ceiling on interest rates, the Commission categorically asserts that such regulations restricted the freedom of banks to compete for savings deposits with non-bank intermediaries which are not subject to similar controls on the rates they offer. It recommends that ceiling on interest rates should be on a stand-by basis and be applied to saving banks and savings and loans associations as well. The Commission further emphasises that the earning power of member commercial banks is impaired by the legal cash reserve, currently at 5 per cent of savings and time deposits, whereas competing institutions are not under any legal obligation to maintain such cash reserves. In order to bring about uniform conditions, the Commission has recommended the repeal of the existing statutory reserve requirements on savings and time deposits. It has also favoured equality in respect of tax treatment to banks, on the one hand, and savings institutions, on the other. In particular, the Commission has drawn attention to the fact that the Treasury's tax treatment of bad debt reserve do not apply equally. The Commission states :

"The application of present tax provisions to mutual savings banks and to savings and loan associations results in virtually no tax payments by them as compared with commercial banks."

Fiscal Policy

As the operation of the monetary and credit system is affected at many points by the Government's policy of spending and borrowing, the Commission has made several suggestions affecting fiscal policy. The Commission, for instance, favours the abolition of statutory public debt limit as well as the gold reserve requirements of the Federal Reserve Banks. It will be recalled that a Bill to abolish the gold reserve requirement (the Multer Bill) has already been introduced in the Congress. A section of conservative bankers in the U.S., however, considers the reserve provision as a "red warning light" which compels authorisation by the Congress for letting the gold reserve drop below a stated point. President Kennedy is strongly opposed to the gold reserve requirement and the views of the Commission on this issue will strengthen his hands.

Balanced Maturity Structure

On the problem of public debt, the Commission has advocated the elimination of the 4¼ per cent limit on interest payable on U.S. Treasury bonds. It recognises the inflationary potential of an excessive volume of short-term debt, and has disapproved of the shortening of the average maturity of the public debt which has occurred since World War II. It has, therefore, recommended that the Treasury should continue its efforts at lengthening the repayment period, in order to achieve more balanced maturity structure for the debt. The Commission has added that such efforts should be made during periods of prosperity so that they would make some contribution to stabilising the level of economic activity. The *Monthly Letter*, however, draws attention to the practical difficulties in readjusting the maturity pattern of the U.S. public debt and observes :

"As President Eisenhower discovered, it runs up against the political objection that bond financing becomes too difficult and costly when business and private credit demands are active. The market is most receptive to long-term U.S. bond issues in a declining phase of business and private credit demands. But then the objection appears that the Treasury should refrain from long-term bond issues so that home builders and other private borrowers, states and municipalities, should enjoy a monopoly on the benefit. Thus the ideal time for the Treasury to put out long-term bonds is 'never', or 'hardly ever.' The practical solution is to keep at the job all the time, with periodic bond offerings gauged in amount to market conditions. This formula would not interfere with stabilisation policy. In periods of prosperity, bond offerings could combine with surplus revenues to reduce outstanding Treasury bills. In periods of recession bond offerings presumably would finance only a part of the deficits so that the supply of Treasury bills and other shorter-dated paper nevertheless would also be increased."

Trenchant Criticism

The Commission's views on the dollar problem and the mounting Government expenditure have come in for trenchant criticism at the hands of the authors of the *Monthly Letter*. Commenting on the failure of the Commission squarely to face the fundamentals on which progress should be sought and freedom and initiative sustained, the *Monthly Letter* observes :

"While expressing the opinion that we should be able to reduce the rate of erosion of the value of the dollar, it takes an indulgent view toward the rising course of Government expenditure and taxes which have more to do with the price trend than is commonly recognised.

"The section on the balance of payments, not on the original agenda, lacks proper recognition of the critical importance of a stable dollar for a stable world economy. It says the use of restrictive monetary and fiscal policies may be 'too costly' in terms of unemployment and lower growth as a means of rectifying a balance-of-payments deficit. It would rely on various 'specific measures,' which to many will seem both inadequate and inappropriate. It recommends retaining the present dollar price of gold as 'a central pivot in the exchange rates structure.' Yet it goes on to suggest that 'If large U.S. payments deficits appear persistent, the need for a change in the exchange rate structure must be recognised, and the change can be either a U.S. devaluation or an appreciation of some other currencies.' Urging removal of the Federal Reserve gold reserve requirement, it would seem disposed to allow the United States to be denuded of its gold and leaves doubt that it would even then face up to the need for fiscal discipline. This is something less than the firm attachment to external stability of the dollar which our own interests and our international responsibilities call for, and is a good example of the cloudy compromises which mar the report.

"The report holds that 'a mixed private and public system best meets our national needs.' Objecting to this, one Commission member, J. Cameron Thomson, comments that what should have been written is that 'The Commission holds that primary reliance on economic freedom and reliance on the market mechanism for the allocation of products and resources is a continuing national objective.' Our 'mixed economy' is threatening to become a mixed-up economy, one without clear purpose or guiding principle.

"If we want to rely on the enterprise of the individual to get us ahead we must buttress his incentives, nourish self-reliance, limit the percentage for the tax-collector, and give the private tax-paying sector of the economy room in which to grow and prosper.

"We should never allow ourselves to forget that progress is the product of human effort. Money is worthless except as people will work to earn and save it for the good of themselves, their families, their communities, and their nation."

RUPEE PAYMENT AGREEMENTS

THEIR EFFECT ON FOREIGN EXCHANGE SITUATION

By A Special Correspondent

FOR the last few years, all our bilateral trade agreements with the Eastern bloc of countries have been made in the form of a rupee payment agreement. Probably, the whole idea of this agreement was to bring about an automatic balancing of exports and imports between the individual countries concerned, so that there might be no strain on foreign exchange. Since the inception of this type of agreement, however, many more virtues were seen in them than were in fact possible. And the latest review of the situation shows that these agreements are definitely harmful to India and the persons in charge of them are not competent to handle them properly.

Rupee payment agreements were fascinating to start with, as the presumption was that exporters to India were willing to accept payments in rupees and that we could import many useful things without having to worry about the foreign exchange counterpart. The agreements did mention the various commodities covered by them. The list of commodities was intended to ensure that commodities exchanged under the agreements would not interfere with our normal trade pattern and would in fact assist in promoting exports of non-traditional commodities.

Probably the first criticism of rupee payment agreements was made about three years ago, when it was realised that they ultimately resulted in blocked balances in favour of either of the parties. These agreements provided that the net balance at the end of the period specified should be settled in sterling and we found to our dismay that all the balances were against India and all the adverse balances had to be settled in sterling at a time when there was considerable pressure on the external value of the pound sterling. Consequently, when the old agreements were replaced by new ones since 1958, the old clauses of settlement in sterling were replaced by clauses for settlements subject to negotiations. This was probably the biggest mistake that the Union Ministry for Commerce and Industry made, probably in the usual spirit of warmth for Communist countries shown by our External Affairs Ministry. Our bilateral trade agreement with China providing for rupee payments expired a year and a half back and has since not been renewed. The last agreement ended with a surplus in India's favour. China has not yet exported to India enough to square this surplus. Again, whenever the Government of India issues licences for imports from China, either it is difficult to place an order for the goods or even if the order is placed, it has taken a considerably long time to get the order fulfilled in full.

Paradoxical Result

The first signs of leakage in rupee payment agreement were seen in the working of the agreement concluded with Egypt after it broke off relations with France and England. Egyptians took away a considerable quantity of our tea and jute and these ultimately found their way into the Continental markets, instead of being consumed in Egypt. The result was that it was Egypt who earned valuable foreign exchange from our exports and we earned blocked Egyptian pounds from which we had very little choice so far as any pattern of imports was concerned.

The most paradoxical and almost unbelievable result of these agreements is the fact that, by exporting to these countries, we received credits to a blocked rupee account in favour of one of the Communist countries, usually with the Bank of China or the State Bank of India. These are accounting entries which are of no benefit till they can be converted into useful goods. On the other hand, the countries importing from us use our imports for earning valuable foreign exchange with the help of our exports which we should normally do ourselves. While it is difficult to prove the exact leakage of our commodities, it is very well known that countries like Czechoslovakia lift coffee from India and sell it to Germany at the c.i.f. price which is lower than the f.o.b. price in India quoted by the India Coffee Board. Surely, there can be no worse situation to damage our traditional exports to those countries whose currencies are most valuable to us for the import of the much needed machinery for our development plans.

Rupee payment agreements have also the unexpected but the most undesirable result of reducing the exchange value of the rupee in the free currency markets of the world. Actually, a regular trade of arbitrage operations is going on in Holland and Switzerland by which rupees are sold forward by the agents of the Eastern bloc countries in the form of agreements to supply various goods. Very often, rupees are sold at a rate of depreciated value between 10 and 30 per cent, depending upon the demand for the commodity for which they might ultimately be used. These forward sales of rupees have a tendency to bring down the value of the rupee and have much wider repercussions on the free markets such as Hong Kong and Singapore. In effect, therefore, India has been indirectly financing the imports of Eastern bloc countries from the Western bloc countries and building up at the same time accounting balances in our favour which cannot be utilised for goods. All these happen, it must be noted, in addition to the increasing pressure on the value of the rupee which ultimately originates from transactions supported by rupee payment agreements. For example, if Czechoslovakia wants machinery from Germany, it can earn the necessary D. Marks by exporting Indian coffee to Germany. The Indian coffee can be imported, under the rupee payment agreement, by which our rupees are credited into the rupee account in India in our favour. As German machinery is much more valuable to Czechoslovakia than imports from India, they are prepared to finance this trade at a value of the rupee which will be much less than par so far as Western European countries are concerned. This, of course, will be true of any country and any commodity without direct reference to the example quoted here.

Another Myth

That rupee payment agreements promote exports is another myth, because the value of exports and imports under rupee payment agreements as compared with the total volume of trade has always remained at a constant level, at between 5 and 6 per cent, over the last few years. The only advantage is that the total volume of business has grown and there has probably been a steady 5 per cent increase in the volume, but this might have happened in any case.

A big risk in the operations under rupee payment agreements is the fact that agents of the other countries concentrate upon the purchase of a limited number of commodities in India in an unusually high volume. For example, recent purchases of raw hides and skins in the Madras area (cashewnuts in Kerala is another example) have not only upset the operations of the tanning factories but they are also likely to upset the supplies to our usual markets. Once our usual overseas markets are not assured of supplies from India, they will switch over to other countries and we will lose our markets even for traditional imports for all time. It is common knowledge that Russia tends to regard trade as a means of economic warfare.

The real reason why we are not competent to carry out successfully bilateral trade agreements with the Communist countries is the fact that there is only one exporting or importing agency at the other end, while there are any number of exporters and importers at the Indian end. If it was just a matter of agreement between two State Trading Corporations, the balancing probably could be managed easily. But, under the present arrangement, the results are most unpredictable, as the overseas State Trading Corporations can mechanically switch on and switch off their supplies to any extent at any time. It is not, therefore, surprising that, upto 1958, all these countries used to have an export surplus with us and now, all of a sudden, all these countries have an import surplus from us. Such an import surplus would be useful if it could be converted into goods by us. At the moment, however, it produces goods for the Eastern bloc countries, besides doing considerable damage to the value of the rupee and to our traditional exports. The least that India should do to extricate itself from this unforeseen mess is to insert a clause in the rupee payment agreements providing for all unrequited exports to be paid for in pounds sterling or U.S. dollars at least once in two years, if not every year.

TEXTILE IMPORTS FROM HONG KONG

GOVERNMENT SUGGESTS EXTENSION OF CEILING PACT

From Our Special Correspondent

MANCHESTER, *4th July*

MANCHESTER LETTER

AFTER so many months of seeming prevarication, with little to show how the future system of importation of cloth was to be tackled, the very fact that a direct move has been made by the Government to end the apparent impasse with Hong Kong is indeed a welcome development. Reactions may differ about the effectiveness of the gesture or the continuance of the current method of curtailment of exports from the Colony, but, without some effort to break down the barriers, the matter might have drifted on until complete confidence was lost. This, in fact, was the very point seized on by Lord Rochdale in his official comment on the proposals. While admitting that Hong Kong might be justifiably reluctant to enter negotiations at a time when the whole question of textile shipments between nations is up for discussion, the Cotton Board Chairman declared his belief that acceptance of the interim arrangement would "engender the confidence which is now so lacking."

The revised project aims at prolonging the ceiling system with the Colony for another eleven months after its expiration at the end of January. The limitation of exports by voluntary undertaking of the three Asiatic countries concerned would then expire simultaneously at the end of next year. Much can happen meanwhile. But at least there would then be the opportunity to re-negotiate terms with India and Pakistan, as well as Hong Kong, without one pact having the effect of becoming an ultimatum on the others because it ended at a different time.

Quota Raised

Details of the amendments in the Hong Kong arrangement give the Colony a larger share of the British market, the quota being raised from an annual rate of 164 million yards of cloth available for retention in the United Kingdom to 185 million yards per annum. Within this total, 100 million yards would be in the form of piecegoods and 65 million yards in garments. The remaining 20 million yards would be at the discretion of the Colony's textile industry. As an inducement, an immediate addition of 10 million yards would be made to the current quota if the terms are agreed. The position would be reviewed periodically in the light of developments, under which further supplementary quotas might be granted if the state of the British import trade warranted it.

The importance of this step centres on the participation of the Government in the approach to the Colony. During past discussions, the tendency has been for political influences to be "played down" and Lancashire has been bluntly told to make inter-industry arrangements wherever possible. Now, perhaps following the positive line adopted by the American Administration in calling international talks on the basic textile issue, the British authorities, too, are dealing directly with the problem.

Nor should the final sentence of the statement be ignored. This said: "While no specific provisions covering cotton yarn was contemplated at present, some restrictive action would be needed, if there was a sudden sharp increase in the import of yarn into the United Kingdom." The implications on the spinning side—and other branches involved—are sufficiently obvious to encourage the hope that safeguards to provide some degree of protection for all sections will be written into any future settlements.

Positive Policy Needed

Perhaps this apparent change of heart on the part of the Government is the result of the growing realisation in official circles that the events of the past few years are only the initial rumblings of fundamental variations in the pattern of industrial progression. Mr. James Broatch, Director-General of the Cotton Board, hit the nail on the head in a recent contribution to a brochure published by the Lancashire and Merseyside Industrial Development Association. In this, he said:

"Sooner or later, it seems certain that the Government will have to face the task of formulating a positive policy towards imports of consumer goods from the rapidly developing members of the Commonwealth. Cotton has taken the full force of the initial impact—at great cost; but many other industries are also threatened. There are also many problems yet to be solved in working out satisfactory arrangements with Western Europe."

Prices Under Pressure

Developments since the price regulation schemes in the spinning and doubling sections of the Lancashire cotton trade were abandoned nearly 2½ years ago have not created circumstances which would normally lead to any sustained pressure on selling rates. The adverse decision of the Restrictive Practices Court and the big changes which then occurred in values were soon succeeded by the intense buying which coincided with the implementation of the redundancy programmes.

Raw material rates in the American section throughout this period remained steady to firm, so that producers of such yarns avoided the necessity of reducing their quotations on this account. The hectic call for supplies effectively maintained the level of selling rates and enabled useful margins to be maintained.

Within the past six months, the most notable feature of price variations has been the contrasting movement between American and Sudan cotton values. Spot rates for the United States staple moved up rapidly in the early months of the year, but a corresponding fall occurred in quotations for the longer staple types.

The following table shows the trend of values, both in raw cotton and in selected yarns:

(In *d.* per lb.)

	Raw cotton		Yarns

The absence of follow-on business in yarn and cloth in the past half-year has been partly attributed to resistance among users to pay the rates quoted. It is significant that the first reductions in American yarn prices since December have lately occurred in some qualities.

Reports of a certain amount of irregularity in values—a not uncommon factor when business has been slipping away—have increased the nervous tone, but there is no reason to suppose that the movement is likely to spread over large sections of the market. The attitude of customers is invariably governed by sentiment of this kind and could bring a further mood of inactivity.

As regards Egyptian type yarns, the unmistakable fall in quotations this year has reflected the adverse movement in the raw material. A narrowing market and the difficulty of obtaining continuity orders forced sellers to make concessions which have resulted in a drop of more than 8*d.* per lb. in the prices ruling for standard Sudan products. In some of the finer combed qualities, the fall has been as much as 10*d.* per lb., while, in twofold descriptions, more than 11*d.* per lb. have been knocked off the price since the end of last year.

Progress in Productivity

A progress report from the Cotton Board Productivity Centre at West Didsbury, Manchester, is a timely and encouraging reminder of what has been achieved in the twelve years since the Board's first pilot course in work study was held at Blackburn. At a time when much of the publicity about the cotton industry has suggested that it is a declining force, the record of the Productivity Centre has been one of steady expansion. From modest beginnings it has gone on to widen its scope of operations and, in turn, its field of influence. Five-hundred firms, among them the leading combines, have taken part in the various training activities organised by the Centre. More than 3,000 junior and senior executives have attended training courses in work study, cost control, quality control and allied subjects; many have gone back to Fielden House again for two and three-day meetings designed to create interest in a new or current topic. Indeed, this flexibility in the direction and emphasis of training, to meet the needs of an era in which the cotton industry has been subjected to changes as violent and far-reaching as any in its history, has been one of the Centre's strong points. A topical example was the study of the economics of mill re-equipment. Seventy senior executives attended the five short courses held during the first year of the cotton reorganisation scheme. Nearly 250 senior executives have studied cost and expense control.

In the field of middle management, the Centre has done a good deal. Well over 400 foremen have attended residential—some lasting three weeks—and non-residential courses. Another 150 foremen were enrolled for six courses designed to give them a working knowledge of work study. Thirty-five courses have been held at mill level to give an appreciation of work study to management-worker groups. The survey reflects the busy and growing level of activity at the Centre and reflects, too, the spirit of lively enthusiasm to be found there. It seems rather sad that there should still be firms in the industry which, according to the report, say that they are unaware of the Centre's activities.—*All Rights Reserved.*

INDIAN TEXTILES AND U.K.'S PROPOSED MEMBERSHIP OF C.M.

EFFECTS ON EXPORTS EXAMINED

COTTON textiles constitutes one of the important items of exports from India that would be greatly affected if Britain were to become a member of the European Economic Community, more popularly known as the Common Market. The effect will be particularly severe if Britain joins the C.M. as a full-fledged member, completely eliminating its links with the Commonwealth. At present, Indian cotton yarn and piecegoods are allowed entry in the U.K. on a duty-free basis, whereas those of non-Commonwealth countries such as Japan, Spain and China are subjected to import duty (7½ per cent for yarn and 17½ per cent for cloth). If the U.K. joins the C.M., Indian textiles will not only lose this tariff advantage but will have to pay a tariff of about 15 per cent on a par with countries like China, Japan and Spain. What is worse, textile exports of the C.M. countries to Britain will be paying a progressively lower tariff and none at all by 1970. This means that India's position in the U.K. market *vis-a-vis* the C.M. countries will be completely reversed. Whereas India is now enjoying a preference of 17½ per cent over the C.M. countries, the latter will, by 1970, enjoy over India a preference of 15 per cent or whatever the level of external tariff for textiles that may ultimately be fixed by the E.E.C.

The E.E.C. countries, it may be noted here, are not exporters of cotton textiles and, after eliminating the inter-E.E.C. trade in textiles, the net exports of these countries to the outside world in 1960 were 49 million pounds of yarn and 844 million yards of cloth. In the circumstances, it is clear that India's exports of cloth and yarn to Britain will suffer a serious setback to the benefit of the C.M. countries as well as Japan, Spain, China and other countries. In other words, in course of time, the earning of foreign exchange through exports of textiles to the U.K. will dwindle very fast; the exchange actually earned last year (1960) was Rs. 17.20 crores from cloth and Rs. 90 lakhs from yarn.

Textile Imports Into U.K.

Table I indicates the imports of cotton piecegoods into the U.K. from India and other countries during 1960 as compared with the three preceding years. The figures in this table show that, in recent years, the volume of exports from the non-Commonwealth countries to the U.K. has been rapidly increasing, that from the C.M. countries alone having expanded from 30 million square yards in 1958 to 77 million square yards in 1960. If the exports from the C.M. countries can expand so rapidly even when they suffer from a tariff disability of 17½ per cent *vis-a-vis* the Commonwealth countries, it is, as Mr. Ramnath Podar, acting Chairman of the Indian Cotton Mills Federation, says in a statement issued to the Press, easy to imagine how much more formidable their competition will be when the position is reversed as explain before. In view of such impact and considering the matter purely from an economic angle, Mr. Podar emphasises that the interests of India and other developing Commonwealth countries can best be preserved by treating these countries also as associated territories of the C.M. This view is justified on the following two grounds:

1. The status of "Associated Territories" has already been accorded to many African countries, some of which were formerly linked with the C.M. countries. Such territories are allowed to export to the C.M. countries at the internal tariff of C.M. At the same time, they are permitted to keep their own import tariffs to protect their young industries. It is, however, laid down that any preference given by such territories to the "mother country" (if any) must be extended by stages to all the members of the C.M. also.

2. One of the basic aims of the C.M. is to make a special effort to help the less-developed areas of the Community and its partners overseas. It is under this aim that the African countries have been taken in as associates of the C.M. There is no reason why India, which is also a less developed country and is an overseas partner of Britain, should not be given a similar status.

So far as the cotton mill industry is concerned, the status of "Associated Territories" will benefit India in several ways. The industry believes that it will continue to have its present advantage in Britain over countries like Japan and China. It, of course, admits that, in due course, India will be on par with the C.M. countries, but points out that the portion of the U.K. market that the country may lose through competition on equal terms with the C.M. countries is likely to be compensated by increased exports of Indian textiles to these countries when India "shall be at a comparative advantage in competing with Japan, China, etc."

If, however, for any reasons, economic or otherwise, India and other Commonwealth countries are not to become associated with the C.M., then, Mr. Podar urges, Britain must preserve the Commonwealth links by making provision for tariff-free imports on a quota basis for commodities which it has traditionally imported from the Commonwealth countries. In the C.M., according to him, similar relationship already exists in some form or other, as, for instance, between France and Belgium and their overseas territories and between West Germany and East Germany. Under such an arrangement, there may be provisions, known as "Carlitype," for offsetting the difference in the U.K. tariff and the C.M. tariff. If, for example, an overseas product is allowed duty-free entry in the U.K. and the C.M. tariff for the product is 15 per cent, then the re-export of that product from the U.K. to the C.M. will be liable to a duty of 15 per cent. Under this arrangement, the effects so far as cotton textiles are concerned are expected to be as follows:

India's present tariff advantage of 17½ per cent *vis-a-vis* non-Commonwealth countries such as Japan, China and Spain will remain unimpaired.

The margin of advantage *vis-a-vis* the C.M. countries will, however, diminish in stages and will disappear altogether by 1970.

Although India will thus have to face a gradually increasing competition in the U.K. market from the C.M. countries, it may be able to maintain its exports to the U.K. at the present level.

Fixation of Quotas

In the considered opinion of Mr. Podar, the fixation of quotas for piecegoods and yarn should be on the basis of the average Indian exports to Britain in the last three years, with provisions for a gradual increase in quotas in the years to come, on the lines of the proposals made by President Kennedy. In regard to re-exports of yarn and cloth from Britain, the goods, it is stressed, should be treated as originating in the C.M. territories, if, due to processing in the U.K., the export value is at least 50 per cent higher than the import value. It is also stressed that Commonwealth preferences should remain unimpaired, as, otherwise, exports of Indian cotton textiles to Commonwealth countries will also suffer if they are subjected to the same tariff as third countries.

Under the Kennedy proposals, it has been suggested that the C.M. countries must liberalise imports from the Asian countries, the actual intake being fixed at a certain percentage of internal production. The total production of C.M. countries in 1960 was 6,728 million yards. Doubts are expressed as to the ability of India to gain from any such liberalisation measure, because of the low level of export of cloth from India to the C.M., as is indicated in Table II; the actual exports last year aggregated no more than 10.7 million yards. By way of a general conclusion, however, the millowners opine that, among Asian countries, it will be wrong to treat Japan on equal terms with India, Hong Kong and Pakistan, as Japan is a developed nation. The U.K. is, therefore, asked to plead with the C.M. countries to fix gradually rising quotas of imports of cotton textiles from India, Pakistan and Hong Kong. Even here, while fixing individual quota for India, due account must, as was reiterated by this journal last week, be taken of the size of its industry, its population and its pressing foreign exchange needs in the coming years, in contrast to the tiny island of Hong Kong with a bare 391 square miles of area and a population of just 2.75 million.

STAPLE FIBRE YARN PRICES

The Committee of the Indian Cotton Mills Federation has, in consultation with the Government, announced the fixation of ex-mill prices for the various intermediate counts of staple fibre yarn. The prices (in rupees per bundle of 10 lbs.) which have been enforced with effect from the 7th inst., are as follows:

Hank yarn: 20s, Rs. 28.55; 21s, 28.80; 22s, 29.05; 24s, 29.55; 26s, 30.05; 28s, 30.55; 30s, 31.05; 32s, 31.65; 36s, 32.85; 40s, 34.05; 42s, 34.65; and 44s, 35.25.

Differentials for yarn on cones: 20s to 26s, Rs. 2.85; 27s to 36s, 3.20 and 37s to 44s, 3.50.

Differentials for doubled yarn: 2/20s to 2/22s, Rs. 3.10; 2/24s to 2/28s, 3.25; 2/30s to 2/36s, 3.90 and 2/40s to 2/44s, 4.50.

These ex-mill prices are required to be stamped on the bundles.

The aforesaid move was necessitated by the fact that several mills had switched over to the spinning of intermediate counts, because, these counts, since they were outside the price regulation scheme (of 13th May 1961) which covered only staple fibre yarn of counts 20s, 30s and 40s with differentials for doubled and cone yarns, were commanding a higher price than the latter. The ex-mill prices (in Rs. per bundle of 10 lbs.) fixed for 20s, 30s and 40s are, the figures in brackets giving the differentials for double yarn and yarn on cones, respectively: 20s: 28.55 (3.10-2.85); 30s: 31.05 (3.90-3.20); 40s: 34.05 (4.50-3.50).

A mutual agreement has been reached between the associations of spinners and processors over the distribution and prices of wool yarn. It is reported that the All-India Woollen Mills Association has agreed to supply 50,000 lbs. of yarn in different counts and qualities every month up to 15th October 1961 to the Federation of All-India Hand Knitting Wool Processors. The spinners have also fixed the ex-mill price of 4/16 64s quality yarn at Rs. 10.50 per lb. Prices of other qualities would, however, be based on the same differentials as the self-regulated prices of weaving yarn.

The Indian Council of Agricultural Research has decided to open shortly an institute in Rajasthan to carry out research in wool technology. The institute will study the potentialities of different breeds, trial of imported sheep, nutrition and other aspects to improve the quality and quantity of wool. A training centre for the personnel for extension and research schemes is also proposed and post-graduates may also be trained in it.

AIRCRAFT INDUSTRY A MUST FOR INDIA

SUGGESTIONS FOR LAYING STRONG FOUNDATION

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

A STRICT economist would be correct in questioning the Government of India's policy, providing for considerable capital expenditure on establishing an aircraft industry in India. This is by no means a matter of rupees alone; it is not the cost of the aircraft that really matters; it is the duty or work that it can perform.

Everything to do with aviation within a country adds up to a simple total under the heading "Air Power." Without adequate 'air-power,' and this includes air transport, trained pilots and all that stands behind them on the ground, no country can count itself independent. As India stands today, almost all our 'air power' is dependent on foreign manufactured supplies. In fact, there is no aircraft within the country that would not be grounded if spares and replacements were not available from abroad.

The seriousness of this can only be fully appreciated when we face facts and admit that, within a few weeks of a war breaking out on our frontiers, most of the Air Force would be grounded.

At Hindustan Aircraft Limited, a team of technicians has produced a supersonic jet fighter which has been flown a number of times. This is a great achievement, but it is only the first step towards the eventual production of military aircraft on a full-scale basis. Already, there are those who would decry this effort claiming that it is a waste of public funds and further that this particular aircraft is unlikely to be of value to the Air Force.

But, in the first place, unless a start is made, the country will never get anywhere in protecting its aviation requirements. The H.F.24 is an exercise of tremendous national importance. As an aircraft, it may or may not be a success. Supersonic fighters take five to seven years to produce, test and perfect for Air Force service. Those who expect miracles from H.A.L. are not helping, because their claims mislead the public into expecting too much in too little time.

Long-term Project

Secondly, investment of public funds in the development of an aircraft industry is justified, because, in the ultimate end, India will become self-sufficient in all the essential aviation requirements which will safeguard our air defences. But this is a long-term project which starting from now will run through at least three five-year plans. Even making allowance for considerable success, it is questionable if any country other than the major industrial countries, already long established, can really become totally self-sufficient in meeting its aviation requirements. Certain types of aircraft or equipment are so fantastically costly as well as technically complicated that it would not be practical to manufacture the small handful required in a country such as India. Even today the aircraft manufacturers of the world are faced with a nightmare of competition which divides the world markets between three or four of them when the total number of aircraft of the particular type required is really only sufficient to make one production line economically attractive.

As an example, it would be quite ridiculous to imagine for one moment that it would be economically practical to manufacture half a dozen Boeing 707s for the use of Air-India International. The number of aircraft in this class required for world air transport does not total 750 units, which might be regarded as a fair offtake from a production line. But, in fact, there are three major manufacturers in the U.S.A., all making aircraft in this class. Capital write-off to balance books runs into millions of dollars.

Probably, the greatest difficulty to be faced in establishing an efficient aircraft industry within the country is in the fact that, as the Government's industrial policy stands, all aircraft manufacture is the concern of the public sector. What is more, as things are at present, the main control is in the hands of the Defence Ministry, which in itself need not necessarily be an obstacle. Unfortunately, it is difficult for a Defence Ministry to think in commercial terms.

The Hindustan Aircraft grew up during the last war and originated as an industrial venture in which the Government participated. The war naturally resulted in this one and only aircraft factory being virtually controlled by those responsible for the Air Forces involved in this part of the world. After the war, the Defence Ministry took a far stronger hold over H.A.L., more or less excluding the other Ministries which would normally be directly interested. At the same time, these Ministries still have a say in what goes on, with the result that it is not always easy to act in a quick and effective industrial manner. This handicaps those on the practical side at H.A.L.

A new development of the Defence Ministry was the introduction of a manufacturing side within the Air Force Maintenance Command. The only comment is that no Air Force outside this country has ever attempted to engage in aircraft manufacture. It remains to be seen if this novel approach achieves its objective, which is claimed to be the production of medium-sized air transports for use of the Air Force, the military and, of course, Indian civil aviation. Those best qualified to judge are of the opinion that it will be next to impossible to achieve economical production on a time scale that fits in with the user demand for the aircraft. There is also the problem of sales and service after sale. It must not be forgotten that the civil operator looks with grave suspicion upon a military source of supply, because the moment Air Force demands impose an over-workload on the factory, priority will be given to the Air Force requirements, then any civil buyers who may have aircraft coming through the production line will find themselves faced with a virtual stopper in the supply line. Exactly how does the commercial operator of aircraft justify taking such a risk? What would the shareholders have to say if their airline operations were broken down and expansion could not take place simply because promised deliveries are not maintained?

There is another side, normal Air Force procedures do not lend themselves to factory practice—no matter how willing those in charge may be to speed the daily work.

There is no major objection to Defence controlling aircraft production, but, in the national interest, it would be wise to consider the possibility of industrialising the factories to the fullest possible extent. It is believed that this is under review. If this is so, it is to be hoped that a way will be found to mingle a good measure of industrial knowledge and control *plus* industrial practices, in both of the present aircraft factory establishments.

Sub-contractors

The aircraft industries of the world, not counting Russia, really amount to three, the United States of America, the United Kingdom and France. Without exception, each of these industries has adopted through the years an ever-expanding system of performing manufacture through sub-contractors.

Anybody who studies modern aircraft manufacture in an objective manner is bound to admit that aircraft have reached such a high level of technical refinement that they are composed of a multitude of specialist equipment that is outside the sphere of the airframe or aero-engine manufacturer. To produce all this equipment under one roof and one management is no longer practical. The airframe contains literally hundreds of pieces of equipment which are specialist manufacture. It is obvious that those charged with building the main structure could not possibly engage in the fine art work of producing delicate recording apparatus or navigation instruments. There is also a wide range of radio and radar with many other complicated electrical devices to work controls, flaps or maintain temperature within the aircraft, or reasonable pressure to enable the occupants to breathe in comfort. All this specialist equipment has to be produced by sub-contractors. In addition, many individual parts of the aircraft itself are easier made by a sub-contractor. Turning to the engine, in these days, it has been found that, in many cases, the sub-contractor is the answer, forming a link between the engine manufacturer and the airframe producer. In this case, the sub-contractor supplies the complete nacelle with all accessories into which he fits the engine and delivers it in the form of a package deal, so that it can literally be buttoned on at the right place ready to work.

There are two major difficulties that at present make sub-contracting in India almost impossible. First, those likely to be able to act as sub-contractors and having the necessary technical experience, are outside the public sector. So it is questionable if they can be called upon to undertake sub-contracts which are important parts of a Defence order. Secondly, in the majority of cases, the number of each individual item for sub-contracting is remarkably small, therefore it is not economically sound for a sub-contractor to engage in this class of work. If he contemplates so doing he must take into account the not inconsiderable costs of equipping himself and his staff for this highly specialised work. All this cost must be spread over a small number of items, so that the actual cost per unit becomes excessively high.

It is probable that, for many items, it will be found more practical for Hindustan Aircraft Limited to start small subsidiary factories, specialising, for example, in hydraulics or instrumentation. One visualises quite a number of such small units which could be administered under the umbrella of H.A.L., though they could actually function quite independently so as to retain their individual status. This is an important point, as it would enable these small units to undertake similar work for commercial supply, quite outside the sphere of the Defence Ministry. It would be a tremendous advantage, as, in all probability, this side of the business would more than carry the overheads, thus H.A.L. would be establishing small satellite industries from which it would reap financial rewards.

National Approach

Economically, the economist would be right in questioning the cost of aircraft production within the country and asking: why not buy from the most attractive market where prices are cut fine? From the national angle, however, the economist would be wrong; aircraft manufacture must be regarded as the key to our national security which can have no price tab. The country's defence, as well as its very life, depends on our ability to produce as much aviation hardware as possible, without having to rely on foreign supplies.

That is why the policy of the Defence Minister should be supported, though at the same time it must be tempered with moderation. Aircraft manufacture is so highly technical that however clever and willing we may be, we still have to learn the art of manufacturing all the bits and pieces. We should not forget that the three major aircraft industries of the world, excluding Russia, have been at the workshop benches for fifty years and more and they are still learning. To pretend that, with our limited facilities, greater achievements can be accomplished overnight is sheer self-deception. Excessive enthusiasm leads to an unrealistic approach and this can only retard our progress.

Success in the aircraft manufacturing industry is well within our reach. The labour force when properly trained can produce the finished article as good as, if not better than, the foreign product. For example, airframe jigs can be built in India to just as high a standard of accuracy as they can be produced in the United Kingdom, where far better facilities exist and those doing the work have far longer experience. Even the price of the Indian-produced jig will be favourable. I record this as a fact based on conversation with a British technician who has practical experience in India. He is a first-class craftsman and is only interested in the perfection of the job.

With labour so favourable as well as skilful, in a few years it must be possible to achieve near-miracle in aircraft production. The cost may run high due to the limited output requirement, but this handicap can be reduced as we progress. Hindustan Machine Tools produces machine tools comparable with the best foreign manufacture. These tools are worthy of export and the prices are favourable. Production is still below the Indian market requirement. Only time can step up the factory floor space and the skilled technicians, so that sufficient machine tools can be produced for both the home market and to export. The same can apply to aircraft production.

Let nothing stand in the way of developing our aircraft industry. Those who measure the costs today should remember that this is India and the nation is only now entering the world markets. So these early days of learning must necessarily be costly, but they will produce great national dividends in the years ahead.

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is on of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.
Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.
Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

SHRI RAMTIRTH YOGASHRAM

Telephone: 62899

TRENDS IN WORLD RUBBER

POPULARITY OF SYNTHETICS GROWING

WORLD consumption of rubber, which had suffered some setback last year, appears to have resumed the upward trend again, in the current calendar year. The latest estimates, published by the International Rubber Study Group, placed the aggregate world requirements during 1961 at 3,902,000 long tons, representing a rise of 165,000 tons as compared with the actual consumption of 3,737,000 tons in 1960 which was less than the preceding year's figure by 65,000 tons. The anticipated rise is expected to be shared by both natural and synthetic rubbers; the estimated consumption of natural is 2,037,000 tons and that of synthetic 1,865,000 tons, as against 1,987,000 tons and 1,750,000 tons consumed in 1960 and 2,125,000 tons and 1,677,000 tons in 1959, respectively.

More than one-third of the estimated total world rubber requirements for 1961 is accounted for by the U.S., the world's largest consumer of rubber. The figure that is actually mentioned is 1,480,000 tons, made up of 1,060,000 tons synthetic rubber and 420,000 tons natural rubber. The estimated rubber requirements of other countries in 1961 are given below:

(In thousand long tons)

Country	Natural	Synthetic	Total
United States ..	420	1,060	1,480
United Kingdom ..	165	123	288
West Germany ..	141	120	261
Japan	169	80	249
France	128	98	226
Italy	77	58	135
Canada	33	59	92
Australia	34	26	60
Czechoslovakia ..	47	2	49
Netherlands ..	21	13	34
Belgium	15	12	27
Austria	11	11	22
Indonesia	18	..	18
Hungary	8	1	9
Denmark	6	3	9
Malaya and Singapore	7	..	7
Other Countries ..	737	199	936
Total ..	2,037	1,865	3,902

The estimated consumption of both natural and synthetic rubber is expected to be closely balanced by production in 1961, indicating no change in the pattern which has ruled for the past five years (1956-60). The total world output, it is said, will be about 3,932,000 tons, as against 3,780,000 tons in 1960 and 3,610,000 tons in 1959. An increase of 152,000 tons in total output during 1961 as compared with 1960 is anticipated, despite the possibility of a decline in the production of natural rubber from 2,055,000 tons to 2,035,000 tons. It is so because the decline is expected to be more than made good by a significant expansion in synthetic rubber output, from 1,725,000 tons to 1,897,000 tons; the figure for 1959 was only 1,627,500 tons. The total annual production capacity of synthetic rubber in the member-countries of the Study Group is said to be of the order of 2.6 million tons.

Production in 1961

The estimated production of natural and synthetic rubber in different countries during 1961 is shown in the following table:

(In thousand long tons)

Natural Rubber:	
Malaya and Singapore	730
Indonesia	650
Thailand	165
Ceylon	98
Vietnam	77
Nigeria	60
Sarawak	45
Liberia	43
Cambodia	38
British North Borneo	25
Burma	11
Papua and New Guinea	5
All other countries	88
Grand Total ..	2,035
Estimated deliveries from strategic stock piles.	30
Total new natural supplies ..	2,065
Synthetic Rubber:	
U.S.A.	1,280
Canada	160
West Germany	120
United Kingdom	110
Italy	75
Other member countries	152
Total ..	1,897

The persistently rising trend of synthetic rubber production has been in keeping with the changing pattern of consumption. Synthetic rubber has already made considerable inroads into the markets for natural rubber. Over the last ten years, the share of synthetic rubber in the total world rubber consumption has gone up appreciably, from 26.4 per cent in 1950 to as much as 49 per cent in 1960 and is expected to increase further to more than 64 per cent by 1970. The percentage share of natural rubber, on the other hand, has declined, from 73.6 in 1950 to 51 in 1960 and, by 1970, it is said, its share will have declined to less than 36. It is not, therefore, surprising that producers of natural rubber are apprehensive about the future. Speaking on this aspect at the last annual general meeting of the Rubber Growers' Association in London, Mr. W. Anderson, Chairman of the Association, said:

"This encroachment by synthetic rubber is the more disturbing when it is realised that it was made by what may be described as the conventional synthetic rubbers, principally the so-called styrenebutadiene rubber or SBR as it is usually designated. The past year has, however, seen the commencement of the commercial production of the new stereo-regular synthetic rubbers. These rubbers fall into two broad categories, cis-polyisoprene or the so-called synthetic "natural" rubber and cis-polybutadiene. Cis-polyisoprene is chemically identical with the principal constituent of natural rubber and it is claimed that it should be capable of replacing natural rubber completely. Cis-polybutadiene, on the other hand, is not regarded as a complete replacement for natural rubber, but is likely to find use on an extensive scale as a diluent for natural rubber.

"At the moment, it may be true that neither of these new materials has been perfected, but it would be a mistake for us to assume that this will always be so. I feel it would be imprudent if we did not regard these new stereo-regular rubbers as providing the means of replacing natural rubber in every field of rubber consumption.

"All this may sound somewhat depressing, but the situation has been long foreseen. For many years now, my predecessors in their addresses to our annual meeting have referred to the possibility of the development of newer and better synthetic rubbers and the importance of making our product price-competitive. These new synthetic rubbers have now been developed and we can no longer count on the superior technical properties of natural rubber as being sufficient to ensure its continued use. It is no longer a question of superior or inferior properties; from now on, it is simply a matter of economics. The material which will obtain the principal share of the world's rubber demand is the material which is available at the most competitive price. A reduction in costs so that we can always supply demand at a stable price, even if need be at a low level, should be our goal. I know that some people may disagree with me and may feel that the production of new types of natural rubber will save the day. I would remind these people that the advent of cis-polyisoprene means that whatever new form of natural rubber may be developed, it can eventually, if not at the moment, be duplicated by synthetic 'natural.' If, therefore, any attempts are to be made to develop new types of natural rubber, it is an essential prerequisite that natural rubber must be competitive in price."

A Lesson for India

Rubber-growers and trade union leaders representing workers employed in rubber plantations will do well to take note of the significance of Mr. Anderson's remarks. In two years from now, India, too, would be producing some 20,000 tons of synthetic rubber, a quantity approximately equal to four-fifths of natural rubber. In less than six years from now, the synthetics will probably outstrip natural rubber. Since Indian economy will have to become competitive in world trade, it cannot afford to follow for long policies that will price out its manufactures and raw materials.

From the long-term point of view, a most important development has been the introduction of what are called the "stereo rubbers" which in whole or in part are said to be direct placements for natural rubber. Three companies in the U.S. (Shell-Torrance, Phillips and Firestone) are currently producing this rubber, the estimated total output for 1961 being put at 75,000 tons. Three more units (American R. & C. Goodyear and Goodrich) will start production in January 1962 and yet another (Texas-U.S. Rubber) a year later. The combined capacity and

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

GROWTH OF CARBON BLACK INDUSTRY

U.S. COMPANIES HELPING MANY COUNTRIES

DURING recent years, there has been a marked increase in the number of countries making carbon black. This growth has come from the technical advance which enables the substance to be made from liquid hydrocarbons as well as from natural gas. The expansion of domestic capacity in Europe and elsewhere, prompted by the growth of demand, is reducing dependence upon the United States.

Carbon black, which results from the incomplete combustion of hydrocarbon gases or liquids, was first prized because its blackness and very finely divided particles made it eminently suitable for the manufacture of inks, paints and varnishes. This use is, however, now quite subsidiary to that of strengthening and reinforcing rubber—a purpose for which it was first used early in the First World War. It multiplies the life of tyres at least ten times, and the rubber industry now accounts for well over 90 per cent of all carbon black consumption, tyres taking by far the largest quantity. There are many other uses for carbon black, including the production of dry cells, carbon paper, and liquid oxygen explosives and in plastics, but these too now account for only a small proportion of consumption.

Today, most carbon black is produced from either petroleum or natural gas, but, in ancient times, lamp-black, a coarse form of carbon, was made by burning resins and oils beneath inverted bowls. The resulting black was scraped off and used for ink, and it is a tribute to the lasting quality of the substance that ancient Chinese and Egyptian manuscripts written in carbon ink have remained intact for centuries.

It was not until the 1860s that carbon black was first made by burning coal gas in the U.S.A., while natural gas was not used for this purpose until the early 1870s. In an early process, gas flames impinged against rotating water-cooled rollers; the resulting material, known as roller black, remains in production in the United States. Towards the end of the century, the channel process was developed and still yields the finest grades of black (called channel blacks) which are used in paints, lacquers and printing inks. In this process, natural gas is burned in a deficiency of air, the flames impinging on cold iron surfaces from which the carbon black is scraped. In 1920, a process of thermal decomposition of hydrocarbon gases producing rather coarse thermal blacks was introduced, and was followed eight years later by the furnace process. This produces, from natural gas, blacks of a fineness midway between the channel and thermal blacks but with a much greater yield than the channel process. Though finer furnace blacks with greater rubber reinforcing qualities were produced as the process was improved, it was found that blacks fully equivalent to channel blacks could not be made by this method.

After War

The demand for carbon black increased sharply during the Second World War, with the increased use of synthetic rubber, which requires more carbon black than natural rubber. For tyres, natural rubber needs about 35 lbs., and synthetic rubber about 50 lbs., per 100 lbs. of crude rubber. The use of synthetic rubber has continued to grow; there was a threefold increase between 1950 and 1960, and last year some 1.8 million tons were used.

There was a major development, in 1943, when the oil furnace process was evolved, using liquid hydrocarbons for producing carbon black. This development laid the foundations of the post-war industry. The oil furnace process, using a heavy, highly aromatic feedstock of closely controlled specifications, can yield a complete range of carbon blacks. It is much more efficient, and cheaper, than the channel process using natural gas, since about 50 per cent of the carbon in the feedstock is recovered, against only 5 per cent by the channel process. It may be noted that coal tar residues have been used to produce blacks in Germany, and are to be used in a new plant in India.

The adoption of petroleum as a raw material has had two significant effects. First, many of the high-cost channel black plants have been closed down, while many new oil furnace plants have been set up. Over 70 per cent of the free world's carbon black capacity is now for oil furnace black, while the proportion is expected to reach 80 per cent by the end of next year whereas it was only 8 per cent in 1947. Natural gas is, however, still of considerable importance in the United States, Secondly, as manufacture is no longer confined to countries with natural gas resources, some countries, with a sufficiently large demand for rubber products or faced with a pressing need to save foreign exchange, have been able to develop their own rubber and carbon black industries. Such countries may, however, have to import the special basestock until local refineries can produce it. The difficulties of transporting the light and fluffy carbon black are overcome by pelletizing, which increases the density of the product.

Trend of Production

Although complete statistics of world output of carbon black are not available, the following table, compiled by the U.S. Bureau of Mines, clearly shows the still-dominant position of the United States. In addition to the countries shown, carbon black is produced in Canada, Italy, China, Taiwan, in Australia since late 1959, in the Netherlands since mid-1960, and in South Africa since early this year:

*Production of Carbon Black**

(In thousand metric tons)

	1956	1957	1958	1959	1960
United States ..	834.5	815.6	745.9	892.3	931.4

Source: U.S. Bureau of Mines, except for France.

Despite the large output of the United States' carbon black industry, which has now almost quadrupled its pre-war production, demand is such that new plants are still being built and planned. As elsewhere, the industry tends to be distinct from the oil industry, although drawing raw materials from it. Phillips Chemical Company, a wholly owned subsidiary of Phillips Petroleum, and Continental Carbon Company, a 51 per cent owned affiliate of the Continental Oil Company, are notable exceptions. Phillips, which has a total capacity of about 150,000 tons a year, completed at the end of last year a 27,000-ton plant at Orange, Texas. Continental Carbon, which already has four furnace black plants and produced 115,000 tons in 1960, is building a new 25,000-ton plant to be completed by mid-1961 at Bakersfield, in California, where United Carbon Company, which produces both channel and furnace black, is also building a plant 85 miles north of Los Angeles which is scheduled to begin production late this year. A new unit on the Texas Gulf coast is planned by the Columbian Carbon Company the present production of which includes furnace, channel and roller black. The biggest producer in the U.S.A., and probably in the world, is Cabot Carbon Company, producing both channel and furnace black.

The United States is still by far the biggest producer, and, in 1959, it exported over one-quarter of its output. Other countries have now developed their own industry, while some no longer require imports (except perhaps of special grades), having become actual or potential exporters. In the United Kingdom, the production of carbon black has been developed entirely since the end of the last war when the saving of dollars became of vital importance. There are now four plants (all using the oil furnace process), and last year some 59,000 tons, over 40 per cent of total output, were exported; they were valued at £4.3 million, or an average of 7.75d. per lb. f.o.b. In the same year, the United Kingdom imported nearly, 17,000 tons, of which nearly half was channel black and the remainder included other special blacks.

Europe

Extensive developments are taking place in Europe, where plants are being built by the major American producers, in some cases jointly and in others with some local participation. France, in particular, is rapidly becoming a major producer, although as recently as 1957 all the country's carbon black requirements had to be imported. The largest of the new French plants is the Cabot France factory at Berre near Marseilles, with ultimate capacity of 44,000 tons a year, production last year being estimated at 35,000 tons. Work was begun early in 1960 on a factory of 25,000 tons capacity near Bordeaux for Cofrablack (a company formed by Phillips and Continental Carbon in 1959); commercial production, using Lacq natural gas as well as imported aromatics, began in January this year. A third plant, also with an annual capacity of 25,000 tons, is being completed by United Carbon at Port Jérôme near the mouth of the Seine.

In the Netherlands, two factories have been built in the Botlek area of Rotterdam port. The first, which was started up in April 1960 by Ketjen Carbon N.V. (in which the American Cabot Company has a 40 per cent interest), has a capacity of 24,000 tons a year. Two months later a smaller plant, with an initial capacity of 11,400 tons a year, was opened by Continental and Columbian Carbon (Nederland) N.V. Prior to this, all carbon black used in the Netherlands was imported, but the two new plants will provide for home consumption and also for substantial exports. Italy has a new 30,000-ton capacity carbon black plant, situated at Trecate near Milan, owned by Columbian Continental Europa. Its output will supplement considerably that of Cabot's plant at Ravenna, with a capacity of 14,000 tons. Since Italian consumption is now about 37,000 tons a year, there will be a margin available for export. Phillips Carbon Black Italiana (in which ANIC of the ENI Group has a 30 per cent interest) plans to build a factory at Ravenna using liquid hydrocarbons.

Canada

Canada became a producer of carbon black in 1953, when Cabot completed a plant at Sarnia, Ontario, and now Columbian Carbon is building a unit at Toronto which is expected to begin operations this year. Two continents have recently acquired their first carbon black plants. The Australian Carbon Black Pty. (which includes both Cabot and United Carbon) opened its £2 million, 37-acre, 11,000 tons a year plant at Altona in October 1959. It will satisfy about three-quarters of Australia's needs and will save £1 million a year in foreign exchange. A 50 per cent Phillips plant near Port Elizabeth, South Africa, the first in Africa, was opened in February this year. It has a capacity of 10,000 tons a year, 85 per cent of which will be used by local tyre manufacturing concerns; it is expected to save foreign exchange to the value of £600,000 a year.

Latin America

Expansion is also taking place in Latin America. In Argentina, Cabot is to build a plant at Campana, 50 miles N.W. of Buenos Aires, with capacity of 13,000 tons a year, while the Texas Butadiene and Chemical Corporation is including a 15,000 tons a year carbon black unit in its complex at Puerto Deseado, 140 miles S.E. of Comodoro Rivadavia, scheduled to be completed next year. Brazil's plant at Piassaguera, 15 miles from Santos, operated by Cie Petroquimica Brasileira-Copebras (in which the major partners are Columbian Carbon and Celanese Corporation), now of 27,000 tons a year capacity, is to be supplemented by a 15,000 tons a year plant to be completed this year by Cia. de Carbonos Coledais at Mataripe in Bahia (N.E. Brazil). A plant with 3,000 to 4,000 tons a year capacity at the State-owned chemical complex at Moron in Western Venezuela was due to be completed last year and is to be followed by another at Valencia, about 75 miles S.W. of Caracas, to be finished late this year and operated by United Carbon de Venezuela C.A. In Mexico, a plant at Salamanca is scheduled for completion in April 1962, while Bolivia also plans a carbon black plant using natural gas.

Others

In Japan, which produced 25,000 tons of carbon black last year, work is proceeding on a 6,000-ton capacity plant being built for Toyo Koatsu with a 49 per cent Continental Carbon interest; Phillips has designed a plant a Kawasaki for Showa Denko KK to come into operation this year. In Israel, carbon black facilities are to be included in a petrochemical complex associated with the Haifa refinery. The plant, to be completed by early 1963, is to have a capacity of nearly 10,000 tons a year which will be used by two tyre companies in the country. In India, Phillips (30 per cent) together with an Indian concern are building a 13,000 tons a year plant near Durgapur, 150 miles north-west of Calcutta, which will use local coal-tar feedstock.

The fortunes of the carbon black producers are, to a very high degree, bound up with those of the rubber and motor vehicle industries. But, considering the many uses already developed, especially in connection with new products, it would not be too much to expect that still more uses will be found for this versatile material.—*By special arrangement with* Petroleum Press Service.

DEVELOPMENT OF NON-FERROUS METALS

PRIVATE SECTOR CAN PLAY A BIGGER ROLE IF INCENTIVES ARE GIVEN

THE inaugural speech of Mr. Manubhai Shah, Union Minister for Industry, at the Twelfth Annual General Meeting of the Indian Non-ferrous Metal Manufacturers' Association held at Calcutta on 7th July 1961, contained an authoritative announcement to the effect that the Government was shortly going to set up a study group for examining the problems of procurement, development and substitution of non-ferrous metals in the country. As the Government's decision was based on the recognition that the development of basic industries in the third Plan period depended as much on indigenous production of non-ferrous metals as on steel and power, his annoucement was indeed timely. Apart from the consideration that the demand for major non-ferrous metals by the end of the third Plan would nearly double and account for Rs. 100 crores, as compared with 1960-61 (Table 1), there is also the disquieting fact that imports of non-ferrous metals accounted in recent years for a fairly large amount (Table 2). The proposed study group would, therefore, have to go into the question of imports and suggest ways and means of reducing them or of keeping them at least at their present level.

Mr. Manubhai Shah was, of course, optimistic about the prospects of producing non-ferrous metals in the country. His optimism even led him to assert that, given the co-operation of the industry, the country could produce 70 to 80 per cent of its requirements of non-ferrous metals. That this was rather excessive optimism in the context of poor prospecting performance in the country could be inferred from the relevant observations of Mr. A. C. Dutta in his presidential address at the Association's meeting. In the latter's judgment, the prospecting done so far in the field of non-ferrous metals had not been extensive enough. Mr. Dutta's charge is in a way confirmed by the 1960-61 report of the Union Ministry of Steel, Mines and Fuel (Department of Mines and Fuel), according to which detailed exploration and drilling for copper alone was carried out during the year under review at four places in Rajasthan and at one place in Andhra Pradesh by the Indian Bureau of Mines. Of course, the Geological Survey of India had done something during the year not only in the matter of copper prospecting but also in that of some other non-ferrous metals. It carried out drilling investigations in Singhbhum District, Bihar, and in Bastar District, Madhya Pradesh, and discovered disseminations of copper pyrites. It also carried out large-scale mapping, along with geochemical prospecting and exploration, of lead and copper deposits in the Almora district (Uttar Pradesh), in the Guntur and Nellore districts (Andhra Pradesh), in the Hassan district (Mysore) and in some areas of the Punjab, and Jammu and Kashmir. Detailed large-scale mapping in respect of lead and zinc was continued during the year in the Udaipur district (Rajasthan), in the Kurnool district (Andhra Pradesh) and in the Mayurbhanj district (Orissa).

Poor Prospecting Performance

Obviously, all this performance in the matter of prospecting was not on the scale needed. Obviously, again, the Department of Mines and Fuel, by itself, was in no position to carry out extensive prospecting in the field of non-ferrous metals. Mr. K. D. Malaviya, Minister for Mines and Oil, was probably aware of the limitations of the public sector when he suggested, in his inaugural address at the Mineral Advisory Board on 2nd May 1961, that the industry should associate itself with the Government either through collaboration or through capital participation to create mixed ventures in mineral prospecting and mining in a big way. The Minister also gave it to be understood that it was the public sector that would be the dominant partner when he laid down the condition that, in such mixed ventures, policy control and, to some extent, management would vest with the Government. All this was typical of Mr. Malaviya's dog-in-the-manger approach which, as in the case of petroleum prospecting, producing and refining, amounted to denying greater scope for the private sector in a field in which the public sector was in no position to do much either. Although, as Mr. A. C. Dutta said, "such prospecting and proving of mineral deposits are, by their very nature, a risky venture in which the entrepreneurs could not be expected to go all the way by themselves," the Government's approach would at least have to be one of according a dominant role to the private sector. Mr. Dutta's suggestions in this regard are:

"The Government department concerned should be associated with the private parties already holding prospecting licences or leases, and it might be a good idea to create a revolving fund through the Indian Bureau of Mines to carry out extensive drilling and prospecting work in mineral deposits all over the country through such association. Whenever economically workable deposits are located and proved, the entrepreneurs already holding licences and leases might be allowed to develop such deposits on the basis of repayment, over a period of years, of the amount spent in such prospecting. For really large deposits of non-ferrous metals, Government also might consider the feasibility of financial participation, thus creating an incentive for large-scale investment in such an industry."

The Incentives Needed

But this is not all that will be required. Actually, the non-ferrous metal and mining industry needs more than one incentive, in view of the fact that it is still in the initial stage of development. Moreover, the prospecting and initial development of a mine to bring it to an economic level of production requires a long time, which may be as much as five to ten years. Installation of adequate processing plants for smelting also requires three to four years. The planning for this industry, according to Mr. Dutta, has to be made in advance for 15 years. The risks involved in the development and utilisation of any suitable ore deposit are great. Very large investments are required without prospect of any return in the initial five to ten years. A well-thought-out scheme of incentives is, therefore, called for to encourage the desired rapid progress in this field. Mr. Dutta's suggestions in this connection are, *prima facie*, reasonable and realistic. These are as follows:

(1) Prospecting and development expenses should be allowed as revenue expenditure to be charged off against future profits, adequate provisions for depletion of ore reserves be allowed and a quick write-off of the capital expenditure be sanctioned.

(2) A tax holiday should be granted, as in Canada, South Africa and Rhodesia, in the initial years to enable the mine to recover the capital costs for the development of the mines and installation of the processing equipments before any taxes become payable.

(3) Financial help from the autonomous bodies should be extended to the mining industries on a more liberal scale. The rigidity of the formula that advances can only be upto 50 per cent of the total block assets should be relaxed or, alternatively, the value of the most important asset at a mine, namely, the valuation of the mine itself, should be taken into account in determining the quantum of advances to the mining companies.

If these incentives, as suggested by Mr. Dutta, are given, the private sector may be expected to play a bigger role in the non-ferrous metal and mining industry. At the same time, progress in the field of copper where the public sector has assumed responsibility for development at Khetri, would have to be speeded up. The potentialities of the Khetri copper deposit in a 50-mile-long belt are stated to be great. Yet, in the last few years, only a fraction of the same has been prospected. Since geologically India is not in the belt of copper-bearing strata, there is all the more reason why Khetri should be very intensively prospected. Drilling operations should be carried out over the whole length of the copper-bearing belt and 50 to 100 drilling crews engaged for prospecting it. And development of the mine should be envisaged with an initial capacity of, say, 30,000 tons of ore per day, if it is warranted by such prospecting. If suitable terms are offered, it is quite possible, in the opinion of Mr. Dutta, that some of the world's biggest producers of copper may take interest in this venture. Here, of course, Mr. Malaviya's approach would have to be different from what it is and his department must be more energetic in the matter of prospecting.

Third Plan Outlay

As for zinc and lead, it is stated that there is scope for a further investment of Rs. 8 to Rs. 10 crores in their production in the next five years in addition to the Rs. 7—8 crores proposed for investment in the next three years. In the zinc industry, there is already under planning the establishment of customs smelters. The aluminium industry has plans on hand for a bigger outlay with a 60,000-ton smelter in Mysore, a 20,000-ton plant at Rihand, a 20,000-ton plant at Koyna, a 10,000-ton plant in Madras State, two others being talked about—one in Madhya Pradesh with Swiss collaboration and the other in the public sector—and expansion of existing plants to more than double their present capacity. Only if the aluminium industry expands to this level will there be some scope for substitution of copper by aluminium to the the extent of 50 per cent as in the U.S., Italy and France. Mr. Manubhai Shah's suggestion that aluminium should replace copper to that extent would be a practical proposition if the industry's plans are not allowed to suffer for want of finance. The proposed third Plan outlay of Rs. 80 crores in primary non-ferrous metals and Rs. 13 crores in cables and wires production will be found to be inadequate if the greater scope, as indicated by Mr. Dutta, for the development of zinc, lead, copper and aluminium industries is recognised. Given a better atmosphere of encouragement, there is every likelihood that entrepreneurs in the country will come forward with more and more investments to develop its non-ferrous metal resources.

