Ceylon proposes to set up a State trading corporation, with the object of undertaking exports of tea, rubber and coconut oil to Communist countries.

Holland will hold an exhibition of its heavy machinery, medical apparatus and chemical products in Moscow from 25th November to 11th December. About fifty Dutch producers will participate in the trade fair, which is organised by a private Dutch Company, Stemmler-Imme.

An official Bill seeking to introduce a scheme of central supervision for accident insurance companies and kindred insurers will be introduced in the Dutch Parliament. Life insurance companies are already subjected to similar supervision by a central body, the Insurance Chamber.

The Italian State Oil Corporation, the E.N.I.-Agip, has secured a $240 million contract from the Argentinian Government for the construction of a natural gas pipeline from the fields in Patagonia to Buenos Aires, a distance of about 1,000 miles. The Italian tender is said to be much below the rival bids from major U.S. groups.

The Bank of England will install next year new prototype machinery for manufacturing bank notes in one continuous operation, instead of sheet by sheet as at present. In due course, the machine is expected to produce bank notes by "nearly automatic methods," untouched by hand, and permit more frequent changes in the design of notes.

PERSONAL

MR. Morarji Desai, Union Finance Minister, returned to India on Monday the 9th inst., after a tour of Ghana, Europe and the U.S.

Mr. P. R. Sunkersett, a barrister of the Bombay High Court, has been appointed a Judicial member of the Income-tax Appellate Tribunal.

Mr. J. R. D. Tata, Chairman of Air-India International, left for Sydney on Tuesday this week to attend the six-day annual meeting of the International Air Transport Association, scheduled to commence there on the 23rd inst.

Mr. B. F. W. Hayward, Electrical and Resins Sales Manager of the Midlands Silicones Ltd., London, is arriving in India on the 29th inst., to study the prospects for exports in this country. Messrs. Parry and Company, Ltd., Madras, are the sole representatives of the Midlands in India for silicone products.

The aggregate output of West German manufacturing industry rose by 163 per cent between 1950 and 1960, representing the biggest rate of growth in Western Europe. The percentage rise in industrial output in Italy was 136, followed by Austria 98, France 89 and the Netherlands 82. The average increase for Western Europe as a whole was 85 per cent.

Australia had an overall favourable trade balance of £A14.6 million during September 1961, as against a deficit of £A23.4 million in the corresponding month last year. Imports amounted to £A67.0 million and exports £A81.7 million. Australia's trade with the U.K. shows signs of decline. During the financial year ended June 1961, Australia bought only 31.4 per cent of its imports from the U.K. and sold only 21.5 per cent, as compared with 49 per cent and 41 per cent, respectively, touched earlier during the last decade.

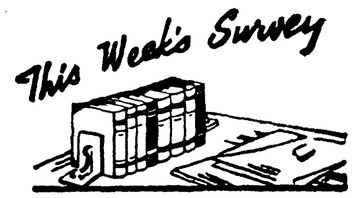
Wages of industrial workers in West Germany rose by 15 per cent between 1958 and 1960. The rise compares favourably with 13 per cent in France, 11 per cent in the Netherlands, 7 per cent in Italy, 5 per cent in the U.K. and 8 per cent in the U.S. Earlier this year, average wage and salary increases of 10 per cent were agreed to between employers and about nine million employees. The employers have still not accepted the recent workers' demands for a wage increase of 18 per cent and a reduction in working hours from 43 to 40 per week.

Two north American companies have set up their factories at Bethune (in France), an area in which the French Government gives generous investment grants, in a bid to remove local unemployment created by the closing down of uneconomic coal mines. One factory, established by Firestone of the U.S., will produce 4,000 tyres a day, of which a quarter will be exported to other Common Market countries. The other plant, which belongs to a joint subsidiary of the Canadian firm, Schenectady-Varnish and Safic Alcan, has a capacity to produce 500 tons of synthetic resins and varnishes per month.

The Institute of Microbiology of the Soviet Academy of Sciences has found out that, by adding an antibiotic, called kormogrizin, to animal fodder, the growth of animals can be speeded up by 20 to 30 per cent. The addition of small quantities of kormogrizin to the fodder increased its fat content. If given to chickens, it results in increasing the size of their liver, which makes the chickens more valuable. This preparation also has a prophylatic effect. As proved by experiments, it sharply decreased the incidence of diseases. The preparation was tested in fifty farms in Moscow region. At present, the Institute is engaged in evolving a technology for obtaining this preparation in large quantities for animal breeding.

Over one thousand devices using radioactive isotopes and nuclear radiation will be used by the coal and ore mining industries in Soviet Russia this year. These devices will make it possible to fully mechanise all underground work. They are said to be absolutely harmless for the personnel. In some Soviet mines and quarries, these devices are already used for the automatic control of skip elevators. They count the trucks, control their loading, and ensure the safety of underground transport. At ore-dressing mills, radioactive isotopes are used for the large-scale automation of crushing and flotation of ore and for coal concentration. Gamma-luminescent automatic devices also are now produced. In Leningrad for diamond concentration factories in Yakutia. These automatic units will increase the yield of diamonds.

Japan's steel manufacturers have been asked by its Government to cut back their capital investment programmes in the present financial year (April to March) by 5 per cent as well as to increase their exports. This measure is designed to prevent any further deterioration in the balance of payments position by holding down the level of imports necessary for capital expansion. Since April this year, Japan's foreign exchange holdings have fallen by $425 million. The Cabinet has, therefore, decided to slow down the rate of growth, which this year has been running at something like twice the 9 per cent originally anticipated. Steel output last year was 23.4 million tons and it has been estimated that this year it may rise by as much as 20 per cent to 28 million tons.



UTILISATION OF INDUSTRIAL RESEARCH

THE National Research Development Corporation, which was set up by the Government of India seven years ago for the purpose of promoting the utilisation of the results of laboratory research in commercial production, has just published its annual report and statement of accounts for the year ended 31st March 1961. The year under review was particularly fruitful in furthering the activities of the Corporation, for it saw the inauguration of the first Pine Oil factory at Hoshiarpur, the Amul Baby Food plant at Anand and the Carboxy Methyl Cellulose plant at Billimora. These three plants have begun manufacturing the respective products according to the processes developed in the Indian research institutes concerned. Besides these, a number of other processes has also gone into commercial production during the year or is expected to go into production very shortly; noteworthy among these are silver mica capacitors, bituminous emulsions, bullock-drawn sugarcane planters, cation exchange resins from cashewnut shell liquid, ethyl ether, can sealing composition and citric acid. The Corporation has also instituted, during the year, pilot projects for the production of a superior grade of activated carbon, proteins from groundnuts, aromatic chemicals and para and meta cymenes—all according to the processes developed in Indian research laboratories. The Corporation's earlier projects for de-ionisation of cane juice, manufacture of white cement from felspar and production of phthalic anhydride are also nearing completion.

But these achievements of the Corporation are relatively few in number. They do not make any appreciable difference to the record of utilisation of the results of laboratory research, for, of the aggregate number of 350 effective inventions in hand as at the end of the year 1960-61, only 117 processes have been licensed and, of the latter, only 39 are in commercial production. It is clear that a large proportion of the inventions made in the country still remains to be exploited. If the intervals between the time when the results of laboratory research become available and their wider application are to be reduced, pilot plant facilities would have to be greatly expanded. The Corporation, which has a paid-up capital of only Rs. 10 lakhs entirely subscribed by the Government and has incurred a cumulative loss of Rs. 10.4 lakhs upto 31st March 1961, cannot be expected to achieve miracles in a difficult field. Its expectation of a subsidy to make good the loss or of further subscription to share capital does not seem to be unreasonable in the context of what remains to be done by way of research development on pilot plant scale.

SMALL CAR PROJECT

It may be remembered that the automobile industry had originally asked for a foreign exchange allocation of Rs. 70 crores for its expansion programme in the third Plan period. But the Planning Commission has turned down the industry's request and provided for a foreign exchange element of just Rs. 40 crores in the final report of the third Plan. Over and above this direct investment will be the demand for an estimated Rs. 175 crores of foreign exchange on maintenance account over the Plan period as a whole. It is not surprising that, in the context of foreign exchange stringency, the Commission has not only laid down a lower target of 30,000 passenger cars for 1965-66—lower than what the Development Council for Automobiles and Ancillary Industries had recommended—but also excluded the controversial small car project from the public sector's industrial programmes. The Commission which has fully accepted the targets recommended by the Development Council in respect of commercial vehicles (60,000), jeeps and station wagons (10,000) and motor cycles, scooters and three-wheelers (60,000), has adopted a different approach towards passenger cars (big or small) presumably on the ground that they represent a luxury which not many could afford.

If, with this background, the Commission has reportedly taken the line that the foreign exchange expenditure on the small car project (on which the Union Ministry of Commerce and Industry seems to have set its heart) should not be included in the overall assistance of Rs. 2,600 crores expected from friendly countries for the third Plan, it is perfectly understandable. But the Ministry, according to one report, has been assured by the French motor firm of Renaults (which has offered to collaborate in the small car project) that the foreign exchange (Rs. 6.5 crores) it would provide for the project would not in any way lessen the aid from the French Government for other projects in the third Plan. Obviously further negotiations would be taking place between the Government of India and the French Government in regard to this question, if the Union Cabinet were to take a final decision in favour of this project in preference to the counter-proposal of the Defence Ministry for the manufacture of a small car with Japanese collaboration. Meanwhile, opposition from the private sector to the proposed public sector project continues. The Federation of Indian Chambers of Commerce and Industry has done well, in this connection, to take time by the forelock and warn the powers-that-be against a possible hasty decision. Its contention is that the private automobile industry has the capacity to undertake the manufacture of a small car and that, if the public sector were to take it up, it would not be in keeping with the principles of the Industrial Policy Resolution of 1956. Surely, it cannot be that the Industry Minister, Mr. Manubhai Shah, who is a well-meaning friend of the private sector, is unaware of this contention. Perhaps, it may be possible for the Federation to use its good offices and persuade the industry to undertake to bring down the costs of production of the present models and improve their quality, so that the Government, in its turn, might be persuaded to give up its proposal for small car manufacture in the public sector. After all, the need for another automobile manufacturing plant is not quite evident, for the middle class, for which the small car is supposedly intended, can ill afford that luxury in these days of high costs of living. It is difficult to believe that even an urban middle-class family with a monthly income of, say, Rs. 1,500 or Rs. 2,000 can afford to purchase and maintain a small car (probably costing Rs. 8,000 in all by way of initial outlay and Rs. 3,000 by way of annual operating and maintenance costs) without impairing its capacity to save for the rainy day. This aspect of the matter also the Federation should have brought to the notice of the Government.

RUBBER INDUSTRY

No cause for alarm: This was how Dr. Rama Varma, Chairman of the Rubber Board, assessed the outlook for natural rubber when he addressed for the first time the fortieth meeting of the Board at Kottayam on Monday the 9th inst. The assessment was, however, qualified by the pertinent remark that adequate steps must be taken in time to meet the situation arising from a possible threat from synthetic rubber. Indeed, if such steps were adopted, natural rubber would definitely have a bright future in the context of rapid economic development in the years to come. For natural rubber, as Dr. Rama Varma stated, is well designed to meet the structural requirements of an elastomer, the demand for which is increasing sufficiently fast, not only in India but the world over, to consume the entire production of both natural and synthetic rubber. What is more, scientific advances in natural rubber production hold out promise to keep down cost so as to make it competitive with synthetic rubber.

Viewed thus, the output target of 45,000 tons fixed to be achieved by the end of the third Plan, though it represents a rise of as much as 18,600 tons as compared with the actual output of 26,400 tons in 1960-61, is by no means ambitious. But the question is whether the target will, in fact, be achieved. Taking the anticipated rise of about 52 per cent in the tappable area under rubber—from 173,633 acres at the end of 1960 to 263,700 acres five years later—and on a *pro rata* basis, raw rubber production is expected to increase to about 38,000 tonnes which may be higher by another 2,000 tonnes if allowance is made for the clonal seedlings and budded trees that may be ready for tapping by that time. Dr. Rama Varma was, therefore, quite right when he pointed out that the fulfilment of the 45,000-ton target would require much greater effort. Some of the methods suggested to step up production are improved manuring practices, adequate plant protection, new methods of tapping, application of yield stimulants, and better employer-employee relationship.

Alluding to these methods, Dr. Rama Varma stressed the need for adopting them on a selective basis. In this connection, he referred to the move to start four demonstration plots of 100 acres each for the benefit of small holders and to issue immediately an advisory pamphlet on new methods of tapping, yield stimulation and use of rain guards for increasing the number of tapping days. He also referred to the Government's acceptance of the Board's recommendation pertaining to grant of loans on easy terms to small holders to raise their holdings to blocks of five to fifteen acres. He disclosed that he proposed to evolve a scheme for providing short-term credit requirements. It may be noted here that, out of the 57,721 registered holders today, as many as 49,636 holdings have no more than five acres, the average size being less than two acres.

As for the long-term prospects for rubber industry, much will depend on the progress of replanting, new planting and research. It is desirable, as the Rubber Board Chairman emphasised, to replant the whole area at present under ordinary seedlings with high-yielding material during the next ten years. The scope for augmenting per-acre yields of rubber through replanting is, indeed, enormous. The average yield of acres planted with ordinary seedlings even under ideal conditions seldom goes beyond 500 lbs., whereas the yield obtained in many of the Cochin Malabar Estates' fields of budded rubber is over 1,000 lbs. and one field of nearly 30 acres planted in 1942 has given as much as 1,420 lbs. These yields compare favourably with those anywhere in the world and can be obtained in India, too, provided rubber producers care to adopt improved practices of intensive plantation culture and are given adequate financial assistance and encouragement. "The urgency for replanting," to quote Dr. Rama Varma, "has been fully recognised and the enhanced rate of subsidy of Rs. 1,000 per acre should induce people to undertake replanting on a large scale. The target fixed for replanting during the third Plan period is 45,000 acres. There are also plans to encourage new plantings." A special responsibility for all this rests on the Rubber Board. The lines on which the Board should approach the whole problem were indicated by Dr. Rama Varma. They are as follows:

Positive measures must be taken to ensure that hereafter only high-yielding planting materials will be used for new planting and replanting.

Greater attention should be devoted to ensure that subsidies and loans are properly used for manuring the young plant and protecting it from diseases.

In order to ensure efficiency and prompt action, it is absolutely essential to decentralise some of the activities of the Board and also to provide the field staff with quicker modes of transport.

All these will not be of much avail unless energetic steps are taken simultaneously to bring the modern advances in science to the aid of the planter as quickly as possible. There is also the need for assuring a reasonable price to rubber growers. It is to be hoped that the Tariff Commission will recommend such a price and that the Government will accept it.

JUTE MILLS TO WORK 48 HOURS

Fresh proof of the jute industry's keenness to maintain production at the highest possible level is provided by its latest move to resume working 48 hours per week with effect from Monday next. Such a step has been rendered possible by the current rate of jute arrivals and the prospects for the current season's crop. The decision, coming as it does fairly soon after the earlier move to restore production cuts effected in August and to enhance weekly working hours from 42½ to 45 from 25th September, is quite sufficient to refute the allegation made by some that the jute industry had deliberately effected curtailment of operations just to coerce the jute growers and the workers.

The restoration of 48 hours working week will doubtless benefit the raw jute grower, labour and overseas buyers of goods and be welcomed by the mills themselves, inasmuch as it will lead to a reduction in overhead costs. At the same time, it must be borne in mind that the industry incurred a production loss of over Rs. 6 crores during the April-September 1961 period. With such a loss, the jute mill companies cannot, as the Indian Jute Mills Association has warned, face up to a recurrence of severely adverse trading conditions; if this should occur, which it is sincerely hoped will not be the case, prompt action will be essential for the good of the industry as a whole and in the interests of national economy.

The raw jute supply position is quite comfortable and bids fair to be so in the coming months. Besides the estimated bumper jute and mesta crops amounting to a total of not less than 6.5 million bales in 1961-62 (as against 5.2 million bales in 1960-61), the Union Government has accorded a liberal treatment to mills' import requirements by abolishing the import duty on Thai jute and issuing licences for import of 300,000 bales of Pakistan cuttings. The comfortable raw jute supply position is certainly very encouraging, but it will be wrong to underrate the importance of building up a buffer stock.

A SYMPOSIUM ON EXPORTS

The representatives of Government, more often than not, try to be on the defensive in matters of trade policy, thereby refusing to accept certain realities of the situation. A refreshing contrast to this trend was found in the speech of Mrs. Tarkeshwari Sinha, Union Deputy Finance Minister, at the seminar on export promotion, held in Bombay last Saturday under the auspices of the All-India Manufacturers' Organisation, the Association of Industries and the Indian Council of Foreign Trade. Mrs. Sinha was not reluctant to admit mistakes. In fact, she suggested several ways for export promotion which may not all be palatable to the powers-that-be. Drawing attention to the need for stepping up exports during the third Plan period, Mrs. Sinha emphasised the need for strengthening the existing measures and policies guiding exports. But this would be in vain, she added, unless a really effective machinery was created, which could "cut through conflicting departmental interests and translate them into concrete measures, including schemes for each product and take quick decisions on their day-to-day implementation and interpretation." She readily admitted that, in a highly competitive world, potential consumers abroad "do not usually wait for long while the Government machinery makes up its mind." It is a vital defect in the administrative machinery that it has, by and large, failed to rise to the occasion. The protracted procedural delays and bureaucratic indifference, as is well known, circumscribe the scope of export promotion measures.

The administrative reforms are good so far as they go. But the basic criterion for expanding exports is the productivity of our industries. Mrs. Sinha, without mincing words, boldly suggested that, if India had to compete in world markets without prohibitive subsidies, it was essential to go all out for maximum economic efficiency and low cost, even if it conflicted with other considerations. While she conceded that it might be desirable to give preference to smaller firms, because they employed more labour and less capital, she was also of the view that they might be unable to compete in world markets. Although larger enterprises employed fewer men in relation to the capital employed by them, they might, "by earning foreign exchange, which could be spent on scarce materials, make possible more employment in industry as a whole." This is undoubtedly a right attitude.

Increased efficiency of various industries will render the price structure more and more competitive. Reducing production costs through increased efficiency, therefore, has necessarily to be a major plank of export policy. But, as Mrs. Sinha observed, measures to reduce costs would take time to bear fruit. So, in the meantime, she suggested that direct or indirect financial assistance might be necessary to facilitate exports. She did not, however, specify the form of financial assistance that should be given to exporters. In order to make the best use of available resources, she said, export efforts should be concentrated on products requiring "a smaller rather than a larger" subsidy. Another related question is the need for eliminating wide price fluctuations in respect of items like jute goods. Such fluctuations, as Mrs. Sinha, pertinently observed, would only encourage overseas buyers to resort to synthetic substitutes. These questions, no doubt, are engaging the attention of the Government. But, as yet, there is no co-ordinated plan to achieve the object of price stabilisation at competitive levels in respect of important exportable goods.

Apart from the question of Government policy, the seminar was concerned with the question as to how manufacturers themselves could help promote exports. Emphasising the role of manufacturers in expanding exports, Mr. Prabhu Mehta urged them to adopt a realistic approach to export pricing, on the basis of a proper cost accounting system. The *ad hoc* method of costing, which was largely adopted, did not show appropriate "marginal cost with a view to pricing our product in a competitive manner." This observation is all the more pertinent in the context of present conditions in world markets, where there is free competition for several products and world price levels are determined largely by the most efficient and the low-cost producing countries. Mr. Mehta also urged the manufacturers to concentrate their attention on select export markets. Elucidating this point, he observed:

"Apart from generally talking about marketing relations in export promotion, each manufacturer can give his specific attention to fix a limited market or markets for concentrated attention in regard to export promotion. Such a measure would, instead of generally making a weak effort in every direction resulting more often than not in total waste, would afford an opportunity to gain ground in a particular market or markets. The process of fixing the markets can be arrived at by stating the facts that are available within the country and, if need be, by consulting the appropriate export promotion council or specialised organisation dealing with the commodity. Limiting the market or markets in the initial stages by fixing the same, the manufacturers will have an advantage to utilise the resources available with him to his best advantage. Another benefit that is likely to accrue is that a particular market may not need many changes in its existing product. Therefore, the changes may be easier to incorporate and subsequently be standardised to meet the demand. Fixing the market may also reduce the variety to produce. Reduction of variety will also give sufficient scope for standardisation and, therefore, reduction in cost of production."

The selection of markets for specific commodities will not be as easy as it might seem, unless competitive quality and price are ensured for the products. Besides, selection and development of markets may be an uphill task for a majority of manufacturing units in India, which have neither sufficient resources nor experience in the line. But if a collective body like the A.M.O. or F.I.C.C.I., undertakes this work in a suitable manner there is a fair chance that selection of markets will yield good results.

SOME ASPECTS OF LABOUR PROBLEM

By V. V. Giri
GOVERNOR OF KERALA

EXACTLY a month ago, we celebrated the fifteenth anniversary of our political independence. During the last fourteen years, we have done much work to improve the general well-being of the people. Many measures, both legal and economic, have been designed to remedy the maladjustment in the economy and assure the less fortunate people of the Fundamental Rights which can provide them with enough food, adequate clothing and suitable shelter. We cannot claim that we have realised our goals fully but we have made substantial progress. No doubt we have suffered from severe handicaps and many obstacles have retarded our progress.

Various amenities have been provided for improving the standard of living of the people who are employed as wage-earners and as a mass are known as workers, especially those engaged in the industrial establishments. "Labour" has come to occupy a special role and the problems of labour are multiplying and greater and greater efforts are made to meet the demands and urges of the workers who have rightly come to be regarded as partners in the industrial system.

On my part, I intended to tackle a few topics which I think has assumed serious import in recent years in India, at least according to me. But I propose to confine myself mainly with the organisation of the workers and the future of trade unionism, the problem of industrial relations, some aspects of wage policy and last but not the least, productivity.

Almost all the labour problems today revolve on the pivot of scientific and well-organised trade union movement. It has been accepted on all hands that the development of sound trade union organisation is a *sine qua non* for the success of industrial democracy which has to go hand in hand with political democracy. The success of our planning, progress and development depends greatly upon the workers—their zeal, enthusiasm and solidarity. It is, therefore, quite appropriate that trade unionism should be the first subject I would like to deal with. Indeed, the trade union movement has grown from small beginnings a generation ago, into a mighty organisation today. I have myself witnessed this remarkable change. But my friends will agree that all is not well with the present state of affairs of the movement.

Many Obstacles

It is a well understood fact that industrial democracy cannot succeed unless all concerned —workers, employers, Governments and the public—fully realise the importance of a strong trade union movement and its due place in the social and economic set-up both to safeguard the interests of labour and for realising the targets of production.

Trade union movement today is beset with many obstacles that considerably hamper its proper growth. The second Five-year Plan sums up these diverse causes: "Multiplicity of trade unions, political rivalries, lack of resources and the disunity in the ranks of workers." To these I would add: The lack of education among the labour force, the emphasis on the external machinery for solving disputes and the limited sympathy of employers and inadequate support from the Government.

A new era has dawned in the history of our country after the attainment of independence. At this juncture, any division in the rank and file of the trade union movement is likely to lead to lack of confidence among the workers in their organisations. All workers, whether in the field or factory, who believe in undiluted democratic and socialistic ideals in the running of the movement, should, therefore, join hands to form a single central organisation to represent, in an authoritative manner, all their reasonable demands. If such united body could be brought into existence, it would be to the everlasting benefit of workers and employers and, finally, ensure the maintenance of real industrial peace. With the increasing participation of Government in economic affairs, trade unions will find it more and more necessary to have a central body, capable of presenting to Government their points of view and render effective assistance in formulating the industrial and labour policies of the Central Government. Not that the present central organisations are not doing this job but one organisation can do it much better. An attempt should, therefore, be made to effect trade union's unity in India. Our goal should be one union in one industry and one central organisation for all workers.

Place of Strike

I would like, in this context, to touch upon the rights and responsibilities of the workers. One of the foremost questions that arise in the minds of the people is whether the weapon of 'strike' is absolute. This question has come to the fore ever since the general strike of the Central Government employees last year, which I personally consider to be an unfortunate episode and has greatly upset the smooth functioning and the healthy growth of trade union movement in our country and also has done no good to the working class interests. I have always believed that 'strike' should be the last weapon in the armoury of the workers and should be used very sparingly. As Mr. A. E. Monk, President of the Australian Council of Trade Unions had said: "To the trade union movement, the right to strike is inherent, and could never be sacrificed as a right, because the right to strike is quite often the only economic weapon that workers can use when their just claims are refused by employers or wage-fixing tribunals. The greater the strength of the trade union movement becomes in any country, the greater the need for responsible trade union leadership. Naturally, greater power accrues to trade unions with high memberships and the more intensified organisation of highly skilled organisation of workers. This makes it imperative that power should not be exercised capriciously either by officials of the organisation or by the workers themselves on their jobs." The rank and file of the trade union movement must keep this uppermost in mind, as sometimes they mistakenly consider strike as the simplest way of solving a dispute.

Personally, I feel we can avoid much of this unrest and conflict by the maintenance of good industrial relations which is of far greater value than the mere preservation of industrial peace and industrial truce. Especially in a progressive economy as ours, I consider this subject to be of vital importance. The state of industrial relations is intimately linked with the political pattern of the country in which it exists. The problem of industrial relations is also inextricably connected with the question of freedom of association, collective bargaining and methods of settlement of industrial disputes. It is in the light of these factors we should evolve methods that can achieve good industrial relations.

Human Relations

Industrial relations, in my view, are nothing more and nothing less than human relations. I would treat these relations as those existing in the joint family system. Nay, the mutuality of interest is greater here, for the latter is capable of dissolution and not so the former. Even if the members of the joint family are separated, they can conduct their business individually, but that cannot be done in an industry. If they try to do so, the whole industrial structure would collapse. Hence harmonious relations are much more essential here than in any other sphere. It is, therefore, highly imperative to evolve a suitable system of machinery for settling industrial disputes as also for preventing them.

Many of the difficulties which occur now can be conveniently overcome by evolving a suitable policy for the resolution of differences between labour and management by mutual agreement. Let me outline such a policy in brief. They should be bipartite and tripartite organisations which should always be in touch with the issues facing the workers and solve the differences that may occur from time to time. If they fail to bring about an agreement, a panel of conciliators, with complete knowledge of the working of the industry in question, may be constituted for every industry from among whom the parties can draft conciliators to settle disputes. Even if they are not able to bring about an agreement, active steps should be taken by Government, trade unions and employers' organisations to persuade the contending parties to a dispute to agree to voluntary arbitration. An agreed panel of arbitrators should likewise be prepared by the Government in consultation with the parties from among whom arbitrators may be chosen to give judgment on the differences. If the arbitrators are not able to agree, conventions must be built to appoint an umpire, well versed in the knowledge and experienced in the settlement of disputes, commanding the general confidence of both the parties. He should hear the dispute with assessors from both sides sitting with him. If this idea is actively propagated, in course of time, traditions and conventions would be built up to follow this line of action and, during a decade or two, there would emerge a panel of expert arbitrators who would have established for themselves a reputation and status for impartiality, wisdom and experience.

Wage Policy

Another important problem which has been the subject of serious discussion is the question of evolving a proper wage policy. It is to be recognised that, in India, the wages earned by labourers in many undertakings are deplorably low. Of course, many reasons have given rise to this. Plentiful supply of man-power and comparatively less opportunities is the major one. While the worker and the employer are directly and vitally concerned with the wages, the Government has also its share of responsibility in seeing to it that some measure of justice for all sections of the community is assured. In fact, when compared with welfare measures that assure for the worker better working and living conditions in respect of health, safety, housing, education, recreation, and social security, the guarantee of reasonable remuneration provides the firmest basis for harmonious industrial relations and, therefore, for the economic prosperity of the country. The payment of a satisfactory wage ensures the co-operation of labour and enables the worker to take his place as a partner in programmes of national development, where the significance of his role has long been accepted.

Prerequisites

It is, indeed, necessary that labour should be paid enough and sufficient wages. But it is generally felt by the employers that it is beyond their means, in the existing set up, to pay more for the workers. The only way this dilemma can be solved is by raising the productivity—a subject which has been well experimented in the Western world and which holds great potentialities to an underdeveloped country like India which is in the throes of economic development.

An appropriate labour policy appears essential for securing that degree of co-operation from workers which alone can lead to higher levels of productivity. The conditions essential for securing co-operation of labour are:

(a) Clear and genuine determination on the part of all concerned to co-operate. Constant demonstration, without mental reservation of good faith.

(b) Strengthening of trade union organisation.

(c) Move towards fair wages and decent working and living conditions.

(d) Assurance that the gains of higher productivity would be shared with workers.

(e) Dissemination to workers of all necessary information for intelligent participation in industrial affairs.

(f) Consultation with workers in personnel policy.

(g) Facilities and opportunities to workers for training and advancement.

These are some of the problems which call for our immediate attention and are necessarily to be solved if we want to realise our goal of the socialist pattern of society.

HOUSING SCHEMES IN THIRD PLAN

A total sum of Rs. 182 crores—Rs. 122 crores provided in the third Plan and Rs. 60 crores expected from the Life Insurance Corporation of India—will be available for various housing schemes of the Union Ministry of Works, Housing and Supply, for which Central aid is to be given to the States, during the Plan period. The housing programme includes subsidised industrial, low-income group, slum clearance and improvement, plantation labour and village housing projects, land acquisition and development, middle-income group schemes and the rental housing scheme for State Government employees.

MODERN HIGH PRODUCTION MACHINE TOOLS

From the best known names in America

We import and sell high grade American machine tools. The following are only some of the Companies we represent and for whom we invite enquiries.

The Ajax Manufacturing Company
E. W. Bliss Company
Cincinnati Shaper Company
Gisholt Machine Company
Gleason Works
The Hydraulic Press Manufacturing Company
Landis Tool Company
Potter & Johnston Company
Pratt & Whitney Company Incorporated
Rockwell Manufacturing Company Delta Power Tool Division
Scaky Brothers Incorporated
South Bend Lathe Works
The L. S. Starrett Company
Sundstrand International Corporation
Sheridan-Gray Inc.
Warner & Swasey Company
The Yoder Company

American Tool Works
Avey Division of the Motch & Merryweather Machinery Company
Barnes Drill Company
Cleveland Automatic Machine Company
Cleveland Hobbing Machine Company
Farrel-Birmingham Company Inc.
Fellows Gear Shaper Company

MR. AL FOIL TALKS TO A "POWER PACKED" MAGNATE

"And profits, Sir" concluded the smiling Al Foil, straddling the telephone " is just what foil ensures."

"Foil plays such an important part in the Electrical Industry, as a conductor. Do you know there's foil in your fan condenser? Foil's to be found wherever superior dielectric properties are required by relieving stresses . . . and for screening cables and coils against electrical interference too.

"Aluminium Foil is the lightweight economical answer to a big job . . . whether as insulation against damp, heat and insect damage or preventing leakage . . . and that means profits."

Don't be isolated by your insulation problem. No foiling problem is difficult enough to foil Al Foil.

VENESTA FOILS LTD. KAMARHATI, 24 PARGANAS, WEST BENGAL.
Branches at: BOMBAY, CALCUTTA, MADRAS, NEW DELHI
Selling Agents for Tea Chest Lining: WILLIAMSON, MAGOR & CO. LTD., Calcutta.

ACHIEVEMENTS AND SHORTFALLS IN IRRIGATION

TWO IMPORTANT EVENTS THIS MONTH

From Our Special Correspondent

NEW DELHI, 10*th October*

IN the immediate post-independence phase of development planning, irrigation secured considerable prominence and much importance was given to multipurpose river valley and medium irrigation projects. Now, it appears, irrigation has receded somewhat into the background, because State Governments now think more of industry than agriculture and only the search for power supplies often compels them to turn their attention to hydel projects. At the same time, there is the continuing failure to utilise the irrigation potential already created and to secure fair returns on the investment so far made: also, States' capacity for execution has been fully stretched in completing the projects already begun. Two important events this month—the inauguration of the Parambikulam-Aliyar project by the Prime Minister and the release by the Vice-President, Dr. Radhakrishnan, of water into the Rajasthan canal (near Hanumangarh)—emphasise the comparatively less publicised work of bringing irrigation to arid areas.

DELHI LETTER

Parambikulam

A special feature of the Parambikulam project—apart from the co-operation of Kerala with Madras in making it possible—is the possibility of progressive increase in effective irrigation even before the completion of the entire scheme. The direct return to the Government on the outlay is expected to be 5.2 per cent. The bulk of it will come from power, but irrigation rates will also contribute to it, though disproportionately to the cost of the total outlay on the project. Thus, of the estimated investment of Rs. 35 crores, as much as Rs. 25 crores represent the expenditure on irrigation, but the income from it will only be 15 per cent of the total. Thus even where a multipurpose project is productive of a fair overall return, electricity virtually subsidises water for agriculture. Dry tracts in Coimbatore district of Madras State will be irrigated to the extent of 240,000 acres as a result of six major dams, two minor dams, tunnels and canals which form part of this scheme. For a State like Madras, which has already reached the limits of the use of available water resources inside the State, this should prove a great blessing.

Rajasthan

The Rajasthan project is costlier; the total outlay is estimated at Rs. 200 crores (including the proportionate cost of Harike barrage and of dams on the Beas) and at Rs. 552 per acre of irrigated land. The first stage costing Rs. 76 crores will not be over until 1968-69 and the second stage till 1975-76; eventually the project is expected to irrigate 3.6 million acres. But its significance lies in the fact that it will help to convert India's dust bowl in the Rajasthan desert into a rich granary. In a sparsely populated area—the population density is as low as 6 per sq. mile in Jaiselmer district and 39 per sq. mile in Bikaner division—the supply of water will open up opportunities for development and cultivation of commercial crops like sugarcane, cotton and oilseeds will in time attract industries to process them. The project is expected to result in the colonisation of two million people and during construction it provides employment to 50,000 people and will continue to do so for the next 15 years. This labour force has to be brought now from outside this area. New townships can arise—and one must hope that they will be planned—and drinking water supply which is now scarce in these areas will come as a boon to its inhabitants.

An important indirect benefit is the check provided by the development of these areas to the steady advance of the desert. Sands which now move across the Aravallis and invade Delhi, South Punjab and Uttar Pradesh will be stemmed by the green belt; it is also hoped that these deserted regions will not in future become the breeding ground for locusts.

Extraordinary Figures

These high hopes warrant the high priority granted to the project. The Rajasthan Government, however, has estimated the financial returns from it as follows:

	First Stage %	*Whole Project* %
After the 10th year of completion ...	4.67	7.1
After the 20th year ,, ...	6.9	13.0
After the 30th year ,, ...	9.65	36.6

These are somewhat extraordinary figures. Apart from the incredibly high percentage return on the whole project visualised after 30 years (about which no one now planning or executing the project can be called to account), it is clear that the rate of return will be very low for as long as ten years after the completion of the first stage of the project. To what extent the return can be increased by measures taken in advance to ensure full utilisation of benefits as and when water is made available needs careful planning; the scope for land settlements and establishment of workers' communities, which may help in the work of construction of canals and channels now on the assurance of land for cultivation later, needs further investigation. It is not enough to be merely idealistic about turning waste land into a fertile valley. There is talk of a Master Plan, of more farms like Suratgarh; but this is an area where the human material is as important as other resources for development and is now scarce. Adventurous families from all States can be brought into this area to create composite labour force and the experience in Dandakaranya may be useful in deciding the types which can be most successfully transplanted—for colonising the area. There is nothing to show that official plans have passed beyond the paper work stage: since irrigation is now expected to start from one of the distributaries (Naurangdesar) the time for translating such schemes into action is very near.

Steps for Improvement

The Rajasthan canal project thus offers a contrast to others undertaken in areas where there are settled local communities, in spite of which irrigation utilisation has often been low and returns on investment oftentimes *nil*. Irrigation systems are working at a loss in almost all the States; though their general benefits on the economy of the country should also be taken into account in judging their usefulness, substantial improvements in financial returns to the extent feasible should be achieved.

The third Plan has recommended the following steps for this purpose:

(1) Synchronisation in the programmes for the construction of headworks, canals, distributaries, water-courses and field channels, so as to ensure that, as far as possible, water can be passed down to the fields as soon as they become available at the headworks.

(2) Setting up of development blocks in the area covered by a project, soon after the approval of the project.

(3) Marking of the lines of water-flows in village maps, so as to enable beneficiaries to excavate channels in advance or (if they default) by *panchayats* who can recover the cost later from them.

(4) Arrangements for soil surveys, experimental farms and demonstration of methods for economical use of water.

(5) Since metred outlets are expensive, other methods of determining volume of water used are necessary on the basis of studies of irrigation practices suited to different crops.

(6) Complementary measures to realise the full benefits of irrigation—like supply of seeds, fertilisers, credit and transport facilities—should be simultaneously ready with irrigation.

(7) Concessional water rates—for two or three years in the initial stages—may be adopted for promoting water use. The Planning Commission, however, feels that, except for this temporary concession, water rates should cover working expenses and debt charges and, except in scarcity areas, irrigation schemes should not involve loss to general revenues. Maintenance costs have increased enormously in recent years. Besides an increase in rates where water is now supplied on an optional basis, the Planning Commission considers that, irrespective of the actual use, a compulsory water cess should be levied on the entire area commanded by a project.

Benefits

This is in addition to the betterment levy in which enforcement has lagged behind in every State. Actual realisations during the second Plan period amounted to Rs. 3.5 crores only, as against the initial estimate of Rs. 47 crores. In the third Plan, the revenue from betterment levy and flood cess is estimated at Rs. 39 crores but the position has not improved considerably and not till long after the elections can we expect substantial progress in this respect. The Research Programme Committee of the Planning Commission has now stressed the indirect benefits from five major irrigation projects surveyed by it—Gang Canal in Rajasthan, Sarda Canal in U.P., Tribeni Canal in Bihar, Damodar Canal in West Bengal and the Cauvery-Mettur project in Madras—though obviously there are very large differences even among these; but indirect benefits alone cannot justify large investments.

In the absence of a sufficient rate of return to State Governments, maintenance of projects tends to be neglected. The Third Finance Commission will have to consider this problem in the context of its award and (like its predecessor body) may indicate the extent to which some States have failed to provide for maintenance while devoting more attention to new construction. In answer, some of them may say that they had to face strong political pressures —because of agitations set afoot by Opposition parties in West Bengal and the Punjab for example—and that their main attention was devoted to making the cultivators use the water first to increase agricultural production.

Tasks Ahead

The total irrigation potential still remaining to be utilised at the end of the second Plan is 3.2 million acres, with only 10 million acres having been irrigated so far, against the potential of 13.2 million acres created. Again, there has been a substantial shortage in the fulfilment of irrigation targets of the second Plan. Originally, it had been proposed to bring an additional area of 12 million acres under irrigation through both major and minor schemes; when the Plan was cut down in 1958, this was reduced to 10.4 million acres and the actual outlay also declined to Rs. 370 crores. In the third Plan, excluding flood control, the outlay on irrigation will be Rs. 600 crores; this includes Rs. 436 crores for projects carried over from the second Plan and Rs. 164 crores for new projects (the latter includes many schemes on which technical studies are not yet complete). Since foreign exchange is not a serious problem—(Rs. 50 crores is the estimate of total need) capacity for execution alone will decide how much potential is created. Also, priority will have to be accorded to the storage schemes on the Beas to be undertaken under the Indus Waters Treaty and the large number of medium irrigation projects (about 95 in number) on which more emphasis has been placed in the third Plan.

All this will increase total water utilisation in the country from 27 per cent of the usable flow at the end of the second Plan to 36 per cent at the end of the third Plan, provided implementation is in accordance with the Plan. Lack of effective measures to make even such a low rate of use sufficiently remunerative is, therefore, to be strongly deplored; the release of the Rajasthan Canal waters is an occasion for reminding the authorities concerned of their unfulfilled responsibilities.

AMERICAN LETTER

ECONOMY STEADILY MOVING FORWARD

UNEMPLOYMENT EXPECTED TO FALL

From Our Special Correspondent

NEW YORK, 7*th October*

ECONOMIC conditions in the United States are still on the upgrade. An extremely hot summer which was not conducive to much activity, particularly retail trade, has given way to a cool autumn. Things are humming again, except in the work-struck 33 factories of Ford Motor Company. Fortunately, the General Motors' labour walk-out did not last very long and, if that is any precedent, the work stoppage at Ford should not be of any long duration either. So far, American Motors is the only major manufacturer who, on its own, offered workers a profit-sharing arrangement. The trade unions did not insist on it with the other manufacturers.

Two hurricanes also slowed down business in some areas where they struck, but rebuilding now makes for greater activity than before. There is an almost universal sanguine view that business expansion will continue and may carry through all of next year. Thus, the analysts, forecasters and other prognosticators with typical American fervour for statistics are having a field day.

Growth Rate

The U.S. Treasury's own team of economists has come out with an estimate that the gross national product will reach a level of $540,000 million in the fourth quarter of 1961. The first quarter figure was $501,000 million, for the second quarter it was $516,000 million and the third quarter may show a seasonally adjusted annual rate of $526,000 million. If all these 'guestimates' are correct, it would mean an annual G.N.P. for 1961 as a whole of $521,000 million, or 3.2 per cent higher than in 1960.

There is much applauding about the growth rate. But the fact of the matter is that the same ratio has been prevailing for several decades. It is and has been created mainly by a growing population and by an increased utilisation of machines, or technology, or automation. The growth rate in other Western industrialised lands, such as West Germany and Japan, has been much higher, owing to enlightened tax policies which have not yet penetrated to Washington.

The President's Council of Economic Advisers who are more politically inspired than the civil servants in the Treasury are even more sanguine. Their projections are that the G.N.P. may reach $600,000 million by the end of 1962. The Council, apparently, has in mind the constantly increasing defence procurement which seems inevitable, while the gentlemen in the Treasury are inclined to wait and see what happens.

In this perspective, the unemployment is being brushed off as "not too important." It still remains in the neighbourhood of 7 per cent of the labour force, but, if all goes as well as the sages see it, within the next 12 months, it may gradually be approaching the 4 per cent level which is now called "reasonably full employment." Formerly, that figure was 3 per cent, according to the experts. Politics may have dictated the upward revision to make it look better.

No Inflation Yet

So far, the recovery has not been accompanied by any marked inflationary tendencies. This is due, perhaps, to the ever-growing recognition that inflation can be disastrous and can annihilate benefits of wage increases. As is well known, President Kennedy wrote letters to the heads of the major steel companies, asking them to refrain from boosting steel prices. The replies were cool. A growing number of news analysts then came to the conclusion that the Kennedy Administration was anti-business. This reaction all but horrified Washington.

In order to eradicate this impression, President Kennedy took two major steps. He appealed to all trade unions to show restraint in current and future wage negotiations, so that business and industry would not be forced into price boosts. Secondly, he made peace with members of the National Business Advisory Council, which includes the Chairman of U.S. Steel. They had walked out on the President previously and told him in no uncertain terms that they could not go along with the suggestions of his socialistically inclined brain trust of academicians.

In this respect, Mr. Kennedy has proven to be a little more realistic than the last Democratic President, Mr. Franklin Delano Roosevelt. The Kennedy fortune, reputedly about $400 million, was made by the President's father, Mr. Joseph Kennedy, who, at one time, was U.S. Ambassador to Great Britain. Being the second generation of wealth, he seems to have a better idea of the intricacies of business, but he has not forgotten either that his grandfather as a relatively poor Irishman was *persona non-grata* with the gentry of Boston.

Two barometers are fairly accurate in pointing to the absence of inflation. One is the average rate of interest charged on short-term loans by banks and the other is the stock market. Between the first half of June and the first half of September rates have changed little. The average rate is now about 4.68 per cent as against 4.65 per cent three months previously.

Outside of temperamental rashes on both the upside and the downside, stock prices, too, have remained fairly stable. Some stocks have been favoured, because of favourable announcements, others are depressed, because of strikes, but, as a whole, there has been an amazing equillibrium in the stock trading picture. Volume has been holding up well. And there is a steady flow of new issues coming to the market, supported by rising capital expenditures which, however, are still on the cautious side.

U.S. Operations Abroad

While industrial expansion at home is on a selective basis, foreign operations and the export of capital from the U.S. continue to accelerate. A recent survey among 350 co-operating companies showed that 107 concerns had 155 foreign-base subsidiaries. Another 70 firms said they were considering or planning actively the establishment of such affiliates.

It may be of interest to note that, of the 155 foreign subsidiaries, about 90 per cent function as both holding and operating companies. Of the 123 companies whose incorporation dates are known, only 8 per cent were established before 1950. At least two-thirds were less than five years old.

Following very much the holding company pattern, the geographical distribution is about as follows—61 in Panama, 35 in Switzerland, 18 in Venezuela, 18 in the Bahamas, 11 in Canada, three in Liechtenstein, three in Bermuda, two in Liberia, one in the United Kingdom and one each in Belgium and the Netherlands.

Involved in this trend are tax benefits, registration of ships under other than the U.S. flag, more autonomy and independence in international operations, better integration of overseas expansion, closer proximity of management and sales personnel to markets and a diversification of financial and political risks. Licensing and sub-licensing of patents, trade marks also play a role. Finally, there is the investment angle which makes it possible for American capital to participate in greater profitability of industry abroad, as compared with such opportunities at home.

Overseas base subsidiaries, generally, have supplemented rather than supplanted existing export or international units and there seems to be general agreement that these operations have proved worthwhile. It is the twentieth century American version of British investment penetration into the "colonies" in the heyday of the Empire.

United Nations News

At this writing, it looks as though the East and the West may agree on a successor to Mr. Dag Hammarskjoeld who was killed in Africa, without fighting over the Soviet proposal of three secretaries (Troika) with veto powers. The gentleman acceptable to both sides, apparently, is U. Thant, United Nations Ambassador from Burma. Mr. Thant would serve and fill the remaining term of Mr. Hammarskjoeld which runs until April 1963.

(*Continued on page 762*)

LABOUR PARTY ANNUAL CONFERENCE

(*From Our Own Correspondent*)

LONDON, 6*th October*

THIS year's conference of the Labour Party in Opposition has been more interesting than usual, because it is of more practical import. For the first time, there seems to be emerging a unified Labour Party with some chance of getting its policy adopted by the electorate. Its resolutions are, therefore, far less academic than a year ago, when the party seemed hopelessly split between right and left. How has this change come about? The leadership under Mr. Gaitskell is unchanged, and yet the deep divisions of opinion have disappeared, at least on the surface.

LONDON LETTER

The explanation is not that the right wing of the party, led by Mr. Gaitskell, has triumphed so much as that the leader of the party himself and its policy-making branch have been sufficiently influenced by the left which they defeated to adopt fundamentally compromise measures. Thus, the broad policy of the Labour Party is, once again, a middle course, losing the lustre of the left but acquiring the solidity which comes of a course to which broadly all sections can adhere.

And what does this mean in terms of precise policies? The burning question this year is the Government's wage policy. This, bitterly opposed by the trades unions, was reflected in the resolutions condemning the Government for its high-handed methods of overriding Wages Councils and arbitration bodies and seeking to impose solutions. Thus, the party is at one in the support of official strikes, resulting from any attempt to restrain wages. Of course, this is a hand-to-mouth policy, for, when the Labour Party has to go to the country at the next General Elections, these issues will probably not be before the electorate. Similarly, Mr. Gaitskell was on firm ground when he said that he would not wish to gain the votes of public servants to overthrow a Government which was denying them their wage rights. The ballot box should not, in his view, be used as a pressure weapon in wage disputes—but, again, this is not going to be a long-term issue.

On defence policy, it is difficult to see that the Labour Party (except for the left wing who would still like unilateral disarmament) has any different policy from that of the Government. Indeed, on foreign policy, generally, Labour and the Government are broadly at one, though under this head the leaders of the party suffered minor defeats when the left wing won their resolutions condemning the presence of German soldiers for training in this country and the use of atomic missile bases.

Common Market

The main economic issue before the Conference was that of the Common Market and the Labour Party has as many proponents and opponents as the Conservatives. There were demands for a positive line to be taken, but Mr. Gaitskell came out for a policy of masterly inactivity. It was useless, he argued, to come to decisions on such a matter without full information. The Government were making inquiries on the the conditions under which the U.K. could enter the Common Market and the results would have to be awaited. The official line is "Probably the balance of economic argument is in favour of going in; possibly the political objections are not quite as strong as has been said." And then came the conclusions that the answer must rest with the House of Commons and that the Labour Party in the House could not have its hands tied beforehand by the views of a Conference insufficiently informed. Thus was the seal set on the issue raised a year ago—should the Annual Conference of the party govern parliamentary policy or merely advise it. Parliamentarians have won.

Finally came the great issue of nationalisation. The left wing maintained the issue was blurred—did the party advocate more nationalisation or didn't it? Mr. Gaitskell argued that the policy was clear—road haulage and steel are to be re-nationalised and the party is pressing on with its claims for public ownership of the freehold of building land in order to take from the private and put into the public purse the enormous increase in land values resulting from an expansion of the population and an expansion of housing.

BRITISH BANK RATE REDUCED

NO RELAXATION, HOWEVER, IN CREDIT RESTRAINTS

ON Thursday, 5th October, the Bank of England, with the concurrence of the Chancellor of the Exchequer, brought down the Bank rate by ½ per cent to 6½ per cent. This is the first change in the Bank rate since the Chancellor's summer budget had raised it sharply by 2 per cent to 7 per cent, as a part of the broader strategy of correcting the basic disequilibrium in the balance of payments position. The crisis rate of 7 per cent was also intended to halt the heavy outflow of short-term capital from Britain, which developed shortly after the revaluation of the West German mark and the Dutch Guilder in March. In recent weeks it has become increasingly clear that the July measures have, on the whole, produced the desired results. The selling pressure on the pound sterling has yielded place to buying pressure again and the sterling dollar rate has been knocking at the upper limit of parity, namely $2.82 per £. In fact, the rate is being held a little below $2.82 by the Bank of England by freely making available sterling to the market. This has, once again, contributed to a rise in Britain's foreign exchange reserves. After making allowance for special factors such as the I.M.F. credit and the repayments to European central banks of credits (amounting to £325 million) taken under the Basle agreement, the foreign exchange reserves of the U.K. have shown a definite improvement. It is stated that short-term funds have actually started flowing back to London. Market observers in Britain believe that, in the past few weeks, such funds were quite substantial in the market for local authority loans.

Reasons for Change

The monetary authorities in Britain, however, have no desire to encourage the inflow of such short-term funds, because it creates a false impression about the basic balance of payments position and aggravates the problem when there are any adverse developments for Britain. It is also said that the British authorities wish to narrow the gap between U.K. and U.S. interest rates with a view to reducing the strain on the dollar. For some days now, the dollar has again been under pressure, with a recurrence of gold loss which amounted to as much as $75 million last week. These causes explain the ½ per cent cut in the Bank rate last week.

The Chancellor of the Exchequer, Mr. Selwyn Lloyd, in his address to the bankers at the Bankers' Dinner at Mansion House, took the opportunity to explain the implications of the Bank rate change. He categorically denied that the Bank rate reduction was an indication that the time had come to relax any part of the credit restraint adopted in the month of July. On the contrary, he reiterated that the credit restrictions and other measures introduced in that month must still continue. He maintained that even the new Bank rate was quite consistent with those policies, as it was still a high rate. He went on to point out that the special measures taken by him to curb the home demand had been vindicated by the subsequent evidence. The Chancellor was, however, quite conscious of the fact that the immediate cost of maintaining the sterling at the existing level was inordinately heavy. It entailed, on the one hand, the burden internally of a high Bank rate and, on the other, a loan of $1,500 million from the I.M.F. which would have to be repaid within three to five years. But Britain, Mr. Lloyd said, carried these burdens, because it was convinced of the supreme value to itself and to world stability of maintaining sterling at the present value. Elaborating this point, Mr. Lloyd observed:

"The alternative of a floating exchange rate—or worse still of devaluation—is quite unacceptable because it would destroy the stability of world trading conditions, on which we depend, and would lower the standard of living here.

"It would be sheer defeatism to suppose that it is not possible for us to be competitive at the present exchange rate. It is a matter of restoring a healthy trend of our costs and prices, and of keeping the way clear for exports to absorb the proper share of our increasing resources."

Summing up, Mr. Lloyd contended that Britain's capacity to discharge its defence obligations overseas, its liability to give aid to the poorer countries, the growth of its economy, its industrial equipment, its standard of living, all really depended on one factor—competitiveness, and ability to compete in world markets.

Referring to the balance of payments position of Britain, the Chancellor stated that the first aim of his policy was to ensure a proper balance between home demand and the development of export markets. Consequently, the home demand must be kept in check until the right proportion between home demand and export demand had been established. Even thereafter, it would be possible to allow home demand to rise only at the rates at which the total productive capacity expanded. The main source of weakness in the economy which prevented a proper balance between the internal demand and export demand was the persistent tendency for wages and salaries to rise at a much faster rate than national productivity. Mr. Lloyd said that this imbalance between wage-rises and productivity-increases had meant inflation, rising costs and prices, and failure of exports to increase sufficiently and hence continuing weakness in the balance of payments. But he was determined to change all this and to bring about a better relationship between the increases in personal incomes and increases in national productivity. This did not imply, he said, any attack on wages. On the contrary, he was patiently and steadfastly defending wages, in that his object was to sustain their purchasing power. As far as the role of Government in maintaining the balance in the economy was concerned, the Chancellor gave the assurance that the Government would keep the public expenditure within bounds, in order to hold back inflationary tendencies. But it was also necessary, in this connection, that both sides of industry—labour and management—should co-operate to attack outdated practices which restricted production. He exhorted the common man to realise that restraint over personal incomes alone would help in maintaining the purchasing power of his income.

Speaking about export drive, the Chancellor stated that a great deal was being done. Credit facilities were as good as any country's. Nevertheless, it was necessary constantly to review these facilities and other assistance that was being given for promoting exports. He wanted businessmen to devote still greater attention to "development of salesmanship and the status of the salesman. Alluding to what the Government could do to boost exports, he made this striking observation:

"The most valuable contribution the Government can make is to keep the economy in balance and hold back inflationary tendencies. That includes keeping public expenditure within bounds."

Bank of England Governor's Views

Lord Cromer, making his first important public speech as the new Governor of the Bank of England, said that he had little to add to what the Chancellor had stated about the reduction in the Bank rate, except to endorse the latter's statement that the change called for no less resolution in the application of the Government's declared economic policy over the longer run or of the other measures of monetary restraint. Lord Cromer warned the nation that Britons had been spending overseas more than what they had been earning overseas. This was the reason why Britain had to borrow from the I.M.F. He appealed to the people to use the breathing space provided by the I.M.F. loan to rectify certain basic imbalances in the British economy and observed:

"We have allowed the level of demand to grow in such a way that, in the home market, behind debilitating protective barriers, increased costs have been passed on to the consumers in higher prices, with the result that, by comparison, the profit motive in exporting is today in many cases inadequate. This is a highly vulnerable state of affairs for a country that depends to the extent that we do on our ability to export. It has been estimated that to make ends meet in the international sense, that is to avoid running further into debt or dangerously depleting our reserves, we need to increase our exports by an amount which is indeed formidable. In the matter of price, no country, least of all ourselves with our heavy dependence on exports, can afford to ignore the economic climate and conditions of the contemporary world. That climate today is one of generally stable prices, for the sound reason that those countries, who are making the most progress in increasing their real wealth, are also pursuing policies of stability."

Emphasising the value of stability of currency, the Governor of the Bank of England observed that "increases in money profits or money incomes only represented increases in real wealth if the increased money is matched by an equivalent increase in goods or services. Otherwise the increase in money, be it in profits or incomes, merely meant paying more money for the same goods. This cannot be widely enough understood."

Some Basic Questions

The new Governor of the Bank of England then posed a series of questions, which have been crossing his mind ever since he took office a few months ago. He gave no answers to them, and merely added that answers had to be found in the breathing space which the U.K. has obtained. The questions are:

"Is it, perhaps, not possible that the overall level of Government expenditure today has grown to levels that the population as a whole is not willing to support by forgoing personal consumption to the extent necessary? Is our system of taxation matched to the present needs of the nation? Are the money rates we have seen in this country in recent years the most appropriate in achieving the rate of progress we would like to see? Are we saving enough?

"Is the high level of Government expenditure overseas not perhaps based more on our Imperial past than tailored to our changing position in the

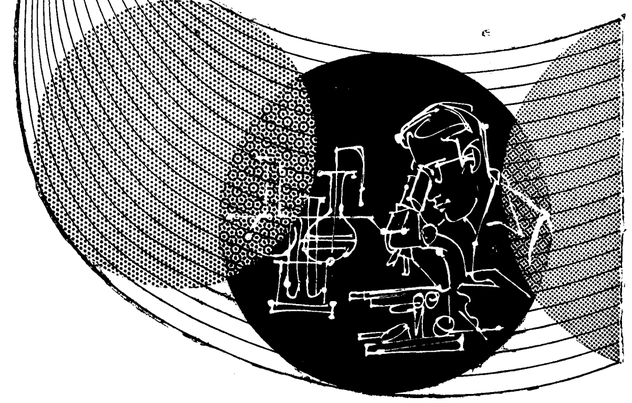
Dyestuffs The Key to Industrial Prosperity



Dyes play a key role in the manufacture of textiles, paints, plastics, paper and ink—all necessities of day-to-day life. Until Independence, India depended on imported dyes.

AMAR DYE started manufacturing dyes in 1956. Today, by dint of intensive research we can offer dyes comparable in quality to the imported products... and at the most competitive prices.

The rising tempo of industrial activity will generate an overwhelming demand for Dyestuffs. We shall ensure that this demand is fully satisfied.

CENTRAL COTTON COMMITTEE MEETS

SPECIAL STRESS ON INTENSIVE METHOD OF CULTIVATION

IT is a pity that the very first year of the third Plan is expected to witness a distinct setback in the production of cotton, the latest estimate of the crop being no more than 4.8 million bales, representing a decline of 600,000 bales as compared with the actual output of 5.4 million bales in the last year of the second Plan (1960-61). The gap that has to be covered between this level of output and the modest target of 7.0 million bales fixed for 1965-66 is thus very wide —as much as 2.2 million bales. Mr. Shankar, I.C.S., Special Secretary to the Union Food and Agriculture Ministry and Vice-President of the *Indian Council of Agricultural Research*, certainly struck a note of realism when he urged, in the course of his speech at the eighty-fourth meeting of the Indian Central Cotton Committee in Bombay last week-end, that, since the task of achieving the third Plan target was not an easy one, the Committee, the Centre and the State Governments should put in all resources for the fulfilment of the target. Appropriately enough, Mr. Shankar underlined the necessity for concentrating attention on intensive method of cultivation, "as there is no scope for increase in the acreage under cotton."

Much effort has no doubt been made to augment the per-acre yield of cotton, as witness the notable rise in the average yield (all-India) from 76 lbs. in 1951-52 to 111 lbs. in 1960-61. Even so, the current yield is considerably low *vis-a-vis* that in several other countries, as, for example, 650 lbs. in the U.S.S.R., 550 lbs. in Egypt, 465 lbs. in the U.S., 452 lbs. in Mexico and 390 lbs. in Syria. As for quality, though the production of long-staple cotton has gone up in recent years—in 1960-61, it was at the record level of 2.44 million bales, as against 1.86 million bales in 1959-60—much still remains to be done to improve the varietal growth of cotton and to protect the crop from the damage caused by pests and diseases. Drawing attention to the latter aspect, Mr. Shankar said: "A well-coordinated programme for production and distribution of pesticides, along with the education of the farmer in the ways and means of controlling these various pests and diseases is the need of the time."

The I.C.C. Sub-committee on pest and disease control has done useful work. Its latest report considered at the meeting indicates not only a study of the pests and diseases that affect cotton but also the extent to which control is achieved over them and the extent to which it is possible to achieve greater control through research, etc. The Sub-committee has suggested certain legislative measures to minimise the incidence of pests and diseases. How urgent is the need for effective control will be evident from the fact that such control will reduce the loss now put at about 15-20 per cent or about 700,000-1,000,000 bales annually.

Cotton Price Policy

An important pronouncement which Mr. Shankar made in his speech related to the Government's decision to announce in future the cotton price policy as much in advance of the season as possible. The decision is to be welcomed in that it will enable the growers to plan their programme of cultivation well in time. Alluding to the cotton control policy for 1961-62, Mr. Shankar said that the efforts of the Cotton Committee to secure an increase in the floor price for cotton had materialised. He was aware that opinions were expressed in the last season regarding the upward revision in the ceiling price also, but said that it was decided to take up the floor price first before the ceiling could be raised, "because the foundation of the floor must be strongly laid." Of the various other measures which Mr. Shankar thought would meet with general approval, one pertains to the removal of the system of compulsory survey of cotton and fixation of a uniform premium of Rs. 50 per candy for reserved area cottons. Similarly, the suggestion for early allotment of Indian cotton quotas to mills had also been implemented this year.

The Central Cotton Committee considered the recommendations made by the various sub-committees—policy, agricultural research, technological research, cotton ginning and pressing factories, and cotton forecast. The Committee felt that the need for taking up seed testing and certification work in respect of cotton on a systematic basis in order that the growers are assured of quality seed intended to be used for sowing. It agreed to the suggestion that information regarding the existing facilities for this purpose in the various States should be ascertained and the possibilities of augmenting them for work on cotton explored. The Committee also noted the progress made under the scope for the development and improvement of Sea Island cotton in Kerala, Mysore, Madras and Andhra Pradesh. In its opinion, the irrigated areas in Mandya and those coming under the Tunga and Bhadra projects offer scope for expansion of this cotton in the coming years. As for Kerala, the potentialities for development are confined mostly to young rubber plantation areas as an inter-crop. The Committee laid great emphasis on the need for preventing such malpractices as mixing of Desi and American cottons through the strict enforcement of various cotton legislations.

Schemes Approved

In the course of its deliberations, the Committee approved of the extension of seven existing schemes and sanctioned 11 new schemes which aim at the evolution of new cotton strains superior to the existing ones, improvement of yields, and control of various pests and diseases. One of the new schemes envisages the breeding of long-staple American cotton under irrigated conditions of Rajasthan for (i) the Ganganagar area which is served by two canals, namely, Ganga canal and the Bhakra Nangal canal, and (ii) the areas coming under the Chambal project.

The Committee endorsed the recommendations of the Cotton Forecast Sub-committee that the reports on the crop estimation surveys on cotton in the major cotton growing States might be reviewed in future by a statistical sub-committee. On the subject of improving the accuracy of the cotton forecasts, the Committee agreed to the appointment of a special sub-committee, consisiting of the cotton forecasting authorities of the important cotton growing States and other experts, to examine the whole question in the light of the crop forecasting procedure followed in the U.S. and make recommendations for ensuring that the official estimates of the Indian cotton crop were as accurate as possible.

The Committee noted that the present position of the enforcement of the cotton legislations in various States was very unsatisfactory, in view of the repeated reports of bad ginning, mixing, watering, etc., of cotton. Accordingly, it recommended that this should be brought to the notice of the Central Government for taking necessary action regarding the provision of adequate staff for the purpose.

The progress of work at the Committee's Technological Laboratory during 1960-61 was reviewed and the programme of work for the year 1961-62 was approved by the Committee. It also considered the report of the Visiting Committee on the work done by the Laboratory during the triennium ended 31st May 1961. The Director of the Technological Laboratory was authorised to implement the various recommendations made by the Visiting Committee.

The Committee reviewed the present position in respect of the project for intensification of regional research on cotton, oilseeds and millets and noted with satisfaction the progress made so far. The recommendations made earlier by the Policy Sub-committee regarding the ways and means of finding funds for meeting the increased expenditure on the Committee's schemes anticipated during the third Five-year Plan, were approved.

DOWN UNDER

AUSTRALIA, the land of kangaroos and cricketers, is one of the 50 countries importing BINNY'S textiles.

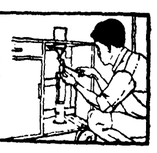
BINNY'S fabrics are made from yarns spun only from cotton of the best quality and are dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control* ensures maximum durability and perfect finish.

*Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

Testing size mix to ensure strengthening of yarn

Viscosity and temperature of the size mix are tested to ensure uniform penetration, dressing and strengthening of yarn.



QUALITY FABRICS

BINNY & CO. (MADRAS) LTD.

Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

BINNY - a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels
Anticrease Suitings • Tussores • Union Fabrics • Silk Sarees
etc etc.

FINANCES OF COTTON TEXTILE FIRMS

DIVIDENDS GENERALLY MAINTAINED—NO DISPOSITION TO PANIC

From Our Special Correspondent

MANCHESTER, 3rd October

MANCHESTER LETTER

ANY survey of the past financial performance of predominantly cotton textile firms must be actively tinged with full recognition of the very different circumstances ruling at present as compared with those encountered during the period whose profits are now being announced. The swings of fortune have a habit of becoming ever more violent in Lancashire; the current reversion to almost complete idleness among customers is in marked contrast to the very hectic conditions which were prevalent little more than a year ago.

Reports lately received have in general reflected the widespread improvement in demand which followed the launching of the reorganisation scheme and continued without cessation until the end of last year. The completion of subsequent orders, which are only now coming to an end, has been effected on more than adequate selling terms and the existing dullness will not be mirrored in balance-sheets until next year. Already, however, the warning notices have gone up. The season for full-scale company comment is not yet at hand, but the preliminary statement by the Calico Printers' Association is indicative of the trend. The dependence of the trade on climatic conditions is emphasised in the report: "The poor weather in the summers of 1960 and 1961 led to a serious contraction of demand from the home trade and current orders to do not indicate any immediate improvement in the general level of activity at the Association's printing and finishing works."

Another of the big groups in the textile finishing trade meanwhile reports less satisfactory conditions in the first half of this year as compared with 1960. Again, passing its interim dividend, the Bradford Dyers' Association says that the total volume of business available to commission dyers as a whole has been considerably less than last year. Competition remains severe and increased costs have not so far been adequately compensated by increased prices.

A New Venture

Among the few firms the full reports of which have lately been received is Barlow and Jones Ltd., whose business in the past has centred largely on the provision of household textiles. Although the Company has shared in the recent favourable conditions in textiles, a new venture has been infused into its affairs. This consists of John Myers mail order group, which was acquired very cheaply a few years ago and has now been built up into an enterprise which provided a trading profit of nearly £200,000 in the past 12 months.

Mr. Eric Cartwright, the Chairman, is able to announce record profits of nearly £658,000, as against less than £550,000 for the previous 18 months. But he is careful to indicate the difficult trading conditions now being so widely encountered in both spinning and weaving. The group still has a good order book and no stocks of yarn but it has been impossible to avoid a reduction in margins through the general falling off in demand. "No concentration has yet taken place in the converting and merchanting trades," says Mr. Cartwright, "and, until this occurs, the returns on this side of the business will continue to be modest, as in the past."

Riverside Mill at Stalybridge, which contains more than 700 automatic looms, is to be closed by the owners Jackson and Steeple Ltd., and the cloth production transferred to the Cicely Bridge Mill at Blackburn, which is owned by a subsidiary, John Baynes Ltd. This is part of a re-equipment and expansion programme planned by the Group under which the Blackburn mill is to be extended to accommodate additional new machinery and allow the production of cloths formerly woven at Riverside Mill.

In a statement today, Jackson and Steeple Ltd. said that employment would be available elsewhere in the group for most key-workers. Staff and operatives who became redundant would be entitled to compensation.

The 7 per cent Bank rate is slowing down business in the textile industry and causing customers to run down stocks. The British Man-Made Fibres Federation—which described the current Bank rate as "high"—suggested this in a report issued in Manchester. With textile merchants operating cautiously, the man-made fibres trade had been a little slow in pulling out of the usual summer lull. The Federation announced a sharp fall last month in production of yarn and staple. The output of 41,950,000 lbs. was affected by holidays in a number of production centres and was nearly 9,000,000 lbs. down on the previous month.

Recession Confirmed

"There are, of course, marked seasonal fluctuations in demand in the textile and clothing industries and sharp month to month changes in the rate at which orders are received should not by themselves be taken to imply similar sharp changes in production; they may, for example, lead to changes in the length of order books or the level of stocks." With these words, the Board of Trade covers itself against any unwise speculation about the monthly figures which are issued reflecting the state of trade over the textile market as a whole. At the same time, the latest returns cannot disguise the disappointing trend which has developed to such a degree during the past few months.

The index number covering the volume of total orders and deliveries is based on the 1959 level, the April figure in that year for orders on hand representing 100. In the second quarter of 1960, a rise had taken place to 137 and, even by the end of last year, orders held by producers still showed a figure of 136. The subsequent decline in 1961 brought the index number down to 123 by the end of the second quarter and to 116 by July.

Net new orders are now running well below the 1959 average, set at 100 and in the first half of this year were about 5 per cent below the level two years ago. In July, a month when holiday influences must be borne in mind, the figure had slumped to 73, a 13 per cent drop on the same month last year.

Deliveries of goods have not been held up, according to these returns, and throughout the period covered by the figures since 1959, have been within a 15 point variation. In June and July this year, they were about 5 per cent down on the 1959 average, but, in view of subsequent measures by which producers curbed their output, later figures will undoubtedly show a falling off in the quantity of supplies moving into distributors' hands.

Interim Pointers

Considering the anxiety which is, understandably enough, being felt about future prospects, the Directors of a number of textile firms have not shown any lack of confidence in announcing interim dividend payments. Few, if any, have been raised, but for the moment at least, the maintenance of the former rate of payment reflects no disposition to panic. Among the firms which have declared unchanged interim dividends during the past couple of months are Mutual Mills, Clover Croft and State Ltd., Birtwistle and Leigh Ltd., Burgess Ledward Ltd., Jackson and Steeple Ltd., William Uttley Ltd., Preston Tyre Fabric Manufacturing Company, and A. & S. Henry & Co. Ltd.

In the Macclesfield area, where silk once reigned supreme, there have been signs of more trepidation. The interim payment has been passed by Barracks Fabrics Printing Company and although the Directors of G. H. Heath & Co. decided to repeat their previous interim, they warned that this payment had not been wholly covered during the half-year. On the other

High Lights on

Stainless Steel

in your Home

Easy to clean, easy to keep clean, solid throughout, stainless steel has strength and beauty that lasts for a lifetime.

here are the facts

- **What is Stainless Steel?** It's a solid steel containing chromium and usually nickel as well and has unique corrosion-resistant qualities.
- **Does Stainless Steel mean plating?** No. Stainless Steel is solid right through.
- **Is Stainless Steel hard to care for?** No. Nothing in your home needs less attention!
- **How should I clean Stainless Steel?** Just wash it, rinse it, dry it. That's all!
- **Can I wear out Stainless Steel?** No. It's durable, lasting—a lifetime investment.
- **Do Stainless Steel pans, spoons or forks taste?** No. Stainless Steel is always clean, tasteless and hygienic.

THE ALUMINIUM CORPORATION OF INDIA LTD.

MR. PADAMPAT SINGHANIA'S SPEECH

THIRD PLAN TARGET FOR ALUMINIUM MUST BE AT LEAST 150,000 TONS

THE view that it would be advisable to increase the third Plan target for aluminium production to at least 150,000 tons, as against the original target of 87,500 tons and the figure of 115,000 tons now being actively considered by the Planning Commission, was expressed by Mr. Padampat Singhania, Chairman of the Aluminium Corporation of India Limited, in his speech read, in his absence, by Mr. Hari Shankar Singhania, Director, at the Twenty-third Annual General Meeting held at Calcutta on Thursday, 28th September 1961. Aluminium, Mr. Padampat Singhania said, was a very versatile metal with possibility of application in all industrial fields, and it was possible to substitute important non-ferrous metals like copper, zinc and lead. He pointed out that, since India was not blessed with natural resources for most of the other non-ferrous metals, we were left with the development of aluminium metal alone in the country to achieve self-sufficiency in non-ferrous metals as far as possible.

The following is the full text of Mr. Padampat Singhania's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the Twenty-third annual general meeting of the Corporation. From the audited account and Directors' report, already circulated, you will observe that the operations during the year have been normal, with improvements in coal mining, alumina and paste production. In spite of increased wages and increases in cost of raw materials, transport, etc. the cost of production has been maintained within reasonable limits. On the other hand, the prices of aluminium products have remained steady and, in fact, the basic prices have remained unchanged for the last four years. The main increase in prices to the consumer has been of excise duty as levied by the Government. Last year, all accumulated metal of earlier years was disposed off with the result that sales during the current year, excluding excise duty realised, have been lower, thus affecting the profit. You will be pleased to observe, the Corporation has still maintained the ratio of gross profit to turnover. You will also notice from the Directors' report and accounts that adequate provisions have been made towards depreciation and general reserve and the Directors have recommended the same rates of dividend to the shareholders as in last year.

Plan Target Low

"In the previous year's statement before you, opinion had been voiced that the consumption of metal in 1965-66 would become much higher than the target of 87,500 tons of metal production as adopted by the Planning Commission in the third Five-year Plan. I am pleased to report that the Planning Commission is now actively considering to increase the target to 115,000 tons which, I feel, is still low and it would be advisable to increase this target to at least 150,000 tons. Without any risk of contradiction, it is possible for me to say that, next to steel and power, the entire development of basic industries of our country is dependent on the availability of non-ferrous metals in the country. Unfortunately, our country is not blessed with natural resources for most of the non-ferrous metals, with the exception of aluminium, and our only hope of expanding non-ferrous metal production in future, which will enable the country to be self-sufficient, is the expansion of aluminium industry. The Hon'ble Shri Manubhai Shah, Central Minister for Industries, has indicated recently that, in 1965 India will need, at a very modest estimate, at least Rs. 100 crores worth of non-ferrous metals. This is a modest estimate indeed and perhaps, by that time, we would require much higher quantity of metals than provided in this estimate.

•

A Versatile Metal

"Aluminium is indeed a very versatile metal with possibility of application in all industrial fields and it is possible to substitute important non-ferrous metals like copper, zinc, lead, etc. in many fields and spheres with aluminium. According to the present situation, therefore, we are left with the development of aluminium metal alone in the country to achieve self-sufficiency in non-ferrous metal as far as possible. Bauxite, the mother ore, is available all over the country and our power development schemes can help a rapid development of this important metal. I would do no better than quote from a recent speech of the Hon'ble Minister, Shri Manubhai Shah, to emphasise this point:

"'It is inevitable to the country that aluminium has to be developed to the maximum extent possible from day to day, year to year, from plan to plan until we make the country self-sufficient in aluminium with a positive surplus for export.'

"Almost all important big aluminium producers of the World have displayed interest in setting up aluminium plants in India in collaboration with the private sector and the Government has already under consideration such several schemes. Government has also recently announced their intention to set up an aluminium plant in the public sector with Hungarian collaboration. I do hope that the Government will give careful consideration before giving any preference to the setting up of this plant in the public sector over the proposals from the private sector already in hand.

Bauxite Deposits

"Now that India is on the threshold of increasing immediate aluminium production capacity about five times the capacity at the end of 1960, as per schemes already licensed, it has, therefore, become imperative to give special attention to completing survey of bauxite-bearing areas in various parts of the country. Sizable quantity of bauxite is at present being exported and also some of the bauxite is utilised in chemical industry. However, the consumption of bauxite for the aluminium industry stands on a different footing as this industry will require large quantity of bauxite regularly for a number of years to come. As such, the aluminium producers have to have contiguous areas, having maximum workable deposit of bauxite enough to last for at least 25—30 years and, wherever such areas are found, the Government should take steps to reserve such areas for the aluminium producers. Furthermore, careful consideration should also be given to other physical raw materials like caustic soda, fluoride, and cryolite to ensure that these important raw materials are also available adequately in the country as far as possible.

"An important question is the rate at which the electricity will be supplied to various new plants, since this is the most important raw material affecting the cost of production of aluminium metal. The generation and development of power production is in the hands of the Central Government and, at the same time, it is now clear that the production of this metal must be developed in all parts of the country and the future economy of the country has to be based on increased production of this important metal. Therefore, it is my humble suggestion that the Government should immediately set up a high-powered committee, thoroughly represented by Government officials and representatives of the industry, to consider the question of supplying electric power at uniform rates to all aluminium-producing companies. This is a question of utmost importance and it should be settled at the earliest.

Labour Problems

"Labour problems are becoming more and more complicated day by day in our country. In a growing economy, certain amount of inflation is inevitable but, by watchful steps, this must be kept within reasonable limits. Unfortunately, the trends in India have not been encouraging and the industry is faced with ever-increasing demands by the labour unions; but at the same time they do not show any responsibility towards increasing efficiency or productivity to minimise inflationary trends. Therefore, the usual leniency shown in the country to the trade union movement has to come to a halt. This movement is no more in infancy and it has come of age. The union must be made to realise and develop responsible attitude for development of the country and it is high time that the trade union movement behaves in an adult manner.

Expansion Programme

"I am glad to inform you that expansion programme of our Company already in hand is progressing at fast pace. The first phase of metal production is under way and the production can be expected early next year. Several shipments of equipments have arrived and are on the way to our plant in Jaykaynagar. The building and foundation work for the machinery is almost ready and erection work will start soon. The construction and building programme for other phases of expansion has been taken in hand. The production from expanded fabrication facilities is expected to follow as per schedule. The programme of training technical personnel both in India and abroad is going according to schedule.

"Gentlemen, in conclusion I would again emphasise that a new history is in the making of the existence of the Corporation in the coming years. The Corporation's growth is fast under way from its humble start. I will be failing in my duty if I do not express my gratitude to the Managing Agents for having managed the affairs of the Corporation in the most economical and efficient manner. I will also express my appreciation to the conscientious working of our staff and technicians, who have made the working of the Corporation a success."

Note:—*This does not purport to be the proceedings of the annual general meeting.*

PEOPLE ARE TALKING ABOUT LIC
Every year, about Rs 30 crores is received by people who own life insurance policies (or by their dependents). And it is interesting that more than 70% of this money is paid to policyholders on maturity of their policies.
This fact clearly demonstrates that the benefits of Life Insurance are being largely enjoyed during the life-time of the policyholder himself.
Millions of people are today realizing that Life Insurance is a unique investment of security—both for themselves and for their families. And millions of people are placing their trust in the soundness of the LIC to safeguard their interests.

MOVE TO EVOLVE A MORE EFFECTIVE WORLD COFFEE AGREEMENT

INDIA'S POSITION—MR. RADCLIFFE'S SUGGESTIONS

TWO notable decisions were taken by the International Coffee Study Group at its meeting held at Washington recently. They pertain to the extension of the International Coffee Agreement (I.C.A.) by one more year—that is upto the end of October 1962—and the setting up of a special committee to draft a new agreement. The Committee consists of the representatives of Brazil, Colombia, El Salvador, France, Italy, Ivory Coast, Mexico, Sweden, the U.K. and the U.S. Mr. Joao Oliveria Santos, Secretary-General of the I.C.A., will serve on the Committee as the representative of the Agreement.

The present Agreement, it will be recalled, was signed in September 1959 and came into effect on 1st October 1959. It was to have expired a year later, but was extended, in June 1960, through the coffee year 1960-61. The Agreement has since been extended, as already stated, by one more year. Although the Agreement has been in force for full two years now, the objective of ensuring stability in the world coffee market has still not been achieved. Here is what the Chairman of the I.C.A. Board of Directors, Senhor Sergio Armando Frazao (President of the Brazilian Coffee Institute) said while addressing a plenary session of the I.C.A. in Washington:

"The major difference between market conditions now and in June (1961) is that the stability of Brazilian prices in the New York market is being menaced by a serious downward drift of prices of other types of coffee. This downward drift is much more serious than has been apparent from the daily posting of quotations in the New York Exchange. Obviously this indicates that the main objective of the Agreement—the stabilisation of prices—has been constantly disavowed."

The decline in coffee prices is certainly serious. Robusta grade Uganda coffee is currently quoted in the London market at 125*s.* 6*d.* per cwt., as against 131*s.* 6*d.* early in June, 211*s.* 3*d.* early this year and 222*s.* before the Coffee Agreement was signed in 1959. The sharp fall in prices has been due to continued high level of production, in the face of only a modest rise in exports from the chief producing countries. Thus, the aggregate world output of coffee went up from 68.25 million cwts. in 1958-59 to as much as 93.03 million cwts. in 1959-60 and, after declining to 76.46 million cwts. in 1960-61, is expected to rise again to 84.70 million cwts. in the current season, a rise of 16.45 million cwts. over the four-year period. As against this rise, the total exports from the principal producing countries increased from 41.67 million cwts. in 1958 to 48.37 million cwts. in 1959 and 49.11 million cwts. in 1960. The current calendar year is expected to witness a further rise in exports, but the extent of the rise is not likely to be appreciable.

Stabilising Coffee Market

The table at the bottom of the page, culled from the September issue of the Commonwealth Economic Committee's *Tropical Products Quarterly*, indicates the trend of world coffee output and exports in the past four years. It will be seen from this table that the current pace of coffee shipments is much less than the estimated output, so that the undisposed stocks at the end of the current season will be considerable, resulting in a further setback to prices. It is not surprising that the coffee producing countries are greatly worried about the future. Mr. Frazao was voicing the opinion of coffee producers the world over when he urged energetic action to stabilise the coffee market. He said:

"The present coffee pact should be renewed for one year and modified to tighten the discipline of the market and to find ways and means of strengthening current price levels. Then, immediate action should be taken to work out a long-term agreement based on the declaration of principles accepted by all Latin American countries and by the U.S. in Punto del Este. To ignore it would seriously endanger not only the coffee market but also the 'Alliance for Progress.' The amount of aid needed by Latin America and Africa to maintain their economies at a running speed would be beyond the capacity of the United States and other industrialised countries, if coffee prices collapse."

The aforesaid extract highlights the urgency of a comprehensive long-term International Coffee Agreement. It is true that the present Agreement covers the bulk of the coffee sold on the world market. But the weakness lies in the fact that the Agreement includes only producer-exporter nations, so that the enforcement of export quotas has not been effective. Another weakness of the Agreement is that it contains no effective measures to regulate production in the principal producing countries. It is stated that the Study Group has asked the special committee to draft an agreement which will be an improvement over the existing one in all these respects.

India's Participation

India is one of the seven coffee producing countries invited to join the Coffee Agreement, the others being Indonesia, Yemen, Congo, Ethiopia, Guinea and Ruanda Urandi. It may be recalled that the question whether India should participate in the Agreement was raised at the last annual meeting of the United Planters' Association, Coonoor. No decision was arrived at, the issue having been referred to a special sub-committee. Mr. S. K. Patil, Union Minister for Agriculture, was definitely opposed to India getting entangled in these dubious international arrangements which are at best intended to cover the folly of overproduction in which the Latin American countries freely indulged in the fifties, following the boom in beverages in the earlier half of the decade. The benefits, if any, for newcomers like India in the sphere of world coffee exports from the International Coffee Agreement are not obvious. India, however, must keep a close watch over the developments in the world and make sure that no new discriminatory arrangements are concluded in the name of stabilising prices of primary produce. This aspect has to be especially stressed in the present context of the expansion in coffee production that has been planned by India and the urgency of earning as much foreign exchange as possible from coffee exports. The need for promoting coffee exports was emphasised well by Mr. R. Radcliffe, the retiring Chairman of the Mysore State Planters' Association, in his speech at the third annual general meeting of the Association held at Bangalore on Saturday the 7th inst. The coffee industry, he declared, must export not only in its own interests but in the larger interests of the nation. It was essential, he stressed, to see that the value of exports, rather than the total tonnage, increased. In this connection, Mr. Radcliffe made the following interesting observations:

".....I would refer particularly to the need to consume more Robusta in the domestic market, so that, eventually, almost the entire production is consumed internally, thus releasing more Arabica coffee for export. But this Arabica coffee must be of the highest possible quality and, to enable this to be so, there should be some definite steps taken to ensure that care in preparation is amply and sufficiently rewarded and also that first class whole crop Arabica cherry is separated from the increasing bulk of Arabica cherry delivered to the Pool. Active steps must also be taken to encourage the production of more Robusta plantation coffee, for this type shows signs of obtaining a profitable market of its own in the export trade. To enable maximum exports to be made over a long period—for surely India will need to export all she can in the next 20 years rather than the next five years—there must be some long-term planning that estimates production for periods of not less than five years at a time and then allocates in a sound and balanced manner this production to the internal and external markets, bearing in mind the overall trends in production of types and grades of coffee. Over the internal market, the industry has control and, if a reasonable return can be given to the grower, then, prices on the export market, even if below cost of production, could be absorbed. It is, however, essential that a firm, sound base of an expanding domestic market is built up that will consume approximately not less than 60 per cent of total average production each year and the price is so regulated that it will finally enable exports to be made of about 40 per cent of the total crop annually."

Having these general principles in mind, Mr. Radcliffe put forward a nine-point programme to be adopted by the powers-that-be. His nine points are:

1. A change should be made as soon as possible in the way coffee is released on the domestic market and in the way the price return is made to the grower and active propaganda must at once be started to fulfil the objective of increased consumption of available coffees by the home consumer.
2. The system of "open auction" should be introduced for the external and internal markets alike, with vigorous and prior advertisements to support this policy.
3. Coffee must be sold by estate marks as early as possible to the maximum extent that is practicable and, where lots are too small, then precise and well considered quality bulks be made of coffees of comparable quality and growth.
4. The trade should be encouraged to stock its requirements for longer periods by a new system of releases.
5. Steps must be taken to ensure a regulated marketing system, under which sale proceeds of the entire crop are allotted equitably to producers by the Coffee Board by a method that rewards care in production and quality.
6. All operations of the Coffee Board must be subjected to a careful economic scrutiny that ensures a high standard of competitive commercial operations.
7. As the sale of a grower's produce is beyond his control and export priorities are dictated, the results of the sales both in the export market and the internal market should be taken into account when determining the return to the grower; suitable weightage may, however, be given to the price return of those coffees which may be exported at below cost of production.
8. A reassessment may be made by the Central Government of the present excise duty levied on coffee and a more helpful policy adopted.
9. A substitution of the current State sales taxes by a surcharge on excise duty, to be equitably distributed to the States concerned, is highly desirable.

Reply By Mr. Reddy

Those who heard the Union Minister for Commerce and Industry, Mr. K. C. Reddy's reply to the points raised by Mr. Radcliffe must have felt generally gratified, though they must have been disappointed at his refusal to accept certain specific suggestions. For Mr. Reddy conceded the plea that the final return to the coffee growers should be such as to give them an incentive for quality production, though he said that one had to reconcile the interests of the consumers and the necessity of maintaining and expanding the export market. Further, Mr. Reddy disclosed that the Coffee Board had decided to introduce open auctions for exports with effect from 1st January next. It is not clear as to why one should wait that long and also why it is not to be followed for internal sale. He, however, gave the welcome assurance that the question of replacing State sales taxes on coffee by a surcharge on Central excise duty would be looked into.

Apropos the suggestion for marketing coffee by estate-mark with the reduction in bulking operations, Mr. Reddy no doubt agreed that the

In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

CHAMBERS OF COMMERCE AND INDUSTRY

THEIR ROLE IN A DEVELOPING ECONOMY

By B. Barker, M.B.E., M.A. (Oxon.), F.C.I.S., A.M.B.I.M.

SECRETARY, BOMBAY CHAMBER OF COMMERCE AND INDUSTRY

[The Bombay Chamber of Commerce and Industry completed a century and quarter of its existence on 22nd September 1961. As part of commemoration of this landmark, the Committee of the Chamber authorised its Secretary, Mr. B. Barker, to deliver a lecture on "Chambers of Commerce and Industry—their role in a developing economy" to the post-graduate students in the commerce faculty of the University of Poona. The article on these pages is an adaptation from the author's lecture. In view of its extraordinary length, it is being published in two instalments, the second of which will appear in our next issue.—ED.]

IT is all too easy to theorise about what the Chambers of Commerce have done, which they ought not to have done and ought to do, which they are not doing and, although it gives me, as Secretary of a busy Chamber, considerable pleasure to theorise on the position of Chambers of Commerce in India, by nature and by the practice of my job I am inclined to take a practical view and, if one takes a practical view when considering Chambers of Commerce in India today, one must start with their past rather than their present.

The establishment of Chambers of Commerce in India can unequivocally be attributed to the British and, in particular, to the indefatigable Scots. The motives of those who found Chambers of Commerce are generally those of enlightened self-interest, but there can be no doubt that the founders of the British Chambers in India were, in addition, remarkably public-spirited. The letter which the Chairman of the Committee of the Bombay Chamber of Commerce sent to the then Chief Secretary to Government a few days after the Chamber was founded in 1836, gives some evidence of the attitude of these remarkable men:

"From this Association, we hope, the members of the mercantile community will be led to meet and act together with that good feeling and unanimity which will best promote their mutual interests and tend to increase and encourage the trade of the Presidency.

"As everything which contributes to protect and advance the commerce of the country most intimately concerns the Government, the members of the Bombay Chamber of Commerce firmly rely on receiving that support and countenance from the Right Hon'ble the Governor in Council which the principles they are associated in induce them to hope for, those of mutual exertion for their mutual and common interests.

"Any communication they may have to make to Government or information they may ask to be favoured with from Government through their Chairman to aid the objects of the Association, the members of the Bombay Chamber of Commerce would thus respectfully hope will receive every attention and consideration from the Right Hon'ble the Governor in Council, and other authorities, while the Chamber of Commerce will ever be ready and willing to afford the Right Hon'ble the Governor in Council and other authorities all the aid and information the members can give, as such may be required from them."

Motives

The signatories to that letter, I may say, were seven Britishers and three Parsees. One further illustration of the attitude of these founders can be drawn from the rules and regulations of the Chamber as adopted in the year of its foundation, an extract from which reads as follows:

"That the objects and duties of the Chamber shall be to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect the general mercantile interests of this Presidency, to collect and classify information on all matters of general mercantile interest, to obtain the removal, as far as such a society can, of all acknowledged grievances, to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance and by this and other means, to form a code of practice for simplifying and facilitating business. To communicate with the public authorities, with similar associations in other places, and with individuals, on all subjects of general and mercantile interest. To arbitrate between parties willing to refer to, and abide by the judgment of, the Chamber."

It is not my intention to trace the history of these Chambers to the present day. For my present purpose that would be too academic an exercise. My only point in making these remarks about the motives of the founders of the British Chambers in the first half of the last century is to show that they were inspired by motives of personal honour as well as enlightened self-interest and that they tried to and succeeded in bringing these personal moral attitudes into what were essentially personal commercial transactions; for, by far the majority of commercial transactions in those days, was conducted by individuals either on their own or in partnership with others. There was no Companies Act in India until 1882 and there was no Management Association until 1954. In other words, this was an age one step in history after that of the merchant adventurer; it was a period when the individual merchant did his own work for himself. The idea of professional managers working on behalf of impersonal companies owned by a large number of shareholders was unknown. The result was that men could exercise personal preference with an individualism which is, perhaps, no longer possible and this individualism produced the brilliance as well as the arbitrariness with which the history of these Chambers is studded.

Similarly, the history of the Indian Chambers is of the utmost significance when considering their role in India today. The founders of the Indian Chambers, perhaps, had two motives for their pioneering work. The first was a negative one, namely, that they felt that they were being prevented from expressing their views and influencing the commercial and industrial policy of the Government and, secondly (and much more positively), they felt a need for the expression amongst the commercial and industrial communities of India of the political feelings which swept the country during the first half of this century. The birth and the growth of the Indian Chambers is entirely in the twentieth century and is bound up with the development of the freedom movement. *Swadeshi* was clearly the commercial and industrial expression of a political idea.

After Independence

We are only fourteen years away from the declaration of India's independence, but, as I was not old enough to appreciate at that time the significance of that event, I may, perhaps, be forgiven by older historians for endeavouring to reconstruct the effect which it has had on both the old British and the newer Indian Chambers. India's independence has necessitated considerable adjustments in both the organisations. In the old British Chambers, the direct political connection of those in authority in the Chamber with those in power in Government was almost completely severed. The whole position of foreign-owned or foreign-managed organisations which figured largely in the membership of these Chambers was in doubt. Would they be over-run? Would they be nationalised? Would the foreigners be asked to quit? These were the fears of the British Chambers at that time and their adjustment to the new India based on a long and continuing association with and regard for this country is in my view to be considered a remarkable achievement.

But the Indian Chambers were equally affected, though in an entirely different way. They had suddenly to become conscious of India as a responsible nation and themselves as a responsible body representing commerce and industry rather than a revolutionary group bent on securing a political ideal. It is, of course, much more easy to fight an alien regime than it is simply to persuade the Government of one's own election. The success of the Indian Chambers in making this adjustment also deserves considerable credit. The effect of independence, however, was that the older Chambers tended to unite themselves more closely, whereas the Indian Chambers lost the strong unifying force of an agreed political ideal and since then have been faced with the continuing problem of the fragmentation of their interests amongst a number of bodies created for a variety of reasons—some racial, some sectarian and some even for reasons of personal aggrandisement.

Let me not give the impression that this process of adjustment after independence is in any way complete; both these groups of Chambers (I refer to the Federation of Indian Chambers of Commerce and the Associated Chambers of Commerce of India) are still going through a transitional stage, adjusting themselves away from their past and towards their future. The chauvinistic impulses of the Indian Chambers are not yet entirely forgotten nor have the old British Chambers learned as yet to turn their backs firmly on their circumstances in Viceregal days. The foreign Chambers, having had themselves cut off from politics are chary of venturing into political controversies, whereas the Indian Chambers are sometimes afflicted by political and other factions within their own organisations. However, it is to the resounding credit of both the old and the new Chambers that they have endeavoured to put the welfare of the country before their own members and the best that is now in both stems from that endeavour.

Organisation

This great difference in origin has influenced these Chambers today in many ways. The pattern of membership in individual Chambers is similar within each group: in the older Chambers, the number of members is generally comparatively small but the membership tends to consist of the larger companies and especially those who have some foreign interest or connection. In the Indian Chambers, the membership is generally much larger and consists for the greater part of smaller companies with little or no foreign connection. Again, the methods of organisation are different for reasons of heritage and environment. The older Chambers rely on presenting carefully prepared and documented memoranda, generally addressed to the officials of Government rather than Ministers by name. The Indian Chambers, with their direct political connection, can address themselves more personally and even socially in making their representations. Again, control of the Indian Chambers is established by means of votes in which parties conduct political-type party campaigns and the representatives ultimately elected have a mandate from their electors which they are asked to follow. In the matter of control, the older Chambers have preserved the manner of the gentlemen's club which means that by and large one Committee appoints another and no "gentleman" will object.

Contrasts and Similarities

At the present stage, therefore, these groups of Chambers in their methods of control and administration are different, but, in their overall activities and objectives, they are frequently the same. However, in their activities, all the Chambers could be said to fall behind those in more developed countries for reasons not only of finance but also of environment. In Western countries, the last organisation to which commerce and industry turn for advice or assistance is Government; in India, Government is the first. This is not meant necessarily as a criticism. It is a fact of Indian history that the Government has for so long been the organiser, the administrator and the provider of so much that there has developed a natural tendency to turn to Government in any moment of difficulty or strain. On the other hand, Chambers of Commerce abroad spend most of their time and effort promoting commerce and industry quite apart from Government. The Public Relations Officers try their utmost to give the impression that the area represented by their Chamber is splendid for commerce and industry. Their object is largely to attract trade and to see that commerce and industry within their area run smoothly. In India, amongst the larger Chambers, the situation is quite different. Commerce and industry turn first to Government and Government in its present mood never takes its eyes off commerce and industry. The result is that there is a continued demand from the smaller trader and manufacturer for Government assistance of one kind or another and, in consequence of its policy of allowing the corporate private sector only a residual position in the economy, an equally continued flow of legislation pours from Government, controlling every activity of those engaged in commerce and industry. In these circumstances, it is natural, inevitable and right that the prime task of the larger Chambers of Commerce in India today is to act as a liaison or to use a less pleasant expression, a "go-between" betwixt Government and the private sector. Government churns out draft legislation and expects considered comments thereon (usually in a matter of days) from commerce and industry. The amount of this legislation and the questionnaires issued by the Government-appointed Committees prior to the drafting of the Bills concerned, is so great that Chambers can, if they wish, spend most of their time attending to it.

Moreover, Government is far from successful in keeping its legislation in an up-to-date form, and much of the work of each of the Chambers today is in keeping the members informed of the complex legislative enactments and amendments

to existing laws which flow from Government at the Centre and in the States.

This is in contrast with the Chambers in developed countries who, though they certainly have to keep their members informed of current affairs, have more time and money to spend on giving information with regard to trading possibilities, effecting commercial introductions, providing promotional services, generally, and dealing only with those items of legislation which immediately affect their members. The different position of Chambers abroad is accentuated by the fact that in the more developed countries the professional institutions of accountants, lawyers, company secretaries and so on, provide relevant information to the specialists in commerce and industry and this information needs little or no supplement from the chambers of commerce. In India, virtually, the whole burden falls on the Chambers. On the other hand, there are few Chambers in the United Kingdom who have begun to develop economic research on the lines of the recently established economic research and training foundation of the Indian Merchants' Chamber in Bombay.

Apart from acting as the Public Relations *cum* Information Officers of Government, Chambers are, of course, or should be, the mouthpiece of commerce and industry as far as the public are concerned. There is an increasing sense of the failure of commerce and industry in recent years to project itself to the public, quite apart from its relation with Government. The mud which is so frequently slung by politicians at commerce and industry is often allowed to stick and little is as yet done to persuade the public and, therefore, the politicians that commerce and industry is not entirely a justifiable target. But, as yet Chambers of Commerce have not applied themselves to nor has private enterprise shown itself willing to finance a continuous and scientifically organised public relations service.

Guidance to Government

I hope that I have said nothing to give the impression that the Government is restraining the development of Chambers of Commerce. Such an impression would be far from the truth. The fact is that groups of manufacturers and traders are frequently urged by Government to form themselves into associations and in recent years Government has appointed a mass of advisory committees on which Chambers are represented both at the Centre and in the States. These committees cover a large variety of subjects—imports, exports, Government purchases, customs, excise, workers' education, employment exchanges, railways, telephones, food—even coconuts and cemeteries. The result is that through Chambers of Commerce, opportunities for commerce and industry to express their views to Government are now legion, but whether Government is taking greater advantage of these opportunities and is listening any more than it did before, is another matter.

In addition to the relations of commerce and industry with Government and with the public, the Chambers are generally of considerable assistance to other trade associations. An association frequently starts in the office of a kindly member who supervises its work; perhaps it then grows and needs more staff or the kindly member requires the space for himself. It is at this stage that a Chamber of Commerce can usually be of assistance. My own Chamber has taken up the work of four such associations in the past year. By taking over the small staffs of the associations and by carrying out the clerical operations within their own organisation, the Chambers can give the associations a good permanent address, sound secretarial services and easy continuity during the growth period of the associations. It may be that later on the associations will outgrow the services of the Chamber which, as it were, fostered them during the initial years. They may require more professional and specialised services than the Chambers can give; they may feel strong enough financially to be able to afford their own staff, under their own control, in their own building and so we find that larger trade associations have in many cases gone away from their Chamber foster parents and have established themselves on their own. This, to me, is a natural and healthy development.

Bombay Chamber

So far I have merely outlined the groups of Chambers as they exist today and said something about their general functions. I should now like to say something about my own Chamber, with a view to giving an idea of how exactly all this work is organised and administered.

The Bombay Chamber of Commerce and Industry is celebrating its 125th anniversary this year. You will immediately recognise it as one of the old-established, originally British, foundations which I have already discussed. Its membership is small—about 540—as compared with that of the Indian Merchants' Chamber's membership of over 2,100, but it includes almost all the larger commercial and industrial houses in Bombay: all the oil companies, Hindustan Lever, I.C.I., Tatas, A.C.C., Bombay Dyeing, Metal Box, Dunlops, Firestone, the foreign Shipping Lines, the leading Air Lines, the large pharmaceutical companies (Glaxo and May and Baker, for example) the engineering industry—National Machinery Manufacturers, Mazagon Dock, Greaves Cotton, Mahindra and Mahindra, Richardson and Cruddas, Alcock Ashdown, Automobile Products of India—the old trading houses now fast industrialising, Killicks, Bombay Company, Forbes, Forbes Campbell, Rallis, etc., and then the banks and insurance companies whose names are household words and the solicitors and accountants whose names I must not mention in case they might consider it to be advertising! Some 50 per cent of these members are companies or firms or branches of companies which are controlled from abroad. The rest are Indian companies and firms controlled in India. However, even this distinction is scarcely accurate, because almost all the members of the Bombay Chamber have long trading connections with countries abroad, especially the United Kingdom, even though the control of the companies may always have been in India, while their foreign employers have often spent virtually all their working life in India and know more of it than of their homeland.

No Canvassing

The Chamber makes very little effort actually to encourage membership. We find that membership rises steadily, because non-members get to know from existing members about the services received. The Chamber grows by reputation rather than canvassing. This is much preferable to persuading or cajoling into membership those who may, in fact, have other motives for seeking membership than the desire to participate in the services offered. In other words, our attitude today is not so much that of a gentlemen's club as that of a professional service organisation. If they want the services, members will offer themselves and will pay a fair price for them. Members have to be proposed and seconded by other members: the proposition has to be accepted by the Committee of the Chamber and then all members entitled to vote do so by secret ballot in the case of every company, firm or individual wishing to join. Although you may consider that this procedure is complex and means that it takes six weeks for the new members to be elected, and although the procedure may also be said to be redolent of the gentlemen's club atmosphere, it is nonetheless a useful safeguard against admitting to membership of the Chamber companies who may besmirch its good name. I have already said that the Chambers of Commerce are the mouthpiece of commerce and industry and it is, therefore, of the utmost importance that the reputation of the Chamber which is largely based on the ethical standards of its members should be maintained. It is much easier to achieve this end by being careful in electing new members than by trying to weed out any dishonourable members after they have been elected. Proof of the care with which members are elected lies in the fact that, though there is reserved to the general body of members the absolute right to expel any member by a resolution at an annual or special general meeting, I am not aware that these powers have ever been used.

Upon election, the member is immediately informed of the services offered by the Chamber to some of which I have already referred in a general way. Most tangibly, he will immediately benefit from the considerable number of circulars which are issued every working day from the Chamber and delivered or posted to all members. A majority of these circulars is addressed to all members but those dealing with customs, excise, import trade control and other special matters of concern in a certain business will be issued only to those companies which are concerned in that business. Each member also receives a *Monthly Bulletin* and Annual Reports which are virtually compilations of the Chamber's circulars and reports on all the work of the Chamber's Committees. The Report itself each year serves as a historical reference book containing information about almost all that has happened during the previous year in so far as commerce and industry has been affected.

The new member will soon discover the many ways in which his liaison with Government is improved as a result of his connection with the Chamber. He will be asked to comment on draft legislation submitted by Government for public consideration. He may be invited to meet senior Government officials—notably those from the Central Board of Revenue—when they visit various centres to elicit from the trade their views on such matters as customs, excise and import trade control procedures. When Government appoints a committee to prepare a report on a particular subject or when legislation is referred to a Select Committee of Parliament for consideration, members are usually invited to send their comments for inclusion in memoranda to be addressed to the Committees concerned. Ultimately, representatives of the Chamber give evidence before these Committees in person on some occasions, although, generally, these matters are for the Central Government and are, therefore, dealt with by the all-India organisation—the Associated Chambers of Commerce of India—of which the Bombay Chamber is a member. I have already referred to the many Advisory Committees which Government has appointed both at the Centre and in the States. The new member will find that he has an opportunity to express his views and obtain answers to his difficulties at a high level by reference through the Chamber's representatives on these Advisory Committees.

High Standard Aimed

Moreover, once in each year, the Associated Chambers of Commerce of India holds its annual general meeting in Calcutta, at which resolutions are moved by the various constituent Chambers. The procedure for this meeting is an interesting and useful example of the very careful preparation which goes into this work. It reminds me of the remarks of the President of the Bombay Chamber in 1884 when he said:

"Never act on imperfect information, always see that representations and complaints are verified before they are taken up, beware of faddists both inside and outside the Chamber and never be afraid of bold and open criticism."

It is this high standard which we try continually to preserve.

For purposes of this annual general meeting, the Committee of the Chamber considers its own ideas as to what matters should form the subjects of resolutions. The Presidents of all the constituent Chambers come together and make the final selection of subjects for resolutions; the resolutions are drafted and sent to the constituent Chambers for consideration; there is a further discussion amongst Presidents of the constituent Chambers and only then are speeches prepared in the Chambers concerned for delivery at the meeting itself. In the meantime, members are invited to submit their own comments and views. As this whole process takes some 4-5 months, by the time speeches are actually made and the resolutions passed, it is reasonably certain that they will be accurate and will represent the considered views of the whole organisation throughout the country. After the meeting, the resolutions and speeches are forwarded to the appropriate departments of Government.

Before I describe any of the special services available to individual members, I would draw an important distinction which runs throughout the Chamber's work, namely, that the Chamber does not reckon to take up the difficulties of individual companies on any subject. It is only where the difficulties are generally experienced by all or a considerable number of members that the Chamber feels able to take action. Let me give some examples, which are from Company Law only. If a member complains that he has been fined by the Registrar of Companies for not filing a copy of a special resolution and requests the Chamber to do something about it, the Chamber will take no action. The member should have known better and the law has been applied fairly. However, if the complaint of a member refers to an interpretation by the Company Law Department which, if applied generally, will affect a large number of members, then the Chamber will take up the matter, not in the name of the individual member and only after carefully ascertaining that the interpretation given has been the experience of other companies and is likely to be the cause of general grievance. As to exactly how the representation is processed from this stage, I will speak a little later. For the moment, the point I wish to make is that, generally speaking, the Chamber deals only with issues of general application, that is, those which concern at least a wide section of members.

THE UNITED NILGIRI TEA ESTATES CO. LTD.

ANOTHER SUCCESSFUL YEAR COMPLETED

CHAIRMAN STRESSES NEED FOR EARLY WAGE AGREEMENT

ADDRESSING the Thirty-ninth Annual General Meeting of the United Nilgiri Tea Estates Company Ltd., held at Coimbatore on 27th September 1961, the Chairman of the Company stressed the need for an early settlement of a new wage agreement in the plantation industry, pending the recommendations of the Wage Board. He added that any delay in this respect was likely to result in labour unrest, "which helps no one except perhaps those labour union leaders who rely on unrest to retain their hold on labour."

The following is the full text of the Chairman's speech:

"GENTLEMEN,

"Firstly I would like to welcome you to our thirty-ninth annual general meeting. It gives me much pleasure that shareholders take the trouble to come to our annual general meetings and that they take such a keen interest in the affairs of this, our very successful tea Company.

"The Directors' report, which you have before you and which, with your permission, I will take as read, indicates the main points of the year's working, and you will see that we have had a successful year, and a crop that has beaten all records. In my speech last year, I commented on the crop to 20th September 1960 as being unprecedented. Crop kept up well for the rest of the year, and our final figure was 828,976 kgs. or 1,827,579 lbs. of made tea.

Prices of Tea

"Prices for the early part of the year were low, but, with the shortfall in the North Indian crop, these improved, and our final gross sale price, including excise duty, worked out to Rs. 5.11 per kg. In view of the bigger crop, our estate costs fell by some 55 nP per kg. and, though our selling price fell by an even larger figure of over 75 nP per kg., the resultant profits from the higher crop increased our final figure considerably. In addition to the crop of 828,976 kgs. of made tea, we also sold the equivalent of 9,525 kgs. of tea as green leaf to other factories, as we had more than we could handle ourselves. This total crop represents 1,293 pounds per acre on the Chamraj Group and 540 pounds per acre on the Korakundah Estate, which results for high grown tea are excellent.

"Crop to date this year is still good and, though we are now some 110,000 kgs., behind last year, we are some 30,000 kgs. up on the crop to the same date in 1959.

Taxes

"As you will see from the accounts before you, the balance profit available for distribution was Rs. 12,85,657, as against which Rs. 6,50,000 have had to be reserved for taxation. In addition to this direct tax on profits, excise duty on Nilgiri teas was increased to 25 nP per kg. in February last, estimated to cost Rs. 1,62,500 on the current year's crop and, though export duty was reduced from 53 to 44 nP per kilo, the increase in excise has to be paid on all our sales in India.

"A sum of Rs. 1,53,646 has been charged in the profit and loss account under rates and taxes, the bulk of which is sales tax. As I have commented before, we must be one of the most highly taxed industries in India.

Capital Expenditure

"This leads up to my next point which is that, after paying taxes and dividends, it is very difficult to provide sufficient funds for necessary estate development and capital expenditure. You will note that your Directors have recommended the appropriation of Rs. 1,75,000 to reserves, and that auditors have commented on page 8 (of the Directors' report and statement of accounts) that a sum of Rs. 5,20,000 has been contracted for capital commitments. Whilst all of this sum will not be spent this year, we have to provide a sum of Rs. 2,39,000 for buildings of staff and labour quarters, latrines, water-supply and creches to be constructed under the provisions of the Plantation Labour Act for this year.

"There is also Rs. 2,00,000 for the factory for new machinery and the provision of extra withering accommodation. The new drier has been in operation for some months now, and our drier capacity is sufficient for any crops we may harvest, but machinery to go with it has been very much delayed in delivery. However, with the sum of Rs. 1.75 lakh reserved, and the 'cash flow' of Rs. 2,15,000 from the depreciation on fixed assets, we hope to complete most of our proposed capital items estimated for this year.

Labour

"The wages agreement with our staff and labour expired on 31st March 1961, and the Government of India have appointed a wage board to cover wages of the plantation industry for both North and South India. In the meantime, and which may be a long time, running into years, we do not know what new wage rates will have to be paid, probably back-dated to 1st April this year. The Government of Madras approached employers in the plantation industry in this State to negotiate a new wage agreement, and our Association has welcomed the suggestion, provided (1) that the Wage Board should accept any such agreement and (2) that it should also apply to plantations in the rest of South India, including Mysore and Kerala. With this object in view, a conference was called in Trivandrum at the beginning of this month which unfortunately failed, primarily on the demand of one union for an immediate interim wage increase before any discussion on a new wage agreement commenced.

"I feel that this is unfortunate, as an early settlement, instead of waiting for the Wage Board, would be to the benefit of labour, and a delay is likely to result in labour unrest meanwhile, which helps no one, except perhaps those labour union leaders who rely on unrest to retain their hold on labour. There is still a chance, however, of an agreement with our staff through the good offices of the U.P.A.S.I.

"As mentioned in the Directors' report, there is also still no agreement on bonus for the year 1960. A recent attempt at conciliation was also rejected by a union, much on the same grounds as on wages. For the year of account our relations with labour have generally been good.

Dividend

"You will note that your Directors have recommended an increase in the dividend, which, with the final of 12 per cent, makes the total for the year 22 per cent subject to tax. We have also arranged with our bankers, the Central Bank of India Ltd., to encash our dividend warrants at par in Madras, Bombay, Delhi and Calcutta. We ourselves will cash warrants at par in Coimbatore. There are now some 800 shareholders in this Company, resident in many places in India, and I hope they will find this a convenience.

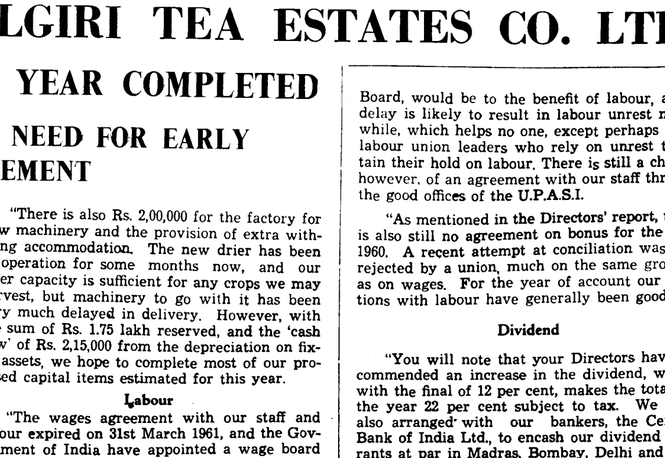
"Before I conclude these comments, I would like to record my appreciation of the services to the Board of Mr. C. E. Wootton, who has been a Director of this Company for 14 years, and to wish him a long and happy retirement.

"If there are any questions on the accounts, I will be pleased to answer them to the best of my ability, and thereafter with your permission to propose that the Directors' report and the accounts for the year ended 31st March 1961 be approved and adopted."

N.B.—*This does not purport to be a record of the proceedings of the annual general meeting.*

How many languages should your banker speak ?

The FIRST NATIONAL CITY BANK of New York
First in World Wide Banking



You'll enjoy a unique plus when you bring your CITIBANKER in on your financing deliberations. Naturally, your CITIBANKER is fluent in the language of your business. But also, because his everyday job has world-wide dimensions, he talks to international businessmen around the world, in THEIR OWN TONGUES about Commerce and Finance. When you plan to explore new markets or more imaginative financing, get the benefit of the broader perspective that First National City's world-wide organisation provides. Call your CITIBANKER in Bombay or Calcutta.

STEEL PRICES IN THE UNITED STATES

CONTROL IN THE NAME OF PRICE STABILITY STRONGLY OPPOSED

STEEL prices in the United States, it is well known, are substantially higher than steel prices in the European Coal and Steel Community or in the United Kingdom. According to an index of average schedule prices for finished steel products (Base: 1953=100) maintained by the High Authority of the Community, it was 104 points, as on 1st January 1961, for basic Bessemer steel in the Community as a whole and 107 points for basic steel in the United Kingdom. But, as on that date, the index had reached a level of 124 points for basic steel in the United States. While the E.C.S.C. has achieved relative stability in steel prices which have been ranging around 100 points in the index, there has been no such stability in the United States, where the index was at the level of 88 points, as on 20th May 1953, and has been steadily rising since 1st January 1956, when it was 104 points. A better idea of the comparative steel prices in the Community and in the United States may be obtained from the following figures of 'basis prices' for exports of rolled products in terms of dollars per metric ton f.o.b. port of shipment, exclusive of taxes:

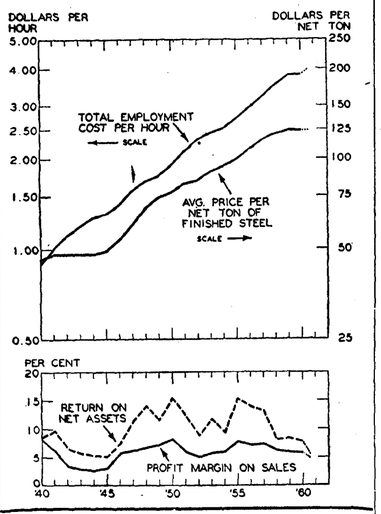
Products	*Community (overall) (Market prices) January 1, 1961*	*United States (Published prices) January 1, 1961*
Merchant bars	91—101	127—134.25
Joists	94—95	131.85
Wire-rod	105—107	146.15
Hoop and strip	109—111	117.95
Plate	99—100	126.75
Sheet (hot-rolled)	134—138	141.75
Sheet (cold-rolled, 1 mm.) ..	147—149	156.75

Why are steel prices in the United States relatively higher? The answer is to be found in the high annual rate of rise in steel employment (wage) costs. This rate was as much as 8 per cent in the period 1940 to 1959. Under the current 30-month wage-contract which was signed in January 1960 after a 116-day strike in the steel industry, the annual rate of rise in wage costs is to be 3½ to 3¾ per cent. Even this moderated rise in steel employment costs, it now appears, will involve upward pressures on the price of steel. According to recent reports, the U.S. steel companies were contemplating to push up prices by about $5 a ton after 1st October 1961—the date laid down in the January 1960 agreement for the final instalment of pay increases. But President Kennedy has intervened by writing to the heads of 12 steel companies and appealing to them to forgo a price increase now, so that the labour representatives could be persuaded to limit wage demands in the next collective bargaining negotiations (due in spring 1962) to a level consistent with continued price stability. Although the U.S. President has rejected the idea of official control of steel prices under utility-type regulations, he seems to have exerted some pressure on the steel industry with the object of getting its 'voluntary' consent for stability in steel prices. While the Kennedy Administration is not in favour of a general steel price increase, it has been reported that it may not frown upon selective and fairly small increases in prices.

Recently, the U.S. steel industry came under fire for the contemplated price increase. According to Senator Albert Gore (who spoke on the subject on 22nd August last in the Senate), the rise in steel prices had been responsible for 40 per cent of the rise in the wholesale price index over the period 1947-58. Another argument advanced by him was that with the scheduled wage increase but without price increase, profits of steel industry during the fourth quarter of 1961 "will likely be equal to the average of the last 14 years, which is 10.5 per cent after taxes." According to the October *Monthly Letter* of the First National City Bank of New York, Mr. Gore's argument has overlooked the responsibility of Government for the cost-push in steel and presumed, contrary to fact, that steel-making is a monopoly and that profits have been the main beneficiary of price advances. The average rate of profit of 10.5 per cent in the last 14 years in the case of the steel industry, it is recalled, is below the 14-year average realised by U.S. manufacturing industry as a whole. The steel industry in the U.S., the *Monthly Letter* continues, is not outside the range of competition, for, after all, there are 241 iron and steel works in that country. It does not resemble a "cartel system" of administered prices, for competitive forces have been at work, as evidenced by the reductions in prices of some steel items during the recent business recession. The *Monthly Letter* explains and defends the pricing policies of the U.S. steel industry as follows:

"The pricing policies of the industry have been based primarily on the cost or supply side of the supply-demand equation. Quotations have not been adjusted up and down sensitively to fluctuations in demand. The companies have followed a general practice of marking up prices in line with step-ups under wage contracts. During World War II, even though costs were rising, steel prices were arbitrarily pinned down by price controls; thus, a part of the rise in price from 1945 to 1949 represented an effort of the industry to restore normal profit margins. But any impartial review of the behaviour of steel prices since 1940 must inevitably come to the conclusion that it was the exceptional rise in costs which explained the exceptional rise in price. The accompanying chart shows the record, since 1940, of hourly employment costs as computed by the American Iron and Steel

Steel Prices, Employment Costs, Profit Margins, and Return on Net Assets, 1940-61



Institute and the average price of finished steel as figured by *Iron Age* magazine. In the bottom panel, profits are shown expressed as rates of return on net assets and on sales.

"Senator Gore spoke of 'competent studies' demonstrating that the rise in the price of steel explains 40 per cent of the rise in the wholesale price index, 1947-58. This bizarre statistic puts the blame on the steel industry for post-war inflation which had more fundamental causes; the tremendous buildup of spending power during World War II, the maintenance of an inflationary cheap money policy in the first six post-war years, pressures exerted by the Government on the steel industry to raise wages, and higher levels of taxes and plant replacement costs. While frowning on increases in steel prices, Government aided and abetted the wage increases which made them necessary if the financial strength and capital-raising power of a basic industry were to be sustained."

Vigorously opposing suggestions for controlling the prices of steel, the *Monthly Letter* avers:

"Apart from the manifest exaggeration of the estimate (of Senator Gore), there are worse things that could happen to this country than an increase in the price of steel.

"One of these is the destruction of the freedoms of the market place and the substitution of political price-fixing, beginning with steel and spreading perhaps throughout industry. If nothing else, our war-time experience with price-setting bureaucracies, black markets, and deteriorations of quality should warn us against this course.

"Something else that would be worse than an increase in steel prices would be an erosion of the industry's financial strength and capacity to raise capital and fulfil its essential role in the process of national growth. Steel is the sinew of war. Nothing would be more foolhardy from the standpoint of national defence than breaking up the industry into smaller and less efficient units, letting weaker companies perish, and dismembering our arsenal of democracy."

The plea is advanced in the *Monthly Letter* for selective upward adjustments in steel prices in keeping with the trends of strengthened demand and higher costs of supply. A healthy steel industry, in its opinion, is more important than some absolute of stability in steel prices. As the U.S. steel companies have been facing difficulties in maintaining the flows of essential profits (ref. second chart above), selective individual adjustments in prices are probably inevitable. The buyer of steel, in the words of the *Monthly Letter*, must pay its cost of production, for the nation's tax-payers cannot afford to have the steel industry become forced to go to Washington as supplicants for subsidies. If and when steel prices are further increased, the competitive capacity of the U.S. steel industry *vis-a-vis* the European steel industry will be further reduced. But internally, as the great bulk of finished steel production is consumed by the automobile, construction and miscellaneous manufacturing industries, the effects of a steel price increase will only be thinly fanned out through the economy. Such debtor countries as have necessarily to import U.S. steel products, machinery and equipment, under the D.L.F. or Ex-Imp. Bank credit terms which tie buyers to the American market, will, on the other hand, certainly feel the pinch.

U.S. FIRM BUILDING GIANT TELESCOPE FOR OSMANIA 'VARSITY

The Fecker Company of Pittsburgh (U.S.) has undertaken the construction of a 48-inch telescope for the Nizamiah Observatory of Osmania University in Hyderabad. It is for the first time that the Company has undertaken a job of this magnitude in its entirety. The 11-ton telescope, which will be the largest in India and South-east Asia, represents an investment of $100,000, labour of more than 200 men, and five years of work. Its purchase was made possible under the terms of the U.S. Wheat Loan Educational Exchange Programme.

Jointly designed by the Fecker Company and the former Director of Nizamiah Observatory, the telescope is equipped to measure the intensity of the light of stars, for work in photography, for general stellar photography, and for spectrographic analysis of the elements and compounds found beyond the earth's atmosphere. The telescope will be ready for delivery in February or March of 1962. Two American technicians will come to India to supervise its reassembly. It will rest on two concrete piers now being built at the Hyderabad observatory.

ALUMINIUM PIPE FOR OIL WELL DRILLING

Will aluminium pipe one day displace steel in the exacting duties of oil well drilling? Two years ago the question would have been pointless, for aluminium had never been used for this purpose. Today the question is of lively interest, according to the *Petroleum Press Service*, as a result of the experimental drilling programme undertaken in the U.S.A. by Shell Oil, in co-operation with Reynolds Metals, manufacturers of the pipe, and the Reed Roller Bit Company. After drilling over 100,000 feet of hole with a 10,000-foot string of 4½ inch pipe, Shell Oil has just described the performance of the light metal as more than satisfactory for oil industry needs.

Reynolds are not yet ready to market such drill strings commercially, but they hope to be in a position to do so next summer. They have fixed a tentative price of $9.20 a foot for the 4½-inch pipe, which compares with a price of around $6.20 for Grade E steel pipe with comparable characteristics. Despite the discrepancy, the manufacturers regard their price as highly competitive because aluminium, apart from its considerably higher scrap value, offers cost-cutting advantage in use. Chief of these is a 40 per cent saving of weight. This makes for cheaper transport of the pipe, ease of handling at every stage, and a much reduced strain on rig and draw-works for a given length of string. For this reason, Shell was able to drill down to 11,500 feet with a rig which could have reached only 7,000 feet with steel pipe.

The physical properties of the light metal pipe —tensile strength, fatigue resistance, etc.—are reported to be at least equal to those of the normally used Grade E steel. Though conventional handling and finishing techniques can be employed without modification, certain special requirements must be observed with aluminium drill pipe. For instance, the drilling mud must have a low alkaline rating, and common acid inhibitors containing arsenic must not be used, since these react with the metal to form a dangerous gas. The problem of mud-stream turbulence, which tended to cause slight erosion of the metal near the tool joints, is reported to have been eliminated by redesigning the internal surfaces, so that they fit almost flush.

In short, the results of these extended tests suggest that competition between the two metals for the driller's custom is likely to become increasingly keen as time goes on.

ADDITIONAL EXCISE DUTIES ON PETROLEUM PRODUCTS

Following the Government's decision to accept the recommendations of the Damle Committee on Oil Prices (*vide*: Article entitled 'Prices of Petroleum Products' on Page 694 of *Commerce* dated 7th October, 1961), Gazettee notifications have been issued for mopping up as revenue the reduction in the selling prices of major petroleum products and bitumen with effect from 1st October 1961.

The notifications have been issued under the Mineral Oil (Additional Duties of Excise and Customs) Act, 1958 and the Sea Customs Act, 1878, in terms of which any increase in the rates of excise duties and customs has to be borne by the oil companies themselves and are not realisable from the consumers.

Following are the new rates of excise duty:

(1) Motor Spirit: Rs. 56.05 per kilolitre at fifteen degrees of centigrade thermometer; (2) Kerosene: Rs. 26.80 per kilolitre at fifteen degrees of centigrade thermometer; (3) Refined Diesel Oil: Rs. 33.55 per kilolitre at fifteen degrees of centigrade thermometer; (4) Vaporizing Oil: Rs. 33.55 per kilolitre at fifteen degrees of centigrade thermometer; (5) Diesel Oil, not otherwise specified: Rs. 19.70 per metric tonne; and (6) Furnace Oil: Rs. 19.70 per metric tonne.

The customs duty would be at the following rates:

(1) High Speed Diesel oil and vaporizing oil, as defined in item No. 27(5) of the First Schedule to the Indian Tariff Act, 1934 (32 of 1934). (a) High Speed Diesel Oil: Rs. 44.45 per kilolitre at 15 degrees of centigrade thermometer or 16 per cent *ad valorem*, whichever is higher plus Rs. 294.25 per kilolitre at 15 degrees of centigrade thermometer; (b) Vaporising Oil: Rs. 44.70 per kilolitre at 15 degrees of centigrade thermometer or 16 per cent *ad valorem*, whichever is higher plus Rs. 272.80 per kilolitre at 15 degrees of centigrade thermometer. (2) Diesel Oil, not otherwise specified, as defined in Item No. 27(7)(b)(1) of the First Schedule to the Indian Tariff Act, 1934 (32 of 1934): 16 per nt *ad valorem* plus Rs. 111.80 per tonne. (3) Furce oil as defined in Item No. 27(7)(b)(2) of the rst Schedule to the Indian Tariff Act, 1934 (32 of 34): 16 per cent *ad valorem* plus Rs. 49.25 per nne.

FURTHER CAPACITY FOR SPECIAL STEELS LICENSED

A further capacity of 1,20,000 tons for the anufacture of tool and alloy steel in the private ctor has been licensed by the Government of dia. It may be recalled here that capacity alady existing or licensed by March this year was out 10,000 tons. There is a variety of tool and loy steels. For purposes of planning, additional pacity estimates of requirements have been made ily of alloy steel sections with a minimum of romium, nickel, molybdenum and other alloying ements which require specialist plant. The coun-y's requirements of such steels by the end of the ird Plan have been estimated at 2,00,000 tons.

The Government has already granted a licence the Tata Iron and Steel Company for establishg a new industrial undertaking at Jamshedpur r the manufacture of 49,000 tons of tool and loy steels per annum. Preliminary work on the ection of an alloy and special steel plant under e Hindustan Steel Ltd. has already begun and the nder enquiries for plant and equipment are under reparation.

D.V.C.'S EARNINGS IN 1960-61

The Damodar Valley Corporation earned over s. 7.83 crores in 1960-61 from the sale of power proced by its chain of hydel and thermal stations. his represents an increase of about Rs. 1.67 crore, s compared with the revenue earned by the Corporation in 1959-60.

The total power generated by the D.V.C. power ystem in 1960-61 was 164 million kw.h., as comared with 146 million kw.h. in the previous year. he main consumers of D.V.C. power in 1960-61 ere the West Bengal and Bihar State Electricity oards and the Calcutta Electric Supply Corporaon. In addition, the Eastern Railway, Chittaranjan Locomotive Works, Hindustan Cables, Durgapur Steel Project, the Indian Copper Corporation, he Indian Iron and Steel Company, and the Tata ron and Steel Company received D.V.C. power in hese years.

PENETRATING EARTH'S CRUST

According to a recent report in *The New York Times*, the Russians are studying a plan to drill holes for scientific purposes at five places on land to depths of six to nine miles (31,680 feet to 47,520 feet). So far, the United States has drilled holes over 25,000 feet deep, the Soviets about 17,000 feet. At sea, American drilling in water to a depth of 1,700 feet is stated to be nearly 100 times the Russian record to-date.

NEW PRODUCTS AND PROCESSES

Shock Treatment Preserves Milk for Long Time

A NEW "shock treatment" method of milk sterilisation, which makes it possible to store milk for a prolonged period of time, has been developed by a team of researchers at Alnarp, the Swedish University College of Dairy Engineering, in collaboration with A.B. Separator, the Swedish Alfa-Laval Company. Milk processed according to this method can be stored at least for four weeks at temperatures normal in the tropics without any change of flavour, colour or nutrition value, it is claimed.

The research team, consisting of Professors Karl Erik Thomé and Per Swartling, Dr. E. G. Samuelsson and a group of Separator engineers, departed from the well-known fact that sterile milk with all the properties could be obtained economically if an accurate heating process could be devised whereby the milk was exposed to the required heat for a sufficiently short time. The solution was found in an application of a process in which steam is used for both heating and chilling and in the design of the Vacu Therm Instant Steriliser, a fully automatic sterilisation plant.

In the new process, the milk is preheated and then given a shock treatment by being heated to 140° C. (284° F.) by jets of hot steam, then quickly chilled by evaporation in a vacuum chamber. This vacuum processing also frees the milk from any feed or similar taste. Milk obtained by this process is absolutely sterile, i.e. completely free from micro-organisms and thus suitable from the bacteriological standpoint for prolonged keeping. Previously applied techniques for prolonged milk storage—pasteurisation chemical and autoclave sterilisation—all have the disadvantages of either ensuring only a limited period of storage or affecting the food value, taste and colour of the milk. The new method is described by its originators as "kind to everying except bacteria."

The exact processing temperature in the Alfa-Laval Vacu Therm Instant Steriliser is achieved partly by an automatic super-sensitive regulating system and partly by a patented automatic "watchman" which returns insufficiently processed milk to the inlet of the sterilising plant. A special automatic device also ensures that the structure of the milk is unchanged during the process.* To ensure absolute sterility before the processing begins, another automatic device cleans and sterilises the machine according to a fixed time and temperature programme.

The operational cost of the installation is claimed to be exceptionally low, since both heating and chilling procedures are simplified by a highly-developed system of heat regeneration. Another advantage is that the installation can be adjusted to sterilise varying quantities of milk.

For obvious reasons, the whole process would be useless if aseptic filling into sterile containers were not possible. However, recent developments in packaging have run parallel with mechanical and technical innovations and there are now available on the market low-priced plastic-coated containers which can be filled and sealed by fully aseptic machines. The experts believe that the new milk sterilisation process may revolutionise milk supply and distribution in developing countries and tropical areas.

Flexible Aluminium Tubing

A recent development by the United Flexible Metallic Tubing Company Limited is the manufacture of flexible tubing in aluminium alloy. Hitherto, production of this type of tubing has been confined to galvanised steel, stainless steel and bronze. Many industries, however, face problems of handling particles, gases or fluids through flexible tubing where the special advantages of aluminium prove of particular value. For this product, aluminium strip is rolled and slit to fine tolerances and is then helically formed, by means of its interlocking edges, into tubing. A continuous sealing cord is introduced between the interlocking edges to maintain pressure tightness with flexibility.

The choice of a high strength alloy, Noral 54S (BS 1470 NS5) offers a tube suitable for pressure service at about one-third the weight of similar tubing in other metals. This is proving of special interest in road-tanker and other bulk handling applications where hoses must often be man-handled. Working pressures range from 300 p.s.i. for ¾ in. bore tubing to 75 p.s.i. for 12 in. bore tubing. The aluminium alloys, particularly the aluminium-magnesium type of which Noral 54S is in the higher strength range, are especially useful to industries handling or processing liquified gases or other materials at very low temperatures, at which many other metals suffer embrittlement.