TABLE 1
Third Plan Demand for Major Non-ferrous Metals
(As estimated by the Development Council concerned)

Metal	Estimated consumption in tons in 1960-61	Estimated demand by the end of third Plan in tons
Copper	85,000	170,000
Zinc	85,000	187,500
Aluminium	50,000	100,000*
Tin	7,000	10,500
Lead	35,000	65,000

* Includes 10,000 tons for export. The revised estimate is 150,000 tons

TABLE 2
Imports of Major Non-ferrous Metals
(Value in crores of rupees)

Metal	1960	1959
Copper	22.9	16.4
Zinc	8.9	5.3
Aluminium	7.3	6.0
Tin	4.1	4.8
Lead	2.6	2.4
Total	45.8	34.9

TABLE 3
Production of Primary Metals and Products made from them
(In metric tons unless otherwise stated)

Name of metal or product	1960	1959
Aluminium	18,143	17,373
Antimony	813	674
Copper	8,928	7,677
Lead	3,710	3,957
Zinc concentrate	9,787	9,810
Aluminium foils	1,808	1,440
,, linings	599	544
,, powder ¢	304	353
,, conductors	22,352	17,125
,, extrusions	1,312	1,242
,, sheets	660	483
,, paste	435	428
Copper conductors	9,286	6,732
V.I.R. Cables (million yards)	301	214
Aluminium wire rods	4,078	2,985
Winding wires	4,064	3,959
Aluminium sheets circles	16,256	16,201
Lead pipes	813	616
,, sheets	66	35
Zinc sheets	3,251	2,538
Brass/copper pipes	1,321	51
,, rods	2,642	2,140
,, sheets	41,148	22,815
,, wire	1,219	923
Non-ferrous alloys	28,968	16,826

ELECTRONIC TIMBER SORTER IN SWEDEN

The Skutskar Sawmill, belonging to the Stora Kopparberg group of industries in Sweden, has just put into operation an electronic timber sorter. This installation is claimed to be the first in the world for electronic measuring and sorting of timber. Its capacity is 600 logs per hour.

Costing about Kr. 500,000 ($100,000) and performing the work of 12-15 men, this all-automatic installation has been developed by Philips Teleindustri, Stockholm. Besides saving labour, it is likely to result in considerable savings of raw material through the high degree of measuring accuracy.

The logs enter the mill on a conveyor at a speed of one metre per second. Along the conveyor optical registering devices feed data into electronic counters which include 700 transistors. The information obtained guides a memory for the subsequent sorting line. The logs are then automatically pushed off the line into different size pockets, whence they proceed to the saw frames. The installation also includes a metal indicator which spots nails or other metallic objects in the timber.

NEW PRODUCTS AND PROCESSES

High-speed Tablet Manufacture

THE "Rotapress," a new double rotary machine for compressing tablets at high-speed, has been developed by Manesty Machine Ltd., Liverpool, U.K. Four models are available, ranging from 696 to 5,280 tablets per minute. Features of the machine are new hydraulic pressure loading, internal helical gear drive, variable speed, new rotary feeding device, dust extraction points, and automatic lubrication.

Quality Metals and Alloys

The exposure of metals and alloys to supersound improves their quality. This conclusion has been drawn by the staff members of the Central Research Institute of Ferrous Metallurgy, Moscow, after many years of experiments. Metals and alloys are exposed to supersonic vibration in molten state. The microscopic analysis of ingots thus obtained showed that they consist of uniform grains 4-5 times smaller than in the metals not exposed to supersound. After this processing the temperature of the molten metal is equalised, the admixtures are equally distributed throughout the ingot and gases are removed. The technological and mechanical properties improved due to structural changes. As a result of exposure to supersound the permissible deformation in some types of steel grew upto 4.5-fold and the ability for elongation—3-fold, which is of great importance in rolling.

Bandage for Bed Sores

Two years of work by the Seton Products Ltd., England, in co-operation with the nursing research team has resulted in the development of a new type of bandage designed for the prevention and treatment of bed sores. At present it is used only on the heels, elbows, legs and knees but research is continuing with a view to perfecting it for every area where pressure sores occur. Named the "Pubipad," the bandage is foambacked by a special process and is described as being simple to apply and to remove and is self-fixing, retaining indefinitely the position in which it is first placed. The bandage is applied with the foam next to the skin and minimises friction between the patient and the bed. The supportive effect of the bandage is of value in accelerating the healing of existing sores as well as preventing them from occurring.

Heating Strips for Factories

Aluminium panels clipped to a steel pipe grid and backed with an insulating material are being offered as radiant heating strips for industrial buildings in the U.K. The strips are available in five widths from 16 inches to 48 inches in increments of 10 feet in length. They are stated to be suitable for use with low, medium or high-pressure hot water and are claimed to enable an economy in pipework and valves to be achieved. Strips may be up to 100 feet long in low-pressure hot water systems and up to 60 feet for high-pressure water. Called Frengerstrips, they are being marketed by Frenger Ceilings, London.

Chemical Treatment for Cotton Fabrics

The Research and Development Division of Cone Mills Corporation, U.S., has developed a new chemical treatment based on an agent called diglycidyl ether. The new treatment not only make cotton fabrics wrinkle-resistant but also prevent them from turning 'yellow' in the process of washing. In certain different formulations, it increases the tear strength of the cotton. Most commercial finishes use nitrogen compounds that retain chlorine which, on the application of heat, produces tendering and yellowing of the fabrics.

Ceramic Adhesive

A new ready-to-use material in the form of a ceramic adhesive has been developed in the U.K. It is said to have excellent electrical properties and good mechanical properties with exceptionally high strength. It will not flake, nor disintegrate during use. Tests are said to have shown that it has a maximum service temperature of 2,600 degrees Fahrenheit, and can be used continuously at up to 2,000 degrees Fahrenheit. The adhesive is cured at a temperature of 250 degrees Fahrenheit. Its electrical properties are said to include a low dielectric constant, and a low "loss tangent." In its initial state it has a paste-like consistency and as a result it can also be used for coating items for protection against high temperatures. It is expected to find applications not merely in the electrical industry, but also in mechanical engineering. It is said to be very easy to apply.

Disc Brakes

The first vehicles to go into regular services on any railway using disc brakes—with the wheel itself as the disc—are now running in express freight services in the U.K. The British Transport Commission says that British Railways are the first in the world with this new development in railway power brakes, and the system is to undergo large-scale trials on 212 coal wagons of three types under service conditions. The first batch of vehicles equipped with disc brakes are 62 21-ton hopper-type coal wagons, which discharge their load through doors in the bottom of the vehicle. These wagons regularly form three express freight trains a week which run at almost passenger-train speed with bulk loads of coal from Mansfield (Nottingham) to a depot in London. Another 150 wagons, 50 16-ton mineral type, and 100 24-ton hopper type, are also to be fitted with disc brakes. In addition to the principal advantage of far longer periods between brake-pad renewals, disc brakes it is claimed, can also achieve a more consistent braking performance, and much better heat dissipation, without the disadvantages of other thermal effects, including brake fade. All these attributes of the disc brake are of particular importance in vehicles which are operated at high speeds, but there are a number of operational problems to be overcome as well as a complete appraisal of all the costs involved before disc brakes could be considered for general use.

Lamination of Cardboard Rolls

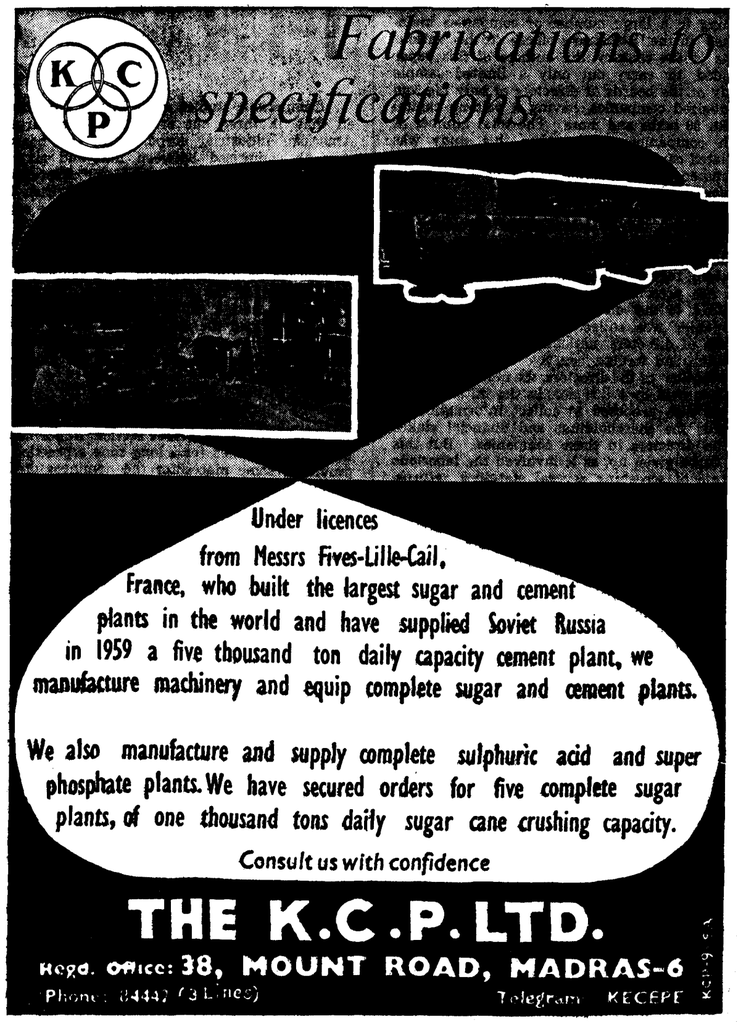
A new IG-Halley machine designed to laminate cardboard rolls to unsupported aluminium foil or transparent viscose film has been developed by James Halley and Sons Ltd., West Bromwich, U.K. The lamination unit, which operates at 500 feet (152.4 m.) per minute, is combined with another unit for coating the foil side of the material with lacquer. Both units are equipped with hydraulic drive and all electrical fittings can be safely operated in hazardous areas. The machine is designed to handle card with widths upto 50 ins. (1.3 m.) and thickness upto .03 ins. (0.762 m.) A minimum oil thickness of 0.009 mm. can be accommodated. Glues and lacquers are varied to suit customers' specification. Hot-melt and solvent-type laminants are used for various coatings which can be of the kiss, reverse, pressure or controlled-gap kind. The machine is equipped with tunnel or drum drying facilities, the tunnel incorporating a comprehensive system of air recirculation to keep heating costs at a minimum. Speeds of applicator rolls and duct cylinders can be varied and the amount of laminant is controlled by squeeze roll or doctor blade.

Novel Air-conditioning Plant

An air-conditioning installation which meets the medical requirements for bacteria-free air as well as personal demands for a constant level of temperature and humidity has been manufactured by the large Swedish makers of ventilation equipment, Svenska Fläktfabriken, Sweden. The installation is the result of close collaboration between the company's own engineers and the chief surgeon of the Phoracic Clinic, Lund Hospital, South Sweden. The equipment now in use at the clinic lets in fresh air which has been filtered, washed, humified, cooled and heated through an aggregate in the ceiling. In order to prevent draught in the theatre, the air flow is diagonal, the air being let in below the ceiling along one end wall and evacuated through floor ventilators at the other. The air of the room is renewed entirely 15-20 times an hour, the humidity and the temperature being kept constant at 60 per cent and 20 deg. C., respectively, irrespective of how many persons are present at the operation. In order to prevent polluted air from the corridor outside the operating theatre from penetrating into the room when a door is opened, the entrance has been equipped with two doors and a low pressure chamber in between.

New Type Rubberised Seal

The Australian Office of the National Rubber Bureau has announced a new type of rubberised bitumen seal used on the bypass. The new additive consists of a solution of Malayan rubber and power kerosene (paraffin) mixed with bitumen. It was developed by the Victorian Country Roads Board in conjunction with the Bureau. The bypass is on the section of the Prince's Highway that connects Melbourne with Geelong 45 miles away. The light rubberised seal used on the bypass will enable any weaknesses in the road formation to be discovered before the more expensive permanent surface is laid down. Rubberised bitumen was selected on the strength of its performance elsewhere in Victoria under adverse conditions and heavy traffic. The extra tenacity of the rubberised bitumen and its resistance to bad weather during laying helped to overcome the problems of carrying out the programme in mid-winter. In fact, although work was interrupted by rain and temperatures varied considerably, a satisfactory result appears to have been achieved. The sealing was completed in less than two days. The consolidated pavement was primed with a blend of vertical retort tar and tar oil before sealing with one-eighth of a gallon of rubberised bitumen per square yard and was then covered with three-eighth basalt chippings. In earlier work carried out with rubberised bitumen by the Country Roads Board, the rubber additive has generally been in the form of a powder added to the bitumen in heater kettles and then loaded to the sprayer and cut back with power kerosene. This method required approximately 40 minutes to dissolve and disperse the rubber powder. A rubber solution which disperses rapidly and readily in hot bitumen was made from a specially selected rubber of known physical properties treated to give a free flowing solution of standard viscosity when dissolved in power kerosene. Laboratory investigation and field tests indicated the practicability of such a solution. The benefits of using the rubberised solution are: (*a*) ready solubility in hot bitumen (as the rubber has already been dissolved in power kerosene); and (*b*) flexibility of preparation. The solution consists of approximately 20 per cent of rubber and 80 per cent power kerosene.



PATTERN OF COMPANY DIRECTORSHIPS—II

RESULTS OF SURVEY IN WESTERN REGION

By Dr. Raj K. Nigam, Director of Research and Statistics and
N. D. Joshi, Research Officer, Department of Company Law Administration, Government of India

AT the time the present Companies Act, 1956 came into force in April 1956, the corporate sector in the country comprised nearly 30,000 public and private companies at work accounting for a total paid-up capital of Rs. 1,024 crores. In the course of the subsequent four years ended 31st March 1960, the strength of the corporate sector is believed to have come down to nearly 27,000 companies, but their total paid-up capital was higher at nearly Rs. 1,600 crores. The overall reduction in the number has been brought about by the vigorous administrative action taken by the Department of Company Law Administration to weed out the moribund or inactive companies from the official records. The existence of such companies in the official registers of companies gives an incorrect and inflated impression of the size of the corporate sector. The process of weeding out is expected to continue for some time more. The total number of directorships of the active core of joint-stock companies was estimated at around 70,000 in the first statutory report on the working and administration of the Companies Act 1956 for the year 1956-57. This estimation was done on the assumption that the average number of directorships in a private and public company was three and five respectively, and that 15 per cent of the directorships in the company was common.

Some Handicaps

Considering the large size of the population of company directors in the country and the fact that the collection of information relating to them would involve inspection of files pertaining to a large number of companies maintained in the Registrar's offices in the various parts of the country, the authors of this paper decided to carry out only a limited sample study of the boards of directors of only big and giant-sized companies, having a paid-up capital of Rs. 50 lakhs and more. The total number of such companies at the time this study was initiated came to around 345 companies. It was estimated that a sample study of these companies would cover roughly over 3,000 company directors. The first phase of this investigation started with the collection of data relating to the directors of 117 big-sized companies reported to be having their registered offices in the Western region. The results of this investigation are presented in this paper. Information relating to the directors of the 117 big-sized companies was collected on the size of the boards of directors, nationality of the directors —Indian and foreign, sex, age and occupational distribution of the directors, the number of directorships held by a director. In the initial stages, it was also proposed to collect information as regards the shareholdings and financial stakes of the directors in these companies. But this had to be given up, as it involved the laborious process of screening several statutory returns, including the list of memberships, and, even if this were done, the results would not give a correct idea of the situation due to the prevalence of the practice of *benami* holdings. However, in regard to the various heads of information selected for study it may be stated here that quite a few distortions were noticed in the information collected from the statutory returns filed by the companies. For example, due to the faulty and broad descriptions of the occupations of the directors, occupational picture of directors was not quite clear. The occupations of the directors in the statutory returns were variously described as Government servant, private service, industrialist, merchant, pensioner, agent, chemist, technical specialist, social worker, housekeeping, etc. Such descriptions made it difficult to ascertain the presence of professional men and specialists like chartered accountants, cost accountants, engineers, solicitors, lawyers, taxation experts, etc., on the boards. Similarly, clear and precise age groups for the directors could not be demarcated, as, in many cases, only the year of birth of the directors and not the date of birth was given. Further, in the absence of information regarding family lineage and "the powers-that-might-be" behind certain directors, the "locus of concentration of economic power" could not be established.

Our study reveals that the total number of directorships of the 117 big-sized companies of the Western Region, comprising the present States of Maharashtra, Gujarat and Madhya Pradesh, totalled 917 held by 546 persons. On the average, a person who served as a director in any of these companies held 1.7 or in rounded terms two directorships in the 117 companies. On an all-India basis, the aforesaid 546 persons held a total of 4,174 directorships on the boards of 1,905 companies. On a country-wide basis, the average number of directorships held by a person came to 7.6 or in rounded terms eight directorships.

Size of Boards of Directors

On an average, the boards of directors of the companies covered in this study comprised eight directors. The maximum size of the board of directors was found in the case of the Associated Cement Companies Limited, comprising 20 directors, and the smallest size was of two directors which is the minimum prescribed for the board of a private company under the law. The number of companies having different sizes of boards are given below:

No. of directors	*No. of companies*
2	2
3	2
4	5
5	9
6	18
7	29
8	18
9	17
10	11
11	5
12	7
14	2
20	1
TOTAL	117

Comparable studies made in the U.S. showed that, in three out of four of the largest American industrial corporations, the board's strength comprised between nine and sixteen directors. In the U.K., Professor Florence's study disclosed that, in the largest British industrial and commercial companies with a capital of over three million pounds, the boards were smaller than those in the U.S. The bulk of them contained six to twelve directors, with an average of nine directors. As against this, in a sample of the smaller British companies with under half a million pounds capital, five directors formed the average size of the board. Our study of the size of boards of big companies shows similarity in size with the big-sized British companies.

Nominee Directors

As said in the previous section, in our country, there has been for a long time a practice of providing some places for the nominees of the managing agents on the boards. Our study reveals that, out of the total number of 917 directorships in the 117 companies, 259 directorships belonged to 32 managing agency-managed companies. Out of these 54 directorships were held by the nominees or representatives of the managing agents concerned. On an average, out of the average strength of a board of eight directors, two directors were the nominees or the representatives of the managing agents.

Nationality of Directors

Some of the big-sized companies in the country are managed by foreign managing agencies and a few of them take on their boards some foreign nationals for various business reasons. Our study reveals that out of the 117 companies studied, 43 companies had foreigners as directors. Their number came to 113. The total number of directorships held by foreigners came to 133, as against 226 held by Indian nationals in those companies. The ratio between Indian and foreign directors worked out to 2 : 1 in the cases of these 43 companies. Among these companies, the predominance of foreign element in the boards of Ahmedabad Electricity Company, Asbestos Cement (Private) Ltd., Burmah-Shell Refineries Ltd., Caltex Oil Refining (India) Ltd., Glaxo Laboratories Ltd., Godfrey Phillips India Limited, Greaves Cotton and Crompton Parkinson Private Ltd., Hindustan Vanaspati Manufacturing Company Ltd., Mazgaon Docks Ltd., Finlay Mills Ltd., Moghul Lines Ltd., National Manufacturers Ltd., was particularly noticeable. The reason for this overweighted representation of foreign element is obvious. These companies are either foreign-owned or wholly managed by foreigners. There are, however, a few cases such as the Asian Finance Corporation Private Limited, the Bombay Suburban Electric Supply Company Limited, Sandoz Products Private Limited, and Voltas Ltd., where Indian and foreign directors are present in equal numbers. As against this, amongst the companies believed to be under Indian management which had foreign element on the board are the Associated Cement Companies Limited, Mahendra and Mahendra Ltd., Polychem Ltd., Tata Hydro-electric Power Companies, Tata Industries Private Ltd., Tata Engineering and Locomotive Company, Tata Mills Ltd., and Tata Oil Mills Company Ltd. The following table briefly summarises the position of Indian and foreign directors in the 43 companies having mixed boards of directors.

	No. of companies.	No. of Indian directors.	No. of foreign directors.	Ratio of Indian to foreign directors.
Companies with foreign predominance on the Board ..	10	10	60	1 : 6
Companies with equal strength of Indian and foreign directors	4	15	15	1 : 1
Companies with Indian predominance on the Board ..	29	201	58	3 : 1
Total companies having foreign element	43	226	133	2 : 1

Apart from this, our study discloses that the 113 foreign directors on all-India basis held 574 directorships, which gave an average of five directorships to a foreigner in the country as against an average of eight directorships held by an Indian national.

Sex Distribution

Out of 117 companies, only seven companies were found to have lady directors who held eight directorships. As against this, 46 directorships were held by male directors in those companies. It is, therefore, clear that the presence of ladies on the boards is rather a rare occurrence in our country.

Frequency Distribution of Directorships

The frequency distribution of the directorships held by the 546 persons holding 4,174 directorships all over the country was as follows:

No. of directorships	No. of persons holding the directorships	Total No. of directorships held
1	113	113
2-10	294	1,541
11-20	95	1,421
21 and more	44	1,099
Total ..	546	4,174

The foregoing table brings out the extent of the plurality of directorships in the country. Before we comment upon it, it is necessary to explain the position of 44 persons holding more than 20 directorships which would appear to be inconsistent with the provisions of Section 275 of the Companies Act. This section requires a person holding more than 20 directorships to surrender the surplus directorships within two months of the coming into operation of the new Act. Section 278 of the Act, however, makes a few exceptions with regard to directorships held in certain categories of companies which are not to be counted for the statutory maximum of 20 companies. Under this section, the directorships in the following companies are to be excluded:

(*a*) a private company which is neither a subsidiary nor a holding company of a public company;

(*b*) an unlimited company;

(*c*) an association not carrying on business for profit or which prohibits the payment of a dividend;

(*d*) a company in which such person is only an alternate director, that is to say, a director who is only qualified to act as such during the absence or incapacity of some other director.

Obviously, the companies and the Boards must have seen that the requirements of these sections were duly complied with, since, otherwise, they would have run into legal difficulties.

Some of these excepted types of directorships are included in the number of directorships held by the 44 persons shown in the above table, and, therefore, one need not look at these figures with dismay. On the basis of the above results, we can conclude that nearly 80 per cent of the directors of big-sized companies were 'plural' directors, whereas 20 per cent were single company directors. Of the total, 20 per cent held more than 10 directorships and these persons under this study could be said to forge interlocks among the Western Region companies on the one hand and many other companies registered in other parts of the country on the other.

The foregoing results of the study can be compared with the position of multiple directors in large companies in the U.K. and the U.S. as disclosed in certain sample surveys undertaken in those countries, the figures from which are quoted by Professor Florence in his book *Logic of British Industry*.

No. of companies in which directorships are held	Indian companies included in our study	Large British companies	Large American companies
One to five	77	70.0	72.5
Six to ten	—	17.0	17.5
Over ten	23	13.0	10.0
Total ..	100	100.0	100.0

The high figure of multiplicity in our country is explained by the acute shortage of qualified candidates for the office of directorship and by the dominance of certain business houses and managing agency firms and companies.

Age Pattern

Out of the total 546 directors, the information regarding their dates of birth and ages was available for only 505 directors. The age pattern of these directors is given in the table below:

Age Group (as on 31st March 1957)	*No. of directors*
Upto 30 years	36
31—45 years	142
46—55 years	172
56—65 years	92
Above 65 years	63
Total ..	505

Here, it is necessary to draw attention to the 63 superannuated directors. The holding of company directorships had to be regularised in these cases under the Companies Act 1956 by a resolution passed by the company in general meeting as per provisions of Section 281 of the Act. These superannuated directors formed only 12 per cent of the total number of directors. As against this, young blood as represented by the age groups upto 45 years, accounted for 35 per cent of the total. The remaining 53 per cent of the directors may be called "matured and seasoned" directors.

This analysis further discloses that, of the 106 companies for which relevant data on the age of their directors was available, "young blood" (that is, persons upto 45 years of age) got no representation on the boards of 12 companies. As against this, in two cases, it got 100 per cent representation and in two others between 76 per cent and 99 per cent. Younger directors predominated in 19 other cases, their representation varying between 51 per cent and 66⅔ per cent in 11 companies and between 66⅔ per cent and 75 per cent in four companies. A fifty-fifty ratio between the "young" directors and "mature and old" ones (these being persons of age exceeding 45 years) was seen in eight cases. The representation of the "young directors" varied between 33⅓ per cent and 49 per cent in 17 companies and between 26 per cent and 33⅓ per cent in 14 companies. Young directors' representation came to 25 per cent of the total strength of the boards in 36 companies. Thus, it is seen that, in 79 out of 106 companies, the board had a working majority and predominance of the "mature and old" directors. That is to say, in four out of five cases, boards comprised the "mature and old" directors. The following table gives the relevant factual information in this regard:

Composition of Board by Young and Old Directors

% representation of young directors of age upto 45 years	*No. of companies*	*% to total companies*
No representation	12	11
Upto 25%	36	34
26% to 33⅓%	14	13
33⅓% to 49%	17	16
50%	8	8
51% to 66⅔%	11	10
66⅔% to 75%	4	4
76% to 99%	2	2
100%	2	2
Total	106	100

The following table presents a comparison between the pattern noticed in our study and that in certain studies available for the American and English directors. Along with the Indian directors' age pattern, that of the foreign directors in the Indian companies is also shown:

Age Pattern of Directors in Indian, American and British Companies

Age group	Percentage			
	Indian directors in Indian companies	Foreign directors in Indian companies	British directors	American directors
Under 40	25	18	9	1.0
40-49	21	28	30	9.5
50-59	29	28	31	26.5
60 and above ..	25	26	31	63.0
Total ..	100	100	100	100.0

The average age of Indian directors, British directors and American directors worked out to 49.5, 55.2 and 65 years respectively. The average age of foreign directors in Indian companies is 49 which is almost the same as that for directors of Indian nationality. The higher average age in the case of American directors is mainly accounted for by the fact that the administrative structure in American companies is very different from that of Indian or British companies. The board of directors of American corporations tends more often to be a supervisory body of elder statesmen of industries including bankers and representatives of leading stockholding families, while the board of directors in the U.K. and in India tends more often to be an active policy-making body.

The lower average age in the case of directors in India may partly be ascribable to the lesser longevity in case of Indian directors and partly to hereditary nature of directors. The lower average age of foreign directors in India is accounted for by the fact that British people of older age would prefer to stay in England.

Occupation Pattern

As stated elsewhere, information relating to occupational distribution of the company directors is a great deal faulty. A clear pattern of occupational distribution can be had only from the replies received from the directors concerned with regard to a detailed categorisation of occupations and professions as some studies in America have attempted. It is because of the lack of precision in the description of occupation of directors, we hesitate to deal with this matter at length.

(Concluded)

Note: The views expressed in this paper are entirely the personal views of the authors and the Department of Company Law Administration is in no way committed to them.

LAUSANNE TRADE FAIR

The next Lausanne National Fair (Switzerland) will take place from 9th to 24th September. About 2,400 exhibitors are expected to display their products in the thirty-eight halls of the Palace of Beaulieu, with six pavilions set apart for agricultural sector and building trade. Although the Lausanne Fair remains primarily national in character, it invites each year a foreign country to take part officially with an exhibition of its own. This year, Greece will be exhibiting its main resources in a pavilion organised by its Government, under the auspices of the Greek Embassy in Switzerland and in collaboration with various Greek national organisations in the fields of cotton, tobaco, tourism, etc. It may be recalled in this connection that India was the guest country at the Lausanne National Fair in 1954. Considerable facilities, in particular in the form of reductions on certain Swiss and foreign rail and air fares, are granted to all visitors.

NEAR EAST INTERNATIONAL FAIR

The 1962 Near East International Fair will be held at Tel Aviv (Israel) Exhibition Gardens for a month from 5th June next. Organised by the Near East Exhibition Company Ltd., Tel Aviv, the exhibition is expected to provide a successful trading forum, bringing together both newly-independent, developing countries, particularly in Asia and Africa, and industrialised countries of the West. Wide lawns, attractive fountains, festive illuminations, colourful flower-beds and a landscaped lake form the setting for the spacious exhibition pavilions and stands. The groups of products likely to be displayed are expected to include a wide range of machinery and equipments, transport vehicles as well as consumer goods such as textiles, tobacco products, paper and rubber goods. All articles consigned for display will be allowed free of customs duties. The fair grounds will be treated as customs free zone.

INDIA REINSURANCE CORPORATION

SCOPE FOR IMPROVING ITS UTILITY

THE results of the India Reinsurance Corporation Ltd. for the year 1960 are of considerable interest for two reasons: First, the business of the Corporation is mainly composed of the cessions made by all the insurance companies in India. This means that the quality of Indian business done by the Corporation should reflect the average results of the operations in India of both the foreign and Indian companies. From 1960 onwards, the results will be still more representative, because of the Insurance Amendment Act of 1961, under which the India Reinsurance Corporation, along with the Indian Guarantee and General Insurance Company Ltd., has been made an approved insurer. Till 1960, it was only voluntary for every insurer to insure with the India Reinsurance Corporation specified percentages of their business. Since the 1st April 1961, however, it is obligatory to reinsure a fixed share of the sum insured on each policy issued or renewed on or after this date. But, since most insurance companies were a party to the voluntary arrangement, even the results of the Corporation for 1960 could well be taken as an index of the cost and profitability of business done in India.

The second reason why the results of the India Reinsurance Corporation are important is the fact that the quality of underwriting is the most important thing in insurance arrangement and good underwriting can always be steadily improved over a course of years. Out of the five years of operations of the India Reinsurance Corporation, the first three years were used for building up sufficient reserves and dividends have been declared only for the fourth and fifth years, namely, 1959 and 1960. The Directors, it may be noted, have recommended the payment of a dividend at 6 per cent, subject to tax, for the year 1960, which will absorb Rs. 60,00,000.

It is most important for a reinsurance company to spread its risks geographically and, consequently, a good part of their premiums are retroceded abroad by all reinsurance companies all over the world. As most of the India Reinsurance Corporation's Indian business comes by way of automatic cessions, the real selection of business comes by way of reciprocity from abroad in return for the excesses over the net account which are ceded abroad. From the voluntary (now compulsory) cessions received by the India Reinsurance Corporation Ltd., 50 per cent of the business is given back to all insurance companies now operating in India by way of part reciprocity. This obligation has now been made a part of the obligation under rules made under the Insurance Act. Out of the balance of 50 per cent, more than half must be going abroad and the quality of business which comes back from abroad in return for this premium should make all the difference to the marginal operations of the India Reinsurance Corporation Ltd.

Indian business, particularly fire business, is known to be one of the most remunerative in the whole world and there is no reason why it should be exchanged for unprofitable business or business of low profitability from the British market, simply because Indian insurance in the past has been traditionally bound to the British market for historical reasons. During 1960, the India Reinsurance Corporation got a premium of Rs. 33,00,000 from abroad, on which the ratio of paid losses was about 78 per cent. The actual incurred losses must have been higher still, but the accounts fail to disclose this important feature by combining the outstanding losses in India with the outstanding losses abroad. This is presumably accounted for by the fact that, in recent years, the home fire business in the British market has been showing very adverse results, particularly on account of the several large fires involving big industrial units.

As against the aforesaid experience abroad, the fire net premium in India was about Rs. 50,000,000 and the corresponding paid loss ratio was only 28 per cent.

Although the results do not show the extent of foreign exchange drain abroad, the necessity of reducing the exchange drain on account of overseas reinsurances, and earning foreign exchange, if possible, cannot be overemphasised. The whole idea of floating the India Reinsurance Corporation was to save foreign exchange and to develop a reinsurance market in this country and it would be useful if the Directors' report and statement of accounts or the Chairman's statement could show in future how far the original intention of starting the India Reinsurance Corporation is being realised. It is necessary and desirable both for the India Reinsurance Corporation and the Indian Guarantee to set healthy standards and give more information on their operations than the minimum necessary under the Companies Act. It is also to be hoped that the two professional reinsurers will compare notes, try to learn from each other's experience and try out innovations of technique in view of our special position. It is probable that India Reinsurance Corporation's results could be improved if it exchanged more business with national insurance corporations like the Pakistan Insurance Corporation or the corresponding body in Egypt and with the various Japanese companies rather than with European companies. They will also be able to save further foreign exchange if they switch over some of the arrangements from a surplus basis to an excess of loss arrangement. At the present time, the India Reinsurance Corporation can afford to take the slightly bigger risk of an excess of loss arrangement, as its reserves have gone up from about Rs. 86,00,000 to about Rs. 1,16,00,000, in addition to its paid-up capital of Rs. 1,00,00,000.

The marine account shows a loss mostly on account of the "reserves strain," caused by the additional reserves of about Rs. 21,00,000.

The Reinsurance Exchange started by the India Reinsurance Corporation does not appear to be very successful, especially with non-Indian companies, probably because the non-Indian companies have a much bigger capacity to retain their acceptances. It is to be hoped that, over a course of years, the India Reinsurance Corporation would be able to take over from various smaller Indian companies the placing of Treaties in India and abroad from the hands of various brokers. This should also enable a greater part of the Treaties to be placed in India with a corresponding reduction in the use of foreign exchange. The India Reinsurance Corporation would also do well to support special insurance needs of the country such as crop insurance, cattle insurance and banking deposits insurance. Instead of taking up these new lines which are relevant to insurance, the India Reinsurance has started with guarantees in connection with hire-purchase transactions. Surely, it would have been better if this type of credit business were left to banks or other specialised agencies, so that the standards of examination for any proposition may be well maintained.

The fire and miscellaneous insurance funds of the Corporation now stand at 50 per cent of the respective net premiums, while the marine funds now stand at 100 per cent of the marine net premium. It is to be hoped that its performance in the current year would take the reserves still further, with an increase in the dividend to 7 per cent so as to keep in step with last year's progress.

CONCORD OF INDIA REPORTS PROFIT

DIVIDEND MAINTAINED

THE results of the Concord of India Insurance Company Ltd. (Managing Director: Mr. N. M. Cole, Calcutta) for the year ended 31st December 1960 are better than those for the preceding year. In refreshing contrast to the loss suffered in 1959, the Company has reported a sizable profit which has enabled it to maintain the dividend without having to deplete the reserves as was the case last year. In fact, the Company has found it possible to add something to the general reserve.

The combined net premium from the three departments, namely, fire, marine and miscellaneous, has improved by Rs. 3.75 lakhs to Rs. 66.05 lakhs. Reflecting the policy of selectivity adopted by the Company in respect of the foreign fire underwriting business, the overall claims ratio has declined from 73.1 per cent in 1959 to 55.3 per cent in the year under review. The ratio of commission, expenses, etc, too, is lower at 38.0 per cent, as against 39.2 per cent in the preceding year.

After taking into account the income of Rs. 4.15 lakhs by way of interest and dividends on the investments of the Company and after meeting the various outgoings, the net profit for the year under review amounts to Rs. 3.57 lakhs, as against a loss of Rs. 1.65 lakh incurred in the previous year. The Directors have sought to maintain the dividend at the 1959 level of 20 per cent per annum subject to tax, requiring an amount of Rs. 2.70 lakhs. It may be noted here that for the four years ended 1958, the Company had paid a dividend of 20 per cent per annum, tax-free, so that it has not yet been able to compensate the shareholders for the loss of grossing benefit. The Directors have credited Rs. 50,000 to the general reserve, thereby making good a part of the depletion of reserves, to the tune of Rs. 2.75 lakhs.

The trend of premiums, claims experience and expenses of the Company in the last four years will be clear from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Fire:				
Premium	31.30	34.32	32.42	32.04
Claims	13.59	20.53	14.78	12.46

* Subject to deduction of tax.

A department-wise study of the accounts indicates that the premium income of the fire department went down by Rs. 3.02 lakhs to Rs. 31.30 lakhs, due to the Company's policy of restricting foreign acceptances. The fire claims which were the subject of litigation have been satisfactorily compromised within the provisions made last year. The profit transferred to the profit and loss account from this department aggregates Rs. 2.98 lakhs.

The premium income of the miscellaneous department in 1960 was Rs. 18.52 lakhs, as against Rs. 14.65 lakhs in the previous year. The claims experience of this department was distinctly better, the claims ratio having dropped from 94.9 per cent in 1959 to 67.1 per cent in 1960. Despite this improvement, the accounts of the department show a loss of Rs. 52,970. This adverse result, according to the Directors, is of a technical nature, being the consequence of an increase in the statutory provision for unexpired risks.

The premium income of the marine department has gone up from Rs. 13.33 lakhs in 1959 to Rs. 16.23 lakhs. The claims amounted to Rs. 11.71 lakhs, as against Rs. 11.31 lakhs in the previous year. The claims experience of this department, too, was favourable, the ratio having declined from 84.8 per cent to 72.1 per cent. The expenses of management, together with commission, aggregated Rs. 4.02 lakhs (Rs. 3.56 lakhs in 1959). Like the miscellaneous department, this department has also incurred a loss, of Rs. 2.39 lakhs.

INDIAN MERCANTILE STEPS UP DIVIDEND

PREMIUMS AND RESERVES RISE

THE Indian Mercantile Insurance Company Ltd. (Manager and Secretary: Mr. C. M. Telivala, Bombay) has the distinction of showing satisfactory trading results for over a decade. The Company has also a very good dividend record to its credit. In keeping with its past performance, the combined premium from the three departments (fire, marine and miscellaneous) registered a rise of Rs. 1.91 lakh to Rs. 37.98 lakhs in the twelve months ended 31st December 1960. Its profit also is higher at Rs. 5.70 lakhs, as against Rs. 4.05 lakhs in 1959. The improved trading results have enabled the Directors to raise the dividend, albeit modestly, from Rs. 5.35 to Rs. 6 (per share of Rs. 40 paid-up) subject to deduction of tax. The net dividend amounts to 10.5 per cent per annum and compares favourably with the tax-free dividend of 9⅜ per cent per annum for 1958 and 1959.

The overall claims experience was, however, unfavourable, the claims ratio having risen from 41.9 per cent in 1959 to 45.2 per cent in the year under review. The commission paid and expenses of management have also risen sharply from Rs. 14.03 lakhs to Rs. 16.04 lakhs, neutralising almost the entire increase in the premium income.

Department-wise, the working of the fire and miscellaneous departments resulted in a surplus of Rs. 4.42 lakhs and Rs. 47,494 respectively. Only the marine department incurred a loss of Rs. 1.47 lakh. The combined net profit transferred to the profit and loss account from the three departments amounted to Rs. 3.42 lakhs, as compared with the profit of Rs. 2.21 lakhs for the preceding year. After taking into account the income by way of interest and dividend amounting to Rs. 2.54 lakhs and profit on sale of investments of Rs. 33,637, and after providing for the outgoings, the profit (before taxation) for the year under review works out to Rs. 5.70 lakhs as against Rs. 4.05 lakhs in 1959.

An idea of the progress of the Company in the last three years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December		
	1960	1959	1958
Fire:			
Premium	10.07	20.77	15.80
Claims paid and outstanding	6.99	6.22	3.75
Commission, expenses, etc.	8.70	7.78	7.56
Fire fund	11.54	10.39	7.94
Miscellaneous:			
Premium	10.75	8.61	0.22
Claims paid and outstanding	4.52	5.59	4.37
Commission, expenses, etc.	4.75	3.91	4.57
Miscellaneous fund	5.88	4.31	4.61
Marine:			
Premium	8.16	6.69	5.81
Claims paid and outstanding	5.66	5.30	4.21
Commission, expenses, etc.	2.50	2.34	1.75
Marine fund	8.16	6.69	5.81
Net profit	5.70	4.05	4.89
Provision for taxation	2.03	4.80	0.99
Transfer to reserve	1.09	..	0.42
Dividend	2.54	2.27	1.59
	(15%)*	(13⅜%)*	(9⅜%)
Provision for bonus to staff	..	0.52	0.90
Carried forward	4.21	4.18	7.72

* Subject to deduction of tax.
† A provision of Rs. 60,000 has been made in the departmental revenue accounts.

It will be evident from the table that the net premium of the fire department has declined from Rs. 20.77 lakhs in 1959 to Rs. 19.07 lakhs. The claims paid and outstanding amounted to Rs. 6.99 lakhs, as against Rs. 6.22 lakhs in the preceding year. The expenses of management and commission went up by Rs. 92,000 to Rs. 8.70 lakhs. The reserve for unexpired risk, together with the additional reserve, amounts to Rs. 11.54 lakhs as against Rs. 12.39 lakhs a year ago. This department contributed the highest share to the profit and loss account during 1960, the exact amount being Rs. 4.42 lakhs.

The net premium of the miscellaneous department went up sizably from Rs. 8.61 lakhs to Rs. 10.75 lakhs. The claims ratio showed a distinct improvement, having dropped from 64.9 per cent to 42.0 per cent. The miscellaneous department's reserve for unexpired risks stands at Rs. 5.38 lakhs, as against Rs. 4.31 lakhs a year ago. The department contributed Rs. 47,494 to the profit and loss account.

The marine department fetched a premium income of Rs. 8.16 lakhs, as compared with Rs. 6.69 lakhs in 1959. The claims ratio declined from 79.2 per cent to 69.3 per cent but the expenses, commission, etc. rose slightly from Rs. 2.34 lakhs to Rs. 2.59 lakhs. After providing 100 per cent premium reserve for unexpired risks, the department closed with a deficit of Rs. 1.47 lakh.

During 1960 the total funds of the Company went up by Rs. 2.69 lakhs to Rs. 65.50 lakhs.

INDIAN MERCANTILE INSURANCE COMPANY LIMITED

MR. K. M. D. THACKERSEY'S SPEECH AT ANNUAL MEETING

THE view that the scheme of non-diversion and mutual assistance now in force would go a long way towards stabilising conditions in general insurance business and introduce a new era for this "much-maligned industry" was expressed by Mr. K. M. D. Thackersey, Chairman of the Indian Mercantile Insurance Company Limited, in his speech at the Fifty-third Annual General Meeting of the Company held at Bombay on Thursday, 6th July 1961. He, however, stressed the need for working the scheme without any mental reservation and in a spirit of mutual understanding and trust.

The following is an extract from the speech of Mr. Thackersey:

"I have great pleasure in extending to you all a cordial welcome to the fifty-third annual general meeting of your Company. You will have noticed that we are again meeting exactly after ten months and that is two months prior to our holding the last annual general meeting thanks to the amending legislation of the Companies Act, 1956 which has made possible this early meeting.

"I am sure you will have noticed from the accounts that the aggregate results achieved during the year under review are better than in 1959. You must also have been happy to note that your Company has been able to step up the dividend and recommend a gross dividend of Rs. 6 per share for your approval and which works out at 15 per cent of the paid-up capital. Before I proceed to comment on the working of the Company, I shall briefly deal with some important developments which affect the insurance industry.

Insurance (Amendment) Act, 1961

"The Insurance (Amendment) Bill 1961 was passed by the Indian Parliament and the Amendment Act became law and came into force with effect from 1st April 1961. The said legislation makes it obligatory for every insurer transacting general insurance business in India to reinsure specified percentages of the sum insured on each policy issued or renewed on or after 1st April 1961 with approved Indian reinsurers, namely, 'India Reinsurance Corporation Limited' and the 'Indian Guarantee and General Insurance Company Limited.' Hitherto we were ceding on a voluntary basis 50 per cent of the specified percentages to 'India Re,' established in 1956 at the instance of the Government by companies working in India. These compulsory legal cessions though providing 50 per cent reciprocity for the fire and marine cargo business—will, no doubt, to some extent affect our profits. However, it is hoped that the object of arresting the drain of foreign exchange which these compulsory cessions visualise is achieved and approved reinsurers succeed in bringing to the Indian market an increasing volume of profitable business from abroad.

Scheme of Non-diversion and Mutual Assistance

"Last year, I had referred that Indian insurance industry, if it is to retain its good name and play the role which is legitimately assigned to it in the economy of the country, should reorient its approach in order to devise a well-planned and co-ordinated effort. Since then, the conditions in the trade have continued to be difficult and the unhealthy competition has remained unchecked and unabated. In spite of several attempts to modify the regulations of the Code of Conduct, the conditions in the trade have continued to remain as they were—eluding the solution for which they were primarily designed. In order that some workable solution is achieved and with a view to seeing that the insurance industry is run on sound and correct lines, several executives of companies backed by their respective Boards of Directors got together and formulated a scheme of non-diversion and mutual assistance. The said scheme has come into force with effect from 1st July 1961 and I am happy to inform you that your Company has joined this scheme. Though at present only 16 other companies have subscribed to the scheme, it is expected that many more will subscribe to the said scheme in not a distant future. Given goodwill, I am sure, the scheme as formulated and devised, if worked up without any mental reservation and with a spirit of mutual understanding and trust, will go a long way to stabilise this industry and introduce a new era for this much-maligned industry.

"I shall now come to the review of our operations during the year. As a result of our operations during the year under review, our consolidated Indian gross and net premium income amounted to Rs. 39.46 lakhs and Rs. 37.99 lakhs, respectively, as compared to Rs. 31.19 lakhs and Rs. 36.07 lakhs, respectively, in the previous year. Our total gross premium for the year amount to Rs. 42.14 lakhs. Thus our both gross and net premium income have registered an increase over last year. As a result of increase in our net premium income, we have transferred Rs. 1,69,230 to the departmental reserves. You will have also noticed that we have transferred Rs. 1,08,705 to the general reserve and it now amounts to Rs. 9,60,000.

Disbursements

"On the disbursement side of the year's premium income, claims absorb 45.2 per cent., as against 47.4 per cent last year. The commission and expenses of management account for 42.2 per cent, as against 38.9 per cent last year. Further, there has been strain on the departmental reserves to the tune of 4.45 per cent. Thus there has been a decrease of 2.2 per cent in the claims cost and increase of 3.3 per cent in the commission and expenses of management. Consolidated departmental profits, inclusive of interest on reserves for unexpired risks in the departments, amounted to Rs. 3,42,506, as against Rs. 2,20,573 last year. In short, despite a rise in expenses of management, to some extent improved position of our underwriting results and increase in our interest income and profits on sale of investments have combined to produce a net profit of Rs. 5,69,547. As a result of the year's operations, the total funds of the Company now stands at Rs. 65,50,336."

Note: *This does not purport to be a report of the proceedings of the General Meeting.*

Notice

THE GENERAL INDUSTRIAL SOCIETY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held at its registered office at 15, India Exchange Place, Calcutta, on Monday, the 31st July, 1961, at 2.45 p.m., for receiving and adopting the Directors' Report and the accounts for the year ended 31st December 1960, declaring dividend, electing a Director, and appointing Auditors of the Company.

Pursuant to the provisions of Section 293 of the Companies Act, 1956, as amended, two ordinary resolutions have also been put in the aforesaid Annual General Meeting as special business authorising the Board of Directors (i) to borrow moneys upto Rs. 2 crores and (ii) to contribute or subscribe to charitable and other funds upto Rs. 50,000 even if such borrowings and contributions are in excess of the prescribed limits.

The Share Transfer Books and Share Register of the Company will remain closed from 17th July, 1961 to 31st July, 1961, both days inclusive. The detailed notice and the explanatory statement in respect of the above two ordinary resolutions have been sent separately to the Shareholders of the Company.

By Order of the Board,
K. C. BAGRI,
Secretary.

CALCUTTA,
Dated, 4th July, 1961.

N.B.—(i) A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

INDO-BRITISH TRADE

FEDERATION ON CONSEQUENCES OF U.K.'S ENTRY INTO C.M.

THERE is still a lot of uncertainty about the U.K. joining the European Common Market. If it finally decides to join this trade bloc, it will naturally be conditioned, it is to be hoped, by the reactions of Commonwealth countries which are now being assessed by senior British Cabinet ministers. Mr. Peter Thorneycroft, the British Minister for Aviation, is currently discussing the subject with the representative of the Government of India. The general trend of the discussions can be had only at the conclusion of the talks. Meanwhile, it is reported that the Government of India is of the opinion that, in case the U.K. joins the Six, without ensuring adequate safeguards for Commonwealth imports into the U.K., India's export trade will receive a major setback, invalidating certain assumptions on which the third Plan is based. India has admittedly vital stakes in any modification of British commercial policy. For Britain is India's largest trading partner. In 1960, the U.K. provided, as in previous years, the largest market for Indian goods, its offtake being Rs. 174 crores (including both exports and re-exports), representing about 27 per cent of India's total exports amounting to Rs. 635 crores. In 1959, India's exports to the U.K. amounted to Rs. 172 crores, out of total exports of Rs. 621 crores.

The following table shows the trend of Indo-British trade since 1952:

(Value in crores of rupees)

	Imports from the U.K.	Exports to U.K.	India's balance of trade
1960	201.5	174.4	—27.1
1959	184.2	171.7	—12.5
1958	168.5	175.7	+ 7.2
1957	238.5	161.0	—77.5
1956	206.2	184.7	—21.5
1955	161.6	168.2	+ 6.6
1954	152.5	177.2	+24.7
1953	141.4	149.5	+ 8.1
1952	152.0	126.5	—25.5

Although there have been fluctuations in India's exports to, and imports from, the U.K., the total trade has expanded substantially during the last decade or so. To a certain extent, the economies of India and the U.K. are complementary; the bulk of the exports of the former being foodstuffs and raw materials, while its imports from the U.K. being finished goods, particularly capital goods. India, for instance, depends on the U.K. for the major portion of its exports of tea, tobacco, coir manufactures, leather, raw wool, linseed oil, etc., while the U.K. finds in India one of its best markets for the export of metal manufactures, electric machinery, wooltops, chemicals, railway and road vehicles and aircraft.

The steady growth of Indo-U.K. trade has been the result, to a large extent, of the existing Commonwealth preferences. India's exports, in particular, have gained much from the duty-free entry in respect of several articles. Commonwealth preferences and absence of quantitative restrictions in the U.K. In this context, a note prepared by the Federation of Indian Chambers of Commerce and Industry and submitted to the Government of India on the likely disadvantages to India's exports, if the U.K. joined the Six, shows that cotton textiles will be the worst hit in such an event. Out of India's total exports of cotton piecegoods of the value of Rs. 70.82 crores in 1960, the U.K. accounted for Rs. 16.50 crores, or about 25 per cent. Imports of Commonwealth textiles into the U.K. are allowed without duty, as against average duty of 17.5 per cent *ad valorem* for imports from non-Commonwealth countries. The Common Market is expected to lay down a duty of 17 to 19 per cent in respect of cotton textiles. If the U.K. abolishes duty-free treatment, there will be serious competition from Japan and China.

Exports of Tea

India's exports of tea, which account for over 40 per cent of its total exports to the U.K., will also face tariff disadvantages in the Common Market. The total exports of tea in 1960 amounted to Rs. 125.80 crores. Of this, the U.K. bought tea worth Rs. 75.40 crores. In the U.K., India, along with Ceylon, enjoys duty-free treatment, as against the standard rate of duy of 2d. per lb. The Common Market rate is expected to be fixed at 18 per cent *ad valorem* for loose tea and 23 per cent *ad valorem* for package tea. It may be noted here that Indian tea is already facing serious competition in the U.K. Its share has been declining of late, being only about 49 per cent of total imports in 1960, as against 55 per cent in 1959, 58 per cent in 1958 and 63 per cent in 1957. At the same time, the share of India's major competitors has been going up. In 1960, while its exports declined, those of its competitors were higher, as will be seen from the following table:

(Quantity in million lbs.)

	1960	1959
India	259.86	284.39
Ceylon	151.00	137.36
Rhodesia and New Zealand ..	21.73	20.48
Kenya	14.20	10.97
Portuguese East Africa	13.23	13.21
Netherlands	14.15	5.78
Indonesia	10.03	9.31
China	11.69	7.56
Pakistan	6.01	10.99
Tanganyika	6.13	4.19
Uganda	3.57	3.17
Malaya	2.63	2.17
Grand total (including others) ..	529.27	517.73

Coffee is another commodity which will lose its preferences in the U.K. and face tariff discrimination in the Common Market. India's exports of coffee to the U.K. in 1960 aggregated Rs. 6.67 crores. While the duty in the U.K. is worked at 5 to 10 per cent *ad valorem* on Commonwealth imports, the Common Market rate is fixed as high as 16 per cent *ad valorem*. The Federation draws attention to the fact that the duty-free treatment permissible to overseas territories of the Common Market will result in severe competition for Indian coffee within the Common Market as well as in the U.K.

Jute Goods

Another important Indian product which has now a sizable market in the U.K. is jute manufactures. The U.K. bought jute cloths worth Rs. 6.37 crores from India, out of the total export of Rs. 70.62 crores. In the U.K., while the standard rate of duty is 20 per cent on jute goods, no duty is levied on imports from the Commonwealth. But, in order to protect the Dundee industry, the prices are marked up by 20 per cent by the Government before resale to British consumers. While there is thus an effective duty of 20 per cent, the Common Market tariff is higher at 23 per cent. Among the other items, India's exports of coir carpets, floor rugs, mats and mattings are not subject to any duty in the U.K., whereas the Common Market tariff is likely to be about 23 per cent. Commonwealth imports of woollen mats, mattings, carpets, etc., too enter the U.K. duty-free, but these items will be subject to a duty of as much as 32 per cent in the Common Market. It is also feared that exports of Indian spices, groundnuts, linseed and castor oil, although only on a small scale, enter the U.K. without duty; but in the Common Market, they are subject to a duty of about 8 per cent.

There are, however, some commodities the exports of which may not suffer to any appreciable extent. In the case of hides and skins, for instance, the import duty in the U.K. for split varieties of sheep and lamb skins is about 10 per cent, with duty-free entry permitted for Commonwealth goods. There is, however, no tariff on this product in the Common Market. Similarly, Indian exports of tobacco, oilcakes, etc., are not likely to face much disadvantage in the Common Market.

DEMAND FOR ELECTRIC FANS IN ADEN

The view that there are good prospects for India's exports of electric fans to Aden is expressed in a report on the market survey for electric fans undertaken by the Commission for India, Aden. In Aden, which is a British Colony, fans are not considered a luxury item because of its hot and humid climate almost throughout the year. Further, it has a prosperous trading community and has high rates of wages. The major suppliers of fans to Aden are Hong Kong, Japan, the U.K., India and Italy. The number of fans imported by Aden rose from about 7,780 (valued at £72,700) in 1959 to 10,256 (£85,000) in 1960. The following table shows imports of fans into Aden from various countries in 1960, as compared with 1959:

	Quantity (Nos.)		Value (£)	
	1960	1959	1960	1959
Hongkong ..	3,795	698	29,822	5,519
Japan	2,418	2,610	14,713	18,418
U.K.	2,373	2,714	24,167	32,481
India	1,312	1,226	11,440	10,109
Italy	358	537	4,923	6,150

It will be noted that Hong Kong has stolen a march over Japan and the U.K. in Aden's expanding market for fans. India's supply rose, but at a slow pace. The aforesaid survey points out that the important factors that helped Hong Kong to capture the market were "lower prices and quick and regular deliveries." Several other factors too put Hong Kong in an advantageous position. They are:

(a) While the supplies of Hong Kong fans were quick and continuous, supplies from India were "limited and invariably delayed";

(b) The packing of fans from Hong Kong, the United Kingdom and Italy, being more attractive, thorough and sturdy than Indian packing, created not only a better impression on the customers but also considerably diminished breakage and damage (including scratches, etc.) in transit;

(c) Hong Kong fans are lighter in weight and are more elegant in appearance; and

(d) Hong Kong fans make about 295 revolutions per minute, as against 220 of Indian fans.

Ceiling fans in 56", 48" and 36" sweeps are imported into Aden, but fans with 56" sweep with a central light are more popular. Pedestal fans from the United Kingdom, West Germany and Japan and aerolette type of ceiling fans from Holland are also imported, but their sales so far have not been encouraging.

The main demand for table fans comes from customers in lower income groups. The Japanese fans are offered in a wide range of prices to suit every pocket and in many attractive colours, designs and with such eye-catching devices as push button and speed regulators.

Table fans with 16" diameter are very popular in Aden. Next in popularity are 14" diameter fans. Table fans of smaller diameter are also imported, but in very small numbers.

Indian exports of electric fans can be improved only if Indian manufacturers cater to the special consumer preferences in the Aden market and arrange for expeditious delivery. It is gratifying to hear that, in respect of quality, India-made fans are considered quite comparable with other imported fans.

ROLE OF STATE TRADING CORPORATION

A plea to confine the activities of the State Trading Corporation to agency functions alone for the purpose of negotiating and entering into trade agreements with Communist countries which have similar institutions for foreign trade, has been put forward by the Indian Merchants' Chamber, Bombay, in a communicaton addressed to the Government of India. The Chamber's suggestion is with reference to the proposed amendment of the Memorandum of Association which, among others, seeks to give the S.T.C. powers to extend credit to companies or to invest in their funds, with the object of promoting export trade. It will also vest the S.T.C. with powers to act as agents or trustees of companies, to invest and deal with the funds of the Corporation, to make loans or give credit to persons or companies on such terms as it may deem expedient. The new powers which are sought to be given to the S.T.C., according to the Chamber, will only result in making it "a mammoth organisation with enormous monopolistic powers over trade and commerce," which is not in the best interests of the country's economy.

The Chamber has called upon the S.T.C. to refrain from undertaking actual trading operations, which supplant normal trade channels. Elucidating this point, the Chamber observes as follows:

"The role which the State Trading Corporation will play, if the proposed changes in its Memorandum of Association are approved and implemented, will be much wider than the one which was envisaged for it at the time when the Corporation was brought into being some five years ago. To allay the fears of the commercial community, it was initially stated on behalf of Government that the new organisation was created to supplement and not to supplant the existing trade channels. The actual experience, however, has been quite otherwise. The increased incursion of the State Trading Corporation in the various types of activities—import, export and even internal distribution of a number of articles—has resulted in supplanting the normal trade channels in several lines. There is also a growing feeling that the entry of the State Trading Corporation in the sphere of actual handling of trade has not served the main purpose in view. There is a grave apprehension in the minds of the trading community that the continuance of this agency in the pursuit of actual trading operations would result in undue interference in the smooth functioning of trade and lead to further disruption of the normal trade channels."

Notices

THE TATA OIL MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FORTY-THIRD ANNUAL GENERAL MEETING of THE TATA OIL MILLS COMPANY, LIMITED, will be held at the Birla Matushri Sabhagar, 19, Marine Lines, Bombay, 1, on Thursday, the 3rd August 1961, at 4-45 p.m. (S.T.), or so soon thereafter as the proceedings of the separate meeting of the holders of the Preference Shares of the Company which has been called at the same place and on the same day, is concluded, to transact the following business:—

(1) To consider and, if thought fit, to approve and adopt the Regulations contained in the document to be submitted to the Meeting and for the purpose of identification subscribed by the Chairman thereof, with such modifications, if any, as may be agreed to at the meeting and to pass the following resolution as a Special Resolution pursuant to Section 31 of the Companies Act, 1956, the relative Explanatory Statement in respect of which, as required by Section 173 of the said Act, is annexed hereto:—

"RESOLVED that the Regulations contained in the document submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof be and are hereby approved and adopted as the Articles of Association of the Company, in substitution for and to the exclusion of the existing Articles thereof."

(2) To receive and adopt the Directors' Report and audited Profit and Loss Account and Balance Sheet for the year ended 31st March 1961.

(3) To declare dividends on Preference and Ordinary Shares.

(4) To appoint a Director in place of Mr. D. M. Ghia who retires by rotation under Article 151 of the Company's Articles of Association and is eligible for re-appointment.

(5) To appoint a Director in place of Mr. A. H. Bhiwandiwala who retires by rotation under Article 151 of the Company's Articles of Association and is eligible for re-appointment.

(6) To appoint Auditors and to fix their remuneration.

(7) To consider and if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves of the purchase at par of 100 Ordinary Shares of Rs. 100 each fully paid up, of Industrial Perfumes Limited from Sassoon J. David & Company Limited (Associates of the Managing Agents, Tata Industries Private Limited)."

Notes: (a) The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items Nos. (1) and (7) set out above are being posted to the shareholders with the notice.

(b) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(c) The Transfer Books of the Company will be closed from Monday the 12th June 1961 to Friday the 7th July 1961, both days inclusive.

(d) If dividends on shares as recommended by the Directors are passed at the meeting payment of such dividends will be made at the State Bank of India, on and after 4th August 1961, to those members whose names are on the Company's register on 7th July 1961.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,

P. A. NARIELWALA,
Director.

BOMBAY, *28th June*, 1961.
Registered Office:
BOMBAY HOUSE, 24, BRUCE STREET,
FORT, BOMBAY-1.

ORIENT PAPER MILLS LIMITED

Registered Office:
BRAJRAJNAGAR (ORISSA)

TO ALL SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT separate meetings of the holders of 5½ per cent Tax-free C.R. Preference Shares, 5½ per cent Taxable C.R. Preference Shares and Ordinary Shares in the above Company will be held at Brajrajnagar, the Registered Office of the Company, on Friday, the 11th August, 1961 for the purpose of approving with or without modification the variation in the dividend payable to the holders of Preference Shares as follows:—

(a) The rights attached to 5½ per cent Tax-free C.R. Preference Shares aggregating to 1,20,000 Shares will be so modified as to confer on them right to a dividend at 7.86 per cent per annum, subject to deduction of tax under the Income-tax Act instead of 5½ per cent per annum tax-free and will be deemed to have been so modified with effect from the dividend payable for the year ended 31st March, 1961 and onwards.

(b) The rights attached to the 60,000 —5½ per cent Taxable C.R. Preference Shares will be so modified as to entitle them to a dividend at 5½ per cent per annum without deduction of tax on Company's account but subject to deduction of tax under the Income-tax Act and will be deemed to have been so modified with effect from the dividend payable for the year ended 31st March, 1961 and onwards.

The meetings will be held at the times mentioned hereunder:—

(i) Meeting of the said holders of 5½ per cent Tax-free C.R. Preference Shares at 4-00 p.m.

(ii) Meeting of the said holders of 5½ per cent Taxable C.R. Preference Shares at 4-15 p.m. or immediately after the conclusion of the meeting of the said holders of 5½ per cent Tax-free C.R. Preference Shares.

(iii) Meeting of the said holders of Ordinary Shares at 4-30 p.m. or immediately after the conclusion of the meeting of the said holders of 5½ per cent Taxable C.R. Preference Shares.

By Order of the Board,
B. K. VYAS,
Secretary.

14, RADHA BAZAR LANE,
CALCUTTA, *the 4th July*, 1961.

N.B.—1. A member entitled to attend and vote is entitled to appoint a proxy and the proxy need not be a member.

2. Explanatory Statement as required under Section 173 of the Companies Act, 1956 has been forwarded to the shareholders along with the notice.

ORIENT PAPER MILLS LIMITED

Registered Office:
BRAJRAJNAGAR (ORISSA)

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Orient Paper Mills Ltd. will be held on Friday the 11th August, 1961 at 3-30 p.m., at Brajrajnagar, the Registered Office of the Company, to consider and if thought fit, to pass, with or without modification the following resolution as a Special Resolution:—

"RESOLVED that the existing Article 75 of the Articles of Association of the Company be deleted and the following new Article 75 be substituted therefor:—

"'75. If at any time the Share Capital is divided into different classes of shares, the rights attached to any class (unless otherwise provided by the terms of issue of the shares of that class) may, subject to the provisions of Sections 106 and 107, and whether or not the Company is being wound up, be varied with the consent in writing of the holders of three-fourths of the issued shares of that class, or with the sanction of a Special Resolution passed at a Special Meeting of the holders of the shares of that class and all the provisions contained in these presents as to General Meetings shall, *mutatis mutandis*, apply to every such meeting. This Article is not by implication to curtail the power of modification which the Company would have if this Article were omitted.'"

By Order of the Board,
B. K. VYAS,
Secretary.

14, RADHA BAZAR LANE,
CALCUTTA, *the 4th July*, 1961.

N.B.—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. Explanatory Statement as required under Section 173 of the Companies Act, 1956, has been forwarded to the shareholders along with the notice.

THE BENGAL PAPER MILL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company (being the One hundred and thirty-seventh Ordinary General Meeting) will be held at the Registered Office of the Company, 14, Netaji Subhas Road, Calcutta, on Monday, the 31st July, 1961, at 3.30 p.m., for the following purposes.

1. To receive and consider the Report of the Directors and to adopt the audited accounts of the Company for the year ended 31st December, 1960.
2. To declare dividends on Preference and Ordinary shares.
3. To elect Directors in place of those who retire by rotation.
4. To appoint Auditors and fix their remuneration.
5. SPECIAL BUSINESS:
   To consider and if thought fit to pass, with or without modifications, the following resolution:
   To be proposed as a Special Resolution:
   "Resolved that consent be and is hereby given to the employment by the Company of Shri P. L. Dhanuka, a relative of Shri H. P. Dhanuka, one of the Directors of the Company, for the purpose of supervising purchases and sales by the Company, on a remuneration of Rs. 2,500 (Rupees two thousand and five hundred only) per month with effect from 1st August, 1961."

NOTICE is hereby given that the Transfer Books and Register of Members of the Company will be closed from 19th July, 1961 to 31st July, 1961, both days inclusive.

By Order of the Board,
THE BENGAL PAPER MILL CO., LTD.,
H. P. DHANUKA,
Director.

Registered Office:
14, NETAJI SUBHAS ROAD,
CALCUTTA.
3rd July, 1961.

Note:—(i) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

(ii) Explanatory statement has been annexed to the copies of this notice posted to the members.

The U.S. Government has approved of a loan of Rs. 47.5 lakhs to three joint Indo-American private ventures engaged in the manufacture of shock absorbers, air-conditioning equipment and automobile and bicycle tyres and tubes. The Carrier Air-conditioning and Refrigeration Private Ltd. formed jointly by the Carrier Corporation of U.S. and Indian firm of Voltas and J. Stone and Co. has received a loan of Rs. 37.5 lakhs. The proposed plant will be set up outside Bombay. The Madras Rubber Factory Co. with which the Mansfield Rubber Co., Ohio, is collaborating, has been given a loan of Rs. 5 lakhs. The Gabriel India Private Ltd., which is a joint venture between D. C. Anand and Associates and the Gabriel Company of Cleveland, Ohio, has received a loan of Rs. 5 lakhs. So far 13 loans aggregating Rs. 11.5 crores have been granted to India-U.S. joint ventures from the Cooley Amendment Fund.

SHRINKAGE IN PROFIT-MARGIN OF SHAW WALLACE

DIVIDEND, HOWEVER, MAINTAINED

SHAW Wallace and Company Limited (Chairman and Managing Director: Stanley Mackay Smith) is one of the oldest managing agency houses which have expanded their business by taking up trading and manufacturing activities also in recent years in view of the declining role of the managing agency system. Thus, besides acting as managing agents, agents and secretaries for tea, coal, tinplate, flour, agro-chemicals, paints and miscellaneous companies, the Company also carries on business as exporters of fertilisers, gunnies and general produce; insurance and shipping agents, importers and manufacturers of wines and spirits, timber and other products. It also manufactures glue, fertiliser mixtures, agricultural spraying equipments, superphosphates, sulphuric acid, etc. The sales of the Company during the year ended 31st December 1960 advanced to Rs. 759.18 lakhs from Rs. 637.77 lakhs in the previous year and Rs. 546.71 lakhs in 1958. The increase during the year under review is 19 per cent over and above the 16.6 per cent expansion recorded in the previous year. The income from agency and other commission and allowances also significantly improved to Rs. 55.08 lakhs from Rs. 51.69 lakhs in the preceding year and Rs. 44.61 lakhs in 1958. The other income, which mainly comprises income from investments and dividends from subsidiary companies, however, dropped from Rs. 19.74 lakhs to Rs. 16.93 lakhs. The total receipts from all these sources show an improvement of 17.2 per cent, from Rs. 709.20 lakhs to Rs. 831.19 lakhs, to be precise.

The expenses of the Company amount to Rs. 767.47 lakhs, including Rs. 30.92 lakhs for excise duty, and show a rise of 19.1 per cent over the year. In the previous year they had increased by 15.4 per cent, from Rs. 557.66 lakhs to Rs. 643.98 lakhs. As a result of the larger increase in expenses, the ratio of gross profit to total income shows a drop from 9.1 per cent in 1959 to 8.2 per cent during the year, the actual amount of gross profit being Rs. 68.49 lakhs, as against Rs. 65.22 lakhs in the previous year, revealing an increase of only 5 per cent.

In contrast to the increase of Rs. 3.27 lakhs in gross profit, the net profit is actually lower by Rs. 3.97 lakhs at Rs. 30.37 lakhs. This adverse result is the outcome of higher provisions for depreciation and taxation. Nevertheless, the dividend to ordinary shareholders has been maintained at 15 per cent per annum, subject to deduction of tax, after declaring the dividend on 6 per cent taxable preference shares at 6.66 per cent, subject to deduction of tax, in pursuance of the provisions of the Preference Shares (Regulation of Dividends) Act 1960.

The following comparative table since 1957, gives a bird's-eye view of the working results of the Company:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales	7,59.18	6,37.77	5,46.71	5,86.16
Agency and other commission and allowances	55.08	51.69	44.61	38.86
Other income	16.93	19.74	17.83	20.34
Closing stocks	1,73.90	98.89	1,14.69	95.81
Excise duty	30.92			
Other expenses	7,36.55	6,43.98	5,57.66	6,03.60
Gross profit	68.49	65.22	51.49	42.76
Provision for—				
Depreciation	12.36	8.56	7.04	4.84
Taxation	25.76	22.32	21.75	18.24
Net profit	30.37	34.34	22.70	19.68
To reserves	11.58	15.32	9.12	4.00
Dividends—				
Preference	4.00*	4.50*	3.08	3.15
Ordinary	11.25* (15%)*	11.25* (15%)*	7.50 (10%)	7.50 (10%)
Carry forward	5.14	5.15	4.87	3.65

* Subject to deduction of tax.

It must be noted that the transfers to reserves this year are lower by some Rs. 4 lakhs.

The paid-up capital of the Company at Rs. 150 lakhs is equally divided into 75,000 preference shares of Rs. 100 each and 750,000 ordinary shares of Rs. 10 each. The reserves and surplus stand at Rs. 61.82 lakhs, as against Rs. 50.59 lakhs in the previous year. There is an item called minority interest in subsidiary companies accounting for a liability of Rs. 59.15 lakhs. Current liabilities and provisions aggregate Rs. 639.61 lakhs, as against which there are current assets of the order of Rs. 669.50 lakhs. The amount of depreciation provided on a gross block of Rs. 137.90 lakhs is Rs. 37.63 lakhs. The current assets include investments amounting to Rs. 179.83 lakhs consisting of Rs. 108.96 lakhs in quoted investments and Rs. 70.87 lakhs in unquoted investments. The market value of quoted investments is lower than the book value by Rs. 11.66 lakhs.

The following important points from the Chairman's statement will be of interest to readers:

The fertiliser trade was difficult and suffered in 1960 following transport bottlenecks and delay in Government allocations of essential raw materials.

The additional manufacturing capacity of superphosphates and sulphuric acid that came into operation in October 1959 was fully employed throughout the year. The following figures of production show the progress made during the past four years:

(In tons)

Year	Acid	Superphosphates 16% basis
1960	24,150	71,545
1959	9,429	26,849
1958	7,396	23,839
1957	5,770	15,454

The turnover of insecticides and fungicides achieved significant increase in sales in the South. The income from this source improved by 22.5 per cent during the year.

The new factory in Madras for agricultural spraying and dusting equipment which started production in October 1959 achieved full production by April 1960. The equipment being manufactured is of a high standard and no difficulty is anticipated in selling the entire production.

The manufacture of glue in Calcutta, Madras and Cambay is also steadily increasing, (23,525 cwts. in 1960, as against 20,124 cwts. in 1959 and 11,688 cwts. in 1956), but it is still below expectations and is not yielding the revenue anticipated earlier. This is due to the difficulty in obtaining adequate quantities of suitable raw materials as the Government was permitting their export. The principal requirements for the manufacture of glue are suitable raw materials, an abundant supply of water, and coal with a low ash content and a high B.T.U. The Madras factory suffered from shortage of water, while the Calcutta and Cambay factories did not get adequate supply of quality coal. The management has undertaken considerable reorganisation to ensure the economic working of these factories.

The tea and coal companies under the management of the Company had another successful year. In regard to the Tinplate Company packed production of tinplate, which amounted to 73,528 tons, was a record high. The production and sales in the flour mills were slightly lower than in the preceding year due to the shortage of wheat. Income from shipping registered a modest increase of approximately 6 per cent.

The new project of yeast factory was not able to go into production in November, as a result of shipment and other unavoidable delays. Production commenced on 1st May after numerous technical difficulties had been overcome. The yeast now being produced is of excellent quality and compares favourably with the imported variety.

The proposals for the manufacture of complex fertilisers in conjunction with foreign and Indian collaborators have been placed before Government for approval.

As regards the outlook for the current year, the Chairman says:

"Business activity during 1961 continues at a satisfactory level so far. However, it is obvious that increasing industrialisation is to bring many difficulties in its train, e.g. power shortages, and we must all be ready for adverse changes over which we have no control from time to time. The blue-print of the Company's third five-year plan has been prepared. Ambitious, and we hope realisable, targets have been set for various industries and your Company hopes to contribute to the general expansion, particularly in the field of agriculture and coal production."

The Rs. 10 paid-up ordinary shares of the Company are quoted at Rs. 24.81 and, on the basis of a net dividend of Re. 1.05 per share, the yield is 4.2 per cent. In market circles, this scrip is bracketed with first class growth shares.

TRAVANCORE CEMENT FARES WELL

PROFIT SLIGHTLY HIGHER

THE financial results of the Travancore Cements Ltd. (Managing Agents: Messrs. Essel Private Ltd., Kottayam) for the year ended 31st December 1960, are in refreshing contrast with those for the previous year, in that the sales of cement had more than doubled, having risen from Rs. 33.34 lakhs to Rs. 70.88 lakhs. It will be recalled that, during 1959, production was dislocated for a period lasting over two months, owing to the installation of the white cement plant, which went into commission during the latter half of that year. The marketing of the product naturally took some time and the delay resulted in restricted turnover and accumulation of large stocks. During the year under review, on the other hand, the Company could produce more than the rated capacity of the factory and found no difficulty in marketing the entire production. Closing inventories of cement, therefore, have declined perceptibly to Rs. 8.15 lakhs as against Rs. 16.02 lakhs a year ago.

A substantial portion of this increase in turnover has, however, been nullified by an unusually high incidence of cost of packing materials and fuel. The cost of gunnies, which constitute the standard packing material for cement, increased sharply during the year, inflating the Company's bill on this account by as much as Rs. 6.10 lakhs to Rs. 9.69 lakhs. Moreover, the acute shortage of coal, to which the industries in the South were subjected during the course of the year, necessitated the use of costly furnace oil in place of coal at an additional cost of 70 per cent. As a result of these cost inflationary factors, the gross profit shows a rise of only Rs. 2.82 lakhs to Rs. 11.70 lakhs.

The provisions for Managing Agents' remuneration and depreciation have been increased nominally, from Rs. 30,238 to Rs. 57,982 for the former and from Rs. 5.61 lakhs to Rs. 5.90 lakhs for the latter. As in the past, no provision for tax liabilities has been found necessary for this year also. However, an amount of Rs. 2 lakhs has been transferred to form the nucleus of a deferred taxation reserve, from the net profit which stands improved by Rs. 2.25 lakhs to Rs. 5.22 lakhs. Out of the available sum of Rs. 3.51 lakhs, inclusive of Rs. 29,086 brought forward, the dividend has been maintained at 6 per cent per annum, subject to deduction of tax at source; the amount required for this purpose is Rs. 3 lakhs.

The progress made by the Company over the past four years will be apparent from the comparative table that follows.

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales	70.88	33.34	48.02	41.29
Other income	1.08	0.56	0.99	0.76
Closing stocks of cement and work-in-process	8.15	16.02	4.11	4.91
Raw materials and stores consumed	17.63	10.26	12.00	11.52
Salaries, wages and bonus	12.39	11.20	11.11	9.12
Other expenses	23.37	15.40	14.49	14.05
Gross profit	11.70	8.88	10.52	10.15
Managing Agents' remuneration	0.58	0.30	0.56	0.54
Provision for—				
Depreciation	5.90	5.61	4.12	4.45
Taxation				
Net profit	5.22	2.97	5.84	5.16
Transfer from reserves		1.50		
Transfer to reserves	2.00	3.86	3.41	0.00
Ordinary dividends	3.00 (6%)*	3.00 (6%)*	3.00 (6%)	3.00 (6%)
Carry forward	0.51	0.29	2.68	3.25

* Subject to deduction of tax.

The share capital of the Company, consisting of 500,000 ordinary shares of Rs. 10 each fully paid is Rs. 50 lakhs with a supplement of Rs. 14.28 lakhs in reserves and surplus account. Current liabilities, including secured and unsecured loans, are altogether Rs. 53.70 lakhs. The fixed assets of the Company having a book value of Rs. 137.91 lakhs have been written down to Rs. 74.02 lakhs. The current assets, loans and advances aggregate Rs. 43.96 lakhs.

The Company's white cement has been very popular throughout India because of its supreme whiteness and excellent qualities. Due to the high selling price incidental to higher production costs and high freight charges, there has been some consumer resistance. The Directors are of the opinion that this is at most a passing phase and that a decent market will be gradually established leading to better offtake in the future.

The Company's Rs. 10 fully paid shares, which are listed on the Madras Stock Exchange, are currently quoted at Rs. 7.68 *cum-div.* On reducing this price to an *ex-div.* basis, the net return on the investment works out to 5.8 per cent per annum.

BURN AND COMPANY REPORTS SATISFACTORY PROGRESS

DIVIDEND REPEATED—RESERVES GET MORE

THE progress made by Burn and Company Ltd.—a large-sized engineering concern, with diversified activities under the management of Martin Burn Ltd., Calcutta—during the year ended 30th April 1961 is satisfactory. Despite shortages of transport, power and such basic raw materials as steel and cement, the Company has been able to show a perceptible improvement in gross and net profit alike, maintain the dividend at the handsome level of 28.5 per cent per annum (subject to tax) for the third year in succession and set aside a larger amount to reserves than a year ago. It would have, indeed, fared much better but for the aforesaid shortages, which, incidentally, were mainly the outcome of defective policies persued by the Government. The chief beneficiary of such improvement would have been the Government itself, for it would have received a much larger amount from the Company by way of taxation. It will thus be noted that the Government itself is, in a way, responsible for the slow capital formation in the country.

A marked decline of 20.5 per cent in sale proceeds, from Rs. 1,142.19 lakhs in 1959-60 to Rs. 947.12 lakhs in 1960-61, has occurred. But the whole of this decline does not indicate a drop in the volume of work done. The Directors say that sales figures for the year under review are not strictly comparable with those for the previous year, as they have had to be regrouped to confirm with the requirements of the amended Company Law. According to them, sales, which mainly represent work finished, have been well maintained. When comparing them with the corresponding sales figures of the previous year, regard must be had for the volume of work-in-progress. The closing stocks of finished goods and work-in-progress have increased by 26.8 per cent from Rs. 287.45 lakhs to Rs. 364.53 lakhs. The receipts from other income have once again risen to Rs. 86.81 lakhs as compared with Rs. 78.83 lakhs in the previous year and Rs. 65.64 lakhs in 1958-59.

It is heartening to find that the gross profit has increased from Rs. 126.83 lakhs to Rs. 139.66 lakhs and that the ratio of gross profit to sales has also gone up from 11.1 per cent in the previous year to 14.7 per cent. On the whole, the results for the year under review are quite satisfactory, considering the heavy cost of keeping the plant at the various works in full state of repair and also the electric power cuts experienced at the Howrah Works during April 1961.

The net profit also reveals an improvement from Rs. 33.59 lakhs to Rs. 48.54 lakhs, after providing a sum of Rs. 9.64 lakhs for managing agency commission, Rs. 23.73 lakhs for depreciation and Rs. 57.75 lakhs for taxation. The rise in profit has enabled the Directors to transfer to reserves a substantially large amount of Rs. 22.25 lakhs, as against a mere Rs. 7.45 lakhs in the previous year. It will be noted that the amount set apart for reserves is three times the provision made last year. The dividend to equity shareholders has been maintained at 28.5 per cent, subject to deduction of tax, or a net dividend of Rs. 19.95 per share. The dividends on preference shares are proposed to be paid in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

The following comparative table reveals at a glance the financial results of the Company for the last four years:

(In lakhs of rupees)

	For the year ended 30th April			
	1961	1960	1959	1958
Sale proceeds	9,47.12	11,42.19	10,16.81	9,55.68
Other income	86.81	78.83	65.64	94.96
Closing stocks of finished goods and work-in-process	3,64.53	2,87.45	3,00.51	4,31.41
Raw materials, stores and spares consumed	5,48.58	5,87.59	5,11.62	5,56.94
Other expenses	4,23.03	4,28.88	3,66.91	3,46.66
Gross profit	1,39.66	1,26.83	1,33.02	1,41.28
Managing Agency commission	9.64	11.35	11.76	12.83
Provision for—				
Depreciation	23.73	18.74	18.31	17.36
Taxation	57.75	69.15	60.00	59.00

Preference	2.38*	2.38*	2.07*	1.81
Ordinary	23.94* (28½%)*	23.94* (28½%)*	23.94* (28½%)*	16.80 (20%)
Carry forward	1.21	1.25	1.57	1.30

* Subject to deduction of tax.

The chart on the distribution of revenue in 1960-61 reveals that materials took 44.3 per cent, employees 28.8 per cent, working expenses 8.3 per cent, taxation 8.3 per cent, depreciation and repairs 4.8 per cent, dividends 2.5 per cent, reserves 2.1 per cent and administration 0.9 per cent. The total emoluments to employees amounted to Rs. 307.80 lakhs and payments to Government by way of various taxes and customs duty Rs. 139.20 lakhs.

The total paid-up capital of the Company, which was last increased in 1953-54 by Rs. 42 lakhs by issue of bonus shares in the proportion of a share for share, remains steady at Rs. 112 lakhs, consisting of Rs. 13 lakhs in 7 per cent cumulative preference shares, Rs. 15 lakhs in 6 per cent cumulative preference shares and Rs. 84 lakhs in ordinary shares of Rs. 100 each. The reserves and surplus at Rs. 257.07 lakhs are more than double the paid-up capital. The current liabilities and provisions which have increased from Rs. 560.79 lakhs to Rs. 739.38 lakhs are amply covered by current assets at Rs. 817.24 lakhs. Of the investments of the Company at Rs. 7.82 lakhs, Rs. 7.47 lakhs are in quoted investments, the market value of which is substantially higher at Rs. 9.10 lakhs. The gross block account of Rs. 520.79 lakhs stands depreciated at Rs. 282.98 lakhs (inclusive of Rs. 87.19 lakhs for incompleted work), the depreciation provided so far being Rs. 325 lakhs. The financial position of the Company is thus quite strong.

The Howrah Works, according to the Directors' report, has a large volume of orders but there is little improvement in the unsatisfactory steel position. The reconstruction and modernisation of the various refractory works in Bengal and Bihar are being continued. Progress is, however, somewhat slow, as the management does not want the expansion work to interfere too greatly with production. Considerable improvement in the working of this group is expected as soon as the alterations are completed. The operations at the Jabalpur Works have been entirely satisfactory. The magnesite mines in Salem continue to give a steady output and measures are being taken to produce the increased quantities that will be required when the new magnesite brick making factory goes into production. Progress on the construction of the new factory is steady but not as fast as was originally planned due to transport difficulties and shortages of cement and steel.

The current quotation of the Rs. 100 fully paid ordinary shares of the Company at Rs. 521 gives a net yield of 3.8 per cent on a net dividend of Rs. 19.95 per share.

CHEMICOAT LTD.

A new company under the name of Chemicoat Ltd. has been formed to undertake the manufacture of metalised paper and plastic films required for packing foods, textiles, cigarettes, as well as printed labels, paper condensors, capacitors, etc. The factory is to be located at Baroda in Gujarat State. The issued capital of the Company is Rs. 20 lakhs; the authorised capital is Rs. 50 lakhs. The Company is expected to enter the market for funds in the near future.

The approval of the Government of India has already been obtained for the production to be undertaken in technical collaboration with a Dutch firm. Metalcoating Establishment which holds patent rights for this process. In addition, the Industrial Credit and Investment Corporation of India has agreed to give a loan of Rs. 12.75 lakhs to meet the foreign exchange requirements for imports of machinery.

The Commonwealth Development Finance Company has announced the grant of a loan of £175,000 for the manufacture of non-ferrous tubes, pipes, rods, and sections in India. The loan will provide the foreign exchange requirements for a factory being erected in Bombay by Kamani Tubes Private Ltd., in collaboration with the Yorkshire Imperial Metals Ltd., an associate of Imperial Chemical Industries, which has arranged the procurement of plant in the United Kingdom, and will assist in the early period of running, under a 10-year technical-collaboration agreement. The foreign firm's part in the scheme is largely one of supplying the know-how. It is also hoped to provide assistance from time to time by means of short visits to India by technicians from Leeds.

Twyfords Ltd., the well-known British firm of sanitaryware producers and engineers of Stocke-on-Trent, Staffordshire, is to be associated in the establishment of a factory in India which is expected to go into production next year. The factory will be built at Delhi by Hindusthan Twyfords Ltd. The British firm will have 26 per cent interest in the new factory. Its contribution will include provision of technical know-how and training of Indian nationals in Britain. The training programme is already under way.

COMPANY MEETINGS AND DIVIDENDS

CONCORD OF INDIA INSURANCE CO., LTD. Annual General Meeting, Calcutta, 17th July 1961. **Dividend:** Re. 1.00 per share, taxable. **Transfer books** remain closed from 3rd to 17th July 1961, both days inclusive.

BASMATIA TEA CO., LTD. **Annual General Meeting, Calcutta, 19th July 1961. Dividend: Rs. 3.50** per share, subject to deduction of tax. Transfer books remain closed from 12th to 19th July 1961, both days inclusive.

METAL BOX CO. OF INDIA LTD. **Annual General Meeting, Calcutta, 19th July 1961. Dividend:** Re. 1.60 per share, final, subject to deduction of tax. Transfer books remain closed from 1st to 19th July 1961, both days inclusive.

OCTAVIUS STEEL AND CO., LTD. Annual General Meeting, Calcutta, 21st July 1961. Transfer books remain closed from 14th to 21st July 1961, both days inclusive.

KESORAM COTTON MILLS LTD. **Annual General Meeting, Calcutta, 22nd July 1961. Dividend: Re. 1.20 per share, subject to deduction of tax.** Transfer books remain closed from 10th to 22nd July 1961, both days inclusive.

LARSEN AND TOUBRO LTD. **Annual General Meeting, Bombay, 25th July 1961. Dividend: Re. 1.80 per ordinary share, subject to deduction of tax, payable on or after 5th August 1961. Transfer books remain closed from 26th June to 22nd July 1961, both days inclusive.**

HINDUSTAN MOTORS LTD. Annual General Meeting, Calcutta, 25th July 1961. Dividend: 12 per cent or Re. 1.20 per share, subject to deduction of tax, payable on and after 25th July 1961. Transfer books were closed from 30th May to 27th June 1961, both days inclusive.

NEW INDIA ASSURANCE CO., LTD. Annual General Meeting, Bombay, 26th July 1961. Dividend: 38 per cent or Rs. 5.70 per share (includes bonus of Re. 1.20 per share), subject to deduction of tax. Transfer books remain closed from 26th June to 25th July 1961, both days inclusive.

SHAW WALLACE & CO., LTD. Annual General Meeting, Calcutta, 26th July 1961. Dividend: 15 per cent or Re. 1.50 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 17th to 26th July 1961, both days inclusive.

MARINE AND GENERAL INSURANCE CO., LTD. Annual General Meeting, Calcutta, 26th July 1961. Dividend: *Nil.* Transfer books will remain closed from 18th to 26th July 1961, both days inclusive.

DHELAKHAT TEA CO., LTD. Annual General Meeting, Calcutta, 27th July 1961. Dividend: 12½ per cent or Re. 1.25 per share, subject to deduction of tax, payable on and after 27th July 1961. Transfer books remain closed from 13th to 27th July 1961 both both days inclusive.

NATIONAL CO., LTD. Annual General Meeting, Calcutta, 27th July 1961. Dividend: Re. 0.75 per ordinary share, subject to deduction of tax. Transfer books remain closed from 7th to 27th July 1961, both days inclusive.

BURN AND CO., LTD. Annual General Meeting, Calcutta, 28th July 1961. Dividend: 28½ per cent or Rs. 28.50 per ordinary share, subject to deduction of tax, payable on or after 7th August 1961. Transfer books will remain closed from 20th to 28th July 1961, both days inclusive.

HATTIKHIRA TEA CO., LTD. Annual General Meeting, Calcutta, 28th July 1961. Dividend: *Nil.* Transfer books will remain closed from 21st to 28th July 1961, both days inclusive.

ANGLO-FRENCH TEXTILES LTD. Annual General Meeting, Pondicherry, 28th July 1961. Dividend: 15 per cent or Rs. 15.00 per share, for the year ended 31st December 1960, subject to deduction of tax. Transfer books remain closed from 14th to 29th July 1961, both days inclusive.

KATRAS JHERRIAH COAL CO., LTD. Annual General Meeting, Calcutta, 29th July 1961. Dividend: 40 per cent or Rs. 4.00 per share, subject to deduction of tax. Transfer books remain closed from 15th to 29th July 1961, both days inclusive.

BHARTIA ELECTRIC STEEL CO., LTD. Annual General Meeting, Calcutta, 31st July 1961. Dividend: 10 per cent or Re. 1.00 per share, subject to deduction of tax. Transfer books will remain closed from 21st to 31st July 1961, both days inclusive.

BENGAL PAPER MILLS CO., LTD. Annual General Meeting, Calcutta, 31st July 1961. Dividend: 32 per cent or Rs. 8.00 per ordinary share, for the year ended 31st December 1960, subject to deduction of tax. Transfer books will remain closed from 19th to 31st July 1961, both days inclusive.

NATIONAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 31st July 1961. Dividend: 16 per cent or Re. 1.60 per ordinary share, subject to deduction of tax. Transfer books remain closed from 14th to 31st July 1961, both days inclusive.

TATA OIL MILLS CO., LTD. Annual General Meeting, Bombay, 3rd August 1961. Dividend: Rs. 5.75 per ordinary share or 23 per cent subject to deduction of tax, payable on and after 4th August 1961. Transfer books were closed from 12th June to 7th July 1961, both days inclusive.

WESTERN BENGAL COALFIELDS LTD. Annual General Meeting, Calcutta, 7th August 1961. Transfer books will remain closed from 22nd July to 7th August 1961, both days inclusive.

HOOLUNGOOREE TEA CO., LTD. Annual General Meeting, Calcutta, 9th August 1961. Dividend: Rs. 10.00 per share, subject to deduction of tax. Transfer books will remain closed from 2nd to 9th August 1961, both days inclusive.

UNIVERSAL CABLES LTD. (formerly Hindusthan Woollen Mills Ltd.). Annual General Meeting, Calcutta, 9th August 1961. Dividend: Re. 0.50 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 24th July to 9th August 1961, both days inclusive.

KUMARDHUBI ENGINEERING WORKS LTD. Dividend of Re. 0.30 per ordinary share, subject to deduction of tax, for the year ended 30th November 1960.

NATIONAL JUTE CUTS DIVIDEND

TURNOVER UP, BUT PROFIT MARGIN LOW

READERS of this journal must be aware by now that the last two years have been quite unfavourable to the jute mill industry in India. The sharp rise in the price of raw jute due to scarcity conditions not only led to a disproportionate increase in the raw material quantum of the cost of production, but its non-availability at even these levels resulted in a serious underutilisation of the installed capacity. With the on-cost thus spread over a restricted output, the gross profit of individual companies showed sharp declines, despite the unhealthy inflated turnover figures. These disturbing features are fully reflected in the accounts of the National Jute Company Ltd., Calcutta, for the year ended 31st October 1960, which disclose that, notwithstanding the substantial increase of as much as Rs. 104.07 lakhs to Rs. 263.51 lakhs in the sale of gunnies, the gross profit stands improved by a meagre Rs. 90,000 or so to Rs. 20.16 lakhs.

Owing to the resignation of the Managing Agents, no provision covering their remuneration has been found necessary and made. The provision for depreciation has, however, been higher at Rs. 7.86 lakhs, as against Rs. 3.41 lakhs in the previous year. In view of the large-scale additions to plant and machinery made during the year, the Company has had to set aside out of its taxable profits a heavy amount for development rebate and this has been responsible in limiting the provision for taxation to Rs. 35,000 only. After these two essential provisions but before development rebate, the net profit shows an improvement of Rs. 3.16 lakhs to Rs. 11.95 lakhs.

A sum of Rs. 1.06 lakh has been credited back to the profit and loss account as provisions no longer required while an additional amount of Rs. 3.18 lakhs has been transferred from the dividend equalisation reserves. Transfers to reserves have been raised from Rs. 3.75 lakhs last year to Rs. 12.79 lakhs, of which the development rebate reserve's share is Rs. 12.03 lakhs. The net additions to reserves thus amounts to Rs. 8.55 lakhs.

After the aforesaid adjustments, there is a balance of Rs. 3.60 lakhs, including Rs. 20,258 brought forward, for distribution among the shareholders. Of this, Rs. 10,500 has become payable to the preference shareholders as additional dividends for the year 1959 under the provisions of the Preference Shares (Regulation of Dividends) Act 1960. Preferred dividends for the year under report have been declared at Rs. 9.10 per share (of Rs. 100 each), instead of the stipulated rate of 7 per cent in accordance with the terms of the said Act. Due to the unsatisfactory profit position, ordinary dividends have been reduced from 10 per cent subject to deduction of tax to 7½ per cent subject to deduction of tax. It is to be noted that the amount required to pay these dividends is equal to that withdrawn from the dividend reserve.

The progress made by the Company during the past four years is compared in the following table:

(In lakhs of rupees)

	For the year ended 31st October			
	1960	1959	1958	1957
Sales	2,63.51	1,59.44	1,40.50	1,35.57

Carry forward	0.41	0.20	0.06	0.19

* Including Rs. 10,500 as additional dividends for the year ended 31st October 1959.
† Subject to deduction of tax.

During the year, the Company regrouped its various reserves. A new reserve styled "General reserve 2" was created. The already existing general reserve account was styled "No. 1 account." The reason for this change given by the Directors is as follows:

"Under Section 49-BB of the Income-tax Act, a tax credit of 10 per cent on the dividends will be available to the Company if they are distributed out of the profits and gains of the Company which are charged to income-tax in one or more assessment years ending before 1st April 1960. The general reserve No. 1, the dividend equalisation reserve and the emergency reserve were, therefore, analysed and the amounts of the profits and gains, which were not actually charged to income-tax, have been transferred to general reserve No. 2. The final position is that the general reserve 1 and the dividend equalisation reserve consist of taxed profits only while the general reserve 2 will consist of untaxed profits."

As disclosed by the balance-sheet as at 31st October 1960, the financial position of the Company is strong. The share capital of Rs. 40 lakhs (Rs. 5 lakhs in 7 per cent preference shares of Rs. 100 each and Rs. 35 lakhs in ordinary shares of Rs. 10 each) is packed by reserves and surplus amounting to Rs. 53.05 lakhs. Current liabilities and loans from banks total Rs. 52.85 lakhs and are fully covered by current assets and loans and advances together aggregating Rs. 62.90 lakhs. Inclusive of the net additions of Rs. 49.99 lakhs to fixed assets during the year, the gross block is valued at Rs. 108.03 lakhs and is written down to Rs. 83 lakhs.

The Company has been able to install and commission 60 wideolooms, out of the present target of installing 100 wideolooms. Of the 60 wideolooms, 46 looms are of 168" R.S. and 14 looms are of 210" R.S. (and the mill has taken up the production of a maximum of 157" carpet backing cloth on 168" R.S. looms and a maximum of 196" carpet backing cloth on 210" R.S. looms).

The Company has also got sanction from the Indian Jute Mills Association to install 4 jute webbing looms. These will start production in the near future. Further, the Directors are contemplating diversification of production and manufacture of specialities. It has been granted a loan of Rs. 39.39 lakhs by the National Industrial Development Corporation Limited for the purchase of new machinery against mortgage of present and future fixed assets. The Company has made a second loan application to N.I.D.C. for another loan of Rs. 16.94 lakhs for further expansion and is under consideration.

The ordinary shares of the Company are being currently quoted at Rs. 19.12. The net yield works out to Rs. 2.2 per cent per annum.

SELECTED SATGRAM TO ISSUE RIGHTS

An increase of 23 per cent in the raising of coal as compared with 10 per cent for the country as a whole, a similar improvement in despatches, and an upgrading of some of its product have contributed to increasing the sales of the Selected Satgram Collieries Ltd. (Managing Agents: S. D. Sethia & Co. Pvt. Ltd., Calcutta) by Rs. 8.57 lakhs to Rs. 52.71 lakhs for the year ended 31st December 1960. This improvement has been brought about by extensive development work needing continued investment of capital funds and adding to the cost of operations. The gross profit has, therefore, shown only a nominal increase of Rs. 1.86 lakh to Rs. 7.95 lakhs. Provision for depreciation has been increased to Rs. 2.12 lakhs while that for taxation has been slightly reduced to Rs. 1.89 lakh. The net profit, therefore, shows an increase of Rs. 66,000 or so to Rs. 3.29 lakhs. Transfer to reserves is a shade lower at Rs. 1.03 lakh, as against Rs. 1.09 lakh. An interim dividend of Rs. 8 per share, subject to deduction of tax, was declared on 13,000 old equity shares, absorbing a sum of Rs. 1.04 lakh. A similar final dividend has now been declared for the old shares and a *pro rata* dividend at the same rate has been recommended for the 6,500 new equity shares issued during August last year. This brings the total dividends payable in respect of the year under review to 16 per cent, subject to deduction of tax, absorbing Rs. 2.25 lakhs as against Rs. 1.56 lakh a year ago.

The following comparative table presents synoptically the progress made by the Company during the past four years.

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

* Subject to deduction of tax.

As disclosed by the balance-sheet as at 31st December 1960, the Company's share capital stands at Rs. 19.50 lakhs in 1.95 lakh ordinary shares of Rs. 100 each. This is backed by Rs. 3.89 lakhs in the reserves. Current liabilities total Rs. 19.08 lakhs in addition to Rs. 12.81 lakhs as secured and unsecured loans. The gross block is valued in the books of the Company at Rs. 34.65 lakhs and yields, on deducting Rs. 9.62 lakhs as accumulated depreciation, a net block worth Rs. 25.03 lakhs. Current assets, loans and advances aggregate Rs. 30.11 lakhs.

As for the future, the Company has placed before it a target of 44,000 tons of coal per month from the existing units, excluding the Dishergarh seam which has now been explored and is expected to yield selected grade of blendable coal of good metallurgical quality. Negotiations are afoot with foreign experts for its final exploration. It is estimated that 25,000-30,000 tons per month can be obtained from this mine, thus bringing the targeted output to at least 7 lakh tons of coal annually to be achieved by the end of the third Five-year Plan. This programme has necessitated increasing the authorised capital from Rs. 50 lakhs to Rs. 2 crores and the subscribed capital from Rs. 19.50 lakhs to Rs. 40 lakhs. This latter increase is to be met from the issue of an additional 20,500 equity shares of Rs. 100 each at par to existing shareholders.

The Rs. 100 fully paid equity shares of the Company are currently quoted, on the cash list of the Stock Exchange at Bombay, at Rs. 135.50 *cum-div.* Reducing the price to an *ex-div.* basis, the net yield on the scrip works out to 8.61 per cent per annum.

FRESH CAPITAL ISSUES

Two companies have been granted consent for the issue of further capital—the Indian Oil Company, which is a Government company, and Dodge and Seymour (India) Private Ltd. The details are given below:

Indian Oil Company

The Company has been granted consent to issue further capital of the value of Rs. 150 lakhs in equity shares of Rs. 1,000 each for cash at par. The proceeds of the issue will be utilised for marketing and distribution of petroleum products by taking over the entire production of the two public sector refineries which are being set up at Gauhati and Barauni. The I.O.C. has a subscribed and paid-up capital of Rs. 57.25 lakhs.

Dodge and Seymour

The Company has been granted consent to issue shares in lieu of cash dividends after deduction of tax of the total value of Rs. 54,000 in 540 equity shares of Rs. 100 each.

Notice

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED

TIRUCHIRAPALLI

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Twenty-first Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Tennur, Tiruchirapalli, on the 30th August 1961, at 4 p.m., to transact the usual business as per notice individually posted to the Shareholders.

The Register of Members and the transfer books of the Company will be closed from 5th August 1961 to 30th August 1961 (both days inclusive).

The Directors at their meeting held on 30th June 1961 have recommended the following dividends to the members for the year ended 31st March 1961:

4½% less tax final dividend on 6,99,968 equity shares which with the 4½% less tax interim dividend already paid makes a total dividend of 9% and *pro rata* dividend at 9% per annum less tax on 28 new Equity Shares,

and 3.85% less tax, final dividend on I and II Preference shares which together with the 3.30% less tax interim dividend already paid makes a total dividend of 7.15%,

and an additional dividend of Rs. 0.47 naye paise per cent less tax on Preference shares being the balance amount which becomes payable for year ended 31st March 1960 (Income-tax assessment year 1960-61) on the 1st and 2nd Preference shares as per the Preference Shares (Regulation of Dividends) Act 1960.

The dividend when declared will be made payable on and after 30th August 1961 to those Shareholders whose names stand on the Register of Members on 30th August 1961 or to holders of dividend mandates. Members are requested to intimate change of address, if any.

Members are requested to attend the meeting in person or by proxy.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(By Order of the Board of Directors),
SESHASAYEE BROTHERS PRIVATE LIMITED,
Managing Agents & Chief Engineers.

TIRUCHIRAPALLI,
30th June 1961.

Carried forward	48	..

* This includes Rs. 5,50,000 transferred from dividend equalisation reserve for the purpose of paying dividends and Rs. 1,78,198 transferred from development and rehabilitation reserve.

† After adjusting the loss of Rs. 4,01,790 brought forward from 1958 accounts.

Extracts from the Directors' report: During the year under review, the trading conditions remained favourable. The mills had to implement the recommendations of the Central Wage Board for the Cotton Textile Industry from 1st January 1960 which led to an increase in the basic salaries of all workers by a minimum of Rs. 8. The dearness allowance payable to the employees also remained on a very high level. The prices of store materials, chemicals, dyes and other items also showed an upward trend.

The Textile Industry of India, in September 1960, adopted a scheme of voluntary price control, under which all prices were related to August 1959 prices. The prices of fine and superfine goods which this Company manufacture, were subjected to a further cut amounting to 4 per cent from January 1961. The cloth produced by the mills is being sold under the scheme of voluntary price control.

During the year, a sum of Rs. 4,46,388 has been spent on extensions of buildings and installation of machinery and equipment on mill's reorganisation, and renovation programme. Main items covered by these expenditures are *Carding Engines, Automatic Card Stripping Equipment, Doubler Winder, Fluorescent Fittings* and *Shallow Trunkings.*

The programme of modernising the mills is being pursued with vigour. Orders have also been placed for *High draft Spinning Frames* with preparatory machines for *Spinning, Doubling Frames* and *Humidification Towers.* This programme will start in the third quarter of 1961 and will continue till the end of the year 1962. This will cost the Company an additional outlay of about Rs. 45,00,000.

The installed capacity of the mills is 42,708 spindles, 1,452 doubling spindles and 920 looms with complete dyeing and bleaching plants.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	30,00,000	Gross block	1,56,85,887

Ordinary	6,00 (30%)	5,00 (25%)
Carried forward	6	5,57

* This represents the amount transferred from dividend equalisation reserve for the purpose of paying dividends.

Extracts from the Directors' report: The Textile Industry of India, in September 1960, adopted a scheme of voluntary price control, under which all prices were related to August 1959 prices. The prices of lower medium and higher medium goods which this Company manufacture, were subjected to a further cut amounting to 4½ per cent from January 1961. The cloth produced by the mills is being sold under the scheme of voluntary price control.

The budget proposals for the year 1961-62 have raised the excise duty on cotton cloths. A new levy was also imposed on cotton yarn issued for the production of cotton cloth. However, on a representation of the industry, the said levy on yarn is being converted into a flat uniform increase on all types of cloths. A part of this new levy, will have to be borne by the Company. Increases have been made in custom duties, thereby raising the cost of machinery and spare parts and fresh levies have been imposed on coal-tar dyes and other colours consumed by mills.

During the year, a sum of Rs. 33,27,098 has been spent on extension of buildings and installation of machinery and equipment on mill's reorganisation, renovation and modernisation programme. Main items covered by these expenditures include six *Textool Fly Frames*, nine *Ring Frames*, one *Sliver Lap Machine* and four *Combers*, one *Doubler Winder*, one *Barber-Colman Winding & Warping Unit*, 12 *Fully Automatic Pirn Winders*, two *Sucker Sizing Machines*, one *Hydro conditioning machine* and two automatic cloth dyeing *Jiggers*, and buildings for Spinning and extension and automatic loom shed.

The programme of rehabilitation and modernisation is still being pursued with vigour and further orders have been placed for 24 *Cards*, 5 *Whitin's Draw Frames*, 36 *Ring Frames* (15,240 *Spindles*), 10 *Textool Intermediate Frames*, 2 *Combers*, 96 *Draper's Automatic Looms*, 96 *Ordinary Looms*, One 3 *Bowl Water Mangle*, One *Sanforizing Machine*, two *humidification plants* and equipments necessary for electrification including one 750 KVA *Transformer*. Out of the above, 5 *Draw Frames*, 10 *Inter Frames*, 96 *Ordinary Looms*, 96 *Draper's Looms* and *Sanforizing machine* will go *into production during the year 1961. This will* cost the Company an additional outlay of about Rs. 57 lakhs.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	32,08,052	Gross block	1,82,78,672

Total available balance	2,93	2,67
Transfer to general reserve	70	70
Proposed dividend (taxable)	1,78 (35%)	1,53 (30%)
Carried forward	45	44

N.B.—Adjustments include the balance brought forward from the previous year and excess wealth-tax provision written back if any.

Extracts from the Directors' report: A crop of 2,647 quintals (7,295 maunds) was secured and sold at an average price of Rs. 7.21 per Kg. This compares with a crop of 2,762 quintals (7,611 maunds) in 1959, which sold at an average price of Rs. 6.59 per Kg. The increase in the average price reflects a better market and a further improvement in the quality of tea manufactured. The decrease in crop was due to less satisfactory climatic conditions, rainfall for the year at 159 Cms. (63 inches) being only about 60 per cent of the average of 262 Cms. (103 inches) for the previous 10 years. Estimates for the current season have been framed for a crop of 2,900 quintals (8,000 maunds).

Capital expenditure during the year, amounting to Rs. 2,09,868, includes the cost of equipment for the oil firing of the drying machinery, further electrification of the factory and the construction of labour and staff quarters.

For some time the Board has had under consideration the capital structure of the Company, and on 5th May 1961, the members of the Company were advised that the Board proposed to recommend to members that Rs. 2,55,000 be capitalised out of general reserves to enable a bonus issue to be made in the ratio of one bonus share for every two shares held. An extraordinary general meeting of the Company will be held on 19th July 1961, to consider the necessary resolutions.

Messrs. Andrew Yule & Co., Ltd., ceased to act as managing agents of the Company on 15th August 1960, and at an adjourned extraordinary general meeting of the Company held on 23rd August 1960, they were appointed Secretaries and Treasurers of the Company with effect from 16th August 1960.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	5,10,000	Gross block	20,56,693

* Only Rs. 330.

† Subject to deduction of tax.

Extracts from the Directors' report: The provision for income-tax on Preference share dividend was made in accordance with the provisions of Preference Shares (Regulation of dividends) Act, 1960.

The arrangement for shifting another factory wherein injectables are now being prepared to the Company's new factory at Sarsuna, is now complete. The Company shall effect the transfer as soon as necessary sanction of the Drug Control Authorities is obtained. In order to facilitate quick movement of goods another depot was started in January, 1961 at Baroda, thus bringing the total number of branches and depots to sixteen.

Accounts in brief as at 31st December 1960 are as under:—

Transfer to reserves	7,67	2,00
Proposed dividends (taxable) 4% Preference	26	28
" " " Ordinary	2,10 (15%)	1,26 (9%)
Carried forward	16	12

N.B.—Adjustments include the balance brought forward from the previous year.

* This represents the amount transferred from general reserve.

Extracts from the Directors' report: During the year under report, the Award of the Central Wage Board for the Cotton Textile Industry was implemented and as a result there is a significant rise in the wage structure of the Company. This and other factors such as cost of cotton, colours, stores, etc., increased the cost of production. However, the trading conditions were comparatively better and the directors consider the resulting profit for the year under report satisfactory.

The programme of renovation of the Company is in progress. During the year additional machinery worth Rs. 8,46,394 was received and installed. The Company is now embarking upon a comprehensive plan of modernisation and rehabilitation of the old machinery in spinning and weaving sections. 15 *New Ring Frames*, 248 *New Looms* (including 48 *Automatic Looms*) and other preparatory machinery have been already ordered. The bulk of the remaining machinery will be replaced in a phased programme lasting 4 to 5 years.

The installed capacity of the Mills is 37,092 *spindles and 761 looms.*

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	18,90,000	Gross block	1,05,37,887

Carried forward	1	91

N.B.—Adjustments include the balance brought forward from the previous year; excess provision for income-tax for past years written back and other credit items.

Extracts from the Directors' report: The directors are glad to report that the Company's income-tax Appeals have been allowed for the years 1952. 1953 and 1954 and the amount of excess provision resulting therefrom has made it possible to create the reserves viz., general reserve and dividend equalisation reserve.

The shortage and irregular supply of raw materials has continued to hamper production. The plant for the manufacture of *A.C.S.R. Conductors* has been completely installed during the current year and production is expected to start immediately on receipt of raw materials. The directors hope that working results of this plant will be reflected in the next account.

D = Dividend. B = Bonus.

Extracts from the Directors' report: The directors hope that the working results for the year, of the Mills will be found satisfactory.

The Central Government have approved the re-appointment of Messrs. Sakarlal Balabhai & Co., Ltd., as the managing agents of the Company for a period of 5 years from 15th August 1960.

The directors have to state that as per Resolution No. 5 of the notice of the extraordinary general meeting of the members of the Company convened on 28th February 1961, it was proposed to issue 2 fully paid ordinary shares of Rs. 250 each in lieu of one ordinary share of Rs. 500 each to the ordinary shareholders whose names stand in the register of members as on 28th February 1961. However, in the said meeting it was decided to issue 2 fully paid ordinary shares of Rs. 250 each in lieu of one ordinary share of the face value of Rs. 500 each to the holders of ordinary shares as on 27th June 1961 instead of on 28th February 1961. The directors have, subject to the approval of the Central Government, resolved to issue fully paid ordinary shares as bonus shares in proportion of one share of Rs. 250 each for every 4 shares of Rs. 250.

After the close of the year under report, the Company has placed orders for machinery estimated to cost Rs. 25.35.000 and have placed contract for extension of building for erecting the machinery at an estimated cost of Rs. 90,000.

Extracts from the Directors' report: As was contemplated in the last year's report of the Board, there has been during the year under review, steady increase in the prices of cotton on the one hand and notable fall in the yarn prices of the counts that this Company spins on the other hand. The wages to employees of the Company have been raised in compliance with the Award of the Central Wage Board. These factors mainly weighed heavily on the working of the Company and have resulted in the reduction of the profits earned during the year as compared to the previous year. In spite of these obstacles the Company was able to earn fair profits. The directors consider that the profits earned during the year are very satisfactory.

The Company has disposed of its investment in the South India Viscose Limited for a profit of Rs. 26.520 and has again invested in the same company already to the extent of Rs. 6,00,000. It has also subscribed for 2,400 right shares issued by the Company for which a sum of Rs. 2,52,000 (inclusive of Rs. 12,000 as premium) has been paid during the current year.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	15,36,800	Gross block	94,68,632
Reserves and surplus	3,93,716	—Depreciation	54,34,367
Other liabilities	59,79,216		
		Net block	40,34,265
		Current assets	32,57,159
		Investments	6,00,250
		Cash	18,148
	Rs. 79,09,822		Rs. 79,09,822

Notice

THE COCHIN STATE POWER & LIGHT CORPORATION, LIMITED

NOTICE OF THE 25TH ANNUAL GENERAL MEETING OF THE SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 25th Annual General Meeting of the Shareholders of THE COCHIN STATE POWER & LIGHT CORPORATION, LIMITED, will be held at the Registered Office of the Company at Huzur Jetty, Foreshore, Ernakulam, on Monday the 28th August 1961, at 11 a.m.

AGENDA

1. To consider and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st March, 1961.
2. To consider the declaration of a Dividend for the year 1960-61.
3. To appoint a Director in the place of Shri A. G. Lalan who retires by rotation.
4. To appoint a Director in the place of Shri S. S. Koder who retires by rotation.
5. To appoint Auditors for the current year and fix their remuneration.
6. Any other subject that may be brought up before the meeting.

The Share Transfer Books of the Company will remain closed from 21st August 1961 to 28th August 1961, both days inclusive.

(By Order of the Board),
For CHANDRIE & Co. (PRIVATE) LTD.,
S. VENKATARAMAN,
Director,
Managing Agents.

20, IIND LINE BEACH.
MADRAS, *7th July*, 1961.

Note: (1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a Proxy need not be a member of the Company.

(2) The Dividend when sanctioned at the Annual General Meeting will be paid on or after 30th August 1961 to those members whose names stand on the Register of Members on the 20th August 1961.

ALL-INDIA GENERAL INSURANCE CO., LTD.

1960 RESULTS ANALYSED

A MARKED expansion in the net premium income of the All-India General Insurance Company Ltd. (Joint General Manager: Mr. P. V. K. Shanmugam, Bombay) is disclosed by the accounts of the Company for the year ended 31st December 1960. The combined premium income of the three departments, namely, fire, marine and miscellaneous, has gone up by Rs. 5.80 lakhs to Rs. 20.44 lakhs. All the three departments contributed to the improved results in the underwriting business. The premium of the fire department recorded the maximum increase of Rs. 3.16 lakhs to Rs. 11.85 lakhs. The miscellaneous department earned Rs. 2.34 lakhs more at Rs. 7.17 lakhs. The marine department also fetched Rs. 30,000 more at Rs. 1.42 lakh. Notwithstanding the substantial improvement in premium income, the net profit of the Company for the year under review, however, has not registered any marked rise, being just Rs. 10,618 as against Rs. 8,543 in the previous year. The Company has, therefore, not been in a position to declare any dividend, as in the past three years.

An idea of the trend of premium, claims, and expenses can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December		
	1960	1959	1958
Fire:			
Net premium	11.85	8.69	7.90
Claims paid and outstanding	3.76	2.70	2.09
Commission, expenses, etc.	5.56	4.85	4.11
Fire fund	5.69	4.00	3.47
Miscellaneous:			
Net premium	7.17	4.83	1.10
Claims paid and outstanding	3.11	2.36	0.47
Commission, expenses, etc.	3.57	2.77	0.45
Miscellaneous fund	3.44	2.22	0.93
Marine:			
Net premium	1.42	1.12	3.06
Claims paid and outstanding	0.88	0.55	2.26
Commission and expenses	0.56	0.50	2.13
Marine fund	1.35	1.01	1.74
Net profit	0.11	0.09	0.08
Dividend	Nil	Nil	Nil
Provision for taxation	..	..	..
Carry forward	0.11	0.09	0.08

An analysis of the accounts of the different departments shows that the premium income of the fire department continued to grow steadily and stood at Rs. 11.85 lakhs, as against Rs. 8.69 lakhs in 1959 and Rs. 7.90 lakhs in 1958. Although the claims experience from the foreign business was not quite satisfactory, the overall claims ratio in 1960 remained at the same level as in the previous year. After crediting Rs. 5.69 lakhs to the reserve for unexpired risk and meeting various outgoings, the profit transferred from this department to the profit and loss account was of the order of Rs. 89,277, as against Rs. 65,043 in 1959. In fact, this is the only department of the Company the working of which resulted in a positive surplus.

In the marine department, though the net premium experienced a rise as noted above, the profitability showed some worsening. This was because of the low level of rating which still continues and the slight deterioration in the claims experience. The rise in claims ratio related mainly to Government business received by the Company from the pool and in respect of reinsurance secured from some friendly offices. Net claims paid and outstanding amounted to Rs. 88,298. Commission and expenses worked out to Rs. 56,297. After setting aside Rs. 1.35 lakhs or 95 per cent of the premium income to the reserve for unexpired risks, the account shows a loss of Rs. 34,914.

In the miscellaneous department the net premium income stood at Rs. 7.17 lakhs, as against Rs. 4.83 lakhs in the previous year. One favourable feature in the working of this department was the slight reduction in the claims ratio. Net commission and expenses amounted to Rs. 3.57 lakhs. After earmarking a sum of Rs. 3.44 lakhs or 48 per cent of the premium income for the year as reserve for unexpired risks, the working of the department resulted in a loss of Rs. 68,667.

The capital and funds of the Company as at 31st December 1960 amounted to Rs. 23.91 lakhs distributed as shown below:

	Rs.
Capital paid-up	10.00.000
Fire fund	5.68,966
Marine fund	1,35,074
Accident and miscellaneous fund	3,44,291
Capital reserve account	2,196
Investment reserve account	2,96,597
Profit and loss appropriation account	43,813
Total ...	23,90,937

FOREIGN ASSETS DECLINE FURTHER

(*From Our Own Correspondent*)

BOMBAY, *12th July*

Conditions in the short-term money market turned distinctly easier during the week under review. The supply of loanable funds has expanded further, due to continuous return flow of funds from inland centres, while the demand for funds is only modest, as slack season is in full swing. The inter-bank call money rate among Exchange and big Indian banks has fallen from 4½ per cent to 4 per cent. Some stray transactions, it is learned, took place even at the rate of 3¾ per cent. Market circles expect the call rate to decline still further before it looks up again when the Central Government's second instalment of the borrowing programme comes up for implementation. This is not far off and the Reserve Bank's announcement on this subject is expected any moment. The other rates were unchanged as given below:

	Per cent
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91 days' Treasury Bills of the Government of India sold through weekly tenders were colourless. As against an invitation for Rs. 2 crores, an equivalent amount was offered and accepted. The average rate of accepted tenders was unchanged at 2.650 per cent per annum. 91 days' intermediate Treasury Bills sold from 5th to 8th inst. amounted to as much as Rs. 3.50 crores. Their sales will be continued from the 12th to the 15th inst.

The trend of contraction in notes in circulation noticed in the past few weeks was reversed during the week ended 7th July 1961, the notes in circulation having expanded by as much as Rs. 15.86 crores over the previous week. This is disclosed by the statement of the Reserve Bank of India for that week. As the notes held in the Banking Department have declined by Rs. 17.35 crores, total notes issued are actually lower by Rs. 1.50 crore. Foreign securities have contracted further by Rs. 10 crores to Rs. 93.01 crores. But, as balances held abroad have improved by Rs. 5.77 as against the net recession in total foreign assets is crores, the net recession in total foreign assets is crores, **the crores only to Rs.** 109.55 crores. Deposits Rs. 4.23 of banks with the Reserve Bank have dropped by Rs. 3.04 crores to Rs. 91.69 crores.

The statement of affairs of the Scheduled Banks for the week ended 30th June 1961 shows an expansion of Rs. 26.84 crores in demand deposits and a contraction of Rs. 10.24 crores in time deposits. The deposits of the State Bank of India alone have gone up by Rs. 7.45 crores. Scheduled banks' borrowings from the Reserve Bank increased by Rs. 4.10 crores, of which Rs. 2.02 crores were against usance bills. Their borrowings from the State Bank were, however, reduced by Rs. 91.73 lakhs in demand variety and Rs. 22 lakhs in time variety. Advances and bills discounted (bank credit) went up by Rs. 3.28 crores to Rs. 1,271.56 crores; a year ago, they were of the order of Rs. 1,129.68 crores. Advances of the State Bank actually declined by Rs. 1.75 crore, which shows that the advances of the other scheduled banks must have actually expanded by Rs. 5.03 crores. Investments of Scheduled Banks, as a whole, improved by Rs. 3.63 crores, but, as the State Bank's investment increased by Rs. 6.04 crores, it is obvious that this portfolio of the other scheduled banks must have declined by Rs. 2.41 crores.