In many conditions of service, flexible tubing must withstand corrosive gases or liquids. Aluminium's resistance to corrosion makes it suitable for use in many otherwise highly corrosive situations. As an example, United Flexible Metallic Tubing Company's new catalogue illustrates 8-in. bore flexible tubing assemblies made from Noral 54SO strip and used by Shell Tankers for flushing tanker pipelines and tanks with sea water.

A ready-mixed paint of distinction which has more than held its own for over 50 YEARS because it—

- is finely ground and contains a special varnish medium that ensures elasticity and durability;
- gives a hard, glossy surface;
- is suitable for both interior and exterior use;
- and is available in 26 distinctive colours.

COMMON MARKET AND WORLD TRADE

U.S. HOPES TO BENEFIT BY U.K.'S ENTRY

[Britain's move to join the Common Market has entered the final stage. This has roused much concern among several countries, including India, which have close commercial relations with Western Europe. The largest industrial country in the world, namely, the U.S., however, is not apprehensive about the possible trade discrimination from the Common Market. On the contrary, many in that country seem to be confident that they can reap benefits from a strong and well-knit European market. In an article on "Common Market and World Trade," the latest (October) Monthly Letter of the First National City Bank of New York expresses the hope that increased demand for U.S. goods in Western Europe will offset the possible adverse effects of tariff changes in that part of the world. It observes that, in the long run, the expanded market, now being created in Europe, will materially enlarge outlets for U.S. exports, provided the Six follow liberal trade policies vis-a-vis non-member countries, "just as our (U.S.) economic growth and liberal import policies have enlarged European opportunities in this (U.S.) market." The full text of this cheerful review of the epoch-making development in Western Europe is published on this page.—ED.]

BRITAIN'S decision is a move of deep economic and political significance. It will promote Europe's unity and stability—an essential factor in the struggle for freedom and progress in the world. It will create the largest single market in the world, gaining substantial benefits from mass production and distribution. A rapidly expanding European market of some 300 million people will, it is hoped, lead, in turn, to increased demands for the products of other parts of the world and thus help expand world trade and improve the prospects for less-developed nations.

The flourishing conditions in the Common Market undoubtedly influenced Britain's decision to apply for membership. Trade within the Common Market has been greatly stimulated and is expanding much faster than trade with outsiders. Between 1957 and 1960, trade of E.E.C. nations among themselves went up by 44 per cent while British exports to the Common Market increased by only 22 per cent. True, Britain's trade with the United States, overseas Commonwealth countries, and other nations is of greater aggregate importance; but Britain could hardly disregard the fact that, right at its doorstep, the Community was rapidly becoming the world's largest market for imported manufactures.

Single European Market

The path to a single market for all of Free Europe is not an easy one. The Six, who have thus far been remarkably successful, will presumably wish to safeguard the essential features of the Community as presently constituted. Britain's application for membership in the Common Market is conditional on satisfactory arrangements being made to meet the interests of British agriculture, the Commonwealth and the other E.F.T.A. members. These matters will now be probed in detail. "There are," as Britain's Prime Minister Macmillan stated, "great risks from failure and great opportunities to be gained by success."

In particular, Britain's approach to the Common Market raises a host of issues with regard to its links with the Commonwealth. For a quarter of a century, Britain has been granting lower tariffs on its imports of products, such as sugar, meat, and dairy products from the West Indies, Australia, and New Zealand, and has, in turn, been given preferences for its exports to many Commonwealth countries. Britain's trade with the Commonwealth, even though diminishing in relative importance, nevertheless represents some two-fifths of its total trade. The merging of the British market into a common European one, surrounded by common import tariffs and guided by common commercial policies, poses great problems for Britain as well as for the overseas Commonwealth countries themselves. At the same time, European agricultural producers like France, Holland, and Italy want free access to the British market.

Furthermore, the six E.E.C. nations want to go beyond the mere freeing of trade among themselves: they seek to use free trade as an instrument of broader economic—and political—integration. Britain has traditionally preferred a less closely knit association with the Continent. Moves to "harmonise" Common Market economic, financial and social policies are proceeding, however, slowly and cautiously. Fiscal and monetary autonomy is, in principle, unimpaired. Each member State is responsible for its balance of payments; exchange policies, though "of common interest," remain national.

Nevertheless, the Common Market nations have made remarkable advances toward complete freedom of movement of capital and labour. So far as capital is concerned, restrictions have been practically abolished in Belgium and Germany; elsewhere, they have been greatly liberalised. Britain also makes large capital investments abroad, but has retained controls over capital exports to non-sterling countries.

Ultimately, of course, the vitality and the vigour of the Common Market will depend on the ability of each member to stand up to unrestrained competition, without customs or other obstacles, in its home market. This will require economic flexibility, adaptability, and efficiency; hence the crucial importance of Britain's current efforts to safeguard financial stability and make its economy truly competitive. But, if the Common Market imposes discipline, it also offers opportunity for expansion, and the two together are the main ingredients of economic success.

New Force in World Affairs

There is thus developing in Europe a powerful group of nations. Its strength is shown by the size of its population, larger than that of the United States or Russia (although Western Europe's area is smaller). Its steel output exceeds our own as well as Russia's, and its electricity and automobile production, while second to ours, are much larger than Russia's.

It is natural that European nations be concerned with the build up of foreign trade, for international division of labour and product specialisation have contributed vitally to their prosperity. This is reflected in the large trade among the European nations themselves as well as in their commerce with the rest of the world. Even if intra-European trade is excluded, Europe is the world's largest trader: its combined shipments to overseas countries are bigger than total U.S. exports.

Europe is also the world's largest market for primary products. It is the main importer of virtually all major commodities with a few exceptions like sugar and coffee, in which the United States is the leader. By and large, what happens in Europe is now as important for the course of world trade and prices as what happens in the United States.

Spurred by the new trading arrangements as well as by remarkably effective policies to foster output and investment, many European nations have attained enviable rates of economic growth. Industrial expansion in the Common Market countries since 1955 has proceeded at an annual rate of 7 per cent, and that in Western Europe as a whole at 5 per cent, as compared with 2 per cent in the United States. Up to a point, to be sure, this recent expansion represents a catching up of the large amount of ground lost during the 1930s and 1940s. But the impetus gained by diminishing commercial rivalries and the fragmentation of markets opens entirely new vistas.

Strong Financial Position

Financially, Europe's strength is evident in its large gold holdings—over $16 billion, as compared with some $17.5 billion in the U.S. reserve. In addition, Europe holds close to $9 billion in the form of short-term dollar claims. Once more, the leading European currencies command respect, with all the self-confidence that this implies.

It is true that Europe today is not a single economic entity. But the widening of the Common Market will strengthen the interdependence of European nations, which has always been important, and will release the dynamic forces of mass production in an environment of competition and efficiency. Wisely handled, economic unification can only be beneficial to Europe's productive power and living standards.

Trade with Outsiders

A Common Market enlarged through the accession of the United Kingdom and other E.F.T.A. countries would become an even bigger factor in world trade than the present Community. In this enlarged market, the problem of trade relationships with non-participating nations might thus become even more delicate than in the E.E.C. as presently constituted. Removing trade restrictions within a closed area helps insiders but puts outsiders at a disadvantage. Most countries outside Europe are naturally concerned with the growth of new tariff discriminations that may hurt their markets in Europe—for agricultural products, raw materials and manufactures.

So far, internal tariffs of Common Market countries have been cut 30 per cent below the 1957 level; another 10-20 per cent decrease, presently under consideration, would reduce tariffs by as much as 50 per cent only four years after the Common Market was established. Import quotas among members on industrial goods are to be eliminated by the end of this year. Within the E.F.T.A. group, the first tariff reduction of 20 per cent was carried out in July 1960 and an additional one of 10 per cent in July 1961, six months ahead of schedule. The dismantling of trade barriers has thus kept pace within each of the two groupings. The Common Market nations made the first adjustments in their tariffs against the rest of the world in January 1961, a year ahead of schedule.

Tariff Reductions

It is encouraging that a good part of last year's tariff reductions among the six founding Common Market nations was "generalised" to outside countries, including the United States. Furthermore, during this year's round of tariff discussions under the General Agreement on Tariffs and Trade (G.A.T.T.), the Common Market nations offered a 20 per cent across-the-board cut in the Community's industrial tariffs against non-members; full reciprocity would not apparently be required from the United States, which had made more than its share of tariff reductions in the years following the war. For instance, rates on automobiles are 8.5 per cent in the United States but 27-29 per cent in the Common Market external tariff as presently scheduled; the rate is 30 per cent in the United Kingdom.

The problem of trade barriers in the agricultural field is particularly difficult, owing to the need for developing a common agricultural policy in the Community. Not only the United States but also Latin America, the Commonwealth countries and other outsiders have a vital stake in the treatment of agricultural imports by Europe.

In the enlarged Common Market, much would obviously depend on the level of the common tariff against outsiders and the manner in which it would conduct its external commercial policy in general. The common tariff would have to be consistent with G.A.T.T., which requires that it should be no more restrictive than the individual rates prior to the establishment of a new customs union.

U.S. Vitally Interested

Like other outside countries, the United States is vitally interested in Europe's regional trading arrangements. Western Europe is our largest trading partner, and over the years has accounted for an increasing portion of our foreign commerce. Currently, our trade with Europe accounts for one-third of our exports and more than one half of our total trade surplus; U.S. exports to Europe exceeded imports from that area by $3 billion during the twelve months ended June 1961. Our trade surplus with Europe helps reduce our large payments deficits with Europe on account of services, defence outlays and capital investment.

The substantial expansion in our exports to Europe—at least until a few months ago—shows that increased demand for American goods can offset the adverse effects of tariff changes. In the long run, it must be hoped, the expanded

EFFECTS OF RUPEE PAYMENT AGREEMENTS

FEDERATION URGES THOROUGH PROBE

ONE of the highlights of the memorandum submitted by the Federation of Indian Chambers of Commerce and Industry to the Import and Export Policy Committee (Chairman: Dr. A. Ramaswami Mudaliar) is the cogent plea for a thorough probe into India's trade under bilateral trade agreements. India has concluded bilateral trade agreements not only with East European countries of the Communist bloc in the form of rupee payment arrangements, but also with countries like U.A.R. (Egypt), Burma, Tunisia, etc. The obvious purpose of this arrangement is to ease immediate pressure on foreign exchange resources and to bring about an automatic balancing of imports and exports between India and the countries concerned. The experience hitherto has, however, shown that these arrangements have neither resulted in an increase in exports of non-traditional commodities or in saving foreign exchange. This journal itself had drawn attention to several defects in the working of the scheme (*vide* page 118 of *Commerce* dated 15th July 1961).

The rupee-payment agreements may immediately seem to effect a saving of foreign exchange inasmuch as no payments are required to be made out of free foreign exchange resources. In the long run, however, as the Federation pertinently remarks, the effect is different. The balance at the end of each year is carried forward from year to year to the credit of one country or another. If rupees are accumulated in India by countries which export goods to this country under the arrangement, those rupees will ultimately have to be settled by exports of Indian goods. Accordingly, these arrangements represent only a postponement of India's liability. In other words, as the Federation points out, though imports from the rupee-payment countries will obviate an immediate drain on India's foreign exchange resources, "the payment in rupees will mean payment of Indian goods of equivalent value." While imports from these countries serve to avoid expenditure on foreign exchange, exports to these countries will mean no addition to foreign exchange earnings.

Re-export of Indian Goods

There is increasing evidence that the rupee payment arrangements have tended to affect adversely the normal outlets for India's exports, because the rupee payment countries buy certain Indian goods only to be re-exported to other countries, which are already India's traditional customers. Elucidating this aspect, the Federation observes as follows:

"... some of the rupee payment countries have purchased our conventional items like tea, coffee, jute, textiles, etc., and re-exported them to our traditional markets at a lower price, thereby affecting our export trade in third markets. This has led to a disruption of our normal pattern of exports to some of the West European countries. For example, one country purchased coffee from India and sold the same to another, one of our traditional buyers, at a c.i.f. price which was even lower than the f.o.b. price in India. Similarly, it has been stated that another country bought considerable quantities of tea and jute which ultimately found their way into Continental markets, instead of being consumed in the country itself. A paradoxical result of these arrangements has been that, by exporting to these countries, we receive credit in our rupee account in favour of the State Bank of the country concerned or the State Bank of India, while these countries re-export our goods and earn foreign exchange as in the cases cited above. Further, it has been pointed out that the attempt to diversify our exports by increasing trade with the rupee payment countries has not resulted in a commodity-wise diversification. For example, even now the main items of our exports to these countries comprise commodities like tea, coffee, jute manufactures, hides and skins, raw wool, spices, iron ore, vegetable oils, tobacco, footwear, etc."

So much for exports from India. The position in regard to imports into India from countries that have agreed to accept rupees is also not wholly satisfactory. It is analogous to that of a person who has to buy goods on credit, as he has no other choice. The Federation points out:

"... goods of the exact specifications required are not offered by the countries willing to accept rupee payment, and an impression is prevalent that there is an attempt to supply inferior quality of goods on rupee account, while the better quality goods are reserved for normal exports. It has also been reported that items like steel of special quality and tested specifications required by engineering industries, stainless steel and alloy steel, M.S. steel sheets, carbon black for rubber industry, bright cold rolled steel strip, wires, etc., and a host of other items are either not available in these countries, or if available, are of poor quality. There are also reports that machinery and equipment supplied to India by these countries were imported in some cases from West European countries. It has been stated by some of our constituents that if imports are made from rupee payment countries, prices are higher by 15 to 30 per cent. The delivery periods are also stated to be uncertain and no after-sales service is generally offered by these countries."

Quality and Price

These views are virtually endorsed by the Paper Traders Association, in its separate memorandum submitted to the Ramaswami Mudaliar Committee. The Association observes that, under the trade arrangements with rupee payment countries, "we have to content ourselves with receiving what inferior qualities, or small or big quantities in specifications suitable to exporters at the other end, and, on top of it all, we have to pay prices out of all proportion to and much higher than the prices at which similar goods would normally be available to us from the sterling (or general) area." Giving a specific instance of import of tissue paper from Rumania, the Association says that the quality of this paper "was so inferior that the trade or the consumers would not normally accept this as tissue paper." Moreover, the price paid for it was much higher than the price at which better quality paper was available from the sterling area. After a detailed study of the trade under rupee payment, the Association concludes that they have proved harmful to India's economy. A similar apprehension about bilateral trade has been expressed in the memorandum of the Indian Merchants' Chamber (Bombay) as well. The I.M.C., too, admits that the prices of some kinds of capital goods imported from rupee payment countries are generally on the high side, though it concedes that there are certain exceptions. The prices of textile machinery imported from East Germany, Yugoslavia, Czechoslovakia and Poland, for instance, compare favourably with those quoted by other countries. Higher prices in certain cases, according to the I.M.C., may be partly due to the fact that they are imported from a third country and are being re-exported to India.

Existing rupee payment arrangements, on the whole, leave much to be desired. The aforesaid trade bodies, however, have not suggested the scrapping of these arrangements to *in toto*. The Federation feels that, because of the present foreign exchange difficulties, bilateral trade on non-convertible Indian rupees, has some part to play. But it stresses that the defects which are noted in the working of the system should be rectified. With this object in view, the Federation suggests that rupee-payment arrangements should be subject to two important conditions, namely, (1) goods bought from India, particularly those in the traditional lines, should be for internal consumption and not for re-export or resale to a third country, and (2) the importing country should buy a specified percentage of newly developing lines of exports from India. In regard to imports, the Federation says that it is necessary to ensure that prices charged by the exporting countries are reasonable and that the quality of goods is satisfactory. It has, however, not suggested any means by which this condition could be enforced.

Export Promotion

On the question of export promotion measures, one of the points made by the Federation, in the memorandum mentioned at the outset, is that, owing to delay caused by complicated procedures and fulfilment of several conditions, exporters have not been able to take full advantage of export promotion incentives. The Federation has suggested that, in the sphere of granting drawback of import and excise duties, the entire system should be reviewed and appropriate liberal procedures be introduced. It has suggested three measures, designed to make the existing export promotion measures more effective. They are:

"1. Currently, under export promotion schemes import of raw materials and components is allowed against exports of goods upto a certain percentage of the export value. The import of capital goods and equipments should also be allowed. This would help the Indian manufacturers to modernise their machinery.

"2. Again, import entitlement for raw material is available only when the goods exported have an import content. On the other hand, a manufacturer who exports goods manufactured out of indigenous raw material is not entitled to claim an import entitlement. This appears to be unsound in principle. It would, accordingly, be desirable to revise the import entitlement formula and also allow entitlement on the exported product which contains indigenous raw material.

"3. Further, at present, the manufacturer-exporter who effects exports to rupee payment countries is not entitled to obtain any incentive import licence from free currency areas. Many of our exportable goods can be manufactured out of raw materials and components imported from only non-rupee payment countries. The discrimination regarding the grant of incentive licence between exports to rupee payment and non-rupee payment countries should be removed."

The Federation has not concealed its disapproval of compulsory exports. It argues that a blanket provision that a certain percentage of production by each industry should be exported may well result in reducing the competitive capacity of India's exports and correspondingly strengthen the bargaining position of the foreign importer. It has, however, no objection to the introduction of a scheme for compulsory exports in respect of a few selected industries, provided it is done with the concurrence of the industries concerned and their associations agree to take an active part in organising the exports in a businesslike manner. The Federation, however, attaches greater importance to concessions in income-tax and sales tax, as well as to effective medium-term credit facilities at favourable rates of interest, as positive aids for promoting exports.

FIRE FIGHTING EQUIPMENTS

A public enquiry into the pricing policy of the fire fighting equipment industry was held by the Tariff Commission last week, with Mr. J. N. Dutta, a Member of the Commission, presiding. This question, it may be recalled, had been referred to the Commission sometime back by the Government of India, following complaints of higher prices by consumers. The major items of fire fighting equipments which are being manufactured in the country are fire extinguishers, fire-engines, crash fire tenders and fire trailer pumps. There are at present eight units in the organised sector engaged in the manufacture of these equipments. Maharashtra and West Bengal have three units each, and Madras and Delhi one each. Another unit has been licensed for Maharashtra and is expected to go into regular production shortly. In addition, there are about sixteen units in the small-scale sector, which are producing various types of fire extinguishers and their components.

It was only after 1956 that the fire fighting equipments industry was brought within the purview of the First Schedule to the Industries (Development and Regulation) Act, 1951. Even after 1956, all the units have not been registered. So reliable data on capacity and production are not available. According to the data collected by the Commission from the producers, the total number of fire extinguishers produced in the organised sector in 1960 was 42,374, as compared with 45,454 in 1959 and 24,930 in 1958. The number of fire engines produced rose from 21 in 1958 to 33 in 1959 and 71 in 1960. About 17 fire trailer pumps were produced in 1960, as against 15 each in 1959 and 1958. According to a producer, demand for fire extinguishers is about 6,500 in 1961 and will go up to 8,000 in 1962 and 10,000 in 1963. These figures do not appear to be correct. Since there are only less than ten units in the field (in the organised sector), it should not be difficult for the Tariff Commission to collect adequate data.

The main raw materials required for the manufacture of fire extinguishers are black M.S. sheets, copper and brass sheets, brass and gunmetal castings, lead, tin, paints, cellulose lacquer, springs and chemicals. Most of the above materials, except one of the chemicals, namely, carbon tetrachloride, are available indigenously. Many producers have complained that they find it difficult to procure requisite quantities of black M.S. sheets in accordance with their requirements. It is generally found that there is considerable scarcity of sheets in the country which is expected to be relieved only after the production of sheets at the Rourkela Plant reaches a satisfactory level. In regard to trailer pumps and fire engines, the principal ingredients—apart from some of the raw materials already mentioned—are an engine and a pump for the former, and a chassis fitted with engine and a pump for the latter, with auxiliary basefittings. Apart from M.S. sheets they require various other iron and steel materials, such as angle iron, flat iron, iron plates, rounds and channels, etc., for body building purposes. The principal equipment in respect of chassis and engines are available indigenously and some units have started manufacture of fire pumps which are of a special design and had to be imported hitherto. The power take-off appliance which is required for fire engines, with pumps mounted on the rear, has to be imported. One of the firms has indicated that it has plans for manufacturing the power take-off unit indigenously by 1962. With regard to fire pumps, some of the manufacturers had been importing them from outside for mounting on fire engines and trailers. Such imports, it is understood, are no longer allowed as some of the indigenous firms have started, and some more are likely to start, manufacturing such pumps in India.

There have been some small imports of fire-fighting equipments. In 1960, for instance, 1,805 fire extinguishers (worth Rs. 2 lakhs) were imported, as against 1,364 (worth Rs. 1.4 lakh) in 1958. The number of fire engines imported in 1960 was four (valued at Rs. 1.85 lakh), as against 23 (Rs. 20 lakhs) in 1958. India has developed some exports of fire extinguishers, too, particularly to Ceylon and Thailand. The total number of fire extinguishers exported was 1,468 (valued at Rs. 42,000), as compared with 750 (Rs. 23,800) in 1959 and 357 (Rs. 15,300) in 1958.

HEAVY DECLINE IN PROFITS OF KHATAU MILLS

DIVIDEND DRASTICALLY CUT

THE fortunes of the Khatau Makanji Spinning and Weaving Company Ltd. (Managing Agents: Messrs. Khatau Makanji and Company Private Ltd., Bombay) for the year ended 30th June 1961, have taken a sudden turn for the worse. The excellent working results achieved in the previous year have proved short-lived and whatever progress the Company had made during that year in profits and dividend distribution have been completely wiped out. Not only have the gross and net profit figures fallen substantially below their 1959-60 levels, but are in fact the lowest to be recorded during any of the past three years. Price reductions in finished goods and higher costs of imported raw materials are reported to have been the contributory factors. It will be remembered, in this connection, that the bulk of the Company's production falls within the fine and superfine varieties and for this the Company has to depend predominantly—to the extent of about 80 to 90 per cent—on imported cotton. The prices of foreign cotton and colours and chemicals which were ruling high during the year have also adversely affected the Company's profit. Moreover, price reductions, effected twice during the year on cloth and yarn, also contributed to a reduction in the profit margins. Thus, although the sale of cloth, yarn and waste has increased by Rs. 11.56 lakhs to Rs. 524.22 lakhs, the gross profit has declined to Rs. 49.01 lakhs from the all-time high of Rs. 100.15 lakhs a year ago.

The fall in gross profit has brought about a reduction in the provision for Managing Agents' commission from Rs. 8.54 lakhs to Rs. 3.20 lakhs and in that for taxation by Rs. 21.20 lakhs to Rs. 13.00 lakhs. Provision for depreciation, however, has had to be increased by Rs. 2.04 lakhs to Rs. 16.78 lakhs, owing to a higher depreciable block. After these essential provisions, the net profit has shown a fall of as much as Rs. 26.64 lakhs (or 62.5 per cent) to Rs. 16.03 lakhs. Transfer to reserves has been cut down from Rs. 21.66 lakhs to Rs. 4.30 lakhs and is confined to a credit to the development rebate reserve. The general reserve, which had received Rs. 17.52 lakhs during the previous year, does not get anything for the year under review. After setting aside Rs. 1.56 lakh to cover the preferred dividends for the year, the Directors propose an ordinary dividend at 16 per cent, subject to deduction of tax, or half of that paid for 1959-60. This will absorb Rs. 9.58 lakhs, leaving a carry forward of Rs. 0.98 lakh. Thus the Company has, after a spell of good fortune lasting for just one year, again reverted to the dividends for 1958-59. Prospects for improvement in ordinary dividends for the current year also do not appear promising, since the Directors themselves report that "there have been no material changes in the working of the Company since the end of the financial year."

The results of operation of the Company during the past four years are presented synoptically in the comparative table given below:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sales (gross)	5,24.22	5,12.66	4,92.48	4,73.08

* Subject to deduction of tax.

Following the programme of renovation and extension of its productive facilities, the Company acquired during the year under review, new assets worth Rs. 30.72 lakhs, thus bringing the gross value of its fixed assets to Rs. 399.59 lakhs. Deducting from this Rs. 284.70 lakhs as the depreciation earned to-date, the net block works out to Rs. 114.89 lakhs or less than one-third of the gross block. The current assets are worth Rs. 363.44 lakhs and more than fully cover loans, current liabilities and provisions aggregating Rs. 300.47 lakhs. The net worth of the Company is Rs. 177.86 lakhs, represented by Rs. 29.92 lakhs in preference share capital, Rs. 59.87 lakhs in equity capital and Rs. 88.07 lakhs in reserves and surplus.

The present market quotation for the Rs. 100 fully paid ordinary share of the Company on an *ex-div.* basis is Rs. 430.05. At this price, the share fetches a net yield of 2.6 per cent per annum.

PROGRESS OF T. STANES ENCOURAGING

The statement of accounts of T. Stanes and Company Ltd. (Managing Director: Mr. E. H. Stanes, Coimbatore) for the six months ended 31st March 1961 has just reached us. The Company, which is now a subsidiary of Messrs. Simpson and Company Ltd., had to change its accounting year as required by Section 212(2) of the Companies Act. During the half-yearly period, its sales amounted to Rs. 42.29 lakhs, as against Rs. 80.88 lakhs in the previous full year and Rs. 68.04 lakhs for 1958-59. Thus the upward trend of its turnover had been well maintained during the period under review. The other income, which is mainly derived by way of dividend from its subsidiaries, amounted to Rs. 5.53 lakhs for the half-year period as against Rs. 9.98 lakhs for the year ended 30th September 1960. The total expenses including raw materials and stores consumed were of the order of Rs. 46.92 lakhs as against Rs. 79.47 lakhs for 1959-60 which shows that, proportionately, they had gone up rather sharply. The gross profit for the half-year under review amounted to Rs. 5.06 lakhs, as compared with Rs. 8.90 lakhs for the preceding full year, thus showing a rise of Rs. 1.22 lakh on a proportionate basis. The improvement is partly due to the larger closing stocks at Rs. 11.57 lakhs as against Rs. 7.40 lakhs in the previous full year, and partly to the improvement in sale proceeds.

After providing Rs. 33,000 for depreciation (Rs. 65,000 in 1959-60) and Rs. 1.55 lakh for taxation (Rs. 3.25 lakhs in 1959-60), the net profit works out to Rs. 3.18 lakhs for the half-year, as against Rs. 5 lakhs for the preceding full year. The Directors have decided to pay the ordinary dividend at the rate of 30 per cent per annum (gross) for the half-year. This dividend compares favourably with the dividend for the year ended 30th September 1960, when the shareholders received a dividend of 32½ per cent (gross) including the centenary bonus of 5 per cent which shows that the Directors have actually stepped up the dividend proper by 2½ per cent. The Directors have set aside an amount of Rs. 1 lakh to reserves, as against Rs. 1.13 lakh in the previous year.

The following comparative table gives a synoptic view of the progress of the Company in the three and half years ended 31st March 1961:

(In lakhs of rupees)

	For the six months ended 31st Mar. 1961	For the year ended 30th September		
		1960	1959	1958
Sales	42.29	80.88	68.04	55.89

* Subject to deduction of tax.
† Includes centenary bonus of 5 per cent, subject to tax.

In their report to shareholders, the Directors have stated that the Company and its subsidiaries made satisfactory progress during the period under review. But, in view of the changes in the financial year of some of the subsidiaries, the results are not strictly comparable with the previous years.

The turnover in the new car department of the Stanes Motors Ltd., one of the subsidiaries of the Company, has been satisfactory, thanks to the availability of supplies of Hindustan, Ambassador and Bedford Trucks. Other departments of the subsidiary also showed promising results. Total sales of the United Coffee Supply Company, another subsidiary of the Company, for the six months were of the order of Rs. 37.27 lakhs, as against Rs. 36.32 lakhs in the corresponding period for 1959.

The Rs. 10 fully paid shares of the Company are well favoured by investors. They are currently quoted at Rs. 31.50 *ex-div.* At the proposed rate of dividend, the net yield on them works out to 6.6 per cent per annum.

HINDUSTAN ELECTRIC RECOVERS

REPAYMENT OF DIVIDENDS RESUMED

WITH the reopening of its Howrah Works from 10th October 1960, the Hindustan Electric Company Limited (Managing Agents: Messrs. Dharamsinh and Company, Bombay) has come into its own again. In refreshing contrast to its working in the previous year, which resulted in a loss, for the first time in its ten-year history, of Rs. 4.08 lakhs due primarily to the closure of the factory at Howrah from 10th December 1959, and the inevitable skipping over the dividend on both preference and equity capital, the Company has staged a smart comeback in all directions during the year ended 30th April 1961. It has cleared the arrears of preference dividend and declared a dividend on both preference and equity capital for the year under review.

Following the reopening of the Howrah factory, production improved steadily, reducing the overheads, and satisfactory progress was made in consolidation. Sale proceeds increased from Rs. 157.01 lakhs to Rs. 191.54 lakhs and yielded a gross profit of Rs. 8.96 lakhs, against a debit balance of Rs. 0.38 lakh in the previous year. After providing for depreciation at Rs. 2.85 lakhs (Rs. 3.58 lakhs), taxation at Rs. 1.00 lakh (*nil*) and Managing Agents' remuneration at Rs. 0.35 lakh (*nil*), the Company has earned a net profit of Rs. 4.68 lakhs, as against a loss of Rs. 4.08 lakhs in the previous year. The Directors have recommended a dividend of Rs. 7.80 per share of Rs. 100 each, subject to deduction of tax, on the preference capital for the previous year and the year under review, giving a net return of Rs. 5.46 per share against a gross dividend of Rs. 8.57, or net of Rs. 6 per share, paid for 1958-59. They have also proposed a taxable dividend of Rs. 4 per share of Rs. 100 each on the equity capital, giving a net return of Rs. 2.80, for the year under review against Rs. 10 gross, or Rs. 7 net, paid per share for 1958-59. The dividends take away Rs. 4.72 lakhs. Allocations to reserves are higher at Rs. 3.33 lakhs, against Rs. 0.12 lakh in the previous year.

The comparative table below gives a fair idea of how the Company has fared in the past four years:

(In lakhs of rupees)

	For the year ended 30th April			
	1961	1960	1959	1958
Sale proceeds	1,91.54	1,57.01	1,89.26	1,94.85
Closing stocks of finished goods and work-in-progress	35.25	35.64	38.75	26.53

* Subject to deduction of tax. † For both 1960 and 1961.
‡ After meeting the loss by transferring Rs. 3 lakhs from genera reserve and from Rs. 0.57 lakhs brought forward from the previous year.

Back to normal, the Company should now be in a position to resume its onward march. It has been sanctioned power by the Punjab Electricity Board for putting into operation its non-ferrous rolling mill at Faridabad, which was scheduled to commence production from the last month. The mill has an annual capacity of 240 tons of A.C.S.R. and all aluminium conductor accessories on a single shift. Adequate electric power has been sanctioned for the Baroda Works to run economic production at first of transformers and later of motor control gears. Production in the Rihand-Banaras Works, with a tentative installed capacity of 5,000 tons of A.C.S.R. and all aluminium conductors, is expected to start by February-March 1962. The general market conditions for the Company's products are said to be favourable.

The share capital of the Company has been maintained at the last year's level of Rs. 60 lakhs, of which Rs. 40 lakhs are in equity, and the balance preference. Reserves and surplus, however, make a modest total of Rs. 4.99 lakhs, and it is necessary to augment them. The gross block account of the value of Rs. 58.51 lakhs has been written down to Rs. 30.17 lakhs.

JAY ENGINEERING'S SALES SHOOT UP

PROFIT MARGIN, HOWEVER, LOWER

THE growing popularity of 'Usha' sewing machines and 'Usha' fans is fully reflected in the financial results of the Jay Engineering Works Ltd. (Managing Agents: Messrs. Madan Mohan Lall Shri Ram and Company Ltd., New Delhi) for the year ended 31st March 1961. The output of both sewing machines and fans has recorded a handsome rise from 242,000 and 346,000 in 1959-60 to 256,000 and 514,000, respectively, in the year under review. Sale proceeds rose to the impressive figure of Rs. 875.13 lakhs from Rs. 715.71 lakhs in the previous year and Rs. 468.33 lakhs in 1957-58. Thus, within a period of the last four years, the value of sales has gone up by Rs. 406.80 lakhs or by as much as 86.9 per cent. Reflecting the larger output, closing stocks were substantially higher at Rs. 207.27 lakhs, as against Rs. 147.98 lakhs in 1959-60 and Rs. 127.10 lakhs in 1958-59. But the gross profit has improved only by Rs. 9.91 lakhs to Rs. 91.85 lakhs, and the profit margin (the ratio of gross profit to sales) has actually declined from 11.4 per cent in 1959-60 to 10.4 per cent in 1960-61. This is due to two factors. First, the costs of production have registered a steep rise; thus the value of raw materials and stores consumed has jumped up by Rs. 100.31 lakhs or by more than 32 per cent to Rs. 411.08 lakhs and other manufacturing expenses which include salaries and wages of the staff by Rs. 99.23 lakhs to Rs. 450.75 lakhs. Secondly, there was a reduction in the prices of fans, by Rs. 5 in ceiling fans and Rs. 2.50 in table fans. It is thus noteworthy that the Company has tried to pass on the benefit of larger turnover to consumers and that in a year of rising production costs.

The net profit shows a much smaller rise of Rs. 2.46 lakhs to Rs. 34.70 lakhs, thanks to the larger provision for depreciation at Rs. 29.36 lakhs, as against Rs. 23.55 lakhs in 1959-60 and for taxation at Rs. 22.85 lakhs, as against Rs. 19.50 lakhs in 1959-60. Only the Managing Agents' commission has decreased from Rs. 6.65 lakhs in 1959-60 to Rs. 4.94 lakhs. The Directors have decided to maintain the dividend at the previous year's level of 17.15 per cent gross, which gives a net dividend of 12 per cent. But, as this dividend is to be paid on the increased capital of Rs. 107.49 lakhs, the amount required for paying this dividend is of the order of Rs. 18.43 lakhs, as against Rs. 15.63 lakhs in the previous year. The dividend on 10 per cent (taxable) preference shares absorbs Rs. 5 lakhs, same as in the preceding year. The allocation to reserve is a shade lower at Rs. 11.26 lakhs, as against Rs. 11.80 lakhs in 1959-60.

The progress of the Company since 1958-59 is depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	875.13	715.71	529.28	468.33

* Subject to deduction of tax.

A notable feature of the Company is the drive for earning foreign exchange for the country. For some years now, the Company has been making vigorous efforts to promote sales of fans and sewing machines in overseas markets. As a result, exports of its sewing machines and fans have gone up from 42,000 and 44,000 in 1959-60 to 65,000 and 65,000, respectively, in 1960-61 and the value of foreign exchange earned has risen from Rs. 82.50 lakhs to Rs. 113 lakhs.

It is well known that, in order to popularise its sewing machines, the Company has been running Usha training schools all over the country. The number of such schools now stands at 800 as against 700 in the preceding year. The Company intends to introduce the Zig Zag sewing machine in the internal market during the current year. Its plans for expansion appear to be making satisfactory progress. It has already received approval from the Government for establishing a factory for the manufacture of sewing machines at Hyderabad, with a capacity of 100,000 machines per annum on a single-shift basis. To finance its various expansion projects, the Company issued 607,500 shares of Rs. 10 each at a premium of Rs. 7.50 per share, of which Rs. 13.25 per share (including a premium of Rs. 5.75 per share) had been called up up to 21st August 1961.

The Company's financial position, as disclosed by its balance-sheet as at 31st March 1961, is quite sound. The share capital of Rs. 157.49 lakhs, comprising Rs. 50 lakhs in 10 per cent (taxable) 50,000 redeemable cumulative preference shares of Rs. 100 each and Rs. 107.49 lakhs in 911,250 fully paid ordinary shares of Rs. 10 each and 607,009 partly paid ordinary shares of Rs. 10 each is supplemented by Rs. 116.85 lakhs of reserves and surplus. Secured loans aggregate Rs. 349.92 lakhs, of which Rs. 27 lakhs are in the form of debentures, the balance being loans from the Industrial Finance Corporation, the Government of India and the State Bank of India. In addition, there are unsecured loans and deposits of Rs. 113.98 lakhs. Other current liabilities and provisions amount to Rs. 274.57 lakhs. As against this total indebtedness to outsiders of the order of Rs. 738.47 lakhs, the Company's current assets stand at Rs. 746.26 lakhs. The gross block of the Company has risen from Rs. 371.16 lakhs in 1959-60 to Rs. 434.87 lakhs and has been well written down to Rs. 265.41 lakhs, the depreciation provided being Rs. 169.46 lakhs.

During the current year, the Company has placed orders for capital goods amounting to Rs. 10.19 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are being currently quoted at Rs. 27.25 *ex-dividend*. On the basis of the net dividend at Re. 1.20 per share, the net yield on them works out to 4.4 per cent per annum.

LUCAS-T.V.S.

Lucas-T.V.S. Private Limited, a company proposed to be incomporated in Madras for the manufacture of automobile electrical equipment, in collaboration with Messrs. Joseph Lucas (Industries) Ltd. in U.K., has been accorded consent to issue capital of Rs. 2 crores, divided into 200,000 equity shares of Rs. 100 each, for cash at par. Of the said capital, 60 per cent will be subscribed by the foreign collaborators.

INDIA REFRIGERATION INDUSTRIES

India Refrigeration Industries Limited, a new company in Delhi, has been granted consent to the issue of capital of Rs. 50 lakhs consisting of equity shares of Rs. 10 each of the value of Rs. 36 lakhs and the balance in 9 per cent free of Company's tax but subject to deduction of taxes at source, cumulative, redeemable preference shares of Rs. 100 each. The Company will manufacture sealed units for refrigerators and air conditioners.

(Concluded from next column)

March 1956. Free reserves thus amount to only Rs. 45.11 lakhs. Total loans stand at Rs. 30.00 lakhs, of which Rs. 20 lakhs are from the I.F.C., and current liabilities at Rs. 90.39 lakhs. On the assets side, the net block is worth Rs. 285.96 lakhs against a gross value of Rs. 400.14 lakhs. Construction in progress and advance to suppliers and contractors aggregate Rs. 23.21 lakhs. Current assets, including investments, loans and advances, are placed at Rs. 127.98 lakhs and are sufficient to cover all current liabilities.

The construction work on the Company's expansion project is going on well and the equipment for the metal production section have been since shipped. The Directors expect that additional metal will flow out of the plant early in 1962. Orders for the plants to fabricate aluminium metal into sheets, circles, foils, extrusions and A.C.S.R. cables, etc., as well as for the aluminium plant are being finalised.

Despite the fact that the Company's plant even after expansion will be a smaller unit in comparison with other concerns coming up elsewhere in the country, the Directors anticipate that, in view of the completely integrated plant and long experience in the industry, the advantage arising out of size will be on the side of the Company and that for this very reason it would be in a position to offer its products at competitive rates.

Currently, the Rs. 10 fully paid ordinary share of the Company is quoted on the Calcutta Stock Exchange at Rs. 14.72 and, at this price, the net yield works out to 5.7 per cent per annum.

SALES OF ALUMINIUM CORPORATION DECLINE

NO CHANGE IN DIVIDEND

NOTWITHSTANDING the fact that production by all the departments was satisfactory and in certain cases had even improved, the sales realisation of the Aluminium Corporation of India Ltd. (Managing Agents: Messrs. J. K. Industries Private Ltd., Calcutta) during the year ended 31st March 1961 declined by Rs. 1.26 lakhs to Rs. 128.12 lakhs. No doubt the drop in sales appears moderate, but it must be noted that a portion of the sales is covered by the excise duty paid on aluminium which has risen sharply to Rs. 12.08 lakhs as compared with Rs. 1.32 lakh a year ago. The Directors in their report to shareholders state that, if sales during the year (excluding excise duty) were lower in comparison with those in the year preceding, it was because, during 1959-60, the Company could sell off in that year all the stock of finished goods accumulated during prior years. Although this might well have been the case, the fact nevertheless remains that there has been a substantial fall in the turnover and that, too, when consumption of aluminium in the country has been showing an upward trend and the Company's products themselves have been in good demand.

In spite of increase wages and increases in cost of stores, raw materials, and transport expenses, the management has been able to maintain the cost of production within reasonable limits. The gross profit has, therefore, been affected only to the extent to which sales have decreased, showing a decline of Rs. 5.20 lakhs to Rs. 33.89 lakhs. The managing agency commission has been pruned to Rs. 2.06 lakhs from Rs. 2.89 lakhs for the previous year. Provision for depreciation has been sharply reduced by Rs. 4.24 lakhs to Rs. 4.76 lakhs, while that for taxation has been brought down to Rs. 13.00 lakhs from Rs. 14.50 lakhs. As a result of these decreases in essential provisions, the net profit has gone up by Rs. 1.37 lakh to Rs. 14.07 lakhs.

The results of operation of the Company during the past four years are setforth in the comparative table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	128.12	129.38	125.78	96.25
Other income	3.00	2.77	1.92	1.12
Closing stocks of finished product	16.72	7.01	14.31	15.13
Excise duty	12.08	1.32	..	..
Raw materials and stores and spare parts consumed	31.00	29.27	31.71	28.67
Salaries, wages and bonus	42.16	38.95	36.50	32.58
Other expenses	19.90	17.12	19.83	13.07
Gross profit	33.89	39.09	38.85	29.24
Managing Agents' commission	2.06	2.89	2.95	2.04
Provision for—				
Depreciation	4.76	9.00*	10.00*	14.00*
Taxation	13.00	14.50	16.50	3.00
Net profit	14.07	12.70	9.40	10.20
Provisions no longer required	11.50	..	..	..
Miscellaneous write offs and expenses	0.09	1.12	..	..
Transfer to reserves	14.07	1.06	1.15	4.24
Dividends—				
Preference	3.06†	3.06†	2.40	2.20
Ordinary	7.50 (12%)†	7.50 (12%)†	6.25	5.18
Carry forward	1.33	0.48	0.52	0.92

* Inclusive of arrears: 1957-58: Rs. 6.00 lakhs; 1958-59 Rs. 3.00 lakhs; and 1959-60: Rs. 4.00 lakhs.

† Subject to deduction of tax.

Owing to changes introduced in the mode of computation of depreciation by the Companies (Amendment) Act 1960, the Company has been obliged to transfer back to the profit and loss account Rs. 9.84 lakhs being the amount of depreciation provided over and above the normal depreciation allowable under the Income-tax Act. In addition Rs. 1.66 lakh has also been similarly credited to the account being provision no longer necessary. Out of the balance thus available, the Directors have transferred Rs. 14.00 lakhs to the general reserve (as against Rs. 1.00 lakh last year) and Rs. 7,107 (as against Rs. 6,356) to the statutory development rebate reserve. Preference dividends, subject to deduction of tax, claim, as during the previous year, Rs. 3.06 lakhs. Ordinary dividends have been maintained at 12 per cent, subject to deduction of tax, and absorbs Rs. 7.50 lakhs. The carry forward is Rs. 1.33 lakh, as against Rs. 47,746 brought in.

Financially, the Company is in a fairly strong position as can be seen from the balance-sheet as at 31st March 1961. The share capital of Rs. 102.00 lakhs is supported by as much as Rs. 218.93 lakhs in reserves and surplus. However, a large portion of this, namely, Rs. 173.82 lakhs, merely represents a capital reserve not available for distribution of dividend, as it has been created through an upward revaluation of the fixed assets during the year ended 31st

(Continued in previous column)

RESULTS OF GOUREPORE AND NUDDEA

DIVIDENDS CUT—CURRENT YEAR'S PROFIT MAY BE LOWER

THE foresight with which the management of the Gourepore Company Ltd. and the Nuddea Mills Company Ltd., both belonging to the MacNeill and Barry group of enterprises, built up enough stocks of raw jute towards the close of 1959-60 has undoubtedly paid the companies fair dividends during the year ended 31st March 1961. Although the year had not been an easy one for trading and it was seldom possible to operate profitably for any position by the simultaneous purchase of raw jute and sale of finished products, the working of the companies for the first six months of the year remained singularly unaffected by the quick rise in jute prices. The restrictions in production which took place during the second half of the year had but a limited effect on the fortunes of the Gourepore Company Ltd., which continued to earn profit at reasonable levels. In the case of Nuddea Mills Ltd., however, the decline in output led to a rise in costs and a consequent drop in profits.

The demand for the specific products of the Gourepore Company Ltd., from all parts of the world and India itself, continued to be good, despite higher prices and, as a result, the sale proceeds increased by as much as Rs. 147.89 lakhs to Rs. 511.07 lakhs. As could be anticipated, a large portion of this rise was absorbed by increasing costs of raw materials, stores and services. The gross profit has, therefore, increased only fractionally from Rs. 42.98 lakhs to Rs. 44.08 lakhs. The net profit has, on the other hand, decreased by Rs. 10.32 lakhs to Rs. 16.04 lakhs, owing to substantially higher provisions for depreciation (Rs. 10.49 lakhs, as against Rs. 5.92 lakhs) and taxation (Rs. 14.50 lakhs as compared with Rs. 6.85 lakhs). Transfer to reserves has been reduced from Rs. 19.21 lakhs a year ago to Rs. 9.01 lakhs during the year under review. The setback in disposable profits has necessitated a cut in the rates of dividends on equity shares. Ordinary dividends which were declared at 30 per cent, subject to deduction of tax, and had absorbed Rs. 7.20 lakhs during 1959-60, have been again brought down to 25 per cent subject to deduction of tax and absorb Rs. 6.00 lakhs.

Although the sales of the Nuddea Mills Company Ltd. have risen to Rs. 344.08 lakhs from Rs. 251.20 lakhs during the previous year, the restrictions on output, already referred to above, have adversely affected the gross profit which shows a fall of Rs. 7.98 lakhs to Rs. 17.75 lakhs. After providing Rs. 0.85 lakh (Rs. 2.05 lakhs) for Managing Agents' commission, Rs. 9.17 lakhs (Rs. 6.02 lakhs) for depreciation and nil (Rs. 0.43 lakh) for taxation, the net profit stands lower at Rs. 7.73 lakhs as against Rs. 17.23 lakhs for 1959-60. Transfer to reserves has been pruned to Rs. 5.59 lakhs, as against Rs. 12.33 lakhs and the rate of ordinary dividends has also been reduced from 8 per cent to 6 per cent, both subject to deduction of tax.

As disclosed by their respective balance-sheets, the financial position of both the Companies is strong. In each case the paid-up share capital is supported by adequate reserves and surplus, the gross block is well written down and the current assets more than fully cover the current liabilities and loans put together.

The following comparative table presents the progress made by these two Companies during the past four years:

Speaking of the prospects for the Gourepore Company, the Directors remark:

"Higher costs arising from additional cutbacks in production which have taken place during the current year as well as an appreciable slackening of demand for your Mill's specialities, including carpet backing, have led to unprofitable working during the first six months of the current year. There are signs, however, that consumers are now ready to renew buying at the lower price level ruling today and it is anticipated that, before the end of the year, with production fully restored, your Company will again be on a profit-earning basis. The final results for the year will inevitably compare most unfavourably with what we have come to expect during the last few years."

A similar note of caution has been struck by the Directors of the Nuddea Mills Company Ltd. They state:

"It has not been possible to operate profitably during the first six months of the current year due to the further rise in cost of production consequent upon additional restrictions in production as well as due to the highly unfavourable relative parities of raw materials and finished goods. Prospects for the second half of the year are, however, more encouraging and, it is hoped, will provide the mill with an opportunity to return to profitable working. The final results are, however, likely to reveal a considerable reduction in profits earned when compared with the previous year."

The *cum*-dividend prices of the Rs. 100 fully paid ordinary share of the Gourepore Company and of the Rs. 50 fully paid ordinary share of the Nuddea Mills Company are Rs. 374.00 and Rs. 47.25 respectively. On an *ex-div.* basis, the net yield works out to 4.9 per cent and 4.6 per cent per annum, respectively.

ASHOK LEYLAND'S DELIVERIES RISE MARKEDLY

A considerable increase in vehicle deliveries during the first nine months of the year over the corresponding period last year has been reported by Ashok Leyland Ltd., the overall increase achieved being nearly 65 per cent. The Ashok Leyland Comet passenger chassis is at the head of the list of orders received during the past nine months. The large investments in the purchase of new buses by the State and Municipal Transport Undertakings are reflected in the increase in deliveries of Comet long wheelbase passenger chassis which account for nearly 45 per cent of the total production. All the main distributors of the Company have registered substantial increases in the number of orders received for Comet trucks for delivery to private operators, nearly 80 per cent of the total production of goods chassis being taken by them. Steel and hydro-electric projects, defence department and oil companies are among the other important buyers of Comet goods vehicles for operation as tippers, tractors and as rigid and articulated tankers.

A significant development in the marketing of Comet goods chassis is the increasing number of orders received for the 118" wheelbase tipper models which are preferred by major irrigation projects, mining companies and large building contractors. With the gradual relaxation of gross laden weight restrictions on National and State highways, the Company is, at the same time, registering a steady increase in deliveries of tractor-trailer units in association with Mahindra Owen Ltd. whose "Gama" 11-ton payload semi-trailers are used in conjunction with the Comet 118" wheelbase tractor chassis. A large increase in the production of Ashok Leyland UE.350 and UE.600 six-cylinder vertical diesel engines for installation in industrial plant and machinery has also been recorded for the period under review. Among the current users of Ashok Leyland Industrial Engines are such well-known firms as Kirloskar Pneumatic Co., Ltd., Consolidated Pneumatic Tool Co., Ltd., and Hollman-Climax Manufacturing Co., Ltd.

AIR-INDIA FARES QUITE WELL

DIFFICULT DAYS, HOWEVER, AHEAD

THE introduction of Boeing 707 jet aircraft and the conclusion of a major partnership agreement with B.O.A.C. and Qantas on all routes from New York to Tokyo and Sydney have enabled the Air-India International Corporation (a Government of India enterprise, with Mr. J. R. D. Tata as Chairman of its Board of Members) to produce highly gratifying results—the operating revenue has increased by 52.4 per cent from Rs. 12.58 crores to Rs. 19.17 crores and the operating profit has soared by more than six times from Rs. 18.26 lakhs to Rs. 1.17 crore—for the year ended 31st March 1961, after three consecutive years of declining profit. Although operation of jet aircraft has resulted in a sharp rise in operating expenses from Rs. 10.88 crores to Rs. 15.46 crores, and has necessitated provision of higher depreciation of Rs. 2.54 crores as compared with Rs. 1.52 crore in the previous year, the aggregate cost per unit (that is, per available tonne kilometre—A.T.Km., for short) fell by 15 per cent from Re. 1.33 in 1960 to Re. 1.13 during the year under review. The results include the burden of revision of the pay scales of the bulk of staff aggregating approximately Rs. 30 lakhs per annum. The total capacity offered during the year recorded an increase of 72.7 per cent over that in the previous year, but the traffic actually carried did not keep pace with this increase, as it expanded by only 41.2 per cent, resulting in a reduction in the overall load factor from 58.2 in 1960 to 47.3 per cent in 1961, as also in the operating revenue from Re. 1.35 per A.T.Km., to Re. 1.19 per A.T.Km. It is noteworthy that, as a result of the introduction of the Boeings, the productivity of the Corporation's labour and staff rose from 20,340 A.T.Km. per employee to 30,688 A.T.Km.

The following table gives a comparison of the Corporation's results for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Operating revenue—				
Traffic	18,45.45	11,99.61	11,10.12	10,47.59

Carry forward	6.55	15.03	0.95	0.92

* Other than depreciation and obsolescence.

An important benefit of the tripartite partnership to the Corporation was that it enabled it to extend its services to New York almost simultaneously (in May 1960) with the introduction of Boeing jet aircraft (in April 1960) on the existing routes. On its own, the Corporation would not have attempted two such important tasks, and the extension to New York would have been postponed by a year. The effect of the agreement during the year was to obtain for the partners a greater share of the total available traffic in the face of severe international competition which became keener since the introduction of large jet aircraft on competing services and the creation amongst some of them of partnership arrangements and consortiums of their own. The substantial sale of capacity of Rs. 31.64 lakhs was a feature peculiar to the year under review only, because of prior plans and commitments for operations which it was commonly agreed should not be disturbed. For the future, the capacities required to be provided by each partner will be worked out in advance, so that adjustment of sale or purchase of capacity would be only marginal and relatively small.

The second stage of the Corporation's re-equipment programme, involving retirement of the Super Constellations and their replacements by jets, has materialised, and the A.-I.I. is well on its way to implement its "go-all-jet" policy. The Government is likely to take over the Constellations for the use of the Defence Services. The Corporation placed provisional orders in December last with the Boeing Airplane Company for two more Boeing 707 jets and a firm purchase agreement was executed in June last. The cost of this project is estimated at Rs. 8 crores. A loan of Rs. 114.24 lakhs (2.4 million

Adjustments	4	9
Appropriations:		
Total available balance	64	29
Transfer to development rebate reserve	*	*
,, ,, general reserve	30	..
,, ,, adjustment account (previous year)	6	16
Proposed dividends (taxable)	20 (10%)	10 (5%)
Carried forward	8	3

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

* Include only an amount of Rs. 156 provided for development rebate reserve. (For 1959 the provision was only Rs. 560.)

Extracts from the Directors' report: *Crop*: The total crop made in 1960 was 244,221 Kg. as against 2,44,668 Kg. in the previous year.

In this connection the directors have pleasure to state that the very good and cultivable land measuring more or less 922 bighas acquired for 99 years lease from Mokalbari Tea Estate at Assam at a rental of Rs. 1,500 per mensem as was reported along with the Company's annual accounts as at 31st December 1957, the directors have since been able to effect its outright purchase at Rs. 275 per bigha during the year under review. It may also be stated that the Company was able to obtain permission from the Tea Board for new plantation and replacement of the existing old planted areas to the extent of 220.57 acres therefrom.

Accounts in brief as at 31st December 1960 are as follows:—

Liabilities	Rs.	Assets	Rs.
Capital	2,00,000	Gross block	13,57,039
Reserves and surplus	6,02,720	—Depreciation	3,84,825
Other liabilities	10,22,860		
		Net block	9,72,214
		Current assets	8,27,918
		Investments	200
		Cash	25,248
	Rs. 18,25,580		Rs. 18,25,580

Dimakusi Tea Co., Ltd.

(*Managing Agents*: Messrs. Williamson Magor and Co., Ltd., Calcutta.)

Annual General Meeting: Held on 7th September.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959

Extracts from the Directors' report:

Coffee Curing—During the year the Company handled a crop of 2,874 tonnes of coffee. For the next year the intake is expected to be of the order of 4,300 tonnes.

Manure, Estate Requisites and Finance—The demand from planters for the supply of fertilisers, estate requisites and finances has been satisfactory, being of the order of Rs. 22 lakhs which necessitated the continuance of borrowings from Bankers and other sources, as usual.

To implement the programme of expansion which has become necessary to handle a larger intake of coffee, additional godowns at a cost of Rs. 32,667 have been constructed during the year under report.

During the current year in pursuance of the programme of expansion Trolley line inside the Works premises to facilitate the quick and easy movement of coffee from sections to sections was laid out. To create more accommodation for Garbling of Hulled coffee, storage of raw coffee and drying of larger quantity of raw coffees, construction of additional godowns and barbecues have been taken up at an estimated cost of Rs. 45,000, which is expected to be completed before the 1961-62 season's coffee arrives.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	8,00,000	Gross block	7,73,070
Reserves and surplus	1,63,484	—Depreciation	5,23,011
Other liabilities	13,84,195		
		Net block	2,50,059
		Current assets	20,31,417
		Investments	25,778
		Cash	37,425
	Rs. 23,47,679		Rs. 23,47,679

* Paid-up capital consists of 80,000 ordinary shares of Rs. 10 each fully paid up.

Hinger-Rampur Coal Co., Ltd.

(*Managing Agents*: Messrs. Killick Industries Ltd., Bombay.)

Annual General Meeting:—1st November.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales (gross)	31,43	31,18
Closing stock	1,01	2
Gross profit	5,01	6,00
Transfer to Managing Agents' commission	27	Nil
,, ,, depreciation and amortisation	1,50	1,05
,, ,, taxation	1,24	Nil
,, ,, development reserve	18	27
Net profit	1,82	3,78
Adjustments	6*	5*
Appropriations:		
Total available balance	1,88	3,83
To adjustment of loss brought forward	1,87	3,83
Carried forward credit (+) or debit (—)	(+) 1	(—) 1,87†

* Excess tax provisions for previous years written back.

† This represents the debit balance carried forward after adjusting Rs. 3,83,048 against the loss of Rs. 5,70,177 brought forward from 1959 accounts.

Extracts from the Directors' report: *Output*: Raisings for the year totalled 157,198 tonnes as compared with 144,019 tonnes for the preceding year. Raisings could have been still higher but for the acute wagon shortage which developed over the last six months of the year as a result of which they had to be restricted to approximately 10,000 tonnes per month from April and approximately 112 workers per month on an average were laid off by suspending operations from 17th North District. There has, however, been an improvement in the wagon supply position since July in consequence of which it was decided to terminate the layoff from 1st September 1961 and to resume normal raisings.

Sales—The total coal sales for the year amounted to 143.549 tonnes as compared with 145.960 tonnes for the preceding year. The decrease in sales was due solely to acute wagon shortage.

Coal Prices—To enable Colliery owners to meet the additional expenditure that would have to be incurred in implementing the grades and time scales of pay for the workers from 1st June 1961 as laid down by the Das Gupta Award, the Central Government permitted an increase of Re. 0.06 per tonne in the price of this Company's coal with effect from that date, thus making the Controlled Prices for Steam and Slack Coals Rs. 21.83 and Rs. 20.85 per tonne respectively.

The Company's Coal has since been upgraded by the Coal Board from Grade III to Grade I with effect from 7th September 1961, and hence the Controlled Prices for Steam and Slack Coals as from that date are Rs. 23.16 and Rs. 22.17 per tonne respectively.

Railway Siding—Negotiations with the Railway Authorities for increasing the capacity of No. 7 Pit Siding showed that the cost would be much heavier than was considered justified in existing circumstances and alternative arrangements were therefore considered. Such arrangements will shortly become effective and will enable the Colliery to handle the expected raisings from Pits 9/11 without much difficulty.

Development—Development work on 10 Dip continued during the year and after installation of the Over Rope Haulage, raisings to the scale of 4/4500 tonnes per month were obtained.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,00,000	Gross block	44,46,519
Reserves and surplus	2,04,168	—Depreciation	29,14,342
Other liabilities	7,92,545		
		Net block	15,32,177
		Block-in-progress	61,681
		Current assets	13,35,828
		Investments	18,000
		Cash	49,027
	Rs. 29,96,713		Rs. 29,96,713

* Paid-up capital consists of: (a) 24,000 ordinary shares of Rs. 50 each fully paid up and (b) 16,000—4½ per cent. tax-free redeemable cumulative preference shares of Rs. 50 each fully paid up. Out of this 5,102 ordinary shares and 534 preference shares are allotted as fully paid up pursuant to an agreement without payments being received in cash.

East Anglia Plastics (India) Ltd.

(*Secretary*: Mr. D. P. Sen, Calcutta.)

Annual General Meeting: 27th October.

Extracts from the Directors' report: The profit and loss account shows that during the period a sum of Rs. 61,611 has been earned as interest, received from banks on capital deposits. Out of this, Rs. 28.000 has been provided for taxation and the surplus balance of Rs. 33,611 has been carried forward.

The construction of building for the Company's factory at Jessore Road, Calcutta, for manufacture of cellulose acetate moulding powder and P.V.C. compounds has been completed. All machinery have arrived at site. Under supervision of the technician from foreign collaborators, the installation work of machines is nearing completion. It has been possible through the help of the Government of India to make arrangement for import of raw materials for the moulding factory. It is, therefore, expected that the plant will go into production by the end of the year. The directors have further pleasure in reporting that the Government of India has granted to the Company an industrial licence for establishing another factory in Andhra Pradesh for the manufacture of 2,400 tons cellulose acetate flakes annually. Cellulose acetate flake is the principal raw material required for the manufacture of cellulose acetate moulding powder in the Company's factory at Calcutta. The said licence also covers manufacture of acetic acid and acetic anhydride which are the raw materials for manufacture of cellulose acetate flakes.

Firm offers for collaboration from several world-famous foreign firms for establishment of this unit have been received. The matter is in the final stage of negotiation. The State Government of Andhra Pradesh is also taking special interest in the cellulose acetate flakes project and is extending all possible help and co-operation to the Company. The Company has been assured of the supply of necessary alcohol and cotton linters. Several sites for location of the Factory have also been suggested. One of the Company's representatives has inspected these sites. A detailed survey report on the basis of the industry's requirements of raw materials, labour, transport, climatic conditions marketing facilities, future expansions, etc., has also been prepared. Final selection of site will however, be made with approval of the foreign collaborators. Implementation of this new project is estimated to cost over six crores of rupees.

With a view to economising the operation of the cellulose acetate flakes plant, it has been deemed advisable to set up an acetate rayon spinning unit also and integrate the same with the flakes project. Application for licence for the establishment of such a spinning unit has been made to the Government of India.

Since the end of the financial period to which this report relates, it has been necessary to make an arrangement for overdraft from bank to the extent of Rs. 5 lakhs for payment towards value of machinery, etc., imported and locally purchased. The directors have now made the first call of Rs. 2.50 per share with a view to meeting further capital expenditures for machinery, etc., and providing the necessary working capital as soon as the factory at Calcutta goes into production.

Accounts in brief for the year ended 31st March 1961 are as follows:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,49,250	Gross block	4,92,05
Reserves and surplus	33,611	—Depreciation	6,86
Other liabilities	2,15,079		
		Net block	4,85,68
		Machinery in transit	1,41,60
		Unallocated capital expenditure	2,02,25
		Current assets	2,78,15
		Cash	3,90,24
	Rs. 14,97,940		Rs. 14,97,94

* Paid-up capital consists of 2,50,000 equity shares of Rs. 10 each and Rs. 5 per share called up and paid up so far.

(*Concluded from page 746*)

suggestion was acceptable as a general proposition but pointed out that, in actual practice, a very wide differentiation of coffee by estates presented numerous difficulties. May be, the difficulties are there, but they are not insurmountable. The present system of bulking and payment of return to growers on the basis of points secured under the price differentiation scale is not sufficiently elastic to meet the intention of the Expert Committee on Marketing. The return the coffee grower gets must, as Mr. Radcliffe rightly urged, be linked to the market performance of his coffee, coupled with a strict classification to certain recognised standards, and a greater attempt must be made to sell coffees on an individual basis, as in the case of other commercial articles.

NON-GOVERNMENT CORPORATE SECTOR IN 1959

FINANCES OF 1,001 PUBLIC LIMITED COMPANIES REVIEWED

THE Reserve Bank of India has just published, in the September 1961 issue of its *Bulletin*, a review of the finances of 1,001 large- and medium-sized non-Government public limited companies for the year 1959, with comparable data for the preceding four years. This study, prepared jointly by the Department of Statistics and the Division of Monetary Economics of the Economic Department of the Reserve Bank, covers the financial results of companies whose accounting year ended during the twelve-month period July 1959-June 1960. Like the earlier studies in the series, the present one, too, does not cover banking, insurance and investment companies, Government companies (as defined in Section 617 of the Companies Act, 1956), companies and associations functioning not for profit and companies limited by guarantee. The 1,001 companies included in this study account for 77 per cent of the paid-up capital of all companies in the sectors covered. The main findings of the study are summarised in the following paragraphs.

The study reveals (i) a further slackening of the pace of industrial growth in 1959, as reflected in a smaller assets formation relatively to previous years, (ii) a substantial increase in corporate sales and profits and (iii) the predominant position of internal sources in the financing of assets formation.

Income and Expenditure

In 1959, sales of the 1,001 companies registered a substantial rise of Rs. 170.5 crores or by 9.3 per cent to Rs. 2,002.2 crores, as compared with a rise of Rs. 94.4 crores or 5.4 per cent in 1958. More than half of the rise in sales was accounted for by the iron and steel, cotton textiles and engineering industries.

On the expenditure side, all the main items showed increases. Manufacturing expenses were higher by Rs. 65.9 crores or 6.5 per cent; during 1958, these had declined by Rs. 16.1 crores, or 1.6 per cent. Salaries and wages rose by Rs. 24.2 crores or 8.4 per cent, excise duty by Rs. 9.9 crores or 6.7 per cent and managing agents' remuneration by Rs. 2.1 crores or 23.5 per cent.

Profits and their Allocation

The larger sales in 1959 were reflected in a substantial rise in corporate profits. Profits before tax of the 1,001 companies which had dropped from Rs. 130.9 crores in 1956 to Rs. 107.8 crores in 1957, and had recovered to Rs. 120.9 crores in 1958, showed a marked rise in 1959 to Rs. 161.5 crores—a rise of Rs. 40.6 crores or 33.5 per cent. Most of the important industries registered a rise in profits, the largest increase being in cotton textiles, its profits increasing from Rs. 7.0 crores in 1958 to Rs. 19.3 crores in 1959. In contrast to the general trend, profits of the shipping industry fell sharply from Rs. 2.8 crores in 1958 to a mere Rs. 43 lakhs in 1959.

In view of the changes in corporate taxation introduced by the Finance Act, 1959, figures in respect of tax provision, profits after tax, dividends and the rates of dividend for 1959 or 1958 are not comparable with those for the earlier years. In 1959, provision for taxation increased by Rs. 3.2 crores to Rs. 59.1 crores. Profits after tax were higher at Rs. 102.4 crores; in 1958, these had amounted to Rs. 65.0 crores. The amount set aside for dividends in 1959 was Rs. 64.1 crores; it had amounted to Rs. 46.9 crores in 1958. The large increase in profits enabled companies to record a substantial increase in retained profits which more than doubled from Rs. 18.1 crores to Rs. 38.3 crores.

The profitability of equity capital as measured by the ratio of profits after tax to net worth worked out to 10.5 per cent in 1959. The average rate of dividend on ordinary shares in 1959 was 11.8 per cent, while the ratio of dividends to net worth worked out to 6.6 per cent.

Sources and Uses of Funds

Total gross assets formation in 1959 was smaller at Rs. 157.4 crores, as compared with Rs. 166.6 crores in 1958. In 1956, it was Rs. 263.8 crores. Gross fixed assets showed a smaller rise of Rs. 107 crores (adjusted for the downward revaluation of fixed assets) or 7.5 per cent in 1959, as against Rs. 148 crores or 11.8 per cent in 1958, and Rs. 177 crores or 16.5 per cent in 1957. The smaller rise reflected partly the impact of the drastic import curbs and partly the virtual completion of the investment programmes in some industries under the second Five-year Plan. Inventory accumulation, on the other hand, showed an improvement from Rs. 5 crores in 1958 to Rs. 15 crores in 1959; the rate of increase worked out to 2.7 per cent, as compared with 0.9 per cent in 1958 and 10.2 per cent in 1957.

Gross capital formation, comprising fixed assets and inventories, amounted to Rs. 123 crores in 1959, as compared with Rs. 153 crores in 1958 and Rs. 229 crores in 1957. The study estimates gross capital formation for the *entire* public limited companies sector at Rs. 159 crores in 1959, of which gross fixed assets would amount to Rs. 139 crores and inventories to Rs. 20 crores. For the four years 1956-59, which would broadly correspond to the first four years of the second Five-year Plan, gross capital formation in the entire public limited companies sector may be put at Rs. 952 crores, of which gross fixed assets would account for Rs. 739 crores.

A significant feature of the pattern of finances in 1959 was the predominant position of internal sources, which accounted for Rs. 98.7 crores or 63 per cent of total funds, as against 48 per cent in 1958 and 28 per cent in 1957. Depreciation reserves continued to be the most important internal source, forming 35.3 per cent of total funds. External sources provided Rs. 58.7 crores or 37 per cent of total funds as compared with 52 per cent in 1958 and 72 per cent in 1957. Among external sources, borrowings showed a substantial decline from Rs. 104.4 crores in 1957 to Rs. 43.5 crores in 1958 and only Rs. 5.7 crores in 1959. Borrowings from banks actually showed a net repayment of Rs. 3.6 crores

(*Continued on page 768*)

COMPANY MEETINGS AND DIVIDENDS

HINDUSTAN ELECTRIC CO., LTD. Annual General Meeting, Bombay, 17th October 1961. Dividend: 4 per cent or Rs. 4.00 per share, subject to deduction of tax, payable on and after 28th October 1961. Transfer books remain closed from 30th September to 14th October 1961, both days inclusive.

NEW KAISER-I-HIND SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 18th October 1961. Dividend: *Nil*. Transfer books remain closed from 7th to 18th October 1961, both days inclusive.

JAYANT PAPER MILLS LTD. Annual General Meeting, Surat, 28th October 1961. Dividend: *Nil*. Transfer books will remain closed from 11th to 28th October 1961, both days inclusive.

TEXTOOL CO., LTD. Annual General Meeting, Coimbatore, 30th October 1961. Dividend: 15 per cent or Rs. 15.00 per share, subject to deduction of tax. Transfer books will remain closed from 17th to 30th October 1961, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 30th October 1961. Dividend: 16 per cent or Rs. 16.00 per ordinary share, subject to deduction of tax. (The dividend for 1960 was 32 per cent or Rs. 32.00 per ordinary share, taxable), payable on and after 6th November 1961. Transfer books will remain closed from 11th October to 7th November 1961, both days inclusive.

NATIONAL ROLLING AND STEEL ROPES LTD. Annual General Meeting, Calcutta, 30th October 1961. Dividend: Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 13th to 30th October 1961, both days inclusive.

SURAT ELECTRICITY CO. LTD. Annual General Meeting, Bombay, 31st October 1961. Dividends payable on and after 3rd November 1961.

STEEL PRODUCTS, LTD. Annual General Meeting, Calcutta, 31st October 1961. Transfer books will remain closed from 13th to 31st October 1961, both days inclusive.

EAST INDIA HOTELS LTD. Annual General Meeting, Calcutta, 31st October 1961. Transfer books will remain closed from 25th to 31st October 1961, both days inclusive.

HINGIR-RAMPUR COAL CO., LTD. Annual General Meeting, Bombay, 1st November 1961. Dividend: Nil.

DELHI CLOTH AND GENERAL MILLS CO., LTD. Annual General Meeting, Delhi, 3rd November 1961. Share transfer books will remain closed from 15th to 30th September 1961, both days inclusive.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 11th November 1961. Net dividend of Rs. 16.80 per ordinary share, for the year ended 30th June 1961, payable from 13th November 1961. Transfer books will remain closed from 16th October to 11th November 1961, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION LTD. Taxable final dividends of Rs. 585 per share on the original shares of Rs. 2,500 each (making a total of Rs. 825 per share); Rs. 29.25 per old ordinary share (making a total of Rs. 41.25 per old ordinary share) and Rs. 11.70 per new ordinary share (making a total of Rs. 16.50 per new ordinary share), for the year ended 31st May 1961.

PEERMADE TEA CO., LTD. Interim dividend of 7½ per cent or Re. 0.75 per ordinary share, subject to deduction of tax, for the year ending 31st December 1961. Transfer books will remain closed from 22nd to 29th October 1961, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Final dividend of £4 per cent net (tax applicable at 7s. 9d. in the £), for the year ended 31st March 1961, payable on 11th November 1961.

TRAVANCORE SUGARS AND CHEMICALS LTD. Taxable dividend of 7½ per cent or Re. 0.75 per ordinary share, for the year ended 30th April 1961. Transfer books will remain closed from 16th to 30th October 1961, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Dividend of Re. 1.50 per ordinary share (on old capital), for the year ended 31st March 1961. Transfer books remain closed from 27th September to 13th October 1961, both days inclusive.

TIDE WATER OIL CO. (INDIA) LTD. Taxable interim dividend of Re. 0.70 per share, for the year ending 31st October 1961.

RAJA BAHADUR MOTILAL POONA MILLS LTD. Interim dividend of Rs. 4.00 per share, subject to deduction of tax, for the year ending 31st December 1961, payable on and from 21st October 1961. Transfer books will remain closed from 9th to 18th October 1961, both days inclusive.

ORISSA MINERALS DEVELOPMENT CO., LTD. Dividend: Interim dividend on the ordinary shares at 10 per cent for the year ended 30th June 1961, subject to deduction of tax. Dividend will be paid on or after 3rd November 1961. Transfer books will remain closed from 13th October to 26th October 1961, both days inclusive.

Notices

THE MORARJEE GOCULDAS SPINNING AND WEAVING CO. LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 90th Annual General Meeting of the Company will be held at its Registered Office at Soparibaug Road, Parel, Bombay-12, on Saturday, the 11th November, 1961, at 11 a.m. (I.S.T.), to transact the following business:—

1. To adopt the Directors' Report and Audited Statements of Accounts for the year ended 30th June 1961.
2. To declare a Dividend on Preference and Ordinary Shares.
3. To elect a Director in place of Shri Manoharlal Jwalaprasad Tibrewala who retires by rotation and being eligible offers himself for re-appointment and to consider, and if thought fit, to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and is hereby given to the members:—

   "Resolved that Shri Manoharlal Jwalaprasad Tibrewala who retires by rotation and who is a Member and an Associate of Messrs. Piramal Sons Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint an Ex-Officio Director to the Board) be and is hereby re-appointed a Director of the Company."

   The reasons which make this Special Resolution necessary are fully set out in the Resolution itself and in para 1 of the Explanatory Statement annexed to this Notice.
4. To appoint Shri Binod Kumar Kanoria, an Associate of the Managing Agents of the Company, as a Director of the Company and to consider and, if thought fit, to pass the following Resolution as a Special Resolution, in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and is hereby given to the members:—

   "Resolved that Shri Binod Kumar Kanoria, who is an Associate of Messrs. Piramal Sons Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint an Ex-Officio Director to the Board) be and is hereby appointed a Director of the Company."

   The reasons which make this Special Resolution necessary are fully set out in the Resolution itself and in para 2 of the Explanatory Statement annexed to this notice.
5. To consent, pursuant to Section 314 of the Companies Act, 1956, to Shri Purshottam Baijnath Modi, who is a relative of Shri Gopikisan Piramal and Dr. Mohanlal Piramal, two of the Directors of the Company, holding and continuing to hold an office or place of profit as an employee and, if thought fit, to pass the following Resolution as a Special Resolution:—

   "Resolved that the Company accords its consent under Section 314 of the Companies Act, 1956, to Shri Purshottam Baijnath Modi, who is a relative of Shri Gopikisan Piramal and Dr. Mohanlal Piramal, two of the Directors of the Company, holding and continuing to hold an office or place of profit under the Company as an employee on a salary of Rs. 2,000 per month together with a bonus of three months' salary and a house allowance of Rs. 500 per month and with such allowances and benefits as he at present receives from the Company or as may from time to time be determined by the Directors of the Company."
6. To consent, pursuant to Section 314 of the Companies Act, 1956, to Shri Rajendraprasad Jwalaprasad Tibrewala who is a relative of Shri Gopikisan Piramal, Dr. Mohanlal Piramal and Shri Manoharlal Jwalaprasad Tibrewala, three of the Directors of the Company, holding and continuing to hold an office or place of profit under the Company as an employee, and, if thought fit, to pass the following Resolution as a Special Resolution:—

   "Resolved that the Company hereby accords its consent under Section 314 of the Companies Act, 1956, to Shri Rajendraprasad Jwalaprasad Tibrewala, who is a relative of Shri Gopikisan Piramal, Dr. Mohanlal Piramal and Shri Manoharlal Jwalaprasad Tibrewala, three of the Directors of the Company, holding and continuing to hold an office or place of profit under the Company, as an employee on a salary of Rs. 1,250 per month in the scale of Rs. 1,250-250-2,000 together with a bonus of three months' salary and with such increments and benefits and other allowances and benefits as may from time to time be determined by the Directors of the Company."
7. To appoint Auditors for the current year and to fix their remuneration.

A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.

The Share Transfer Books of the Company will be closed from Monday, the 16th October 1961, to Saturday, the 11th November 1961, both days inclusive.

By Order of the Board,
FOR PIRAMAL SONS PRIVATE LIMITED,
MOHANLAL PIRAMAL,
Director,
Agents.

BOMBAY,
Dated 23rd September 1961.

The Dividend, if sanctioned, will be payable from Monday, the 13th November 1961, to those shareholders whose names stand on the Register of the Company on 14th October 1961.

Dividend Warrants will be posted in due course to the Registered addresses of the Shareholders. Change of address, if any, should be notified without delay.

AN EXPLANATORY STATEMENT RELATING TO THE SPECIAL RESOLUTIONS MENTIONED ABOVE, AS REQUIRED BY SECTION 173(2) OF THE COMPANIES ACT, 1956, IS BEING SENT SEPARATELY TO THE SHAREHOLDERS AT THEIR REGISTERED ADDRESSES.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT IN compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5 per cent Cumulative Preference Shares for the half-year ending 31st October, 1961, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 28th October to 1st November, 1961, both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 1st November, 1961 or to their Mandatees.

By Order of the Board,
K. S. BASU,
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *28th September*, 1961.

MANCHESTER LETTER

(*Concluded from page* 743)

hand, reverting to the Manchester trade, both the Amalgamated Cotton Mills Trust and the English Sewing Cotton Company Ltd. have paid the same interim dividend on larger capital and a scrip issue has been made by Armitage and Rigby Ltd., with the accompanying statement that the Directors hope to pay the same annual dividend on the increased capital.

Expansionist plans resulting in a substantial broadening of interests over the Pennines has resulted in a big improvement in the earnings secured by the Lancashire and Yorkshire Tulketh Group, whose origin in cotton spinning at Preston is now linked with considerable enterprises in the worsted and woollen industries.

During the reorganisation phase, it was inevitable that producers would be too busily engaged in other aspects of business to pay much attention to fresh acquisitions. As compared with some years ago, the rate of mergers and takeovers is much smaller but several have occurred within the past quarter. A notable feature of the latest trend is that the fashion of diversifying into other trades seems for the moment to have suffered an eclipse. Practically all the new developments in this direction have been within the textile orbit, although in the case of the Lancashire Cotton Corporation a further interest in the woollen trade has been acquired through the purchase of the hundred-year-old Leeds spinning and weaving firm of William Pearson and Co. Ltd. The Tulketh Group has also made a further move into Yorkshire by purchasing the Sowerby Bridge worsted spinners, Clay and Horsfall Ltd.

COMMON MARKET AND WORLD TRADE

(*Concluded from page* 754)

market now being created in Europe, joined with liberal trade policies *vis-a-vis* outsiders, will materially enlarge outlets for U.S. exports just as our economic growth and liberal import policies have enlarged European opportunities in this market.

Elsewhere in the world, groupings similar to the Common Market are also emerging. Last June, a Latin American Free Trade Association, formed by seven nations, was set in operation. A Central American Common Market comprising four countries has been in existence for a year. Regional Asian and African groupings are being discussed. Ripples from the economic tidal wave set in motion by the signing in 195[illegible] of the Treaty of Rome, which created the E.E.C. have thus spread throughout the world.

These moves, particularly on the part of less-developed nations, stem from an understandable desire to speed up industrialisation. But they also reflect the desire to strengthen their bargaining position *vis-a-vis* the European Common Market. The E.E.C. places fairly high tariffs on tropical products like coffee, cocoa and tea produced by non-participating nations while allowing similar imports from members "associated territories" overseas to be free of duty.

The emergence of these regional groupings constitutes a major challenge for Free World economic statesmanship. Above all, it is necessary to avoid the dangers of splitting the world into three or four blocs. For this, it is essential that the regional groupings look outward, not inward, and build up their own strength while ready to help others. This would fortify the fabric of global, in contrast to regional, trade and increase the economic and political cohesion of the Free World.

AMERICAN LETTER

(*Concluded from page* 739)

Mr. Thant is highly regarded everywhere. His selection by the U.N. Security Council, as proposed presently, would mark a milestone in U.N. history. Mr. Thant would be a symbol of the power of the Afro-Asian nations which have become independent recently and which aim to assert their rights in the family of U.N. countries.

Otherwise, the Berlin crisis, the defection of Syria from the United Arab Republic and other Middle East and Balkan developments continue to dominate the scene at the U.N. The Chinese question was brought into focus by a line of pickets which demanded freedom of self-determination for Formosans, who, they said, were tired of being dominated by mainland Chinese not recognised as Formosans.

Investment Centre of India

A New York branch of the Indian Investment Centre, with headquarters at New Delhi, was opened in New York this week. It is headed by Mr. M. Gopala Menon, formerly India's Consul General here. Dr. K. C. Chaco of the consulate staff will be assistant manager. Present at the opening ceremony was India's Finance Minister, Mr. Morarji R. Desai. The opening date coincided with the birthday of Mahatma Gandhi.

The new office will serve as an information bureau, clearing house and liaison office for technical and financial joint-venture projects proposed by American or Indian investors, or both.

MONEY AGAIN STRINGENT

(*From Our Own Correspondent*)

BOMBAY, *11th October*

The short-term money market turned distinctly stringent during the latter part of the week under review. Though the busy season has not yet commenced, demand for funds is slowly rising and, as banks do not have adequate floating funds for meeting this growing demand, borrowers found it difficult to get their full requirements. Some banks are stated to have approached the Reserve Bank of India for funds. The call rate which ruled at 4½ per cent till Monday the 9th inst., firmed up to 4½ per cent yesterday and stands at that level at the time of writing. The other rates remained unchanged as under:

	Per cent
Notice Money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive) ...	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3¾
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-days' Treasury Bills of the Government of India sold through weekly tenders showed that, as against an invitation for Rs. 2 crores the amount offered and accepted was the same. The average rate of accepted tenders stood at 2.5 per cent, same as last week. There was no demand for intermediate Treasury Bills, but they are on offer still.

A sharp expansion of Rs. 34.25 crores in notes in circulation, as compared with that for the previous week, is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 6th October 1961. As the notes held in the Banking Department have shrunk by Rs. 16.70 crores, the total notes issued have gone up by Rs. 17.54 crores. The foreign securities are unchanged at Rs. 116.86 crores, but as the balances held abroad have improved by Rs. 72.99 lakhs, the total foreign assets are higher by that amount at Rs. 130.46 crores. The deposits of the Central Government have risen by Rs. 5.68 crores, but those of other Governments have declined sharply by Rs. 17.81 crores. Deposits of banks also have shrunk by Rs. 6 crores. On the assets side, investments have declined steeply by Rs. 39.65 crores. But other loans and advances, which include advances to scheduled banks against usance bills, have risen by Rs. 5.81 crores.

An expansion of Rs. 2.97 crores in demand deposits and of Rs. 1.99 crore in time deposits is disclosed by the statement of the scheduled banks for the week ended 29th September 1961. The deposits of the State Bank of India alone have gone up by Rs. 8.15 crores. Total borrowings from the Reserve Bank have shrunk by Rs. 4.55 crores of which the share of those against usance bills is as much as Rs. 4.16 crores. Investments have risen by Rs. 10.56 crores. Advances and bills discounted (bank credit) contracted by Rs. 3.34 crores to Rs. 1,220.74 crores. Of this fall, the share of the State Bank is only Rs. 21 lakhs.

The gilt-edged market continued to be dull. There were sellers for medium-dated and long-dated loans, but in the absence of sufficient buyers, the transactions were extremely limited. The institutional investors are said to be earmarking funds for the new Bombay Municipal loan for Rs. 2.50 crores carrying interest at 4.25 per cent per annum and repayable in 1973. The issue price is Rs. 99.25 and the list for public subscription will open on 20th October 1961. The Conversion Loan eased by 5 nP to Rs. 72.75. Three per cent 1964 and 3½ per cent 1969 shed 5 nP each to Rs. 96.20 and Rs. 98.30. Other loans were unchanged.

In the foreign exchange section, the value of the rupee was unchanged in relation to the U.S. dollar. Banks selling and buying rates for ready T.T. on New York were Rs. 475.50 and Rs. 472.25 per 100 dollars same as last week. In the New York foreign exchange market, the pound sterling improved *vis-a-vis* the U.S. dollar. The latest available rate for pound sterling in the spot market is 281.550-281.580 cents, as against 281.510-281.560 last week. Thus, over the week, the spot rate for pound sterling has gained 0.40 cent.

SKINS AND HIDES STEADY

(*From Our Own Correspondent*)

MADRAS, *7th October*

The arrivals of tanned kips continued to be moderate, but the offtake by shippers was slow. U.K. inquiries have been highly selective and mostly for lower selections. Mediums and heavies kips were almost neglected, but lights of all tannages had inquiries. Prices, however, continued to be steady due mainly to uneconomical levels at the raw centres, where acute shortage was reported.

Cow calf skins had better inquiries, particularly lower selections and some good business resulted with the U.K. Buff calf top marks 1½/2 lbs. run had good call from the U.K. and Continent. Thirds and 2/2½ lbs. run and thirds, however, were almost neglected. Raw calf skins markets are ruling at unworkable levels. The U.S. was out of the market.

Buffs again were neglected by the U.K. but the U.S. took small quantities of butts.

Tanned goat and sheep skins were a shade easier due to poor inquiries from the U.K., U.S. and Continent. Raw skins markets also are reported to have declined slightly.

Shipments during September were 3,116 bales cow hides. 121 cow calf, 16 buff hides, 19 buff calf, 454 goat and 210 sheep to the U.K. 16 cow hides, 63 cow calf, 14 buff calf, 884 goat and 346 sheep to Continent. 4 cow hides, 2 cow calf, 111 buff hides, 96 buff calf and 167 goat to the U.S., one goat and 245 sheep to Japan and 6 cow hides to Canada.

BULLION QUIET

(*From Our Own Correspondent*)

BOMBAY, *11th October*

Gold was slightly better over the week, while silver was a shade easy. Both the metals encountered selling early in the week, following heavy arrivals and easy advices from Delhi. The subsequent sessions no doubt witnessed a rise in the prices of both gold and silver, due to expectations regarding enlarged offtake in the next few weeks. But the extent of rise was not so much as to make good the earlier losses. Actually, today's closing rates for silver were below those prevailing a week ago. The undertone of the market at the time of writing was quiet.

Arrivals of both gold and silver during the week were smaller as compared with the previous week. The daily average was 4,200 tolas and 36 bars, respectively, as against 8,250 tolas and 45 bars. As regards offtake, the daily average was higher in the case of gold (4,200 tolas, as against 3,500 tolas), but lower in respect of silver (8 bars, as against 9 bars). The floating stocks are estimated at 30,000 tolas of gold and 800 bars of silver.

Adjustment rates fixed today were Rs. 124.80 per 10 grams of gold and Rs. 205.80 per kilogram of silver. The corresponding rates a week ago were Rs. 124.50 and Rs. 206, respectively.

In gold, the *Margashir* (December) settlement was subjected to bull liquidation in the first two sessions of the week and receded from Rs. 125.50 to Rs. 124.80 on Friday. After recovering subsequently to Rs. 126.25 yesterday, the settlement fell again to Rs. 125.70 today before finishing at Rs. 125.80.

Ready gold began the week at Rs. 124.65, as against the previous close of Rs. 124.75, and moved down to Rs. 123.90 on the 6th inst. Thereafter, it gradually edged forward and touched Rs. 125.50 yesterday, but declined to Rs. 124.95 today. The closing was slightly higher at Rs. 125.05. At this level, the discount under the forward was 75 nP, same as last week. The discount had narrowed to 50 nP on Saturday the 7th inst.

The *Margashir* settlement in silver eased from Rs. 207.10 last week-end to Rs. 206.15 at one time on Friday. After recovering to Rs. 207.35 yesterday, the settlement fell back to Rs. 206.70 before closing at Rs. 206.80. The net loss over the week was 30 nP.

Ready silver continued to be quoted at a discount under the forward throughout the week, though the actual discount declined slightly from Re. 1.10 on Wednesday last week to Re. 1 today when the quotation stood at Rs. 205.80, as against Rs. 206. The highest and lowest levels touched in the week were Rs. 206.30 (Tuesday the 10th inst.) and Rs. 204.90 (Friday the 6th inst.).

The world price of gold in the London bullion market was unchanged at $35.18⅜ this week too, while the sterling price of gold improved by ½d. to 250*s.* 0¼*d.* Ready and forward silver continued unaltered at 79½*d.* and 80⅛*d.*, respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of prices during the week under review:

	11-10-1961 (closing)	High	Low	4-10-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	125.05	125.50	123.90	124.75
Forward: Margashir* ..	125.80	126.25	124.80	125.50
Sovereign	96.75	97.00	96.75	97.00
SILVER				
Ready (.996 fine) ..	205.80	206.30	204.90	206.00
Forward: Margashir† ..	206.80	207.35	206.15	207.00
London—				
Silver Ready	79½*d.*	—	—	79½*d.*
Silver Forward	80¼*d.*	—	—	80¼*d.*
Gold	250*s.* 0¼*d.*	250*s.* 1½*d.*	250*s.*	250*s.*
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th December settlement. † 26th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES FINISH BETTER

(*From Our Own Correspondent*)

BOMBAY, *11th October*

The cotton futures market ruled easy during the first three sessions of the week (that is, Thursday, Friday and Saturday), but picked up strength on Monday which persisted practically till the close of today. The initial easiness was due to reports that the current season's crop had not suffered as much damage as was feared earlier. There was also some selling induced by good weather conditions in Khandesh, Berar and C.P. tracts. Consequently, values moved down. A sharp recovery was, however, in evidence on the 9th inst. It followed fears of much loss to the crop as a result of heavy rains in several cotton-growing areas, especially Berar, Khamgaon and Moglai. The rise gathered momentum early yesterday, though, towards the close, there was stale bull liquidation which led to a fall in prices. Today, the market put on a cheerful appearance again, with values registering a further improvement. The trend of the market during the week is indicated below:

(In Rs. per candy of 784 lbs.)

11-10-61	*High*	*Low*	4-10-61
I.C.C. Jarilla March	631.50	633.00	620.75	625.25

A notable feature of trading in the spot section was the firmness of new crop cotton, thanks to active buying by mills in the wake of poor offerings. In particular, 197/3 cotton evoked keen demand which stemmed from fears regarding damage to the crop from continued rains. A few varieties such as Co2 and L.147, however, were somewhat neglected on expectations of higher output. The export section ruled dull, as fresh overseas support was lacking and traders anticipated a larger Bengal *Deshi* crop.

Among foreign styles, superior grade Sudan and African cottons met with good support. Some business was also put through in whatever foreign growths that were readily available in the local market.

The latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 650; Hubli Laxmi 975; Kalyan 870; L.147 1,025; Co2 1,250; East African B.P.52 1,270; B.P. (U.N.U.G.) 1,300.

Sudan XG2L (November-December shipment) 1,495-1,497.

The mofussil mills are now eligible to import and retain cotton, for their own use only, up to 30 per cent of the value of raw cotton entitlement accruing to them under the cloth export incentive scheme. A notification to this effect has been issued by the Chief Controller of Imports and Exports. Meanwhile, imports of foreign cotton into Bombay port continue to be on a large scale. The actual imports during the period from 1st September to 5th October aggregated 179,559 bales, as against 173,260 bales in the corresponding period last year.

The Karachi cotton market depicted a quiet trend during the week under review, with values tending to move down. Shippers were not inclined to enter into fresh commitments, pending the emergence of a clear picture regarding Pakistan cotton purchases by Japan and other countries. Nor was buying by local spinners on a large scale. The March 1962 contract encountered selling and lost 90 nP to Rs. 75.70. January contract dropped 70 nP to Rs. 77.70.

There was no trading in the Alexandria cotton futures market during the week under review too. The first official estimate of the Egyptian cotton crop for the current season (1961-62) places the total output substantially lower at 6.82 million kantars, as against 10.44 million kantars in 1960-61. Such a sharp fall in output is attributed to unprecedented damage caused by pests early in August.

The Liverpool cotton market was depressed on reports of larger U.S. crop this season. The December position fell from 24.60*d.* to 24.05*d.* per lb. The October position declined from 24.10*d.* to 24.05*d.* Sudan (November) was dull at 32*d.* The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 24.05; December 24.55; March 25.00; May 25.45.

American cotton mixed growth contract: October 24.45; December 24.90; March 25.30; May 25.75.

Sudan: November, January, March 32.

Fully steady conditions prevailed in the New York cotton market, despite anticipation of a larger output of cotton during the 1961-62 season. The Crop Reporting Board of the U.S. Department of Agriculture has estimated the crop (as of 1st October) at 14,334,000 bales (of 500 lbs.), which compares with 14,262,000 bales estimated last month

and the 14,272,000 bales actually harvested in the previous season.

The following are the latest available quotations from New York, as compared with those a week and fortnight ago:

(In cents per lb.)

	10-10-61	3-10-61	26-9-61
New York Spot	35.60	35.50	35.45
October	34.53	34.31	34.41
December	34.97	34.90	35.01
March	35.74	35.68	35.75

ART SILK YARN IMPORT POLICY

(From Our Own Correspondent)

BOMBAY, 11*th October*

The outstanding event of the week in so far as the yarn market is concerned is the announcement of a revised policy for import of art silk yarn under the Fabrics Export Incentive Scheme during the current half-year. The policy provides for grant of yarn import entitlements to manufacturers up to 100 per cent of the f.o.b. value of exports or the international prices, whichever is lower. Of the face value of these licences, 10 per cent is permitted to be utilised for import of the permissible types of spare parts of machinery required for the production of art silk cloth. No manufacturer will, however, be entitled to import art silk yarn in excess of Rs. 7,500 per loom per annum or Rs. 1,875 per loom per quarter, accumulation or adjustments of quarterly licences being allowed upto half a year. The other features of the policy are as follows:

Exporters, including manufacturer-exporters and processors, will also be granted licences under the scheme for import of coal tar dyes and textile chemicals upto two per cent of the face value of licences issued for import of art silk yarn.

Exports to Nepal, Tibet, Sikkim, Bhutan and Portuguese possessions in India will not be taken into account in determining the amount upto which import licences will be granted. Exports to Afghanistan will, however, qualify for grant of import licences for art silk yarn only from countries having special arrangements for payment in rupees and against payment in rupees. Exports against payments in rupee to countries with which special arrangements exist will be taken into account for the grant of import licences, provided the imports are made from countries having special arrangements for payment in rupees and against payment in rupees. These import licences will not be revalidated for import from general currency area.

Licences will be granted only once a month on the basis of exports effected in the preceding month. The Joint Chief Controller of Imports and Exports, Bombay, will entertain applications from the powerloom sector and the Joint Chief Controller of Imports and Exports, Madras, from the handloom sector.

Thirty per cent of the entitlement for art silk yarn under the scheme is required to be surrendered compulsorily by each manufacturer-exporter for the import of rayon grade wood pulp by spinners of indigenous art silk yarn. The surrender of entitlement shall apply to art silk yarn only and not to the import entitlement for dyes, chemicals, machinery and spare parts admissible under the Scheme. In return for the surrender of entitlement, the manufacturer-exporter will be entitled to receive 0.75 lb. of indigenous art silk yarn for every rupee of entitlement surrendered at prices to be fixed by the Textile Commissioner from time to time.

The revised policy marks a welcome departure from the previous scheme, in that the entitlement of import licences is now linked to the f.o.b. value or the international prices, whichever is lower, whereas, previously, the entitlement was linked to the value of exports, as assessed by the Textile Commissioner's Office. The one distinct advantage of this change is that exports of fabrics at substantial losses will be reduced considerably, because the incentive will be less if the f.o.b. price is lower. Further, the scheme will check the highly undesirable practice of overinvoicing freely indulged in by a section of industry and trade.

The announcement of the new policy had a bullish effect on the market, as operators thought that, with the reduction in incentive, imports of art silk yarn might decline. Even reports suggesting the arrivals of yarn worth about Rs. 3 crores in the next few weeks had no effect. Consequently, art silk yarn tended to look up, with the exception of J.P. Bemberg yarn (40 x 1) forward deliveries which drifted downward. In sympathy with art silk yarns, staple fibre yarns also recorded a rise in values. Cotton yarns, however, continued to rule dull in the absence of any new encouraging development.

The following table gives the prices of rayon staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	4-10-1961	4-10-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Canvens Bemberg (100 kg.)—		
October	2,850.00	2,850.00
December	2,850.00	2,850.00
Spot	2,954.00	2,900.00
40 x 1 75		
October	2,490.00	2,488.00
December	2,480.00	2,455.00
150 Japan (per 105 kg.)	1,920.00	1,875.00
150 Japan (per 100 kg.)	2,150.00	2,095.00
150 Italy (per 100 kg.)	1,975.00	1,875.00
Net. Imp. 150 2A 2	13.95	13.82
Staple fibre yarn (40 x 3)—		
October (per 98.79 kg.)	838.00	834.00
December	836.00	831.00
Hind (per kg.)	9.50	9.77
Cotton yarn (per bundle of 10 lbs.)—		
10s Peeler	17.97	17.97
20s Gekal	22.00	22.00
30s Row Graal	26.75	26.75
40s Mohan	32.25	32.25
60s Pinkey	52.37	52.37
80s Mohan	67.50	67.75

GROUNDNUTS RECOVER

(From Our Own Correspondent)

BOMBAY, 11*th October*

A recovery, though modest, in groundnuts from the low levels touched last week was the feature of trading in the oilseeds market during the week under review. In sympathy with this recovery other seeds and oils ruled firm. Spot groundnuts were particularly strong, thanks to delay in arrivals of new crop from upcountry centres and persistent reports of some damage to the crops in Andhra Pradesh as a result of unfavourable rains. Besides, the local crushers and *vanaspati* manufacturers gave sizable support at lower levels. The improvement in offtake was also aided by expectations of larger demand for oil during the *Divali* festival. The pronounced strength in the spot section provided a stimulus to bulls in futures as well. Operators hoped that the Government would concede the traders' plea for an early export quota for H.P.S. for which there are good overseas inquiries at present. As for groundnut oil exports, however, prospects are gloomy in view of the wide disparity between Indian and world prices. But unconfirmed reports that the State Trading Corporation would be allotted a quota for oil exports led operators to feel that this would tighten the supply position.

Linseed tended to move up, following relatively lower arrivals and sustained demand for oil. Castorseeds, too, edged forward on inquiries from shippers. Cottonseeds were well maintained on expectation of a smaller cotton crop this season.

Groundnut January 1962 contract, which fell initially from Rs. 198.37 to Rs. 197.25, recovered swiftly later and closed at Rs. 199. Nizam bold gathered Re. 1.25 to Rs. 43.25. Both Coromandels and Khandesh quality rose by a rupee to Rs. 43.50. Oil ex-mill and railway receipts put on 25 nP each, the former to Rs. 18.75 and the latter to Rs. 18.50. Groundnut oil January 1962 contract hardened by 15 nP to Rs. 16.15, after fluctuating between Rs. 15.90 and Rs. 16.20.

Castorseed March 1962 contract advanced by a rupee to Rs. 158.25. Ready Kanpur picked up 37 nP to Rs. 31.37 and Madras 25 nP to Rs. 32.50. Oil commercial put on 10 nP to Rs. 14.20. But oil B.S.S. eased by 10 nP to Rs. 13.20.

Linseed March 1962 rose from Rs. 35.53 to Rs. 35.62, but drifted lower subsequently to Rs. 35.56. Bold ready spurted by Re. 1.25 to Rs. 38.50. Linseed oil increased by 45 nP to Rs. 16.75.

Among cottonseeds, the January 1962 contract strengthened by 50 nP to Rs. 94. Berars, whites and non-whites were all held steady at Rs. 19.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	11-10-1961	4-9-1961	27-9-1961
Groundnut	Rs.	Rs.	Rs.
January 1962	199.00	198.37	206.25
Nizam bold	43.25	42.00	44.50
Coromandel ready	43.50	42.50	44.50
Khandesh quality	43.50	42.50	44.50

GOOD DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 3*rd October*

Offerings amounted to approximately 525,000 kilograms in sale No. 40 held today. Quality from the Nilgiris was fully maintained with a few brighter invoices on offer; from the other districts, the standard showed a slight seasonal improvement. There was good general demand. Best Nilgiris came in for keener competition and, following quality, sold readily at fully firm to dearer rates. Other Nilgiris sold at around last prices. Good mediums and mediums continued to be well supported at firm rates although some irregularity was seen with respect to the poor liquoring sorts which were generally easier. Low medium and plainest sorts sold well but tended to be somewhat irregular and only slightly easier when compared with last rates. Whole leaf grades came to a steady market with buyers active on the high-grown F.Ps. C.T.Cs and lagg-cut teas declined in value whilst there was better support for C.T.C. types. Black leaf teas realised good prices.

The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low mediums	3.95/4.10	4.40/4.70
Mediums	4.10/4.25	4.70/5.00
Good mediums	4.25/5.10	5.00/5.70
Nilgiri B.O.P.	5.00	7.80

The average price realised in sale No. 40 was Rs. 4.52 per kilo, as against Rs. 4.44 in the previous week and Rs. 5.17 in the corresponding sale last year.

Dust Sale No. 40: Just over 200 000 kilograms were offered in dust sale No. 40 held on Thursday, 5th inst. There was strong general demand. Highgrowns came in for fair support at around last levels. Mediums received keen competition at firm to dearer rates with buyers' emphasis on the brighter lines. The more fibrous sorts, however, sold irregularly and were generally easier. C.T.Cs were compared for at dearer rates. Legg-cuts and C.T.C. types came to a slightly easier market.

The average price realised in dust sale No. 40 was Rs. 4.57 per kilo, as compared with Rs. 4.50 a week ago and Rs. 4.49 in the corresponding sale last year.

Export Quota: There are no buyers at present in the market, although sellers are quoted nominally at 1¼ nP per kilo.

Colombo: The market opened to good general demand, although Uvas were generally lower with quality. Best Dimbulas sold readily at slightly dearer rates whilst the lesser kinds were somewhat irregular. The plainest on offer were 3/10 cents dearer, whilst useful good mediums advanced by 3/8 cents. Mediums and lowgrowns were irregular but generally somewhat lower.

London: *North Indian and other growths*: There was strong general demand for all descriptions which sold at fully firm to dearer rates.

Ceylon and South Indian: In Tuesday's sale 25,777 packages were on offer of which 5,490 packages were South Indian teas. Demand continued to be good except for a few light liquoring teas. The market generally showed some advance in price with the lowest kinds being a strong feature.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No. 41*: 529.000 kilograms. Good general demand. Plain and low mediums barely steady. Mediums fully firm. Good mediums irregularly 10 nP to 20 nP dearer. Highgrowns irregular following quality."

LINSEED WEAK

(Messrs. A. Bradley and Co.)

CALCUTTA, 7*th October*

There was a slightly weaker undertone in the linseed market during the week, owing to absence of enquiries. Local crushers reduced their output to a great extent because of lack of parity, oil prices having declined with little corresponding decline in the prices of seeds. Arrivals from upcountry were very small.

Owing to the weakness in other vegetable oils, linseed oil ruled dull. Local demand was poor.

The oilcake market was firm. There was good local demand at higher prices, but stocks were very small and business was restricted.

October delivery was quoted at Rs. 28.50 per maund.

SUGAR RISES

(From Our Own Correspondent)

HAPUR, 9*th October*

Sugar prices, which had drifted lower earlier following decontrol of sugar, improved towards the week-end on brisk buying support from consuming areas. The Government's decision to reduce the production quota of the mills in the coming season by ten per cent also had a steadying effect. Mills would start the season late, with no incentive left for early crushing. In order to meet festive demand, the Union Government has released further 100.000 tons of sugar for sale. Prices of sugar at factory ends recorded a hardening trend and week-end prices here were: Rs. 106 per bag in the open market, retail 97 nP per *seer*. Mill delivery prices were: *Simbhauli* (D-29) Rs. 104.50, (E-29) Rs. 104, *bulandshar* (D-29) Rs. 104 per bag.

Firm trend prevailed in the sugar market at Muzaffarnagar during the week, contrary to expectations that prices would fall after decontrol, on brisk demand from the Punjab, Gujarat, Rajasthan and Saurashtra and bulk quantities were also sold for Delhi. Business of about 250.000 bags was put in the market since decontrol and almost all factories were selling at higher rates. Week-end prices were: *Aqbalpur* (A-29) Rs. 40.22, *Khatauli* (B-29) Rs. 39.53, *Lakshar* (C-29) Rs. 38.34, *Rohana* Rs. 38.34. *Deoband* Rs. 38.84, *Dauarla* Rs. 38.84, *Mawana* Rs. 38.84, *Meerut* Rs. 38.15, *Amroha* Rs. 37.85, *Shamli* Rs. 38.05, *Bijnore* Rs. 37.50 and *Ramlaxman* Rs. 37.78.

Khandsari prices, which had eased earlier after decontrol of sugar, steadier later on brisk demand for the Punjab coupled with sugar prices. Local demand was also good and latest prices were galewat Rs. 225 to Rs. 29, non-crystal Rs. 31 to Rs. 35.75 and crystal Rs. 33 to Rs. 35.50 a maund.

New *gur* arrivals, which had started during mid-session, again stopped following rains. Old stocks were not much in request and week's offtake was two wagonloads and local stock now put at 9.000 maunds. New arrivals would soon mount and, as factories would start purchasing cane late, increased *gur* production is predicted. Week-end prices (in rupees per maund) were: new 16.50 to 17, old *koyha* 14 to 15, wet 12.50, *shakker* 17 and new 19 per maund.

Demand for *gur* was slack during the week in the Muzaffarnagar market, as consuming centres evinced little interest. New production has not yet begun and week-end prices were: *chaku* Rs. 18 to Rs. 18.50. wet Rs. 13.25, *shakker dara* Rs. 16.75 to Rs. 19.25, *masala* Rs. 21 to Rs. 23 per maund.

Gur futures moved both ways during the week. *Gur fagun* having opened at Rs. 12.25 on 3rd October, touched the highest and lowest at Rs. 12.36 and Rs. 12.04, respectively, and is today quoted at Rs. 12.22.

RAW JUTE ARRIVALS SUBSTANTIAL

(From Our Own Correspondent)

CALCUTTA, 10*th October*

Raw jute arrivals showed a substantial increase during the week under review which led to the mid-week fall in prices, albeit insignificantly. As the week progressed, the mills turned keen buyers of fibre at lower levels and the quantity contracted for by them was considerable. This arrested the declining trend. Over the week-end, the Indian Jute Mills Association announced that the mills would be working 48 hours a week from 16th October, as against 45½ hours as at present. Demand for jute goods was yet low, as overseas buyers were prepared to wait before replenishing their stocks. Prices of goods also declined and, at lower levels, good business was put through in October hessian as well as sacking goods. Market circles realised that the prices of manufactured goods, though at levels not admitting of profits to mills, must decline further, if a steady flow of demand from overseas countries was to be generated. It was felt that, unless fibre prices declined further, stability in the markets would not set in. At the same time, there was the realisation that it was imperative that the cultivators also got economic prices for their produce. The fact that, even at the present high prices of goods, mills are not able to operate profitably led to the comment in some quarters that, inasmuch as cultivators had reaped good profits in the recent past, they should be able to sacrifice a portion of their gains by reducing fibre prices, so that their as well as the industry's long-term interests would be protected. However, this comment should be read with reservation because the high prices prevailed in the closing months of the last season when practically all fibre had left the hands of cultivators. Cash requirements of cultivators for the forthcoming *Pooja* festivals have led to increased arrivals which prevent prices from rising further.

The news from across the border that, while some mills in Pakistan have now reduced production by working two shifts instead of 2½ shifts as hitherto, other mills have increased production by introducing an extra half-shift, was noted. There will thus be no change in the total monthly output of Pakistan mills. This is apparently good news to the industry in India, as in the past reports of increased production in Pakistan had depressed the Calcutta market. Mills in Pakistan apparently realise that any increase in production is not justified by the trend of demand for goods. It is known here that the quality of the Pakistan goods is much below that of Indian goods. Although the Indian mills are fed with inferior jute and many mills have yet to modernise their plants, the quality of goods is of a high order. The Pakistan mills, despite the advantages of modern machinery and good quality fibre, are yet to acquire experience. Such a realistic analysis has resulted from current trends and, though mills in India can sit back with pride, they are in no mood for complacency. For they realise the need for a fall in prices of goods, which alone would revive overseas demand. If mills accept the premise that higher output would lead to a fall in costs of production, they point out that cultivators, who are harvesting a bumper crop, should also be able to make the same profit if they market all the crop at lower prices than at present.

Meanwhile, the mid-week drop in fibre prices has alarmed officialdom which has utilised this opportunity to remind the I.J.M.A. of its assurance to maintain the stability in jute prices. The Cossipore yard of the Eastern Railway has been flooded with incoming consignments, and arrivals of Pakistan cuttings and Thailand's mesta also contributed to depress prices. While mills are committed to a programme of increased production, it should be pointed out that the mills can hardly be expected to embark on a plan of flooding their godowns with goods. They have already unsealed the looms sealed in August and, in the last month increased working hours to 45½ a week. They have now been called upon to work a full week of 48 hours. Although this can only be done when there are signs of revival of overseas demand for goods, the mills belonging to the membership of the I.J.M.A. have decided to work 48 hours from the forthcoming week. A *Pooja*-eve decline in fibre prices, it is pointed out, is a usual feature every year, and a gradual rise in prices following the *Poojas* is also a usual feature. A temporary decline in prices should not upset the authorities. When the mills have not yet been able to operate profitably, it is amusing that there have been demands from Bihar that the State Trading Corporation should purchase fibre at Rs. 35 a maund. Evidently, the suggestion is that the S.T.C. should sell all such fibre bought by it at a higher rate to the mills.

The latest development in Pakistan has been that the E.P.C. prices were raised by 2 per cent for all grades, excluding all cuttings, exports hearts, and Tossa 4. This rise, despite weakness in the fibre market caused by the hesitancy of buyers, followed the announcement by the Pakistan Jute Association that the E.P.C. prices would be 2 per cent higher than the daily quotations and that the 2 per cent was only agents' commission. Market circles said that it was very difficult to maintain the present E.P.C. rates, as demand from overseas was at levels £4 to £5 below the E.P.C. Despite this, the E.P.C. rate has been raised, and it has been hinted that this action has been taken to lead to a greater fall in prices. With increased imports and little interest being shown by Pakistan mills and exporters, it is not seen how the high E.P.C. rates can be maintained for any length of time.

Firm conditions developed in the goods market on Tuesday last and ready hessian 40" 10 oz. was at a high premium for prompt delivery. Mills turned sellers at the higher rate, and the price of ready hessian 40" 10 oz. closed lower than the highest level for the day at Rs. 55.25. In sympathy, ready B. twills steadied around Rs. 134.00. At this stage, the report of a decline in fibre prices following increased arrivals affected the trend and, on Wednesday, hessian 40" 10 oz. dropped to Rs. 54.00 and B. twills to Rs. 132.50. Selling pressure developed in the futures market and ready goods also fell. At lower levels, demand was revived. Hessian 40" 10 oz. closed lower at Rs. 51.25 and B. twills at Rs. 132.00 on Thursday. Business followed and, as a result, on Friday, prices recovered to Rs. 52.75 and Rs. 132.75, respectively. Over the week-end, prices recorded a sharp rise with B. twills quoting Rs. 133.00 and hessian 40" 10 oz. at Rs. 53.25. This followed the announcement of details of stock figures at the end of September. Stock of goods with mills fell by 12,500 tons to 52,500 tons. The largest fall of 5,700 tons was recorded in sacking at 29,200 tons; hessian at 15 800 tons was lower by 4,700 tons. Miscellaneous constructions dropped by 2,200 tons to 7,500 tons.

A two-way movement in fibre prices was in evidence. Increased arrivals and reports of heavy accumulation in Cossipore pushed down ready daissee bottoms to Rs. 36 from Rs. 37 a maund and Assam bottoms as well as northern bottoms to Rs. 32.50 from Rs. 34.00. Mills turned substantial buyers at lower levels. There were also reports that the Government, alarmed at the decline, reminded mills of their undertaking to maintain stability in fibre prices. The possibility of mills increasing production was also hinted and, when over the week-end mills announced their decision to work a full week from 16th October, it caused no surprise. As mills began to increase offtake, daissee bottoms gained to Rs. 36 and Assam bottoms and northern bottoms to Rs. 33.00.

BLACK PEPPER MOVES DOWN

(Messrs. Parekh and Co.)

BOMBAY, 11*th October*

After a week's grounding within a narrow range, Malabar black pepper climbed down under the impact of liquidation of October delivery contract by tired bulls induced by the proximity of the settlement date. Withdrawal of New York buyers and their indicating lower buying price made the matter worse. Ungarbled ready fell to Rs. 373 and garbled to Rs. 383. October delivery, after spurting to Rs. 404 in expectations of broadening Punjab and inland demand, came down to Rs. 389 as the inland demand did not pick up as expected. Almost all the hedge sellers having already lifted their hedge sales for October delivery, there were a few fresh buyers, as new incentives were lacking. December delivery was quoted lower at Rs. 373. Calicut was indicating at Rs. 375.

Singapore is reported to be flat without any foreign business. Arrivals from Sarawak during the week were higher than in the previous week. Secondhands in Singapore are quoting lower to attract business but without result. White and black pepper are quoted at Str.$175 and Str.$140, respectively.

Spot in New York remained quiet at $0.44, with demand poor. As Singapore is indicating comparatively lower prices, bidding level for Malabar by New York dealers is lowered to $0.42.

The future of the market is uncertain. It will depend upon the selling policy of Lampong new crop which is so far held back from the market and the attitude of the U.S.S.R. which generally comes in the Indian market at the start of the new season.

Ready pepper in Bombay is nominally quoted Rs. 205 per 50 kilos with poor demand.

FOODGRAINS DEPRESSED

(From Our Own Correspondent)

HAPUR, 9*th October*

Quietly depressed conditions were witnessed in foodgrains prices during the week ending 9th October. Pressure of new maize arrivals at an average of 500 maunds daily from Rampur was main influencing factor. Fairly good rains have now been received and timely *rabi* sowings would be possible. Sowings of coarse grains—gram and barley, bejhar and peas would begin after a week, while that of wheat would begin by the end of the month. Wheat prices here during the week ruled steady at Rs. 14.75 to Rs. 15 a maund for average quality and Rs. 15.50 to Rs. 16.25 for better farm produce. Daily arrivals were small at an average of 75 maunds which were readily absorbed by consumers and local stock is almost stationary around 25.000 maunds.

Rice prices registered further fractional decline due to good crop. Arrivals of new paddy have begun which was quoted at Rs. 12 to Rs. 13 per maund. Demand of rice was slack and week-end prices were: Rice *mainpuri sela* Rs. 20.75; *gadda kutcha* Rs. 20.75; *ramajwayan sela* Rs. 22; *raimunia sela* Rs. 23; *basmati sela* Rs. 27 to Rs. 30; superior Rs. 32 to Rs. 37 (all per maund). Gram ruled quietly depressed at Rs. 13.25 to Rs. 13.50 per maund, and, although arrivals from Punjab were small, local stock was still heavy at 34,000 maunds. Barley was depressed at Rs. 10 to Rs. 10.75 and *bejhar* inferior at Rs. 10 and *moongia* variety at Rs. 11 per maund. Demand of these coarse grains is slack and some barley reached here from the Punjab during the week. New maize arrivals at an average of about two truck loads daily from Rampur rural areas were being lifted by consumers for seasonal consumption and prices drifted lower under pressure of arrivals to Rs. 10.50 to Rs. 11 per maund. *Juwar* and *guwar* were listless at Rs. 11 and Rs. 14 per maund, respectively. Arrivals of new *bajra* have not begun and old variety continued to be quoted at Rs. 15. *Methi* improved from Rs. 27 to Rs. 28 per maund on good outside buying support, while oats was quiet at Rs. 13 per maund.

Among pulses, peas and *arhar dal* attracted good demand and week's offtake was heavy mostly to Madras side. Prices of peas, however, were depressed on selling pressure by stockists, as stocks were still heavy at 42,500 mds., but *arhar dal* prices improved 50 nP per maund. *Urd* prices improved on good demand in the face of poor stocks while *moong* prices continued easy, thanks to good crop prospects. Week-end prices (in rupees per maund) were: Peas *dara* 11.25; *khatti* 11.25; farm 12 to 12.27; peas *dal* 12.75; *arhar* 12.37; *arhar dal* 16; *urd* 21; *urd dal* 24; *moong* 16 to 17; *moong dal* 19 to 20; *massoor* 13 to 16; *massoor dal* 16; *moth* 16; *moth dal* 19.

Preparation of land for *rabi* sowings is in full swing and sowings of coarse grains would begin shortly, thanks to good rains.

TIN EASY, COPPER FIRM

(From Our Own Correspondent)

CALCUTTA, 10*th October*

Trade circles had further time to study the Government's import policy for base metals. Satisfaction was expressed at the revival of quota licences to the extent of 10 per cent in regard to wrought copper in semi-manufactures. The specific provision that the quota licences for virgin copper and zinc are valid for import from the U.S. only, trade circles thought, should have been better avoided. Although even if there was not this specific provision, most imports of these two items would take place from the U.S. only, quota holders would now be prevented from taking quotations from other sources of supply. It was apprehended that the U.S. traders might use this provision to their favour, as quota holders must place their orders on U.S. suppliers only. The quota for zinc is 30 per cent as previously and for copper 100 per cent.

The other features of the policy are: (1) Quota licences for brass semis such as wire, rod, section, sheet, pipes and tubes, has been revived to the extent of 12½ per cent. The licensing system in this regard has been decentralised and the import authorities at the ports will issue licences. Such licences issued will also be valid for import of copper unwrought and zinc or spelter unwrought in the form of ingots and cakes. (2) For aluminium alloy items such as plates, sheets, circles, strips, rods and bars, the quota licences have been reduced from 20 to 10 per cent. This is attributed to the increased aluminium production in the country. (3) In regard to cadmium, cobalt, manganese, magnesium, chromium, vanadium and other non-ferrous metals not otherwise specified in the import control, quota licences have been reduced from 100 to 90 per cent. Also, it is stipulated that imports of monel metal wire cloth/netting, platinum crucibles and lead-winged aluminium-glazed bars under these licences should not amount to more than 20 per cent of the face value of these licences.

Higher advices were received from London during the week under review. There electrolytic zinc opened at £220½ a ton and, although the announcement of import restrictions by Japan continued to depress sentiment, this was arrested by reports of labour troubles in several mines. During the week, a high of £229½ was reached. The quotation closed firm at £228¾. Demand for copper scrap in Calcutta was higher, and prices for the scrap offering for sale were fully firm. Lead in London closed £1½ higher at £63½ a ton. The gain was attributed to increased demand at lower levels. The Calcutta quotation was unchanged at Rs. 135.75 per quintal. Electrolytic zinc in London closed fractionally higher at £72¾ a ton. Conditions here were fully steady, as demand was constant. In accordance with the lower trend in London, where the price declined from £944 a ton to £937, tin here also eased.

EXPORTS OF LAC

The Government of India has formulated a new scheme for price stabilisation and export promotion of lac. Under the scheme, the State Trading Corporation has been authorised to act as a buffer stock agency to regulate the purchase and export prices of lac. The minimum prices at which the S.T.C. will purchase certain types of lac from growers and manufacturers are based on Rs. 56 per maund for B. 11 quality seedlac, with corresponding changes for other grades. At the same time, the minimum export price has been reduced from Rs. 70 to Rs. 64 per maund. Further, an export duty of Rs. 160 per 1,000 kgs. of seedlac and shellac (including button lac and garnet lac) and Rs. 125 on other varieties, has been imposed.

In a note on "Lac exports" in *Commerce* dated 8th July 1961, the value of exports was inadvertently given as Rs. 4.7 crores in 1960. This figure relates only to the nine-month period from April-December 1960. The correct figure for the whole year 1960 is Rs. 6.41 crores. This compares with Rs. 6.10 crores in 1959 and Rs. 7.09 crores in 1957.

BANKING

(*Concluded from page 740*)

world or the need to confine financially unremunerative expenditure overseas to what, as a nation, we are prepared to earn overseas?

"Do the remnants of the 'siege' economy which remain with us from the last war make any positive contribution to our good or merely restrict our earning capacity?"

After admitting that the short-term credits obtained from the European central banks had only served to obscure the deep-seated but more malignant disease which had reached a stage that could not brook any delay in the application of a more drastic treatment, the Governor said that he had agreed to "the proportionately heavy reliance on the use of monetary measures in the short-term" as purely defensive measures for making an immediate impact, pending the evolution and application of a long-term treatment which would however take time to yield results. He concluded by saying that it was his firm belief that "constant recourse to disproportionate use of monetary measures is no substitute for a consistent and appropriate national economic policy."

NON-GOVERNMENT CORPORATE SECTOR

(*Concluded from page 761*)

in 1959, as against a net borrowing of Rs. 10.6 crores in 1958. During the four years 1956-59 together, total financing amounted to Rs. 830 crores, of which external sources accounted for Rs. 485 crores or 58.5 per cent.

New issues of shares and debentures in 1959 amounted to Rs. 32.4 crores, as against Rs. 27.8 crores in 1958.

Total gross assets of the 1,001 companies in 1959 amounted to Rs. 2,666 crores and net assets to Rs. 2,072 crores, as compared to Rs. 2,511 crores and Rs. 1,973 crores, respectively, in 1958.

The liquidity position of companies recorded some improvement in 1959, the ratio of current assets to current liabilities was slightly higher at 1.27 as against 1.26 in 1958, although lower than 1.48 in 1955. The percentage of current assets to net total assets, however, declined from 53.9 in 1958 to 53.5; it stood at 59.7 in 1955.

COMPANY MATTERS

(*Concluded from page 759*)

dollars), representing 20 per cent of the estimated dollar content of the project, has been negotiated and the remainder, including the foreign exchange, will be furnished by the Government out of a loan from the Export-Import Bank. The fourth Boeing was delivered to the Corporation in April this year.

The first two half-yearly instalments of the aggregate amount of Rs. 1.60 crore (3,360 million dollars) were paid to the commercial banks in the U.S.A. towards the repayment of their loan of Rs. 5.33 crores (11.20 million dollars) for financing the dollar content of the purchase of the first three Boeings. The funds for this repayment were provided from the Corporation's internal resources. The interest and other charges on the dollar loans for the first three aircrafts amounted to Rs. 39.28 lakhs for the year 1960-61 and have been charged to the revenues of the year. The same U.S. commercial banks advanced to the Corporation a supplementary loan of Rs. 57.31 lakhs (1.204 million dollars) at 6 per cent per annum to cover 20 per cent of the dollar content of the cost of the fourth Boeing aircraft and related spares and equipment during the year under review. The balance of the dollar content has been financed by the Government from the credit available from the Exim Bank. The funds to meet the sterling content of the cost of the project have also been provided by the Government.

While the future outlook for the Corporation is glittering, it is not golden, as the annual report strikes a note of sober confidence. It says that, though the prospects for the Corporation of further growth and profitability in operation in the years to come are good, it is facing in the current year particularly difficult conditions which may not be wholly compensated by the advantages accruing from its partnership arrangements and the jet service. In fact, it warns, little or no profit may accrue in 1961-62.

While it may be hoped that the growth in demand will resume its previous upward trend, load factors during the current year and part of the next year are likely to be affected by the still further increase in capacity offered as deliveries of the new jet planes to other airlines are completed in 1961-62. The international air transport industry may, therefore, be expected to face somewhat lean times until 1962-63, by which time demand should be able to catch up with the increase in capacity. In the meantime, there will be a strong case, says the Directors' report, for a further reduction in economy and tourist fares on some routes with a view to stimulating demand, considering that the proportion of people who travel by air even in the wealthier countries of the West is still pitifully small. Air-India is particularly interested, the report notes, in the enlargement of the available traffic base. The large carriers operating on high density routes have special advantages over Air-India, which, at its present stage, "must be content with being a low frequency operator over an exceptionally widespread route system." Having to meet, as it does, the severest competition imaginable, "its best chance of continued growth and profitability lies," to quote the report itself, "in a continuous enlargement of the market rather than in diverting to itself a bigger share of a restricted market." The Corporation, according to the report, is in favour of lowering fares, consistent with sound economic principles, so that its services may be available to an ever-increasing number of people. This is doubtless a very enlightened attitude.

Notice

THE CHAMPDANY JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at its Registered Office at 2, Netaji Subhas Road, Calcutta, 1, at 3-30 p.m. on 26th October 1961, to consider and if thought fit to pass the following resolution as an Ordinary Resolution:—

"That the Directors be and they are hereby authorised to sell the land and premises comprising the Company's Champdany Mill and the appurtenances thereto together with the plant, machinery, equipment and installations situated thereat to Kothari and Company Private Limited, for the sum of Rs. 48,20,000 upon and subject to the terms comprised in an Agreement entered into between the Company and the said Kothari and Company Private Limited, and that the said Agreement submitted to this Meeting be and the same is hereby approved."

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

Dated Calcutta, 30th September, 1961.

EXPLANATORY STATEMENT

As your Directors indicated in their Report to the Shareholders for the year ended 31st March, 1961, it has been decided to concentrate the manufacturing operations of the Company at Wellington Mill and to close down Champdany Mill in order to reduce manufacturing costs. In pursuance of this policy, negotiations have taken place between your Directors and Kothari & Co. Private Ltd. for the sale of the Company's Champdany Mill and, subject to your consent under Section 293 (1) (*a*) of the Companies Act, 1956, it is your Directors' intention to proceed with the sale to Kothari & Co. Private Ltd. on the terms indicated in the resolution and in the Agreement referred to therein. The Agreement contains the usual stipulations that the sale is subject to the Company making out a good and marketable title to the property to be sold and to the property being free from encumbrances, and also to a provision that it is subject to your consent under the above Resolution.

INSPECTION

A copy of the said Agreement is available for inspection at the registered office of the Company, No. 2, Netaji Subhas Road, Calcutta 1, during the usual office hours and will also be available at the meeting.

INTEREST OF DIRECTORS AND MANAGING AGENTS

Your Directors and Managing Agents are or may be deemed to be interested in the resolution as follows:—Mr. A. I. Murison, Mr. N. S. Coldwell, Mr. R. G. Edwards, Mr. K. P. Goenka and Mr. B. Gill as members and directors and James Finlay & Co. Limited as Managing Agents and members of the Company.

NOTE:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

VOL. CIII. No. 2637 BOMBAY, 21st OCTOBER 1961 PRICE Rs. 2

BONUS FOR LIFE POLICYHOLDERS

THE second valuation report of the Life Insurance Corporation, made public soon after our last issue went to Press, errs on the side of excessive caution, if not conservatism. The basis of valuation adopted in the first report, published in June 1959 recommending provisional bonuses for participating policies, did suggest that the actuaries of the Corporation were rather liberal in assuming a rate of interest of 3.125 per cent. This rate was perceptibly higher than the 3 per cent or even lower rates that were being adopted by private insurers. It may be recalled that, in its last valuation preceding nationalisation, the Oriental had assumed the rate of interest at 2.11/16 per cent. But subsequent events seem to have justified the aforesaid assumption of L.I.C. actuaries. The rate of interest earned was much higher; it was 3.52 per cent in 1958 and 4.08 per cent in 1959, the average net rate for the biennium as a whole being 3.81 per cent, as against 3.745 per cent in the preceding biennium and 3.125 per cent assumed. The downward trend in the renewal expense ratio noticed during 1956 and 1957, when it fell from 20.90 per cent to 15.89 per cent, continued during the period of the latest valuation also; the ratio was 12.92 per cent in 1959, as against 15.46 per cent in 1958. It is true that, in 1960, according to the Corporation's annual report, the ratio did not go down further, having remained practically unchanged at that level. But the Corporation's business is growing at a satisfactory pace. Claims ratio is favourable, thanks to better mortality experience. The earnings from investments are also rising and the trend of interest rates is very likely to be on the high side. Both the Governor of the Reserve Bank and the Central Board of Directors of the Bank have expressed the view that monetary stringency will continue much longer than most people expect and so also the regime of higher interest rates. The following quotation from the Reserve Bank's annual report for 1961 is quite pertinent in this connection:

"In a developing economy, the flow of credit has to be regulated by the monetary authorities, with due regard to the productive credit needs of expanding industry and trade. In this context, the higher cost of credit would have a healthy effect by reducing less-urgent demands, by checking undue reliance on bank credit, and by promoting the economical use of resources.... The pattern of higher interest rates to which the economy is adapting itself should be of assistance in general in promoting savings and restraining less desirable forms of investment."

It will be noted from the foregoing extract that there is enough justification for expecting L.I.C.'s investments, the bulk of which is in Government securities and will continue to be so, to yield still higher rates than in the recent past. It is, of course, true that, when interest rates go up, the market value of fixed-yield investments goes down, but, in the case of Government securities, this is only a passing phenomenon, for, as the maturity dates of previous investments draw near, the market value gains. Again, the low interest bearing maturing loans are converted into loans carrying higher rates of interest. And, in any case, the loss represented by the fall in market value is only a book loss, because the redemption is at full face value; even that book loss must have been more than provided for by now, thanks to the hidden reserves built up by the well-managed insurers before nationalisation and by the appreciation in the market value of other investments. Thus, looked at from both performance hitherto and the prospects, the basis of the latest valuation is more stringent than it need be for ensuring a satisfactory and sound financial position for the Corporation, as well as a steady rate of bonus. The rate of interest assumed is no more than 2½ per cent and, in respect of mortality, it is the modified Oriental (1925-35) ultimate mortality table, which is a very conservative one, in that the actual rate of mortality is very much lower, that has been taken into account. In fact, the authors of valuation (Mr. V. H. Vora, Executive Director (Actuarial) and Mr. D. D. Markan, Actuary) themselves admit our criticism of the valuation basis, albeit impliedly, when they conclude their report thus: "The policyholders would be glad to know that further investigations made by us go to show that the Corporation is not only in a position to maintain the present bonuses in the future but also to improve thereon, in due course, if the present favourable conditions continue."

The provision made in respect of expenses is also quite conservative. In the first valuation, an expense ratio of 20 per cent (of premium) for participating policies and 16 per cent for non-participating policies had been adopted. In addition, a provision of Rs. 5 per thousand of sum assured per annum for participating paid-up policies and Re. 1 per thousand for non-participating paid-up policies had been made. Actual experience of the Corporation has shown that these assumptions were quite safe and by no means indiscrete. At the time this basis was adopted, the renewal expense ratio of the Corporation was running in the neighbourhood of 16 per cent. But, now when this expense ratio is less than 13 per cent, the allowance made for expenses is practically the same. Thus, 20 per cent is the ratio adopted for the participating policies which account for the major portion of the business in force. The rate for non-participating policies has been kept a little lower at 15 per cent, but for the paid-up policies the rates have been stepped up to Rs. 7 and Rs. 2 per thousand per annum for participating and non-participating policies, respectively. These provisions seem to suggest that the actuaries have no confidence in the ability of the Corporation's management to force the expenses ratio down and not much faith either in the assurances of the Union Finance Minister that he was determined to minimise deficit financing or in the steps being taken by the Government to check the upward trend in price levels and cost of living.

When Pressmen questioned the L.I.C. officials as to why such an unduly stringent basis had been adopted for determining the surplus available for distribution, they were told that the Corporation had to carry the message and value of life insurance to every nook and corner of this vast country, irrespective of the cost involved. This obligation, imposed on it as a State-owned enterprise, coupled with the effects of inflationary pressures, has tended to push up its expenses. Costs are no doubt going up, but this argument can be exaggerated. An ultra conservative valuation and conservation of resources at the expense of policyholders may not serve as incentives to the spending departments of a State-owned monopolistic institution like the L.I.C. to effect economies. On the contrary, it may have the reverse effect. Talking of rising costs consequent on inflation, it must be borne in mind that policyholders too suffer heavily, when their claims mature and get paid in amounts the purchasing power of which is much less than the premiums paid. Accordingly, their claim for bigger bonuses has considerable moral justification.