The gilt-edged market remained dull throughout the week. The Reserve Bank of India discontinued its open market operations on Monday the 10th inst., thereby making the stage clear for the Government of India to launch its borrowing programme, again, which is expected to be of the order of Rs. 100 crores. The 3 per cent Conversion Loan remained steady at Rs. 72.75. Most of the Central loans were neglected and remained unchanged; only 3 per cent 1963-65 and 1964 loans eased by 5 nP each to Rs. 98.70. Some of the medium-dated State loans received good enquiry from institutional quarters, but their prices did not show any change.

In the foreign exchange section, the rupee week-end further in relation to the U.S. dollar in sympathy with the pound sterling. Banks' selling and buying rates for ready T.T. were Rs. 480.25 and Rs. 477 per 100 dollars, respectively, as against Rs. 480 and Rs. 476.75 a week ago. In the New York market, the pound sterling touched a new low. The latest available rates are: 278.440-278.480 cents per £ for spot and 275.420-275.460 cents per £ for three months' forward. Over the week, the pound sterling has lost 0.48 cent in the spot and 0.90 cent in the forward.

KIPS PRICES LOW

(*From Our Own Correspondent*)

MADRAS, *10th July*

Arrivals of kips were on the usual scale, but clearances halting. U.K. demand was patchy because of seasonal holidays during August. There were some inquiries for tanned cow hides lower grades, but at very low prices which were uneconomical to the tanners. Demand for tanned goat and sheep skins was small and prices ruled nominally unchanged.

In the German tanned skins public sales held last week, goat skins realised 9d. below current c.i.f. levels and 45 per cent of the stocks were cleared. Sheep skins were unquotable, as the clearance was negligible.

Shipments during June were: 3,700 bales tanned cow hides, 206 cow calf, 50 buffs, 272 buff calf, 658 goat and 424 sheep skins to U.K. ports; 152 cow hides, 112 cow calf, 10 buffs, 5 buff calf, 927 goat and 364 sheep skins to Continent; 107 buffs, 120 buff calf and 125 sheep skins to U.S.A. ports; and 6 sheep and 217 goat skins to Japan.

RECOVERY IN BULLION

(*From Our Own Correspondent*)

BOMBAY, *12th July*

The bullion market depicted a steady trend in the first two sessions of the week (Thursday and Friday), but developed a sagging tendency thereafter which persisted practically till today when a recovery was in evidence following support at lower levels. The earlier firmness was engendered by reports that a leading bear operator at Calcutta had bought about 1,500 bars of silver on Wednesday last week. In sympathy with silver and induced by spot demand following the news of seizure of contraband gold worth Rs. 1 lakh at Madras, gold also tended to move up on Friday. The upward trend in both metals was, however, halted on the following day, thanks to selling by spot houses and some speculative interest. Consequently, values suffered a setback. The declining tendency gathered further momentum in the subsequent sessions also. This was apparently due to reports of heavy floods in Orissa and South India causing heavy damage to agriculturists. The inference was that the loss suffered by them would limit their capacity to buy bullion in the next season. Today, the market picked up some strength, with both gold and silver staging a recovery. But the recovery was not marked enough to make up for the previous losses, so that the closing rates today were lower than those prevailing on Tuesday last week, excepting for forward gold which was a shade better.

The average daily arrivals of gold were unchanged at the previous week's level of 4.000 tolas, while the offtake was better at 4,000 tolas, as against 3,200 tolas. In silver, arrivals were smaller, the daily average rate being 41 bars, as against 49 bars, whereas offtake was higher at seven bars, as against five bars. The floating stocks are reported to be around 27,000 tolas of gold and 600 bars of silver.

Adjustment rates fixed today were Rs. 120.00 per 10 grams of gold and Rs. 200.15 per kilogram of silver. The corresponding rates for Tuesday last week were Rs. 121.00 and Rs. 200.35, respectively.

In gold, the *Bhadravad* (25th September) settlement advanced from Rs. 119.55 to Rs. 119.80 on the 7th inst. Subsequently, however, it drifted down and touched Rs. 119.15 yesterday. After recovering to Rs. 119.80 today, the settlement finished at Rs. 119.70.

Ready gold continued to command a premium over the forward throughout the week, though the actual premium declined from Re. 1.70 on Tuesday the 4th inst. to 55 nP today, when the closing rate for the metal stood at Rs. 120.25, as against Rs. 121.25 on Tuesday last week; the highest and lowest levels touched during the week were Rs. 121.25 (Friday) and Rs. 119.90 (yesterday), respectively.

The *Bhadrapad* (26th September) settlement in silver began the week firm at Rs. 202.65, as against the previous close of Rs. 201.75, and declined steadily to Rs. 200.70 yesterday. The settlement opened at Rs. 201.25 today and, after easing to Rs. 220.90, closed at Rs. 201.15. The net loss over the week was 60 nP.

The discount at which ready silver was quoted under the forward persisted this week, too, though the actual discount declined from Re. 1.40 last week-end to Re. 1 today. The spot rate, which had gone up from Rs. 200.35 to Rs. 201.40 early in the week, receded thereafter and stood at one time on the 10th inst. at Rs. 199.75. After recovering to Rs 200.30 today, it finished easy at Rs. 200.15.

The world price of gold in the London bullion market firmed up further during the week from $35.08¼ to $35.09⅜. Following this improvement and in view of the easiness of the pound sterling *vis-a-vis* the dollar, ready gold also advanced from 251s. 7¼d. to 252s. 0¼d. Silver forward gained ⅛d. to 79⅞d., the ready rate remaining firm at 79⅛d. Silver in New York continued unchanged at 91.375 cents.

The following table shows the trend of prices during the week under review:

	12-7-1961 (closing)	High	Low	4-7-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	120.25	121.05	119.90	121.25
Forward: Bhadrapad*	119.70	119.80	119.15	119.55
Sovereign	94.25	94.25	94.00	94.00
SILVER				
Ready (.996 fine)	200.15	201.40	199.75	200.35
Forward: Bhadrapad†	201.15	202.65	200.70	201.75
London—	11-7-1961			4-7-1961
Silver Ready	79⅛d.	—	—	79⅛d.
Silver Forward	79⅛d.	79⅛d.	79⅛d.	79⅛d.
Gold	252s. 0¼d.	252s. 0¼d.	251s. 7¼d.	251s. 7¼d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

NEW COTTON CONTRACTS

(*From Our Own Correspondent*)

BOMBAY, *12th July*

Hedge trading in the new (1961-62) crop cotton contracts will commence at Bombay soon under the auspices of the East India Cotton Association. The Forward Markets Commission has already approved of proposals for the revision of hedge contracts as put forward by the recognised associations dealing in cotton. The Presidents of these Associations held detailed discussions with F.M.C. officials in the City on Thursday the 6th inst. The terms and conditions governing the new crop contracts are as follows:

The basis will remain unchanged, namely, Fine Moglai Jarilla 25/32" (Kalyan at Ahmedabad, Berar at Akola and Malvi at Ujjain).

Delivery months will be March, May and August (April and August at Ahmedabad. February, May and July at Akola and *Chaitra* and *Srawan* at Ujjain).

Tendering differences will be fixed on the basis of difference between the hedge contract and spot rates of respective descriptions on the day of fixing such differences subject to a reduction of 15 per cent in the case of premiums and increase of 15 per cent in respect of discounts.

Invoicing back rate for rejected cotton will be the spot rate of the day following the date of final award less 50 per cent of difference between spot and hedge contract rates. The corresponding rate in the case of cotton rejected on the day previous to the due date and thereafter, as well as in that of failure to tender, will be the spot rate of due date less 50 per cent of difference between such spot rate and the hedge contract rate.

The system of ordinary margins in vogue at Ahmedabad, Akola and Ujjain associations will continue.

The F.M.C. has agreed that there should be no special margins. It has, however, stated that the decision has been taken "purely on an experimental basis" and hopes that the cotton trade will conduct itself in such a manner as to make it unnecessary for it to intervene. Indeed, the Commission has made it clear that "it will not hesitate to reimpose special margins should the market behaviour necessitate the same."

Pending the commencement of business in new crop contracts, activity in the cotton futures market continued to be restricted during the week under review also. The proximity of delivery period in the current contract (I.C.C. Jarilla August) and the uncertainty regarding fixation of tendering differences, too, restrained large-scale fresh commitments either way.

The I.C.C. Jarilla August contract began at Rs. 581.00 on Saturday the 8th inst., (the market remained closed on Thursday and Friday), as against Rs. 579 on Tuesday the 4th and moved up, following reports of reduced acreage under cotton this season and drought conditions in certain cotton-growing tracts, to touch Rs. 585 early on Monday the 11th. Thereafter, the contract was subjected to selling, induced by news of rains in regions where unfavourable weather had prevailed previously and report that several mills were carrying large stocks of cotton. The rate fell to Rs. 576 at one time yesterday. Today, however, the contract recovered to Rs. 579.50 before finishing at Rs. 579.

The spot section ruled dull during the major part of the week. The only buyers were mills to which additional indigenous cotton quotas were allotted recently. Good quality cottons like Vijay, L147, Surti, Laxmi, Digvijay and CO2 attracted good support. There was also some demand for Khandesh and Kalyan. Among exportable styles, Bengal *deshi* evoked inquiries from shippers on hopes of an early export quota. In the import section, Egyptian, African and Sudan cottons were in demand. Transactions were put through at Rs. 1,311 (c.i.f.) for B.P. 52 F.A.Q., at Rs. 1,325 for B.P. 52 U.N.U.G. and Rs. 1.725-1.755 for Karnak type 151 (c.i.f. Bombay November-December shipment).

The latest available rates—in rupees per candy of 784 lbs.—quoted in the spot market are given below:

Hubli Laxmi 940; Amravati 1,010; Moglai Zoda 450; Digvijay 960; Gadag Laxmi 935; Dhulia Zoda 450; Kalyan 830; Surtis 960; Moglai Jarilla 780.

The Karachi cotton market continued to rule easy during the week under review on reports of good weather conditions in cotton-growing tracts. The January 1962 contract was particularly depressed, the quotations having gone down by Re. 1.95 to Rs. 72.95. July 1961 contract came in for selling and closed lower at Rs. 58, as against Rs. 58.60. The spot section, too, was subdued, despite some offtake by mills. The following are the latest available quotations—in rupees per maund of 92 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi, the figures in brackets being last week's closing rates: Sind *deshi* 85 (85); Punjab *deshi* 83 (85); 4F Punjab Roller 76.95 (77.10); S.G. 80.95 (81.10); L.S.S. Punjab Roller 78.95 (79.10); S.G. 83.45 (83.60).

The Liverpool cotton market ruled steady on some speculative support. The distant delivery evoked enquiries from commission houses on expectations of sterling devaluation and fears of cotton shortage by the end of the year. The October 1961 position rose from 24.20*d.* to 24.40*d.* per lb. The maturing contracts, however, were quiet on apprehension of large tenders against them. July 1961 position was unchanged at 23.65*d.* and July 1961 Sudan at 31.65*d.*

Forward trading in cotton at Alexandria continued to be suspended. Weather conditions were satisfactory and the crops were reported to be progressing well. Export inquiries were limited, as foreign buyers were awaiting details of the Government machinery for cotton transactions. Meanwhile, Mr. El Sayed Hassan Abbas Zaky, Executive Minister of Economy, U.A.R., explained

that the Government's policy would be designed to ensure profitable prices for producers and to dispose of the largest possible quantity of the crop from the country. He added that the futures market had failed in its technical and economic function of fixing suitable prices that reflected the levels of international prices "due to the attitude adopted by some buyers who concluded big deals at certain periods in order to put pressure on the market and to realise unreal prices." Elucidating the Government's new cotton policy, he observed:

"The Government is at the moment, organising the machinery for the smooth implementation of the new cotton policy. It has been decided to reorganise the Egyptian Cotton Committee to permit it to carry out its new tasks. The Government is also establishing the apparatus required for tightening control and organising transportation.... It is hoped that the new policy will meet with the success expected, and that cotton growers and merchants will rest assured that the State has their interests at heart and spares them the adverse effect of fluctuation of prices and bears the responsibility for disposing of cotton on their behalf."

Firm conditions prevailed in the New York cotton market during the week, following the U.S. Agriculture Department announcement of lower acreage under the cotton crop for 1960-61 season, namely, 16.56 million acres, which is less than what was expected earlier and is much below the ten-year (1950-59) average of 20.6 million acres. The Department has made no forecast on production. But it is reported that if the per acre yield equals that of the last two crops production will be about 14,200,000 bales of 500 lbs. gross weight. Production last year was 14,272,000 bales and 13,710,000 bales for the ten-year average. This year's crop, like those of recent years, is being grown under a crop control programme designed to prevent over-production. Each farm is governed by a marketing quota. Excess sales are subject to penalty taxes. The estimate of the planted acreage compares with 18,458,000 allotted farms under this control programme. Some farms do not plant their full allotments. The first official estimate of production will be given on 8th August next. The crop will be supplemented by an estimated 7.5 million bales accumulated from past crops. Requirements from this year's crop are expected to be around 14 million bales.

The following are the latest available quotations from New York as compared with those a week and a fortnight ago:

(In cents per lb.)

	11-7-61	3-7-61	27-6-61
Spot	34.70	34.60	34.55
July	33.50	33.28	33.20
October	34.25	34.17	34.08

CASTOR EASY

(From Our Own Correspondent)

BOMBAY, 12th July

An important event of the week in so far as the oilseeds market is concerned is the commencement of new crop contracts with effect from Friday the 7th inst. There are two such contracts in each section in addition to the one already in vogue, so that business is now conducted simultaneously in three contracts. The delivery months of new hedge contracts are January and April 1962 in groundnuts, groundnut oil and cottonseeds, and March and June 1962 for castorseed and linseed. Margin restrictions and ceiling prices have been abolished from the new contracts, as was pointed out in these columns a fortnight back. The contracts will, however, be subjected to certain limits on the daily rise in prices.

The commencement of hedge trading in new contracts would appear to have had no perceptible effect on the market, the undertone of which was easy during the week under review. The easiness was due to expectations of better crop this year and absence of any encouraging export enquiries. Castorseeds ruled easy, as operators were disappointed at the continued absence of demand for castor oil from the U.K. and the U.S. as well as pronounced weakness in other foreign markets. There were, besides, fears that the British entry into the European Common Market would deprive India of the Commonwealth preferences it now enjoyed in the U.K. market for castor oil. Groundnuts were generally easy, following selling by Saurashtra interests on hopes of larger crop there in view of the favourable weather conditions. The damage done to the crop by floods in Madras had not yet been estimated precisely, though it was generally felt that its impact on the overall supply position would not be substantial in view of the distinctly better crop in Andhra, Gujarat and Maharashtra. Linseed was well maintained early in the week, influenced by the strength of sarson in the North. It however, came in for some selling subsequently and closed lower. Cottonseeds too were subdued. But sesame was fully steady.

Castorseeds September 1961 contract fell from Rs. 178.75 to Rs. 175. The March 1962 contract opened at Rs. 178.50 and declined thereafter to touch Rs. 173.87 today. Madras small receded from Rs. 35.50 to Rs. 35 before closing at Rs. 35.12. Oil commercial lost 15 nP to Rs. 14.75 and B.S.S. 10 nP to Rs. 16.10.

Among groundnuts, the February 1962 contract retreated from Rs. 223.50 to Rs. 221.50. Oil ex-mill and railway receipts eased by 25 nP each to Rs. 22.75 and Rs. 22.50, respectively. Both Nizam bold and Coromandels, however, picked up a rupee to Rs. 55.50.

Linseeds September 1961 contract rose initially from Rs. 40.12 to Rs. 40.19, but fell back to last week's level towards the close. The March 1962 contract declined by 12 nP to Rs. 38. Bold ready was unchanged at Rs. 39.50. Linseed oil, however, put on 10 nP to Rs. 17.

Cottonseed January 1962 contract eased by Rs. 3 to Rs. 92.50. The September 1961 contract receded by 50 nP to Rs. 95. Berars and non-whites were quiet at Rs. 19.75, as also whites at Rs. 20.25.

Sesame bold was steady at Rs. 370. Sesame oil rose by 25 nP to Rs. 28.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	12-7-1961	5-7-1961	28-6-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	221.50	—	—
Nizam bold	55.50	54.50	55.75
Coromandel ready	55.50	54.50	56.00
Khandesh quality	55.50	54.75	56.00
Oil ex-mill ready*	22.75	23.00	23.25
Railway receipts*	22.50	22.75	23.20
Castorseed			
September 1961	175.00	178.75	181.62
March 1962	173.87	—	—
Ready Madras	35.12	35.50	36.00
Ready Kanpur	33.75	33.87	34.62
Oil B.S.S.†	16.10	16.20	16.35
Oil commercial†	14.75	14.90	15.20
Linseed			
September 1961	40.12	40.12	40.69
March 1962	38.00	—	—
Bold ready	39.50	39.50	40.25
Oil ready†	17.00	16.90	17.25
Cottonseed			
September 1961	95.00	95.50	96.25
January 1962	92.50	—	—
Niger seed	42.00	42.50	42.50
Kardi seed	27.00	27.50	27.80

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

ART SILK YARN CLIMBS UP

(From Our Own Correspondent)

BOMBAY, 12th July

There was a sharp rally in the prices of art silk yarn during the week under review. The rally followed hectic buying by bulls who thought that floating stocks in the market might dwindle considerably. This feeling arose from the reported large-scale purchases by several weaving mills on fears of a possible reduction in their quotas under the revised distribution scheme for indigenous yarn. Even reports that the sponsors of the Rayon and Synthetic Textiles Development Corporation, proposed to be set up shortly to undertake export trade in art silk fabrics and to procure and distribute yarn under the export promotion scheme, had been assured of a grant of advance licence to the Corporation for import of art silk yarn worth Rs. 125 lakhs had no effect. Among imported art silk yarns, 120 Japan climbed up from Rs. 1,874 to Rs. 2,010 and 150 Japan from Rs. 1,971 to Rs. 2,204. 120 Italy spurted by Rs. 93 to Rs. 1,899. 150 Italy was firm at Rs. 1,845. Among indigenous yarns, 150 Bt. cones 1st grade advanced by Re. 1.39 to Rs. 17.60. 120 Bt. cones 1st grade rose by Re. 1.17 to Rs. 20.55. Cupressa Bemberg yarn (60 x 1) August delivery scored a gain of Rs. 60, today's closing rate being Rs. 2,880. Spot Cupressa rallied from Rs. 2,659 to Rs. 2,879. (40 x 1) J.P. August contract picked up Rs. 42 to Rs. 3,228. October position was done at Rs. 3,243.

In contrast to art silk yarn, staple fibre yarn ruled distinctly easy. The easiness was due to apprehensions regarding further official measures to regulate prices. On Thursday the 6th inst., the Committee of the Indian Cotton Mills Federation announced the fixation of ex-mill prices for intermediate counts staple fibre yarn in the same manner as had been done in respect of 20, 30 and 40 counts; the relevant details are given on page 120 of this issue. The revised prices have been enforced with effect from the 7th inst. The authorities have no doubt appreciated the move of the Federation but want this body also to evolve a scheme for ensuring an equitable distribution of yarn at fair prices. In fact, they are inclined to feel that, if the Federation fails to do so, the Government may have to do it itself. The authorities are also considering the adoption of measures to check any abuse in the scheme of price stamping of staple fibre yarn. All these reports led to selling pressure which resulted in a setback to prices. 400 x 2 staple fibre yarn August contract receded from Rs. 1,048 to Rs. 1,012. Spot Hind fell by 77 nP to Rs. 11.07. City dropped 42 nP to Rs. 11.81.

Cotton yarns were dull in the absence of any fresh developments. Demand from consuming centres was at a low ebb. Nor were export enquiries encouraging. Transactions put through, as a consequence, were limited with values moving narrowly.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	12-7-1961	4-7-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
August	2,880.00	2,820.00
Spot	2,879.00	2,859.00
40 x 1 JP		
August	3,228.00	3,186.00
October	3,243.00	—
120 Japan (per 100 kg.)	2,010.00	1,874.00
150 Japan (per 100 kg.)	2,204.00	1,971.00
120 Italy	1,899.00	1,806.00
150 Italy	1,845.00	1,048.00
Staple fibre yarn (40 x 2)—		
August (per 90.72 kg.)	1,012.00	—
City (per kg.)	11.81	12.23
Cotton yarn (per bundle of 10 lbs.)—		
10s Fodar	17.37	17.37
20s New Great	21.25	21.25
30s New Great	27.00	27.00
40s Madura	32.50	32.50
60s Finlay	65.00	65.00
80s Moderns	69.25	69.50

BLACK PEPPER RALLIES

(Messrs. Parekh and Co.)

BOMBAY, 12th July

Our last report was dated 10th May 1961. During the period from 10th May to 5th July 1961, garbled Malabar black pepper fluctuated as under:—

(In Rs. per quintal)

Week ended	Highest	Lowest
17-5-61	391	389
24-5-61	391	391
31-5-61	412	391
7-6-61	435	408
14-6-61	440	433
21-6-61	448	433
28-6-61	437	425
5-7-61	425	418½

During the same period, ungarbled Malabar touched the highest at Rs. 428 under pressure of buying by exporters to cover their sales of about 600 tons to the East European countries. Singapore also firmed up under pressure of short covering by bears who sold short in anticipation of lower prices under pressure of arrivals from Indonesia. The bears were forced to cover at higher prices, as most of the arrivals of Lampong was held by the semi-Government Indonesian firm which refused to sell unless at its price. The Iraq-Kuwait conflict and rumours of devaluation of sterling in the wake of the devaluation of Canadian dollar proved supporting factors.

The arrivals of fair sized unsold consignments of Malabar black pepper and the postponement of Long shoremen's strike as the President evoked Taft-Hartley Law ordering the workers back to work for a period of 80 days thereby relieving the doubts regarding the nearby supplies made the market easy, the lowest being $0.45½ the highest was $0.48. Easiness in New York had its reflection on Singapore and India. Singapore touched the lowest at Str.$147½, after touching Str.$157½ while the garbled in India came down to Rs. 418, after touching a high of Rs. 448.

Malabar black pepper showed some improvement during the week ended 12th July, in sympathy with Singapore and New York where the undertone of the markets was reported to be firm, though the rise in the prices was fractional.

Kerala, the pepper bowl of India, suffered from the worst flood and heavy rain unseen in the past 37 years. Rains and floods were so heavy that the access to the interior was made impossible. As such, no reliable information as to the extent of damage to the pepper crop was available. But, knowledgeable sources and the Government agency estimated the damage to pepper vines to the extent of 20 to 25 per cent. These estimates of damage are only guess work and should not be relied upon until fair weather and rehabilitation of the disorganised transport is established. Plantations in low lying areas and those on the rivers' banks are reported to be the worst sufferers.

Ungarbled at Cochin rallied from Rs. 406 to Rs. 416½ and garbled from Rs. 418½ to Rs. 432. July and August deliveries also improved to Rs. 443 and Rs. 451, the lowest being Rs. 426 and Rs. 432, respectively. Calicut rose from Rs. 410 to Rs. 420.

Growers who are holding stock in the terminal markets are stiff sellers. They refuse to sell unless at their price. However, for testing the market, small sales at the best market price are reported almost daily.

The statistical position of Malabar black pepper is very healthy, as the quantity of 22,000 tons are estimated to have gone into consumption either for inland consumption or for exports. The balance available at the start of new crop is variously estimated. The bears estimate at 6,000 tons and the bulls at 4,000 tons. The internal demand is poor, owing to seasonal lull. Foreign inquiries are so far poor. As a consequence, prices are steadily held. Even small inquiries from foreign or the revival in the internal demand are most likely to push up the prices, as the growers are unwilling sellers and dealers have limited holdings.

There are reports that the Indo-U.S.A. Conference Line agreement will come to an end on the 31st inst. As such, there are chances of a fair-sized reduction in freight from Indian ports to the U.S.A.

Singapore: Most of the stock of Lampong black in Singapore and Indonesia are held by the Semi-Government Indonesian Co. As such, the market there remained steady, despite poor demand. Singapore is cheaper at present as compared with Malabar. If the demand from New York springs up, which is very likely as the dealers there shall have to cover for their autumn requirements, the present stock in New York being limited, it is sure to push up the market at Singapore. Black pepper improved to Str.$152½ from the lowest Str.$147½, the highest touched during june being Str.$157½.

New York: The pressure of unsold consignments from India is reported to have now eased. As a result, the spot showed improvement from $0.45½ to $0.46, with sellers stiff as the replacements from the origins are difficult at present low prices.

Indonesia: The new crop of Lampong is estimated from 10,000 to 12,000 tons. But most of the dealers in India treat this estimate with reserve, as they think that there cannot be so great a reduction in the production in one year, the last year's production being as high as 25,000 tons.

Sarawak: The new crop is estimated at 8,000 tons. Though harvesting has already started, there is no pressure from the source either on Singapore or on the Continent. Sarawak is reported to be watching closely the prospect of coming crop of Lampong and the extent of the possible damage to the new crop in Malabar owing to floods in low lying areas.

The future of pepper is rosy. But stimuli are required for the revival of the sluggishness in demand which is the result of the present "hand-to-mouth" buying policy of the dealers in the consuming markets.

Ready pepper has improved from Rs. 221 to Rs. 225 per 50 kilos with demand improving.

TEA FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 4th July

Approximately 565,000 kilograms were offered in sale No. 27 held on Tuesday, the 4th inst. Quality from the lower elevations remained unchanged but from the Nilgiris an improvement was noticeable. There was strong and active demand at dearer rates. Highgrowns sold well at fully firm rates and were dearer with improved quality. Good mediums were in strong demand and following active competition, realised rates which were 5 to 10 nP per kilo above last and sometimes more. Medium, low medium and plainest sorts were a strong feature and inclined dearer by 10 to 15 nP per kilo. Whole leaf grades sold readily at dearer rates. C.T.C. and legg-cut types were firm. Black leaf teas sold well and shared in the upward trend of the market.

Quotations were:

	1961	1960
	Rs.	Rs.
Low mediums	4.35-4.50	3.42-3.53
Mediums	4.50-4.60	3.64-3.86
Good mediums ...	4.60-4.80	3.97-4.30
Nilgiri B.O.P.	Rs. 4.60-5.80	

The average price realised in sale No. 27 was Rs. 4.55 per kilo, as against Rs. 4.44 a week ago and Rs. 3.81 in the corresponding sale last year.

Dust Sale No. 27: Offerings amounted to 286,000 kilograms in dust sale No. 27 held on Thursday, the 6th inst. There was strong general demand. Highgrowns received keen competition and were generally dearer by up to 10 nP per kilo. Mediums continued to be well supported and registered prices which were 5 to 10 nP per kilo above last. The more fibrous kinds in these categories were a strong feature and sold exceedingly well. C.T.C. and legg-cut teas shared in the general upward trend of the market.

The average price realised in dust sale No. 27 was Rs. 4.50 per kilo, as compared with Rs. 4.28 a week ago and Rs. 3.50 in the corresponding sale last year.

Export Quota: The market is quoted nominally at 2½ nP per kilo at which rate there are sellers.

Colombo: Just over 6 million pounds were offered this week. The market opened to strong general demand with highgrown and medium brokens selling at fully firm to dearer prices. Useful fannings from these districts were often 10 cents per lb. dearer. The plainer mediums were barely steady whilst lowgrowns were firm.

London: North Indian and other growths:— There was strong and active demand at dearer rates.

Ceylon and South Indians: In Tuesday's sale 28,630 packages were offered of which 5,248 packages originated from South India. The market met with good demand with prices tending dearer for most of the descriptions.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No. 28: 580,000 kilograms.* Strong general demand prices following quality. Plain and low mediums 10 to 15 nP dearer particularly brokens, mediums and good mediums about 10 nP dearer. Highgrowns generally dearer particularly for improved quality."

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 10th July

Foodgrains ruled quiet during the week ended 10th July. Fairly heavy rains were received in the last two days of the week and *kharif* crop prospects have been brightened. Arrivals of grains, however, dropped. Wheat prices here were almost stationary during the week to be quoted on Monday at Rs. 14.25 to Rs. 14.75 a maund for *dara* average quality and from Rs. 15.50 to Rs. 16.25 for better farm produce. Daily arrivals at an average of 250 maunds were hardly sufficient to meet day-to-day requirements, but record production reports of well over 10 million tons in the country during 1960-61 and continued imports from outside have checked rising trend in wheat prices. Good rains over wide areas also had a dampening effect on prices. Local wheat stock is put at 25,000 maunds. Rice prices continued to rule steady on good demand, as against poor local stocks put at 9,000 maunds. Rice was reaching here from east U.P. in small quantity and week-end prices were: *rice mainpuri sela* Rs. 22.75, *gainda kutcha* Rs. 22.25, *ramajwayan sela* Rs. 24.50, *raimunia sela* Rs. 25.50, *basmati sela* Rs. 29 to Rs. 31, superior Rs. 33 to Rs. 38 per maund.

Gram prices were quietly depressed during the week at Rs. 13.25 a maund for local inferior produce and Rs. 13.50 to Rs. 13.62 for Punjab variety. Daily arrivals from the Punjab were still at an average of 300 to 400 maunds which were being lifted by consumers and local stock is reported stationary at about 50,000 maunds. Barley prices were stagnant at Rs. 11 to Rs. 11.25 a maund and *bejhar* was depressed at Rs. 10.50 for inferior quality and Rs. 11.25 for moongia variety. Arrivals were poor at an average of 100 maunds. Thanks to good rains maize crop is progressing under favourable weather conditions and fodder crops *juwar* and *guwar* have also improved. *Methi* continued to attract good demand from Bengal and Rajasthan and prices improved by a rupee per maund to Rs. 27 to Rs. 28 per maund. *Juwar* and *guwar* have lost their brisk demand for seed purposes and prices drifted to lower levels at Rs. 13 to Rs. 15 and Rs. 15 to Rs. 17 a maund, respectively. Prices in other section were idle at oats Rs. 11.50 to Rs. 12, old maize Rs. 12.50, *bajra* Rs. 16.50 a maund.

Pulses' rates were steady at Rs. 10.62 to Rs. 11 a maund for *tarur* quality and Rs. 11.25 to Rs. 12.25 for superior farm variety. Although loading to much needy areas of Madras side was not available, the week's offtake at eight wagon-loads was mostly to east U.P. and Bihar and with daily arrivals at an average of 400 maunds, local stock shrinked by 4,000 maunds to 86,000 maunds estimated now. Prices of *arhar* were stagnant due to poor outside buying support at Rs. 12.50 to Rs. 13 a maund, arrivals however dropped to an average of 100 to 150 maunds daily and local stock is put at 45,000 maunds. Prices of other pulses, however, were steady on poor stocks in face of demand from consumers and week-end prices were: peas *dal* Rs. 12.50, *gram dal* Rs. 15.75, *arhar dal* Rs. 16, *urd* Rs. 21 to Rs. 22, *dal* Rs. 25, *moong* Rs. 21 to Rs. 25, *dal* Rs. 24 to Rs. 27, *massor* Rs. 13 to Rs. 15, *dal* Rs. 16.25 a maund.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 10th July

Sugar prices were quietly depressed during the week under review, thanks to the fresh release of 200,000 tons of monthly quota. Export prospects were bright and it was gathered that sugar export to the U.S. might mount to 600,000 tons and Pakistan will also be a keen buyer at an early date. In the Muzaffarnagar market, easier conditions were witnessed in sugar, thanks to easy supply position. Week-end prices were: Hapur Rs. 107 per bag of 2 mds. 30 seers, retail Re. 1 per seer; Muzaffarnagar Rs. 107 to Rs. 107.25 per bag, as against controlled price of Rs. 107.69 per bag. Damaged *Mansurpur C-29* was sold at Rs. 36.22 which is Rs. 2 per maund lower than controlled price. Sugar prices were quiet at Rs. 108 to Rs. 108.50 per bag in Kanpur market during the week.

Demand of *khandsari* was dull during the week. Crystal quality prices, however, improved by 50 nP a maund during the week as stocks now left were negligible. *Khandsari* stocks at Muzaffarnagar were now reported to be 15,000 maunds, as against corresponding figure last year at 65,000 maunds and overall *khandsari* production declined by more than 30 per cent over last year.

Week-end prices were: *desi non-crystal* Rs. 32 to Rs. 37 according to quality and crystal Rs. 35.50 to Rs. 38.50 a maund.

Gur prices ruled steady to firm during the week on good demand from consuming areas. Loading from Hapur was hardly available, offtake being only two wagonloads, but heavy despatches were being done from nearby stations and also by trucks to east U.P. and local stock has run down to 19,000 mds. Rains were fair to heavy in week-end over a wide area and these rains have proved beneficial to cane crops. Week-end prevailing prices were: *gur* dry selected Rs. 17 to Rs. 17.25, *dara* Rs.16, *kotha* dry-wet Rs. 15.75, wet Rs. 14.50 a maund. *Shakker* prices improved by a rupee per maund during the week to Rs. 17 to Rs. 18 due to poor arrivals.

Following resumption of railway booking for Gujarat and the Punjab, demand for *gur* was brisk in Muzaffarnagar market during the week. Booking to Rajasthan was not available but despatches were being arranged by trucks. Week-end prices were: *Chaku kotha* Rs. 19.50, wet Rs. 14.75, dry-wet Rs. 18.19, *shakker dara* Rs. 17 to Rs. 19, *masala* Rs. 21 to Rs. 23 per maund.

While *jagun* delivery prices in *gur* futures improved on reports of likely heavy despatches of sugar to outside the country, *ashad* delivery prices were quiet as trading was sparse due to early delivery date. *Gur ashad* is today quoted at Rs. 14.62 and *jagun* Rs. 14.05, as against the week's opening at Rs. 14.62 and Rs. 13.90, respectively, and lowest touched in mid-session at Rs. 14.44 and Rs. 13.85, respectively.

BASE METALS RECEDE

(From Our Own Correspondent)

CALCUTTA, 11th July

Following lower advices from foreign markets and also decline in demand, base metals closed lower on balance during the week under review. Tin opened in London at £910 a ton and, after hardening to £929, closed at £914. It would be remembered that tin reached a high of £939 on the London Metal Exchange a couple of weeks ago following acute scarcity and the exhaustion of stocks with the Buffer Stock Manager in London. He sold as far as he could at £880 and it was believed that speculative buying contributed to exhaust his stocks sooner than otherwise. The softening trend in London followed the strong possibility that the U.S. Government would soon release about 3,933 tons from its stocks which had been built at the time when the Texas city smelter was made over to private industry. There was the report that, in view of the recent price developments, the International Tin Council was contemplating to fix a higher ceiling and floor. Further, in the month of May, output in Malaya had shown a significant rise, and purchasers from London were disinclined to support the higher price on the expectation that the price would soon decline assuming the higher trend of production was maintained. Stocks in Congo have now been built up, and supplies from that country are expected to flow to London soon. The decline in the price of tin in London was believed to be due to profit-taking by those who had bought the metal earlier when the price gradually improved and purchases were made with speculative intentions. Locally, ready tin was less in demand, and interest was centred around forward delivery. The price opened at Rs. 1,683.00 per 100 kgs. and, after improving to Rs. 1,698.75, closed lower on balance at Rs. 1,673.00.

Noting Mr. Manubhai Shah, the Union Industry Minister's call on the non-ferrous metals industry to set up three national units which should produce alloys of non-ferrous metals exclusively for export purposes, industry circles wondered how imports of copper and zinc could be completely eliminated. Mr. Shah was speaking at the annual meeting of the Non-ferrous Metals Manufacturers' Association here last week. It was felt that copper and zinc formed important raw materials for non-ferrous alloys. The country has only limited scope for increasing production of copper, and it was not seen how imports of copper and zinc could be reduced while aiming at expansion of the alloys industry.

During the week, copper scrap prices were easy with utensil scrap declining from Rs. 436 per 100 kgs. to Rs. 428.75. Berry quality declined from Rs. 460.00 to Rs. 447.50 per 100 kgs. Permit metal was available in sufficient quantities and that explained the easiness in the copper scrap market. On the London Metal Exchange, copper opened at £228½ a ton and after being higher at £230 closed at £229½. Electrolytic zinc in London closed at £77⅜ a ton as against £77¼ opening. The price for electrolytic zinc closed here at Rs. 324.75 as against opening of Rs. 326.75. Lead was quiet at Rs. 137.75 per 100 kgs.

(For Calcutta Tea and Jute reports see page 152)

PLANTING

(Concluded from page 124)

output of all these firms in 1963 is estimated at 225,000 tons. An additional 100,000 tons of stereo capacity installed in Western Europe is scheduled for production by the end of 1963.

The prices of synthetic rubbers are generally lower than those of natural rubber. The currently selling prices (basis f.o.b. domestic shipping point) in the U.S. are:

	Cents per lb.
Natural rubber	30-27*
Polybutadiene	30
Polybutadiene (with 20 per cent oil extension)	26½
Polyisoprene	27
Polyisoprene (oil extended) ...	23
General purpose synthetic SBR ...	23
SBR (37½ parts oil)	17½

*The bulk of natural rubber consumed in the U.S. is in the off grades which sell at an average discount of about 3 cents under 1 RSS. The price measuring stick used in the market is for 1 RSS.

In the opinion of the Natural Rubber Bureau, U.S., both the "stereo rubber" development and the U.S. stockpile disposal (estimated at 30,000 tons in 1961) "appear on the surface to create a gloomy outlook for natural rubber, particularly if natural's future were to be measured by the price relationships existing on today's market." It may be noted here that the U.S. still has over a million tons of rubber under stockpile, even though it has disposed of 350,000 tons in the past 18 months. But it is pointed out that, as the supplies of natural type synthetic rubbers (that is, natural and stereos) plus stockpile disposals exert their effect on the market, the present differences will narrow and natural rubber will continue to sell its full output. Attention is drawn to the replanting scheme of Malaya, under which high-yielding trees are fast replacing the old low-yielding ones, and confidence is expressed that, given a few years more, when the replanting scheme will have been successfully carried out, Malaya "will be able to meet any synthetic price competition presently foreseeable."

Even though the competitive capacity of natural could be bettered by introducing high-yielding plants, the co-operation of labour also is very necessary for this purpose. Since natural rubber is tapped by hand, the cost of labour, as Mr. Anderson of the Rubber Growers' Association pertinently pointed out, is the major factor in its cost of production. If labour leaders are not moderate in putting forward their demands for improving the earnings of workers, they will only be helping the synthetics to make further inroads into the market for natural rubber.

WAGE BOARDS FOR COFFEE AND RUBBER

The Government of India has constituted two Central Wage Boards, one for the coffee plantation industry and the other for the rubber plantation industry. Mr. L. P. Dave is the Chairman of both the Boards and the two independent members common to both the Boards are Mr. T. Manaen and Dr. R. Balakrishna. The employers' and workers' representatives on the Wage Board for Coffee are: Messrs. U. K. Lakshman Gowda and M. B. Cariappa (employers' representatives) M. C. Narasimhan and P. Vriddhagiri (workers representatives). The members of the Wage Board for rubber plantation industry are Messrs. M. M. Varghese and C.H.S. London (employers' representatives), B. K. Nair and P. Ramalingam (workers' representatives). The terms of reference of the Wage Boards are "to work out the wage structure based on the principles of fair wages as set forth in the report of the Committee on Fair Wages as far as practicable." In evolving a wage structure, the Boards would, in addition to the considerations relating to fair wages, also take into account the needs of the industry in a developing economy, system of payment by results, special characteristics of the industry in various regions and areas, categories of workers to be covered (according to the definition of workmen in the Industrial Disputes Act) and working hours in the industry. Whenever applying the system of payment by results, the Boards shall keep in view the need for fixing a minimum (fall-back) wage and also to safeguard against overwork and undue speed. The headquarters of the Board will be at Calcutta.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends or completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

TEA FIRM

(From Our Own Correspondent)

CALCUTTA, 11th July

With greater demand, steadier conditions were in evidence in the internal sales held last week. As a result, prices hardened. Meanwhile, tea bookings during the week showed a further impressive improvement, and assuming floods, which have affected several areas in Kerala and are threatening the Orissa coast, do not occur in North-East India and transport is not affected, the season is expected to be in full swing within the very near future. It was heartening that tea districts in Assam and West Bengal reported fair weather in June, with normal outturn.

Dusts on offer in the internal sales held last week amounted to 7,633 packages, of which only 277 packages were of the old season's manufacture. Prices gained on active demand, with C.T.C. teas meeting with strong competition. Prices of orthodox teas gained by 10 to 15 nP. Legg-cut teas were fully steady. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.60 to Rs. 7.30, medium Assam C.T.C. dust Rs. 6.00 to Rs. 6.50, legg-cut dust Rs. 4.60 to Rs. 5.20, medium Assam dust Rs. 4.60 to Rs. 5.00, and plain orthodox dust Rs. 4.35 to Rs. 4.50.

Leaf on offer amounting to 28 packages were irregular.

Offerings during yesterday's export sale amounted to 29,665 chests, which met with strong demand. Orthodox teas received greater attention than the rest, with the better liquoring varieties recording the highest addition to prices. Whole leaf grades were fully steady, and although tippy teas were greater in quantity, firmer conditions were in evidence. Darjeelings were supported at higher rates; quality showed an improvement and the best teas showed at very higher prices. Better liquoring C.T.C.s eased, while medium and poorer teas gained in prices. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 7.70 to Rs. 8.50, best Assam C.T.C. B.Ps Rs. 7.50 to Rs. 7.80, medium Assam C.T.C. fannings Rs. 6.50 to Rs. 7.00, medium Assam C.T.C. B.Ps Rs. 6.40 to Rs. 6.80, plain fannings Rs. 4.70 to Rs. 4.80, plain B.Ps Rs. 4.85 to Rs. 4.95, and clean plain pekoe Rs. 5.25 to Rs. 5.35.

JUTES HARDEN

(From Our Own Correspondent)

CALCUTTA, 11th July

The feature during the week under review in the jute markets was a handsome addition to prices of both fibre and goods. Earlier in the week, there was selling pressure in goods, but the trend was reversed when it was thought that, although the goods market in the month of June was comparatively dull throughout the month, shipments were satisfactory. In fact, there had been good business done in June, and although not all that was shipped in the month had been bought in June, more business with overseas buyers should be attributed to the reduction in production. Over the week-end, stock figures as at the end of June were announced, and they revealed an overall fall of 15,300 tons, that is, 7,700 tons in sacking goods, 5,700 tons in hessian and 1,900 tons in miscellaneous constructions. The trade had at one time anticipated a greater fall having regard to the loss of production for one week, and as an immediate reaction for a time on Friday prices were below the best levels during the week.

With high prices for fibre, simultaneous business in goods and fibre at a profit has become impossible to mills. It cannot be said that mills could have avoided closure. For, when there is no fibre to feed the machines, the only alternative is closure and that is what mills did in June and contemplate doing in this month and probably in August also. As to when mills can return to profitability is difficult to conjecture but considering all aspects of the situation it seems expedient that the Indian Jute Mills Association would modify the quota system. It is understood that the mills are to be given a time limit for completing their quota of the old fibre, while, in the meanwhile, they are not permitted to use the quotas of the old crop for purchasing new fibre. Also, new fibre cannot be bought by them in any quantities they like. It would help the industry, trade circles stated, if the Association allowed mills to use the quotas of the old fibre for purchasing new fibre also. New fibre is quoted at a discount compared to old crop and if mills were permitted to use their quotas to their advantage they would be enabled to purchase forward fibre at a discount. It is stated that if mills failed to complete their purchases of the old crop, the unutilised portion would be lost to them. If this were so, mills would be put to loss in purchasing the old fibre at higher rates. Mills are also put to financial strain, since there have been instances where consignments of the old crop, for which mills had paid are being delayed by steamer companies on the plea of insufficient cargo. During this week, the I.J.M.A. issued, for the first time, quotas for the new fibre, which were considered insignificant.

On Tuesday last, prices of goods rose on good covering business in near delivery goods. Earlier, there were reports of interest by U.S. buyers for small quantities here and there for near delivery goods. In sacking goods also, there was good demand, but a greater proportion of the business done was considered due more to speculative intentions than to genuine demand. As a result, ready B. twills hardened from Rs. 154.25 to Rs. 156.50 and ready hessian 40" 10 oz. from Rs. 49.00 to Rs. 49.20. On the following day also, there was good demand against covering. However, at higher levels there was selling pressure, which was again followed by keener demand. With the result, prices closed for the day higher on balance. B. twills were dearer on balance at Rs. 156.85 and hessian 40" 10 oz. at Rs. 49.30. Following this, activity in the futures market became livelier. Earlier, there were reports of a weakening trend in the New York burlap market but subsequently New York played the tune of Calcutta and prices there also moved up. On Thursday prices for ready goods here recorded handsome additions following greater interest shown by overseas buyers. B. twills advanced to Rs. 159 and hessian 40" 10 oz. to Rs. 50.40. Friday's announcement of a decline in stocks as at the end of June came as a climax and this was celebrated with B. twills rising to Rs. 161.50 and hessian 40" 10 oz. to Rs. 51.25. During the week, in the futures market, November B. twills recorded a high of Rs. 142.35 and a low of Rs. 134.90 and November 40" 10 oz. hessian a high of Rs. 48.76 and a low of Rs. 46.08. December Assam bottoms were as high as Rs. 37.94 against a low of Rs. 34.40. The higher levels stabilised as the week progressed. Over the week-end, following substantial addition to prices of fibre, goods reached near buoyancy. Thus B. twills closed substantially higher on balance at Rs. 164.50 as did hessian 40" 10 oz. at Rs. 52.00. Conditions became steadier following good business in the ready market and bullish reports from the futures market. Ready B. twills rose further to Rs. 166.50 and ready hessian 40" 10 oz. to Rs. 53.75.

Steadiness was a feature in the fibre market. A number of transactions were reported at above the quoted prices. The rise must be attributed to the insistence of the I.J.M.A. that mills should complete the quotas of the old crop or otherwise the unutilised portion would stand expired. Also, new crop quotas issued during the week was meagre. Opening and closing quotations of the old crop varieties are given below:

(Rs. per maund against delivery within 15 days)

	Opening	Closing	Gain
Daisee bottoms ...	50.00	56.00	6.00
Northern bottoms ...	47.50	54.50	7.00
Assam bottoms ...	48.00	55.00	7.00

MARKET GOSSIP

(Concluded from page 107)

is continued, or modified belatedly in favour of producers.

The demand for cement is also expected to go up steadily hereafter, although, in the past, there were instances of slack periods. In 1958, the potential demand for cement during that year was estimated by the Commission at 6.78 million tonnes, which was expected to increase to 10 million tonnes by 1960-61, with a maximum limit of 12 million tonnes. There was, however, a temporary recession in demand which persisted during the whole of 1958 and the first half of 1959. Since the beginning of 1960, however, there has been a steady spurt in the demand for cement in the country, with the result that acute shortages are reported in many States. Among the manufacturers, the Associated Cement Companies Ltd. has estimated the demand at 9.13 million tonnes for 1961, 10.04 million tonnes for 1962 and 11.05 million tonnes for 1963. The Planning Commission has estimated the demand to touch 13 million tonnes in 1965-66, the end of the third Plan period.

The spurt in demand, which began early in 1960, continues unabated and, with the large-scale development plans envisaged for the third Plan, the pressure of demand will admittedly be on the increase. In order to enable the industry to meet this demand, it should be assured of a fair return on capital employed, taking into consideration the increasing cost of production and the need for ploughing back a part of resources for expansion. In assessing the cost structure, the Tariff Commission, it is to be hoped, will not repeat the mistake of excluding from overall cost such items as bonus and gratuity as well as remuneration to managing agents. There is also need for rationalising the system of distribution and ensuring a reasonable margin on packing costs.

Many interesting points were made by the spokesmen of cement producers in their statements to the Tariff Commission. Drawing particular attention to the declining trend in profits of several cement companies, Mr. N. Dandekar, I.C.S. (Retd.), who represented the A.C.C., which, incidentally, runs fourteen factories and accounts for 45 per cent of India's total cement output, stressed the need for granting the industry a net return of 15 per cent on equity capital or 9 per cent on capital employed. This does not seem to be an exaggerated claim, considering the fact that the Planning Commission has allowed a net return of 13 to 15 per cent on capital employed in public sector enterprises. Mr. Dandekar's plea is all the more forceful in view of the steady decline in return on capital in cement industry recently; it fell from 11.66 per cent in 1957 to 5.6 per cent in 1958.

The spokesmen of the industry were, however, divided in their opinion on the basis for fixing cement prices. This is not surprising, since the industry consists of both new and old companies. The new companies' capital cost has been heavier than that of old companies. But, at the same time, it must be borne in mind that the old companies, too, have been erecting new factories on which their capital cost cannot be very much lower than that of new entrants. Mr. Dandekar, supported by the Dalmia group, favoured the restoration of the pre-1956 price structure which took into account representative cost, based on the f.o.r. destination price with certain differentials in the case of a few units. Mr. G. D. Somani, representing the Digvijay Cement, however, expressed the view that a uniform price with one or two differentials was not practicable, as it would not serve the interests of all sections of the industry. He was supported by the managements of all the units of recent origin numbering about a dozen. Currently, it may be noted, the ex-factory prices for packed cement range from Rs. 55.4 to Rs. 82.16 per ton. Can such a wide margin be adjusted by a single price? The obvious problem here is to work out a price formula which will neither adversely affect the relatively smaller units nor penalise the more efficient ones.

LONDON LETTER

WAITING FOR THE WORST

From Our Own Correspondent

LONDON, 8th July

THE heading of this letter is taken from today's *Financial Times'* main leader; it reflects in a sentence the outlook of the City this week. The principal omen has been another statement by the Chancellor of the Exchequer forecasting, without specifying, measures which he will announce at the end of the month before the House of Commons rises. It is known that Mr. Lloyd takes a gloomy view of the country's situation both internally—where shortage of labour and rising costs are making for inflation more rapidly than rising production can counter it—and overseas where sterling is weak and the balance of payments adverse. But what is not known is whether the Chancellor will be satisfied with short-term measures or whether he will be seeking to establish a policy which will last the Government over the next couple of years.

The reflection of this uncertainty is naturally seen principally in the industrial share market. Since the middle of May, prices have dropped 15 per cent, and the tiny recovery this week is of no particular significance. The share indices are still about 2 or 3 per cent above their level in January, but, whereas it took four and a half months for them to rise to their May peak nearly, the whole of these gains has been wiped out in seven weeks. On the past fortnight's account alone, the indices dropped over 4 per cent. Nothing, not even Government securities which might have been expected to benefit from the rise in the return on equities, has been immune from the general weakness. This weakness has, in part, been contributed to by the pressure of new issues coming onto the market from many borrowers wanting to put themselves in funds before money becomes even tighter; for credit is getting both dearer and more difficult with every week that passes and, once again, higher hire-purchase charges are envisaged—an almost inevitable precursor to a drop in consumer spending.

The Right Course

A few bulls are hoping that the Chancellor will do little and that the industrial and financial situation will sort itself out. In the unlikely event that they will be right, the market would certainly shoot upwards in relief, but the Chancellor is not likely to play their game. He may satisfy himself with restricting credit through his various official weapons such as demanding higher deposits from the banks and shortening the repayment period on hire-purchase contracts. If he adds to these cuts in Government overseas expenditure and possibly in economic aid, his programme will look tougher but will have the obvious criticism that it is not constructive.

The *Financial Times* suggests that the Chancellor's right course is to combine such short-term restrictions with "constructive long-term proposals." What could these be? Restrictions on capital expenditure on construction are hardly going to help; a stimulus to saving is difficult to imagine without reduced taxation. The nub of the matter is undoubtedly in the factors affecting costs on the home market. On the one hand, he can take steps to stimulate competition by attaching more strongly various price restrictive devices, though, if he does this, he is up against a powerful industrial lobby in his own Party. His other line is on wages, but he is not going to have any Trade Union support in avoiding further wage demands. An entry into the Common Market with its speeding up of tariff cuts will help—but this is going to take time. The Chancellor has about as difficult a task as anyone can have. His devices for limiting imports are much more restricted than those open to his predecessors and he cannot impose direct controls as an Opposition Chancellor would do. It is the knowledge of these difficulties which keeps the City in such agonised suspense.—*All Rights Reserved.*

HONGKONG AND SHANGHAI BANKING CORPORATION

The Board of Directors of the Hongkong and Shanghai Banking Corporation has announced an interim dividend of 5s per share for the year 1961, payable on 14th August 1961. Transfer books will be closed from 28th July to 12th August, both days inclusive.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2624 BOMBAY, 22nd JULY 1961 PRICE Rs. 2

INDIA BORROWS FROM I.M.F. AGAIN

FOR the third time since Independence fourteen years ago, India has resorted to the credit facilities available from the International Monetary Fund. The credit now being availed of—$250 million, equivalent to Rs. 119.04 crores—is the largest taken so far, but it is in keeping with the widening foreign exchange gap. The first time it borrowed from the I.M.F. was way back in 1948-49 and the amount was $100 million (Rs. 47.62 crores). At that time, India had plenty of sterling balances. Yet, it borrowed from the I.M.F. and did not repay it till April 1956, even though the prolonged delay meant payment of high penal rates of interest, in order to help Britain, in particular, and the sterling area, in general. In 1957, that is, in less than a year from that repayment, India was in the I.M.F. again, withdrawing $200 million (Rs. 95.30 crores), that is, twice as much as on the previous occasion. This second withdrawal, too, would not have been necessary but for the Suez crisis which was not of India's making. It is true that heavy imports had been permitted by the Government, resulting in a large adverse balance of trade. But the position had considerably deteriorated because of the Suez episode. The credit obtained this week is thus really the first drawing of rights by India to meet a balance of payments situation which is its own creation. And it has had to be availed of even when a balance of $63.25 million (Rs. 30.11 crores) out of the 1957 accommodation remains to be cleared. What is more, it was only three weeks ago that it had repaid $64.25 million (Rs. 30.60 crores), that is, a year after returning $72.50 million (Rs. 34.59 crores). The long time taken by this country to repay the borrowings from the I.M.F. on both the occasions in the past and also the long intervals at which it has resorted to the I.M.F. provide striking commentary on the character of India's balance of payments problem.

It is a well-known fact that, for India, this problem is of a long-term nature, because its development projects have a substantial import content. India has avoided seeking credits from the I.M.F. as far as possible precisely for this reason. If it has now found it necessary to go to this international lender of last resort, it is because (*a*) the promised flow of long-term aid from the foreign countries has lagged behind its requirements and (*b*) its own foreign assets have shrunk to the nadir. As of 14th July 1961, India's external reserves consists of Rs. 102.90 crores in foreign exchange and Rs. 117.76 crores in gold. The minimum currency reserve requirements, under the 1957 October amendment to the Reserve Bank of India Act, are Rs. 200 crores (to be held by the Issue Department), of which Rs. 115 crores must be in gold. With foreign assets in the Issue Department no more than Rs. 93 crores, the room for further depletion of these assets is a mere Rs. 10 crores, or maximum of Rs. 20 crores taking into account the small balance with the Banking Department of the Reserve Bank. The Government has, of course, power to permit the bank to allow its foreign assets to touch even zero, first for a period of six months and then from time to time, but not exceeding three months at a time. But this proviso is intended to be exercised only in grave emergencies. The psychological effect of such a situation both within the country and abroad would be so adverse and demoralising that we fervently hope that it would never arise. Since the credit which the I.M.F. has now sanctioned will be available only on 1st August, one must, however, be prepared for a further fall in India's foreign balances in the fortnight ending 28th July 1961.

A noteworthy feature of the I.M.F.'s latest credit to India is that it is in six currencies—U.S. dollar, pound sterling, deutsche mark, French francs, Italian lire and Japanese yen. (Incidentally, India is the first member of the Fund to draw a part of its right in Japanese currency.) A significance of this feature is that no one country will have to bear the entire burden. But, as all the six currencies are convertible into any currency, the loan proceeds can be used for settling India's balance of payments account with any country. It is not known how long it will take for India to repay this multi-currency loan from the I.M.F. Nor is it known how swiftly this credit (of about Rs. 120 crores) would vanish. Much will depend upon the rate at which the members of Aid-India Club make available the assistance they have promised for the first two years of the third Plan period. As most of the assistance promised is related to specific projects and only a modest amount will be available in untied form for maintenance imports, much will also depend upon the ability of our authorities to check non-development and non-maintenance imports. It is pertinent to mention here that, in the first five months of 1961, India's exports (on the basis of provisional figures) at Rs. 275.57 crores were higher than in the corresponding period of 1960 when they amounted to Rs. 252.91 crores. But, at the same time, imports, too, expanded faster, from Rs. 385.68 crores to Rs. 410.14 crores, so that the adverse balance at Rs. 134.57 crores was greater by some Rs. 2 crores. The object in mentioning these figures here is not to suggest that what is desirable is not being followed; it is rather to give an idea of the prevailing trend. It must also be borne in mind that the period July to November constitutes the slack season for exports and that the foreign exchange earnings during these months are usually lower than during December to June.

The shrinkage in India's foreign assets to the rock-bottom level and the utilisation of a substantial part of rights in the I.M.F. should serve as a reminder of the precarious nature of the country's external position. This statement is no doubt a reiteration of the obvious, but it is necessary, because there is a tendency in some quarters—both official and non-official—to regard the present position as something normal to a developing economy. There is, of course, no cause for alarm or excessive pessimism. But there is equally no cause for taking things for granted. Neither the aid promised by the friendly countries nor the fact the I.M.F. has not insisted upon any changes in our policies before granting the credit should lull the authorities and the businessmen in this country into the belief that everything is fine with our fiscal, monetary, industrial and trade policies. On the contrary, there is an urgent need for re-examining them from the point of view of (*a*) increasing the competitive capacity of this country in the world markets, (*b*) avoiding commitments on industrial or trading projects which can very well wait for better days, (*c*) allowing foreign private enterprise to play a greater role in the economic development of the country than is contemplated now, and (*d*) intensive utilisation of productive capacities already created in both the sectors. It is rather depressing to find that, nowadays, almost every foreign exchange earner has to be propped up in one way or another which only accentuates the vicious circle of rising prices. It is high time some bold steps were taken to bring down the prices of foodgrains and industrial raw materials. Prestige projects such as people's car should be postponed. The country can no longer afford the luxury of ideology underlining the policies of the Ministers for Oil, Mines and Steel which have already cost the country an immense amount of foreign exchange. The sooner these policies yield place to realism the better for the country.

FIXATION OF EX-FACTORY PRICES

WITH commendable perseverance and consistency, the Federation of Indian Chambers of Commerce and Industry has been presenting, especially in the last two years, the case for a new approach to the question of ex-factory prices, also termed as retention prices, wherever they are fixed by the authorities. Briefly stated, this case has rested on the proven need for a higher return on the employed capital of such industries as have been subjected to price regulation. The Federation's arguments on the five occasions recalled here are of continuing interest precisely because they have not so far found favour with the Government. Its latest representation pleading for a change in the Government's approach is, of course, the fifth in the series and is better understood against the background of the earlier ones.

In December 1959, while commenting on the price fixing role of the Tariff Commission, the Federation made the point that, in calculating the fair ex-works costs, the Tariff Commission should fix returns on the basis of the expected increases of capital expenditure in an industry. For, when large investments on overheads were made during the period of expansion, they would be spread over the output, thereby bringing about changes in cost structure somewhat different from the Commission's estimates. Here the Federation instanced the case of the highly capital-intensive non-ferrous metals industry which, with a return of only 10 per cent on employed capital allowed to it by the Tariff Commission, was hardly in a position to build up reserves for expansion.

The representation made to the Government in May 1960 suggested that an industry subjected to price regulation should be enabled to provide substantial funds for rehabilitation, modernisation and expansion from internal resources and that the return on investment in such an industry should have some relationship with the return in other industries so that it might be in a position to compete effectively for new funds in the capital market. On the question of rehabilitation allowance, the Federation then made a number of relevant points. First, there was the lack of a uniform policy for the grant of rehabilitation allowance while fixing prices payable to producers. The question was pertinently raised in this connection why rehabilitation allowances had been granted in the case of certain industries like steel and cement while they had not been allowed in the case of other industries like sugar and paper. Reference was also made here to the fact that the Supreme Court, in considering the award of

bonus to workmen, had uniformly held that rehabilitation should be considered as a prior charge and that adequate allowance be made therefor.

The return of 12 per cent, generally allowed by the Tariff Commission since 1958 in respect of different industries, was to provide for increased provision for labour welfare, bonus and gratuity to employees, managing agency commission, interest on borrowings, taxation of profits and payment of dividends to preference and equity shareholders. The Federation's calculation, however, was that on the basis of a return of 12 per cent, after meeting the various charges, the net return to equity shareholders, free of tax, would hardly amount to 4 per cent. culation, however, was that, on the basis of a return to equity shareholders was estimated at 3.86 per cent, in the case of cement industry at 3.82 per cent, and in the case of coal at as low as 2.42 per cent. The Federation's contention, therefore, was that such a low net return, free of tax, to the equity shareholder was very inadequate and that, in the market conditions, it would be difficult to raise even preference capital at less than 6.5 per cent free of tax.

The need for treating managing agency commission, bonus and gratuity as items of cost, inasmuch as they were items of revenue expenditure, was then emphasised by the Federation which also made the point that the Tariff Commission, in its assessment of costs, should take into account the actual expenditure incurred on the works side. Theoretical assumptions of production being nearly equal to capacity and consumption of raw materials, it pointed out, would be hardly realistic in any assessment of works costs. Objection was also taken to the Tariff Commission's procedure of working out the 'fair' works costs as an average of the costs of all producers. The Federation's contention here was that, in such a situation, the producers whose costs were above the average would have no incentive for expanding capacity and production.

In November 1960, the Federation's representation was confined to the question of cement prices which had been rendered inadequate by the rise in costs of production since the last enquiry by the Tariff Commission. In February 1961, the Federation again represented to the Government that the recommendations of the price-fixing authorities did not always take note of the needs of industry to provide for a fair return to investors and for rehabilitation and expansion of plant and equipment, after meeting the growing operational expenses. This, then, is the background to the Federation's latest representation, that of July 1961, in which the Government's silence on the issue of price fixation has come in for severe criticism. The expansion plans of such industries as cement and paper, it is pointed out, have been retarded by the increase in costs which have rendered the prices fixed by the Government unremunerative. The Federation has also advanced a general plea to the effect that the Government should take an early decision on the basic principles and procedures to be applied in determining the fixed prices of manufactured goods and the return on capital so that all doubts could be cleared.

It would appear from the cogent, though infructuous, representations of the Federation since December 1959 that the role of the Tariff Commission in determining prices has been accepted as something that is permanent. The idea here seems to be that the Government should lay down a new policy for the guidance of the Commission whose recommendations, then, should not be changed. It is here that this journal, which is otherwise in agreement with the Federation on its arguments for a more realistic and remunerative structure of prices and a higher return on capital, would like to present a different point of view. To cut a long story short, our plea is for the establishment of a permanent high-powered committee for determining the relevant industrial prices from time to time in the light of changes in costs of production. Such a committee, unlike the Tariff Commission which takes two or even three years for completing an enquiry, can be continuously appraising the changes in costs and revising the prices either upward or downward, as and when required. Its statistical section can regularly collect and maintain the data relating to actual expenditure on the works side, prices of raw materials, and so on, and thus facilitate a realistic assessment of works costs. The Committee can also be guided by a statement of price policy, laying down some general principles regarding return on capital, contingency allowance, rehabilitation allowance, etc. If the Tariff Commission relies on this committee for determining the fair ex-works costs for the purpose of arriving at the quantum of protection needed by an industry, its task will also be rendered easier. For, then, the Commission can confine itself to the ascertainment of the landed costs which are to be compared with the fair ex-works costs. Since the Commission has been repeatedly and, in some cases, as in sugar and paper, rightly, criticised for its faulty assessment of industrial costs, it should be relieved of this responsibility which can be more easily discharged by a wholetime and permanent price committee. The Tariff Commission's role in recommending protection or deprotection has got mixed up with the price-fixing role to such an extent that wide sections of industry have come to feel aggrieved. The ascertainment of ex-works costs for the broad purpose of determining the quantum of protection to an industry has unfortunately become a price-fixing process which has generally disregarded the needs of industry for rehabilitation, modernisation and expansion. It is high time, therefore, that the function of fixing fair ex-works prices was entrusted to a separate body, leaving the Tariff Commission to concern itself only with the task of conferring tariff protection and supervising the protected industries.

CONFLICT IN WORLD TEXTILE TRADE

IT is not before next week-end that the outcome of the G.A.T.T. Textile Conference now in session at Geneva will be fully known. For the Conference, which began on Monday this week and was scheduled to end four days later, that is, on Friday the 21st inst., is expected to be prolonged till the 28th inst. The outcome of the Conference is awaited with great interest the world over, as the decisions reached at the Conference will influence and determine the future course of international trade not only in cotton textiles but also in other manufactured goods in which the developing countries are acquiring proficiency and hope to use them for earning foreign exchange. The Conference, it will be recalled, has been convened at the request of the U.S. Government, with a view to reaching agreement on arrangements for the orderly development of world cotton textile trade through (*a*) an increase in access to markets now subject to import restrictions, (*b*) maintenance of regulated access to other markets, (c) securing from export countries some restraint in their export policy, and (*d*) laying down guiding principles and establishment of international machinery for keeping the situation under review.

The issue before the Geneva Conference is thus quite a complex one. It is for this reason and in view of the fact that the talks are being held in "strict secrecy," it will be rash to forecast the final outcome of the talks. All that can be said is that the success of the Conference will depend on the extent to which it is able to reconcile the conflicting interests of the two groups of textile trading nations, one comprising the industrially advanced importing countries, such as the U.K., Germany, the U.S., and Canada, and the other representing the so-called low-cost supplying countries like India, Japan, Pakistan and Hong Kong. The Governments of the countries in the former group have for sometime been under heavy pressure from industrial groups demanding import restrictions to protect the domestic textile industries against "cheap" overseas imports, while the exporting countries have been urging for a wider market because of the vital need for earning foreign exchange required to finance schemes of economic development.

It may be true that imports of cotton piecegoods into the U.K., the U.S., Canada and other West European countries have risen in the past few years, but the increased imports cannot be attributed to dumping, export subsidies and other malpractices. For no exporting country in the free world has been resorting to such measures. The importing countries themselves now admit this fact. The argument advanced by these countries is that continued import of textiles from low-cost countries is having a disastrous impact on their domestic textile industries. Indeed, fears are expressed that there will be a considerable shrinkage in their textile industries in the years to come. These fears are not wholly unwarranted. But the change that is rapidly taking place in the industrial structure of the world as a whole is inevitable and its repercussions on old industries in the industrially developed countries have to be faced by their leaders realistically. Fortunately, today, the West is in a position to adjust itself to this change without any significant setback to its economy.

Why should the cotton textile industry so heavily be concentrated in countries like the U.K., Canada and West European nations which do not grow any cotton at all? A steady reduction in the cotton textile producing capacity of these countries is necessary. One may say that such a reduction will result in unemployment and the consequent lowering of living standards. This assessment is, however, not true. For almost all the Western countries do not have any problem of unemployment. On the contrary, for many of them, the chief headache is traceable to shortage of labour. The displacement of labour arising from decline in the size of cotton industry can easily be met by absorbing the workers involved in other textiles, engineering and other manufacturing industries. Every one of the Western countries, it may be noted, is in a favoured position so far as production of man-made fibres and woollen textiles is concerned. Nor are the apprehensions of a lowering of living standards justified, because the Western nations are already enjoying very high standards of living to which the manufacture of cotton textiles makes only a small contribution. The *per capita* income is as high as Rs. 11,000 in the U.S., Rs. 5,000 in Britain and Rs. 7,000 in Canada, to mention only a few, as against just Rs. 300 in India, Rs. 240 in Pakistan and Rs. 1,400 in Japan.

Any move on the part of Western countries to restrict imports of cotton textiles and other manufactured goods especially from the developing countries like India may tend to jeopardise their own interests. How can such restrictions enable the less-developed countries to pay for the increasing imports from the Western countries? It is estimated by the European wing of the U.N. that the total annual import requirements of the less-developed countries will rise to about $60 billion in 1980, as against the average of $22.5 billion in 1957-59. Even if a liberal allowance were to be made for the increase in capital aid from the developed countries (say, from an average of $3.5 billion in 1957-59 to $10 billion in 1980), the less-developed countries would still have to step up their exports from $19 billion to $50 billion if a dislocation in world payments situation were to be avoided. Inasmuch as there is hardly any scope for a phenomenal increase in exports of primary commodities, the developing countries will need, according to the U.N. experts in Europe, to augment their exports of manufactures from $2 billion a year to at least $15 billion in 1980 in order to finance their import requirements. A large part of this increase will have to be accounted for by the Western countries.

A vigorous growth in exports of manufactures from the developing countries implies for the developed countries a need to adapt their pattern of trade and, to some extent, their domestic industrial structure. This aspect has been well brought out by no less a body than the U.N. Economic Commission for Europe which represents the interests of Western Europe. The Commission, in its latest *Economic Survey of Europe, namely, that for 1960, rightly* points out that, in order to stimulate developing countries to create and expand industries which export manufactures, the Western countries should (1) reduce customs tariff on certain finished manufactures such as textiles; (2) gradually remove informal restrictions on imports of cheap labour manufactures; (3) eliminate, as soon as possible, discrimination against imports of manufactures from Japan and Hong Kong; and (4) adapt the preferential treatment granted to associated territories so as to benefit not only their short-term export prospects for traditional commodities but also their long-run economic development.

The course of action suggested above has two important merits. In the first place, it will expand the markets for goods produced in the Western countries and facilitate a profitable outflow of private capital (as well as technical know-how) to the developing countries where it is badly needed. Secondly, it will provide to the developing countries the kind of help that is needed to overcome what the U.N. Economic Commission for Europe describes as "the special infant industry disadvantages. In the long run, dustrial export production would, as the E.C.E. a move of this kind, assist the industrial pertinently emphasises, their domestic industrial countries to adjust gradual industrialisation of structure to the developed world. What is more, it will be of benefit to the developed and developing countries alike, as it will contribute to a pattern of world trade that will be more in line with opportunities for international specialisation on the basis of comparative advantage, a point to which this journal has drawn attention more than once in recent weeks but which nevertheless bears repetition.

MARKET GOSSIP

Central Government Comes to Capital Market Again

THE inter-bank call money rate has suffered a big break this week. It has dropped in quick succession from 4 per cent to 2 per cent. Even at the latter rate, the lenders are over. A year ago, the rate stood at 3½ per cent. And not long ago, when the 1960-61 busy season was in full swing, the rate was as high as 5½ per cent. Since the commencement of June, deposits with banks have gone up by Rs. 10 crores to Rs. 1,776 crores as of 7th July. Bank credit has fallen by about Rs. 13 crores to Rs. 1,268 crores. Borrowings from the Reserve Bank have been reduced by Rs. 20 crores to less than Rs. 10 crores. And the cash balances have improved by Rs. 10 crores to Rs. 136 crores. The position today must have become easier still, as is evident from the sharp fall in call money rate. But all this does not necessarily mean that the Central Government's second instalment of the borrowing programme, announced soon after our last issue went to Press, is assured of complete success.

The decline in inter-bank call money does not reflect any marked change in the state of the capital market. All that it signifies is that the banks are having a temporary surplus of funds, mainly because the Life Insurance Corporation has converted a part of its short-dated investments in Government securities into cash and is placing the funds in the call money market, pending its application to the Goverment's new loans for which the list is scheduled to open on 24th July 1961. It is also possible that the return of seasonal advances is more substantial than anticipated. Apparently, with promising prospects of good agricultural crops in most parts of the country, the tendency to dehoard among farmers and merchants alike must have been quite pronounced in recent weeks.

Flushed though the banks may be today with large cash balances, they have not yet dared to lower their rates of interest on short-term deposits. With the recent heavy pressure on their resources still fresh in their minds and with the general belief that the next busy season would witness a much heavier demand for bank accommodation than did the past season, and that the growth of deposits would continue to be slow, still holding the field, the banks are unlikely to display any enthusiasm for the new loans, even though they offer slightly higher returns as compared with current yields on gilt-edged securities of corresponding maturity. The fact that some of the leading banks have just bought from the L.I.C. short-dated securities maturing in the next four or five years shows that they prefer not to go in even for medium-dated loans, let alone long-dated loans, so that they could minimise the risk of capital depreciation and also be in a better position to raise cash in case they need more funds for investing in loans, overdrafts, cash credits and trade bills which yield a distinctly higher return. Further, banks generally feel that they should reserve a good part of their liquid assets for investment in State loans, which are expected to be announced in three or four weeks, because the State Governments bring considerable pressure on them. As the Reserve Bank has been readily supporting State loans when the banks are in need of funds for financing genuine commercial and industrial activities, as opposed to speculation, and as the return on such loans is a shade better than that on Central loans, their love for State loans has perceptibly increased.

The main support for the new loans of the Central Government—3½ per cent 1969 and 4 per cent 1981 for an aggregate sum of Rs. 100 crores—will, therefore, have to come from the L.I.C., the provident funds and trusts, as well as from the State Bank of India to some extent. The L.I.C. has, of course, been preparing itself to take up a sizable amount of the new loans. Even so, the response from these quarters cannot be so great as to neutralise the possible shortfall in the support from banks. Accordingly, it looks as though the Reserve Bank will have to put in a big application if the list is to be closed with full subscription. This does not mean that the commercial banks will take up nothing at all. They may convert at least a good part of the maturing loans—2½ per cent 1961 or 3 per cent 1951-61 Hyderabad loan—of which a little over Rs. 45 crores are believed to be outstanding, especially as word is believed to have been passed on to them by "influential quarters" to the effect that they should extend at least decent support to the loans of the Central Government also.

Much has already been said in the daily Press about the slightly more favourable terms offered for the new loans—especially for the 4 per cent 1981 loan—as compared with the prevailing yields. The 4 per cent 1980 loan was standing at Rs. 99.80 on the eve of the announcement of new loan. As against this, the Government has offered the 4 per cent 1981 loan at Rs. 98 50. The significance here is that the Government is only reluctantly yielding to pressure of the law of demand and supply, after trying to resist it for a long time. It would be rather far-fetched to interpret the terms of the new loan in such a way as to give the impression that the Government is giving a lead to dear money policy. Surely, even those investors who are compelled by law to invest all or a part of their funds in Government securities must be enabled to earn a return to fulfil their obligations to those whose savings are kept in their charge. Indeed, the issue price of the new long-dated loan is still unrealistically low, considering that its redemption yield is only 4.11 per cent, as compared with 3.61 that can be had on a four-year loan. An advantage of only 0.60 per cent is by no means an adequate compensation for an investor who has to wait for another 15 years to get his money back from the Government.

One may wonder as to why the values of 4 per cent 1981 and other long-dated loans have not yet declined to levels comparable with the issue price of the new 4 per cent loan. The real reason for this lies in the fact that some operators had sold short these loans in anticipation of the terms of new loan. They have not been able to cover their sales so far, as there are no sellers other than the Reserve Bank. Understandably enough, the latter is in no mood to oblige them. This shows how narrow and regimented the gilt-edged market is in this country.

Finance Corporation For Agriculture?

If the agricultural sector, the sheet-anchor of the country's economy, is to achieve the third Plan targets fixed for different crops, it is imperative that the several handicaps facing it are removed. One such handicap pertains to paucity of finance. The total credit requirements of this sector during the third Plan period are estimated at as high as Rs. 680 crores, short and medium credit accounting for Rs. 530 crores and long-term credit for Rs. 150 crores. While there are a number of agencies granting credit facilities to farmers, the resources actually made available as long-term loans are too insufficient fully to meet the needs of growers. Viewed thus, the reported move of the Government of India to set up an Agricultural Development Finance Corporation, though a belated one, is certainly a step in the right direction. The proposed Corporation, the details of which are being considered by the Reserve Bank, will, we are told, "provide loans for schemes that are intended to increase agricultural production and that are remunerative in character but involve considerable investment"; loans will be channelled through the Central Land Mortgage Banks. The schemes, according to Mr. Sriman Narayan, Member, Planning Commission, will include development of rubber, coffee, tea, cashewnut and arecanut plantations, orchards, contour bunding, and soil conservation.

The proposed inclusion of the major plantation industries under the purview of the long-term loan scheme must be particularly welcomed. The financial position of several of these estates is none-too-happy, thanks to the continuously rising trend of production costs, on the one hand, and the unsatisfactory price policy of the authorities, on the other. Provision of adequate long-term credit to the owners of estates will doubtless enable them to undertake measures which will not only make the estates yield more per given area of land and improve the quality but also facilitate a reduction in the prices paid by the consumers.

Coal Washeries

The need for washing inferior coals so as to reduce their ash content and make it more suitable for coking and metallurgical purposes is going to be greater in the third Plan period. It will be greater because of the absolutely larger quantity of coal to be produced in the years ahead and of the expected higher proportion of inferior coals in the total production. The Government and consumers of coal alike have, therefore, assigned some importance to the establishment of an additional washery capacity of 12.7 million tons in terms of raw coal in the third Plan period. Since there has been a shortfall of about 6 million tons in the creation of washery capacity in the second Plan which had laid down a target of 11.6 million tons for the purpose, the additional capacity that will have to be actually established during the third Plan period will come to 18.7 million tons (12.7 million tons *plus* 6 million tons). On the assumption that the second Plan's shortfall of 6 million tons in washery capacity will be made good by the middle of 1963, the Government seems to have drawn up the programme for setting up the additional washery capacity of 12.7 million tons in the public sector. Under this programme, the expansion of washeries already existing or in the course of erection will account for 4.8 million of the additional capacity. Doubling of the capacities of the washeries at Durgapur, Dugda and Bhojudhi is also envisaged. Besides, five new washeries are to be set up—two at Kathra and two at Karanpura and one in Central Jharia. There will also be a washery forming an integral part of the West Bengal coke-oven plant at Durgapur. This programme alone is estimated to involve an outlay of about Rs. 35 crores, including the cost of townships. Its foreign exchange component will be anything up to Rs. 10 crores, unless, of course, it is reduced to some extent by indigenous manufacture of coal washing equipment.

It is, in this context, that the proposal that is being actively pursued in the private sector to establish the manufacture of coal-washing plant and equipment may be considered particularly heartening. Already, a licence has been issued to a new company under the name of McNally-Bird Engineering to manufacture coal washeries as well as coal-handling plants. This enterprise will be based on joint Indo-British-American collaboration. "McNally" in the name stands for McNally Pittsburg Manufacturing Corporation, U.S. and "Bird" for Bird and Company (Private) Ltd., Calcutta. Its authorised capital will be Rs. 2 crores and the major portion of the finance, it is stated, will be provided by the American partners. The company proposes to manufacture 70 per cent of a coal washery from the beginning and to achieve 100 per cent indigenous content in about five years. Its plant will be located at Kumardhubi in Bihar and is expected to go into production in about a year's time with a manufacturing capacity equivalent to producing coal washeries aggregating 1,000 tons per hour. When this unit goes into production, it will be in a position to supply washery plant and equipment not only to the public sector which has a pretty big programme of creating additional washery capacity in the third Plan but also to those colliery-owners who want to create their own washery capacity and to steel mills, thermal power plants and other coal consumers like the railways, with their own requirements for washeries and coal-handling equipment. If the establishment of this new company has the effect of expediting the third Plan programme for additional washery capacity, it will be a very healthy development, indeed, as much from the point of view of some saving in foreign exchange as from that of achieving the third Plan target without any shortfall.

Section 23A And Small Companies

It is one of the standing complaints of small enterprises organised on a corporate basis that the provisions of Section 23A of the Indian Income-tax Act are having a deleterious effect on their capital formation. The question has been examined several times by expert committees, but no specific relief has been granted so far. The Committee of the Bharat Chamber of Commerce, Calcutta, has, therefore, done a valuable service to the small private companies by submitting last week a closely reasoned memorandum to the Union Finance Minister, Mr. Morarji Desai, on this problem. It is well known that, besides the basic tax of 45 per cent on company profits which affects the retained earnings of all companies, Section 23A of the Income-tax Act, designed to regulate the distribution of profits by private companies and closely held public companies, also reduces the funds available for future expansion. This Section compels private companies and closely-held companies to distribute at least 50 per cent of their available profits after taxes; otherwise, they would be subject to a penal super-tax of 37 per cent on their retained profits. In the case of non-industrial companies and investment companies coming within the scope of Section 23A, the statutory percentages for profit distribution are even higher than for industrial companies—the exact percentages being 65 and 90, respectively.

It may be wondered why a provision like 23A has been incorporated in the Income-tax Statute, when the needs of economic development of the country create a bias in favour of savings, both personal and corporate. The rationale behind Section 23A, whatever may be its effect, is not difficult to realise. Only, Section 23A is a typical example of the conflict between two equally desirable goals of policy, which, in this case, are the need for closing tax loop-holes and the need for conserving corporate resources for future growth and expansion. Unfortunately, this section does not provide for a proper balancing between these two conflicting goals. On the contrary, it actually tilts the balance in favour of the object of closing opportunities for tax avoidance to the total neglect of the needs of growth of small enterprises.

It is, of course, true that, in private companies, a few rich individuals have complete control over the affairs of the companies and they can reduce their liability to high personal super-tax by postponing or reducing distribution of the company's profits. This temptation to avoid super-taxes is strong, especially when their income from other sources is very high. In fact, a number of industrially advanced countries have faced similar problems and their tax laws have evolved suitable provisions for preventing improper accumulations of undistributed corporate earnings. But their laws are not as rigid as Section 23A and make possible conservation of corporate earnings in terms of business needs. Section 23A, it may be noted, was also flexible in the beginning. But it was made unduly rigid by the Finance Act (2) of 1957 which took away the right of companies to appeal to the Commissioner of Income-tax or the Board of Referees for seeking total or partial exemption from the minimum statutory distribution on the basis of their current business requirements or those relating to the maintenance and development of business.

Apart from the need for introducing a large measure of flexibility in the operations of the existing provisions of Section 23A, the Bharat Chamber has questioned the very assumption that private companies are necessarily owned and controlled by rich individuals. In support of its contention that these companies are controlled by persons belonging to middle income group, the Chamber has cited data which show that 92 per cent of the private limited companies—8,542 of the total of 19,984 to be precise—are small, with a paid-up capital of less than Rs. 5 lakhs and an average capital of only Rs. 56,628 per company. From the data culled out from a recent study by the Department of Company Law Administration, the Chamber has drawn the inference that "such small companies are mostly owned by the smaller individual enterprisers who have formed such companies for systematic pursuit of their ventures with their own money and with the financial resources of their friends and near acquaintances." Whether this conclusion is warranted by actual facts cannot be judged without more elaborate data on this question. But, on the face of it, the Chamber's inference does not appear to be wide of the mark. Nor is there any exaggeration in its remark that the rigours of Section 23A only condemn such enterprises to drag on with their difficulties, being unable to accumulate funds within the company when they pass through prosperous days either for weathering the rainy days or for financing further growth.

The Chamber has rightly questioned the validity of the observation of the Direct Taxation

IRREGULAR TREND IN EQUITIES

BANKS FAVOURED

(From Our Own Correspondents)

BOMBAY, 20*th July*

EQUITIES on the Bombay Stock Exchange displayed an irregular trend during the week under review. On the opening day of the week, that is, Friday the 14th inst., prices declined on account of pre-settlement liquidation. In the following two sessions, however, the trend was upward thanks to good buying support induced by continued lack of confirmation of the old rumour about stringent regulations on speculation. The *budla* rates also were normal. Further the Stock Exchange authorities did not effect any change in the existing special deposit *havala* rates except in the case of T.E.L.Co., the rate for which was lowered from Rs. 330.94 to Rs. 329.85. The distinctly comfortable conditions in the money market, with inter-bank call rate rapidly going down from 4 per cent to 2 per cent, gave some psychological comfort to the bulls. In the last two days, however, profit-taking was more in evidence than fresh buying. This was particularly true of the leading speculative counters. A feature of the week was good investment buying of bank shares. This was due partly to encouraging half-yearly results of leading banks and partly to expectations of right issues in the near future. There were, however, some scrips which drifted downward, thanks to liquidation by parties who feared a possible official intervention in the market.

In the steel section, Tata Steels advanced from Rs. 160.25 to Rs. 160.75 after the higher dividend news was announced, moved down subsequently for lack of follow-up support and touched a low of Rs. 158 today before finishing at Rs. 158.75. The loss over the week was Re 1.50. Indian Irons improved by 35 nP to Rs. 27.95 on rumours that the Company would give a cash bonus as in the case of the T.I.S.Co. Mukand Irons spurted from Rs. 27.25 to Rs. 28.

Among textiles, Centurys provided a bright spot, the quotation forging ahead from R . 672 to Rs. 696, on Tuesday the 18th inst. At this level, profit-taking set in and the scrip closed lower at Rs. 687, showing a net gain of Rs. 15 over the week. Khataus were keenly bid and advanced by Rs. 8.75 to Rs. 576.25. Bradburys gathered Rs. 5 to Rs. 150. Laxmi gained a like amount to Rs. 605. Mysores, Svadeshis and Tatas put on Rs. 2 each to Rs. 71, Rs. 270 and Rs 68.50, respectively. Bombay Dyeings opened at Rs. 66.50, as against the previous close of Rs. 66.60, and rose to touch Rs. 68.10 today before finishing at Rs. 67.90. Over the week the scrip thus gained Re. 1.30. Gokaks gathered a rupee to Rs. 186. Central Indias gained 50 nP to Rs. 126.50, Apollos firm at Re. 1.70, Podars at Rs. 143 and Indores at Rs. 158. Standards, however, slumped by Rs. 32 to Rs. 1.328. Mafatlals were moved down by Rs. 25 to Rs. 850. Morarjees receded by Rs. 6 to Rs. 422, Kohinoors by Rs. 5 to Rs. 296, Vishnus by Rs. 4.50 to Rs. 155.50 and Finlays by Rs. 4 to Rs. 320. Elphinstones shed Rs. 3 to Rs. 79. B.R. Cottons and Simplex lost Rs. 2 each to Rs. 50 and Rs. 198, respectively. Ahmedabad Advances were lower by Re. 1.50 at Rs. 191.50.

Bank shares ruled distinctly firm. The sentiment was influenced by the half-yearly announcement of the interim dividend. Central Banks spurted by Rs. 3 to Rs. 64. Punjab Nationals put on Rs. 2 to Rs. 24.52. Barodas and Bank of Indias gained a rupee each, the former to Rs. 104 and the latter to Rs. 133. United Commercials gained 50 nP to Rs. 91.50 and Union Bank 8 nP to Rs. 6.84.

Cement shares received selective support. Associated Cements opened slightly lower at Rs. 162.50, as against the previous closure of Rs. 162.75, and improved to Rs. 164.25, on account of investment buying and lack of offerings on Tuesday the 18th inst. In subsequent sessions there was stale bull liquidation as a result of which the scrip declined to Rs. 162.75. Digvijays gathered a rupee to Rs. 155, Jaipur Udyogs gained 60 nP to Rs. 11.60. Orissas put on 16 nP up to Rs. 14.60.

Sugar shares staged a slight recovery from the low levels touched last week. Kesars jumped up by Rs. 26.25 to Rs. 246.25. Belapurs hardened by Rs. 4 to Rs. 250. Phaltans rose by Rs. 2 to Rs. 127. Walchandnagars strengthened by a like amount to Rs. 168. But Maharashtras were neglected at Rs. 166, as against Rs. 168 last weekend.

In the shipping section, Scindias opened at Rs. 14.08, as against the previous close of Rs. 14.04, and advanced to Rs. 14.28 on Monday the 17th inst. Subsequently, however, they eased to Rs. 14.08, on account of offerings. Great Easterns, on the other hand receded from Rs. 14.04 to Rs. 13.88.

Among automobiles, Premier Automobiles evinced some interest and gathered Rs. 2.50 to Rs. 163.50. Hindustan Motors gained 8 nP to Rs. 22.32.

Rayon shares showed a mixed trend. National Rayons opened firm at Rs. 551, same as last week, and increased to Rs. 554 on Monday the 17th inst. Subsequently, they encountered selling and drifted lower to finish at Rs. 546, showing a net loss of Rs. 5. South India Viscose suffered loss of Rs. 2 to Rs. 187. Indian Rayons shed Re. 1.50 to Rs. 60. But Baroda Rayons were keenly bid Rs. 3.50 higher at Rs. 140.50. Gwaliors were marked up by 50 nP to Rs. 52.

An irregular trend was in evidence in the chemical section. Polychems were firm at Rs. 215 and Dhrangadhras at Rs. 110. Dharamsis attracted good support and rose by Rs. 5 to Rs. 280. Synthetics put on Rs. 3 to Rs. 199. Citrics gained a rupee to Rs. 51.50. Colour Chems were quoted Rs. 330 ex-right. The Company has declared a maiden dividend of Rs. 8 per share (tax-free) for the year ended March 1961. But Indian Dyestuffs declined by Rs. 17.50 to Rs. 462.50. Amar Dyes lost Rs. 8.75 to Rs. 350. Alembics receded by Rs. 8.75 to Rs. 242.50. Tata Chemicals shed 24 nP to Rs. 18.84.

In the engineering section, Telcos shot up from Rs. 356 to Rs. 371.50 on Tuesday the 18th inst., following the note of optimism regarding the future struck by the Chairman of the Company at the last annual meeting. The high level, however, attracted profit-taking and the scrip slipped down to Rs. 362.50 today before finishing at Rs. 366.50. The net gain over the week was Rs. 10.50. Brady Engineers gathered Rs. 2.50 to Rs. 422.50. Larsen and Toubros hardened by Re. 1.50 to Rs. 39. Alcocks were fully maintained at Rs. 272, Coopers at Rs. 175 and Khandelwals at Rs. 77. New Standard Engineerings, however, lost Rs. 4 to Rs. 186. T. Maneklals shed Rs. 7.50 to Rs. 592.50. Greaves eased by 50 nP to Rs. 178.50. Texmacos lost 48 nP to Rs. 20.12.

In the miscellaneous section, Bombay Burmahs opened at Rs. 605 and soon receded to Rs. 593. They were quoted at Rs. 596 *ex-div.* on Monday the 17th inst. On Tuesday they received some buying support and spurted to Rs. 603. On the following days, profit-taking brought down the rate to Rs. 595. Even making allowance for the ex-dividend rate, the scrip suffered a loss of Rs. 2.60 over the week. Voltas were keenly bid and put on Rs. 7 to Rs. 293. Shivrajpurs spurted by Rs. 13 to Rs. 89. The Directors of the Company have decided to capitalise a part of the reserves to issue bonus shares in the ratio of one to one. Killicks gained 50 nP to Rs. 99. Wimcos were firm at Rs. 268. Ceat Tyres advanced by Rs. 5 to Rs. 217.50, while Premier Tyres lost a rupee to Rs. 125. Laxmi Starchs spurted by Rs. 23.25 to Rs. 212.50. Permanent Magnets picked up a rupee to Rs. 88. Hindustan Levers were fully steady at Rs. 47.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, 12*th July*

Despite intermittent profit-taking, closing levels were higher on balance on the Stock Exchange during the week under review. The volume of transactions improved, notwithstanding anxiety over the rapid fall in foreign balances and apprehensions regarding further import curbs. For the encouraging outlook for the corporate sector attracted investment support. With shortage of scrips and disinclination of holders to book in profits at current levels, prices received a further boost. Many a miscellaneous industrial was lifted up at hardening rates. The floods in the country gave rise to concern, but market circles thought that, since the last agricultural crop had been good, any damage to current crop would not be reflected in prices. Recent utterances by President Ayub Khan on Kashmir lent a restraining influence to trading. Another factor for caution was the report that the Union Finance Ministry would insist on the Stock Exchanges to take further measures to curb excessive speculation through margin regulations and minimum brokerage. Dalal Street's disappointment at the T.I.S.Co. dividend was shared by Calcutta which did not now expect any change for the better in the I.S.Co. dividend.

Induced by excellent working report and declaration of a dividend of 15 per cent, Katras Jherriahs, among coals, were firm at Rs. 49.50. Burrakurs were maintained at Rs. 20.37, with Bengals being steadier at Rs. 390, as against Rs. 388 previously. Central Indias at Rs. 13.87 scored a fractional gain. Western Bengals touched a high of Rs. 10.55, as against Rs. 9.91 earlier. Raneegunges were firm at Rs. 19.12, while Dhemo Mains eased from Rs. 7.09 to Rs. 6.69.

At lower levels, a larger volume of business was recorded in jutes, thus enabling the inference that the operators and investors preferred to change over their portfolios from jutes. Anglo-Indias were unchanged at Rs. 189, while New Centrals gained 6 nP to Rs. 20.06 before easing to Rs. 19.81. Birlas were at one time lower at Rs. 27.00 but closed at Rs. 27.81. Nuddeas fell by one point to Rs. 46.75, as did Bally at Rs. 217. Aucklands were quiet at Rs. 158, after rising earlier to Rs. 160. Kanknarahs at Rs. 72 added Rs. 3. Megnas changed hands at Rs. 12.12, as against Rs. 12.06 previously. Ganges shed a few naye paise at Rs. 11.31. Nellimarlas being unchanged at Rs. 9.56.

Among minings, Orissa Minerals hardened to Rs. 45.87 from Rs. 45.50. Indian Coppers, which had produced an excellent working report leading to maintenance of dividend at 27 per cent taxable, were unchanged at Rs. 5.66. Interest would seem to have petered out, as, contrary to earlier expectations, a share issue was not considered likely.

Engineerings were about steady. Indian Irons opened at Rs. 27.77 and rose steadily to Rs. 28.05 before closing at Rs. 27.94. Bhartias, for which a taxable dividend of 10 per cent (against 15 per cent taxable) was announced on adverse working results arising from a decline in orders for castings, changed hands at Rs. 11.81, as against Rs. 11.87 previously. Calcutta Steels eased from Rs. 18.50 to Rs. 17.69. Binani Metals, on profit-taking, receded from Rs. 12.81 to Rs 12.37. On interested buying, Braithwaites at Rs. 35 added two points.

Teas met with fair interest, preference being shown to Assam gardens. Bishnauths at Rs. 26.25 recorded a fractional gain. Grobs were better at Rs. 11.19. Tyrons picked up Re. 1 to Rs. 39. Basmatias hardened from Rs. 40.75 to Rs. 41.37. Bagmaris realised Rs. 24.50, as against Rs. 23.37. Birparas, after being lower at Rs. 174, rose to Rs. 176, while Hantaparas eased from Rs. 141 to Rs. 139. Ranicherras were unchanged at Rs. 19.25.

Several features were recorded among miscellaneous industrials. National Pipes and Tubes at Rs. 28.62 recorded a further addition, and, on expectations of good corporate news, National Cables were better at Rs. 38.75. British Paints were held fully steady at Rs. 27.00, after being higher at Rs. 27.31. Goodyears changed hands in larger numbers and touched Rs. 39.50 to close at Rs. 39.25. National Tobaccos, for which a dividend of 16 per cent taxable has been maintained, gave way from Rs. 21.25 to Rs. 20.87. Expectations of a bonus issue maintained Dunlop Rubbers at Rs. 52.87 and, for the same reason, Britannia Biscuits were hard to be found even at Rs. 54.87. Indian Aluminiums moved up further from Rs. 34.25 to Rs. 35.62. Replacement buying pushed up Alkali and Chemicals to Rs. 40.00.

* * * *

Madras Stock Exchange

MADRAS, 19*th July*

Distinctly easy conditions prevailed on the Stock Exchange during the week under review, with both investors and professional operators awaiting fresh incentives. Encouraging advices from Bombay, did not have any effect. Plantation shares were generally subdued, notwithstanding the reported move of the Central Government to set up an Agricultural Development Finance Corporation to provide long-term loans for financing the development of plantations, etc., and the Centre's decision to delegate authority to the Tea Board to grant permission for extension of tea plantations upto a limit of 15 per cent of existing holdings, thereby eliminating the need for prior Government approval. Textiles lacked support, barring a few scrips which were well sought after. Sugars ruled easy on account of continued uncertainty regarding measures for disposal of surplus stocks. In the miscellaneous section, cements, engineerings and chemicals were subjected to selling pressure.

Among teas, Chembras declined by 8 nP to Rs. 3.92. Blue Mountains fell from Rs. 3.23 to Rs. 3.12, before closing at Rs. 3.17, with a net loss of 6 nP. Kil Kotagiris and Waterfalls shed 5 nP each, the former to Rs. 4.75 and the latter to Rs. 2.95. Periakaramalais receded initially from Rs. 3.97 to Rs. 3.86, but lower levels attracted buying subsequently, and the quotation improved to Rs. 3.75 today.

In the coffee group, Consolidated Coffees encountered stale liquidation and fell by 50 nP to Rs. 21.35. Ouchterlony Valleys gave way from Rs. 3.72 to Rs. 3.65, though they recovered subsequently to wind up the week at the last week-end level. Coffee Lands were quiet at Rs. 18.60, as also Rajendras at Rs. 12.12, Mysores at Rs. 5.45 and Cowcoodys at Rs. 4.71.

Rubbers generally drifted downward. Malankaras suffered a setback of 25 nP to Rs. 18.50. Puthuthottams declined by a like amount to Rs. 2.50, reflecting disappointment of operators over the lower dividend of 7.50 per cent, taxable, for the year ended March 1961, as compared with 12 per cent distributed in the previous year. Cochin Malabars lost 12 nP to Rs. 7.75. Vaikundams were unchanged at Rs. 31.25. But Travancore Rubbers rose by 25 nP to Rs. 10.62 on special support. Midlands put on 5 nP to Rs. 11.80.

Activity in textile scrips was greatly restricted during the week. South India Viscose, which had staged a rally in the last fortnight, were marked down by Rs. 7 to Rs. 188, on technical considerations. Lakshmis eased by Rs. 2.50 to Rs. 172. Dhanalakshmis fell by a rupee to Rs. 240. Maduras sagged by 50 nP to Rs. 37.25. Travancore Rayons shed 40 nP to Rs. 38.10. Bangalore Woollens were quiet at Rs. 205, as also Coimbatore Pioneers at Rs. 265.87 and Coimbatore Spinnings at Rs. 53.50. Metturs were unaltered at Rs. 382. Premiers at Rs. 287 and Kotharis at Rs. 12.60. But Buckinghams gathered Rs. 2.50 to Rs. 232.50. Coimbatore Cottons picked up Rs. 2 to Rs. 184. Radhakrishnas improved by 5 nP to Rs. 33.80.

Among sugars, Cauverys were marked down by Rs. 3 to Rs. 127. East India Distilleries lost 50 nP to Rs. 41.25. Indias dropped 35 nP to Rs. 12.20. Deccans eased by 5 nP to Rs. 13.80 after being lower at Rs. 13.75 earlier. United Breweries were dull at Rs. 104 and Mysores at Rs. 57.75. Travancores, however, rose by 10 nP to Rs. 10.30.

In the miscellaneous section, Western India Plywoods retreated from Rs. 229 to Rs. 223.50. Tube Investments fell by Rs. 3 at Rs. 262. Textools dropped Rs. 2 to Rs. 183. Among cements, Indias receded from Rs. 6.70 to Rs. 6.58, before finishing at Rs. 6.65. Travancores were a shade lower at Rs. 7.67. Andhras and Orissas were subdued, the former at Rs. 9.95 and the latter at Rs. 14.40. In the chemicals group, F.A.C.Ts shed 5 nP to Rs. 10.45 and Metturs 3 nP to Rs. 14.60. Mysores were neglected at Rs. 24. Mysore Fertilisers, however, moved up by 12 nP to Rs. 11.67. Travancores strengthened by 10 nP to Rs. 18.75, following the announcement of a final dividend of 12.50 per cent, making a total of 20 per cent for the year ended March 1961, which compares well with 15 per cent for the previous year. Among others, Indian Steel Rollings eased by 15 nP to Rs. 10.70. Ashok Leylands decreased by 7 nP to Rs. 9.02 and Aluminium Industries by 2 nP to Rs. 23.55. Forest Industries were subdued at Rs. 2.95. The Directors of the Company have reduced the dividend from 20 per cent during the year ended March 1960 to 12 per cent in 1960-61.

LABOUR IN PUBLIC SECTOR

THAT all is not well in the field of labour-management relations in the public sector steel plants has been known for some time. The situation has presumably worsened to such an extent that the Union Deputy Minister for Labour, Mr. L. N. Mishra, has considered it necessary to deal with it in a forthright manner. His opening speech at a recent high-level conference to discuss industrial relations in the State-owned steel plants disclosed that "no uniform or acceptable basis has been evolved for fixing wages," that conditions of service had not been laid down and that the Government had received complaints that even elementary labour laws had not been enforced. The team of officers who had investigated the causes of last year's serious labour unrest at Bhilai, he revealed, had come to the following disturbing conclusions:

"People were not being paid according to the work they did; persons doing the same job got different wages; there was no system of assessing the suitability of a person either for appointment or for promotion; no grievance procedure was laid down and safety precautions were neglected."

No wonder, then, that serious disturbances took place at Bhilai last year. Managerial indifference to the genuine grievances of labour was thus responsible for the workers' indiscipline. The Deputy Minister for Labour was, therefore right, though pathetic, in his plea that "public sector employees should at least be treated on a par with their counterparts in private employment." His appeal to the managements of the steel plants in the public sector to implement faithfully all the labour laws, to recognise trade unions in accordance with the accepted standards, to form immediately works committees and to strengthen their personnel departments was particularly necessary, because any deterioration in the labour situation might slow down the tempo of iron and steel production in the third Plan period. Moreover, when enterprises in the private sector are compelled to implement even the more onerous ones among the labour laws, the Government of India would be rightly accused of having a different standard for itself where the public sector enterprises are concerned. What is worse still, any managerial indifference in the matter of enforcing elementary labour laws in the public sector enterprises may have the effect of undermining respect for such laws in the private sector too. After all, a minimum of healthy labour legislation is necessary to regulate labour-management relations on sound lines and ensure industrial peace.

INVESTMENT CENTRE

Although the Government of India's policy governing foreign capital has been clearly enunciated not only in the Industrial Policy Resolution of 1948 but also by the authoritative pronouncements made by high Government spokesmen, besides the Prime Minister and the Finance Minister, there is the continuing need for promoting wider knowledge and understanding in the capital exporting countries of conditions, laws, policies and procedures relating to investment in India. It was precisely to serve this need, it will be recalled, that the Indian Investment Centre at New Delhi was sponsored. The Centre was inaugurated just five months ago, on 16th February last, to be precise. It must certainly be said to the credit of the Centre that it has, during this brief period, made notable progress. Indeed, Mr. G. L. Mehta, Chairman of the Centre, claimed at a Press conference at New Delhi over the week-end that, though the Centre had been active for less than five months, it had made "considerable headway" both in organising itself and in arranging to bring Indian and foreign parties together.

The Centre, we are told, has already transmitted ten industrial proposals to its representatives abroad who will approach the eligible parties in foreign countries for technical collaboration or financial participation as the case may be. The proposals are said to cover a wide field of industries, including alloy and tool steels, tubes and pipes, paper and pulp, automobile tyres and tubes, scientific glassware and plastics. The foreign component of the individual projects ranges from $700,000 to over $2 million. Mr. Mehta admitted that no "marriage" had yet taken place between Indian and foreign industrialists as a result of the Centre's efforts, but hoped that at least a few would take place soon. It is encouraging to hear from him that some "very prominent" industrial firms in the U.S. have approached the Centre with "interesting long-term plans." A number of them relate to chemical industries and a few to metallurgical industries, the main fields in which American investors are now interested, judging from enquiries received by the Centre. It is equally encouraging to learn that Indian businessmen who have settled down in the countries of South East Asia and who want to return to India for starting businesses here are also approaching the Centre for information and guidance. Mr. Mehta gave a gist of the work that is being done by the Centre at present and its plans for the future, from which emerge the following points:

The Centre's contacts are now mainly with the U.S., but the possibilities of attracting more capital from countries of Western Europe also are being explored. The Centre is primarily meant to assist those wanting to establish medium industries, as the big industrial houses such as the Tatas and Birlas have their own contacts abroad and do not normally need the services of the Centre.

The setting up of a branch of the Centre at New York is under consideration. In the meantime, it is making use of Indian Embassies and Consulates abroad as agencies for its activities.

In course of time, the Centre may assist Indian industrialists in raising rupee capital also within the country. These parties may not be in need of any foreign collaboration but may require guidance as to how to go about the capital market in India.

The Centre proposes to appoint technical and financial experts who will assist the Indian *entrepreneurs* in preparing financial estimates and project reports.

For the present, the Centre will remain a non-profit organisation and offers free services to all. But, as it gains experience and expands its activities, it will start charging a nominal fee.

The working of the Centre in the coming years will surely be watched with much interest. To the extent the Centre endeavours to help reduce delays by supplying complete and precise information and directions regarding procedures, it will have done real service to prospective industrialists, Indian and foreign, who are handicapped greatly by what Mr. Mehta aptly described as "the maze of controls and regulations that now obtain in India." Further, the Centre will do well to strengthen its publicity wing, so that the doubts and fears among foreign investors about investments in India may be removed to the extent they are born of ignorance. As Mr. Mehta himself pointed out, there is considerable ignorance in some foreign countries on the industrial facilities available in India and on the modernisation of Indian institutions.

D.A.G. AND ECONOMIC AID

The ten-nation Development Assistance Group (D.A.G.)—comprising the U.S., Canada, the U.K., West Germany, France, Belgium, Holland, Italy, Portugal and Japan—which held its fifth session at Tokyo last week, has failed, once again, to make up its mind on a clear-cut formula for providing aid to developing countries. The U.S. proposal that industrially advanced countries should contribute one per cent of their gross national product towards aid to economically backward countries, it is learned, met with strong opposition from some countries. This formula, it may be recalled, was originally put forward by a Harvard Study Group some time back. The possible acceptance of this proposal by all industrialised countries may well mean a total world aid contribution aggregating $8,000 million annually, of which the share of the U.S. alone would be $5,000 million, or over 62 per cent of the total. It is, however, a pity that, notwithstanding the generous gesture of the major contributor, namely, the U.S., in voluntarily agreeing to the aid formula, the other countries have chosen not to commit themselves on the issue. Had the D.A.G. members endorsed the proposal, it would have meant a distinctly wider source of long-term aid for capital-hungry countries which are in the process of development.

Although all the D.A.G. members were not unanimous in respect of the extent of aid they should offer, they nevertheless agreed at the Tokyo session to make it their common objective "to secure an expansion of the aggregate volume of resources made available to the less-developed countries" and to improve the effectiveness of aid programmes. Apparently, they wanted further consideration of the principles on which each Government "might most equitably determine their respective contribution to the common aid effort," after taking into account the various problems peculiar to each country. With this purpose in view, the D.A.G. decided to set up a working group, headed by the D.A.G. Chairman, Mr. Charles Riddleberger of the U.S. The Working Group has been asked to recommend, for consideration of the D.A.G., three points, namely, (1) principles to be used to guide the discussion of each country's contribution to the common aid effort, (2) role of regular reviews by the D.A.G. of the amount and nature of aid, and (3) procedures, documentation and methods for such reviews. It is to be hoped that the Working Group will expedite the preparation of its report, so that it will be available to members for necessary appraisal before the commencement of the next D.A.G. session, which is scheduled to be held in Paris in November 1961.

While the D.A.G. has been paying considerable attention to the problem of aid, it has so far not devoted any thought to the somewhat related problem of increasing the trade opportunities in industrialised countries for exports from less-developed countries. It is gratifying to note that the Japanese Prime Minister, Mr. Ikeda, who inaugurated the meeting, touched upon this important problem. Mr. Hayato Ikeda, while welcoming measures for economic aid, called upon the other members of the D.A.G. to give at the same time "serious consideration" to the question of ensuring better accessibility in the markets of developed countries for exports of primary commodities and new industrial products from the developing countries. This plea will not have fallen on deaf years, if the Working Group makes it possible to devote some thought to this question and recommends suitable measures, keeping in view the various suggestions made by the U.N. Economic Commission for Europe, in its latest annual report, for liberalising the import policies of developed countries.

In order to assess the prospects for encouraging the flow of private capital from industrialised countries to the developing regions, the D.A.G. decided to ask the World Bank to prepare a study on possible multilateral investment guarantee systems. While the D.A.G. recognised the role of public investments in developing countries, it was equally convinced about the growing need for enlarging the scope for the private sector. Emphasising the need for special incentives to private capital, the D.A.G. felt that the problem of incentives to private investment in developing countries should be regarded as a continuing part of the work of the Group and that it was necessary to study the questions involved, particularly the desirability of fiscal incentives being given for overseas private investment in developing countries. The D.A.G. also agreed in principle to set up an information centre, designed to "stimulate the flow of ideas, exchange of information and contacts between industrialised and less-developed countries." It is needless to emphasise that mutual understanding is a pre-condition for closer economic co-operation. The proposed information centre should go some way in making this possible.

I.B.R.D. LOAN FOR CALCUTTA PORT

The port of Calcutta is one of the busiest in the world. Over 10 million tons of exports and imports are routed through it; this figure is likely to rise to 18 million tons by 1965-66. About 50 per cent of India's exports are shipped from this port, and these include, among others, tea from Assam, jute goods from the mills around Calcutta, manganese ore from Orissa and the Central plateaus, coal from Orissa and Bihar and an increasing volume of engineering goods from Bengal. The port has to serve an area larger than the U.K. and France taken together and a population of about 150 million. This vast hinterland, with its abundant coal and iron ore reserves and rapidly developing iron and steel, engineering and chemical industries, may well be described as the future Ruhr of India. But this busy port, serving such an immense hinterland, is threatened with extinction as the Hooghly river on which it is based is being increasingly choked by rising silt. This problem of silting is, of course, nothing new, for it has always been there, involving periodically such remedial measures as dredging and river training works. In fact, between 1925 and 1956, as many as 8 million tons of silt were being removed annually below Calcutta port by dredging. But what is now most disquieting is that the problem has worsened to such an extent that only ships of 21 to 23 ft. mean drafts (which in the dry weather months are only 18 ft.) are in a position to enter or leave the port. As navigation for ships drawing 26 feet has been severely affected in the last three or four years, modern ships of 10,000 deadweight tons or more cannot enter the port when fully loaded. As the loss of each foot of draft means a loss of 600 tons of cargo-carrying capacity, Indian shipping alone has suffered a heavy financial loss (which is estimated at Rs. 3 crores per year) since 1956 when ships of 26 ft. draft were still able to enter the port. Apart from this loss, there is also the rising annual cost of dredging which is now Rs. 80 lakhs per year, as compared with Rs. 8 lakhs upto 1940. A permanent remedy for this state of affairs can result only from the proposed Farakka barrage which will be designed to improve greatly the water-supplies in the Hooghly.

But it will take some years before that barrage becomes a reality. The need of the hour is more efficient and systematic dredging for the purpose of maintaining access to the port for bigger vessels. The Calcutta Port Commissioners have currently before them the objective of enabling ships of 26 ft. draft to enter the port all the year round. It is gratifying to hear that the World Bank has just been persuaded to grant a loan of $21 million almost exclusively for the purpose of dredging. Whereas only a small part of the $29 million loan given by the Bank in 1958 for various improvements at the port was used to purchase some additional dredgers, the greater part of the current loan would be used for the purchase of 20 floating craft, of which four are to be large dredgers and six auxiliary dredging vessels. The balance of the loan will help finance miscellaneous development works, designed to improve the efficiency of the port, and also the foreign excosts of a hydraulic study of the Hooghly river to determine the feasibility of establishing a deep-water satellite port further down the river at Haldia to accommodate bulk cargo vessels. The entire loan of $21 million now given will cover the foreign exchange requirements of the development project estimated to cost $31 million in all, including the rupee costs. The duration of the Bank loan is for a term of 25 years, bearing interest at 5¾ per cent per annum including the usual 1 per cent commission which is allocated to the Bank's Special Reserve; its amortisation will begin from 15th May 1966. The purposes for which this loan has been given and the importance that has been attached to Calcutta "as a port vital to the economy of India" suggest that the World Bank will be increasingly in the picture, taking an integrated view of the related projects, namely, the Farakka barrage, the Haldia port and the improvement of the Calcutta port itself. The present loan is, therefore, a promising beginning in this direction.

INDUSTRIAL PURCHASING

With industrial activity in the country gaining momentum, it is being increasingly realised that "industrial purchasing," that is, buying of goods required by industrial establishments, is a highly specialised managerial function, which calls for a good deal of knowledge and experience for optimum performance. From the crude and simple method of bargaining, the function of purchasing has grown into a vital element in industrial operation, covering procurement through such diverse fields as sub-contracting, hiring, barter deals, and production in a subsidiary plant. It is this diversification that has lent the purchasing profession in advanced countries a distinct and specialised character, more or less similar to sales or accounting. This has led to the gradual shift in emphasis in the concept of purchasing from bargaining to value analysis, market research for purchasing, selective inventory control and linear programming for source selection, etc. The purchasing profession is not, however, considered a necessary evil in industrialised countries. Far from it. Judicious purchasing, in fact, has proved to be a blessing, in that it helps reduce cost of production by rationalising buying operations.

The importance of scientific buying has received only insufficient appreciation in this country so far. Even the top management, in general, has not recognised that efficient execution of purchasing functions is a specialised profession. It is gratifying to see, therefore, that an organisation of purchasing profession, called the National Association of Purchasing Executives, has been set up in Bombay, with the object, *inter alia*, of educating public opinion on the vital role of marketing in industrial operations. The Association, which was inaugurated by Mr. C. D. Deshmukh, over the last week-end, also seeks to provide a platform for exchange of views among executives of member-companies, apart from keeping track of changing methods and policies in "purchasing science" and disseminate them among its members. Dr. P. N. Vakil, President of the Association, observed at the inaugural meeting that efficiency in any business activity was contingent upon having "materials, supplies and equipments available in the proper quantity, with the proper quality, at the proper place and time and at the proper price." Failure in any of these points added to cost and reduced profit, as in the case of outmoded production methods or ineffective salesmanship.

Welcoming the Association, Mr. Deshmukh observed that greater efficiency in purchasing and materials-management was a pre-condition for reducing the cost structure of industries. Of the total investment of Rs. 10,200 crores envisaged in the third Plan, about Rs. 5,000 crores would be spent on the purchase of materials and equipments for the creation of physical assets like buildings and plants. Mr. Deshmukh was of the view that adoption of better purchasing techniques would reduce the total cost on materials and equipment in the third Plan by as much as Rs. 500 crores. Even if a reduction of 5 per cent in material cost was set up as a modest goal, this would mean a saving of Rs. 250 crores.

While there is need for a more systematic approach towards purchasing and related industrial operations in India, it is doubtful if an economy of 5 to 10 per cent can be achieved thereby. In the first place, Mr. Deshmukh's estimates are based presumably on the experience of certain large-scale industrial undertakings

Having fun—wish you were here

Kodaikanal. Flowers, ferns, waterfalls—nature on exhibit. Days replete with relaxation. Boating, swimming, unhurried walks. Plains looked lovely at distance—intend keeping them there as long as possible. (And Wills' Gold Flake? As fine as ever—superbly satisfying—wherever you go they're good.)

ON THE ARENA

By "Archer"

Destructive Inundation

WE have had a fortnight of distress brought about by floods almost everywhere in the country; Kerala, Madras, Mysore, Andhra, Orissa, Maharashtra and Assam have all been harassed by the fury of swirling waters. Crops have been submerged, large tracts have been inundated, whole villages have been laid waste, houses have toppled down, lives lost and thousands of poor families uprooted. It almost looks as though all the dams and reservoirs have had a secret meeting and resolved to test man's capacity to hold them in submission. The Chief Ministers of Maharashtra and Madras have made air dashes and car dashes to the afflicted areas and completed aerial surveys of the devastation. Timely aid has been rendered and gratefully acknowledged. The Chief Minister of Orissa gave adequate warning through the Radio and kept his fingers crossed and had his usual pattern of luck. There are still some regions which cause anxiety, such as the Krishna, Godavari and Brahmaputra basins and hopes are entertained that

> "though things may not look bright,
> they'll all turn out alright,
> if we keep painting, the clouds,
> with—sunshine."

Sir C. P. Ramaswami Aiyar has recalled his years' old suggestion of cross linking all the rivers of the south by a series of navigation-cum-irrigation channels, the Mahanadi, the Godavari, the Krishna, the Pennar, the Palar, the South Pennar, the Coleroon, the Cauveri, the Vaigi, the Tambraparani and the Periar, which, if implemented, would solve the twin problems of transport and irrigation, and would also provide for an integrated system of flood control. Mr. T. T. Krishnamachari has also recalled his suggestion that a dam should be built on the Cauveri higher up above Mettur, about fifty or sixty miles away, say, in Hogganakkal, and that excess waters from the Cauveri and Coleroon should be diverted to the South Pennar. Experts on flood control will, perhaps, find merit in integrating both suggestions and evolving a system of river conservation *plus* flood control in the whole region south of the Vindhyas, but it is a big question if all the States concerned will agree to so large a measure of pooling natural resources as is involved in such a project. What we seem to need is an organisation like the Tennessee Valley Authority in the U.S. which will be controlled by the Central Government for the common purpose of improving soil conservation, building more dams, increasing waterways for transport, navigation and irrigation, increasing power supply, eradicating wastage of water into the sea and banishing all dangers of devastation by floods in future. Since such an organisation must be autonomous and must work under a single control, it should not be subject to the influences of the several States concerned, when only it will develop the outlook and objectivity required for achieving the greatest good of the greatest number.

Flood control, increase in electric power generation, soil conservation and development of inland waterways and river ports should be the four major objectives of such a body, in their order of importance. It is unnecessary to dwell on the importance of the first two. As regards soil conservation, I shall content myself with quoting the views of Mr. David E. Lilienthal, the celebrated Chairman of T.V.A. :

> "If the soil is exposed, unprotected from the rains by cover and by roots, the people will be poor and the river will be muddy, heavy with the best soil of the fields. Even a moderate rainfall forces the river from its banks and every downpour brings disastrous floods, destroys crops and homes and bridges and highways. It is otherwise where land is covered with sod or trees and cultivated each season with the purpose of holding the rain where it falls. Such land literally serves as water reservoir, a part of a system of flood control and river development, quite as directly as dams that stretch from bank to bank to hold the waters back. A river could offer many benefits and a variety of hazards. Its improvement through engineering structure "is inseparable from the development and use of the land of the watershed. The development of soil and increased productivity are not simply problems of land, of farming and of agricultural science, any more than the development of a river is only water control, dams and engineering techniques. The restoration of land fertility, the healing of gullies, the reafforestation of hillsides—these are no more ends in themselves, than are flood control, navigation and power. As the river *is not separable* from the land, so the land is inseparable from forests and minerals."

As regards the fourth objective, namely, development of inland waterways and river ports, most of us have realised the great need for supplementing the transport facilities in the country by the establishment of inland waterways which will help in moving the large quantities of raw materials required by basic industries established in the south. The coverage of vast distances for the transport of bulky materials can best be accomplished through developing a network of navigable canals and building small ports at strategic centres.

It will be obvious from the foregoing that the safety of the paddy cultivating areas of Madras, Andhra and Orissa is largely dependent on the methods of soil conservation and afforestation pursued in Kerala, Coorg, Mysore, Konkan Maharashtra and Madhya Pradesh, and that the possibility of ensuring their future safety and development rests on the measure of co-ordinated and integrated action taken by all the southern States put together. The subject is of considerable topical interest at this time when the whole country is talking of "national integration." Sharing of river waters is an issue over which the several States have been having quarrels all along. Now that nature has visited all of them with its fury, will they give up their insular and parochial outlook and agree to pool their resources to tame nature for man's good? This is the big question in "integration."

* * * *

Can We Integrate? And How?

There are very few people who seem to be not worried about the disintegration complex which has set in throughout the country. There is so much of open and unashamed support at the highest levels for communalism, linguism, parochialism, provincialism, casteism and several other forms of separatism, that most young minds have become so corrupt as to accept them as normal and even fair. To give only one instance, the propriety of totally discarding selection of candidates for admission to professional colleges on the basis of academic merit, under the guise of increasing the representation of underprivileged communities, but almost openly for weeding out boys of the higher castes, has not been questioned in Madras State, which, incidentally, is reputed to be one of the best administered in the Union. When the Congress President or the Prime Minister pleads for eradication of casteism in the country, all those young men who have suffered by the application of the above form of "apartheid" (this is what they call it in Madras) are not inclined to display any enthusiasm. Provincialism and linguism have continued to flourish under Congress leadership, and many State Governments have been assiduously cultivating casteist sentiments: these have been countenanced at the highest levels of leadership on grounds of expediency, to catch votes at the next elections. It would be very correct to state that most of the steps which are needed for achieving "emotional integration" are primary casualties in the complicated scheme of winning the coming elections. There has been far too much of reckless disregard of the forces required for cultivating the essential unity of the country, too little solicitude for equity, justice and fairplay, too great encouragement of the personality cult in each State, and too little emphasis on the secular form of living, that nothing but a violent upheaval is likely to rekindle the flickering torch of national unity in the minds of the younger generation.