So far as spreading life insurance to all parts of the country is concerned, one can have no quarrel with the objective. But must the cost of this pioneering activity be borne by the existing policyholders, especially the policyholders of nationalised insurers? It would surely be equitable if a part of the cost involved could be treated as capital expenditure to be met from future surpluses. Another part could be borne by the Government as the sole shareholder, with a provision for recovering it at a later stage. The Government, it may be noted, has already gained Rs 2.73 crores as its share of the surplus from the first and second valuations. In the case of life policies sold in rural and semi-urban areas which are uneconomical, the consequent loss amounts to social expenditure and as such it should be treated as a charge against the tax-payers as a whole. The Government would be justified in subsidising, in part at least, the cost of this development programme in some form or other. It is surely not fair to penalise the policyholders who did not bargain for bringing such ultra social objectives within the scope of life insurance business. The suggestion that the Government should bear a part of the developmental cost of life insurance in underdeveloped parts of the country is not without precedent, as the principle is already in vogue in several spheres. The example of State Bank's branch expansion scheme, for instance, can be easily applied to the L.I.C.

So much for the basis of valuation. Now to take the results of its application. The life insurance fund, as at the end of 1959, amounted to Rs. 495.78 crores, as against which net liability under assurance and annuity contracts, including Rs. 18.69 lakhs unutilised bonuses at the preceding valuation, was Rs. 474.83 crores, leaving a surplus of Rs. 20.95 crores as per valuation balance-sheet. A sum of Rs. 4.62 crores is available from the taxation account, being the excess of income-tax deducted at source on Corporation's investments over the tax due (Rs. 4.58 crores) on the surplus. The amount available for distribution is thus Rs. 25.57 crores, of which Rs. 24.29 crores are for policyholders and Rs. 1.28 crore for the Government. The details of distribution to policyholders of the Corporation and those of erstwhile private insurers are published elsewhere in this issue. Suffice it to say that the rates of bonuses recommended under the first valuation were only provisional and have now been superseded by those announced now. The grouping just finalised differs appreciably from that made in 1959, there being as many as 25 groups as against only seven before. This suggests that the assumption

have tried to do justice in a more refined manner than two years ago. The result, however, is less satisfying to the majority of policyholders. Thus, under the final valuation, 69 per cent (2.74 million policies issued by 27 units, including the L.I.C. the policies of which number 1.05 million) of the total participating with-profit policies (5.23 million) get less bonus than that proposed in the provisional valuation of 1959, while only 30 per cent (1.17 million policies issued by 161 units) get more. A comparison with final bonuses declared by private insurers before nationalisation also brings out a disappointing picture. It shows that 66 per cent of policies (1.88 million issued by 33 insurers) receive, under the final dispensation announced this week, less, while only 32.5 per cent (0.93 million policies issued by 149 insurers) get a better deal. An irony of this outcome is that the policyholders who were prudent in selecting the insurers have suffered as a result of nationalisation and those who were not have gained. What is more, contrary to popular notions, the former class of policyholders is larger in number than the latter. It is suggested by some that it is better to end the maze of differential bonuses, now numbering as many as 25, by having uniform rates of bonus for all policies, retaining only the difference between whole-life assurances and endowment assurances. Such an arrangement will undoubtedly be neat, require less effort, and be in conformity with the objectives of a State-owned undertaking. But it would mean further sacrifice on the part of the majority of policyholders of the pre-nationalisation era. The time for this reform would be when the L.I.C.'s surplus is large enough to implement it without dipping into the legitimate share of policies issued by the more efficient and financially strong units. That day, however, does not seem to be in sight yet.

PLANNING IN BRITAIN

PLANNING, like socialism, can be of different styles and hues, and there are several mixed economies which have come under some kind of planning or other. There is, for instance, the French-style planning (described in a recent P.E.P. broadsheet). Under this style, there are no official directives, but only voluntary co-ordination of four-year plans evolved by representatives of industry and other interests organised in different committees for different sectors under the *Commissariat du Plan*, with its staff of just 140. This organisation draws up the preliminary outlines in the light of the Government's directive laying down the target for annual rate of growth. A noteworthy feature of this planning is that those who participate in the finalisation of plans generally accept their implications and strive hard to attain the goals. It is the manifest success of this French planning, which has largely contributed in the last 12 years to a rate of economic growth at least double that of the United Kingdom, that seems to have provided some inspiration to the British Government. And so, for some time now, the Conservative Government has been seized with the idea of economic planning which would go beyond the general allocation of resources such as under a full employment policy. The recent Plowden report, it may be recalled, has led to the belief that the British Government will frame a Five-year Plan for its own public expenditure programmes and the investment programmes of the nationalised industries. As the other part of the economy, that is, the private sector, could not obviously be left unplanned, the Chancellor of the Exchequer, Mr. Selwyn Lloyd, after first mooting the idea of a possible two-tier planning committee in general terms in the latter half of August last, has set the ball of discussion rolling in industrial and trade union circles in Britain.

Mr. Lloyd's idea, as first adumbrated to employers and trade unionists in August, was to set up a two-tier committee which would consist of 25 businessmen and trade unionists in a top council, with an office of economic technocrats beneath them. It was then reported that the Chancellor's aim was "to establish a joint approach by both sides of industry to the problems of wages, productivity, investment and exports, which would lead eventually, if not to a 'national plan,' at least to a greater mutual understanding of the needs of the British economy." The Trades Union Congress, without whose enthusiastic participation no system of planning is expected to succeed in the long run in Britain, was then stated to be pleased with the prospect of investment planning which it had always advocated. But it was by no means clear that the T.U.C. would accept, with a full heart, the planning of incomes (wage increases) as a corollary to the planning of investment, for it was already committed to a round of wage demands while the Chancellor was swearing by his 'wages pause' policy. The T.U.C. leaders were, however, willing to sell the idea of wage restraint (under planning) to their members, if the Chancellor could give them a "psychological sweetener" by taking a favourable view of pending wage demands. The T.U.C. Economic Committee, with which the Chancellor had discussions on 22nd August 1961, did not therefore straightaway commit itself to supporting the proposed planning body, although it was stated to be secretly enthusiastic about participation in a high-level policy-making machinery.

Mr. Lloyd's discussions, on the following day, with the representatives of the four principal employers' organisations in Britain, turned out, on the other hand, to be less difficult. In fact, the employers' representatives then expressed themselves firmly in favour of the two-tier planning body, the functions of which were described a little more specifically by the Chancellor. It was stated that this body, at its lower level, would consist of an "office" with a permanent staff of economic experts. This office could be independent of Government influence; it would be charged with the task of examining all industries with a view to assessing their needs, as well as the contributions they could make to the national well-being. It would look at such matters as "output, exports, imports, employment, investment, demand for power and fuel, and the like." And it would then prepare reports on the nation's long-term requirements and present these for the consideration of the top tier, or "national economic council." The top tier, it was then reported, might possibly have the Chancellor as its Chairman and would be served by representatives of employers' organisations, trade unions, the nationalised industries, and possibly members of the public. The employers' representatives, who heard these details from the Chancellor, were pleasantly surprised that his line of thinking on the subject had turned out to be closely allied to their own. Their favourable reaction was epitomised by Sir Norman Kipping, Director-General of the Federation of British Industries, who said that it was "the beginning of a very interesting and perhaps very, very far-reaching and important development."

But, at that early stage in discussions, there was the studied absence of any mention of "wages" among the subjects for planning; this was probably meant to entice the T.U.C. into the planning mechanism. Presumably, the French experience of planning growth and investment alone, but not wages and income distribution, had something to do with the omission, as the Chancellor himself was stated to have been converted by the disciples of French planning. But the T.U.C. did not seem to have been taken in by all this, for its General Secretary told the annual Congress on 6th September 1961, that the "wages pause" to which the Chancellor was already wedded should be balanced by a "pause on profits or some similar sacrifice from the wealthier sections of society." Unfortunately, the U.K. Government's refusal, on 26th September 1961, to implement the Industrial Court's award for an increase of £1 a week for 2,300 Admiralty employees had the effect of confirming the doubts and fears of the T.U.C. This action provided a sombre background to the letters that the Chancellor had just then sent to the T.U.C. and the four national employers' organisations on the subject of planning.

With these identical letters in which Mr. Selwyn Lloyd has given a fuller picture of the constitution, powers and functions of the proposed planning machinery, the question has been advanced to a further stage of discussions which have started since the 16th inst. The planning machinery and its functions, as outlined by the Chancellor, are:

> There would be a 20-member National Economic Development Council. The Chancellor of the Exchequer would be the Chairman and one or two other Ministers, such as the President of the Board of Trade and the Minister of Labour, would be members. The other members of the Council, who would be appointed by the Chancellor after appropriate consultations, would be drawn from the trade unions and from the management side of private and nationalised industry, with perhaps some additional members.
>
> The functions of the Council would be to examine, and if necessary, commission studies relevant to the economic objectives mentioned earlier and to consider how these objectives could best be secured.

Responsibility for final decisions on matters of Government policy must remain with the Government, but the views expressed by the Council would carry great weight both with the Government and with industry. It would be for the Council to consider how far, and in what form, the result of its work should be made public.

The effectiveness of the Council's work would depend on the establishment of a full-time staff of the right calibre. The staff, which would work under a Director to be appointed from outside the Civil Service, although under the ægis of Government, would not be part of the ordinary Government machine. It would act under the general direction of, and be responsible to, the Council.

The Government for their part would be prepared to make available from the Civil Service an appropriate portion of the staff. The rest would be drawn from both sides of industry, the commercial world and elsewhere. Normally individual members of the staff would be regarded as on temporary secondment, for, say, two to three years.

The function of this staff would be to examine the plans for development of the main industries in the private sector, and, in the light of such examinations and of discussions with Government departments about other sectors of the economy, that is, the nationalised industries, to prepare, for the consideration of the Council, the necessary studies.

The Chancellor's ideas contained in the above extracts, according to latest indications, have produced different reactions. The employers' representatives, it is reported, are of the view that the Council will only be worthwhile, if it is effective. In other words, the proposed National Development Council should be clothed with greater powers; this, according to them, means that the Government must be prepared to sacrifice some of its own economic power and allow the Council to bargain over a wide range of economic issues. Their idea is that, while the Council should be more than a talking shop, it should not become a backdoor for the introduction of controls and that it should, therefore, be genuinely independent of the Treasury. Some of the trade union representatives have also demanded that the Council should be rendered effective, but for a different purpose; according to the extremist, Mr. Frank Cousins, there must be planning by direction, for the Government's idea of planning by advice and example would not work. Many T.U.C. representatives also insist that the Council should be a top-level body for genuine collective bargaining. In view of these different approaches of employers and trade unions to the powers and functions of the proposed Development Council, the discussions which the Chancellor has just been having with them are reported to have run into difficulties. But there is nevertheless a consensus of opinion in favour of planning, and so there seems to be a good chance that a planning authority of some kind will be established in Britain within the next few months.

It looks as though British planning cannot be a copy of French planning for some reasons. For one thing, planning in Britain cannot be divorced from the Treasury, as it is in France, for the British Treasury has its responsibility for sterling. Secondly, it is argued that the Treasury in Britain, unlike in France, must retain the ultimate responsibility for the economic direction of the country and, therefore, for the plan. But it is also feared that the Government might find it extremely difficult to retain the ultimate responsibility for directing the economy, when it has brought in industry and labour as equal partners in planning. In view of these dilemmas, planning procedures in Britain are not likely to be smooth. There is, however, the hope that some kind of planning based on a workable compromise between Government, industry and labour will finally emerge and that this will turn out to be a useful instrument in a general campaign to raise productivity in the British economy which is now suffering from three basic defects—decline in competitiveness of much of its industry, perpetual tendency to wage inflation and smugness. Anything like a national plan, in the opinion of Sir Robert Hall, a former Economic Adviser to the British Government, would also help towards the acceptance of a national wages policy, if it allowed the body of the community to associate themselves with it, in the form of a challenge. Again, it may be that planning may help even out the investment and stock cycles by better co-ordination within the public sector and better estimation of demand within the private sector. Above all, it may mean a greater determination to expand the British economy which, in the not distant future, may form part of the European Economic Community and have to stand up to competition from some other E.E.C. countries which have already reached a higher level of efficiency.

MARKET GOSSIP

NOTHING exciting is happening in share markets nowadays. The speculators have had no new developments which they could exploit in their favour. Even manufacture of rumours is at a low ebb. Someone started a rumour last week that National Rayon would soon raise fresh equity capital and pushed up the price of the scrip. But the management of the Company quickly scotched it, by issuing a denial. This was a commendable step. And, if such steps are taken by other companies, when their shares are exploited by rumourmongers for their selfish ends, there will be less scope for unhealthy speculation. Generally, company managements are inclined to argue that they have better things to do than denying or confirming rumours set afloat by interested parties in share markets. This, however, is a wrong attitude to take. A healthy stock exchange is a great asset to all companies in the private sector and company managements must gladly do whatever they can to discourage unnecessary speculation in these exchanges. They must regard this work as a social service for ensuring a healthy climate for private enterprise. It will be no exaggeration to say that, in this respect, company managements in India considerably lag behind their confreres in the U.S. and the U.K.

Reports of flood devastation from U.P., Bihar and parts of Maharashtra in the past few days have not had any effect on share markets. Nor has the possibility of a shortfall in cotton crop from earlier estimates excited them. Cotton mill shares, on the contrary, are being strongly fancied, apparently because reports about profits of mills for the current year are optimistic. The amicable settlement of bonus dispute by mills in Ahmedabad has engendered the feeling that labour troubles in mill industry are very unlikely. More important, in this respect, is the acceptance of the Award of the Wage Board early this year. Barring some trouble by the Communist-led unions in West Bengal, industrial relations in India as a whole are happier than in many parts of the world.

The time for election speeches is not far off. Will they provide enough grist for the bears' mills which are now idle? It is risky to give a dogmatic answer, because Mr. Nehru is unpredictable, though his aversion for the rich and passionate desire for reducing the gap in living standards and the wide disparities in incomes are common knowledge. The appearance of the Swatantra Party on the arena, in contrast to its absence at the time of the last elections, may provoke him to say harsh things about the private sector. But, if the speeches delivered by Congressmen at the Madurai meeting of the A.-I.C.C. are any indication, the quinquennial drive for votes in the next few months may not materially affect the markets. The report that Mr. T. T. Krishnamachari, the former Union Finance Minister, whose budgets and speeches played havoc with the share markets in 1957-58, would contest for a seat in the Lok Sabha from Madras on Congress ticket has gone unnoticed in market circles.

Although narrow fluctuations, moderate turnover and selective buying of cash scrips are the features of trading in share markets these days and although the signs are that the markets may not appreciably move in either direction in the short-term, the sentiment about the long-term outlook is still one of hope for the best. That, in the coming years, there will be more production and more profits for companies, despite possibilities of increased competition in the internal market from domestic manufacturers, is the assumption which is sustaining equities at the current high levels. The spread of ownership of shares among small investors has also tended to have a steadying influence on the stock exchanges, as they are not given to the habit of buying and selling frequently. Developments adverse to the market may worry them, but, unlike the big investors, they do not rush to sell, or *vice versa* when favourable developments arise.

The greatest uncertainty, in the economic field, is the next budget, the one that will be presented after the General Elections. Will history repeat itself? Will not Mr. Nehru then try to give a further big push to "socialism" in this country, or will he let the *status quo* continue? Those who know the answer can certainly make a lot of money on the stock exchanges. At present, the general belief seems to be that the Congress Party is now more mature than five years ago and that nothing much will be done to harm the interests of investors. Admittedly, it is this belief, coupled with the optimistic view of the long-term outlook, that is helping the market to face the big uncertainty with equanimity.

Maharashtra Electricity Board

The Maharashtra State Electricity Board's Rs. 2.50-crore loan, the list of which will open for subscription on Monday the 30th inst., is quite an attractive one, especially for institutional investors. The bonds of the face value of Rs. 100 will be issued at a discount of 25 nP and carry interest at the rate of 4½ per cent per annum. The redemption yield works out to 4.53 per cent. The bonds have a currency of just ten years, as they are repayable at par on 30th October 1971. They are backed fully by State Government's guarantee in regard to interest and repayment of principal. What is more, the bonds enjoy the status of trustee securities and approved securities for the purposes of the Insurance Act and Banking Companies Act, besides being eligible for advances under Section 17 (4) (a) of the Reserve Bank of India Act.

The bonds are being issued for finding a part of the Rs. 52 crores that will be spent on the Board's capital programme in the third Plan period. The programme envisages extension of Khaperkhada and Paras steam stations each by 60,000 kw., installation of a new 60,000-kw. steam station at Bhusaval, transmission of 150,000 kw. of power from the Nuclear Power Station under construction at Tarapore by the Government of India to the load centre in the Bombay area, and extension of power supply to areas hitherto not supplied with power. The Board has also under consideration the establishment of a 300,000-kw. steam station in the Kalyan-Nasik area to meet the ever-growing power demands of the Bombay-Poona region. Besides the above, the Government of Maharashtra has decided to hand over to the Board the Koyna Hydro-electric Project in stages. With the completion of all these projects and the handing over of the Koyna and Purna projects to the Board by Government, the total installed capacity of the plant owned by the Board is expected to increase from 134,000 kw. to 1,050,000 kw. by the end of the third Plan period, excluding the 150,000 kw. to be obtained from the Tarapore Nuclear Power Station.

The assets of the Board of a book value of Rs. 26 crores now comprise (*a*) the three steam power stations at Khaperkheda, Paras and Ballarshah interconnected in a common grid and serving the Vidarbha region, (*b*) a hydro-electric power station at Radhanagari interconnected with the diesel power stations at Kolhapur and Vishrambag and serving the Kolhapur-Sangli area, (*c*) a number of small diesel power stations serving some important towns and villages mainly in the Marathwada area, and (*d*) a network of 66, 33, 22 and 11 KV transmission lines emanating from the above power stations and distribution systems connected thereto.

Montecatini to Expand Activities in India

Whatever be the scale of foreign assistance received by India on a Government-to-Government basis, it is clear that the pace of economic development cannot be accelerated to any significant extent without large-scale inflow of foreign private investments. It is true that the past three years have witnessed a rise in such investments, the net rise last year (1960) being about Rs. 47 crores, as against Rs. 38 crores in 1959 and Rs. 30 crores in 1958. But the major portion of the increase is accounted for by retained profits by foreign investors already operating in India. World Bank aid and U.S. business investments. One of the countries which have not evinced any appreciable interest in investments in India is Italy. The share of this country in the estimated aggregate foreign non-banking business investment of Rs. 658 crores at the end of 1960 is negligible. Viewed thus, it is somewhat encouraging to learn that some business firms in Italy are of late eager to expand their business connections with India through financial and technical collaboration. One such firm is the world-famous Messrs. Montecatini of Milan. This firm is a giant organisation having wide interests in a number of major fields not only in Italy but the world over. The annual turnover of the firm's group of industries is approximately Rs. 175 crores and the total assets are of the order of Rs. 600 crores. It has been known in India for quite sometime now, the companies with which it is associated being Madras Aluminium, Mafatlal Gagalbhai group of industries and Amar Dyes. The current capital investments are estimated at Rs. 3 crores, but this is expected to rise markedly in the next two or three years. This Italian firm has also designed the urea plant at Nayveli.

Montecatini has just announced its decision to collaborate both financially and technically with four new private sector projects in India. These pertain to (*a*) polypropylene plastics, (*b*) industrial and mining explosives, (*c*) methanol and formaldehyde, and (*d*) polystyrene resin. Excepting for the last mentioned project, applications for industrial licences have already been made. The combined outlay of the four projects is estimated at about Rs. 30 crores, of which Montecatini is expected to contribute by way of equity capital anything between 25 and 50 per cent. It has also agreed to arrange for sufficient Italian bank credit. Some of the details of the projects are as under:

1. *Polypropylene plastics:* Capital outlay—Rs. 10 crores in the first stage, to increase later to Rs. 13-14 crores. The factory will be located in Bombay where the propylene gas from refineries is readily available. The installed capacity is put at 7,000 tons per annum. It may be noted here that the anticipated total demand for thermoplastics at the end of the third Plan (1965-66) is of the order of 90,000 tons, of which 15,000 tons have been assigned to polypropylene and allied products. The proposed factory can easily commence production within three years from the day of foundation. The outlets for polypropylene are said to be quite extensive. It can be used as man-made fibre or in blend with silk, wool and high-grade cotton. 2. *Explosives:* Capital outlay—Rs. 7-8 crores in first stage and Rs. 9-11 crores in second stage. Location of the plant still not decided. 3. *Methanol and formaldehyde:* Capital outlay—Rs. 6 crores. It will be located in Gujarat or wherever the refinery naptha-fraction is available. The installed capacity will be 100 tons of methanol per day. This will be utilised in the same factory to produce urea pharmaldehyde. 4. *Polystyrene resin:* Capital outlay—Rs. 5 crores. This factory, too, will be located in Gujarat State. The annual installed capacity is put at five tons per day

Mr. Giustiniani, *Managing* Director of Montecatini, is arriving in India at the end of this month for discussions on the projects with the Indian promoters.

Uncertainty in Tin

There is at least one primary commodity which is now having a sellers' market. It is tin; the demand for this non-ferrous metal is in excess of supply and the future of International Tin Agreement is uncertain. It is estimated that the demand for this commodity will exceed supply by about 20,000 tons in 1961. What is worse, while consumption is steadily picking up, output of tin has been lagging behind. The total world production (excluding communist bloc) of tin-in-concentrates was only 65,300 tons in the first half of 1961, as compared with 69,500 tons in the previous half year, thereby reversing the upward trend in output noted since 1959 (after a downward trend for three consecutive years prior to that). Stocks of tin metal are now light: they were just 19,500 tons at the end of June last, as against 27,000 tons a year earlier. Besides, by the end of June, the Council's bufferstock was completely exhausted, whereas it had about 10,000 tons a year back. Production of tin-in-concentrates in the whole year 1960 is estimated at 140,000 tons, as compared with 122,000 tons in 1959 and 118,000 tons in 1958. Consumption of tin rose steadily from 82,300 tons during the second half of 1960 to 86,700 tons in the first half of the current year. This trend is in distinct contrast to conditions obtaining a couple of years ago, when the tin market was haunted by the spectre of overproduction in the face of sluggish world demand.

The prevalent imbalance in the supply and demand position would not be a source of much concern, if the International Tin Council were in a position to control the market, rather than be a silent spectator of price fluctuations. It is, therefore, a pity that the Council, which met at London last week, failed to evolve a satisfactory price formula. It may be noted here that, though a decision to evolve the second International Tin Agreement (to come into force with effect from 1st July 1961) was taken as early as June 1960, the problem of fixing a price agreeable to both the producing and consuming countries has remained as elusive as ever. The first meeting to decide the question, it may be recalled, was held in July last, only to adjourn to 22nd August. This meeting, too, did not come off, and was postponed twice thereafter. The major hitch in arriving at a price formula is the disagreement between consumers and producers over the question of revising the floor and ceiling prices. Consuming countries represented in the Council believe that time is not yet ripe for any modification in the existing floor price of £730 per ton and ceiling price of £880. The ceiling has, of course, become virtually ineffective, with the open market prices of zinc on the London Metal Exchange quoted at about £950 per ton, a much higher figure than the ceiling. There is, therefore, apparently some justification in the producers' stand that floor prices should be raised to £800 and the ceiling to £1,000. Their argument is that a higher price will induce marginal producers to reopen mines and ease the tight supply position.

The Council, it is now expected, will take a decision on the question in its next meeting scheduled to be held in February 1962. This long postponement is designed presumably to get a clearer picture of the stand of the U.S., which, though the largest consumer of tin, is still not a member of the Council. Will the U.S. join the Council as a full-fledged member, or simply help replenish the Council's bufferstock by contributing some commodity from its own stockpiles? For an answer, one will have to wait till January next, when the Congress is due to re-assemble. It is only the Congress that can decide the issue.

The Council's inability to take a decision on the question has tended to create a certain degree of uncertainty in tin markets, though the immediate price movements have been erratic. The consensus of opinion in the world is that international action is essential to avoid wide fluctuations in tin. It may be recalled that the price of tin, which was about £600 per ton early in 1950, skyrocketed to almost £1,500 at the time of Korean boom. But, it retreated to touch about £600 again in 1953, when the first International Tin Agreement came into force. The International Tin Council, through the operation of a price stabilisation scheme, backed by export quotas and a fund for the purchase and sale of tin, has been able to eliminate wide price fluctuations. Its present incapacity is due to exhaustion of the buffer stock under its control. In view of the uptrend in consumption, price has been going up in recent months. The current price of tin (three months forward) is as much as £955 per ton, as compared with only £790 in the beginning of 1961 and £795 a year ago.

Two lessons emerge from the experience of International Tin Agreement so far. First, a world bufferstock arrangement cannot function successfully, if all the principal producing countries and the largest consuming countries are not members of the Agreement. And, secondly, the managers of the Agreement should be in a position to make an advance assessment of demand and to influence production in good time, so that they may avoid emergence of unmanageable situations. Mere fixation of floors and ceilings without powers to adjust them in consonance with fundamental changes in production and demand trends will not be sufficient. Unless these basic defects in the Agreement are eliminated, one cannot be sure that the predicament in which the Council finds itself today will not be repeated in future.

EQUITIES RECOVER AT CLOSE

UNDERTONE HOWEVER UNCERTAIN

(From Our Own Correspondents)

BOMBAY, *18th October*

THE share market displayed an easy tone in the first three sessions of the week under review, but picked up strength yesterday which persisted practically till the close today. The earlier easiness was due to absence of any stimulating news and heavy selling pressure in National Rayons induced by the Directors' statement denying the rumours regarding issue of fresh capital. Investment inquiry was at a low ebb. Equities, as a consequence, tended to recede, though there were some counters which scored gains on speculative support. The downward drift gathered momentum on Monday the 16th inst., when unconfirmed reports suggesting an increase in the margin on bank advances against shares from the existing level of 50 per cent led to bull liquidation. The last two sessions (yesterday and today), however, witnessed a marked change in sentiment, which followed absence of fresh offerings, short-covering and replacement buying. Consequently, equities staged a recovery. The undertone of the market, however, was uncertain at the time of writing.

In the steel section, Tata steels opened at Rs. 146.25, same as last week, and advanced to Rs. 147 on Saturday. At higher levels profit-taking set in and the scrip declined to Rs. 143.75 yesterday. Today fresh support lifted the value to Rs. 145. The net loss over the week was Re. 1.25. Indian Irons moved up from Rs. 24.32 to Rs. 24.60 on Saturday and, after moving narrowly subsequently, finished at Rs. 24.44 today. Mukand Iron dropped 10 nP to Rs. 27.40.

Textiles displayed a mixed trend. Centurys began the week at Rs. 574, as against the previous closing of Rs. 575, and spurted to touch Rs. 582.50 on Saturday. After receding to Rs. 573 on Monday, due to profit-taking, they met with fresh speculative support today again and advanced to Rs. 590, showing a net gain of Rs. 15 over the week. Kohinoors jumped up from Rs. 306 to Rs. 318. At this level, profit-taking set in and the scrip fell to Rs. 304.50 yesterday. Today again, fresh support raised the price to Rs. 313. The gain over the week was Rs. 6.25. Indores advanced by Rs. 10 to Rs. 175, Elphinstones by Rs. 9.50 to Rs. 103.50 and Swadeshis by Rs. 7.50 to Rs. 276.50. In the cash section, Victorias shot up by Rs. 15 to Rs. 500. New Kaisers were strengthened by Rs. 5.50 to Rs. 60. Some textile shares, however, encountered selling and suffered a setback to values. Thus, Mafatlals lost Rs. 5 to Rs. 930. Podars declined by Rs. 4 to Rs. 147. Morarjees shed Rs. 3 to Rs. 392, despite higher dividend announced by the Company. Simplex, Gokaks and Central Indias lost Rs. 2 each to Rs. 168, Rs. 201 and Rs. 134, respectively.

Electric shares encountered selling and suffered losses. Thus, Tata Powers were marked down by Rs. 46.25 to Rs. 1,108.75. Andhras declined by Rs. 12.50 to Rs. 1,040. Ahmedabad Electrics shed Rs. 3.50 to Rs. 91. Bombay Suburbans eased by Rs. 2 to Rs. 102.

Cement shares were also depressed, Associated Cements receded from Rs. 169 to Rs. 167 on Monday. After moving narrowly, they closed at Rs. 168 today. Digvijays eased by Rs. 2 to Rs. 180. Orissas softened by 44 nP to Rs. 14.68.

Sugars, too, were easy. Belapurs opened lower at Rs. 277, as against the previous close of Rs. 280, and retreated to Rs. 271 on Friday. In the subsequent sessions, they fluctuated within a narrow range and finished at Rs. 273 today, showing a net loss of Rs. 7 over the week. Walchandnagars declined by Rs. 2 to Rs. 167. Maharashtras shed a rupee to Rs. 188. But Kesars met with special support and jumped up by Rs. 32.50 to Rs. 255.

Shipping shares evoked scattered inquiries and recorded modest gains. Scindias opened at Rs. 13.08, as against the previous close of Rs. 13.04, and touched Rs. 13.32. After easing to Rs. 13 yesterday on account of profit-taking, they wound up the week at Rs. 13.06. Great Easterns decreased by 32 nP to Rs. 13.88. Among automobiles, Hindustan Motors gathered 16 nP to Rs. 19.28, while Premier Automobiles lost Rs. 2.75 to Rs. 156.75.

In the Rayons section, National Rayons moved down from Rs. 542.50 to Rs. 535 on Monday, following the Directors' statement that the Company did not intend to issue fresh capital in the near future. Today, however, the share attracted good support and improved to Rs. 544. Gwalior Rayons gained Re. 1.25 to Rs. 48.75. But South Indian Viscoses encountered selling and lost Rs. 5 to Rs. 179. Baroda Rayons shed Re. 1.50 to Rs. 153. Indian Rayons softened by a rupee to Rs. 72.

The chemical section presented a mixed pattern. Citrics evoked good support and gathered Rs. 4 to Rs. 74. Dharamsis gained Rs. 3.75 to Rs. 200. Adarshas put on Rs. 2 to Rs. 92.50. But Colour Chems were marked down by Rs. 12.50 to Rs. 372.50. Indian Dyestuffs declined from Rs. 475 to Rs. 465. Synthetics receded from Rs. 199 to Rs. 193. Polychems and Alembics shed Rs. 3.75 each to Rs. 195 and Rs. 243.75, respectively.

In the engineering section, T.E.L. Cos. opened at Rs. 352.50, as against the previous close of Rs. 356, and rose to Rs. 357.50 on Saturday. In the subsequent session, selling pressure brought down the value to Rs. 348. The scrip, however, recovered to Rs. 354.50 today. Alcock Ashdowns and Cooper Engineering, were steady, the former at Rs. 325 and the latter at Rs. 188. Texmacos were quiet at Rs. 18.52. But Larsen and Toubros eased by 25 nP to Rs. 38.75. Among cash scrips, Asian Electricals received good support and advanced by Rs. 15 to Rs. 125. Hind Electricals gained Rs. 5 to Rs. 175. Greaves Cotton shed Rs. 3 to Rs. 189. Wandiesides were marked up by Rs. 6 to Rs. 96. But T. Mancklal Old shares decreased by Rs. 15 to Rs. 645. Kirloskar Engines suffered a loss of Rs. 3 to Rs. 33.35.

In the miscellaneous section, Bombay Burmahs opened higher at Rs. 631 as against the previous close of Rs. 628.50, and fluctuated both ways in a narrow range. On Monday, they touched the low of Rs. 622 but advanced later on fresh support and finished at Rs. 629.50 today. Voltas, however, shed Rs. 2 to Rs. 300.50. Hindustan Levers shed a rupee to Rs. 52. Jayant Papers lost Rs. 4.50 to Rs. 89.50. Anil Hardboards shed Rs. 2.50 to Rs. 250.

Calcutta Stock Exchange

CALCUTTA, *18th October*

Following good corporate news and announcement of rights issue by the New Manbhoom Coal Company in the proportion of two new shares for every three held at a premium of Rs. 2.50 a share assisted the Stock Exchange to close on a steadier note on the 13th for the Pooja holidays; the market will re-open on the 25th inst. The expectation of an imminent announcement of steel retention prices, together with the reported decision of the Government to license the private sector to produce 120,000 tons of tool and alloy steel a year, also aided the sentiment. The resolution of Big Power differences over the choice of an interim chief for the U.N. awaits as a favourable factor for reopening after the Poojas, while the New Delhi indication that business interests would be taken into confidence in any scheme of compulsory exports was the other factor that gave general strength. The news that the S.T.C. was working out a scheme in conjunction with private trade for increased exports of cotton yarn and piecegoods led to specific support to textiles. Also cloth offtake for the Pooja festivals was believed to have been extremely satisfactory. Tea shares were favoured following improved auction results for export. Tea crop in the coming months, when production would be common teas fit for internal consumption, it was thought, would not maintain the earlier higher trend as the winter is setting in much earlier than usual, and, therefore, plucking would have to cease much earlier. There was good support for shares of paper mills, while cement and sugar shares trod a dull path, in view of the uncertainty about prices. Coals were quiet, as the transport situation has not shown signs of improvement.

Among coals, Raneegunges were quiet at Rs. 15.37, while Dhemo Mains were better at Rs. 7.00. New Manbhooms for which the taxable ordinary dividend has been increased from 7½ to 9 per cent, were difficult to be located and were once crossed at Rs. 15.62. Western Bengals were maintained at Rs. 9.34 and Amalgamateds realised a slightly higher rate of Rs. 21.62.

Fort Williams, among jutes, were a prominent feature. Following the announcement of maintenance of taxable dividend at 22.50 per cent and of plans for diversification by setting up a steel wire rope factory, influential support lifted the scrip from Rs. 27.25 to Rs. 29.50. Although the taxable ordinary dividend has been cut from 10 to 2.50 per cent, the hope of better working results drew in interested support to Agarparas which, as a result, hardened from Rs. 9.94 to Rs. 10.62. The improvement in Champadanies from Rs. 129.00 to Rs. 132.00 was short-lived, as profit-taking intervened to reduce the gain to Rs. 129.50. Aucklands were able to realise Rs. 165, as against Rs. 147 previously, but Belvederes were hammered down from Rs. 155 to Rs. 141. Gourepores had buyers at Rs. 381, as against Rs. 371 previously, and Nuddeas picked up Rs. 3 at Rs. 50.50. Kamarhatties were better at Rs. 145.

Among engineerings, Escorts commanded good attention, in view of the likelihood of an imminent rights issue, and the rate at Rs. 24.25 was fully steady. Indian Irons opened at Rs. 24.44 and, after fluctuating in and around that level, closed firm at Rs. 24.42. Texmacos were better at Rs. 18.40, as were Jessop & Cos. at Rs. 21.25. J.K. Steels opening at Rs. 20.62 firmed up to Rs. 21.62 before closing at Rs. 21.50.

Teas enjoyed more than usual support. Tezpores were favoured at the higher rate of Rs. 16.75, as against Rs. 15.81 previously. East Indias were 6 nP higher at Rs. 19.50, while Huldibaris were unchanged at Rs. 29.12.

Interested buying lifted many an industrial share. J.K. Syntheticals were better at Rs. 13.00. Following reports of the resolution of labour troubles, Indian Cables recovered from Rs. 35.75 to Rs. 36.25. Dunlop Rubbers continued to be inspired by official sanction to the bonus issue and met with support at Rs. 54.62. Hindusthan Motors, despite the news of the indefinite lockout, were bought against replacement and improved from Rs. 19.25 to Rs. 19.31. Sirsilks were held firm at Rs. 11.12 under the impact of the news of reorganisation and modernisation with foreign collaboration.

Madras Stock Exchange

MADRAS, *17th October*

Price movements on the Stock Exchange were confined to a narrow groove during the week under review in the absence of any fresh stimulating news. The State Home Minister's statement that Madras would have to raise about Rs. 35 crores by way of additional taxation for financing the third Plan did not have any effect. Textiles ruled steady on better investment buying. Teas attracting good attention on encouraging reports from auction centres. Rubbers put on a cheerful appearance. Miscellaneous shares were generally well favoured. Coffees, however, lacked support in view of the large undisposed surplus of about 30,000 tons. Sugar continued to be easy.

4½ PER CENT
MAHARASHTRA STATE ELECTRICITY BONDS, 1971

FOR Rs. 250 LAKHS

(ISSUED BY MAHARASHTRA STATE ELECTRICITY BOARD)

(Payment of Interest and Repayment of Principal Guaranteed by the Government of Maharashtra)

ISSUE PRICE: Rs. 99.75 PER CENT

Redeemable at par on 30th October, 1971.

The Bonds will be Trustee Securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act. The Bonds will also be eligible for the purposes of advances under Section 17 (4) (a) of the Reserve Bank of India Act, 1934.

Subscriptions will be received in cash or cheques from 30th October 1961 but the list will be closed without notice as soon as the total subscriptions amount approximately to Rs. 250 lakhs and in any case not later than the close of business on 4th November 1961.

Applications will be received at (a) the office of the Financial Adviser and Chief Accounts Officer, Maharashtra State Electricity Board, Mercantile Bank Building, Fort, Bombay-1, (b) the offices of the Superintending Engineers, Maharashtra State Electricity Board at Nagpur and Kolhapur and (c) the office of the Executive Engineer, Maharashtra State Electricity Board at Poona.

Copies of the Bond Prospectus announcing the terms of issue and the application forms are available at the receiving offices mentioned above and at all Divisional offices of the Maharashtra State Electricity Board in the State of Maharashtra.

NEWS IN BRIEF

THE Madhya Pradesh Government proposes to set up a Small-Scale Industries Corporation for the development of small industries in the State.

Vast deposits of limestone have been discovered at Jagdalpur in Bastar district and near the Singrauli coalfields of Sidhi district in Madhya Pradesh.

Three new newsprint factories will be established during the third Plan, with an annual installed capacity of 60,000 tons each. They will be located at Karad, Moradabad and in the Punjab.

The Sikkim Mining Corporation, a joint Indo-Sikkim undertaking, is expected to commence operations in January next for the mining of copper deposits which have been discovered in the Singtam area.

The Orissa Legislative Assembly has passed a Bill which seeks to levy a flat rate of 15 per cent duty on consumption of electricity in the State. The levy is expected to yield an additional income of Rs. 50 lakhs annually.

The Central Government has decided to exempt imported raw materials for the plastic industry, such as styrene, cellulose plastics, excepting cellulose acetate and vinyl resins, from customs duty in excess of 25 per cent *ad valorem*.

A six-member trade delegation from Ceylon has arrived at New Delhi for discussions with the representatives of the Government of India on the question of promoting trade between the two countries.

India will participate in the forthcoming Leipzig Spring Trade Fair scheduled to be held from 4th to 13th March 1962. The Union Ministry of Commerce and Industry will accept lists of articles for exhibition at this fair from Indian manufacturers upto 25th November 1961.

The Government of Madras proposes to launch a Rs. 1-crore project envisaging cultivation of large-scale bamboo plantations in the North Coimbatore forest belt, extending over an area of 30,000 acres, in the next fifteen years. The bamboo plantations, proposed to be grown alongside tea and eucalyptus, will be extended later to 50,000 acres more.

Delhi will shortly have a college of catering and institutional management. This will be one of three new colleges being started by the Government, in order to propagate ideas about nutrition and balanced diets and to encourage scientific and hygienic catering. The other two colleges will be set up at Calcutta and Madras. One college, which is already functioning in Bombay (in Andheri), is to be reorganised and put on a permanent footing.

Nearly 1,800 square miles of detailed geological mapping has been carried out in the Jaisalmer district of Rajasthan State by the Oil and Natural Gas Commission. Semi-detailed geological mapping has also been prepared for another 2,400 square miles in Jaisalmer, Jodhpur and Bikaner districts of the State. Aeromagnetic survey has been carried out over 17,000 square miles and ground gravity and magnetic survey over 7,400 square miles. Seismic survey along 52 line-miles was also completed in the area. An agreement, it may be recalled, has already been reached between the Oil and Natural Gas Commission and the French Petroleum Institute for carrying out petroleum exploration in the area.

• • • •

From Abroad

Japan has offered technical co-operation to Pakistan for setting up small and medium-sized factories.

The U.S. is believed to have offered a loan of $37 million for financing the Volta River Dam in Ghana.

An international trade fair is to be held in Nigeria in October 1962. Over seventy countries are expected to take part in the Fair.

Tea output in Pakistan rose by over 40 per cent to 59 million lbs. during the 1961-62 season, as compared with the previous year.

China and Indonesia signed an economic and technical co-operation agreement at Peking last week. Details of the agreement have not so far been disclosed.

An Asian trade fair, first of its kind, will be held at Singapore at the end of 1963 under the auspices of the U.N. Economic Commission for Asia and the Far East.

The Government of Iraq has granted a contract to a Czech firm for building up an oil refinery near Basra. The refinery is expected to produce 2.6 million tons of petroleum products per annum.

Britain's adverse balance of trade in September amounted to £70.2 million, as against only £40.4 million in the previous month. Exports (including re-exports) during the month aggregated £273.0 million and imports £343.2 million.

The second World Congress of Man-made Fibres will be held in London on 1st May 1962. It is being organised by the International Rayon and Synthetic Fibres Committee. The first Congress was held in 1958.

A federation of stock exchanges is proposed to be established in Western Europe. The federation will include stock exchanges of Amsterdam, Brussels, London, Luxembourg, Madrid, Milan, Paris and Vienna as well as the associations of West German and the Swiss exchanges.

The export duty on coconut oilcake in Ceylon has been reduced from Rs. 200 to just Rs. 25 per ton, in a bid to encourage exports. This measure is expected to help indirectly export of copra, the price of which has been falling in world markets of late.

Burma is reported to be contemplating to sever economic and trade relations with Japan, leading to boycott of Japanese goods and expulsion of Japanese firms in Burma, following disagreement between the two countries over payment of reparations to Burma.

Turkey plans to expand its tea plantations in the Rize (Black Sea) area with the object of producing about 9,000 tons of tea by 1965. The tea output in Turkey has risen from only 2,000 tons in 1950 to 5,000 tons by 1960. In order to process the increasing supply of tea, the Turkish State Monopoly proposes to put up seven new plants shortly.

The New Zealand Government has rejected the recommendation of the Monetary and Economic Council, an official advisory body, for the imposition of higher taxes to balance the economy. It is of the view that, instead of resorting to such shock measures as higher taxes, the present import restrictions, a credit squeeze and a possible loan from the I.M.F. would ensure stability.

Steel production in the European Coal and Steel Community during the first nine months of 1961 was 55.5 million tons, representing an increase of 2.1 per cent over the corresponding period last year. The actual rise in output was 10.5 in Italy, 4.8 per cent in Holland, 4.1 per cent in France and 2.4 per cent in Luxembourg. The production in Belgium and West Germany, however, fell by 5.3 and 0.4 per cent, respectively.

Ceylon, Indonesia and the Philippines have agreed to establish a common secretariat at Colombo for the study of problems relating to coconut oil and for formulating a common policy on exports, etc., in co-operation with Malaya. They have also decided to set up a special committee consisting of representatives of the four aforesaid countries to study the problems of all vegetable oils.

PERSONAL

DR. S. Radhakrishnan, Vice-President of India, left on a tenIday tour of Hungary, the Netherlands and West Germany on Saturday the 14th inst.

Mr. Sadath Ali Khan, Parliamentary Secretary to the Prime Minister, has been appointed Ambassador of India to Iraq, vice Mr. I. S. Chopra who will become the Ambassador to Lebanon.

Mrs. Tarkeshwari Sinha, Union Deputy Finance Minister, will lead the Indian delegation to the Colombo Plan Consultative Committee, which will meet at Kuala Lumpur next month.

Mr. Ratan Lall, General Manager, North-East Frontier Railway, has been appointed General Manager of the Central Railway, vice Mr. D. R. Khanna, who is due to retire soon. Mr. M. A. Rao, a former Chief Engineer, succeeds Mr. Lall as the General Manager of the N.-E. Railway.

Mr. George Curran, Vice-President of the Bank of America's International Banking Division (Far East activities) at the head office in San Francisco, is scheduled to arrive in New Delhi on Saturday the 21st inst., on a business tour. He will also pay a visit to Pakistan, Thailand, Hong Kong, Formosa, Okinawa and Japan, before returning to the U.S. by the end of December.

Pakistan and the U.S. have signed an agreement providing for an inflow of surplus U.S. agricultural commodities worth $600 million in the next four years. The commodities covered are wheat and wheat products (worth $341 million), other foodgrains ($23.6 million), cotton ($15.9 million), tobacco ($8 million), soyabean oil ($127.6 million), tallow ($16 million) and dry milk, eggs and poultry ($2.8 million). This is the first major agreement under the Food for Peace Programme of the new U.S. Administration.

The Government of Ceylon has decided to extend the period of the present scheme for replanting rubber (second of the two five-year programmes scheduled to end at the close of this year) upto 1968. Out of the total 668,000 acres under rubber in Ceylon, replanting has been undertaken in 150,000 acres. The annual replanting is now at the rate of about 22,000 acres costing about Rs. 2 crores. The quantum of subsidy per acre replanted is Rs. 700 for estates of hundred acres and over, Rs. 900 for estates having an area ranging between 100 and 10 acres, and Rs. 1,000 for less than 10 acres.

CONSUMER PROTECTION

NON-OFFICIAL bodies have an important role in ensuring a fair deal to consumers in a competitive economy. In countries like the U.K., there are several private institutions effectively serving the cause of consumers, for instance, by keeping a close watch on the quality of consumer products and by protecting the public from misguided advertisements. Consumers in India, too, have started realising the need for collective effort in solving their specific problems. This at least is the impression one gets from the deliberations of the three-day seminar, first of its kind in India, held at New Delhi last week under the auspices of the Consumers' Association of India. If this seminar has been able to help promote the cause of consumer consciousness among discriminating buyers, it should be deemed a fair success. But more organised efforts are needed, if the organisers of the seminar mean business, for several malpractices in distribution are prevalent in India, adulteration of foodstuffs being the major one. There are, of course, certain laws against these malpractices. But, in implementing these laws, the Central and State Governments have failed miserably. The consumers' organisations, if properly organised, will certainly be in a position to supplement the efforts of the Government in a fruitful manner.

It is gratifying to find that the problem of adulteration of foodstuffs figured prominently in the discussions at the seminar. No less a person than Dr. P. S. Lokanathan condemned outright the adulteration of foodstuffs. He emphasised the point that producers themselves suffered as much as consumers from adulteration. A reason for these malpractices, as pointed out by Dr. V. K. R. V. Rao, is that the offenders in this respect are not being punished speedily and effectively. The deterrent effect of the laws governing them was, therefore, completely lost. Dr. Rao suggested that Government should undertake a comprehensive inquiry into the whole question of adulteration of foodstuffs, administration of inspection services and punishment to the offenders. This suggestion deserves favourable consideration at the hands of the Government, since it is an accepted fact that the State Governments have not been able to eradicate these malpractices.

A related question is the need for adherence to standards. The Indian Standards Institution has been doing good work in this connection. During the last fourteen years, the I.S.I. has turned out standard specifications for over 1,600 products. It is also giving "certification marks" for those manufacturers whose product conform to its specifications. It is, however, a pity that all manufacturers have not been uniformly enthusiastic about adhering to standards. Unless consumers themselves make it a point to insist on certification marks as a guarantee of quality, standardisation will not become popular. Apart from domestic consumption, standardisation is of particular relevance in the case of exports. As pointed out by Dr. Lokanathan, lack of standardisation led to a marked difference between samples and the actual quality of goods exported. There is, therefore, much to commend in the recommendation made at the seminar that the Consumers' Association of India should propagate the use of certified goods bearing certification marks, such as the I.S.I., Agmark and others given by various State Governments.

The suggestion of Dr. D. K. Rangnekar, Director of the Seminar, that consumers' representatives should be associated with the Government's major policy decisions affecting the cost of living is quite sound. It is a reasonable demand that consumers should be represented on wage boards, bonus commissions, Import and Export Promotion Advisory Councils, and so on. For it is the consumer who will ultimately be affected by the recommendations of these bodies. A plea that the Government should devise practical control and regulatory measures to hold the price line was another highlight of the seminar. Dr. Rao, in fact, wanted the Government to appoint a committee to conduct a full-fledged investigation into industrial costs. But it is not clear what exactly Dr. Rao wants this committee to do. The Tariff Commission has already examined the cost structure of many industries. Even the investigations of a technically competent body like the Tariff Commission have not resulted in any foolproof price structure in the case of the relevant industries. If Dr. Rao wants the price structure of all industries to be separately studied, this seems to be quite impractical. This is not to deny the vital need for ensuring fair prices to consumers. There should be an expert study on the basis to be adopted for calculating cost elements in industries under Indian conditions, before an attempt is made to evolve set patterns of price-fixation.

WELFARE OF WEAKER SECTIONS

The Study Group on the Welfare of the Weaker Sections of the Village Community, set up in December last year under the leadership of Mr. Jayaprakash Narayan, was assigned a specific and limited task. It was to study the manner in which the Community Development programme and Panchayat Raj institutions could promote the economic development and welfare of the weaker sections of the village community and to suggest steps by which the development schemes and the financial assistance available could be more effectively utilised for their benefit. The Group has, of course, tried to do justice to its assignment in a spirit of compassion for the poorest of the poor in rural areas. Some of its conclusions and suggestions are practical and generally acceptable, while others are not only impractical but controversial. For instance, the Group's conclusion that the grant of educational assistance to the "weaker sections" (designed as those families whose annual income is less than Rs. 1,000) is a sound one, for it is a potentially paying investment in human capital. The suggestion made in this connection is that, subject to a "means test," free education and free boarding and lodging should be provided in mixed hostels up to the higher secondary stage.

But the Group's suggestion that no "means test" should be applied to the Scheduled Castes and Scheduled Tribes does not seem to be quite logical in the context of the income criterion that has been adopted for defining the "weaker sections." Surely not all the families belonging to the Scheduled Castes are "destitutes" with an annual per-family income of less than Rs. 250. Nor can it be assumed that there are no "destitute" families in all the so-called upper castes. If the income criterion is uniformly adopted to define economic backwardness, it will be found that there are "weaker sections" (with varying proportions of "destitutes" among them) in all Hindu castes, sub-castes and out-castes and in all other religious communities—Muslim, Christian, etc. The Group's view that "the uplift, welfare and emancipation of the weaker sections cannot be accomplished without a comprehensive non-violent social revolution encompassing all facets of Indian society and the destruction, root and branch, of the caste system" is presumably based on the belief that social degradation is the cause of economic backwardness. This is only partly true, for the existence, in varying degree, of economic backwardness in all castes and communities is also a fact.

While the Group has rightly suggested that quicker and wider relief should be provided to the weaker sections through a rural public works programme (covering land reclamation, contour bunding and soil conservation, water conservation and utilisation, irrigation works and flood control, road building, etc.), it seems to have erred in suggesting that "the Government should undertake and make a declaration to that effect—to guarantee employment to every citizen who is prepared and fit to do manual labour." The latter suggestion involves the conferment of the "right to work," for which the state of the economy is not yet ripe. The utmost that may be possible is to provide work to all "destitutes," as in the relief works permissible under the Famine Code. As all "destitutes" with per-family income of less than Rs. 250 per annum certainly need assistance, a rural public works programme, designed also as a relief programme limited to such "destitutes," will alone be worthwhile and financially feasible. There will, then, be no need for starting a series of weak and uneconomic, though labour-intensive, rural industries which would have to be protected in several ways. The Group's advocacy of "protection of rural industries (related to the resources and needs of the area concerned) and reservation in fields and lines of production" owes its inspiration to the Gandhian school of economic thought, but it is unrealistic and impractical in the context of current industrialisation. On the other hand, it would be realistic to confine labour-intensive programmes to agriculture, irrigation, afforestation, road building, and the like—programmes which, if systematically developed and executed, have the potential not only to provide greater employment opportunities to weaker sections but to create more social capital in the countryside. The Group's controversial suggestions, therefore, call for the most careful consideration before any decisions are taken thereon.

BONUS FOR AHMEDABAD MILL WORKERS

It is, indeed, gratifying that the question of bonus for cotton mill workers in Ahmedabad has been satisfactorily settled, thanks to the attitude of give-and-take exhibited by both management and labour. Under an agreement reached between the Ahmedabad Millowners' Association and the I.N.T.U.C.-dominated Textile Labour Association, about 115,000 workers employed in 48 mills situated in Ahmedabad City will together get a bonus of over Rs. 115 lakhs per year for the four years 1959, 1960, 1961 and 1962. It is stated that the remaining 16 mills with a total labour force of 26,000 will be persuaded to fall in line. The entire clerical staff and technicians drawing a salary of less than Rs. 350 per month will also be entitled to bonus. The bonus for 1959 is expected to be disbursed before *Diwali*, that for 1960 being paid before the end of December next. The agreement is purely on *ad hoc* basis, pending the submission of the report by the Bonus Commission.

The satisfactory settlement of the bonus dispute in the Ahmedabad cotton textile industry augurs well for harmonious labour-management relations which constitute an essential prerequisite for maintaining a high level of yarn and cloth production. The cotton textile industry, it may be noted here, is Gujarat's biggest industry, and it is heavily concentrated in Ahmedabad City. Out of the total 99 mills now working in the State with a total labour force of 193,554, as many as 64 employing about 141,320 workers are located in Ahmedabad City. The Ahmedabad mills together account for quite a large portion of the total output of cotton textiles. The quantity of yarn and cloth actually produced by these mills during the first seven months of 1960 was 60.24 million kg. and 611.30 million metres, respectively; the corresponding aggregate all-India figures are 490.06 million kg. and 2,741.93 million metres.

Instead of appreciating the gesture of mill managements of Ahmedabad City to concede the bonus demand of workers, it is a pity that some labour leaders have criticised the agreement and are trying to impute motives to the two parties concerned. The General Secretary of the Gujarat State *Hind Mazdoor Sabha* (P.S.P.-led labour organisation) has described the agreement as "election bonus and not profit bonus." Such tactics are certainly deplorable and do no good whatever to workers whose interests their so-called leaders are supposed to safeguard. Here is one more proof, if such were needed, of our contention that it is politics and not the genuine interests of helpless workers that dominates the minds of most of our trade union leaders.

ROAD TRANSPORT TAXATION IN E.C.A.F.E. REGION

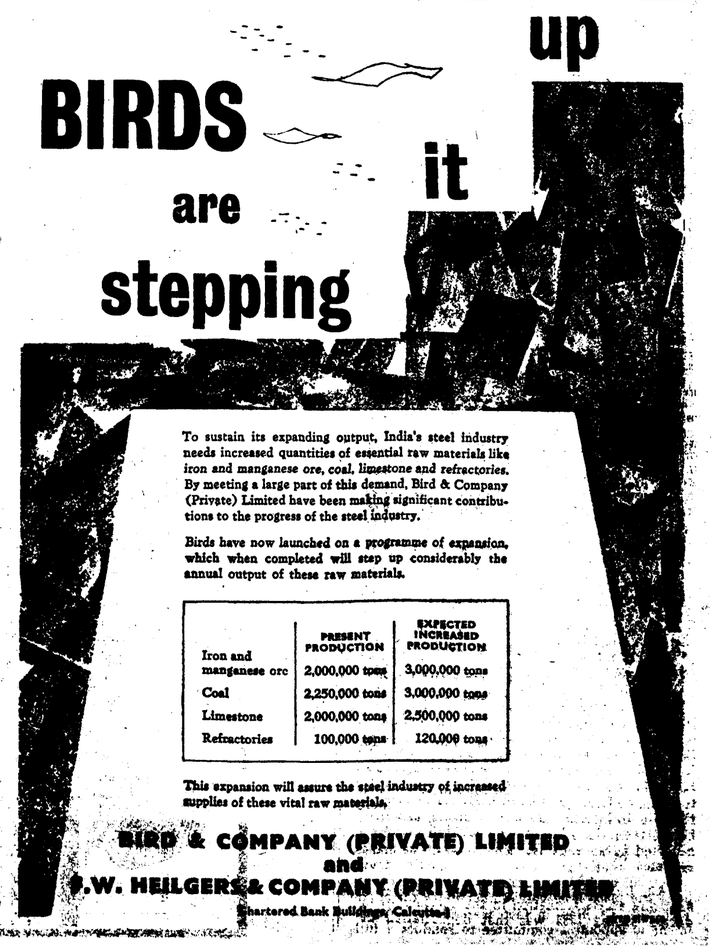
In many countries of the E.C.A.F.E. region, the road passenger transport industry is now subjected to a multiplicity of taxes. These are: import or excise duty on motor vehicles and accessories, fuel tax, vehicle tax, octroi, terminal tax, wheel tax, tax on passenger fares, bridge tax, bus-stand fees, toll tax, transit fees, sales tax on fuel, and so on. While numerous taxes and duties of the kind are levied in several countries, the total amount derived therefrom is generally not adequate to meet the requirements of road maintenance and development. There is here a difficult problem, for the combined incidence of a multiplicity of taxes on road transport is already so heavy that it stifles the growth of that industry. It would, therefore, be too much to expect that all the expenditure on roads should be financed by the receipts of road transport taxation. For instance, in the United States, the expenditure on roads is far in excess of the revenue derived from motor vehicles. The E.C.A.F.E. Seminar on Road Passenger Transport, which concluded its discussions last week at Madras, has, therefore, done well to lay down two principles. One of these is that the amount spent on road development and maintenance should not be less than the tax collected from road transport. And the other is that, where the tax amount is not adequate to meet the requirements of road maintenance and development, it should be supplemented from the general revenues.

There is, at the same time, the urgent need for rationalising the taxes on road transport by limiting their number and amalgamating the existing recoveries from the levies to be abolished with the types to be retained. Here, again, the E.C.A.F.E. Seminar has reached the very sound conclusion that a multiplicity of taxes should be avoided, that only three forms of taxes—import or excise duty on motor vehicles and accessories, fuel tax, and vehicle tax—should be in vogue and that any new taxation or increased taxation should be confined to one or other of the said three types. It may be noted, in passing, that, as far as India is concerned, there is a case for reducing the combined incidence of taxes on motor vehicles for it is known to be one of the heaviest in the world. In any case, the very reduction in the number and variety of taxes would mean less harassment to the road transport industry. Even if the incidence of road transport taxation is not appreciably reduced, at least the development rebate concessions which are available to other industries in the matter of income-tax liability should be made available to the automobile transport industry wherever there is discrimination in that respect against the latter. In pleading for this, the E.C.A.F.E. Seminar has rightly taken the stand that there should be no discrimination against the road transport industry, as compared with other industries. At a time of industrialisation, when the dependence of other industries on road transport is increasing, there can be no two opinions on the need for providing greater incentives and thereby accelerating the growth of the automobile transport industry.

FINANCES OF COTTON MILLS

Even at the risk of repetition, it has to be emphasised that the problem of improving the profitability of the cotton mill industry to a reasonable level is urgent in all conscience. For, unless the industry has sufficient margin of profit to plough back the amounts required to meet at least a part of the cost of replacing its assets and to sustain a rate of dividend that will induce confidence among investors in the shares of cotton mill companies, the industry cannot be expected to be in a position adequately to cater to the expanding clothing requirements of the nation and to earn precious foreign exchange through exports. This aspect will be fully appreciated by anyone who cares to peruse the Reserve Bank of India's interesting analysis of the financial results of 1,001 joint-stock companies representing the major industries for the year 1959 with comparative data for the preceding three years. The analysis reveals that the quantum of profit earned by the cotton mill industry is very small. The gross profit of 202 mill companies as percentage of gross sales was 6.3 for 1959, which, though higher than the previous year's level of 3.6 per cent, was much less than the figure for several other industries—23.1 per cent for silk and woollen textiles, 9.0 for jute textiles, 25.1 for coffee and rubber plantations, 20.8 for mineral oils, 8.9 for sugar, 14.7 for paper, 13.9 for chemicals, and 10.2 for engineering. Similarly, the gross profit as percentage of total capital employed was 8.2 (4.5 for 1958), as against 19.3, 11.4, 11.2, 14.8, 10.2, 12.0, 10.7, 10.6, respectively, for the aforesaid industries. The profit (after tax) as percentage of net worth (paid-up capital + all reserves other than taxation and depreciation reserve + balance of profit) was also lower at

BIRDS are stepping up it



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

BIRD & COMPANY (PRIVATE) LIMITED and P.W. HEILGERS & COMPANY (PRIVATE) LIMITED

Chartered Bank Buildings, Calcutta-1

7.1, as against 21.9, 12.6, 7.4, 15.5, 11.8, 12.3, 11.3 and 11.4, respectively.

The improvement in the profit margin of cotton mill industry during 1959 as compared with the year preceding it was, however, purely a temporary phenomenon which followed increased production and diversification of manufacture by taking to other lines, coupled with a rise in the offtake for both domestic consumption and export. It is possible that, when figures are compiled for 1960 and 1961, they may show a slight improvement over those for 1959. Even so, the profit-margin cannot be considered as quite adequate having regard to the industry's need for large funds for modernising its plant and machinery, not to mention marketing techniques.

The 202 cotton mill companies earned in 1959 a total profit (before tax, but after depreciation and managing agents' commission) of Rs. 19.26 crores. This was no doubt appreciably higher than the sum of Rs. 6.95 crores earned in the previous year. But quite a good bit of this profit—Rs. 7.99 crores, to be precise—was absorbed by tax provision. Nevertheless, the net profit (after tax) was substantially higher at Rs. 11.27 crores than the mere Rs. 43 lakhs in 1958, which, however, was quite a lean year for the industry. The aggregate dividends distributed amounted to Rs. 9.32 crores in 1959, as against Rs. 6.48 crores in 1958. In view of the heavy tax liability and the necessity of paying reasonable dividends, the amount of profit retained in business was negligible, being a bare Rs. 1.95 crore. Actually, in the previous two years, the mill companies had drawn on their reserves to the extent of Rs. 6.05 crores and Rs. 8.23 crores, respectively. Consequently, only a small portion of this heavy depletion of reserves was made good in 1959. In order to appreciate the position better, one will do well to look at the performance of the industry over a five-year period. Including the profit (as defined earlier) of Rs. 19.26 crores earned during 1959, the total profit for the five-years from 1955 to 1959 comes to Rs. 77.03 crores, of which more than half (Rs. 39.11 crores) was utilised for meeting the tax liability. The balance of Rs. 37.92 crores, which represents the net profit, was not adequate enough to pay the dividends amounting to Rs. 38.37 crores, let alone setting apart sums for expansion and rehabilitation.

The consolidated results of operation of the 202 cotton mill companies during 1959 as compared with those for the preceding three years are given in the table below. In this table, the gross profit and net profit have been worked out by us on the basis of data compiled by the Reserve Bank. The gross profit here is after all expenses but before managing agents' commission, depreciation and taxation, while the net profit is after all these provisions:

(In crores of rupees)

	1959	1958	1957	1956
Sales/main income	454.03	424.09	403.42	392.21
Other income	6.44	3.05	2.93	2.42
Closing stocks of finished goods and work-in-progress	59.57	77.15	82.49	66.92
Raw materials and stores consumed*	243.68	240.17	249.75	234.48
Salaries, wages and welfare expenses	100.81	100.24	98.62	94.79
Excise duty	34.21	38.28	34.12	24.57
Other expenses	25.87	25.32	23.39	21.53
Gross profit	32.31	17.70	15.68	38.82
Managing Agents'remuneration	2.34	1.70	1.57	3.88
Provision for—				
Depreciation	10.71	9.04	9.91	11.28
Taxation	7.99	6.53	6.08	9.96
Net profit	11.27	0.43	—1.88	13.70
Dividends	9.32	6.48	6.35	8.15
Profits retained	1.95	—6.05	—8.23	5.55

* Inclusive of other manufacturing expenses.

The gross fixed assets formation in the cotton textile industry during 1959 amounted to Rs. 17.84 crores, as against Rs. 17.64 crores in 1958 and Rs. 23.85 crores in 1957. Of this amount, plant and machinery alone accounted for Rs. 14.93 crores (Rs. 14.06 crores and Rs. 20.15 crores in the two preceding years, respectively). There was a sizable inventory decumulation amounting to Rs. 7.62 crores, which, though it was less than the figure of Rs. 11.39 crores for 1958, was in contrast to the accumulation of Rs. 13.45 crores in 1958 and Rs. 27.57 crores in 1956. At the end of 1959 the 202 mill companies together had cash and bank balances of no more than Rs. 1.27 crore, which, however, was a little better than Rs. 96 lakhs a year before and a negative balance of Rs. 5.83 crores two years earlier.

An important feature of the pattern of financing assets formation in the cotton mill industry during 1959 was that depreciation reserves provided the bulk of the finance, accounting for Rs. 9.14 crores (Rs. 8.38 crores in 1958), out of the total of Rs. 14.10 crores (Rs. 8.64 crores in 1958). The share of free reserves and surplus was Rs. 3.07 crores, in contrast to —Rs. 5.03 crores in 1958 and —Rs. 8.05 crores in 1957. Among external sources, fresh capital was relatively unimportant, being just Rs. 92 lakhs, as against Rs. 2.15 crores in 1958. There was a net repayment of bank credit amounting to Rs. 8.1 crores during the year under review. This was possible because of lower stocks of finished goods at the close of the year, following the better movement of piecegoods and yarn. Additions to mortgages aggregated Rs. 1.25 crore, as against a decline of Rs. 2 lakhs in 1958.

STATES AND CENTRAL REVENUES

A fervent plea to expand the divisible pool of shared taxes—income-tax and excise duties—and to allocate grants-in-aid on a rational basis has been made by the Madras Government in its memorandum to the Third Finance Commission. Rejecting outright the case for distributing income-tax among States on a collection basis, the memorandum maintains that, as 75 per cent of the proceeds of income-tax originate in only three States of the Indian Union, namely, Maharashtra, Gujarat and West Bengal, distribution on a collection basis would confer on these States an almost monopolistic advantage over the industrially backward States. As differences in the endowment of natural resources in the different regions are bound to perpetuate regional economic disparities for a number of years in the future, the Madras Government's contention that devolution of income-tax should be treated more as a means of transferring plan assistance, than an equitable sharing of Central resources between the different States is not without some force. In making this point, the Madras Government has not been unaware of the fact that, following the change in the system of taxing companies, the States' share as a whole has suffered a depletion. But its solution for making up this loss is an increase in the divisible pool of income-tax from 60 per cent to 75 per cent. The Third Finance Commission would, therefore, be well advised not to reopen the controversial issue of the basis of distribution and stick to the system recommended by the previous two Commissions. The suggestion for making 25 per cent of the proceeds from the entire excise duties divisible among the States, as against only a few selected goods as obtaining today, is also reasonable, because there is no logical justification for the existing scheme.

Two other issues raised by the Madras Government in its memorandum also deserve the careful attention of the authorities concerned. These pertain to the existing system of determining the targets of State taxation and the scheme of *ad hoc* grants-in-aid given by the Central Government for financing plan schemes. The memorandum raises a controversial issue when it observes that the targets of additional taxation fixed by the Planning Commission for the different States are not based on any fair consideration of taxable capacity of the different States. It points out that additional taxation target is treated purely as a balancing item in the resources picture. This southernmost State, therefore, argues that in future at least due consideration should be given to the prevailing level of taxation, the *per capita* income of the State and the desired size of the

AN OLD VEXED ISSUE REOPENED

JAYAPRAKASH COMMITTEE'S SUGGESTIONS

From Our Special Correspondent

NEW DELHI, *16th October*

DELHI LETTER

THE report of the Study Group on the welfare of the weaker sections of the village community (under the chairmanship of Mr. Jayaprakash Narayan) published today, reopens an old vexed issue which was regarded as closed by the final draft of the third Plan. It relates to the role of Community Development in the context of planning; the Plan states that "the growth of agricultural production is of such critical importance that, in the immediate context of the third Plan, the principal test to be met by the Community Development movement must be its practical effectiveness as an agricultural extension agency." Formerly, this position was questioned by the Ministry concerned; its implications, apart from the manner in which the allotted funds (of Rs. 400 crores) in the third Plan for Community Development should be spent, were that (1) Community Development Ministry had no need to function within the control of the Food and Agriculture Ministry but only to co-ordinate its activities; and (2) the proposed outlay on agriculture in the Plan cannot include that on Community Development and must in consequence be deemed very inadequate for the targets fixed.

New Tasks and New Goals

The Planning Commission has been unable to earmark more funds for agriculture or to accept the thesis that Community Development should be independent of production programmes and should not be evaluated by the success of the latter. But the Jayaprakash Narayan report now sets new tasks and goals for Community Development: it declares, in categorical terms, that C. D. "should be regarded not only as a *means* but also as the *end*. The Community Development programme as well as the funds allotted to it in the schematic budget should, therefore, have a single focus, namely, developing the village community" (italics in report). *Panchayat Raj* is viewed as the agency for effecting a radical change from "a hierarchical society based on an inherited status to a democratic society based on individual and co-operative achievement." The report recommends that funds under grants and loans should be devoted as a rule to schemes involving extension work, including demonstration. The role of *panchayat samitis* is defined as one of responsibility for preparing and executing schemes designed to secure (*a*) full employment to the underemployed and unemployed in the villages; (*b*) the minimum essential requirements of the weaker sections by way of social services and welfare. These objectives are not new and as the report points out, are already recognised and emphasised elsewhere in the Plan; the Study Group's objection is to the test prescribed in relation to agricultural production, which completely alters the role of Community Development and introduces, in its view, an element of "divided thinking."

The Study Group's terms of reference specified by the Ministry of Community Development and Co-operation, were somewhat limited. It was expected only to study how far and in what manner Community Development and *Panchayat Raj* institutions can promote economic development and welfare of the weaker sections of the rural community and the steps by which development schemes, and financial assistance can be effectively utilised for their benefit. The Study Group has come to the conclusion that, unless there is a comprehensive social revolution encompassing all facets of Indian society, the emancipation of the weaker sections cannot be accomplished. But, though it modestly admits that it is beyond its scope to present a blueprint for such a revolution, it has had no hesitation or compunction in overstepping its terms of reference which it found to be too narrow and in declaring that the recommendations, whether within or outside their scope, are parts of a consistent whole and should be taken together.

In view of its desire for radical solutions, the Study Group considers the public works programme in the Plan to be "halting and unimaginative" and that the problem of rural industrialisation "has only begun to be grasped in its complex completeness." The report has little difficulty in defining the criteria for identifying the weaker sections in the rural sector; 80 per cent of the households have an annual income of less than Rs. 1,000; about 45-50 per cent of less than Rs. 500 and about 20 per cent below Rs. 200; it then proceeds to show, on the basis of extracts, that these weaker sections have not so far benefited sufficiently from the Community Development programmes. While the general development of the rural economy is a *necessary* condition of their progress, it is not considered a *sufficient* condition, since larger cultivators and tenants may get a disproportionate share of the benefits. Besides economic factors, there are social and psychological factors like illiteracy, fatalism and ingrained inertia. Adopting Gandhiji's concept of *antyodaya*, the Study Group recommends that, beginning with the lowest rungs of the ladder, families with less than Rs. 250 should be considered destitutes—to be treated on a "famine relief" basis—and that assistance should be given to all families below Rs. 500; besides, Scheduled Castes and Tribes should be treated as belonging to the weaker sections without any "means test."

Compulsion Envisaged

It is not being uncharitable to say that the Study Group has not realised the magnitude of the problem which it had thus set for itself and the difficulty of prescribing the minimum standards of welfare which the State must assure for these classes in terms of food, clothing, housing, education and health. Fragmented small holdings of peasants have not benefited by reforms; since the growth of co-operative joint farming may also be very slow, the report recommends village or community ownership of land on the lines of Vinobhaji's Gramdan movement "as the only complete answer to the problems of our agriculture at once from the point of view of social justice and of development of agriculture and preparing favourable conditions for rural industrialisation." It expects the major political parties to co-operate and give a lead to make this a success both as a voluntary movement and as a legislative measure.

Moving next to a more practical plane, the Study Group has found that only a programme of public works can give the weaker sections the quickest and widest possible relief; the various items of public works in rural areas should be taken up as relief works as in famine areas and executed on a contract system through labour co-operatives. Under the third Plan as it now stands, rural works are expected to lead to employment opportunities to 2.5 million persons in the fifty year; but that would only be a small fraction of the population for which the Study Group has recommended the execution of such works.

General Manager.

43-20.

Possibly sensing the impracticability of its ambitious proposal and to make up for failure in implementation, the Study Group recommends that the Government should make a declaration forthwith to the effect that it guarantees employment to every citizen who is prepared and fit to do manual labour. Not that the fulfilment of such guarantee is any more practicable. It is recommended primarily for its psychological effect to "lift up" the pall of despair and discouragement that overshadows millions... to kindle the energies of a somnolent giant." It would take time to organise such a programme; but the Constitution gives the right to work and the third Plan should mean employment to the common man *here and now*. So, the Study Group says, place it on an emergency or war footing.

Who Is To Pay?

Less controversial and impracticable are its recommendations about education, health and housing schemes and special measures to make scavenging less obnoxious. But even here, realising that welfare measures mean expense and State sponsorship involves more taxation, the Study Group makes a clean escape from the problem by merely saying that the community as a whole should take responsibility for scholarships, midday meals, free dress, books, etc.—"which is a very different kind of thing from providing all this assistance out of taxes levied on the people."

The report clarifies that rural industrialisation should not be conceived as being limited to what are termed as "rural industries or processing industries." There must be "an even spread of industries throughout the countryside." This development must be of an organic nature and "come out of the soil." The necessary capital must be obtained from the rural areas in the shape of co-operative shares. Outside capital should come in the form of loans and subsidies from Government and the banks to co-operative and community enterprises. The industry should also be related to the resources and needs of the area concerned. The Group has advocated protection of rural industries from urban ones and reservation in fields and lines of production. It has recommended the creation of a single comprehensive authority, with necessary powers and resources and charged with the responsibility of rapidly industrialising the rural areas.

Finance for Co-operation

Discussing the role of co-operatives in ameliorating the lot of weaker sections, the Study Group has recommended that the risk fund should be suitably augmented and co-operative credit societies which are prepared to undertake the risk of cultivation on marginal lands should be helped. The rural works programme should be oriented to take up land reclamation of petty cultivators on a complete relief basis. The Study Group is of the view that processing and semi-processing of agricultural produce can be tackled by regional marketing societies and has advocated the extension of Reserve Bank credit for agriculturists to meet the situation.

On the question of co-operative farming, the Study Group has recommended that the pooling of land should be for a minimum period of ten years. With a view to enabling farm labourers to take shares in co-operative farming societies, loans should be provided. The report says that, as a general principle, 40 per cent of the produce should be distributed to those who have contributed land to the co-operative, 40 per cent to labour and the remaining 20 per cent should go to reserves. It has been urged that whenever small landowners are willing to join together, their holdings should be consolidated in one compact part of the village. It is also suggested that the landless should be given waste lands and be persuaded to form themselves into a small landowners' co-operative and helped by direct State aid for improving the land production.

As regards organisational set-up, the report says that the existing organisation at the Centre in the Ministry of Community Development and Co-operation and the Development Commissioners in the States should be made responsible for promoting the welfare of the weaker sections of the community.

The report thus constitutes an extraordinary postscript to the Plan: it follows that the Plan outlays are grossly inadequate both for agriculture and Community Development. It is not obviously for Study Groups to say how much and in what ways more funds should be found before they can be spent

PROMISING TRENDS IN U.K. ECONOMY

STERLING REGAINS ITS STRENGTH

By W. T. C. King

EDITOR OF THE *BANKER*, LONDON

ON the economic front, as on the political, this has been another highly eventful month for the world of international finance. The annual meeting of the Governors of the International Monetary Fund and the World Bank have provided, as usual, a forum for major discussions, official and unofficial. On this occasion much of the year's widespread hard thinking on the problems of international liquidity has been brought into focus. The way has been prepared for a further advance by a buttressing of the resources of the Fund—not, indeed, by any such radical reform as some have advocated, but at least in a fashion that should ensure the capacity of the Fund to iron out monetary disturbances of the kind that have attracted so much attention during the past two years of heavy movements of short-term funds.

For the British Commonwealth, unexpectedly, the most publicised of the month's developments was the reaction of the Finance Ministers of the Commonwealth countries, at their meeting at Accra, to Britain's decision to enter into formal negotiations for admission to the European Common Market, if this can be done on acceptable terms. These private meetings of Finance Ministers that precede the I.M.F. and World Bank gatherings, are normally unobstrusive affairs that receive little publicity. But, on this occasion, the *communique* attracted widespread attention, since it revealed very clearly the concern felt by a number of Commonwealth countries lest Britain might join the E.E.C. on terms that would impair the solidarity of the Commonwealth, and since it also expressed the doubts of some members whether the terms would, in fact, be obtainable that would not endanger vital Commonwealth interests. It is much to be hoped that this will prove to be an over-pessimistic reading of the possibilities; at all events, the mood disclosed at Accra has led spokesmen for the British Government to reaffirm the pledges that Britain will not, in fact, join the Common Market, unless that can be done consistently with the Commonwealth relationship.

Bank of England's Quarterly

The month has also brought forth a spate of news concerning Britain's own economy—on the one hand, documenting in much greater detail than previously, the economic situation that led up to the Government's measures of end-July, and, on the other hand, disclosing the first effects of those measures in a number of sectors. Especially noteworthy under the first head is the latest of the quarterly bulletins from the Bank of England, with its running commentary on the critical second quarter of this year and an important account of the workings of the so-called Basle agreement reached between the European central banks after the revaluation of the D-mark and guilder.

Sterling, meanwhile, has gone from strength to strength. It has gained relief immediately after the announcements of 25th July; and, during this summer, the spot rate has appreciated steadily on the exchange markets in spite of the fact that the exchange equalisation account has been an almost continuous purchaser of foreign exchange. Early in October, the sterling-dollar rate reached a peak of $2.81¼ as compared with around $2.78½ last July, and is now at its best since the time of the massive inflow of hot money last year. So far as can be ascertained, there has not yet been any large revival of this sort of support. Most of the rebound in sterling up to date has, unquestionably, been due to the closing of short positions, to the rebuilding of normal working balances that had been unduly run down and to the swing of the "leads and lags" in commercial payments in Britain's favour.

In consequence, there has been a substantial reinforcement of the central reserves, though, unfortunately, it is impossible to say precisely how large the true reinforcement has been. The statement of the reserves at end-August, the first statement to reflect the rebound, was also the first to reflect the draft on the I.M.F. and major repayments by Britain to its central bank creditors under the Basle arrangements, as well as certain receipts from France in discharge of old debts incurred through the European Payments Union. The allowance for these special factors suggested that the true rise in the reserves was probably in the region of £50,000,000. In September, the gain may have been of much the same magnitude, or perhaps a little larger, but the unofficial estimates may here be rather more precarious than those for August. What we do know positively, however, is that at end-September the reserves stood at £1,269 million, compared with £1,159 million last January, before the drain began; and that this end-September figure was computed, on the one hand, after crediting the whole of the £536,000,000 of the "immediate" drawing on the I.M.F. (as distinct from the stand-by credit) and, on the other hand, after the repayment of the "great bulk" of the assistance provided under the Basle arrangements.

Size of Basle Credit

The Bank of England bulletin discloses that this assistance was provided by the several central banks in a variety of forms, and not all of it by way of accumulations of overseas holdings of sterling. Such accumulations did, however, account for the greater part. At end-June £112,000,000 was represented by overseas official holdings of sterling, £85,000,000 was represented by overseas non-official holdings of sterling (held, in effect, on behalf of overseas central banks) and a further £126,000,000 (included in the balance of payments statistics under the heading of "miscellaneous capital (net)") represented the aid that had been furnished in currencies other than sterling. At this date, therefore, the total aid amounted to £323,000,000, which was virtually its peak amount—stated by the Bank of England to have been £325,000,000. This, it will be apparent, is a much larger sum than had been realised at the time; no real clue to the full extent of the run on sterling was given until after the measures of 25th July had averted the danger. Now, in effect, the special indebtedness has been taken over by the I.M.F., and Britain's most pressing duty is to shape its economy and balance of payments to ensure that the I.F.M. drawings can be safely repaid within the due period three to five years ahead, if not before that.

Earlier Diagnosis Confirmed

It is too soon yet for it to be reasonable to look for clear signs of any such fundamental response to the July measures, but such indications as are discernible are not unpromising. Most indices lately becoming available of the state of the domestic economy in the second quarter of the year have tended to confirm the official diagnosis made at the time of the July measures and have supported the view that the main danger was the still rising pressure of demand against productive resources and a tight situation in the labour market. The rising demand had, however, at last been reflected in a clear expansion in industrial production. The official index for June has now been revised upward, to the new peak of 124 (1954=100), and the provisional index for July is 125; this compares with a quarterly average rate of just under 121 that had been unchanged for the four preceding quarters. This expansion occurred, moreover, in spite of a further decline in the rate of additions to inventories: it reflected, therefore, a further growth in both consumption and fixed investment. The July measures were aimed, first, at restraining consumption without impairing essential investment, and the latest indicators suggest that the trend is indeed in this direction—even though the forecasts of investment by the manufacturing industry for the current year (framed just before the July measures) suggest a somewhat smaller advance on the 1960 total than was being estimated early this year. The prospective increase is still, however, large—21 per cent, compared with the

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

PHILOSOPHY OF U.S. FOREIGN AID

WORLD BANK PRESIDENT'S INSPIRING EXPOSITION

[The speech delivered by Mr. Eugene R. Black, President of the World Bank, to the Investment Bankers' Association, New York, early this month is an inspiring, well-timed piece. It provides a telling answer to the revival of the contention not only in the U.S. but also in the U.K. and elsewhere in Western Europe that aid to underdeveloped countries be used as a price for gaining their support in the cold war against Russia. Since this contention has given rise to a lot of mischief in the unaligned countries, the chief beneficiary of which is Russia, we make no apology for publishing on this page the full text of Mr. Black's address. It will be seen from this really beautiful speech that the fundamental philosophy of American economic aid is based on human considerations and, if, in the process, the aid helps check the spread of Communism, as, indeed, it does, it confers a double advantage on both the giver and the recipient.

Although primarily addressed to U.S. citizens, in general, and the financial and business leaders in that country, in particular, this address of Mr. Black which, apparently, he delivered more as an American than the head of one of the U.N. specialised agencies, has considerable relevance to us, Indians. It provides, by implication, suppor to Prime Minister Nehru's well-intentioned advice to the developed countries, to his thesis on economic planning and to his general social philosophy. In it, there is food for thought for industrialists, traders and bankers in this country. A careful reading of this address will help widen their vision. It will show why India has to plan, why there should not be a wide gap between the haves and have-nots, why there should be an equitable distribution of the gains of economic progress, what criteria they should adopt for judging the merits of development projects and how they should evaluate the progress made as a result of planning.—ED.]

I AM convinced that foreign aid is the concern of Wall Street as much as it is the concern of Washington and that there is a great deal that the financial and business leaders of America can and should do about it. The United States' effort in the underdeveloped countries has left all of us, in greater or less degree, uncomfortable about this foreign aid business—and for good reasons. The foreign aid programme has been muddled and confused in its objectives, often mediocre in its administration. Much of the resistance and outright hostility which the executive presentation of the foreign aid budget has encountered year after year, whatever the political persuasion of the Congressional majority, is attributable to impatience with the operational weaknesses and administrative failures which have characterised the programme in the past. We have been sold foreign aid as an emergency measure to stop communism, as a necessary tool to "make friends and influence people" in the underdeveloped world, as a "must" to expand our export trade. Yet none of these so-called objectives has been achieved. Soviet influence remains at high tide; our dispensations of money have won us neither gratitude nor affection, but more often grumbling dissatisfaction; and our balance of payments position has worsened, not improved.

Three Propositions

Yet, despite what may seem a pretty disheartening record, I want to advance to you, and with conviction, the following propositions:

First, that foreign aid, properly conceived, is a vitally essential element of our national policy—not for the shrill, short-term reasons usually advanced, but for the longer-range objective of building the kind of sound world economy and society which alone will let us fulfil our own national aspirations.

Second, that we can only achieve the real objective of our foreign aid programme if emphasis is put, not on the quantity of money provided, but on the quality of the investment made with that money—on the amount of effective development which foreign aid funds buy or induce.

And, *finally*, I want to suggest that the financial and business leaders of this country have a much greater role to play in making our foreign aid programme effective than has ever been appreciated in Washington or has yet been generally recognised by you.

Let me start with the basic question of why foreign aid at all—why you and I should support and not oppose it. Foreign aid has been sold—oversold, I believe—largely as a necessary weapon of the cold war.

Indeed, there seems an almost direct relationship between the Congressional fortunes of the various aid proposals over recent years and the violence of Soviet threats at the time. That there is a connection between the need for economic growth and the cold war is, of course, true: to the extent that the peoples of the less developed areas are better housed, better fed, better clothed—to the extent that they can see some prospect of improving their low standards of living—their loyalty to their own institutions will be strengthened and they will be less susceptible to the insidious sales pitch of Communism. But we must not make the mistake of thinking that, by helping to finance their economic growth, we can buy the loyalty or friendship of the less developed countries—or their vote in the United Nations. They are too independent and too proud for that.

Nor must we make the mistake of thinking that foreign aid will buy us popularity! If we are out to be popular—if we are not thick-skinned enough to hear, without rancour, criticism from those to whom we have extended aid—we had better get out of this business. And we had better get out of it, too, if we are going to consider every temporary advance of Communism a defeat for our programme.

But if we ever did cut out or cut down on our foreign aid for any such reason, it would be more than the loss of a battle in our struggle with Russia—it would be a defeat for the affirmative objectives of our national policy quite apart from the cold war. Indeed, if the Communist conspiracy should be totally defeated tomorrow, foreign aid to the underdeveloped world would remain, I suggest, an imperative of our time.

There are a number of reasons why this is so. For one thing, there are humanitarian and moral considerations behind our aid. We are moved by a concern for the welfare of others, by an impulse to help those who are engaged in a struggle against poverty, disease and ignorance. We need not and should not be ashamed to recognise and, indeed, to proclaim this reason for our foreign aid; generosity to less fortunate peoples is an aspect of our national tradition of which we can justifiably be proud.

Compelling Reasons

There are economic considerations behind the programme of considerable importance to our own welfare. The only effective way to assure sources of supply for the basic raw materials we need, the only effective way to assure expanding markets for the products of our industries, is to help other countries to achieve and maintain self-sustaining economic growth.

But important and valid as these humanitarian and economic considerations are, I suggest that there are reasons for foreign aid far more compelling, far more basic, than these. We discovered many years ago in our own society that growth based on a prosperous few and an impoverished many was neither healthy nor enduring, that our nation's system of free enterprise could expand and grow strong over the long pull only by opening opportunities to the people at large and thereby releasing their energies and initiative. This has been reflected in many different ways—in our public education and public health systems, in our fiscal regime, in our slum clearance and urban renewal programmes, in our encouragement of agriculture, and so on.

Every consideration of policy which dictated our national programme is reproduced on the world scene—and the world today is smaller in many ways than was the United States when these national programmes were first started. The industrial countries cannot count on remaining, for long, isolated islands of prosperity. Certainly, as I have already commented, their industries cannot achieve their long-range potentialities except as they build up the markets waiting to be developed in the economically backward countries. And, even more certainly, they cannot count on the political stability they need so long as great parts of the world are smouldering with the discontent born of poverty unrelieved by hope.

The only answer I know to all this is somehow to give to the peoples of the underdeveloped world the opportunity, the means—and the incentive—to produce more. That is the simple meaning of all the high-flown talk about economic development. That is the essential objective of foreign aid—to enable the impoverished peoples of Asia, Africa and Latin America to improve their own lot by growing more crops, extracting more minerals, manufacturing more industrial products, so that they can enjoy a better standard of living and higher standards of education, thus giving their children greater opportunities than they themselves have known.

A Complicated Task

I have stated the objective in simple terms, but achieving the vast increases in production that are necessary is an infinitely complicated task. It is not just a matter of building factories—it is first a matter of educating and training *people* equipped to manage and operate such factories.

It is not just a matter of providing better seed and more fertiliser for the farmers—one must first give the farmers incentive, and put them in a position to use modern tools effectively. This means, among many other things, providing adequate agricultural credit and extension services, and reforming antiquated systems of land tenure.

It is not just a matter of building new roads—it is equally a matter of organising an efficient Highway Department to maintain the roads once they are built. It is not just a matter of constructing new power plants—it is equally a matter of assuring that the power industry will be strong and solvent.

To achieve the necessary production increases, in short, requires changes, and sometimes revolutionary changes, not only across the whole broad front of economic life, but also in many aspects of the social structure.

This is all familiar to us in the United States. Our production has been our strength. The broad diffusion of its rewards among all our people has been the main source of both our economic growth and our political stability. The challenge to us now is to help get the same process going in the backward areas of the world. And foreign aid—financial and technical—is our means for doing this.

Quality More Important Than Quantity

That brings me right to my second proposition—that the proper measure of our foreign aid is not the amount of money we make available but the amount of effective development which our foreign aid funds buy or induce. We should be concerned more with quality than with quantity. Money provided to the underdeveloped countries buys nothing lasting except as it is productively invested either in additional physical facilities or, even more important, in the improvement of human resources. That is why I get so impatient with theoretical global estimates of the amount of external capital needed to bring about development at some given rate. What *X* millions of dollars will accomplish in countries like India; for example, with well prepared projects, a good level of administrative capacity both in Government and in the private sector, and with political and monetary stability, is one thing. What the same amount of money will accomplish in another type of country—of which there are many—with no programme, few projects, and a very thin layer of administrative competence, is quite a different thing. Both types of country need help—but help differently fashioned to meet their different needs and in amounts which differ in accordance with their capacity to undertake effective investment.

Duty of Recipients

On this aspect of foreign aid, action is called for by both the recipient and aid-giving countries. The recipient countries need to work out national development programmes which reflect a rational determination of investment priorities and, even more important, to translate those programmes into specific projects ready for execution. In this task, foreign technical advice can be extremely useful, and is often absolutely necessary.

Equally, the aid-giving countries need to confine their help to sound projects which meet a real developmental need—and not to waste it, either to meet political pressures within the underdeveloped country (as in the case of the Soviet roubles used to pave the streets of Kabul) or else to promote the short-term trade interests of their own exporters. When loans are made for projects that are ill conceived or of low priority simply in order to facilitate the sale of equipment for those projects, the cause of development is retarded, not advanced.

Again, when, in response to political pressures, foreign aid is made available to countries which are not effectively mobilising their own resources—countries, for example, which fail to bring inflationary pressures under control or which fail to tax their citizens effectively—the result is often to enable the recipient Government to put off the day for taking the necessary domestic action—again retarding, not advancing the cause of development.

It is not foreign aid itself, therefore, that is important—it is only the extent to which that foreign aid brings about sound investment. That is why I say to you that we must stress the quality, not just the quantity, of our foreign aid.

Role of U.S. Bankers

And that is where in financial and business leaders come in. What I have described as essential in the administration of foreign aid is, after all, nothing more than the standards which investment bankers are accustomed to apply in the practice of their profession. They know the value of productive investment; they know the importance of assuring the best use of available resources; they know the dangers of lending without considering the technical merits of the project and whether it will result in a marketable product; they know that each client has his own peculiarities and capabilities and that the amount and terms of the financing they provide must take appropriate account of the borrower as well as of the project.

As Americans, the financiers in Wall Street, have, I believe, an obligation to support the general concept of foreign aid. But as bankers, they have a special and affirmative obligation to see to it that that concept is translated into a programme so framed and so administered that it produces results. It is easy to sit on the sidelines and carp about "waste," "mismanagement," "money down the drain," and the like, but that does not help. What the programme needs is not more derogatory cliches but the very kind of informed criticism and discriminating support which the financiers of all groups in the U.S. are in the best position to provide.

There is still a reasonable chance of getting a sound foreign aid programme under way. The concepts and principles underlying the new foreign aid legislation are a big step in the right direction; financing in the context of carefully considered development programmes, rather than for a series of isolated, unrelated projects; long-term planning and commitment of funds; special concern for countries prepared to mobilise their own resources effectively and to carry out the necessary internal reforms; and administrative responsibility entrusted to a single aid agency established at an appropriately high level and as an integral part of Government. The targets of the programme will not be easy to achieve and, in actual administration, realistic compromises will sometimes have to be made. But, given the understanding support, the friendly but firm criticism, I feel confident that the programme can be kept headed in the right direction.

American Heritage

But let me say, again, in conclusion, as I said at the start, that the support of U.S. bankers will be effective only if and to the extent that they emphasise the right issues. We, Americans, must stop asking whether foreign aid is really winning us popularity and ask whether it is really buying us development. We must stop worrying every time the Soviets extend development assistance to one of the underdeveloped countries and concentrate, instead, on whether our own programmes are being effectively carried out. For this development business is *our* game and *our* heritage, and not Khrushchev's or that of the Soviets.

It is *our* heritage which has demonstrated to the peoples of the underdeveloped world that there is an alternative to object poverty.

It is *our* heritage which introduced the radical idea of self-determination and national independence.

It is *our* heritage which has shown the way to mass consumption and to the widest participation in the fruits of economic progress.

It is *our* heritage which, by giving impetus to this whole revolutionary business of development, has carried a message of hope to human beings the world over.

So let us (Americans) play the game with good heart and cool head. Let us play it with vigour but without panic. Surely, we need not fear to lose if we only play it well.

DIFFERENTIAL BONUS SCHEME ANNOUNCEMENT

The Differential Bonus Scheme has now been finalised and in exercise of the powers conferred by Section 49 of the Life Insurance Corporation Act, 1956, the Corporation has made Regulations classifying the policies issued by the Corporation, and by the various insurers, whose controlled business has been transferred to and vested in the Corporation, for the purpose of declaring Differential Bonuses. The Regulations have been drawn up in consultation with and approved by the Central Government and notified in the Gazette of India.

2. The Scheme is being implemented under instructions from the Government of India and supersedes the Provisional Scheme framed by the Corporation and published in June 1959. The participating Policies of the erstwhile insurers and of the Corporation are now classified in 25 groups instead of the 6 groups under the superseded Scheme.

3. The rates of bonus now declared are as a result of the valuation as at 31st December 1957. The business valued included all the policies which were issued by the Life Insurance Corporation or by the erstwhile insurers and were in force as on 31st December 1957. Out of the gross profits disclosed by the valuation an amount of Rs. 27.56 crores was reserved for distribution to participating policyholders, after providing for the estimated income-tax liability and the Government's share of surplus.

4. The rates of bonus in respect of participating policies issued by the Life Insurance Corporation of India are:

Whole Life—Rs. 16.00 per Rs. thousand sum assured per annum.

Endowment—Rs. 12.80 per Rs. thousand sum assured per annum.

5. As stated earlier the policies of the erstwhile insurers are now classified in 25 different groups.
The policies of the Life Insurance Corporation as well as of certain insurers included in the same group have been allotted key index No. 10. Each of the other 24 groups has been given an index number and the ratio thereof to 10 indicates the proportion which the bonus rates applicable to the group bear to the bonus rates of the group which has the key index No. 10. The bonus vests immediately.

6. For the purpose of illustration, the bonus rates applicable to policies of some of the erstwhile insurers are shown below:

Name of the Unit	Index No.	Rate of bonus per thousand per annum	
		Whole Life Rs.	Endowment Rs.
Bombay Mutual	11	17.60	14.08
Hindusthan Co-op.	10	16.00	12.80
National Insurance	10	16.00	12.80
New India	11	17.60	14.08
Oriental Govt. Sec.	12	19.20	15.36

7. The classification adopted in the new scheme will also apply to bonus allocations at future valuations. The new scheme will not apply to policies which have resulted into claims by death or maturity after 31st Dec. 1957 but before 15th Oct. 1961. For these policies bonuses are payable on the basis of the Provisional Scheme.

Full details of the L.I.C. Differential Bonus Scheme and names of Units in various groups are being published in the following papers:

Times of India, Bombay/Delhi, 14-10-1961
Economic Times, Bombay, 15-10 1961
Statesman, Calcutta/Delhi, 14-10 1961
Hindustan Times, Delhi, 16-10-1961
Hindu, Madras, 14-10-1961

ROLE OF CHAMBERS OF COMMERCE AND INDUSTRY—II

SPECIALISED SERVICES—PLACE OF SECRETARIAT —PEEP INTO FUTURE

By B. Barker, M.B.E., M.A. (Oxon), F.C.I.S., A.M.B.I.M.
SECRETARY, BOMBAY CHAMBER OF COMMERCE AND INDUSTRY

[In this, the second and last, instalment of the author's lecture to the post-graduate students in the Commerce faculty of the University of Poona, the specialised services rendered by the Bombay Chamber of Commerce and Industry are described, followed by an account of the place of its secretariat, the working of its General Committee and Sub-committees and of the responsibilities the Chambers of Commerce and Industry, in general, may have to undertake in future. The first part of this article appeared in our last issue.—ED.]

IT is the special services, namely, the labour advisory service, the statistical service, the docks department and others which I have already mentioned, that are available for the use of members individually, to deal with problems which are peculiar to them as individual companies. In operating these special services, the Chamber is careful not to give the impression of competing with the professionals who are already offering similar services. For example, the Chamber does not give opinions on matters of law, although the Chamber may give a view of what is or what is not the general practice of commerce and industry in this part of India. Nor does the Chamber give advice to individual companies on such matters as income-tax or other accounting matters which are dealt with by professional firms. The specialist advisory services of the Chamber are, therefore, supplementary to those that are already available.

Labour Department

The most notable of the Bombay Chamber's advisory services is that offered by the Labour Department. Individual companies can seek free advice from the Department on matters not involving long interviews or correspondence or the members may requisition the services of the Labour Department on an *ad hoc* basis as and when they have labour difficulties to be resolved, or, finally, medium and small size companies who do not have their own specialist personnel officers can retain the services of the Labour Department on payment of a monthly subscription in return for which the Chamber's Labour Advisers visit the premises of the company concerned each week and deal with the specific labour matters of that company in detail. The Advisers frequently appear on behalf of members in the Labour Courts and render a wide range of services from the drafting of letters of retrenchment to discussions with unions on behalf of important commercial or industrial associations. Apart from the advisory work of the Department which deals with individual members, the Department also concerns itself with general matters of Government's labour policy and is for the Secretariat the fountainhead of information on such matters. In recent years, the Chamber has tended to make representations on general labour matters, i.e., labour legislation, relations with Government, labour policy in the country as a whole, etc., through the Employers' Federation of India of which the Bombay Chamber is an important member in the Western Region.

From the Statistical Department, the new member can obtain statistics with regard to the import or export to or from any major port in India of any commodity listed in the statistics issued by the Director General of Commercial Intelligence and Statistics, Calcutta, and these statistics are issued to the member exactly as he may want them—weekly, monthly, half-yearly or even yearly. In other words, this is a custom-made service.

Every working day, this Department also publishes for non-members as well as members a shipping intelligence, that is, a leaflet giving details of the ships on the high seas which are destined for or have recently left Bombay as well as the ships which are at present in port. This leaflet is invaluable to all clearing agents, importers, banks and insurance companies.

Hindi Classes

Classes in the Hindi language for the benefit of the staff of member companies are conducted by the Bombay Chamber and in other Chambers you will find a good deal of work done in the matter of setting examinations in commercial subjects.

There is a great demand in the Chamber for the issue of Certificates of Origin and Analysis in respect of a variety of goods exported. In order to meet the demands of overseas buyers of Indian produce and manufacture, the Chamber issues Certificates of weight and quality in respect of a large number of commodities, especially oils and oilseeds, spices, drugs and medicines, Indian herbs, etc. Special arrangements exist for the weighment and sampling of these commodities and the issue of weighment and analysis certificates.

Being a Port Chamber, the usual weighment and measurement services are available to exporters who pay the Chamber for certificates which, for the most part, are used for presentation to shipping companies in connection with the calculation of freight charges.

The Chamber acts as secretaries of seven trade associations concerned with engineering, insurance, paint, tractor and earth-moving equipment, pharmaceuticals, chemical plant and travel agents. It undertakes arbitrations and surveys for the settlement of commercial disputes under prescribed regulations.

All legislation, both Central and State, likely to affect commerce and industry is kept up to date with all amendments made. There is one man doing nothing else.

Good Library

The Chamber has a well stocked library of reference books on all subjects of commerce, industry and labour which is open to members free of charge and to non-members on payment of a nominal fee.

All this is run by a staff of 56 officers, measurers, typists and clerks, with 66 sepoys to do delivery work, to run off the circulars and assist on the docks.

From all this, you may get the impression that membership of Chambers of Commerce is a one-way business, that is, the member pays a subscription and the Chamber provides services. This is far from the truth. As members grow in their experiene of the Chamber, the contribution which the Chamber asks of them grows likewise, because it is from these large and experienced members that the Chamber appoints its sub-committees and the general committee who instruct and guide the secretariat. The Bombay Chamber has some sixteen specialist sub-committees on every subject affecting commerce and industry from labour affairs to exports and from railways to Company Law. Service on these sub-committees not only involves a good deal of time in attending to the problems of the day but also provides the Committee members themselves with an interesting and often useful insight into the views and difficulties of other companies.

Sub-committees

To illustrate the working of these sub-committees, I return to my example of a member's representation regarding an interpretation of Company Law. The letter from the member will first be considered by the Assistant Secretary responsible for Company Law matters. This officer will then in all probability discuss the matter with the Secretary to agree on the next step. This step may be to issue a circular to all members to ask them if their experience is the same as that of the member who has complained or it may be that the point needs further clarification from the member concerned before it can be referred to the sub-committee. Flexibility at every stage is of great importance, for no two problems are ever alike. Once the facts are clear —and it is the secretariat's duty to collect all the relevant facts—the matter is placed before the sub-committee, usually by a circular passed to each member in his office. By this procedure, each member is able to consider the matter clearly at his convenience and can himself avail of the assistance of other experts in his own office. The circular is eventually returned to the Chamber together with the comments of each member attached thereto. You may consider that this is a rather long-drawn-out procedure. I am afraid it is. Nonetheless, when any responsible individual is asked to set down his comment in writing and sign it with his name, he is likely to give much more consideration to the matter under discussion than if he were merely to attend a meeting where he could make a speech *ex tempore*. All circulars of this kind are returned to the Secretary and if there is unanimous agreement on the action to be taken, then that action is taken without further reference to anyone, except when a reference to the Associated Chambers or Government is indicated, in which case the matter will be placed before the President himself for consideration and, if there is time, before the general committee as a whole. In any case, the papers will be placed before the General Committee after action has been taken in order that they may be fully informed of what has been done.

However, the sub-committee may not be agreed, in which case it is possible that a meeting of the sub-committee will be held when the minutes of each member will be tabled and a discussion will take place until unanimity is achieved. It is not the practice of the Chamber either as a result of discussion in a sub-committee or in the general committee to take any action other than on unanimous decisions. It is a token of the success of this procedure that I cannot remember an occasion when, either in a sub-committee meeting or a general committee meeting, there was any need to put the matter under discussion to the vote.

This procedure implies two further considerations which I would like to emphasise. The first is that, if all the facts are collected and expressed with due emphasis, in nine out of ten cases, the solution will be apparent and it will follow that no vote will be necessary because no argument will take place. This, however, entirely depends on the quality of the secretariat's work and of the advice in the sub-committees. Secondly, this procedure is only possible in an atmosphere of trust. It follows that the members must have confidence in the committee they have appointed; that the committee must have confidence in its sub-committees and that the individual members of the Committee must have confidence in their President. The whole organisation must of course have confidence in the Secretariat. Poor secretarial work and poor advice or bickering in committees lead only to hot air and inaction. For speedy and effective action, confidence and ability are essential. It is often a matter of fine judgment in these swiftly moving times to decide how long can be spent in considering a representation which, if it is received too late, will lose all its value, however good it may be in itself. Personally, I am inclined to think that a near perfect representation in time is better than a perfect representation too late; but there can be no rules in this matter; one can only try to keep the standard high.

Controlling Committee

In the Bombay Chamber, the controlling committee is the general committee which consists of twelve gentlemen who are usually the seniormost executives of their organisations in commerce and industry or one of the professions. The president is elected annually from the body of members. Here again, in passing, I would mention that there has never been a contested election. The Vice-President is elected similarly and normally succeeds the President. Eight more members of the Committee are nominated by the outgoing Committee and these gentlemen have to be considered first by the members at the annual general meeting. Only if one of these gentlemen is not elected is there an opportunity for any other name to be suggested. Two additional members of the committee are co-opted by the new committee at their very first meeting. By convention, one of these is usually the immediately retired President and the other the Chairman of the Exchange Banks Association. There is also a convention that no member of the committee serves for more than two years at a stretch, unless he takes office, though he may return after a period of absence. The functions of the general committee are so varied and cover such a wide range of activity that it is difficult to circumscribe them in a few words. Naturally, they deal with matters of policy rather than detail and they are more concerned with matters of all-India significance than with technical problems which are usually dealt with at the sub-committee level.

Secretary

You will have gathered that the sub-committees and the general committee consist of "amateurs," in the sense that they are not full-time workers and are not paid anything for the services they render. The professional stipendiary work is done by the secretariat and is pivotal in the operations of the Chamber. There are few members of any of the committees or, indeed, of the Chamber itself who have an opportunity to realise the range of activities with which the secretariat is concerned. From the point of view of the secretariat, the "boss" changes every year. It follows that a good deal of responsibility devolves on the Secretary himself in ensuring continuity not only of policy in the Chamber as far as the outside world is concerned but also in dealing with the Chamber's own staff. The Secretary of a modern Chamber of Commerce in India has to be a man of many parts. He has to know a little about a great many things and he has also to know that a little knowledge is a dangerous thing. He has to combine purely secretarial functions with those of a Public Relations Officer. He has to initiate or stimulate discussions, without arrogance or disrespect. Most of all, he must be endowed with powers of judgment and discretion which will enable him to take advantage of and to enjoy the great variety of people and subject matter with which he will deal.

Less than ten years ago and still today, in many cases, the secretaries of Chambers of Commerce and their assistants were merely the callers of meetings, the compilers of agendas and minutes and the drafters of memoranda. In other words, the activating influence of the Chambers was generally from without. The Chambers acted when they were prodded either by the complaints of members of the intervention of Government and when they were so prodded, the action taken was not only decided at policy level by the generally annually appointed committees of the Chamber but was also literally dictated by these same gentlemen. This had some remarkable advantages in that the representations were made direct, as it were, from the horse's mouth. The very man affected by Government's activities or by whatever may have been the subject matter under consideration, was there to take action and dictate the memoranda. You will notice that this procedure fits in with the system of management which I have described as prevalent in commerce and industry in the last century. The committee members of Chambers were the owners of capital and the managers of it. Today, however, the situation is entirely different. We live in an age when professional managers, who, by and large, are not themselves the owners of capital, are controlling large enterprises owned by a vast number of shareholders scattered all over the country and even the world. It follows that, within the organisation concerned, specialisation has developed. Instead of broadly experienced capital owners controlling a varied range of commercial and industrial activities, we now have professional managers frequently specialised, generally in one aspect of the business. It follows that the considerations of Chamber committees are much less general and individualistic and much more specific and impersonal than they used to be. The age of Sir Purshottamdas Thakurdas died with him. Moreover, the pace and the breadth of activity has increased so fast that managers have less and less time to give to other things than quite literally minding their own business.

This change in the type of management and managers is bringing in its turn a change in the type of secretaries and administrators in Chambers of Commerce. It is no longer necessary or advisable to wait for complaints from members or intervention by Government. Action has to be initiated at an earlier stage if it is to be effective. The ideas which develop in Chambers of Commerce must increasingly come from the officials themselves. Naturally, decisions with regard to policy will always remain in the hands of committees of Chambers but for the reasons I have given earlier I think that the amount of original work contributed by the committees in Chambers will tend to decrease and that their role will be to guide, advise and, if necessary, direct stipendiary experts.

A Complex Job

The administration of commerce and industry has become a matter of such complexity in recent years that it is impossible for the stipendiary officer or the committee member to keep pace in detail. The importance of specialised officials within Chambers of Commerce both to the committees as well as to the members themselves must, therefore, in the immediate future tend to grow. In the field of labour relations, for example, several Chambers have developed important specialised, professional advisory services available to individual company members for consultation on individual matters and in my own Chamber I have seen this service grow from one adviser to three and from an income of *nil* to a lakh of rupees in five years. Similarly, we may expect the development of other professional services, e.g., sales tax advice, preparation of statistics, market research, investment analysis, economic reporting, translation services, organisation of training courses, advice with regard to staff selection, advice to Indian collaborators with regard to foreign investors and to foreign investors with regard to Indian collaborators, specialist advice on Customs matters, excise matters, import trade control, export trade control, secretarial practice and so on. This list can easily be extended. There is a great need for these professional services and they can best be arranged, controlled and financed by the combined efforts of numerous companies through their Chambers of Commerce and Industry.

Public Sector Companies

I am sure that the Chambers will in the future welcome the membership of Government-controlled organisations in commerce and industry. Let no one imagine that problems of management in these organisations are necessarily going to be different or less than those of their colleagues in the private sector and the more the two sectors in industry get to know about each other's working and the more they appreciate the common problems which will arise, the happier will be the future for the development of a mixed economy. In my own Chamber, we have recently been pleased to welcome as members the Indian Oil Company Ltd. and it is certainly the policy of the Chamber to welcome the membership of companies and corporations in the public sector.

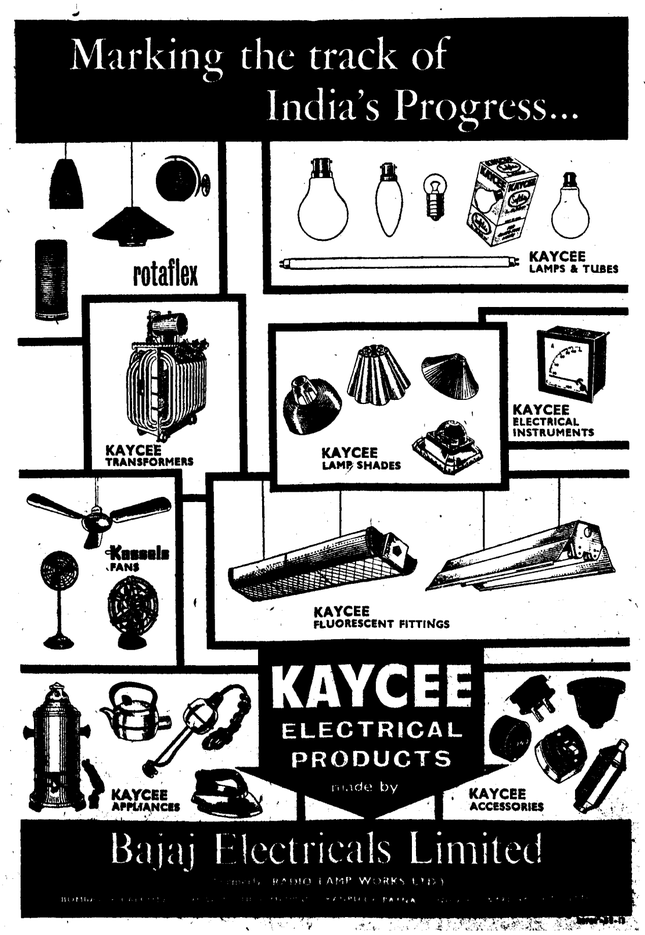
Future

Looking, finally, at the longer term, one can see an important future for Chambers of Commerce and Industry in this country. Although the number of politicians who have some interest in—let alone knowledge of—commerce and industry is tending to grow, there is still almost no effective representation of commercial and industrial interests capable of commanding respect, in either house of the Indian Parliament. As long as this is the case, the well-established Chambers of Commerce, who eschew political affiliation will remain the only mouthpiece. The least respect which Government can pay them is to regard them as sounding boards (let it be noted, in this connection, that Government may well continue to wish to listen to a variety of sounding boards!) and if the Chambers can continue to command respect for their objectivity and their ultimate interest in the welfare of the country as a whole, there is no reason why they should not be called upon to play an even more important role in the affairs of the State than they do at present.

Moreover, I would hope that the Chambers and private enterprise will not always have to follow at the heels of Government and that the corporate and co-operative sectors of private enterprise will be able to develop their own organisations, including their Chambers of Commerce without the at present inevitable visits to Delhi or the local seats of Government. Chambers of Commerce are so preoccupied with Government today that there is a risk that they will have no time or inclination to develop services of their own quite apart from Government's help, blessing or interference and will lose that sense of initiative and self-help which is the great virtue of private enterprise. Government makes plenty of work for Chambers of Commerce at the present, but whether this is the sort of work which Chambers ought to be doing is another matter.

PANEL FOR CEMENT INDUSTRY

The Government of India has set up a nine-member Panel under the chairmanship of Dr. G. P. Kane, Senior Industrial Adviser in the Ministry of Commerce and Industry, to examine the various matters relating to the cement industry and make suitable recommendations. The Panel will consider *inter alia* the availability of limestone and other calculeous minerals suitable for making cement, possible utilisation of alternate raw materials, availability of suitable quantities and quality of fuels like coal and furnace oil, requirements of spares, balancing equipment and capital machinery for industry, diversification of production to manufacture special cements like slag cement, pozzolan cement, low heat and high early strength cements, etc., bulk transport of cement, training programme for the industry and research and development.



TWO NEW PLANS TO IMPROVE EFFICIENCY IN COTTON INDUSTRY

"GET TOUGH" MOVE BY WORKERS

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 10th October

TWO new plans to improve efficiency in the Lancashire cotton textile industry have been announced in Manchester by the Productivity Centre of the Cotton Board. Owners of the 1,000 mills still left in the Lancashire spinning, weaving and finishing sections after the drastic reorganisation schemes, have received details of a new training service for the 5,000 supervisors in the trade who are regarded as the key-men in a drive for increased productivity. Under the code name "EDIT" coined from the initial letters of the words examination, diagnosis, identification and training, the Centre has drawn up a programme by which individual companies in the trade will be able to train their own firms with the assistance of productivity experts from the Cotton Board.

The main plan is to assess the exact responsibilities for the job now being undertaken by means of extensive questionnaires to be completed by both management and supervisor. Mr. James Bolton, Director of the Productivity Centre, said: "There is far too much woolliness about what each man is supposed to do. The scheme will be tailored to the individual requirements of each company."

The Productivity Centre is also sponsoring an inter-firm survey with the object of comparing the efficiency of British cotton firms and their rivals overseas. Twenty firms in the spinning section of the trade have agreed to submit confidential details of their profits, costings, prices and assets for scrutiny by Cotton Board officials. A report on the results obtained in relation to each other and to foreign competitors will be compiled before the end of the year. The figures given by individual firms will remain secret, average figures will show how Lancashire compares particularly with countries in the European Common Market.

Cotton Unions Get Tough

First hint of a "get tough" move by the Lancashire cotton unions against the mill bosses who recently turned down their 2*s.*-in-the-£ pay claim came in Manchester. Leaders of nine weaving unions—they were told they could not have more pay because trade was bad—met to decide their attitude towards pleas by 12 firms for permission to introduce or extend shift-working. But instead of the applications going through, the unions put back a decision until after the eight-man committee set-up to decide what can be done about their rejected pay demands, has met next week.

Mr. Lewis Wright, General Secretary of the Weavers' Amalgamation, one of the three big Lancashire cotton unions said: "Most of these applications would have been approved but for the employers' rejection of the pay claim." "One day they tell us they cannot afford a pay rise and the next they come to us begging for more hours to be worked." The weaving firms had asked for permission to introduce various types of shift-working—from night shifts in some cases to overtime working in others.

The Problem Unresolved

Only a week or two is usually allowed to slip by without some published reference being made to the frustrating aspect for Lancashire traders of the heavy imports of goods which have taken such a toll of the industry and clouded the outlook during recent years. Mr. Roger Lee, who combines the role of chairman of two of the biggest groups in the trade, has emphasised the effect of foreign cloth arrivals in his statement as head of the Calico Printers' Association, giving in effect a sharp warning about the implications of a continuation of such extensive purchases from abroad.

Mr. Lee is not the first to underline the paradox of local millowners scrapping their machinery at the same time, as the inroads made in Britain's home market by foreign competitors are for ever widening. The expenditure of public money on the elimination of productive capacity is, indeed, "a strange contradiction" when viewed against the background of mounting imports. Printed cotton goods, he says, are now arriving from other countries at a rate which would employ two fair-sized print works.

In addition, Mr. Lee declares that the textile finishing redundancy plan so far as it concerns printing may well be wasted. The quantity of goods arriving from overseas will, unless checked, he warns, largely replace the scrapped printing capacity in this country.

Disappearing Markets

Without dwelling too deeply on past achievements, Mr. Lee's comparison with former days must strike a chord among many of the older generation still working in the industry. In particular, his reference to the former traditional shipping markets of India, Burma, Ceylon and the Near and Middle East being "completely lost" shows how the tide has turned. The amount of direct business sent to the company by customers for these markets during the past year, he says, would barely occupy a medium-sized works for a month.

Nor is it possible to gain much solace from printing business conducted on behalf of the home trade and Commonwealth customers in Australia and New Zealand. Once again, the British summer comes in for criticism as the poor weather this year and last can be held responsible for the determination of distributors to maintain a cautious buying policy. Coupled with the economic difficulties and the Government measures introduced to deal with them, it is not surprising that Mr. Lee mentions the "restraining influence" which such events have had on the Company's trading.

From Small Beginnings

Already partly lost in the dim recollection of "how it all started" is the fact that foreign cloth imports were first permitted in any size soon after the end of the war when Lancashire's productive capacity had been concentrated to provide manpower for munitions. Long before the end of the 1940's, arrangements were made to secure supplies from Japan under which grey goods would be imported for finishing in this country and subsequently re-exported to Colonial markets, chiefly in Africa, which were clamouring for deliveries. Subsequently, quotas were fixed on the entry of Japanese goods. It was not until the past few years that India and Hong Kong came upon the scene with such substantial repercussions on local Lancashire producers.

The emphasis throughout this form of trading has been on the supply of grey cloth which, however aggravating to weavers on this side, did at least offer business to converters and finishers. Now, as observers have frequently forecast it would, the position is already beginning to change. The arrival of finished fabrics and made-up garments is gathering momentum and although loom-state cloth still accounts for the major proportion of this turnover, its share is dwindling.

Finished Cloth Now

In the first eight months of this year, imports of finished cotton goods exceeded 106 million yards, as compared with 81 million yards in the same period of 1960 and only 41 million yards in 1959. During the same period, the arrivals of grey cloth in the first eight months of the year have increased from 280 million yards in 1959 to 390 million yards last year and to 434 million yards in 1961.

This development, although scarcely unexpected in view of the establishment of finishing and making-up facilities in countries abroad, has obvious implications for the textile merchants community in London and Lancashire, as well as the primary producers. For the moment, everything is held up pending the discussions due to begin in Geneva later this month when the complete subject of international trading in cotton textiles is to be thrashed out.—*All Rights Reserved.*

MOVE TO STABILISE WORLD SUGAR MARKET

MUCH DEPENDS ON RUSSIA'S ATTITUDE

IT is somewhat strange that no information is yet available as to whether the United Nations Sugar Conference, which began at Geneva more than a month ago—on 12th September 1961—has concluded its deliberations and, if so, what decisions have been taken. While the plenary session of the Conference was being held from 12th to 19th September, the European Office of the United Nations issued Press handouts relating to the statements made by the delegates of the different countries, as well as by the representative of the Food and Agriculture Organisation, Mr. Albert Viton. Since then, however, no handouts have been issued. At one stage, it was reported that the duration of the Conference would be extended upto 4th or 5th of the current month. The latest report from Geneva, however, suggests that the Conference is split over a Cuban application for a quota of 7,285,000 tons. One delegate is quoted as having said: "The Conference is in a very bad way."

This is not surprising, because of the main difficulty in reconciling the conflicting interests in the world's sugar economy, represented by the exporting countries (particularly Cuba, the largest exporter, which is now in the Communist camp), on the one side, and the importing countries (particularly the U.S., the leader of the free world), on the other. The difficulty could probably have been solved had it not been for the insinuatory remarks made by the Cuban and Russian delegates against some countries, especially the United States. Such remarks and counter-remarks are disquieting, in that they amount to importing the cold war politics into a purely business arrangement. Surely, the World Sugar Agreement cannot be expected to achieve the chief objective of ensuring stable markets for sugar producers and consumers, unless it is backed fully by constructive marketing policies by exporting countries and domestic policies by importing countries. It is only then that a reasonable balance between the supply of and the demand for sugar can be struck. This is the challenge now posed before the Geneva Conference. Unfortunately, the fact remains that Russia and its associates have not cared to play the game. It is common knowledge that Russia and China have done their best to disrupt the free market for world sugar by unloading large quantities of sugar obtained from Cuba at cut prices. The worst sufferers of this practice have been the underdeveloped countries that produce and export sugar, countries whose champion the two Communist powers claim to be. With Cuba, the largest exporter of sugar, toeing the line of Communist powers, the future of International Sugar Agreement depends on the willingness of Russia (and China) to respect scrupulously both the letter and spirit of the Agreement. It will be worthwhile to recall here the few sane words uttered by Mr. Albert Viton (F.A.O.). He said:

"The results of the Conference will have reverberations far beyond sugar, as they will affect stabilisation tendencies in general. At present, there is underconsumption and overproduction. Consumption is increasing, but the rate of increase is diminishing. Sugar prices are still high in the low-income countries.

"International action in the fields of consumption and production are difficult, but I nevertheless suggest that no defeatist attitude be adopted. Both aspects can be dealt with by providing in the Agreement for a form of systematic international consultation. The annual export quotas have not been entirely effective during the last turbulent years. The quotas are essential, but they should be reinforced by providing for systematic discussions of marketing policies."

Huge Surplus

It is thus clear that the success of the Geneva Sugar Conference will depend on how it will revise the present Agreement so as to make it really effective in dealing with a huge sugar surplus now hanging on the world market and to what extent Russia and its associates are ready to abide by whatever decision is taken. The actual surplus at the beginning of the current season (1st September 1961) was as much as 17.6 million metric tons (raw value), as against 13.6 million tons a year before and 9.5 million tons at the end of August 1958. Thanks to such a huge surplus, the world price of sugar now stands at the lowest level since the war. The latest available quotation for sugar in the London market is £23 10s. per ton, which compares very unfavourably with £30 10s. in May 1961 and nearly £31 in July last year.

The marked increase in sugar stocks must be attributed to the failure of world consumption to keep pace with production. The aggregate world output of sugar has gone up quite markedly in the past three years, from 55.60 million metric tons in 1958-59 to 62.58 million tons in 1960-61. But the total world exports have risen from 14.70 million tons in 1957 to just 15.86 million tons in 1960. The expansion in sugar production is accounted for by both cane sugar and beet sugar, the former increasing from 29.29 million tons in 1958-59 to 31.96 million tons in 1960-61 and the latter from 21.61 million tons to 25.59 million tons. The following Table A indicates the trend of output in the major larger producing countries during the last three years:

TABLE A—*Trend of World Sugar Ouput*

(In metric tons)

	1960-61	1959-60	1958-59
Cane sugar:			
India	8,690,000	7,671,000	7,158,000
Cuba	6,764,386	5,859,525	5,961,799
Brazil	3,535,000	3,378,764	3,590,580
Mexico	1,470,998	1,620,389	1,366,443
Philippines	1,463,384	1,386,949	1,371,340

Grand Total ..	62,579,833	55,014,082	55,597,318

1961-62 Season

As far as the current (1961-62) sugar season is concerned, the F.A.O.'s publication, *The State of Food and Agriculture 1961*, observes as follows:

"World sugar supplies in 1961-62 will be affected, on the one hand, by the fact that the long-term upward tendency in production in western Europe will be temporarily halted by the restrictions on plantings imposed in some countries as a result of the exceptionally large harvests of 1960-61 and the high level of stocks. On the other hand, production is likely to continue its upward trend in the less developed regions."

An interesting account of the recent trends in world sugar trade is given in the *Commodity Survey 1960* published by the United Nations and priced at $3.00 per copy. The review reveals that, with less than half the world trade in sugar taking place in the "free" market, special arrangements account for most of the international movement of sugar. These arrangements continue to influence not only the direction of trade but also the average unit value of exports. Among the larger of such special arrangements are those applying to the bulk of sugar imports into the U.K. and the U.S. The U.K. obtains most of its requirements in terms of the Commonwealth Sugar Agreement under which the "basic negotiated price" is paid for sugar imported into Britain. Similarly, sugar is imported into the U.S. on the basis of quotas allocated in accordance with the Sugar Act. The quantities of sugar involved under the arrangements are, indeed, substantial, as will be seen from Table B.

TABLE B—*Sugar Quotas Under Special Arrangements*

Commonwealth Sugar Agreement

(In long tons)

Exporting countries	Total agreement quota	Negotiated price quota		
		1961	1960	1959
West Indies and British Guiana	914,400	683,900	687,200	667,600

Total ..	9,400,000	10,400,000	9,200,000	9,400,000

Note:—Figures in brackets give the percentage share in the total.

In addition to the aforesaid arrangements, the Soviet Union has entered into an agreement with Cuba to purchase a million tons of sugar each year for five years. Communist China has also entered into a similar agreement for the purchase of half a million tons of Cuban sugar a year for five years. These agreements followed the U.S. suspension of imports from Cuba.

Sugar Agreement

It is against this background that one has to assess the working of the World Sugar Agreement. In October 1960, it will be recalled, the International Sugar Council adjusted the 1960 export quotas of member-countries in the light of crop returns, stocks and the new pattern of Cuban trade. The aggregate of 1960 quotas was raised to 105 per cent of the basic tonnage; this was almost a third above the 1959 total and more than a sixth above the initial 1960 total. The major change was a massive increase of 1.5 million tons in the volume of Cuban exports taking place under the Agreement. There were also sizable increases in the quotas of Taiwan, Brazil and the Dominican Republic, but these were largely offset by reductions in the quotas of Peru, Poland, Soviet Union, Indonesia, Belgium and Czechoslovakia, as will be seen from the Table C given below:

TABLE C—*1960 World Sugar Quotas*

(In tons)

Countries	1961	1960		1959	
	Initial	Initial	Adjusted	Initial	Adjusted

Portugal	18,000	18,000	..	20,000	..
Total ..	5,448,000	5,805,000	6,858,800	6,890,000	5,168,400

When the Sugar Council met in November 1960, it came to the conclusion that, taking into account the latest estimates of production and the volume of sugar likely to be absorbed in terms of the various special arrangements and contracts, the quantity for disposal on the "free" market in 1961 would exceed the requirements of that market by about a million tons. It accordingly fixed the initial 1961 quota for free market exports from the larger producers at 85 per cent of basic tonnage. As compared with the initial 1960 quota, Cuba bore the brunt of the cut. The quota of Taiwan where stocks had been drawn down in the two preceding seasons was also cut by an over-average proportion. Only the smallest exporters (with quotas of less than 50,000 tons) started 1961 with the same quotas as in 1960.

To revert to the U.N. Sugar Conference. Sugar interests in India are keenly awaiting the outcome of the Conference. With Cuba agitating for a substantial increase in its quota, the chances of India's plea for an upward revision in the quota (currently at 112,500 long tons) being conceded, which appeared bright at one time, seem to have somewhat receded. But the increase requested by India is modest as compared with the massive expansion sought by Cuba. There are, however, good prospects of the country securing an additional quota in the U.S. market, as a result of the reported inability of the Philippines to ship its entire allotment. During the recent negotiations which India had with the U.S., the latter, it will be recalled, had assured the former that it would consider the grant of a fresh allotment to India, if any other quota-holder were to fail in fulfilling its commitments.

Gaiety and Colour

It's the village fair...where business vies with fun. At this seasonal get-together, villagers sell the products of their farms and handlooms. The day's business done, they indulge in a little gaiety and at dusk, return to the farm and the loom.

The colourful handloom products displayed at the fair are an eloquent tribute to their traditional art. The quaint patterns and the essential harmony of colours is utterly captivating. Small wonder, then, that the products of the handlooms find a ready market among the sophisticated in India—and abroad.

These colour-conscious artisans largely rely upon Amar Dyes for their requirements of dyes. They have good reasons too. Amar dyes offer a wide range of colours of astonishing fastness and quality, at extremely competitive prices...prices *they* can afford.

For special tastes, special colours

OUTLOOK FOR TREE-GROWN RUBBER

FORMIDABLE CHALLENGE FROM NEW SYNTHETICS

LAST year, the synthetic rubber industry again made history by starting the commercial manufacture of an entirely novel type of man-made rubber. This has become known as "stereo-regular" or, more commonly, as "synthetic natural" rubber. In contrast with the long-established varieties of general-purpose synthetics, which serve many of the functions of the natural product but differ from it in molecular structure, one of the newly-evolved synthetic materials, polyisoprene, virtually duplicates tree-grown rubber in all essential features. Being chemically identical with the latter, it is, therefore, credited with being capable of displacing it completely in every sphere of usage. Another stereo-regular type, polybutadiene, does not duplicate the natural product chemically, but is so closely akin to it in technical properties that it is expected to find extensive application as both a substitute and a diluent of plantation rubber.

Research and experimental work on synthetic-natural rubbers has been going on in the United States and elsewhere since the early 1950s. The first commercial supplies of polyisoprene became available some two years ago, when one of the early pioneers in this field, Shell Chemical in the U.S., started small-scale production of this material, mainly for market evaluation. Last October, the Company brought on stream a full-size polyisoprene plant of 20,000 tons annual capacity, and expects to have a second, of 40,000 tons, in operation by the end of this year. American firms currently producing polybutadiene, or planning shortly to commence its manufacture (interchangeably with polyisoprene), include Phillips Chemical, Firestone, Goodrich-Gulf, Goodyear, American Rubber and Chemical, and Texas-U.S. Chemicals. These latter facilities will bring the total stereo-regular capacity already to be available in the U.S.A. next year close to the 200,000-ton mark. A rise to more than twice that level is predicted by 1965. Outside the United States, projects for manufacturing these new rubbers are being brought under way by the Polymer Corporation in Canada, by Shell both in the U.K., and the Netherlands, and by Chemische Werke Huels in West Germany.

Sharp Impact Ahead

The inception of large-scale production of the new synthetic-natural rubbers is certain to make a sharp impact on the world rubber market as a whole. Over the past decade, in which the global production of natural rubber rose from 1,860,000 long tons in 1950 to no more than 2,002,500 tons in 1960, that of man-made rubbers from free-world sources more than trebled, from 534,624 tons to 1,892,500 tons. But the output potential of the synthetic rubber plants so far set up is already as high as about three million tons, while big additions to the existing capacity are still under construction or projected. Most of these plants operate on petroleum base stocks. Synthetic rubber is at present produced in the U.S., Canada, Britain, France, West Germany, the Netherlands, Italy, Japan, the U.S.S.R., East Germany and Poland; among the countries to enter this field in the near future are Australia, India, South Africa, Mexico, Argentina, Brazil, and several more in the Communist bloc.