"Complete secularism in the country"—a phrase taken from the Prime Minister's reported letter to all Chief Ministers—is very desirable in a democratic country like ours where several communities have to live and work together. We can make a beginning if we go about it in a determined way along the following lines:

The public holidays in the several States should be drastically reduced, observances being restricted to only one or two *national* festivals (not sectional and provincial) besides the important communal festivals pertaining to Muslims, Christians, etc. If secularism is the objective, the observance of the *punyathithis* or birthdays of leaders and heroes should also be removed from the list of holidays. It will, however, be consistent with secularism to observe the birthday of Gandhiji to whom we owe our freedom. The main reason for making this suggestion is that the whole country should observe one set of holidays, not each State its own.

The practice of publicly celebrating the visits of dignitaries to any area should be stopped and should be restricted to that of the head of the State. Ministers and officials should refuse to submit to being garlanded when discharging their duty. Religious ceremonials should be taboo during official functions, and the importation of religious observances or invocations in the normal routine of administration should be forbidden. The practice of treating foreign dignitaries with traditional Hindu observances (such as applying *tilak*, etc.) should be given up in all public receptions.

And, finally, to ensure the slow obliteration of the personality cult in the country, the ostentatious celebration (through processions and public gatherings) of the birthdays of persons in privileged positions of power and authority should be discouraged, especially as it encourages the growth of sycophancy among patronage seekers and officials.

Power has a very corrupting influence on the minds of people, and those who find themselves in seats of power cannot adapt themselves to their privileged environment with poise, grace and decorum, unless they are already cultured and emancipated. Unfortunately, in a democracy, this cannot always be ensured, because success in elections and political influence depend on the whims of the electorate and many small-minded men are often catapulted into positions of power and authority through fortuitous circumstances. It is, therefore, very important that democratic countries should observe the golden rule of not conferring too much public honour or adulation on their elected representatives, for, if they do so, they encourage many small-minded people to compete for such honour, and corrupt practices are generated. It is because the position of an elected representative confers unlooked for prestige and patronage on people that there is so much jockeying for positions as we see in many parts of the country. If a political career calls for only hard work and great personal sacrifice, but ensures no undue position or power or prestige, the seekers will be fewer than if it was otherwise, and public life will be altogether clean.

How far can we reform ourselves on these lines to achieve the much-talked about "emotional integration"?

* * * *

The Killer Instinct!

A correspondent from Wimbledon writes of Ramanathan Krishnan, the tennis champion, that he lost the Wimbledon trophy to Rod Laver, because he lacked "the killer instinct," though he was an undisputed master of touch tennis and a wizard at the art of disguising a shot. In the dim distant past, tennis was a game suited to an expansive way of living, requiring agility and footwork, a great deal of cunning, anticipation and wrist play. Later, the style changed to cross court drives and endless rallies, each player endeavouring to wear out the opponent by keeping him on the move all the time. And now we have the day of savage ferocity, with players intent on serving to kill and volleying to murder, with no long shots, no rallys and no placements that call for cunning. The stress and strain of modern life have no doubt left their impress on the way the game has developed. The days are gone when we talked of a nice game of tennis; it is all tumultuous slap dash as we have it. But the saddest thing about tennis is that it has no place for people who believe in covering their anatomy in a conventional way. One has to don a singlet with most of the chest open, wear shorts which are shorter than bathing trunks and not feel shy about displaying all the masculine muscles aggressively at tension. One has to behave like a bull facing a matador, shout and groan when a point is lost and become temperamental as frequently as possible. It would be a good thing if Krishnan learns a few aggressive *mudras*, contortions, poses and steps from Kathakali (a la Cosmic dance) to make up for the alleged lack of the killer effect in his play. An added touch of emotional aura would perhaps strike terror in his opponents.

INDIA—BRITAIN—COMMON MARKET

OUTCOME OF TALKS WITH MR. THORNEYCROFT ANALYSED

From Our Special Correspondent

NEW DELHI, 18*th July*

MR. Peter Thorneycroft's mission to New Delhi ended on a somewhat subdued note, in contrast to the unexpected opposition encountered by his colleagues (especially Mr. Duncan Sandys) in the other Commonwealth capitals. Discussions in New Delhi covered much familiar ground regarding the prospects for India's exports to the U.K. if the present system of duty-free entry and preferences accorded to Commonwealth products gave way to a new set of preferences under the common external tariff of the expanded European Economic Community. A new development was the opinion expressed by Prime Minister Nehru soon after his meeting with Mr. Thorneycroft that the Commonwealth would be weakened by Britain's entry into the Common Market, which showed that the British Minister was unable to carry conviction on the political aspects of his country's move, assuming that he was able to provide satisfactory assurances on Britain's intention to extract concessions to safeguard Indo-British trade against sudden disruption.

DELHI LETTER

Mr. Nehru's view is widely shared in the Commonwealth (except perhaps in Malaya and Pakistan). Mr. Diefenbaker stressed the political aspects of Britain's entry when he demanded a Prime Ministers' conference and Mr. Menzies, the Australian Prime Minister, observed that the Commonwealth will not be the same again. There is, of course, nothing yet to substantiate these fears. But the Common Market countries have emphasised constantly that their economic integration is only a prelude to a closer political integration and Mr. Thorneycroft was outspoken enough to admit that Britain will be signing the Treaty of Rome only if she can accept the common tariff, commercial policies and the institutions flowing from it. Already, the Commonwealth structure has become a little too unwieldly, with the entry of more members from Africa, for effective political consultations. If Britain feels, in future, that what she says or does has to be consistent with her position in both groups, her diplomacy may come under greater strain; in theory, however, there is nothing to prevent the maintenance of equal interest in both camps.

Forthright Answers

As an enthusiastic supporter of Britain's entry into the Common Market, Mr. Thorneycroft found no difficulty in giving forthright answers to the questions put to him at the Press conference in New Delhi. The Commonwealth, he said, did not offer a large-sized free market for British entry in the way the European countries could, because the countries belonging to the former are engaged in industrialising their economies. As he saw it, the strength of the Commonwealth relationship depended upon Britain's usefulness as a market or as a source of capital for other members and isolation from Europe could not enhance its value in either respect. There was a great deal of truth in his statement that changes in any organisation could both weaken and strengthen it and that, if old ties became weaker, new ones could be made stronger; but that does not help in making a decision.

Mr. Thorneycroft explained that, while the question of Britain's entry created some very difficult problems now, keeping out of the Common Market might create equally difficult problems later. At the same time, he stressed that the U.K. was interested in membership of the Common Market only if it was an outward-looking club, seeking the maximum trade with the rest of the world. The existence of certain illiberal features like quota restrictions among the Common Market countries was not denied, nor the fact that these were opposed to the principles of G.A.T.T. While Britain could not insist on their abolition as a condition precedent to its entry, it would make every effort to plead for liberalisation; the immediate object, however, was to prevent the continued economic division of Europe.

The text of the *communique* (issued on 14th July) does not disclose any specific safeguards for India's exports. There is only a general indication that Indian interests will be kept fully in mind and that the British Government will keep in the closest touch with the Government of India if negotiations are started. There will be need for such consultations not only until Britain joins, if at all, the Common Market but for long after, since very few final solutions may be forthcoming for the complex Commonwealth problems during the preliminary negotiations before the entry.

The real danger is that Britain may try to insist on too many conditions for her entry and finally be left with no alternative but to choose among them and to subordinate Commonwealth interests to those of her own agriculture and to the obligations to fellow-members of E.F.T.A. So far as agriculture is concerned, policies have not crystallised even within the Common Market and sharp differences have arisen recently between France and West Germany because of their conflicting interests. The implementation of any common agricultural policy is expected to be spread over the next eight or nine years and British agriculture is considered not so inefficient or uncompetitive as to be unable to adjust itself to this transition. There is plenty of time and opportunity for the discovery of the right methods of safeguarding agriculture.

With regard to E.F.T.A., Britain is interested in the moral support it can derive from this association for its liberal free-trading principles in future negotiations with the Six. While E.F.T.A. members recently agreed to keep in close touch with each other in their talks with the Common Market authorities and to co-ordinate their individual viewpoints, they have (unlike Commonwealth members) a right of accession to the Treaty of Rome as European countries and hence are entitled to negotiate independently about their respective interests and insist on the safeguards needed. Commonwealth countries, on the other hand, are dependent entirely on British good offices for securing minimum protection for their trade. It does not appear that this aspect was forcefully brought out during the discussions in New Delhi.

A Disquieting Development

An important new factor that came up, however, related to the possibility of discriminatory treatment within the Commonwealth. Some member-countries of the Commonwealth may be singled out for preferential treatment such as that now accorded to the overseas territories of the Six. There is a laconic sentence in the *communique* which hints at the possibility of "further differences and complications in areas outside Europe." This has been construed as referring to such preferential treatment—either on the ground that a country is dependent on a single commodity for its export earnings and hence entitled to reliefs or on the plea that some areas, like, for example, the Crown Colony of Hong Kong, are overseas territories. If any such discriminatory principle is introduced by the Six with the active or passive support or even acquiescence of the British Government, much harm can result. India, for example, may be at a disadvantage *vis-a-vis* Ceylon in the matter of tea and Hong Kong in the matter of cotton textiles. There is, however, nothing specific yet about these dubious solutions. But Commonwealth relations will be considerably strained if differential treatment is given in the British Market to the same commodity according to the country of origin, introducing new preferences opposed to G.A.T.T. and not even justifiable on the ground of regional economic integration.

At the same time, it is felt in some quarters that nothing is gained by exaggerating the possible adverse effects of Britain's entry on India's exports. The prospects for exports of new manufactures are in any case uncertain and special efforts are called for to find markets. Immediately, the problem can be narrowed down to maintenance of the present volume of tea exports (in the face of a possible tariff of 1*8* per cent on loose tea and 23 per cent on packaged tea) and the offtake of textiles by the U.K. The most widely canvassed solution for tea is a weighted average duty which may bring down the effective tariff to the present level of 2*d*. per lb. now levied by the U.K. on non-Commonwealth tea. Except for some of the African overseas territories of the Six competing with tea by sale of other beverages, there is no special interest within the Common Market which should be opposed to the Englishman enjoying his favourite beverage at no extra cost.

Jute Goods

In the case of jute manufactures, the tariff may be no more than the present mark-up of prices in the U.K. to protect the Dundee industry; the only new factor will be additional competition from the Continental jute industry (for example, Belgium) and the present quota bought by the U.K. Jute control will disappear. India may have to fight for this as for other markets by reducing her costs in the jute industry by producing more raw material and effecting rationalisation.

Cotton Textiles

The future of cotton textiles will remain uncertain, unless new gestures are made by the European countries at the international textile conference now taking place in Geneva. One of the points emphasised by Mr. Thorneycroft was that effort should be directed towards creating opportunities, not securing safeguards; perhaps he had textiles in mind and thought of the future possibilities in an enlarged European market.

Britain's negotiations with the Six are likely to be long and difficult. President de Gaulle has been taking the stand that Britain should join without conditions and the President of the Common Market Commission, Prof. Hallstein, has been pointing out that Britain can only seek certain adjustments, not substantial changes in the Treaty of Rome, if she wants to join as a full member. On the other hand, there have been several expressions of sympathy from other European Governments for Britain's dilemma; Mr. Macmillan indicated, at one stage, that minimum safeguards required by the U.K. should come before the question of status as full or associate member, which, he said, the Six would have to decide on the basis of such safeguards.

It is difficult to assume that this stand will be maintained at all costs. There is latterly a feeling within Britain that whole-hogging enthusiasm for the Common Market has done some harm and possibly encouraged French demands for entry without conditions. The Federation of British Industries, which has been actively championing British membership of the Common Market, has very significantly come out with a statement last week that too heavy a sacrifice on the part of the Commonwealth should not be the price for joining the E.C.M. Lord Gladwyn, another zealous champion of immediate entry, has also expressed a similar, though slightly qualified, view.

No Going Back?

Amidst these uncertainties, it is becoming clear that Britain has reached a stage when it is difficult to retrace its steps and give up the attempt; in any case, Commonwealth members should not be accused of having exercised a veto or altered a decision based on British national interests. India's position on the issue is a correct one; it cannot be interpreted as opposition or approval for the proposed step.

That the Government of India has taken a detached view is also proved by the opportunity provided to the two leading Chambers of Commerce to explain the difficulties directly to Mr. Thorneycroft. There is a curious reference to the common interests of the U.K. in India's exports in the *communique* which runs to the effect that the credits which India was receiving from the U.K. as well as from other countries could only be repaid through an expansion of India's exports; that goes for the other Common Market countries, especially West Germany, also.

The last week's talks should have helped to emphasise the importance of fresh efforts on the part of the Government to maintain and expand markets for India's exports and to continue the battle in G.A.T.T. and other international bodies against discriminatory practices.

A draft Investment Guarantee Programme Agreement designed to encourage investment of American private capital in Ceylon has been formulated by the Finance Minister of Ceylon. The investments eligible for guarantee provided for in the draft Agreement include cash contributions, materials, equipment, patents, processes, techniques and technical assistance for specific projects. There will be insurance against losses through inability to convert local currency earnings into dollars, expropriation or confiscation and war. Ordinary business losses, normal business risks and devaluation of local currency are, however, excluded from the purview of the Agreement.

A Bill seeking to regulate general insurance business in Ceylon is likely to be introduced in Parliament during the current session which opened on the 12th inst. Life insurance has already been nationalised.

AMERICAN LETTER

ECONOMIC RECOVERY UNDER WAY

SPEND-AND-SPEND PHILOSOPHY GATHERS MOMENTUM

From Our Special Correspondent

NEW YORK, 15*th July*

ANY information emanating in and from the United States these days, unfortunately, must be projected against the psychological background of the worst war-scare since 1939. There are as many voices who proclaim the inevitability of a conflict with the Soviet Union over West Berlin as there are opinions that war will be averted.

At any rate, a recovery in economic activity, no doubt, is under way. This is borne out by many statistics. The exceptions are steel and automobiles which are affected by the usual summer shutdowns. Moreover, new wage negotiations have begun in the automotive industry. The outcome does not look too promising, since the United Automobile Workers of America have listed as their chief demand a share in the benefits of automation which has cost the loss of jobs. Steel will be facing the same dilemma next year.

With these two major industrial exceptions, gains in production have been fairly widespread. Inventory liquidation, apparently, has come to an end and there are indications of an incipient build-up again. In the final analysis, inventory buying, however, will depend more or less on public demand. While retail trade has been fairly steady, there are no signs that the public is in a rush to over-buy.

Tourist Exodus Falls

This reflects the general caution which is caused by the war-scare and by what seems to many indecisiveness on the part of Washington to counter Premier Khrushchev's threats effectively. This psychological attitude of the American people is also indicated by the sharp drop this year in vacation travel abroad. About 40 per cent fewer U.S. tourists will be going to Europe this summer than in previous years for fear of what might happen while they are there.

Since the low point in February, industrial output has gained about 6 per cent, but employment rose in manufacturing only 2 per cent. The number of unemployed has been augmented by students who are looking for the work during the school holidays which will continue until early in September. The net result is that, in percentage of the labour force, unemployment continues to be considerably above the generally accepted "full employment" rate of 4 per cent jobless. For those on job payrolls there has been a lengthening of the work week which made it unnecessary for manufacturers to do outside hiring.

A similar development occurred in the construction industry. Despite an appreciable upturn in outlays and activity, there was an actual decline of one per cent in the labour force. Both public building and business construction have been in an upward trend. Home building is rising, too, and it is expected to be aided further by Government subsidies in the low-cost housing area.

Spending Spree

The importance of Government spending in the current upward trend cannot be over-emphasised. Such expenditures are now running $10,000 million above the rate of a year ago. A similar upswing is noted in the area of State and Local Government spending. On the Federal level, defence and space outlays are now at the rate of more than $48,000 million a year, up $3,000 million from the preceding fiscal year.

In the field of agriculture, it may be observed that forecasts for this year's crops are being revised downward. Droughts in the spring wheat belt or North America have been severe and there may be no surplus in this commodity. In this connection, a new law has just been passed authorising the Administration to sell an additional $2,000 million of farm surplus commodities from previous years against foreign currencies. Last year, India was the recipient of a considerable volume of grain on this basis.

Many other new laws reflect the spend-and-spend philosophy of the Kennedy Administration. Greater Social Security benefits were enacted which will mean heavier pay check deductions next year. Also, men may now retire at the age of 62 at lower benefits instead of at 65, as previously. Then there was the $5,600 million catch-all housing bill which is designed to benefit moderate and low-income families through public housing. It provides also for urban slum clearance, college dormitories, farm housing and transit and sewer improvement.

Owing to the considerable Treasury financing in the current fiscal year, some of it deficit financing, Congress raised the temporary national debt limit by $5,000 million to a new peacetime high of $298,000 million. The President's advisors wanted a $300,000 million ceiling, but Mr. Kennedy vetoed the suggestion for fear of furnishing additional ammunition to the loyal opposition of the Republican Party.

Report on Money and Credit

The Commission on Money and Credit issued its report a few days ago, with particular reference to Government and private measures which influence jobs, prices and growth. Members of the Commission were mostly top people from private business, banks, university professors and the work was supported, though not influenced, by the Ford Foundation and the Committee for Economic Development.

Even after many months of study and meetings and individual dissenting reports notwithstanding, the Commission has come out with precious little which is worth recording for posterity. For example, one "fundamental and basic" recommendation was that there should be greater liaison among Government agencies and that the right hand should know what the left hand is doing. This is so obvious that it is hardly worth mentioning.

Equally obvious is the suggestion that greater emphasis in tax legislation should be given to incentives for capital formation, such as more liberal depreciation allowances. This has been said for years, but nobody has done anything about it. The Commission has recommended no precise, or specific formula by which growth, stability of prices and full employment could be achieved. In explanation, it was observed "to do so (make recommendations) would be inconsistent with our tradition and practices and probably totally unrealistic." This is not to say that there was no meat and validity in the writings of some Commission members, but they were hardly forceful enough to make a dent in established procedures of Government and private business.

United Nations News

Reorganisation proposals regarding top echelon management of the United Nations continue to be made. This is in preparation for the General Assembly meetings this fall and it is also an attempt to take the wind out of the Kremlin's sails and to take the edge off Premier Khrushchev's demands for removal of the office of Secretary-General.

Meanwhile, two U.N. member organisations reported further expansion. The International Monetary Fund and the International Bank for Reconstruction and Development reported that Laos had become a member of both organisations. Seventy-one nations are now members of the Fund and 69 countries are members of the Bank. Admission of Laos brought the total of members' quotas in the Fund to $14,860,800,000 and the total subscribed capital of the World Bank to $20,103,100,000. The quota for Laos in the Fund is $7.5 million and its subscription to the stock in the Bank is 100 shares with a par value of $10 million.—*All Rights Reserved.*

CAPITAL AND LIQUIDITY PROVISIONS FOR BANKS IN OTHER COUNTRIES

FOR a proper assessment of the proposals recently made by the Reserve Bank of India in regard to the ratios of capital and liquid funds of the commercial banks to their deposit liabilities, it will be instructive to study the provisions in these respects in the banking statutes in other countries. Such a study may throw considerable light on the reasonableness or otherwise of the Reserve Bank's move to strengthen the banking system of this country. An attempt is made in this article to give a broad picture of the position in other countries.

To take up the provisions regarding capital and reserves first. It is found that Western Germany, Belgium, Switzerland, Denmark and Finland are the only countries in Europe which have incorporated rules within their respective banking laws for establishing a specified proportion between capital and reserves of the banks and their deposit liabilities and/or lendings. Outside Europe, similar provisions are found in the banking legislation of the Union of South Africa, Guatemala and the Dominican Republic.

Four Guiding Ratios

In Western Germany, the Bundesbank has four guiding ratios in regard to credits and makes any rediscounting by credit institutions dependent on their observance. The first guiding ratio provides that the total of the short-term and medium-term lendings shall not exceed 18 times the "liable funds," that is, capital and reserves. The second guiding ratio lays down that the credits in current accounts and acceptance credits shall not exceed 60 per cent of the liable funds and deposits. The third ratio pertains to maintenance of liquid resources. According to it, liquid resources (cash holdings, balances with the central bank, cheques and bills, Treasury Bills and Government Bonds) should be 20 per cent of borrowed funds (that is, deposits and other liabilities). The fourth guiding ratio enforces the restriction that the total of acceptances and bills drawn on debtors shall not exceed 3 times the liable funds. But where they do not serve to finance foreign trade or crops, they shall not exceed the "liable funds." To facilitate the enforcements of these rules, as well as supervision and verification of the banks' business, the banks in West Germany have to submit monthly balance-sheets to the Bundesbank. It will thus be seen that the West German legislation seeks to establish a proportion between different types of credits and the owned resources, rather than relate the capital and reserves to the deposit liabilities as is sought to be done by the Reserve Bank of India.

Position in Belgium

In Belgium, the Royal Decree concerning the banking control law provides that the minimum amount of capital required for establishing a bank is 10 million francs and that this amount must be fully paid up. Further, the Banking Commission—a statutory body—is empowered to determine from time to time the proportions which must exist between capital and reserves, on the one side, and the total amount of deposits, on the other. These co-efficients are variable according to the size of the banks. In 1946, the Belgium Banking Commission suggested the following ratios for big banks:

(a) 4 per cent of the total sight and short-term liabilities of the bank in Belgian francs must be in treasury items comprising cash, deposits with the central bank, money lent at call, etc.

(b) 5 per cent of the remaining liabilities in Belgian francs must be covered by the bank's capital and reserves.

(c) 65 per cent (including four per cent in (a) above) of the Belgian francs liabilities of the bank (other than capital and reserves) must be held in the form of Government securities.

These restrictions are still in force, though there have been minor modifications from time to time, under which banks have been able to receive higher rates of interest on their investments in Government securities.

The Federal Law of Switzerland relating to Banking Companies provides *inter alia* that banks must maintain an adequate proportion between the amounts of their funds and of their total liabilities. It further compels the banks to set aside at least 20 per cent of their *net* profits to reserve funds meant for covering losses and depreciation on investments. This transfer must be made until the fund reaches one-fifth of the paid-up capital. In the case of banks which have no paid-up capital, the reserve fund should be at least 20 per cent of their liabilities to third parties.

Finland and Denmark

In Finland, the banking law provides that, out of the profits of the bank, not less than 15 per cent shall be transferred annually to an ordinary reserve fund until the reserve fund amounts to 25 per cent of the share capital and thereafter not less than 10 per cent until the reserve fund amounts to 50 per cent of the share capital. Article 7 of the Banking Statute of Finland lays down that the liabilities of a bank may amount to 15 times the total of its share capital and reserve fund plus its cash reserves and the book value of the Government Bonds and Treasury Bills held by the bank. This means that the ratio of owned funds (capital and reserves) to liabilities is much lower than even 6⅔ per cent, as the liabilities are permitted to be of the order of 15 times the owned funds plus cash plus Government Bonds and Treasury Bills.

The Danish Act governing the commercial banks prescribes rules with regard to the size of the share capital required for the foundation of a bank, which must be not less than Kr. 600,000 fifty per cent to be paid in on subscription and the remainder within one year. The provisions of the Act further serve the purpose of safeguarding the depositors by providing that the net capital assets of any bank shall amount to not less than one-tenth of the banks aggregate debts and guarantee commitments.

In the remaining countries of Europe, there are no specific legislative provisions determining the relation between capital funds and the aggregate deposits or credits of the banks. But in some countries, banks have made efforts to widen their capital base commensurate with the expansion in their aggregate liabilities. Particularly in France, since the end of the war, the commercial banks operating in the private sector have progressively increased their capital funds by the issue of new shares on the market and by the capitalisation of reseserves. As against 11 billion francs at the end of 1938, the capital funds amounted to 160 billion francs at the end of 1957. Even though the French commercial banks have not yet fully regained their ratio of capital funds to deposits of the pre-war period, they have made very noticeable improvements in recent years.

Provisions in Dominican Republic

Now to consider some of the countries outside Europe.

The general banking law of the Dominican Republic lays down that before starting operations, the branches or agencies of the foreign banks, which may be established in the country, must prove the effective availability of the capital and reserves assigned to them. Article 18 provides that at any time when the proportion of paid-up and reserves of a bank falls below 10 per cent of its assets, or when the said capital and reserves are reduced below the minimum of R.D.$100,000 the superintendent of banks, with the approval of the Monetary Board, must order that a part or all of the net profit of the bank be added to the reserves and must limit or prohibit the making of new loans or investments until the required proportion is arrived at, provided that this, in the judgment of the Monetary Board, does not tend to accentuate deflationary tendencies. When a bank has serious and continuing deficiency in said proportion and does not satisfactorily eliminate it within a reasonable period, the superintendent of banks may request the appropriate judicial authorities to liquidate the bank. It is quite obvious that this is a very stringent provision, and would entail very severe restrictions on the banks' lending power.

Guatemala and South Africa

The Guatemalan banking law also contains a provision governing the relations between owned funds and various types of loans and investment. Article 20 of the law lays down specifically that, in order to promote the solvency of banks with respect to their depositors and creditors, every bank must maintain an amount of paid-in capital and surplus equivalent at least to the sum of the following percentages:

(1) 5 per cent of its investments in securities issued or guaranteed by the Government,

(2) 10 per cent of its investments in other securities or in loans, and

(3) 50 per cent of its investments in furnishings, real estate and other fixed assets.

It will be noted from the foregoing that the ratio of capital and reserves is separately related to different types of assets of the bank. When the capital and reserve are deficient, the superintendent of banks is authorised to limit or prohibit the distribution of profits and to direct the bank concerned that a part or all of its profits be used to increase the capital or reserve.

The Banking Act (1942) of the Union of South Africa compels every commercial bank to have paid-up capital and reserves together amounting to no less than either £50,000 and in addition thereto £5,000 for each office in excess of five, or ten per cent of the amount of its liabilities to the public payable in the Union, whichever is greater.

Liquidity Ratios

In recent years, commercial bank cash reserve requirements have become an important credit control instrument in many countries. These requirements, when made alterable, serve as a means for influencing the availability of funds for bank loans and investments. When they are not variable, they may provide a basis for the Central bank to carry out open market operations. The cash and liquidity ratio provisions are also intended to promote confidence of the public in the banking system. Such provisions are, therefore, found in the banking statutes of a number of countries.

It is well known that all member banks in the Federal Reserve System are under an obligation to keep certain percentage of their demand and time deposits with their Federal Reserve Bank, the highest percentage being for banks in central reserve cities, such as New York and Chicago. As of August 1960, New York and Chicago banks are required to keep reserves against net demand deposits of 17½ per cent, with 5 per cent against time deposits; other reserve cities must hold 16½ per cent and 5 per cent respectively; country banks 11 per cent and 5 per cent. The Federal Reserve System has also power, acquired as early as in 1935, to alter the minimum reserve ratios and this feature has become a salient characteristic of the American banking system. This has also been copied by a number of countries in other parts of the world.

Banks in the U.K. have made their own rules; generally they keep 8 per cent "cash" within 30 per cent overall liquidity. Nowadays cash is usually split as between 5 per cent in bank tills and 3 per cent kept at the Bank of England. The minimum liquidity of 30 per cent is made up of the 8 per cent cash *plus* the two liquid assets of money at call and discounts, the latter being mainly U.K. Treasury Bills. With effect from 3rd July 1958, an agreed scheme for special deposits came into force, but, from the middle of June 1960, it was made compulsory. The most important point to be noted so far as the U.K. is concerned is that, even today, the reserve requirement is not enforced by law. The minimum of 30 per cent is being observed as a matter of normal banking practice and under moral suasion exerted by the Bank of England.

Ratios in Germany

The guiding ratios, referred to earlier, in Western Germany also provide that the liquid resources (cash balances, balances with the Bundesbank, bills and Government Treasury bills and bonds) shall not be less than 20 per cent of the borrowed funds. The Bundesbank also requires commercial banks to maintain with itself minimum reserves which vary from 6 per cent to 13 per cent of their deposits according to the size of the banks and the period for which the deposits run. The Bundesbank has also powers for varying the amount of minimum reserves and thereby try to check credit expansion by commercial banks.

In France, contrary to the general trend, commercial banks are not obliged to keep minimum reserves at the central bank in fixed proportion to their sight and time deposits, but, since July 1956 they have been compelled to invest 25 per cent of their deposits in Treasury Bills. These "bill floors," as they are called, curtail the credit-creating capacity of banks and correspondingly improve their liquidity. The deposit banks, however, are obliged to maintain a minimum liquidity percentage of 60 per cent of their short-term commitments in cash or rediscountable or readily mobilisable assets.

Austria, Belgium and Denmark

In Austria, to protect the stability of the Austrian currency and to promote confidence in the Austrian banking system, all credit institutions are required to deposit up to 15 per cent of their total deposits with the Austrian National Bank. As at the end of 1959, the effective reserve requirement was 5 per cent. In Belgium, the Banking Commission, as noted earlier, has laid down that 4 per cent of the total sight and short-term liabilities of a commercial bank must be in treasury items comprising cash, deposits with the central bank, and money lent at call. In addition, they have to maintain a secondary reserve of 50 to 60 per cent depending on the size and type of bank. The Danish Banking Act lays down that a bank's holdings of legal tender coin and bank notes sight deposits with the central bank shall not amount to less than 2 per cent of the bank's debts and that cash in hand *plus* value of holdings of safe readily marketable securities and credit instruments shall amount to not less than 15 per cent of the short-term debts. Furthermore, cash in hand *plus* securities and credit instruments shall amount to not less than 10 per cent of a bank's aggregate debts and guarantee commitments. But, in Denmark, there are no liquidity rules designed for purposes of monetary policy and Danish banks are not subject to variable cash reserve rules. They are, therefore, not obliged to maintain a part of their cash-in-hand in the form of deposits with the central bank.

Position in Finland and Greece

The Finnish Bank Act requires the commercial banks to maintain a cash ratio of 20 per cent of the banks' demand liabilities. Cash includes cash in bank tills, deposits with the central bank, net deposits with other banks, foreign bills and bonds. But the share of the 20 per cent which has to be held in non-interest bearing cash is not stipulated. The commercial banks in Greece are obliged to keep certain proportion of their disposable funds as compulsory deposits in cash with the central bank as compulsory investments in short-term State bills bearing interest. The currency committee, consisting of the Government Ministers dealing with economic affairs and the Governor of the Central Bank has fixed the compulsory deposit to be held with the central bank at 8 per cent of sight and saving deposits. There is also a provision to vary the compulsory deposit by requiring the banks to keep additional deposits with the Central bank.

Italian Regulation

In Italy, the 1947 regulations, introduced to combat the then rampant inflation, have as their main purpose the establishment of a fixed ratio between bank deposits and the reserves held against them at the Banca d'Italia. The banks are obliged to maintain with the Central bank a reserve of 25 per cent of the deposits. The ratio is variable from 15 to 20 per cent, depending upon the level of deposits. But the level of deposits has been so high that the maximum ratio has been obtaining for quite some time. The actual legal position is as follows: 20 per cent of deposits in excess of 10 times bank capital, or 15 per cent of deposits whichever is smaller; *plus* 40 per cent of increase in deposits after 1st October 1947, upto a maximum ratio of 25 per cent. A notable feature of this requirement is that the funds held with the Central banking institutions carry interest which is one per cent above the rate on one-year Treasury Bonds.

In the Netherlands also, commercial banks are required to hold deposits in the books of the Nederlandsche Bank upto 15 per cent of their liabilities. The first 10 million florin in each bank requires no reserves. But these deposits are non-interest bearing. The Nederlandsche Bank fixes the actual percentage to be maintained from time to time according to the development of the banks' gold and foreign exchange reserves. The effective percentage (as of May 1959) was seven. In addition, 45 per cent of deposits is required to be held in the form of cash, central bank deposits, call loans or short-term Government securities. It may be noted here that, though the Central banking institution in the Netherlands has powers to en-

RANDOM THOUGHTS ON BANKING PROBLEMS

HISTORY IN THE MAKING

By "Kuber"

THESE days, when one glances through a daily paper, one cannot help noticing history being made, almost every day, by some one or other. I do not mean in politics, because it is very easy for politicians to make history by doing something unusual or even spectacular at the slightest provocation. I am referring to the field banking and money. When the Finance Minister in Canada introduces a bill in Parliament and gets it passed by the Lower House for the removal of the Governor of the Bank of Canada, he is also making history, because it is for the first time that such a thing has been done. He is in fact making history in more than one sense, as he is getting the Governor removed not because the Governor has been found guilty of any misconduct but because he has dared to suggest a policy in the interest of Canada's economy. One can understand and perhaps appreciate the Government's stand, if the Governor of a central banking institution were to be dismissed for pursuing a wrong monetary policy resulting in inflation. Here the case is just the reverse. The poor fellow appears to have suggested a policy of austerity and he has had to be removed just for that. It is the Finance Minister and his party who want to embark on a spendthrift policy, as appears to be the fashion these days in almost every country. He naturally resents the "interference" of the Governor of the Bank of Canada and has punished him for daring to cry a halt to his policy and thus mar the chances of his party coming into power again on the wave of easy money policy, irrespective of the financial difficulties that may ensue for his country in times to come. However, I am not going to deal with this development at any length. My only object in referring to it was to highlight it as an event of the week that makes history.

In Britain, too, history is being made by the Bank of England on another front. For the first time, the yield on the irredeemable gilt-edged securities has been allowed to go up by the Bank to as high as 6¾ per cent per annum. Just imagine Government securities giving a return of about 7 per cent in the present day conditions in England, when it is enjoying an unprecedented wave of prosperity denoting plenty of capital in the country seeking investment! Nor is this phenomenon confined only to Government securities. The trend is noticeable in other fixed-interest bearing securities also. The 6 per cent New Zealand loan is at a substantial discount and so are the debentures and other fixed interest bearing securities of the most well-known companies: they are all giving a yield of very much more than 6 per cent. No one naturally knows how far this tendency will continue; for all we know, we may soon be seeing a full 7 per cent return on the Government securities and the best of debentures and other fixed interest bearing securities in Britain.

To some extent, the fall in the values of these securities and therefore the rise in their yield may be due to the recent pressure on the pound sterling or to such other transitory factors. But this tendency leading to higher rates of interest has been in evidence for some time now. And, even before the pressure on sterling began, the British Government securities were giving a little more than 6 per cent. What is, however, important to note is that, for quite a considerable time, the Bank of England has been withholding its support to the Gilt-edged market, allowing the Government securities to drift lower, as a matter of deliberate policy in spite of a hue and cry from the investing public. The attitude of British banks seems to be that the Government must also borrow on the same terms as the private sector. If the higher rates of interest have come to stay, the Government also must reconcile itself to the prevailing economic conditions, and it cannot, on any ground, get a preferential treatment. The Bank of England is a bankers' bank and it cannot follow two policies, one for the Government and the other for the banks. The Bank's policy has had to be a realistic one, that is, one in keeping with the financial conditions obtaining in the market.

The British Chancellor of the Exchequer is also making history. He has succeeded in getting £1,000 million by way of small savings. It was only in September 1958 that the National Savings movement of Britain was given a target of a "Million Pounds a Day" and, within less than three years, the response from investors has beaten all records. Last year, people in Britain saved 8 per cent of the disposable income as against only 2 per cent before the war. The success of national savings has been so spectacular that the British Government has got from the small savings all the money that it needs and the Chancellor of the Exchequer has let it be known that it may not be necessary for him to borrow from the market at all. It would, indeed, be a wonderful thing to any Government to get all the money that it requires from small savings which would make it unnecessary for it to come to the capital market every now and then. In such a happy event, there would be no need for manipulating the capital market and pump-priming it, to use an American term.

The Reserve Bank of India, too, has been making history, though in a different sort of way. In the last four or five years, it has so managed the Government securities that their price and, therefore, their yield have remained practically the same. The 3½ per cent 1967 loan, for instance, which was at around Rs. 98.44 in 1956-57 is quoting now at about Rs. 99; its yield which was 3.56 per cent a few years ago is 3.68 per cent now. The 3 per cent Development Loan

(Continued on page 196)

(Concluded from previous page)

force the reserve requirements by law, they are being worked through a gentleman's agreement.

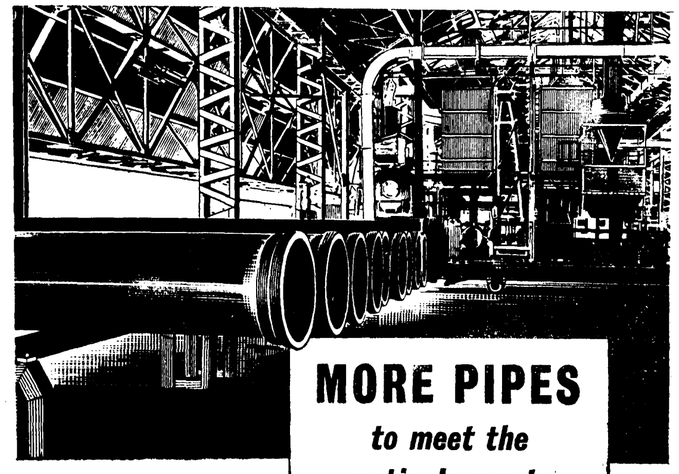
It will be seen from the foregoing account that liquidity ratios have become a common feature of banking legislation in a number of countries. While the ratios have certain common characteristics, they differ as regards the way in which they are enforced and the kind of assets they cover. In most countries, they are administered statutorily, but, in some cases, they operate under special agreements. Cash reserves are included in the computation of the liquidity ratios in Austria, Belgium, the Netherlands and the U.K. In Australia (not covered in the above survey) such cash reserves are excluded, and the liquidity ratios, in fact, constitute separate requirements. Cash assets are also included in the liquidity ratios in the countries that do not have cash reserve requirements, except in France. In Italy, Government securities are the only eligible liquid assets in addition to balances with the Central bank, Call loans are eligible in Austria, Belgium, Canada, the Netherlands, and the United Kingdom, and commercial bills in Austria and the United Kingdom.

Their Efficacy

As regards the efficacy of liquidity ratios as a quantitative credit control instrument, it is found that generally their impact varies widely according to the circumstances at the time of their introduction as well as the subsequent budget and debt-management policies of the Governments. In some countries, notably France, Belgium, Italy and in the Netherlands, the ratios were effective in restraining bank credit through a locking-in of the banks' holdings of Government securities. In some countries, it was the directives to banks which accompanied the ratio regulations that were found to be more effective in halting bank credit expansion. In some others, the requirement that commercial banks should enlarge their Government securities holdings in proportion to their deposits had often the effect of channelling more and more funds to the treasury. The ratios have thus tended to become increasingly a vehicle for facilitating the financing of Government deficits.

The major difficulty encountered in a number of countries having liquidity requirements related to ensuring equity among individual banks. The equity problem arises because of differences in the asset structures of individual banks. Such difficulties have been overcome in some countries by relating liquidity ratios to deposits, but even this arrangement penalises those banks whose deposits are growing more rapidly. In Italy, the problem tends to be mitigated by the provision that the requirement of a 40 per cent minimum against deposit increases ceases to apply when a bank's total holdings of reserve assets have reached 25 per cent of its total deposits.

The developments in the U.K. during past few years have clearly brought out the fact that the effectiveness of liquidity ratios depends on the budgetary and borrowing policies of the Government. This emphasises the need for combining appropriate fiscal and debt-management policies with the minimum liquidity ratio requirements, if the latter are to become effective instruments for controlling credit.



MORE PIPES
to meet the nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

INDIA IN WORLD TEXTILE SET-UP

COMPETITION IN MARKETS BECOMING KEENER AND KEENER

OUT of every Rs. 100 of foreign exchange earned by India from exports every year, cotton textiles alone account for as much as Rs. 10-11. In view of the imperative need for earning more foreign exchange in the coming years and the limited scope for diversifying exports, the country will have to do everything possible to push up the exports of cotton textiles. Although this aspect has been repeatedly stressed in the Press and on platforms, the action by the powers-that-be continues to leave much to be desired. The ideological considerations governing the textile policy is thwarting all efforts of mill industry to expand its capacity, to modernise the machinery and equipment, especially through the installation of automatic looms, and to rationalise the methods of production. The result is disquieting: India is finding it increasingly difficult to face the competition in world textile markets which is becoming keener and keener as every day passes. It is, therefore, actually losing ground and other countries, much less favourably placed than India in regard to manufacture of cotton goods, are steadily stealing a march over it. This is conclusively borne out by a study of India's export trade in textiles, against the background of world trends in recent years, by the Cotton Textiles Export Promotion Council.

The aforesaid study reveals that, while the aggregate world export of cotton piecegoods have gone up by over a thousand million yards in the past six years—from 5,463 million yards in 1954 to 6,577 million yards in 1960—the quantity supplied by India has declined from 863 million yards (both mill-made and handloom cloth) to 722 million yards. Consequently, the country's share in the total exports has fallen from 16 per cent in 1954 to 11 per cent in 1960 and this, it would appear, will be lower still in the current year, with the actual exports estimated at no more than 700 million yards. India no doubt ranked as the second largest exporter of cloth in the world during 1960, the first place being held by Japan, but its share was only half that of Japan. The quantity of cloth actually shipped by Japan during 1960 was marked by higher at 1,421 million yards, as against 1,263 million yards in 1959 and 1,278 million yards in 1954. It may be interesting to note, in this connection, that, in 1950, India held the first place among exporters of cotton textiles with a total of 1,120 million yards, when Japan was able to ship no more than 1,104 million yards. Japan continues to occupy its predominant place as the biggest supplier of cotton cloth, accounting for more than one-fifth of the total world exports and one-fourth of exports from non-Communist countries alone. The percentage share of Communist countries in the total world exports has risen appreciably from just 5 in 1954 to 16 in 1960. The percentage share of that tiny British colony, Hong Kong, has also risen from 3 to 5.

The following table indicates the trend of exports of cotton piecegoods from India, Japan and other countries during 1960, as compared with that during the three preceding years:

(In million yards)

Supply country	1960	1959	1958	1957
Asia:				
India	721.89	850.16	622.40	881.40
Japan	1,424.60	1,263.00	1,345.32	1,468.36

Grand Total	6,577.20	6,227.86	5,232.56	5,972.86

* Based on imports of Chinese cotton piecegoods into various countries. The figure also includes about 100 million square yards exported to Soviet Russia.

It will be seen from the above figures that, during 1960, France was India's closest rival with a share only 200 million square yards less than that of India. Indeed, from a review of the trend of cotton piecegoods exports from these two countries, it is considered not unlikely that France may outstrip India in due course, unless India takes effective steps to improve its position.

World exports of cotton piecegoods continued to expand during 1960, the rise over 1959 being of the order of 11 per cent. Almost the whole of this expansion was accounted for by increased shipments from non-Communist countries. The rise was more restrained in respect of exports from Communist countries, being just 1.5 per cent. This phenomenon is attributed largely to the drop of nearly 50 million yards in exports from Communist China to free world markets. It is, however, conceded that cotton piecegoods exports from Communist countries can only be approximated on the basis of the intake of their textiles by importing countries and, since such statistics are not available in respect of centrally planned economies, the actual volume of intra-bloc trade within the Communist fold is not assessable. On a rough estimate, the position is said to be as follows:

Chinese Sales

While 25 per cent of the piecegoods exports from Communist countries other than China are routed to markets in the free world, the ratio is as high as 75 per cent in respect of Chinese exports. The decline in exports of Chinese textiles in 1960 might have been due to larger exports to countries like the U.S.S.R., as was the case in 1959. There is no doubt that the failure of the cotton crop in China during the past two successive seasons has contributed largely to this restrained trend in exports of Chinese textiles. That country has, however, been "making desperate efforts to get round these failures by manufacturing fabrics out of mixture of cotton with barks of trees and wild grass, so as to make available a larger export surplus after catering to the requirements of the rapidly increasing local population." Barring China, most of the other Communist countries had stepped up exports of their piecegoods during the year 1960.

Among the free world countries, exports of U.S. textiles have been declining since 1957, the losses being particularly marked in their shipments to Cuba, Canada and Venezuela. In Europe, the declining trend of British exports has still not been halted, as the full advantages of the cotton industry's reorganisation in that country are yet to be realised. Barring the U.K., practically all the other major West European suppliers have reported significantly larger exports during 1960. The same is true of all Asian suppliers with the notable exception of India. Exports of piecegoods increased by nearly 8 million square yards, due chiefly to an increase of 13 million square yards in those of Egyptian textiles. The newly announced policy of the United Arab Republic Government, which envisages exports of yarn and piecegoods rather than raw cotton, is quite significant in this connection. It is understood that Egyptian cotton yarn is already finding its way into West Germany.

The aggregate world exports of cotton piecegoods during 1960 amounted to nearly 6,600 million yards. This quantity represents about 13 per cent of the total world output which in 1960 is estimated to have reached the level of 50,000 million square yards, nearly 4.7 per cent more than the quantity produced in 1959. Both Communist and non-Communist countries shared in this expansion, that of the latter being higher. The table below gives the production of piecegoods during the last four years in the nine biggest producing countries which together account for 80 per cent of the total world production:

(In million yards)

Countries	1960	1959	1958	1957
India	7,243.35	7,183.43	7,504.96	7,265.40
Japan	3,853.12	3,294.08	3,164.64	3,333.08
China	8,492.00*	8,204.00	6,232.00	5,524.00
U.S.A.	9,349.00	9,599.80	8,972.72	9,585.76
U.S.S.R.	7,248.00	6,692.00	6,332.00	6,120.00
France†	N.A.	2,083.88	2,201.84	2,135.92
West Germany	1,657.48	1,550.28	1,539.76	1,632.20
Italy	1,338.20	1,203.68	1,144.48	1,168.32
United Kingdom	1,293.56	1,336.80	1,428.80	1,627.80

* Based on figures of raw cotton consumption.
† Cotton cloth output in France includes cotton-linen and cotton spun rayon mixtures but in which cotton predominates.

The statement above shows that the U.S. has maintained its position as the world's largest producer of cotton cloth. India, which had occupied the second position until 1959, has slipped down to the fourth place, having been preceded by China and Soviet Russia in that order. The remaining countries have maintained their respective positions.

THE CENTRAL BANK OF INDIA, LIMITED

Profits for the half-year ended 30th June, 1961

The Net Profit of The Central Bank of India, Limited for the half-year ended 30th June, 1961, subject to audit, including the sum of Rs. 18,61,470.96 brought forward from the last year's account, amounts to Rs. 1,05,29,450.69 which the Directors have resolved to dispose of as follows:—

	Rs. nP.
To pay an ad-interim dividend at the rate of Rs. 2.40 per share subject to tax (i.e. Rs. 1.68 net) for the half-year ended 30th June, 1961 as against Rs. 2.10 per share, subject to tax, paid for the corresponding period last year.	30,24,000.00
To carry forward to next half-year's account subject to provision for taxation	75,05,450.69
Total ..	1,05,29,450.69

EXPORT INCENTIVE SCHEME FOR COTTON TEXTILES

Some modifications in the Export Incentive Scheme for cotton textiles have been announced by the Union Ministry of Commerce and Industry. The modifications cover exports of cotton cloth and yarn hand-printed cloth, handloom fabrics, hosiery, ready-made garments, tents and mosquito nets. As a result of the modifications, effective from the 1st of this month, import entitlements, which will be considered on a quarterly basis, for raw cotton, coal-tar dyes, textile chemicals, zip-fasteners and other items will be granted against the exports of the aforesaid goods on the following basis:

Cloth and yarn: Raw cotton (import) entitlement will be 66⅔ per cent of the f.o.b. value of exports. The mills will be allowed to retain for their own use cotton equal in value of 100 per cent in respects of fine and superfine cloth exports and yarn of 60 counts and above and 30 per cent in other cases. An additional 2 per cent (that is, a total of 32 per cent) will be admitted in the case of mofussil mills located at a distance of over 322 kilometres but less than 644 kilometres from the ports of Bombay, Madras and Calcutta and 5 per cent (total of 35 per cent) in respect of mills located at a distance of more than 644 kilometres.

Hand-printed cloth: Imports of coal-tar dyes, textile chemicals, gum and special kinds of paper for packing not indigenously available (transparent cellophane paper and glassine paper) will be allowed to the extent of 15 per cent of the f.o.b. value of cloth imported. The holders of import entitlement can sell it at a premium not exceeding 20 per cent of the c.i.f. cost of articles landed in any port of India but only to registered hand-printers. Licences for paper imports will be up to 10 per cent of the total value of entitlements accruing in any one quarter subject to a minimum of Rs. 750 for cellophane paper and up to 30 per cent for glassine paper.

Tents and mosquito nets: Raw cotton (import) entitlement is fixed at 50 per cent of the f.o.b. value of exports, the retention quota being calculated in the same manner as is being done in regard to cloth yarn exports.

Ready-made cotton garments: 15 per cent of f.o.b. value of exports represents the import entitlement which covers (a) coal-tar dyes, textile chemicals, etc., (b) zip-fasteners, button buckles, elastics, transparent cellophane paper and trimmings, and (c) industrial power sewing machines and their accessories and sewing needles not indigenously available and such other accessories as are needed for improving the quality of garments. So far as articles in (b) are concerned, import licences will be limited to 5 per cent of the total value of import entitlements.

Handloom fabrics: Import entitlement will be calculated at 40 per cent either on the actual f.o.b. value of fabrics exported in any quarter or on the value of consignments calculated at Rs. 2 per square metre of fabrics exported whichever is less.

The condition allotted is that f.o.b. value of the fabrics exported in any quarter should be Rs. 2,000. Against the entitlement, no licence will be granted for cotton imports. The entire value of entitlements will be made available on such terms and conditions as may be prescribed by the Textile Commissioner. Import of coal-tar dyes, textile chemicals, gums, special kinds of paper and/or yarn will be allowed to the extent of 15 per cent of the f.o.b. value of exports. The import entitlement cannot be sold at a premium exceeding 20 per cent of the c.i.f. cost of articles landed at any port and that only to producers of handloom fabrics. Licences for cellophane paper imports will be up to 10 per cent of the total entitlement subject to a minimum of Rs. 750 and those for glassine paper up to 30 per cent.

Hosiery fabrics: Import entitlement is fixed at 15 per cent, the articles covered being (a) coal-tar dyes, textile chemicals, etc. (b) zip-fasteners, elastic tapes and trimmings (limited to 5 per cent of the entitlement value), and (c) knitting machines, their accessories and needles not indigenously available.

The net effect of the modified scheme is that import entitlements for mills against exports of grey cloth have been retained at 2 per cent but reduced from 4 to 2 per cent in the case of bleached and processed cloth exports. But the entitlements for dyed, processed and printed cloth in so far as the registered processors are concerned have been raised from 4 to 5 per cent, while the entitlement for bleached cloth continues unchanged at 4 per cent. The mills are thus enabled to obtain import licences under both the categories, that is, as mills and registered processes. They get the benefit of an increase of 2 per cent in entitlement in the case of longcloth and 3 per cent in respect of dyed and processed and printed cloth.

As for private exporters, the entitlement for grey and bleached longcloth remains unchanged, while the same for dyed, printed and processed cloth has been raised from 2 to 3 per cent. The increase is considered to be negligible and falls far short of the 10 per cent increase believed to have been recommended by the Export Promotion Council. "With the cost of cloth and yarn high," to quote a report, "the percentage of import entitlement will not leave a sufficient margin for exporters to increase their export."

Appropos the Export Incentive Scheme, the mills interests are of the view that the Scheme will not succeed unless it is so devised as to ensure regularly imports of at least 600,000 bales of long-staple foreign cotton per annum. It is said that there is a deficit of over Rs. 1 crore in the allocation of funds available to the industry for disbursement under the Scheme; the deficit is attributed largely to the shortfall in imports of cotton stapling 1-1/16" and 1-1/16" and above the premium from which provides the fund to the scheme. The mill interests, therefore, have urged the authorities to ensure a minimum import of 600,000 of long-staple cotton. It is pointed out that the total premium available on 500,000 bales (excluding the retention quota) is estimated at Rs. 6.80 crores (at Rs. 160 per bale on 200,000 bales of 1-3/6" and above cotton) and at Rs. 120 on 300,000 bales of stapling 1-1/16" and above) which, together with Rs. 50 lakhs accruing as a result of the increase of Rs. 10 per bale recently permitted in both cases, "would enable the Scheme to balance itself."

The plea for large-scale imports of foreign cotton could be justified only in times of shortage of domestic cotton but not when the supply of such cotton is sufficient. The current cotton season witnessed a marked rise in domestic cotton output, the estimated figure being more than five million bales, as against 3.75 million bales in 1959-60. The coming season is expected to witness a further rise in output. In view of the improved position of domestic cotton supply, one wonders whether it would not be better to reduce imports of cotton and utilise the foreign exchange thus saved to import spares, spare parts and machinery which are required in large quantities by several mills.

"NYLON 7"

A special type of nylon thread which has superior qualities for tyre cords, fish lines and a wide variety of uses as wearing apparel has been produced by a simple economic process. Nylon 7, shelved since its accidental production in the laboratory many years ago, can at last be made by a commercially feasible process from a synthetic derivative of aminoheptanoic acid, according to Dr. C. F. Horn of Union Carbide Chemical Company of South Charleston, West Virginia. When this derivative is boiled in water, it forms a white waxy-to-brittle substance that can be stored or spun immediately into strong fibres, thus eliminating several steps involved in the commercial production of its chemical cousins, the familiar nylon 6 and nylon 66. Its high softening temperature, 430 degrees Fahrenheit, makes it especially suitable for tyre cords where heat built up from friction is a problem. Nylon 7 does not deteriorate easily in presence of ultra-violet light and produces tough, clear sheets and moulded objects of good impact resistance.

COTTON TRADERS' PROBLEMS

It is proposed to convert the East India Cotton Association (E.I.C.A.) into an all-India body, on lines similar to those of the Indian Cotton Mills Federation. This was disclosed by Mr. Madan Mohan Bula, President of the E.I.C.A., in his speech at the joint meeting of the E.I.C.A., the Cotton Buyers Association, and the Cotton Merchants and Mucadams Association, held in the city last week. The move is certainly well-conceived and has come not a day too soon. It would be better to have one single organisation representing various trades throughout the country instead of a multiplicity of associations in different centres. [illegible] effectively [illegible] matters.

The joint meeting considered a number of problems confronting cotton traders. Opinion was said to have been unanimous over four important issues, namely, (1) removal of cotton price control, (2) desirability of legalising option trading, (3) imposition of sales tax and stamp duty on cotton on uniform basis, and (4) application of section 24 of the Income-tax Act in relation to cotton transactions. It was decided to present the views to Mr. K. C. Reddy, Union Minister for Commerce and Industry, who is expected to visit Bombay later this month. Further, the meeting discussed the official export policy. It was felt that the policy and the procedure in detail for exports should be enunciated at the beginning of the season itself, leaving the quantity to be announced later. A maximum possible quantity, the members urged, must be announced early in October, a supplementary quota being given in February-March, to be followed by a further quota later, provided the crop situation permitted. On the question of imports, it was decided to request the Government to associate the trade with the imports of cotton in future. A plea was also put forward for setting up an expert committee or a council to examine the cotton problems which, it was contended, were not receiving the consideration they deserved at the hands of the Government.

Another plea put forward at the meeting was for the immediate release of export quota for Bengal deshi cotton. The plea was based on the ground that there was a large surplus of this cotton, which, in the absence of either mill demand or export outlet, had been causing considerable financial distress. Commending the same plea for the acceptance of the Government, in the course of a statement issued to the Press earlier, Mr. Ruia had said:

"In May 1961, the East India Cotton Association Ltd. brought to the notice of the Government that the available figures of supply, consumption and exports permitted till then of Bengal deshi cotton indicated that a quota of at least 40,000 bales plus a quantity lapsed from the previous three quotas announced this year could comfortably be released for exports. In view of there being no response to this request, the East India Cotton Association Ltd. collected actual stock position of unsold Bengal deshi lying with merchants in Bombay and also made inquiries as to the estimated stock lying in the upcountry cotton markets of such cotton. The supply position was also again examined on the basis of the recorded figures of surveys, etc., with the Association. The requirements of the indigenous industry, namely, the textiles, absorbent and khadi, till November-end were taken into account on the basis of the past consumption figures released by the office of the Textile Commissioner. The conclusion was that there was a definite surplus of Bengal deshi cotton lying in the country which could advantageously be exported right now.

"Having regard to the reported increase in acreage under Bengal deshi for the next season and the surplus with our competitors, that is, Pakistan and Burma, in relation to the overall consumption of this cotton in the world markets, it is only proper that this surplus in our country be disposed by allowing further exports without delay, as, otherwise, it would not only depreciate in value but also would have adverse effects on the prices of next year's crop, which in turn would be against the interests of the farmers. As it is, the prices of Bengal cotton have come down, not unsubstantially, during the last few weeks. Non-issuance of quota now would put the exporters, particularly the small ones, into heavy losses and also the country to a loss of foreign exchange so urgently needed, as the prices have dwindled down very substantially in the last few weeks, because of lack of demand. It is hoped that the Government would accede to this very essential and reasonable request of the Association on behalf of the cotton trade without delay."

WORLD WOOL TEXTILE ACTIVITY

Activity in the non-Communist countries' wool textile industries in 1960 was slightly higher than in the previous year, states a statistical report presented by the Commonwealth Economic Committee to the International Wool Conference in Holland. After reaching a peak in the first quarter of 1960, activity tended to fall. In the final quarter, it was more than five per cent lower than at the end of 1959. The position varied between one country and another, with marked improvements in Italy and Japan, lesser gains in France and Belgium, and falls in the United Kingdom, the United States, Argentina and certain other countries. International trade in raw wool and tops was lower than in the previous year, though yarns and fabrics showed further increases. Total wool imports by 14 major consuming countries declined by about six per cent as compared with 1959. Wool tops exports were four per cent below the previous year's peak, but woollen and worsted yarn exports rose by 12 per cent—establishing an all-time record. Exports of wool fabrics rose by five per cent.

A PASSENGER FROM DELHI WRITES.....

"..... the staff there is always very helpful and very obliging. It is a real pleasure to deal with them ..... I congratulate you on the excellence of your office organisation and the smoothness of the KLM flights....."

This extract is from an unsolicited letter; a photocopy can be obtained from KLM, Calcutta.

For that extra personalised service, there's nothing like flying KLM. Next time you

visit **NEW YORK**
go **KLM DC-8 Jet**
(Via AMSTERDAM)

Leaving : Calcutta Saturday - 17.45 hrs.
Arriving : New York Sunday - 13.30 hrs.
Leaving : New Delhi Thursday - 22.20 hrs.
Arriving : New York Friday - 19.20 hrs.

Sincerely yours

KLM

LONG-TERM PLAN FOR TEXTILE IMPORTS

HONG KONG REJECTS U.K. GOVERNMENT'S PLEA FOR EXTENSION OF CEILING PACT

From Our Special Correspondent

MANCHESTER, 11*th July*

MANCHESTER LETTER

REACTION from Hong Kong to the British Government's intervention in the import situation could well have been foretold at the time when the official statements were issued. "Resentment" has been expressed, "unconcealed anger and contempt" indicated, and the new additional quotas described as "a bribe." These comments were hardly unexpected in the series of hard bargaining which is going on at present and which must be anticipated in the months ahead. Other aspects of the conflicting views between the different parties involved have been ventilated, such as Hong Kong's apparent ignorance that her shipments enter British ports duty-free compared with non-Commonwealth goods, and the Colony's unwillingness to avail itself of the market for grey cloth which is subsequently re-exported from the United Kingdom, on which no quota limit is imposed.

One of the main objects in proposing an eleven-month extension to the present agreement is to regularise the three separate undertakings given by Hong Kong, India and Pakistan so that they all expire on the same date. It is scarcely likely that the British Government should interest itself so much in the arrangements if it only intended to deal with such a short-term project and textile exporters in Hong Kong have been quick to assume that a much lengthier continuance of the scheme is contemplated.

Government's View

That such a plan is, indeed, visualised can be confirmed from an important sentence contained in a statement issued by the Board of Trade at the time of the original release of the proposed extension, to which little, if any, reference was made in the general press. This said: "Though the extension now proposed only covers a period up to the end of 1962, it is the view of the Government that restraint on imports of duty-free Commonwealth cloth into the United Kingdom will undoubtedly be needed for the whole period of the re-equipment and reorganisation of the British industry." How long such a "state of emergency" will exist to substantiate the maintenance of controls of this kind is anybody's guess. The statement adds that the Government hopes that the uncertainties now standing in the way of settlement through inter-industry negotiation will have been resolved well before the suggested extension runs out, i.e. before the end of next year.

In the meantime, plans for world-wide pacts to regulate the quantity of imported cotton and allied goods have received a setback. Hong Kong millowners are apparently unwilling to extend current arrangements with the United Kingdom even on terms more favourable than those at present existing. After an emergency meeting of Hong Kong weavers' federation, the request for an 11-month extension of the agreement with Britain was rejected. A letter of rejection is to be sent jointly by the spinning and weaving organisations in Hong Kong to Mr. H. A. Angus, Director of Commerce and Industry in the Government there. The British Government had offered an extra 20 million yards on the ceiling and a further ten million yards supplementary quota. This the Colony's textile industrialists are determined to oppose, according to reports from Hong Kong.

Geneva Conference Prospects

In Britain, the attitude was one of sorrow more than anger. A spokesman for a mill group said: "We were hopeful that some form of international agreement would be negotiated but now this seems unlikely." Meanwhile, arrangements are proceeding for a meeting opening in Geneva on Monday at which most of the leading textile countries will be represented. It is called under the auspices of the General Agreement on Tariffs and Trade at the instigation of the United States. Its object is an exploratory one over the export trade.

The suggestion is that Western nations should open up their markets to goods made by the developing countries within reasonable bounds. At the same time, the developing areas should be prepared to accept voluntary quotas on their exports to individual markets to avoid the disruption of the textile industries in the manufacturing countries. In the first five months of 1961, imports of cotton goods (excluding garments) to Britain reached a new peak of 352 million yards valued at nearly £30 million. This compares with 297 million yards, costing about £23 million, for the same period last year.

Voice of Industry

The flow of advice and admonition on the imports issue from company chairmen has not diminished. The following are recent samples of the attitude adopted by leading spokesmen for the industry, both on this controversial topic and the outlook in Europe:

"The great new finishing works in Hong Kong are responsible for the entry of an increasing stream of piecegoods and garments into this country, thereby creating uncertainty in regard to price levels and a natural reluctance among spinners and manufacturers to re-equip. With this country's entrance into the Common Market now probably only a question of time, this latter aspect of Hong Kong competition is likely to have a most serious long-term effect on our ability to sell against the Europeans. The labour content in printing is about 30 per cent and in garment-making more than 60 per cent and Hong Kong wages are effectively about 50 per cent of ours. Duty-free entry is a political matter and the industry, therefore, has every right to expect Government action if, and only if, the United Kingdom and Hong Kong industries cannot by themselves resolve the situation. Given a re-equipped industry working on a multi-shift basis, Lancashire certainly ought to be able to compete with other European countries, though even then not without serious effort." (Mr. J. F. Simpson, Chairman, Simpson & Godlee Ltd.).

European Viewpoint

"It is imperative that this problem be cleared up with the utmost despatch before the industry is forced into another severe recession. It would cause consternation not only in this country but also on the Continent, where there has been great admiration for our reorganisation schemes, if these were to run off the rails at this stage through faulty timing or through lack of constructive thinking about the regulation of trade within the Commonwealth. The attitude of the Hong Kong industry appears to have been influenced by the rapid increase in imports of cloth and yarn from other countries, especially Spain. This is a totally different problem, since there is strong evidence of an element of dumping in these imports. The Government has all the necessary powers for dealing with this kind of destructive competition, but it appears that either they are reluctant to use these powers or there is a serious delay in the mechanism by which they can operate. I would welcome our entry into the European Common Market, which would give us access to a much broader market than we have now and would also, in my opinion, be of benefit because of the stimulation provided by rivalry stemming from ideas and culture rather than from a low standard of living." (Mr. W. T. Winterbottom, Chairman, Fine Spinners and Doublers Ltd.).

"Cloth and garment shortages of last year have now mainly disappeared, leaving ample reserve stocks, and in consequence more competitive conditions are ruling. Earlier this year, it seemed almost certain that Hong Kong would not renew her quota agreement with Britain, but I now believe that Whitehall will intervene in the dispute and that Lancashire will receive further protection from Asian imports although the quota figures will probably be increased. The prospect of Britain's early entry into the Common Market is a situation which I welcome, as I do not believe we can afford to resist the challenge of this vast European market, with its enormous potential." (Mr. K. O. Boardman, Chairman, Boardman, Marden, Ltd.).

Demand for Clothing Still High

Home market demand for clothing remains high, according to the latest quarterly statistical review issued in Manchester by the Cotton Board. The review says: "On a seasonally adjusted basis, it looks as though the pronounced increase in retail sales of clothing (corrected for price changes) which was such a feature of 1959 and 1960 may have flattened out this year, but the level in the first four months of the year was about 4 per cent up on the same period last year."

The reasonably healthy state of final demand, however, was more than offset by the very rapid increase in imports of yarn, cloth and apparel. Coupled with uncertainty about the future of ceilings on Commonwealth imports, this helped to cause a marked slowing-down in the rate of ordering and also a tendency to postpone decisions about whether or not to participate in the re-equipment phase of the reorganisation schemes. "The inevitable reaction to the building-up of stocks during the boom conditions of the last two years is another major influence on the present state of trade," adds the report. The rate of output per working day in the United Kingdom cotton industry improved appreciably in March and April compared with the first two months of the year, when production was abnormally depressed because of sickness among the operatives.

In spinning, the main feature was the continued low level of output in the man-made fibres section where trade in very coarse yarns for tufted carpets remained depressed. In weaving, chief features of interest were also on the man-made fibres side, including the fall in

SECOND PLAN OUTLAY OF STATES

STRAIN ON FINANCES CONSIDERABLE

IT will be recalled that, in their budget speeches just prior to the commencement of second Five-year Plan, the Finance Ministers of practically all the States had forcefully pleaded for great efforts to mobilise as much resources as possible for the successful implementation of the Plan. But the efforts actually made did not meet with adequate success, inasmuch as the additional funds which the State Governments were able to gather were not commensurate with the requirements for maintaining the accelerated tempo of development. The consequence was the considerable strain on States' finances that persisted throughout the second Plan period, notwithstanding the huge resources —amounting to Rs. 2,891 crores—made available by the Central Government. This conclusion is borne out by the array of statistical data furnished in the detailed analysis of the finances of State Governments appearing in the June issue of the *Reserve Bank of India Bulletin*. The aggregate overall deficit of the States widened sharply from Rs. 86.7 crores in the first Plan period to Rs. 157.6 crores in the second Plan. This, it must be noted, was the position even after doubling their borrowings from the public. The data compiled by the Reserve Bank show (under permanent debt) that such borrowings during the second Plan period were no less than Rs. 358 crores, as compared with Rs. 162 crores in the first Plan period.

The strain on States' finances is attributed to two chief factors, namely, mounting Plan outlays and additional commitments due to payment of increased emoluments to Government servants. The total second Plan outlay is estimated at Rs. 2,103 crores (of which the last year of the Plan, that is, 1960-61 alone accounted for Rs. 573 crores). This investment is 134 per cent higher than the actual outlay of Rs. 898 crores in the first Plan period. It has, however, fallen short of the target originally envisaged, namely, Rs. 2,146 crores, albeit by only Rs. 43 crores. The year-to-year Plan outlay of the different States for the first Plan, the targets for second and third Plans, and the budget estimate of outlay for the current year (1961-62 which is the first year of the third Plan) are shown in the table at the bottom. The figures given in this table are based on the budget papers of State Governments and differ from the figures given out by the Planning Commission, as the former include outlay on schemes included in the Centre's Plan but executed in States, as also certain other schemes which are technically outside the Plans of Centre and the States.

Expenditure Rises Markedly

The second Plan outlay of Rs. 2,103 crores constitutes over 35 per cent of the States' total expenditure of Rs. 5,973 crores. The latter amount represents a rise of as much as Rs. 2,587 crores as compared with the total expenditure of Rs. 3,386 crores incurred in the first Plan period. The rise is accounted for by expenditure on both revenue and capital accounts, the former being higher by Rs. 1,592 crores at Rs. 3,946 crores and the latter by Rs. 995 crores at Rs. 2,027 crores. The total expenditure of States per annum has been consistently rising. From just Rs. 544 crores in 1951-52, it increased to Rs. 946 crores in 1955-56 and further to Rs. 1,512 crores in 1960-61. The budget estimate for the year 1961-62 is placed still higher at Rs. 1,580 crores, comprising Rs. 1,057 crores on revenue account and Rs. 523 crores on capital account.

In the context of the mounting expenditure, particularly for implementing the Plan, the resources made available by the Centre are of considerable significance to the States' budgetary position. The total resources (share of divisible taxes and duties, as well as grants and loans) actually transferred from the Centre to the States have gone up quite markedly from Rs. 160.1 crores in 1951-52 to as high as Rs. 771 crores in 1960-61, the estimate for 1961-62 being higher still at Rs. 801 crores. The aggregate resources thus transferred during the whole of second Plan period, as already mentioned, amounted to Rs. 2,891 crores, as against Rs. 1,422 crores in the first Plan period. Almost half of this total represented loans, the actual amount being Rs. 1,428 crores, as against Rs. 807 crores given as loans in first Plan period. The balance was shared by grants (Rs. 752 crores) and shared taxes (Rs. 711 crores); the corresponding figures for first Plan are Rs. 270 crores and Rs. 345 crores, respectively.

Of the Rs. 770 crores transferred in 1960-61, Rs. 414 crores represented the States' share of divisible taxes and grants, constituting 42 per cent of the States' total revenue expenditure. The remaining sum of Rs. 356 crores was in the form of loans and advances, accounting for 69 per cent of the capital expenditure of States. The devolution of resources from the Centre to States, it may be noted here, is at present governed by the award of the Second Finance Commission which covers the five year period from 1957-58 to 1961-62. The Third Finance Commission presided over by Mr. A. K. Chanda, set up in December 1960, is currently engaged in the task of determining (for the four years 1962-63 to 1965-66) the States' share of taxes on income and Union excise as well as grants, keeping in view the requirements of third Plan and the efforts expected of them to raise additional resources. This Commission is expected to complete its tour of the various States by 15th October next and then assemble at New Delhi to finalise its recommendations by 15th December 1961 when the term of the Commission expires. Revealing this at Chandigarh last week-end, Mr. Chanda is reported to have observed:

"The State Governments so far contacted are sharply divided on the question of retaining the present system of dual allocations of Central aid and grants to the State Governments. Some States want that the present system of the Planning and Finance Commissions making separate allocations should continue, although they desire some simplification in procedure. Other States have suggested that at least all the non-capital funds should be allocated by one authority. This is considered to be particularly necessary if the Finance Commission is to discharge properly its function of saving the States' sovereignty from being impugned by the Centre, while allocation or distributing Central funds.

"The Finance Commission has also to re-think on the principle that should govern the distribution of income-tax and the Central excise incomes to States. The receipts of income-tax from companies have now been out of the purview of the distributable funds. The old argument of distributing on the basis of population has, therefore, lost some of its force. The present Finance Commission has, thus, to lay down new principles for the purpose. In the case of Central excise, I appreciate the argument that funds should be distributed on the basis of consumption of various articles in different States. But there are difficulties in calculating consumption figures. It is difficult to determine the spending potential of various States."

These observations do not give any clue as to whether the Commission's award would result in a sizable increase in resources made available by the Centre to the States. Many State Governments have already urged for large-scale additional resources. It is contended by some critics that it was with a view to impressing upon the Commission the need for such resources that the State Finance Ministers deliberately budgeted for deficits by underestimating revenue receipts and over-estimating expenditure. The need for additional funds may be urgent, but the States must spare no pains to raise resources, on the one hand, and to avoid wasteful expenditure, on the other.

Additional Tax Effort

Only ten out of the fifteen State Governments announced proposals for additional taxation in their budgets for 1961-62, the first year of the third Plan. But, even here, the aggregate yield is estimated at no more than Rs. 17.3 crores, as against the overall deficit (on the basis of existing taxation except in the case of Orissa and Rajasthan) estimated at Rs. 66.6 crores. The aggregate overall deficit for the entire second Plan period, as already stated, amounted to Rs. 157.6 crores. Of this, the figure for 1960-61 alone was Rs. 91.7 crores. The deficit would have been wider but for the revenue surplus of Rs. 13.9 crores. The deficit of Rs. 157.6 crores in the second Plan period was met partly by running down cash balances (the closing balance for 1960-61 was *minus* Rs. 14.2 crores, as against the opening balance of *plus* Rs. 14.0 crores for 1956-57) and partly by withdrawal of securities from reserves. The amount of investments sold out by the States during the second Plan period was Rs. 51 crores, the comparable figure for the first Plan period being Rs. 43 crores.

The position in so far as 1961-62 is concerned is that, with hardly any cash balances to fall back upon, a large part of the total estimated deficit of Rs. 66.6 crores will have to be met by overdrafts, leading to an increase in the negative cash balance from Rs. 14.2 crores at the beginning of the year to Rs. 60.9 crores as on 31st March 1962. At the end of 1961-62, as many as eleven States will have negative cash balances, as against only five at the beginning of the year.

I.M.F. CREDIT TO INDIA

The International Monetary Fund has agreed to provide $.250 million (Rs. 119.04 crores) to the Government of India in six foreign currencies: $110 million (Rs. 52.38 crores) in U.S. dollars, $60 million (Rs. 28.57 crores) in pound sterling, $45 million (Rs. 21.43 crores) in Deutschemarks, $15 million (Rs. 7.14 crores) in French francs, $15 million (Rs. 7.14 crores) in Italian lira and $5 million (Rs. 2.38 crores) in Japanese yen. This is the first occasion when drawings in yen are being made by any member from the Fund.

Although the Fund's agreement for the provision of $250 million (Rs. 119.04 crores) in foreign currencies has been announced, the actual credit would be received only on 1st August 1961. The Reserve Bank of India has already made arrangements with the Central Banks of the concerned countries for receiving the credit.

India's quota in the Fund amounts to $600 million (Rs. 285.71 crores), of which $77.5 million (Rs. 37.90 crores) have been paid in gold and the rest in Indian currency. This is not the first occasion that India has sought assistance from the Fund to meet its short-term balance of payments difficulties. In 1948-49, India drew $100 million (Rs. 47.62 crores) from the Fund. This amount was repaid by April 1956. Subsequently, in 1957, India made a straight drawal of $127.5 million (Rs. 60.71 crores) from the Fund and another $72.5 million (Rs. 34.59 crores) as 'stand-by' credit. While the 'stand-by' credit was fully repaid within three years, that is, by June 1960, the straight drawal of $127.5 million (Rs. 60.71 crores) was repaid to the extent of $64.25 million (Rs. 30.60 crores) on 26th June 1961. The balance of $63.25 million (Rs. 30.11 crores) is expected to be repaid in the near future.

L.I.C. CONCESSION FOR FLOOD VICTIMS

The Life Insurance Corporation has announced immediate concessions for its policyholders affected by the unprecedented floods in Poona and Ratnagiri Districts of Maharashtra and certain districts in the South and East Zones. The Corporation has waived late fee or interest on unpaid premiums, if payments are made within three months from the due dates of the premiums. If a policyholder dies within the period of grace now allowed, the claim will be met in full, subject to deduction of unpaid premiums.

These concessions will apply to policyholders residing in the affected areas which will be delineated by the L.I.C.'s Divisional Offices, in consultation with the controlling Zonal Offices. The norm of such delineation will be the district and not small pockets or thanas. Details of such areas would be announced later. These concessions will remain in force upto 11th January 1962 and will apply to policies which were in full force on 12th July 1961.

INCOME-TAX AMENDMENT BILL

POSITION OF NON-RESIDENTS AND FOREIGNERS

By J. J. Jussawalla

IN almost all modern systems of taxes on income the State assumes the prerogative to tax income earned abroad by its nationals or by such foreigners as it could reach because of their extended stay in the country or through their agents in India. But, at the same time, as in the U.K., countries having vast international connections, necessitating long stay of their nationals abroad or, conversely, of foreign nationals in their country, special care has always been taken in taxing income of such individuals. For this purpose, in the U.K., for example, there are three well understood but not statutorily demarcated categories of assessees: (1) Persons domiciled and ordinarily resident in the U.K., (2) persons ordinarily resident in the U.K. but not domiciled therein, and (3) non-residents. Persons in the first category only are liable to full U.K. tax on their income wherever earned; persons in the last two categories are liable to such income as they receive from sources within the U.K. and also on such income from sources outside the U.K. as is remitted to the U.K. India is now rapidly assuming its rightful place in the community of nations and, as in the case of the U.K., developing vast and enduring foreign contacts. And with this development in view it is important to see that our tax laws do not prove a deterrent to such promising contacts, and with a new tax Bill on the anvil, the present is an opportune time for such an examination.

With this in mind we may notice a point or two of the U.K. tax law, which would serve as a better model than that of any other country. In the U.K. whilst in the case of non-residents facts are usually clear and arbitrary limits of residence in terms of time are laid down in law, the Revenue authorities as well as Parliament of the U.K. have both steadfastly refused to lay down arbitrary criteria in law as to what constitutes ordinary residence, for the reason that there are infinite variations in personal circumstances and the decision as to whether a person is domiciled and ordinarily resident or resident would depend on a rather delicate balance of complicated facts. Physical presence, maintenance of a dwelling place, employment of a person, his and his family's ties, connections and attachments, his past history and future intentions all have to be given due weight in deciding whether the person is ordinarily resident or not. Each of these facts would have a different or even contrary import in the case of a person previously ordinarily resident in the country, but who has since left the U.K. and that of a person who has just entered the country, but nevertheless the conditions under which he stays indicate his intention to reside in the U.K. in the ordinary course of his life. For this purpose the Revenue authorities are guided by a few statutory rules and a vast body of case law, always applying them both to the facts of each case to determine whether a person's income everywhere should be brought to U.K. taxes or only such income as is earned or received in the U.K. according as he is considered domiciled and ordinarily resident, or, if a British subject, domiciled but not ordinarily resident.

The Amending Act of 1939

In India, by a happy compromise by Amending the Act of 1939, these considerations of personal circumstances of each case to determine residential status of an assessee were not found necessary, for between Sections 4-A and 4-B of the present Income-tax Act statutory definitions of technical residence as well as by implication of ordinary residence are available. Section 4-A defines what constitutes technical residence in terms of number of days or maintenance of a dwelling place. Section 4-B looks beyond the arbitrary limits and conditions laid down in Section 4-A to determine the residential status of a person and proceeds to define negatively ordinary residence without reference to his maintaining a dwelling place in India. Only an individual who is considered resident and ordinarily resident in India is liable to Indian taxes on his income wherever earned and one who is regarded as not ordinarily resident is liable to Indian taxes on such of his income as is derived from Indian sources, and if from foreign sources, such of it as is brought into India. It admittedly enabled an assessee to stay for long periods without bearing his proper share of tax burden in that his foreign income was not brought to Indian taxes. But all the same it recognised, in a rough and ready way, the intention behind the stay and maintenance of a dwelling place by both the classes of assessees: (1) an Indian who has settled abroad and is gradually drifting away from India and whose connections with this country are becoming rather attenuated and for whom his dwelling place in India exists only because it is an ancestral house or for reasons of paternal or family obligations or attachment or as a convenient place of lodging in the course of his periodic or occasional, but in all cases short visits to India, and (2) the foreigner who has just entered upon a career in India and who has to maintain a second dwelling place in addition to one maintained in his own country, the second being maintained for a purpose—that of employment and for a period, either short or long, but at all events both the dwelling places and the stay intended to be limited to his working life in India, thus indicative of the circumstances under which he resides in this country. There is, therefore, clear logic and equity behind refraining to tax world income of both the classes of assessees as provided in the present Act under Section 4-B.

The New Bill

The new Income-tax Bill now before the Select Committee seeks to remove bodily Section 4-B, leaving only Section 4-A (which is essentially reproduced in Clause 6 of the Bill) to determine whether a person is liable to tax on his world income or not.

Clause 6, as Section 4-A, lays down a technical condition, maintenance of a dwelling place, and sets an arbitrary limit of time (182 days) as one of the tests of residence. A visit exceeding 182 days fastens full tax liability, as also mere maintenance of a dwelling place of necessity or rarely used and almost forgotten, makes an Indian or foreigner liable to full taxes even if he just puts in an appearance in India, in the literal sense of the word. Section 4-B in a way gives statutory recognition of the intention behind the maintenance of a dwelling place, either for the purposes of employment, health or pleasure, and to an extent takes into consideration the nature, quality and extent of residence in India, and disregards entirely the fact of mere maintenance of a dwelling place. In fact, it wrote into law as back as in 1939 what the U.K. authorities have enacted in 1956 on the recommendation of the Royal Commission on the Taxation of Profits and Income (Final Report, 1954) which recommended that in modern conditions no special importance should be attached to the question whether a man maintains a place of abode in the U.K. or not in considering one's residential status for tax purposes.

It may be admitted that Section 4-B was enacted in 1939 to lessen the tax burden of the then rulers of India, but to seek to remove it—a very sound enactment—from the Statute Book just for that reason does not appear to be very logical or convincing. As we have seen above, it recognises and gives effect in law with rare certainty not found in other like enactments to the facts of life, that the person may have to maintain a dwelling place in India without the least intention to reside in India in the ordinary course of his life and in fact, may be maintaining another residence in another country wherein his settled and ordinary residence lay. This will be true in the case of foreigners working in India as in the case of Indians settled abroad.

Narrow Definition of "Residence"

The harshness of basing tax liability on such a narrow and technical meaning of residence will be powerfully brought out by the following illustration which has some basis in fact:

An Indian who was a naturalised British subject continued to have a dwelling place in India for other members of his family, though he himself had just emigrated from India and had settled abroad. Section 4-B of the present Act was not applicable to him, as prior to leaving India he was for a number of years residing in India and was out of India for less than two consecutive years. His residential status was, therefore, to be determined under Section 4-A of the present, or which is the same law as contained in Clause 6 of the present Bill. Under both of these, enforcing an artificial conception of residence based on maintenance of dwelling place coupled with physical appearance in India, he would have been regarded as resident in India for tax purposes. Flying eastward from Europe to the Far East his plane made a convenient halt in Bombay, long enough for him to visit his family in the city, but the poor man dared not step out of the customs enclosure lest he be dubbed resident in India for tax purposes, if he did.

This illustration brings out the harshness and inequity of judging residence on such a narrow and technical basis—mere maintenance of a dwelling place for infrequent visits and just appearance in India.

It is earnestly requested of the Select Committee now considering the Bill to give its best attention to this point. First, either through oversight, a sense of wrong emphasis or sheer prejudice, provisions of Section 4-B seem to have been left out of the present Bill. That does not matter much but in that process they have lost sight of the clear but finely drawn distinction between a person ordinarily resident in India and one just residing for a purpose and a period. The incidence of Indian tax liability would naturally not fasten to an equal degree in both the cases. Next is the consideration of feasibility of enforcing the writ of the Indian legislature in regard to assets of foreigners located abroad. In taxation too it appears discretion is the better part of valour, for it would be better not to have on the Statute Book a law which cannot be enforced with reasonable certainty. Finally, there is the consideration of the first generations of Indian nationals working and/or settled abroad. In many cases a dwelling place is maintained for the aged or the rest of the family remaining behind and on the basis of such preposterously artificial test (mere physical appearance and just maintenance of a dwelling place in the taxable territories) to seek to bring to tax the foreign income of such an Indian would make, who may be exile by necessity, exile by overwhelming compulsion. It is to point out that by such an artificial definition of residence under the present provisions of other taxing statutes, not only foreign income of the Indian settled abroad is brought to Indian tax, but also his wealth abroad as also his and his family's expenditure abroad made from income earned abroad and gifts made abroad from sources outside India.

Sense of Balance Required

Finally, it is not suggested that the full freedom or licence to avoid taxes that is possible under the present Section 4-B be retained; that cannot be and should not be. But what could be done is to restore a sense of balance in taxing Indians settled abroad by enacting into law the suggestion made in the Report of the Taxation Inquiry Commission 1953-54 (the Mathai Report), which cannot be accused of being kind to foreigners or that accursed tribe, the idle rich. Agreeing to do away with Section 4-B of the present Act and the extreme exemptions available thereunder, the Commission had proposed, together with other alternative tests of residence, the following:

"An individual is resident in the taxable territories in any year if he:—

(ii) maintains or has maintained for him a dwelling place in the taxable territories for a period or periods amounting in all to one hundred and eighty-two days or more in that year, AND IS IN THE TAXABLE TERRITORIES FOR A PERIOD OR PERIODS AMOUNTING TO NINETY DAYS OR MORE IN THAT YEAR (capitals mine).—*Report of the Taxation Inquiry Commission vol. II, p. 29.*

As for foreigners working in India, but not domiciled or settled therein, it is suggested that condition precedent to tax liability to income accruing abroad and not received in India should be that the assessee be an Indian citizen. For laying down this qualification, we have precedence in our own taxing statutes, namely, the Wealth Tax Act (after the amendment made by the Finance Act, 1958) and the Expenditure Tax Act. Under both these Acts, liability to wealth abroad or expenses abroad from foreign sources arises on the assessee being both a citizen of India and resident in India as defined under the Income Tax Act.

An amendment to Clause 6 of the Bill on the aforesaid lines would give preference to none and render justice with equity to all.

BHILAI STEEL PROJECT

SOVIET CHIEF ENGINEER'S IMPRESSIONS

By Tribhuwan Nath

IT is difficult to feel when you meet Nikolai Goldin—a simple, modest and unassuming man—that he is one of the top executives of the Soviet Union, who has been successively Chief Engineer of a building trust of the U.S.S.R., Deputy Minister of Construction of Metallurgical Enterprises and Deputy Chairman of one of the Economic Councils of the U.S.S.R. "My whole life has been devoted to construction—construction of metallurgical enterprises," he told me. He had helped build many steel plants in the U.S.S.R., but he was perhaps happy about none as much as about Bhilai, for Bhilai, said he, stood in a different category. "It is a bond, a symbol of friendship, between two great countries. It is the fruit of joint work by the workers and technicians of the Soviet Union and India." Behind it lay the desire of the Indian people to have their own heavy industry, in the first place a powerful iron and steel industry, and the readiness of the Soviet people to help them in consolidating their economic independence, he added.

Nikolai Goldin recalled the moving words spoken by Jawaharlal Nehru when he inaugurated the rail and structural mill last October. Bhilai, said Mr. Nehru, had become a symbol of India, of science and progress and of Indo-Soviet co-operation. Bhilai, he added, gave practical shape to the people's dream of a new India.

Key Factor

He emphasised again and again, in the course of our talk, that it was the close co-operation between the Soviet and Indian staff in an atmosphere of mutual trust and confidence that was the key and vital factor in completing the Bhilai plant in the shortest possible time. His face beamed as he talked of this co-operation and friendship. "The Soviet and Indian engineers got on very well together," said he. "It was the common striving to make Bhilai the pride of India's heavy industry that made them feel like brothers," he added.

This friendship, he told me, transcended the office or the workshop; it pervaded the everyday life of the Soviet and Indian workers and technicians. They shared their work as well as leisure. They would often spend their evenings together, they celebrated their festivals and national days together. Personally speaking, N. Goldin said, he would always remember and cherish the friendship and esteem that he received from his Indian colleagues.

Training on the Spot

Bhilai had produced steel, N. Goldin said, but not only steel; it had produced also fine young technicians and skilled workers, who had in a remarkably short time mastered the complex techniques of steel production. The Soviet specialists, he added, had not only helped build up the steel colossus, they had also—and it was no less important perhaps—trained large numbers of Indian specialist right on the spot, in the very process of construction and production.

Giving a concrete example of how this training was imparted, he told me how one of the top Soviet engineers, Yakov Samoilenko, who had designed highly automated electrical equipment for Bhilai and later during his three years' stay in the steel town had helped in assembling and installing it, had trained over 50 Indians in handling this complex and highly specialised equipment. Now they were able to manage all this automation machinery independently. Needless to say, every workshop of the Bhilai plant had its own Yakov Samoilenko.

Besides, Nikolai Goldin told me, over 700 Indian technicians had received training at big Soviet iron and steel plants.

Distinguishing Characteristic

The distinguishing characteristic of Bhilai, as different from the other plants, said N. Goldin, was this central emphasis on the training of Indian technical cadre. For the rapid industrialisation of India, he added, this was even more important than machinery and equipment.

The Bhilai plant, N. Goldin told me, was one of the most modern in the world, and any country would be proud of it. All the processes of production here were automated and integrated. It had blast furnaces of the most perfect design working, under enhanced gas pressure, on fluxed sinter cakes with permanent humidity steam air-blowing. The open-hearth furnaces that had been built at Bhilai were the most powerful in the country, each one of them having a holding capacity of 250 tons. No wonder that N. S. Khrushchov said about Bhilai: "We would be proud of such a plant if it were built in our country. It is a good plant with the latest equipment, which is in step with modern achievements of science and technology in metallurgy."

Nikolai Goldin recalled, in this connection the statement of N.S. Khrushchov that in fulfilling the agreement on the expansion of the Bhilai plant, the Soviet Government would be supplying the very latest equipment for the expansion project, taking into account the advance in the technology of steel production in the intervening period. The new open-hearth furnaces to be built under the expansion plan would have double the capacity of the present furnaces, i.e., 500 tons. The volume of the new blast furnaces would be similarly raised from 1,033 cubic metres to 1,719 cubic metres.

Excellent Performance

When I asked Nikolai Goldin what he thought of Bhilai in comparison to the two other plants, commissioned at about the same time as Bhilai, he said it was difficult for him to speak about the other plants, but he could say this about Bhilai, that it was doing exceedingly well. Production there was in full swing. It produced in June this year 20 per cent more steel as compared to May, 25 per cent more rolled metal and 12 per cent more pig iron. It has produced up to date 1.5 million tons of coke, 1.4 million tons of pig iron, 630,000 tons of steel and 586,000 tons of rolled metal. It might be profitable to compare these figures about Bhilai given by Nikolai Goldin with the corresponding figures for Rourkela and Durgapur as published by the Press. The total production at Rourkela comes to 1.1 million tons of coke, 840,000 tons of pig iron, 350,000 tons of steel and 180,000 tons of rolled metal. Durgapur has so far produced only 860,000 tons of coke, 650,000 tons of pig iron, 250,000 tons of steel and 230,000 tons of rolled metal.

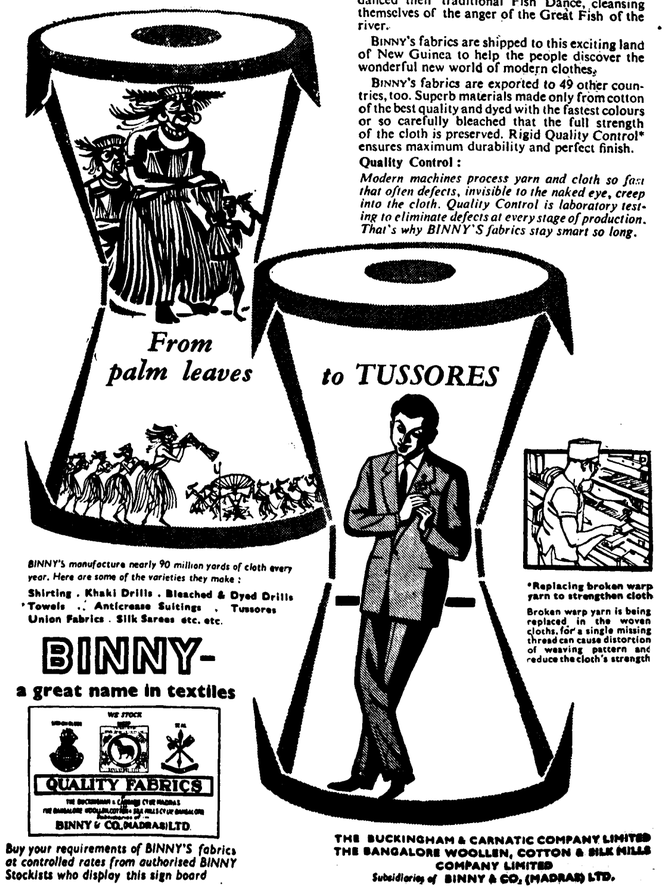
These figures showed that Bhilai had a striking lead in production. It had been able, thanks to its excellent machinery, efficient organisation of work and close co-operation between the Soviet and Indian specialists, to maintain steady, uninterrupted flow of production.

An important feature of the Bhilai plant as compared to the other two plants built in India is that it even now yields profit for India. Bhilai has given a very good account of itself, said N. Goldin. Every plant, he added, should be judged by its actual performance.

Dominant Impression

Concluding, Nikolai Goldin said that his dominant impression during his stay in India was that the Indian people were very industrious. Bhilai was a testimony of the will and determination of the Indian people and their Government and personally of Prime Minister Nehru to have their own heavy industry—the backbone of a country's economy. He wished the Indian workers and specialists working at Bhilai further successes in their work, especially in expanding their plant. He said although he was leaving India, he would always retain a special devotion to Bhilai and look forward to its continued progress and development.

The International Monetary Fund has entered into a stand-by arrangement with the Government of El Salvador for a period of 12 months, in an amount equivalent to $11.25 million. The reserve position of El Salvador showed a decline in the last quarter of 1960 and the first quarter of 1961, when a high level of bank credit facilitated imports which exceeded the country's current foreign exchange earnings. The Salvadoran authorities are adopting measures to improve the internal situation through appropriate fiscal and monetary policies. The Fund's assistance will help support the country's reserve position, and the continued convertibility of its currency, while these policies are taking effect.



The mighty roll of the drums seethes to the climax of a wild rhythm...and the dancing Wapis have danced their traditional Fish Dance, cleansing themselves of the anger of the Great Fish of the river.

BINNY's fabrics are shipped to this exciting land of New Guinea to help the people discover the wonderful new world of modern clothes.

BINNY's fabrics are exported to 49 other countries, too. Superb materials made only from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control* ensures maximum durability and perfect finish.

Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirting . Khaki Drills . Bleached & Dyed Drills
Towels . Anticrease Suitings . Tussores
Union Fabrics . Silk Sarees etc. etc.

*Replacing broken warp yarn to strengthen cloth

Broken warp yarn is being replaced in the woven cloths, for a single missing thread can cause distortion of weaving pattern and reduce the cloth's strength

Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board

TATA ENGINEERING & LOCOMOTIVE CO., LTD.

STATEMENT OF CHAIRMAN, MR. J. R. D. TATA

RS. 18-CRORE EXPANSION SCHEME GETS GOVERNMENT'S APPROVAL

THE expansion scheme of the Tata Engineering and Locomotive Company Limited has been approved of by the Government of India and necessary initial steps have already been taken to implement it. This is disclosed by Mr. J. R. D. Tata, Chairman of the Company, in his annual statement to shareholders, circulated along with the Directors' report and audited accounts for the year ended March 1961. The scheme, according to Mr. Tata, is estimated to cost about Rs. 18 crores, including its share of the expansion of capacity for castings, forgings and other components, and envisages a doubling up of the rate of output once again. He says that it is planned to complete the programme over a period of about 3½ years during which production and the percentage of indigenous content will be progressively increased each year. By way of a general observation, he emphasises that productivity and efficiency can be achieved only step by step, with sustained hard work, relentless attention to details, and insistence on the highest standards of quality and performance. This important aspect of industrial growth, he trusts, will not be ignored in the implementation of great plans of industrial development.

The following is the full text of the statement of Mr. Tata:

"The year that has passed has been a good one for this Company. As shareholders will see from the attached report and accounts, we made all round progress in production, in sales and in profits.

Substantial Benefits to the Country

"The Company's performance in the past year has brought substantial benefits to many sectors of the economy. The rail and road transport industries were provided with Rs. 33 crores worth of Indian made transport equipment of the highest quality and performance; 13,000 men and women were provided direct employment and earned from us over Rs. 4 crores in wages and bonuses. The Company paid Rs. 7.7 crores in taxes and duties.

"Ordinary shareholders, assuming they approve of the Directors' recommendation, will have received Rs. 1.16 crore as dividends and added Rs. 3.92 crores to their assets.

"In addition to the above benefits, which can be expressed in money terms, we made intangible, but not less real, contributions to the nation's economic development: for instance, in the training and additional experience imparted to our staff at various levels, in the continued building up of the managerial and technological skills of our organisation; in the stimulus which our operations will have given to the development of ancillary industries and to road transport.

"The results we have achieved and the manner in which we have conducted our affairs in the past year demonstrate what private enterprise, properly organised and financed and given the necessary scope for initiative, can do for the country in its plans of industrial development.

Productivity and Efficiency

"It should be noted that it took the Company some fifteen years of hard work to achieve its present stage of maturity and efficiency. There is a tendency in our country to believe that the establishment of new industries requires little more than the provision of the necessary buildings, plant and equipment, and to criticise the lack of immediate results. We have ourselves had our share of such criticism. Enterprises such as ours are not, however, made up merely of buildings and machines. These are the mere bones of industry; the flesh, muscles, blood and nerves essential to productive effort, which in industry are represented by materials and money, management and staff, take nearly as long to build up as it takes for a child to develop into a grown and productive human being. Productivity and efficiency can be achieved only step by step with sustained hard work, relentless attention to details, and insistence on the highest standards of quality and performance. I trust that this important aspect of industrial growth will not be ignored in the implementation of the great plans of industrial development on which the country has embarked.

"Now that the Company has reached maturity, by which I mean not only the ability to pay its way but also the capacity for self-sustaining growth, I would like to thank the shareholders for their support and continued confidence during the ten weary years they waited for a dividend. When so much is so often said with so little understanding about the inadequacies of private enterprise and the inequities of the profit motive, I trust the record of this Company will not be overlooked nor the fact that its shareholders and management bore with patience this long period of waiting for some return on their investment of money and effort.

Excellent Job by the Staff

"I would, on your behalf, also like to thank all those responsible for the Company's progress over these past fifteen years; our workers and staff at Jamshedpur and elsewhere for the skills and productivity they have acquired (I am glad that they are now getting tangible evidence of the value of the training and experience they have been given in the Company's employment and the opportunities available to them for advancement and higher standards of life); the supervisory staff, and particularly the higher echelons of management, for the unremitting and at times thankless work they have put in; our past General Managers who laid the foundations for the present progress of the Company; Mr. da Costa, our present General Manager; Mr. Stoehr, head of our Automobile Division, who has been mainly responsible for building up this Division to its present high state of efficiency and productivity; Mr. Broacha, head of our construction and engineering activities; and finally our technical associates, Messrs. Daimler-Benz, Krauss-Maffei, Henricot, Harnischfeger, and Johnsons for their invaluable assistance in our various projects.

"Our thanks are also due in no small measure to the Ministry of Commerce and Industry, particularly the Development Wing of the Ministry, for their realistic and constructive policies and sound decisions on the problems of the Automobile Industry. Very much against his own wish, I must also mention my colleague, Mr. Moolgaokar, Director-in-Charge of the Company, who, through the dedicated application of his outstanding technical and managerial talents and an immense capacity for work, has contributed more than any other single person to the growth, efficiency and success of the Company.

Profits and Appropriations

"As you will see from the Directors' report and accounts, the gross profits accruing from the past year's operations were Rs. 110.44 lakhs higher than in the previous year. After providing an additional Rs. 19.33 lakhs for depreciation, Rs. 30.84 lakhs for development rebate reserve, and Rs. 28.93 lakhs for taxation, the Directors were able to recommend an increase of 16 per cent over the previous year in the rate of distribution on ordinary shares which, if approved by you, will be Rs. 14.50 gross or Rs. 10.15 tax-free per share, subject to tax relief under Section 15C of the Income Tax Act. In order to ensure that the shareholders obtain the full benefit of such relief, a part of the dividends on ordinary shares will be paid out of the undistributed balance of 15C profits earned in previous years and the whole of such 15C profits earned in the year under report. As a result of this treatment of appropriations and dividends, the tax on dividends borne by the shareholders will be reduced from 30 per cent to 21.9 per cent, subject to finalisation by the Income-tax authorities.

Automobile Division

"As in the past year, the operations of the Automobile Division produced the bulk of our revenues and profits. Tata-Mercedes-Benz vehicles have maintained and in fact further enhanced their leadership in the industry, and the demand for our vehicles continues greatly to exceed our capacity to produce them even after expanding our output to 1,000 units a month. I mentioned to you last year that, in order to meet this unsatisfied demand, we had decided to embark on a further scheme of expansion of our capacity intended to double once again our rate of output. I am glad to report that our proposals have been approved by the Government of India and that the necessary initial steps have already been taken to implement this important project which is estimated to cost about Rs. 18 crores, including its share of the expansion of capacity for castings, forgings and other components. It is planned to complete the programme over a period of about three and a half years during which production and the percentage of indigenous content will be progressively increased each year.

"In my statement last year, I discussed at some length the project for an economy car in regard to which we had put forward to Government proposals for the manufacture of the DKW-junior under licence from Messrs. Auto-Union, an associate company of Messrs. Daimler-Benz. Nothing has come of this scheme nor is it likely to materialise in the future, as the Government of India seem to have decided, on grounds which are yet to be justified publicly, to manufacture such a car themselves. It remains to be seen whether the public will in due course get from the Government project a good, durable and economical small car at a price anywhere near Rs. 5,000 or Rs. 5,500 as indicated by Government.

Locomotives

"On the expiry of the sixteen-year agreement between the Railway Board and the Company in May 1961, the Railway Board's obligation to place regular orders for locomotives on the Company, and the Company's obligation to supply them, have come to an end. Although this agreement caused headaches to both sides and brought us hardly any profit, we may be grateful for the part it played in enabling the Company to come into existence and to create the initial industrial base from which we developed into other more profitable fields making possible our subsequent progress. We are grateful to the Railway Board for the support extended to us during the last sixteen years.

"Although we are no longer legally obliged to supply locomotives to the Railway Board, we have readily agreed to meet their further requirements on an *ad hoc* basis and have received orders for the supply of about sixty-five locomotives a year on an average for the next five years, at a price which, while yielding us only a very small profit, will enable the country to secure its requirements of metre-gauge steam locomotives more cheaply than, we believe, the Railways could secure from any other source.

Tata-P & H Excavators

"Since I reported to you last year, the project for the manufacture of excavators and similar equipment under licence from Messrs. Harnischfeger of Milwaukee, U.S.A., has got into its stride and is being energetically pursued. Subject to the availability of foreign exchange, the shortage of which, incidentally, was responsible for delaying the start of the project, we shall be in regular production of these heavy machines essential to the mining, heavy construction and other industries. An initial batch of twenty 2½ cubic yard power shovels has been put into production. Although, naturally, the number of units manufactured initially will be relatively small, I believe that the Tata-P & H power shovels, cranes and similar machines will establish for themselves the same high reputation for performance and quality as has characterised our Tata-Mercedes-Benz trucks and buses.

Manufacture of Plant and Equipment

"An important activity of the Company, which has grown considerably in the last year and which is not specifically reflected in the Directors' report or accounts, is the increasing extent to which we have been making plant and equipment for our own use. Amongst such items may be mentioned special machine tools, materials handling equipment, presses, furnaces, cranes, etc. This development is of great value, both to ourselves and to the country. It assists development of design talent, enables expansion activities to be better co-ordinated, and not only reduces capital expenditure but also saves a good deal of foreign exchange of which, as you know, there is a critical dearth today.

"I have little further to add to the Directors' report and the annexed accounts which give a clear picture of our operations during the past year. We can, I think, view the future with sober confidence in our ability to surmount such obstacles and difficulties as we may find on our road to further growth and achievement. I can safely assure you that, with the equipment, the financial and human resources, the knowledge and experience now at our disposal, and given reasonable freedom of initiative and action, we should do at least as well, if not better than any similarly placed enterprise in the country, and in the process satisfy some of the most vital needs of the country as well as the legitimate aspirations of the shareholders.

"In closing, I wish on behalf of the Directors and yourselves, to refer to the great loss suffered by the Company, the industrial and business community, and the country as a whole by the death of Sir Purshotamdas Thakurdas on the 4th of July 1961. A man of outstanding intellect and ability and unrivalled experience of business and industry, Sir Purshotamdas has rendered valuable services to the Company of which he had been a Director since its inception. The Directors have placed on record their sorrow at the passing of Sir Purshotamdas, and I am sure you will wish to join them in conveying our deepest condolences to Lady Thakurdas and other members of the family."

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 41st Annual General Meeting of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Bombay 1, on Monday, the 31st July, 1961, at 4-30 p.m., to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December, 1960.
(2) To appoint Directors in place of those who retire but are eligible for re-appointment.
(3) To approve a Contract dated 15th June 1961 between Mr. Narayan Prabhakar Chandavarkar and this Company appointing the former as Consulting Architect to the Company for six years from 1st June 1961.
(4) To appoint Auditors for the current year and to fix their remuneration.

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

Detailed Notice of the above Meeting has already been published in the Press, and has also been posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & Co. PRIVATE LTD.,
Managing Agents,
G. V. SIRUR,
Director.

BOMBAY,
Dated 12th July 1961.

GOVERNMENT OF INDIA

3½ PER CENT. BONDS 1969 ISSUE PRICE Rs. 98.40 PER Rs. 100 (NOMINAL). REPAYABLE ON 1ST JULY, 1969.
4 PER CENT. LOAN 1981 ISSUE PRICE Rs. 98.50 PER Rs. 100 (NOMINAL). REPAYABLE ON 24TH JULY 1981.

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 100 crores (approximately). Subscriptions may be in the form of (i) cash/cheque or (ii) securities of the 2½ per cent. Loan 1961 or 3 per cent. Hyderabad Loan 1951-61 which will be accepted for conversion at par.

Interest on the securities tendered for conversion will be paid upto 31st July 1961 inclusive.

The new bonds and loan will bear interest from 24th of July 1961. Interest on the bonds will be paid on 1st January 1962 for the period 24th of July 1961 to 31st December 1961 and thereafter half-yearly on 1st of July and 1st of January. In case of the loan interest will be paid half-yearly on the 24th of January and 24th of July.

Subscription lists will open on 24th July 1961 and close on 26th July 1961 or earlier without notice.

Applications for the bonds and loan will be received at:—

(*a*) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
(*b*) Branches of the State Bank of Hyderabad conducting Government work, and those at Bahinsa, Jaggayyapet, Mancherial, Nagarjunasagar and Sirpur, Kagaznagar in Andhra Pradesh, Manwath, Purli-Vaijnath and Sailu in Maharashtra State and Shahabad in Mysore State;
(*c*) Branches of the State Bank of Mysore in the State of Mysore except those at Bangalore, Mangalore and Gulbarga; and

ANNUAL MEETING OF BENGAL POTTERIES LTD.

MR. M. G. BHAGAT PLEADS FOR REDUCTION IN EXCISE DUTY

LARGE EXPANSION PLANS UNDER WAY

THE view that the heavy burden of excise duty on crockeries and insulators, imposed in March last, might adversely affect the growth of pottery industry was expressed by Mr. M. G. Bhagat, a Director of the Bengal Potteries Ltd., in his speech at the Forty-ninth Annual General Meeting of the Company held at Calcutta on 26th June 1961; he presided over the meeting in the unavoidable absence of Lala Shri Ram, Chairman of the Company. Mr. Bhagat requested the Government to reduce the rates of excise duty on pottery products. Giving details of the expansion plans the Company had undertaken, Mr. Bhagat observed that the Company had, in technical collaboration with a well-known West German firm started work on planning a new type of lay-out in Factory No. 2, in order to improve the quality and increase the quantity of high-tension and low-tension insulator production. He stated that, when these plans were completed, possibly by 1962, the Company would become one of the largest producers of electrical porcelain in the world.

The following is the text of Mr. Bhagat's speech:

"GENTLEMEN,

"I am delighted to welcome you to the forty-ninth annual general meeting of the Company.

"The audited accounts and the report of the Company's Directors have already been circulated, and, I hope, I have your permission to take these as read.

"Before I express my views with regard to the working results of the Company for the year ending 31st December 1960, I would like to inform you that our Chairman, Sir Shri Ram, on account of being rather unwell, has been unable to attend today's meeting. I need hardly add the great services rendered by Sir Shri Ram to this Company. You fully know how extremely fortunate we are in having his valuable advice for guiding our policies during the last several years. I am sure I am voicing your good wishes, to which I add my own, for a speedy recovery to normal health of Sir Shri Ram.

Progress of the Company

"The audited accounts for the year under review have been before you for some time now. I would like to state that the Company has been making a steady improvement in all spheres of its activities. Our sales have increased by Rs. 27 lakhs, as compared with the year before. We have maintained the prices of our goods at the same level throughout. As a matter of fact, in certain items, we have reduced our prices. However, the cost to the Company of all raw materials and stores has increased considerably. Naturally, this has affected to some extent, the working results of your Company.

"The Directors have recommended the transfer of Rs. 3,80,000 to general reserves besides the transfer of Rs. 48,070 to development rebate reserve which, as you know, under statutory provisions, has to be made for the purpose of replacement of machinery and equipment. Although the Directors have recommended a dividend of 15 per cent, which is slightly higher than what was paid last year, on account of the new procedure of statutory deduction of tax, the net result will be 10.5 per cent tax-free dividend.

Production

"Our production in Factory No. 1 has increased, although the equipment and the firing capacity in this factory remained the same. Unfortunately on account of the miscalculation of our gas producer suppliers, our Factory No. 2 is still running below capacity for want of adequate gas supply for our furnaces. However, the production of this factory is higher for the year under review than the year before.

"I am glad to inform you that after nearly one and a half years of great effort, we have succeeded in getting an import licence for importing an extra gas producer of larger capacity. According to the present available information, we feel that this gas producer will be in operation within the first half of 1962. It will then be possible to increase the production of Factory No. 2 considerably.

W. German Collaboration

"You have been informed that the Company has signed an agreement for technical collaboration with the well-known firm of Messrs. Rosenthal-Isolatoren Gmbh of selb, West Germany, in order to increase the manufacture of high-tension and low-tension insulators. I am glad to say that the Technical Director of this German firm, along with two of his technical colleagues, joined the Company on the 2nd April 1961, and they have already started work on planning a new type of layout in our Factory No. 2, to improve the quality and increase the quantity of our high-tension and low-tension insulator production. We have had to import extra equipment, in addition to the gas producer already mentioned above, in connection with increasing this capacity. Some of the equipment has already arrived in Calcutta, and the rest is expected before the end of this year. It is my belief that when the plans for this increased production have been completed, which I hope we shall be able to accomplish by the end of 1962, your Company will be one of the largest producers of electrical porcelain in the world. It will surely be by far the largest in this country. The demand for high tension insulators, on account of the great impetus given to electrical power production in the third Five-year Plan, is considered to be very large. Further, the demand of the Post and Telegraphs Department for low tension insulators is also increasing considerably, and your Company has made adequate arrangements for meeting the increased demand of this department.

"In addition to the improvements which we have planned for our insulators, we are seeking technical collaboration for improving the quality of our tableware production, and to reduce our production losses. It is my belief that in next year's report we may be able to give you some definite results of our present efforts towards this end. I am also glad to inform you that we have received from the Central Government, a licence for the production of high class translucent china. Your Directors are constantly making efforts to improve and enlarge the scope of your concern.

Sales

"I am glad to state that our sole selling Agents, Messrs. Allied Distributors and Co., have increased the number of depots and dealers for retailing our tableware. It is a matter of great satisfaction that the products of your Company are at present available in all parts of the country at uniform and controlled prices, through the efforts of our selling agents.

Excise Duty

"On the 1st of March this year, the Central Government imposed an excise duty on our products. All production of tableware after 1st March 1961, has been levied an *ad valorem* duty of 15 per cent on our prices, and all insulators an *ad valorem* duty of 10 per cent. This has naturally increased the retail prices of these commodities by an amount equivalent to the duties levied in each case. We cannot say as yet how this increase in prices is going to affect the sale of our products in the years to come, but we feel that the rate of excise duty levied on crockery and insulators is extremely high. This is a young industry, and it is quite possible that, while it is growing to maturity, such a heavy burden of taxation may affect its growth. We are making efforts to persuade the Central Government to reduce the quantum of excise duty.

Loan from I.C.I.C.I.

"To meet the foreign exchange requirements for the purchase of the new equipment for our development plans, and other finances, we have obtained foreign exchange and rupee loans from the Industrial Credit and Investment Corporation of India Ltd., Bombay. We are hoping that the amount of the loans will be made available to us by the end of July.

Export

"We have been exporting our goods on a small scale, and we expect that in the year 1961, we shall be able to export a fairly large amount of our products. I may inform you that the prices available to us in foreign countries for our products are lower, and we have to export our products at a loss, but in order that we perform our duty for the maintenance of export targets fixed by our Government, we have undertaken this export.

Labour Relations

"Our labour relations, I am glad to say, with our employees have been very satisfactory. For the work of the year 1960, we have paid 5½ months' bonus calculated on basic salary to our employees. The elected members of the workers are constantly consulted in framing the labour policies of the Company.

"I will now take this opportunity of conveying my own and the Board's appreciation of the excellent work done by all our employees.

"I thank you very much indeed for giving me a patient hearing and for the courtesy extended to me."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Now Ready—An indispensable book.

GUIDE TO
COMPANIES ACT
As Amended by Act LXV of 1960

SECOND EDITION

(Revised and Enlarged)

BY A. RAMAIYA (*Advocate*)

Though the book is called a Guide it is really a comprehensive book dealing fully with all the sections of the Companies Act giving the relevant case-law and useful and practical notes to the various sections. A detailed study of the changes introduced by the Companies Act I of 1956 and the Amendment Act LXV of 1960 is made in the Introduction. Useful Appendices and all prescribed Rules and Forms as amended up-to-date are included.

So many changes have been made affecting even the day-to-day administration that a thorough knowledge of the various provisions is necessary for every person connected with the administration of companies.

Order for a copy immediately.

Printed on foreign printing paper and attractively got up.

Price Rs. 20. **Postage extra.**

Pre-publication offer of Rs. 17.50.

Open till the end of August, 1961 only.

M.L.J. OFFICE, P. B. No. 604, MADRAS 4

OIL IN UNDERDEVELOPED COUNTRIES

COMMUNIST POWERS RENDER SUBSTANTIAL ASSISTANCE

IT is paradoxical that, while the cold war continues to darken the political scene, the Communists should be intensifying their economic relations with many Western countries, as well as with the neutral or uncommitted nations. The rising exports of Soviet oil, upon which so much attention has been focused, form only one item in the account. The Communists both sell and buy a wide range equipment—including equipment for the oil industry—and continue to offer financial and technical assistance to a growing number of countries.

A broad distinction must, however, be drawn between Soviet relations with the underdeveloped countries and with the more advanced communities of the West—even though, in individual cases, the motives may be mixed. In the former, the motivation is mainly political—to demonstrate that the Communists too can give aid and assistance, to win the goodwill of the neutral States, to embarrass the Western powers, and to stimulate interest in, if not actually propagate, communist ideas. In the relations with the advanced communities, on the other hand, the objectives are primarily economic—to procure raw materials and, more especially, a wide range of industrial equipment needed to promote and sustain economic growth behind the iron curtain. To pay for these necessary imports, there must be exports in exchange.

Convenient Export Counter

Oil is, for various reasons, a convenient export counter; and total exports of crude and products from the Communist bloc to the rest of the world almost trebled in three years, to reach 22.7 million tons in 1960. The direction of this trade was mostly towards the industrialised countries. Nearly three-quarters flowed into Western Europe, Italy being by far the biggest buyer. About one-quarter of Italian supplies last year came from this source, while, for the European Economic Community as a whole, the 1960 proportion was 11 per cent. The U.K. Government, on the other hand, still refuses to grant import licences for Russian oil, save for special qualities. Cuba entered the picture as a large buyer in the middle of last year, taking over 2 million tons; and, according to a recent broadcast by that country's Minister of the Interior, the present rate of shipment is about 4 million tons a year. Last year also saw a sharp advance in Japanese purchases of Communist oil, while several new customers were added to the list.

All the indications are that this trade, now equivalent to 14 per cent of the combined crude oil production of Russia and Rumania, will continue to grow. Exports from the U.S.S.R. are by far the most important and these are as much subject to political decisions as is all Russian economic activity. This means that price may often be only a secondary consideration and that the export agency can adopt flexible pricing arrangements in order to complete a bargain—expressed in barter deals, willingness to accept soft currencies, the offer of credit terms, etc. In general, the prices offered to western buyers are as low as, or lower than, those offered by others; using also reciprocal trading arrangements, the Russians are thus able to force their oil into the countries where it suits them.

Most of Russia's oil exports to the West are shipped from the Black Sea; and since the Russian tanker fleet has a capacity of little more than a million tons deadweight, much of this export trade is carried in vessels chartered from Scandinavian, Greek, U.K., and other owners. The Russians have thus had a certain impact on the depressed tanker markets, even though the hauls they offer are shorter than those for the oil their exports displace. They are, however, now seeking to build up their own fleets by the purchase of second-hand vessels, by new building within the Soviet sphere, and by placing construction contracts in various countries—Finland, Sweden, Yugoslavia, Italy and Japan. This new building programme will naturally tend to prolong the existing tanker surplus, just as exports of communist oil have tended to aggravate the world oil surplus.

Besides ships, the Communists are interested in buying pumps, machine tools, plant and equipment of all kinds. In view of the rapid growth of their oil and gas industries, they are, in particular, short of large-diameter line pipe, despite large-scale manufacture in the Soviet Union, Czechoslovakia and East Germany. This has induced the Soviet negotiators to place big orders for pipe with manufacturers in Italy, Sweden and Japan.

The flow of equipment and manufactured goods is not, however, a one-way traffic: there are exports as well as imports. Some may be consigned to the industrialised countries of the West: France, for instance, is to receive equipment to the value of 2.5 million new francs under the trade agreement signed with Rumania earlier this year. Highly industrialised Sweden is also receiving some from the U.S.S.R. Generally speaking, however, capital goods from the U.S.S.R. (and other Communist countries) are of little or no interest to the highly developed countries, and are accepted only when no better goods can be offered in the course of negotiating trade agreements. Still less are they of interest to the oil industry in the West. The tenuous amount which the Soviet bloc as a whole may have to spare is, therefore, available to help build up its relations elsewhere. To this end, equipment, technical know-how and financial assistance may be offered as a package deal, on terms which especially appeal to Governments eager to establish their own oil operations.

On general grounds, it is desirable that the Communist bloc should make its own contribution to the immense task of raising the levels of production and the standard of living in the vast underdeveloped areas of the world. The burden should not be borne by the Western countries alone. And many countries have in fact become willing recipients of help and accommodation from both sides in the cold war.

Help to India

India provides a significant example in several respects. In regard to oil, the Russians' acceptance of payment in rupees has led the Government to agree to import some two million tons of Russian oil products over the next three or four years. India is also benefiting from Russian and Rumanian assistance in the search for oil and gas, which comes within the framework of a comprehensive agreement by the U.S.S.R. to assist in the fulfilment of the industrial development plans. Help in the oil search is, however, on quite a different footing from the conventional operations of commercial oil companies. The Russians act on a contractual basis: they require high fees for their services, charge a low rate of interest on the outlays made, but risk no capital of their own and therefore do not obtain possession of any oil or gas that may be found. Also, by their 1959 agreement, the Russians granted a credit for the construction of a 2 million-ton oil refinery which they are supplying and erecting at Barauni in Bihar. Similarly, in Assam, a smaller refinery is being provided and built by the Rumanians. Poland has also granted credits to India, which heads the list of recipients of Communist financial aid.

STATE BANK OF TRAVANCORE

(Subsidiary of the State Bank of India)

Head Office: **TRIVANDRUM**

OFFERS INCREASED INTEREST RATES ON DEPOSITS

as under with effect from 1st April 1961:

SAVINGS BANK DEPOSITS .. 3% p.a.

FIXED DEPOSITS .. .. from 4% to 5%

Full particulars can be obtained from Head Office or the nearest Branch.

As a subsidiary of the State Bank of India we have agency and drawing arrangements with all branches of the State Bank of India and their seven subsidiaries.

ALL TYPES OF INTERNAL AND INTERNATIONAL BANKING BUSINESS TRANSACTED.

T. R. KRISHNASWAMI,
General Manager.

Pakistan entered into its first agreement with a Communist country (the Soviet Union) for assistance in the search for oil as recently as March of this year. The Russians lost no time in sending technical experts to assist in drawing up a prospecting programme, and are to despatch the necessary equipment and skilled personnel as soon as the details of the agreement are finalised. To finance the programme, Russia has granted a loan equivalent to over £10 million, repayable in rupees over a period of 12 years, with interest at 2½ per cent. Such terms are typical of those which characterise Russian dealings with Asian countries. As in India, the Communists will operate on a contract basis, without participating in any discoveries that may be made.

Afghanistan has long been getting Russian help of many kinds and has been granted credits for road building and industrial development on favourable terms—interest at 2 per cent and with repayment spread over 30 years. In the northern part of the country, Russian, Czech and Rumanian crews have been drilling for oil under an agreement signed in 1957. Last year, oil was located in small quantities, and, very recently, it was reported that natural gas had been found in the same general area.