Spectacular though the advance of man-made rubbers has been in the past, it has nonetheless been affected by certain limitations to their range of application. The hitherto predominant, styrene-butadiene (SBR) types of general-purpose synthetics—formerly known as GRS or S-type rubber—lack some characteristics of the natural product. For instance, their lower resistance to wear and abrasion, and their greater tendency to building-up heat under sustained mechanical stresses, still debar them from general use in heavy-duty tyres of large motor vehicles, tractors, earth-moving equipment, and aeroplanes, or for footwear, belting, floor-tiling, etc. That the overall demand for synthetics has nevertheless kept growing at such an imposing pace testifies to the many compensating merits of the man-made product in other respects. Among the most compelling are their availability in ever-rising quantities, their stability in price, and their uniformity in quality.

For the majority of purposes, the currently produced types of SBR are well suited for substituting natural rubber either wholly or partially in compound with the latter, while the various special-purpose synthetics are decidedly superior to tree-rubber. Thus, neoprene and nitrile synthetic rubbers are unrivalled for their resistance to oils, chemicals, heat, oxidation, ageing and weathering. Similar advantages are claimed for the newly developed ethylene-propylene (EPR) rubbers. Butyl has long become indispensable for use in inner tubes of tyres, on account of its impermeability to air and its outstanding resistance to tear; more recently, improved types of butyl have also been successfully employed for the manufacture of whole tyres and other automotive accessories, as well as for mechanical goods, conveyor belts and wire costings. Now, the advent of the new synthetic-natural rubbers has removed the last obstacles to the advance of synthetics into those few remaining fields that seemed until recently the unchallengeable preserves of natural rubber.

Economics Alone Will Decide

The great significance of the latest developments in synthetics for the natural rubber industry was aptly expounded by the Chairmen of both the Rubber Growers' Association and the Rubber Trade Association of London at the recent annual general meetings of these two bodies. In almost identical words, they stressed the fact that, henceforth, the producers of natural rubber could no longer count upon the technical properties of this commodity being sufficient to ensure its continued use. From now on, economics alone will govern the consumers' choice—between tree-grown and man-made rubbers. And this means, of course, that the two industries will be called upon to compete with each other not only on a price basis but also in their ability of promptly meeting the continually growing needs of the market both in quantity and quality. On every count, the position of synthetics is growing stronger from year to year.

In striking contrast to the frequent and often sharp fluctuations in natural rubber prices, the prices of SBR synthetic have remained virtually unchanged for the past eight years, despite substantial improvements in product quality and massive capital investments in new plant facilities. As will be seen from the accompanying Chart I, U.S. selling prices of SBR have been persistently below the annual averages of New York market quotations for natural rubber throughout the whole of the past decade. This remarkable price stability of synthetics in the face of fast-expanding demand reflects the industry's ability to offset rising costs of labour and materials by exploiting the economics of large-scale production and the advances in research and process technology for bettering its products.

CHART I

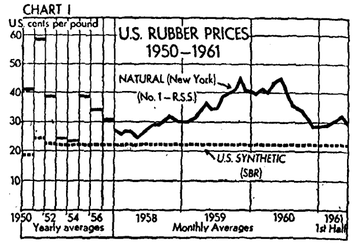

CHART II

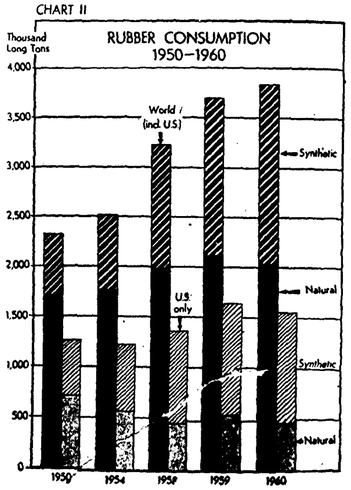

A Striking Advantage

It will be recalled that the United States and Canada were the free world's only major suppliers of man-made rubber in the early 1950s, and they still account for four-fifths of its total synthetics production today. Brought into being by the Federal Administration on the country's entry into World War II, the American synthetic rubber industry remained under public ownership until 1955, when its plants were taken over by private concerns. But, despite considerable changes arising from this transfer, both on the financial side and in respect of marketing conditions, the organisation of feedstock supplies and the integration of manufacturing facilities, price stability has remained a keynote of the industry's operations in the U.S.A. And the same concept has been adopted in the various other countries, where rubber-making plants have been brought into production during the past decade. With the assurance of a steadily widening market and readily controllable output, it is, of course, easier for manufacturers of synthetics to adjust supply to demand than it is for the natural rubber industry, where, especially in respect of smallholders' production price is a principal determinant, both in the short and long terms. Indeed, this is an outstanding instance of the confrontation of factory and agricultural production in their characteristic features.

The prices of the new stereo-regular synthetics, which are at present above those of SBR general-purpose grades, may be expected to fall with the rising scale of production, and reach stability at a competitive level in a few years time. The prospect that supplies of those novel materials will then be available for world-wide consumption at annual rates of several hundred thousand tons, and at prices well below those currently quoted for plantation rubber is bound to cause apprehension among rubber growers. Hitherto, they used to look at synthetics as merely complementary to the natural product, yet unable fully to displace it. So they had come to take it for granted that they were assured of retaining a substantial share of the world rubber market irrespective of price. But they can no longer do so.

Rapidly Rising Share

The ratio of synthetic to natural rubber consumption has steadily gone up—from 25 per cent in 1950 to 47 per cent in 1960 for the world as a whole, and from 43 to 69 per cent in the U.S.A. alone—but, as Chart II shows, the global consumption of natural rubber has, nevertheless, continued to rise until 1959. Yet the margin between supplies and demand for tree-rubber has kept contracting and widening all the time. Apart from the inevitable short-term fluctuations in output, the changes in the supply-demand position in natural rubber were accentuated in recent years by substantial, but sporadic increases in natural rubber purchases by Communist China, the Soviet Union and the satellites. Considerably more far-reaching, however, were the effects of the large natural rubber stock-piling programmes undertaken by the U.S. and U.K. Governments in the 1950s. These have, over the years reduced the working stocks of the markets (other than Singapore) below the level adequate for meeting normal needs. They induced excessive price fluctuations that could only be detrimental to the structure of the rubber market, though they were immediately profitable for the rubber growers and dealers.

The decision taken late in 1959 substantially to reduce the American stockpile, and virtually to liquidate the British one, greatly eased the acute shortage of free rubber supplies. But this relief came at the very time when the world demand for natural rubber was heading for a decline in the face of the fast-growing availability of synthetics not only from American but also from European and other sources. Various major rubber consuming countries that until a few years ago depended for their supplies of man-made rubbers chiefly on dollar-paid imports from U.S. and Canadian producers, and therefore, had to keep their purchases of these materials in line with their balance of payments are now rapidly building up their own rubber-making facilities. The advent of the new synthetic-natural rubbers will no doubt provide an added stimulus for petrochemical enterprises to step up the world's synthetic rubber capacity in the years to come.

The implications of this prospect were also put into clear perspective at the recent annual meeting of the Rubber Growers' Association, when the Chairman pointed out that, whatever new form of natural rubber may be developed, it can eventually be duplicated by synthetic-natural. It would, therefore, be essential that any attempt at evolving improved varieties of tree-rubber should be directed from the outset at making them competitive in price, even at levels below those of current prices of synthetics. For, as competition between natural and man-made rubbers intensifies, the latter may become still cheaper than they are today. That the need for cutting the costs of rubber-growing by raising the industry's productivity and technical efficiency has long been recognised is evident from the comprehensive Government schemes, initiated in 1955, for replanting most estates in Malaya and Ceylon with high-yielding stock, which is now coming into bearing; in Indonesia, too, a Government replanting programme is at present under consideration. The Government of the Malayan Federation has also been co-operating with the industry in research, which recently included, e.g., studies on the admixture of oil to natural rubber ("oil-extended" natural rubber), and the blending of natural and synthetic rubbers.

Old Synthetics

Despite the increased efforts of natural rubber producers to meet the growing challenge from synthetics, it seems certain that the advance of the latter will still gather momentum as the new stereo-regulars enter the world markets on a mounting scale. Their introduction, however, inevitably poses fresh problems also for the synthetic rubber industry itself. For these novel materials will have to stand up to the twofold competition from both the natural product and the longer-established types of general-purpose synthetics. Vast sums have been invested since the war in building the complex facilities for making SBR and its oil-based constituents, butadiene and styrene. A good many new American plants and nearly all those in Europe and elsewhere have been set up only in the past few years, while others are still under construction or projected. So those older and cheaper synthetics of the SBR type, which today account for over three-quarters of the total world supply of man-made rubber, will retain a substantial share of the market for some time to come, but are bound to lose ground in the longer term owing to the co-existence of the newer and technically superior synthetic-naturals. But these problems of change solely arise from a major technological break-through of the synthetic rubber industry's own making. In the end, the growing availability of greatly improved man-made products can only bring further big gains for synthetics in the world's rubber markets.—*By special arrangement with Petroleum Press Service.*

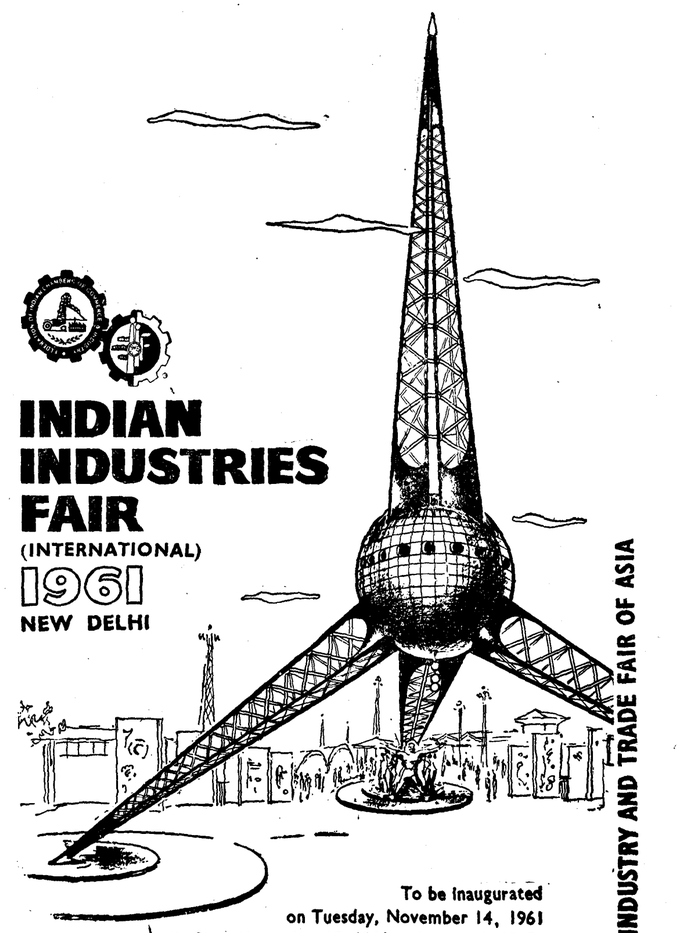
RUBBER PLANTING IN INDIA

The target fixed for rubber replanting during the third Plan period is 45,000 acres. There are also plans to encourage new plantings. In the Kerala Government plan, there is a provision of Rs. 4.65 crores for rubber plantation. It expects to plant 20,000 acres as Government projects, to allot 10,000 acres to landless, poor and educated unemployed, and to encourage small-holders to plant 67,000 acres and larger estates 10,000 acres. The Madras Government has also selected 3,000 acres for rubber planting as Government project and expects to bring about 2,000 acres under rubber during the third Plan period. Besides, the Central plan has provided Rs. 3·9 crores for the development of rubber plantation.



To be inaugurated
on Tuesday, November 14, 1961
(open to public from November 15, 1961 to January 1, 1962)

FIRST INDIAN-MADE ELECTRIC LOCOMOTIVE

SLOW BUT STEADY PROGRESS IN RAILWAY ELECTRIFICATION

WITH the ceremonial commissioning by Prime Minister Nehru of the first Indian-made electric locomotive on 14th October 1961, another glorious chapter was added to the history of the Government-owned Chittaranjan Locomotive Works which, by that date, had produced 1,266 broad-gauge steam locomotives. This electric locomotive, which will be assigned to the difficult Western Ghat section of the Central Railway, is the first of a series of 21 D.C. locomotives to be completed by February 1963. It weighs 123 tons, with an axle load of 20.5 tons, and has been designed in consultation with the English Electric Company which has supplied the equipment. Of its 31,000 components, about 55 per cent have been imported. A rough idea of its cost (which is yet to be worked out) may be had from the cost, namely, Rs. 12 lakhs, of an imported electric locomotive.

It may be that the cost of an Indian-made electric locomotive will turn out to be more than Rs. 12 lakhs in the early stages of production. But the expectation here seems to be that, even as the cost of a broad gauge steam locomotive has now come down to Rs. 4.1 lakhs from the level of about Rs. 7 lakhs in the initial stages, the cost of an Indian-made electric locomotive will be comparable to that of the imported type after some years when production will run at the rate of six units a month, as compared with the monthly rate of production of 14 broad-gauge steam locomotives. Whatever be the exact cost of the electric locomotive, its manufacture within the country means a saving of about Rs. 1 crore in foreign exchange on the first batch of 21 units now under production. When the Heavy Electrical Project begins to supply complete traction equipment for the future electric locomotives to be built at the Chittaranjan Works, the indigenous content will be greatly increased and there will be further saving in foreign exchange. On about 225 electric locomotives to be produced during the third Plan period the total saving in foreign exchange may well be anything between Rs. 16 crores and Rs. 20 crores.

This saving in foreign exchange is a big consideration, for the import of 110 A.C. electric locomotives during the second Plan period has involved a large amount of foreign exchange expenditure. Also, in the overall cost of electric traction, expenditure on rolling stock is appreciable; on main lines, it is about 33 per cent and, on suburban sections, it is still more. In the second Plan period indigenous manufacture of components of overhead traction equipment has been fairly successful. In the third Plan period, there will be further progress towards self-sufficiency. Apart from the complete electric locomotives to be produced at the Chittaranjan Works, electric multiple units and mechanical components of D.C. electric multiple units will be made in the private sector; mechanical components of the A.C. electric multiple units will be made at the Integral Coach Factory at Perambur; the electrical components of electric locomotives and electric multiple units will be manufactured by the Bhopal Heavy Electricals; and the Chittaranjan Works will manufacture the mechanical components of all electric locomotives, broad-gauge or metre-gauge, A.C. or D.C., and assemble the electrical equipment. Already, orders have been placed on the Chittaranjan Works for making the mechanical components of 57 freight-type broad-gauge A.C. locomotives and 16 A.C. metre-gauge mixed traffic-type locomotives. But it is feared that multiplicity of design might handicap production at the Cittaranjan Works to some extent.

All this effort to achieve self-sufficiency in rolling stock will become increasingly important because of the progressive electrification of sections of the Indian railways. The third Plan programme includes provision for electrification of about 1,100 miles of railways where the replacement of steam traction is considered necessary for operational reasons, having regard to the density of traffic already reached and the expected increase in traffic. The programme, estimated to cost Rs. 70 crores, provides mainly for the completion of work on those sections which were taken up for electrification in the second Plan—the sections serving the steel plants and the coal mining regions. The only new section which is proposed to be taken up during the third Plan period for electrification is that from Mughalsarai to Kanpur; the electrification of this section is required mainly in connection with the future movement of coal.

The progress of railway electrification up till now has, of course, not been very fast. Up to the end of the first Plan, only 242 route miles had been electrified. The second Plan had originally provided for electrification of about 1,442 route miles. But this programme had to be rephased due to the difficult foreign exchange position. By the end of the second Plan, the electrified route miles were less than 1,000. By the end of the third Plan, they will be about 2,000 miles in all. This slow but steady progress in railway electricfication will still be substantial, for it will have covered one-eighteenth of the entire railway route mileage in India. On this part of the route mileage, electric traction will have distinctly greater advantages than steam or diesel traction. It will be cleaner and cheaper than the latter. An electric locomotive, it has been estimated, can replace 2½ steam locomotives. In other words, if a steam locomotive can haul traffic over 100 miles a day, an electric locomotive can haul traffic over 250 miles a day. And the maintenance cost of an electric locomotive will also be much less than that of a diesel or steam locomotive. With these manifest advantages, railway electrification is by far the most important measure in the modernisation of railway operation. But the pace of electrification cannot be as fast as one would like it to be, for the capital outlays that it will involve by way of overhead transmission lines, electric locomotives and other rolling stock, power generation, and so on will be initially far heavier than are involved in the mere replacement of older steam locomotives and other rolling stock by newer ones or in the adoption of diesel traction. Perhaps, it will be a great achievement, if all the main lines can be electrified and the secondary lines dieselised in the next 20 years or so.

NEW BRITISH SWITCHGEAR DESIGN

Messrs. English Electric (Stafford. Midlands) have introduced a new design of switchgear equipment to control electrical power supplies at voltages approaching that of lightning. Voltages of this magnitude, it is pointed out in this connection, are becoming necessary for feeding power economically over great distances, such as exist in India. Australia and North and South America.

The new equipment has just been introduced to engineers at a conference held by the firm. A multi-million-pound test machinery has been installed to prove the reliability of the switchgear before it goes into service. This machinery also ensures that the gear can deal swiftly with faulty conditions, such as short circuits caused by birds or falling trees, which could impose on the equipment voltage surges of up to 1,500,000 volts, comparable to the full power of a lightning flash. The capacity of the test equipment has recently been doubled to prove very-high-duty switchgear, worth £1,500,000. ordered for Britain's new 400,000-volt Grid system.

The main problem in switching off electrical power, particularly at the high currents and voltages common today, is to put out the electric arc that forms and keeps the current flowing even when the switch is pulled out. In high-voltage, high-power switches, the arc is normally blown out by a powerful blast of air. This is done more quickly and reliably than before in the new design by pressurising the whole switch assembly with dry air, which ensures that the arc is not only blown out immediately but prevented from re-forming.

The new equipment is stated to be compact, makes use of reliable and cheap new high-strength materials, and is built from standard components to lower costs.

JAPANESE SHIPPING

A White Paper on Japanese Shipping was recently published by the Transportation Ministry of the Government of Japan. According to it, as of March 1961, Japan had an ocean-going merchant fleet estimated at 5.49 million gross tons (683 ships), an increase of 470,000 tons (9.4 per cent) over the figure for the previous year. The total freight carried during 1960 by Japanese bottoms was 5.92 million tons of exports, 43.15 million tons of imports and 3.47 million tons between third countries, making a total of 52.54 million tons. The figure represented about 5 per cent of overall international marine transportation for the year.

The income from freightage was: exports, 52,700 million yen, imports, 118,300 million yen and third nation trade, 20,100 million yen, or a total of 191:100 million yen, an increase of 8.4 per cent over the previous year's figure.

But, although the volume of cargo transported by Japanese bottoms rose for the year, the proportion of overall Japanese trade carried in Japanese bottoms declined. Exports carried during the year represented 54.6 per cent of the total as against the previous year's 56.1 per cent, while 46.3 per cent of imports were carried in comparison with the previous year's 51.5 per cent.

The reason for the decline in the proportion of cargo transported by Japanese bottoms is stated to be the relatively slower increase in the number of ships available, as compared with the growth in imports. The White Paper has, therefore, warned that, unless the number of bottoms is increased, there will be an adverse effect on Japan's international payments balance. It is recalled here that total freightage paid to foreign ships in 1960 was $300 million (108,000 million yen). If this drain is to be reduced, the merchant fleet will have to be augmented. But this will not be an easy job, for Japanese shipowners share only 21.4 per cent of the cost of building new ships and there is currently a deficit of 72,000 million yen in depreciation.

MOTORS WITH VARIABLE-SPEED GEARS FOR MACHINE TOOLS

In machine-tool construction, according to the Press Bureau of German Industry, there is a growing tendency to build machines by using prefabricated assembly units. Such machines built of unitised elements can be more economically manufactured owing to simplified construction and reduced assembly time involved. This in turn affords an increase in machine production. The use of standardised assembly units, some of which have already been put on the market, means a saving in time and costs for development, design and construction of the complete machine to the manufacturer, while on the buyer's side, stock-keeping and spare parts problems are simplified.

It was in line with this development that Siemens-Schuckertwerke designed novel motors with variable-speed gears in co-operation with Zahnradfabrik Friedrichshafen, the motors comprising a complete, remote-controlled variable-speed gear unit assembled with an electric motor. They are especially suitable for main drives of machine tools, but can also be employed to drive feed mechanisms. The unit may either be accommodated in the machine stand or installed externally to the machine tool. Arranging the drive unit separately from the work spindle is of particular advantage, since undesirable vibration and the friction heat of the electro-magnetic multiple-disc clutches of the gear are kept away from the spindle. A noteworthy feature is that the individual speed steps of the motors may be switched when the motor is under load, e.g., during a machining operation.

The gear unit comprises three trains of planetary gear wheels, and is designed for eight output speed which are provided by appropriately combining three of the built-in electro-magnetic multiple-disc clutches. The gear unit is lubricated by oil which is circulated and also dissipates the heat. In addition to this, an idling and braking position are provided.

Motors with variable-speed gears for output ratings of 4, 5.5, 7.5 and 11 kw. have been put on the market so far. Further units for 20, 30 and 45 kw. are stated to be under preparation.

MORE GERMAN TECHNICIANS FOR ROURKELA

There were only 100 West German technicians at Rourkela till very recently—80 on maintenance and 20 on operational jobs. The lack of trained supervisory personnel in sufficient numbers has been a major handicap in Rourkela during recent months. In response to the urgent requests made by the Hindustan Steel management for technical personnel who could help smoothen the running-in period of the integrated steel plant at Rourkela, the West German steel industry has just released 34 engineers for service in India. These personnel have now arrived; they form the first group of a total about 230 experts who will be released by several leading West German firms for work at Rourkela.

NEW PRODUCTS AND PROCESSES

New Method to Clean Watches

A new method—ultrasound—is being used in Czechoslovakia to clean the miniature parts of wrist watches. It rids the parts, which have been heated in a chemical solution, of the tiniest particles of dirt. Cleaning with ultrasound, it is claimed, is most perfect, faster and increases the quality of the clock-work. The wrist watch runs steadier and does not have to be oiled very often.

Printing Without Pressure

A method of printing which involves the use of an electrostatic charge, resinous ink and stencils, but eliminates the need to use pressure, has been developed in America for marking bottles and similar fragile objects. The printing "plate" is a stainless steel mesh of 200 wires to the inch which carries a static electric charge of about 1,500 volts. The surface to be printed has an opposite charge. A stencil placed between the "plate" and steel mesh outlines the letters to be printed. During the printing operation, a revolving brush puts dry, powdered ink on the screen. The ink particles pick up the charge from the screen and when this is brought close to the surface to be printed they are attracted by the opposite charge and jump across. The printed matter is then heated to bond the resinous ink to the surface. The sponsors of the process claim that it is cheaper than conventional printing and that it will work on low grade newsprint equally as well as on containers and pharmaceutical products.

Nutrition of Plants

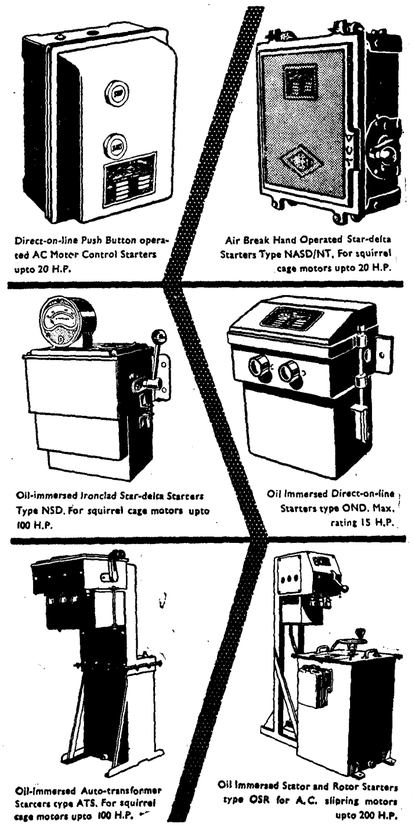
Desert micro-flora can actively produce elements for the root nutrition of plants, according to a scientific conference held at Tashkent, the Soviet Union on 5th October. The conference is discussing ways for applying latest achievements in microbiology in the agriculture of Central Asian Republics. Turkmenian biologists established that micro-organisms in the soil of the Central Asian Karakumy Desert are in the main "omnivorous" and can assimilate nitrogen needed by the plants from any source including the atmosphere. Experiments have shown that the desert micro-flora produces root nutrition elements most actively in the case of mixed planting of lucerne and Sudanese grass, as well as maize. By the end of the first year of cultivation the biological activity of the soil increases five to ten times. Such a choice of crops, scientists said, will provide ample fodder for the big grazing livestock herds in the desert. The scientists also studied processes occurring in the micro-flora of the Karakumy Desert in cotton plant cultivation. Their conclusion is that to obtain good cotton yields the soil must be saturated with organic substances. The findings of Turkmenian biologists are highly important for the development of arid areas of Central Asia.

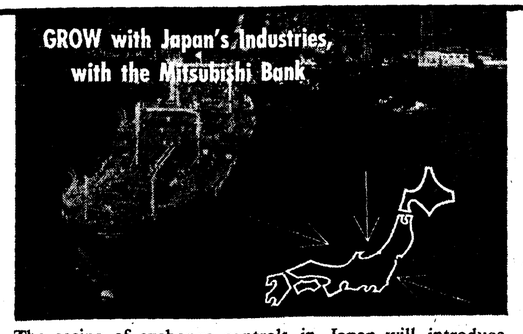
Stimulator for Plant Growth

A new plant growth stimulator has been isolated by Soviet biologists from mycelium, a substance contained in soil fungi. In green house conditions the yield of beans treated with a solution of the new stimulator has doubled, according to an experiment conducted at a conference of microbiology in Tashkent in Uzbekistan. The experimentators, a group of Moscow University scientists, claim that the new stimulator whose effects are most pronounced in the case of legumes, cabbage, and tomatoes will also help to push these crops farther north, into the highlands and desert areas with a shorter vegetation period. The experiment stems from the discovery made by the scientists that most soil fungi contain elements which have either a stimulating or a retarding effect on plant growth. The scientists established a number of advantages of the mycelium extract of soil fungi over the well-known gibberellin stimulators. It does not cause abnormal elongation of stalks or narrowing of leaves as often is the case with gibberellins. The plants surrounding the treated crop are either inhibited or left unchanged. Therefore the use of the new stimulator, it is claimed, is not accompanied by increased weed growth.

Special Hinged Coupling for Remote Control

A foundry at Slikkerveer, Holland, has produced a special coupling for the mechanical remote control of inaccessible parts of machines and installations (shut-off valves, waterproof partitions, etc.). It works by means of rotating shafts at an angle to each other. The coupling, which operates on the principle of geared transmission, consists of two cogwheels, one of which is provided with eight upright cylindrical studs. The other has eight radially projecting teeth. The shafts on which the two cogwheels are mounted are fitted with bearings immediately behind the cogwheels. There is a hinged connection between the two bearings. When the hinge is closed, the two cogwheels engage fully and the shafts are then end to end. As the hinge is opened, the cogwheels begin to separate on one side with the result that the number of teeth engaged at a given time slowly decreases. The limit to which the hinge will open is 160°. As one of the arms of the hinge pivots around the shaft on which the studied cogwheel is mounted, this 160° flexibility applies in every direction. By using a combination of shafts fitted with these couplings and making different kinds of detours, it is possible over fairly long distances to operate parts of machines and installations that are hard to get at. A special feature is that the angles at which the various shafts rotate in relation to each other can be altered without having to halt the mechanism. The new coupling is manufactured from high-grade materials, has low-friction characteristics and requires little maintenance. It is intended for manual or low-speed mechanical operation.





The easing of exchange controls in Japan will introduce new economic growth as foreign capital is introduced to Japan's booming industries.

WORLD TREND IN OILS AND OILSEEDS

OUTPUT OF SOYABEAN AND GROUNDNUTS EXPECTED TO BE HIGHER

THE world prices of vegetable oils and oilseeds in general have, of late, shown a distinctly sagging tendency, reflecting largely the improvement in the supply position of oils and fats. The possibility of a sizable increase in supply of oil during 1961, it may be recalled, was forecasted by Mr. J. C. A. Faure of Unilever in his address at the meeting of the International Association of Seed Crushers in June last. Unilever, usually a source of a reliable estimates, had placed the total availability of oils and fats during 1961 at 32.6 million tons, representing an increase of 500,000 tons. Price movements of oils and seeds in recent weeks by and large substantiate Unilever's assessment of the prospects for oil. Groundnut oil (West Africa), for instance, which had touched £137 per ton in the London market earlier this year, has now fallen steeply to £106. Similarly, the price of coconut oil (Straits) declined from £95 to £81 and that of soyabean oil from £118 to £90.

The following table shows Unilever's estimate of the supply of oils and fats in 1961 from different regions, as compared with the figures for the last two years and during the pre-war period:

TABLE I

Fats and Oils: World Production

(In terms of oil or fat)

Increase in Supply

The increase in the supply of oil is the result of sustained improvement in world oilseeds crop, in general. Table II appearing on this page shows that free world output of groundnut, soyabean, cottonseed, linseed and castorseed in 1960-61 was distinctly higher than in the previous year. This progress is expected to be maintained (except, perhaps, in linseed) in the current season as well, according to a comprehensive study on vegetable oils and oilseeds appearing in the latest *Tropical Products Quarterly* of the Commonwealth Economic Committee. Table II in this article is from this *Quarterly*. On the basis of information so far available about the current crop, the *Quarterly* points out that the soyabean output alone in the U.S., the major producer, will rise by 22 per cent over the year to 18.3 million tons in 1961-62, a new record. Little is so far known about the Chinese position, "although the indications are that serious natural disasters have again hit production." The groundnut crop is expected to be slightly smaller in the U.S., but this will be more than compensated by the increase reported in India, Senegal and Nigeria. Increased rapeseed crop in Western Europe, particularly in France, Sweden and Germany, according to the *Quarterly* is likely to offset the moderate fall expected in Canada. "A high level of rapeseed production is, therefore, still possible." The information on sunflower seed is so far not available, except in the case of Russia (the largest producer), the output of which is expected to be substantially higher as a result of favourable weather. In respect of cottonseed, the output in the U.S., it is estimated, will be slightly lower at 5.2 million tons (as against 5.3 million tons in 1960-61). Ceylonese production of coconut is placed higher this season, but some decline is expected in the Philippines and Malaya. Latest indications are of reduced production of both palm kernels and palm oil in 1931 in Africa. Owing to severe drought in North America, the linseed crop in that region is expected to suffer a marked setback, resulting in small export supplies.

Major Seeds

It may be seen from Table II that, in 1960-61, the latest year for which official estimates are available, the output of soyabeans was about 17 million tons, as compared with only 16 million tons in 1959-60. This increase was due mainly to the expansion of output in the U.S. (which accounts for over 90 per cent of output in non-communist countries), from 14 million tons to 15 million tons. In respect of groundnuts, India continues to be the major producer. Its production rose from 3.9 million tons (in shell) to 4.4 million tons and that in West African countries from 0.97 million tons to 1.12 million tons. Most of the other producers of groundnuts also reported an increase, except Burma, Sudan and Congo (former Belgian). Cottonseed production was higher, despite some decline in the U.S. crop. This was due to larger output in India, Brazil.

The expansion in output has not always led to an increase in world exportable surplus for several reasons. Export of soyabean during January-June 1961, for instance, was about one-third less than that in the same period in 1960. Most of the decline was, of course, in Chinese shipments. U.S. shipments, too, fell off slightly, as compared with the heavy shipments towards the close of 1960. In the sphere of groundnuts and groundnut oil exports, the *Quarterly* says that increased output in West Africa has not moved into trade yet. On balance, it appears that the somewhat heavier exports of groundnuts from the Gamlia Nigeria and Senegal-Mali, have been offset by reduced shipments from Niger and China. The increase in Argentine and South African shipments of groundnut oil failed to compensate for the absence of shipments from China and the reduction in those from Senegal-Mali.

Prospects for Linseed

It is reasonable to assume that, in view of the better crop position, the tempo of exports of seeds and oils during the latter part of the year would gain momentum. But, in the case of linseed (in which India, being a major producer, with good exportable surplus, is vitally interested), the world supply position of linseed and oil is expected to be tight in the current half-year. In a detailed study of the linseed position, the *Quarterly* observes as follows:

"The prospects of short supplies of linseed and linseed oil for export during the second half of 1961 have been reflected in the upward trend in prices since the beginning of July. This position contrasts sharply with that prevailing during most of the 1960-61 crop year when supplies in the major exporting countries—Canada the U.S. and Argentina—have generally been large. Two factors have changed the position; one is that the large Argentine stocks have been sharply run down since the beginning of 1961, and the other is that drought conditions have seriously affected the current crops in the main linseed producing areas of Canada and the U.S. During the past twelve months, Argentina has been the main exporter of linseed and linseed oil, in oil equivalent. The

* The independent States of Senegal, Mali, Niger, Dahomey and Upper Volta. † Unofficial estimates.

P.S.—(1) In this table, the Southern hemisphere harvests are, in general, combined with the previous harvests of the Northern hemisphere. Thus, under 1960-61 are given the northern harvests occurring mainly in the latter half of 1960 and the southern harvests occurring in the first half of 1961. For copra, palm kernels and palm oil, however, production figures are on a calendar year basis, for example, those in 1959-60 column refer to 1960. (2) The production of China and Soviet Union is excluded from this table, except where shown separately beneath the crop totals. There is some output of sunflower seed, linseed and castorseed in China and of soyabeans, linseed and castorseed in Soviet Russia, but no reliable indications of the size of the crop are available. (3) Figures of copra, palm and kernel and palm oil output represent commercial production only.

INDUSTRIAL IBCON CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT—
PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL
STORES ORGANISATION • CONSUMABLE STORES CONTROL
RAW MATERIALS CONTROL • FUEL AND STEAM UTILISATION
TRANSPORTATION METHODS • MECHANICAL HANDLING
PRODUCT QUALITY CONTROL • OPERATIONAL RESEARCH
WORK STUDY • BUDGETARY CONTROLS
VALUATION OF PLANT & BUILDINGS
DESIGN AND ESTIMATES OF EXTENSIONS

ON LABOUR—
METHOD AND WORK STUDY • PRODUCTIVITY INDICES
TIMEKEEPING SYSTEMS • WAGE PAYMENT SYSTEMS
JOB EVALUATION • WAGE STRUCTURES
PERSONNEL RECORDS • LABOUR POLICIES
HUMAN RELATIONS • COMMUNICATION
REORIENTATION LECTURES • FOR LABOUR AND SUPERVISION

IN OFFICES—
MANAGEMENT ORGANISATION • EXECUTIVE LEVEL WORK
CLERICAL PROCEDURE • MANAGEMENT CONTROLS
WORK MEASUREMENT • BUDGET FORECASTS
LAYOUT, COMMUNICATIONS AND EQUIPMENT
AND
THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH
PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

EARNINGS OF TEXTOOL RISE

ISSUE OF FRESH CAPITAL IN THE OFFING

THE progress made by the Textool Company Limited (Managing Agents: Messrs. Balasundaram and Company, Coimbatore) during the year ended 30th April 1961 shows perceptible improvement. The Company is engaged in the manufacture of textile machinery (such as spinning frames and spares), as well as diesel engines, railway signalling equipment and alloy steel, and its products are rapidly gaining in popularity all over India. Although its sales in 1960-61 rose only modestly, that is, by Rs. 6.45 lakhs to Rs. 172.82 lakhs or by 3.8 per cent, the gross earnings have improved by Rs. 4.46 lakhs to Rs. 17.53 lakhs. This is due to the fact that the turnover in the year under review was accounted for mostly by sale of complete manufactured machinery, unlike in the previous year when the Company had taken up orders for renovation of old machinery in textile mills. Consequently, the profit-margin was better, the ratio of gross profit to sales having improved from 7.8 per cent in 1959-60 to 10.1 per cent in the year under review. The net profit, however, is practically the same as that for 1959-60, just sufficient to maintain the dividend at 15 per cent (taxable) on the increased capital. Thus, at Rs. 6.65 lakhs, the net profit is higher by less than a lakh and, of that, the dividend takes away Rs. 5.74 lakhs, leaving only a small margin for being ploughed back, as will be seen from the following comparative table of progress:

(In lakhs of rupees)

	For the year ended 30th April			
	1961	1960	1959	1958
Sales	1,72.82	1,66.37	1,82.27	1,41.20
Other income	1.62	0.90	0.55	0.20
Closing stocks	45.78	38.76	38.89	40.15
Raw materials, spares, power consumed	90.90	90.32	61.30	1,00.22
Other expenses	78.03	63.75	57.96	58.90

Ordinary	5.74 (15%)*	3.29 (15%)*	2.99 (15%)*	1.98 (12%)
Carry forward	0.17	0.04	0.01	0.30

* Subject to deduction of tax.

The reasons for only a fractional increase in net profits are the higher provisions which have a prior claim. Thus, the Managing Agents' remuneration takes up Rs. 1.33 lakh (Rs. 82,000 in 1959-60) and depreciation Rs. 4.05 lakhs (Rs. 3.97 lakhs in the previous year). The provision for taxation is more than double at Rs. 5.50 lakhs, as against Rs. 2.60 lakhs in the preceding year. The development rebate reserve has received Rs. 84,000, as against Rs. 60,000 a year ago.

The Directors are quite optimistic about the working of the Company in the coming years. Although the production of ring frames and fly frames during 1960-61 was affected by the shortage of certain types of imported materials, such as top arm, drafting systems and ball bearing assemblies, they say that, in future, regular and increased supplies of these items would be forthcoming from indigenous sources. Consequently, they expect that the Company would be in a position to increase its production. They further say that demand for various items of textile machinery manufactured by the Company is rising on account of the issue of licences for establishment of additional spindlage. The Company, according to its Directors, has substantially increased its production of diesel engines. It has also begun manufacture and sale of railway signalling equipment, a product enjoying a broadening market. Production of alloy steel has also increased, enabling the Company to market special steels to selected engineering industries, besides meeting its own requirements.

The Company proposes to move a resolution at the ensuing annual general meeting for increasing its authorised capital by Rs. 50 lakhs to Rs. 1 crore. It also proposes to approach the Central Government for the issue of Rs. 20 lakhs of additional capital in the first instance.

Explaining the need for additional capital, the Directors say that, as the Company has to sell its products on deferred payment system also, its borrowings have increased and that it is desirable to reduce such borrowings by having a larger amount of working capital. It may be noted here that, in 1960-61, the paid-up capital of the Company rose from Rs. 33.22 lakhs to Rs. 39.84 lakhs, following the calling up of the balance of Rs. 25 in respect of 19,922 equity shares issued in January 1960. Further, the calls in arrears also declined from Rs. 1.35 lakh to a mere Rs. 4,675. Its reserves and surplus are still modest at Rs. 14.69 lakhs and will require considerable augmentation in the coming years. The dependence on borrowed capital is pretty heavy. Loans secured and unsecured aggregate Rs. 92.94 lakhs, besides current liabilities and provisions of Rs. 101.49 lakhs, the total indebtedness to outsiders being of the order of Rs. 194.43 lakhs, that is, nearly Rs. 2 crores. It is, however, fully covered by current assets amounting to Rs. 200.01 lakhs, of which stock-in-trade and stores alone account for Rs. 78 lakhs, trade debts for Rs. 64 lakhs and loans on deferred payment basis Rs. 30 lakhs. The gross block account has risen by Rs. 8.34 lakhs to Rs. 77.83 lakhs and has been adequately written down to Rs. 47.57 lakhs.

The Rs. 100 fully paid shares of the Company are currently quoted at Rs. 188 *cum-div.* On an *ex-div.* basis and at the proposed rate of dividend of Rs. 10.5 net per share, they offer a net yield of 5.9 per cent per annum.

HINDUSTAN ELECTRIC CO., LTD.

The Hindustan Electric Company Ltd. (Chairman and Chief Executive: Mr. D. D. Desai), which has three factories (located at Faridabad, Howrah and Baroda) engaged in the manufacture of several electrical machinery and equipments, has announced a large expansion programme to be implemented in collaboration—financial and technical—with the world-renowned Swiss firm, Messrs. Brown Boveri and Co. Ltd. The Company has already secured the necessary industrial licence for the manufacture of articles covered by a number of patents registered by the Swiss firm. Accordingly, the Faridabad factory will undertake the manufacture of A.C. and D.C. generators, A.C. and D.C. motors of special types including Ward Leonard, cranes (variable speed) special purposes motors, etc., and welding sets. The Howrah works will manufacture transformers of all types upto 25,000 K.V.A. and 220 K.V. The Baroda works will undertake production of high tension air blast circuit breakers upto 220,000 volts, medium tension circuit breakers upto 220,000 volts, low voltage circuit breakers of all types, isolators upto 220,000 volts, instrument transformers upto 220,000 volts, lightning arrestors upto 220,000 volts, high tension and low tension switchboards, control boards for various purposes and electric furnaces of all types.

For financing the expansion programme, the Company proposes to raise its paid-up capital by Rs. 80 lakhs to Rs. 140 lakhs by issuing 80,000 equity shares of Rs. 100 each. The Swiss firm will contribute Rs. 60 lakhs of fresh equity capital and this amount will be utilised for importing plant, equipment, etc. The balance of Rs. 20 lakhs, represents the right-*cum*-public issue. The Directors of the Company, who together hold 50 per cent of the total capital, have decided not to exercise this right option. The other shareholders will also be allowed to do so. If, however, the shareholders do not agree to this, then the amount of public issue will be Rs. 10 lakhs. It may be noted that the Rs. 100 paid shares of the Company are currently quoted at Rs. 185.

ELECTRO-EQUIPMENT CORPORATION LTD.

The Electro-Equipment Corporation Ltd. proposes to enter the market next month, with a public issue amounting to Rs. 17.15 lakhs (171,500 equity shares of Rs. 10 each). The issue represents almost 50 per cent of the total issued capital of Rs. 35 lakhs. The present shareholders of the Company will take up shares worth Rs. 10 lakhs and the balance of Rs. 7.85 lakhs will be subscribed by the Directors and their friends.

Under a licence secured in October 1958, the Corporation will put up a plant for the manufacture of electric metres at Mulund, a suburb of Bombay. The plant, the total capital outlay of which is estimated at Rs. 50 lakhs, is expected to commence production in January next. It will initially manufacture 60,000 metres a year on a single-shift basis. By stages, its capacity will be raised to 180,000 metres on a two-shift basis. The Company has entered into a collaboration agreement with Messrs. Cekop, Warsaw (Poland), for the supply of the necessary plant and equipment, technical know-how and technical assistance as well as manufacturing licence. The Polish collaborators have already supplied the complete details, and plans for installing these plants and equipments are almost complete. It is said that no immediate payment of foreign exchange is involved either in the supply of plant and machinery, technical know-how or in the payment of royalty, as the whole scheme is based on rupee payment.

RESULTS OF MORARJEE GOCULDAS

ALL-ROUND IMPROVEMENT

THE shares of the Morarjee Goculdas Spinning and Weaving Company Limited (Managing Agents: Piramal Sons Private Ltd., Bombay) have shot into the limelight on the Bombay Stock Exchange this year, and having appreciated by more than 150 points to Rs. 468 in June-end, are still going strong at present at Rs. 395 *cum-div.* against Rs. 290 *cum-div.* a year ago. Apart from the general buoyancy enjoyed by the cotton textile industry in the country, the strength in these shares reflects the growing confidence of investors in the Company, which has been amply justified by its working results for the year ended 30th June 1961. Not only has the Company made larger sales, earned more profits and paid a higher dividend on the equity capital as compared with the previous year but has also set apart a larger amount to the reserves, thereby strengthening the Company's financial position further.

Sale proceeds during the year under review increased from Rs. 394 lakhs to Rs. 497.63 lakhs, the highest level to be seen in recent years. In view of the subdued trend in the country's cotton market during the season 1960-61, cost of cotton consumed at Rs. 175.09 lakhs against Rs. 155.28 lakhs previously, apparently reflects an increase in production. And, despite a substantial rise in wages and other expenses, excluding stores and other materials, from Rs. 151.56 lakhs to Rs. 202.95 lakhs, the gross profit has gone up by more than Rs. 20 lakhs to Rs. 61.35 lakhs and the net profit by nearly Rs. 9 lakhs to Rs. 24.55 lakhs. In consonance with the improved results, the Directors have stepped up the dividend on the equity capital from 21.5 per cent per share of Rs. 100 each to 24 per cent, giving a net dividend of Rs. 16.80 against Rs. 15.05 previously, and transferred Rs. 10 lakhs to reserves against Rs. 5.65 lakhs in the previous year. Allocations of prime nature are higher by more than Rs. 11 lakhs, with the provision for depreciation amounting to Rs. 15.91 lakhs (Rs. 11.91 lakhs) and for taxation to Rs. 16.50 lakhs (Rs. 10 lakhs). Managing Agents' commission amounts to Rs. 4.38 lakhs, as against Rs. 3.25 lakhs previously.

A synoptic view of the Company's progress in the past four years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale proceeds	4,97.63	3,94.00	3,79.48	3,66.06

Carry forward	1.55	0.48	2.88	0.22

* Subject to deduction of tax.

Much of the progress made by the Company is due to its sound policy of rehabilitation and modernisation, on which it has incurred a capital expenditure of Rs. 134.19 lakhs during the past seven years. During the year under review alone, the Company made additions of Rs. 22.01 lakhs to plant and machinery and placed orders for new machinery of Rs. 27.50 lakhs. The gross block account of the book value of Rs. 325.39 lakhs has been conservatively written down to Rs. 94.38 lakhs.

The share capital of the Company has been maintained at the previous year's level of Rs. 69 lakhs, comprising Rs. 51.75 lakhs equity and Rs. 17.25 lakhs preference. To the extent of Rs. 34.50 lakhs, the equity capital represents capitalisation of reserves in the past. Nevertheless, the reserves and surplus now amount to Rs. 62.15 lakhs. The Company has nearly paid off its secured loans of Rs. 60.93 lakhs in the previous year, which at the end of June last are shown at Rs. 0.28 lakh. Unsecured loans have also dropped from Rs. 4.90 lakhs to Rs. 2.22 lakhs. Current liabilities and provisions at Rs. 75.16 lakhs are safely covered by current assets aggregating Rs. 114.90 lakhs.

The shares of the Company are currently quoted at Rs. 395 *cum-div.* At the *ex-div.* price of Rs. 378.20, the yield on the shares works out to 4.1 per cent free of tax per annum.

23 OCT 1961 PUBLIC DEPARTMENT

COOPER ENGINEERING FARES BETTER

FURTHER DIVERSIFICATION PLANNED

A MODERATE improvement in trading results is disclosed by the report and statement of accounts of Cooper Engineering Ltd. (Managing Agents: Messrs. Walchand and Company Pvt. Ltd., Bombay) for the year ended 30th June, 1961. Gross sales of the Company's diversified lines of engineering products have gone up slightly from Rs. 203.06 lakhs to Rs. 209.67 lakhs, and the gross profit has increased by Rs. 3.21 lakhs to Rs. 32.63 lakhs. The aggregate amount set aside for essential provisions has remained practically stationary at Rs. 19.03 lakhs in comparison with Rs. 18.78 lakhs during the previous year. Of this, the Managing Agents' commission claims Rs. 2.18 lakhs as against Rs. 2.46 lakhs, depreciation Rs. 9.35 lakhs as against Rs 4.82 lakhs, and taxation Rs. 7.50 lakhs as compared with Rs. 11.50 lakhs. The lower provision for taxation, despite a higher profit earned, is due to the fact that the development rebate which the Company can set up against its taxable profits has more than doubled during the year. The net profit has, therefore, increased in line with the gross profit from Rs. 10.64 lakhs to Rs. 13.60 lakhs. On taking credit for Rs. 0.76 lakh brought forward from the previous accounting period and Rs. 0.66 lakh as provisions no longer required, the amount available for appropriation totals Rs. 15.02 lakhs. Of this, over a third, Rs. 5.92 lakhs, to be precise has been transferred to the statutory development rebate reserve, Rs. 1.47 lakh to contingency and gratuity reserve and Rs. 1 lakh to the general reserve. Corresponding figures for the previous year are Rs. 2.99 lakhs, Rs. 1.00 lakh and Rs. 1.00 lakh, respectively. Thus, more than one half of the amount available for appropriation has been conserved. Ordinary dividend, the rate of which has been maintained at Rs. 13 per share, subject to deduction of tax, and inclusive of bonus of Rs. 3 per share, claims Rs. 5.88 lakhs, as against Rs. 5.75 lakhs previously.

The steady progress made by the Company during the past four years is reflected in the figures contained in the comparative table given below:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale	2,09.67	2,03.06	1,59.02	1,24.26
Other income	2.44	1.85	1.68	1.43
Closing stocks of finished product	20.90	6.79	7.18	5.08

Depreciation	9.35	4.82	3.42	2.28
Taxation	7.50	11.50	4.00	4.80
Net profit	13.60	10.64	7.44	5.54
Provisions no longer required	0.66	0.13	..	..
Transfer to reserves	3.80	4.99	4.08	2.98
Ordinary dividends	5.88 (10% + 38%)*	5.75 (10% + 38%)*	3.37 (10% + 38%)	2.56 (7% + 38%)
Carry forward	0.75	0.76	0.72	0.68

* Subject to deduction of tax.

The balance-sheet of the Company as at 30th June 1961 discloses a financial position that can be considered as strong. The paid-up share capital, consisting entirely of ordinary shares, stands at Rs. 45.20 lakhs, with a complement of Rs. 53.68 lakhs as reserves and surplus. Secured and unsecured loans total Rs. 85.91 lakhs, in addition to current liabilities and provisions aggregating Rs. 78.33 lakhs. On the asset side, the gross block is worth Rs. 140.18 lakhs and has been written down to Rs. 84.68 lakhs. Capital expenditure awaiting completion is valued at Rs. 3.43 lakhs, thus giving the total net block as Rs. 88.11 lakhs. Current assets, inclusive of investments and loans and advances, amount to Rs. 175.01 lakhs.

The Company continued to make good progress in the manufacture of its existing lines as well as new lines, namely, the manufacture of machine tools. The construction of the building to house the machine tool division was completed and the division was declared open in January last. Regular production has now commenced. Keeping in line with its policy of continued expansion and diversification, the Company has procured a licence to manufacture vertical turret lathes and horizontal boring machines. Manufacture of automatic looms, in collaboration with well-known foreign firms, has also been planned. A further licence to cover the manufacture of 500 high speed diesel engines per month has also been received.

KALINGA INDUSTRIES' GOOD PROGRESS

MAIDEN DIVIDEND DECLARED

THE shareholders of the Kalinga Industries Ltd. (Chairman: Mrs. Gyan Patnaik, Cuttack) will have some satisfaction to know that the Company as declared a maiden dividend of 5 per cent subject to tax, for the year ended 31st March 1961. Its sales shot up from Rs. 71.14 lakhs in 1959-60 to Rs. 117.58 lakhs in 1960-61, representing an increase of more than 65 per cent. The gross earnings have, however, suffered a slight setback of Rs. 55,000 to Rs. 14.01 lakhs, thanks to the sharp expansion in the costs of production. The value of raw material and stores consumed, for example, has gone up by 40 per cent from Rs. 45.80 lakhs to Rs. 64.51 lakhs and other manufacturing expenses, which include salaries and wages to staff, from Rs. 25.35 lakhs to Rs. 39.38 lakhs or by 56 per cent.

After providing a slightly smaller amount of Rs. 4.16 lakhs for depreciation, as against Rs. 4.87 lakhs in 1959-60, the net profit is a shade higher at Rs. 9.85 lakhs, as compared with Rs. 9.69 lakhs for the previous year. No provision for taxation has been made, as the Company will not be required to pay any income-tax, in view of the development rebate and depreciation concessions allowed to new industries. The sum actually available for distribution is of the order of Rs. 5.80 lakhs, as the debit balance of Rs. 4.05 lakhs carried forward from the previous year has been set off against the net profit. The debit balance, it may be noted, arose on account of the heavy provision of Rs. 13.55 lakhs for development rebate made in the accounts for 1959-60, against the net profit of Rs. 9.69 lakhs for that year.

The Directors have cleared all the arrears of preference dividend for the previous years, amounting in all to Rs. 2.02 lakhs. In addition the preference dividend for 1960-61 takes up Rs. 18,305. They have allocated Rs. 27,000 to the development rebate reserve. The proposed dividend to ordinary shareholders absorbs Rs. 1.94 lakh, leaving Rs. 1.38 lakh to be carried forward to the next year. There are two good grounds for shareholders to expect to receive a higher dividend from next year onwards. First, all the arrears of preference dividend have been cleared and, second, there is now no outstanding debit balance in the profit and loss account.

The following comparative figures will give one an idea of the progress of the Company in the last two years:

(In lakhs of rupees)

	For the year ended 31st March	
	1961	1960
Sales	1,17.58	71.14
Closing stock	28.78	22.60

* Including arrears for previous years.
† Subject to deduction of tax.

Both the heavy and light engineering departments of the Company made satisfactory progress during the year under review. The Company has set up the first successful low shaft furnace in the country and has been producing high grade foundry pig iron for the last 24 months. The present capacity is 30,000 tons of foundry grade pig iron per annum and the plans are to raise the capacity to 100,000 tons per annum, and to set up a cast iron spun pipe plant, using the pig iron as raw material, as well as a power plant of 5,000 kw. capacity, utilising the rich top gas from the furnace. While the Company has received the industrial licence for this expansion scheme, it has yet to receive the foreign exchange allocation which is expected to be given out of the W. German loan to India. The output of refrigerators in the light engineering factory at Jobra recorded a substantial rise. The Company has entered into collaboration agreement with Electrolux AB of Sweden for making the world-famous Electrolux refrigerators in its factory at Cuttack. By January 1962, it is expected to manufacture its own cooling units, thereby avoiding imports of this vital part of a refrigeratbr. The production of fluorescent light fittings also maintained a steady pace. The tubular structures factory at Chowdwar enlarged the scope of its activities by introducing new designs of structures ranging from 20' to 60' span. The Company's expansion programmes, too, is said to be proceeding satisfactorily. The new factory at Chowdwar is expected to commence the assembling of refrigerators before the end of the current financial year. The expansion of the low shaft furnace and the spun pipe plant is, however, being handicapped by shortage of foreign exchange and the progress of this project would depend on the allocation of foreign exchange from the German loan. It is noteworthy that the Company itself is making efforts to earn foreign exchange. It exported as many as 11,000 tons of foundry grade pig iron, yielding Rs. 30 lakhs worth of foreign exchange, in the year under review.

The Company's balance-sheet as on 31st March 1961 shows that its paid-up capital of Rs. 42.45 lakhs, comprising Rs. 3.63 lakhs in 3,630 five per cent (tax-free) preference shares of Rs. 100 each and Rs. 38.84 lakhs in 38,844 equity shares of Rs. 100 each, is supported by Rs. 13.83 lakhs of reserves and surplus. It has secured loans aggregating Rs. 55.77 lakhs, of which Rs. 22 lakhs are in 22,000 6½ per cent debentures of Rs. 100 each and unsecured loans are Rs. 14.42 lakhs. In addition, there are outstanding current liabilities and provisions of Rs. 23.55 lakhs. As against its total indebtedness of Rs 93.74 lakhs, the current assets are of the order of Rs. 72.24 lakhs, apart from the investment of Rs. 1 lakh (all in ordinary shares) in Electrolux India. The gross block account amounts to Rs. 97.88 lakhs and has been written down to Rs. 82.81 lakhs.

Readers will be interested to know that the present Chief Minister of Orissa, Mr. B. Patnaik, was the Chairman of the Company till he took over that august office in the State.

COMPANY MEETINGS AND DIVIDENDS

NATIONAL ROLLING AND STEEL ROPES LTD. Annual General Meeting, Calcutta, 30th October 1961. Dividend: Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 13th to 30th October 1961, both days inclusive.

SURAT ELECTRICITY CO. LTD. Annual General Meeting, Bombay, 31st October 1961. Dividends payable on and after 3rd November 1961.

STEEL PRODUCTS, LTD. Annual General Meeting, Calcutta, 31st October 1961. Transfer books will remain closed from 13th to 31st October 1961, both days inclusive.

NATIONAL COTTON MILLS LTD. Annual General Meeting, Calcutta, 31st October 1961. Transfer books will remain closed from 10th to 31st October, 1961, both days inclusive.

MALWA SUGAR MILLS CO., LTD. Annual General Meeting, Calcutta, 31st October 1961. Share Transfer books will remain closed from 25th to 31st October 1961, both days inclusive.

BENGAL ROLLING MILLS LTD. Annual General Meeting, Calcutta, 31st October 1961. Transfer books will remain closed from 25th to 31st October 1961, both days inclusive.

DELHI CLOTH AND GENERAL MILLS CO., LTD. Annual General Meeting, Delhi, 3rd November 1961. Share transfer books will remain closed from 15th to 30th September 1961, both days inclusive.

FORT GLOSTER INDUSTRIES LTD. Annual General Meeting, Calcutta, 6th November 1961. Dividend: A dividend of Rs. 10 per ordinary share, subject to deduction of tax, for the year ended 31st March 1961. Share transfer books will remain closed from 27th October to 6th November 1961, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 9th November 1961. *Dividend:* A dividend of Re. 1.50 per ordinary share (on old capital), for the year ended 31st March 1961. Transfer books remained closed from 27th September to 13th October 1961, both days inclusive.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 11th November 1961. Net dividend of Rs. 16.80 per ordinary share, for the year ended 30th June 1961, payable from 13th November 1961. Transfer books will remain closed from 16th October to 11th November 1961, both days inclusive.

TRAVANCORE SUGARS AND CHEMICALS LTD. Taxable dividend of 7½ per cent or Re. 0.75 per ordinary share, for the year ended 30th April 1961. Transfer books will remain closed from 16th to 30th October 1961, both days inclusive.

ORISSA MINERALS DEVELOPMENT CO., LTD. Dividend: Interim dividend on the ordinary shares at 10 per cent for the year ended 30th June 1961, subject to deduction of tax. Dividend will be paid on or after 3rd November 1961. Transfer books will remain closed from 13th October to 26th October 1961, both days inclusive.

UNION CARBIDE INDIA LTD. Dividend: An interim dividend of 75 nP per ordinary share, subject to deduction of tax. Transfer books will remain closed from 21st October to 4th November 1961, both days inclusive.

ASHER TEXTILES LTD. A dividend of 30 per cent, taxable, for the year ended 30th June 1961. Transfer books will remain closed from 3rd to 16th November 1961, both days inclusive.

SYNOPSES OF COMPANY REPORTS

Dehri-Rohtas Light Railway Co., Ltd.

(*Managing Agents*: Messrs. Sahu Jain Ltd., Calcutta.)

Annual General Meeting: Held on 30th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Gross income	53,92	43,98
Gross profit	30,18	22,35
Transfer to Managing Agents' remuneration	2,45	1,95
" " depreciation	3,42	2,73
" " taxation	11,00	7,85
Net profit	13,31	9,81

Appropriations:		
Total available balance	13,91	14,95
Transfer to development rebate reserve	31	25
" " general reserve	7,00	8,10
Proposed dividend (taxable) ordinary	6,00 (10.9%)†	6,00† (10.9%)
Carried forward	60	60

N.B.—Adjustments include the balance brought forward from the previous year.

* A sum of Rs. 5,10,000 was transferred from the general reserve to pay off the previous year's dividends.

† Only Rs. 90,000 was paid as dividends in the previous year and the balance of Rs. 5,10,000 was paid out of general reserve during the year under review.

Extracts from the Directors' report: There was substantial increase in traffic during the year and the railway carried a record goods traffic of over a million tonnes. A new station was established during the year at Nauhatta Road.

The freight rates of all private managed light railways in India are presently on discontinuous mileage basis. The Railway Board is considering a proposal for introducing continuous mileage freight structure in respect of the Company's railway only. Under this proposal the Company will receive less freight per tonne/KM for carriage of goods for the same distance by its Railway in through booking with State railways than for movement within its own line. This would discriminate between the different users of this Railway. The Company has made necessary representation.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	30,02,600	Gross block	89,62,531

N.B.—Adjustments include only the balance brought forward rom the previous year.

Extracts from the Directors' report: *Limestone*:—Raisings increased from 10,09,789 tons to 12,50,435 tons. Sales also improved from 9,65,994 tons to 12,05,107 tons as compared with the previous year.

Dolomite:—Output increased by 148,323 tons to 4,39,269 tons as compared with 2,90,946 tons raised during the last year. Sales also rose correspondingly from 2,84,962 tons to 4,28,340 tons.

Lime:—Production at 10,31,763 mds. was lower by 2,87,197 mds. as compared with the last year and this was mainly due to shortage of coal. Sales also declined from 11,83,658 mds. to 8,93,120 mds.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	92,22,366
Reserves and surplus	52,85,937	—Depreciation	45,37,856
Other liabilities	99,99,056	Net block	46,84,510
		Block in progress	3,45,666

		Investments	70,686
		Cash	3,08,859
	Rs. 1,52,84,993		Rs. 1,52,84,993

* Paid-up capital consists of 1,00,000 ordinary shares of Rs. 10 each. Out of this 35,000 ordinary shares are allotted as fully paid-up pursuant to a contract without payment being received in cash and 50,000 Ordinary shares have been allotted as fully paid-up by way of Bonus shares by capitalisation of Reserve fund.

Jayant Paper Mills Ltd.

(*Chairman*: Mr. Ranchhoddas T. Popawala, Bombay.)

First Annual General Meeting—28th October.

Extracts from the Directors' report: The Company was incorporated on the 29th of April 1960. The issued capital of the Company is Rs. 25.00 000 consisting of 25,000 equity shares of Rs. 100 each, out of which 12 500 equity shares of Rs. 100 each, are issued to the public. The issue to the public was oversubscribed and the allotment was made in accordance with the scheme laid down by the Bombay Stock Exchange. The shares of the Company are listed on the Bombay Stock Exchange.

The working of the Company for the period ended 30th June 1961 shows a surplus of Rs. 32,158 after providing for depreciation and taxation.

Progress:—During the period under report, the Company has made overall satisfactory progress. The construction of the main Factory buiilding, office building and a major part of the staff colony at the Utran Factory site are nearing completion. All machinery for the paper plant imported from Japan have already reached the Factory site at Utran. Two Japanese technical experts are expected to arrive at Utran within a very short period from Japan. for the erection of machinery in the Factory Building and for putting the plant into operation. At present the said erection work is progressing swiftly, and if the present progress is maintained, the Mills are likely to go into production from about in the second half of 1962. It is a matter of satisfaction that all the machinery, heavy and light. has been received at the Utran site without any damage.

The Company has received recommendation from the Ministry of Commerce and Industry for the import of 540 tons of wood pulp through S.T.C. during this period. An application has been made to the railway authorities for laying a private railway siding upto the premises of the Company's factory. The said application is under consideration by the authorities concerned. The necessary supply of electric power has been granted to the Company by the Gujarat Electricity Board, Baroda for our Utran factory.

Expansion:—The productive capacity of the paper plant that has been imported, is 10 tons per day. The directors have plans to import further machinery equipment from Japan at a cost of about Rs. 3 lakhs as an addition to the present machinery which will enable the Company to expand the production to 20 tons per day.

The construction of the office building is complete at the Company's factory site and the directors therefore propose that the registered office of the Company should be shifted from Surat to the factory site.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	23,80,125	Gross block	12,10,023
Reserves and surplus	32,157	—Depreciation	1,188
Other liabilities	1,33,886	Net block	12,08,835
		Block in progress	4,76,449
		Current assets	1,75,024
		Cash	5,89,793
		Miscellaneous expenditure	1,45,057
	Rs. 25,46,168		Rs. 25,46,168

* Paid-up capital consists of 25,000 ordinary shares of Rs. 10 each. Out of this allotment and call money arrears amount to Rs. 1,19,875.

ASSAM SILLIMANITE LIMITED

CHAIRMAN, MR. S. M. WAHI, WANTS SATISFACTORY EXPORT FORMULA

DEMAND FOR SILLIMANITE GROWING

THE need for working out a satisfactory formula for exports of sillimanite for the year 1962 was stressed by Mr. S. M. Wahi, Chairman of the Assam Sillimanite Ltd., in his address at the Tenth Annual General Meeting of the Company held at Gauhati on the 14th inst. In this connection, he pointed out that Government's restriction on exports of sillimanite, announced early in 1961, came as a shock to India's clients abroad. Large overseas refractory works, he added, had switched over their production to sillimanite products on account of the good quality as well as continuity of supplies from India. Mr. Wahi, however, admitted that Government granted permission to his Company for export against firm commitments for 1961. He hoped that a similar formula would be worked for the next year on the basis of firm commitments, after keeping a reasonable quantity for indigenous industries. The demand for sillimanite in India as well as the world over, Mr. Wahi observed, was growing:

The following is the full text of Mr. Wahi's speech:

'GENTLEMEN,

"This year has been a period of great stress and strain—stress, because, while our production, even though increased from the previous years was not found to be enough to meet the growing demand for sillimanite the world over as also the increased requirement from within the country; and strain, since our valued clients in Europe—most of the large refractory works—got a shock to find the Government of India's policy announced early in 1961 restricting exports to one-third of the best year's export. These works had switched over their production to sillimanite products on account of the good quality as well as continuity of supplies being maintained by your Company during the last couple of years. Thanks to the efforts of your Managing Agents, export market for sillimanite had been well established in Europe, Japan and several other countries.

Domestic Demand

"With certain adjustments we had to make for meeting the immediate, but reasonable, needs of the indigenous industries, the Government of India was good enough to approve of the export of the quantities, for which we had entered into a firm commitment for export during 1961. So, while some of our customers abroad had some difficulties in receiving supplies expected by them, the position of meeting their orders for 1961 has been resolved. To frame the programme for 1962, the Ministry of Commerce and Industry, Government of India, has issued circulars to all indigenous refractory works to submit to us their requirements for 1962. We had also asked our overseas buyers to place their firm requirements in our hands at an early date so that we may be able to finalise arrangements for 1962. As in 1961, we expect some sort of satisfactory formula for export would be worked out on the basis of firm commitments after keeping a reasonable quantity for indigenous industries. It would be a pity to lose the world market and the foreign exchange so earned out of the export of sillimanite. To restrict indiscriminate buying, we had to ask for one-third advance with orders, so that our old and genuine buyers continue to get their genuine needs met.

"The gradual increase in production, as anticipated, is working out, despite heavy odds under which the mine has to be operated. Large sums of money had to be expended in the maintenance and improvement of the Company's 3 miles of hill section road. New approach roads and bridges had to be made to reach new deposits. The transport and excavation machinery has had rough beating, resulting in heavy depreciation.

"The production, however, was 7,540·01 tons in 1960-61, as against 6,957·50 tons in 1959-60. In 1961-62, we expect to reach a production of 8,000 tons. The sales had also increased to 30,38[illegible] in the year under review, mainly because in hand are [illegible] tons, [illegible] at the year-end. This does not include [illegible] during the year [illegible] about 1961.

"Emphasis has been laid on increasing production of sawn blocks and additional capital expenditure was incurred for developing the facilities for Diamond saw plant at Paharpur in Calcutta to meet the growing demand of sillimanite blocks and shapes for the glass and ceramic industries. While quite a number of back-log orders have been completed during the year, we have received fresh orders, valuing Rs. 7.40 lakhs which, with the present installed capacity could only be completed by 1964. It has, therefore, been decided to double the capacity of the existing plant so that the orders in hand could be completely executed by the end of 1962 or early 1963, and we may be in a position to satisfy the growing demand of the industry by accepting fresh orders for sawn blocks, cut to size and shape, from individual clients. It is expected that the import licence, which has been recommended by the Industry Ministry for this additional plant, would be in our hands and additional capacity set up early in 1962.

Ramgarh Plant

"I am glad to report that the progress of work on the initial refractory plant at Ramgarh has been quite satisfactory. The plant has gone into production and is producing sillimanite blocks and shapes, fireclay bricks and shapes, crucibles and some quantities of thermocouple sheaths have also been successfully experimented. The present plant has been erected entirely from machinery indigenously procured and has an installed capacity of 5,500 tons. We have in hand firm inquiries awaiting confirmation by us for 3,076 tons, valuing Rs. 22.00 lakhs. It is proposed to concentrate on the production of sillimanite shapes and tank blocks to meet the requirements of our existing customers, by adding a couple more of machines. In the meantime the legal and other technical obstacles to International Finance Corporation's investment of Rs. 65.00 lakhs in the Company for the import of the 46,000 tons main plant have been resolved. According to the Companies Act, certain resolutions have to be passed by the shareholders to implement the Investment Agreement. These are being placed before you at the extraordinary general meeting for approval.

Development of Mines

"Last year, I had mentioned to you about the developing of the mines of fireclays, both plastic and non-plastic, near Ramgarh. For the manufacture of refractories, both plastic and non-plastic fireclays, kyanite, chrome and magnesite are essential raw materials. Excellent deposits of fireclays have been located near about our Ramgarh refractory plant. Lease and other formalities for some of these deposits have been completed with the Government of Bihar, while for certain others the formalities are still to be completed. Operations on one of these plastic fireclay deposits have commenced. A prospecting licence and the relative lease agreement have also been signed with the Bihar Government for some kyanite deposits in Chybassa District. Work on these mines would be started soon after the rains are over. With the mines of some of these raw materials gradually developed, the refractory plant would have largely its own sources of raw material supplies. It is intended to develop sufficient production of these mines so that some of the existing plants and other refractory works could also get supplies and avail themselves of our services.

"It may be of interest to the shareholders to know that it has been your Company's general policy to continually expand and invest in developing the properties and assets of the Company. This continuous process during the past few years has taken away some of your liquid resources, which otherwise could have built general reserves. This has resulted in greatly increasing the value of your property and assets. Furthermore this diversification of the activity to cover the refractory field, from out of the existing resources of the Company, has opened the vast potential for your mining Company to serve the refractory needs of the country and obtain its fair share of business.

"Once again, this year, I would like to thank [illegible] our workers for the devotion to duty and service rendered especially at the mines in Assam, where working conditions have been extremely difficult and, during the rains, even hazardous. Major McLeod has kept up the team spirit of the personnel and maintained good relations with the people of the area, which is an important aspect of any business operation in the present day. The Company has also to recognise the endeavours of Mr. N. C. Whiter, Project Manager, who along with Mr. K. G. R. Nayar, our Refractory Engineer, have been responsible for erecting and putting the present Ramgarh plant in operation. A good team of technicians and workers at Ramgarh is being built up and trained and their experience would greatly assist in the successful and economical operation of the main plant. This promises an excellent future for the Company in its service to the refractory industry in India, which is the basis of the industrial and the relative economic development of a country."

N.B.—The above statement is not a report of the proceedings of the annual general meeting referred to.

PROMISING TRENDS IN U.K. ECONOMY

(*Concluded from page 779*)

earlier estimate of 30 per cent. For 1962, there is expected to be a fractional decline in manufacturing investment, but other private investment is expected to rise moderately.

Although the pressures on the home economy had continued to mount during the second quarter, the balance of payments had already shown some improvement. The preliminary official estimates, suggest that, on current transactions as a whole, the quarter showed a deficit of £15,000,000—easily the smallest since a gap first opened up at the end of 1959. The deficit for the preceding quarter was £68,000,000, and that for the corresponding quarter of 1960, £50,000,000. The worst quarter was the seasonally adverse third quarter of 1960—at £136,000,000. The monthly trade figures for July and August suggest that this improving trend has continued—so that at the moment the current account is probably no longer in deficit. Much of the gain up to date, however, has been due to the effects of the run-down of stockbuilding upon imports, and to the continued favourable movement of the terms of trade. Thanks to the good prospects in export markets, a further strengthening is now being looked for. But it is too soon to envisage the stable equilibrium that is the target of policy. The current account is still far from enough to support Britain's net outgoings on aid and long-term lending, and the bill to be met for imports is likely to rise as soon as the domestic economy is able to start expanding vigorously again.

Meanwhile, all the new restraints on home demand are being firmly maintained—and in one sphere they seem to be having stronger effects than had been envisaged. The net advances of the clearing banks dropped in August by £104,000,000, a surprisingly sharp reversal of the preceding upward trend; yet in September they dropped by another £128,000,000 to £3,318 million. To some extent this decline is seasonal, but it mainly shows that the banks are being even tougher towards "non-essential" borrowers than had been generally supposed—tactics that are bound to reinforce, sooner or later, the other restraints on consumer outlay and on borderline capital expenditures.

Note: The Bank rate was lowered from 7 per cent to 6½ per cent on 5th October 1961. The Chancellor of the Exchequer stated that the reduction, leaving still a very high rate, was not an indication that the time had come to relax on any part of the present policy.

MANUFACTURE OF SALT—NEW UNITS TO BE PERMITTED

The Union Government has decided to permit the setting up of new units for the manufacture of salt. This decision has been taken consequent on a review of the existing manufacturing capacity in the country and requirements of salt for industrial and edible purposes during the third Plan period. Intending manufacturers are required to approach the Salt Commissioner for issue of licences through the State Governments.

The target fixed for the production of salt in the second Plan having been exceeded, the Government had decided, in November 1958, not to issue new licences, so that no difficulty might be experienced in marketing the surplus production. It has now been estimated that an additional production of about 3·5 million tonnes, mostly of in-

COMMERCE AND INDUSTRY

(*Concluded from page 792*)

large 1959-60 crop moved into trade only slowly, and, in fact, substantial supplies of both seed and oil were carried forward into the 1960-61 season, partly offsetting the smaliness of the 1960-61 crop. Exports up to the end of July 1961 proved to be exceptionally heavy, amounting to some 83,000 tons of seed and 143,000 tons of oil (171,000 tons oil equivalent). The result has been that, until the new crop becomes available early in 1962, not much more than 30,000-35,000 tons of oil, or its seed equivalent is likely to be available for export after making due allowance for domestic requirements and the maintenance of minimum stocks.

"In Canada and the U.S., the drought affecting the central areas has resulted in sharply reduced crop estimates. In the U.S., the first official estimate places the linseed crop at 484,000 tons, as compared with 760,000 tons in 1960 from an area about 20 per cent larger. An unofficial estimate of the Canadian crop puts it at 360,000 tons, as compared with 568,000 tons in 1960. Furthermore, though stocks of linseed at the end of the crop years (end-June in the U.S. and end-July in Canada) were higher than those at the same time in 1960, they have been run down considerably in recent months by the unusually heavy exports made in the second quarter of the year; it appears that exports of linseed from North America in the early part of the year were effected by the heavy supplies leaving Argentina. Altogether, combined supplies of linseed in Canada and the U.S. for the period 1961-62 are unlikely to reach more than 1.2 million tons, as against 1.5 million tons at the start of each of the two previous seasons. Stocks of linseed oil in the U.S. at the end of June were 43,600 tons, little changed from the same time last year; stocks of linseed oil in Canada are normally unimportant as the bulk of the crop is exported as seed. It appears that supplies in the U.S. will be more severely affected than those in Canada; there may be a further reduction in crushings (domestic utilisation of linseed oil has tended to decline in recent years) but this is unlikely to prevent exports from falling sharply over the year. Total U.S. supplies are well below average disappearances of the past few years. Canadian exports, on the other hand, could be reasonably well maintained in view of the size of present stocks.

"Uruguay and India are the only other important exporting countries; in neither case are export supplies likely to rise towards the end of 1961. The Indian crop estimate recently published for 1960-61 shows some reduction as compared with last year, while the large Uruguayan exports of oil in the first half of 1961 have probably cleared most of the available supplies until the next crop is harvested at approximately the same time as Argentina's.

"It, therefore, appears that, during the first half of the 1961-62 crop year, most of the export supplies will come from North America, principally from Canada. Exports of linseed during this period could be nearly as large as at the same time last year, if Canadian supplies move into trade, but shipments of oil will certainly be small, although there may be movements from the U.S. In all, combined exports of seed and oil during the second half of 1961 are likely to be well below last year's level and the supply position relatively tight. Import demand may be somewhat reduced, in view of the fact that stocks in Western Europe are believed to have increased recently, but this will probably not balance the reduction in export supplies. Prospects in the second half of the crop year depend largely upon the size of the Argentine linseed crop to be harvested during November-January. It is unofficially reported that the area sown to linseed will be appreciably larger than in 1960-61, but, on the other hand, the weather has tended to be dry. In addition, the Argentine carry-over stocks will be much below those at the start of the 1960-61 year, and will probably be reduced to minimal levels."

* Articles under this sub-heading is subject to the conditions laid down by the competent authorities.

The study of oils and oilseeds in the *Tropical Quarterly* is not confined to short-term trends. It has, appropriately enough, given a brief account of the measures proposed to be taken by the European Common Market countries in respect of oils and fats. The Common Market proposes to fix production prices, independent of world prices. These prices will not necessarily be such that all forms of production are "economic," thereby implying that special support will be given in certain cases, particularly in the case of Italian olive oil. In the course of next year, the Common Market Commission will start an investigation into the comparable prices of oilseeds, oils and fats in the member-countries, in order to work out an agreeable common price formula. By January 1963, the Commission will establish a Fats Bureau and also a Fat Fund which will undertake measures for the stabilisation of oilseeds and oil prices and direct aids to producers, particularly in the Associated Overseas Territories. The ultimate object is to make the Common Market a single market for these commodities by 1st July 1968. The rates of common duty to be ultimately (at the end of transitional period) levied on oils from third countries vary from 3 to 20 per cent. Table in column one shows the common tariff on different oils and seeds. It may be seen from the table that all oilseeds will enter the Common Market duty-free, that duties on oil intended for industrial uses will be lighter than those for food purposes, and that they will be heavier on processed oils than on crude oil. For example, while crude palm kernels oil for industrial uses will bear 5 per cent duty, processed oil will be subjected to a duty of 8 per cent.

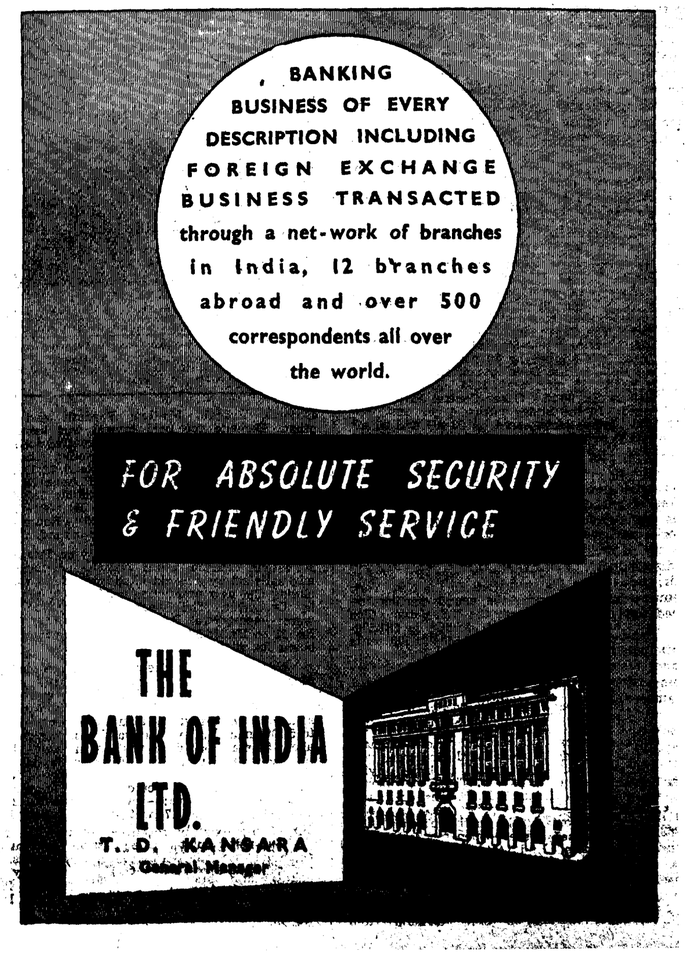
EUROPEAN PARTICLE BOARD INDUSTRY

The United Nations Economic Commission for Europe's Timber Committee, which held its nineteenth session at Geneva a fortnight ago, had before it a provisional report on a survey of the production, consumption and trade of fibreboard and particle board in Europe. This report revealed that, in the five years 1955-60, output of particle board had increased nearly five times. Over the same period, output of fibreboard in Europe had risen by about 50 per cent. Production in 1960 in European (including Russia) was 1.9 million tons of fibreboard and 1.4 million tons of particle board. The particle board industry is expected to continue its very rapid expansion, and that by 1975, the wood requirements of both board industries will have doubled or trebled, giving these industries a significant role in Europe's forest and timber economy.

The Committee agreed that a meeting of experts, which should take the form of a colloquium, be held at the end of 1962 or early 1963, to discuss selected topics relating to the economics of production and utilisation of fibreboard and particle board. It was also decided to convene a group of experts charged with the task of preparing a draft programme of work on the economic aspects of, and productivity in, the wood-processing industries. It was also agreed by the Committee that the Special Meeting on the utilisation of small-sized wood, held in Geneva in March 1961, had been very useful in drawing attention to the problems associated with the production and utilisation of small-sized wood. A publication containing the papers and other statements prepared in connection with the Special Meeting is in course of preparation and will be put on sale shortly.

In addition to the survey of the markets for sawn softwood and hardwood the E.C.E. Timber Committee reviewed the markets for pitprops and pulpwood. Revised estimates of pitprop requirements for 1961 amount to 37.4 million solid cubic metres, or 1.8 million less than expected a year ago. Import requirements are now shown to be about 7 per cent lower than estimated a year ago, and about 20 per cent lower than in 1960, but, for 1962, they are expected to continue at about the 1961 level. Estimates for 1962 show a further reduction in total requirements of about one million solid cubic metres. This corresponds to a further expected fall in Russian requirements. Elsewhere, expected reductions in pitprop needs (notably in the U.K.) are again offset by increases in other countries. Higher export prices for pitprops were established towards the end of 1960 because of the large increase in demand for pulpwood. This higher price level has been generally maintained this year and this appears to have stimulated ample export offers.

There has been a big increase in the requirements of wood raw material for pulping in Europe this year. Revised estimates for 1961 places the demand at over 88 million solid cubic metres, or 2.6 million more than expected in October 1960. This increase is seen mainly in Finland, Russia, France and Sweden, and reflects the continued high level of demand for pulp and pulp products.



MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 18*th October*

Conditions in the short-term money market which had remained relatively stringent in the past few weeks turned distinctly comfortable during the latter part of the week under review. As most of the markets in other parts of the country were closed on account of *Pooja* holidays, demand for funds was rather slack, and borrowers had no difficulty in obtaining their entire requirements. In fact, there was a surplus of funds in the market. Accordingly, the inter-bank call rate eased by ¼ per cent to 4 per cent yesterday. Today, the rate moved down further, to 3¾ per cent. At the close, transactions were reported even at 3½ per cent. The terms rates, however, were unchanged. For purposes of reference, they are given below:

		Per cent
Notice Money:		
3 days or more	... ...	3
Term deposits:		
(i) 3 to 30 days (inclusive)	...	3
(ii) 31 to 60 days	... ...	3¼
(iii) 61 to 90 days	... ...	3½
(iv) 91 days and more but less than 12 months	... ...	3¾
(v) 12 months	... ...	4

There were no sales of 91-days Government of India Treasury Bills to the public other than those of intermediate treasury bills. The sales of the latter from the 11th to the 14th inst., amounted to Rs. 10 lakhs. The sales of 91-days' Treasury Bills had been suspended probably to facilitate subscription to the ensuing Municipal Loan. Their sales will be resumed from the 21st inst.

The statement of affairs of the Reserve Bank of India for the week-ended 13th October 1961 shows an expansion of Rs. 14.64 crores in notes in circulation, as compared with that for the previous week. As notes held in the Banking Department have declined by Rs. 5.18 crores, the total notes issued have gone up by Rs. 9.46 crores only. The foreign securities are unchanged at Rs. 116.86 crores but, as balances held abroad have contracted by Rs. 3.58 crores, the total foreign assets have been marked down by that amount to Rs. 126.88 crores. The deposits of the Central Government have fallen by Rs. 4.08 crores and so also those of other Governments, albeit only slightly, by Rs. 60.29 lakhs. The deposits of banks, however, have improved by Rs. 9.63 crores. On the assets side, investments have shrunk by Rs. 9.88 crores. Other loans and advances which include advances to scheduled banks against usance bills have also fallen by Rs. 2.95 crores.

A decline of Rs. 4.13 crores in demand deposits and of Rs. 3.98 crores in time deposits is disclosed by the statement of the Scheduled banks for the week ended 6th October 1961. Of this fall, the deposits of the State Bank account for Rs. 2.31 crores. Borrowings from the Reserve Bank of India went up by Rs. 5.33 crores, of which the share of those against usance bills was of the order of Rs. 2.48 crores. Their borrowings of demand nature from the State Bank of India, too, expanded by Rs. 68.62 lakhs. But those of time nature from the same institution declined by Rs. 79 lakhs. On the assets side, investments have shrunk by Rs. 6.19 crores, of which the share of the State Bank alone is as high as Rs. 5.01 crores. In contrast to the declining trend of bank credit witnessed in the past few weeks, advances and bills discounted (bank credit) have gone up by Rs. 13.23 crores to Rs. 1,233.97 crores.

The Government securities market presented an extremely dull appearance throughout the week. There were no buyers for either Central or States loans. But there were offerings. Consequently, the prices of a number of loans suffered a setback. The Conversion Loan was neglected at Rs. 72.75. 3 per cent 1963-65 shed 5 nP to Rs. 98.70. 3 per cent 1964 shipped by 10 nP to Rs. 98.75. 3 per cent 1970-75 First Development loan lost 15 nP to Rs. 90.80. 3½ per cent 1969 declined from Rs. 98.40 to Rs. 98.35. Other Central loans were unchanged. In the States section 4 per cent 1968 and 1969 Madras loans eased by 20 nP and 25 nP to Rs. 98.30 and Rs. 98.25 respectively. 4½ per cent 1972 new Madras loan fell by 5 nP to Rs. 99.05. 4 per cent 1967 and 1968 Andhra issues also suffered a loss of 25 nP each. 4 per cent 1967 and 1968 U.P. loans also encountered selling and declined in values.

In the foreign exchange section, the rupee was almost unchanged in relation to the U.S. dollar. The banks' selling rate for ready T.T. on New York stood at Rs. 475.50 for 100 dollars same as last week. The latest buying rate was Rs. 472, as against Rs. 472.25 a week before. In the New York foreign exchange market, the pound sterling improved only slightly *vis-a-vis* the U.S. dollar. The latest available rate for spot sterling is 281.570-281.600 cents as compared to 281.550-281.580 cents last week.

SUGAR HARDENS

(From Our Own Correspondent)

HAPUR, 16*th October*

Contrary to expectations that prices of sugar would ease after decontrol, a hardening trend was in evidence in the sugar market on brisk buying support from consuming areas. The Government's release of an extra quota of 100,000 tons for festival demand failed to check the rising trend and consumption was reported to be on the increase. The week-end prices here were:—open market Rs. 107 per bag of 2 maunds and 30 *seers*; retail, 97 nP to Re. 1 per *seer*; mill delivery Simbhauli (D29) Rs. 105.50; (E29) Rs. 105; Bulandshar (D29) Rs. 104.25 per bag.

Sugar continued bullish during the week in the Muzaffarnagar market on brisk demand from Gujarat, Punjab, Madhya Pradesh and Rajasthan. Demand for bold crystal was keen from Gujarat and the factories were reported to be selling A, B and C varieties at a premium. The week-end prices were:—B29 Khatauli Rs.39. 72; Deoband, Daurala and Mowana Rs. 39.03, Rohana Rs. 38.59; Iqbalpur Rs. 38.84; Shamli Rs. 38.70; Sakoti and Meerut Rs. 38.22; Saharanpur Rs. 38; Bijnore Rs. 37.37; Seohara Rs. 37.73 (E29); Ramalaxman Rs. 37.91; Simbhauli Rs. 38.62 per maund.

Khandsari ruled quietly steady on Punjab and Rajasthan demand. Local festival, demand was also satisfactory and old *khandsari* stocks were declining and new production would begin some time in December. The week-end prevailing prices were:—non-crystal Rs. 31 to Rs. 35.50; crystal Rs. 33 to Rs. 35.50; *galawat* Rs. 25 to Rs. 29, and *boora* Rs. 39 per maund.

New *gur* recorded new heights to be quoted on Monday upto Rs. 21 per maund, thanks to good consumer demand in the face of poor arrivals due to rains last week. Old stock prices were also steady in sympathy; the actual old stocks declined to 5,000 maunds. New *gur* arrivals, which were about 50 maunds today, would soon mount, thanks to clear weather now. Following a fall in the the sugar production target to the extent of ten per cent, *gur* production would mount this year and week-end prices were:—new Rs. 19 to Rs. 21; old *kotha* Rs. 15 to Rs. 17; wet Rs. 13; *shakker* Rs. 17 to Rs. 20 per maund.

Gur ruled quiet in the Mazaffarnagar market, as the old stock holders were anxious sellers. New arrivals would soon begin. Cane crop is fairly good, due to heavy rains. Old stocks are put at 20,000 maunds. The week-end prices were: Chaku Rs. 17 to Rs. 18; rusket Rs. 5 to Rs. 6; *shakker* Rs. 17 to Rs. 20.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, 18*th October*

The bullion market depicted an easy trend during the week under review, with both gold and silver drifting downward. The easiness was due to poor offtake despite the approach of *Diwali*. Operators thought that the funds which normally flow into the bullion market at this time of the year had declined considerably following the severe damage suffered by agriculturists on account of heavy rains and floods in several parts of North India. The daily average offtake, though it was slightly higher than in the previous week, was not much, being 4,250 tolas of gold and 10 bars of silver, as against 4,200 tolas and 8 bars, respectively, in the preceding week. The pace of offtake was not adequate to absorb the arrivals; the daily average arrivals amounted to 4,800 tolas and 37 bars, as against 4,200 tolas and 37 bars, respectively, last week. The floating stocks of gold in the city are reported to be around 40,000 tolas and those of silver are estimated at 1,500 bars.

Adjustment rates fixed today were Rs. 124.70 per 10 grams of gold and Rs. 205.30 per kilogram of silver. The corresponding rates a week ago were Rs. 124.80 and Rs. 205.80, respectively.

The *Margashir* (December) settlement in gold encountered selling and receded from Rs. 125.80 last week-end to Rs. 124.95 on Monday. After recovering to Rs. 125.35 yesterday, the settlement softened again to Rs. 125.05 today before finishing at Rs. 125.10.

Ready gold continued to be quoted at a discount under the forward, though the actual discount declined from 75 nP last week-end to 15 nP today. The spot closing rate was Rs. 124.95, as against Rs. 125.05 on Wednesday last week, the highest and lowest levels touched being Rs. 125.30 (Thursday, 12th inst.) and Rs. 124.45 (Monday 16th inst.), respectively.

In silver, the *Margashir* settlement began the week at Rs. 206.80, same as last week, and moved down to Rs. 205.70 on the 16th inst. At this level, some support ensued and the settlement improved to Rs. 206.15 today. The closing was a shade lower at Rs. 206.10.

Ready silver retreated from Rs 205.80 last week-end to Rs. 204.90 on Monday and, after recovering to Rs. 205.55 today, it finished at Rs. 205.50. The discount under forward was 60 nP today, as against Re. 1 on Wednesday last week.

The world price of gold in the London bullion market hardened from $35.18¾ to $35.19¾, while the sterling price of gold eased by ½*d.* to 250*s.* Ready and forward silver continued unchanged at 79¾*d.* and 80¾*d.*, respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of prices during the week under review:

	18-10-1961 (closing)	High	Low	4-10-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine) ..	124.95	125.30	124.45	125.05

Silver	91.375 cents	—	—	91.375 cents

* 25th December settlement. † 26th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES RECOVER AFTER EARLY DECLINE

(From Our Own Correspondent)

BOMBAY, 18*th October*

Renewed hopes of a bigger cotton crop in the current season following favourable reports from several tracts, announcement of an import quota for 25,000 bales of cotton stapling 1 1/16" and above from any area against retention quota, apprehensions regarding imposition of heavy margins by the Forward Markets Commission, sizable new crop arrivals in Akola, and subdued tone of spot section—these were the principal factors that imparted a subdued tone to the cotton futures market during the week under review. It was not surprising that there was long liquidation. Some Akola operators also sought to press sales in the local market. The reported move of the Government to build a bufferstock of cotton, too, imparted weakness. Consequently, prices staged a retreat. At every decline, there was, of course, profit-taking which led to a recovery in values. Nevertheless, today's closing rates were lower than those prevailing a week ago. The undertone of the market at the time of writing is somewhat better than earlier during the week.

I.C.C. Jarilla March 1962 contract began the week at Rs. 631, as against the previous close of Rs. 631.50, and moved down to touch a low of Rs. 621 yesterday. After recovering to Rs. 626.75, the contract finished at Rs. 626.50. The net loss over the week was Rs. 5.

The spot market presented a dull trend during the major part of the week. The only old crop varieties which were sought after by mills were Surti, L 147 and Vijay-Digvijay. Kalyan, 197/3, Kala-wagad and 0394 evoked scattered inquiries. New crop cottons were quoted at the ceiling levels. Among exportable styles, Bengal *deshi* was subdued, though later in the week, some shippers lent support. Out of the 150,000 bales of this cotton released for export on 23rd September 1961, sales aggregating 27,000 bales are reported to have so far been registered. The import section was somewhat active. Sudan cotton attracted good attention, while East African growths met with stray support. No bids were accepted at the auction held at Kampala yesterday. The latest available spot quotations—rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *deshi* (December) 628; Hubli Laxmi 930; Kalyan 840; L 147 1,070; Co2 1,250; East African B P 52 1,255; B.P. (UNUG) 1,275. On Thursday the 12th inst., the Government announced its decision to permit import of 25,000 bales of cotton stapling 1 1/16" and above from any area for allocation to mills but only against their retention quota under the Export Incentive Scheme. This quantity will be available for shipment only after 31st December next but not later than 30th June 1962. The announcement was not unexpected; it was long over-due. In fact, several mills had booked business for prompt shipment even before the announcement. The import quota has, however, evoked disappointment among cotton circles on two grounds: First, the quota is very small and, secondly, shipment will not be effected earlier than the beginning of 1962. No wonder, then, that the attention of mills is now increasingly focussed on whatever lots of American cotton that are readily available.

Cotton circles noted the U.S. Secretary of Agriculture, Mr. Orville Freeman's statement at a press conference in New Delhi on Tuesday that he could not commit his Government at present to India's request for the supply of two million bales of cotton through a P.L. 480 agreement to serve as a bufferstock. Mr. Freeman pointed out that the U.S. cotton crop last season was below normal and made it clear that the whole question had to be reviewed next year in terms of output. He added that the request of India would receive the U.S. Administration's "earnest consideration." This assurance was interpreted to mean that the Administration would definitely help India to build a bufferstock, in order to take care of any crisis of short-supply.

A distinctly easy tone prevailed in the Karachi cotton market during the week under review, thanks to selling by commission houses and poor offtake by spinners. The U.S.-Pakistan agreement envisaging the supply of U.S. raw cotton worth $15.9 million, among other commodities, in the next four years also acted as a damper. The January 1962 contract fell by 95 nP to Rs. 76.75. The March 1962 contract declined by 55 nP to Rs. 75.15.

Trading in the Alexandria cotton market continued to be suspended. Of importance to the market was the latest reliable estimates suggesting that the total production will be not more than 1.148 million bales. Of these, 345,000 bales will be consumed locally, so that the supply for export will be only about 803,000 bales, as compared with 1.035 million last season. There is a carryover of about 200,000 bales which should enable the Egyptian Government just to cover the export demand at last year's level. It will however, be impossible for Egypt to make use of its own disappointing crop as an excuse to raise the prices. For world cotton supplies are expected to be sufficient to meet any foreseeable demand.

In the Liverpool cotton futures market, there was a modest recovery in prices during the week. The recovery followed sustained demand from spinners in the wave of reduced offerings. The December position improved from 24.05*d.* per lb. to 24.45*d.* The November (Sudan) position moved up from 32.05*d.* to 32.25*d.* But the October position eased from 24.05*d.* to 23.95*d.*

The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 23.95; December 24.45; March 24.95; May 25.40.

American cotton mixed growth contract: October 24.35; December 24.80; March 25.25; May 25.40.

Sudan: November, January and March 32.25.

The New York cotton market displayed firm conditions during the week, as a result of good buying by commission houses. The satisfactory crop reports from producing areas did not have any effect.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	17-10-61	10-10-61	3-10-61
New York Spot ...	35.65	35.60	35.50
October	—	34.53	34.31
December	34.67	34.97	34.90
March	35.38	35.74	35.68

ART SILK YARNS ADVANCE

(From Our Own Correspondent)

BOMBAY, 18*th October*

Art silk yarns registered a handsome rise in values during the week under review. The rise followed excellent support induced by fears that the pace of foreign yarn arrivals would slow down in the coming weeks as a result of the modified import policy for the current half year (October 1961-March 1962); the details of the policy were given in this column last week. J.P. Bemberg yarn (40 x 1) December delivery climbed up from Rs. 3,430 to Rs. 3,500. October contract advanced by Rs. 50 to Rs. 3,480. Spot cupressa yarn (60 x 1) was firm at Rs. 2,934. No transactions were put through in forward delivery, in view of paucity of stocks. Spot 120 Italy strengthened by Rs. 25 to Rs. 1,900. 120 Japan and 150 Japan were maintained at the last week's level of Rs. 1,929 and Rs. 2,150, respectively. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade spurted by 77 nP to Rs. 14.72. 120 Bt. cones 1st grade rose by Re. 1.32 to Rs. 20.15.

In contrast to art silk yarns, staple fibre yarns drifted lower, thanks to slack demand from consuming centres. 40 x 1 October settlement declined by Rs. 7 to Rs. 821. December contract dropped Rs. 2 to Rs. 836. Spot Hinds lost 2 nP to Rs. 9.81. Citys were quiet at Rs. 10.10.

Cotton yarns continued to rule dull. Ten counts Podars were neglected at Rs. 17.37, as also Moderns at Rs. 19.25. Twenty counts Gokaks shed 25 nP to Rs. 22.75. Thirty counts New Greats were unaltered at Rs. 26.75. Forty counts Maduras fell by 75 nP to Rs. 31.50. Minaxis were dull at Rs. 35. Sixty counts Finlays were done at Rs. 62.87, same as last week. Eighty counts Finlays eased by 37 nP to Rs. 81.25. Mahindras were unchanged at Rs. 69.37 and Moderns at Rs. 67.50.

The following table gives the prices of rayon staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	18-10-1961	11-10-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupresa Bemberg (100 kg.)—		
October	—	2,850.00
December	—	2,850.00
Spot	2,934.00	2,934.00
40 × 1 J.P.		
October	3,480.00	3,430.00
December	3,500.00	3,450.00
150 Japan (per 100 kg.)	1,929.00	1,929.00
150 Japan (per 100 kg.)	2,150.00	2,150.00
120 Italy (per 100 kg.)	1,900.00	1,875.00
Nat. Ray. 150 Bt. I	14.72	13.06
Staple fibre yarn (40 × 2)—		
October (per 90.72 kg.)	821.00	828.00
December	836.00	838.00
Hind (per kg.)	9.81	9.83
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.37	17.37
20s Gokak	22.75	23.00
30s New Great	26.75	26.75
40s Madura	31.50	32.25
60s Finlay	62.87	62.87
80s Modern	67.50	67.50

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 18*th October*

Oilseeds and oils staged a spectacular rally early in the week under the leadership of groundnuts, but suffered a distinct setback later on long bull liquidation. There was evidence of some recovery today. Still, the closing prices were well below those a week ago. Groundnuts met with renewed support, induced by pause in arrivals of new crop owing to rains in certain producing centres and enlarged seasonal support from *vanaspati* manufacturers and crushers. As the week progressed, the pace of arrivals accelerated, especially from the South and Saurashtra. Kathiawad interests figured prominently as sellers. Castorseeds lacked support, in view of the gloomy outlook for exports of castor oil. Cottonseeds, too, encountered selling. Linseeds were quiet, despite smaller arrivals on account of floods and rains in Madhya Pradesh. Hedge trading in linseed commenced at the Central India Commercial Exchange, Gwalior, on the 17th inst. Gwalior is the third recognised futures market in the country, the other two being Bombay and Calcutta.

Groundnut, January 1962 contract rose from Rs. 199 to Rs. 202.12 by Monday. After falling back to Rs. 195.50 yesterday, the contract recovered to Rs. 197.62 today, albeit with a net loss of Re. 1.38 over the week. Khandesh quality declined Re. 1.38 over the week. Khandesh quality declined by a rupee to Rs. 42.25. Oil ex-mill dropped 75 nP to Rs. 18 and Railway receipts 70 nP to Rs. 17.80. Groundnut oil January 1962 contract decreased from Rs. 16.15 to Rs. 16, after fluctuating between Rs. 16.50 and Rs. 15.90.

In the castorseed section, the March 1962 contract fell from Rs. 156.25 to Rs. 158. Ready Madras lost 25 nP to Rs. 32.25. Oil B.S.S. eased by 20 nP to Rs. 14. Commercial shed 5 nP to Rs. 13.15.

Linseed March 1962 was quoted today at Rs. 35.44, as against Rs. 35.56 a week ago. Bold ready lost 25 nP to Rs. 38.25. Linseed oil receded by 35 nP to Rs. 16.40.

Cottonseed January 1962 contract fell from Rs. 94 to Rs. 93; it had touched Rs. 92.50 earlier. Both Berars and non-whites sagged by 5 nP to Rs. 18.75.

In the sesame section, bold ready was marked down by Rs. 5 to Rs. 250 (per 250 kgs.). Sesame oil, however, put on 50 nP to Rs. 20.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	19-10-1961	11-10-1961	4-10-1961
Groundnut			
January 1962	Rs. 197.62	Rs. 199.00	Rs. 198.37
Nizam bold		43.25	42.00
Coromandel ready	43.00	43.50	42.50
Khandesh quality	42.25	43.50	42.50
Oil ex-mill ready*	18.00	18.75	18.50
Railway receipts*	17.80	18.50	18.25
Oil January 1962	16.00	16.15	16.00
Castorseed			
March 1962	158.00	158.25	157.25
Ready Madras	32.25	32.50	32.25
Ready Kanpur	31.00	31.37	31.00
Oil B.S.S.†	14.00	14.20	14.10
Oil commercial†	13.15	13.20	13.30
Linseed			
March 1962	35.44	35.56	35.53
Bold ready	38.25	38.50	37.25
Oil ready†	16.40	16.75	16.30
Cottonseed			
January 1962	93.00	94.00	93.50
Niger seed	88.50	88.50	89.00
Kardi seed	22.50	22.50	22.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, 18*th October*

Trading in Malabar black pepper proved to be a one-way affair during the week under review, with prices declining almost daily in both India and Singapore, the main suppliers of pepper to the world's market. Despite sizable export and fair inland consumption of Malabar during the seasonal year, the present behaviour of the market denotes that the Malabar crop for the year 1960-61 should be more than all the optimistic estimates in the past. This fact is confirmed by the present softer attitude of the growers who are anxious sellers at Rs. 1,100 per candy even at the fag end of the season.

New York, after a small and selective buying on a down grade, is now reported to be sitting on the fence, as present asked prices by Singapore and India are the same. Arrivals of the hollow berries new crop Malabar have started coming in Alleppey market. Exportable quality, however, is not likely to come before the first or second week of December.

The situation in Singapore is rather intriguing, even though a greater part of the stock of Lampong is in strong hands and the production of Lampong has tended to be smaller this year. The market in Singapore is now slowly giving way. It is really a paradox. A bazaar analyst attributes such a state of affairs to the fact that most of the Chinese traders, who had until now a monopoly in the pepper trade and export, are sitting on the fence allowing the Indopesian firm to carry the baby. Thus, they wanted to impress upon the Indonesian Government that they cannot handle trade in Indonesian produce at Singapore as efficiently as the Chinese. A ten per cent increase in freight rates on pepper by the Far Eastern Conference was a depressing factor.

Soot in New York climbed down to $0.43½. The stockists there are willing to meet the grinders even at a concession influenced by the easier advices from Singapore and India. Singapore is down from Str.$142½ to Str.$137½ for black and from Str.$177½ to Str.$172½ for white.

After the settlement of October delivery on the Cochin Exchange, the market for December became demoralised, because there are very small short sales. The stockists and investors, having lifted their hedge sales against October, became long in their ready portfolio. To support ready, they went long in December. They are now anxious sellers. As a consequence, small business to East European countries is reported done at bid price. There are reports that they are bidding lower to Russia to attract business, but no business is reported done so far. The Indonesian Trading Agency is also now said to be trying to negotiate deals with Russia and other East European countries and, if that were to materialise, there would be stiff competition in selling to Russia and East European countries in the coming months between Indonesia and India.

Ready garbled is lower at Rs. 368 and ungarbled is going abegging at Rs. 356. December is going down almost daily and is quoted at Rs. 353, as no support is forthcoming from the erstwhile bulls who are unwilling to take risk, in view of the proximity of the new season and good prospects for the new crop. Calicut is seller at Rs. 360.

There are no forward sales overseas in new crop. As such, there is likely to be small support when the new crop starts moving. The present position of pepper looks gloomy without any silver lining on the horizon. Lampong holders are getting tired and there is no forward sale in Malabar to cushion the impact of new arrivals. New arrivals of Lampong are pressing Singapore market.

Ready demand in Bombay is disappointing, as is usual in a declining market. There are sellers at Rs. 202 per 50 kilos.

TEA FIRM

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 10*th October*

A total of 529,000 kilograms was on offer in sale No. 41 held today. There was good general demand. Quality from the Nilgiris was irregular but generally maintained. An all-round improvement in quality was shown from other districts. Nilgiris met good competition but at irregular rates following quality. Plain and low mediums were a little irregular, but generally fully firm except for poorer sorts which were barely steady. Mediums met good support at fully firm prices. Good mediums came in for good demand and were 10 nP to 20 nP dearer. Whole leaf grades met better demand and were irregularly fully firm. Black leaf teas sold at fully firm rates. C.T.Cs. were better supported and C.T.C. types came to a slightly dearer market. Legg-cuts were a little easier.

The quotations (per kg.) were:

	1961 Rs.	1960 Rs.
Low mediums	3.90-4.10	4.30-4.60
Mediums	4.10-4.30	4.60-4.85
Good mediums	4.30-5.40	4.85-5.50
Nilgiri B.O.P.	5.00	7.80

The average price realised in sale No. 41 was Rs. 4.61 per kilo, as against Rs. 4.52 in the previous week and Rs. 5.00 in the corresponding sale last year.

Dust Sale No. 41: 273,000 kilograms were on offer in dust sale No. 41 held on Thursday the 12th inst. There was good demand throughout the sale and prices realised were fully firm to dearer. The strongest feature of the sale were coloury mediums. Highgrowns dusts sold at steady rates. C.T.C. and C.T.C. types met with good demand and were dearer.

The average price realised in dust sale No. 41 was Rs. 4.59 per kilo, as compared with Rs. 4.57 a week ago and Rs. 4.54 in the corresponding sale last year.

Export Quota: There are sellers at ¼ nP per kilo with no buyers.

Colombo: There was good demand, but Westerns and Uvas were irregular following quality. Mediums teas were some 5 to 8 cents lower and lowgrowns sold at barely steady rates.

London: North Indian and other growns: In Monday's sale against good demand C.T.Cs. tended dearer with the plainest sorts being strong feature and often 1*d.* dearer. Wednesday's sale met with strong demand for the best teas with medium C.T.Cs. and light liquoring orthodox being quieter with some withdrawals. Others were fully firm, particularly legg Dooars.

Ceylon and South Indians: In Tuesday's sale 21,129 packages were on offer and South India contributed 6,307 packages. There was good demand particularly for the Ceylon teas. South Indians met with an irregular market and poor liquoring fannings were a weak feature.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Sale No.* 42:—554,000 kilograms. Useful general demand. Plain and low mediums, except poorest, about steady. Mediums and good mediums fully firm to dearer. Highgrowns irregular following quality."

HEAVY LOSSES TO CROPS IN BIHAR AND U.P.

(From Our Own Correspondent)

HAPUR, 16*th October*

Steady conditions continued to prevail in the foodgrains market during the week on confluenced reports of heavy losses to crops in Bihar, U.P. and some other States, due to untimely heavy rains and floods. The crops worst sufferers were *juwar*, *bajra*, paddy and cotton. Wheat here was steady to be quoted at Rs. 15 to Rs. 15.25 a maund for average quality and at Rs. 16 to Rs. 16.25 for better farm produce. Daily arrivals were poor and local wheat stock with trade was put at 25,000 maunds.

After the last week's heavy rains, weather is now clear and preparation of land for *rabi* sowings have begun. The sowings of coarse grains will begin after a week and those of wheat after another fortnight. Increase *rabi* acreage is now expected, as all the land vacated from *kharif* crop would be available for such sowings.

Rice sought lower levels thanks to arrivals of new paddy in the market which is being lifted at Rs. 12 to Rs. 13 per maund. Demand for rice was slack and week-end prices were:—*mainpuri sela* Rs. 20; *gadda kutcha new* Rs. 21; *ramajwayan sela* Rs. 21; *raimunia sela* Rs. 22; *basmati sela* Rs. 28 per maund.

Gram continued to rule steady, though local stock was heavy around 34,000 maunds. Some gram was still reaching here from the Punjab, but the main influencing factor was the reported loss to crops due to heavy rains. Gram was now quoted at Rs. 13.50 to Rs. 13.87 a maund according to quality, while barley improved fractionally to Rs. 11 per maund. *Bejhar* inferior to Rs. 11.50 and *moongia* variety to Rs. 12. New maize continued to reach here from rural areas of Rampur at an average of 200 to 300 maunds daily and prices were depressed at Rs. 10.75 to Rs. 11.25 a maund under pressure of arrivals. *Jowar* and *guzai* were listless at Rs. 11 and Rs. 14 respectively. *Methi* was steady at Rs. 27.50 to Rs. 28 per maund. Other sections were [illegible] maund.

L.I.C.'S BONUS SCHEME

RESULTS OF TWO VALUATIONS

THE Life Insurance Corporation of India announced on 13th October the finalisation of the Scheme of Differential Bonuses, which is being implemented under instructions from the Government of India. This Scheme supersedes the provisional scheme which was framed by the Corporation and announced in June 1959. The new Scheme classifies the participating policies of the erstwhile insurers and of the Corporation in 25 groups. The allocation of profits amongst the policyholders in respect of the period ended 31st December 1957 has now been revised by the Corporation in accordance with the provisions of this scheme. The results of the second valuation conducted by the Corporation in respect of the biennium ended 31st December 1959 have also been simultaneously announced. The policyholders entitled to participate in the profits disclosed as a result of this valuation will be allotted bonuses at the same rates as those determined for the valuation as at 31st December 1957.

The delay in the announcement of these results is due to the various administrative problems that had to be faced in integration of the business of 245 insurers taken over by the Corporation and the standardisation of their records. Even so, the first actuarial valuation as at 31st December 1957 was completed in the middle of 1959. If the business valued was of a single insurer or of a homogeneous group, it would have been a simple matter to determine the bonuses on individual policies once the actuarial valuation of the liabilities was completed. This was not so in the present case. Accordingly, it was necessary, in equity, to classify the policies of the erstwhile insurers for declaring differential bonuses as required under Section 49(2) (k) of the Life Insurance Corporation Act. The work being heavy could be completed only recently. Regulations made for the classification of policies for the purpose of declaring differential bonuses have been approved by the Central Government and are being notified in the *Gazette* dated 14th October 1961.

Twenty-five Groups

As stated above, the participating policies of the erstwhile insurers and of the Corporation are now classified in 25 groups. The policies issued by the Life Insurance Corporation, as also the policies issued by all the insurers after 19th January 1956 and the policies issued by certain insurers on or before 19th January 1956 included in the same group, have been allotted a key Index No. of 10. Each of the other 24 groups has been given an index number varying from 49 to 'nil'. The ratio thereof to 10 indicates the proportion which the bonus rates applicable to the policies issued by the insurers named in the group bears to the bonus rates of the policies issued by the insurers in the group with Index No. 10. The table below gives the percentages of the with profit business of the specified group to the total with profit business of all the groups in force on 31st December 1957:

Group index	*Percentage of the with profit business of the specified group to the total with profit business of all groups*
Nil	1.19
1 to 4	0.37
5 to 9	5.36
10	42.89
11 to 14	49.62
15 and above	0.57
All groups ...	100.00

Six insurers which required special method of distribution of profits due to the nature of their contracts have been placed in the 'Miscellaneous Group' and the benefits allotted to their policyholders are laid down in the scheme.

The first valuation as at 31st December 1957, of which the final results are now announced, covered all policies issued by the Corporation as well as those issued by the erstwhile insurers whose assets and liabilities had vested in the Corporation and covered a period ranging from three to seven years except in the case of a few foreign insurers and the Corporation. These comprised 56.83 lakh policies assuring a sum of Rs. 1,472.81 crores, including bonuses, and 11,539 annuity policies for Rs. 72.80 lakhs per annum. This valuation disclosed a profit of Rs. 30.24 crores, after providing for estimated amount of income-tax. Out of this, an allocation of Rs. 1.45 crore was made to the Central Government and of Rs. 1.23 crore to interim bonuses paid to policyholders, leaving an amount of Rs. 27.56 crores reserved for the participating policyholders.

In respect of the second valuation as at 31st December 1959, the total number of policies in force was 69.29 lakhs assuring a sum of Rs. 1,997.15 crores, including bonuses and there were also 10,997 annuity policies for Rs. 104.60 lakhs per annum. The total amount of profits for the intervaluation period of two years after providing for estimated amount of income-tax and after taking credit for Rs. 18.70 lakhs brought forward from the previous valuation was Rs. 26.08 crores. Out of this, allocation of Rs. 1.28 crore was made to the Central Government and of Rs. 33 lakhs to interim bonus paid to policyholders, leaving an amount of Rs. 24.47 crores reserved for the participating policyholders.

The bonuses declared on policies issued by the Corporation in respect of both the valuations are at the following rates:

Rs. 16.00 per thousand sum assured per annum on whole life policies.

Rs. 12.80 per thousand sum assured per annum on endowment assurance policies.

Bonuses on policies of erstwhile insurers will be in accordance with the final scheme of differential bonus, as explained above.

The work of preparation of bonus intimation cards is now being taken up. As more than fifty lakh cards will have to be prepared and as envelopes bearing the addresses of the policyholders will have to be prepared for each policy, it will naturally take quite some time before the bonus intimation cards can be sent to individual policyholders. In the meantime, with a view to informing the policyholders of the results of the valuation, the same are being prominently displayed through various advertisements in the newspapers and other magazines. Besides, the announcement will be exhibited in all the Corporation's offices. The Development Officers, Field Officers and Agents of the Corporation will also carry with them full details of bonuses now declared.

SURVEY

(*Concluded from page 776*)

revenue component of the plan, in determining the target of fresh taxation for any State.

The Madras memorandum has done well in highlighting the defects in the present methods of giving grants-in-aid for plan schemes of State Governments. Under the existing scheme, the assistance to States fluctuate, depending upon the fortunes of the Central Government and invariably, the actual grants fall short of the quantum determined for each State by the Working Group in the Planning Commission. This system causes severe strains on the States' resources position, because the States' budgets are based on the assumption of the original figures of assistance and not on the reduced amounts. The Madras Government has, therefore, rightly appealed to the Third Finance Commission to obtain a reasonably accurate estimate of Central assistance in respect of States' plan schemes, so that each one of them can calculate more realistically the net gap in its resources. The Madras Government makes a good point, when it asks for the abolition of the present scheme of matching grants in favour of lumpsum grants. The existing system of grants, it is said, is defective as it does not take into account the actual plan performance of the States. This criticism implies that a scheme of grants variable with plan performance will act as an incentive to their States to fulfil the plan targets within the period scheduled for their completion, provided the performance is measured in physical terms. The proposition sounds attractive on paper, but its implementation in actual practice will be extremely difficult and politically inconvenient.

WORLD BANK LOAN FOR INDIAN RAILWAYS

On Friday, the 13th inst., the World Bank gave a loan equivalent to $50 million to India to finance the development programme of its railways. Inclusive of this loan, the total quantum of aid received from that institution by Indian railways amounts to $379 million, easily the largest amount lent by the Bank to a single enterprise. The new loan will enable the railways to meet about one-eighth of the total foreign exchange expenditure during the current Plan.

The loan is for a term of 20 years and bears interest at 5¾ per cent per annum inclusive of the one per cent commission which is allocated to the Bank's special reserve. Five U.S. commercial banks, namely, the Bank of America, the First National City Bank of New York, Manufacturers Hanover Trust Company, the Fidelity Philadelphia Trust Company and the First Pennsylvania Banking and Trust Company, are participating in the loan without the World Bank's guarantee for a total of $1.075 million covering the entire first maturity, due in February 1965, and a part of the second maturity, due in August 1965.

LONDON LETTER

1961 BALANCING ACT

PAYMENTS POSITION STILL UNCOMFORTABLE

From Our Own Correspondent

LONDON, 13*th October*

BY the end of the first half of 1961, the U.K.'s gold and currency reserves had fallen from their level at the beginning of the year by £164 million, in spite of assistance under the Basle arrangements of some £325 million. Since that time, the outflow of gold has been reversed and each succeeding month has shown record figures. All this is the reflection of vast monetary movements and has little to do with the country's true long-term position. It is rather a special aspect of the problem of international liquidity.

This week, we have the official analysis of the country's trade for the first half of this year showing a reasonable, if not very spectacular, improvement over 1960. It is this which dominates the long-term position.

Before the end of 1960, exports had recovered from their mid-year fall and imports had stopped rising. During the first half of this year, imports began to fall, while exports remained at their new higher levels. The final results would have been very encouraging if Government spending had not continued to rise sharply, mainly because of the ending of German support costs for expenditure in Europe. Other invisible earnings showed a slight improvement on balance, but the best that can be said of invisibles overall is that they are no longer dropping off as fast as they were. There is nothing in the figures, however, to make one revise the conclusion of the past couple of years that this country is now back in the position in which it has got to pay for its imports by the export of goods, leaving the payment for services as a self-balancing item.

In the first half of 1960, there was an adverse visible trade deficit of £143 million, offset by an invisible income of £49 million, giving an overall deficit of £94 million. In the first half of this year, the overall deficit was cut to £108 million, but, unhappily, the net invisible income dropped to £25 million, giving an overall deficit of £83 million.

Overseas Investments

In spite of this deficit, the U.K. continued its traditional role of overseas investor and the total for the half-year was some £220 million after allowing for long-term investment by foreigners in this country. If this had been the end of the story, the country would have had a long-term deficit for the half-year of over £300 million. This situation was saved only by the vast repurchase by America of capital invested in the Ford motor industry in the U.K. which yielded £130 million of dollar income. Germany also repaid its debt of £45 million. This reduced the net deficit for the half-year to £129 million.

These figures support the view of the Chancellor of the Exchequer that the stringent measures which he took in July at the time of the run on sterling are unlikely to be seriously relaxed for some time; although the Bank rate has been reduced to 6½ per cent, he has warned that this is not an indication of any general relaxation. "The credit restrictions and the other measures must still continue," he said at the Lord Mayor's Bankers dinner last week. At the same time, he took the opportunity of stressing the Government's conviction of the need to value both to the U.K. and to world stability the parity of maintaining sterling at its present value. He dismissed the idea of a floating exchange rate, which he regarded as little better than devaluation and said that he saw the solution of the British balance of payments problem as "... a matter of restoring a healthy trend of our costs and prices and of keeping the way clear for exports to absorb the proper share of our increasing resources." He regarded the Government's part in all this as keeping the economy in balance and holding back inflationary tendencies. He repeated this theme over again to [illegible] country that, both in its interest [illegible] economy, restraint must still be [illegible] day and the only expansion [illegible] is in the growth of exports.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2638 BOMBAY, 28th OCTOBER 1961 PRICE Rs. 2

INCENTIVES FOR STEPPING UP EXPORTS

THE question of incentives for stepping up exports will doubtless prove a very ticklish issue to the Import and Export Policy Committee, under the chairmanship of Dr. Ramaswami Mudaliar, which visited our city this week for taking oral evidence from trade associations and interested persons. The Committee's task, in this respect, has by no means been rendered easy by the memoranda received from the various commercial associations in the country. Most of them contain only an analysis of some of the aspects of the export incentives that are already being provided by the Government; there are no categorical suggestions in them. They are, however, unanimous on three points: (1) The existing schemes have not been much of a success, in that the results have been below expectations and not commensurate with the increase in exports the country needs; (2) this, however, is no reason for discontinuing them, for the need for special export incentives has become more imperative than before; and (3) the Committee should evolve incentive schemes that will yield better results. The purpose of this article is not to fill the gap in the memoranda mentioned above. It is only to emphasise the limitations to which any scheme of export subsidy is subject. Essentially, export subsidies are only palliatives and not remedies. They may help ease the difficulties in winning exports for a short while and, if the breathing space provided by them is not utilised to rectify the fundamental defects in the national economy, the sacrifice involved will have gone in vain. Perhaps, the failure to realise this point is responsible for the sense of dissatisfaction with the results obtained from the schemes that have been in operation in the last two or three years.

While conclusions have been drawn by the authors of the memoranda, they have not been supported by the necessary factual evidence. The Import and Export Policy Committee will, therefore, have to gather sufficient data to find out the extent to which the prevailing export incentive schemes have been efficacious. It may be that their success has not been impressive, but it is possible that, but for them, things might have been worse. Only, it is necessary to find out whether the cost involved has been worth even this negative gain. Further, some of the schemes are said to contain loopholes, facilitating the abuse of this convenience. The Government has no doubt been modifying the schemes from time to time to prevent abuses. While no scheme can be absolutely foolproof against the attempts of skilled schemers who are out to line their pockets irrespective of national considerations, the Committee will, nevertheless, have to examine these aspects in detail, if it is to suggest better methods of providing export incentives, with minimum scope for leakages.

The necessity for export incentives has arisen because the goods to be exported are not competitive in world markets in terms of either prices or quality or both. In some cases, the exports have to be made more attractive than sales for domestic consumption which are relatively easier in a developing economy, protected by severe import restrictions, heavy tariffs and limited internal competition. Devaluation may appear to be a simpler solution, in the sense it can be administered easily. But it will raise more problems than it can solve. Surely, India cannot afford to make its imports costlier than they are now, as that will add to the cost of capital goods, technical services and know-how for which it is still dependent upon foreign countries to a considerable extent. Further, devaluation will aggravate the inflationary pressures already prevalent in the country and will only tend to perpetuate some of the dubious economic policies that are being pursued in the name of decentralisation of economic power and equitable distribution of employment opportunities among all the member-States of the Indian Union. This is not to suggest that export subsidies are not free from these defects. They do give rise to some of the evils of devaluation. Thus, to the extent that the cost of subsidies, whatever form they may take—currency retention, special import entitlements, cheap export credits, freight concessions, fiscal reliefs, State directly sharing a part of the loss on exports —is borne by the domestic consumers and taxpayers, they have an inflationary impact. They are also unlikely to compel a *wholesale* change in the attitude of policy-makers and administrators. But the degree of these evils will be milder than in the case of devaluation. It will be true to say that export incentives constitute a lesser evil. Their impact will be selective. And they will, to some extent, bring home to the authorities the need for realism in adopting some of their socialist policies, because, when circumstances force them to yield fiscal concessions at the expense of the Exchequer, they are bound to realise the urgency for giving up at least some of their economic follies. The quantum and variety of export subsidies can surely be minimised, if the Government encourages large-scale manufacture of products, permits introduction of up-to-date production devices that will keep the unit cost low, follows a labour policy that relates the worker's income to productivity, allows import of plant and machinery of high efficiency by industrial units that are willing to develop export markets, makes a determined attempt to bring down the prices of raw materials and food through higher productivity in agriculture, stops meddling with efficient commercial plantations in order to satisfy ideological whims and fancies and, above all, bears in mind the following quotation from a recent speech of Mr. Selwyn Lloyd, the British Chancellor of the Exchequer:

> "The most valuable contribution the Government can make (to export promotion) is to keep the economy in balance and hold back inflationary tendencies."

It is to be hoped that, while recommending export subsidies for specific goods, the Ex-Imp Policy Committee will examine the factors that have made such assistance necessary and suggest appropriate remedies for withdrawing this prop as early as possible. It is needless to add that, if a devaluation of the rupee is to be avoided, it is absolutely essential that the circumstances which have necessitated export subsidies should be ended at an early date. It is also necessary to bear in mind that the rest of the world is becoming more and more efficient as compared with this country. The Committee has also to examine and prescribe the types of export subsidy and the conditions under which they should be made available, for there is no one variety which can satisfy the requirements of exportable goods, nor do all the goods that are exported need subsidy. Broadly speaking, however, direct cash subsidy will have to be limited only to those that are absolutely in need of them, for the question of finding resources will be difficult. As between such export incentives as special entitlement to imports of scarce commodities and relief in direct taxation on export performance, the latter is preferable to the former, as it is less inflationary in its impact. It would, therefore, be desirable to restrict the use of the former incentive (that is, import entitlement) only to those cases where the balance of advantage is distinctly favourable.

AMERICAN DELEGATION

FIFTY American business men, good and true, have been in New Delhi this week, seeking answers to their many doubts about the prevailing climate for foreign investment in India. That this should happen after many years of publicity and public relations about India's interest in attracting foreign private capital can hardly reflect credit on the work that has so far been done. Mr. Morarji Desai, for example, has been claiming, after each visit to Washington, that misgivings there about India's economic policies have been removed and better understanding promoted; once again, he has had to repeat at Delhi his explanations regarding the Indian Government's attitudes to foreign capital and the Indian private sector. Journalists in the Union capital have been told that the visitors are now reassured. Only events in the coming months will show to what extent this assessment is correct.

There, however, seems to be more in all this than has been publicly acknowledged. In view of the increased interest shown by U.S. business men in India, one of them was apparently commissioned earlier to investigate and make a report which, it is reported, was not quite favourable to this country. The continuing tussle with the oil companies here was probably responsible for giving the impression that India may go back on assurances; actually, a question to the effect whether India always kept its contracts with foreign capital was put by one of the business men when the group met the Minister for Steel, Mines and Fuel and was answered by an emphatic affirmation. It would surely be optimistic to think that such affirmation has cleared up the misunderstanding, the nature of which was clearly revealed by the questioner. Indian Government officials in the U.S., be it said to their credit, have been alert in this matter and been anxious that the true picture should be presented to a cross-section of U.S. business men. The first-hand impressions now gained by a large and mixed group may avoid the personal prejudices of indtviduals, for some of whom even the word "socialism" is an anathema and the public sector in industry an antithesis of free enterprise. There are others who already have some connection with India; they do not regret it and would like to explore the scope for further ventures. But both sets of business men are in earnest about finding out the truth. The answers of officials and Ministers may be accepted with mental reservations; but the group is also scheduled to meet Indian business men from whom they may hear a language

which they understand better. Their real difficulty may be in finding unbiased and fairly objective views on the future role of foreign capital in the Indian economy.

Among the questions which these business men have asked is whether the public sector can guarantee supply of power to industries to be started by foreign enterprise and whether Government would permit them to have their own generating capacity. There can be no clear-cut answers to questions like this, when power shortages are acute and chronic in the Delhi and Calcutta regions and seasonal in the South. The third Plan itself makes clear that, in spite of the target of 12.69 million kw. for commercial operation (requiring an outlay of Rs. 1,039 crores) shortages will persist. It is improbable that experienced *entrepreneurs* are not aware of the stresses and strains of a developing economy and the difficulties in providing the economic overheads which are usually taken for granted in the advanced countries. The Government can only say that every effort will be made to supply power where available; it can go a little further and say that industries will be freely allowed to generate their own power, though here again the problem of transport of coal for thermal stations will have to be considered. It is estimated that investment in self-generating industrial establishments has increased from about Rs. 40 crores in 1960 to Rs. 78 crores at the end of the second Plan, with a corresponding doubling of capacity and power generation in these units. This shows that there are no objections in principle.

Similar considerations apply to transport also. The controversy between the Railway Ministry and the Ministry of Steel, Mines and Fuel may not be a good advertisement for the public sector's capacity for co-ordination, but foreign *entrepreneurs* who must be sufficiently aware of the problems of development, may tolerate such imperfections, so long as they can see concrete evidence of the desire to remedy them. Their visit should serve to remind the authorities that, while such conditions as freedom to repatriate capital and profits, fair compensation in the event of nationalisation and avoidance of double taxation are all essential for attracting foreign capital, they are not quite enough. Foreign investors are still somewhat sceptical about the Government's licensing policies and formalities about capital issues and import controls. Obviously, these cannot be removed to accommodate them, but they may be simplified further. The establishment of the Indian Investment Centre is an alternative method by which the Government has tried to reduce the inconvenience caused by dilatory methods of its Departments to persons unused to such detailed regulation in their own countries. One must hope that the Investment Centre itself will not lapse into governmental ways and lose sight of its primary objective.

On the whole, the U.S. business men appear to have been impressed by the nature of the problems tackled here and the visit has done much good for both. It was nice of them to have travelled all the way from their country to see things for themselves. They have been agreeably surprised by the well developed credit and stock market mechanisms at work; confrontation with officials seems to have convinced them that the officials were generally well-informed and knew what they were doing. Recent changes in company taxation, concessions to foreign technicians and in royalty taxes have served as proof of the Government's constant desire to woo the foreign investor. And, if Press reports do not exaggerate, the brief encounter with the Minister for Oil, Mr. K. D. Malaviya, has even illuminated some aspects of the controversial oil policy which will not normally be appreciated by American business men. The latest partnership with a British oil company on a 50-50 basis has apparently helped to prove the workability of such arrangements on what has been described as a "co-operative" basis. These are positive gains.

TOWN PLANNING

TOWN planning, which has the twin objective of controlling land use and securing the orderly development of towns and cities in the interest of social stability and general welfare, has gained a good deal of urgency in the wake of further industrialisation and consequent urbanisation during the last decade. The number of cities with a population of 100,000 or more has increased from 75 in 1951 to 115 in 1961 and their population forms about 43 per cent of India's total urban population. With this increased urbanisation, the problems relating to housing, water-supply, sanitation, transport and power, location of industries, civic administration and, above all, land use have increased in number and intensity alike. Many of the larger cities like Calcutta, Bombay, Delhi, Kanpur, Ahmedabad and Madras are already heavily congested, and the industries established so far are also accentuating their civic problems. Three remedial measures are, therefore, being encouraged now—one emphasising the establishment of new industries, as far as possible, away from such congested cities, the second emphasising the creation of 'ring' towns (such as those envisaged in the Master Plan that has been evolved for Delhi) or of 'satellite' towns (such as the one discussed for inclusion in the Master Plan that is to be drawn up for Calcutta), and the third pertaining to the preparation of master plans for all metropolitan cities, State capitals, port towns, new industrial centres and other large and growing cities. It redounds to the credit of India's planners that they have come to grips with the problem of town planning in their final report on the third Plan.

This report describes "town planning" as something indispensable for the development of towns and cities on sound lines. The first step in this process of town planning will be the preparation of interim general plans, establishing the broad pattern of land use to which developments should conform; in the second stage are to be prepared detailed master plans. The report has also provided a tentative list of towns and cities for which master plans are to be drawn up in the third Plan period. In the part pertaining to metropolitan cities, State capitals and port towns are to be found Ahmedabad, Bangalore, Bhopal, Cochin, Delhi, Greater Bombay, Greater Calcutta, Hyderabad-Secunderabad, Jaipur, Kandla, Kanpur, Lucknow, Madras, Patna, Poona, Shillong, Srinagar, Varanasi, Visakhapatnam and Trivandrum. In the other part relating to industrial centres are included Allahabad, Asansol, Barauni, Bhadravati, Bhilai, Bokaro, Chittaranjan, Coimbatore, Dehri-on-Sone, Dhanbad, Digboi, Durgapur, Gauhati, Gorakhpur, Deoria, Guntur, Jamshedpur, Kothagudam, Mirzapur, Moghulserai, Nangal, Panvel, Ranchi, Rishikesh-Hardwar, Rourkela, Sindri, Tinsukhia, Vijayawada and Warangal. The State Governments and the local administrations concerned will have the primary responsibility for the preparation of master plans for these towns and industrial centres. Under the third Plan, they will have Central assistance to the tune of Rs. 10 crores for the preparation of master plans and related urban development measures. West Bengal has separately provided Rs. 10 crores in its plan for meeting some of the urgent civic needs of Calcutta which poses a special problem for the eastern region of the country. The Central Regional and Town Planning Organisation will be in a position to assist the State Governments in the preparation of master plans; the State Governments, in their turn, are expected to establish Town Planning Organisations, with adequate trained personnel. But the work of town planning as such can get started only when suitable legislation on town and country planning is enacted in the States. Such legislation will be absolutely necessary for control of urban land values through public acquisition of land and appropriate fiscal policies, physical planning of the use of land and the preparation of master plans, defining minimum and maximum standards for housing and other services to be provided for towns according to their requirements, and strengthening of municipal administrations for undertaking new development responsibilities.

There is, thus, much work to be done in the next few years in the sphere of town planning. If this work is to be expedited, the recommendations of the tenth annual Town and Country Planning Seminar, which has just concluded its discussions at Madras, would need to be given prompt consideration. As the Seminar was attended by as many as 225 delegates, representing the Central Government, State Governments, municipal corporations, city improvement trusts and housing boards, its conclusions seem to be invested with some authority. These, in summary form, are:

Master plans should be drawn up for all big towns and cities. Pending the finalisation of such master plans, the State Governments should control physical development, according to an interim, or outline of, development plan. Central and State Governments should provide grants and loans to local authorities to enable them to undertake implementation of the master plans.

The planning of public utilities, like water-supply and drainage, and services, like electricity and gas, should form an integral part of the master plan proposals for a town. These services should be laid in accordance with the ultimate sections of roads as contemplated in the master plan proposals. Plans for them should be drawn up on a long-term basis, keeping in view the future requirements. And the planning of sewerage system should invariably include proposals for proper treatment of effluent before the same is let out, so that sources of water-supply, surface or underground, may not get polluted.

In order to acquire, at a reasonable cost, the land required for various public utilities and services under the master plans, it would be necessary to peg down the soaring land prices to the level prevailing at a suitable past date. For this purpose, all the States should enact legislation immediately; the recent legislative enactments in Madras, Bihar and Madhya Pradesh could serve as models in this connection.

There is an immediate necessity to make a correct assessment of the needs of the people in regard to their water requirements, taking note of future expansion.

In order to relieve traffic congestion in big cities, the undermentioned steps would be necessary: staggering of office hours in industries, commercial establishments and Government departments; staggering of timings of educational institutions, giving due consideration to the age group of pupils; functional classification of roads, based on land use and traffic surveys; apportioning of roads to accommodate peak hour traffic; prohibition of encroachments on the road margins and pedestrian paths; provision of subways or overbridges in streets with a large volume of traffic and at railway level-crossings.

The State Governments and the local authorities should conserve the existing open spaces and maintain them in an æsthetic manner and adopt statutory measures for the purpose on the model of the proposed Parks and Open Spaces Bill of Madras. Water-fronts, if any, in urban areas should be developed for non-commercial use, that is, for rest and recreation purposes.

All the above conclusions and recommendations, one would readily concede, bear the stamp of detailed study and careful thinking. They are also sensible and practicable. Only, they must be implemented energetically. The Central and State Governments have to assist the local authorities with leadership, besides grants and loans. The local authorities themselves must raise additional resources from tax and non-tax sources. There can at least be three new major sources of revenue to them, if the relevant recommendations in the final report of the third Plan are given effect to. One of these is allotment of lands, acquired by public authorities, only on a leasehold basis; this will bring in a recurring income by way of ground rent. The second source is represented by betterment levies and taxation of agricultural lands put to non-agricultural uses, for which the existing provisions in several States are inadequate; this is stated to be a growing source of revenue. And a possible capital tax on transfer of free-hold lands is the third source. But one qualification regarding betterment levies (that is, charges payable by those whose property has been enhanced in value by development) may have to be kept in mind; this is the extreme difficulty involved in determining or collecting them, as evidenced by British experience in this respect in the 'thirties.

Town planning in India may also have some useful lessons to draw from the working of the Town and Country Planning Act, 1947, and the New Towns Act, 1946, in Great Britain. Under the first Act, the British Government has been providing liberal grants from public funds towards the cost of schemes of major redevelopment. Under the second Act, the capital cost of developing 15 new towns (designed for an ultimate total population of about 700,000 in 100,000 houses) has been advanced to the development corporations concerned from public funds. The new towns in Britain are thus a wholly State investment. They have involved an outlay of about £300 million (Rs. 400 crores) in the course of 12 years. An outlay of this magnitude by the Central and State Governments on new industrial towns and State capitals that have been under construction or are under contemplation in India cannot, however, be expected for obvious reasons. Private investment will have to play a large role in India's new towns, and Chandigarh has already shown the way.

MARKET GOSSIP

Nip It In The Bud

THERE is a new deplorable tendency among companies wanting to raise additional capital through the issue of ordinary shares. Under the Company Law, the existing shareholders have a prior right to all these shares and, in regard to rights not taken up by any of them, a convention has come to prevail under which the existing shareholders who wish to have additional shares and who have applied for them along with their application for the rights are allowed to have their extra requirements. The right under law was first watered down, in order to allow expansion and/or diversification of activities with the assistance of foreign capital. The foreign collaborator was permitted to acquire shares at par of even well-established companies. This was understandable and the existing shareholders generally agreed to the arrangement gladly as it provided an opportunity for their own holdings to appreciate in market value in course of time. But now this right is sought to be whittled down further in the name of socialism. The existing shareholders are told by their directors that, of the balance of new capital to be raised after the share of foreign collaborators, they will be offered only a part, as it is proposed to distribute the other part to new investors in consonance with the Government's policy of spreading ownership of companies over as large a number of investors as possible and preventing concentration of economic power in a few hands.

In the past fortnight, two instances of this nature have come to our notice and many more may be in the offing. One is the Hindustan Electric and the other Asian Cables Corporation. In both the cases, the market value of their shares went up when news of right shares first reached the market, but, later, a substantial part of the gain was wiped out when it was known that only partial right would be given to existing shareholders. The shares of Asian Cables, for instance, first looked up from Rs. 122.50 to Rs. 144 and then lost Rs. 40 from the highest point, following the Directors' announcement that the rights will be only at the rate of one for one, instead of at two for one to which they are entitled under the Company Law. The shareholders of the Hindustan Electric, a large number of them at any rate, have refused to oblige their directors. It remains to be seen whether the shareholders of Asian Cables, too, will follow suit.

Before proceeding further, it is better to mention the facts of Asian Cables' proposed capital increase. These can be had from the following extract of the explanatory statement to the shareholders:

"At the first annual general meeting of the Company held on 10th March 1961, a series of resolutions were adopted by the shareholders for the purpose of issuing fresh equity capital to the extent of Rs. 1,55,00,000, consisting of 1,55,000 new equity shares. Out of the said shares, 55,000 shares were decided to be offered to Phelps Dodge Enfield International Corporation, a combine of Phelps Dodge Copper Products International Corporation of New York and Enfield Cables Limited of U.K., who have agreed to collaborate with the company in the erection and working of its Project II for manufacturing high tension power cables and magnet wires.

"The remaining 1,00,000 new equity shares were decided to be offered to the shareholders in the proportion of two shares for every one share held by them. The Board of Directors, however, feel that it would be in keeping with the trend of the times and the Government's policy and also in the best interests of the Company itself, to make the holding of the share capital as broad based as possible so as to enable as many people to subscribe to the share capital of the Company, thereby discouraging concentration of shareholding in a few hands.

"However, it is also felt that the existing shareholders should not be denied their right to have new equity (ordinary) shares and, therefore, striking a golden mean, the Directors have come to the decision to recommend the special resolution for the acceptance of the members. It is proposed to offer 50,000 shares to the shareholders as right shares (that is, at the rate of one new share for every existing share) and the balance of 50,000 shares for public subscription on such terms for payment as may be decided hereafter by the Directors."

It is all very well to talk about the need for discouraging concentration of shareholding in a few hands, but is it right to seek the achievement of this laudable objective by robbing Peter? Is it not a fact that the management of the Company, which is surely in a few hands, holds the controlling interest? If so, why not give up that concentration in favour of wider shareholding? It will be noted that those who have the controlling interest of the Company do not say that they are giving up their entire rights to the new issue, as was done by the Directors of the Hindustan Electric.

The most important point here is that there must be quite a sizable number of small shareholders in Asian Cables, having five, ten, fifteen or 20 shares of Rs. 100 each. We would say that even a person who holds 100 shares is an investor of moderate means. Must these small investors be made to forgo their rights, so that the management could identify itself with the policies and principles of the powers-that-be? If a shareholder having ten or fifteen shares is allowed to possess 20 or 30 shares more, will it lead to concentration of economic power in a few hands? It would be understandable if the really big shareholders were persuaded to give up all their rights in favour of the smaller fry. It would be commendable if a part of the new shares were reserved for being offered to the workers of the Company on quite favourable terms. But that is not what the management proposes to do. It is most unfair to bracket the small shareholder with the big shareholders in such matters. Will the authorities of the Bombay Stock Exchange and the Controller of Stock Exchanges look into this problem and take appropriate steps to safeguard the interests of small investors?

As we go to press comes the report that the Seshasayee Industries Ltd., Madras, also proposes to offer only a part of its new issue to the existing shareholders. It is said that, of the 400,000 new shares of Rs. 10 each, the existing shareholders (there are at present 316,000 ordinary shares and 84,000 preference shares, both of Rs. 10 each) are to be given only 100,000 shares or so. Full details are not available at the time of writing, but it is to be hoped that the Directors of the Company will first satisfy the full requirements of all existing shareholders and offer to the public only that portion which is not taken up by them.

Airlines' Dilemma

The disturbing revelations made by Sir William Hildred, Director-General of the International Air Transport Association, in his report to this year's meeting of the I.A.T.A., held at Sydney this week, should induce fresh thinking on the problems that threaten to cripple the industry. Gross operating profit-margin of the industry (that is, before taxes and interest) was, Sir William pointed out, ridiculously low—£20 million or only one per cent of the gross revenue of £2,000 million and utterly insufficient to meet the demands of growth or the pressure of rising costs. Financially, the situation in the industry, according to the Director-General, was precarious and an affront to commonsense.

What is the solution? Sir William had no doubt that reducing fares to a low enough level to multiply the demand that will fill the yawning seats and yield a decent profit, was the only way of making air transport pay. But reduction in fares was not easy to achieve. Lower fares should spring from a reduction in costs for which airlines alone did not hold the key. There were, ironically, many areas of costs which were quite outside the control of airline managements. For instance, the price of aircraft was dictated by manufacturers' imperatives and not those of the airlines and the price of fuel was based on conditions other than those of the operator and affected by taxes of an infinite variety and sometimes of appalling magnitude. Further, the cost of both air and ground operations was strongly influenced by the actions of powerful trade unions. In fact, for all airlines, there were segments of costs determined by the policies, and sometimes the whims, of Governments. Two items of expenses, which, according to Sir William, were of grave concern, because they were growing faster than any other, were landing fees and associated charges arising from the use of airports and charges and costs of air navigation and other *en route* facilities.

In three years, Sir William pointed out, landing charges had risen by half as compared with a rise of only one-third in total operating costs. In 1959, the industry paid $122 million in landing fees alone, while air navigation facilities cost another $20 million. The amounts paid to Government and airport authorities were at present three times the airlines' gross profit margin.

Protests against this "mounting and capricious" burden of landing fees and charges for navigation facilities proved to be of no avail, averred Sir William. It was "discouragingly apparent," he pointed out, that Government administrators made up their minds before advising airlines and had little intention of changing them. Airlines, the Director-General argued, were not averse to paying higher landing charges, but it was unfair, he maintained, to hold them solely responsible for them as some Governments did. The airlines also did not object to paying a fair share of the cost of navigation facilities, but there was little standardisation and less logic in the way they were charged. The Director-General disclosed that, in view of this situation, the world air transport industry planned to start a campaign against Governments aimed at securing a reduction in the mounting burden of landing fees and navigation charges. The airlines were also establishing an intelligence network to ensure that they became aware sooner of the various Government's intentions. The most important assignment of this network, according to Sir William, would be to establish relations with Government agencies, so that they be kept posted of the facts as the airlines see them, so that they could count on consultation before Governments' minds were completely crystallised.

The economics of air transport is such that a reduction in cost, even if it were possible to achieve it, can only be a partial solution to the financial difficulties of airlines. As it is, the scope for any substantial cut in operational costs is limited. A considerable expansion in traffic alone can make a substantial addition to the revenue. Such expansion will, however, be possible only if fares are reduced. Even in the affluent countries of the West, the proportion of people who travel by air is a small percentage of the travelling public. A reduction in fares cou'd, therefore, make a more than proportionate impact on turnover.

The large spare capacity available today on most of the world's air routes affords an excellent opportunity for enlarging the traffic by a cut in fares. Unfortunately, international air fares, fixed as they are by agreement between the airline companies, cannot be easily changed. For a host of issues, other than strictly commercial, are brought to bear on the question of fare revision, with the result that stagnant traffic and dwindling profits have rendered air transport uneconomic.

While world airlines are thus financially crippled, yet another threat to the industry's solvency looms on the horizon. This is the possibility of the advent of the supersonic age in international air transport. Although this is still a distant prospect, thanks to the fact that at present it is beyond the capacity of airlines or aircraft manufacturers to finance the manufacture of supersonic aircraft, the possibility of Governments introducing supersonic aircraft in commercial transport, for prestige or other reasons, cannot be entirely ruled out. The implication of this can be understood only if it is remembered that, according to experts on commercial air transport, even the jet age has come too soon and too massively. Consequently, almost all air transport companies had to rush to "go jet", lest they should be driven out of business by their competitors. As a result, a whole generation of piston-engined aircraft had to be prematurely put out of service. This has resulted in a heavy strain on the finances of airlines. Even before the switch-over to jet aircraft is complete, the latter have to face the danger of being rendered obsolete. International airlines have thus become the victims of wild competition and swift scientific progress in aircraft industry.

Is It Worth Spending?

In spite of all the fanfare of publicity by the *Khadi* and Village Industries Commission, there is a common complaint that either the amount spent on the development of these industries is unduly heavy or a large part of it is not being utilised properly. Some even ask: Is it worth spending crores of rupees year after year on projects many of which are not economically sound? That the criticisms levelled against the implementation of the *khadi* and village industries schemes are not uncharitable will be evident from the statistical data furnished by the Commission itself. As against the aggregate disbursements amounting to nearly Rs. 85 crores during the second Plan period, the actual value of output was no more than Rs. 157 crores. In other words, for every rupee worth of goods produced, the development outlay worked out to as much as 54 nP!

Out of the Rs. 85 crores disbursed by way of loans and grants, the share of traditional *khadi* alone was of the order of Rs. 45 crores and that of ambar *khadi* Rs. 20 crores. The village industries together accounted for Rs. 18 crores. The balance of about Rs. 2 crores represented the expenditure on intensive area scheme. The major portion of the amount disbursed—Rs. 51 crores, to be precise—was in the nature of loans, while grants aggregated Rs. 34 crores. Almost Rs. 39 crores were disbursed as loans for working capital and purchase of equipment for *khadi*. It is, indeed, gratifying to learn that over Rs. 29 crores were repaid during the second Plan period.

Judged by the size of the development outlay, the production performance of the different industries assisted by the Commission has not been as encouraging as one would have wished. Take, for instance, traditional *khadi*. The actual output has not only not registered any increase but has in fact suffered a distinct setback. After rising from 42 million square yards in 1956-57 to 50 million square yards in 1957-58, it fell to less than 40 million square yards in 1960-61, a year of considerable scarcity of mill-made cloth which forced the Government to intervene and compel the millowners to reduce prices. While the trend of production has thus been downward, the value of output has gone up from Rs. 7.90 crores in 1955-56 to Rs. 9.56 crores in 1960-61. The production of ambar *khadi* in 1960-61 was as low as 23 million square yards, which, though it was higher than the figure of just two million square yards for 1956-57, was well below the quantity produced in 1959-60, namely, 26 million yards. The average value per square yard produced in 1960-61 was Rs. 2.40 in the case of traditional *khadi* and almost Rs. 2 in respect of ambar *khadi*. Surely, one wonders whether it is worth while to spend enormous sums of money to produce negligible quantities of such high-cost cloth. This aspect has to be specially stressed in the context of the continuously rising domestic requirements of cloth, not to speak of the need for exports and scarcity of financial resources. Quite a large part of the amount that is now being spent on *khadi* development could be saved, if only the powers-that-be were to concede the just demand for allowing the more efficient mill sector to expand its capacity and improve its plant and machinery.

The production under different village industries showed a steady increase during the second Plan period. The total production in 1960-61 was valued at Rs. 23.54 crores, representing a rise of 162 per cent as compared with 1956-57 when the value of output was Rs. 8.97 crores. But the extent of the improvement was not even. Thus, the production of oil, leather, *gur*, *khandsari* and pottery recorded a significant increase (ranging between two and four times), whereas the rise in other industries was not so significant.

The foregoing review tells us that the pace of progress in *khadi* and village industries has not

been commensurate with the huge expenditure actually incurred on their development. The planners themselves seem to have recognised this point. How else, then, is one to explain the niggardly increase in the outlay provided for in the third Plan? As against the disbursements of Rs. 85 crores in the second Plan, the provision made in the third Plan is just Rs. 92.4 crores (Rs. 37.0 crores for traditional *khadi*, Rs. 35.4 crores for ambar *khadi* and Rs. 20.0 crores for village industries). If even this amount and the human and material resources are to be utilised well, three things are necessary. First, the activities of the various agencies undertaking rural development should be co-ordinated at appropriate levels. Second, steps must be taken to ensure the development of local leadership and initiative for preparation and execution of the programmes. And, finally, efforts must be made to improve the productivity of rural industries by supplying modern tools.

Special Margins On Mustard

Vegetable oilseeds and oils, which had ruled easy for some time past, staged a smart recovery during the past few days. The initial momentum was given by rumours spread by certain interested parties that the Government of India would announce an incentive scheme for the export of groundnut oil. But this rumour proved absolutely baseless. For Mr. D. S. Joshi, I.C.S., Additional Secretary in the Union Ministry of Commerce, made it clear at a meeting with the representatives of the Indian Oilseeds Committee at New Delhi recently that the Government had no intention to permit export of groundnut oil for the present. Besides, Mr. Joshi, it is learned, did not hesitate to condemn those operators who played up, through a section of the Press, a periodical meeting of this sort to serve their self-interest. Despite this setback, oilseeds prices showed no signs of abatement. In fact, they moved up still further. Groundnut January 1962 contract, for instance, which had fallen from Rs. 223 (per 250 kgs.) in the beginning of July to Rs. 196 by mid-October, rallied to Rs. 203.75 by Wednesday this week. Rumours of lower yield from the standing crop at Saurashtra and other parts of Gujarat and pre-*Diwali* demand account only partly for this renewed strength. The major contributory factor was the heavy short covering by speculators, on account of the pronounced firmness in rapeseed and mustardseed in Delhi and other North Indian markets.

Considering the adverse effects of speculation in mustard on outside markets, the Forward Markets Commission hastened to enhance the special margin on November 1961 settlement in mustard futures contracts in Delhi, Agra, Kanpur and Bhatinda. The details of the new margin system are: (1) A special margin deposit of Rs. 2,500 per unit of 4,000 kgs. will be levied on members holding long open position up to 100 units when the price of the November 1961 mustard futures in Delhi is above Rs. 33 per 40 kgs. In respect of members holding open position above 100 units, the rate of special margin will be Rs. 3,300 when the price is above Rs. 33 per 40 kgs. In other words, the special margin will be 100 per cent of the value. A 100 per cent special margin will be applicable to all 'longs' during the delivery period, irrespective of the position held. (2) The concession regarding free-limit will be abolished forthwith in respect of the November 1961 delivery.

The Commission's move is welcome; since it is clear that, it is not any basic imbalance in the demand-supply position but unhealthy speculation that led to the rigging up of mustard prices. It is, of course, too early to assess the position of this crop in the 1961-62 season, since the sowing has just begun in most of the areas. But the 1960-61 crop was the largest ever, being 1.38 million tons (final official estimates), as against 1.05 million tons in 1959-60. Despite the comfortable supply position, November 1961 delivery spurted from Rs. 32 (per 40 kgs.) in the beginning of this month to Rs. 35 by Wednesday this week in the Delhi market. The F.M.C.'s move is a timely warning to speculators that it will not hesitate to resort once again to special margins—which it has removed from 1961-62 crop deliveries—not only in mustard but in other seeds as well.

Advisory Council To Meet

The Central Advisory Council of Industries, due to meet in New Delhi this week-end, will not have any new problem on its agenda. Import cuts and transport difficulties which hamper industrial production are bound to figure prominently in the discussion: however, the index of industrial production for the first five months of the year (184.1) has shown a rise of about 9 per cent over the corresponding period last year, in spite of import restrictions necessitated by the fall in the sterling reserves.

Fresh insistence on expanding maintenance imports is only to be expected. Further examination of the scheme of compulsory exports from this larger body (which is also representative of labour) may usefully supplement the discussions in the last meeting of the Export Advisory Council. An important point that has recently emerged is the impracticability of setting targets for an industry as a whole when it consists of many weak units operating on a small scale whose quality and after-sales service are not such as to help exports. This objection is valid in respect of many new industries, especially in the field of engineering. The reports of the Development Councils to be placed before the Central Advisory Council contain many examples of low quality and workmanship; even so, they command high local prices, because of keen demand and the pull of the internal market has to be countered without affecting the producer or export. The Government's ideas on export promotion measures to the extent they have crystallised so far, may be forthcoming at this meeting.

EQUITIES STEADY TO FIRM

(From Our Own Correspondents)

BOMBAY, 26*th October*

BARRING a minor setback on Monday the 23rd inst. on account of technical correction, the share market displayed a firm trend during the week under review. A number of pivotal counters, both in the cash and forward sections, recorded handsome gains. The revival of bull support was partly induced by the decision of the Reserve Bank of India to revoke the curb on clean advances. This development gave rise to hopes that the restriction on bank advances against shares might also be removed sooner or later. Textile shares were well favoured, thanks to the general feeling in market circles that the working results of most of the leading textile mills in the current year might be exceedingly good. Cement shares also received a fair amount of support, following reports that the Government has at last decided to raise the ex-factory price of cement though not to the extent recommended by the Tariff Commission. Unconfirmed rumours about expansion plans of T.E.L.Co. and Voltas imparted considerable strength to these scrips.

Although the general trend was steady to firm, the turnover was not large; nor were the gains widespread. Some of the first class investment scrips such as G.K.W., Indian Oxygen, Larsen and Toubro, Gwalior Rayon, and bank scrips were rather quiet on stray liquidation. It is reported that a large block of G.K.Ws. have changed hands in private deals and more such transfers are quite on the cards.

In the steel section, Tata Steels opened higher at Rs. 145.25 as against the closing rate of Rs. 145 last week and eased in the subsequent sessions following stray liquidation by bulls to Rs. 143.25. Lower levels attracted support and the share wound up the week at Rs. 145.25 today, showing a gain of 25 nP over the week. Indian Irons began the week at Rs. 24.44, but softened in subsequent sessions due to lack of support. The closing rate today was Rs. 24.28. Mukand Irons advanced from Rs. 27.25 to Rs. 28.35.

In the textile section, Centurys began the week at Rs. 591, as against the previous close of Rs. 590. On Monday, the closing quotation was Rs. 584*xd*. In the last three sessions, the scrip fluctuated both ways within a narrow range before finishing at Rs. 588.50 today. The net gain over the week was Rs. 6.90. Standards were the outstanding feature of this section, in that they shot up by Rs. 72 to Rs. 1,409 for no ostensible reason. Another feature of this section was that some back-benchers, too, registered substantial gains. Thus, Edward Textiles jumped up by Rs. 25 to Rs. 330. Swans rose by Rs. 20 to Rs. 645. Elphinstones gathered Rs. 16.25 to Rs. 120. New Greats were marked up by Rs. 7.50 to Rs. 252. Azam Jahis hardened by Rs. 5 to Rs. 85. In the cash section, Mafatlals spurted by Rs. 25 to Rs. 955. Indian Manufacturings gained an equal amount to Rs. 3,225. Laxmis put on Rs. 2.50 to Rs. 622.50. But there were some losses, too, in this section. Thus, Svadeshis receded by Rs. 6 to Rs. 270.50. Kohinoors after moving irregularly, lost Rs. 2 to Rs. 311. They opened the week at Rs. 312, as against the previous close of Rs. 313 and advanced to Rs. 318.50 on Monday. Higher levels, however, attracted profit-taking and the share closed lower. Bombay Dyeings opened slightly higher at Rs. 68.80, as against the closing rate of Rs. 68.60 last week and fluctuated narrowly in the subsequent sessions, before finishing at Rs. 68.20 today. Over the week, the scrip suffered a setback of 40 nP.

Cement shares displayed a firm trend. Associated Cements opened the week at Rs. 167.50, as against the closing rate of Rs. 168 and advanced in subsequent sessions as a sequel to investment-*cum*-speculative support to Rs. 171.25 today. At the close, however, they were slightly subdued and finished lower at Rs. 170.25, showing a gain of Rs. 2.25 over the week. Digvijays spurted by Rs. 4 to Rs. 184, and Orissas put on 20 nP to Rs. 14.88.

Electric shares showed a mixed trend. Ahmedabad Electrics put on 80 nP to Rs. 91.80. Tata Powers hardened by Re. 1.25 to Rs. 1,110. But Andhra Powers shed Rs. 5 to Rs. 1,035. Tata Hydros moved down by Rs. 3.50 to Rs. 109.50 and Bombay Suburbans were quiet at Rs. 101.50.

Sugar shares were distinctly quiet. Belapurs began the week at Rs. 274 as against the previous close of Rs. 273 and receded to Rs. 272.50 in initial deals. In subsequent sessions, it fluctuated within a narrow range before finishing at Rs. 272 today. Phaltans declined by Rs. 4 to Rs. 131. Walchandnagars shed a ruppe to Rs. 166. In the cash section, Kesar Sugars were hammered down by Rs. 12.50 to Rs. 242.50. Maharashtras, too, were neglected and eased by Rs. 2 to Rs. 186. Ravalgaons were quiet at Rs. 60.

Shipping shares were easy. Scindias lost 44 nP to Rs. 12.64. Obviously the decision to close down the Konkan line of the Bombay Steam Navigation Company—a fully owned subsidiary of Scindia Steam—which has been incurring heavy losses had no marked effect on the sentiment. Great Easterns eased by 12 nP to Rs. 13.80.

Among automobiles, Hindustan Motors rose by 12 nP to Rs. 19.40 on reports that the lockout would soon be lifted. But Premier Automobiles were friendless, losing a rupee to stand at Rs. 155.75.

Rayon shares commanded good attention. National Rayons opened at Rs. 544.50, as against the previous close of Rs. 544 and fluctuated within a narrow groove. Today they were specially favoured and touched the high of Rs. 551, before they wound up the week at Rs. 548. Baroda Rayons had buyers at Rs. 158.50 as against Rs. 153 previously. South Indian Viscoses advanced by Rs. 3.50 to Rs. 182.50 and Indian Rayons by a rupee to Rs. 73. But Gwalior Rayons were neglected and shed 75 nP to Rs. 48.

The chemical section presented a mixed pattern. Colour-Chems firmed up by Rs. 2.50 to Rs. 375. Ultramarines gained Rs. 2 to Rs. 107. Polychems put on Re. 1.25 to Rs. 196.25 and Adarshs advanced from Rs. 92.50 to Rs. 94. But Amar Dyes slipped down by Rs. 7.50 to Rs. 300. Citrics eased by Rs. 2 to Rs. 71. Dhrangadhras (new) shed a rupee to Rs. 105. Alembics were quiet at Rs. 243.75, while Dharamsis were unchanged at Rs. 200 and so also Universal Dyestuffs at Rs. 53.

T.E.L.Cos. were a bright feature of trading in the engineering section. They opened the week at Rs. 357.50, as against the previous close of Rs. 354.50 and spurted to Rs. 360 in initial deals. At this level profit-taking brought down the value to Rs. 352.75. Later they attracted good support and rose to Rs. 363.50 today before finishing at Rs. 362.50. Alcock Ashdowns gathered Rs. 2.10 to Rs. 327. Cooper Engineerings put on Re. 1.50 to Rs. 189.50. Larsen and Toubros were quiet at Rs. 38.75. In the cash section, Fit Tight advanced by Rs. 14 to Rs. 100. Kirloskar Pneumatics gained Rs. 15 to Rs. 395. Mysore Kirloskars were better at Rs. 123, as against Rs. 116 previously. Brady Engineerings changed hands a rupee higher at Rs. 91. Greaves Cottons, however, were marked down by Rs. 10 to Rs. 179. Asian Cables first went up from Rs. 125 to Rs. 144 and then slumped to Rs. 104, as the terms of the proposed rights issue turned out to be less attractive than expected earlier. The closing was a shade higher at Rs. 109, but, over the week, the loss was Rs. 16.

In the miscellaneous section, Bombay Burmahs fluctuated between Rs. 631 and Rs. 640, to finish the week with a gain of Rs. 5 at Rs. 634.50. Voltas advanced by Rs. 3.50 to Rs. 303.50. Bharat Bijlees (new) made a handsome gain of Rs. 16.75 to Rs. 163. Bajaj Electricals put on Rs. 12 to Rs. 132. Permanent Magnets rose by Rs. 4 to Rs. 92. But Hindustan Levers were neglected at Rs. 52. Escorts were quiet at Rs. 19.48 and Indian Hume Pipes at Rs. 178, despite the Directors' decision to maintain the dividend. W. H. Bradys were steady at Rs. 450, while Killick Industries lost Rs. 4 to close at Rs. 94, following the Company's decision not to pay the usual interim dividend, though this was done in order to conserve the resources for financing the development schemes.

Triveni Engineering Works

The public response to the issue of the Triveni Engineering Works Ltd., due to open for subscription on Monday next, will doubtless be quite encouraging for more than one reason. In the first place, the project is well conceived; it is to manufacture primarily sugar machinery the demand for which is assured, though the factory is being designed for production of general heavy engineering lines, including industrial process turbines for which the Company is the first to be licensed in the private sector. Further, the promoters of the project are the well-known business house of Sawhneys who are among the pioneers in sugar industry in India. What is more, the promoters have secured the financial and technical collaboration of the world-renowned sugar plant manufacturing firm of Britain, Messrs. Booker Brothers McConnell and Co., Ltd.; this firm has subscribed in cash for 50 per cent of the equity and cumulative redeemable preference shares to be issued by the Triveni Engineering Works. The promoters have also secured full and continuing technical collaboration of Messrs. Peter Brotherhood and Co. for industrial process turbines. The factory will be situated at a place (Naini on the outskirts of Allahabad in Uttar Pradesh) which commands facilities of transport, communications, availability of raw materials and power supply. It is said that those who subscribe to the capital of the Company may not have to wait unduly long for the commencement of production, because almost the entire requirement of machinery and equipment have already been ordered—nearly Rs. 25 lakhs worth of imported machinery has actually arrived in India half of which is on site—more than half of indigenous equipment is on site and the delivery of the remainder is expected to be completed soon.

In view of the aforesaid advantages, the Company expects to earn a satisfactory profit. Annual production, on single-shift working, is estimated at Rs. 1 crore which is expected to rise to Rs. 2 to Rs. 2.5 crores on three-shift working in two or three years.

The details of the public issue appear elsewhere (*vide* pages 830-831). It will be seen therefrom that the total amount of the issue is Rs. 30 lakhs, divided into Rs. 8.75 lakhs preference capital (87,500 9.3 per cent shares of Rs. 10 each issued for cash at par) and Rs. 21.25 lakhs equity capital (212,500 shares of Rs. 10 each issued for cash at par). The promoters and the companies under their management have agreed to subscribe Rs. 10.84 lakhs. The balance of Rs. 19.16 lakhs (104,125 equity shares and 87,500 preference shares) is being offered to the public.

NEWS IN BRIEF

TWO new barges, called *Krishna* and *Koyna*, belonging to Gogte Mines, were launched in Bombay on Sunday last.

The Union Labour Ministry has decided to conduct an enquiry into labour-management relations in coal mines in the Bihar and Bengal areas.

The U.S. Technical Co-operation Mission has agreed to undertake the development of Singrauli coalfields in Madhya Pradesh, besides the Ramgarh fields in Bihar.

It is understood that the Devidayal Metal Industries (Private) Ltd. has secured overseas orders for the supply of copper and brass semis, particularly sheets, strips, circles and sheathings.

It has been decided to allow exports of 350,000 tons of bauxite annually in the next two years. Of this quantity, 150,000 tons will be allowed for export from the ports of Saurashtra and 100,000 tons each from Bombay and Calcutta.

The Governments of India and West Germany have reached an agreement, under which Air-India International and the German Lufthansa Airlines will be entitled to operate through W. Germany and India, respectively.

The Government of Gujarat has decided to set up shortly two corporations, one for ensuring supply of raw materials to industries, particularly in the small-scale sector, and the other for the development of industrial estates.

A loan of Rs. 22.22 lakhs has been sanctioned by the Government of India to the Maharashtra State for financing the expenditure on the Koyna hydro-electric project during the second quarter of 1961-62. Including this loan, the total loan sanctioned since 1954-55 comes to Rs. 28.71 crores.

The Oil and Natural Gas Commission has found oil in wells Nos. 37 and 47 in the Ankleshwar area, Gujarat bringing the total number of successful wells to 18 out of the 22 wells drilled so far. Only two wells have turned out to be dry, while testing is going on in the remaining two.

A licence has been issued by the Union Government to a private firm for putting up a factory to manufacture transistor radio sets at Nagpur, in collaboration with a Japanese firm. The first batch of sets, which will be all-wave wireless receivers, with three bands and a magic eye, is expected to be in the market by January next.

The Government of India has approved in principle a proposal to initiate a welfare scheme for workers employed in iron ore mines on the lines of a similar scheme in force in coal mines. The proposal has now been referred to the Union Ministry of Steel, Mines and Fuel for a technical study of its effects on the price structure of steel.

Japan is considering a proposal to construct three model rice farms in India. A Japanese survey team in this connection is expected to arrive at New Delhi next month. Six hectares of land will be taken on lease by a small community of five Japanese agricultural families on each site. These communities will train Indian farmers in Japanese techniques.

The first kerb-side petrol pump in the public sector, installed by the Indian Oil Company at Cochin in Kerala, was inaugurated on Monday the 23rd inst. by Mr. K. A. Damodara Menon, the State's Minister for Industries, Commerce and Publicity. The I.O.C. plans to set up such kerb-side pumps for motors and trucks all over India within the next six months. To begin with, these pumps will sell retail diesel oil imported from Russia, and they will supply petrol also when the first public sector oil refinery goes on stream at Gauhati (Assam) in the beginning of next year.

A scheme for improvement of fruit and vegetable production was approved by the Governing Board of the National Committee of the Freedom-from-Hunger Campaign, which met at New Delhi last week. The scheme envisages the distribution of improved seeds and garden tools to farmers, youth organisations and school students. It is expected to help increase the output of fruits, such as papaya, guava and lime and a number of vegetables. The Board sanctioned a grant of Rs. 24,000 as loan for the setting up of two private factories to manufacture balanced feed for poultry. For two other projects—one for popularising the use of Japanese implements and techniques for rice-growing and the other for setting up model piggery units—the National Committee has requested the F.A.O. to arrange necessary foreign assistance.

From Abroad

Switzerland has agreed to give Britain a loan of 215 million Swiss francs (about £18 million) at a rate of interest of 3 per cent. The loan is to be repaid before the end of 1964.

A natural gas field, which is expected to yield 100 million cubic feet of gas per day when fully developed, has been discovered in New Zealand at Kapuni in the Taranaki province.

The Government of Iraq has prepared legislation to restrict the operations of the oil companies in the country to oil wells at present in production and to take away the remaining concessionary areas from the companies.

Iraq has formulated a five-year development Plan, which is expected to be commenced before the end of the year. The Plan, which involves a capital outlay of $1,585 million, envisages 248 major projects in the sphere of industry, agriculture and communications.

Iran has decided to restrict imports from Japan to essential items and to put them on a barter basis. The move is said to be a sequel to the failure of Japan to grant a credit of $30 million and purchase Iranian goods worth $12 million, as provided for in the trade agreement signed a year ago.

It is reported that the gold and foreign exchange reserves of West Germany are sufficient to cover imports of slightly more than eight months measured on the basis of the 1960 import requirements. This compares with reserves sufficient for covering imports of 7.5 months in Italy, 5.7 months in Austria, 5.3 months in France, 4.5 months in the Netherlands, 4.3 months in Belgium, 3.9 months in Canada, and 2.6 months in the U.K. Switzerland alone had a higher proportion of reserves than W. Germany, being sufficient to cover imports for 14 months.

A draft international agreement designed to protect cocoa producers and consumers and to stabilise prices, is being considered by a twelve-nation committee at Rome at the initiative of the F.A.O. The draft provides for a scheme of export quota and overall control of production. The aggregate world production of cocoa, according to F.A.O. estimates, will be lower at 1,069,000 metric tons in 1961-62, as against 1,163,000 tons in the previous year. Consumption, however, is expected to go up by 84,000 tons to 1,080,000 tons in 1962, as compared with 1961.

The West German steel industry expects the steady upward movement in its production may come to a temporary standstill this year. Crude steel production in the first three quarters of this year was about 25.70 million tons which was still slightly higher than that in the same period last year (25.68 million tons). However, the September output alone was only 2.62 million tons, the lowest since December 1959. In view of the comparatively small volume of new orders booked with the steelworks in the last few months, it can be assumed that the total 1961 production will be somewhere between 33.50 million and 34.00 million tons this year, as against 34.10 million tons in 1960.

The International Development Association has announced the grant of a credit of $1 million to Pakistan to finance the Dacca-Narayanganj-Demra irrigation project, the first of its kind in East Pakistan. The credit is repayable in foreign exchange over a term of fifty years, free of interest. The I.D.A. funds, along with the rupee funds needed to complete the financing, will be made available to the East Pakistan Water and Power Development Authority, which will execute the project. Repayment of the credit will begin on 1st April 1972, after a ten-year period of grace. Thereafter, one per cent per annum of the principal will be repayable for ten years and 3 per cent will be repayable each year for the final thirty years. A service charge of ¾ per cent per annum on the amounts withdrawn and outstanding will be made to meet the I.D.A's administrative costs.

PERSONAL

DR. S. Rādhakrishnan, Vice-President of India, has returned after a lecture tour of Poland, Hungary, West Germany and the Netherlands.

Mr. Charles H. Atwood and Mr. F. Perry Wilson have been appointed Vice-Presidents of the Union Carbide International Company, U.S.

Mr. J. Knox, Senior Technical Director of Gascoignes, one of Britain's biggest dairy and farm equipment manufacturers, will visit Bombay on 3rd November in the course of a trade promotion tour of Asia and Europe.

Mr. H. C. B. Mynors, Deputy Governor of the Bank of England, arrived at Bombay on Wednesday this week for a short visit, on his way to Karachi where he will attend the inauguration ceremony of the building of the State Bank of Pakistan.

Mr. Eugene R. Black, President of the World Bank, has assumed additional charge as the President of the International Finance Corporation, with effect from the 13th inst., *vice* Mr. Robert L. Garner, who has retired. Mr. Martin M. Rosen, formerly Director of Operations for the Far East of the World Bank, has been appointed the new Executive Vice-President of the I.F.C.

Brown Recording-Integrating Flow Receiver

What is the cost of process flows for the various production departments of your plant? You must have accurate records of the quantities of steam, water, air, chemicals, fuel oil and other fluids supplied to each department to know where your money goes and why. Honeywell Flow Meters aid cost accounting by providing the information you need.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.
Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.
Precision electronic instruments and control systems for aircraft and missiles.

AGRO-ECONOMIC RESEARCH

AGRO-ECONOMIC research has not received in India as much attention as it deserves. Although agriculture is the mainstay of India's economy, contributing as it does about 50 per cent of the total national income, several policy measures in the field of agriculture are based more on guess-work than on any detailed and objectived study of the various aspects of production and distribution. During the pre-independence period, agro-economic research worth the name was confined to a handful of reports, mainly by official commissions, brought out from time to time. Some of them, of course, have become classic reference works on Indian economics, for instance, the reports of the Indian Famine Commissions (1880, 1890 and 1901), of the Irrigation Commission (1901-03) and the Royal Commission on Agriculture, as also Dr. Voelcker's report on the Improvement of Indian Agriculture. As is always the case with the findings of official commissions, these reports generally lacked full academic detachment. The dawn of planning has, however, revived interest in agricultural economic research. Several studies of a micro-economic nature have already been undertaken with the aid of improved methodology. But what Prof. A. W. Ashby observed on the question in 1949 still holds good: "Having regard to (*a*) the area of agricultural land, (*b*) the size of agricultural population and (*c*) the importance of agriculture in the national economy—in actual and potential contribution to national wealth—I am appalled at the small provision made for investigation and research in agricultural economics in India."

It cannot be denied that a good beginning has already been made in the field of agro-economic research, with the encouragement of the Government. In order to promote the cause of agro-economic research, the Union Ministry of Food and Agriculture set up, in 1954, four agro-economic research centres on a regional basis at Delhi, Poona, Madras and Santiniketan to make a continuous study of the changes in rural economy. Subsequently, three more similar research centres were set up at Gwalior, Jorhat and Anand. About 260 villages have been surveyed by these centres. Another significant contribution in this respect is the farm management studies initiated by the Union Ministry of Food and Agriculture. So far, these studies have covered ten agricultural regions and, under the third Plan, it is proposed to extend them to eighteen new regions. The Indian Council of Agricultural Research, which has been devoting its attention mainly to technological aspects of agriculture so far, is also extending its activities to agricultural economics. Mention may be made here of the Rural Credit Survey (undertaken by the Reserve Bank in 1951-52), which brought to light a wealth of data on the pattern of rural economics, and reports of Agricultural Labour Enquiry conducted by the Union Ministry of Labour. Much good work has also been done in this field by the Indian Society of Agricultural Economics, Bombay, and the Gokhale Institute of Economics and Politics, Poona.

The scope for agro-economic research in India is steadily improving. Momentous changes taking place in the rural areas constitute a challenge and opportunity to the student of agricultural economics. There is no reason to believe that the importance of agriculture will diminish as the tempo of industrialisation gains momentum. As pointed out by Mr. S. K. Patil, Union Minister for Food and Agriculture, in the course of his inaugural address at a conference on agro-economic research held at New Delhi on Monday this week, although the relative decline in importance of agriculture is a theme beloved of western economists, "this consummation, however devoutly to be wished for, is still, so far as we are concerned, a long way off." Mr. Patil observed that, in order to step up productivity in agriculture, and, thereby, to improve the standard of living of those in the rural areas, the motivations and decisions of innumerable small farmers spread over a vast area had to be properly influenced by experts. There was, therefore, an urgent need for understanding the problems of "the village, the district and the region." Mr. Patil felt that the demarcation of each State into regions on the basis of soil, climate and crop conditions and their integrated development might hold the key to agricultural development. He regretted that several aspects of India's rural economy remained unexplored, particularly the question of farmer's response to price levels, factors determining marketable surplus, relation between size of farm and productivity, various types of unemployment in agriculture and methods of measuring them.

The major factors that stand in the way of research are the lack of sufficient finance and the absence of adequate number of competent personnel. International organisations like the F.A.O. and private bodies like the U.S. Ford Foundation are offering some help in this direction. The Government can, of course, promote larger co-operation in this matter and channel such assistance to purposeful research studies in a co-ordinated manner. Besides, instead of arrogating to itself all the resources, the Government would do well to encourage objective research studies by competent bodies like the Indian Society of Agricultural Economics, which have proved their worth in the field. The foundations of agro-economic research cannot be laid on a strong and permanent footing, unless non-official bodies are enabled to enter the field. Unbiassed findings will certainly help the Government to pursue realistic policies.

HINDUSTAN SHIPYARD

Hindustan Shipyard Ltd. in the public sector has solved, in recent months, at least two major problems—one concerning the acquisition, by the Government of India, of the shares held by Scindias in the Company and the other concerning the earlier dearth of orders to keep the Yard fully occupied. There is reference to both these matters in the speech delivered this week, at the ninth annual general meeting of the Company at New Delhi, by Chairman Mr. G. L. Mehta, who, it may be remembered, wanted to relinquish the office after the last annual meeting but was persuaded by the Directors and the Government to continue for one more year. The question of releasing the share (Rs. 1,04,25,000) of Scindias in the total issued and paid-up capital (Rs. 5,59,67,000 as on 31st March 1961) of the Company has at last been solved—but not too happily, for the Government has acquired the Scindia interest at a valuation of only Rs. 30.38 lakhs. Of course, this valuation has been agreed upon between the parties concerned—Scindias and the Government of India. There is no indication in Mr. Mehta's speech about the way in which the valuation has been done. It is, however, obvious that Scindias have had to incur a heavy loss of about Rs. 73.87 lakhs in the process of getting out of a subsidised enterprise which, as of 1959-60, has fixed assets of the order of only Rs. 3.46 crores. But, at the same time, there is no gainsaying the fact that the release of the Scindia share has brought some relief to Scindias, inasmuch as the sum of Rs. 30.38 lakhs would be adjusted against instalments of price payable by them to the Shipyard on the ships recently ordered by them. Although the final settlement of the Scindia interest in the Company has meant that there are no longer Scindias' nominees on the Board of Directors, it has relieved them of a long-standing worry.

The second question relating to orders for ships has also been solved satisfactorily, and the Yard will now be fully occupied till the middle of 1964. At present, the order book of the Yard is fairly full and the nine vessels, for which the Company has recently obtained orders, are happily repeats of the same series. These repeat orders, according to Mr. Mehta, will render possible the advantages of standardisation which has been one of the main recommendations of the Estimates Committee but which could not be implemented hitherto, because of the divergent requirements of the shipowners. It is also a heartening development that the prices of these nine vessels to be built have been practically settled in advance, although the standing question of evolving a permanent formula for pricing is no nearer a solution.

The small profit of Rs. 63,783 made by the Company in the financial year ended 31st March 1961 has meant that the cumulative loss has come down from Rs. 9.13 lakhs in 1959-60 to Rs. 8.49 lakhs now. But for the substantial subsidy which the Yard has continued to receive from the Government, the cumulative loss would have been much greater. Although production in 1960-61 was higher than at any time before and there was a welcome drop in the quantum of overheads, the net profit has been about the same as in 1959-60. This situation, caused by the high costs of shipbuilding in India, may be partially remedied when imports of steel are gradually replaced by indigenous steel products. The steady decline in the labour man-days spent on the construction of repeat vessels is also a hopeful sign pointing to some reduction in costs. But how long it will take for Hindustan Shipyard to cease to be a losing enterprise is anybody's guess.

SUGAR EXPORT

It is, indeed, regrettable that the U.S. Administration has cut the import quota allotted for Indian sugar for 1961 from 225,000 tons to 175,000 tons, along with similar reduction in the quotas of Brazil (from 336,474 tons to 306,474 tons) and Formosa (from 190,028 tons to 170,028 tons). No valid reason has been adduced for the decision. All that the Department of Agriculture has stated is that the cut has been effected "in an effort to increase the price of raw sugar in the United States." In support of this view, it says:

"Although the average price for raw sugar at New York for the year to date is about the same as the annual average price in 1960 and higher than that of earlier years, raw sugar prices in recent months have been well below average and are below a desirable level for this period of the year. In view of geographical and other relevant circumstances affecting raw sugar supplies, it would be appropriate for inventories in the hands of refiners to be larger at the end of 1961 than those held at the end of recent years. Nevertheless, to encourage the purchase of raw sugar at prices which will equitably maintain and protect the domestic sugar industry, it appears necessary to reduce the supplies of offshore raw sugar."

The aforesaid announcement has been received in India with considerable disappointment, all the more so because it has completely falsified the hopes of the U.S. allocating a supplementary export quota to India this year. Hopes ran high particularly after the news appeared in the Press that the Philippines was unable to ship its entire allotment. The U.S. had, in fact, assured India not long ago that it would consider the grant of a fresh allotment to it, if any quota-holder were to fail in fulfilling its commitments. The latest decision of the U.S. Government is thus clearly contrary to earlier expectations. No wonder, a spokesman of the Indian Sugar Mills Association's Export Agency Division is astonished at this news.

Equally disappointed are sugar circles in the U.S. The reduction in the Indian quota is considered by them to be unfortunate not only because it has followed so soon the visit of the Agriculture Secretary to India but also because it has come when practically the entire allocation made to India has been covered already, the quantity remaining to be shipped being a bare 50,000 tons. The sugar, it is said, has been bought by the U.S. traders for being resold to consumers and, actually, ships have been chartered to bring this sugar. In other words, as a result of the U.S. decision, the arrangements entered into between American and Indian firms have been disrupted, with all the consequent practical difficulties. Voicing the opinion of sugar importers in the U.S., the head of a leading American firm is reported to have said: "We are astounded and very unhappy. We do not think this step was really necessary. Furthermore, the timing is most unfortunate."

The U.S. Agriculture Department has, however, held out the assurance that special efforts would be made to restore to India (as well as Brazil and Formosa) similar quantities from any sugar allocation available during the first half of 1962. While this is somewhat comforting, serious doubts have arisen as to whether India can count on the U.S. market for the disposal of a sizable part of its sugar surplus. The replies which Mr. Orville L. Freeman, U.S. Secretary of Agriculture, gave at a Press conference in New Delhi on Friday last week were couched in vague terms. The gist of his replies is as follows:

"The question of the allotment of a future quota for export of Indian sugar to the United States cannot be answered now, because the necessary information about an excess quota and the U.S. domestic sugar crop is not yet available. The present U.S. Sugar Act, which expires at the end of June 1962, provides for quotas for specific countries. Only if a country holding a quota is unable to meet its quota is there any discretion to make allotments to any other country. I expect that, shortly after my return to the U.S., when the necessary information becomes available, a decision will be made in this regard. The question of a sugar policy in connection with the U.S. and all countries will be reviewed and a new Sugar Act will be passed by the next Congress of the U.S.,

which convenes next January. Neither the executive branch nor the Congress has determined exactly what the legislation will be. I am not familiar enough with the economics of Indian sugar production to pass judgment. I have, however, been informed that a substantial amount of today's production is more costly than the world market price. The question whether the U.S. will continue to buy Indian sugar at a price higher than the world price cannot be answered by myself or anyone else at this point, because it will be determined by the U.S. Congress at its next session."

To revert to the cut in India's quota for the current year. The announcement regarding the cut has come when the entire quantity of 225,000 short tons (188,000 long tons) allotted have already been sold out to American buyers. What is more, the bulk of this quantity has actually been shipped and arrangements have been completed to ensure that the balance will reach U.S. ports well before the end of December. The sugar millowners are believed to have approached the Government of India to move in the matter through the proper channel to obtain the permission of the U.S. Agriculture Department for the sugar to be entered from the shipments that are to be made against contracts which have already been concluded. And indications are that the Government may make the necessary representation to the U.S. Administration.

Almost simultaneously with the disappointing announcement of the U.S. decision has come the happy news that the International Sugar Council has allocated to India an additional export quota of 20,000 tons (from out of the 40,000 tons held in reserve to meet contingencies), raising the total effective quota of India for 1961 to 132,000 tons. But the point is whether India will find customers even for this small additional quantity before the year ends. For many countries are reported to be offering sugar at prices which are appreciably lower than those prevailing in India. The latest available rate in London is not more than Rs. 303 (£22¾) per ton, as against the Indian price of Rs. 719 (£54), even after the full remission of excise duty and cane cess together amounting to Rs. 343 per ton.

BOMBAY-KONKAN STEAMER SERVICE

The Bombay Steam Navigation Company (1953) Ltd., which has been operating, on a monopoly basis, a steamer service between Bombay and Konkan for the last 100 years, is a subsidiary of the Scindia Steam Navigation Company Ltd. The fares charged on this service have been controlled by the Government. These, however, have turned out to be uneconomic in recent years, and the Company has, therefore, incurred an annual loss of about Rs. 6 lakhs between 1957-58 and 1959-60 and Rs. 3 lakhs in 1960-61 on its operations. The accumulated loss since 1954 is stated to be as much as Rs. 31.6 lakhs. Only an increase in fares to match the increased operational costs could have rendered the steamer service economic. But the Government of India has refused to concede a two-step fare increase of 15 per cent in all recommended by an official *ad hoc* committee (Chairman: Mr. P. S. Rau) which reported in October last year. The Government has, of course, accepted the recommendation of this committee that an interest-free loan of Rs. 120 lakhs be granted to the Company for acquiring three new ships. The Maharashtra Government, too, has agreed in principle to grant, in pursuance of the Rau Committee's recommendation, a matching subsidy equivalent to the interest forgone by the Government of India on its loan, subject to a maximum of Rs. 1.89 lakh per annum. But these accepted recommendations have not given satisfaction to the Company which had expected a substantial fare increase. Even the Government loan of Rs. 120 lakhs, it is now estimated, will fall short of the present increased capital cost of new ships by Rs. 42 lakhs.

In the circumstances, the decision of the Company, announced by its Chairman Mr. Jehangir P. Patel, on the 20th instant, to discontinue the Bombay-Konkan service and the harbour services between Bombay and nearby ports with effect from 1st December 1961, seems to have been inescapable. The Company has certainly a good case in pleading for an 8 per cent increase in fares with immediate effect and a further increase of 7 per cent after the acquisition of the new ships in pursuance of the recommendations of the Rau Committee. Apart from the consideration that the annual concession represented by the absence of interest on the Government loan and the annual matching subsidy by the State Government will add up to only Rs. 3.8 lakhs, as against the annual loss of Rs. 6 lakhs in recent years, even the first-step increase of 8 per cent, if given effect to immediately, is not expected to cover fully the increased cost of operations or to yield a 4½ per cent return on subscribed capital. As even the second-step increase of 7 per cent, if given effect to, would presumably be swallowed up by higher depreciation provision on account of the new ships, the Company would have no very great relief from that increase either. After all, the Rau Committee has not been unduly generous in its recommendations regarding fare increase. If even the modest increase recommended by it cannot be brought into effect, the large number of people (about a million) who travel between Bombay and Konkan every year will be put to great hardship and the Company itself may go out of business sooner or later. Any suggestion of nationalisation of the coastal steamer service concerned would be no answer to the problem, for it is a safe guess that an already losing private service would not be transformed overnight into a profitable enterprise by the mere act of nationalisation unless, of course, the fares are increased substantially. The monopoly running of the Bombay-Konkan service has not, by itself, conferred any advantage on the Company by way of greater profit-making capacity, for the fare structure has been rigorously controlled by the Government. Without an increase in fares, it will confer no particular advantage on the Government either in the event of nationalisation. These considerations should weigh with the Government in its approach to the regrettable move of the Company to close its Konkan service.

BOMBAY PORT TRUST

The working of the Bombay Port Trust, which handles the largest quantum of trade in India, proved satisfactory during the year 1960-61, despite the larger demands made on it by the increasing volume of trade. The weight of cargo handled by the Port Trust was an all-time record of 14.72 million dw. tonnes in 1960-61, according to the latest annual Administration Report of the Port Trust just released. With this increase, the volume of trade passing through this port has almost doubled during the last decade. Both exports and imports shared in the increase. Exports touched 3.93 million dw. tonnes in 1960-61, as compared with 3.79 million tonnes in 1959-60 and only 1.70 million tonnes in 1951-52. Imports were higher at 10.80 million tonnes, as compared with 9.56 million tonnes and 5.90 million tonnes, respectively. Goods handled by the bunders rose substantially from about 7.01 million tonnes in 1959-60 to 7.98 million tonnes in 1960-61. The volume of traffic through docks, too, rose from 5.60 million tonnes to 6.7 million tonnes. The important commodities which showed a marked rise were rice, wheat, cotton, cement as well as iron and steel on the import side, and manganese and other ores, kerosene oil and sugar on the export side.

The following table shows the trend in the expansion of trade handled by the Bombay Port during the last decade:

(In thousand D.W. tonnes)

	Imports	Exports	Total trade
1951-52	5,900	1,700	7,600
1952-53	4,771	1,974	6,745
1953-54	4,852	1,982	6,834
1954-55	5,721	1,985	7,706
1955-56	6,815	3,656	10,471
1956-57	8,372	3,800	12,172
1957-58	9,451	3,869	13,320
1958-59	8,553	3,387	11,940
1959-60	9,564	3,793	13,357
1960-61	10,795	3,926	14,721

INVEST WISELY AND WELL

You may be prudent enough to save a portion of your income, but perhaps you are hesitant to decide on a safe investment.

Let this not disturb you. The State Bank is in touch with the leading brokers and will make their expert advice available to you quickly and without charge.

The State Bank will also keep your investments in safe custody and collect and credit to your account interest and dividends as and when they fall due.

It does not matter where you reside—the State Bank has a net-work of offices through which it offers to place these and other services at your disposal.

Why not talk things over with our nearest Bank Agent or write for information?

The State Bank's local head office at Bombay, one of more than nine hundred offices waiting to serve you throughout India.

STATE BANK OF INDIA

INDIA'S LEADING BANK

SBTA'S-58-2-R

As a result of the expansion of traffic, the financial position of the Port Trust has improved. There was a surplus of Rs. 3.27 crores on the General Account, as against Rs. 2.43 crores in 1959-60. The aggregate revenue on General Account, including surcharge, amounted to Rs. 12.46 crores (as compared with Rs. 11.51 crores in 1959-60), and total expenditure Rs. 9.19 crores (as compared with Rs. 9.08 crores). The Pilotage Account showed a surplus of Rs. 13.50 lakhs. The total revenue under this head amounted to Rs. 27.59 lakhs (Rs. 24.46 lakhs in 1959-60) and expenditure Rs. 14.17 lakhs (Rs. 14.08 lakhs).

The Administration Report points out that, for the purpose of implementing the scheme for combining Victoria Dock with Alexandra Dock, negotiations were held with consulting engineers. This scheme for development and modernisation has been talked about since 1949, but it is yet to be implemented. The original scheme, estimated to cost Rs. 20 crores, was whittled down subsequently to a modest one costing about Rs. 8 crores. It is reported that Mr. F. Posthuma, Managing Director of the Port of Rotterdam, whose services were made available to India under the U.N. Technical Assistance Programme, has now prepared a preliminary project report, recommending certain important changes in the scheme. Mr. Posthuma, it is learnt, has not favoured the combining of the Alexandra and Victoria Docks. He argues that, if this is done, the whole port, with the exception of the old Princes Dock, will become dependent on the already rather old Alexandra dock lock. Should the lock be dislocated or sent for repairs, practically the entire port will be blocked. Mr. Posthuma has, therefore, suggested the execution of only the first stage of the proposed scheme, envisaging the extension of the east arm of Alexandra Dock by 1,000 feet to form four berths. The revised scheme is estimated to cost Rs. 9 crores. While in a way this delay might have been a blessing in disguise, in that it gave an opportunity to improve the scheme further by eliminating the drawbacks, it is high time a beginning was made with its implementation at least this year.

ASSESSMENT OF RESOURCES

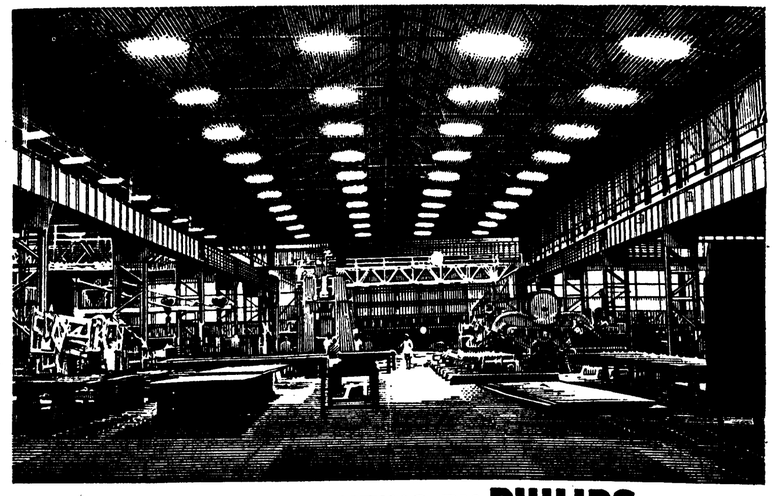
The appointment of a high-power committee (to be presided over by Mr. G. L. Nanda, Vice-Chairman of the Planning Commission) to control and supervise the work of the various agencies engaged in the assessment of the natural resources of the country, has not come a day too soon. It marks the finalisation of the organisational structure necessary for making a comprehensive assessment of the resources, with a view to ensuring their maximum utilisation. With the formulation of the third Plan, a stage has come when, as a necessary condition of well-conceived long-term plans, a comprehensive view needs to be taken of the material, capital and human resources that are available. In fact, under its terms of reference, the Planning Commission is required to assess fully the resources position and to investigate the possibilities of augmenting such of those resources as are found to be deficient in relation to the nation's requirements and to formulate a plan for the most effective and balanced utilisation of the material wealth of the country. The first Plan made a preliminary estimate of the land, water, mineral and energy resources of the country. It drew attention to the main problems in each field and set out the programmes for further surveys and investigations. The investigations conducted during the second Plan period resulted in a fuller assessment of the country's natural resources. At the same time, they also revealed many gaps in the information relating to the resources as well as their deficiency in relation to the nation's future requirements. A special unit was set up in the Planning Commission recently for studying problems relating to the assessment and development of natural resources and assisting the various agencies engaged in the survey and investigation of these resources in linking their work closely with the requirements of the rapidly developing economy and generally helping in securing a common approach in various related fields.

The Committee now set up will include, besides Mr. Nanda, the Chairman, members of the Planning Commission dealing with the various resource subjects and representatives of heads of field agencies such as the Oil and Natural Gas Commission, the Council of Scientific and Industrial Research, the Atomic Energy Commission, etc. The Committee will be assisted in its work by four technical committees consisting of experts, each dealing with land, water, minerals and energy. Two other committees, one on finance and the other on publication, have also been set up.

Under the guidance of the Committee, the new Resources and Scientific Research Division set up in the Planning Commission will collect information about the resource position and present it in a systematic manner to enable a scientific analysis to be made. Based on this analysis, recommendations will be made for the proper development and conservation of natural resources. Both long-term and short-term studies are proposed to be undertaken.

The task that lies ahead of the Committee is one of considerable magnitude. Besides guiding and supervising the work of the various agencies engaged in the assessment of resources, it will be the function of the Committee to coordinate their work. The potential for the development of India's natural resources is vast. As the Planning Commission itself has recognised, with systematic study and exploration of the resources and the increasing application of science and technology in their assessment and utilisation, the possibilities of economic development could be enlarged far beyond the present anticipations.

HINDUSTAN SHIPYARD AT VISAKHAPATNAM



LIGHTING BY PHILIPS

An area covering more than 67,000 sq. ft. in India's only shipbuilding yard at Visakhapatnam, a project of national importance, has been installed with Philips lighting to ensure round-the-clock, working efficiently and speedily. And, this has been found so satisfactory that Philips fluorescent lighting will shortly be introduced in the rest of the establishment.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.*

PHILIPS quality lighting for ultimate economy

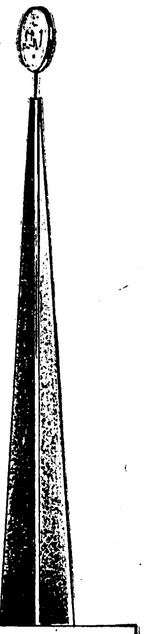
Visit

BASF and CASSELLA

at the Indian Industries Fair



BASF and CASSELLA, who bring to India a wide range of chemicals, dyestuffs and raw materials, are participating in the Indian Industries Fair at New Delhi from November 14, 1961 to January 1, 1962.

Their display will consist of a large number of products of special interest to the Indian Industries.

BADISCHE ANILIN- & SODA-FABRIK AG, Ludwigshafen am Rhein, West Germany, is the largest individual complex of chemical industry on the European Continent. They manufacture more than 5,300 products, from Dyestuffs to Fertilizers to Magnetic Recording Tapes. There are BASF products for almost every branch of industry.

CASSELLA FARBWERKE MAINKUR AG, Frankfurt/Main-Fechenheim, West Germany, make a famous range of textile dyestuffs—and specialised products for the paper, leather, and paint industries.

Come and see the BASF and CASSELLA stand in the West German Pavilion.

FINANCE FOR INDIA'S EXPORTS

By "Kuber"

ALMOST every day, some scheme or other is being proposed to boost our exports. And, really, nobody can be blamed for it. Our imports are increasing at break-neck speed, while our exports have remained more or less stagnant or are increasing at a slow pace. The result is obvious. Our imports continue to outstrip exports by leaps and bounds. In 1958, the gap between our imports and exports was Rs. 290 crores—in itself an alarming figure. In 1959, the gap or what is generally known as the imbalance, increased to Rs. 320 crores; in 1960 it has further increased to Rs. 380 crores. On the basis of the performance during the first few months of the year, it is estimated that our exports will be about Rs. 660 crores, whereas our imports will exceed Rs. 980 crores and therefore the imbalance is likely to exceed Rs. 300 crores. If for any reason our exports fail to reach the figure just mentioned or our imports overshoot the above mark, which is not unlikely, the imbalance will be even greater.

The future, if anything, is still more alarming. For the time being, our problem is to get the foreign aid in whatever form and on whatever terms possible. The time must, however, come when we will have to repay the loans. In the meantime, we will have to pay some interest to those from whom we borrow. As time goes by, the interest charges will increase in a cumulative fashion and the payment, by way of repayment of loans or interest charges, in the last analysis, can only be made in terms of our goods and services, which means that our exports must increase *pro tanto*. That is not all. As was recently pointed out by our Deputy Finance Minister, India has been losing ground in the sphere of foreign trade. In the last decade, although world foreign trade has doubled, India's share has gone down. We are further told that, in terms of *per capita* export trade, India stands at the bottom even among the underdeveloped countries. It is very difficult to conjecture at this stage as to the overall effects of Britain joining the European Common Market. One thing, however, is certain. Our difficulties will be aggravated either because our exports are likely to diminish or because we will have to pay more for our imports; at any rate, we are unlikely to improve our position. What it amounts to, therefore, is that not only our present position is desperate, but the future holds out no hope for betterment either. In such a situation, what is more natural than that all sorts of schemes and suggestions should be proposed to stop the rot?

One of such suggestions has recently been proposed by the Federation of Indian Chambers of Commerce and Industry to the Import and Export Policy Committee and that is to set up a Refinance Corporation for Exports on the lines of the Refinance Corporation for Industry. Its object is to provide medium-term credit to exporters of Indian goods and, in support of this proposal, it is said that the same sort of thing is being done by the Western countries, particularly the United Kingdom and the U.S. The Federation further argues that such an institution is necessary to increase our exports to Afro-Asian countries which are in a developing stage and are likely to go in particularly for our engineering goods. It is true that at present we are exporting hardly Rs. 10 crores worth of such goods to these countries, but the demand for them from these countries is on the increase and that is, perhaps, why the third Plan has fixed a target of Rs. 50 crores per annum for engineering goods to be attained at the end of 1965.

Curiously enough, the Federation of Indian Chambers of Commerce and Industry, as well as others who have backed the scheme for starting a Refinance Corporation for Exports, has failed, at the present juncture, to give any facts and figures in support of the scheme. They have merely propounded the scheme in general terms and left it at that. Naturally, it is easier for one to propose an idea, but it becomes difficult to refute it in the present conditions. One cannot critically examine a proposal which is all in the air, however laudable the motives behind the suggestion may be. The least the Federation could have done was to have pointed out to what extent and in what manner the existing agencies have been found wanting. The next thing one would expect from such an expert body is some facts and figures, however rudimentary they may be, to show what type of exports fail to get the required finance under the present conditions. Unless one knows the exact malady, how can one prescribe a remedy?

What is, therefore, wanted is a proper diagnosis of the ills which the export trade is suffering from before one can prescribe the way out. The remedy suggested by the Federation reminds me of an old woman's complaint to her family doctor to all sorts of illnesses—mostly imaginary. The result is that the doctor has no choice but to prescribe the usual medicine to meet the occasion, at times changing the colour of it, with a dash of a pick-up. It often has a favourable reception. The old lady is happy and so is the doctor and no harm done. There may be a slight reaction after the effect of the pick-up is over, but, then, it is such a nice feeling to have a temporary respite, never mind if things get worse a little later.

Let us have a look at the existing agencies which are ready and willing—a little too willing, if I may say so—to finance our exports. There are three gigantic groups of Exchange banks, having enormous experience and resources to cater to this class of business to any extent. There are hosts of Indian banks equally anxious to finance such a business and are, in fact, anxious to develop it further, if they can. It is a well-known fact that foreign exchange business is more paying to them than financing internal business, as the margin of profit is higher. Both the groups of banks have ample resources and experience to meet the situation and yet they are unable to get the business they would like to have. The Indian banks have gone to the length of opening the required branches abroad to do full justice to financing export trade but, according to available reports, most of their branches abroad have not succeeded in getting even a part of the business they are capable of handling.

There are also sufficient avenues open to these banks for supplementing their resources. There is, for instance, the Bill Market Scheme of the Reserve Bank which can be availed of by the banks in times of need. There is also the Refinance Corporation for Industry, which, though ostensibly intended for a different type of business, can be suitably modified to serve the purpose of providing medium-term finance for exports. After all, reaching the consumer, whether here or abroad, is the end of production and there is no reason why the present facilities of Refinance Corporation for Industry cannot be utilised so as to include the tail end of the operations of the industry arising out of selling their goods abroad.

It is, however, said by some that the Bill Market Scheme and the facilities afforded by the Refinance Corporation for Industry cannot meet the situation either because their management by the Reserve Bank is too rigid or because it will imply slight modifications in the Reserve Bank's rules; it may even require legislative amendment. So what? Why not face a little bit of legislation and change of rules than go all out for a brand new institution, which, if anything, will raise more problems than it will solve. What about the technical personnel required for manning that institution? And what is more important, what about the provision of know-how for such an institution? The best of banks are unable to find even a few qualified people for ordinary joint-stock banking.

Again, obviously, the proposed institution, if started, will be directly under the control of Government and, of course, the Reserve Bank will come into the picture. What is likely to be the case is that either someone from one of the Ministries in Delhi will lead the show (or mislead it) or someone from the Reserve Bank will be the boss of the show. About 30 or 40 officers from the Reserve Bank or the Ministry of Finance or for that matter from various other Ministries having not even the remotest idea of foreign trade or exchange, will man the key posts. The Federation and others are fully aware of the various things that are being done by such a set-up, as they have, in the same breath, bitterly complained against the State Trading Corporation and the manner in which it has been handling the export problem. And yet they want to create another State-owned institution for handling a specialised type of business.

The Exchange banks and the Joint-stock Indian banks, it may be noted, have been handling this class of business for years now and they appear to offer adequate facilities for financing such business in the future too. Of course, they confine themselves only to short-term finance up to six months period. Under certain conditions, they may even agree to finance up to a year or so, if adequate facilities from the Reserve Bank to rediscount such bills are made available to them under the Bill Market Scheme. The sponsors of the new idea, however, want facilities for a still longer period on two grounds. First, they argue that the export of even light engineering goods is not possible, unless medium-term assistance is given to the exporters. Their buyers abroad require these facilities, because they in turn offer hire-purchase facilities to their customers and, therefore, they can purchase more of our goods, if we also offer them this type of facility. Secondly, they argue that our exports of engineering products is likely to increase further in the future and, therefore, there is a dearth of finance to meet the situation.

These arguments, however, do not hold water. In the first instance, people forget that, normally, it is the business of the importer to make suitable arrangements for credit at his end; if he is worth his salt or enjoys even a moderate reputation, it should not be difficult for him to arrange with his bank in his country to obtain finance against the mortgage of hypothecation of the goods imported. That is how most of the exports are financed. It is the importer who arranges with his bank to open a letter of credit favouring the exporting customer. In the alternative, if he wants time to sell his goods, he also makes suitable arrangements with his bankers to either lend him against the mortgage or hypothecation of these goods or even for the release of the goods to be paid for as and when he is able to dispose of them. It is very strange that the sponsors of the scheme under reference want to provide facilities at our end to finance operations for which the banks in the importing countries are best qualified. This aspect of the problem, therefore, requires a careful study and it will be foolhardy to increase our exports on the above basis. The position of Britain and other advanced countries is entirely different. They specialise in exporting heavy machinery which by the very nature of the operations requires State aid at both ends. We are, on the other hand, exporting light engineering goods such as fans, sewing machines, etc., and have only lately entered the field of small diesel machines. The business is still insignificant: only Rs. 10 crores worth of goods have been exported during the last year and most of the industrialists obviously have succeeded in getting the required finance. What all this boils down to, therefore, is that a refinance corporation for exports is being proposed for the business that is yet to come. The obvious answer is let that day come and we will see about it.

As things are at present, the existing agencies are, by and large, quite competent to cater not only to the existing export business but also to any increase that may ensue in future. There is no complaint so far as the export of our traditional items is concerned. For the other items, our experience is yet very limited and the amount involved is far too insignificant. Even then, the export of such items can, as mentioned earlier, very well be handled by the existing agencies, with suitable modifications in the Bill Market Scheme and the Refinance Corporation for Industry. A significant point to be noted here is that, though the Export Risk Insurance Corporation has been of a very great assistance in financing exports, it has succeeded in doing business of only 318 parties and its business as on 31st December 1960 was only Rs. 7.71 crores, as against the limit of the maximum liability of Rs. 25 crores which the Corporation is allowed to undertake. This shows that we have to go a long way before we need even think of a specialised institution of the type proposed.

The real trouble is that it is not for the lack of finance that our exports are in the doldrums. The real reasons lie elsewhere. The main thing is that the quality of most of our goods is simply not good enough. Foreigners refuse to buy our goods which are not upto the mark. We, in India, will buy any shoddy goods that are produced, because we have no choice. The foreigners are lucky. They have a wide choice of buying the goods they like and from whom they like. Our standards are not to their liking. We will export one thing today and another thing to-morrow. Foreigners refuse to trade with us on such terms. Our industrialists have to mend their ways a great deal, if they want to succeed in the open sea of competition in foreign lands. No wonder, they prefer to confine themselves to the more attractive home market and make large profits. Barring a few industrialists, and a very few at that, the rest are content to exploit us and have a good time at our expense.

AMERICAN LETTER

INFLATION FEARS REAPPEAR

EX-IMP BANK MAY SOON RUN SHORT OF FUNDS

From Our Special Correspondent

NEW YORK, 21*st October*

THE influence of the Washington Government on the United States economy is increasing constantly. This is being achieved by two primary methods. Higher Government spending and reorganisation of such ministries as State, Commerce and Labour. More people who believe in the "New Frontier" philosophy of President Kennedy are being added to the Administration. They in turn choose their men and educate them in the new philosophy.

What brought this clearly into focus was an off-the-record meeting I had the other day with a top official of the Department of Commerce who must remain unnamed, except to say that, at one time in his career, he was a university professor. He is a very articulate man of great persuasion. His approach, economically, is neo-Keynesian. He was hand-picked by Mr. Kennedy himself and quite representative of the new school of thought at Washington.

The first premise is that nearly everything which was done previously in the Capital was antiquated, if not decadent, particularly in the last eight years of Republican leadership. While it must be admitted that everything in this world can be improved, the frame of mind is infantile, to say the least.

Commerce Department Expanded

So far as the Commerce Department is concerned, the reorganisation involves creation of new divisions to deal with foreign trade and foreign investments and the addition of 100 people to the payroll of 600 already in that Department's employ. The process is about one half completed, but the effect of it cannot be felt until early next year. The greatest dearth, at the moment, are bright young analysts trained in the new school.

The commercial attaches in the various U.S. Embassies and Consulates are going to remain under the jurisdiction of the State Department, since most of them have political rather than economic qualifications and there is rather close liaison between State and Commerce. Both Departments, by open admission, have difficulty with the U.S. Treasury which is run by a highly specialised trained staff with their own opinions.

At any rate, so far as India and the rest of the world are concerned, the Commerce Department is becoming more and more political. It has its eyes on the various foreign aid agencies, on the international balance of payments, thus on imports as well as exports and it will start a campaign of door-bell ringing among ordinarily lethargic American businessmen to increase exports at competitive levels even at the price of letting the domestic consumer pay for the subsidy because of the political implications.

Soviet Russia's Requests

Licensing of trade with Soviet Russia and the Red bloc is likewise dictated by politics and specifically the Berlin crisis. Requests for American goods from Moscow, even for consumer goods, are mostly for prototypes which would be used, obviously, in Russian laboratories to copy and build up native industries.

Thus, there are orders for *one* automobile, or *one* airplane, *one* electronic device and so on. One manufacturer told me the other day—he builds the navigational heart of a missile—that he received requests from Moscow for his catalogue. He cleared this inquiry with the State Department, sent the material to Moscow but his request for Russian material of the same type was never answered. Examples like that could be repeated *ad infinitum*.

Spending Spree

Political considerations reign supreme in the new Administration. Where is the money coming from to reorganise the Government and hire more people? The answer is invariably "as long as Congress appropriates the funds, there is no problem." The long-range economic effect of this spend-and-spend-philosophy seems to be ignored.

That is why there is increasing distrust in business and industrial quarters about official economic policy and renewed fears of inflation, which seems inevitable once the impact of the reorganisation of the Government makes itself felt. While there are pleadings from Washington to both industry and the trade unions to do nothing which would disturb the price level, support levels for farm products have been raised by $1,000 million in what seems to be a deliberate attempt to raise prices in the face of much reduced crops owing to the drought. Farmers are still a powerful voting bloc.

Government influence is also evident in mortgage lending. Various agencies make available a considerable volume of housing credit via direct loans, at low interest rates and for unusually long terms. The Congress appropriated almost $4,000 million this year for the stimulation of housing. The net result has been—and this does not apply to the Kennedy Administration alone—that, since 1945, when mortgage debt and indebtedness of corporations were about $35,000 million each, mortgage debt has increased to almost $208,000 million, while corporate indebtedness is just short of $120,000 million.

This artificial boost to housing which was beneficial as far as it went, did nothing, however, to create an impetus to capital formation which is the basis for real economic growth. Housing, essentially, helps consumption, not the growth of production.

Export-Import Bank

The business of the Export-Import Bank has been booming. It has become an important adjunct to the Administration's Alliance for Progress programme. Most of the Bank's loans this year fell in the general area of project credits. They involved long-term loans to finance the purchase of capital equipment in the U.S. for such undertakings as Argentina's $40 million highway programme and Chile's $42 million purchase of power equipment.

The Bank's operations are particularly significant in Latin America, where it serves the institution's original purpose of financing the export of U.S. goods for development projects abroad. Loans and credits extended last year were $1,400 million, the highest in the 27-year history of the Bank, except for 1946 when post-war reconstruction loans inflated the total.

So feverish has the lending activity become that unused loaning authority had shrunk to $1,200 million on 1st July last, the beginning of the new fiscal year. The statutory limit for loans and loan guarantees is $7,000 million. At the rate new loan applications are coming in, the chances are that, next year, at this time, uncommitted funds may have dropped to $500 million.

Since the Bank operates all over the world, including India, this state of affairs suggests that lending activities will have to be reduced or additional loaning authority will have to be sought from Congress. In view of the spend-and-spend-philosophy, the latter would most likely be the case.

In the fiscal year ended 30th June, the Export-Import Bank made 832 loan and guarantee transactions. Of these, 571 were in Latin America. In the current year, the proportion is about the same and also the volume which is more than double the annual average over the last 10 years.—*All Rights Reserved.*

(*Concluded from next column*)

policy in the new Council, but, on this, they will have to reckon with their Trades Union colleagues, assuming that the latter are equally prepared to come in. It is, indeed, practically a foregone conclusion that the Unions will co-operate with the Government, although they are sceptical of much good coming out of a conversion to the theory of planning which is not able to be entirely wholehearted. In this, they may be wrong, for, though the Conservative Party tends to lag behind its political opponents in formulating new ideas, it is not inhibited by any tenets of doctrine from considering any new approach to a problem.

LONDON LETTER

THE PAUSE AND THE PLAN

CONSERVATIVES CHANGE THEIR OUTLOOK

(*From Our Own Correspondent*)

LONDON, 21*st October*

IF the Chancellor of the Exchequer had been hoping for dramatic results from his July squeeze, he will not be able to find them in the various economic indices which have appeared since then. The squeeze was primarily designed to put a brake on consumer spending and non-essential (whatever that might be) investment spending.

But we find that, in September, the volume of retail sales was just as high as it had been in July. The third quarter as a whole is about 2 per cent up on the second quarter of the year, and 4 per cent on the first quarter. Sales of food have gone up steadily and so have sales of clothing, but there is a decline in what are called durable goods. It is on these that the credit squeeze mainly operates and we find that hire-purchase business as a whole was about one-fifth lower in August than it had been in July. Oddly enough, furniture sales on credit actually increased in August and other household goods did likewise. It is rather on the products of machine goods industries such as electrical goods, hardware, radio, etc., that the squeeze seems to have been most operative. Retail prices do not appear to have been forced down, the reduction between September and August being a fraction of 1 per cent.

When it comes to the building industry, we find that there were as many schemes put through in the third quarter of the year as in the second, even though the building area which these schemes would cover was about one-sixth less. Of course, industrial building planned has for the whole of this year been a good deal less than for last year—taking comparable periods—but this has nothing to do with the July squeeze.

In the light of all this, it is not surprising to find that the index of industrial production showed no fall in August, as compared with the previous month, and a fractional fall is only noticeable in the manufacturing industries. But even this, we are warned, may be due to variations in holiday habits. For the three months which ended in August this year, the level of industrial production was 2 per cent higher than in the previous three months, and 3 per cent higher than a year before. Employment remains high at around the 24 million mark and the variations in unemployment (which is running a little over 1 per cent of the total number employed) from one month to another are insignificant.

Developments in Regard to Planning

The Chancellor is no doubt grateful that both sides of industry have agreed to co-operate fully in the discussions on the planning machinery which he would like to create. He has already had meetings with the employers' side, the most important of which has just been concluded. The representation has covered the Federation of British Industries as well as the other employers' organisations and the British Chambers of Commerce. The Treasury claims that "there was a useful exchange of views on the structure and functions of the new machinery, with particular reference to assessments of future growth." The discussions with the Unions is to take place in the next few days. The employers' associations are in favour of a National Economic Development Council and hopeful that the final form of the Council and its membership will be announced next month. The reference to "assessments of future growth" is to the hope that it will be possible to assess the rate of economic growth which the country can be expected to achieve in the next five years and for five-year periods beyond that, and, in these assessments, the private and public sectors of industry will be looked at together.

It is amusing that the British Conservative Party, of all people, has at last succumbed to the necessity for accepting five-year plans. The employers are also anxious to discuss a wage

(*Continued in previous column*)

MAHARASHTRA STATE CO-OPERATIVE BANK

HALF A CENTURY OF PROUD ACHIEVEMENTS

THE Golden Jubilee Celebrations of the Maharashtra State Co-operative Bank held on Tuesday, 24th October 1961, constitute an important landmark in the history of co-operative credit movement in Western India. The Bank was founded in the year 1911 by two eminent nationalists—Sir Vithaldas Thackersey and Sir Lallubhai Samaldas—much against the wishes of powerful British financial interests and was registered under the name of Bombay Central Co-operative Bank. Its name has, of course, been changed several times to suit the area of its operations, but the essential continuity of its development and operation has been maintained all along. The Bank can, therefore, look upon the half century of its momentous career with justifiable pride. From its very inception, the Bank has been connected with agricultural finance and as such its operations have been concentrated mostly in rural areas. In the initial years, it established direct contacts with agriculturists and primary agricultural credit societies, spread over several districts of the old Bombay State, besides functioning as the apex bank for the State as a whole. In its rural operations, the Bank worked through the establishment of branch offices, which were first run with the help of local advisory committees and then these bodies were converted into branch committees with definite delegated powers. This policy enabled the Bank to evolve at later stages the federal co-operative structure based on the principle of "democratic decentralisation."

Structural Reorganisation

At an early stage in its career, the Bank realised the anomaly of its own dual role in directly serving the needs of some districts, while simultaneously operating as an apex institution. The formulation of co-operative policies after independence provided an opportunity for ending this anomaly. The process of reorganisation, as mentioned by Prof. D. R. Gadgil, Chairman of the Bank, in his welcome speech, led to the adoption of the federal structure through the establishment of district central banks and transfer of all district business to these banks. It is gratifying to note from Prof. Gadgil's speech that this reorganisation has not led to retrogression, as was feared by some, but has actually imparted strength to the co-operative activity in most parts of the State. The Bank also appreciated from the beginning the need to have closer co-operation with the Government of the day. Shortly after independence it took initiative in advocating a policy of State participation in the capital of co-operative banking institutions, in order to strengthen their capacity to serve the public. Later, this policy gained wider recognition and was fully endorsed by the Rural Credit Survey Report (Chairman: Mr. A. D. Gorwala). The non-official co-operators who advocated this step were not afraid that this would lead to undermining of the co-operative character of the institutions or unduly increasing official interference. "The manner in which the Government accepted the policy of participation and in which co-operative institutions have since operated in the State have," Prof. Gadgil averred, "fully justified the confidence displayed at the time." Will it continue to be so in future? An answer to this will depend on the type of Government that may come to power.

Apart from performing the banking functions proper, the Bank has played, according to Prof. Gadgil, a significant part in formulating and influencing co-operative policies. This claim is perfectly justified, for, after the doyens of Co-operation in the Madras State had passed away from the scene, the co-operators in the Bombay State could give the lead to the whole movement. In Mr. V. L. Mehta, Prof. D. G. Karve, Mr. R. G. Saraiya, Mr. V. P. Varde and Prof. Gadgil, the Bombay State was fortunate enough to find leaders with faith and conviction in the co-operative movement and all these distinguished persons have served the Bank with devotion and diligence. Prof. Gadgil, therefore, did not exaggerate a bit when he observed that "a large number of elements of programmes of planned co-operative development which have now become accepted in Indian policies can be traced to the process of reorganisation of the co-operative banking structure in Bombay." From the very early stages the Maharashtra State Co-operative Bank had accepted a very broad concept of co-operative activity and it considered co-operative credit as [illegible] one aspect of the total co-operative business. It always emphasised the need for integrating credit with other activities and took keen interest in sale and purchase organisation. It, therefore, adopted the practice of supplying credit through the supply of materials. It was also for the sake of developing an integrated co-operative structure that it encouraged the formation of processing and better living societies.

Bank's Progress

It would be appropriate on this occasion to give a few figures to indicate the Bank's progress since its inception. It is true that the figures for 1961 are not comparable with those for the previous years on account of the bifurcation of the Bombay State Co-operative Bank into the Gujarat and Maharashtra State Co-operative Banks and the incorporation of the Vidarbha Co-operative Bank Ltd. Nevertheless, the table below will give the reader a general idea of the progress it has recorded in the last fifty years:

(Rs. in lakhs)

Year	Paid-up share capital	Reserve and other funds	Deposits	Borrowings	Advances	Working capital
1912 ..	2.10	..	3.37	..	5.22	6.22
1922 ..	7.00	2.24	46.40	9.10	51.18	66.59
1932 ..	12.97	6.00	1,29.58	14.36	99.12	1,72.51
1942 ..	13.00	19.03	2,35.12	6.64	96.21	2,88.98
1952 ..	59.18	39.27	7,45.81	2,80.84	6,40.24	12,17.61
1961* ..	3,26.40	98.72	21,35.20	22,86.43	37,35.79	52,63.02

* As at 30th June, 1961.

The Bank now has as many as 360 offices spread all over the State of Maharashtra.

It would be most appropriate to end this brief review of the Bank's progress and achievements by quoting from Prof. Gadgil's remarks on the future of the Bank. He said:

"The Apex Bank is the repository of financial resources within the movement. Through this position it is invested with the responsibility of the leadership of that movement. The integrated view taken of total co-operative activity by the Bank has also resulted in the Bank giving the lead in a number of co-operative developments within the State. The most important direction in which the lead has, so far, proved useful has been that of co-operative processing activity. The needs of the future demand great emphasis on rural industrialisation and the integrated co-operative system will have to move rapidly in this direction. This is a contingency of which the Bank has already taken due cognizance.

"Today, the Bank can claim that it operates on a scale, offers services and undertakes activities which in most directions are somewhat unusual in India. Its financial position is sound; its structure is well-designed, and it is able to draw upon the services of co-operative workers from all parts of the State. It derives great strength from this broad base. No longer is it true to say that the co-operative superstructure is manned chiefly by the metropolis or by urban interests. Today, within the Bank are fully reflected all aspects of co-operative activity and rural interests predominate, because ours is still a rural economy. The history of the past raises high hopes for the future. In the context of a developing economy orientated towards the attainment of a co-operative commonwealth, the Bank has great responsibilities as a leader both in thought and action. I hope I shall not be considered over-optimistic in stating that, given appropriate co-operation and goodwill, workers connected with the Bank hope that the Bank will be able to discharge these responsibilities adequately and satisfactorily."

(Concluded from next column)

Rs. 3.5 lakhs for a single film. Loans in excess of this amount will require the approval of the President. The interest rates of the Corporation have been kept particularly low. They range from 7½ to 9 per cent, with liberal rebates for prompt repayment. The Corporation has a voice during the production of a film, and, where a film is not completed within the target date, the Board has the right either to demand from the borrower, immediate repayment of all outstanding instalments of the loans together with interest or take over the production of the film and complete it under its own authority or through another producer nominated by it. The Corporation also has the authority to scrutinise the script of the film. It thus makes sure that the proposed film conforms to its objectives.

The Corporation has made a modest but a good start. The making of purposeful films is, undoubtedly, a slow process, but judging from the response from the film industry, it promises to be a sure process worth waiting for.

ROLE OF FILM FINANCE CORPORATION

PRODUCTION OF PURPOSEFUL FILMS

By A Correspondent

TWO new Indian films will shortly be put on the screen in different parts of the country. These will have more than usual interest to those who contributed to their production, particularly to those who have made a financial contribution. These pictures will be the ones which have been financed by the Film Finance Corporation, youngest of the three financial corporations, set up by the Ministry of Finance. The success of these pictures from the point of view of æsthetic standards will be the test of the objectives which the F.F.C. has set before itself. The main purpose of the Corporation is to encourage the production of films of good quality. This definition has a special import—films which are instructive as well as entertaining. Also F.F.C. financed films should hold the mirror up to life in its nobler form. That is to say, the films should have more realism where the picture-goers find it easy to identify themselves with the characters, situations and problems portrayed in them. This would hold good both in regard to social themes and to subjects with a historical or folklore background. This means that F.F.C. films would seek to make a departure from the normal run of pictures produced solely through private financing. They would be shorn of over-glamorous settings and costumes, exaggerated characterisation, unreal and contrived situations and melodramatic treatment. Crude and cheap humour would also be eschewed.

It would, however, be unfair to draw the inference that the Film Finance Corporation is trying to take on the role of a reformist movement in the Indian film world or that it will replace private financing for the film industry. The Corporation's effort is to help in the production of films which will progressively turn out to be works of art and lay stress on lasting values by which alone a people and a nation are known and respected. It does not ignore the commercial aspect of a film which is very important, if the Corporation is to continue its role as a film financier. At the same time, it would set its face against its money being used for a production which portrays life in its base forms leading to national degeneration and disruption. The Corporation does not add to the cost spiral in the film industry. A "box office hit" today involves colossal sums of money. Top-notch film stars and reputed production studios are booked at fabulous rates, in order to make a film which would draw vast crowds. Should the film fail, the producer finds himself in a financial tragedy. The Corporation, on the other hand, would give preference to a film whose production is financially modest and whose stars constitute new-found talent. This serves a double purpose and makes a valuable contribution to the development of the film industry and the film profession.

The idea of the State taking a hand in the financing of the film industry is not new. There is a National Film Finance Corporation functioning in the United Kingdom for over 10 years. In Italy, the job has been entrusted to a bank, while in France the work is handled by the National Centre of Cinematography.

Capital To Be Raised

The Film Finance Corporation in India Limited, incorporated as a wholly owned Government company, was registered in March last year. It, however, started functioning effectively from the middle of February this year and, by the middle of October, it had received 22 applications for loans totalling nearly Rs. 64.70 lakhs. Of these, 5 applications totalling a sum of Rs. 18 lakhs were sanctioned. A sum of Rs. 6.40 lakhs has already been disbursed among 3 applicants. Ten applications have been rejected and 7 for a total of Rs. 19.85 lakhs are pending. The Corporation has an authorised capital of Rs. 1 crore, but its paid-up capital of Rs. 20 lakhs is nearly exhausted. It is shortly raising its paid-up capital by Rs. 24 lakhs when it will be able to meet more demands for loans.

The objectives of the Corporation's financing have set the pattern of selection of films for loans. Not all the money that is required for the production of a film is met by it. One-fourth of the total cost is to be met by the producer and the Board of Directors of the Corporation may, in its discretion, grant loans up to

(Continued in previous column)

THE CHANGING PATTERN OF INDO-BRITISH TRADE

INDIA'S PROBLEMS WELL UNDERSTOOD

By Stephan E. Schattmann

TRADE between India and Britain has expanded substantially in both directions during the last ten years. In 1960 Britain still remained India's major trading partner, taking 27.3 per cent of her exports—a larger proportion than any other country—and providing 20 per cent of her imports. There was a decline in 1960 in India's purchases from Britain, which led to a reduction of the total value of trade, but India remained Britain's sixth largest export market and India's goods ranked ninth in the list of British imports.

The pattern of Indian imports from Britain has undergone significant changes in recent years. There has been a steady decline in imports of consumer goods and of other goods now produced in India, coupled with a considerable shift towards capital goods, especially machinery of all types, chemicals and road vehicles and aircraft. This change, the result of the rising tempo of India's industrialisation, has affected particularly such commodities as cotton textiles, certain chemical products, rubber tyres, tobacco products, soap and others.

This is a trend not unfamiliar to Britain and it is fully appreciated against the background of the long-term importance of the Indian market to industry in Britain. Britain, whose very existence depends on the exports of its industrial products, has learned that the industrialisation of a developing country means more and not less demand for British products. It is enlightened self-interest, as well as the obligations of Commonwealth partnership, which determine Britain's resolution to continue its contribution to India's further development.

The main commodities exported by India to Britain in recent years are tea, textile manufactures (including cotton yarn and piecegoods; jute yarn, fabrics, sacks and bags; carpetings of coir, jute and wool), leather (dressed and undressed), tobacco, bristles and shellac, raw wool, vegetable oils, mica, manganese and animal feeding stuffs.

In addition, Britain has benefited from the growing diversification of India's export trade through industrialisation. Sewing machines and small diesel engines are some examples of India's "new" exports which are finding a market in Britain. An event of some significance last year was the first shipment to Britain of steel billets produced at the Bhilai steel works. Pig iron has already been received from Bhilai.

Statistical Picture

Looking at the 1960 trade statistics, the following picture emerges:

Imports from India amounted to £146,600,000, against £140,900,000 in 1959, an increase of four per cent. Cotton yarns and fabrics, linseed oil, tobacco, fruits and vegetables, manganese ore, mica, jute goods, oilseeds and oil nuts, and crude fertilisers, all registered increases over 1959. The value of cotton yarns and fabrics came to £14,600,000, an increase of 29 per cent. Shipments of linseed oil were £441,000 greater; or 65 per cent. Tobacco, at £9,200,000, was £1,100,000 more than in the previous year. Imports of fruit and vegetables at £1,700,000 registered an increase of 37 per cent.

Imports of some commodities, such as tea, coffee, animal feeding stuffs, raw cotton, wool, petroleum products and leather and leather goods declined. Feeding stuffs, at £10,500,000, were £1,600,000 or 13 per cent less than in 1959. Leather and leather goods, at £13,000,000, were £640,000 down on 1959. To sum up, the drop in Indian shipments of tea—slight though it is—leather goods, animal feeding stuffs, cotton and wool was more than made up by larger shipments of cotton yarn, woollen fabrics and other textile manufactures, as well as tobacco.

The rapid progress in the manufacture of synthetic materials is a factor which must be borne in mind in any assessment of the future prospects of some of India's exports to Britain. Coir is being replaced by nylon in the manufacture of mats. Not only are nylon fibres said to have better wearing qualities, but the finished product is more attractive and therefore preferred by the housewife in Britain, even if the price is higher. Shellac faces competition from synthetic resins in the manufacture of paint. The gramophone industry, too, has gone over from shellac to plastics and now makes virtually all new records of plastic materials. Jute is coming up against changes in packaging techniques. Commodities which used to be carried across the oceans in jute bags are now shipped in bulk carriers, and paper bags are cheap and easy to make.

Indian imports from Britain in 1960 were worth £148,900,000 against £170,200,000 in 1959, a decrease of 12.5 per cent. Exports of machinery, other than electric, which showed the biggest fall declined from £54,600,000 in 1959 to £43,400,000 in 1960, a drop of 20 per cent. Electric machinery went down by £5,800,000 to £14,800,000, chemicals by £7,600,000 to £14,100,000 and railway vehicles by £2,400,000 to £1,400,000. Exports of aircraft fell by almost 50 per cent to £8,600,000. British deliveries to India of cotton yarn and fabrics, and man-made fibres and products, also were substantially lower. Wool and tops, scientific instruments, photographic and optical goods and watches and clocks fell away as well. On the other hand, exports of road vehicles rose by £4,200,000 to £13,800,000, ships and boats by £2,100,000 to £6,042,000, petroleum and petroleum products by £1,600,000 to £4,000,000, and non-ferrous metals by £900,000 to £3,800,000.

Some anxiety is felt by British exporters at India's tendency to import an increasing part of her capital equipment from countries willing to accept blocked rupees. But both industry and Government in Britain are fully aware of India's tight balance of payments position, and the measures aimed at alleviating the position, have met with general approval in Britain.

Economic Aid

Two agreements were signed in Delhi on 1st May 1961 for loans amounting to £40,000,000 to the Government of India from the British Government. The first is for £30,000,000, for development. This is the largest single loan ever made by Britain as part of its programme of oversea development assistance. The loan is intended as an initial contribution to the third Five-year Plan. It is to be used for purchases from Britain, about half for individual projects and the remainder for other capital equipment and machinery.

The second agreement covers a loan of £10,000,000 for the purchase of a broad range of goods from Britain. Both loans are for a period of 25 years and no repayments are required until 1966. Total loans made by Britain towards Indias development plans now amount to more than £120,000,000. In addition, negotiations are proceeding on the loan for expansion of the Durgapur steel works' capacity by 600,000 tons.

No sketch of India's trade relations with Britain would be complete at this juncture without a reference to Britain's application for membership of the European Economic Community. While it is still far too early to make any definite statement on this important matter, one thing can be said.

By becoming a member of the European Economic Community, Britain would indeed have to subscribe to its basic principles which include a common tariff, common institutions, and a certain measure of common economic policies. This is bound to affect existing relationships within the Commonwealth. But, as Mr. Macmillan said in the debate in the House of Commons on 2nd August, it will be Britain's aim to make satisfactory arrangements to meet the special interests of the Commonwealth particularly, of course, in the economic field, and the Government has given an assurance that the Government will keep in the closest touch with the Government of India and other Commonwealth Governments in all matters affecting their interests. Britain believes that, by joining a rapidly-expanding economic unit of 250,000,000 people, it would not only strengthen its own economy and contribute to the further growth of this large market, but would also serve best the interests of the Commonwealth as a whole. Only an economically strong Britain will be able to provide an expanding market for the products of a developing country and, what is at least as important, will be able in co-operation with others, to be a source of investment funds for the execution of its economic plans.

CLIMATE FOR FOREIGN INVESTMENTS

HONOUR AND GOOD FAITH BEST INCENTIVES

By R. G. Follis

Chairman, Standard Oil Company, California

TO stand on their own feet, to become stable, free and strong, to grow and to prosper, the newly emerging nations of the world must import large amounts of foreign capital and skills. Outright gifts and loans from friendly foreign Governments, while they help get things started, are almost never enough to get them finished. And among the international investments that have helped these nations, those of the oil companies, comprising one-third of the total, are the largest.

Contrary to what many might think, it is not always easy to arrange to import such capital. These projects involve years of planning and hard work, the spending of vast sums of money, and are subject to the natural hazards of oil exploration itself with its heavy odds against success. In Australia, the last ten years of effort and the spending of two hundred million dollars by oil men has resulted in no commercial production. In Brazil, the spending of three hundred million dollars and six years of work have brought the same result. Forty years of exploration in the Philippines have resulted in a total loss to date. The countries involved, however, received bonus payments, investment within their borders, employment of their citizens and other benefits.

These investments are not the same as those spread over a wide variety and number of ventures. In each country, the risk is all in one piece—and the oil companies who venture in these foreign lands assume it all. The "host" country, by sharing in success, receives money to develop its own national economy at no cost or investment by Government or people. The country, however, does not share in the cost of failure.

Before making an investment of this magnitude, common sense dictates that previous agreement be reached as to the share of profit the country is to receive; and the share the company is to receive if oil is found; how they receive it; rights and obligations on both sides.

Complicated Business

Usually, these take the form of concession agreements. They permit an oil company to go ahead in the face of the existing risks, with the assurance that the ground rules will not suddenly be changed by one side later on. But the development of the oil resources of a country is a widespread and complicated business. Inevitably, differences of opinion and disputes between company and country will come up. But friendly discussions, in an atmosphere of goodwill and in good faith, will usually bring a mutually agreeable solution. These are allowed for in such agreements. An example is the agreement between Saudi Arabia and the Arabian American Oil Company. Here, such discussions have forged even stronger links between country and company, including the now widely-accepted principle of sharing profits equally.

The success of these agreements is now a commonplace. It is therefore all the more surprising to hear from some current sources and individuals the thesis that, after oil is found and developed, a "host" Government can, in fact, as a matter of patriotic necessity should, declare a one-sided amendment to the agreement which would give them part or all of the investing company's share of the profits.

There is, of course, no historical, logical, moral or legal support anywhere for this unique doctrine in any true civilisation found on law and not upon force. But, legality aside, if such a principle were accepted, the practical effects might well be disastrous.

The need of the newly-developing nations for outside capital does not stop with the discovery of oil. New capital investment is then more necessary than before. This is because the country's new wealth lies not in possessing the oil, but in selling or using it or its products.

Even that, however, is not enough; the capital invested by the oil company is still just a shove, although a big one, in the direction of economic well-being for the "host" country. Success and good faith on both sides attracts more foreign capital to create more real wealth, a better life.

TEXTILE INDUSTRIES IN LATIN AMERICA

NO IMPORTANT DEVELOPMENTS EXPECTED IN NEAR FUTURE

AN interesting review of the general trends in the textile industries of Latin America was made by Mr. Jackson E. Spears, Chairman of the Foreign Trade Committee of the American Cotton Manufacturers Institute, Inc., in the course of a paper read at the 1961 meeting of the International Federation of Cotton and Textile Industries held at Osaka (Japan). The paper gives a statistical picture of the textile industries, country-wise breakdown of *per capita* fibre consumption in the past few years, a comparison of the cotton cloth and yarn output in selected Latin American countries with that in the U.S., and trend of man-made fibre cloth production. The chief conclusion arrived at by the author is that the textile potential in Latin America will continue to be dependent for real expansion, modernisation and growth on the economic and social development of the area. No important change is expected until major events occur. Mr. Spears' review reveals the following trends:

Between the late 'thirties and the late 'fifties, the physical quantity of textiles available annually in Latin America has doubled, accompanied by a slight decline in net importation of these products into the area. Thus, there has been over this period a large increase in mill fibre consumption. *Per capita* availability of textile products increased from 3.7 kilos prewar to 4.5 kilos in 1957. During these two decades, there was a very large increase in population. In January 1950, cotton spindles in place in Latin America totalled 5.77 million, or an increase of 28 per cent. While, on a gross basis, consumption of textiles in Latin America of all fibres increased during the period, on a *per capita* basis, wool was unchanged at the end of the period. Cotton products were up 10 per cent, while man-made fibre more than doubled.

In 1957, as in 1938, cotton products dominated the Latin American picture, standing at 3.3 kilos *per capita*, as compared with 1.2 kilos for man-made fibre and wool combined. Man-made fibre, with a smaller share of the market than wool at the beginning of the twenty-year period, had twice as large a share at the end.

In January 1960, the three countries with the largest number of cotton spindles were Brazil with 3.5 million, Mexico with 1.2 million, and Argentina with 1.0 million. These three countries accounted for 5.76 million of Latin America's total of 7.38 million spindles. While the number of spindles in place in Brazil and Mexico was only modestly larger than ten years earlier, the Argentine total represents a doubling over the decade. In January 1960, these three countries between them had 183,000 of the 227,000 cotton looms in Latin America. Brazil made substantial increases in loom installations during the 1950's and Argentina's weaving capacity was modernised.

The cotton textile industry in Brazil had a very good year in 1960. The Argentine industry, in contrast, experienced considerable difficulty in the first half of 1960, though there was probably some improvement in the later months of the year. Perhaps the most important development last year in the Mexican industry was the conclusion of a revised industrywide agreement on wages and fringe benefits, carrying wage increases of about 15 per cent and concessions in vacation and holiday pay and other fringe. After the increase, Mexican textile labour is averaging slightly better than two U.S. dollars per day. For comparison purposes, it might be noted that the daily wage in the U.S. industry averages about six times this figure. Some 20 per cent of Mexico's cotton looms are automatic, and efforts are being made to modernise the industry. Since June 1958, for instance, importation of second-hand machinery has been forbidden.

Of the 15,000 looms on man-made fibres in Mexico, 95 per cent are automatic. In both Mexico and Brazil there has been a phenomenal growth in apparel manufacturing. There are now about 88,000 industrial sewing machines in Mexico, with heavy concentration on shirts and work clothing. The Brazilian garment industry has about 40,000 industrial sewing machines and expects to double its output in the next decade. In Argentina, industrial sewing machines installed are estimated at between 80,000 and 100,000.

The whole thrust of development in Latin America is towards increased reliance upon domestic textile and apparel manufacturing and a continuing decline in the relative importance of foreign trade in these products. The explosive population growth in Latin America insures that there will be more bodies to clothe. The question, of course, is whether the growth in income will also be explosive. So far, clearly, population is outrunning income in Latin America. In 1938, there were 126 million people in Latin America; in 1960, there were 206 million. The natural annual increase in Central America (including Mexico) is now 2.7 per cent. In South America, it is 2.3 per cent. The rate in the world as a whole is only 1.7, which, incidentally, is also the rate for East Asia. Because of the relatively low life expectancy, 40 per cent of the population in most Latin American countries is under 15 years of age. Failure of the gross national product of the area to grow apace is a matter of concern. It is hoped that the general awareness of this problem will encourage redoubled efforts to find solutions. During the 1950 decade alone, some 40 million people were added to the population of Latin America.

On 13th September 1960, a group of 19 member-countries of the Organisation of American States signed the Act of Bogota. Parenthetically, the 20 Latin American republics plus the

OUTLOOK FOR COTTON INDUSTRY GLOOMY

MILLS SEEKING HELP OF RESEARCH EXPERTS

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 17*th October*

STRIKE action is only likely to be taken "as a last resort" by the ten trade unions in the cotton industry in support of their claim for a 10 per cent wage increase for nearly 180,000 workers. The demand was rejected outright by the millowners last month.

Sir Alfred Roberts, Secretary of the Card-room Workers' Amalgamation, said that the eight-man sub-committee was not in favour of strike action after a meeting in Manchester. "Nor are we in favour of arbitration," he added, "in view of the Government's attitude towards collective bargaining. Its decision on arbitration affecting Government employees is not conducive to us having any confidence in arbitration at this stage."

After further discussions, the sub-committee will report back to the executives of the unions involved.

Knitting Exhibition Opens

The biggest "shop window" of equipment for the knitting industry ever staged in Britain has brought nearly 300 exhibitors from eleven countries to Manchester and visitors from every textile-producing country in the world. The International Knitting Machinery and Accessories Exhibition has moved from the traditional centre of Britain's knitting industry because its rapid growth in size has overgrown the exhibition hall facilities available at Leicester.

Plant on show at Belle Vue, Manchester, reflects the latest advances in design and production techniques, including the use of electronic devices. The fashion swing towards seam-free stockings is underlined by the many machines in this category on display. One seamless hose machine is capable of producing a stocking in two-and-a-half minutes and another trims, transports and selects seamless hose automatically in one operation.

Cotton Prospects

A warning that major strikes later this year would reduce retail sales of textiles and cause more dislocation in the cotton industry is contained in the quarterly review issued by the Cotton Board. Giving a gloomy picture of prospects, the Board describes more machinery standing idle, the curtailment of shift work, extended holidays and occasional mills closing down completely.

Yarn output dropped by nearly 7 per cent between April and August and the number of looms running drifted downwards. The labour force fell by 10,000 in the first half of the year and the familiar three-year stock cycle is now being encountered. A further decline of over 1,000 workers took place in the cotton industry during August and, at the end of the month, the number of operatives on the books of employers was 177,140. This compared with 184,400 twelve months previously.

Output in the mills was affected by holiday influences, but both yarn and cloth production was lower than in 1960. Average weekly output of yarn was 12,400,000 lbs., a drop of 300,000 lbs. per week on last year's level. Production of woven goods averaged 33,730,000 yards weekly, a fall of 1,710,000 yards per week on the corresponding month last year.

Aid from Research Experts

More and more Lancashire textile firms "streamlining" their mills are calling in research experts to help them over the initial problems. Dr. D. W. Hill, Director of the Shirley Institute—the Didsbury Research Centre of the Cotton, Silk and Man-Made Fibres Research Association—said in Manchester that the Centre's experts had made over 3,500 special visits to mills in a year to discuss urgent problems. This was equal to 30 visits on every working day.

The increased demand for these special visits, Dr. Hill told the annual meeting, arose from the industry's interest in re-equipment and it was apparent that the mills were turning more and more to the Research Centre for help in solving the many problems now pressing upon the trade. Discussing the Institute's research programme, he said that, while basic research must still be actively pursued, the *industry's prime need at the present time* was for increased productivity, economical processing and new developments, particularly in finishing, likely to attract the consumer.

Household Textiles Expand

In spite of the problems of dwindling orders and rising manufacturing costs facing household textile firms, readily available supplies and intensive competition between suppliers have stimulated a flow of new ideas, material designs, colourings, make-up and presentation, the Household Textile Association said in its annual report. "Whatever troubled views the producer and converter may have, the consumers' view of the market and what it offers must surely be as attractive as it has ever been," said the report. "The housewife has an almost infinite range of choice when she buys a textile article for the home." But the report added that, at the production end, many firms were seriously concerned about the outlook.

Order books and profit margins were shortening; labour and other manufacturing costs continued to rise, and plans for further re-equipment and increased productivity in the industry might well be frustrated while low cost imports continue to increase. Among the disturbing features of the rise in imports is what could only be described as the practice of dumping goods at uneconomic or subsidised prices which disrupted the channels of trade, and inflicted serious damage on the domestic industry. In particular, this charge can be levelled against imports of various types of textiles from Spain. But organised efforts to induce the Board of Trade to apply its powers against dumping had so far failed.

Boxing Against Shadows

Conspicuous by their absence at this year's Cotton Board conference, to be held this weekend at Harrogate, will be the politicians. Many people in the industry would rightly contend that Representatives of the Government should be there in force to hear what the men from the mills think about the way they are being treated. Virtually every decision which concerns the future of the Lancashire cotton trade at the moment is being taken by Whitehall—with apparently very little regard for those directly involved.

The conference—not for the first time—is being held under the shadow of a disturbingly low rate of activity in the trade. The high hopes of two years back have been whittled away by undermining confidence created by anxiety over imports and a persistent failure to provide shippers with the means to maintain, let alone improve, overseas transactions. One aspect of recent negotiations with Hong Kong and the other Commonwealth suppliers of so much of the current arrivals from abroad is that the spokesmen from the British side have been entirely drawn from Government officials. It is, therefore, entirely wrong to level any blame for the impact of the new arrangements on representatives of the Cotton Board, or indeed the trade's leaders, who have never been more than observers at the talks.

New Broom—Old Methods?

It has been suggested in some quarters that the appointment of a local man as President of the Board of Trade may create a more favourable atmosphere for Lancashire. In view of the fact, however, that several of his predecessors in the post are members of the Cabinet, Mr. Erroll may have a difficult task to convince his colleagues that a special case can be argued on cotton's behalf. There are many reasons for thinking that no real relief is likely in the near future. Marketing and promotion provide the basis for this year's debates at Harrogate and offer scope for stimulating initiative in a trade where international rivalry becomes increasingly keen. It would be surprising if the effect of Britain's now apparently inevitable entry into Europe is not the subject of questions and wide discussion.

The cotton industry has proved that it can take a vast and comprehensive reorganisation scheme in its stride and still continue turning out supplies at a time of almost overwhelming demand. Now that the moment has come to dispose of its goods in highly competitive conditions, it is right that every angle of selling techniques should be examined dispassionately.—*All Rights Reserved.*

WOOL RESEARCH IN U.K.

Trade associations in the British wool textile industry have agreed to an increase in the statutory levy on the industry aggregating about £50,000 a year for scientific research. Most of this will be needed by the Wool Industries Research Association, Leeds, to maintain the present scale of its research, as costs have risen, and the Department of Scientific and Industrial Research now requires a larger contribution from the industry to qualify for assistance. Bigger funds should also make possible more financial help for approved research projects in textile departments of universities and colleges of technology.

The existing research levy on the British wool textile industry realises about £185,000 a year and is administered by the Wool Textile Research Council, representative of the whole industry and including trade union representatives, scientists and others. The Wool Textile Delegation has asked the Board of Trade to seek parliamentary approval for appropriate amendment of the statutory order under which the levy is paid. It is hoped that the order will operate from April 1962 and first collection at the new rates would be made from 1st October next year.

The Government of India has raised the import entitlements for decoration ideas such as zip fasteners, buttons and snap fasteners from 1 to 5 per cent of the export value of wool hosiery. Under the Export Promotion Scheme for woollen goods (including hosiery), an exporter can import wool tops, embellishments, dyes and chemicals and machinery upto 85 per cent of the export value.

COTTON ADVISORY BOARD'S MEETING

CONTROVERSY OVER REINTRODUCTION OF QUALITY CONTROL

THE Cotton Advisory Board, which met in the City on the 21st inst., discussed the overall supply and demand position of raw cotton during the 1961-62 season. The Board estimated that the Indian cotton crop during the current season, that is, 1961-62, would vary between 4.8 million bales and 4.9 million bales and that mill consumption of Indian and foreign cotton taken together would amount to 5.6 million to 5.75 million bales. On this basis, the requirements of foreign cotton, according to the Board, would be about 1.20 million to 1.35 million bales, even if no additions were made to the existing carry-over stocks which it considered to be already low. The Board was also of the view that, in the context of the smaller crop this year, the system of compulsory survey, through regional committees, might be revived in the interest of all concerned. It was also emphasised that the working of these committees should be supervised and controlled.

On the basis of the Board's calculations, it is possible to draw a preliminary picture of the supply and distribution of raw cotton during the season. The carryover stocks at the beginning of the season were 2.21 million bales, comprising 1.85 million bales of Indian and 395,000 bales of foreign cotton. If the crop turns out to be in line with the Board's estimate, total supply, excluding imports, would be 7.06 million bales. The Board estimated consumption requirements of Indian mills at 5.7 million bales (Indian and foreign). Assuming that exports during the season would be about last year's shipment of roughly 300,000 bales, total disappearance would work out to six million bales. Hence imports of 1.2 to 1.3 million bales would be required, according to the Board's estimate, if stocks at the end of the season were not to decline below the current season's opening level of 2.21 million bales. The Board, however, did not suggest the composition of imports staple-lengthwise nor the quantum of short-staple cotton of 1" and below that should be imported. It left the question to be decided at a later stage.

While the Board's estimate thus reveal a tight statistical position during the season, the trade has revised its crop ideas from 4.8 million bales a month ago to about 5 million bales at present. Some suggest that, should there be no further setback, the crop might even equal 5.2 million bales, as against last season's 5.4 million bales. Whatever be the size of the final crop, there is no doubt that the current season's crop would be lower than last season's output. Even if the actual crop were to be higher by 200,000 to 300,000 bales than is anticipated at present, the increase would be just sufficient to cover the rise in the requirements of spinners which is placed by the Board at 230,000 bales. Consequently, it would appear that imports would have to be maintained on the scale allowed last year.

Tight Supply

The Board does not seem to doubt that, in view of the smaller crop, the supply position would be tight. This explains its plea for the reintroduction of the system of compulsory surveys which was in force during the last two seasons and a decision to abolish which with effect from this season was taken not long ago. The East India Cotton Association, Bombay, has also suggested reintroduction of the compulsory survey and the appointment of regional survey committees. This proposal has, however, been opposed in some quarters. For instance, the *Gujerat Niyantrit Bazar Sangh* strongly opposed compulsory surveys. In a telegraphic communication addressed to Mr. K. C. Reddy, Union Minister for Commerce and Industry, the *Sangh* has requested the Government not to reintroduce compulsory surveys. It has pointed out that compulsory survey proved to be detrimental to the interests of growers last season and resulted in the accumulation of stocks and a sharp decline in prices.

The Government's reactions to these opposing points of view are not known at the time of writing. It is probable that it will make up its mind only after a clearer idea of the crop becomes available. Although compulsory surveys are not desirable in the normal circumstances as it cripples free trading in cotton, should the crop turn out to be as poor as is envisaged at present, some ways will have to be devised to ration out the limited supplies at reasonable prices. The quota system (which is still in force) and compulsory surveys had helped to regulate the distribution of cotton during the last season and, if the 1959-60 experience were to repeat itself, the Government might find itself left with no other choice.

WORLD COTTON SUPPLY

Some increase in the total world supply of cotton during the present season seems virtually assured in view of a larger world carryover on 1st August this year and the continuing high level of cotton production which could well set a new record, according to the September review of the International Cotton Advisory Committee. It seems doubtful, however, whether total exports will remain at the same level as in the last two seasons. On the basis of present estimates, export availabilities should not be much different from last season. On the consumption side, the Committee estimates that overall cotton consumption should remain at a relatively high level, despite less favourable prospects in certain countries, notably in Western Europe.

But there are a number of uncertainties which make it difficult to make a realistic appraisal of the trade outlook.

In the first place, the significant increase in stocks in certain net importing countries, particularly India and Japan, could affect imports by these countries though the trend of their textile production has been upward.

On the other hand, demand from Communist countries has become an important factor in the total cotton export economy. A hopeful factor here is the marked reduction in production in the Soviet Union and China last season, which stimulated demand for cotton imports in Communist countries from the rest of the world.

In the longer term, maintains the I.C.A.C., the price trend for both raw cotton and cotton textiles will be a key factor in the outlook for consumption. In the last two years, mills have had to absorb rising cotton prices and increased labour costs without being able to offset these by higher textile prices owing to the highly competitive situation of the world textile industry. As a result, mill margins have often remained insufficient to provide an adequate flow of funds for new investment. In the competitive position *versus* man-made fibres, where production in 1960 set a new record high.

The price trend for American type cotton in the last two seasons has inched steadily upwards and this would seem to set the pattern for the present season. In the United States, despite availability of unusually large free stocks, any heavy movement of cotton into the Government loan will inevitably lead to higher prices as the season progresses. Extra-long staples which were under some pressure earlier in the season, have shown firming tendencies of late in view of the short Egyptian crop this season.

COTTON IMPORTS INTO U.S.

The United States imported 92,000 bales (500 pounds gross each) of cotton during August, the first month of the 1961-62 quota year for long-staple varieties. Of these, 61,000 bales were imported from Egypt. 20,000 bales from Peru and 10,000 bales from Mexico. Imports from India amounted to less than 500 bales. The United States also imported 13,000 bales of cotton linters, mostly felting qualities, during August. This was nearly equal to the quantity imported in July this year, but was considerably higher than the 7,000 bales imported in August 1960. Mexico and the Soviet Union were the major suppliers with El Salvador, Guatemala and other countries shipping smaller quantities.

JUTE INDUSTRY AND ITS PROBLEMS

MR. BAJORIA'S NOTE OF WARNING NEEDS TO BE HEEDED

IN the last financial year, that is 1960-61, the jute industry earned for the country precious foreign exchange amounting to as much as Rs. 135 crores. In fact, out of every Rs. 100 worth of exports in that year, jute yarns and manufactures alone accounted for Rs. 21 crores. It is obvious, therefore, that any marked fall in exports of jute goods will disrupt the third Five-year Plan which is so heavily dependent on external resources. Surely, Mr. C. L. Bajoria, Deputy Chairman of the Indian Jute Mills Association, does not indulge in any exaggeration or try to be melodramatic when he declares, in the course of a series of three articles contributed to the Press, that a serious decline in jute goods exports will be a disaster for cultivators, industrial labourers, millowners, investors and for the State of West Bengal, the economy of which is to a large extent based on the jute industry. Mr. Bajoria is one of the few who have a thorough knowledge of the problems of jute industry and his views, therefore, deserve due consideration. In the aforesaid articles, he has impressively analysed the recent trends in the industry and offered solutions to some of the problems confronting the industry.

How serious is the competition offered by the rapidly expanding jute industry in Pakistan has been well brought out by Mr. Bajoria. The share of Pakistan in the combined jute goods exports of India and Pakistan has gone up quite markedly from just 5.9 per cent in 1955 to as much as 19.1 per cent in 1960, while that of India has fallen from 94.1 per cent to 80.9 per cent. The competition is keener in the case of sacking than hessian. The percentage share of Pakistan in sacking has risen from 12.4 to 28.4, whereas India's share has declined from 87.6 to 71.6. India's major export markets for sacking are being lost to Pakistan at an alarming rate, as the following figures show:

(In tons)

Countries	India		Pakistan	
	1960	1957	1960	1957
Australia	55,500	81,400	26,100	600
Burma	5,200	24,900	12,000	7,200
Cuba	34,400	51,400	10,800	1,200
Nigeria	9,100	17,900	12,600	..
Rest of Africa (excluding S. Africa) ..	50,800	94,200	14,800	5,800
Peru	5,300	10,400	4,800	500
West Indies	1,700	4,900	4,000	1,800

It is stated that 75 per cent of the Australian market and 50 per cent of the Cuban market have already been lost to Pakistan. The entire Egyptian market has been lost, because of the setting up of jute mills there. In Thailand, mills are being established and, further, this country is meeting its requirements by imports from Japan for which it pays by export of its raw jute.

Effective Action Wanted

The competition offered by Pakistan is bound to be more and more acute in the coming years. The jute industry in Pakistan is carrying out a substantial expansion of productive capacity. About 6,000 additional looms will be installed in the next four or five years, bringing the total loomage to 14,000 by 1965. Of these new looms, about 5,000 will be for producing sacking. On this basis and assuming that the industry works 2½ shifts, the output of sacking will be at the rate of 30,000 tons per month. It may be noted here that the average monthly export of sacking from India during the period 1956-60 was just this quantity. Viewed thus, there is no exaggeration whatever in the note of warning struck by Mr. Bajoria that, unless prompt and effective action is taken to meet the situation, almost the entire export market for sacking may be irretrievably lost within the next few years. Explaining the consequences of such a development, he says:

"Should this happen, export earnings from jute goods would decline by about Rs. 55 crores a year, the jute industry would be crippled through the restriction of sacking production to the small amount needed for domestic consumption and perhaps marginal exports, jute growers would suffer heavy loss, and about 100,000 workers or half the total number in the industry would be deprived of employment. The implications for national economic development and for the economy of West Bengal can easily be imagined.

"The outlook for hessian is not quite so grim at the moment, though, in time, the danger from Pakistan is likely to become serious in this section of the industry, too. While both India and Pakistan increased hessian exports during the years 1957 to 1960, the increase in the case of Pakistan was greater than that of India. For hessian, the menace is not yet imminent, but sacking is already faced with a struggle for survival."

The high competitive ability of the Pakistan jute industry *vis-a-vis* the Indian industry no doubt appears somewhat strange, considering that the Pakistan industry is faced with problems like shortage and high cost of power, the relatively lower level of workers' skill, high depreciation charges on expensive modern machinery, and lack of ancillary industries for servicing and maintenance of such complex machinery. But as against these problems, the Pakistan industry enjoys three very distinct advantages. They are: (*a*) abundant supplies of cheap and superior quality raw jute; (*b*) comparatively low wages and freedom from a number of welfare and social service benefits; and (*c*) export bonus system.

Export Subsidy

It is estimated by Mr. Bajoria that the last mentioned factor alone gives the Pakistan industry a cost advantage of about Rs. 150 per ton of sacking and hessian on the basis of present conditions. Taking all factors into account, the cost difference in favour of Pakistan comes to about Rs. 300 per ton. Drawing pointed attention to this aspect, Mr. Bajoria urges effective means to meet Pakistan competition in the export market. In particular, he commends for acceptance the grant of an export subsidy for the Indian jute industry. In support of this plea, he observes:

"An export subsidy such as this is, perhaps, not desirable in principle, but, if our main competitor resorts to such tactics and thereby threatens our major export industry with annihilation, it should be obvious that we have no choice but to follow suit. The alternative is to do nothing, while our more enterprising rival captures our markets and cripples our industry. This is surely an even greater evil than the grant of a subsidy to match that of Pakistan. In practice, even a full matching subsidy will not, in all probability, be needed. In the conditions prevailing in Pakistan, capital for expansion of the jute industry will be attracted only by a very much higher margin of profit than that considered reasonable in India. It is likely that a subsidy of about Rs. 130 per ton on sacking exports by India would be sufficient to reduce profitability in Pakistan to a level that would be regarded as unattractive and induce a revision of the projected expansion of manufacturing capacity. Moreover, in all probability, the grant of a subsidy by India would lead to abolition of the export bonus system in Pakistan, where it would be considered a costly but relatively ineffective device. It would then no longer be necessary to continue the Indian subsidy. A country that considers it worthwhile to pay Rs. 5.5 crores to subsidise sugar exports worth Rs. 12 crores ought not to cavil at a moderate and probably temporary subsidy in order to safeguard exports worth Rs. 55 crores a year. If necessary, at least a part of the loss of revenue involved could be made up through an excise duty on jute goods consumed within the country."

The case for an export subsidy is pretty strong in the circumstances explained by the Vice-President of the I.J.M.A. It has also a moral justification, in that the industry had paid in the early fifties crores and crores of rupees by way of export duty and that, by subjecting it to heavy export levies, the Government of India held out a protective umbrella to the jute industry in Pakistan during its infancy. Public memory being short, it may be recalled here that, in those days, this journal pleaded in vain for building up a separate fund out of the proceeds of export duties for subsidising the jute industry in times of need.

Productivity Must Be Raised

An export subsidy, it must be emphasised, is at best only a palliative, and not an effective, permanent solution to the problems of jute industry. Such a solution lies in taking energetic action to step up the productivity of the jute mills through modernisation of equipment and rationalisation of the manufacturing processes. It is only then that the competitive capacity of the industry in overseas markets can be enhanced from the point of view of not only quality but also price. Simultaneously, there is the urgent need for ensuring stability in the prices of jute goods and raw jute at levels that are economic to both the grower and the processer. This aspect has been forcefully highlighted by Mr. Bajoria.

NEW PUBLICATIONS

Indian Tax Structure and Economic Development. By G. S. Sahota. Institute of Economic Growth, Delhi. Publishers: Asia Publishing House, Bombay. Pages: 106. Price: Rs. 9.

IS the tax system in India sufficiently income-elastic? If so, to what extent? If not, why is it inelastic and how can it be made more income-elastic? These are the questions which have aroused wide interest in the context of the increasing emphasis laid on role of taxation in the financing of economic development. It is in the fitness of things that Mr. G. S. Sahota, a junior Research Fellow of the Institute of Economic Growth, Delhi, undertook a study of the relation between the tax structure of India and its economic growth. The study, the results of which are now published in the book under review, deals primarily with the response of the tax system to the expanding fiscal needs necessitated by a planned attempt at accelerated economic development.

Mr. Sahota has lucidly analysed the response of the tax system to increases in national income under two broad heads: One is described as the built-in-flexibility of the system, that is, the proportion of the rate of increase in tax yield to that of the rise in national income, the proportion being used to determine the elasticity of the tax system; and two, the result of changes in the rates and structure of the system, involving its widening and deepening by way of extension of base, additions to the number of taxes, and increase in rates of taxation. Three methods have been used for calculating the elasticity and buoyancy of the Indian tax system and of the more important of the individual taxes which are not alternative but complementary to one another, namely, (a) regression analysis, linking tax receipts to changes in national income or its different components as the case may be; (b) time rate of growth linking the growth of tax receipts with that of national income or its relevant component over a period of time; and (c) a simple computation of the percentage that a tax forms of national income for each of the periods studied. The findings in this respect are, as Dr. V. K. R. V. Rao, Director of the Institute, says in his introduction to the publication, highly significant from the point of view of both understanding the current responses of the tax system to changes in national income and formulating a new tax policy more suited to the requirements of the developing economy.

The chief merit of the study is that the general sluggishness in the responsiveness of the Indian tax system to changes in income or expenditure has been admirably and convincingly brought out with the use of the technique of regression analysis. Further, the causes of this sluggish behaviour, including tax evasion, have not only been stated but their impact worked out, perhaps for the first time in statistical terms. What is more, the great scope for the manipulation of the fiscal apparatus to influence production and income distribution has been highlighted.

Some interesting conclusions have been arrived at by Mr. Sahota. They may be summed up as follows:

The relative time rate of growth is much higher in the case of most indirect taxes, while the degree of responsiveness of direct taxes to income changes in terms of built-in-flexibility is relatively lower.

The growth of our tax receipts over time has been due much more to increase in taxation than to built-in-flexibility.

The comparatively lower rate of buoyancy of income-tax is due to widespread evasion.

The incidence of taxation on rural income is lower than on urban income, but the rate of increase in tax incidence has been greater in the rural sector than in the urban sector.

On the basis of the elasticity and buoyancy co-efficients and assuming that income during the third Plan period rises approximately at the rate expected by planners, Mr. Sahota has estimated the additional tax that can be expected over the Plan period without any additional tax effort (that is as a result of the built-in-flexibility in the tax system) at Rs. 1,130 crores. This estimate is, however, qualified by the proviso that national income will rise at 6 per cent a year. The appendix at the end of the study gives a statistical analysis of the various taxes and tax groups.

Underlining the significance of built-in-flexibility (or elasticity as Mr. Sahota calls it) in the tax system as the crucial determinant of the role which public funds can play in economic development, Dr. Rao has made the following interesting observations:

"When a country passes from a state of comparative backwardness in economic development to one of self-sustaining growth and economic maturity, it does so mainly by using part of the funds that arise in the process of economic development as increments in national income resulting from economic growth. The tax system is a major instrument for the mobilisation of these funds. It must be noted, however, that there are severe political and administrative limitations on the extent to which additional taxation by way of either expansion of tax bases or increase in tax rates or imposition of new taxes can be resorted to for increasing the flow of tax receipts. For enlarging tax receipts, therefore, the tax system will have to rely largely on its built-in-flexibility. The structure of the tax system should be such that an increasing proportion of the increments to national income gets automatically syphoned off into the public exchequer without involving any additional tax effort on the part of Government. It is from this point of view that the Indian tax system should be subjected to a new look so that the necessary structural reorganisation could be effected to make it a more effective and less painful instrument for the mobilisation of public funds for economic development."

Viewed thus, the study of Mr. Sahota is only a preliminary one. Nevertheless, it will be immensely useful for undertaking more detailed studies in the field of taxation. Such studies will help evolve a tax system that will be sufficiently responsive to changes in income and expenditure.

Mysore State—An Atlas of Resources (Vol. I). Edited by Mr. A. T. A. Learmonth and Mr. L. S. Bhat. Publishers: Asia Publishing House, Bombay. Pages: 294. Price: Rs. 32.

This book is the first volume of the regional survey of Mysore State initiated as a pilot project by the Indian Statistical Institute. Although the book is the product primarily of the exploratory effort in quantitative regional analysis and mapping techniques, it throws a good deal of light on patterns of distribution of resources and regional economic disparities within the State. Some of the developmental problems and their planning implications have also been briefly considered. The study, therefore, is of interest to those engaged in planning and studies of geography, as well as to businessmen and industrialists who wish to venture into new fields of activity in Mysore. Surely, the technical aid which the U.K. Government granted for the survey under the Colombo Plan has been well utilised.

The Atlas includes 105 maps dealing with the resources of the Mysore State, brief notes on sources of data, methods of representation and analysis. Based on these maps, a regional synthesis, combined with the data collected through a series of reconnaissance tours in the State and the results of some experimental sample surveys of villages in the sub-regions of the State, is said to have been presented in Volume II.

Consumer Buying for Better Living. By Prof. Cleo Fitzsimmons. Publishers: John Wiley & Sons, Inc., New York. Available in India: Asia Publishing House, Bombay. Pages: 546. Price: $8.50.

To a common man, "consumer buying" means purchase of quality goods and commodities at the lowest possible price. He may, therefore, wonder whether as many as 546 pages are required to explain what is meant by "consumer buying for better living." But, if he were to peruse the above interesting book by Prof. Cleo Fitzsimmons, he would at once feel that the subject is really so vast as to need such detailed study. For, in this book, the author has examined those aspects of economic theory that are related to consumption and to the buyer's use of the market in obtaining consumer goods. She equates buying with a way of living, of course, to the extent that purchases can provide it. Prof. Fitzsimmons shows how theory can be related to pratice in consumer buying and conveys an understanding of the function of markets, as well as desirable management and buying procedures.

The book is divided into two main parts. In the first part, the author considers both the theoretical and observable aspects of the economic system in which consumers operate. Special stress is placed on markets which are described in terms of their varieties and uses, their relation to the consumer group and marketing arrangements that affect the purchase of goods, including display, advertising and credit. Several other topics of importance to the consumer are also discussed, as, for instance, production, demand and organisation providing consumer information and protection. The second part is devoted to the analysis of the problems and procedures of consumer buying for nine classifications of goods—food, housing, clothing, household operating goods, furniture and equipment, etc. An unusual inclusion is the treatment of requisites for health, recreation, transportation and protection as types of goods that are bought and used.

The terminology used in the book is that of basic economics and home economics. And, since the book supplies the elements of economic theory involved in consumer buying, previous acquaintance with economics is not necessarily required. In order to help the reader to see his problems in terms of goods he may buy in the market today, questions under "Guides for your thinking" are introduced at intervals in the discussions. These questions will enable the individual to apply to his own community or household the principles considered in the book.

The Workshop of the World. By Prof. J. D. Chambers. Published by Oxford University Press. Pages: 239. Price: 8s. 6d.

This book covers the economic history of Britain during the period 1820 to 1880 when British industrial supremacy was at its pinnacle and which earned for the country the epithet "Workshop of the world." It takes the story of British economic development, so well told by Prof. T. S. Ashton in a book of the same series, *Industrial Revolution*, a stage further, that is, till about the end of the nineteenth century. Professor Chamber's narration is fascinating and is sure to hold the interest of the reader, even though the subject has been endless written about. It is an admirable introduction to the economic history of Britain.

THE NEW ISSUE MARKET AND THE STOCK EXCHANGE—AUTHOR'S REPLY

Apropos the review of the above book in *Commerce* dated 16th September 1961 (*vide* page 562), the author of the book, Mr. A. K. Sur, writes as follows:

"I am extremely sorry to find that the reviewer had an evident misunderstanding of the subject. Otherwise, he would not have said: 'This is neither a full-fledged book on the Indian capital market nor a penetrating analysis arising out of intensive research on any one of the individual aspects of it.' But he should have noted it (as explained by me on page 1 of the book as also in its sub-title) that this is a book only on the securities market of the country. Now capital market is a wider thing concerned with the supply of capital to both the corporate and the non-corporate sectors of the economy, whereas the securities market is concerned only with the corporate sector. The reviewer should have an understanding of it, in order to do justice to the author.

"If, indeed, the reviewer had any mastery of the subject, then he could have at once discovered that the various aspects of the new issue market described and discussed in the book are based on the author's own research work. A reference to pages 32, 48, 49, 50, 51, 54, 61, 64, 75, 76, 80, 81, 98, 99, 100, 102 to 116, and so forth will show the amount of research work that must have gone to find out the data given therein. Indeed, the chief feature of the book is the presentation of a continuous series of data relating to the new issues, both initial and further issues, from 1921.

"After my book was written, the Reserve Bank of India has published a series of data relating to the new issues for the period 1951 to 1960. But even these data were not complete, because the initial and further issues of the earlier years of the series were not given. These data relating to the initial and further issues of the earlier years are given only in my book. Then again, the R.B.I. data were brought down only to the middle of 1960. The research department of the *Economic Times* brought them down to the end of October. In my book, I have brought them down to the end of December 1960.

"The reviewer says: 'Familiar and beaten track has been covered and a substantial part of the book is elementary in character.' I would only ask him to read what is stated at the very outset of the preface. There it is stated: 'In teaching a course on business finance at the Indian Institute of Social Welfare and Business Management, the author has frequently felt that the task of the students to understand the technicalities of the market for raising funds would have been much easier had there been a book of this kind.' To make the intricacies of the market understood to the students, statement of certain elementary things becomes necessary. This you will agree with me.

"As a matter of fact, most of the statements made by the reviewer stands on no solid footing. Even his observation relating to the bibliography is incorrect. He says: 'In a book essentially devoted to the study of the Indian capital market, one is surprised to see that not a single book published by Indian authors on Indian conditions is mentioned.' If he had carefully studied the note at the top of the list, then he would have perceived that only those works have been listed 'which have been freely used in the preparation of this work.' But even here, whatever recent work has been done has been documented. Thus, both *Commerce Golden Jubilee Number* and the *Economic Times* (15th May 1961) issue have been included. I have no apathy for honest criticism. But it is surprising that, in a book of 179 pages, the reviewer failed to discover even a single element to admire and praise."

ORIENT EXPRESS
Travel Service

Through its 4 offices in India and 350 correspondents in all principal cities throughout the world, Orient Express Travel Service places at the disposal of its clients a complete Travel Service.

Air, Rail and Steamer tickets issued at tariff rates, Hotel reservations made anywhere. Advice and assistance given in securing Passports, Visas, Health Certificates and Travellers Cheques.

TRANSPORTATION SYSTEM IN CANADA

RECENT TRENDS REVIEWED

INDIA'S transportation system and that of Canada are not exactly alike, for the phenomenal expansion of road transport in the latter country has led to a decline in the importance of railway transport, whereas, in this country, railways are still holding their own. Road building and road transport have not expanded in India on any comparable scale. Still, a student of transport problems will see in India's transportation system a growing emphasis on road transport, for even long-distance road haulage by truck is increasingly coming into vogue. But inland navigation and oil pipelines are of negligible importance in this country, whereas in Canada they have relatively greater roles to play. There is, however, one similarity between Canada and India. This is the identical effort in either country to achieve an integrated system of transportation. In this context, readers will find the review of recent trends in Canada's transportation system interesting.

The Canadian transportation scene was dominated by railroads and water carriers until about fifteen years ago. In 1945, rail and water carriers accounted for 97 per cent of inter-city traffic by volume, three-quarters of which were carried by the railways. These two systems of transportation—railways and inland navigation—were more complementary than competitive, and the railways enjoyed a virtual monopoly of overland transport from their introduction until World War II. Competition between the railways and road transport had begun to develop in the 1930's, when transportation requirements changed as a result of the further development of manufacturing industries and urban areas, but was only mild. It was only after the last war that road transport began to make itself felt on the railways. Since then the growth of vehicular traffic, which is admirably suited to meet the increasing demand for more flexible transport services, has been spectacular. Manufacturing concerns have tended to concentrate in urban areas, in order to be near their major markets. This has meant a large increase in short hauls of upto 500 miles, with the accent on quick service and flexibility. In addition to being the preferred method of transportation for many of the new manufacturing firms, which have sprung up in the past two or three decades, it is undeniable, according to a review contained in the July 1961 *Commercial Letter* of the Canadian Imperial Bank of Commerce, that freight transportation by road has cut into business long enjoyed by the railways. So much so, the railways now handle only slightly more inter-city traffic than they did in 1945, although the total traffic has risen by 56 per cent; in 1959, for instance, they carried only about half of all inter-city traffic calculated on a ton-mile basis, while, at the end of the war, they carried three-quarters of such traffic. During the same period (1945-59), motor transport has increased its share from three to 10 per cent, most of which is high value traffic rather than bulk traffic, while waterborne traffic has increased its share from 22 to 25 per cent. And oil pipelines, too, have expanded rapidly and account for approximately 13 per cent of total freight traffic. Still, it is said that the various types of transport are not always directly competitive and that they may, in some cases, be complementary or even provide a service quite different to that possible by other methods.

Growth of Road Transport

It is the rapid growth of road transport that constitutes the major highlight of the post-war period. This mode of transport has enjoyed rapid technological change, including the development of engines of large horsepower, the introduction of trailers enabling trucks to engage in volume handling, and improvements to roads and highways. According to the data contained in *Canada 1960*, the number of trucks and road tractors licensed in Canada during 1958 averaged 862,775. These vehicles travelled 6,610 million miles or an average distance of 7,661 miles each and carried 460 million tons of goods to perform 15,639 million ton-miles. Trucks operating for hire averaged 50,541 or approximately 6 per cent of the truck population in 1958. They travelled 1,300 million miles or nearly 20 per cent of the miles covered by transport trucks. Revenue earned by trucks was $631 million, representing an average of $12,400 per vehicle and 6.8 cents per ton-mile. This impressive freight traffic on the roads has resulted from the extension and improvement of Canadian highways, particularly high-speed expressways which have greatly facilitated the operation of regular schedules by the carriers. An idea may be had, in this connection, of the tremendous road-building activity in Canada from the following facts and figures:

Since the end of the Second World War, governments at three levels—Federal, Provincial and Municipal—have spent approximately $6,500 million for repairing, rebuilding and extending highways, roads and streets in an endeavour to meet the demands of motor traffic. Surfaced mileage, which stood at 131,000 miles in 1945, increased to 251,000 miles by the end of 1958. During the latter year alone, $773 million was spent on highways and rural roads and $164 million on urban streets, sidewalks and bridges. The chief spending agencies are the provincial governments, which accounted for 68 per cent of the total in 1958, including assistance to municipalities. Federal Government expenditure accounted for 11 per cent and municipal and other agencies for the remainder. Existing roads in the heavily-populated areas, in which short hauls are the most numerous, have been the first to be upgraded, while all provinces have undertaken the construction of new highways to link existing settlements or to open up new areas and resources.

Federal Government expenditures on roads, according to *Canada 1960*, will show a decided increase over the next eight years as a result of the inauguration of the "Roads to Resources" project, whereby the Government of Canada will share with the provinces one-half of the cost of building over 4,000 miles of roads in undeveloped and underdeveloped areas, involving an expenditure of $150 million. The Federal Government, in addition, has undertaken a seven-year $100 million programme of road-building in the Yukon and North-West Territories, also for the purpose of opening up resource development areas.

Threat to Railways

A noteworthy feature of road transportation in Canada is its cost structure. As compared with most other carriers, fixed costs are relatively low, for roads are public rights of way paid for largely out of general revenues, although costs are generally recovered from the proceeds of gasoline taxes and licence fees. Road transportation costs tend to vary more closely with use than those of other forms and the relatively small overhead costs of the industry have enabled many operators to enter the field. This, in turn, has led to vigorous competition not only among road haulers but also against competing forms of transportation. Road transport, in the post-war period, has provided a real competitive threat to the railroads, primarily as a result of the development of secondary industry which values the flexibility inherent in that mode of transport. Trucks are well suited for small loads, can make quick turnrounds, provide door-to-door delivery, and do not necessitate elaborate packaging. There has been an increase in per capita consumption of such food items as fresh fruit, vegetables, meat products and milk, and this has created a need for quick delivery from producer to market, in order to minimise spoilage and maintain maximum quality; as road transport is well adapted to this function, it has benefited from this consumption trend.

Another interesting feature of Canada's road transport system is that trucks have ventured into the long haul field as well. Highway developments, of which the Trans-Canada Highway is a recent example, have encouraged and facilitated long hauls by truck. It is true that trucking costs over long hauls are higher than rail costs. But it is also true that, in long haulage by truck, it is often more convenient and satisfactory for consignors, having once loaded a truck, to send it a considerable distance rather than transfer to a railroad car. An exception here is the case of goods moving in sufficient tonnage to make it worthwhile to have the railroad come direct to the site.

The *Commercial Bulletin* of the Canadian Imperial Bank of Commerce has also referred to another significant development in the trucking business, namely, the growth of the private trucking fleet. Some companies now own their own trucks for transporting raw materials or finished products. Although no accurate figures on the volume of this type of trucking are available, it is stated to be expanding.

As for the other modes of transport in Canada—inland navigation, oil pipelines and air transport—there have been some stricking developments. First, the opening of the St. Lawrence Seaway in 1958 has widened the scope for shipping in Canada, but the full advantages still remain to be achieved. To combat the problem of the limited area of operations, water carriers have integrated with road carriers to make shipping services available to those who are not located at water shipping points. Secondly, by 1959, there were over 7,500 miles of oil pipeline and a vast network of trunk and feeder lines, as compared with only 1,400 miles in 1950. This spectacular increase in oil pipeline facilities has meant that the railways could carry, as of 1959, only one-quarter of the crude oil volume they handled ten years earlier, despite the large increases in Canadian production and consumption during this period. Transportation costs by pipelines are stated to be extremely low when sufficient volume is available. Thirdly, technological improvements in aircraft have enabled them to enter the cargo-carrying field, although, as yet, on only a relatively small scale. In terms of ton-miles, airlines now carry less than one-tenth of one per cent of inter-city freight traffic, for air freight rates are expensive because of high capital costs, load limits, etc.

Competitive Co-existence

The competition from all other modes of transport has accentuated the railways' problems in Canada. The railways have, of course, not ignored this competition; in fact, they have been trying to meet it by modernising their equipment and improving their service. Still, the volume of traffic handled by them has declined from 75 to 51 per cent of all traffic between 1946 and 1959, despite the impressive growth that has taken place in the Canadian economy during that period. Even more significant has been the change in the composition of traffic handled by the railways. As trucks have become increasingly popular for the carrying of finished high quality goods, on which the railways had traditionally levied high tariffs, the railways have been left with an increasing proportion of low-rated commodities. How the railways are meeting the competition is described in the following passage in the *Commercial Bulletin*:

"One way in which the railways are meeting the strong competition they face is the use of 'piggybacks,' the carrying of truck trailers on railroad flat cars. This service was begun in 1952 between Montreal and Toronto and has since been extended coast-to-coast. Although it still represents only about three per cent of total carloadings and between four and five per cent of total railway revenues, piggybacking is being extended and carloadings of this type in 1960 were more than double those in 1958. Piggyback seems to be a natural union of rail and road, and, under this system, truck trailers really become a freight item

(Continued on page 842)

A PASSENGER FROM CALCUTTA WRITES:

... Just a line to thank you and KLM for looking after us so well prior to our departure from Dum Dum, and during the flight to London. The service on the plane was excellent and the hostesses charming ...

This extract is from an unsolicited letter: a photocopy can be obtained from KLM, Calcutta.

For that extra personalised service, there's nothing like flying "the Golden Circle"

to EUROPE

by KLM DC-8 JET

Departure : New Delhi Thursday 22.20 hrs.

Excellent connections from Amsterdam to the U.K.

Arrival : London Friday 13.10 hrs.

Sincerely yours

KLM

NEW PRODUCTS AND PROCESSES

New Fire Extinguisher

A NEW design of portable dry powder fire extinguisher has been developed by a British firm. The use of gas cartridges has been eliminated and the problem of powder clogging in vital points is claimed to have been eradicated. As the use of dry powder as an extinguishing agent became more universal, particularly during the past three years, the company began to examine in detail the problems connected with conventional dry powder extinguishers and decided that a successful method of stored pressure (sometimes referred to as maintained pressure) must be found to eliminate the use of gas cartridges which prove costly and involve transport and other difficulties. With the introduction of a prototype model containing its own pressure supply came an immediate problem of equipping it with an efficient pressure gauge—a vital component in a stored pressure type of extinguisher. The fragility of the normal type of pressure gauge made it unsuitable, so the company's technicians undertook to produce a more satisfactory alternative means of registering the pressure in the extinguisher. The result was a simple but effective and unbreakable pressure indicating device. The problem of powder clogging was carefully examined and by designing a special valve seating which cannot be clogged and by situating the discharge control valve at the head of the extinguisher body instead of the end of the discharge hose, the danger of clogging in the hose was eliminated. The next step in producing major improvements was research into nozzle design and powder discharge characteristics which resulted in a new type of discharge nozzle which greatly reduces the risk of flashback. Finally, the company examined their powder and experimented until they produced a new formula which not only has a better extinguishing effect, but also is non-toxic, non-anæsthetic, non-conductive to electricity and has maximum storage life.

Portable Water Purifier

To meet the growing need in hospitals, manufacturing industries, and general scientific research for purer water than can be obtained by multiple distillation, a British firm, Elga Products Ltd., Buckinghamshire, has introduced a range of low-priced, portable water-purifying units known as Elgastats. All the units will purify tap water without prior treatment and, dependent on size, will produce ultra-pure water at flows ranging from 4 to 50 gallons an hour. Independent of inlet water hardness, ultra-pure water of consistent quality can be drawn off until the capacity of the purifiers is exhausted. This latter stage is shown by simple colour change or by a meter built into the apparatus. The basic unit, introduced commercially for the first time, is a simple cartridge containing a mixed bed of ion-exchange resins. These cartridges can either be recharged with fresh resins or replaced by a new cartridge, the exhausted material being sent back to the factory for regeneration. The Company has set up a world-wide postal service. Although the standard cartridges considerably reduce the bacteria content of tap water, for absolute sterility it is necessary to irradiate purified water with ultra-violet light. This refinement can be built into the largest unit, a small, movable cabinet which gives an output of up to 50 gallons an hour, and can be used to provide ultra-pure water as an extra laboratory service.

Instruction Machine for Printers

Printing schools need no longer be restricted to teaching the use of the rotary press by blackboard alone. Timsons Ltd., a British firm, has designed and built a machine which incorporates equipment to enable schools to put a full, practical rotary course into their curriculum. There has been an increasing tendency for letterpress printing to move into the rotary field and printing schools are well aware of this trend, many have also been conscious of their inability to give practical demonstrations of printing from the reel. The new machine is a small letterpress reel-feed rotary which will print from curved metal stereos, rubber or plastic flexible plates. The floor space required is only 10 ft. by 5 ft. and it is powered by a 2½ h.p. motor. The total weight is 3 tons and there is little or no vibration when running. It is designed to be run at 500 feet a minute and is planned so that all units are easily accessible. The work of a teacher or student can be seen by a class gathered round the machine. The unwind unit takes a maximum reel width of 12 ins. and a single reel stand will take a standard reel of 30 ins. diameter with an internal core of 2½ ins. to 3¼ ins.

Transistor Tape-recorder

Austrian engineers have brought on the market a new tape-recorder fully transistorised and operating on the lighting circuit. The entirely new design has many advantages: considerably higher longevity of transistors as against electronic tubes, resistances against shocks and rough handling, small and compact design of the sets. Moreover, it is no longer necessary to wait until the recorder has warmed up. By simply pushing a key the recorder is made ready for operation, which makes it possible to use it at any desired moment. Operation is very simple and easy, because there are only 4 elements that have to be taken into consideration: a push key for starting, a knurl for volume control, a track-shifter and a universal key for controlling the playback, quickly coiling and recoiling the tape and stopping the reels. With a reel diameter of 15 cm. and a tape speed of 9.5 cm./sec. the recorder can supply a 6-hour programme. The track-shifting switch makes it moreover possible to shift to a "second programme."

Speed Control for Motorists

A new, trouble-free concept of speed control which gives the motorist more positive throttle response and eliminates complicated accelerator-carburettor linkage problems for the car manufacturer, has been developed by Dunlop. The new development, which the firm says is already arousing great interest in British and American firms, is a pneumatic throttle control which uses air to transmit the control movements from the driver's foot to the engine. The only connection between the accelerator pedal and the engine is a ¼-inch diameter flexible plastic tube which eradicates the manufacturers' difficulty of fitting mechanical linkage into the engine compartments of modern low profile cars. As the throttle control is free from friction, it assures motorists more positive control throughout the whole range of throttle openings. Depression of the pedal forces air through the tubing into a rolling diaphragm actuator which is connected to the carburettor.

Dutch Draughting Equipment

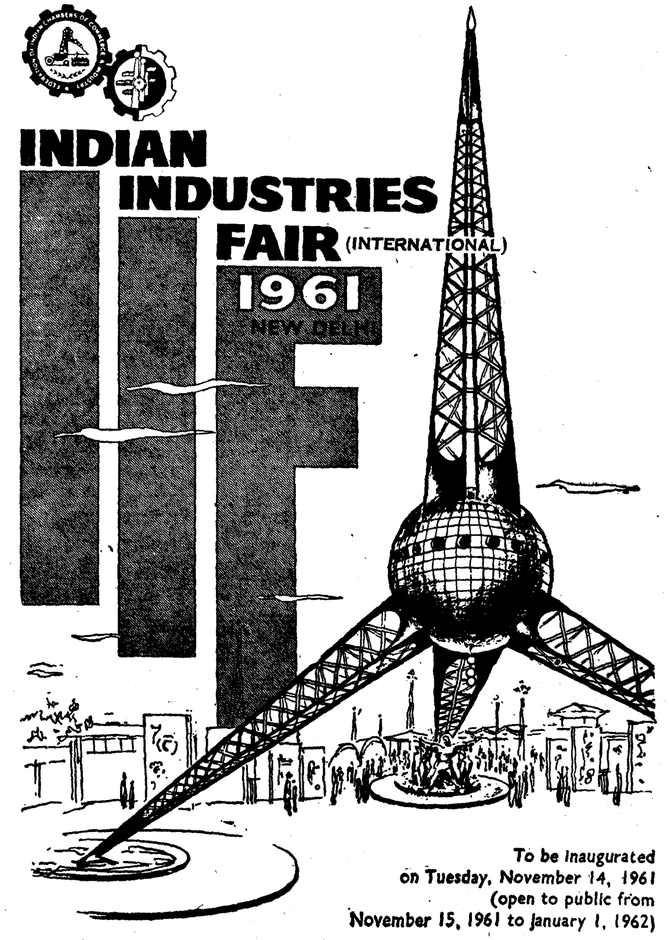
A Dutch precision engineering firm has for some time been producing very accurately finished draughting equipment of modern design and colour, which has now been put in the export range. This draughting unit has a good-sized draughting head, well shaped for the hand, with clearly marked divisions on the scale. The angle of the head is selected in 15° increments, while intermediate angles are easily adjusted and fixed. The ruler fixing device is robust and of conical fit. The draughting head may be lifted off the board. The fixed backing plate moves smoothly across the board without damaging the drawing. Each draughting unit is provided with a counterweight ensuring proper balance in any position of the board; pivoting points all operate on precision ball-bearings. They are supplied for board sizes of 70 x 100 cm., 80 x 120 cm., 92 x 127 cm. and 100 x 150 cm., complete with measuring rulers with scale divisions. The firm also manufactures the corresponding draughting tables and lamps.

"Baby" Gas Turbine

Three universities—one at Ghent, Belgium, the others in Colombo and Hong Kong—have ordered "baby" gas turbine instruction sets from Britain. The unit is a 50 h.p. Mars gas turbine made by Perkins Gas Turbines Ltd., of Peterborough, England. The turbine is one of the smallest in production and can be used for a wide variety of applications. Educationalists say that the instruction set fills a gap in practical tuition on gas turbines. For these purposes it drives an hydraulic dynamometer and is fitted with instruments designed to demonstrate basic operating principles and characteristics common to all gas turbines. Among the educational establishments the firm has supplied with similar instruction sets are colleges at Turin, Naples and Pisa.

Radio Waves to Blast Rocks

Blasting rock with radio waves may prove a boon to the mining industry. General Electric (U.S.) scientists report development of such a process that "can make secondary blasting and explosive-breaking as much as 25 times more economical." Known as electrothermal forcing, the company said it can be used "universally in mining operations without danger to workers." One test device cracked, broke, or shattered underground rock depending on the amount of electric power trained on the site.



To be inaugurated on Tuesday, November 14, 1961 (open to public from November 15, 1961 to January 1, 1962)

RELATIONSHIP BETWEEN MINISTERS AND OFFICIALS

ROLE OF PARLIAMENT NOT WELL DEFINED

By Sir Paul Gore-Booth

BRITISH HIGH COMMISSIONER IN INDIA

[What kind of relationship should obtain between a Minister and his Secretary in a parliamentary democracy is always a fascinating subject for discussion. It has not lost its attraction or relevance, although the interest displayed by the public in the question in the wake of the dramatic Chagla inquiry into the L.I.C.-Mundhra deal has waned in recent years. In a way, the lecture recently delivered in the Feroze Gandhi Memorial Lecture Series by Sir Paul Gore-Booth, British High Commissioner in India, revives interest in the question. His views and impressions, unlike those of Mr. C. C. Desai, I.C.S. (Retd.), who wrote on the subject in the 1959 Annual Number of Commerce, seek to convey that the relationship between Ministers and Civil Servants is "fairly clearly definable." But the field of relationship between Civil Servants and Members of Parliament, in his opinion, is less definite. On either relationship, Sir Paul Gore-Booth, drawing on British experience which, in many ways, is applicable to conditions in India, has something solid and mature to say. His lecture, published in extenso here, will be seen as a useful addition to the literature on the subject.—ED.]

I HAVE . . . , as a public servant, had the privilege all the time of working for the Queen in Parliament. Put less technically, this means that the affairs in which I have had any part have always derived from the policy of Government, and, therefore, in the last resort have necessitated the approval of Parliament. It seemed to me, therefore, that the small contribution I could make to this occasion might be to say something, essentially in British terms, but with a few comparisons from abroad, about the relationship between public servants or officials and Parliament.

There are, of course, all sorts of extremes in this relationship. One recalls them with a certain amusement, because either they do not happen very often, or they are not entirely true. One which concerned me very personally was an occasion in which I sat in the official box in the House of Commons and listened in agony to the, unfortunately, not extremely successful efforts of a Minister to explain and defend an agreement which a delegation led by me had just negotiated with a foreign Government. The agonising thing was that the Minister nearly got it all right, but failed to have one or two details on the tip of his tongue. There was no method of briefing him from the box in time.

But these agonies are rare. The day-to-day relationship is less dramatic, but even within this less dramatic daily work, there are still some extremes. There is always, in London, a certain amount of mutual banter between Ministers and officials. The extreme of the Ministerial view is something like this. It is alleged by politicians in moments of frustration that, if officials decide that they do not like a Minister, they employ one of two stratagems. Either they give him no work at all and simply say, "Well, sir, there really is nothing which demands Ministerial attention," or alternatively they send every file in the office to the Minister until he asks them to take the things away.

The Civil Servant's supposed standing grievance is of a different order. It consists in the dry proposition that any policy success is due to the genius of the Minister while any failure is directly traceable to the bungling of his officials. So you see that both sides have material with which to tease the other. But these are only the amusing fringes of a serious and constructive relationship.

In China and U.S.

The relationship is not, of course, the same in all countries. I understand, for instance, that in the People's Republic of China there is something of a reversion, in Communist terms, to the old Chinese tradition of a unified structure of policy and administration, in which all individuals are carefully allotted precise grades, and there is no worthwhile distinction between what, in most democratic countries, would be called the legislature and the executive.

In the U.S. you have an interesting compromise. Since the members of the Cabinet (who, by the way, are not called Ministers) cannot, under the Constitution, be members of the legislature, the American system produces at top levels a brand of people who are neither exactly politicians, nor exactly Civil Servants. They normally belong to the party in power (though occasionally non-party people are used; a striking current example is that of Mr. Douglas Dillon, who has been Under-Secretary of State in the State Department under a Republican Administration, and is now Secretary of the Treasury in a Democratic Administration).

In British eyes, and indeed in Indian eyes, this situation contrasts strangely with the strict distinction we draw between Civil Servants and elected politicians occupying public office. It is, however, fair to say that the advantages are not all on one side. The American system permits the Administration to use people of high standing in the community who are not accustomed to, or normally occupied with, party political matters, to contribute directly to the work of governing. They bring freshness into the bureaucracy and expertness into politics. We know, of course, the objections—the risk of discontinuity not only in policy, but also in administration, the risk, much less than it used to be, of merit losing out to the spoils system and the danger that people may be chosen who will prove in their contacts with individual Congressmen and Congressional Committees, not to possess even the minimum of political sensitiveness or sagacity. But I am only concerned to note that there are more ways than one of conducting relationships between the executive and the legislature.

British System

In our system, however, the distinction between politicians and Civil Servants is clearly defined and observed. I saw in a newspaper only the other day the reproduction of a recent British Foreign Office circular reminding Foreign Office officials of the strict limitations on the degree to which they should open their mouths in public. Our political method has developed in such a way that the continuity of administration and the ability of Civil Servants to be loyal to Governments of different party colour has become a fundamental in theory and practice. It was put severely to the test when the first Labour Government with an absolute majority came into power in 1945. It is not, I think, out of order to say now that many members of the Labour Party profoundly mistrusted the Civil Servants who had served Conservatives, Liberals, Coalition and minority Labour Governments for so long, and who, some people felt, would be unable to adapt themselves to the views and methods of work of the Labour leadership and party. I remember one Labour member who emphasised this by refusing to take a dinner jacket to an international conference in order to show that his outlook at least would remain independent.

One is glad to say that this story developed happily. The system was found to work. The officials of the different departments proved both able and willing to work as loyally for the Labour Government as they had done for the previous Coalition Government. I can think of a few, very few, who resigned in the Home Civil Service on conscientious grounds. They were the exception for whom, of course, one has a great respect. One has this respect, because there is, in fact, no half-way house between complete loyalty and resignation. The essence of a Civil Service is that one cannot half work for the Government. One can have mental reservations on individual points. One has the right, and indeed the duty, to make one's objections to and criticisms of policy known and felt until such time as a decision has been taken. But from that moment on, as in the Armed Forces, obedience must be absolute.

NEW LICENSING ARRANGEMENTS. Vantona Textiles Ltd., 3, Woodstock St., London, W.1, are actual steady consumers of all types and widths of Indian grey cloth. We are not merchants and invite offers and correspondence from Mills for regular supplies. Avoid uncertainty by trading direct.

There is the more subtle counterpart to this loyalty, which is the loyalty of Ministers to their Civil Servants. It is more subtle, because it is not actively called upon all the time. But demands on it do arise. Discipline must be maintained within a Ministry, but a divided house cannot efficiently serve the country. People often ask why the late Ernest Bevin evoked a quite extraordinary devotion and affection among those who worked for him. He had many qualities which inspired admiration, but the quality which inspired affection was his readiness at a difficult time publicly to defend those who worked for him from attack and innuendo from outside.

Personal Relationship

The personal relationship between a Minister and his senior advisers is a fascinating one. It is, or can be, one of close personal friendship. But this personal friendship, which can become uninhibited, for instance, after retirement, is always tempered in active life by two reservations. The Minister, having almost certainly been a Minister far less time than his senior Civil Servants have been Civil Servants, is bound to have a certain slightly impatient respect for the experience and caution of his advisers. The advisers, while realising that they may know more about the subject than the Minister, will, if they are wise, always remember that the Minister represents the final authority of democracy, namely Parliament. The Civil Servants may be objectively wise and well-informed; but the Minister is the instrument of finally getting the thing done or prevented from being done, because he is part of that final resort of democracy, the voice of the people.*

The personal relationship is well described in Lord Morrison's excellent book, *Government and Parliament*, as follows:

"It is my general experience that if the Minister in charge knows what he wants and is intelligent in going about it, he can command the understanding co-operation and support of his Civil Servants. The kind of Minister who is most tiring to the officers of a Department is the Minister who does not know his own mind and cannot make it up. If the policy of a Department is hazy, vacillating, and ineffective, it is, after all, the responsibility of the Minister; it is quite as likely to be his fault as that of his Civil Servants."

It is time now to look a little more deeply beneath the surface of the personal relationship I have described. The Minister, as I have already suggested, must be the judge whether a particular policy or piece of legislation is going to be acceptable to Parliament, and therefore whether it is practical politics to undertake it. The Civil Servant's job is to know the history of the question, the pros and cons in the national interest of taking a certain line, and the effect which it is likely to have on the policy or economy of the country, abstracted from purely emotional and party political considerations. However, the two points of view clearly cannot be wholly separated. If the Minister has a series of policies which are most attractive, but impossible to administer, obviously his department will end in a hopeless muddle. (I knew of a Minister who was in every way an ideal chief, except that he could not distinguish the important from the insignificant, and sometimes confused and delayed important work by insisting on urgent replies to trivial questions.) Equally, if the Civil Servant insists upon producing ideas which are admirable in theory and which Parliament or public opinion would not look at for five minutes, he is not doing his job; he is simply enacting a parody of it. Therefore, the Minister must have some sense of administration, and the Civil Servant some sense of politics, without either of them trying to usurp the function of the other.

Famous Case

An interesting aspect of the relationship between officials and Ministers was brought out in a famous case which occurred a few years ago in the United Kingdom, known as the "Crichel Down" case. Very briefly, the Civil Servants entrusted with the policy of developing a certain estate for agricultural research purposes were challenged by the owner of the estate who wanted to get his land back. The eminent lawyer who inquired into the case found, to put it in an oversimplified manner, that the execution of the policy had been continued beyond the point which would have been the Minister's intention had he known what was going on. The moral of this is that Civil Servants must have the instinct for policy which will warn them against pursuing a policy which, although it has not been reversed, is no longer applicable. There comes a time when one needs to ask the Minister if the policy will still do, or whether there ought to be a change. In this particular case the Minister might well have wished for a change, but had not had the chance to suggest it because the file had not been re-submitted to him and the point had not occurred to him independently. Because the department under his control was held to have erred in this matter, the Minister, a very much respected political leader, felt it his duty to resign.

In this matter of clarity between Ministers and officials, Lord Morrison in the same book, in talking about Ministerial decisions, writes: "The final Ministerial minute should be clear and decisive unless the Minister has decided to postpone or seek further information." In other words, clarity between the two sides is all-important. I believe Mr. Feroze Gandhi held strong views on this point.

Officials and M.P.s

From the relationship between Civil Servants and Ministers, which is fairly clearly definable, we come to the less definite field of the relationship between Civil Servants and private members. Here we must surely be guided almost entirely by common sense. On the one hand there is clear advantage in personal contact. It is important that politicians should realise that Civil Servants are not all troglodytes or cave-dwellers, and that Civil Servants should understand that politicians are not all charlatans or gas-bags. Personal acquaintance in this sphere in almost all cases heightens mutual respect—respect for the objectivity and knowledge of the good Civil Servant, and respect for the quickness of apprehension and versatility of the good politician.

But clearly there is also a need for caution. The right person to explain policy to politicians is the politician on the particular job—in other words, the Minister, his Deputy Minister, or Parliamentary Under-Secretary. Therefore there is a moment beyond which the private member should refrain from asking questions of the Civil Servant and the Civil Servant, if asked, will have to refrain from answering and refer the questioner to the Minister.

My own view is that in Britain we have interpreted this aloofness in the past a little too strictly. There is great advantage in an interested member, be he Government or Opposition, having the opportunity to talk directly to the expert Civil Servant on the elements of a particular problem in which he is seriously interested. But it remains important to know where to stop, and it is also true that one blunder in this sphere can lead to more mischief than all the good done by the many occasions on which nothing goes wrong. The reason is that, if you are to adopt a Civil Service system at all, it must be based on continuity, on the ability of your Civil Servant to serve Governments of different complexions within the same democratic framework. If the Civil Servant is tempted to venture opinions which involve party political disagreement, then he can only too easily lose his utility.

It is not, of course, necessary to go into the cruder forms of interference with Civil Servants which were a feature of British politics in the late eighteenth and early nineteenth centuries—if, indeed, there could be said at that time to have been a Civil Service at all. Any dependence of the administrative structure on personal favours from, and relationships with, outside is the beginning of the system running down in efficiency and honesty. But all this is too obvious for me to waste your time on it.

Need for Good Fellowship

If I can now gather the threads together, it would be something like this. A proper relationship, official and personal, between the Civil Service and politicians is a vital element in the smooth working of democracy. It needs good sense as well as good fellowship on the part of all concerned. In so far as we are speaking of the relationship between Ministers and officials, it exists, so to speak, compulsorily, and therefore the rules of conduct are now fairly clear and well known, though both sides need constantly to refresh their memories about what these rules are. Between private members and officials the rules are less clear, if only because such relations are optional rather than compulsory and so much depends on individual backgrounds and personal as opposed to official contact. But practice makes as perfect as you can make anything, and what might be called a "comfortable" relationship between the two groups is a sign of efficiency and maturity.

There is a story which is probably now forgotten, which deals with the time in the 1920's when the first Labour Government took office in the United Kingdom. Up to that time, the Minister in a particular Department had been accustomed to summon his Private Secretary by ringing a bell at a respectable hour, whereupon the Private Secretary came in and stood respectfully to attention until the Minister looked up from his work and addressed him formally as "Mr. So and So." The story goes that when the first Labour Government came in, the Minister, used to factory hours, arrived long before his office staff, who sat in some trepidation next door wondering when they would be summoned and how. Eventually the door between the two offices was pushed slightly open, a head appeared round it, and a good factory voice said: "'Ere!"

It does not in the least matter whether the relationship is on the basis of "Mr. So and So" or "'Ere!," as long as there is an atmosphere of co-operation, a certain renunciation of egotism, and a feeling by each side that the other, whatever its difficulties, is doing its best to ensure that democracy will work. If this feeling does exist, and mutual respect is enhanced by a reciprocal sense of humour, the relationship can be a very happy one. Perhaps I am saying that, despite the haste and strain of modern life, a degree of happiness in Government is necessary to its health and welfare and that of the country. But that could be the subject of another lecture.

*I am aware that under constitutions which provide for appeal to a Supreme Court in constitutional matters, this is not absolutely accurate; but it is accurately descriptive.

30 OCT 1961 Public Revenue Tax Act

THIS IS ONLY AN ANNOUNCEMENT—NOT A PROSPECTUS

Consent of the Government of India has been obtained to this issue by an order of which a complete copy is open to public inspection at the registered office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements, made or opinions expressed with regard to them.

A copy of this Prospectus having attached thereto the documents specified in Section 60 of the Companies Act, 1956, has been delivered to the Registrar of Companies, Delhi, for registration.

A licence under the Industries (Development and Regulation) Act, 1951, has been obtained from the Government of India for the establishment of this new industrial undertaking at Naini, District Allahabad, of which a copy is open to public inspection at the registered office of the Company. It must be distinctly understood that in granting this licence the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Applications have been made to the Delhi, Bombay and Calcutta Stock Exchanges for permission to deal in and for an official quotation of the shares of the Company.

The subscription list will open at the commencement of banking hours on 30th October, 1961 and will close at the close of banking hours on 5th November, 1961, or earlier at the discretion of the Directors, but not before the close of banking hours on 1st November, 1961.

THE TRIVENI ENGINEERING WORKS LTD.

(INCORPORATED UNDER THE COMPANIES ACT, 1956, ON 7TH JANUARY, 1961)

SHARE CAPITAL

AUTHORISED:

Rs. 1,00,00,000 divided into 8,00,000 Equity Shares and 2,00,000 9.3% Cumulative Redeemable Preference Shares of Rs. 10 each.

ISSUED:

Rs. 60,00,000 divided into 4,25,000 Equity Shares and 1,75,000—9.3% Cumulative Redeemable Preference Shares of Rs. 10 each.

The issued capital is payable as follows :—

(i) Along with application at the rate of Rs. 2 per share—whether Equity or Preference.

(ii) The balance Rs. 8 per share—whether Equity or Preference, on allotment.

PREFERENTIAL ALLOTMENTS AND RESERVATIONS

Out of the above issue of Rs. 42,50,000 worth Equity Shares and Rs. 17,50,000 worth 9.3% Cumulative Redeemable Preference Shares of Rs. 10 each at par amounting to Rs. 60,00,000 :—

1,08,375 Equity Shares of Rs. 10 each at par are reserved for issue to the Indian Promoters, the Directors, the companies with which they are associated, and the employees of the Company ... ... Rs. 10,83,750

2,12,500 Equity Shares and 87,500—9.3% Cumulative Redeemable Preference Shares of Rs. 10 each have been issued and subscribed for cash at par by the collaborator concern to be utilized for import of plant and machinery required for the Project ... ... Rs. 30,00,000

The balance 1,04,125 Equity Shares and 87,500—9.3% Cumulative Redeemable Preference Shares of Rs. 10 each will be issued to the public at par.

RIGHTS OF PREFERENCE SHARES

The Preference Shareholders will be entitled to a fixed dividend of 9.3% per annum, payable in priority to the Equity Shares, free of Company's income-tax but subject to deduction of tax at source at the prescribed rates. In the event of winding up Preference Shareholders will be entitled, in priority to Equity Shareholders, to repayment of the capital paid-up at par plus all accrued dividends—whether earned, declared or not declared and also declared but not paid.

The Preference Shares are redeemable at par on expiry of seven years at the option of the Company on giving three months' notice but shall definitely be redeemed on or before expiry of ten years from the date of issue.

The voting rights of the Preference Shares will be as per Section 87 of the Companies Act.

VOTING RIGHTS

On a show of hands every member present in person has one vote and every person present either as a general proxy, as defined in the Articles of Association, or as a duly authorised representative of a body corporate has one vote. On a poll the voting rights of a member are in proportion to his share of the paid-up equity capital of the Company. A member holding Preference Shares is entitled to vote in respect of such shares only when the dividend due on such shares or any part thereof is two years in arrear or on a resolution which directly affects the rights attached to the Preference Shares.

PRESENT ISSUE

The balance capital will be issued at par to the public as follows :—

1,04,125 Equity Shares of Rs. 10 each ;

87,500 9.3% Cumulative Redeemable Preference Shares of Rs. 10 each.

The entire issue of 87,500 Preference Shares has been underwritten by (1) Life Insurance Corporation of India, 60,000 shares (subject to firm allotment of 40,000 shares to them) and (2) Messrs. Harbans Singh Mehta & Co., New Delhi, 27,500 shares.

PROSPECTUS, APPLICATION FORM AND ALLOTMENT OF SHARES

Copies of the Prospectus, on the basis of which alone applications will be considered, and Application Forms may be obtained from the Registered Office of the Company or offices of the Company's Bankers and their branches mentioned in the Application Form, or Brokers and Underwriters.

Applications have to be made for a minimum of 50 shares, or multiple thereof in the case of Equity Shares and 100 shares or multiple thereof in the case of Preference Shares, and in all cases, these must be accompanied by remittance of the amount payable on application.

Applications must be completed in accordance with the directions contained therein and delivered before the closing of the subscription list to the bankers or brokers, but not to the registered office of the Company.

If no allotment will be made, the application money will be returned in full, and where the number of shares allotted is less than the number applied for then the balance amount, if any, left after adjustment of allotment money on the shares allotted will be returned to the applicants by cheques either through the post or otherwise within two months from the date of allotment.

The Share Certificates will be ready for issue by the Company within four months from the date of allotment of shares.

LOAN CAPITAL

The Company has no Loan Capital at present but intends to raise at an early date Rs. 22½ lacs by means of a debenture loan.

FINANCIAL REQUIREMENTS

The financial requirements of the Company are comprised of :—	Rs.
Cost of land and factory and office buildings	12,00,000
Cost of imported plant and machinery	39,75,000
Cost of indigenous machinery and Drawing Office equipment, etc.	13,00,000
Freight, insurance, custom duty, transport charges, erection and technical service, etc.	8,60,000
Motor cars, furniture, Administrative contingent and miscellaneous expenses	7,50,000
Preliminary Expenses	1,65,000
Total ...	82,50,000

FINANCIAL RESOURCES	Rs.
By capital subscription from Equity Shares	42,50,000
By capital subscription from Preference Shares	17,50,000
By Debentures Loan	22,50,000
Total ...	82,50,000

DIRECTORS

SHRI BALMOKAND SHAH SAWHNEY, 20, Prithviraj Road, New Delhi. Businessman and Industrialist.

SHRI C. W. TYRRELL, F.C.A., Bucklersbury House, 83, Cannon Street, London, E.C. 4. Director, Booker Brothers McConnell & Co., Ltd. Chairman, Bookers Engineering Holdings Ltd. Director, Bookers Sugar Machinery Group Ltd.

SHRI MEHR CHAND MAHAJAN, 47, Friends Colony, New Delhi. Retired Chief Justice of Supreme Court of India.

SHRI C. W. MURRAY, D.F.C., D.L., M.I. Mech.E., Masson Works, Litchurch Lane, Derby, England. Director, Bookers Engineering Holdings Ltd. Chairman, Bookers Sugar Machinery Group Ltd., George Fletcher & Co., Ltd., Duncan Stewart & Co., Ltd.

5. SHRI KANHAYA LAL SAWHNEY, Rookwood, Simla. Businessman and Industrialist.

6. SHRI PURAN CHAND SAWHNEY, 1, South End Road, New Delhi. Businessman and Industrialist.

7. SHRI T. P. HOUGHTON, A.C.A., Bucklersbury House, 83, Cannon Street, London, E.C. 4. Director, Bookers Engineering Holdings Ltd. Director, Bookers Sugar Machinery Group Ltd.

8. SHRI DEVI CHAND SAWHNEY, 19, Prithviraj Road, New Delhi. Businessman and Industrialist.

CONSENTS

The consents in writing of the Directors, Auditors, Managing Brokers, Brokers, Bankers and Solicitors to the Company to act in their respective capacities have been obtained and filed with the Registrar of Companies, New Delhi, and none of them has withdrawn the consent so given.

MINIMUM SUBSCRIPTION

The Directors will not proceed to allotment until the whole of the present issue has been subscribed.

HISTORY AND OBJECTS

The Company was incorporated on 7th January 1961, for the purposes stated in its Memorandum of Association. The immediate object in particular is to carry on the business of Engineering and to that end to erect and establish at Naini, District Allahabad, U.P., a plant for the purposes of manufacture and production of sugar machinery, steam turbines, and other heavy industrial plant and machinery.

Amongst the main objects of the Company, as contained in its Memorandum of Association, are:

1. To carry on the business of general manufacturing engineers, manufacturers and repairers of heavy machinery of all kinds and component parts thereof as well as complete factories and plants and in particular for the following industries:— Sugar, paper, ice-making, flour, steel rolling, rubber processing, textiles, power plants.

2. To carry on the business of iron-founders, millwrights, boiler makers, electricians, machinists, coppersmiths, makers of motors, accumulators, generators, builders of all kinds of property, shippers, shipowners, brokers and general merchants in all the branches thereof, and

3. To carry on the business or businesses of manufacture of agricultural and other implements of all kinds and other machinery, bridge builders, brass founders, metal works, iron and steel converters, smiths, wood workers, builders, metallurgists, etc. etc. and water works engineers, tool makers, water supply engineers, gas makers, farmers, printers, carriers, and to buy, sell, manufacture, repair, convert, alter, let on hire and deal in machinery, implements, rolling stock and hardware of all kinds and to carry on any other business (manufacturing or otherwise) which may seem to the Company capable of being conveniently carried on in connection with the above or otherwise calculated directly or indirectly to enhance the value of the Company's property and rights for the time being.

SCOPE AND PROSPECTS

As the Second Five Year Plan could be called a Steel Plan, so might the Third Five Year Plan, which operates from early 1961, well be called India's Machinery Plan, since under it the production of machinery in the country is designed to rise nearly three-fold.

The Sugar Industry is the second largest and one of the first to be established in the country. With a rapidly rising population and with the improvement of living standards, this industry has expanded from a production of 10 lac tons in 1953-54 to 29.8 lac tons for the season 1960-61 and this production is scheduled to rise to 35 lac tons at the end of the Third Five Year Plan.

To take full advantage of the experience and knowledge in the Sugar Industry of the Indian and United Kingdom promoters, the production programme of the Triveni Engineering Works Ltd. will be based on the manufacture of sugar machinery. However, to avoid possible seasonal declines in demand and to be able to select the most profitable business available, the Works are being designed for general manufacture of heavy engineering lines, including industrial process turbines for which the Company is the first to be licensed in the Private Sector.

SITE FOR THE WORKS

The site for the Works has been chosen at Naini, on the outskirts of Allahabad, near the physical centre of India. Its location is in the middle of Uttar Pradesh-Bihar Sugar belt and six railway systems meet at or converge on Allahabad. Moreover, it is well placed for the supply of raw materials from India's Steel Industry and the Government Foundry Forge Development at Ranchi.

Approximately 26 Acres of almost level land for the Company's Works has been acquired by the Uttar Pradesh Government and possession given to the Company. This is near the Naini Station, adjacent to the proposed Rihand Power Sub-station and bordered by two roads, one of which is the Grand Trunk Road.

POWER, MACHINERY AND EQUIPMENT

Government of U.P. have promised the utmost help for the early supply of Government "Hydro Electric Power." In the meantime arrangements have been made for generation by the Company of electricity by Diesel Engines at site.

Major portion of the plant and machinery—both imported and indigenous—has reached the site and is under installation. It is hoped that the production will commence early in 1962.

TECHNICAL COLLABORATION

As many as one-quarter of the sugar plants in operation in India today have been manufactured either by George Fletcher & Co., Ltd., of Derby, England, and/or by Duncan Stewart & Co., Ltd., of Glasgow, Scotland, and there is hardly a sugar factory in India which does not contain some items of equipment supplied by one or other of these companies. Both companies are subsidiaries of Booker Brothers McConnell & Co., Ltd., which Company has taken up for cash 50% of the Equity and Preference Shares to be issued by the Triveni Engineering Works Ltd.

COLLABORATION FEE

Under an agreement Bookers Sugar Machinery Group Ltd., George Fletcher & Co., Ltd., and Duncan Stewart & Co., Ltd., agreed to act as the Technical Consultants and sell outright in London to the Company at a consideration of £50,000 sterling the technical know-how to be in the exclusive use of the Company in India and they have also agreed to advance to the Company a loan of £50,000 sterling free of interest and repayable by the Company within a period of ten years and tax liability thereon, if any, would be borne by the Company.

For Turbines and Air Compressors, Peter Brotherhood & Co., Ltd., of Peterborough, England, whose products are well-known throughout the world, has entered into an agreement to give full and continuing technical collaboration and have agreed to sell in London for a consideration of £40,000 sterling the technical know-how to be in the exclusive use of the Company in India. They have also similarly agreed to advance to the Company a loan of £40,000 sterling free of interest and repayable by the Company within a period of ten years and tax liability thereon, if any, would be borne by the Company.

IMPORT LICENCES

Import Licences No. 997663/60/HQ/CE/I dated 1-2-61 and 997664/60/HQ/CE/II dated 1-2-61 have been received from Government of India for import of nearly Rs. 30 lacs worth of capital equipment from the U.K. and Italy, against the foreign investment. In addition, Rs. 12 lacs worth of capital equipment will be imported from U.S.A. against a D.L.F. Loan, sanctioned vide Government of India Letter No. 41(43)61-DLF dated 21st February, 1961.

PROFITABILITY

Annual production on one shift working is estimated at about Rs. 1 crore. This is expected to rise to between Rs. 2 and 2.5 crores on three shift working, which, it is hoped to attain in two to three years. The experience of similar engineering concerns in India, catering to specialised markets for industrial plant, shows that the Company's estimated rates of production should return a satisfactory profit.

SPECIAL BENEFITS

The Company will enjoy the special benefits under the "Indian Income-Tax Act" inasmuch as:—

1. Development Rebate equal to 20% of the cost of machinery installed will be allowed.

2. Under Section 15C the profits upto 6% of the employed capital will be exempt from tax for the first five years of production. The shareholders will also enjoy relief on the dividends received by them in accordance with this section of the Income-Tax Act in respect of any dividend paid as is attributable to that part of the profits of the Company, which obtained the foregoing exemption and

3. Under Section 56A of the Income-Tax Act, Super-tax will not be payable on dividends received by the company holding shares in this Company.

BROKERAGE

Brokerage will be paid to the brokers, banks and underwriters at 10 nP per Equity and Preference Share of Rs. 10 each offered to the public in respect of shares allotted on applications bearing their stamps. In addition, brokerage at 7 nP per share will be paid to the Managing Brokers only in respect of 1,04,125 Equity Shares being offered to the public.

UNDERWRITING COMMISSION

Underwriting commission of 2½% will be paid to the Life Insurance Corporation of India and Messrs. Harbans Singh Mehta & Co.—the underwriters, in respect of Cumulative Redeemable Preference Shares of Rs. 8,75,000 underwritten by them.

PRELIMINARY EXPENSES

The Preliminary Expenses and the expenses of the Issue including Underwriting Commission and Brokerage are estimated at Rs. 1,65,000 and are payable by the Company.

INTEREST OF PROMOTERS

The Promoters of the Company are Booker Brothers McConnell & Co. Ltd. and R. B. L. Tirath Ram Shah (India) Ltd. The Promoters are receiving no remuneration for their services as such but the latter company is entitled to be reimbursed for expenses borne by them. Bookers Sugar Machinery Group Ltd., George Fletcher & Co., Ltd., and Duncan Stewart & Co. Ltd., are subsidiaries of Booker Brothers McConnell & Co. Ltd. The Promoters are interested to the extent of the shares allotted to them.

DIRECTORS' INTEREST

All the Directors will be interested in the remuneration payable to them as fee for the meetings attended and travelling expenses, if any, for the purpose.

Shri Balmokand Shah Sawhney, Shri Kanhaya Lal Sawhney, Shri Puran Chand Sawhney and Shri Devi Chand Sawhney are Directors or members of R. B. L. Tirath Ram Shah (India) Ltd., promoters of the Company. Each of them is also a Director or Member of The Ganga Sugar Corporation Ltd., The Upper India Sugar Mills Ltd., The Mahalakshmi Sugar Mills Co. Ltd., and The Ramkola Sugar Mills Co. Ltd., and are interested to the extent of the shares to be allotted to each of these companies and to themselves.

Shri C. W. Tyrrell is a Director and member and Shri C. W. Murray is a member of Booker Brothers McConnell & Co. Ltd., one of the promoters of the Company. Shri C. W. Murray is Chairman and Shri T. P. Houghton a Director of Bookers Sugar Machinery Group Ltd. and Shri Murray is also Chairman of George Fletcher & Co. Ltd. and of Duncan Stewart & Co. Ltd.

BORROWING POWERS

The Directors may from time to time raise or borrow and secure the payment of any sums of money for the purposes of the Company provided that the amount borrowed and outstanding (apart from temporary Bank Loans obtained in the ordinary course of trading) shall not at any time exceed the aggregate of the paid-up capital of the Company and its free reserves, except with the consent of the Company in general meeting.

POWERS OF THE DIRECTORS

No restrictions are imposed by the Articles of Association on the Board's powers of the management and the control of the Company's affairs is vested in the Board and save in so far as provided by the Companies Act, 1956.

AUDITORS' REPORTS

In accordance with Clause 24 of Para II of Schedule II of the Companies Act, 1956, we report that the Triveni Engineering Works Ltd., have not made up accounts for the period from the incorporation of the Company (7th January, 1961) to three months before the issue of the Prospectus.

(CONTD.)

SURVEY OF BURMA OIL INDUSTRY

DEAL WITH BRITISH COMPANIES SUCCESSFULLY WORKING

By A Special Correspondent

BURMA can legitimately claim a longer history for its oil industry than any other country in the world. The story goes that, centuries ago, captives of an ancient Burmese king started working the oil on the barren plateau near the eastern bank of the Irrawaddy river. We are on firmer ground in affirming that, during the eighteenth century, oil was known and used by the Burmese for their lamps. Also, two oil-bearing tracts of the present Yenangyaung field were worked towards the end of this period. It was Dr. Thomas Oldham, the father of the Geological Survey of India, who first observed the association of oil with dome structure at Yenangyaung in 1855. This was six years before E. B. Andrews and T. Sterry Hunt in America worked out the anticlinal theory which has had so profound an influence on the better understanding of commercial oil accumulations.

The foundation of modern oil industry, however, was laid in Burma by The Burmah Oil Company Ltd. seventy-five years ago. The B.O.C. was formed by Mr. Cargill in 1886 by acquiring the interests of the Rangoon Oil Company Ltd., which had just gone into liquidation. The B.O.C. started the first machine drilled well in 1887 between the Twingon and Beme reserves in Yenangyaung, and it also acquired well sites within the reserves by purchase. Between 1888 and 1906, the country's entire production from machine drilled wells was that of The B.O.C. Ltd.

After the War

Finding the refinery at Dunnedaw (Rangoon) too small for its crude oil production, the Company erected a new processing plant at Syriam. The B.O.C. also completed a 275-mile long 10-in. pipeline from Yenangyaung to Syriam in 1908 for transporting the oil which until then had been carried in barges down the river. A 4-in. pipeline from Yenangyat to Singu and an 8-in. pipeline from Singu field to Yenangyaung were also built to convey these crudes to the main pipeline. From time to time, obsolete plants were replaced both in the refinery and the fields by modern equipment and this, coupled with the sound business policy pursued, brought the B.O.C. to a prominent place in the world of oil industry. The Company had a fleet of tankers to transport its products to India.

Before the last war, the refinery's main products consisted of aviation and motor spirits, several grades of kerosenes, diesel and furnace oils, scores of waxes of a range of melting points. The B.O.C.'s 1941 Products Specification Book listed in all 231 products. Between the years 1930 and 1941, it refined annually an average quantity of 205,390,000 imperial gallons, and the cumulative total of crude oil processed between 1902 and 1941 amounted to 6,990 million gallons.

The catastrophic effect of the last war is brought out by the precipitous decline in Burma's oil production during 1942-46. Whereas the country's output in 1941 was 272 million gallons, it declined to 36 million gallons in 1942, 33 million gallons in 1943, rose slightly to 51 million gallons in 1944, was 20 million gallons in 1945 and 2 million gallons in the following year. (1942-46 figures provided by The B.O.C. Ltd., London.)

On the invasion of Burma by the Japanese early in 1942, all the properties, refineries, plants, etc., owned by the operating subsidiaries of the B.O.C. were destroyed or put out of action under official instructions. Operations were resumed in Burma in April 1946 with imported crude oil.

The work of rehabilitation of the oilfields and ancillary facilities was greatly retarded by disturbed post-war political conditions. Late in 1948, the B.O.C. and associated oil companies, which had expended over £8 million on rehabilitation work since the war, decided that the prevailing political climate did not warrant such work on any full scale.

But because of the importance of the oil industry to the Burmese national economy, and to avoid adding to the difficulties of the Government of that country which might result from a heavy discharge of labour, the U.K. Government, as a provisional measure, gave the B.O.C. certain assurances against future losses arising out of expenditure on rehabilitation work. During this period of assurance, the Company's rehabilitation outlay is reckoned to have totalled nearly £2 million. When this assurance was discontinued, the B.O.C. reluctantly terminated the services of some 5,000 workers and retained only a skeletal staff of less than 1,500. When the Burma Government reiterated that a loan involving any sort of outside control on expenditure would be "quite unacceptable," the economic recovery of potentially the richest country in Asia received a setback.

New Company Formed

In 1954 a Burmese company—Burma Oil Company (1954) Ltd.—was formed to take over the producing and refining assets, then valued at around £15 million, of the B.O.C., Indo-Burma Petroleum and British Burmah Petroleum. The Government of Burma acquired a one-third holding payable in cash and secured the right to increase its interest when desired by buying shares from the other shareholders at par value. Marketing was still in the hands of Burmah Oil's Burma Trading Company and Indo-Burma Petroleum Company.

Late in 1960, the Burmese Government brought its holding in Burma Oil (1954) up to 51 per cent, thus obtaining control. The main clauses of the agreement signed on 25th October, 1960 are: (1) The oil companies have agreed to subscribe 49 per cent of the new capital required for the proposed expansion of the Syriam Refinery and the Syriam-Dunnedaw Pipeline Project. (2) The Government has agreed not to exercise for a period of 15 years its right under the 1954 J.O.V. (Joint Oil Venture) Agreement to acquire from the oil companies further shares in the issued capital of B.O.C. (1954) Ltd. (3) The parties declare their intention to conduct the affairs of the Company in such a way that a reasonable return on the shareholders' investment will be earned. (4) The search for oil in Burma is to be intensified. In the years 1961, 1962 and 1963, exploration programmes have been planned at an estimated cost of between 25 and 30 million kyats in each year. (5) The London office of The B.O.C. (B.T.) Ltd. will continue as agents for the Company for certain purposes under a new Agreement for a period of ten years. (6) The terms and conditions of service of the Asian staff at present employed will not be changed. (7) B.O.C. (1954) Ltd. will continue a policy of accelerated Burmanisation. (8) The marketing installations and facilities in Burma of B.O.C. (B.T.) Ltd. and B.P.C. Ltd. will be taken over by the B.O.C. (1954) Ltd. as at 1st January, 1961.

Minority Interest

The purchase of B.O.C. (B.T.) Ltd., the distributing company, with estimated assets of the order of £5 million, should help the Government to increase the return on its new capital in B.O.C. (1954) Ltd. The B.O.C.'s share in Burma Oil (1954) is now 40.5 per cent, and it is effectively responsible for all technical matters.

During 1960, thirty-eight development wells, involving a footage of 118,507 ft., were drilled against 29 totalling 87,703 ft. the year before. Despite the late receipt of prospecting licences, exploratory drilling increased from 34,500 ft. in 1959 to 37,242 ft. last year.

Heavy exploratory drilling rigs employed at Chauk to drill below the known existing sands have disclosed the accumulation of natural gas below a faulted zone. At Yenangyaung, five development wells were drilled of which two were producers.

Plans for an intensive exploratory programme for 1961 have been made to offset the depletion of known reserves at existing oilfields. A second well was spudded in at Payagon in the Delta which confirmed the existence of a gasfield. A new deep test at Tharrawaddy was 6,000 ft. deep at the end of 1960.

In central Burma, the well drilled at Palanyon on the west bank of the Irrawaddy, some six miles south of Minbu, found oil on 10th July 1961. It yielded on initial test 40 barrels a day of 40° A.P.I. oil from a depth of 2,600 ft. It is the first oil discovery made outside the producing fields in Burma since the war.

The B.O.C. (1954) Ltd. produced 108.94 million gallons of crude oil in 1960, an increase of 2.75 million gallons on the previous year. Since consumption is currently running at an annual rate of some 122.5 million gallons, Burma is a small net importer of oil products. Crude oil lifted from Syriam fell from 66.54 million gallons in 1959 to 57.93 million gallons in the following year, due to severe shoaling of the Irrawaddy river, causing periodical groundings.

The throughput of Chauk refinery was 59.61 million gallons in 1960, an increase of 6.48 million gallons on the preceding year. The Syriam refinery processed 67 million gallons last year, or 12 per cent more than in 1959. The capacity of Syriam refinery is being stepped up to 685,000 gallons per day at an estimated cost of £2.5 million. The construction of an underriver pipeline to carry products to the main distribution centre in Rangoon will involve an outlay of around £500,000.

Sales of major products showed an overall increase of 7.2 per cent on those of 1959. This growth was shared by motor spirit, kerosene, fuel oil and aviation turbine fuel.

Burma nationals continue to be trained by The B.O.C. (1954) Ltd. both locally and abroad. At the Chauk Technical Institute, 114 apprentices were given training, while 50 apprentices were attached to the various departments of the Syriam refinery. Of the 29 Burma nationals trained at the expense of the Company, 25 went to the U.K. and four to India.

Other Highlights

Other highlights in the B.O.C.'s history are briefly stated. It proved the saviour of the Anglo-Persian Oil Company, when it was struggling desperately hard to find its feet. As far back as 1914, it started imparting technical training to the Burmese, and, in 1928, it founded the College of Mining and Engineering of the Rangoon University. In sum, through good times and bad, the B.O.C. group of companies have kept their faith with the Burmese people and the different Governments in power, and contributed to the economic well-being of the country.

Since direct operations are only a part of the business of the B.O.C. group, the need for retaining earnings and for capital expenditure is smaller than for companies solely or mainly engaged in direct oil operations. By and large, the B.O.C. is a holding company, deriving a large part of its revenue from its investments in other oil companies, notably British Petroleum and Shell Transport. Following the issue by B.P. of free shares on a one-for-one basis in 1959, the B.O.C. wrote up its direct and indirect holding of B.P. capital from a book value of 10s. to 20s. a unit (as compared with the ruling market price of around 50s.) and issued to its shareholders one new share for every share held.

The B.O.C.'s main interests still remain in Burma, India and Pakistan which were again affected by world-wide competition in the oil industry in 1960. The resulting contraction of profit margins, with the cost of increased exploratory effort, are mainly responsible for a decline of £1.8 million to £6.7 million in trading profits last year (in 1960). This fall, however, was more than offset by larger receipts from dividends on the company's large holdings of B.P. and Shell Transport shares and net profit of the parent company increased moderately to £9¼ million.

Link With India

By the end of 1960, the B.O.C. had contributed £10½ million towards its two-thirds share of £21 million required for Oil India's field development in Upper Assam. The estimated cost of the pipeline is approximately £35 million, of which £14 million represents foreign exchange. The B.O.C. has agreed to provide a loan of some £11 million to meet the bulk of the foreign exchange. It expects to make the necessary loan finance arrangements towards the end of 1961. The £21 million requirement in rupees is to be borrowed in India by Oil India Ltd. Only when a substantial production from the Nahorkatiya and Moran fields is sold can any return be expected from the B.O.C.'s investment in Oil India Ltd.

In the B.O.C's consolidated balance-sheet for 1960, there is a net increase of £5 million to £19.3 million in fixed assets (after depreciation), and on the liabilities side a rise from £0.9 million to £5.1 million in unsecured loans, representing bank advances to the group including B.O.C.'s share in Oil India's rupee borrowing. The parent company's ordinary share dividend (tax-free) was 9¾ per cent in 1960, against 8¾ per cent the year before.

L.I.C.
BONUS
ANNOUNCEMENT
1959 VALUATION
RESULTS

WHOLE LIFE ASSURANCES
Rs. 16.00
per thousand per annum

ENDOWMENT ASSURANCES
Rs. 12.80
per thousand per annum

The Life Insurance Corporation has pleasure in declaring the above rates of bonus as a result of the second Valuation of its liabilities and assets as at 31st December 1959. These bonus rates are applicable to with-profits policies issued by the Corporation and in force as at the date of Valuation.

As regards the bonuses on with-profits policies issued by former insurers, these have been declared proportionately in accordance with the Scheme of Differential Bonuses approved by the Central Government and published in the Gazette of India dated 14th October, 1961.

The bonus rates applicable to all the policies are the same as those declared on the basis of the preceding Valuation as at 31st December 1957.

As at the date of the present Valuation the total sum assured under the policies was Rs. 1,997 crores, including bonuses, and Rs. 105 lakhs per annum under Annuities. Out of the gross profits disclosed by the Valuation, a sum of Rs. 24.47 crores has been utilised for allotting bonuses at the above rates to policy-holders, after providing for income-tax liability amounting to Rs. 4.58 crores and Government's share of Surplus amounting to Rs. 1.28 crores.

As already announced, bonus intimations in respect of both the first and second Valuations will be sent out to the policy-holders as soon as possible.

General Manager.

BANGALORE LABOUR CONFERENCE

MR. NANDA'S SPEECH ANALYSED—MAIN CONCLUSIONS REVIEWED

IN contrast to last year's stormy session, the nineteenth session of the Indian Labour Conference, held at Bangalore early this month, was one of comparative calm. While the Central Government employees' strike, the issues underlying it and the fresh problems thrown up dominated the discussions last year, a sober approach to a labour policy suited to a developing economy characterised this year's deliberations. Mr. G. L. Nanda, Union Minister for Labour, set the tone for the discussion in his opening speech at the Conference. He sought to share with the delegates what he called "a tentative endeavour to comprehend, however dimly, the desirable course of future developments in the relations between the community, industrial management and the working class." This, as he himself modestly put it, might be considered as "very preliminary exercise" in perspective planning in this field. Three factors, he pointed out, had to provide the setting for this preview. First, there should be a clear appreciation of the conditions and trends, the way in which they were evolving and the lessons of past experience. Secondly, it had to be borne in mind that, it was not possible to conceive of a working class and a structure of industrial relations in isolation from the picture of the social and economic organisation envisaged for the country. Thirdly, in view of the various limitations, especially in the matter of resources, the tasks to be carried out and the ground to be covered had to be on the basis of certain priorities, so that conditions for the realisation of the basic aims of social policy were as speedily realised as possible.

Mr. Nanda pointed out that access on the part of every family to a national minimum in respect of the five basic needs of life, namely, food, clothing, shelter, education and health, early attainment of full employment and a very rapid and radical change in the system of distribution of wealth were the accepted national goals. They had an immediate and intimate relevance to the consideration of the problems of industrial relations. All the workers engaged in industry should have a living wage as soon as possible. The first priority should be to make available the need-based minimum standard as envisaged in the recommendation of the fifteenth session of the Indian Labour Conference. This could be made feasible only by a greater rise in the output per worker. But the workers had no exclusive claim to the gains in productivity. Other claims, besides an improvement in the standard of living of the workers, had also to be met. Mr. Nanda listed them as under:

1. Formation of additional capital for enlarging productive activity and the consequent volume of employment.

2. Reduction in the price of the products, so that the community at large is able to share in the benefits of industrial progress.

3. Improvement in the competing capacity of products in the export markets to maintain increased production as well as employment inside the country and to keep up a sound balance of payments position.

It will be pertinent to recall here the main principles that should govern distribution of the gains in productivity mentioned in the third Plan. These are:

"The surpluses that are generated are a social product to which neither the employer, nor the working class can lay an exclusive claim; their distribution has to be according to the worth of the contribution of each, subject to the requirements of further development and the interests of all sections of society, in particular, the satisfaction of the basic needs of all its members."

Responsibility of Trade Unions

Mr. Nanda said that workers had not been made aware of the relentless economic principle that, for the working class as a whole, no appreciable rise in real wages, along with a satisfactory growth in employment opportunities, was possible without a corresponding increase in productivity per worker. This, he pointed out, should become the principal concern of the trade union organisation in the country even more than that of employers. The workers had, at the same time, to realise that, while they must have suitable conditions and facilities provided for them in order to evoke the best in them, their remuneration, whether as wages or bonus, cannot be very far out of alignment with prevailing standards in the country, even if the profitability of a particular establishment or industry might make that possible. Labour, he emphasised, had to function as an organic part of the entire community.

This approach, Mr. Nanda pointed out, had, however, certain implications to the employers too. They had to take it to heart that they had to discharge their obligations as entrepreneurs in a poor country which had accepted socialism as its way of life, because of the human aspect, that is, the needs and privations of the huge masses of the country and also because this was the only way to make a free society exist and make democracy become successful in an underdeveloped country. This would mean, according to him, a wholly new outlook and an acceptance of a new kind of economic and social discipline and rectitude.

Balanced Approach

The foregoing is undoubtedly a balanced approach. The only snag here is that its application in practice, strictly in accordance with the spirit of its enunciation, will lead to certain practical difficulties, when foreign private capital is associated with the projects for economic development. Can foreign capital, technical know-how and entrepreneurs be attracted to this country in sufficient amount and numbers, if the conditions to be offered under Mr. Nanda's prescription are not competitive with those that could be had in the developed countries? The flow of foreign capital will undoubtedly slow down and with that the economic progress of the country, too, if conditions are not attractive. In the result, employment opportunities will not expand as fast as it could and should. If, in order to overcome this difficulty, more favourable terms of remuneration, etc. were allowed in concerns with foreign capital, would not such concession amount to discrimination against national entrepreneurs and risk capital? How would Mr. Nanda solve this problem?

To return to the Labour Minister's speech. He did well to spell out the obligations and responsibilities of the public sector in respect of labour. He said that, in accordance with the type of economic organisation outlined by him, no very sharp distinction between the public and private sectors need remain. When dealing with the public sector itself, it was necessary to go beneath the label, because there was no special virtue in the name itself. The public sector was an essential and growing element in the industrial structure of the country. It was in a way new to the job and had, Mr. Nanda frankly admitted, its flaws but he hastened to add that it was increasingly becoming aware of its special role and obligations. The public sector was part of the tripartite set-up and it might be trusted to play its role well. It is thus clear from Mr. Nanda's observations that no handicaps would be placed on the private sector either wittingly or unwittingly by prescribing less onerous conditions of employment for the public sector.

It is a truism to say that the best way to safeguard the interests of labour is to increase production and profits. Mr. Nanda did realise this point and stressed it effectively. The primary need, Mr. Nanda underlined, was to lift the performance of the industry to the highest levels possible. This should, therefore, become the foremost concern of the employers, workers and the State. Viewed from this angle, the Code of Discipline in industry assumed added significance. Mr. Nanda had no doubt that the Code had established its worth in one direction at least. The number of working days lost on account of industrial disputes, which showed an upward trend earlier, had been steadily and continually going down from year to year since the adoption of the Code in June 1958. Thus, from 4.7 million in the first half of 1958, the number of working days lost on account of industrial disputes declined to 3.1 million in the first half of 1959, 2.9 million in 1960 and still further to 1.6 million in the first half of 1961. Similarly, the number of working days lost declined from 3.1 million in the second half of 1958 to 2.5 million in the second half of 1959, and 1.9 in the second half of 1960. It was obvious from this, Mr. Nanda claimed, that the Code had made a major contribution towards this gratifying result. While this is true, the improvement in industrial relations cannot be attributed solely to the Code of Discipline. The workers' emoluments as a whole have gone up substantially, thanks to wage boards, etc., and the employers' ability to pass on the incidence of higher wages to consumers, an ability strengthened by absence of competitive conditions.

Proceeding, the Union Labour Minister admitted that there were certain deficiencies in the implementation of the Code. Determined efforts, he averred, were being made by the organisations of employers and workers and the Government to make the Code far more effective than it had been. The Minister felt that, for this purpose, a more stringent application of internal sanctions by the organisations themselves was called for. Also, there might have to be recourse to publicity in the case of repeated or serious breaches of the Code. He conceded that the Code was not a legal instrument. It had, however, the much greater binding force of a voluntary agreement and moral commitment.

Code of Efficiency and Welfare

The agenda for the conference included several subjects, the most important of them being consideration of the proposals relating to the adoption of the Code of Efficiency and Welfare. Mr. Nanda was anxious that a Code of Efficiency and Welfare should be accepted at the conference at least in principle. Workers' organisations were divided in their stand. The I.N.T.U.C. (Congress) welcomed the Code, while the H.M.S (Praja Socialists) and the U.T.U.C. (Socialists) had mental reservations. The A.I.T.U.C. (Communists) was, on the other hand, opposed to it. Its chief spokesman, Mr. S. A. Dange, vigorously attacked the concept and argued that workers had not secured their due share of the gains in productivity in recent years and were not prepared to walk into a trap. Contrary to earlier reports, the employers are said to have taken a non-committal stand. Mr. Naval Tata, President of the Employers' Federation, pleaded on behalf of employers, for more time to study the implications of the proposal. He said that, in view of their experience of the working of the Code of Discipline, employers did not wish to be rushed into a final decision at the conference on the Code. Mr. Nanda was at pains to drive home to both employers and workers that the idea of the Code was sound. Both Dr. P. S. Lokanathan, Chairman of the National Productivity Council, and Dr. V. K. R. Menon, Director of the India Branch of the I.L.O. and Chairman of the Committee which drafted the Code, supported the Minister. Employers' representatives, however, agreed that they would meet in a tripartite committee to discuss the draft Code and the report of the Menon Committee. This Committee would be set up shortly.

Rights of Recognised Unions

Another important subject on the agenda was the rights of recognised trade union under the Code of Discipline *vis-a-vis* an unrecognised union. The discussions revealed considerable divergence of opinion between the representatives of the I.N.T.U.C. and A.I.T.U.C. The question was consequently postponed for further consideration at a future session of the Indian Labour Conference on the meeting of the Standing Labour Committee.

The revival of the Labour Appellate Tribunal was another important item on the agenda. On behalf of employers, Mr. Naval Tata said that employers would like the Tribunal to be revived. The workers' representatives, as also representatives of State Governments, however, were opposed to the suggestion on the ground that, instead of reducing litigation, it would increase it. They were, however, prepared to welcome the revival of the Tribunal, provided employers agreed not to file any appeals to the Supreme Court or High Courts against the awards of such tribunals. Employers were not prepared to do this. Winding up the discussion on the subject, Mr. Nanda said that the Labour Appellate Tribunal need not be revived but that the problems of delays in the disposal of cases should be studied and placed before the Standing Labour Committee for consideration. There is good reason to think that Mr. Nanda was right. The employers would be well advised not to demand the revival of Labour Appellate Tribunal. Its absence has actually led to better industrial relations and to go back to it would be a retrograde step. In fact, the employers could gain the goodwill of workers by dropping that demand.

The working of the Implementation Machinery of the Code of Discipline, which has been the subject of much discussion of late, also

Ease out of that profit squeeze...

Decentralisation and lower profit margins make the profit-and-loss statement the real measure of each plant's efficiency. That's why it is increasingly important for management to study methods to ease out of the profit squeeze. Planned Lubrication gives management such an opportunity for savings.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

PLASTICS INDUSTRY MAKES HEADWAY

MANUFACTURERS PLEAD FOR LOWER EXCISE DUTY

THE plastics industry in India has made good progress in recent years, despite the inadequacy of indigenous raw materials, machinery and specialised technical skill. The total output of plastics (including polyethylene, P.V.C., polystyrene, etc.) rose from a mere 700 tons in 1955-56 to as much as about 11,500 tons by 1960-61, thereby fulfilling the targets laid down in the second Plan. During the third Plan period, production is proposed to be stepped up to 74,000 tons, an increase of about 700 per cent. The capacity is expected to be raised from 15,700 tons in 1960-61 to 85,000 tons by the end of the Plan. The third Plan targets are, of course, modest, as compared with the estimates of demand for plastics goods made by the Plastics Panel of the Development Council, Government of India. According to the Panel, the total requirement by the end of the third Plan will be 125,000 tons. The Council has, therefore, suggested an upward revision of capacity and production targets to meet the anticipated increase in demand.

The following table shows the total installed capacity and output of important plastics goods in 1960, as compared with the position in the previous year:

(In tons)

	Installed capacity		Production	
	1959	1960	1959	1960
P. F. moulding powder ..	3,000	3,360	1,810	2,041
Polystyrene moulding powder..	4,500 to 5,400	4,500 to 5,400	3,314	3,708
Phenolic laminates	450	600	486	567
Polyethylene	..	3,500	..	3,361
Polythene films and layflat tubings	837	1,032	1,054	1,251
P.V.C. (flexible) sheetings (unsupported)	1,232	1,232	602	961
U. F. moulding powder ..	940	742	322	353
U. F. resins for plywood ..	..	2,160	..	N.A.
Injection moulding and compression moulding*	..	..	5.45	5.70
Leather cloth†	8,700	8,950	5,420	6,081
Linoleum‡	450	500	453	586

* Million gross. † Thousand yards.
‡ Thousand lineal yards.

It will be seen from the table above that most of the sectors have shown signs of steady improvement. The production of linoleum, as well as leather cloths, rose by 30 per cent and that of polystyrene and P.V.C. sheetings by about 20 per cent each. An important development in the year 1960 was the commencement of manufacture, for the first time in India, of urea formaldehyde resins for use in the plywood industry. This alone is expected to result in a foreign exchange saving of the order of Rs. 20 lakhs annually.

While the recent trends in the working of the industry are satisfactory, the industry has been called upon to play a substantially more important role in the third Plan. Although the burden of development will fall principally on the industry, their enthusiasm will be stifled if Government does not show a helpful attitude to this developing, but young, industry. The manufacturers contend that, in the first place, the incidence of excise duty on this industry is pretty high and should be reduced. An excise duty at the rate of 20 per cent *ad valorem* was imposed on the industry, for the first time, in March last. A fervent plea to reduce this duty to five per cent was made by Mr. Shantilal I. Parekh in his welcome speech at the fourteenth annual conference of the All-India Plastics Manufacturers' Association held at Bombay on Saturday the 21st inst. At the conference, which was inaugurated by Mr. S. K. Patil, Union Minister for Food and Agriculture, Mr. Parekh pointed out that, in order to realise a revenue of Rs. 40 lakhs, as laid down in the budget, an excise duty of 5 per cent should be sufficient. He maintained that the existing levy had already affected the development of this industry. He contended that an industry like plastics, which was dependent on costly imported raw materials to a large extent, should not be subjected to exorbitant rates of duty, if its progress were to be accelerated.

A point worth remembering here is that, although the output of the industry is going up, its development is quite modest, as compared with the vast strides made by countries like the U.S., the U.K. and Japan in this field. The spectacular progress of the industry in the developed countries owes its origin to the availability of substantial quantities of basic intermediates, particularly petrochemicals, derived from natural sources such as coal, natural gas, petroleum and cotton linters. By producing on a large-scale, the industrialised countries have been able steadily to bring down the price of plastics. This, in turn, has made it possible to compete with conventional goods effectively. It has, in fact, become the basic materials for industrial and constructional purposes in its own right, rather than being mere substitutes. In India, the story is different. Indian plastics industry started production on wholly imported raw materials. The situation, however, is changing, with the gradual growth of indigenous sources of raw materials. Of the various raw materials required by the industry, the manufacture of several items has already been taken up, particularly phenol formaldehyde moulding powder, urea formaldehyde moulding powder, polystyrene moulding powder, polyethylene moulding powder and polyvinyl chloride resin and compositions. The first plant to produce polyvinyl chloride went on stream in September 1961. Its capacity is 3,600 tons a year. The installed capacity of polyethylene is 6,200 tons, its output being 4,000 tons in 1960, as against 2,000 in 1959, which was the first year of production. The production of the other raw materials is shown in Table I above. Imports, however, are still quite large, although, since 1957, a restrictive policy has been pursued. The value of imports of raw materials, which was Rs. 4.43 crores in 1959, rose to Rs. 5.71 crores in 1960-61. The following table shows imports of some of the important raw materials of plastics industry:

(In lakhs of rupees)

	1958	1959	1960-61*
P. F. moulding powder	8.88	8.72	8.69
U. F. moulding powder	10.86	9.25	11.03
Cellulose acetate moulding powder ..	10.30	26.56	55.70
Cellulose acetate butyrate	12.66	18.90	32.07
Cellulose acetate butyrate	61.30	46.86	8.22
Polyethylene	4.67	0.56	3.03
Polystyrene	33.58	45.72	82.26
Vinyl resins			

* From April 1960 to March 1961.

The indigenous supply of certain raw materials is, no doubt, steadily increasing. But their prices, according to Mr. Parekh, are exorbitantly high, as compared with international prices. Mr. Parekh appealed to raw material manufacturers to charge "very reasonable and competitive" prices. In view of the expansion of several raw materials envisaged now, prospects for bringing down raw material prices are bright. Explaining the position, Mr. Parekh said:

"Some of the important schemes for raw material manufacturers are based on the availability of ethyl alcohol in India. Thanks to a flourishing and *well-established sugar* industry, India is producing abundant quantities of industrial alcohol which can be used as a starting material for production of many important plastics. The polyethylene projects now in operation consume nearly 3.5 million gallons of industrial alcohol. Styrene monomer plant which is being set up by Messrs. Polychem Limited in Bombay may consume two million gallons of alcohol. Industrial alcohol is also used for manufacture of acetic acid. It is estimated that five to six million gallons of alcohol may be required for production of acetic acid. The production of industrial power alcohol may reach about 50 million gallons by 1965, with an installed capacity of 70 million gallons."

In addition, in view of the plans for encouraging the growth of petrochemical industries in the third Plan, the supply position of basic raw materials is expected to become quite comfortable in the years to come. The approximate capacity now established, or programmed for production, in the case of certain major basic chemicals is given below:

	Tons
Ethyl alcohol	200,000
Benzene	40,000
Formaldehyde	13,000
Styrene monomer	25,000
Phenol	12,000
Acetic acid	15,000

Apart from raw materials, Indian plastics processing industry has been dependent on imports for machinery as well. In this connection, Mr. Parekh urged the Government of India to accord highest priority to any project for the manufacture of standard types of plastics machinery and equipment. He also suggested that attractive terms should be offered to reputed foreign companies to set up their factories for the production of plastics machinery with local collaboration, wherever possible. Mr. Parekh wanted the Government to liberalise the import policy in such a way as to permit the import of latest types of machinery and equipments.

Mr. Pratap Bhogilal, who presided over the Conference, stressed the need for diversification of the industry. At present, Indian plastics industry was mainly concentrated on utility and consumer items. Mr. Bhogilal observed that, with rapid industrialisation of the country, it would be advisable for plastics manufacturers to concentrate more and more on production of industrial items. He, however, added that considerable market research would have to be undertaken before offering plastics industrial components acceptable to industries.

Although a young industry, plastics have been able to secure some foreign exchange. Exports of plastics goods amounted to Rs. 72.84 lakhs in 1960, as against Rs. 67.45 lakhs in 1959. If a more liberal attitude is shown in granting import licence to manufacturer-exporters for machinery, etc., against exports under the incentive schemes and if the related procedural delays are eliminated, as suggested by Mr. Parekh, the prospect of exports going up further, particularly to developing countries in Asia and Africa, is reasonably bright.

RAW FILM FACTORY

Among the major public sector projects, which will commence production early during the third Plan, will be the raw film factory, located on the outskirts of the hill station of Ootacamund in South India. Work is proceeding briskly on this project which, when completed, will meet the bulk of India's requirements of a large variety of photographic materials and help to save much of Rs. 5 crores worth foreign exchange, which the country now spends on import of raw film and photo materials.

Construction work has already started on the site of 250 acres, to house the factory and ancillary units. It is expected that, towards the end of 1962, the factory would commence the production of a large variety of photographic sensitised materials, including cinematograph film, roll and sheet film, photographic paper, materials for graphic arts, etc. The target of output worth Rs. 5 crores will be reached during the third Plan itself. A total investment of Rs. 7 crores—Rs. 4 crores in foreign exchange and Rs. 3 crores by way of rupee costs—will be required for the project. The largest single item in the production programme is cinematograph film and a start will be made with black and white materials. Before the end of the third Plan period, the production of film for colour process will also be taken up.

The factory will also manufacture X-ray films for which there is growing demand in the country. In this case, production from the factory would be more than enough to meet the entire domestic requirements and will leave some surplus for export.

The Government of India has secured the collaboration of the well-known French firm Messrs. Bauchet for the project. The designs for the different sections of the factory have been completed, and while a large part of the equipment will be fabricated in France, certain specialised items will be supplied from the U.S., West Germany, Switzerland and Austria. Shipments will be made as each item is completed and tested. It is expected that the first consignment will reach India by March 1962. Import of the necessary equipment for the factory will be financed under the French Government's Export Credit Scheme. Payments for the equipment are due to start only after the factory has gone to production, and will be spread over five years. The factory will thus be able to save the foreign exchange needed to pay for the imported equipment.

A special feature of this project is that, from the very outset, it will be manned and operated by Indian personnel. A number of scientists and engineers have already been recruited from all parts of India and sent to France to work in the factories of the consultants. Arrangements have also been made for production of necessary raw materials within the country. For a number of these materials, such as cellulose, triacetate, plasticisers, solvents and photographic gelatine, the Government has already granted manufacturing licences to units in the private sector. Some of the materials like silver nitrate will be manufactured in the film factory itself. It is planned that from the beginning, the value of raw materials to be imported will be only a small fraction of the price of the finished product. By the end of the Plan period, practically 99 per cent of the raw materials will be made available indigenously.

AGRICULTURAL MARKETING IN INDIA AND ABROAD

R. S. SRIVASTAVA

Deputy Director, Programme Evaluation Organisation, Planning Commission, New Delhi.

Marketing constitutes the crux of the food and agricultural problem. A special feature of this book is that it combines the presentation of the principles and economics of marketing with comparison of policies and programmes in different countries which throw into relief the extent of various leeways.

W. GERMAN AID FOR DEVELOPING NATIONS

Total West German financial assistance to the world's developing nations between 1st January 1957 and 31st July 1961 amounted to more than DM. 11,700 million, according to the statistics published by the Federal Finance Ministry. Of this amount, about DM. 5,600 million came from public funds and DM. 6,100 million were contributed by private sources. A remarkable feature was that private development aid in the first half of this year jumped up to DM. 1,309 million, exceeding the corresponding amount of DM. 1,125 million for the whole of 1960, while public aid was lower at DM 921 million, as against DM. 1,329 million in the whole of 1960. The breakdown of aid for the past four and a half years is given below:

(In million D-marks)

	1957	1958	1959	1960	1st half of 1961
Bilateral aid :					
Public assistance :					
Grants	9.0	27.0	33.0	33.0	56.6
Credits	83.3	215.8	995.2	742.6	421.2

Total private aid	1,089.0	1,019.0	1,609.0	1,124.9	1,309.0
Grand total ..	1,964.3	1,953.8	3,141.2	2,453.5	2,229.9

CENTRAL REVENUE

The revenue realised from items on which duties are levied and collected by the Central Government in the first five months of the financial year 1961-62 amounted to Rs. 338.86 crores. Of this, Rs. 68.37 crores were collected during August 1961. The corresponding figures for the first five months of 1960-61 and for the month of August 1960 were Rs. 291.93 crores and Rs. 60.39 crores, respectively.

Following are details of the revenue realised under various heads:

(In lakhs of rupees)

Revenue head	August		April to August	
	1961	1960	1961-62	1960-61
Customs	1,705	1,485	7,829	6,421
Union excise duties (excluding coal cess and salt cess) ..	3,823	3,166	19,033	16,208

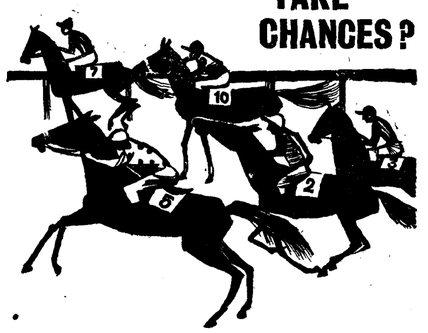
* Provisional.

DEVELOPMENT OF DIAMOND MINES

The Mineral Development Corporation has prepared two project reports for the exploitation of diamond deposits of Ramkheryа and Majhgawan areas in the Panna district, Madhya Pradesh. The Ramkherya scheme is estimated to cost Rs. 46 lakhs, with a foreign exchange component of Rs. 27.9 lakhs. The annual output of diamonds is estimated at 12,500 ratties. The Majhgawan scheme is expected to cost Rs. 90 lakhs, involving a foreign exchange component of Rs. 29 lakhs. The annual output of diamonds is estimated at 30,000 ratties.

A sum of Rs. 12,44,285 has been spent by the Panna Diamond Project up to June this year and diamonds valued at Rs. 51,000 approximately have been recovered during the period. In the meantime, the Geological Survey of India has done preliminary reconnaissance survey of the diamondiferous belt in Kurnool district of Andhra Pradesh during 1960-61. The survey was undertaken for the purpose for planning out detailed mapping and investigation by drilling during the third Plan period. The department proposes to undertake large-scale mapping with pitting, trenching, drilling, sampling and washing for diamonds in the diamondiferous belts in the Kurnool, Mehaboobnagar, Nalgonda, Guntur, Krishna and Anantapur districts of the State during the third Plan period.



In what you do every day, you are taking many chances. For example, take the things that you buy in the market. Are you always sure of their quality? Do you get good value for the money you spend?

And yet, you *can be sure* if you know that the goods you buy have been made to a given standard. Standardization benefits not only you, the consumer, but also the producer, the distributor and indeed, the country as a whole.

The Indian Standards Institution has prescribed standards for industrial as well as consumer goods. To manufacturers producing to relevant standards, ISI grants licences to apply on their goods its certification mark which is the guarantee of quality. The next time you buy anything, don't take a chance; look for the ISI mark.

CALCUTTA ELECTRICITY SELLS MORE POWER

NET PROFIT, HOWEVER, LOWER—DIVIDEND MAINTAINED

ELECTRICITY is still the cheapest source of power and, with the industrial development and expansion that is taking place in our country, the demand for it is ever on the increase. In keeping with this trend, the Calcutta Electricity Supply Corporation Limited (Chairman: Sir Harry Burn) has reported a higher income of £9,805,661 by sale of current for the year ended 31st March 1961, as against £8,834,610 in the previous year. Sale of energy has been steadily rising for the past fourteen years, and during the year under review the Corporation sold 1,955 million units, that is, 138 million units more as compared with the previous year. Industrial demand accounted for 90 per cent of the energy sold for power purposes. Demand for low tension industrial power expanded further, with sales increasing by 9 million units to 123 million units and the number of consumers by 1,200 to more than 16,700. Income from other sources has gone up from £141,762 to £196,885 largely due to an increase in the interest earned on investments from £43,727 to £90,172. The cost of generation rose by £530,509 to £5,088,135, with coal alone accounting for an increase of £414,000. Expenditure on coal, including handling and ash disposal charges, amounted to £3,240,000 (consumption 1,293,000 tons) and accounted for 80 per cent of the total operating cost of generation. Power purchased from the Damodar Valley Corporation cost £288,000 more than in the previous year. Total units imported amounted to 390 million, an increase of nearly 88 million; nevertheless, the power made available was insufficient and the essential and urgent plant overhauls could not be undertaken. Administrative and other expenses were also higher at £1,904,633, as compared with £1,562,756 in the previous year. Because of higher costs, gross profit has gone up only modestly from £2,855,990 to £3,009,778. Net profit is, however, lower at £894,149, against £1,167,490 previously, due mainly to a much larger provision of £1,155,014 (£759,324) for taxation. Depreciation, too, has been provided with a slightly larger sum of £960,615 against £929,176 previously. The clear profit for the year, as calculated under the Electricity (Supply) Act, 1948, was less than the *reasonable return* by £356,541.

This shortfall has been made good by transfers from reserves created for meeting such deficits. At the end of the year, the reserves stood at £187,816, and are expected to be utilised fully during the current year. Next year, the Corporation's tariff structure is expected to be able to earn the entire *reasonable return* and provide internal finance for the major extensions at the New Cossipore station during the next three to four years. The previous year's increased dividend of 7.5 per cent (actual), against 7 per cent before on the ordinary stock of £1, has been maintained during the year under review; this includes the final dividend of 4 per cent. The Directors have transferred £639,257 to reserves, against £660,866 in the previous year. The carry forward is £124,585, against £108,138 brought in.

The following table gives a comparison of the Corporation's working in the past four years:

(In £s sterling)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale of current	9,805,661	8,834,610	8,114,777	7,322,268
Other income	196,885	141,762	114,680	145,122
Cost of generation, distribution, etc.	5,088,135	4,557,626	4,023,448	3,511,820
Other expenses*	1,904,633	1,562,756	1,577,357	1,347,499
Gross profit	3,009,778	2,855,990	2,623,057	2,608,071
Depreciation	960,615	929,176	900,782	848,551
Taxation	1,155,014	759,324	623,222	537,702
Net profit	894,149	1,167,490	1,104,553	1,225,818

,, gratuity fund and debenture issue expenses	51,671	51,670	51,670	51,670
Dividends—				
5 per cent. preference	68,850	65,075	95,000	95,000
Ordinary	319,699	319,699	298,386	296,386
	(7.5%)	(7.5%)	(7%)	(7%)
Carry forward	124,585	108,138	122,137	119,841

* Inclusive of cost of power purchased which for 1960-61 amounted to £1,070,194, as against £782,449 in 1959-60 and £771,087 in 1958-59.

The Corporation has won its point on the need for expanding the New Cossipore station, as the Bengal Government has now agreed, that the Corporation should proceed with its plans for increasing the capacity of the station by installing a further machine of 50 MW. Finance in respect of expenditure to be incurred in India has been arranged on reasonable terms and, advised by its consultants, Messrs. Merz and McLellan, the Corporation is now engaged in negotiating the necessary contracts. It is hoped to commission the machine, at an all-in cost of some £3.5 million, towards the end of 1963, nearly a year before the West Bengal State Electricity Board's new Bandel station begins operation.

It was pointless for the Government to have deferred the Corporation's essential and urgent expansion plans till it was forced to realise by circumstances that the D.V.C. was just unable to meet the Corporation's demands. To quote the Chairman, Sir Harry Burn: "We anticipated, however (after having failed to realise our expectations before for an adequate supply of power from this source under the agreement entered into in April 1954 and January 1959) that, by the end of 1960, the Damodar Valley Corporation would have commissioned sufficient new generating plant to have enabled them to honour their commitment to us of 95 MW. for the year 1960-61. Unfortunately, our hopes were not realised and, despite our most persistent requests throughout 1960 and early 1961 to the D.V.C. to afford us power up to their full contractual obligation, they never found it possible to afford us a supply of more than 60 MW. at the time of our daily system peak."

As a result, the Corporation was unable to take out of service for routine maintenance the three turbo-aternators, one of 50 MW. and two of 30 MW., at the New Cossipore station, all of which were long overdue for overhaul. This led to their breakdown in the earlier half of this year. The three machines were recommissioned later, in May 1961 to be precise, and the Corporation's total effective generating capacity of about 275 MW. was restored.

Dealing with certain "ill-informed criticism" in the Press following the breakdowns, to the effect that the Corporation's generating plant is largely worn out, the Chairman says that, in fact, the plants at New Cossipore and at Mulajore are in first class condition and capable of many years of useful service, while the southern station, though old and not so efficient, has been well maintained and will continue to provide a satisfactory source of power especially during peak load periods. According to Sir Harry, a shortage of power in Calcutta is bound to continue for the next few years, since the demand in the area is already outstripping the Corporation's maximum generating capacity, augmented by the offtake available from the D.V.C. The Government has assured the Corporation that it will provide the ultimate solution of the problem in the shape of a bulk supply through the West Bengal State Electricity Board, first some 60 MW. (not expected to be available until January 1964) from the Durgapore station and thereafter supplies from the proposed Bandel station. The Corporation anxiously awaits these supplies.

The Directors have pursued the policy of meeting capital expenditure out of internal finance and transferred £550,000 to special appropriations for plant expansion, replacements and contingencies, which, with the sum set aside for depreciation of £960,000, makes a total provision of £1,510,000. Capital expenditure during the year amounted to £1,332,000 on transmission and distribution lines and was provided internally. The gross block of the value of £35,950,954 is written down to £20,637,068. The paid-up capital of £6,162,646 is supplemented by reserves aggregating £26,372,339. After redeeming debentures of £1,628,836, the liability on this score at the end of the year is shown at £3,366,164. The Corporation has yet to write off £145,867 by way of cost of issue of debentures. Current liabilities of £2,450,440 are matched by current assets of £3,607,978. Contingency fund of investments has increased from £468,604 to £520,638, and has a realisation value of £531,247.

The Corporation's ordinary stock of the value of £1 each is being currently quoted on the Calcutta Stock Exchange at Rs. 15.31 *cum-div.*, at which rate the approximate yield on them is 7 per cent per annum taxable, or about 4.90 per cent net.

(Concluded from next column)

It will be noted from the above account of the financial position of the Company that there is a clear case for widening the capital base by issue of fresh shares.

The Rs. 100 paid-up shares of the Company are currently quoted at Rs. 225 *cum-div.* on the Madras Stock Exchange. On an *ex-div.* basis and at the proposed dividend, the net yield on them works out to 9.33 per cent per annum.

HANDSOME RISE IN ASHER TEXTILES' DIVIDEND

CAPACITY BEING EXPANDED

THE year ended 30th June 1961 has proved to be quite a prosperous one for Asher Textiles Limited (Managing Agents: Messrs. Setna and Company, Tirupur, South India). Although the Company had to effect a cut in yarn prices twice during the year, in accordance with the advice of the Indian Cotton Mills Federation, and had to purchase raw cotton from abroad at higher prices, its gross profit has staged an impressive rise of Rs. 5.04 lakhs to Rs. 15.50 lakhs, representing an increase of 48.1 per cent over the previous year. This is on top of a rise of Rs. 6.54 lakhs recorded in the previous year. The net profit, however, has gone up by just Rs. 1.10 lakh to Rs. 6.21 lakhs, thanks to the sizably larger provision for taxation at Rs. 5.25 lakhs, a sum which is equal to more than a third of the gross profit, as against Rs. 2 lakhs provided last year. The provision for depreciation is a shade higher at Rs. 2.82 lakhs, as against Rs. 2.49 lakhs in 1959-60.

The Directors have raised the dividend substantially from 12½ per cent taxable to 30 per cent taxable. This higher dividend will take up Rs. 3.60 lakhs, as against Rs. 1.50 lakhs in the previous year. Thus, the entire increase in net earnings has been utilised to pay the dividend of 30 per cent; besides the amount transferred to reserve has been cut down from Rs. 3.58 lakhs in 1959-60 to Rs. 2.40 lakhs.

The results for the year under review are highlighted against the background of those for the previous three years in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale proceeds	92.54	83.17	74.00	68.73
Other income	2.05	1.02	0.64	0.26
Closing stocks of finished goods and process stock	4.82	2.95	2.64	0.76
Raw materials consumed	55.88	49.57	52.39	45.08
Other expenses	26.58	23.57	20.21	17.06
Gross profit	15.50	10.40	3.02	0.51
Managing Agents' remuneration	1.22	0.86	0.15	0.15

	(30%)*	(12½%)*	(6%)*	(6%)
Carry forward	0.01	0.03	..	..

* Subject to deduction of tax.

The three outstanding features of the year's results are: (1) sales have gone up by Rs. 9.37 lakhs to Rs. 92.54 lakhs, (2) this is accompanied by a rise of Rs. 6.31 lakhs to Rs. 55.88 lakhs in raw materials consumed and of Rs. 3.01 lakhs to Rs. 26.58 lakhs in other manufacturing expenses and (3) the profit-margin (the ratio of gross profit to sales) has risen from 12.5 per cent in 1959-60 to 16.2 per cent in the year under review.

In pursuance of the policy of modernisation and expansion of the mill's machinery, the Company incurred a capital expenditure of the order of Rs. 7.08 lakhs, of which Rs. 5.66 lakhs were in machinery. Further, it has placed orders for four doubling frames of 400 spindles of indigenous make valued at Rs. 1.15 lakh. The two frames will be received in the near future. Notable among the other proposed additions is the German hank yarn mercerising machine at a cost of Rs. 1.15 lakh, for which the necessary import licence has been obtained. The present installed capacity of the Company's mill, it may be noted, is 24,800 ring spindles. Application has been made for 6,000 additional spindles for balancing the preparatory equipment of the mills.

The Company's balance-sheet, as at 30th June 1961, shows that the subscribed capital of Rs. 11.99 lakhs, all in 11,986 equity shares of Rs. 100 each, is supported by reserves and surplus amounting to Rs. 7.40 lakhs. Its secured and unsecured loans together aggregate Rs. 33.52 lakhs. In addition, there are other current liabilities and provisions of Rs. 19.37 lakhs. The current assets at Rs. 45.26 lakhs are below the total indebtedness to outsiders by Rs. 7.63 lakhs. The larger borrowings are on account of the programme of expansion and modernisation undertaken in recent years. The gross block has risen from Rs. 49.08 lakhs in 1959-60 to Rs. 55.18 lakhs and has been depreciated to Rs. 26.92 lakhs.

(Continued in previous column)

SHARP CUT IN FORT GLOSTER'S DIVIDEND

OUTLOOK, HOWEVER, PROMISING

OF the three factors—inadequate supplies of raw jute, disproportionate rise in the price of jute in relation to that of fibre, and frequent interruption to normal production—which hit the country's jute industry last year, the one mentioned second is the prime cause for the very disappointing results of Fort Gloster Industries Limited (Managing Agents: Kettlewell Bullen and Company Ltd., Calcutta) for the year ended 31st March 1961. The results are disappointing, because, despite a 60 per cent increase in sale proceeds, from Rs. 384.73 lakhs to Rs. 616.60 lakhs to be precise, all that the Company has managed to bring home is a gross profit of Rs. 36.09 lakhs, which, in fact, is lower as compared with Rs. 37.94 lakhs earned in the previous year. To obtain a 60 per cent increase in turnover, the Company had to bear as heavy a cost of jute consumed as Rs. 419.45 lakhs against Rs. 202.84 lakhs previously, reflecting a rise of 106 per cent. In view of the raw material shortage and the resultant cut in production through sealing of looms, it can be safely concluded that it was a steep increase in the price of jute that accounted for the strident rise in the cost of production.

The rise in the cost of raw jute, without a proportionate increase in the selling price of jute goods, has reduced the Company's profitability. On top of this, other manufacturing expenses, too, have gone up by Rs. 38 lakhs to Rs. 194.02 lakhs, of which more than Rs. 12 lakhs are on account of a higher wage bill of Rs. 100.74 lakhs following the interim award of the Wage Board. The dividend on the equity capital, which was raised only last year from 20 per cent to 25 per cent, has been slashed to 10 per cent, subject to deduction of tax. The net return on the shares of Rs. 100 each works out to 7 per cent, against 17.5 per cent in the previous year. A sum of Rs. 0.57 lakh, set aside in the previous year for paying supplemental dividend in respect of first and second preference shares to regularise distribution from tax-free to taxable basis, has been written back during the year under review, as the scheme for a change in the yield pattern could not be put through in the absence of the necessary consent of the shareholders. The Directors have, however, recommended additional dividend for the previous year from the profits of the year under review.

The following comparable table gives in a nutshell the progress of the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	616.60	384.73	382.27	402.02
Other income	3.38	2.64	24.08	2.79
Jute consumed	419.45	202.84	225.20	233.56
Other expenses	194.02	156.02	149.14	144.06
Gross profit	36.09	37.94	36.58	25.03
Provision for—				
Depreciation	21.70	10.29	8.73	7.49
Taxation	7.10	4.25	12.52	1.08
Managing Agents' remuneration	1.32	2.97	3.30	1.90
Net profit	5.88	20.42	12.02	14.56
Transfer from reserves	4.50	5.50	..	..
To reserves	2.52	14.75	2.89	8.95
Dividends—				
7% tax-free first preference	1.57*†	0.98*	0.98*	0.98*
5% tax-free second preference	0.56*‡	0.35*	0.35*	0.35*
Ordinary	6.30	10.50	3.40	4.20
	(10%)*	(25%)*	(30%)*	(20%)*
Carry forward	0.72	0.72	1.95	2.54

* Subject to deduction of tax.
† Including additional dividend of 2.1 per cent, and ‡ of 1.5 per cent., payable in terms of Preference Shares (Regulation of Dividends) Act, 1960, for the year ended 31st March 1960.

The net profit has fallen by 71 per cent, from Rs. 20.42 lakhs to Rs. 5.88 lakhs, owing to heavier allocations to essential accounts. Provision for depreciation amounts to Rs. 21.79 lakhs (Rs. 10.29 lakhs), for taxation Rs. 7.10 lakhs (Rs. 4.25 lakhs) and for Managing Agents' remuneration Rs. 1.32 lakh (Rs. 2.97 lakhs). The Directors have withdrawn again Rs. 4.50 lakhs from general reserve to provide for dividends and other appropriations. Dividends take away Rs. 8.43 lakhs, against Rs. 11.83 lakhs in the previous year. Since the amount credited to reserves this year is Rs. 2.52 lakhs, there has actually been a net depletion of about Rs. 2 lakhs, in striking contrast to a net addition of Rs. 9.25 lakhs last year.

The Company's cable division recorded further improvement during the year, and all types and sizes of cables for which the factory was planned were placed in the market. Competition has been experienced in this field, but increase in demand is expected as a result of expansion in the power generation capacity in the country. Schemes for expansion and diversification in new lines of cables are being considered. Mention is made in the Directors' report of the Company having received an industrial licence for manufacturing V.I.R. cables of larger sections, trailing cables for mines, inter-vehicular railway coupler cables, railway signalling cable and special types of cables and flexible cords required for special purposes. The Company has also received a licence for the manufacture of paper insulated underground cable.

As for the jute section, some relief is expected this year due to better jute crop and the consequent fall in prices, and the Directors are hopeful that the industry will be able to operate smoothly and continuously, though at a smaller profit-margin. The modernisation of the sacking weft spinning section will be completed with the arrival of four additional spinning frames, out of which two with back process have already been shipped. The machinery for the fine side for which licence was obtained last year has been received and the erection work is in progress. A further licence for the import of back process machinery has been granted. The order for the 24-4½" sliver spinning frames has also been placed. While all this serves as a pointer to better working during the current year, it must be borne in mind that the first half of 1961-62 was heavily unprofitable for the jute industry. Between 1960 and 1961, the Company has drawn Rs. 10 lakhs from the general reserve. But this has not upset its financial position, thanks to a sound policy over the past years of maintaining a strong capital-reserves ratio. The capital at the end of the year under review is maintained at the previous year's level of Rs. 83.84 lakhs, of which Rs. 7 lakhs are by way of capitalisation of reserves. It is matched by reserves and surplus totalling Rs. 82.45 lakhs. Secured loans have increased from Rs. 139.76 lakhs to Rs. 176.80 lakhs and so have unsecured borrowings from Rs. 5.25 lakhs to Rs. 20.25 lakhs. Other current liabilities and provisions are shown at Rs. 67.65 lakhs raising the total of liabilities to outsiders to Rs. 264.70 lakhs. These are fully covered by current assets, loans and advances totalling Rs. 266.24 lakhs. Investments have gone up from Rs. 2.09 lakhs to Rs. 2.36 lakhs and command a market value of Rs. 2.28 lakhs. An addition of Rs. 6.19 lakhs was made to the gross block account in the jute division, which, at the end of the year, makes a total of Rs. 2.70 crores and has been very conservatively written down to Rs. 91.20 lakhs. The capital expenditure in the cable division increased from Rs. 78.22 lakhs to Rs. 83.15 lakhs during the year under review and has been written down to Rs. 70.78 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 300 *cum-div.* At the *ex-div.* price of Rs. 293, the yield on the shares works out to a little less than 2.4 per cent, free of tax, per annum. Such a low yield reflects the investors' hope that, in the near future, the cable division will start yielding a sizable profit and enable the Company to restore the cut in dividend.

PANYAM CEMENTS

Highly satisfactory results have been achieved by the *Panyam Cements* and Mineral Industries Ltd. (Managing Agents: Messrs. Panyam Industrial Agencies Private Ltd.) for the year ended 31st August 1961, despite a moderate fall in the production of cement from 78,242 metric tonnes to 71,385 metric tonnes. Owing to encouraging demand, which continued throughout the year, the sale of cement increased by Rs. 2.36 lakhs to Rs. 65.08 lakhs. The gross profit shows an improvement of Rs. 4.56 lakhs to Rs. 22.21 lakhs. Of this, the provision for depreciation claims Rs. 10.42 lakhs, as against Rs. 9.54 lakhs during the previous year. No provision for managing agents' remuneration has been made, in view of the fact that the managing agents have waived their right to remuneration for the second year in succession. Similarly, no provision for income-tax and super-tax has been made, since there is no assessable income for tax purposes, though the Company has a balance of profit available for distribution. The net profit has, therefore, increased in consonance with the gross profit by Rs. 3.68 lakhs to Rs. 11.79 lakhs. After taking credit for Rs. 13.865 written back from development rebate reserve and writing off Rs. 52.346 as miscellaneous expenses, the Company has transferred Rs. 7,253 to reserves and has set aside Rs. 3.73 lakhs towards the arrears of preference dividends upto the year ended 31st August 1960. The overall liability in respect of such dividends has thus been reduced to Rs. 1.17 lakh and covers the dividends payable for the year under review. No ordinary dividends have been proposed for the sixth year in sucession.

Steady progress has been made with regard to the Company's expansion programme. Orders have been placed for the supply of the main equipment for a cement plant of 300 tonnes per day capacity. This is expected to go into regular commercial production during the second quarter of 1963. The total capital outlay estimated for the project is about Rs. 120 lakhs and is proposed to be financed by the issue of further share capital, long-term borrowings, and from internal resources. The consent of the Controller of Capital Issues for raising fresh capital to the tune of Rs. 46.36 lakhs has been obtained and the Directors will be approaching the shareholders in this connection in the near future.

PERMANENT MAGNETS LTD.

The foundation-stone of Permanent Magnets' Rs. 25-lakh factory in Borivli (near Bombay) was laid on Thursday the 19th inst. The levelling of the ground has almost been completed and the construction work of the factory will start before the end of this month. The Company is in full possession of 31,000 sq. yards and is in the process of purchasing another adjoining piece of land of 20,000 sq. yards for future expansion. Orders for machinery have already been placed abroad; the first shipment from Italy is expected in January. The entire machinery will be received by the end of March, 1962.

COMPANY MEETINGS AND DIVIDENDS

STEEL PRODUCTS, LTD. Annual General Meeting, Calcutta, 31st October 1961. Transfer books will remain closed from 13th to 31st October 1961, both days inclusive.

NATIONAL COTTON MILLS LTD. Annual General Meeting, Calcutta, 31st October 1961. Transfer books will remain closed from 10th to 31st October, 1961, both days inclusive.

MALWA SUGAR MILLS CO., LTD. Annual General Meeting, Calcutta, 31st October 1961. Share transfer books will remain closed from 25th to 31st October 1961, both days inclusive.

BENGAL ROLLING MILLS LTD. Annual General Meeting, Calcutta, 31st October 1961. Transfer books will remain closed from 25th to 31st October 1961, both days inclusive.

DELHI CLOTH AND GENERAL MILLS CO., LTD. Annual General Meeting, Delhi, 3rd November 1961. Share transfer books will remain closed from 15th to 30th September 1961, both days inclusive.

FORT GLOSTER INDUSTRIES LTD. Annual General Meeting, Calcutta, 6th November 1961. Dividend: A dividend of Rs. 10 per ordinary share, subject to deduction of tax, for the year ended 31st March 1961. Share transfer books will remain closed from 27th October to 6th November 1961, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 9th November 1961. Dividend: A dividend of Re. 1.50 per ordinary share (on old capital), for the year ended 31st March 1961. Transfer books remained closed from 27th September to 13th October 1961, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, London, 9th November 1961. Dividend: A final dividend of 7.50 per cent, taxable, for the year ended 31st March 1961. Dividend payable on and after 11th November 1961.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 11th November 1961. Net dividend of Rs. 16.80 per ordinary share, for the year ended 30th June 1961, payable from 13th November 1961. Transfer books will remain closed from 16th October to 11th November 1961, both days inclusive.

NONSUCH TEA ESTATES LTD. Annual General Meeting, Cochin, 11th November 1961. Dividend: A final dividend of 20 per cent taxable, for the year ended 30th June, 1961. Transfer books will remain closed from 4th to 13th November, 1961.

PANYAM CEMENTS AND MINERAL INDUSTRIES LTD. Annual General Meeting, Cement Nagar, Kurnool District, 14th November 1961. Transfer books will remain closed from 7th to 21st November, 1961, both days inclusive.

ASHER TEXTILES LTD. Annual General Meeting, Tirupur, 16th November 1961. Dividend: A dividend of 30 per cent, taxable, for the year ended 30th June 1961. Dividends payable on and after 17th November 1961. Transfer books will remain closed from 3rd to 16th November, 1961, both days inclusive.

HUKUMCHAND JUTE MILLS LTD. Annual General Meeting, Calcutta, 17th November 1961. Transfer books will remain closed from 6th to 17th November, 1961, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Dividend: An interim dividend of Re. 1.00 per ordinary share, subject to deduction of tax, for the year ended 31st December 1961. Dividends will be paid on and after 27th November 1961. Registers will remain closed from 6th to 27th November 1961, both days inclusive.

DECCAN SUGAR AND ABKHARI CO., LTD. A final dividend of 13.50 per cent, making a total of 21 per cent, taxable, for the year ended 31st May 1961. Transfer books will remain closed from 11th to 27th November 1961, both days inclusive.

PANCHURA. Dividend: A dividend of 25 per cent on ordinary shares, taxable, for the year ended 30th June 1961.

TUBE INVESTMENT CO., LTD. Dividend: A dividend of 10 per cent., taxable, for the year ended 31st July 1961.

SYNOPSES OF COMPANY REPORTS

Ananda-Bag Tea Co., Ltd.

(*Managing Agents*: Gillanders Arbuthnot & Co., Ltd., Calcutta.)

Annual General Meeting—Held on 14th September.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	5,50	6,58
Gross profit	6,37	4,08
Transfer to Managing Agents' remuneration	60	43
" " provision for leave salary and pass-age	13	13
" " depreciation	78	78
" " taxation	2,25	1,58
" " development rebate reserve	1	14
Net profit	2,60	1,03
Adjustments	84	1,24
Appropriations:		
Total available balance	3,44	2,27
Transfer to general reserve	50	50
Proposed dividend (taxable) ordinary	2,10 (30%)	1,23 (17½%)
Carry forward	84	54

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: The total crop harvested was 3,21,178 kgs. compared with 3,00,738 kgs. in 1959. Given favourable conditions the increase in crop would have been larger.

On account of a shortfall in crop in India and an increase in internal consumption, production and consumption were more finely balanced than previously, and in consequence the general trend of prices in 1960 was satisfactory.

The average price realised during 1960 shows an increase of 94 nP per kg. when compared with the 1959 figure. The table below gives the gross average sale prices per kilogram as compared with those realised in 1959:—

	1960 Rs.	nP	1959 Rs.	nP
London Sale	7	43	6	10
Calcutta Sale:				
Export	6	60	6	13
Internal	5	98	5	07
Combined Average	6	85	5	91

Prospects are at present favourable to producers but any substantial increase in world crops would seriously depress prices, particularly of the commoner types—unless an increase in demand can be brought about.

The net sale proceeds, realised and estimated amounted to Rs. 19,42,708 compared with Rs. 15,43,571, an increase of Rs. 3,99,137 on account of better sale prices.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	7,03,250	Gross block	17,30,420
Reserves and surplus	8,91,405	—Depreciation	5,78,959
Other liabilities	16,37,749	Net block	11,51,461
		Current assets	18,25,498
		Investments	500
		Cash	2,54,947
	Rs. 32,32,404		Rs. 32,32,404

* Paid-up capital consists of 70,000 ordinary shares of Rs. 10 each, fully paid up. The amount of Rs. 3,250 included in the capital pertains to forfeited shares.

Balmadies Plantations Ltd.

(*Managing Agents*: Messrs. Planting Agencies Private Ltd., Madras.)

Annual General Meeting: Held on 29th September.

Working Results:

	For the year ended 31st May (In thousand rupees)	
	1961	1960
Sales	15	..
Closing stocks	2,93	..
Gross profit	51	70
Transfer to Managing Agents' commission	6	5
" " depreciation	12	7
" " taxation	11	18
Bonus to employees	5	12
Net profit	14	28
Adjustments	11	2
Appropriations:		
Total available balance	25	30
Proposed dividends (taxable) 6% preference	6	6
" " equity	15 (5%)	23 (7½%)
Carried forward	5	1

N.B.—Adjustments include the balance brought forward from the previous year and other credit balances.

Extracts from the Directors' report: *Crop and Cost*:—The crop harvested during the season was 99.5 tonnes at an all in cost of Rs. 148 per 50 kilos, as against the estimate of 75 tonnes at an all in cost of Rs. 167 per 50 kilos, in the previous season.

Replanting:—The replanted areas of about 27 acres are coming up satisfactorily. They are expected to come to full bearing in one or two years more. In view of the poor crop and the prevailing price, further replanting programme has been suspended.

Estimate for 1961-62:—A crop of 75 tonnes at an all in cost Rs. 170 per 50 kilos has been estimated for this year.

Accounts in brief as at 31st May 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	3,75,000	Gross block	4,18,231
Reserves and surplus	2,29,953	—Depreciation	13,254
Other liabilities	99,138	Net block	4,05,977
		Current assets	2,07,899
		Cash	90,215
	Rs. 7,04,091		Rs. 7,04,091

* Paid-up capital consists of 1,50,000 equity shares of Rs. 2 each, fully paid; and 7,500—6 per cent. tax-free cumulative preference shares of Rs. 10 each. (Of the above, 50,000 equity shares were issued as fully paid-up bonus shares.)

Sitalakshmi Mills Ltd.

(*Managing Agents*: Messrs. C. S. Ramachary & Co., Madurai.)

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales (yarn and waste)	62,59	42,39
Closing stock	1,35	1,70
Gross profit	22,36	10,24
Transfer to Managing Agents' remuneration	1,79	82
" " depreciation	4,29	2,78
" " taxation	6,40	70
Net profit	9,88	5,94
Adjustments	2	1
Appropriations:		
Total available balance	9,90	5,95
Transfer to development rebate reserve	74	4,66
To payment of bonus (for 30-6-1960)	25	Nil
" donations	50	Nil
Transfer to general reserve	6,00	30
Proposed dividends (taxable) 6% Preference	10	9
" " " Equity	2,19 (25%)	78 (2%)
Carried forward	12	2*

N.B.—Adjustments include only the balance brought forward from the previous year.

* After paying income-tax Rs. 3,210 and writing off preliminary expenses and share commission amounting to Rs. 5,726.

Extracts from the Directors' report: The outstanding results of the year are due to certain fortuitous circumstances, which may not be repeated during the coming years.

On account of changes in the Income-tax Act, regarding allowance for depreciation, a sum of Rs. 62,652 has been provided in excess of the amount normally chargeable during the year in order to bring the value of the assets to the same level as that adopted for income-tax purpose.

The Company continues to enjoy the benefit of tax exemption under 15(C) of the Income-tax Act for the 3rd year in succession. It is estimated that 9 per cent of the income will be exempt from tax under this Section. An application is being made to the income-tax authorities requesting them to determine the percentage of such exemption. Subject to their approval tax will not be deducted on 9 per cent of the gross dividend.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	35,19,159
Reserves and surplus	13,17,306	—Depreciation	8,45,488
Other liabilities	21,45,096	Net block	26,73,671
		Current assets	4,89,158
		Investments	3,206
		Cash	13,46,367
	Rs. 44,62,402		Rs. 44,62,402

* Paid-up capital consists of 2,500 six per cent (net after deduction of tax under Section 18-3 (D), cumulative preference shares of Rs. 50 each, fully paid up and 17,500 equity shares of Rs. 50 each, fully paid up.

VANGUARD OF THE NATION'S SERVICE

Carried forward	42	3

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Plants*: The generating plants at Janusi worked satisfactorily during the year under review and were maintained in efficient order. A new sub-station near the Town Hall was constructed at Gorakhpur. A.C. Supply from the hydel was obtained and the sub-station was commissioned on 20th November 1960 by installing suitable converting equipments. Rest of the Machines worked satisfactorily in spite of heavy strain and overload.

During the year extensions of 50 street lights were made at the instance of the municipal authorities at Jhansi and 68 street lights only were extended at Gorakhpur.

The following tables will indicate the progress that has been made during the last four years.

Jhansi

Year	Units sold	Total connection	Peak load (k.w.)
1957-58	23,96,072	2,893	800
1958-59	26,67,914	3,001	900

		Cash	15,184
	Rs. 16,37,806		Rs. 16,37,806

*Paid-up capital consists of 95,000 ordinary shares of Rs. 5 each, called up. Of the above, 8,068 shares are allotted as fully paid up pursuant to a contract without payment being received in cash.

CAMPHOR AND ALLIED PRODUCTS LTD.

The issue of 23,560 equity shares of Rs. 100 each, offered for public subscription by the Camphor and Allied Products Ltd., has been oversubscribed, the total number of applications received being 17,642 for an aggregate of 277,342 shares. Further, 1,920 equity shares which were reserved for allotment to the American Company have also now been included for allotment in India, with the result that the equity shares to be allotted to the public would be 24,500, instead of 23,560. The allocation was finalised in consultation with the Bombay Stock Exchange authorities and the same has been confirmed by them. The lots were drawn by the President of the Stock Exchange and the Company is now proceeding with the allotment of 24,500 equity shares in accordance with the formula and the lots drawn

Complete Industrial Plants All Over the World

We are exporting products of the well-known Czechoslovak Engineering Works of traditional trade marks Skoda, CKD, of the First Brno Engineering Works, Královo Pole Engineering Works, Vitkovice Iron Works, Prerov Engineering Works, etc.

We design, erect and deliver complete plants or individual object for the coal and ore industry, for metallurgical plants, water and steam power plants, for chemical, building, engineering and wood-working industry, for tyre manufacturing plants, etc.

At the International Trade Fair in Brno from September 10th till 24th, 1961, we displayed products of the Czechoslovak Heavy Engineering Industry.

JUTE

(*Concluded from page 822*)

An essential condition for the efficient functioning of the jute industry is, as Mr. Bajoria emphasised, a regular and adequate supply of raw jute at reasonable and stable prices. This problem presupposes self-sufficiency in raw jute both quantitatively and qualitatively. The achievement of self-sufficiency is, however, only a long-term solution. "Our immediate concern," to quote Mr. Bajoria, "is to find means to cope with an irregular and uncertain jute supply and fluctuating jute prices." Alluding to the buffer-stock which he considers to be "the best solution," he gives the following details about the organisation and functioning of the buffer-stock as has been agreed to between the I.J.M.A. and the Government of India:

Organisation: The buffer-stock Agency will be an autonomous body under the ægis of the I.J.M.A. It will be financed through bank loans bearing interest. The raw jute will be purchased and stored by mills on behalf of the agency.

Working: In times of glut, when raw jute prices fall to uneconomic levels, the agency will maintain prices through open market purchases for storage. The presence of an unlimited buyer will effectively check a fall in prices. If, subsequently, a shortage were to occur, supplies could be drawn from the buffer-stock so as to prevent an excessive rise in prices.

Buffer-stock and mills: Since storage for a long period may cause deterioration, a quick turn-over is desirable. For this purpose, the mills will be permitted to withdraw jute from the buffer-stock, if they consider it in danger of deterioration, on their undertaking to replace it with the same quality and quantity within a specified period.

Buffer-stock and cultivators: The cultivators will be assured of a reasonable price for his crop and this will prevent diversion of acreage from jute to alternative crops which will otherwise occur when prices fall steeply.

The mere establishment of a buffer-stock agency will not, however, be of much avail, if steps are not taken to curb unbridled speculation. Mr. Bajoria has done well to make a special reference to this problem. Indeed, he has clearly warned that, unless an effective solution can be found for this problem, the future of the industry and of the export trade in jute goods will be greatly jeopardised. Some of the specific suggestions he has put forward merit the due attention of the interests concerned. There is, for instance, the need for a strict enforcement of ban on after-hours business and more vigorous action against kerb trading. Further, a "climate of opinion" must be created in which those who indulge in anti-social practices will receive the moral censure of society, especially of the business community. The chambers of commerce and business associations will also have to do a great deal to raise the moral standards in business conduct.

TEXTILES

(*Concluded from page 818*)

United States form the O.A.S. At Bogota, Cuba voted "no," and the Dominican Republic was not represented. The signatory powers stated clearly their intention to co-operate to achieve common social and economic progress, because they believe that "the sound social and economic progress of each is of importance to all." Clearly, new emphasis is being placed on the economic and social development of Latin America. The rate at which this development occurs will affect greatly the textile consumption potential in the area. The Act of Bogota has provided the basis for an unprecedented degree of international co-operation which can, if aggressively pursued, contribute much to the economic growth of Latin America. Although various regional trade arrangements have been proposed and a few are operating, these have so far had little effect on textile trade.

The predominant policy of most of the Latin American countries is economic nationalism, the effect of which is to place the accent of self-sufficiency in consumer goods. Policies are generally administered so as to restrict imports of consumer goods in favour of the domestic product. Imports of machine tools and other capital equipment are favoured. Many feel that this tendency has been a deterrent to growth because of the characteristic single dependence on single commodities in the area. The total net trade in textiles declined from imports of 124,000 metric tons in 1938 to 111,000 tons in 1957. Cotton textile trade was reduced by half to a level of 60,000 metric tons during the first decade under review, and has remained at about that figure since. Imports of rayon and other man-made fibres doubled from 27,000 to 54,000 metric tons. From a net import position of 45,000 tons, woollen trade moved to a net export position about half as large, the exports consisting mostly of wool tops.

Total *per capita* consumption of the basic apparel-type fibres in Latin America is still slightly below the world average. The rate of increase in consumption is also below the world average, and is in sharp contrast to the rapid growth being recorded in some other major areas, particularly Europe and Africa. The net trade shifts for the area as a whole conceal much more pronounced trends in individual countries. The larger Latin American countries have now reduced their cotton textile imports to practically nothing, with only a few speciality products typically allowed to enter. In those larger countries which have now established their own production facilities in the synthetics, the same pattern is being repeated. Perhaps the two most significant basic trends are the movement towards national self-sufficiency in textile manufacture and the rapid change in the utilisation pattern. Whereas, before World War II, textiles moved to the Latin American market mostly in the form of piecegoods, there is now emerging a real growth in the apparel industries throughout the Continent, with quality of product showing marked improvement in many countries.

Aside from these data, the following observations may also be pertinent:

Though there are notable exceptions, the Latin American textile plants are neither modern nor low-cost producers.

The policies of nationalism have precluded most of the textile industries from developing to a sufficient degree of efficiency.

Current statistical data on textile operations are characteristically inadequate.

Cotton Textile Capacity in Latin America

Country	Spindles (in thousands)		Looms

LABOUR

(*Concluded from page 834*)

figured on the agenda. The primary responsibility of the Committee is at present to fix the responsibility for violation of the Code. The spokesman of the Government wanted that the Implementation Committees should be permitted to bring round the contending parties and effect a settlement of disputes. The workers' representatives also thought that Implementation Committee should, wherever possible, effect a settlement of disputes also. As a result of the discussions it was agreed by all the parties that, besides fixing responsibility for violation of the Code, the Implementation Committee should, wherever necessary, bring round the contending parties and effect settlement with a view to reducing tensions. This is undoubtedly a wise decision and it is gratifying to find that the employers' representatives were agreeable to it.

Taking an overall view of what transpired at the conference, it can be said that no radical or far-reaching decisions were taken. Neither the employers nor workers made any substantial concessions. Nor did the Government press for any. Nevertheless, the opportunities offered by the conference enabled the different points of view to crystallise in clear-cut terms and to put the issues in a clearer light. Moreover, the clarification of such questions as the scope and functions of the Implementation Committee will enable better enforcement of the Code of Discipline.

ENGINEERING

(*Concluded from page 826*)

while competition arises as to which system shall be used—road or rail."

The future course of Canada's transportation system is not quite clear. According to the *Commercial Bulletin*, each form of transport is attempting to find the markets which it can serve most efficiently, and the industry is likely to remain in a continual state of flux until a form of competitive co-existence is achieved. The *Bulletin* continues:

"Until this comes about, those carriers which are losing markets to competing carriers will have to make severe adjustments to their operations, and the more flexible they are the easier these adjustments will prove to be. The railways, long established as the nation's principal carrier, will undoubtedly continue to play the major rolé, but, at the same time, will likely bear the brunt of competition from carriers catering to specialised forms of freight. This situation is not confined to Canada and railways all over the world are experiencing severe competition. Inherently inflexible, in the material sense, they find it difficult to adjust but they are nevertheless continually experimenting with ideas to marry their operations with those of competing carriers."

It is concluded that it will be some time before the necessary adjustments are made for achieving a fully integrated transportation system in Canada and that the developments of the past decade are merely working towards this end.

RADIOISOTOPES HELP SEWAGE PURIFICATION

The Atomic Energy Establishment, Trombay, in collaboration with the Central Public Health Engineering Research Institute, has started a radiotracer study at the Bombay Municipal Corporation's Dadar Sewage Purification Plant. Sewage from Matunga and Mahim areas are treated at the Dadar plant. One of the first processes is the removal of the suspended solids from the liquid sewage by allowing it to flow very slowly through a settling tank. The first study carried out today is to find the actual period the sewage spends in the settling tank.

Some of the radioisotope sodium-24 was produced in Apsara, the Pool type reactor at Trombay by irradiating sodium carbonate (common soda) and was brought to Dadar in a lead shielded container. The can containing the radioactive material was opened with remote handling tools behind a lead wall and the contents were dissolved in a bucket of water which was then remotely introduced into the inlet channel of the settling tank. The radioactive solution rapidly mixed with some of the sewage and followed its path towards the outlet of the settling tank. The arrival of this "radioactive sewage" at the outlet channel was indicated by submerged radiation detectors.

The time which lapsed between the introduction of the tracer and its detection in the tank outlet gave the public health engineers important information on the actual time spent by sewage in this settling tank. During the passage through the tank the radioisotope was diluted by a very large volume of sewage so that its concentration in the outlet was so low that there was no hazard from its radiation.

FIFTH ANNIVERSARY OF CALDER HALL

The world's first industrial-scale nuclear reactor at Calder Hall, Cumberland, went "on stream" on 17th October 1956. Since then the British Atomic Energy Authority's four reactors at Calder Hall and the four similar reactors at Chapelcross, Scotland, have fed 5,920 million kilowatt-hours of electricity into the national Grid. Of this, Calder Hall has contributed 3,729 million kilowatt-hours.

Experience gained from operating these reactors has been of major importance, according to the Atomic Energy Authority. The Calder Hall and Chapelcross reactors have, between them, accumulated over 24 reactor-years of operating experience, and their designers believe that all eight reactors will achieve their expected life of 20 years.

The eight reactors have been able to remain at full power for 85 per cent of the year, one reactor at Calder Hall running continuously for nearly 96 per cent of the time. These results have been achieved in addition to the extensive use of the reactors for experimental work.

Output, too, has passed design expectations. The heat output per reactor now running at 100 per cent power is 220,000 kilowatts—or nearly 25 per cent more than the 180,000 kilowatts originally planned. This increased rate of heat output outstripped the capacity of the turbo-alternators to convert it into electricity, and a programme of re-blading the turbines to increase their capacity to 27,000 kilowatts is well on the way to completion.

Calder Hall also played its part in establishing important design improvements in fuel elements for the new Bradwell (Essex) and Berkeley (Gloucestershire) stations when prototype fuel elements for both the latter were irradiated during the reactors' first years of operation.

INTER-BANK CALL RATE HARDENS

(From Our Own Correspondent)

BOMBAY, 25*th October*

The short-term money market showed some signs of stringency during the week under review. Demand for funds was slowly rising, indicative of the commencement of the busy season. Further, due to borrowing by a number of local bodies, the volume of surplus funds with the banks was less. On most days of the week, especially towards the close, lenders were scarce. Accordingly, the inter-bank call money rate gradually hardened from 3½ per cent to 4½ per cent. At closing time today, however, there was some surplus of funds and the rate was a shade easier. The term rates remained unchanged as follows:

	Per cent
Notice Money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive) ...	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3½
(v) 12 months	4

The results of the 91-days' Government of India Treasury Bills showed that the amount invited, offered and accepted was all same, namely Rs. 2 crores. The average rate of accepted tenders stood unchanged at 2.5 per cent per annum. The 91-days' intermediate Treasury Bills sold from the 16th to the 21st inst., amounted to Rs. 1.85 crore. Their sales will be continued from 25th to 28th inst., both days inclusive.

A contraction of Rs. 2.23 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 20th October 1961, as compared with the previous week. As the notes held in the Banking Department have gone up by Rs. 2.61 crores, the total notes issued have risen by just Rs. 38.64 lakhs. Foreign securities held in the Issue Department are unchanged at Rs. 116.86 crores. But, as balances held abroad have improved by Rs. 18.25 crores the total foreign assets are higher by that amount at Rs. 145.13 crores. The deposits of the Central Government have shrunk further by Rs. 11.15 crores, but those of other Governments have gone up sizably by Rs. 24.62 crores. The deposits of banks are also higher by Rs. 2.39 crores. On the assets side, investments have risen by Rs. 19.36 crores, but other loans and advances, which include advances to Scheduled banks against usance bills, have fallen by Rs. 25.85 lakhs.

The statement of affairs of the Scheduled banks for the week ended 13th October 1961 shows an expansion of Rs. 2.40 crores in demand deposits and a contraction of Rs. 2.74 crores in time deposits. The deposits of the State Bank of India have risen by just Rs. 99 lakhs. Their borrowings from the Reserve Bank declined by Rs. 2.31 crores; of these usance bills accounted for Rs. 92 lakhs. Their borrowings of demand nature from the State Bank of India, too, declined by Rs. 32.36 lakhs. On the assets side, investments have fallen by just Rs. 2.09 lakhs while bank credit (advances and bills discounted) has gone up by Rs. 87 lakhs to Rs. 1,234.84 crores.

The gilt-edged market presented a dull and listless appearance. The undertone was subdued, as small sellers predominated in almost all the sections. As buyers were scarce, transactions, however, were limited, though prices of a few securities eased as a sequel to offerings. The Conversion Loan was quiet at Rs. 72.75. 3 per cent 1970-75 First Development Loan, 3½ per cent 1964 National Plan Loan and 3½ per cent 1965 second National Plan loan each eased by 5 nP to Rs. 90.75, Rs. 99.85 and Rs. 99.80 respectively. In the State Loans section 4¼ per cent 1972 Madras Loan eased by 15 nP to Rs. 98.90. 4¼ per cent 1972 Andhra shed 20 nP to Rs. 98.50. 4¼ per cent 1972 U.P. loan also softened by 15 nP to Rs. 98.90. New loans of Madhya Pradesh, Bihar and Orissa, too, suffered a setback of 10 nP each.

In the foreign exchange market, the rupee recorded only a slight improvement. The banks' selling rate for ready T.T. on New York stood at Rs. 475.25 for 100 dollars as against Rs. 475.50 last week. Over the week, their buying rate was unchanged at Rs. 472. The pound sterling appreciated only slightly in relation to the U.S. dollar in the New York foreign exchange market. The latest available rate for spot sterling is 281.660-281.700 cents, as against 281.570-281.600 cents last week.

• • • •

STERLING REACHES A NEW HIGH LEVEL

The pound sterling, by gaining one-sixteenth of a cent in terms of the U.S. dollar, on the 19th inst., reached its highest point on the foreign exchanges this year at $2.81⅛. This was also its highest point since early November of last year. Since the Chancellor of the Exchequer introduced his "summer budget" on 25th July, sterling has appreciated by 3¾ cents in terms of the U.S. dollar. Dealers in the London foreign-exchange market believe that the sterling-dollar rate would show an even greater appreciation of sterling, if British monetary authorities had not, from time to time intervened, in the interests of exchange rate equilibrium, by buying in dollars.

It is quite clear now, say London observers, that the Chancellor's July measures—backed by the large-scale aid which Britain has received from the International Monetary Fund—have resulted in a considerable flow of liquid funds once more to London. It is possible that the pace of entry of these funds has been quickened by the recent reduction of the Bank rate by half per cent and the interpretation put upon this move by the market (although not hinted at by any official source) that a further reduction of half per cent would follow fairly soon.

The foreign holders of funds sharing this interpretation would naturally accelerate their investments in London to take advantage of the high level of prevailing interest rates while they lasted. It does not follow, however, that these movements of funds are mainly speculative. Indeed, a considerable part of the inflow is probably due to the rebuilding of sterling balances and would, therefore, go into various forms of investment in Britain.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 25*th October*

The easy trend noted in the bullion market last week abated during the week under review. In fact, the market ruled firm. Silver met with good support induced by hopes of enlarged offtake during *Diwali*. In sympathy with silver and as fresh offerings were poor, gold was somewhat steady, though the spot rate today was below that prevailing on Wednesday last week. The net rise in prices over the week would have been more marked but for reports suggesting reduced offtake, the daily average rate of which was said to be 2,500 tolas of gold and 5 bars of silver, respectively, as against 4,250 tolas and 10 bars last week. Arrivals were also less, the daily average being 4,750 tolas and 23 bars, as against 4,800 tolas and 37 bars. The floating stocks are reported to be around 40,000 tolas of gold and 1,500 bars of silver.

Adjustment rates fixed today were Rs. 123.60 per 10 grams of gold and Rs. 206.40 per kilogram of silver. The corresponding rates a week ago were Rs. 124.70 and Rs. 205.30, respectively.

In gold, the *Margashir* (December) settlement began the week on easy note at Rs. 124.70, as against the previous close of Rs. 125.10, but edged forward subsequently and touched a high of Rs. 125.65 on Monday the 23rd inst. After easing to Rs. 125.10 yesterday, the settlement rose again to Rs. 125.60 today before finishing at Rs. 125.15.

Ready gold was quoted at a discount under the forward throughout the week. The actual discount widened appreciably from 15 nP last week-end to Re. 1.30 today when the closing rate stood at Rs. 123.85, as against Rs. 124.95 on Wednesday last. The highest and lowest levels touched during the week were Rs. 125.10 (Friday 20th) and Rs. 123.85 (today), respectively.

The *Margashir* settlement in silver attracted good attention of operators and jumped up from Rs. 206.10 to Rs. 208.05 today. At this level, profit-taking set in and the settlement finished at Rs. 207.65. The net rise over the week was Re. 1.55.

Ready silver was well supported, the quotation advancing from Rs. 205.50 to Rs. 207.20 today. It, however, closed easy at Rs. 206.40. At this rate, the discount under the forward was Re. 1.25, as against 60 nP a week ago.

The world price of gold in the London bullion market declined from $35.19½ to $35.18⅜ per fine ounce. Following this decline and owing to the strength of the pound sterling *vis-a-vis* the dollar, the sterling price of gold eased further from 250*s.* to 249*s.* 11¾*d.* Ready and forward silver, however, improved by ¼*d.* each to 80*d.* and 80¼*d.*, respectively, while silver in New York continued unchanged at 91.375 cents.

The following table shows the trend of prices during the week under review:

	25-10-1961 (closing)	High	Low	18-10-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	123.85	125.10	123.85	124.95
Forward: Margashir* ..	125.15	125.65	124.50	125.10
Sovereign	97.00	97.00	96.75	96.75
SILVER				
Ready (.996 fine)	206.40	207.20	205.15	205.50
Forward: Margashir† ..	207.65	208.05	205.70	206.10
London—				
Silver Ready	80*d.*	80*d.*	79¾*d.*	79¾*d.*
Silver Forward	80¼*d.*	80¼*d.*	80¼*d.*	80¼*d.*
Gold	249*s.*11¾*d.*	250*s.*	249*s.*11¾*d.*	250*s.*
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th December settlement. † 26th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COW HIDES FIRM

(From Our Own Correspondent)

MADRAS, 23*rd October*

Arrivals of tanned cow hides were limited with prices firm, due mainly to uneconomical prices for raw, arrivals of which were very small. C.I.F. business was small and selective. Premium and semi-premium marks were generally oversold. Fifths and inferiors F.A.Q. were in demand, but overseas business was rendered difficult, due to better prices locally. Business in cow calf was difficult and very small. Lower ends which were generally oversold were again in demand. Buffaloes continued firm, while buffalo calf had only isolated inquiries. Prices quoted were unworkable for buyers. Business in tanned goat was restricted, though prices remained firm, due to further increases for raw skins. Suedes were in demand from the Continent. Small business with Yugoslavia was reported. Tanned sheep skins were quiet with prices a shade easier. Overseas business was small.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 25*th October*

Steady conditions prevailed in the cotton futures market during the week under review. Trading was influenced by two developments the effect of which virtually cancelled each other. One was the recommendation of the Cotton Advisory Board, at its meeting held in the City on the 21st inst., that, in order to make good the anticipated fall in production during the season, imports of about 1.3 million bales should be permitted. The bearish implication of this recommendation was offset by the higher consumption estimated by the Board during the season so that the new effect of the recommendation on the market was negligible. However, varying crop estimates had an unsettling effect on the market. While the Cotton Advisory Board put the season's crop at no more than 4.8 to 4.9 million bales, private trade estimates placed it higher at 5 million to 5.2 million bales. The controversy over the reintroductions of quality survey also had an unsettling influence. While the Cotton Advisory Board and the East India Cotton Association, Bombay, favoured reintroduction of compulsory survey, a section of cotton traders in Gujarat was opposed to it.

The I.C.C. March 1962 contract commenced the week at Rs. 627.25 and, after having declined to Rs. 624.25 on the 21st inst., improved to Rs. 627.75 in the subsequent session. The contract is currently quoting at around last week-end level of Rs. 626.

As regards new crop, a leading firm of cotton traders sums up the position at the end of September as under: "The September weather, as so often in the past, has proved to be most unpredictable. The monsoon not only lingered on right through the month, but turned once more very vigorous, bringing rather unwanted heavy and prolonged rainfall. The Berars, CP's and Madhya Pradesh received the brunt of the downpour. In the Punjab we had long spells of unfavourable winds with partly cloudy weather, in Surat/Broach low-lying areas were flooded by raging rivers. In contrast, a part of the Westerns suffered from a severe drought holding up sowings.... The above factors, coupled with a practically unchanged acreage sown, make it virtually certain that the total Indian crop 1961-62 will be smaller than last year."

The spot market at Sewri reported a broadening of mill interest in new crop cotton. Apart from Khandesh and L.147, new crop Vijay, Digvijay, Kalyan and Surti were also in demand by spinners in anticipation of the early arrival of these varieties in the market. Prices consequently tended to harden.

Moderate export demand was reported for Bengal *deshi* from overseas buyers. Local demand for this quality was also good. Consequently the quotation for Bengal *deshi* hardened.

Interest in foreign cotton centred round East African, Egyptian and Sudan cotton. Stray buying was also reported in U.S. cotton.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *deshi* (December) 640; Hubli Laxmi 940; Digvijay 970; Kalyan 850; L.147 1,080; CO2 1,300; American 1,250; Sudan XG35 1,760.

Quiet conditions prevailed in the Karachi cotton futures market during the week. Values tended to recede in thin trading. Export demand was slack. Domestic spinner interest too was subdued. Favourable crop news and the prospect of importing U.S. cotton acted as dampers. N.T.R.G. January receded from Rs. 76.75 last week-end to Rs. 76.50. The March contract was unchanged at Rs. 75.15.

Reports from Alexandria indicate that the supply position of long-staple Karnak and Menoufi cotton will be tight during the current season. As regards medium staples, the balance available, after excluding export commitments already made, will, it is said, be just sufficient to cover local consumption requirements. In view of this situation, the export prices for Dandera Ashmouni has been raised by one tallari per lb. Export prices for Karnak, Menoufi and Giza-45 have, however, been left unchanged.

Cotton futures in Liverpool drifted downwards during the week under review. Both the American and American type contracts came under selling pressure by Commission Houses and local operators. Sudan cotton contracts at Liverpool were neglected. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one-inch staple contract: October 23.85; December 24.35; March 24.85; May 25.30.

American cotton one-inch staple contract: October 24.25; December 24.70; March 25.15; May 25.65.

Sudan: November, January, March 34.35.

Fully steady conditions prevailed in the New York cotton futures market during the week. Good advices from the spot market and the higher rate of entry into the loan programme imparted strength to futures. The bale of the cotton entering the C.C.C. loan is reported to be middling and

higher grades. More cotton is reported to be reaching the central markets and trading is becoming more active.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	24-10-61	17-10-61	10-10-61
New York Spot ...	35.65	35.65	35.60
October	—	—	34.53
December	34.69	34.67	34.97
March	35.46	35.38	35.74

* * * *

TRAINING COURSE IN COTTON RESEARCH

A training course for cotton research workers, financed by the Indian Central Cotton Committee, was inaugurated at the Agricultural Research Institute, Coimbatore, on the 23rd inst. Coimbatore is one of the two centres in the country selected for this course. The other centre where similar training will be given is Sirsa in Punjab.

Candidates from Madras, Kerala, Mysore, Andhra Pradesh, Madhya Pradesh, Maharashtra and Gujarat will join the Coimbatore centre. They will study for three months plant breeding and genetics, agronomy, plant physiology, soil science, cotton breeding and other subjects.

Inaugurating the course, Dr. S. Krishnamurthy, Dean of the Agricultural Research Institute, said that research on cotton had helped the Coimbatore textile industry to grow. Some years ago they had only the 1" staple Karunganni variety capable of spinning 10 to 12 counts but now they had evolved a variety called K-6, of one-inch staple capable of spinning 34 counts.

ART SILK YARN DISTRIBUTION

(From Our Own Correspondent)

BOMBAY, *25th October*

Although the current quarter—that is, October-December 1961—commenced more than three weeks ago, it was only on Saturday the 21st inst. that the Office of the Textile Commissioner issued the trade notice regarding the distribution of indigenous art silk yarn during the quarter. In pursuance of this notice, it has been decided to issue allocation cards on the basis of the applications received and allocations made in the July-September 1961 quarter by the Indigenous Art Silk Yarn Distribution Committee, Bombay. The actual users who had not applied for the supply of indigenous art silk yarn in July-September are required to submit their applications immediately to the Joint Secretary of the Distribution Committee, along with a fee of Rs. 2 before 10th November. It has also been decided that the allocation of indigenous art silk yarn during the above quarter to art silk powerloom weaving units will be made at the rate of 0.60 kg. per loom per shift on the basis of the loom-shifts worked by the applicants during the April-June 1961 quarter.

The immediate reaction of the market to the above notification was a drop in values of indigenous art silk yarn which followed selling pressure by parties who thought that large quantities of yarn would be tendered for sale in the next few weeks. National Rayons 120 Bt. cones 1st grade fell by Re. 1.45 to Rs. 18.70 per kg. 150 Bt. cones 1st grade receded from Rs. 14.72 to Rs. 14.08. Imported art silk yarns were quiet, 120 Japan being quoted at Rs. 1,929 per 100 kg., 150 Japan at Rs. 2,150 and 120 Italy at Rs. 1,900. J.P. Bemberg yarn (40 x 1) December delivery, however, spurted by Rs. 25 to Rs. 3,525. October position picked up Rs. 10 to Rs. 3,490.

Staple fibre yarns elicited good buying inquiries induced by hopes of better fabrics export business. December contract (40 x 2) rose by Rs. 27 to Rs. 863 per case of 90.72 kg. October delivery hardened by Rs. 17 to Rs. 838. Spot Hinds gathered 9 nP to Rs. 9.90. Centurys were firm at Rs. 10.10.

Cotton yarns were dull in the absence of any new encouraging development. Today's quotations for most yarns were more or less maintained at the last week's levels. Forty counts Maduras declined by 25 nP to Rs. 31.25. Eighty counts Moderns shed a like amount to Rs. 67.25.

The following table gives the prices of rayon staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	25-10-1961	18-10-1961
	Rs.	Rs.
Art silk yarns—		
20/1 Amlan (100 kg.)—		
October	3,398.00	3,355.00
December	3,385.00	3,452.00
40 x 1 J.P.		
October	3,490.00	3,480.00
December	3,525.00	3,500.00
120 Japan (per 100 kg.)	1,929.00	1,929.00
150 Japan (per 100 kg.)	2,150.00	2,150.00
120 Italy (per 100 kg.)	1,900.00	1,900.00
Nat. Ray. 150 Bt. I	14.08	14.72
Staple fibre yarn (40 x 2)—		
October (per 90.72 kg.)	838.00	821.00
December	863.00	836.00
Hind (per kg.)	9.90	9.81
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.87	17.87
20s Gokak	23.75	23.75
30s New Great	26.75	26.75
40s Madura	31.25	31.50
50s Finley	62.87	62.87
80s Modern	67.25	67.50

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *25th October*

Oilseeds and oils ruled firm during the week under review, in distinct contrast to the easy trend noted last week. Groundnuts were particularly buoyant, despite the official denial of rumours regarding export quota and incentives for groundnut oil. Mr. D. S. Joshi, I.C.S., Additional Secretary in the Ministry of Commerce and Industry, informed the representatives of the Indian Oilseeds Committee, who met him at New Delhi on Friday, 20th inst., that the Government had no intention at present to permit exports of groundnut oil until the crop position was clear which, he added, would not be before the end of this year. He mentioned that, in regard to H.P.S. groundnuts, some quotas have already been allowed and the question of allowing further quota for seeds was under consideration. The Government's reluctance to allow exports of groundnut oil, though it disappointed the bulls, did not affect the general sentiment of the market. On the contrary, groundnut and groundnut oil staged a smart rally, thanks mainly to heavy short covering by speculators on reports of distinctly firm conditions in sarson in Delhi and the Punjab. Crop reports from Saurashtra and other parts of Gujarat showed that the yield from the standing crop would not be as high as was originally anticipated. In sympathy with groundnuts, castorseeds and linseed tended to rise. Cottonseeds put on a cheerful appearance, induced by reports of a smaller cotton crop.

Groundnut January 1962 contract jumped up from Rs. 197.62 to Rs. 203.75. Khandesh rose by Rs. 2.50 to Rs 44.75. Khandesh quality put on Re. 1.50 to Rs. 44.50. Oil ex-mill hardened by 70 nP to Rs. 18.70 and railway receipt by 40 nP to Rs. 18.20. Groundnut oil January 1962 contract strengthened by 60 nP to Rs. 16.60.

Castorseed March 1962 spurted from Rs. 158 to Rs. 160. Ready Madras picked up 50 nP to Rs. 32.75. Kanpurs improved by a like amount to Rs. 31.50. Oil B.S.S. gathered 20 nP to Rs. 14.20 and Commercial 10 nP to Rs. 13.25.

In the linseed section, the March 1962 contract increased by a rupee to Rs. 36.44. Bold ready put on 50 nP to Rs. 38.75. Linseed oil improved by 30 nP to Rs. 16.70.

Cottonseed January 1962 contract spurted by Re. 1.75 to Rs. 94.75. Both non-whites and Berars gained 15 nP to Rs. 18.90.

Sesame bold was maintained at Rs. 250 (per 250 kgs.) Sesame oil, however, shed 25 nP to Rs. 20.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	25-10-1961	19-10-1961	11-10-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	203.75	197.62	199.00
Khandesh	44.75	42.25	43.50
Khandesh quality	44.50	42.25	43.50
Oil ex-mill ready*	18.70	18.00	18.75
Railway receipts*	18.20	17.80	18.50
Oil January 1962	16.60	16.00	16.15
Castorseed			
March 1962	160.00	158.00	158.25
Ready Madras	32.75	32.25	32.50
Ready Kanpur	31.50	31.00	31.37
Oil B.S.S.†	14.20	14.00	14.20
Oil commercial†	13.25	13.15	13.20
Linseed			
March 1962	36.44	35.44	35.56
Bold ready	38.75	38.25	38.50
Oil ready†	16.70	16.40	16.75
Cottonseed			
January 1962	94.75	93.00	94.00
Niger seed	38.50	38.50	38.50
Kardi seed	22.00	22.50	22.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER RETREATS

(Messrs. Parekh and Co.)

BOMBAY, *25th October*

Malabar black pepper during the week staged a further retreat, establishing a new low level of the season at Rs. 332 per quintal for garbled and Rs. 324 for ungarbled, in sympathy with Singapore where crisis-like conditions have developed in view of the price-cutting between Sarawak and Lampong. Patchy buying policy of New York made Lampong holders to lose confidence. They are now anxious sellers. New York having refused to oblige, prices in Singapore are dropping almost daily. Black and white pepper are quoted nominally at M$117½ and M$115½, respectively.

Despite India being at the fag-end of the season, Malabar black is going down. There is very little interest in December delivery even at Rs. 312 per quintal. Calicut is seller at Rs. 325.

Malabar new crop is estimated at 27,000 tons. Normal crop is expected to be harvested as damage to the crop by flood and rain in a particular area was offset by the higher yield elsewhere.

Spot in New York slided downhill to $0.41 with grinders holding off until prices stabilised at a certain level.

New York dealers, clever as they are, refuse to bid in a declining market. One of the important dealers opines that, even though stock in the consuming countries was far from satisfactory, the traders could afford to wait for coming two months until a clearer picture of the new crop of Malabar was available and the price thereof touched the bottom.

Spot in Bombay is quoted at Rs. 185 per 50 kilos.

TEA STEADY

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *17th October*

Offerings amounted to approximately 554,000 kilograms in Sale No. 42 held today. Quality from all districts generally improved. There was useful general demand. Best highgrowns received keen inquiry and sold readily at around last rate. Lesser highgrown brokens were a strong feature and inclined dearer with quality. Their fannings were, however, irregular and slightly easier. Mediums and good mediums continued to sell well at fully firm rates. Plain and low mediums were about steady with the exception of the poorer fibrous kinds which eased. There was a good inquiry for black leaf teas which sold well. Whole leaf grades realised dearer rates with good competition in evidence. Legg-cut, C.T.C. and C.T.C. types sold at barely steady rates.

The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low mediums	3.85-4.15	4.30-4.60
Mediums	4.15-4.40	4.60-4.85
Good mediums	4.40-5.40	4.85-5.50
Nilgiri B.O.P.	5.20	7.90

The average price realised in sale No. 42 was Rs. 4.79 per kilo, as against Rs. 4.61 in the corresponding sale last year.

Dust Sale No. 42: On offer dust sale No. 42 held on Friday, 20th inst. was a total of 220,000 kilograms There was a good general demand. Highgrowns received good support and sold well with the exception of the more fibrous sorts which were sometimes easier. Mediums and good mediums realised fully firm prices and were up to 10 nP per kilo dearer. Low mediums came to a slightly irregular market but were generally firm with buyers' emphasis on the cleaner types which were sometimes dearer. Residuals sold readily. C.T.C., legg-cut and C.T.C. types came in for strong support at slightly enhanced levels.

The average price realised in dust sale No. 42 was Rs. 4.74 per kilo, as compared with Rs. 5.59 a week ago and Rs. 4.43 in the corresponding sale last year.

Export Quota: There are no buyers at present on the market and sellers are still nominally quoted at 1½ nP per kilo.

Colombo: There was strong general demand although Dimbulas were slightly easier. Uvas were irregular with quality. Best mediums declined by 5 cents but the plainer kinds were firm. Lowgrowns advanced by ½ cents. Fannings generally followed a slightly lower trend.

London: North Indian and other growths: There was good general demand for all descriptions except poorest. Prices were generally firm to dearer. Plain B.P. is quoted at 3-4½d.

Ceylon and South Indians: In Tuesday's sale 11,869 packages were offered of which 4,907 were South Indian. The Ceylon teas on offer met strong competition with prices fully firm to dearer. Better liquoring mediums and highgrowns were often 1d. to 2d. dearer. Nearly all South Indian descriptions were fully firm but plainer sorts were irregular and often easier.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Sale No. 43*: 511,000 kilograms. Useful demand particularly for brokens and whole leaf. Low mediums and mediums firm. Good mediums easier. Highgrowns irregular with quality; plain and stalky descriptions easier."

PULSES DEPRESSED

(From Our Own Correspondent)

HAPUR, *23rd October*

Steady to firm conditions were witnessed in the foodgrains market during the week on reports of heavy losses to crops due to floods in east U.P., Bihar and M.P. Wheat here continued to rule steady to be quoted on Monday at Rs. 15.25 a maund for average quality and upto Rs. 16.50 for better farm produce. Daily arrivals were about 100 maunds average and it was gathered that a part of the wheat stocks supplied to cultivators for seed by co-operative units was being diverted to the open market. Local wheat stock with trade is put at 25,000 maunds. Sowings of *rabi* grains are being done and, thanks to good sunny weather, it would be possible now to sow *rabi* crops on an increased scale in time.

Rice ruled quiet, as the new paddy reaching the market was being lifted at Rs. 12 to Rs. 13 per maund. Demand for rice was slack and old stocks were poor around 4,000 maunds. Week-end prices were:—*Maipuri sela* Rs. 20, *gadda kutcha* new Rs. 21, *ramajwayan sela* Rs. 21, *raimunia sela* Rs. 22, *basmati sela* Rs. 28, superior Rs. 31 to Rs. 34 per maund.

Gram recorded modest gains to Rs. 14 to Rs. 14.25 a maund, thanks to good demand for seed purposes. Arrivals from Punjab still continued in small quantity and local gram stock was put at 34,000 maunds. Barley improved fractionally to Rs. 11 to Rs. 11.25 per maund and *bejhar*, too, was quoted higher at Rs. 11 a maund for inferior quality and at Rs. 12 for *moongia* variety. New maize reaching here from Rampur rural areas at an average of one to two truck-loads and, as consumer demand was fairly good, prices ruled steady at Rs. 12 to Rs. 12.50 per maund. *Methi* was in demand from Rajasthan and Calcutta side and, as stocks were poor, prices were steadier at Rs. 28 a maund. New *bajra* was not reaching the market as yet and old stuff was quoted Rs. 15 per maund. Other sections were stagnant at:—Oats Rs. 12, *juwar* Rs. 11, *guwar* Rs. 14 per maund.

Among pulses, peas and *arhar* were quietly depressed in the week-end, as demand was slack and local stocks were still heavy. Small offtake was in the form of *dal* to the flood-affected areas of east U.P. and Bihar. *Urd* was depressed, thanks to fresh arrivals, while other sections were almost stationary. Rates (in rupees per maund) were:—Peas *dara* 11.50 to 11.62; farm 12 to 12.50; peas *dal* 12.75; *arhar* 12.75 to 13.50; *arhar dal* 16.25; *urd* 22 to 23; *urd dal* 25 to 26; *moong* 16 to 18; *moong dal* 19 to 21; *masoor* 13 to 16; *massor dal* 16.25; *moth* 16, *moth dal* 19.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *23rd October*

Sugar ruled quiet towards the week-end, despite brisk festival demand locally. Demand from the consuming areas, which was very brisk just after decontrol of the commodity, has now subsided a little as consignments against commitments had now reached the destinations. Bold crystal was, however, being quoted at a premium. Factories were now preparing to start their season and, although some of them would begin crushing on 15th November, most of them would function later as production earlier would be uneconomical. Week-end prices here were:—Rs. 107.50 per bag in open market; retail Re. 1 per *seer*; mill delivery Simbhauli (D29) Rs. 106; (E29) Rs. 105.50; Bulandshar (D29) Rs. 105 per bag.

Easier trend was witnessed in the Muzaffarnagar sugar market during the week. Prices which had advanced appreciably after decontrol eased by 15 nP to 47 nP per maund. Most of the factories were facing difficulty of wagon supply and despatches were hampered on that account. Most of the despatches were being arranged, by roads. Week-end prices (in rupees per maund) were:—A29 Deoband 40.72; Iqbalpur 40.22; B29 Khatauli 39.52; Shamli 39.50; C29 Deoband 38.84; Modinagar 38.47; Dhampur 37.75; D29 Amroah 37.37; Bijnore 37.

Khandsari ruled quietly steady, as demand was fairly good locally as well as from other centres. *Khandsari* stocks were now poor and, in the Muzaffarnagar market, they were put at 4,000 maunds, as against 40,000 maunds on the corresponding date last year. Production would begin early in December and latest prices were:—Galawat Rs. 25 to Rs. 29; non-crystal Rs. 31 to Rs. 35.75; crystal Rs. 33 to Rs. 36 per maund.

New *gur* arrivals were fast mounting and were 1,400 maunds today. But prices were steady on good festival demand. Most of the crushers who had started functioning were now manufacturing *gur* and would revert to *khandsari* after some time and were purchasing cane at 90 nP per maund, as against the statutory price of Re. 1.44 to be paid by factories. Shortage of fodder has compelled the cultivator to sell cane at such low prices. Further, the land vacated from cane now would be available for sowings of peas. Week-end prices here were:—New *gur* best Rs. 20.50; medium Rs. 18 to Rs. 19.50; old Rs. 15 to Rs. 17; wet Rs. 13; *shakker* old Rs. 19; new Rs. 23 per maund.

Demand for old *gur* was poor in the Muzaffarnagar market during the week. Some old stuff was being despatched to some centres where it was being reprocessed in the form of new *gur* and week-end prices were:—*Chaku* old Rs. 13 to Rs. 18 and *shakker* Rs. 17 to Rs. 23, according to quality. Some new arrivals have begun at an average of 250 maunds daily which were being lifted for Rajasthan and other destinations. As cane growers were busy in *rabi* sowings, arrivals of heavy quantity of new *gur* would start later.

Gur futures recorded a sharp advance to be quoted near the best level of session today at Rs. 12.74, as against the week's opening of Rs. 12.20 which was the lowest level of the week and the highest touched on Saturday was Rs. 12.77. The trend is still bullish.

TRUCKING INDUSTRY IN U.S.A.

When the motor truck first made its appearance in the United States nearly 60 years ago, some people labelled the clumsy and noisy contraption an unrealistic invention that would soon disappear. But a small group of imaginative men, believing it would some day become America's most flexible transport method, refused to abandon the vehicle and doggedly worked to improve it. The intervening years have justified their faith, as the truck has steadily grown in importance in the carrier field. Today it is a mainspring of the U.S. economy. Almost everything Americans eat, wear, or use is transported at least part of its journey from its point of origin by trucks. There are at least 25,000 communities in the U.S. which are not located on a railroad or waterway. Yet these towns suffer no deprivation because of the steady flow of goods which trucks bring them every day of the year.

In 1904, only 700 trucks were on the highways in America. Today there are some 11,500,000 in regulated inter-State trucking, not including more than 550,000 owned by the Government nor the thousands more in use in cities and on farms. The growth of the national highway system in the 1920's and the substitution of pneumatic tyres for solid rubber, enabling vehicles to travel farther, faster and carry heavier loads, gave trucking its first important stimulus. As trucks drew these communities closer together, a new pattern of intercity and inter-State freight movement began to develop. Merchants and manufacturers found that fast, frequent dependable truck service could reduce the need for large stocks of goods and material thus reducing the amount of capital needed to operate. The principle of separating the power unit of a truck from the trailer unit which carried the load enabled the truck or power unit to switch from one trailer load to another in a matter of seconds, thus proving to be a tremendous boost to the economical delivery of goods. The power units could be used 24 hours a day, while their trailers stood idle, being loaded or unloaded.

Currently, several hundred U.S. companies are producing thousands of special types of motor transports for practically every type of freight imaginable. Many of these trucks are designed to perform extraordinary services. A bookmobile is a carrier of a travelling library which provides literature for rural areas. Other transports carry dental clinics, art exhibits, grocery stores, and X-ray laboratories. The Red Cross uses trucks for the collection of blood donations, while the U.S. Armed Forces finds them valuable in recruiting. Moving vans haul the household goods of people moving from coast to coast. Then, of course, there is the fire engine, the post office vehicle which delivers mail and parcel post, the ambulance which rescues the ill or injured, the maintenance truck to repair communications and electric power, and the utility conveyance to wash streets in the summer and clear them of snow in the winter.

The owners of one-third of all farms in the United States depend on trucks to transfer crops of one and one half tons or less. On many small farms a vehicle, called a beach wagon, frequently serves as both truck and pleasure vehicle. The big farm operator with his trucks can transfer his products to market quickly and cheaply. Before the advent of the truck, it was a time-consuming journey for him to travel by horse and wagon to town and return even if the distance was relatively short. Frequently his produce lost its freshness during the trip. Taking his livestock to market was even more tedious as he had to herd it along the road for hours. The cows, hogs or sheep would lose weight during the tiresome journey and command a lower selling price at the market place. Besides carrying the farmer's products and livestock to market, the truck today serves a major purpose on the farm itself, transporting cattle feed, fertilisers, fruit, chicken, hay, grain and machinery and farm labourers from distant fields.

Trucks used for projects off the highways usually are of a heavier variety because of the formidable tasks they have to undertake. Some of these transports may have six or more driving wheels, up to 16 forward driving speeds and four reverse speeds and are powered with either Diesel or gasoline engines. These carriers, used in construction projects and at mines, lumber camps and industrial plants, sometimes haul cargoes of more than 200 tons over rugged terrain.

The U.S. trucking industry employs more than seven million persons, buys 14.5 billion gallons of motor fuel each year while spending about $3.9 billion for new equipment, parts and accessories. In addition to its role as a major consumer of supplies and services, trucking pays $2.8 billion annually in taxes for highway use.

Growth in the industry is expected to continue if only for the reason that the overall U.S. transportation demands will almost certainly continue to expand. Population growth and increasing standards of living should in themselves assure this. Also the new 41,000-mile Inter-State Highway System, connecting 90 per cent of all cities with over 50,000 population, should increase trucking potentialities. Some authorities predict that, by 1975, there will be 20 million trucks streaming along the roads and highways in the United States.

BANKING

(Concluded from page 817)

But if this is an ascending spiral, one-sided abrogation and bad faith breeds a descending one; new and desperately needed capital investment is "scared off" and even that already invested seeks to cut activity or escape altogether. The stability and development, freedom and political independence of the new nation can be permanently retarded.

A man's word must be his bond. So must the word of a company, or a nation. Trust to the faithful performance to the letter and spirit of a contract freely entered by both sides—and from which both benefit—has for centuries been, as it is now, one of the indispensable foundations of a civilisation founded upon law.

The most opulent

crepe of the season

...the one with Amcel acetate

The advantages of Amcel's Acetate for dress fabrics such as satins and brocades are already well-known. Amcel's Acetate also makes the finest crepe. It can be finished in many luxurious ways and takes glowing colours.

Amcel's Acetate filament yarns are spun to meet your specific needs for each type of cloth. There is an Amcel yarn for luxuriously heavy to light satins, for all types of taffetas, lightweight to heavy faille, for tricot jerseys, sheer cloths, brocades or novelties such as suitings of sharkskin or tweed effect.

DUNCAN BROTHERS & CO., LTD. are pleased to announce their appointment by AMCEL CO., INC. as the exclusive sales agents in India for all Amcel products. Messrs. Mittersain Rupchand, 336 Kalbadevi Road, Bombay are sub-agents in the states of Maharashtra and Gujerat and Messrs. Sardesai Brothers Ltd., M-106 Radial Road, Connaught Place, New Delhi-1, sub-agents elsewhere in India.

*AMCEL is a trademark.

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2639 BOMBAY, 4th NOVEMBER 1961 PRICE Rs. 2

THE STRONG WANTS PROTECTION AGAINST THE WEAK

THE approach of the developed countries to the problem of exports of cotton goods by underdeveloped countries is disquieting. It looks as though the former group does not want this trade to grow any more. This is clear from the decisions taken at the sixteen-nation Geneva meeting held under the auspices of the G.A.T.T. According to the communique issued at the conclusion of this meeting last week-end, a sub-committee has been appointed to work out details of a long-term agreement based on the objectives of short-term arrangements made in July last. The sub-committee is expected to meet in December and prepare its report in time for consideration by the sixteen-nation conference in January next. Broadly speaking, these objectives are two: (1) the underdeveloped countries exporting cotton textiles should agree to limit their exports to the 1961 level, if requested by the importing countries (belonging to the developed group), in order to prevent a disruption of the market for their domestic textile industry; and (2) the importing countries should provide opportunities for a progressive improvement in the offtake of textiles from the exporting countries. The first of these two principles, it will be noted, is more specific than the second which is delightfully vague. A long-term agreement based on principles agreed to for a stop-gap arrangement is bound to work to the detriment of underdeveloped countries, which have been placed under the nomenclature "low-cost producers." In the absence of full details of the proceedings of the Geneva meeting, one does not know what safeguards have been sought by the Indian delegation. Nor is the period covered by the term "long-term" known.

Reports from Geneva speak of a conflict between the U.S. and the U.K. It would appear that the U.S. holds the view that the basis for the short-term understanding is perfectly suitable for a long-term agreement, too, while the U.K. does not seem to feel that way. Similarly, while the U.K. favours bilateral arrangements on the lines of understanding it has reached with India, Pakistan and Hong Kong, the U.S. wants a multilateral understanding. Again, the U.K., it is said, wants a specific provision to safeguard the interests of Hong Kong, but the U.S. is not willing for such an arrangement. From all this, it is not clear which of these two developed countries wishes to be more restrictive. Pronouncements by the U.S. spokesmen in the recent past suggested that the American Administration was keen on not choking the growth of exports of cotton textiles by the low-cost countries. But that is only a statement of intention, whereas Britain has actually implemented that principle in revising its agreement with Hong Kong. As readers are aware, Hong Kong's share in the British textile market was recently enhanced. Whether this revision has been to the full satisfaction of the parties concerned is, however, another question. The fact that the U.K. specially went out of its way to support Hong Kong is not without significance. In saying this we are not unaware of the fact that, as Hong Kong is a British colony, without an independent status, Britain has to speak for this small settlement, which is smaller than even Bombay City. For its size and population, Hong Kong is already having an undeservedly big slice of the world textile market. It will surely be too much to place it on the same footing as India or Pakistan. Being a British colony, Britain may feel justified in doing so, but it cannot expect the U.S. also to extend such treatment to Hong Kong. It is to be hoped that the U.S. will not yield to British pressure in this respect. If there is to be a rationing of the cotton textile markets in Europe and America among the low-cost producers, then let it be done in an equitable manner, having regard, among other things, to the size and needs of such producers.

This is undoubtedly an unpleasant task and is bound to lead to a lot of heart-burning among the countries affected. The only way to stop bad blood spreading further in international economic relations is to drop the move. The argument that imports from low-cost producers is causing disruption of markets in the developed countries is untenable, besides being inconsistent with the principles of multilateral trade in which the Western countries are, according to them, great believers. On Wednesday last, this thesis was very ably argued by Mr. B. K. Nehru, India's Ambassador to the U.S. Speaking at the National Foreign Trade Convention in New York, Mr. Nehru contended that the argument of cheap labour used against imports of semi-processed or manufactured products from developing countries was "spurious and pernicious." The developed countries seek to protect their domestic industries against imports of low-cost countries on the ground that workers in the latter countries are underpaid and, by implication, exploited. But they do not mind buying other goods from these cheap-labour countries when it suits them. This is a sort of double standards and the point was well brought out by Mr. Nehru in these words:

> "There is immediate outcry for imposition of prohibiting tariffs, quotas and what not on the ground that these are the products of cheap labour. It is suppos

profits and paid larger dividends. So even the investors in textile industry have not fared as badly as is often made out by the spokesmen of British cotton industry. It is needless to add that the views expressed by the aforesaid British authority on the consumption prospects in Britain hold good for most of the developed countries in the West, including the U.S. There is thus no justification for the developed countries' move to place restrictions on imports of textiles from the underdeveloped countries. It is gratifying to find that this view is shared by no less an economic authority than Sir Roy Harrod. In his address to Lancashire mill-owners last week, he said that, if imports of textiles into Britain were at all to be restricted, the axe should be applied to cotton textiles from advanced countries, especially those in Europe and America, rather than to imports from under-developed countries which, as a matter of simple ethics, deserved to be helped in every way possible.

NATIONAL INCOME ESTIMATES

"NATIONAL Income is a subject in which there is still a great deal of obscurity." This admission was made by Dr. V. K. R. V. Rao, the renowned author of an elaborate study of National Income for the year 1931-32, at the Third Indian Conference on Research in National Income which began its session on the 1st inst. at Bombay. Dr. Rao himself, it may be remembered, had improved the methodology of the earlier estimates so as to put the national income studies on a more scientific basis. The two reports of the National Income Committee (*set up by the Government of India in 1949*), in which estimates of national income were made for 1948-49 and 1950-51, respectively, represented another major effort in the process of refinement of estimation procedures. Although the Committee was aware of the statistical gaps in making the estimates, it did succeed in laying the foundation for the national income series which the Central Statistical Organisation has constructed and maintained up till now. This series has suffered from a serious limitation, to which Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, has referred in his welcome address to the Conference. The limitation, according to him, is that the estimates of national income in the present series "are not very reliable for sectors other than agriculture, mining and manufacturing, and Central and State Governments," for the available data on the basis of which estimates of income are made for the other sectors are regrettably fragmentary. Dr. N. S. R. Sastry, Statistical Adviser to the Reserve Bank of India, has also admitted in his presidential address to the Conference that the available data in respect of the unorganised small-scale and cottage industries and service sectors leave much to be desired, for the data relating to both the number of persons employed and their average income are very inadequate and the recent Census (1961) has revealed that the earlier estimates based on certain assumptions are wide of the mark.

The Central Statistical Organisation has, therefore, proposed for discussion at the Conference Seminar a revised series of National *Income Estimates* for 1955-56 to 1959-60 in the light of data collected especially from 16 rounds of the National Sample Survey. The 236-page monograph, in which the C.S.O.'s proposals are contained, represents a painstaking and praiseworthy enterprise on the part of its research workers. Their awareness of the imperfections of national income estimation and their effort to improve the methods of such estimation are amply reflected in the pages of what is largely a technical monograph. It would appear that the process of improving the methodology of national income estimation is a continuing one and that, as of today, there can be no finality about it in the context of several dark corners in our statistical knowledge of the country's economy. This very imperfection in national income estimation, as Mr. S. K. Wankhede, Finance Minister of the Maharashtra Government, pertinently remarked in his inaugural address to the Conference, is almost a necessary condition for the development of this branch of statistical science. The revised series, given in comparison with the conventional series in a table in the next column, is itself an index of the scientific courage which has inspired the C.S.O. in its effort to correct the imperfect estimates of the conventional series to the maximum extent possible. The downward revision of the national income aggregates (in Rs. abja=100 crores) at current prices, as compared with the aggregates in the conventional series, may be noted here:

Year	Conventional series	Revised series
1955-56	99.8	92.0
1956-57	113.1	106.9
1957-58	113.9	107.6
1958-59	126.0	121.1
1959-60	128.4	124.3

The major revisions incorporated in the new series would need to be briefly mentioned here. Firstly, the estimates of working force have been revised in the light of additional employment generated by the development plans. This revision has placed the total working force at 149.1 million in 1955-56 and 156.6 million in 1959-60, whereas, under the conventional series, the estimates for the respective years were higher at 154.8 million and 165.1 million. The inference seems to be that additional employment had not materialised in the first four years of the second Plan period to the extent that had been hoped for. Secondly, the basis of netting (allowance for cost of production) has been improved in respect of agriculture and mining. Thirdly, the estimates in respect of small enterprises have been improved by separately estimating for the urban and rural areas. Fourthly, the gross output estimates of forestry and fishery, mining and factory establishments and certain agricultural products are based on the latest and more reliable data. Fifthly, the estimates relating to chit funds, nidhis and other financial intermediaries included in the "banks and insurance" sector and the estimates of gross and net rental in the "house property" sector are based on fresh data specially collected by the National Income Unit of the C.S.O. And, lastly, the estimates relating to "other commerce and transport" and "professions and liberal arts" sectors have been based on revised estimates of working force and average earnings per head, with much wider coverage and duly weighted for urban-rural differentials. In spite of all these improvements in the revised series, it is admitted by the C.S.O. that the sectors of small enterprises, construction, commerce and transport, professions (including domestic service) and house property still remain comparatively weak links in the estimates of national income. The present estimates, it is said, may again have to be revised in the light of additional data that will be made available by the N.S.S. and administrative statistics, as also by the detailed industrial classification of working force as revealed by the 1961 Census.

Another revision of the national income estimates may be absolutely necessary in the light of such fresh data that will soon be available. But the public has a right to expect a degree of finality about the estimates over the third Plan period for more than one purpose. One of them will be to obtain a more dependable measure of the country's economic growth at least over the third Plan period. Here the C.S.O. has done well to construct a new real output series on the basis of a more recent year, namely, 1958-59, instead of continuing the conventional net output series at constant prices of 1948-49. The selection of this year has been justified on three grounds: first, it was a comparatively normal year; secondly, it is the latest year for which maximum data are now available; and, thirdly, it is so close to the end of the second Plan as to make the results more useful for planning purposes. Since a real output series at constant prices "isolates the *year-to-year changes* in the net volume of production of the country from the price fluctuations and thus helps to assess the economic growth of the country over a period of time," it will be patently necessary to maintain the new series undisturbed for at least the next 15 years. It is to be hoped that the national income estimates for 1960-61 will incorporate all the necessary additional revisions. That year being the last year of the second Plan, the national income for that year at constant prices of 1958-59 will serve as a basis of comparison for the country's economic performance over the third and subsequent Plan periods.

Another purpose that will be served by a degree of finality about national income estimates, if achieved in a couple of years from now, is the scope that will then be available for estimating Statewise incomes in a more dependable manner. When the C.S.O's national income estimates are more fully revised and thus freed from their erstwhile limitations, it would, perhaps, be worthwhile to adopt the basis of certain State indicators, evolved by Prof. K. N. Raj of the Delhi School of Economics, and Mr. Ravi Varma of the Department of Statistics of the Reserve Bank, to allocate national income to various States. One difficulty visualised by Mr. H. V. R. Iengar, in this connection, is that the estimates of State incomes so derived will still indicate only the output *originating* in the States and not the incomes *accruing* to the residents of the States. It may be that inter-State comparisons, based on such breakdown estimates, of economic growth, in general, and industrial growth, in particular, will present a distorted picture. But the distortion that is feared will probably turn out to be an exaggeration, for in every State there are some persons to whom incomes *accrue* from another State. These income accruals may be taken to be mutually cancelled out. Even if sample inquiries reveal some disparities in this respect, it would not be difficult to make suitable statistical adjustments. In the same way, it should be possible to perfect further the State indicators adopted for allocation of national income to various States. As statistical experts in India are all the time perfecting their tools of inquiry, norms, yardsticks, indicators, formulæ and the like, they can be depended upon to provide the best possible estimates of State incomes.

Any fear that separate estimates of State incomes might provoke further disintegrating tendencies in the form of excessive demands for development funds by the poorer States would be to ignore the realities of the social and political situation. After all, India is a Union of States and these, too, are generally unilingual now. They will not be far wrong in expecting reasonably equal treatment at least in the matter of future development. If they are not to base their demands for development on imperfect estimates of State incomes by their own statistical bureaux or by individual statisticians, the only sensible course would be to get the Central Statistical Organisation to expedite its work of estimating total income and *per capita* income in each State in the light of its fully revised estimates of national income. Whether the C.S.C. adopts, for this purpose, the basis of allocation evolved by Prof. K. N. Raj and Mr. Ravi Varma or some other improved basis of its own, is a matter of detail. What is urgently necessary is the removal of chaos and disorder which have been caused by independent and unco-ordinated State estimates. Dependable estimation of State incomes on a uniform basis is a national question. It would need to be solved as such in the interests of truth, justice and national integration.

MARKET GOSSIP

F.M.C.'s Error Exposed

"ACT first, think later." This was the policy of the Forward Markets Commission a few months ago, when it was in a great hurry to confer freedom on speculators in commodities. The Commission is now paying a price for it. In July last, this journal had questioned the wisdom of the Commission in deciding to allow unlimited futures trading in oils and oilseeds in the current crop without even placing some restraints on speculation. At that time, no one knew what would be the size of the crop; even today, when new crop seeds have started moving, there are conflicting reports. Some say that groundnut crop, in particular, is good. Others aver that it is not as large as is made out. Basically, the trend of the market in June-July itself was still in favour of sellers and the prices in India were well above the world parity. The cost of living in the country continued to stay high, with the rise in prices of edible oils having made a sizable contribution to the inflationary trend. It was quite apparent from the statistical position of oils and seeds that, even if the current year's crop were a bumper one, it would not be sufficient to bring any substantial relief to consumers or lower the prices to levels that will be in parity with world prices. Commonsense suggested that there was no need for permitting futures trading and that too so early in the season. But the Commission seemed to have allowed itself to be influenced more by considerations of employment in futures markets than by the interests of the general body of consumers and foreign exchange requirements of the country. It could have at least taken the precaution of retaining the handicaps on speculators (such as special margins and ceiling on hedge contract rates) and told the traders concerned that it would sympathetically consider their removal after a clear picture of the size of the new crop was available. By not taking these precautions, it had ignored the common saying that "prevention is better than cure" and was content with giving a warning to the operators that it would not hesitate to resort to stringent measures should their behaviour necessitate officials' intervention. Surely, the Commission has had sufficient experience to realise that such warnings invariably fail to work.

It is, however, a matter for some consolation that the Commission has at least quickly reacted to the attempts of some speculators to boost prices and taken stern action. The suspension of all trading in the market this week, which has been extended, at the time of writing, by another two days till and inclusive of the 4th inst., reflects the Commission's determination to make amends for its wrong judgment in the closing days of June last. One may ask as to why the spot markets, too, should be penalised. But it is the outcome of earlier mistake, for which the authorities of forward markets also are responsible, in that they had failed to give correct advice to the Commission. Haste always leads to waste.

What should the Commission do now? It can re-impose the margins, but it cannot place a ceiling on the rate for the hedge contract, as it will not be in keeping with the rules of the game. It can, however, cut off all the outstanding transactions at the rate prevailing on the day of its intervention and suspend futures trading for the rest of the season. This, in our opinion, would be the right thing to do, as the statistical position of the commodity is not comfortable enough to permit smooth functioning of hedge trading. In the prevailing political climate in the country, this advice, however, will fall on deaf ears. Ironically enough, in this country, with an ultra socialist Government in power, speculators enjoy more freedom (and make huge profits) than genuine businessmen.

Industrial Estates

Indian planners have adopted the institutional technique of industrial estates as a means to promote small-scale industries. As against an investment of Rs. 11.6 crores on industrial estates in the second Plan, it is proposed to spend as much as Rs. 30.2 crores in the third Plan. Seventy-five industrial estates have already started functioning; another forty-five are expected to be completed shortly. The third Plan envisages the establishment of as many as 300 large and medium-sized industrial estates and 500-1,000 small rural industrial estates in the various parts of the country. In this context, it is only appropriate that the E.C.A.F.E. should have chosen to hold a seminar on industrial estates in this country. The eleven-day seminar, which was inaugurated by Mr. Manubhai Shah on the 1st inst. at Madras, seeks to bring together industrial planners, administrators and specialists from this region and elsewhere and enable them to compare their experiences on the planning and operation of industrial estates.

The developing countries of Asia are bound to welcome any experiment in industrialisation which offers scope for large employment. No wonder then that industrial estates have evoked great interest in them. It is, however, to be hoped that, in their enthusiasm for small industries both as a means of providing gainful employment and of dispersal of economic power, our planners and administrators will not develop a closed mind. On the contrary, they should be receptive to constructive criticism and be ready to rectify the defects in their schemes.

There was such a criticism from at least one delegate to the seminar. An Italian expert had the courage of conviction to assert that small industrial estates of the type in India were condemned to stagnation from the outset. In a paper submitted by him to the seminar, Mr. Alessandro Molinari of the Association for the Development of Industry in Southern Italy, cast doubts on the efficacy of industrialisation policies which relied too heavily on small-scale industries of the type established in our industrial estates. He sought to expose some of the glaring defects in them. In the first place, the development of decentralised small estates, he pointed out, would call for the creation of "an extensive network of imposing economic and technical assistance facilities." This constituted a heavy drain on the limited reserves of experts and technicians in an underdeveloped country. He held the view that, even if, through such enormous effort and expenditure of resources, the minute nuclei of small-scale industries were kept in existence and their productivity increased, "the contribution to industrialisation and its acceleration in the countries adopting such policies will be very slight."

The relatively high cost of establishing and maintaining small industrial estates is another factor which is usually overlooked. Mr. Molinari pointed out that, in estates intended for occupation by small-scale industries, a government agency must establish a large number of infra-structure facilities which are essentially indivisible and must furnish connections with large-scale infra-structure facilities. Such facilities would, however, be out of proportion to the dimension of small estates of the Indian type. Consequently, the costs of infra-structure facilities per unit product for a small estate, he averred, was much greater than they would be for "large estates," in which there was scope for mass production. There seems to be a lot of force in this analysis of the Italian expert. Even the Planning Commission concedes that the experiment in this country has not been an unmixed blessing. It says in the third Plan: "While many of these estates have been successful in their main aim of providing suitable factory accommodation and other conditions favourable to working efficiency, *expenditure on some of them has been on the high side and the new employment created is not yet commensurate with the expenditure incurred.*" (Italics ours.) It would, therefore, be useful, if the working of these estates were scrutinised and evaluated by a team of experts. There would be no harm in securing the services of some competent foreigners for this purpose. The earlier such a study is made the better.

Unutilised Industrial Capacities

At the meeting of the Central Advisory Council of Industries last week-end, industrial spokesmen raised the question of coal, power and transport shortages not without reason, for they knew only too well where the shoe was pinching. That the existing industrial capacities could not be more fully utilised in view of these shortages was the burden of their speeches. But some of the Ministers seemed to think that, because industrial production had increased by 8.5 per cent in the first half of 1961, as compared with the corresponding period of 1960, all was well in God's world. The point was missed that industrial production could easily have been greater still, if the critical shortages in coal, power, transport, steel and other raw materials had not been there to prevent fuller utilisation of capacities. Even the proverbially short public memory could not have possibly forgotten the crucial shortages in the last one year. The slower tempo of coal production in the public sector collieries, it may be recalled, was first responsible for an overall physical shortage of coal. This was subsequently accentuated by the inadequacy of railway transport facilities. Even the reduced coal supplies, especially to iron and steel works, were not of the requisite coking quality. These, in turn, slowed down the tempo of iron and steel production in both the sectors to levels much below their installed capacities. The consequent reduced supplies of pig iron to foundries and engineering industries and of steel billets to the re-rolling industries led to a drastic underutilisation of capacities in these industries; this was admitted as recently as in September last by Sardar Swaran Singh, Minister for Steel, Mines and Fuel. How the power shortage, especially in the eastern region, had hit the engineering and other industries and slowed down their production was referred to in these columns some months back. The failure of maintenance imports to catch up with the needs of industry for fuller utilisation of capacities has also been there. It would not be difficult to establish the present under-utilisation of capacities in a wide range of industries from the statistics provided by the Commerce and Industry Ministry itself to the Central Advisory Council of Industries. Ministerial spokesmen, especially Mr. Manubhai Shah, who dismissed the industry's complaints in a cavalier fashion, must think twice before they pooh-pooh the undoubted difficulties of different industries.

Cement Prices

The long-awaited Government announcement regarding the retention price of cement has at last been made. The Government published on 31st October its decisions on the recommendations of the Tariff Commission in respect of the fair prices payable to producers of cement. The Government has made two major departures from the recommendations of the Commission. They are (1) it has rejected the Commission's suggestion for continuance of the system of differential ex-works prices and has instead preferred a uniform ex-works price of Rs. 69.50 per tonne for naked

FORUM OF FREE ENTERPRISE

INDIA'S planning, like its Constitution, seems to be an amalgam fashioned in the light of lessons, both positive and negative, drawn from the experiences of several countries—communist and non-communist. It is still in the process of evolution into what may be called "Indian-style planning." At one time, it was feared that Indian planning might become wholly Soviet-oriented, that co-operativisation of agriculture might proceed on Chinese lines and end up in collectivisation and that a growing public sector might swallow up the private sector. Fortunately these fears have been partly belied by events so far. The testimony of Prof. J. K. Galbraith that India is one of the least planned economies in the world is not without truth. But the danger of Indian planning sliding into a totalitarian pattern at some stage or other is not inconceivable. So long as there is such a conceivable danger, there will be need for somebody or some organisation to warn the country of its possibility so that it may not become a *fait accompli*. If correction by exaggeration is needed in any field, it is in that of planning where the State bureaucracy has the propensity to concentrate more and more power in its own hands. If private capitalism, which can be regulated for public good within reasonable limits, is not to be entirely superseded by State capitalism over which there can be no effective control even by Parliament, an organisation like the Forum of Free Enterprise has a certain restraining role to play. That this role has also a positive aspect in the sense of reforming private capitalism on humanitarian lines is evident from the speech delivered by Mr. A. D. Shroff, President, Forum of Free Enterprise, at the annual general meeting of the Forum on 25th October 1961, at Bombay. In the following passage is to be found the quintessence of Mr. Shroff's approach:

"Private enterprise should not merely be content to bring about realistic planning by educating public opinion. It must also help the country to develop in many other ways. It must assume leadership in several spheres of life, thus taking them out of the mischief of politics, which is intruding into all spheres. Private enterprise, through the various chambers of commerce and other organisations, should resort to social service and particularly take a keen interest in education and civic life. Education and civic amenities have so far been left to professional politicians. The result has been a rapid deterioration in educational standards and dearth of civic amenities in every city of the country. Especially, the experimentations in the educational field by overnight authorities in the subject are promoting a set of students which would be unable to fit itself in the rapidly changing economic context....

"It is with pride that one can recognise the wind of change in this direction. The Indian Chamber of Commerce in Calcutta has undertaken a project to help the displaced persons at Dandakaranya and is promoting a scheme for Youth Clubs in Calcutta. The Indian Merchant's Chamber in Bombay has established an economic research unit. The Andhra Chamber of Commerce in Madras has started a private Employment Exchange. A number of individual firms are doing excellent work in the field of social service. For instance, a major cement producer in the country has undertaken rural uplift work in areas around its factories. A major industrial group in the country earned credit for its flood relief work at Poona. A leading firm, of Poona has set up a Foundation to give technical and legal assistance to new entrepreneurs:...

"The signs are thus hopeful, and we can be sure that private enterprise is ready to meet the challenge which faces it. It is the challenge of developing the country rapidly and on a large-scale to give the vast masses of the people a decent standard of living; to create growth potential and an atmosphere of equal opportunities for all; and to give them a satisfying life of creative fulfilment both as producers and consumers and, above all, as citizens of a democracy."

If the Forum of Free Enterprise can be a force for restraining bureaucratic inroads into the economy and securing a clearer demarcation of the fields open to the public sector and the private sector, it can also be a force for educating business opinion on the welfare and humanitarian responsibilities of industrial and commercial houses in a country of glaring disparities of income and wealth. That the various humanitarian foundations in the United States are sustained by the generous endowments and contributions of business houses is a lesson that this country can usefully learn from the United States. Charitableness and compassion are not only good in themselves but can also be a matter of enlightened self-interest [illegible]

EQUITIES FIRM

MORE GAINS THAN LOSSES

(From Our Own Correspondents)

BOMBAY, *2nd November*

THE share market displayed a slightly firmer trend during the major part of the week under review. There was, of course, a mild recession on Monday and Tuesday, but this was mainly due to profit-taking at higher levels and not to any bearish factors, although some operators might have been influenced by the Finance Minister's broadcast talk on 30th October reiterating the need for higher taxation and restraints on dividend distribution. Over the week, the closing rates of a number of scrips show gains, which are quite marked in some cases.

Resuming on a promising note, equities staged a modest rally on Friday 27th October, thanks to short-covering and scattered support. Hindustan Motors, in particular, presented a bright feature, following the news that the strike at the Company's factory at Calcutta was over. On Saturday, the recovery gathered further momentum, when a number of prominent scrips in both cash and forward lists surged ahead. The buoyancy was engendered by brighter prospects of U.S. investments in India, as revealed by the discussions at New Delhi between the delegation of American businessmen and representatives of Indian industrialists. After the mild recession on the following two days, the firm trend was, once again, resumed yesterday, following a revival of support to a few leading shares like T.E.L.Cos, Century, National Rayon, Khatau. Cement shares, too, received selective support, though the market was not fully satisfied with the ex-factory price increases granted by the Government of India. Today also the market presented a cheerful appearance, with the closing tone distinctly encouraging. Hindustan Motors, however, were easier, as the earlier report about the workers' strike turned out to be incorrect.

In the steel section, Tata Steels opened firm at Rs. 145.50 on Friday, as against the previous close of Rs. 145.25, and rallied on Saturday to touch a high of Rs. 146.75. Profit-taking at this level brought down the value and the scrip receded to Rs. 144.75 yesterday, before finishing higher at Rs. 146.25 today. Over the week, the shares gained a rupee. Indian Irons began the week at Rs. 24.48, as against the closing rate of Rs. 24.28 last week and moved both ways within a narrow range on alternative bouts of buying and selling. Today, they were reported to have received special support from institutional investors and touched a high of Rs. 24.92 before winding up the week at Rs. 24.80. Mukand Irons put on 15 nP to Rs. 28.50.

A sharp rise in the value of Khataus by Rs. 32.50 to Rs. 472.50 was the main feature of trading in the textile section. Centurys opened at Rs. 589, against the previous close of Rs. 588 and spurted in subsequent sessions on bull support to touch Rs. 600 on Tuesday. Profit-taking at this level brought the rate down to Rs. 591 yesterday. Renewed support at this low level once again lifted the value to Rs. 595 today. Standards advanced by Rs. 8 to Rs. 1,417. Ahmedabad Advance picked up Rs. 4 to Rs. 190. Indores and Morarjis gained Rs. 3 each to Rs. 175 and Rs. 396, respectively. Swans improved by Rs. 5 to Rs. 650. Svadeshis put on Rs. 2.75 to Rs. 273.25. Shree Niwas Cotton gained Rs. 2 to Rs. 284. In the cash list, New Kaiser-i-Hinds spurted by Rs. 4.50 to Rs. 65.50. Moderns hardened by Rs. 2.50 to Rs. 73.50 and Sassoons gained a rupee to Rs. 71.50. Some textile shares encountered selling pressure and suffered a setback to values. For example, Kohinoors lost Rs. 2.50 to Rs. 308.50. Simplex softened by 50 nP to Rs. 168.50. Bombay Dyeings eased by 20 nP to Rs. 68. Elphinstones were marked down by Rs. 6.50 to Rs. 113.50. Mafatlals were neglected and shed Rs. 5 to Rs. 950.

Reflecting the favourable impact of the Government's decision to raise the ex-factory prices of cement, almost all the scrips in the cement section registered some modest gains in value. Associated Cements opened the week at Rs. 170.50, as against the previous close of Rs. 170.25 and rose to Rs. 171 in initial deals. They receded, however, to Rs. 167.75 on Monday, with the general trend of the market, but received fresh support in subsequent sessions and touched the high of Rs. 172 today, before closing at Rs. 170. Over the week, they shed 25 nP. Digvijays advanced by Rs. 4.50 to Rs. 188.50. The shares of Dalmia Bharat have gone up by Re. 1.36 to Rs. 12.86. Jaipur Udyog advanced by 24 nP to Rs. 12.24. Bagalkots put on 12 nP to Rs. 8. India Cements and Sone Valleys improved by just 4 nP to Rs. 6.72 and Rs. 4.96, respectively.

Sugars displayed a mixed trend. Belapurs began the week at Rs. 271 as against the previous week's close of Rs. 271 and moved both ways within a narrow range. On Saturday, they touched the week's high of Rs. 273.50. In the subsequent sessions, they eased to touch Rs. 268 yesterday. Today, they received fresh support and rallied to Rs. 271 at close, showing a loss of a rupee over the week. Phaltans, too, softened by a rupee to Rs. 130. Walchandnagars were quiet at Rs. 166. In the cash section, Hindustan Sugars advanced by Rs. 3.75 to Rs. 327.50. Maharashtras changed hands at Rs. 188, as against Rs. 186 in the previous week. But Kesars were out of favour and slipped down by Rs. 2.50 to Rs. 240.

Rayon shares received good support. National Rayon opened at Rs. 549, just a rupee higher than the previous close, and jumped up to Rs. 560 on Monday. In the subsequent two sessions they eased to Rs. 551 on profit-taking but recovered again today to Rs. 559.50 before finishing at Rs. 556.50. The share gained Rs. 8.50 over the week. Indian Rayons were also in keen demand and rose by Rs. 9 to Rs. 82. South India Viscoses advanced by Rs. 4.50 to Rs. 187. Baroda Rayons were better at Rs. 160.

Chemical shares were generally firm. Kemps provided a bright feature of trading in this section. They were quoted *ex-div.* at Rs. 300, recording a handsome gain of Rs. 15 over the week. Synthetics jumped up by Rs. 20 to Rs. 220. The Colour Chems gathered Rs. 7.50 to Rs. 382.50. Ultramarines rose by Rs. 5 to Rs. 112. Citrics gained Rs. 4 to Rs. 75. The Company, it is learned, has finalised arrangements with West German collaborators for the supply of plants for its factory.

The engineering section displayed a mixed trend. T.E.L.Cos opened slightly firm at Rs. 363 on Friday, as against the previous close of Rs. 362.50, and spurted to Rs. 367.25 the next day. Profit-taking in the subsequent two sessions brought down the value to Rs. 362 on Tuesday. Yesterday and today they attracted good support and touched the high of Rs. 369.75, before winding up the week at Rs. 366.50. But Alcock Ashdowns declined by Rs. 2 to Rs. 325 and Coopers eased by Re. 1.50 to Rs. 188. Larsen and Toubros were quiet at Rs. 38.75. In the cash section, T. Maneklal (old shares) were hammered down by Rs. 30 to Rs. 665. But Brady Engineerings advanced by Rs. 4 to Rs. 95. New Standard Engineerings gained Rs. 6.50 to Rs. 202.

In the miscellaneous section, Bombay Burmahs fluctuated between Rs. 628.50 and Rs. 638, before finishing the week at Rs. 635 today. The full details of the accounts of the Company for the year ended 31st May 1961 now available show that the Company's gross trading receipts rose substantially by Rs. 66 lakhs to Rs. 5.59 crores. Voltas advanced by Rs. 2 to Rs. 305.50. Sirpur Paper gained 4 nP to Rs. 16.48. The Directors of the Company have announced an increase in the dividend on ordinary share to 85 nP per share from 65 nP for the previous two years. Bombay Oxygens attracted good attention and advanced by Rs. 6.50 to Rs. 67.50. Chemcoat rose by Rs. 13.50 to Rs. 102. Permanent Magnets jumped up by Rs. 43 to Rs. 135. Hindustan Levers put on 50 nP to Rs. 52.50.

Calcutta Stock Exchange

CALCUTTA, *1st November*

Trading on the Calcutta Stock Exchange, after reopening on expiry of the *Pooja* holidays, on 25th October, has been unimpressive. Under the impetus of encouraging corporate news and the announcement of increased cement prices, selling pressure showed signs of abatement. Selected miscellaneous shares recorded modest gains. Inquiries on Wednesday last were restricted due to clearing adjustments, but on expectations of better working, following their phased plan to increase production, shares of jute mills were quoted higher. Although operators were disinclined to enter into fresh commitments, the technical position should be considered not alarming, as was evident from the carry-forward charges in the last clearing. It was evident that, with a number of issue of rights shares as well as new issues in the offing, funds were being held back. This would explain the limited turnover in the face of reports of diversification and increasing industrial output. The conclusion of the U.S. businessmen and bankers, at their conference with Indian officials and industrialists, that India offered tremendous scope for U.S. private capital investment encouraged optimism. This, together with expectations of increased industrial activity, explained why selling pressure was less marked. With a number of new issues awaiting release and signs of the onset of the busy monetary season, it was realised that the flow of funds to the market was not likely to increase despite the Reserve Bank's cancellation of restrictions on clean advances. The two serious train accidents in the wake of dislocation of traffic, following floods, give no hope of any immediate improvement in the transport situation for coal; this, as well as the official indication that the difficulties for transport would only accentuate were reflected in the low level of activity in coal shares. The Government's decision to import Russian furnace oil for utilisation in place of coal in South and West India was also bearishly interpreted. Expectations of improved working and reports of better cloth offtake explained why prices of cotton mills had not fallen.

Among textiles, Bowreahs were lifted from Rs. 35.87 to Rs. 36.75. Elgins were maintained at Rs. 22.06. Dunbars eased fractionally from Rs. 33.56 to Rs. 33.44. At Rs. 27.75, Bharat Commerces gained a point, with J. K. Rayons improving Rs. 19.25 to Rs. 20.00 and Cawnpores from Rs. 9.06 to Rs. 9.25.

Although activity in coals was restricted with Western Bengals slipping from Rs. 9.34 to Rs. 9.12, Raneegunges and Dhemo Mains recorded a fractional gain at Rs. 15.44 and Rs. 7.37, respectively. New Beerbhooms were likewise better at Rs. 21.81. Central Indias were firm at Rs. 11.81 and Amalgamateds at Rs. 21.81, as against Rs. 11.75 and Rs. 21.50 earlier.

Several features were recorded in jutes on interested buying, although demands from cultivators' organisations to fix minimum prices for fibre at far above the current levels were viewed with alarm against the background of continued competition from lower-priced substitutes, Deltas were bought at Rs. 165, as against Rs. 149 previously. Fort Glosters firmed up to as high as Rs. 368 from Rs. 297. Anglo-Indias forged ahead from Rs. 169 to Rs. 198. Northbrooks were done more than a rupee higher at Rs. 28.75. Indias rose from Rs. 14.00 to Rs. 15.56. Budge-Budges picked up Rs. 20 at Rs. 142, while Nuddeas, after having been quoted higher at Rs. 54.50, receded to Rs. 53.50. Gourepores jumped, on interested buying, from Rs. 381 to Rs. 408. For a like reason, Dalhousies, at Rs. 106, were marked up by Rs. 15. Lansdownes advanced from Rs. 91.75 to Rs. 105.

Selected engineering shares attracted support. Indian Standard Wagons strengthened from Rs. 95.00 to Rs. 101.00. Guest Keen Williams were steady at Rs. 40.50. Jay Engineerings improved from Rs. 27.31 to Rs. 27.87. J. K. Steels, at Rs. 21 87, were a few nP better. Indian Irons opened at Rs. 24.22 and closed with a modest gain at Rs. 24.64 after being higher at Rs. 24.78. Texmacos were steadier earlier at Rs. 18.95 but eased to Rs. 19.55 at close.

Sugar shares were on offer, thanks to apprehensions of bad times for the mills, following U.S. reluctance to lift the agreed sugar quota. Carews eased from Rs. 13.12 to Rs. 12 but subsequently recovered to Rs. 13.50. S.K.Gs, at Rs. 10.75, were fractionally lower.

Selected miscellaneous industrials hardened on good support. Dunlop Rubbers were pushed up from Rs. 54.62 to Rs. 55.25 to close at Rs. 55. Expectations of increased dividend strengthened Martin Burns which ruled steady at Rs. 28.50. Goodyears scored a small gain to Rs. 38.25. Indian Coppers were firm at Rs. 4.90. J.K. Synthetics firmed up from Rs. 12.94 to Rs. 13.75.

• • • •

Madras Stock Exchange

MADRAS, *1st November*

Barring sugars, which encountered persistent selling, equities on the Stock Exchange put on a distinctly cheerful appearance. The bullish fervour was fanned by rumours of sustained buying of select shares by the Life Insurance Corporation. Besides, advices from Bombay and Calcutta were also encouraging. Textiles were in the limelight on account of optimistic view of the progress for the current year. Teas elicited good inquiries. Coffees and rubbers moved up in sympathy. Miscellaneous industrials displayed distinctly firm conditions; cements, in particular, were active, following the Government's decision to enhance the retention prices.

Among textiles, Premiers forged ahead by Rs. 12 to Rs. 317. Bangalore Woollens advanced by Rs. 10 to Rs. 230. Lakshmis spurted by Rs. 8 to Rs. 168. Cannanores rose from Rs. 171 to Rs. 177. Coimbatore Cottons rose by Rs. 3 to Rs. 199. Travancore Rayons moved up by Rs. 2.75 to Rs. 43.25. Buckinghams gathered Re. 1.50 to Rs. 253.50. Maduras strengthened by 90 nP to Rs. 40.25. Kotharis were higher by 10 nP at Rs. 13.20. Loyals were maintained at Rs. 50.50, following the announcement of a dividend of 6 per cent (taxable) for the year ended June 1961; no dividend had been paid in the previous year.

A feature of trading in the coffee section was the spurt in the quotation of Consolidated Coffees from Rs. 20.10 to Rs. 21. Coffee Lands hardened by 40 nP to Rs. 16.70. Cowcoodys were higher by 10 nP at Rs. 4.55. Sheveroys were, however, quiet at Re. 1.70, reflecting the disappointment of operators over the dividend of 7½ per cent (taxable) for the year ended June 1961, which compares unfavourably with 9 per cent distributed in the previous year. Outcherlony Valleys, however, shed 2 nP to Rs. 3.65.

Among rubbers, Malankaras scored a gain o 27 nP to Rs. 17.50. T.R. & Ts put on 13 nP t Rs. 10.25. Cochin Malabars closed higher at Rs. 7.4 as against Rs. 7.37. Midlands and Vaikundam were firm at Rs. 11 and Rs. 32.50, respectively.

Sugars ruled easy. Cauverys suffered a setbac of a rupee to Rs. 116. Deccans lost 15 nP t Rs. 12.50. East India Distilleries declined by 25 n to Rs. 38.75. Indias were dull at Rs. 11.2 Travancores at Rs. 9.69 and United Breweries Rs. 104.

In the miscellaneous section, Western India Pl woods were marked up by Rs. 7 to Rs. 260. Te tools ruled by Rs. 4 to Rs. 182.50 *ex-div.* Tube In vestments gathered Re. 1.50 to Rs. 286.50. Amon cements, Dalmias spurted by 54 nP to Rs. 12.2 Orissas rose by 40 nP to Rs. 15.20. India Cement firmed up by 26 nP to Rs. 6.58, Andhras were hel steady at Rs. 9.40, as also Travancores at Rs. 7.6 In the chemicals group, Travancores made headwa by 87 nP to Rs. 21.87. Metturs gained 22 nP Rs. 14.62, but F.A.C.Ts shed 5 nP to Rs. 9.3 Among others, Ashok Leylands rose initially fro Rs. 9.62 to Rs. 9.20, but eased subsequently Rs. 9.17. Aluminium Industries rose from Rs. 23. to Rs. 23.80, before closing at Rs. 23.65.

NEWS IN BRIEF

THE total number of industrial schemes for which foreign collaboration has been approved was 304 during January-September 1961. Of this, as many as 107 cases were in the field of engineering industries.

Bhilai Steel Works has despatched 1,200 tons of coal tar pitch and 200 tons of pressed naphthalene for export for the first time. These are by-products recovered from the coke-oven gases in the Steel Works.

India's first transport plane, *Avro* 748, which has been built at Kanpur Air Force Station, made its inaugural flight on Wednesday the 1st inst. in the presence of the Union Defence Minister, Mr. V. K. Krishna Menon.

An Indian Committee of Lloyd's Register of Shipping is proposed to be set up shortly, with headquarters in Bombay. The Chairman of Lloyd's Sir Kenneth Pelly, will formally inaugurate the new committee at the end of this month.

The U.P. Government has decided to exempt *gur* and *khandsari* industries from the purchase tax levied on sugarcane during the coming season. The licence fees on power crushers, *bels*, power centrifugals and hand-driven centrifugals have also been reduced to one-third of the existing level.

The President has given assent to the Madhya Pradesh Ceiling on Agricultural Holdings (Amendment Bill, 1961). The legislation amends the Madhya Pradesh Ceiling on Agricultural Holdings Act, 1960, to implement the suggestions made by the Central Committee for Land Reforms.

The Government of India has sanctioned a loan of Rs. 29 lakhs to the Rajasthan Government for financing expenditure on the Rajasthan Canal Project during 1961-62. The total loan advanced to the State Government for this project since 1957-58, including the current loan, amounts to Rs. 15.29 crores.

In order to relieve the acute power shortage in Gujarat, the Government of India has approved of a proposal of the State Government to import fourteen diesel power-generating sets. These sets, each of which will have a capacity of 1,000 kw., will be installed in different towns where new industries are coming up.

India has secured a research grant of $73,228 (in rupee equivalent) from the U.S. Department of Agriculture to explore the possibilities of adding non-fat milk to buffalo milk to make hard cheese. The grant will finance a five-year study by the Kaira District Co-operative Milk Producers Union Limited, Anand, Gujarat State.

The State-owned Indian Oil Company has reached an agreement with Russia for the import of 50,000 tons of furnace oil, for the first time. The first consignment of 10,000 tons is expected to reach Cochin port in December. Thereafter, 10,000 tons will be delivered every alternate month in four instalments. All the deliveries will take place at Cochin.

The Regional Office of the Geological Survey of India at Lucknow was inaugurated by the Governor of U.P., Mr. B. Ramakrishna Rao, on 26th October. The Lucknow Office is one of the three regional offices being set up by the Government of India under the reorganisation scheme. The other two will be set up at Calcutta and Hyderabad.

About 5,800 factory workers will now benefit under the Employees' State Insurance Scheme which has been extended to Banmore in the State of Madhya Pradesh and to thirteen villages in the State of Madras, with effect from 28th October 1961. The employers of the factories covered under the scheme will now be required to pay their special contribution at the rate of 1¼ per cent of the total wage bill, instead of ¾ per cent as hitherto.

The Government of India has set up an advisory body, called Direct Taxes Advisory Committee, as recommended by the Direct Taxes Administration Inquiry Committee. Apart from promoting co-operation between taxpayers and the Income-tax Department, the Committee will also advise the Government on the adoption of measures to remove procedural difficulties of a general nature concerning income, wealth, gift and expenditure taxes, as also estate duty.

Rich deposits of metallurgical coal in the vicinity of North Karanpura coalfields in Bihar have been discovered by the Indian Bureau of Mines. Exposed in a *nala* cutting in Chano-Rikba area, the seams are of ten to twelve feet thickness. The continuity of seams has been proved to extend over a large area in the Chano-Rikba and contiguous area. More than fifty million tons of such strongly coking coal with high ash content have already been proved.

The Union Labour Ministry has drawn up two schemes, one for giving national safety awards and the other for rewards on safety suggestions in industrial undertakings. Under the scheme for national safety awards, those industrial undertakings, which work at least one million man-hours per year and achieve the largest percentage reduction in accidents during a calendar year, as compared with the previous year, will receive the award. The scheme for rewards on safety suggestions provides for granting prizes for workers for suggestions on accident prevention.

Apropos the item about the possibility of eucalyptus being used as a raw material for manufacturing newsprint in our "News-in-brief" feature on page 733 of our issue dated 14th October 1961, we are informed by the management of the Punalur Paper Mills Ltd., that the Company has carried out only *laboratory tests* with eucalyptus wood chips received from the Forest Department of Kerala and that no *mill-scale trials*, particularly in the manufacture of newsprint, has been carried out with this wood.

The Paper Traders' Association, Bombay, has decided to set up a corporation to handle the distribution of paper (other than newsprint) allotted to it from imports made by the State Trading Corporation. The new corporation, being formed at the suggestion of the Chief Controller of Imports, will operate on the lines of the Newsprint Trading and Distributing Corporation. The Corporation will pass on the allotted paper stocks to members and quota-holders on an agreed basis charging a commission of ten per cent. Similar regional corporations will also come into being in Delhi, Madras and Calcutta.

Trade talks between the Government of India and an official trade delegation from Poland began at New Delhi on 27th October. The two delegations are expected to discuss and finalise the trade arrangements for 1962. Trade between the two countries is governed by the three-year trade agreement, which came into force on 1st January 1960. Under the terms of the agreement, trade will be in a balanced basis and payments will be regulated through non-convertible Indian rupees. In the past three years, trade between the two countries has been increasing and is expected to be of the order of about Rs. 5 crores, either way, during the current year.

The impact of regional trade blocs like the Common Market on the trade and economic development of Afro-Asian countries will be discussed at a conference of the Afro-Asian Organisation for Economic Co-operation, scheduled to be held at New Delhi, under the auspices of the Federation of Indian Chambers of Commerce and Industry from 11th December 1961. The conference, which will be inaugurated by Prime Minister Nehru, will be attended by several countries of the Afro-Asian region, besides a number of international organisations. The Organisation, which is a non-governmental body, came into being in Cairo in 1958. Chambers of commerce in 38 countries, including India, are its members.

Air-India International will be entitled to operate four services a week, with Boeing aircraft, to Europe and the U.S. through Paris, as a result of amendments made in the Indo-French Air Services Agreement. Diplomatic notes in respect of the amendments were exchanged between the representatives of the two Governments at New Delhi this week. Amendments are said to have provided a satisfactory basis for determining the frequencies of the services of the airlines of both the countries, and they are now entitled to operate an equal number of frequencies through each other's territories. At present, Air-India International is operating only three services per week to Europe and the U.S., through Paris, with Boeings, while Air-France operates four services per week through India with the same type of equipment.

The Government of India and the U.S. have signed an agreement covering a loan of $20 million (Rs. 9.5 crores) for the import of non-ferrous metals into this country. The loan will be channelled through the U.S. Development Loan Fund. Like all other credits by the D.L.F. to India, it is repayable in rupees. The loan will be utilised for procurement of aluminium, copper and zinc from the U.S. Much of the metal will be processed into final form at plants in India. Resulting products will be used mainly on projects in the fields of power, transportation and communication. The major part of the imports will be used in the fabrication of electrical equipment, such as transformers, motors, generators, switchgear and overhead lines for railway electrification and also in the manufacture of machinery components for chemical, sugar, tea, paper, automobile and storage battery industries.

In order to ensure speedier consideration of applications for licences under the Industries (Development and Regulation) Act, 1951, the Union Ministry of Commerce and Industry has advised the industrialists that, while submitting their applications to the Ministry, the parties should forward a copy each of their applications to the Directors of Industries of the State concerned and to the technical authorities, such as Development Wing or Textile Commissioner, or Iron and Steel Controller, etc., as the case may be. While forwarding a copy of the application, it may be indicated that the original application, together with the requisite treasury receipt, has been forwarded to the Ministry of Commerce and Industry. Similarly, the original application submitted to the Ministry of Commerce and Industry should indicate the authorities to whom copies of the application have been sent direct.

The total purchases made by the Directorate-General of Supplies and Disposals touched an all-time record of Rs. 222 crores, while the share of imports was only Rs. 42 crores. In 1958-59, the total purchases were of the order of Rs. 182 crores. Purchases of small-scale industries by the Directorate amounted to Rs. 6.46 crores in 1960-61, an increase of 50 per cent over the previous year. This was disclosed by Mr. N. E. S. Raghavachari, Director-General, Supplies and Disposals, at the sixth meeting of the Regional Purchase Advisory Council, Northern Zone, held at New Delhi on 23rd October. The major part of these purchases, according to Mr. Raghavachari, is free of price preference. In order to augment the production of the small-scale industries, the Directorate will soon increase the number of articles reserved for purchase exclusively from them from 27 to 44. Further, to facilitate registration of more small-scale industries with the Directorate, the procedure for registration has been simplified and liberalised. Such industries can now obtain forms for registration from the State Directors of Industries.

From Abroad

The Swedish Government has decided to ask for associated membership of the European Common Market.

China is reported to be planning to buy twenty British *Viscount* turbo-prop airliners at a cost of about £12 million.

Japan has offered a loan of $15 million to Pakistan for fifteen years, with interest at the rate of 6 per cent per annum.

The U.S. has signed an agreement with Indonesia, under which the former will provide shortly 55,000 tons of rice to the latter, under the new "food-for-peace" programme.

The total number of unemployed persons in the U.K. rose sharply by 48,500 to 365,600 by the middle of October, as compared with mid-September. Unfilled vacancies fell during the period by 39,000 to 289,210.

The guaranteed producer price for groundnuts for the 1961-62 season has been reduced from £46 4s. 6d. to £43 11s. 6d., a ton in Northern Nigeria. The price of grade I cotton has also been slashed from 6s. 1d. to 5s. 6d. per lb.

Indonesia proposes to set up a plant for the manufacture of aircrafts, in collaboration with the U.S. To begin with, the plant will assemble small aircrafts. The next stage will be the development of a full-fledged aircraft industry.

Following the recession in the British Steel Industry, which is now operating only about three-quarters of its potential capacity, the U.K. Government has eased the ban on exports of iron and steel scrap.

The Government of the United Arab Republic has entered into an agreement with the British Northrop of Blackburn for the supply of plant and machinery for four cotton spinning mills and a factory for the manufacture of mechanical looms to be set up in Egypt. The mills will have a joint capacity of 51 million metres of cotton fabrics annually.

The free market for sheet rubber in Ceylon has been suspended with effect from 27th October. All exporters having been asked to sell sheet rubber to Government to fulfil its contracts with China and Poland, under which almost the entire output of the country's sheet rubber, till the end of next year, has been sold out. Ceylon will have to supply 31,000 metric tons of sheet rubber to China and 6,500 tons to Poland under trade agreements with these two countries.

The foreign trade of the European Common Market countries rose by 8.5 per cent to $31,734 million in the first half of 1961, as compared with the corresponding period of 1960. The exchange of goods among the Common Market countries rose by 17 per cent to $11,560 million. The foreign trade of the E.F.T.A. rose during the same period by only 4.6 per cent to $21,534 million. The intra-E.F.T.A. trade was higher by 6.2 per cent at $8,203 million.

PERSONAL

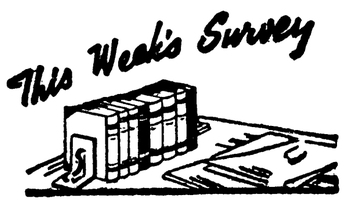
MR. A. J. B. Dickson and Mr. H. J. Watson have been elected President and Vice-President, respectively, of the Cochin Chamber of Commerce, Cochin, for the year 1961-62.

Dr. F. P. Antia and Mr. J. R. Price have been elected President and Vice-President, respectively, of the Indian Roads and Transport Development Association for 1961-62.

Dr. Ajit Mazoomdar, Jute Commissioner, Government of India, has been elected Chairman of the Shellac Export Promotion Council, *vice* Mr. C. R. B. Menon, who was the Chairman of the Council since its inception.

Mr. R. H. Belcher, C.M.G., has arrived in New Delhi to take up the post of British Deputy High Commissioner in India. Until recently, he was an Under-Secretary of State in the Commonwealth Relations Office in London.

Mr. Geofrey Wilson, World Bank's Director of Operations for the South-East Asian region, will arrive in India shortly to discuss with representatives of the Government of India the details of the utilisation of aid offered by the Aid-India Consortium for the second year of the third Plan.



ROAD TRANSPORT

IT may be remembered that Mr. Raj Bahadur, Minister of State in the Union Ministry of Transport and Communications, recently admitted that the level of taxation on road transport in India was the highest in the world and that motor transport was like a milch cow which had been fully exploited by the Government. This ministerial admission has lent added support to the stand of the road transport industry that there should not only be no further taxes on road transport but also a reduction in the burden. The recent E.C.A.F.E. seminar at Madras on road passenger transport had also taken, more or less, the same line. The Transport Development Council, which held its session last week at New Delhi under the presidency of Dr. P. Subbarayan, Union Minister for Transport and Communications, has reiterated its familiar stand. It has given the finding that the octroi duties imposed by various local bodies are a great impediment to the smooth flow of motor traffic and has, therefore, called upon the State Governments to ensure their early abolition. And it has also urged the State Governments to implement the principle of single-point taxation without delay by abolishing double taxation on inter-State transport. Another recommendation made by the Council is that there should be only one agency for the collection of motor tax and the taxes on passengers and goods. The Council's acceptance of the principle of creating a Rural Road Fund for the development of roads in rural areas is also noteworthy, although the details of the proposed fund have been left to be worked out by the State Governments and the development bodies of the Central Government.

All these recommendations will, doubtless, be gratifying to the road transport industry. But it will be surprising to the industry that the Development Council has recognised the heavy incidence of income-tax only in respect of State transport corporations and recommended to the Transport Ministry to appoint a committee to study the difficulties of such corporations and to suggest incentives for their expansion, including tax relief. The private sector of the road transport industry is bound to raise the issue of unequal treatment as between State transport corporations and private transport enterprises. If it takes the forthright stand that a concession like the development rebate in respect of income-tax liability should again be given to the private road transport industry which has been aggrieved by the withdrawal of that rebate, it can hardly be accused of being an Oliver Twist. As the road transport industry is the only one to be singled out for a denial of the development rebate, its case for the revival of the concession will be unassailable, more especially because, as vehicles become available, there will be greater competition and small profit-margins. Indeed, there are already reports of cut-throat competition in certain routes, with the result that the demand for trucks is said to have slackened.

MINOR IRRIGATION

The third Plan has appropriately laid greater emphasis on minor irrigation than the second, for it has some obvious advantages. These are: the relevant schemes can be more speedily executed than major works; local resources in manpower and materials can be utilised; and there is no dependence on foreign exchange. In view of these advantages, minor irrigation has been allotted an outlay of as much as Rs. 300 crores in the third Plan. All this, outlay will, of course, not be on entirely new minor irrigation works. A good part of it will presumably be spent on renovation of older tanks which have silted up and of open wells which have gone into disuse. An official estimate, in this connection, is that there are as many as 35,000 tanks all over the country, requiring renovation. Of the five million open wells in the country, quite a large number has been lying in disuse and can be renovated. There is thus so much work to do in this field, but what is lacking is efficient organisation. The disappointing results of the first and second Plans, such as the neglect of older works alongside the delayed and inefficient construction of new ones and the failure to ensure continued maintenance of many old and new works alike on satisfactory lines, have been probably due to two principal factors, namely, the absence of a single executing agency at each State level and the absence of local organisations for undertaking the responsibilty for maintenance of works.

If the large funds earmarked for minor irrigation are to be spent effectively and economically, it would be necessary to create a single agency in each State to deal with the subject of minor irrigation which, at present, is the concern of various departments like agriculture, revenue, irrigation, public works, planning, etc. Only such an agency could impart "vigour and drive" to the programme. In pleading for such an agency, Mr. S. K. Patil, who spoke at the Northern Regional Conference on Minor Irrigation at New Delhi last week, has hit the nail on the head. But his plea does not seem to have been fully endorsed by the conference, for it has merely recommended the setting up of a special engineering cell in each State to deal with the technical aspects of minor irrigation schemes in a unified and integrated manner and bring about greater co-ordination and technical competence in planning and implementing minor works. While it is true that this recommendation is partly an endorsement of Mr. Patil's idea, it is doubtful if the "special engineering cell" will have the authority to by-pass the other departments concerned. It is reference, at every turn, to these other departments that has always caused delays in execution. If the conference has merely called for "urgent steps to remove procedural delays on matters like sanctioning estimates, entering into works agreements and granting financial assistance to cultivators," it is a confession of the difficulties involved, under the existing administrative set-up, in the creation of a single agency with overriding authority. It may, however, be that the special engineering cell will ultimately evolve into a single administrative and executing agency for minor irrigation. The other recommendation of the conference, pertaining to maintenance responsibility, does not go far enough. If the responsibility for maintenance should be increasingly placed on *panchayats*, it should be clearly laid down that the agricultural beneficiaries should make the fullest possible contribution to the revenue resources of the *panchayats*. Surely, finances for maintenance also cannot be expected to be provided by the State Governments in addition to funds for renovation and new construction.

TERMS OF BONUS COMMISSION

There is little that merits serious criticism in the terms of reference of the proposed Bonus Commission, finalised this week at New Delhi by a tripartite meeting presided over by Mr. G. L. Nanda, Union Minister for Labour. An outstanding feature of the final terms of reference is that they are more specific and comprehensive than the earlier draft prepared by the Union Ministry of Labour. They contain elaborations and additions which clearly define the task before the Commission. While this does not leave much room for the Commission to stray from the basic issues, it will enable the body to arrive at its decisions more speedily than would have been the case otherwise.

The draft terms prepared by a sub-committee appointed by the Standing Labour Committee, and approved at the New Delhi meeting, are:

1. To define the concept of bonus and to consider, in relation to industrial employment, the question of payment of bonus based on profits and to recommend principles for computation of such bonus and methods of payment. The term industrial employment will include all employment in the private sector and in establishments in the public sector not departmentally run and which compete directly with establishments in the private sector.

2. To determine the extent to which the quantum of bonus should be influenced by the prevailing level of remuneration and the need to increase productivity.

3. To determine what the prior charges should be and how they should be calculated in different circumstances and to determine other conditions under which bonus payment should be made industry *cum* region-wise, industry-wise and unit-wise.

4. To consider whether the bonus due to workers beyond a specified amount should be paid in the form of national saving certificates or in any other form.

5. To consider whether there should be lower limits irrespective of losses in particular establishments and upper limits for distribution in one year and, if so, the manner of carrying forward profits and losses over a prescribed period.

6. To suggest an appropriate machinery and method for the settlement of bonus disputes.

7. To make such other recommendations regarding matters concerning bonus that might be placed before the Commission on an agreed basis by the employers' and workers' representatives.

It is evident from the foregoing account that the ground to be covered by the Commission is quite comprehensive but precise. In fact, the second term of reference requires the Commission to go deeper into the question of bonus than what the courts of law have ever done. This is only as it should be, for the extent to which the quantum of bonus is to be influenced by the prevailing level of remuneration and the need to improve productivity are basically economic questions and courts of law are not the proper authority to decide such issues. It is, hower, true that certain aspects of bonus covered by the terms of reference, such as the definition of the concept and the principles of computation of bonus, have been dealt with by the courts in the country and certain principles laid down in the course of industrial adjudication. At the same time, it is clear from the task delineated for the Commission that it need not consider itself bound by the decisions of courts and that it is free to examine the issues *de novo* not from the strictly legalistic but from the larger economic and social points of view. This does not necessarily means that it will make an altogether fresh start or that it will reject well-established principles; only, its freedom will not be fettered by existing court decisions.

The task assigned to the Commission is doubtless a complex one. The definition of the concept, the norms that should govern the fixation of the quantum of bonus, the mode of payment, whether there should be a ceiling on bonus, etc., are complicated and ticklish issues to decide. It is difficult to think of easy or ready-made solutions. The bonus question has been the cause of friction between management and labour year after year, as well as of disappointments for workers should their expectations regarding bonus fail to materialise. The best thing to do, therefore, would have been to think of a system of wages which would avoid all these vexations and relate reward more directly to effort, after ensuring a fair minimum wage. It is unfortunate that the representatives of the Government, the employers and the workers could not make a rational and sensible approach to this problem. This speaks very poorly of their ability to think afresh and to benefit by the experience of the developed countries which have solved the problem of workers' remuneration in a more satisfactory manner. Would it be too much to hope that there are at least some employers in this country who are prepared to throw overboard the system of bonuses in favour of a scientific wage system, thereby blazing the trail for the others? Competition among employers in this direction would be a healthy one, as it would ensure a better future for private enterprise.

MR. NICOLL ON FORCED EXPORTS

Several devices, including incentive schemes and drawback of duties, designed to boost exports, have been improvised by the Government of India. But never before has the Government thought of a more controversial measure than the one for compulsory exports now on the anvil. It would appear that the authorities are bent on going ahead with the scheme at least in selected commodities, without even waiting for the suggestions of the Export and Import Policy Committee (Chairman: Dr. Ramaswami Mudaliar). If the powers-that-be seek to indulge in fiats, why should there be expert committees and study groups? At least when an expert committee is appointed to examine the export trade, it will not be appropriate for the Government to go over its head and make decisions of basic significance on a matter under review. Representatives of trade and industry in several parts of the country have already sought to impress upon the Government the futility of the proposed scheme for compulsory exports. A strong indictment of the measure has come from Mr. W. H. Nicoll, President of the Cochin Chamber of Commerce. Mr. Nicoll, in the course of his address at the annual general meeting of the Chamber held at Cochin on 27th October, categorically stated that "to compel an industry to export is not possible, but to persuade and help an industry to export is another matter."

Drawing particular attention to the defects in the proposed scheme for compulsory exports, Mr. Nicoll observed that, while Government could compel an industry to export, "buyers abroad cannot be compelled to buy from India." If it was the intention to compel an exporter to sell at cheap rates by means of subsidy, thereby flooding a particular market, he added, the importing country was bound to react by imposing restrictions on imports. There might occasionally be, in the event of compulsion, distress selling which would encourage buyers abroad to buy from India. But, according to Mr. Nicoll, that is not the way to build the foundations of long-term trade connections. He pointed out that markets were diverse and that what was required in one market might differ from that required in another. Besides, in all markets, "the price must be competitive and the goods must be of the required quality." He was of the view that, instead of introducing compulsion, the authorities should give incentives to exporters by way of reduction of income-tax on that proportion of income earned from exports, or the allocation of import entitlement against exports. Mr. Nicoll suggested that there should be a "norm," based on, for instance, the average of established exporter's earnings during previous years. A proportion of the foreign exchange earned over and above this "norm" should be made available to the exporter for the purpose of importing any article he wished, primarily his own requirements of plant and materials. This idea, of course, has already been accepted by Government and selected export items are even now being given import incentives.

Turning to local problems, Mr. Nicoll expressed the view that Kerala's share of total investment in the third Plan was "disappointing," being only Rs. 170 crores in the State sector. Emphasising the need for larger outlay for the State, he observed: "There are times when the social and economic needs of the people must carry weight in deciding the location of projects, and Kerala, with its dense and literate population, needs outlets for its energies and skills." He considered investment in social overheads as important as that on industry. He made particular reference, in this connection, to the need for a review of internal transport policy, so as to place greater emphasis on development of road transport. For "many goods are more suited to road transport for obvious reasons—quicker delivery, release of locked-up stocks and reduction of locked-up capital, lower packing costs, less handling, delivery to the buyer's premises, etc., are all important advantages, while pilferage, which is so heavy by rail, is virtually negligible." He, therefore, advocated the reduction of tax burden on road transport.

A notable suggestion made by Mr. Nicoll was that, if the Government did not find finance for road development, the private sector should be encouraged to construct roads. He appealed to the authorities that trunk roads should be let on a long lease, say, for twenty years or so, and private enterprise should maintain them with the money collected by way of tolls. He does not find anything wrong in charging tolls for road development, since they are prevalent in Europe and the U.S. While this suggestion of Mr. Nicoll reflects his anxiety to solve the problem quickly, its practicability under existing conditions in India is open to doubt. Quite apart from ideological considerations not all of which are irrelevant, tolls on roads will have to be quite sizable if private investment is to be attracted; but, as roads are social capital, they cannot be subjected to a heavy charge. It is significant that, in all the underdeveloped countries, road-building is being done by the State with the aid of loans from the World Bank and the I.D.A.

BRITISH LIFE INSURANCE

The statistics, just published by the British Life Offices Association and the Associated Scottish Life Offices, reveal a picture of life insurance in Britain which should be the envy of, and the pattern for, life insurance everywhere. Life insurance in Britain, under private management, has added fresh laurels to its already impressive performance by setting many new records in 1960. The number of new life insurance policies issued in 1960 exceeded the one-million mark for the first time, the exact figure being 1,020,000. New business scaled yet another peak in 1960 to £1,590 million, as compared with £1,319 million in 1959; and new premium income rose to £87.3 million in 1960, as against £68.4 million in the previous year. It is noteworthy that the number of new policies issued has doubled during the ten-year period, 1950-60, from 500,000 to over one million, and the new sum assured almost doubled in half that time, from £810 million in 1956 to £1,590 million in 1960. The number of policies in force at the end of 1960 was a record 9.9 million and the total sum assured in force, including bonuses, stood higher than at any time in the past at £9,090 million.

The remarkable growth of new business during the past six years is indicated in the table below:

Trend of new business

Year	No. of policies	Premium	Sum assured
		(£ millions)	(£ millions)
1955	753,000	41.4	750
1956	754,000	42.1	810
1957	793,000	47.2	892
1958	853,000	53.7	1,074
1959	939,000	68.4	1,319
1960	1,020,000	87.3	1,590

Ordinary life and annuity funds of British life insurance companies amounted to £4,173 million as at the end of December last, representing a rise of £410 million over the previous year. After allowing for transfers, the net figure, representing the new savings of policyholders, amounted to £405 million, £57 million higher than in 1959. Other new records set were in pension and annuity payments, which rose from £31 million to £37 million, and death claims settled which increased from £55 million to £62 million. Payment to policyholders of over £100 million on matured endowment assurances in 1960 was yet another landmark in British life insurance.

Reflecting the expansion of business, incomes of life insurance companies from premium, investment and other sources rose from £720 million in 1959 to £809 million in 1960. Premiums alone accounted for 560 million, investment incomes for £239 million and other incomes for £10.2 million. Of this, no less than £277 million was paid to policyholders, £405 million was added to life, annuity and reserve funds, £78 million was paid in commission and management expenses and £38.7 million appropriated in income and profit taxes. Only £5.59 million, or roughly 0.7 per cent of total income, was distributed to shareholders.

The pattern of investments of life insurance funds in Britain showed no significant change in 1960, as compared with 1959. The percentage of investments in gilt-edgeds (British Government, British Commonwealth Governments, Provincial and Municipal securities) declined from 25 per cent of total investments in 1959 to 24 per cent in 1960, whereas investments in equities rose from 20.5 per cent to 21 per cent. Investments in mortgages also increased from 15.5 to 16 per cent. Debentures, loan stocks, preference and guaranteed stocks and shares accounted for a slightly lower share, 20.5 per cent of total investments in 1960, as against 21 per cent in 1959. Investments in real property, ground rents and other investments also declined from 18 per cent to 17.5 per cent.

A comparison of life insurance in Britain and India reveals the large leeway that has to be made up before life insurance here could be regarded as anything comparable to that in Britain. For a population of 52 million, which is only one-eighth that of India, Britain has 2.2 million more life insurance policies in force than in India. Total sum assured in Britain at the end of 1960, at £9,090 million, is five times as much as in India. It must, however, be added that the growth of life insurance in India will be conditioned by the rate of economic development.

INDO-CEYLON TRADE

The recent trends in Indo-Ceylon trade have been to the liking neither of India nor of Ceylon. India, of course, continues to be the second largest supplier of merchandise (next only to the U.K.) to Ceylon. It is also true that Ceylon is one of the seven leading markets for Indian products and, in Asia, second only to Japan. But India's exports to this country over a long period have been more or less static. There has, in fact, been some decline in exports of late. In 1960, for instance, India's exports to that country aggregated Rs. 18 crores, which compares with as much as Rs. 20 crores in 1952. In 1959, its shipments were, no doubt, running at a high level (Rs. 22 crores). But this tempo could not be maintained, largely as a result of severe import restrictions imposed in Ceylon about a year ago on balance of payments considerations. During the seven months ended July 1961, there was a further decline in exports, being only Rs. 12 crores, as against Rs. 15 crores in the corresponding period of 1960. But like Ceylon, India too, has been restricting its imports; this has affected certain items of Ceylonese commodities like copra and coconut oil. India's total intake of Ceylonese goods was lower at Rs. 4 crores in 1960, as against Rs. 6 crores in 1959 and Rs. 5 crores in 1952.

The following table shows at a glance the trend of India's trade with Ceylon during the last decade:

(In lakhs of rupees)

	Exports	Imports	Balance of trade
1952	20,23	4,82	+15,41
1953	18,30	4,78	+13,52
1954	18,41	7,31	+11,10
1955	20,07	8,85	+11,20
1956	19,29	8,57	+10,72
1957	17,04	5,76	+11,28
1958	20,02	4,30	+15,72
1959	22,28	6,05	+16,23
1960	18,48	3,92	+14,56
1960 January-July ..	14,50	1,90	+12,60
1961 January-July ..	12,40	2,00	+10,40

It will be seen from the table that, despite smaller imports from Ceylon, India's favourable balance of trade has remained more or less unchanged. But the fact remains that, if this trend is allowed to continue, the total volume of mutual trade is likely to suffer a further setback. What is more, the traditional export items (such as handloom and other textiles from India and coconut oil and copra from Ceylon) will be the worst sufferers. It is, therefore, gratifying to note that the two Governments have signed a trade agreement, for the first time, following negotiations at New Delhi. The agreement, it is said, comes into force with immediate effect. It is, however, surprising that the Government of India has not yet disclosed the details of this agreement. Why should the Government put the trade and industry in suspense in a matter in which a section of them is vitally interested?

A brief joint *communique* issued at the conclusion of the agreement is, to say the least, vague. According to it, the two Governments have undertaken, on the basis of mutual advantage, to maintain "as far as is practicable, the traditional pattern of trade hitherto existing and to explore all possibilities, through consultations from time to time, of expanding trade and of trading in new goods." Another ambiguous statement in the *communique* is that the two Governments will give full consideration to the suggestion made by either party for facilitating the export and import of specific commodities. What are the commodities referred to? Is a scheme for barter trade in the offing? It is said that the agreement is expected to alleviate the difficulties now encountered with regard to export of coconut oil, copra, chewing tobacco and rubber from Ceylon to India and exports of dried fish, *bidis*, jaggery, tamarind and handloom textiles from India. Presumably, both the countries have agreed to relax restrictions on import of the aforesaid commodities as a compromise formula. There can be no quarrel over "alleviating difficulties" in the way of trade. Only, the public has a right to know the specific steps proposed to be taken to attain the objective.

Far more details of the agreement than those given in the *communique* have been provided in a casual talk which Mr. T. B. Illangaratne, Commerce Minister of Ceylon, who headed his country's delegation to New Delhi, had with newsmen at Menambakam airport (Madras) on his way back to Colombo. He has observed that, following the agreement, there will be a certain amount of guarantee of exports and imports between the two countries. He is reported to have said that the State trading organisations in both the countries will be entrusted with the task of developing mutual trade. It may not be too late in the day to ask whether State trading organisations will be more competent than private channels in handling trade between two democratic countries. Besides, from what has transpired so far about the agreement, it looks as though the negotiators were concentrating their attention on problems of traditional goods. It should be remembered that Ceylon is a fast developing country and, therefore, it opens out good scope for new lines of export from India, particularly engineering and light engineering goods, apart from the traditional items like fish and textile goods. Although there is considerable competition from industrialised countries like the U.K. and Japan, India can still take advantage of its fortuitous position as the closest neighbour of Ceylon, if only adequate publicity campaigns are undertaken and necessary after-sales service arrangements are ensured.

THE UNORGANISED MARKET

By "Kuber"

SPEAKING at Coimbatore last week, Mr. T. T. Krishnamachari, a former Finance Minister of the Union Government, is reported to have stated that more and more of our savings were being diverted away from the organised market to the unorganised sector, and that the latter's share of business was on the increase. This view is in contrast to that held by Mr. H. V. R. Iengar, the Reserve Bank Governor, who said, in one of his speeches, that the share of the monetised sector was increasing and that banks' deposits were, once again, on the increase, meaning thereby that the sudden and steep decline in the deposits experienced by the banks during the last busy season was, more or less, a thing of the past. But both may be right, for both the sectors are growing, though which sector is growing faster could be a highly controversial issue. But this particular problem is of great significance at the present juncture—on the eve of the busy season—to the trade and industry. It is of still greater significance from the point of view of the future of banks and their capacity to finance the ever-increasing tempo of our economic activity, as a result of the third Plan. On the proper appreciation of this problem, the future monetary policy of the Reserve Bank will have to be based; if the deposits continue to flow to the banking system, as they have begun to do again, the task of the Reserve Bank will be very much easier; otherwise, the Reserve Bank will have to adopt such measures as it can, to provide the necessary finance to the organised sector, so that economic development may not be retarded.

Unfortunately, this apparently simple problem has become a bit complicated, as the term "unorganised market" does not mean the same thing to different persons and institutions, with the result that the solutions tried are wide of the mark. According to Mr. Iengar, "the Reserve Bank of India is faced, unlike the central banks in highly developed economies, such as the U.S.A. or Western Europe, with the fact that the money market itself is not closely integrated and there are sectors which are largely impervious to Reserve Bank control. The outstanding characteristic of the Indian money market is its dichotomy; it comprises two broadly distinct markets, namely, the organised and unorganised, with a marked divergence in the structure of interest rates. The organised market comprises the Reserve Bank, the State Bank of India—the largest commercial bank in India owned very largely by the State—the Indian joint-stock banks and foreign banks. Quasi-Government bodies and larger-sized joint-stock companies also participate in the operations of the money market as lenders." No one will quarrel with this view. But then the Governor goes on to say that "the unorganised market, which itself, is not homogenous, comprises largely of what are known as 'indigenous bankers'." This view of the Reserve Bank is not wholly incorrect, but it is a narrow and rather outmoded conception.

How Unorganised Market Functions

Anyone with even a nodding acquaintance with the current market conditions very well knows that the unorganised market is a very much more complicated affair, comprising, as it does, all sorts of businessmen, merchants, traders, and individuals—in short, the bulk of the people in India who have any money to lend or borrow. Of course, some of these very people who form the backbone of the unorganised market do have dealings with the organised market also. A Himatlal Ramlal worth, say, about Rs. 5 to 10 lakhs, may maintain substantial deposits with or borrow from the joint-stock banks. When it suits him, however, he may withdraw his deposits and lend his moneys in the unorganised market, for the simple reason that he gets a higher return. He may even borrow from the banks at, say, 6 or 7 per cent and lend in the unorganised market, to get the advantage of difference between the rates in these two markets. The unorganised market is full of such Himatlals. Even the educated and modern investors have lately lent substantial amounts in the unorganised market, as they get a very much higher return, anything from 6 to 9 per cent, instead of, as used to be the case, keeping their funds with the joint-stock banks at about 4 per cent on time deposits.

During the last two or three years, this process has been going on all the time, mostly at the expense of joint-stock banks and, in my opinion, it will continue that way, so long as the present difference in the rates in the two markets persists. The fact that the banks had to raise their rates on deposits a few months ago and the fact that they have continued to pay the higher rates even during the present slack season prove my point. The main thing to bear in mind, therefore, is that the unorganised market is not confined mainly to the indigenous bankers as the Reserve Bank would have us believe. In fact, the indigenous bankers, as they are generally known, have ceased to play an important part in the larger towns and cities, yielding place to the new class of merchants who have amassed a great deal of wealth in recent times. Some of the cloth merchants, iron merchants and the like are so rich today that they can easily buy up the so-called indigenous bankers. Moreover, the best of the bunch—the Multani bankers—borrow largely from the organised markets and lend, in the unorganised market, to small merchants and traders. They, therefore, are the most important link between these two markets. The joint-stock bankers know all these developments—sometimes to their cost—though the Reserve Bank may not be keeping abreast of the latest developments in the unorganised sector.

Hot Money

If my above point of view is conceded, then the next thing naturally follows. And that is that there is a continuous flow of money from one sector to the other depending upon differences in the rates of interest ruling in these markets. It is a kind of an internal version of "hot money." If and when the rates ruling in the organised markets are unduly low or unremunerative or unrealistic, the money tends to flow from the organised sector to the unorganised sector, as was witnessed in the last busy season. In fact, I may go further and say that this tendency has gathered considerable momentum in the recent past, as, due to inflationary conditions, people find it quite safe to lend money to hundreds and thousands of firms in the unorganised sector rather than keep deposits with joint-stock banks. Most of these industrial firms are full up with orders, and are able to make huge profits. I know of two or three engineering firms who have found no difficulty in getting lakhs and lakhs of rupees by way of deposits from the people. They have obtained such vast funds that they have taken to all sorts of new businesses such as construction, etc., on which, incidentally, they are minting money. If one were to total up the deposits raised by such firms, the figure would be staggering. Of course, these firms have dealings with the organised market also, but only marginal. They do maintain nominal deposits with the banks and they borrow from them against the securities that are acceptable to them; but, by and large, they rely on funds that they can get from the so-called unorganised market.

Wide of the Mark

If that is so, the other conclusions arrived at by the Reserve Bank in this regard are also wide of the mark. In the same speech from which I have quoted above, the Reserve Bank Governor further holds the view that "in this market (unorganised market), there is no clear demarcation between short-term and long-term finance; not even between the purposes of finances, inasmuch as there is usually nothing on the indigenous bill of exchange to indicate whether it is for financing trade or for providing financial accommodation; in other words, whether it is a genuine trade bill or a financial paper. Some idea of the size of the unorganised market can be had from the fact that, according to an official investigation, made some 30 years ago, the market financed 90 per cent of the internal trade of India. With the expansion of banking, the percentage has come down, and at present it is estimated to be as high as 50 per cent at present."

I do not subscribe to these views. The unorganised sector is pretty well organised, in that they have established sound traditions. People in the unorganised sector very well know the difference between short-term and long-term finance. They have a call loan market in which merchants can obtain *Dasti* loans or hand loans on clean basis from one another at competitive rates and many merchants do borrow in this market more freely. Even the small banks get larger amounts from this market than they possibly could from the organised market. They rarely lend on long-term basis, except against properties or against durable goods. They have a pretty good idea of the purpose for which they lend. If nothing is mentioned in the Indian bill of exchange, it is because of the ancient practice and custom in this regard. Anyway, why make fetish of these clean advances when big borrowers are able to get similar accommodation from the banks (in the organised sector).

What is, however, more important is that the indigenous bankers are happy as they are. Their rates may be high, but they are more realistic, because they get the money they require from the investors and the investors, too, are happy because their savings are absorbed at profitable rates of interest. The indigenous bankers are not tied down to rules and conditions which are out of tune with the economic forces nor are they subjected to the so-called monetary policy of the Reserve Bank. No wonder that the unorganised sector is doing so well as compared with the organised sector. The present position of the unorganised market reminds me of a piece of the famous cartoonist Low several years ago in the *Manchester Guardian*. In the world map, Low showed various dictators and politicians pointing guns at one another from their respective countries. In the African continent, however, he showed Negroes immensely enjoying a dance, in a circle, singing a song. I forget exactly the wording of the song, but the substance of it was "How happy are we that we are not civilised." The unorganised sector of our money market is very much in the same position as the people in Africa as pictured by Low years ago.

FINANCE FOR INDIA'S EXPORTS

A reader writes:

"I have read with interest the article on finance for exports by 'Kuber' in the last issue of *Commerce*. Although it may be true and it is often true that our exports are not up to the quality and there are institutions ready to finance our exports, the tone of the article and his remarks are rather uncharitable to Indian manufacturers. The textiles that are offered are as good as those manufactured by foreigners. It is an innate habit of ours to like everything that is foreign. It is no doubt true that foreigners offer goods of quality. They have behind them experience and traditions built up over years. In our own country, attracted by high profits many new units will be started and competition will compel them to offer articles of quality. Only, it will take time.

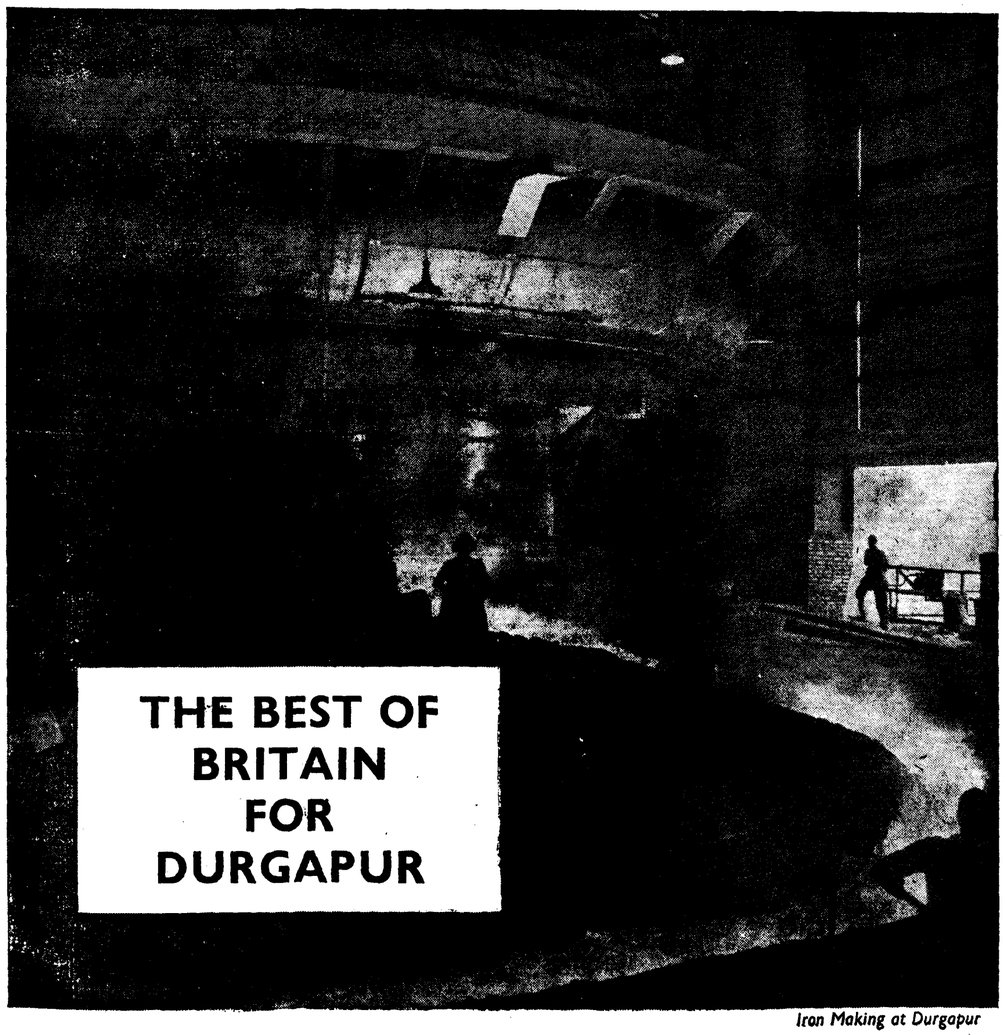
"Once, I had purchased Japanese woollen cloth. I made out a suit. I gave it for dry cleaning. The colour had gone. I had written to the shopowner from whom I had purchased and to the Japanese Consulate. No reply was received. I similarly purchased material for making a coat. The coat did not last for more than two months. I am reminded of my early college days. I was doing my economics. Improvident extravagance on marriage occasions was put down as one of the causes for poverty, etc. of India. I swallowed it as a child swallows ice cream. But, after reading economic history and other books, I came to realise that they were not the real causes but only symptoms. The causes were different.

"In the transition stage of an economy, there are bound to be lapses, but we are not all dishonest. We will learn that dishonesty will not pay in the long run. It is one thing to say that we should improve our quality to maintain our markets, but it is another thing to say that the stuff is shoddy and people are exploiting, etc.

"One should not overlook that exports must be linked to incentives. If there are incentives and there is scope to make money, then exports are boosted; otherwise, manufacturers like to sell their goods in the home market.

"So many delegations are going abroad. What are they doing? Whatever may be the truth, one cannot go as far as 'Kuber' does. I had an Eagle vacuum flask. It was not preserving heat. I wrote to them. They immediately replied and said that they would replace without cost if it was due to manufacturing defect. And they kept their word. Let us not generalise. Let us suspend our judgment. Human nature is the same all over the world. Ours is a poor country and people stoop because of poverty."

A team of specialists from Stanford Research Institute arrived at Taipei, Formosa, this week to begin a study of opportunities for productive investment in that country by foreign companies. The team members are Mr. Charles L. Hamman, senior economist, and Mr. Harry J. Robinson, specialist in studies related to the problems of newly developing areas. Other S.R.I. staff members will join them as the study progresses. The Formosa survey, expected to last about six months, is being sponsored by the International Co-operation Administration (I.C.A.). It was undertaken at the request of the Government of the Republic of China.



Iron Making at Durgapur

The best of British Engineering has been brought together by ISCON to design and construct the Durgapur Steelworks. The combined efforts of British and Indian engineers who built Durgapur will serve as a unique example of Indo-British collaboration which can meet the future needs of the Indian Steel Industry.

MR. T. N. SINGH'S STAND ON POWER AND ROAD TRANSPORT UNREALISTIC

ATTITUDE OF MR. MANUBHAI SHAH BECOMING PETULANT

From Our Special Correspondent

NEW DELHI, 31*st October*

THE meeting of the Central Advisory Council of Industries held last week-end was unusual in some respects. An annual one-day discussion in this body has only provided occasions for a general debate on the industrial problems but they have been useful for the exchange of views among business men and officials. In view of the serious bottlenecks in transport and power supply this year which affect production, the Council was expected to give some special attention to the steps needed for overcoming them; it dispersed, however, without achieving concrete results, because Government spokesmen were far too complacent to admit that anything was wrong. That industrial production during the first half of the year was about 8 per cent higher than the corresponding period last year was partly responsible for such complacency; it is not always easy to demonstrate that output could have been higher still if power and transport failures had been avoided.

DELHI LETTER

Power

While defensive attitudes on the part of official representatives are to be expected, the performance of Mr. T. N. Singh, a Member of the Planning Commission who is responsible for industry, was altogether surprising in regard to the question of permitting some industries to generate their own power. No new issue of principle was involved in this matter; installed capacity in industrial establishments has increased from 0.59 m.kw. in 1950 to 1.02 m.kw. in 1960 and energy generated has similarly doubled. State Governments, like that of Punjab, have even offered tax concessions to such installations which relieve the strain on the public power supply. Mr. Singh, however, objected to the demand on the ground that the foreign exchange needed for such power units will also have to come from the limited pool of foreign exchange secured through external aid for the Plan. This may be true (except in the case of foreign enterprise which can find additional foreign exchange for power generation also), but power is in the priority category and any additions to it even at the expense of some other schemes is not entirely a matter for regret. Nothing is lost, as the saying goes, when the candle burns and the establishment of new power capacity in the private sector will only reduce the risks facing industry. There was much support for this idea from Dr. A. Ramaswamy Mudaliar, who suggested a co-operative effort among capitalists in power generation, and from the I.N.T.U.C. representative Mr. Vasavada.

Transport

The Plan provides for an investment of Rs. 50 crores in the private sector on power and the foreign exchange component of this investment should be available for the purpose. In the first two Plans, an investment of Rs. 69 crores was made in the company-owned utilities and Rs. 38 crores in self-generating industrial establishments; the respective proportions of the two for the third Plan are not clear, but the present shortages and growing needs should have indicated the need for a more constructive response to the demand than Mr. Singh was able to make on this occasion. (Mr. Trivedi, another Member of the Planning Commission, was less unhelpful but offered little hope of improvement in the "tight" power position.) Mr. Singh was equally disobliging on the question of road transport, arguing that any expansion beyond that provided for in the Plan (15 to 20 per cent) would involve additional investment on roads and vehicles—overlooking thereby that the substance of most criticisms was that more could be achieved with existing resources if the right policies were followed by the Centre and the States.

After this, it was somewhat refreshing to hear that the railways had been permitted to spend 30 to 40 per cent more than the Plan outlay to create the additional transport capacity needed. But since this additional investment was not linked to any revised figures of goods traffic to be carried, the inference is that the railways may require more money even to achieve the targets already agreed upon. While no one will minimise the importance of railway development on which the economy depends a great deal, the contrast between the grudging nature of the response to the private sector's demands and the ready concession to the railways will not fail to be noticed.

Mr. Karnail Singh, Chairman of the Railway Board, however, made it clear that the railways would not be able to meet all demands made on it for carrying goods traffic, though he foresaw no special difficulty in meeting the requirements of industry. It implied that industry must resort to other, even more expensive, forms of transport where necessary.

Coal Supplies

On the question of coal supplies, hardly any reassuring statement was made to allay the fears expressed by the heads of the two leading Chambers of Commerce. Discretion apparently seemed the better part of policy. The Minister for Industry, Mr. Manubhai Shah, however, seemed to include these fears among the "grouses," though industry, he said, was in fine shape and prospering because of the increase in production. His growing self-confidence reached the point of asserting—before a body of industrialists who ought to know their manufacturing operations—that there was hardly any unutilised industrial capacity in the country. This is a theory which the Minister has been reiterating of late to counter suggestions that lack of one or the other of the several requirements—power, coal, transport or raw materials—is reducing the rate of industrial expansion. Various estimates have been made of this unutilised capacity; some of it might have been due to licensing of units without regard to the possibilities of supply of raw materials or power. (A paper by Mr. Morris J. Solomon, Adviser to T.C.M., has indicated some disturbing facts to this effect: Sir Donald MacDougall also made some rough estimates.) So Dr. Lokanathan, who referred to this subject in the Council, had reliable evidence to support his contention that existing units should be extended fully before new capacity was created. Mr. Manubhai Shah brushed all this aside with his *ipse dixit* that there was no idle capacity at all. This method of meeting criticism is increasingly noticed of late, but the Minister apparently overlooked the implications of such a flat denial. It means that, unless there is continuous fresh investment, without interruptions due to foreign exchange difficulties as at present, it will become impossible to maintain the present annual rate of increase in industrial production and, as in 1958 and 1959, industry will soon reach a plateau.

In refreshing contrast to these petulant attitudes on the official side, the representatives of the private sector, with few exceptions, showed great moderation. In particular, Dr. Ramaswamy Mudaliar gave the right lead by drawing attention to the problems and performance of the public sector and the limitations under which it had to operate; both Mr. Thapar and Mr. Stenhouse gave a straightforward account of deficiencies in planning.

Mr. K. C. Reddy, Minister for Commerce and Industry, very wisely agreed to have in future two sessions of the Council every year. He laid emphasis mainly on the foreign exchange difficulty which prevented sanction of schemes of expansion, especially those requiring regular import of raw material and components. Export performance, he stressed, would be an important criterion in granting import licences. For the rest, his was an unexciting but complete account of the various steps to promote foreign collaboration, draw up priority lists for licences and encourage various financing institutions to help new industry.

Distracted by the problems of production, the Council had little time for discussions on the problems of prices, especially of exported goods; though Mr. K. C. Reddy referred to it and Dr. Mudaliar underlined the need for exporting goods at ex-factory prices, no new or encouraging suggestions came forth. The only hopeful part of the proceedings was the general feeling that the increasing interest shown abroad in investment in India was evidence of an improving climate for foreign investment.

INDUSTRIAL FILMS IN WEST GERMANY

(*By A Correspondent*)

RAPID progress is being made in West Germany—same as in most other of the world's highly industrialised countries—in a new field of information on industrial activities: the number of industrial films produced on behalf of West German enterprises and shown in countries throughout the world is steadily moving up.

The total number of such films produced between 1950 and the middle of 1961 runs up to between 1,900 and 2,000. This figure is comparatively small as compared with the number of industrial films produced in other countries. About 400 industrial films annually are being made in France, for example, some 800 in Britain, and the 1959 output of industrial films in the United States was about 8,000.

But the Federal Republic is catching up. Almost 450 industrial films were produced in the first half of this year; this compares with an annual production rate of about 200 between 1958 and 1960.

Industrial films should be both masterpieces of information and the art of movie-making, German producers think. Their top products, in fact, have fetched first prizes at international festivals at Rouen, France, last year and again at Monza, Italy, this year.

Another guiding principle for the manufacture of industrial films in West Germany is that they are not made to advertise for a certain enterprise or a certain product. Their purpose is to provide information on the industry and/or the Company and its products by depicting manufacturing processes and problems or by outlining social questions. And this principle makes them especially suitable to serve one of the biggest tasks at present: the aid which the world's industrial nations are giving to the lesser developed countries.

Many inhabitants of most of the developing countries are presently entering a completely new and strange world with many "mysteries": the world of machines and mechanised production processes. The way to inform them by literature is often barred owing to the still high rate of illiteracy in these countries. Industrial films have, therefore, turned out to be one of the best means of information by making understandable complicated industrial processes by motion pictures.

In order to meet these requirements, a growing number of industrial film producers have started to make foreign-language versions of their films. A total of 886 German industrial films are now available in foreign-language versions, most of them in English and French but some of them also in languages like Arabian, Chinese, and Persian.

Thus, West German industrial films have become a major instrument of information and instruction to acquaint people throughout the world with the multitude of problems and achievements of the industrial society.

"PULSE BEAT OF OUR TIME"

"Pulse Beat of our Time" is a documentary film produced by the "Gesellschaft fuer bildende Filme, Muenchen" in close co-operation with the House of Siemens. The film, which is intended to give some idea of the significance and the achievements of the House of Siemens, was shown to the press in Bombay on Monday this week. The film clearly shows the character of existing relationships in electrial engineering. In an expedition to the four corners of the earth, the camera spotlights distant focal points of electrical engineering. The journey takes one from the ore loading plant in Norway to the television transmitters on the Columbian Cordillera; from the Indian industrial centre at Rourkela to the high voltage lines in the jungle of Nicaragua in South America; from the power installations in the rocky landscape of Afghanistan to the coaxial cable over 1,000 km. (620 miles) in length in Argentina; from a power station in Mexico to the transmitting stations which bridge the deserts of Arabia. It also takes one into the world of the microscope, displaying the phenomena in the manufacture of quartz crystals, in the manufacture of semiconductors, which are on the borderline of physics and chemistry. The camera even penetrates into the interior of an electron microscope to make visible streams of electrons. It is claimed that this is the first moving picture to show the transformation of the molecular structure of aluminium oxide.

UNDER SECRETARY 6 NOV 1961 DEPARTMENT

BANKS IN THE MONEY

NO RELAXATION OF CREDIT SQUEEZE

(*From Our Own Correspondent*)

LONDON, 27*th October*

THIS year's credit squeeze is running true to form. Measures applied with severity and aplomb in July are beginning to show serious effect only after three months, and the basis for the measures at the same time appears to be removed. Your correspondent's letter last week pointed out that a great many of the economic indices did not show any significant effects. There is only one amendment to make this week: with the publication of the mid-October unemployment figures, we find that, against the usual increase at the end of the summer of about 10 per cent of the numbers unemployed, this year the figure is about 13 per cent.

LONDON LETTER

The financial indices tell a slightly different story. It will be recalled that the Bank of England's most powerful weapon when dealing with the joint-stock banks nowadays is the use of the Special Deposit, and the banks had already—before the latest squeeze—been required to put up 2 per cent of their deposits with the Bank of England. In July, a further 1 per cent was added, thus locking up £218 million of money which could otherwise have served as a backing for advances and investments. The £70 million and odd which the Bank of England took out of the London banks in July, reducing their liquid assets by the same amount, cut more than 10 per cent out of the banks' cash. Since the ratio of advances to cash is between 5 and 6 to 1, £70 million off the cash can mean £400 million off the advances. In practice, things do not quite work out this way, as the banks take measures to increase their cash resources by selling investments, for example. Nevertheless, in the two months August and September, the banks were forced to squeeze their borrowers to the tune of £230 million, that is, approximately 7 per cent of their outstanding advances in July. Seven per cent may not sound a large figure, but it has to be implemented from directives to bank managers throughout the country and takes the form of steady pressure on borrowers to reduce their overdrafts and stolid resistance to increases.

Small Reduction

In October, there has been a further reduction in advances. Anyone who studies the figures would be misled if they did not know that there have been transfers from advances to call money (which are loans to the City), but the true reduction is only of the order of £30 million. Against the squeeze of the earlier two months, this is very small.

What is even more significant is that the banks have succeeded in putting themselves back into a position of still *greater* liquidity than they were in July. They can no longer tell their customers as they did then that they simply do not have the funds to maintain their existing level of advances. They not only have the funds but have actually been forced to invest them in gilt-edged, which is one reason why that market has been so strong recently; £50 million has been so invested in this last month alone.

Does this increase in bank liquidity, accompanied by a reduction in interest rates, mean that the squeeze is going to slacken? If the banks were left to their own devices, it would undoubtedly mean this. But the Government is in no mood to let this happen and it could quite easily demand a further 1 per cent of special deposits which would, once again, put the banks in a very tight position. The banks' only alternative is to maintain, by their own actions, the pressure on their customers, until the Government indicates that this may be relaxed.

COMMONWEALTH AND COMMON MARKET

The Secretary of State for Commonwealth Relations, Mr. Duncan Sandys, told the European Foundation for International Exchanges in Brussels (Belgium) last week, that, following his consultations on the Common Market with Commonwealth Governments, the British Government was convinced that the interests of the Commonwealth and of Europe were not incompatible. On the contrary, the Government was convinced that these interests were complementary and closely linked. "The prosperity of the one can only strengthen that of the other," he said.

BRITAIN REPAYS PART OF I.M.F. LOAN

BID TO PROMOTE INTERNATIONAL MONETARY CO-OPERATION

VIEWED from whatever standpoint, whether as a gesture to maintain the stability of international exchange rates or as a step towards easing the current strain on the resources of the International Monetary Fund, or to help the U.S. dollar which has tended to be soft again, the decision of the British monetary authorities to repay at once £100 million to the Fund is a step in the right direction. It will be recalled that it was only three months ago, on 4th August to be precise, the Fund had granted a massive credit of $2,000 million to Britain for helping that country to tide over its balance of payments crisis. Under that credit, the U.K. was allowed to make an immediate drawing of $1,500 million (equivalent to £535 million) as well as to have the right to make additional drawings to the tune of $500 million in the following twelve months. That it is in a position to return nearly one-fifth of its borrowings so soon speaks not only of the resilience of British economy but also a full appreciation by the British Government of the role of the I.M.F. as short-term lender.

Happily for Britain, its predicament has proved to be of a shorter duration than most people thought in the months of July and August. The selling pressure on the pound has disappeared, with the pound sterling gaining three cents since July, despite substantial sales of sterling by the Bank of England partly to prevent the rate from piercing the ceiling and partly to replenish its dollar reserves which had diminished as a result of flight of speculative capital from Britain. In the result, Britain's reserves of gold and convertible currencies recorded a substantial increase in recent weeks. Although several special payments have concealed the exact amount of expansion in these reserves, authoritative observers in Britain estimate that they have gone up by a little over £120 million in the months of August and September. There has also been a considerable inflow of "hot money" mainly as a result of higher rates of interest and the uneasiness among investors who had kept funds in W. Germany engendered by the Berlin crisis and Soviet resumption of nuclear tests on a large-scale. Even the reduction of ½ per cent to 6½ per cent in the British Bank rate had no perceptible effect in reducing the inflow of funds. On the contrary the prospect of a further cut in the British Bank rate has induced many foreign investors to go in for British shares and securities while the going is good. This has resulted in an increase in the inflow of funds into Britain.

The British monetary authorities are, however, keenly aware of the havoc that such flow of short-term funds can play on the stability of international exchange rates, in general, and on the pound when the tide turns against it again. The prompt repayment is, therefore, mainly induced by their growing desire to promote international co-operation. There is, we are told, a keen desire on the part of British authorities to see that "hot money" flowing into Britain is promptly internationalised by being channelled back through the International Monetary Fund. This is, by any standard, the most appropriate policy to follow. Even during the days of the International Gold Standard, every participating country was expected to follow certain rules of the gold standard game. Under the present system of international payments, it is, in fact, more incumbent on the member-countries of the Fund that they adopt suitable policies to counteract speculative flow of funds, and thereby prevent such movement from disturbing the stability of exchange rates.

There are, however, some in London who believe that the British Government might have decided to return a part of the I.M.F. credit as an alternative to a substantial reduction in the Bank rate which will be necessary if any serious impact is to be had on the inflow of "hot money" but which will be undesirable from the point of view of restraining demand for excessive wage increases and other inflationary pressures. Be that as it may, the need for prompt action on the part of Britain was all the more imperative in the present context, because the currency which would have been exposed to instability was the U.S. dollar, as the move into sterling is predominantly in the nature of a flight from the dollar. In the past few weeks, the U.S. has suffered a fairly sharp gold loss, a part of which is undoubtedly due to the widening of the margin in favour of "covered investments" in London. The early repayment of a part of the massive credit has been prompted by the low state of the Fund's reserves also. After the great assistance of $1,500 million to the U.K., the Fund was short of certain key currencies—notably the lira, the mark and the French franc—so that it had actually to sell $500 million of its gold. It is also quite likely that the British decision has been influenced by the differences at the recent Vienna meeting over the proposal for expanding the resources of the Fund. The quick repayment by the U.K. may help remove much of the sting in the criticism of France and other countries that more abundant resources at the disposal of the Fund would be primarily utilised to prop up the ailing economy of Britain.

CREDIT GUARANTEE FOR U.S. EXPORTERS

A new comprehensive scheme of export credit arrangements is expected to be announced by the U.S. Government in the near future. This scheme is intended to cover American exporters against both political and commercial risks. At present, American exporters are said to be at a disadvantage, as compared with many of their competitors in other countries. The proposed scheme, it is learned, is the outcome of a study undertaken earlier this year by the Export-Import Bank for covering political risks such as expropriation. The Bank, in partnership with seven insurance companies, has also been studying ways of covering ordinary commercial risks such as insolvency of the buyer. New export credit arrangements based on the above studies are expected to be announced very shortly.

The exports from the U.S. are also likely to be stimulated by the following two measures: (1) The U.S. would participate in 17 international trade fairs next year, and (2) there are proposals to grant more generous depreciation allowances, with a view to improving the competitive ability of some of the older industries.

Notice

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE is hereby given that the Ninety-eighth Annual General Meeting of the Shareholders of the Corporation will be held at the Sheth Goculdas Tejpal Auditorium, Gowalia Tank T.T., Bombay 7, on Friday the 24th November, 1961, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and audited accounts for the year ended 31st May, 1961.
2. To sanction the declaration of a dividend.
3. To elect a Director in place of Mr. M. G. R. Aitken, who retires by rotation and being eligible offers himself for re-election.
4. To elect a Director in place of Mr. Arvind N. Mafatlal, who retires by rotation and being eligible offers himself for re-election.
5. To elect a Director in place of Mr. J. A. E. Macpherson, who retires by rotation and being eligible offers himself for re-election.
6. To appoint Auditors for the period until the next Annual General Meeting of the Corporation and to fix their remuneration.
7. To appoint Branch Auditors at a remuneration to be fixed by the Board.
8. To consider and if thought fit to pass the following ordinary resolution:

"That the Company hereby approves of the appointment and consents to the continuance of the following persons as Sole Selling Agents of the Company's products listed below, in the respective areas mentioned against their names, for a period of five years commencing from 1st October 1961, with a proviso that the arrangement may be terminated by six months' notice by the Board or by the Sole Selling Agents:

Name of Agents.	Terms % Commission.	Area or Place.
Aitken Spence & Co., Ltd.	Timber 3%	Ceylon
Jardine Matheson & Co., Ltd.	Timber 5%	Hongkong
Jardine Matheson & Co. (Japan) Ltd. ..	Timber 4%	Japan
Wallace Brothers & Co. (Holdings) Ltd. ..	Timber 3%	Europe
	Tea 2%	Europe"

By Order of the Board,
WALLACE & CO.,
Secretaries and Treasurers.

9, WALLACE STREET, FORT,
BOMBAY, *27th October*, 1961.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Corporation.

Warrants for the dividend, if declared, will be posted to Shareholders on the 27th November, 1961.

Dividend will be payable on and from that date to those shareholders whose names stand on the Register at the close of business on 28th October, 1961.

The Transfer Books of the Corporation will be closed from the 30th October, 1961 to the 20th November, 1961, both days inclusive.

Explanatory Statement as required by Section 173 of the Companies Act, 1956:

Item 8. These Agents were appointed in 1956, for a period of five years which has now expired. This resolution seeks the continuance of their appointment for a further period of five years under Section 294 of the Companies Act, 1956. All the Agents mentioned have served the Company satisfactorily for many years in the past. The relative Agreements are open to inspection at the Company's offices any time during working hours.

RISK CAPITAL SUPPLY IN JAPAN

ROLE OF COMMERCIAL BANKS

By Kiichiro Satoh
CHAIRMAN, THE MITSUI BANK LTD.

TO what extent commercial banks may finance the so-called risk enterprises is a highly interesting problem. There are, I believe, two schools of thought. Let me illustrate this by a case of a certain enterprising businessman who called on the president of A Bank for a loan, taking with him a blueprint of a promising new project. The president refused the request on the ground that the particular project was as yet in an entirely experimental stage and not economically established. The same businessman, however, could receive a loan from B Bank whose president had an idea that the loan was warranted on the ground of extending a helping hand to any highly promising project after careful investigation. Suppose this businessman eventually succeeded in his new project! In a case like this, can the B Bank be proud of their foresight? Or is it the right attitude for the conscientious management of such a bank as A Bank not to share in the risk of an enterprise, because of the fact that the project is simply "promising"? The conclusion on the present subject lies between these two verdicts.

The history of how the so-called Zaibatsu developed in pre-war Japan is well known. They were few in number, but were very powerful and rich not only in material wealth but in having men of ability in the organisation. Most of them, instead of being merely scrupulous in going after self-interest, could afford at the same time to take responsibility to serve the country in economic development. Before World War II, these Zaibatsu in Japan played an important role in solving the complexity of the problem of supplying risk capital. New projects which were risky, demanding large capital, were generally started by a few Zaibatsu interests, if not by the Government. At the same time, financial institutions, which were established also as an important part of the vast business combine of the Zaibatsu, enjoyed the immense trust and confidence of the public. Thus, the major part of what people saved found its way to these affiliated banks in the form of deposits, especially as time deposits. Under the guarantee of the Zaibatsu, banks were able to supply funds thus made available to develop enterprises without bearing unwarranted risks in doing so. It was by such a process that the formula of what we call "indirect investment" by private and individual investors to industry was born spontaneously.

Pre-war Position

It is roughly estimated that the average annual growth rate of the national economy during the period from 1913 through 1938 (that is, up to the outbreak of World War II) stood at 5.5 per cent in Japan, as compared with 2.0 per cent in the United States, 1.0 per cent in the United Kingdom and 1.3 per cent in Germany. How was it possible financially? Japan was fortunate enough to accumulate a considerable amount of foreign exchange, thanks to a favourable balance of trade during World War I, but what Japan could earn during that period was expended during the post-war depression followed by the calamity of the big earthquake. The inflow of foreign capital thenceforward continued to mark time. Thus, Japan's economic growth before World War II was financed almost solely by the mobilisation of domestic resources. The rate of capital formation (i.e., the ratio of investment in the gross national product) in Japan in 1938 already stood as high as at 24 per cent, as compared with 8 per cent in the United States, 10 in the United Kingdom and 19 in Germany at those times.

One of the most noteworthy changes in the Japanese economic structure after World War II was the elimination of usefulness of these Zaibatsu as a result of the very heavy capital levy (90 per cent) imposed during the Occupation period, followed by the eventual dissolution of the Zaibatsu themselves. And also the war indemnity clause which was provided by the Government during the war to have armament industries financed by commercial banks was abrogated, and its effects rendered most of the big banks to write off their capital and reserves, and they were forced to start from scratch by issuing new share capital to the public who were also impoverished by the war.

Frankly speaking, it was the Government coffers that eventually benefited. In 1949, the yen was fixed at Y360 to a dollar, a curtailment to one-ninetieth of the pre-war value of approximately four yen to a dollar. In consequence, the interest charge of Government bonds was reduced to an insignificant item in the national budget. What worried us most at that time was the fear of the possible loss of the public's incentive for renewed monetary savings, because of such a sharp depreciation of the currency. For instance, the Japanese people who bought a pre-war insurance policy with the thought of providing for their rainy days, found with resentment that it was not worth even a year's premium in its purchasing power at the post-war maturity of insurance.

The Japanese economy after World War II made its fresh start under such unfavourable circumstances. Fortunately, however, the public's trust and confidence in banking system have not been lost, although most of the big banks sustained heavy blows. At the same time, the stability of the currency value in Japan, established as early as in 1949, contributed a great deal to encouragement of savings anew.

Budget Surplus

Since 1949 up to the present, the Government budget has continued to remain either balanced or to end with surplus revenues over the original estimate, and no Government bonds have had to be issued except for conversion. The only Governmental operation in the interim to compete with private businesses was the issue of corporate bonds by quasi-governmental agencies such as the Japanese National Railways, the Nippon Telegraph and Telephone Public Corporation and other public organisations under the Government guarantees, amounting, in the aggregate, to 381 billion yen ($1.1 billion) in value. Spurred by the general economic activities in recent years, over-the-estimate surplus of revenue in the national budget has been sizable each year. It has become customary practices in recent years that such increases in revenue have been adjusted by virtue of supplementary appropriation in the budgets. The over-the-estimate surplus, for instance, in fiscal 1960 reached 320 billion yen ($0.9 billion), or some 20 per cent more than the original Government estimate. It is estimated that the liquid asset of the Treasury has at the moment reached 500 billion yen ($1.4 billion). To that extent commercial banks have been compelled to borrow from the Bank of Japan over and above the actual requirements.

During the post-war period under review, various positive measures were taken to encourage depositors in the bank in view of the imperative need of propelling the formula of the public's indirect investment (as mentioned elsewhere) for the economic rehabilitation after the war. Interest on bank deposits were exempted from the income-tax for a few years, and the rate of interest on the one-year time deposit was long placed at 6 per cent per annum until 1960 (it is now set at a little less than 5 per cent per annum after taxes).

Resources of Banks

Thus, during the period from 1949 through the end of 1960, bank deposits increased elevenfold from 792 billion yen ($2.2 billion) to 8 872 billion yen ($24.6 billion). Of this increase, time deposits, a type which is most common for stable savings, accounted for some 55 per cent. In the interim, the total amount of bank resources grew from 1,017 billion yen ($2 8 billion) to 12,943 billion yen ($36.0 billion). On the operative side of these resources, the amount of Government and Government-guaranteed bonds in the portfolio accounted for only 5 per cent of the total for the reason that I have already mentioned. At present, the ratio of bank loans to bank deposits has reached a high level of 92 per cent, a fact reflecting a heavy demand for money by expanding businesses. It is noteworthy that the ratio of external liabilities in the total amount of capital employed by Japanese industry and commerce rose from 40 per cent in the pre-war period to 60 per cent soon after the war and further to 70 per cent in recent years. In other words, it vividly demonstrated the trend that the external liabilities of private businesses would taper off when the Government finance is in need of borrowing, whereas the demands for funds by private sector would tend to increase when the national budget continues to stay in the black.

Generally speaking, the equity capital formation of Japanese industrial corporations is still inadequate as compared with the pre-war level. Soon after the end of the war, many companies were in need of increasing their equity capital, but due to the lack of investors, institutional as well as individual, banks had to come into the market as substantial buyers, although with reluctance on their part. Recently, the sales of shares to the general public have become steadily active in parallel with the growth of investment trusts. The market value of shares held by these investment trusts is estimated at some 622 billion yen ($1.7 billion) or 11 per cent of the total value of shares outstanding. However, those shares held by banks are considered no less than those of the investment trusts in current value, judging by the amount of dividends being received by all banks. This is an inevitable state of affairs in Japan, because of the special circumstances in which Japanese banks have been called upon to lend a helping hand to enterprises after the dissolution of the Zaibatsu.

Corporate Bonds

The same is the case with corporate bonds. After World War II, commercial banks in Japan have been prohibited from underwriting issues of corporate bonds. As the funds available on the bond market are markedly restricted, however, banks are eventually required to buy the major part of the bonds newly issued, although they are initially underwritten by securities companies. Of the total amount of corporate bonds outstanding valued at 692 billion yen ($1.9 billion), banks are thus in possession of some 66 per cent. Banks which act as trustees of bond issues naturally are considered well informed of the credit standing of the bond issuing companies concerned. Therefore, although the banks are not legally responsible for the ultimate fate of the bond for which they acted as trustees, there were some actual instances after the war in which banks took care of continued payment to the bondholders when issuing corporations were in financial trouble.

In conclusion, I may say that commercial banks in Japan have, since World War II continued to play a cardinal role in the phase of industrial capital supply through three major channels—purchase of stocks, undertaking of corporate bonds and direct loans. I would not predict what should be the future assignment of Japanese commercial banks; however, I may hope that positive efforts be made to alleviate the excessive post-war burden on commercial banks by means of diversification of financing methods, depending more on the development of life insurance companies, investment trusts and other institutional investors, particularly in the long-term investment market. In whatever endeavours to be made in this direction, however, the popular propensity on the part of people for capital accumulation so essential for the growing Japanese economy should not be discouraged in the least for the sake of the academic concept such as liquidity of banks, etc., which tends to disregard the true value of the characteristic structure adapted to each country.

INTERNATIONAL ADVISORY SERVICE FOR ECONOMIC DEVELOPMENT

A new international advisory service for economic development has been formed in London. Known as the Combined Engineering and Economic Studies Ltd. (situated at 1-2 Finsbury Square, London, E.C.2.), it will use advanced engineering and economic techniques to survey engineering, economic, and financial potential in any country and to examine projects and plans of many different kinds for which unbiased, highly skilled advice is needed. The new company, which is completely independent, will draw on the advice of eminent engineers and economists of international standing, according to the nature of the project. The service will enable oversea Governments and municipalities to obtain a preliminary survey of all possibilities before embarking on ambitious projects.

The directors of the new concern are: Mr. Maxwell Stamp, formerly adviser to the Governor of the Bank of England, and Mr. Andrew B. Henderson, partner in a London firm of consulting engineers.

Speaking at a press conference in London, Mr. Stamp drew attention to the communication gulf which existed between economists and engineers. "Engineers and economists," he said, "must get together and work hard from the outset if they are to give adequate and professional advice to those responsible for development projects at home or abroad."

COMMUNIST COMPETITION IN WORLD TEXTILE MARKETS

REMARKABLE EXPANSION IN SPINNING AND WEAVING CAPACITY

THE emergence of Communist China as a major producer and exporter of cotton textiles and the penetration of Chinese textiles in South-East Asian markets have invested the development of the cotton textile industry of China in particular and of the Communist countries in general, with international commercial significance. But, unlike in the free world countries, where statistics of industry are collected and made readily available as essential aids in planning and in the formulation of economic policies, in Communist countries such data are of little use except, perhaps, for political propaganda. Such statistics of industries, as are published from time to time in official publications, are so dressed up that it is difficult to get a comprehensive and accurate picture of any branch of industry. Viewed in this context, the statistical survey of the cotton textile industry in Communist countries, prepared by Robert Fischer-Ledenice of Austria and presented as a paper at this year's (1961) meeting of the International Federation of Cotton and Allied Textile Industries held at Osaka (Japan), is a valuable document. It throws some revealing light on this dimly lit sector of industry in the Communist bloc. It may be recalled here that the main theme of the Osaka meeting was international textile competition and the papers presented were chiefly concerned with the textile industries and textile markets outside Europe and North America.

In the paper mentioned above, the author has assembled a great deal of information, which is not readily available elsewhere and which together presents a comprehensive statistical picture of the cotton textile industry in the Communist countries as a whole. The study has been so phased as to provide a comparison of four periods—1938, a year shortly before the Second World War—1948, a year shortly after it and two years from the recent past, namely, 1955 and 1959, in order to show the trend of developments in the industry. The spinning capacity of the industry in the various Communist countries at the end of the aforesaid periods is as follows:

(1,000 spindles)

	1938	1948	1955	1959
Eastern European countries ..	6,133	4,660	5,270	5,597
U.S.S.R.	10,050	8,600	10,100	10,800
China	4,450	5,000	6,700	10,100
Total Communist countries	20,633	18,260	22,070	26,497

It is evident from the table that, during the last twenty years, the cotton spinning capacity has increased in almost all the countries. The only exception is Czechoslovakia, where the number of spindles has decreased. In the U.S.S.R., the number of spindles has remained more or less unchanged at about 10 million. The six Eastern European countries in general show only moderate increases in spinning capacity.

China's Position

The most striking factor is the steep increase in the spinning capacity in China. Since the years before the Second World War, it has been doubled and more than half the increase falls into the period between 1955 and 1959. This enormous expansion of China's cotton spinning industry also leads to a noticeable change in the relative size of the spinning capacity in the Communist countries. The following table gives the percentage distribution of the spinning capacity in the Communist countries.

Year	Total	Eastern Europe	U.S.S.R.	China
1938	100	30	49	21
1948	100	26	47	27
1955	100	24	46	30
1959	100	21	41	38

It will be seen that the U.S.S.R. still has the largest share in the spinning capacity of the Communist countries, but China has almost caught up with it. The latter country's ambitious plans for the future expansion of spinning capacity leads to the conclusion that, in the next few years, it will succeed in leaving the U.S.S.R. well behind. The importance of the six Eastern European countries has decreased relatively, though the number of spindles in these States has slowly increased.

The development of weaving capacity shows, as is evident from the table below, a pattern similar to that of spinning capacity. Here the U.S.S.R. seems to have suffered more war damage than in the spinning sector. The contrast between the number of looms in 1938 and 1948 is comparatively large, although this is probably due to a forced automation process in the course of which the number of looms usually declines. At any rate, it is obvious that the U.S.S.R. is endeavouring to raise its weaving capacity again by having up-to-date automatic machines. But the pre-war level has not been reached yet. The East European countries show a slightly rising tendency in the number of looms. Only Czechoslovakia shows the same large decline between 1938 and 1948 as in the spinning capacity. The considerable loss of looms in Czechoslovakia has a strong influence on the development of the weaving capacity of the Eastern European countries as a whole which decreased from 193,760 in 1938 to 130,200 looms in 1959.

(Looms)

Country	1938	1948	1955	1959
Eastern Europe	197,760	151,500	130,200	130,200
U.S.S.R.	270,000	184,000	215,000	225,000
China	50,200	127,000	172,000	240,000
Total Communist countries..	519,960	463,000	517,200	595,400

As in the case of spindles, the rise in the number of looms is the largest in China. In 1938, China's weaving capacity was only one-fifth of that of Russia. In 1959, Russia had already been surpassed by China. This becomes even more evident from the variations in the shares of different Communist countries. Thus, in 1938, China accounted for only 11 per cent of the total weaving capacity of the Communist countries, whereas in 1959, it accounted for as much as 40 per cent. The share of the U.S.S.R., on the other hand, declined from 52 per cent to 38 per cent during the same period, while that of Eastern European countries also fell from 37 per cent to 22 per cent during the same period.

A comparison of looms per 1,000 inhabitants in U.S.S.R., China and Eastern Europe with that in the U.S. and Western Europe shows that, in relation to population, Western Europe, barring Czechoslovakia, has the highest loom capacity, namely, 2.7 in 1959, as against 1.8 for the U.S., 1.1 for U.S.S.R., 1.3 for Eastern Europe, 0.4 for China and 0.6 for Communist countries, in general. Nevertheless, looms per 1,000 inhabitants in Western Europe declined from 3.5 in 1955 to 2.7 in 1959.

Output of Yarn and Fabrics

As a consequence of the steadily growing capacity, production of yarns and fabrics in the Communist countries as a whole has also increased in the last twenty years. The upward trend is, again most evident in China and insignificant in the six Eastern European countries. The following table illustrates the position:

(In 1,000 metric tons)

	1938	1948	1959	
	Cotton	Cotton	Cotton	Staple fibre
Yarn:				
Eastern Europe	219.3	241.8	342.9	102.8
U.S.S.R.	566.0	568.0	1,127.0	125.0
China	390.6	400.0	1,500.0	6.5
Total Communist countries ..	1,175.9	1,209.8	2,969.9	234.3
	1938	1948	1955	1959
Fabrics:				
Eastern Europe	136.1	137.6	213.5	247.1
U.S.S.R.	420.4	384.3	717.8	743.7
China	103.7	280.6	531.9	915.0
Total ..	660.2	802.5	1,462.7	1,905.8

Percentage changes in the entire production of yarns and fabrics in the Communist countries demonstrate even more clearly the trends observed in spinning and weaving capacities. The dominant position of U.S.S.R. in 1938 in the Communist bloc has been entirely lost. Also, the Eastern European countries have suffered a heavy decline in production, whereas China, which was unimportant in 1938 as far as production of fabrics was concerned, attained in 1959 the leading position within the Communist bloc, although considering the size of its population and its requirements, the size of the industry is not that impressive.

Computation of the yearly production of fabrics per loom leads to certain conclusions as to the development of productivity in U.S.S.R., China, Eastern Europe, Western Europe and the U.S.A. Production per loom in 1959 (taking production in 1938 as 100) was the highest at 265 in the six East European countries, whereas it was 259 in the U.S., 226 in China, 213 in U.S.S.R. and 167 in Western Europe. The relatively high increase in the East European countries is chiefly due to the almost generally established three-shift system, combined with simplification of production methods. The relatively slower rate of growth in production per loom in Western Europe is due probably to the manifold increase in production in these countries. The marked increase in production per loom in China reflects the establishment of a new industry with most modern machinery.

Foreign Trade

The remarkable expansion of the textile industry in the Communist countries is reflected in the trend of foreign trade in textiles in these countries. An analysis of this trend in the five areas, namely, U.S.S.R., China, Eastern Europe, Western Europe and the U.S. shows that Eastern Europe is still the largest net exporter of piecegoods, although the surplus of exports over imports has declined from 248,000 metric tons to 29,000 metric tons during the period 1938-59. The following table shows the trend of exports and imports of piecegoods by these countries during the period 1938-59:

(In 1,000 metric tons)

Country	Year	Imports	Exports	Balance
W. Europe	1938	68.8	316.5*	248.2 (E)
	1955	125.4	217.5	92.1 (E)
	1959	182.0	211.0	29.0 (E)
U.S.A.	1938	11.2	26.5*	15.3 (E)
	1955	14.8	58.0	43.2 (E)
	1959	25.9	49.6	23.7 (E)
E. Europe	1938	7.9	10.8	2.9 (E)
	1955	5.8	35.6	29.8 (E)
	1959	7.9	42.8	34.9 (E)
U.S.S.R.	1938			
	1955	2.2	16.7	14.5 (E)
	1959	23.1	20.6	2.5 (I)
China	1938	9.8	8.0	1.8 (I)
	1955	2.8	15.0	12.2 (E)
	1959	1.0 †	56.0†	55.0 (E)

* 1937 † 1958

The proportion of exports and imports to total production is small, 2 to 3 per cent in the U.S. and U.S.S.R., indicating that the cotton textile industries of both countries are rather independent of foreign trade and are serving almost entirely the home market. In the case of Western Europe, Eastern Europe and China, the percentage is higher.

Consumption *Per Capita*

No precise information on the end-use of fabrics is available. But from such data as are available it is evident that the Communist countries, except the U.S.S.R., are far behind in *per capita* consumption of fabrics, as compared with the U.S. and even Western Europe. Thus, the *per capita* consumption of cotton and rayon piecegoods in 1959 was 78 yards in the U.S., 42 in Western Europe, 32 in the U.S.S.R., 19 in Eastern Europe and only 12 in China. The U.S.S.R. has obviously raised its consumption quota during the last five to ten years and has already reached 75 per cent of the Western Europe level. The *per capita* consumption of cotton fabrics between 1955 and 1959 generally shows a certain increase which is relatively highest in China. Only in the U.S., consumption seems to have decreased slightly, possibly due, some extent, to increased consumption of synthetic and other newer fibres. Concluding his analysis of consumption trends, Mr. Robert Fischer-Ledenice observes:

"It is evident that the average consumption in the Communist countries is still very low. This implies that this area, which is—with the exception of China—united in an economic system, the so-called Camecon, may be obliged for some time to come to direct its surplus fabrics from industrialised areas into those parts of the Communist world that are well behind the standard of the U.S.S.R. or of that in the six Eastern European countries if a rise in the standard of living in the whole Eastern bloc is to be realised. With certain reservations, these figures on the consumption of fabrics may well serve also for a study of the general development of the standard of living in Communist countries as clothing and textile requirements are no doubt one of its characteristics. It ought to be remarked that the low *per capita* consumption in China is probably not quite correct. As far as could be ascertained, China reports in her statistics only industrial production, completely ignoring the Chinese hand-weaving which certainly is still rather widespread (it was, at least, before 1948). Therefore, really correct figures in respect of Chinese consumption are hardly available."

Apart from the aforesaid aspects of the textile industry in Communist countries, there are

SCHEME TO SHARE THE BURDEN OF CLOTH IMPORTS

SIR ROY HARROD'S SAGE COUNSEL

From Our Special Correspondent

MANCHESTER, 24th October

A SCHEME to share the burden of cotton cloth imports between all Western countries has been submitted to the British Government and will be put forward when international talks on the subject open in Geneva next week. This was disclosed by Viscount Rochdale, Chairman of the Cotton Board, when he opened the industry's annual conference.

MANCHESTER LETTER

Two main recommendations have been submitted to the Board of Trade by the Cotton Board for the guidance of the Government representatives to the Geneva talks. In the first place, the Lancashire cotton industry feels that a declaration should be made that the U.K. has been bearing an unfair share of the burden and the Government's policy should be to reduce retained imports from low-wage countries as wider opportunities are opened up for these goods in other markets.

The other recommendation is that every effort should be made at the discussions to secure an undertaking that, by 1970, every "Western" country or economic community should take at least 10 per cent, but not more than 20 per cent, of its domestic requirements of cotton products from low-wage countries.

"We have pointed out," said Lord Rochdale, "that these two proposals, if implemented, would help to create conditions in which the U.K. cotton industry could with confidence continue its programme of reorganisation and re-equipment effectively and achieve the compact and highly efficient industry within the decade without inhibiting the reasonable aspirations of less developed countries."

On re-equipment of the Lancashire cotton industry, Lord Rochdale said the Government reorganisation scheme had not achieved the results hoped for. Application made to the Cotton Board by all sections of the industry up to last week represented expenditure on re-equipment of £32.75 million. The sectional totals were £17 million in spinning, £800,000 in doubling, £14.7 million in weaving and £250,000 in finishing.

"These figures scarcely represent more than one would expect from an already up-to-date industry for its normal development," he commented. "They clearly do not represent enough to put the industry in the forefront of its competitors."

The Board of Trade has agreed, Lord Rochdale disclosed, to extend the period during which orders for machinery may be placed to gain the 25 per cent subsidy for a further year until 8th July 1963. "That is not as good as a postponement of the final date for completion of installation, but it is better than nothing," he said.

Import from Poorer Countries

The imposition of a ban on imports of cotton textiles from advanced countries, especially those in Europe and North America, was advocated by Sir Roy Harrod, the economist, at the closing session of the Cotton Board Conference.

Sir Roy, who described his proposition as "a matter of simple ethics," said the richer countries should give a helping hand to the less developed areas. If the Western world did not bring the Asian countries forward by buying their products, then the Communists would.

He believed that the concept of the Commonwealth should be maintained and that these countries should be encouraged in every way possible. The advanced nations in Europe and other parts of the world should be persuaded that they, too, had a responsibility to the poorer countries in purcashing their goods.

To Mr. Michael Grey, leader of the Lancashire delegation to the Geneva talks, who pointed out that the U.K. was importing 45 per cent of its home consumption of cotton goods from low-cost countries, Sir Roy said he would tell the representatives of the advanced nations that Britain intended to put the poorer countries at the top of the list for imports. If the other areas were prepared to absorb more supplies from low-cost producers, then the U.K. might consider taking additional quantities from the richer nations.

Sir Roy said he felt it was not right for the Government or any other public body to invest money in the modernisation of industry unless the net result would be to enable a more competitive product to be turned out.

Before the conference closed, Lord Rochdale, Chairman of the Cotton Board, said the views of the delegates on the import situation would be carefully considered. But no resolutions could be entertained.

Effective Marketing

Measures to improve the effectiveness of marketing cotton goods, without extensive alterations to the present structure of the Lancashire textile industry, were advocated at the Cotton Board's conference by Mr. A. G. B. Burney, Director, Reorganisation, at the Cotton Board during 1959 and 1960 when the industry's big reconstruction scheme was being carried through.

Among his suggestions were co-operative wholesaling on a group basis, a central market research and intelligence organisation and the establishment of a centrally organised computer service station.

Mr. Burney said he had felt for a long time that the industry should protect itself against the booms and slumps in textiles which seemed to follow a regular three-year cycle. Since 1951, the expenditure by consumers on cotton goods in the U.K. had risen steadily and had never varied by as much as 10 per cent between one year and the next.

He urged that some form of co-operative wholesaling or merchanting on a group basis and selling direct to the retail trade should be introduced. Similar arrangements had been organised in the grocery trade and the production of pharmaceutical goods.

On the other hand, it was not practicable for the textile industry to improve its marketing position by increasing its control of retail units. Quite apart from the major place held by the multiple stores, it would not be possible for the industry, without the investment of huge sums of money, to acquire or control any significant part of total retail sales.

Research and Costing

The Cotton Board, said Mr. Burney, with its allied Productivity Centre and close relations with the Shirley Institute, would be an ideal body to develop a market research organisation and intelligence units. Economic surveys of home and export conditions in world textile markets could be drawn up and information could be published at regular intervals regarding stocks, output, order books, etc., in order to supply the Lancashire textile industry with information about world requirements for its products.

"I feel the importance of a really first-class costing system cannot be overrated," he continued. "It may well be that the industry could make use of a centrally organised computer service station. Many of the problems, particularly of the larger firms, would lend themselves to analysis and solution by data processing, particularly such matters as stocks and stock control, trend of sales, analysis of sales and availability of supplies."

Man-made Fibres

Addressing the conference on the relationship of the man-made fibres industry to the Lancashire cotton industry, Mr. D. R. B. Mynors, a Director of Courtaulds, said that in concentrating on the use of man-made fibres, the industry would be better able to survive the inevitable disruption caused by competition in plain cotton goods from Far Eastern countries and emergent colonial territories with lower wage levels.

"Whether we join the Common Market or not, the pattern of our foreign trade will swing more and more in the direction of Europe," he continued. "My own firm's recent experience may perhaps introduce an optimistic note. Our exports of fabrics this year are running at the same rate, but the change in ratio between markets is very significant. . . . Last year the Commonwealth took four times as much as Western Europe. In the last six months, the ratio has swung to 1.6 to one. Our trade with the Common Market countries has trebled without any tariff changes at all."

Mr. Mynors contended that the Government's reorganisation scheme had not gone far enough and that, not only should there be another round of scrapping of surplus capacity in the near future, but that it should be a continuing process.

PROUD ACHIEVEMENT

The J. K. Organisation can legitimately be proud of the fact that it has been the first in various fields of industrial activity in India.

FIRST to manufacture *Calico Prints* in India—J. K. Cotton Spinning & Weaving Mills Co. Ltd., Kanpur.

FIRST to instal *Electric Furnace* for manufacturing steel in Northern India—J. K. Iron & Steel Co. Ltd., Kanpur.

FIRST to produce *Baling Hoops* for use by the Jute and Cotton Textile Industries in India—J. K. Iron & Steel Co. Ltd., Kanpur.

FIRST to manufacture hydraulically operated modern cane crushing mill for small-scale Khandsari sugar units—J. K. Iron & Steel Co. Ltd., Kanpur.

FIRST to produce *Aluminium virgin metal* from Indian Bauxite in India—Aluminium Corporation of India Ltd., Jaykaynagar.

FIRST to produce *Engineers' Files* in India—J. K. Engineers' Files, Bombay.

FIRST to establish *Plastic Industry* in Northern India—Plastic Products Ltd., Kanpur.

FIRST to produce *Heavy Chemicals* in Western India—Eastern Chemical Co., (India) Bombay.

FIRST in the world to produce on a commercial scale *Hydrosulphite of Soda* by Sodium Amalgam Process—J. K. Chemicals Ltd., Thana.

FIRST *Continuous process Rayon Plant* in India to produce *Viscose Rayon* and the first such factory in India to be built up in record time—J. K. Rayon, Kanpur.

FIRST *Nylon Plant* in India—Jaykaylon (under construction). ROTA

FIRST to manufacture *Portable Typewriters* in India—Blackwoods India Ltd., Calcutta.

FIRST Woollen mill in India to export woollen goods to Norway and Sweden—The Raymond Woollen Mills Ltd., Thana.

LARGEST Jute Mill in Northern India—J. K. Jute Mills Co. Ltd., Kanpur.

TAPPING ELEMENTAL SOURCES OF ENERGY

JAPAN LEADS IN THE USE OF SOLAR WATER HEATERS

ALTHOUGH the recent United Nations Conference at Rome on "New Sources of Energy" was concerned with some of man's ancient sources of heat and mechanical power, it nevertheless provided a wealth of valuable information on new ways of harnessing the energies of the sun, of the wind, and of the earth's underground reservoirs of natural steam. These are, obviously, of particular interest for underdeveloped countries handicapped by the lack of adequate means of meeting their energy needs from modern conventional sources, but they are of considerable practical significance also for industrially advanced nations. It is worth noting, for instance, that there are today some 10,000 solar water heaters in use in Israel, over 25,000 in Florida, and close on 400,000 in Japan where their number is expected to rise to a million by 1965. The installed capacity of geothermal power plants in Italy, New Zealand, the United States and the Soviet Union, driven by local subterranean steam wells, currently totals nearly 400,000 kw., with another 70,000 kw. capacity at present under construction. Iceland's large resources of natural steam and numerous hot water springs now provide geothermal space heating for 45,000 people—about a quarter of the country's entire population—and for 100,000 square metres of greenhouses, as well as water heating for 80 swimming pools. The Reykjavik hot-spring water District Heating system saves the municipality the import of 65,000 tons of coal, or 40,000 tons of fuel oil, annually.

Wind power continues to be widely utilised in many parts of the globe, both in the traditional form of primitive windmills for water pumping (of which, e.g., Greece alone has no fewer than 10,000 still in use), and in the more refined modern versions of wind machines for electricity generation. These latter may range from small units of less than 5 kw. to big ones of between 100 and 1,000 kw. Under an Indian Government scheme, some 200 wind machines are being erected this year. By and large, however, wind power has lost a good deal of its former importance in the course of this century, at the beginning of which there were some 30,000 windmills in Northern Europe, while the United States still had as many as half a million in the 1920s. On the other hand, the progress in the exploitation of both solar and geothermal energy has been all the more impressive.

Mass Production

Solar water heaters are now being mass-produced in various countries for domestic and export markets, with Japan apparently far in the lead and herself a large user of such appliances. The simplest and cheapest types cost the equivalent of £2-4, but have a lifetime of only a couple of years. Consisting merely of a pillow-shaped expandable bag of vinyl film, which holds about 45 gallons of water and is fitted with connections for inlet and outlet pipes, they are mounted horizontally on supporting structures close to the tops of the sloped roofs of houses or factories, so as to collect a maximum amount of the sun's heat. Larger, more durable and elaborate solar heating systems, costing £40-50 apiece, serve to provide warm water for bathing or various other purposes. It is estimated that every solar water heater installed saves about a ton of fuel annually.

However, the majority of less developed countries in tropical and subtropical regions will generally be more interested in utilising the long periods of uninterrupted sunshine they enjoy for solar cooking, refrigeration and for meeting their modest needs for electric power. But those objectives are more difficult to achieve by satisfactory devices. While the solar cookers so far developed can have limited appeal to housewives, as they are suited only for outdoor use and are mostly rather cumbersome contraptions at that, progress in evolving reasonably efficient and easily workable small-sized solar power sets continues to be hampered by the technical complexity and high first costs of such machines. Nevertheless, much attention was attracted at Rome by the demonstration of an Israeli-designed "solar power package," producing about five kilowatts of electricity through a small turbine actuated by vapours of a non-corrosive chemical fluid, monochlorobenzene, in place of steam; the fluid itself was, however, vapourised by steam raised in solar collectors. The inventors claim that, at current prices of electricity on farms and remote locations, the costs of power obtained from batch-produced solar machines of this kind would compare favourably with those of gasoline and diesel engines. Of the various methods of collecting solar heat, one of special interest was a proposal by the National Physical Laboratory in Israel of using large stationary ponds of water, whose density at the bottom is artificially increased by adding suitable salts in high concentrations, so that the salty water at the bottom acts as a built-in heat storage reservoir.

Geothermal Energy

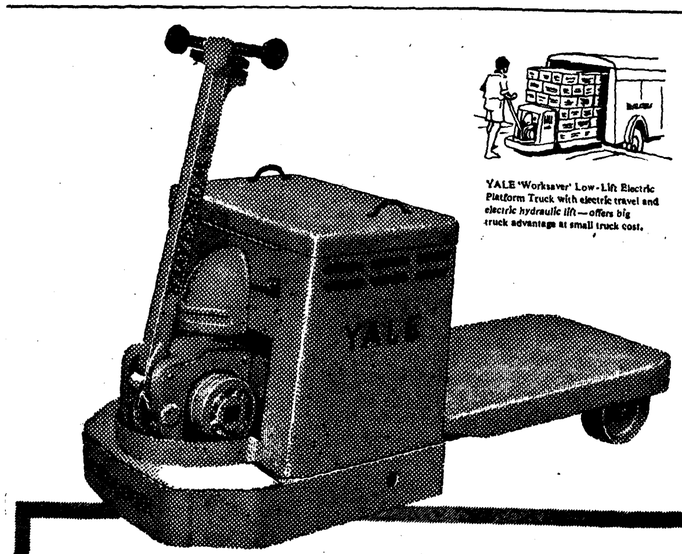
The Conference discussions on geothermal energy were exceedingly fruitful in evaluating not only its already considerable importance for the few countries at present engaged in its commercial exploitation, but also the prospects of opening up further areas of natural steam production in the light of new knowledge on the origin of geothermal energy. The long-held belief that subterranean steam fields are associated solely with volcanic rock formations and traceable only by surface manifestations appears to be in need of revision. So are, possibly, previous theories that such steam fields are liable to exhaustion in the manner of oil or natural gas fields. In fact, it seems conceivable that the earth's heat may constantly create fresh supplies of natural steam from underground water reservoirs, and that these may be successfully tapped in many more locations of the globe than was hitherto assumed. Geophysical studies and active exploration work have already been vigorously extended in recent years to various new areas in Central and Latin America, Africa, Japan and other Pacific regions.

Throughout the world, about a thousand wells, totalling some 400,000 metres, have so far been drilled in search of sources of geothermal energy. But with the still very limited fund of scientific data and practical experience in this field, prospecting for natural steam wells may be an even more protracted and costly business than oil exploration, despite the similarity of the techniques applied. In certain cases, the effort might only be justified where there is a reasonable prospect that such sources, once discovered, could be utilised on a substantial scale for generating electric base-load power through conventional steam turbines. But this, in turn, would mostly call for the setting-up of adequate facilities for power transmission to the consuming areas, since the temperature of the natural steam drawn from underground wells is generally not high enough to make long-distance distribution of the steam by pipelines economical.

In underdeveloped areas not yet supplied with electric energy, there seems therefore little scope for the immediate development of geothermal energy for power generation, as 1,000 kw. is widely regarded as the minimum economic size of units for converting subterranean heat into electricity. On the other hand, in regions already equipped with electricity, geothermal power would have to compete with conventional thermal or hydro-electric stations. Though this requirement may well be met under specific conditions, close economic scrutiny would have to precede any proposals for large-scale investment in geothermal power projects, especially in capital-deficient countries.

Power Plants

So far, the biggest complex of geothermal power plants in operation is that of the Larderello Company in Italy, which started exploiting the natural steam wells of Tuscany



YALE 'Worksaver' Low-Lift Electric Platform Truck with electric travel and electric hydraulic lift—offers big truck advantage at small truck cost.

YALE

Worksavers speed handling in narrow aisles

Compact and of robust construction, YALE Worksavers handle loads up to 3 tons, even in narrow aisles and cramped surroundings. Extraordinary manoeuvrability combined with high travel speed and lift power, make YALE Worksavers ideal for use in factories, workshops, railways, warehouses, etc.

VOLTAS, Sole Distributors for the complete line of YALE Industrial Lift Trucks and Hoists, will be glad to offer expert advice on your materials handling problems.

before the First World War. Today, the installed capacity of Larderello's geothermal power plants of close on 300,000 kw. could suffice to satisfy the needs of the country's entire electric railway system, of which it actually supplies about two-thirds, while the balance of output is absorbed by industrial users. The unit cost of electricity from this source is equivalent to less than 0.3 pence per kwh., or roughly half that of conventionally produced thermal power. Another example of large-scale utilisation of natural steam is the New Zealand Government's scheme for installing at Wairakei, on North Island, a 192,000 kw. geothermal power station, of which the first stage of 69,000 kw. was commissioned early last year. The total cost of this project (whose further extension to 282,000 kw. is tentatively contemplated for a later stage) is £15.8 million, or £82.25 per kw. installed, while the average unit cost of electricity from the geothermal plant is estimated at under 0.4 pence a kwh. In Iceland, whose large sources of natural steam and hot springs have so far been utilised only for space- and water-heating, the State Electricity Authority is now also considering the erection of a 15,000 kw. geothermal power station, as an alternative to setting up new hydro-electric plant.

The United States' first natural-steam driven power station, of 12,500 kw., was started up last year in California, where a second and bigger plant of this kind is now nearing completion. The Soviet Union, too, is exploiting her geothermal resources in Kamchatka for both electricity generation and local house-heating. Meanwhile, exploratory investigations into the occurrence of geothermal sources of energy are being intensified in Japan, Indonesia, Mexico, El Salvador and various countries on the South American and African continents, with a view to harnessing terrestrial steam not only for heating or power production but also for certain special uses. Among the latter, those already proved feasible include the application of geothermal heat for salt extraction in Japan, for pulp and paper processing in New Zealand, and for chicken hatching in Kenya, while others still under study extend to fresh water distillation, aluminium and sugar processing, cooling and drying operations, and chemicals production. That geothermal energy has a good deal more to offer than is generally realised has perhaps been one of the most significant revelations emerging from the recent Conference at Rome.—(*By Special Arrangement with the* ***Petroleum Press Service.***)

LOW-COST POWER FROM THE ATOM PREDICTED

Preliminary plans have been completed by a United States electric power company for building an atomic-electric power plant which, it is believed, will be fully competitive in production costs with power plants that use conventional fuels such as coal or oil. The plant will be built at Bodega Bay, near San Francisco in California, by the Pacific Gas and Electric Company. It will have a capacity of 325,000 kilowatts.

By 1965, after the plant has been completed and has been in operation for a period of some months, it will produce electric power for about 56/100ths of a cent a kilowatt-hour, as compared with nearly 58/100ths of a cent for conventional power plants in the area. The cost of producing power at comparable atomic-electric plants now in operation or under construction is at least 1 cent a kilowatt-hour. "The end of this decade will see the last of the conventional plants," a Pacific Gas and Electric spokesman says. "From then on, all big steam plants will be nuclear fuelled."

Upto now, the principal factor that has prevented the construction of competitive atomic-electric power plants has been the high cost of building the complex structures and equipment. Maintenance costs are about the same as those for conventional plants; and nuclear fuel such as enriched uranium or thorium costs a little less than coal or oil. The Pacific Gas and Electric Company, however, says that its new plant will cost only $61,000,000, or $181 per kilowatt of capacity. This compares with costs of $280 to $400 per kilowatt of capacity for the big nuclear plants that have previously been built. One major factor in reducing the cost of the new plant is that its nuclear reactor will be housed in a 100-foot deep hole in the ground, instead of in a huge and expensive steel dome. In addition, the experience of American power companies with previous plants has brought about "simpler, more compact and more flexible" reactor and plant design.

Five commercial atomic-electric power plants are already in operation in the United States. The two largest are the Yankee Atomic Electric Company plant at Rowe, Massachusetts, which produces power at a rate of 1.2 cents a kilowatt-hour, and the Dresden Station plant near Chicago, where the operating cost is about 1.1 cents. Seven new plants are under construction, and four more are planned.

Commenting on the marked progress that has been made during the past few years in increasing the efficiency of atomic-electric power plants, the publication *Newsweek* says: "There is no doubt that basic costs are falling fast. And this, plus an expected price rise for conventional fuels and a price drop for nuclear fuels, means that the breakthrough in atomic power is finally on the way."

PROTECTION FOR ELECTRIC MOTOR INDUSTRY TO CONTINUE

The Government of India has just accepted the Tariff Commission's recommendation that protection to the electric motor industry be continued for a further period of two years ending 31st December 1963. The Government has also accepted the Commission's recommendation that protection should cover squirrel cage and slip ring motors of 1 to 500 h.p. (excluding variable speed commutator motors), single phase motors of 1 to 3 h.p. and fractional h.p. motors of not less than ¼ p.h. with the existing level of duty of 15 per cent *ad valorem*. Duties on the import of component parts of the electric motors now brought under protection will be at 20 per cent *ad valorem*, which will come into force with immediate effect.

Fractional h.p. motors of less than one-fourth h.p. and component parts, which are mostly manufactured in the small-scale sector, will be protected at the prevailing duty of 35 per cent *ad valorem*.

In the Commission's view, protection is necessary to enable the industry to consolidate its present position. It has suggested that a review of the industry can be undertaken in 1963 along with that of the power and distribution transformer industry. It may be recalled here that the protection granted to the latter industry would also expire on 31st December 1963.

The Tariff Commission has estimated the current domestic demand for electric motors at one million h.p. The demand in 1964 has been estimated at 2.6 million h.p. The Commission has given the finding that the industry in both large-scale and small-scale sectors is capable of meeting the requirements of the country, if it works a double shift. It has, therefore, recommended that the Government should ensure adequate supplies of raw materials to the industry through imports or other means.

at a place called sahaganj

Residents of a town some thirty miles north of Calcutta, coming to work at the Dunlop factory—a typical, week-day, morning scene. Indeed, there is scarcely a household in Sahaganj today where the main breadwinner does not work at the Dunlop factory.

The Sahaganj of 25 years ago, however, was a different story; having achieved a brief eminence in the later Moghul period, it lapsed into obscurity and remained unknown to the world outside.

It was here that Dunlop bought a derelict jute mill and set up in 1936, India's first large-scale tyre factory which is today Asia's largest rubber manufacturing enterprise.

To the community at Sahaganj the Dunlop factory has meant, among other things, better health conditions such as the control of malaria. Above all, it has meant a rapid absorption of modern values which come in the wake of a progressive industry.

PROGRESS OF ELECTRICAL INDUSTRIES

BIG EXPANSION ENVISAGED UNDER THIRD PLAN

ELECTRICAL industries have been broadly divided into two categories—one "heavy and medium" and the other "light." In the former category are included big electric motors, transformers, switchgear and controlgear, cables and wires, and heavy electrical machinery and equipment. In the latter category are included electric lamps, batteries, radio receivers, electronic equipment, telephones, telegraphic equipment, wireless and communication apparatus, electric fans, electric meters, air conditioners, refrigerators and household electric appliances. Both these categories generally registered substantial progress during the second Plan period, though the progress of individual industries in either category was not quite uniform. For instance, such industries as transformers and electric motors of higher ratings in the first category suffered a slight setback during the middle of the second Plan period on account of foreign exchange difficulties which led to the rephasing of power projects. While referring to this fact in its review of the progress made by the heavy electrical industries, the 1960-61 report, just available, of the Development Council for Heavy Electrical Industries has also recorded that there was a significant increase in production in a few other industries such as cables and wires and switchgear and controlgear. The report has further noted that the performance of all the heavy electrical industries during the second Plan period was, by and large, according to expectations and that, in most of the cases, targets had been achieved and, in a few of them, targets had even been exceeded. Production figures, pertaining to 1960 and the first half of 1961, of the heavy electrical industries are given in Table 1 in this article. In the category of light electrical industries, according to the Development Council in charge of these industries, the general progress made by them during the second Plan period was satisfactory. But in respect of certain commodities like low wattage general lighting service lamps and fluorescent tubes, shortages existed, in spite of the increase in their production. Production figures, pertaining to 1960 and the first half of 1961, are given in Table 2 in this article.

Motors and Transformers

A detailed review of individual industries in the first category alone is given in this article. To take electric motors first. In this industry, there were 12 manufacturing units in 1955: these produced motors upto 100 h.p. of an aggregate quantity of 250,000 h.p. in that year. In 1960, there were 27 firms manufacturing electric motors of the aggregate quantity of 700,000 h.p. Manufacture of special motors, such as variable speed motors and motors upto 500 h.p. was established in the second Plan period. At present, the units in the private sector are not manufacturing very large motors such as those required for rolling mills, heavy industrial drives, cement machinery, etc. Capacity for such large motors is being established in the Bhopal Heavy Electricals in the public sector. The Bhopal factory will be manufacturing such motors in all types and ranges of higher horsepower and higher voltage.

As for transformers, they were manufactured by 10 units in 1955, their aggregate production in that year was of the order of 565,000 K.V.A. At present, there are 17 units; their production in 1960 was of the order of 1.2 million K.V.A. These units have been manufacturing transformers upto 10,000 K.V.A and 100 K.V. Demand for distribution transformers is now entirely met from indigenous production. The Bhopal Heavy Electricals factory has also begun to manufacture the entire range of power transformers required by major power projects and industrial undertakings.

In the switchgear and controlgear industry, production in 1955 was only of the order of Rs. 40 lakhs. The year 1960 recorded a total production of Rs. 410 lakhs from 23 units. Several manufacturers have entered into collaboration with manufacturers abroad and have thus been able to manufacture various types of switchgear and controlgear required for power projects and other utilities. Various types of electric motor starters, such as contactor starters, star-delta starters, stator rotor starters and other special types of starters are being manufactured now; flame-proof starters are also being manufactured. In the case of low voltage switchgear, oil and air circuit breakers upto 1,200 amps. are being manufactured and further expansion in this range is also being planned. Low voltage iron-clad switches and switch fuse units and circuit breakers and switchboards upto 11 K.V., insofar as the manufacture of high voltage switchgear is concerned, are other current lines of manufacture. The Bhopal Heavy Electricals factory has recently commenced manufacture of switchgear above 11 K.V.

Cables and Wires

In the cables and wires industry, very significant progress has taken place in all lines except bare copper conductors. Production of bare copper conductors in 1960 was only 10,000 tons, as against the installed capacity of 20,000 tons. The shortfall was apparently due to scarcity of copper caused by shortage of foreign exchange. With the trend towards the use of all-aluminium conductors for transmission and low-voltage distribution, production of all-aluminium conductors has increased and, to that extent, production of copper conductors has remained stationary. As for A.C.S.R. and all-aluminium conductors, there were only four units manufacturing them in 1955, and there are seven units at present. Production from these seven units in 1960 was of the order of 22,000 tons. The requirements of A.C.S.R. and all-aluminium conductors by the various power projects is almost exclusively being met from indigenous production. With vigorous moves for the establishment of more aluminium plants in the country and manufacture of core wire, the industry, it is stated, will be largely self-sufficient in raw materials. As for V.I.R. and P.V.C. cables, very significant progress has taken place in their production; in 1955 their production was only 86 million yards, but, in 1960, it was of the order of 250 million yards. In the paper insulated power cables industry, there has been only one unit, but recently another unit has gone into operation. Production of these paper insulated cables in 1960 was of the order of 575 miles. In the winding wires industry, substantial progress has been recorded during the last few years. There are now eight manufacturers in this field, producing various types of winding wires required for winding electric motors, fans, transformers, etc. A notable feature of this industry is that some of the manufacturers have been able to fabricate the equipment required for the manufacture of winding wires; this effort on their part has resulted in the saving of considerable amount of foreign exchange for the import of plant and machinery. In the telephone cables industry, the only unit manufacturing such cables is the Hindustan Cables Ltd. in the public sector. It produced about 700 miles of dry core telephone cables during 1960. It has also commenced manufacture of coaxial cables and has plans for expanding the production of dry core cables. A second cable factory in the public sector is also proposed to be established.

House service meters	'000 Nos.	475	273	2,500
Radio receivers	'000 Nos.	267	151	..
Refrigerators	Nos.	11,388	5,511	..

Heavy Electrical Machinery

The heavy electrical machinery and equipment industry is in the public sector. The Bhopal Heavy Electricals factory will be manufacturing a wide range of specialised heavy electrical equipment, such as turbo-alternators, hydraulic turbines and generators, large-size power transformers and electric motors, switchgear required for power transmission systems and industries and controlgear, traction equipment for railway electrification, etc. In the initial stages, that is, in the current year and the next, production will be mainly confined to switchgear from 11 K.V. to 132 K.V., transformers upto 25 M.V.A., capacitors, controlgear and welding sets. In the later stages, the factory is expected to take up the manufacture of the other products mentioned above. At present, the factory is being planned for a production of Rs. 25 crores of all the items on two-shift basis. Proposals for the ultimate expansion of output to Rs. 50 crores per annum have also been under examination.

Two more plants for manufacturing heavy electrical equipment are to be established in the public sector in the third Plan period. One of these, to be located near Hyderabad, will have Czech collaboration and manufacture steam turbo-alternators and their auxiliaries upto 2½ M.W.; the total annual output of steam turbo alternators from this factory would be 620 M.W. The other plant, which will have Russian collaboration, is to be set up at Ranipur in Uttar Pradesh for manufacturing steam turbo-alternators upto 100 M.W., hydro-electric generating sets and large-size electric motors including heavy D.C. motors required for steel plants and other industries. As the heavy electrical equipment line is much diversified, it is proposed to license the establishment of a few units of modest size in the private sector also.

The Development Council for Heavy Electrical Industries has recommended that power transformers and electric motors of higher ratings, so far reserved for development in the public sector, should be permitted to be manufactured by such of those units in the private sector as have capacity to manufacture them, in view of the very large demand for them. A summary of the other recommendations made by the Council in 1960-61 in regard to this as well as to some problems facing the heavy electrical industries is given below:

"As it would take a considerable time to build up capacities in respect of most of the heavy electrical equipment, it is desirable to license additional capacities as early as possible, keeping in view the anticipated demand during the third Five-year Plan.

"In cases where the requirement of capital goods, either for new projects or for expansion, and/or replacement plant and machinery, is not large, Government might consider granting licences for import against free foreign exchange or against loans available from the various countries.

"As the prices of electric sheet steel and high tensile galvanised steel wire available under Development Loan Fund are very high, as compared with the prices from other sources, granting of licences, where possible, for the import of these from sources other than D.L.F., deserves consideration.

"As the supply position of non-ferrous sections and extruded sections etc. is still difficult, Government might consider granting of licences for import of such of those sections, which are not available indigenously.

"Manufacture of basic ancillary items, such as, ball bearings, insulating materials, small and semi-finished components etc. should be developed quickly in order that the electrical industry may

NEW PRODUCTS AND PROCESSES

Roomcall Service for Hotels

INTERCOMMUNICATION and entertainment equipment for hotels and motels that can repay its installation and running costs is available from Associated Electrical Industries (India) Pvt. Ltd., Calcutta. A.E.I. Roomcall is a three-in-one system that replaces internal telephone system, radio programme distribution and room-service bells. Roomcall provides two-way speech communication between reception desk master unit, service room master unit, etc., and individual guestroom units. The guestroom loudspeaker units, which have individual volume control, also serve as the medium for the dissemination of two radio programmes, either of which can be selected by push-button. Because of the built-in radio distribution facility, Roomcall can pay for its installation and running costs. Guestroom units can be supplied with a "lock" on the radio channels. This entertainment can then be offered for a small daily or weekly charge. Master units for hotels and motels of 10, 20 or 30 rooms are available as standard units, but larger installations can be provided. For hotels where the reception desk closes early, a change-over switch can be wired to channel calls to a night-duty master unit elsewhere; or, for small hotels that do not want several master units, a portable plug-in master, which can be used in a number of pre-wired positions, is available. Calling a room involves depressing the room number and "Ring" buttons on the master unit to sound a buzzer in the guestroom. The guest replies by pressing the "Reception" button on the room unit, and the room number button on the master unit is illuminated. Conversation can then take place; for privacy, the master unit is equipped with a conventional telephone handset instead of a loud-speaker. When a guest initiates a call, the room number button on the master is illuminated and a buzzer sounds.

Multi-language Typewriter

A typewriter—originally developed for the British Atomic Energy Authority—on which the operator can type in more than one language or, alternatively, mathematical formulæ requiring many different signs and symbols, has now been supplied to companies and academic centres in different parts of the world. Essentially it consists of two or more complete typewriter units mounted side by side but fitted with a single carriage. The paper or papers and carbons are placed in the carriage and typing can be done in the normal way. A rail extends right across the two units at the rear and the whole carriage can hinge and slide on this rail. The carriage may be moved by means of a single lever from its normal position above the left-hand unit to a similar position above any of the right-hand units. Guides and detents are provided so that the carriage fits with certainty into one or other of these position. The operator may type a few letters or words on one keyboard—transfer the carriage to another unit—and carry on typing without having to worry about register which is automatically assured. The typewriter can be issued for almost any language in the world. Apart from Roman script, widely used in the Western world, the firm has overcome technical problems associated with other scripts—including Arabic and Indian. At the request of the B.B.C's African Unit they successfully devised a machine to type Somali—a language which up to that time had no official script of its own.

Sealing Device for Bottles and Tubes

A handy polyethylene sealing device for squeeze bottles and tubes has been developed by a firm in Holland. The seal consists of a screw top with a moulded-in nozzle protruding obliquely from its side, and a hollow plunger closed at the top, capable of moving up and down. When the bottle is squeezed, the internal pressure forces the plunger upwards, allowing the contents to flow out of the dispenser through the nozzle in a fine stream. When the plunger is depressed, the entrance of the nozzle is shut off and the flow of liquid stopped. The nozzle is sealed off by a small collar fitted to the bottom of the plunger that causes a total seal without undue friction. After the flow of liquid has been cut, any fluid left in the nozzle opening drains back into the container so that the edge of the nozzle orifice remains completely dry. Nozzle diameter can be adapted to suit the viscosity of the substance to be dispensed, which means that the sealing device can be used for thin and runny as well as thicker substances (mayonnaise, mustard, adhesives, hair creams, etc.). The sealing tops can be supplied with dispensing diameters of from 1.2 to 8mm. Up to the time the package reaches the consumer, the plunger is held in position by a narrow polyethylene retaining strip, thus safeguarding the contents against running out as a result of bumps and jolts during transport. This retaining strip is easily removed with the thumb-nail. This article has been patented in Holland and many other countries.

"Electric" Automobile

The "electric" automobile is expected to stage a comeback. Not in the next few years, perhaps, but almost inevitably in the next decade or so. The next time around for electric cars, first used in the early history of automobiles, will not see them powered by batteries but a new device now the object of considerable scientific work in several countries—the fuel cell. In the United States, the Army, Navy, and Air Force are pushing research on the fuel cell, according to the Department of Commerce's Office of Technical Services, through which military research data is released to industry. Unlike the battery, which has limited power, the fuel cell continuously transforms a chemical reaction into electrical energy as long as a supply of "reactants" is fed to the system, just as the gasoline engine operates as long as it has a supply of gasoline. While small fuel cell units have been operated continuously for more than a year, many engineering "breakthroughs" will be required before the automobile is powered with the fuel cell. But the breakthroughs are not considered impracticable, and if you don't drive an electric car your children probably will.

Isotopes May Preserve Food Indefinitely

The use of radioisotopes to preserve food indefinitely could help to alleviate food shortages in famine-prone countries, according to Glenn T. Seaborg, Chairman of the U.S. Atomic Energy Commission. U.S. experiments using radiation to keep fish and fruit fresh longer could also have important application in countries where there is little or no refrigeration. In these experiments, foods are exposed briefly to the radiation given off by isotopes. The radiation destroys or slows down the tiny organisms that cause food to spoil. According to Mr. Seaborg, the United States Army Quartermaster Corps for several years has been studying complete sterilisation of foods with radiation so they could be stored indefinitely without refrigeration. In some foods, he added, this has been done "without significant change in appearance or taste." Other experiments have shown that low doses of radiation will extend for a significant period of time the freshness of California strawberries, he said, and have doubled the shelf life of shrimp from 15 to 30 days.

Sealing Compounds

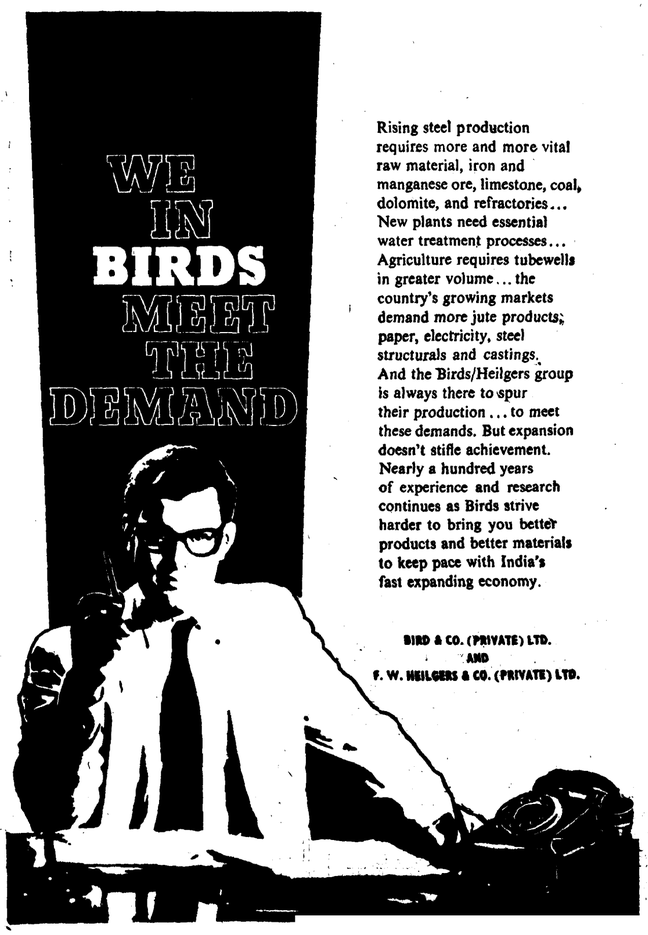
Exceptional resistance to high temperature and many types of fuel are claimed for two sealing compounds—based on synthetic rubber—which have been developed by a British firm, B.B. Chemical Co., Ltd., Leicester, England. The compounds are primarily for the aircraft industry, mainly for integral fuel tank and pressure cabin sealing on supersonic aircraft. But they can be used wherever rubbery compounds are required which retain resiliency and other properties on prolonged exposure to temperatures up to 250°C. Two classes of compound are available, one based on viton synthetic rubber and one on silicone rubber. The former is fuel resistant. The silicone compound is not, but has application advantages in that it does not contain solvent, therefore shrinkage due to solvent evaporation does not have to be considered. Both viton and silicone rubber substances are supplied in two-part form. After mixing together they will cure to rubbery solids within a week at room temperature. The curing period can be shortened by exposing the mixed sealants to higher temperatures.

Plastic Screw Cap

A plastic screw cap for sealing bottles and vessels full of liquids liable to build up high vapour pressures during storage and transport is manufactured by a Dutch firm. The screw cap embodies a plunger which rises automatically when there is an overpressure of a maximum of 0.2 atmospheres in the bottle. Vapour can then escape from inside via small flues along the side of the plunger. As soon as the pressure in the container has levelled off to an overpressure of 0.05 atmospheres, the plunger is reseated by a spring. When this happens, a small collar at the bottom of the plunger seals the bottle hermetically. The overpressure of 0.05 atmospheres following vapour release prevents a vacuum forming in the bottle when it cools down. Owing to the hermetic seal after vapour release, no dirt or water can find its way into the bottle. These plastic screw caps can be supplied in any desired finish, including models for metal vessels, and, if desired, the over-pressures at which the automatic vapour release mechanism operates can be determined to suit customers' requirements.

Electric Chair-lift

A Dutch firm has produced a one-seater electric chair-lift suitable for mounting on staircases in houses, hospitals, churches, etc. It consists of an upright steel plate to which is fitted a seat and foot-rest, folding or otherwise. The lift runs on four wheels on an enclosed rail fitted to the treads of the staircase on the side near the wall. The lift is drawn upwards on a cable driven by a ¾ h.p. electric motor. The arm-rest has built-in push-buttons for sending the lift up or down and there are also buttons at the top and bottom of the stairs for summoning the lift when empty. The lift is easy to install and is provided with a mechanical and electrical safeguard. It can also be installed on curving staircases. There are a number of different models supplyable, including one for polio patients, whom the lift can accommodate, wheel-chair and all.



Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products, paper, electricity, steel structurals and castings. And the Birds/Heilgers group is always there to spur their production... to meet these demands. But expansion doesn't stifle achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

MAKING LAND MORE FERTILE

INDIA CAN BENEFIT FROM BRITAIN'S UNIQUE EXPERIENCE

By D. P. Hopkins, B.Sc., F.R.I.C.

NO country can steadily produce adequate quantities of food, unless the plant-foods removed by crops can be replaced. Often, also, there are many soils which cannot be economically used for food production until their natural infertility has first been corrected by the supply of plant-foods. Fertilisers solve these problems. From its small beginning in England in 1843, when Sir John Lawes opened a factory near London to make superphosphate by treating bones with acid, the world's fertiliser manufacturing industry has steadily grown to huge dimensions. No industry is more vital to mankind. The present world population—let alone the rising population of the 1980s and 1990s—could not survive on the food production from soils whose fertility could not be added. This is realised today by all Governments, not least by the Government of India.

To have brought the manufacture of fertilisers into practical existence is probably one of Britain's greatest contributions to civilisation. ing the growth of the industry have been large-fertiliser factories, it is an easily forgotten contribution. However, it is by no means the only one. Many of the technical developments during the growth of the industry have been largely or wholly pioneered by the British industry. This is currently true, not merely true of the past. In the 1945-60 period, fertiliser consumption by British farmers was more than doubled —consumption in fact, is now three-and-a-half times what it was before World War II.

A number of entirely new fertiliser factories have been built in Britain, some of them being among the largest in the world. Practically every fertiliser factory in Britain has been entirely modernised and re-equipped with new and often totally different plant. From those distant pioneering 1840s, there has never been a period of more intense technical development and change for the British industry than during the post-World War II years.

Three Major Trends

In this contemporary activity there are three major trends—the production of more concentrated fertilisers, that is, fertilisers which contain higher amounts of plant-foods per ton; the production of fertilisers in better physical condition for farm use and storing; and the reduction in labour demands for manufacturing fertilisers; for example, mechanical handling for the hundreds of thousands of tons that have to be moved about during processing and automation for the control of chemical processes.

One of the first post-war developments was the erection of a huge factory in England by Fisons Ltd., to manufacture triple superphosphate. Britain was not the first country to produce this very concentrated fertiliser, though there had been British manufacture of this material for non-fertiliser purposes in the nineteenth century. Ordinary superphosphate contains from 18 to 20 per cent of soluble phosphoric acid; triple superphosphate contains 47 per cent of this important plant-food. This difference is of considerable benefit to farmers for much smaller dressings are needed to provide soils and crops with their phosphate requirements. This reduces farm work, the space in farm buildings needed for storage, and it also reduces transport and bagging costs.

Important Gain

However, for farming in Britain the production of triple superphosphate has contributed to a more important gain than any of these somewhat obvious benefits. Mixed or compound fertilisers are heavily used in Britain. In 1960, approximately three out of every four tons of fertiliser used where compounds, that is, fertilisers providing not only one major plant-food but all three, nitrogen, phosphate and potash. With triple superphosphate available as a much more concentrated source of phosphate in compound fertilisers, it became possible to make compounds with higher total contents of the three main plant-foods. For example, more nitrogen and more potash could be brought into each ton because less room was required in the mixture for the phosphate-supplying material.

Thus, triple superphosphate, now manufactured at a number of factories in Britain, has greatly raised the fertilising value of compounds. To any country, where fertilisers are intensively used, this is of great benefit; but even in countries where intensive use is still not generally established, it is a technical development that must become desirable as fertiliser use expands. British chemical engineering experience is available to assist similar projects overseas.

Granulation Process

Another example is the process of granulation. For almost a century the physical condition of some fertilisers—and often the more important of them—has presented problems to farmers. They can be dusty during application, or become moist and sticky through moisture absorption, or they can set into hard, caked masses during storage. These defects add to the work needed in applying fertilisers; worse still, they make it difficult to achieve uniform rates of application. Granulation is a process by which fertilisers are converted into fairly even-sized small and hard granules, which under all reasonable conditions remain dry and do not cake together. Since the mid-1940s, this granulation principle has been more extensively adopted by the British fertiliser industry than by any other national fertiliser industry. Only an insignificant proportion of the 2,750,000 tons of compounds manufactured and used each year is not granulated. It is likely that there are more granulation plants in Britain than in any other country.

The principles of the process are simple enough. The fertiliser material is wetted (if dry) with water and/or steam and when it is in a pasty or slurry-like state, it is rolled, usually in a large rotating drum, and wet granules are formed; these then pass into a large rotating drum through which hot gases are circulating, and the wet granules are dried and hardened. After screening for over-size and under-size, they are then cooled and bagged or bulk-stored.

The operation of the process is not, however, as simple as it seems. Indeed, some fertiliser authorities still regard granulation as an art as much as it is a science. Different fertliser mixtures require different conditions for satisfactory granule formation. The amounts of added water and/or steam, the diameter of the drums, the rates of drum revolution, are all factors that influence granule formation.

Unique Experience

Britain's steady development of this modern process has undoubtedly given her technologists unique experience, and granulation plants in both large and small British factories have been visited and studied by scientists from many other countries. Here, again, there is vast store of knowledge in plant design and process operation which Britain provides.

Granulation does not reduce the soil efficiency of the plant-foods in the fertiliser. Nitrogen and potash are as readily released from granules, phosphate is, in fact, made slightly more efficient for, in granular form, it is better protected from losses to soil fixation. A few fertilisers, however, depend for their effectiveness upon entering the soil in a fine particle state; these, of course, are not granulated.

In terms of fertilisers, the greatest association between Britain and India has been for nitrogen. For raw material reasons, Britain has never been a substantial exporter of phosphatic or potash fertilisers. But the nitrogen section of the British industry has always exported as well as produced the home needs of British farming, and India has been one of the chief customers.

In the early 1920s, Britain began to make nitrogen fertilisers from the air's nitrogen—by synthetic fixation. Nearly 40 years later at the same huge chemical factory—the Billingham works of Imperial Chemical Industries Ltd.—fixation plants are producing huge tonnages of nitrogen fertilisers for Britain's own needs and for overseas.

India's Own Industry

Many other countries today manufacture nitrogen fertilisers by synthetic fixation—India herself has developed her own fixation industry and as a result can provide some of her fertiliser needs from the air and her own fuel and power. Under many conditions it is nitrogen which is the most decisive plant-food for raising yields. This is well known in the tea plantations.

Since World War II, a number of new nitrogen-producing factories have been built in Britain. At the present time more are being built or are in the projected stage. Britain's own use of fertiliser nitrogen has expanded remarkably—for while fertiliser consumption in 20 years has risen by three and a half times, the use of nitrogen has risen six times! In the earlier post-war period, before it had been possible to expand British fixation plant capacity sufficiently, British home demands for fertiliser nitrogen could have absorbed all or almost all production. Nevertheless, the needs of Britain's traditional oversea customers for nitrogen—and notably India—were not sacrificed, and large tonnages were exported.

Hot Solution by Train

One of the more recently-built nitrogen factories in Britain (1959) produces 400 tons of ammonium nitrate a day. This fertiliser, however, is handled as a hot solution—containing about 88 per cent of ammonium nitrate and 12 per cent of water—and in this liquid form it is transported in steam-coil heated rail or road tankers to a number of other fertiliser factories in Britain.

At each of these other factories it is used, still in the hot liquid state, as a source of nitrogen for manufacturing compound fertilisers. This strong solution will solidify by crystallisation at 85°C. So it must be maintained at well above this temperature during storage and handling.

But it is advantageous to do so because this enables a normally solid material to be handled as a fluid with such advantages as pipe-line conveyance. This is another modern instance of technical innovation by the British industry.

India's own fertiliser needs are high. Her use of fertilisers must expand steadily—and not too slowly—if the high population is to enjoy a rising standard of living. Nothing is more fundamental than food in defining a standard of living. The development of a large fertiliser industry and of intensive fertiliser use on her farms has enormously raised Britain's capacity to produce food from her limited area of land.

Britain can help India in two ways—by supplying nitrogen fertilisers to add to India's own production, and by sharing her great store of technical knowledge and experience to aid the development of a large home-based fertiliser industry in India. The benefits of British pioneering in new methods of fertiliser manufacture are at India's disposal for any new fertiliser project from the initial planning and drawing-board stage to the final operation of the plant.

A.E.I. SEMI-CONDUCTOR DEVICES

The Lincoln factory of the Electronic Apparatus Division of Associated Electrical Industries Ltd. continues to manufacture and develop a wide range of semi-conductor devices including diodes, rectifiers, transistors and controlled rectifiers in the light and medium power fields. The Heavy Plant Division, Rugby, in addition to manufacturing and marketing high current devices has already produced semi-conductor power rectifier equipment totalling over 500,000 kw. and is expanding in manufacturing capacity. With A.E.I. combined resources of these two Divisions, A.E.I. is in an unequalled position to meet industrial, military and research requirements in this field.

The most opulent satin of the season ...the one with Amcel acetate

The advantages of Amcel's Acetate for dress fabrics such as crepes and brocades are already well-known, Amcel's Acetate also makes the finest satin. It can be finished in many luxurious ways and takes glowing colours.

Amcel's Acetate filament yarns are spun to meet your specific needs for each type of cloth. There is an Amcel's yarn for luxuriously heavy to light satins, for all types of taffetas, light-weight to heavy faille, for tricot jerseys, sheer cloths, brocades or novelties such as suitings of sharkskin or tweed effect.

DUNCAN BROTHERS & CO., LTD. are pleased to announce their appointment by AMCEL CO. INC. as the exclusive sales agents in India for all Amcel products. Messrs. Mittersain Rupchand, 336 Kalbadevi Road, Bombay are sub-agents in the states of Maharashtra and Gujerat and Messrs. Sardesai Brothers Ltd., M-106 Radial Road, Connaught Place, New Delhi-1, sub-agents elsewhere in India.

DEFICIT IN BALANCE OF TRADE NARROWS

EXPORTS OF CERTAIN TRADITIONAL ITEMS, HOWEVER, LOWER

A SIGNIFICANT feature of India's foreign trade so far during the current year has been a steady narrowing down of the gap in the balance of (merchandise) trade position. During the first eight months of 1961 (January to August), the latest period for which only provisional data are available, the adverse balance of trade narrowed down by as much as one-third (about Rs. 100 crores) to Rs. 200 crores, as compared with the corresponding period of 1960. This trend is the cumulative result of a fairly sizable expansion of exports and contraction in imports. Exports (including re-exports) rose by ten per cent to Rs. 438 crores, or an annual average of Rs. 660 crores, which compares with Rs. 635 crores in the whole of 1960. Imports (excluding certain items on Government account, the magnitude of which is not known) at Rs. 638 crores were lower by 8·9 per cent, thanks mainly to the restrictive import policy pursued by the Government. It is noteworthy, in this context, that exports were running at a distinctly higher level every month in the current year, as compared with those in the same months of 1960. By August, exports had in fact risen to a high (for the year so far) at Rs. 61 crores (*as against only* Rs. 57 crores in August 1960), thereby reducing the monthly trade deficit to no more than about Rs. 10 crores. It must, however, be emphasised that the position of balance of trade indicated by this study is only provisional and that the actual gap, as revealed by the revised figures, will be much bigger than is seen now, though it is quite possible that the gap may be somewhat smaller than was the case in 1960. It must also be borne in mind that, while the figures of exports and imports in 1961 are provisional, those for 1960 are revised. Accordingly, they are not strictly comparable. The only useful purpose served by them is that they give one a broad picture of India's foreign trade performance and a vague outline of the extent of trade gap.

Subject to the above qualification, Table I in this column shows at a glance the trend of trade month by month during January-August 1961, as compared with the corresponding period in 1960.

Although the overall trade figures are available upto the end of August, commodity-wise details, which are published by the Department of Commercial Intelligence and Statistics, Calcutta, are available upto the six months ended June 1961 only. Two tables are given on this page, one showing the major imports and the other major exports (group-wise and commodity-wise) during the first half of 1961, as compared with the same period of last year. It will be seen from Table II that India's total foreign exchange earnings from merchandise trade amounted to Rs. 326 crores in the first half of 1961, *as against* Rs. 297 crores during January-June 1960. The major items of India's exports, namely, tea and jute goods, made good progress in terms of value. Export earnings from jute goods rose by about Rs. 6 crores to Rs. 63 crores mainly on account of larger shipment of jute bags to the U.K., Belgium, etc., and wool sacks to Aden, Australia and New Zealand. Thus, jute goods maintained its position as the leading item in India's exports, which it had snatched from tea last year. This was possible because of the high prices of jute goods arising from shortage of raw jute.

Tea

Although tea could not hold the first position, it was still able to earn a larger amount of foreign exchange than in the first half of 1960, the provisional total being Rs. 41 crores. This is particularly noteworthy, because it was achieved, despite increasing competition from Ceylon and East African countries. Raw cotton was another important commodity which made substantial progress on the export front, its exports having doubled in value during the period, thanks mainly to larger exports quota, following last year's good crop position. Shipments of iron and steel made headway from about Rs. 3 crores to Rs. 7 crores, as a result of larger offtake of ferro-alloys by the U.S., steel tubes by Pakistan and iron pipes and fittings by Malaya and Singapore. It is also heartening to find that, in the face of severe competition from countries like Uganda and Tanganyika, coffee fared distinctly better, its exports having gone up by Rs. 2 crores to about Rs. 6 crores. There was, besides, some increase in the shipment of iron ore, mica and certain chemicals.

There is, however, no room for complacency on the export front. For a wide range of India's major traditional export items, such as manganese ore and vegetable oils, suffered setbacks. Exports of manganese ore, for instance, declined by Rs. 1 crore to Rs. 6 crores, although, by and large, industrial activity in Europe and America was well maintained. It is possible that India's capacity to compete effectively with countries like Brazil has been impaired by the growing interference of the State Trading Corporation in the export trade. Vegetable oils lost considerable ground during the period under review. Shipments of castor oil fell sharply from Rs. 5 crores to Rs. 3 crores, primarily on account of small offtake by the U.S., India's major customer of this commodity, following the pressure of supplies of oil at cheaper rates from Brazil. The price of Indian linseed oil was out of parity with world prices and, consequently, its exports recorded a considerable reduction. There was some overseas purchases of groundnut oil early during the year, thanks to the incentive scheme announced at the end of last year. The Government of India did not allow any further quota for groundnut oil and that position still continues. With the increasing demand for domestic consumption and with production almost stagnant, the price of this commodity has been going up. World prices of groundnut oil have been substantially below Indian quotations and the prospect of its exports in the rest of the year is slim. Hydrogenated oils, however, managed to secure larger earnings in the first half of the year. But it is doubtful whether this tempo has been maintained in the second half of the year. For the price of its major raw material, groundnut oil, has been ruling high, and the incentive scheme for *vanaspati* exports has not been made sufficiently attractive to exporters.

Cotton Textiles

Cotton textiles, too, have been facing rough weather on account of growing competition even in Asian and African markets, apart from import restrictions in industrialised countries. Hides and skins is another traditional commodity the exports of which suffered some setback, primarily on account of smaller Russian purchases. Their export declined by over Rs. 2 crores to Rs. 4 crores. Exports of wool and other animal hairs also were lower. Among the other important items which fared poorly on the export front are mineral fuels, including petroleum products and coal, as also spices, tobacco and leather footwear. Shipments of machinery and transport equipments, too, fell substantially.

On the import side, there was a substantial increase in the purchase of machinery, particularly industrial and mining equipments and electric appliances, etc. Imports of chemicals and manufactured goods rose by Rs. 2 crores each. In the manufactures section, the intake of iron and steel and non-ferrous metals, such as copper, aluminium and tin, was higher. These increases were largely offset by sharp declines in imports of crude raw materials, petroleum and also foodstuffs. Among raw materials, imports of raw cotton fell by Rs. 3 crores to Rs. 35 crores and those of raw jute by a crore of rupees to Rs. 3 crores. Among foodgrains, while imports of rice declined by about Rs. 6 crores to Rs. 3 crores, those of wheat rose by over Rs. 2 crores to Rs. 45 crores.

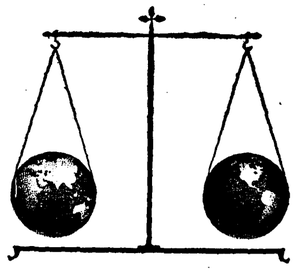
Wool, etc.	6,15	5,81
Fertilizers, crude	1,21	1,12
Chemicals	**45,61**	**43,24**
Manufactured goods	**103,12**	**101,44**
Of which		
Iron and steel	50,21	49,27
Textile yarn fabrics and made-up articles, etc.	7,76	8,91
Copper	10,24	9,99
Nickel	67	56
Aluminium	3,80	3,62
Lead	1,22	1,34
Zinc	4,20	4,23
Tin	2,67	2,18
Paper and paperboard	5,51	5,58
Machinery and transport	**190,15**	**140,95**
Of which		
Electric machinery	33,73	26,60
Mining construction and other industrial machinery	80,95	52,16
Railway vehicles	7,31	11,23
Total (including others) ..	497,48	530,74

N.B.—The group totals do not tally with the grand total, because the latter incorporates certain revisions made in respect of imports made on Government account. Some of the less important import groups have also been excluded from this table.



In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

Agricultural Situation in India

A monthly journal presenting a factual and integrated picture of the agricultural and food situation in India, against an appropriate background.

This journal, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, have as its regular features:

- A monthly newsletter surveying the latest development in the field.
- Authoritative special articles on topics of current interest.
- Extensive information on events and trends in India and abroad.
- Reviews of production and prices of various commodities.
- A comprehensive statistical section.

Commanding a wide and influential readership in India and abroad, *Agricultural Situation in India* is an invaluable guide to students of agricultural economics, business executives and administrators.

Annual subscription .. .. Rs. 24.00 or 37 sh.

Available from:

1. The Manager of Publications, Civil Lines, Delhi-8.
2. The Secretary to the High Commissioner for India, "India House," Aldwych, London, W.C.2.

INDIAN LABOUR JOURNAL

Issued monthly by the Government of India, Ministry of Labour and Employment, Labour Bureau, Simla, contains up-to-date information relating to labour in India, e.g., summaries of reports and enquiries; Labour legislation, summaries of important awards, legal decisions and collective agreements, labour news from States covering labour welfare and living conditions, statistics of industrial disputes, absenteeism, employment—service, wages and earnings, cost of living, retail and wholesale prices, trade unions, etc. In addition to these, the quarterly issues of the journal contain special articles on subjects of labour interest.

Rates of Subscription: Rs. 24 per annum and Rs. 2 per copy.

Available from:

The Manager of Publications, Civil Lines, Delhi-8,

She believed she made a good first impression

An ideal receptionist, attractive, always eager to help—but her carelessness ruined her first impression on the visitor. She wore a lovely outfit, but it seemed ill-fitting, shrunk!

She overlooked the fact that only cottons that bear the label 'Sanforized' would keep their fit even after many washings.

Make certain you get the full measure of value of the material you buy—
Look for

·SANFORIZED· REGD. TD MK

on the label
and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

NEW CENTRAL JUTE MAINTAINS DIVIDEND

SEVERE DECLINE IN PROFITS, BUT OUTLOOK PROMISING

IN the context of acute shortage of jute, the mounting cost of raw materials with no corresponding increase in the price of finished goods and a general lack of opportunity for profitable simultaneous operations, the working results disclosed by the New Central Jute Mills Company Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) for the year ended 31st March 1961 can be considered satisfactory. The Company's foresight in making judicious purchase of raw materials has enabled it to achieve the reported results. Sales, inclusive of departmental transfers, have risen by as much as Rs. 544.70 lakhs to Rs. 1,208.33 lakhs, but a large portion of this rise has been accounted for by the increase in the cost of gunnies purchased for resale from Rs. 121.66 lakhs to Rs. 470.90 lakhs. Moreover, there has also been a rise in the cost of raw materials and stores consumed of Rs. 174.30 lakhs to Rs. 452.16 lakhs, and in the cost of services and other expenses from Rs. 197.14 lakhs to Rs. 260.63 lakhs, owing to which the gross profit has declined by Rs. 7.24 lakhs to Rs. 71.22 lakhs. Provision for depreciation which was made to the extent of only Rs. 8.99 lakhs during the previous year has been stepped up substantially to Rs. 36.23 lakhs due no doubt to the fact that the new assets acquired during the previous year have become eligible for a full year's depreciation. With no provision being found necessary either for the Managing Agents' commission or for taxation, the net profit amounts to Rs. 34.99 lakhs as compared with Rs. 66.34 lakhs a year ago. The entire sum has been appropriated by the Directors towards a transfer of Rs. 23.46 lakhs to the statutory development rebate reserve and the balance of Rs. 11.53 lakhs to general reserve No. 2. Preference and ordinary dividends for the year, the rates of which have been maintained at Rs. 9.10 and Re. 1.50 per share of Rs. 100 and Rs. 10, respectively subject to deductions of tax, are being proposed to be paid out of retained profits for the previous years. Accordingly, Rs. 28.65 lakhs have been transferred to the profit and loss account from general reserve No. 1.

The following comparative table presents synoptically the results of operation of the Company for each of the past four years:

(Value in lakhs of rupees)

	For the year ended 31st March			Fifteen months ended 31st Mar.
	1961	1960	1959	1958
Sales	12,08.33	6,63.53	7,16.06	15,96.33
Other income	8.92	5.49	3.28	1.60
Closing stocks of finished products	94.97	57.31	51.31	51.68
Raw materials and stores consumed	4,52.16	2,77.86	2,61.18	3,95.26
Goods purchased for resale	4,70.90	1,21.66	2,71.62	9,88.73
Salaries, wages and bonus	1,27.62	1,03.51	88.66	1,14.07
Other expenses	1,39.01	93.63	59.29	66.87
Gross profit	71.22	78.49	38.22	31.37

* Subject to deduction of tax.

With the issue, in March 1961, of new ordinary shares of Rs. 10 each at a premium of Rs. 3.25 per share the issued and subscribed share capital of the Company as at 31st March 1961 consists of Rs. 233.00 lakhs in preference shares of Rs. 100 each and Rs. 253.63 lakhs in ordinary shares of Rs. 10 each, with a backing of as much as Rs. 260.72 lakhs in reserves. Loans, secured and unsecured aggregate Rs. 541.64 lakhs, in addition to current liabilities and provisions amounting to Rs. 130.84 lakhs. The gross block, inclusive of additions during the year amounting to Rs. 59.08 lakhs, stands in the Company's books at Rs. 966.78 lakhs and has a written down value of Rs. 795.04 lakhs. Investments, current assets, and loans and advances, all amount to Rs. 424.79 lakhs.

Though the year under review had been the most difficult one for the jute industry, prospects for the current year are expected to be satisfactory. Present jute crop reports are encouraging and a substantial increase in the availability of raw jute is expected. The flow of fibre into the market and to the mills has already improved and this has led to an increase in the working hours. With increased production and a reasonable parity in the prices of raw jute and finished goods now, the working results of the industry should improve. The demand for jute carpet backing cloth is rising and the offtake of the Company's broad loom plant is encouraging. On the chemical and fertiliser side, the ammonium chloride fertiliser manufactured by the Company has been well received in the market. Production of heavy soda ash has commenced and further concentration of effort in the activity has been planned. Unfortunately, the acute difficulty in regard to supply for hard coke both in respect of quality and quantity has affected production and the plant had to be stopped several times for want of this essential commodity. Production has, accordingly, suffered.

Further progress been reported in the matter of renovation and installation of plant and machinery. Eleven more broad looms have been commissioned to operations, raising the total broad looms complement to 121 and steps are in hand for installation of further broad looms. Six new sliver spinning frames have also been commissioned and four more frames will start working soon. The installation of the balance of four frames ordered last year is expected by the year-end. Orders have also been placed since for new sliver spinning frames and automatic cop loaders.

The present market quotation for the Company's Rs. 10 fully paid ordinary shares is Rs. 17.31 at which price the net return on investment works out to 6.5 per cent per annum.

LUCAS-T.V.S. PRIVATE LTD.

Messrs. T. V. Sundaram Iyengar and Sons of South India and Joseph Lucas of Britain have signed, according to a report from London, a partnership agreement, initiating the formation of a new company known as Lucas-T.V.S. Private Ltd. The new company will manufacture vehicle electrical equipment to meet the demand of the rapidly expanding Indian motor industry. Initially, to permit an early start in production, some components will be imported, but a phased programme of changeover to indigenous production is planned.

The capital employed in the new company in the early years will amount to over £2 million and this will include over £1 million worth of plant and machinery provided by Lucas. The new factory is being built in Madras. Employment will be provided in the new company in the first phase for over 1,000 Indian nationals in all grades, from engineers to unskilled operatives. Initial production will be starting in 1962 with the manufacture of electrical equipment and spares for vehicles, both commercial and private. The equipment to be manufactured will be of the latest design.

The Board will consist of three Lucas and three T.V.S. concern directors. The Chairman will be Mr. T. S. Krishna of T.V.S., while Mr. J. W. Shield of Lucas, Birmingham, will be the Managing Director.

KHANDELWAL UDYOG LTD.

Khandelwal Udyog Limited, a company belonging to the "Khandelwal Group" of Bombay, has concluded a technical collaboration agreement with Ing. F. Ferre & C., S.p.A., of Milan for the manufacture of industrial furnaces. The collaborators are one of the leading furnace manufacturers in Italy and their equipment is already being manufactured in other European countries under licence. When in full production, Khandelwal Udyog's furnaces department will be manufacturing furnaces worth Rs. 25 lakhs per annum.

The Company's manufacturing programme includes both electric and combustion furnaces and will specially cater to the growing requirements of the engineering and metallurgical industries. Their range will cover, we are told, various types of furnaces, including the manufacture of bell type furnaces for bright annealing of wires and strips and continuous automatic lines for heat treatment of ferrous and non-ferrous components. The company will also be manufacturing furnaces for the glass and ceramic industries. It is expected that the major portion of the furnaces will be manufactured indigenously right from commencement, with the exception of the automatic controls and instrumentation.

MADRAS RUBBER FACTORY LTD.

The expansion work of the Madras Rubber Factory Ltd., to produce trucks and car tyres in collaboration with Mansfield Tyre and Rubber Company, an American Company, has, we are told, started briskly. The construction of the new factory building is progressing rapidly. A batch of technicians from the collaborators have arrived for investigation and planning. A group of Indian engineers and chemists have left for the United States for higher training who will be at the Mansfield factory, for a rigorous six months' course. Another batch will leave for the U.S. shortly.

Complete licences have been obtained for the import of plant and machinery, and orders have been placed and confirmed in Europe and America. The trial production is expected to start shortly, while the factory is expected to go into full production in June 1962.

NONSUCH TEA'S PROFIT LOWER

FINANCIAL POSITION STRONG

THE financial results of the Nonsuch Tea Estates Ltd. (Managing Agents: Messrs. Harrisons and Crosfield Ltd., Cochin) for the year ended 30th June 1961 are clearly less satisfactory than those for the previous year. Although the Company was successful in raising a record crop of tea, with highest yield per acre, and in selling more tea, its gross profit has suffered a slight setback to Rs. 15.60 lakhs, as compared with that for the previous year. The decline in net profit is quite perceptible, as we shall show presently. The chief reason for the decline in profits is the drop of 16 nP per lb. in the average price realised by the Company during the year under review. This fall has more than offset the saving of 6 nP in the cost of production of tea. Accordingly, the value of sales has shrunk by Rs. 1.85 lakh to Rs. 37.56 lakhs. It is noteworthy that the estate and other expenses were fairly stable.

After providing Rs. 5.94 lakhs for taxation (Rs. 6.25 lakhs in 1959-60), Rs. 77,000 for depreciation (nil in the previous year) and Rs. 73,000 for Managing Agents' remuneration, the net profit amounts to Rs. 8.16 lakhs, as against Rs. 9.49 lakhs for the previous year, a fall of Rs. 1.33 lakh or about 14 per cent. After setting off the expenses relating to previous years aggregating Rs 69,000, the amount actually available for distribution, together with the sum brought forward from the previous years, is of the order of Rs. 7.60 lakhs. The Directors have transferred Rs. 2.25 lakhs to development rebate reserve and Rs. 50,000 to the contingency reserve. They have proposed a final dividend of 10 per cent, taxable, which together with the interim dividend of 10 per cent taxable, would absorb Rs. 4.62 lakhs, leaving Rs. 22,735 to be carried forward to the next year. The dividend of 20 per cent taxable (or 14 per cent net) for the year under review is the same as that for the previous two years, as will be seen from the comparative table of progress given below:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale proceeds of tea	37.56	39.41	33.00	27.01
Closing stocks	3.91	5.50	8.04	10.91
Estate and other expenses	20.88	20.75	18.58	18.04
Gross profit	15.60	18.49	12.02	16.86
Managing Agents' commission	0.73	0.69	0.55	0.82

Cost of production of tea (per lb. in Rs.)	1.27	1.33	1.56	1.32
Average price realised for tea (per lb. in Rs.)	2.60	2.76	2.38	2.76

* Subject to deduction of tax.

The financial position of the Company is sound. The paid-up capital of Rs. 23.10 lakhs, all in 231,000 equity shares of Rs. 10 each, is supported by reserves and surplus amounting to Rs. 6 lakhs. The Company has no secured or unsecured loans and its current liabilities and provisions, aggregating Rs. 15.22 lakhs, are more than amply covered by current assets of the order of Rs. 17.58 lakhs, exclusive of investments of Rs. 4.49 lakhs, almost all of which are in gilt-edged securities. A striking feature of current assets is their high degree of liquidity, the share of cash balances and deposits with banks alone being Rs. 11.72 lakhs. The Company's fixed assets at cost stand at Rs. 35.77 lakhs. As the depreciation provided so far amounts to Rs. 13.53 lakhs, the net value of the assets is Rs. 22.24 lakhs. Very few planting companies have such a strong financial position.

The tea crop for the current year is estimated at a slightly lower level of 525,000 kgs. (or 1.157 million lbs.) to be harvested at an all-in cost of Rs. 3.18 per kg. (or Re. 1.44 per lb.).

The current market quotation of the Rs. 10 paid-up shares of the Company is Rs. 28.25 cum-final dividend. On an ex-dividend basis, the approximate net yield works out to a little over 5 per cent per annum.

Visit

BASF and CASSELLA

at the Indian Industries Fair

BASF and CASSELLA, who bring to India a wide range of chemicals, dyestuffs and raw materials, are participating in the Indian Industries Fair at New Delhi from November 14, 1961 to January 1, 1962.

Their display will consist of a large number of products of special interest to the Indian Industries.

BADISCHE ANILIN-& SODA-FABRIK AG, Ludwigshafen am Rhein, West Germany, is the largest individual complex of chemical industry on the European Continent. They manufacture more than 5,300 products, from Dyestuffs to Fertilizers to Magnetic Recording Tapes. There are BASF products for almost every branch of industry.

CASSELLA FARBWERKE MAINKUR AG, Frankfurt/Main-Fechenheim, West Germany, make a famous range of textile dyestuffs—and specialised products for the paper, leather, and paint industries.

Come and see the BASF and CASSELLA stand in the West German Pavilion.

"ALIND'S" PROFIT LOWER, DESPITE LARGER TURNOVER

EFFECT OF KEEN COMPETITION

LARGER production and more sales, but less profit. This is the story of Aluminium Industries Ltd., which is under the management of the well-known South Indian managing agency house of Seshasayees, for the year ended 31st March 1961. The production of the Hirakud unit of the Company was better than in the previous year and the output of the unit at Kundara also was higher. There was good demand for the Company's aluminium products—bare conductors, covered conductors and rod. And yet both the gross profit and net profit were less than in 1959-60. The chief explanation for this phenomenon lies in the fact that competition in the market for cables was keener, leaving no scope for adjusting the selling prices to include the rise in cost of production. Here is one more instance to show that, gradually, even new industries in India are beginning to lose the benefit of a sellers' market ensured by several import restrictions and that, as days pass by, they must become more and more efficient, if they are not to be ultimately pushed out of the market. That the management of "Alind" is fully aware of this condition is amply borne out by the observations of the Company's Chairman, *vide* page 704 of *Commerce* dated 7th October 1961.

The Company's production of bare conductors during 1960-61 staged a marked rise from 55,384 kilometres in 1959-60 to 66,300 kilometres and that of covered conductors from 7 million core-yards to 9 million core-yards. Its sales went up by more than 27 per cent, from Rs. 340.72 lakhs in 1959-60 to Rs. 435.73 lakhs in 1960-61, to be exact. But the gross profit has actually shrunk by Rs. 3.35 lakhs to Rs. 48.64 lakhs. The upward trend in gross profit witnessed in the past three years has thus suffered a reverse.

This unfavourable financial result is due to two factors: (1) the costs of production have registered a strident increase; the imposition of the excise duty of Rs. 300 per metric ton on indigenous production of aluminium ingot along with a corresponding countervailing import duty on imported aluminium ingot and rod in the Union Budget for the financial year 1960-61 was one of the causes for the rise in the value of raw materials alone by Rs. 114.14 lakhs to Rs. 371.16 lakhs, representing an increase of 44.1 per cent over the previous year. The other manufacturing expenses, including salaries and wages, have also risen sharply from Rs. 15.52 lakhs in 1959-60 to Rs. 72.41 lakhs or by more than four times. The increase under the wages bill alone is of the order of Rs. 4.71 lakhs. While these increases reflect the effects of expansion in production, they are also due to inflation in costs. The second factor was the intense competition in the internal market to which reference has already been made. The profitability of its working has, therefore, suffered a setback, the profit-margin (the ratio of gross profit to sales) having declined from 12.1 per cent in 1959-60 to 11.1 per cent in 1960-61.

The net profit, too, is a shade lower at Rs. 18.29 lakhs, as compared with Rs. 19.81 lakhs for the preceding year. The Company has not made any significant variations in the usual appropriation heads. In conformity with reduced earnings, the remuneration to managing agents is lower at Rs. 2.96 lakhs, as against Rs. 3.98 lakhs last year. The provision for depreciation as been cut down by Rs. 91,000 to Rs. 10.98 lakhs. Taxation absorbs Rs. 16.41 lakhs, as against Rs. 16.31 lakhs in 1959-60. No provision has been made for development rebate reserve, since no new machinery was commissioned during the year under review. The Directors have also not made any addition to the free reserves, for the third year in succession, as they have chosen to utilise almost the entire amount of net earnings to maintain the dividend at the previous year's level of 18 per cent taxable or 12.6 per cent net. The amount actually required for paying the dividend is, however, higher by Rs. 2.40 lakhs at Rs. 16.80 lakhs, in view of the higher paid-up capital at Rs. 1 crore, as compared with Rs. 80 lakhs in 1959-60.

As stated at the outset, the Company's production programme made satisfactory progress during the year under review. Its factories at Kundara and Hirakud worked to capacity, thanks to adequate supplies of aluminium metal made available by the Government of India. In fact, it could have produced and supplied more rolled rod to other manufacturers of bare conductors in the country, if the Government had given still larger supplies of aluminium.

The following comparative table summarises the working results of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	4,35.73	3,40.72	3,35.89	3,75.85

Carry forward	3.01	1.52	0.49	0.50

* Subject to deduction of tax.

† On increased capital.

The expansion programme of the Company is proceeding smoothly. The construction of the factory for the manufacture of high tensile galvanised sheet wire at Kundara is likely to be completed three months ahead of schedule. The Directors expect the new factory to start regular operations by the end of 1961. The Company has secured licences for expanding the manufacturing capacity of its covered conductor factory at Kundara and for establishing a new covered conductor factory near Hyderabad in Andhra Pradesh. The Government of India has sanctioned the requisite foreign exchange for the importation of machinery and equipment. The Company has also acquired a suitable property at Lingampally, a suburb of Hyderabad. Further, it has obtained a licence for establishing the manufacture at Kundara of a special type of low voltage aluminium cable for underground applications. The Directors are stated to be examining the details of this project. Fuller details of the Company's expansion schemes and their financial implications can be had from the statement of the Chairman, referred to earlier. Suffice it to add that the Company is contemplating an expansion in its equity capital.

The balance-sheet as at 31st March 1961 shows that the Company's paid-up capital of Rs. 1 crore, all in 1,000,000 equity shares of Rs. 10 each, is supported by reserves and surplus aggregating Rs. 50.95 lakhs. The expansion programmes undertaken by the Company, coupled with the tremendous increase in inventories, has kept its borrowings at a high level. Thus, secured and unsecured loans together add up to Rs. 215.60 lakhs; in addition, there are current liabilities and provision aggregating Rs. 172.59 lakhs, giving a total indebtedness to outsiders of Rs. 388.19 lakhs. These are, of course, more than adequately covered by current assets of the order of Rs. 424.53 lakhs, excluding investment at Rs. 1.47 lakh. The gross block at Rs. 151.27 lakhs has been satisfactorily depreciated to Rs. 84.82 lakhs.

The Rs. 10 paid-up shares of the Company are currently quoted on the Madras Stock Exchange at Rs. 23.50 *ex-div.* On the basis of the net dividend of Re. 1.26 per share, the net yield works out to 5.36 per cent per annum.

It is obvious from the Chairman's statement that the Company is unlikely to increase the dividend for the current or even the next year even if the distributable profit happens to be higher. In the first place, the reserves have to be strengthened. And, secondly, the paid-up capital is going to be raised again. This, however, need not cause any disappointment among the shareholders, as the productive capacity of their Company is being expanded and diversified. If they wait patiently for a few years, they will be able to enjoy the fruits of this expansion. Meanwhile, they can have the satisfaction that their holdings have been well secured by a larger block account and a bigger turnover.

COMPANY MEETINGS AND DIVIDENDS

FORT GLOSTER INDUSTRIES LTD. Annual General Meeting, Calcutta, 6th November 1961. Dividend: A dividend of Rs. 10 per ordinary share, subject to deduction of tax, for the year ended 31st March 1961. Share transfer books remain closed from 27th October to 6th November 1961, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 9th November 1961. Dividend: A dividend of Re. 1.50 per ordinary share (on old capital), for the year ended 31st March 1961. Transfer books remain closed from 27th September to 13th October 1961, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, London, 9th November 1961. Dividend: A final dividend of 7.50 per cent, taxable, for the year ended 31st March 1961. Dividend payable on and after 11th November 1961.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 11th November 1961. Net dividend of Rs. 16.80 per ordinary share, for the year ended 30th June 1961, payable from 13th November 1961. Transfer books remain closed from 16th October to 11th November 1961, both days inclusive.

NONSUCH TEA ESTATES LTD. Annual General Meeting, Cochin, 11th November 1961. Dividend: A final dividend of 20 per cent taxable, for the year ended 30th June, 1961. Transfer books will remain closed from 4th to 13th November, 1961.

PANYAM CEMENTS AND MINERAL INDUSTRIES LTD. Annual General Meeting, Cement Nagar, Kurnool District, 14th November 1961. Transfer books will remain closed from 7th to 21st November, 1961, both days inclusive.

ASHER TEXTILES LTD. Annual General Meeting, Tirupur, 16th November 1961. Dividend: A dividend of 30 per cent, taxable, for the year ended 30th June 1961. Dividends payable on and after 17th November 1961. Transfer books will remain closed from 3rd to 16th November, 1961, both days inclusive.

HUKUMCHAND JUTE MILLS LTD. Annual General Meeting, Calcutta, 17th November 1961. Dividend: A dividend of Rs. 2.15 per equity share, taxable, for the year ended 31st March 1961. Transfer books will remain closed from 6th to 17th November, 1961, both days inclusive.

YERCAUD COFFEE CURING WORKS LTD. Annual General Meeting, Salem, 22nd November 1961. Dividend: A dividend of 20 per cent, taxable, on equity shares, for the year ended 30th June 1961. Transfer books will remain closed from 16th to 22nd November 1961, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION LTD. Annual General Meeting, Bombay, 24th November 1961. Dividend: Rs. 41.25 per ordinary share of Rs. 125 each, taxable, and Rs. 16.50 per share of Rs. 125 (Rs. 50 paid), taxable, for the year ended 31st May 1961. Dividends payable on and from 27th November 1961. Transfer books remain closed from 30th October to 20th November 1961, both days inclusive.

BROOKE BOND ESTATES INDIA LTD. Annual General Meeting, Calcutta, 29th November 1961. Transfer books will remain closed from 3rd to 29th November 1961, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Dividend: An interim dividend of Re. 1.00 per ordinary share, subject to deduction of tax, for the year ended 31st December 1961. Dividends will be paid on and after 27th November 1961. Registers will remain closed from 6th to 27th November 1961, both days inclusive.

DECCAN SUGAR AND ABKHARI CO., LTD. A final dividend of 13.50 per cent, making a total of 21 per cent, taxable, for the year ended 31st May 1961. Transfer books will remain closed from 11th to 27th November 1961, both days inclusive.

TUBE INVESTMENT CO., LTD. Dividend: A dividend of 10 per cent, taxable, for the year ended 31st July 1961.

BOMBAY SAFE DEPOSIT CO., LTD. Dividend: An interim dividend of Rs. 10 for the period from 1st October to 31st December 1961. Dividends payable on and after 29th December 1961. Transfer books will remain closed from 14th to 24th November 1961, both days inclusive.

SIRPUR PAPER MILLS LTD. A dividend of 85 nP per share taxable, for the year ended 30th June 1961. Transfer books will remain closed from 21st November to 5th December 1961, both days inclusive.

MARIKAR MOTORS LTD. A dividend of 25 per cent, taxable, for the year ended 31st March 1961.

UGAR SUGAR WORKS LTD. A dividend of 15 per cent, taxable. Transfer books will remain closed from 5th to 20th December 1961, both days inclusive.

SHEVEROY ESTATES LTD. A dividend of 7½ per cent, taxable, for the year ended 30th June 1961.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. An interim dividend of 4½ per cent, taxable, for the year ending 31st March 1962. Transfer books will remain closed from 25th November to 5th December 1961, both days inclusive.

Skilled hands working with the touch of steel—steel weaving in and out of fabric, making a pattern or sewing together, steel fashions the clothes we wear. Fine needle to giant machinery in modern cloth mills, much of the textile industry's equipment is shaped from steel—tons of steel are required to produce the fabrics which clothe our millions. Soon we shall know abundance in an even greater measure—the finest textile at a price all can afford. Soon all this will be ours as there is a little more steel for each of us. *Towards this end, IISCO is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege*

SELF-SUFFICIENCY IN RAW JUTE

YIELD PER ACRE MUST BE RAISED

By C. L. Bajoria

DEPUTY CHAIRMAN, INDIAN JUTE MILLS ASSOCIATION

ONE lesson that emerges from the recent crisis more clearly than ever before is the importance of attaining and maintaining self-sufficiency in raw jute at the earliest possible date. Taking *jute and mesta* together, the annual requirement of the industry, on the basis of the present level of production, is about 6.5 million bales. Another 150,000 bales is needed to meet normal consumption in the villages. It is necessary, therefore, to ensure annual production of about 6.7 million bales.

This applies to normal times. In the current year, something like another 1.5 million bales will be needed to build up stocks which were almost exhausted during the period of scarcity in 1960-61. It is thus unlikely, even on the most optimistic estimates of the 1961-62 crop, that price support operations by the Buffer Stock Agency will be necessary this season.

Whatever the size of the Indian crop, for some years to come it will need to be supplemented by a small amount of import of cuttings from Pakistan. These are used for mixing with Indian jute, so as to reduce the cost of the 'batch.' As a raw jute exporting country, Pakistan has a surplus of cuttings, after other portions of the jute fibre have been exported to Continental and other countries. Dependence on Pakistan for cuttings is only marginal, the amount involved is insignificant and such import should not be regarded as a serious limitation on self-sufficiency. India will become independent of import of cuttings only if we too become a substantial exporter of raw jute. Nevertheless, the Government could make a useful contribution towards lowering the cost of Indian jute goods and increasing their competitive strength in the world market by liberal and speedy licensing of the industry's requirements of imported cuttings.

The efforts, since the beginning of the first Five-year Plan, to increase the production of jute have produced substantial result. It is unfortunate, however, that attention has been concentrated on jute alone and has not extended to mesta. Yet the greater availability of raw material for the jute industry during the last 10 years has been due mainly to increased production of mesta. Much more could have been achieved if mesta had been given a place, along with jute, in the Five-year Plans.

Jute and Mesta Production in India
1951 to 1960 (Figures in 000 bales)

Years	Jute	Mesta	Total
1951-52	4,678	..	4,678
1952-53	4,592	682	5,274
1953-54	3,129	656	3,785
1954-55	2,928	1,016	3,944
1955-56	4,197	1,159	5,356
1956-57	4,288	1,478	5,766
1957-58	4,052	1,291	5,343
1958-59	5,158	1,488	6,646
1959-60	4,605	1,118	5,723
1960-61	4,030	1,147	5,177

The increase in jute production has occurred mainly through extension of the area of cultivation. Yield per acre has shown no substantial change. Yet in the future, increased production must be sought mainly through higher yields, rather than by bringing more land under jute. Cultivable land is limited and diversion of land from rice to jute is undesirable because of the urgent need to attain self-sufficiency in food. Moreover, a higher yield per acre is the most effective way to make jute cheaper and, at the same time, give the cultivators a higher income. The need of the industry for cheap raw material to maintain its competitive strength and the legitimate demand of the grower for a higher money return can best be reconciled by increasing the yield per acre.

The performance in this respect over the last few years has been disappointing. The all-India acreage yield has remained virtually unchanged during the two Five-year Plans at around 2.5 bales, as compared with an annual average of 3.75 bales in Pakistan over the same period. One of the major advantages enjoyed by the Pakistan jute industry in competing with that of India stems from this disparity. Pakistan's advantage could be reduced, if not completely neutralised, by a sufficient rise in the yield per acre in India.

It has been conclusively established that this can be done. Research work carried out by the Indian Central Jute Committee and the application of these methods by the Indian Jute Mills Association in selected intensive cultivation blocks in different parts of West Bengal have shown that an increase of one to two bales or even more in the yield per acre is possible. There are areas where a yield of five to six bales per acre is considered normal due to adoption of improved methods of cultivation. Even an increase of one bale per acre in the all-India average yield will mean a difference of 1.5 million bales in the annual output. It is evident that self-sufficiency in raw jute, at any conceivable level of industrial production, is possible without any extension of acreage under jute.

To bring about this increase in yield, a well-planned programme of intensive cultivation through application of scientific agricultural methods is required. At present, jute cultivation is haphazard and indiscriminate. When jute prices are high, there is a tendency to grow it on any and every kind of land, without considering whether the soil and other conditions are suitable. This unhealthy practice needs to be checked.

The lines along which action is needed to raise yield per acre are now known and the Indian Jute Mills Association has launched a three-year programme for this purpose. The entire jute-growing area of the country has been demarcated into a number of agro-climatic zones. In each zone, three large areas will be selected each year for encouragement of intensive cultivation. Cultivators in these areas will be supplied with improved seed, fertilisers, implements and plant protection facilities at subsidised rates. Each year, the effort will be shifted to a new area in the same zone, so that subsidised assistance may be as widespread as possible. Retting facilities in each area will be developed on a community basis, taking advantage of all natural resources.

To meet the requirements of improved seeds, the Association will supplement the seed multiplication programme of the State Government by taking up multiplication in areas where good quality seed can be produced at low cost. The States best suited for economical multiplication of jute seed are Uttar Pradesh, Bihar and Orissa.

For large-scale adoption of improved cultural practices such as line sowing, cultivators experience difficulty in purchasing the necessary implements. If these are provided on hire or on hire-purchase terms, methods of cultivation can be improved and cost reduced. The Association intends to provide 60 seed drills each year to the intensive cultivation areas in each zone. Other lines along which improved yield per acre can be obtained are by the use of ammonium sulphate in addition to farmyard manure and the use of the wheel hoe in weeding, harrowing and thinning.

The main problems facing the jute industry have been set forth in this series of articles in the hope that thereby a greater public awareness will be created, both of the position of the jute industry in the national economy and the difficulties that it has to contend with. It is to be hoped that they will make some contribution towards dispelling misconceptions regarding the steps taken by the industry to tide over the crisis arising from shortage of raw jute in the 1960-61 season. The threat to the future of the industry arising from the growth of jute manufacturing capacity in Pakistan needs to be realised and the necessary defensive measures adopted before it is too late. Speculative manipulation of prices threatens the stability of the export market for jute goods and should be condemned by public opinion as a menace to national economic progress. Finally, the importance of attaining self-sufficiency in raw jute, mainly by raising the yield per acre will, it is to be hoped, receive the priority that it deserves.

[Note: *The foregoing is the last of the series of four articles by the author. The salient features of the first three articles have been brought out on pages 822 and 842 of our issue dated 28th October 1961.*—ED.]

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 1st *November*

Conditions in the short-term money market were fairly comfortable for borrowers during the major part of the week under review. Following the inflow of funds from other centres, supply was plentiful throughout. The call rate dropped by one per cent to 3½ per cent on Thursday, 26th October and remained at that level till Monday. Yesterday, however, the rate firmed up by ½ per cent to 4 per cent. Today, the market displayed a steady trend with both renewals and fresh money being available at 4 per cent. The term rates were unchanged as under:

	Per cent
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3¼
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-days' Government of India Treasury bills showed no new features. As against the invitation for Rs. 2 crores, the amount offered and accepted was the same. The average rate was unchanged at 2.5 per cent per annum. The 91-days' intermediate Treasury bills sold from 25th October to 28th October amounted to Rs. 35 lakhs. Their sales are being continued from the 1st to the 4th inst., both days inclusive.

The satement of affairs of the Reserve Bank of India for the week ended 27th October 1961 discloses a contraction of Rs. 21.64 crores in notes in circulation, as compared with the previous week. As the notes held in the Banking Department went up by Rs. 22.95 crores, the total notes issued have risen by just Rs. 1.31 crore. Foreign securities are unchanged at Rs. 116.86 crores; but, as balances held abroad improved by Rs. 5.95 lakhs, the total foreign assets have risen by that amount to Rs. 145.19 crores. The deposits of the Central Government have risen by Rs. 14.86 crores, in contrast with the decline of Rs. 11.15 crores witnessed in the preceding week. The deposits of other Governments have, however, shrunk by Rs. 8.27 crores. The deposits of banks are higher by Rs. 1.88 crore. On the assets side, investments have fallen by just Rs. 27.17 lakhs, but other loans and advances, which include advances to scheduled banks, also have declined by Rs. 6.40 crores.

An expansion of Rs. 5.02 crores in demand deposits and of Rs. 1.39 crore in time deposits is disclosed by the statement of affairs of the scheduled banks for the week ended 20th October 1961. The deposits of the State Bank of India, however, have declined by Rs. 1.43 crore. The banks' borrowings from the Reserve Bank have shrunk by Rs. 1.25 crore, though those against usance bills have gone up by Rs. 29 lakhs. Their borrowings from the State Bank of India of demand and time nature have edged forward by Rs. 1.69 crore and Rs. 58.49 lakhs, respectively. On the assets side, investments have gained Rs. 1.16 crore, but bank credit (advances and bills discounted) has shrunk by Rs. 2.27 crores to Rs. 1,232.56 crores. The State Bank's advances experienced a decline of Rs. 18 lakhs.

The gilt-edged market continued to remain weak, as sellers predominated in the Central as well as State loans. The Reserve Bank of India has reduced its purchase prices for some of the Central loans by 5 to 10 nP. For example, its buying price for 3 per cent 1964 has been reduced from Rs. 98.85 to Rs. 98.75, for 3½ per cent 1964 from Rs. 99.90 to Rs. 99.85, 3½ per cent 1965 from Rs. 99.85 to Rs. 99.80 and 3 per cent 1966-68 from Rs. 96.25 to Rs. 96.20. The Reserve Bank is still buying these loans only against switches. The Conversion Loan has dropped 35 nP to Rs. 72.40. 3 per cent 1970-75 first development loan lost 30 nP to Rs. 90.45. Only 4 per cent 1979, however, advanced by 5 nP to Rs. 99.30. Other Central loans were unchanged. In the States loans section, prices of several loans were marked down. 4 per cent Madras loans suffered losses ranging from 10 nP to 40 nP. The 4 per cent Andhra and U.P. loans also declined in value.

In the foreign exchange section, the rupee eased slightly in relation to the U.S. dollar. The banks' selling and buying rates for ready T.T. on New York were Rs. 475.50 and Rs. 472.25 per 100 dollars, respectively, as against Rs. 475.25 and Rs. 472 last week. The pound sterling also softened a little in relation to the U.S. dollar. The latest available rate for spot sterling is 281.480-281.510 cents, as against 281.570-281.600 cents a week before.

SUGAR DECLINES SLIGHTLY

(From Our Own Correspondent)

HAPUR, 30th *October*

Sugar prices declined slightly towards the week-end despite good demand for *Diwali* as supply position was easy following release of monthly quota of 2 lakh tons. The U.S. announcement of reduction of 50,000 tons of sugar import quota from India also acted as a dampening factor in sugar prices. Factories in West U.P. will start crushing not before the third week of November and week-end prices here were:—Rs. 107 per bag, retail Re. 1 per *seer*; *mill delivery* Simbhauli D29 Rs. 106; E29 Rs. 105.50, Bulandshar D29 Rs. 105 per bag.

Depressed conditions were also witnessed in the sugar market at Muzaffarnagar during the week on slack outside buying demand. Mills were eager sellers and further decline in prices is not ruled out in view of fall in demand. Some factories quoted their produce at discount from 62 nP to Re. 1.23 a maund and week-end prices were (per maund):—A29 Iqbalpur Rs. 39.66, Khatauli Rs. 39.97, B29 Shamli Rs. 39.30, Khatauli Rs. 39.44, D29 Saharanpur Rs. 37.75, Modinagar Rs. 38, Amroha Rs. 37.12, Bijnore Rs. 36.62, Shamli E29 Rs. 37.90.

Khandsari prices were steadier on good demand from Punjab and festive local requirements. Old stocks were fast declining and new season would start some time in December as crushers now find it more profitable to manufacture *gur* rather than *khandsari* due to low percentage of sugar in cane. Week-end prices of *khandsari* were:—*galawat* Rs. 25 to Rs. 29, non-crystal Rs. 31 to Rs. 36.25, crystal Rs. 33 to Rs. 36, *boora* Rs. 39 per maund.

New *gur* arrivals were fast mounting and were about 2,000 maunds average but were hampered during the week-end due to rains. Demand from consuming areas was good and entire arrivals were being lifted and local old stock also shrank to 2,000 maunds. Arrivals of new *gur* have also begun in mofussil areas and demand was fair from consuming areas. Arrivals would soon mount with clear weather and the cultivator, being free from *rabi* sowings, would concentrate on *gur* manufacture. Prices were fully steady and week-end prices were: new superior Rs. 21, medium Rs. 18 to Rs. 19, old Rs. 16, *shakker* Rs. 20, new Rs. 24 per maund.

Demand of old *gur* and *shakker* was poor in Muzaffarnagar market during the week as new arrivals have begun in small quantity. Consequently old *chaku gur* was quoted at Rs. 12 to Rs. 17.50, new *gur pansera* improved to Rs. 18 to Rs. 20 per maund, while *shakker* hardened Re. 1 to Rs. 2 per maund upto Rs. 24 on Punjab, Rajasthan and Gujarat support.

Gur futures moved both ways during the week in heavy speculative activity. Opening at Rs. 12.74 last Monday *gur fagun* touched the highest of the week at Rs. 12.85 on Wednesday and lowest of the week at Rs. 12.48 the same day and is today quoted at Rs. 12.62.

LINSEED FIRM

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 30th *October*

Since our last report before the *Pooja* holidays, the seeds market have shot up again, owing to damage caused by rains and floods upcountry to the stocks held there. Arrivals have therefore, been very scarce; mills are finding it difficult to run.

The oil prices have gone up in sympathy with seeds and other oil; stocks held by millers are limited and they are not interested in forward business at these prices. The oil cake markets are very firm. Prices are marked up higher by Re. 1 to Rs. 2 per maund as here, again, stocks are very low in the hands of millers. The latest quotation is: Ready November delivery Rs. 30.50 per maund.

GOLD EASY, SILVER QUIET

(From Our Own Correspondent)

BOMBAY, 1st *November*

There have been no outstanding developments in the bullion market during the week under review. Gold was distinctly easy, while silver was quietly steady. Turnover was poor, owing to lack of demand. Arrivals were larger than offtake in the case of both the metals. Speculators were idle during most part of the week, as they had nothing new to go upon. The only feature worth mentioning is a spurt of a rupee in sovereigns from Rs. 97 to Rs. 98, apparently due to a shortage of coins. This rise is in striking contrast to the loss of one rupee suffered by both ready and forward gold over the week and the absence of any appreciable variation in the price of silver.

The daily average offtake of gold was about 4,000 tolas, while the arrivals were 3,000 tolas. The offtake of silver was just six bars a day, while the arrivals averaged 30 bars.

Forward gold began the week at Rs. 125, gradually declined to touch a low of Rs. 124.05 on Tuesday and finished at Rs. 124.10, after moving up to Rs. 124.30. Ready gold continued to be at a discount as compared with the forward; actually the discount widened during the week from Re 1.30 to Re. 1.75, reflecting the poor demand for the metal at present and the speculators' continued hope that the demand would pick up in next spring, if not earlier.

Forward silver opened steady at Rs. 207.70, moved up to a high of Rs. 209.85 on 27th October, only to drift down gently thereafter; the week's lowest rate of Rs. 207.65 was seen on the opening day before the spurt took place and the lowest level touched today was Rs. 207.85. This shows that the rise recorded earlier in the week was nearly wiped out, the closing rate today being no more than Rs. 207.90, just a fractional gain of 25 nP over the week. Life ready gold, ready silver also was at a discount; such today was Re. 1.25, exactly the same as that a week ago.

The following table shows the trend of prices during the week under review:

	1-11-1961 (closing)	High	Low	25-10-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	122.35	123.95	122.25	123.85
Forward: Margashir* ..	124.10	125.15	124.05	125.15
Sovereign	98.00	98.00	97.00	97.00
SILVER				
Ready (.995 fine)	206.65	207.20	206.40	206.40
Forward: Margashir† ..	207.90	209.85	207.65	207.65