As one would expect, the U.S.S.R. loses no opportunity of seeking to win goodwill in the Middle East and infiltrating into key sectors of a country's economy. The United Arab Republic is second to India in the amount of financial assistance received from the Communist bloc. Besides providing big credits and staff for the construction of the High Dam and other projects, the Russians have been helping the Egyptians in the search for oil. The Czechs recently supplied a further distillation unit for the State-owned refinery at Suez, as well as another unit for the plant at Alexandria in which Caltex has an interest. In Syria, where the Czechs supplied and built (on a competitive contract basis) the refinery at Homs, the Russians have been assisting the Government by making geological and geophysical surveys. The arrangements date back to a comprehensive agreement for technical and economic aid signed in 1957. A new agreement of last autumn provides for assistance in the construction of a lube oil plant, a fertiliser plant and other works, as well as in the search for mineral wealth, including petroleum.

In their 1959 agreement with Iraq, the Russians promised a loan of 550 million old roubles (say £50 million) with interest at 2½ per cent and repayable over 12 years, together with technical assistance for constructional works, irrigation schemes, etc. Under the terms of this agreement, they have been making seismic surveys in the Khanaquin oilfield area, surrendered by a B.P. subsidiary in 1958. Drilling equipment to the value of £500,000 was recently promised, while the U.S.S.R. is to build at Basra a plant for the production of fertilisers from natural gas. Towards the end of last year, Czechoslovakia granted Iraq an eight-year credit equivalent to £12 million, providing for economic and technical assistance in various fields, including an oil refinery near Basra (which is now under study) and a hydro-electric plant.

Latin America

Communist economic penetration into Latin America has hitherto been impeded by a number of factors, including the powerful influence, of, and close trade ties with, the U.S.A. and the psychological gulf between Catholic and Communist, which, however, is usually bridged when the bait of economic advantage is large enough. Brazil, Uruguay and Argentina have all bought low-priced oil from the U.S.S.R., though the trade last year was small. In Cuba, the Castro revolution and the conflict with the U.S.A. have, of course, provided golden opportunities which the Communists have been quick to seize. Besides the substantial shipments of crude oil already mentioned, and help in operating the refineries, the Russians are sending geologists to assist the Cubans in oil prospection, and have promised an oil refinery for erection at Santiago de Cuba. Other projects include chemical plants to be built under contracts with the U.S.S.R. and, significantly, with China; and a motor vehicle factory to be built with Czech assistance. Even the Hungarians granted a credit of 32 million roubles to Cuba last year.

In Africa, too, the Russians woo the newly emergent nations with offers of assistance. French Guinea has been helped since it voted itself independence in 1958. Ghana recently

(Continued on page 190)

THE PROBLEM OF INDIA'S INCREASING NUMBERS

A PLEA FOR AN INTER-STATE APPROACH

By Dr. V. K. R. V. Rao

INDIA'S population has recorded a significant increase during the twentieth century. Starting with a total of 235 million in 1901, it has reached a figure of 436 million in the census year 1961; and the latest projections anticipate its reaching a total of 625 millions in 1976. The phenomenal increase of 85.7 per cent, the bulk of which took place in the last four decades, and the expected increase of 43 per cent in a decade and a half over the current year's population—which would mean a rise of nearly 166 per cent over the numbers with which we started this century—has filled the country with justifiable anxiety about its economic future. It is agreed on all sides that we must limit our numbers; and a vigorous and nation-wide policy of family planning is now regarded as a must of Indian planning. It is the purpose of this brief paper* to examine some of the less discussed aspects of this problem of increasing numbers and the measures suggested for restraining the increase.

I think it is important to realise that the rate of increase is not uniform over the different parts of the country and this has a significant bearing on priorities and programming in family planning policy. Thus, if we take 14 out of the 15 states of India (figures for Jammu and Kashmir are not available over the entire period), the increase in population in the sixty years of this century vary from a maximum of over 219 per cent for Assam to a minimum of 51.7 per cent for Uttar Pradesh, the national rate of increase being 85.7 per cent. Eight states out of 14 show an increase which is above the national figure, while six are below it. I give below data for the individual states together with relevant figures of density per square mile in 1961:

State	Population (in millions) 1901	1961	Increase in population 1901-61 (in millions)	% increase in population over 1901	Density per sq. mile in 1901
Andhra	19.7	36.0	16.3	88.7	339
Assam	3.7	11.9	8.2	219.4	252
Bihar	27.3	46.5	19.2	70.1	691
Gujarat	9.1	20.6	11.5	126.8	286
Kerala	6.4	16.9	10.5	163.8	1,125
Madhya Pradesh	16.9	32.4	15.5	92.1	189
Madras	19.3	33.7	14.4	74.8	671
Maharashtra	19.4	39.5	20.1	103.7	332
Mysore	13.1	23.5	10.4	80.4	318
Orissa	10.8	17.6	7.8	70.5	292
Punjab	13.3	20.3	7.0	53.0	431
Rajasthan	10.3	20.1	9.8	95.7	152
U.P.	48.6	73.8	25.2	51.7	650
West Bengal	16.9	35.0	18.1	106.4	1,031
India	235.0	436.4	201.4	85.7	344

It is interesting to note from this table that, of the five states which have more than doubled their population during the last sixty years, two, namely, West Bengal and Kerala, have also the highest densities per square mile. Though a partial explanation for the increase in West Bengal is to be found in the vast inward movement of Hindu refugees from East Pakistan uncompensated by any corresponding outward movement from West Bengal to East Pakistan, and also in the inflow of industrial labour from U.P., Bihar and Orissa into Calcutta, there can be no denying the high rate of natural increase in the local Bengali population; and this is a matter for serious concern, because, even at the beginning of the century, West Bengal had a density of 499 per square mile which was the highest in India and contrasted sharply with the national average of 208 per square mile.

The position is even worse in the case of Kerala. Even in 1901, density of population in that State was as high as 426 per square mile. Kerala has not been affected by any inward movement of refugees; nor has there been any immigration of industrial labour into that State, the numerically unimportant influx of Tamil labour for plantations having been compensated by the outflow of Keralites to other Indian States. And, yet, population has increased by 164 per cent in 60 years; and it has brought up the density per square mile to 1,125 in 1961, which is the highest in the country and is nearly three times the national average of 384 per square mile. There is no doubt that the highest natural rate of increase in population in India is in the Kerala State; and taken in conjunction with the high figures of density, and the consistent increase that has been taking place every decade since 1901, Kerala is obviously the State which needs the most immediate and the most comprehensive programme for population control and family planning. The demographic situation there is made even more difficult by the fact that this increase in population has been occurring in spite of the highest inter-state rate of both male and female literacy in the country, the comparatively better status of women due to the prevalence of the matriarchal system, and a higher incidence of unemployment than perhaps anywhere else in the country. Evidently, there are some special factors conducive to population growth that are operating; and, in the interests both of Kerala and the country as a whole, these need objective identification and courageous handling.

*Read as Convocation Address by the author at the Demographic Training and Research Centre, Chembur, Bombay, on 11th July 1961.

Not Equally Unsatisfactory

In the case of the three other States which have recorded high rates of increase, the position is not equally unsatisfactory. Density per square mile in these States is still below the national average; and immigration from other States accounts largely for the increase in Assam and to some extent for that in Maharashtra. As for Gujarat, the explanation seems to be a prosperous agriculture and growing industrialisation. It is interesting to note that Assam has retained the first place and Gujarat the third place in the rate of increase, whether one takes the entire period 1901-61 or the last thirty years, 1931-61 or the immediately preceding census decade, 1951-61; while Maharashtra has shown a welcome drop in the ranking, being fifth if we take the entire sixty years, sixth if we take the last thirty years, and eighth if we take the last ten years. While the position is, perhaps, not so bad from the point of view of relative densities, the absolute position is quite unsatisfactory, with a rate of growth exceeding 23 per cent in the last decade.

Of the five high density States of 1901, namely, Kerala, West Bengal, U.P., Bihar, and Madras, we have seen that the position has substantially worsened in the case of the first two during the last sixty years and looks as if it would get even more worse in the coming few decades, in the absence of effective countervailing action. The position is somewhat different in the case of the remaining three States. U.P. shows a rate of increase substantially below the national rate, and this has been so consistently over the six census decades. The relevant figures of percentage increase by different periods are given below for both U.P. and the whole of India:

Period	U.P.	India	Difference
1901-61	51.7	85.7	—24.0
1911-61	53.2	74.1	—20.9
1921-61	58.0	74.6	—16.6
1931-61	48.2	57.3	— 9.1
1941-61	30.5	37.7	— 7.2
1951-61	16.7	21.5	— 4.8

The result, in fact, has been that the demographic importance of U.P. in India has declined over the twentieth century, its share in the Indian total being only 16.9 per cent in 1961, as compared to 20.7 in 1901. Partly, of course, this is explained by an outflow to other States, especially Bengal, Maharashtra, and Delhi, but the number this accounted for is a comparatively small proportion of its population. There is no doubt that the natural rate of increase in U.P. is the lowest in India as against its being the highest in Kerala. But this can give no cause for satisfaction when one sees that density per square mile has increased from the already high figure of 429 in 1901 to 650 in 1961; and, with its comparative absence of industry and commerce, the position is even worse. The rate of growth in U.P. is certainly lower than in the rest of India; but its ability to afford growth is even lower than in the rest of India. The only thing to be thankful for is that it has not followed the example of West Bengal and Kerala which would have had even more disastrous consequences on the economic future of the country.

Bihar's position is similar to that of U.P. and, perhaps, a little worse. Starting with a lower initial density than U.P. in 1901 (406 per square mile, as against 429), it has now reached a density of 691 which is higher than that of U.P. (650). Its rate of growth over the entire period, namely, 70.1 per cent, while below the national average, is significantly higher than of U.P. (51.7 per cent); and its rate of growth in the last census decade of 1951-61 is much nearer the national average than over the entire period. It is true that a certain measure of industrialisation is taking place in Bihar, but it has not helped to improve its comparative overall economic position in *per capita* terms. Population control is even more necessary for Bihar than for U.P.

Position in Madras

Madras is the other State which started with a high initial density (384 per square mile) in 1901; and it has also had a high rate of increase over the entire period, namely, 74.8 per cent, though it is less than the national average. Density has also now gone up to 671, which places it higher than even U.P., though lower than Bihar. It is true that, during this period, there has been a considerable degree of improvement in agriculture and a certain measure of industrialisation, but this is not enough to offset the increasing pressure of numbers on natural resources. Moreover, the natural rate of growth is even higher than indicated by the rate of increase, as there has been a significant outflow of population from Madras to other States as well as neighbouring countries. The one hopeful factor in the situation, however, is the consistency with which Madras has fallen in inter-State ranking in terms of percentage increase in population, from the 10th place over the entire period to the 13th place over the period 1931-61, and now to the 14th place over the last census decade of 1951-61. The rate of increase in 1951-61 is only 11.7 per cent which is practically half of the national average. With increasing electrification of the rural areas in which Madras is far ahead of other Indian States, good prospects of widespread economic development, and the adoption of an enlightened and vigorous policy of population control, Madras presents a less dismal picture from the demographic point of view than do the other areas of equally high or higher density.

Maharashtra, Madhya Pradesh and Rajasthan are States which started with a low initial density in 1901, with 163, 98, and 78 per square mile, respectively, and have shown a comparatively high rate of increase over the last sixty years, the respective figures being 104 per cent, 92 per cent and 96 per cent; all of which are above the national average. This increase has of course increased their density but still leaves them below the national average, and, in the case of Madhya Pradesh and Rajasthan, well below it. On the other hand, the nature of geography and land utilisation in these States work in favour of a lower density, with the result that, in terms of demographic pressure, lower density in these areas is not such a comparative advantage as compared with the higher density in some of the other States with their alluvial plains and their comparative absence of hills, forests, and desert and rain-scarce areas. Moreover, a disquieting feature in respect of these States is the high rate of population growth shown in the last census decade, the relevant figures being 26.4 per cent, 24.3 per cent and 23.4 per cent for Rajasthan, Madhya Pradesh and Maharashtra, respectively. It must be added that, from a long run point of view, and given economic development, population growth is less likely to be a handicap in the case of Madhya Pradesh and to some extent even of Rajasthan than in that of Maharashtra.

Andhra, Mysore and Orissa all started with a low initial density in 1901, the respective figures being 180, 176, and 171 per square mile. The rate of increase over the period of sixty years was more or less near the national average in the case of Andhra and Mysore with 88 per cent and 81 per cent, respectively, while, in the case of Orissa, it was significantly less, being 71 per cent. Their densities of course have increased, but still leave them below the national average, with Orissa showing a density of only 292 per square mile. Here again geographical factors such as hills, forests, and rain-scarce areas account for a part of the lower density, but Orissa is likely to have better demographic potentialities in relation to utilisation of natural resources than the other two States of Andhra and Mysore. Between the two latter States, though Andhra has had a higher rate of growth over the entire period in recent decades, the figure for the latest census decade being 21.4 per cent, as against 15.6 per cent for Andhra. While all these three States could benefit by population control, the need to do so among them seems most urgent in Mysore.

Punjab

Punjab still remains to be discussed. Though it started in 1901 with an initial density much lower than that of U.P. (282 per square mile as against 429), its rate of growth over the entire period has been one of the lowest in India, in fact being only 53 per cent, as against U.P.'s 52 per cent. This does not mean, however, that its natural rate of growth has been equally low. In fact, it must have been much higher, because, during the first 40 years of the century, there was a steady outflow of population from this area to the Western parts of the then Punjab (now in West Pakistan) as well as to Delhi and some other neighbouring States; and, in the decade 1941-51, there was the great exodus to Pakistan which was offset of course but not completely by the inflow from Pakistan. It is only during the last census decade, 1951-61, that more stable demographic conditions have been restored in the Punjab with the westward movement barred on the one hand, and agricultural and industrial development making it more possible, on the other hand, to find economic livelihood within the State itself. And this has led to a sudden spurt in the rate of population growth, the increase in the last ten years being almost as much as that during the entire period of the previous fifty years. If there is one State in India, to which we can apply the phrase population explosion, it is the Punjab, in the decade 1951-61. The peculiar character of the demographic growth in this State is well illustrated by the following figures of cumulative increase in this century, as compared to that of India as a whole:

Period	Punjab %	India %
1901-61	53.0	85.7
1911-61	69.9	74.1
1921-61	62.8	74.6
1931-41	48.5	57.3
1941-51	26.1	37.7
1951-61	25.8	21.5

While therefore the high rate of increase in the last census decade need not in itself cause undue disquiet in regard to population growth in the Punjab, it should be a matter of anxiety as a portent for the future. In spite, therefore, of the Punjab having the second lowest rate of population growth over the sixty years of this century and its present record and future prospects of economic development, there is no doubt that population control is as necessary for its future as it is for other States with much higher rates of growth over this period.

To sum up, it is clear that, when talking of our increasing numbers and the resulting need for a population policy, it is not correct to look at the problem only in overall national terms. It is true that India is one State and that, in terms of national planning, we are concerned with the national rate of population growth. But, with internal migration practically stable and constituting only a minor element as pointed out by Kingsley Davis, the different States of India constitute demographic entities in themselves; and this aspect of Indian demography is likely to harden with the reconstitution of India into linguistic States and the rapid and alarming growth of sub-national sentiments in the country. We must, therefore, look at the different States individually and frame our national population policy in the light of the inter-state differences revealed by such a study. It is true that the need for population control is apparent in all the States; but the pressures vary, the rates of growth are different, causes and effects have different overtones, and it is not possible to lump all the States together and treat them as one unmixed problem. This preliminary paper has given ample evidence of demographic differences in different States and this is true not only in terms of rates of population growth but of other demographic characteristics as well. Programmes, priorities, and policies have to be fitted to regional and State requirements, and this is an immense task which, I am afraid, we have hardly attempted so far. Indian demography badly needs research on regional and State lines.

INDUSTRIAL IBCON CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:—

IN THE PLANT—
PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL
STORES ORGANISATION • CONSUMABLE STORES CONTROL
RAW MATERIALS CONTROL • FUEL AND STEAM UTILISATION
TRANSPORTATION METHODS • MECHANICAL HANDLING
PRODUCT QUALITY CONTROL • OPERATIONAL RESEARCH
WORK STUDY • BUDGETARY CONTROLS
VALUATION OF PLANT & BUILDINGS
DESIGN AND ESTIMATES OF EXTENSIONS

ON LABOUR—
METHOD AND WORK STUDY • PRODUCTIVITY INDICES
TIMEKEEPING SYSTEMS • WAGE PAYMENT SYSTEMS
JOB EVALUATION • WAGE STRUCTURES
PERSONNEL RECORDS • LABOUR POLICIES
HUMAN RELATIONS • COMMUNICATION
REORIENTATION LECTURES • FOR LABOUR AND SUPERVISION

IN OFFICES—
MANAGEMENT ORGANISATION • EXECUTIVE LEVEL WORK
CLERICAL PROCEDURE • MANAGEMENT CONTROLS
WORK MEASUREMENT • BUDGET FORECASTS
LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND
THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT

MARKET RESEARCH
PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

EXPORT OF ENGINEERING GOODS

REPORT OF DELEGATION TO WEST ASIAN AND SOME EUROPEAN COUNTRIES

THE Engineering Export Promotion Council, Calcutta, has just released the report of its Trade Delegation which visited West Asian and some European countries early this year to study the prospects for export of Indian engineering goods in general. The Delegation, which was led by Mr. B. S. Bugga of Messrs. B. S. Bugga & Co., Calcutta, was also charged with the responsibility of studying the competitive position of Indian engineering goods *vis-a-vis* other exporting countries and the conditions obtaining in the respective countries—conditions such as import regulations, customs tariff, preferences and prejudices, terms of business, credit facilities offered by other competing countries and special circumstances for and against the introduction of Indian engineering goods. Its brief but businesslike report, dealing with the conditions in Yugoslavia, United Kingdom, United Arab Republic, Spain, Lebanon, Italy, Iran and Greece, indicates the existence of possibilities for export of a wide range of engineering products to these countries. But there are certain handicaps which should be removed before any large-scale business could be expected. These handicaps are: (i) Absence of regular shipping from Indian ports to Greek ports; (ii) high shipping freight from Indian ports to the European ports, as a result of which the f.o.b. price advantage which Indian manufacturers have is lost; (iii) inadequate publicity to India's engineering goods; (iv) absence of bilateral trade agreements; and (v) the inability of Indian manufacturers to offer long-term credit facilities particularly to Iranian importers to whom such credits are available from other exporters of engineering goods for periods varying from six months to six years.

Recommendations

In order to remove these handicaps and to promote the export of engineering goods to the countries concerned, the Delegation has made the following recommendations:

(1) Bilateral trade agreements should be signed, as early as possible, with Syria (U.A.R.) and Spain. There should also be some special agreements with Italy, because certain special types of machine tools, machinery items and castings can be exported to that country in sufficiently large quantities once such agreements are signed.

(2) As there is a lot of goodwill towards India in all the countries visited by the Delegation, it would be a worthwhile proposition to invite their Ministers and high Government officials to visit this country and see some of its modern achievements. The friendship and goodwill thus created will ultimately help in establishing better business contacts in certain fields.

(3) Facilities should be offered to Indian manufacturers and exporters to spend money for publicising through the media of press, radio, television, exhibitions, trade fairs and showrooms. It would be a good thing if the Export Risks Insurance Corporation could insure the market development expenditures of this nature. The Government of India should also participate in the Trade Fairs of Damascus (Syria), Salonika (Greece), Milano (Italy) and Zagreb (Yugoslavia) and also organise wholly Indian exhibitions in countries like Egypt, Iran and the United Kingdom.

(4) Indian manufacturers and exporters should establish close personal contacts with importers and dealers, because Indian products have not yet achieved an international fame where business could be expected on the basis of brands. Service organisations will have to be established in respect of products which need servicing.

(5) Export Houses should be set up to offer new products to new markets and also financial guarantee and market research facilities which cannot otherwise be provided by small manufacturers scattered throughout the country.

(6) The services of English Export Houses, which have unique distribution arrangements in West Africa and Latin America, can be utilised to explore the possibilities of export to countries of those regions.

(7) As there is a very good opportunity for exporting castings of all kinds to countries like Yugoslavia, United Kingdom and Iran, the Indian foundries should make a thorough study of the markets by deputing their representatives jointly so that expenses are shared.

(8) Some of the Yugoslavian firms have shown interest in entering into collaboration with Indian firms, so that they could offer their know-how and machinery where they have advantage over those of Yugoslavia. For instance, Yugoslavia has agreed to set up sugar mills in Indonesia and Sudan. As Indian firms have greater experience in sugarcane crushing machinery and know-how, they can explore, with advantage, the possibilities of such collaboration. Similarly, possibilities exist for collaboration with Egypt where, for instance, the Government would like to supply sulphuric phosphates instead of rock phosphates to a country and in exchange agree to buy wires and cables and not set up industries to manufacture them in their own country.

(9) As countries in West Asia and Africa offer bright prospects for many items which have not so far figured much in India's export of engineering goods—items such as railway stores, track and signalling materials, railway wagons, locomotives and components, steel and cast iron machine castings, chassis, auto engines, transmission line towers, irrigation equipment and heavier electrical goods, the Government of India should include these items in the trade and payments agreements which are negotiated with the countries concerned.

(10) The Engineering Export Promotion Council should set up an office in Cairo from where activities can be organised in West Asian and North African countries.

Some of the above recommendations for export promotion, it will be seen, are on familiar lines. But some others, notably the sixth and eighth recommendations, represent innovations which deserve to be pursued. All the recommendations, made in the light of the Delegation's findings in respect of the conditions obtaining in the countries concerned, seem to be both practical and necessary.

Iran and U.R.A.

The conditions pertaining to import regulations, customs tariffs, etc., in individual countries visited by the Delegation have been dealt with in some detail in the report. To begin with, in Iran, the traders insist on long-term credit which they are able to get from India's competitors. Under the new regulations introduced recently (after the Delegation's visit) by the Government of Iran, it is also made compulsory for the importer to open Letter of Credit before importing anything. If the Export Risks Insurance Corporation could issue policies for longer credit facilities, some of the engineering products like sewing machines, diesel engines and electric fans, which have established a good name in the Iranian market, all types of castings, the prices of which have been found to be competitive, and refractories and sugar machinery, for which there is a fairly good demand—all these could be supplied with advantage to Iran. The bulk of imports of sewing machines, the annual consumption of which is about 40,000 per annum, are from Japan; the import duty on them is Rs. 2 per kilo. Japan, again, is the principal supplier of electric fans (predominantly table fans) for which the annual demand in Iran is 35,000; the import duty on them is 30 per cent. The total imports of bicycles come to 100,000 units per annum—90 per cent of them being from the U.K. and 10 per cent from Japan. As for vertical and horizontal diesel engines, the Indian makes have been found very popular in the Iranian market, and there is scope for a further increase in their export. There is a very good opportunity for all types of automobile parts and accessories, auto bolts and nuts, screws, adjustable wrenches, wheel wrenches, radiators, rubber hoses, pistons and insulation taps. The major part of the trade in auto parts is in the hands of Iranians who are willing to develop business relations with Indian manufacturers. Indian storage batteries stand a chance, if manufacturers could come out with throwaway prices and are prepared to invest for publicity and propaganda. There is a very good demand for steel pipes and fittings, and the Indian prices are found competitive. According to Iranian regulations, tea is now imported in bulk and packing is done in Iran; there is, therefore, good scope for export of aluminium foils. There is also very good demand for non-ferrous items like sheets and tubes; one Indian firm has already established a good name and there are prospects of increasing the export of these items manifold, provided the Indian exporters could ensure prompt delivery.

The United Arab Republic (Syria and Egypt) offers good scope for the export of such Indian products as irrigation equipment, agricultural implements, diesel engines, pumping sets, transmission line towers, cables, railway track and signalling materials, wagons and wagon components, steam locomotives, way bridges, electric fans, sewing machines, cast iron pipes, manhole covers, machine castings, machine tools and bicycles. The sugar plants in both Syria and Egypt are old and require replacements and renewals. Although there is a big demand for sugar machinery worth about £5 million immediately, India cannot supply the big requirements now due to lack of a suitable consortium for export of sugar machinery. However, according to the Delegation, India can supply the requirements for replacement to the extent of about £100,000 annually without much difficulty.

Europe

Greece presents prospects for some of the engineering goods ranging from special types of machines to durable consumer goods like sewing machines. But India suffers from a disadvantage in respect of shipping, for there is no regular shipping service from this country to Athens. Continental countries, on the other hand, ply regular ships to Athens and supply stores within two to three weeks. The Delegation's finding, therefore, is that, unless India is in a position to effect quick deliveries and carry on an intensive propaganda, it would be a difficult job for Indian manufacturers to compete with European countries, particularly Italy and Germany, in that market.

In Yugoslavia the two favourable factors observed by the Delegation are, firstly, a favourable balance of trade which that country has with India and secondly, the aid programme which it is having to help some countries in Asia and Africa where it needs Indian know-how, as far as possible, in certain fields. Some of the items which offer good scope in that market are bicycles and components, radios, electric irons, electric radiators, washing machines, refrigerators, sewing machines, cotton textile machines like looms, spinning frames, certain types of diesel engines, certain types of pumps, small machine tools, lathes and caste iron products. The prices of Indian castings have been found to be quite competitive. But deliveries to Yugoslavia will have to be prompt, if the price advantage is not to be lost on account of the delay in supplies.

In Italy, given proper push, items like special types of machine tools, cast iron products, electric fans, conduit pipes, builders hardware, electrical goods, bolts and nuts, galvanised pipes, malleable pipes and fittings and non-ferrous metal products can sell. While all the engineering goods which India can export are being produced in Italy, many of them are also being imported in varying quantities. The Delegation itself received specific enquiries for quite a few of them.

The United Kingdom follows a very liberal import policy now. Here, India also enjoys Commonwealth Preference, with the result that it has a distinct advantage over other competitors like Japan. According to the Delegation, machine builders in the U.K. have shown keen interest in Indian cast iron products. The combustion engine manufacturers in particular are interested in Indian castings, because of their quite competitive prices. Merchant houses which have already been importing some Indian engineering goods are also interested in consumer durables. In 1960, 14,000 sewing machines were sold and some diesel engines were also exported. Those Indian firms which have entered the field are doing a fine job. Only the quantum of trade has yet to increase. Some types of machine tools, internal combustion engines and auto engines can also be exported to the U.K. Besides these items, Indian exporters can also explore the U.K. market for such items as wire and wire products, bolts and nuts, washers and rivets, screws, small tools, spoons, forks, butter knives, and so on.

In Spain, there is some scope for the introduction of such Indian goods as agricultural machines and irrigation equipments, builders hardware, scientific and electrical instruments, machine tools, small tools, jute mill machinery, spinning frames, diesel and steam locomotives, rice and flour mill machinery, railway track materials, wagon components, plant protection equipments, transmission line towers and cables. Spain is in a position to supply ships. Unless a bilateral trade agreement is signed with Spain and, against the import of ships, some of the engineering goods are exported, there seems to be little prospect for developing export to that country. Import duties levied by Spain are high and mostly protective in character.

Besides giving its findings in respect of export prospects, the Delegation has also provided in the appendices to its report two useful lists—one of importers in different countries, and the other of firms interested in taking up Indian agencies for the countries concerned. Statements showing the imports of and the duties levied on certain engineering goods in the U.K. and Italy also enhance the usefulness of the Delegation's Report.

NEW PRODUCTS AND PROCESSES

Plastics Welding Machine

AMONG the latest machines for the continuous welding of plastic products is the model 200 Acme Automatic which is now being produced by the Industrial Services, Wood Green, London. Suitable for the high-frequency welding of items such as plastic baby pants, book covers, pouches and other goods made "in the flat" the machine consists basically of a press and generator.

It includes a stand to hold three reels of plastics material up to 24 inches wide and 11 inches in diameter and will handle thicknesses ranging upward from 0.004 inches.

Pure Water Producer

Pure water for use in the pharmaceutical chemical and electronic industries can be obtained at a rate of *50 gallons an hour*, it is claimed, with the Elgastat E.101 deioniser. The unit produced in U.K. is housed in a small cabinet with a control panel on the top and has only to be connected to the mains supply to become operational. As soon as it is switched on, water from the mains is passed through a "pre-purifier" which removes most of the dissolved solids. The water then passes through a cartridge-type deioniser which will yield about 1,000 gallons of water before it needs exchanging for a fresh one. The pre-purifier has also to be recharged at intervals, this depending on the quality of the incoming water. In London, for instance, recharging is necessary after 200 gallons have been drawn, but in Sheffield four times that amount can be handled. Standard packs of recharging fluid are supplied with the equipment which is produced by Elga Products Ltd., of Lane End, Buckinghamshire.

Air-filtration System

The filtering of air is especially important in many industrial processes. It is not only a safeguard to personnel but also a vital factor in the efficiency of production. An improved type of air filter which is operated electronically has now been developed in the U.K. One advantage of the new filter is the fact that it can be readily cleaned and that it is, therefore, according to its developers, more reliable. It can also be used in different sizes with different power units. It is said to be exceptionally robust and can handle even the heaviest industrial conditions where the amount of dust to be handled is far greater than that which can be met by the use of standard filters.

The operation of the system depends on an "ionising" section where an electrical charge is imparted to the dust particles—and the use of a series of collecting plates sections. How these different collecting sections are arranged is determined by the dust-collecting efficiency required.

Helmet for Welders

A glass-fibre helmet for welders which can be used in all types of industries including heavy and nuclear engineering and in shipyard work, has been developed by Freedman Brothers of North East England. Although larger than the average helmet it is much lighter. Claimed to be virtually indestructible, it does not twist, warp or melt under intense heat. The glass is held by an attachment which also helps to prevent the glass itself being broken. The new helmet was designed by the firm after developing a successful glass fibre hand guard for welders at a local shipyard. The manufacturers have made special sink units for nuclear energy establishments, and have also specialised in glass fibre fittings for hospitals and ships.

New Bleaching Plant

A new bleaching plant with a capacity of 90,000 tons per year was recently put into operation at the Ostrand Sulphate Mill, North Sweden, belonging to the Swedish Cellulose Company. The plant, which was erected at a cost of Kr. 29 million (£2 million), will increase the annual production value of the mill by some Kr. 20 million to Kr. 120 million (£8.28 million). Also operating a previous bleaching plant with a capacity of 60,000 tons, the Ostrand Mill will now be able to bleach the total output of sulphate pulp, 150,000 tons. The new highly automatised plant employs a staff of only 20, four of whom are standby personnel.

Powder Fire-extinguisher

A fire-fighting equipment factory at Dordrecht, Holland, has produced a handy, small fire extinguisher consisting of two main components, namely, a head and an exchangeable cylinder. The head has a grip, a knob with piercing pin and a discharge nozzle. The cylinder, which is also the cartridge, has a capacity of only 1.8 kg. (4 lbs.) of extinguishing powder under a pressure of 17 atm. CO_2. The two main components are screwed together enabling a spent cartridge to be exchanged in a few seconds. The cartridge consists of a seamless precision tube the disc of which is sealed by a membrane preventing ingress of moisture. After the piercing pin has punctured the membrane the powder is discharged through the riser and the discharge nozzle in about 15 seconds. When filled, the complete extinguisher weighs about 3.5 kg. (7¾ lbs.). The overall height is 36 cm. (14") and the diameter 9 cm. (3½"). The low weight and small dimensions make it eminently suitable for use in small areas such as public means of transport, yachts, laboratories, offices, private houses, garages and oxyacetylene welding shops. The fire-extinguisher is supplied with a suspension clip and, if required, with spare cylinders in racks of 1, 2 or 3 cartridges. Spent cartridges it is claimed, can be refilled.

Fume Extraction Fan

A fume-extractor fan which is claimed to have a life several times that of conventional metal fans, has been developed by Turner and Braon Ltd., England. It has also been specially designed to blend with contemporary architecture of new hospitals, universities and industrial premises where low silhouette, modernistic lines are essential—an advantage over ducting discharge connections and weather cowls associated with industrial skylines. The range covers six sizes—from 10 ins. to 25 ins. diameter. The fans are made in P.V.C. (polyvinylchloride). The use of metal has been restricted to stainless steel holding down bolts. A feature of the design is a special ventilation device which ensures that the motor does not overheat during warm weather. Installation is simple since the connection at the base of the fan can be supplied to suit the customer's ducting. It also has low power consumption and is resistant to chemical fumes, corrosive gases and bad weather. The Company's developments, which are attracting increasing interest from oversea countries include a range of tanks for use with most commercial acids and alkalis. They are constructed of mild steel lined with polypropylene, combining strength with acid resistance.

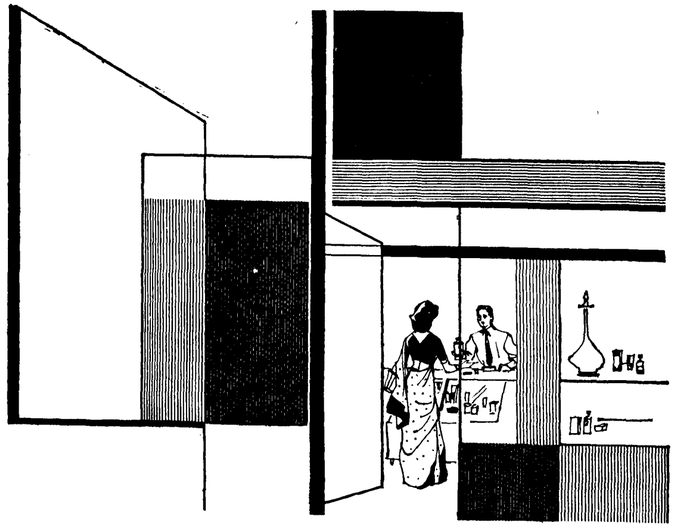
De-sulphurising Pig Iron

A new method has been developed by Prof. B. Kalling in the Stora Koparbergs AB in Falun, Sweden. G.H.W. (Gesellschaft fuer Huettenwerksanlagen mbH in Duesseldorf, Germany), the D.E.M.A.G. affiliate, of thoroughly mixing molten cast or pig iron with solid additions. This results in a quality of pig iron previously unachievable. The mixing process is accomplished in a shaker-ladle or converter-like vessel. The company has also further developed the new unit on a constructive basis.

The shaker-ladle offers great advantages for use in foundries. By adding only 1.5 per cent quicklime powder or 0.5 per cent calcium carbide and shaking it for eight to ten minutes in the ladle, the pig iron is de-sulphurised up to 90 per cent with hardly any loss of temperature. Any kind of composition can be achieved, it is claimed, including an increase in the silicon or carbon content, if this is desired. G.H.W. has already manufactured and delivered ten shaker-ladles of this kind with capacities ranging between 3 and 15 tons. More of these units, including ladles with a capacity of 100 tons, are being planned. A well-known large German foundry has gone over to making the required amount of pig iron exclusively by the shaker-ladle method. The new process is claimed to be simple. The molten metal and the additions are poured into the shaker-ladle, which is then set into motion. The liquid mixture splashes back and forth in the ladle, similar to the way surf splashes on the beach. In this way, the contents of the ladle are mixed thoroughly. The undesired companion of the iron, sulphur, is fixed to the slag by the additions. After the tapping of the molten pig iron it remains in the bottom of the ladle, from where it can easily be dumped. The shaker-ladle is suitable for mixing all metallic melts, for example, to make ferro-silicon, ferro-chromium and others, as well as for an inexpensive method of making nodular castings. Because of the great possibilities offered for metallurgy and economy, the new process will probably be widely used.

Preservation of Wooden Objects

A new method of preserving wooden objects by means of vacuum-pressure impregnation of polyethyleneglycol has been developed by Mr. Tore Boström, a Stockholm engineer and former head of the technical department of the Swedish Office of National Antiquities. The method has been tried out on wooden finds from the 17th-century warship Wasa and have yielded very favourable results. By the new method, which is said to be both quicker and more effective for certain finds, the object while still wet is weighed and left for the water to drip off the surface layer. After renewed weighing in order to ascertain the volume of water escaped for the impregnation to start, the object is placed in an air-tight steel cylinder. The air is evacuated by means of a vacuum-pump and the cylinder is filled with polyethyleneglycol. The normal impregnation time for a medium-sized wooden sculpture is about an hour. After the first impregnation, the wooden object is left to dry under control, the polyethyleneglycol serving as a screen through which the water in the interior of the wood can penetrate only slowly. When enough water has escaped, the object is submitted to a further impregnation procedure, which is, in most cases, repeated a third time. Once the degree of moisture has been reduced to normal, superfluous polyethyleneglycol is washed off by means of alcohol. The surface of the wood has, then, by and large, regained its original appearance. By using different kinds of impregnation liquids the device can also be utilised for preserving other porous objects, such as leather, bones, and archæological finds of metal.



You can look where you're going
—thanks to glass

Shopfronts look more attractive in glass! Inside, glass functions just as brightly. Protecting merchandise without obscuring it from view. Sealing out moisture, noise and dust yet letting in light. Countertops are glass, too! It's the easiest thing to clean.

The finest and most durable in India, HPG sheet glass is tested for unvarying quality at every stage of manufacture.

Available in a wide variety of sizes and thicknesses.

MARKETING TECHNIQUES IN THE WEST

PRODUCTIVITY TEAM URGES INDUSTRY TO BE SALES-CONSCIOUS

IT is indeed unfortunate that, although India is fast becoming production-conscious, there is inadequate appreciation on the part of industry in general of what scientific marketing techniques can do to ensure fuller utilisation of resources. Barring a few enlightened business houses, which have embarked on market research, effective advertising and other constructive measures of sales promotion, the Indian industry has yet to recognise that by expanding (or even rationalising) demand and creating new demand, production can be stepped up, thereby cutting costs and, in turn, creating still more demand, and that by distribution of goods in the right places, when they are needed, not only can demand be stimulated, but unnecessary stocks reduced and money tied up idly in working capital made to do profitable work. In other words, judicious marketing is considered a luxury in this country. This attitude is the result primarily of the sheltered and protected nature of the economy. In competitive industries, as in the West, the tendency is to aim at a bigger share of the cake. On the contrary, non-competitive industries tend to be content with the existing size of the cake and proper attention is not given to enlarge the size of the cake to the benefit both of the investor and community in general.

N.P.C.

It is to this relatively neglected aspect of industrial development in this country (namely, marketing) that the Indian productivity team (Leader: Mr. P. L. Tandon, Chairman of the Hindustan Lever Ltd.) addressed itself in its recent study tour of the U.K., the U.S. and West Germany. The team, selected by the National Productivity Council of India, was sponsored by the U.S. Technical Co-operation Mission. The team, which familiarised itself with advanced marketing techniques adopted by selected world-renowned business-houses, marketing organisations and official agencies concerned with sales promotion, submitted a report to the N.P.C., which has just published it. While the report contains several findings useful to Indian industry, their utility would have been certainly heightened, had the team studied the techniques of marketing in Japan also, the economy of which has several characteristics similar to those of India's. It may be noted, in this connection, that several other teams, sponsored by the N.P.C., found it useful to include Japan in their itinerary.

Again, the team confined its attention to the marketing techniques of selected organisations only. But it could have extended its sphere of work more profitably, had it sought to ascertain from importers of Indian products in those countries defects in India's sales techniques, which, by no means, will be few in number. Such a study would have served the purpose of export promotion better, by bringing to light the wide gap India has to make up in respect of overseas market research and advertisements, before it could strengthen its export markets. The team, of course, comes back to the subject of export promotion again and again in the report, but these observations are made rather casually. Finally, it is not clear why the team has not felt competent to recommend specific measures for improvement in the marketing techniques of Indian industries, with modifications necessary to suit local environments. Although specific recommendations are not given as such, the report contains several valuable findings, which merit the serious consideration of industrialists and Government.

It is not correct to think that the marketing techniques employed in highly advanced countries will not be entirely suitable to Indian conditions. As the report points out, modern marketing techniques are highly advanced in the West, but they are essentially an understanding of human needs and the most economic means of satisfying them. They can be borrowed and transplanted elsewhere, according to the report, "easily and successfully at a very small cost, but with very fruitful results." Marketing in the West is considered as important a function as production. In the U.S., in particular, marketing would rank even before production, because it would search and decide what can be marketed, and, therefore, should be produced. In India, on the contrary, marketing is seriously thought of only when there is a surplus, reflecting "a kind of fire-fighting action." The productivity team rightly insists that the more constructive approach is to regard marketing as something that activates both the market and production, which are otherwise static by themselves. A community used to a certain level of consumption will tend to remain static, but well-planned marketing can "kindle demand and stimulate production." No wonder, then, that, in the West, marketing is considered not just selling and advertising but as "the creative management function, which promotes trade and employment by assessing needs and initiating research and development to meet them. It co-ordinates the resources of finance, production and distribution of goods and services, and determines and directs the volume and scale of effort required (including sales management, advertising, sales promotion, public relations and marketing research) to sell profitably to the ultimate consumer or the user."

U.K. Market

From what the team has observed in several leading industries and marketing agencies in the U.K., it concludes that the British industry has become marketing-conscious, whether it is for consumer or industrial products. Equally, there is much consciousness of public image, which, according to the team, is a sign of social responsibility. Dealing in particular with the possibilities of the U.K. as a market for export of goods, the report states that the average national wage in the U.K. of £14 per week, when supplemented by other members of the family, rise sometimes to £40 and more a week. Of this, about 60 per cent represents discretionary expenditures, only 40 per cent being spent on necessities. A notable feature is the size and shape of the "teen-age market," which has a total pocket money of £90 million per week. In the British market, which is thus saturated with regard to physical wants, the task of an exporter is to study the scope for his products. The remarks made by the team in regard to the export prospects for Indian goods are worth quoting:

"After reaching saturation in physical wants, the U.K. market is experiencing a resurgence of arts. Of this, India, with tradition of skills and crafts, can take advantage. But this will mean a careful study of habits and fashion goods. It is not enough to sell our traditional wares of acts and crafts, for their novelty soon wears off and they begin to fall. Some of them will, of course, continue to have a permanent appeal, but mostly they will have to be made to fit the tastes and requirements of the people. After all, they have no traditional appeal to them, nor have they a natural place in homes. Besides, in affluent societies, tastes are fickle and change quickly, especially under the impact of manufacturers who are constantly bringing out new goods to take a share of the discretionary expenditure.

"Somehow, filling a few trade centres with saris, copper and brass and handicrafts (usually crammed in a shop window with the minimum of attention-getting display value) is not enough by itself. It needs a broad-base of wide distribution through stores for selling goods which, though maintaining their Indian tradition of handicraft, should be made with a local appeal.

"An example of the change in British tastes is the amount of cheerful colour one is beginning to see in their homes: walls painted or papered in different colours and patterns, bright rugs and bold upholstery, bric-a-brac and ceramics. Another example is that homes are usually centrally heated, an innovation being the built-in-electric heating coils in the floors, making fitted and thick carpets unnecessary, at least for providing warmth. This means, for instance, that thick felt and fur-lined slippers are being replaced by sandals, and carpets by rugs because the rooms and floors are no longer cold and draughty. Light sandals for women, in plastic, foam rubber and hand-tooled leather, with our conventional and modern patterns will find a ready market. Stair carpets in Indian designs instead of the mass products type, now used in England, would also have scope. Raw silks for covering walls, instead of paint or paper is another example. It is all a designs and marketing—and of rigid quality control."

Export Seminars

The team has made a suggestion that, well-organised export seminars should be held in India for different countries, or different regions, on the lines of seminars being held at the British Institute of Management, London. Participants in the seminar should include businessmen interested in exports, marketing and advertising. It would be helpful, if experienced businessmen from export markets are also invited. The report stresses that, in such seminars, the emphasis should be laid not on reduction of prices to meet competition, but on marketing. It is marketing know-how and skill and marketing-mindedness that is the key to the problem, supported by a personal knowledge of markets concerned.

During the course of its tour in the U.S., the team was very much impressed with the sizable resources spent by American businessmen for marketing. The report observes, "They will produce whatever will sell, and just as quickly stop producing whatever will not sell. If there is any following, it is clearly production following the marketing needs, instead of marketing following production." Referring to the scope for promoting Indian exports to the U.S., the team feels that the first thing to be done is to remove from the average American mind the image of India, associated with handicrafts, monkeys, sacred cows and palaces. Indian promotional activity should be designed to weave into the picture of handicrafts, etc., the geography, people's life and their industry and modern plants. The media used, according to the Report, should include women's journals and sketch books, where information about Indian life, clothes and cooking recipes should be featured.

West Germany

On the marketing techniques in West Germany, the team observes as follows:

"In its reconstruction and expansion, German industry appears to have made full use of modern marketing techniques and of tools like marketing research with all its refinements, of advertising media, study of market shares, sales, distribution, transportation and packaging techniques and, growingly, of public relations. With characteristic thoroughness, they seem to go further in desk research for the harnessing of available data and, in the case of large heavy industries, in research into markets abroad. Their big concerns, even where their goods do not reach the public, appear conscious of the need to build an image for their products and themselves. For reasons of commercial goodwill, they seem anxious too to create an image abroad, because such an aura helps to gain international trade and contracts.

"Their marketing has borrowed frankly from the Americans, but into it they have woven a thoroughness and a philosophy which is characteristically their own. They have been pragmatic enough to realise the value of successful marketing techniques, but they have accepted them in their own language."

The team, in its concluding remarks, seeks to dispel the fear that the cost of applying marketing techniques will be burdensome. It affirms that the cost of marketing is small, as compared with the return it can bring in turnover and production economics. In the case of small industries, the team opines that Government agencies can help them by making marketing advice freely available, as it is beginning to do with production advice. This is all the more essential, since the small producer, having learnt how to make, finds it difficult to know where he should turn for learning how to market. The large-scale units, whether in the public sector or in the private sector, irrespective of whether they are producing consumer goods or capital goods, will find it rewarding, if they devote a part of their resources for the marketing function. Unless this is done, demand, both domestic and foreign, will tend to be of a static nature.

SWEDEN'S HELP FOR DEVELOPING COUNTRIES

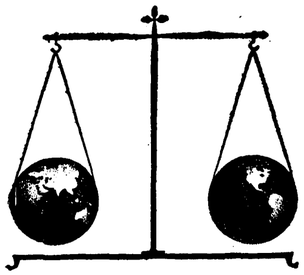
The Swedish commercial investments in underdeveloped countries have gone up in recent years, according to a study, *The Swedish Economy and the Underdeveloped Countries*, published by the Industrial Council for Social and Economic Studies, Stockholm, Sweden. In 1960, such investments, partly in subsidiary companies, amounted to 140 million kroner and included extensive export of technical knowledge in the form of training of workers in the countries concerned. The transfer of private capital for direct investment or long-term credits has, however, been bottlenecked by Swedish currency policy.

The total imports into Sweden from underdeveloped countries aggregated 2,000 million kroner (£138 million) and its exports to them 1,700 million kroner (£117 million) in 1960. The study also gives an account of the official private aid activities, partly of multilateral character through international organisations, and partly bilateral.

EAST ANGLIA PLANT FOR ANDHRA

An industrial licence for the establishment of a new plant in Andhra Pradesh for the manufacture of cellulose di-acetate and tri-acetate flakes, which are the raw materials for acetate moulding compounds, acetate fibres and raw film, has been granted to the East Anglia Plastics (India) Ltd. The proposed plant will, in addition, manufacture some of the organic chemicals, such as acetic acid and acetic anhydride, required for producing acetate flakes. The scheme is expected to cost about Rs. 5 crores. It is also learned that a well known foreign company has agreed to collaborate in the project and provide technical know-how.

The East Anglia Plastics, it may be noted, had secured some time back a licence for the manufacture of cellulose acetate moulding powders and P.V.C. compounds. The plant, now being set up for the purpose at Dum Dum, Calcutta, is nearing completion. All machinery for the project have been imported and are under installation. The Calcutta unit is expected to go into production before the end of this year.



In both hemispheres . . .

. . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

PROFITABILITY OF TATA OIL DECLINES

DIVIDEND, HOWEVER, MAINTAINED

HIGHLY disappointing are the results of the Tata Oil Mills Company Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay) for the year ended 31st March 1961. They provide a typical instance of the adverse effects of cost inflation. It is a well-known fact that, in 1960, though the prices of food remained steady, those of raw materials went up sharply. The Company is one of the industrial units to be badly hit by this trend. Sales and other income have touched a record figure of over Rs. 10 crores during the year ended 31st March 1961. The receipts from sales proceeds amounted to Rs. 984.98 lakhs or an increase of 21.7 per cent as against that of 24.2 per cent in the previous year from Rs. 651.08 lakhs to Rs. 809.29 lakhs. The other income, however, dropped from Rs. 21.97 lakhs to Rs. 17.29 lakhs, chiefly on account of a setback in receipts from sales agency commission on Indian and imported chemicals.

In spite of a record rise in sales and other income the gross profit has dropped by 29.2 per cent to Rs. 57.38 lakhs as compared with Rs. 74.19 lakhs in the preceding year. The reasons for the drop in profit are several, the principal ones among which are the following:

Increase in prices of raw material cost the Company Rs. 29 lakhs more. A surcharge on railway freight rates and increased use of road transport resulted in an increase of Rs. 4 lakhs. The income by way of commission on imported chemicals dropped by Rs. 7.5 lakhs due to reduced imports of soda ash and caustic soda. Interest charges were higher by Rs. 5.2 lakhs due to larger borrowings and dearer bank credit. The marketing department and the selling organisation were expanded in excess of immediate requirements in anticipation of greater sales to come at a cost of Rs. 11.5 lakhs. All these led to a rise in expenses to the tune of Rs. 57.2 lakhs. This was only partially offset by increases in the selling prices of the products of the Company. Consequently, the profit-margin in 1960-61 narrowed down.

The dividend to shareholders has, however, been maintained at 23 per cent, subject to deduction of tax, which is equivalent to Rs. 4.025 per share. This has been made possible by considerable saving in the provision for depreciation, managing agents' commission, taxation and reserves as will be seen from the comparative table that follows. The provision of Rs. 11 lakhs for depreciation fully covers the normal and shift depreciation at income-tax rates but the Directors have dropped the practice of providing extra depreciation as they do not consider it necessary any more.

While there was a drop of 22 per cent in the prices of imported copra and of 11 per cent in palm oil, the prices of indigenous groundnut oil rose by 27 per cent and of coconut oil by 10 per cent. Further, owing to the availability of larger supplies of cattle feed in European markets the price of de-oiled groundnut meal fell by 15 per cent, which raised the net cost of groundnut oil to the Company. The cost of raw materials and stores consumed therefore sharply rose by 28.1 per cent from Rs. 471.70 lakhs to Rs. 604.29 lakhs. The other expenses, exclusive of excise duty, also rose from Rs. 242.02 lakhs to Rs. 292.60 lakhs.

While a part of these increases reflect the rise in turnover a substantial rise in prices is the major cause.

The following comparative table gives the salient features of the working results of the Company for the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	9,84.98	8,09.29	6,51.08	6,16.70
Other income	17.29	21.97	12.76	8.02

To reserves	5.88	8.00	5.50	1.07
Employees' gratuity	1.75	2.00	1.50	1.20
Dividends—				
Preference	1.84†	1.84†	0.92	0.92
Ordinary	16.12† (23%)†	16.12† (23%)†	9.11 (13%)	7.01 (10%)
Carry forward	0.29	0.46	0.12	0.06

* Inclusive of excise duty which amounted to Rs. 47.99 lakhs for 1960-61, Rs. 43.35 lakhs for 1959-60 and Rs. 39.06 lakhs for 1958-59.
† Subject to deduction of tax.

There was an all-round improvement in the operations of the Company as can be seen from the data below showing the turnover of its various divisions

Seeds crushing	+21 per cent
Soaps	+13 „ „
Glycerine	+16 „ „
Vanaspati	+52 „ „
Toilet products ...	+25 „ „
Coconut oil	+204 „ „
Exports	+103 „ „

The Company's subsidiary, the Lakme Limited, achieved increase in sales from Rs. 5.17 lakhs to Rs. 8.27 lakhs and earned a higher profit of Rs. 1.26 lakh as against Rs. 0.73 lakh in the previous year. Similarly, the Industrial Perfumes Limited achieved higher sales, Rs. 21.10 lakhs as against Rs. 12.50 lakhs in the previous year and its gross profit increased from Rs. 0.99 lakh to Rs. 4.29 lakhs.

The expansion in the Company's activities is likely to increase in the current year and it may, perhaps, lead to an increase in profit-margin. The plant and equipment of the Amrut Oil Mills at Sewri, which was purchased in May 1960, is being overhauled and modified before being put into operation. The construction work on the Northern Factory Project is expected to start after the current monsoon. The fat splitting and fatty acid distillation plant at the Tatapuram Factory is expected to start production in the first quarter of next year. The continuous soap plant obtained from Italy was erected in the Bombay Factory during the year and the same has functioned satisfactorily since it was put into operation in February 1961. Additional equipment has been ordered in order to rationalise soap making operations. A pilot plant for the manufacture of animal feed has been installed and trials will commence shortly on producing different types of feed, suitable for India's milch cattle. The new soap plant at the Calcutta Factory continued to operate satisfactorily. A section for the manufacture of toiletries was opened and the installation of the refined glycerine plant is expected to be completed during the year.

In spite of a significant increase in borrowings and block account during the year under review the financial position of the Company remains very satisfactory. The gross block account has increased from Rs. 267.49 lakhs to Rs. 320.58 lakhs on which depreciation provision so far is Rs. 165.91 lakhs. The total of current assets, inclusive of investments, stands at Rs. 691.90 lakhs and are well above the current liabilities aggregating Rs. 536.36 lakhs including debentures of Rs. 50 lakhs repayable after 1st October 1969. The surplus of floating assets over liabilities is Rs. 155.54 lakhs. The paid-up capital of Rs. 99.96 lakhs consists of Rs. 29.89 lakhs in preference shares of Rs. 100 each and Rs. 70.07 lakhs in ordinary shares of Rs. 25 each. The reserves and surplus have increased by Rs. 5.70 lakhs to Rs. 55.57 lakhs.

The Company's ordinary shares of Rs. 25 paid-up are a favourite among small investors, as is borne out by the chart on number of shareholders included in the Directors' report. The number of shareholders holding 1 to 20 shares, that is, of a total paid-up value below Rs. 500, has grown from 5,263 to 5,383 or in terms of percentage of total shares from 77.1 per cent to 78.0 per cent. The Company has, in all, 6,904 ordinary shareholders of whom 2,883 own between one and five shares, 1,557 six to ten shares, 943 eleven to twenty shares, 962 twenty-one to fifty shares, 292 fifty-one to one hundred shares and 267 one hundred and one and over. The current quotation of these shares stands at Rs. 74.50 as compared with Rs. 84 a year ago. At the current rate, the net yield works out to 5.33 per cent on a net dividend of Rs. 4.025 per share.

NATIONAL TOBACCO HIT BY COMPETITION

FINANCIAL POSITION STRONG

AS a sequel to the growing standard of living in the country and the rapid spread of smoking habit, the fortunes of the cigarette manufacturing industry in India have been steadily improving in recent years. The improvement, however, has not been spectacular owing to a progressive increase in taxation year after year and keen competition among the producers. Nevertheless, the National Tobacco Company of India Ltd. (Managing Agents: Messrs. B. N. Elias & Co., Private Ltd., Calcutta) had managed to report a substantial improvement in sales and profit. This reflected its ability to withstand competition through efficiency and hard work. Apparently there is a limit to what can be done in this highly competitive field. The Company's results for 1960 show that, in the past year, it was not able to participate, to any appreciable extent, in the increased all-India consumption of cigarettes. Its sales remained virtually unchanged, having increased by a mere Rs. 29.27 lakhs to Rs. 964.44 lakhs. "The year saw a determined effort on the part of our major competitor," say the Directors of the Company in their report to shareholders, "to contain our business in our major selling grade. They have, to some extent, been successful in their attempt and in consequence we have given ground in certain areas." This statement is further borne out by the fact that value of the closing stocks of finished goods has risen sharply to Rs. 101.16 lakhs from Rs. 64.83 lakhs a year ago.

The intensive competition, coupled with a rise in operating expenses, has absorbed most of the small increase in turnover and the gross profit has, therefore, shown only a fractional improvement of some Rs. 23,000 to Rs. 71.35 lakhs. Despite lower provisions for managing agents' commission (Rs. 6.38 lakhs, as against Rs. 7.81 lakhs), depreciation (Rs. 5.91 lakhs, as compared with Rs. 6.09 lakhs) and taxation (Rs. 25.38 lakhs, as against Rs. 26.27 lakhs) the net profit stands only moderately improved by Rs. 2.73 lakhs to Rs. 33.68 lakhs. To this amount is added Rs. 7.08 lakhs as the carry forward from the previous accounting period and Rs. 64,304 as transfer from the contingency reserve no longer required. The balance available for appropriation amounts to Rs. 41.40 lakhs. Of this sum, Rs. 15.83 lakhs have been transferred to reserves, as against Rs. 21.56 lakhs a year ago. Dividends payable on the tax-free preference shares for the year 1960 have been computed in accordance with the Preference Shares (Regulation of Dividends) Act 1960, and will absorb Rs. 2.80 lakhs. A sum of Rs. 64,473 has also become payable on account of supplementary dividends on preference shares for the year 1959 in terms of the aforesaid Act. In respect of the ordinary shares, the Directors have recommended a dividend of 16 per cent per annum, subject to deduction of tax. This is the same as in previous year and will absorb Rs. 12.79 lakhs, leaving a sizable carry forward of Rs. 9.34 lakhs, a sum sufficient to cover three-fourths of the proposed dividend. It is noteworthy that the amount that is being carried forward is higher by over Rs. 2 lakhs than that brought in.

The above salient features of operations of the Company in 1960 have been set forth in the table below in juxtaposition with the corresponding figures for the preceding three years for facilitating comparison:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales	9,64.44	9,35.17	8,35.11	6,53.78
Miscellaneous sales and income	82.37	36.05	26.55	23.97
Closing stocks of finished goods	1,01.16	64.83	58.46	49.37
Raw materials and stores consumed	4,12.78	3,75.87	3,59.37	2,94.19
Customs and excise duty	3,44.22	3,27.35	2,65.17	1,98.28
Salaries, wages and bonus	72.76	68.28	60.28	51.73
Other expenses	1,52.03	1,34.97	1,20.90	93.36
Gross profit	71.35	71.12	65.03	45.19
Managing Agents' remuneration	6.38	7.81	7.51	5.37
Provision for—				
Depreciation	5.91	6.09	6.49	5.06
Taxation	25.38	26.27	27.83	18.85
Net profit	33.68	30.95	23.20	15.93
Provisions written back and refunds	0.64	3.03		24.00
Transfer to reserves	15.83	21.56	11.54	30.73
Dividends				
Preference	3.44*	2.15	2.15	2.15
Ordinary	12.79 (16%)†	12.79 (16%)†	8.80 (11%)	7.20 (9%)
Carry forward	9.34	7.08	9.60	8.88

* Including Rs. 64,473 as supplementary dividends for 1959.
† Subject to the deduction of tax.

A commendable feature of the Company's appropriation policy is conservation of a good part of the profit year after year. Of the sum of Rs. 15.83 lakhs transferred to reserves, Rs. 3 lakhs are by way of development rebate, Rs. 10 lakhs to reserve for capital expenditure and Rs. 2.83 lakhs to general reserve.

A perusal of the Company's chart showing the disposal of its revenue shows that taxes (both direct and indirect) take away as much as 35.10 per cent, raw materials and stores 39.20 per cent manufacturing and selling expenses 15.90 per cent, salaries, wages and other benefits 6.9 per cent, dividends to shareholders 1.50 per cent and retained earnings 1.40 per cent.

Continuing its policy of constant renovation and modernisation of its productive facilities, the Company has been the first in India to install the Molins Mark VIII cigarette making machine which is expected to produce cigarettes that are better made than by any other machine. An additional high vacuum leaf conditioning plant and a second cleaning classifying line, both with a higher capacity, have also been installed. With these and other improvements, the Company now has equipments which place it in a strong manufacturing position.

The financial position of the Company, as disclosed by its balance-sheet as at 31st December, 1960, is strong. The capital account consists of Rs. 12 lakhs in a 4 per cent mortgage debentures, Rs. 44.98 lakhs in preference shares, Rs. 79.97 lakhs in ordinary shares with a supplement of as much as Rs. 126.89 lakhs in reserves and surplus. Current liabilities and short-time loans together amount to Rs. 187.83 lakhs and are more than amply covered by the total of current assets, investments and loans and advances at Rs. 382.44 lakhs. The written down value of fixed assets is Rs. 69.23 lakhs against a gross value of Rs. 150.41 lakhs.

The future prospects for the cigarette industry, in general, and the Company, in particular, have been expressed by the Directors in these words:
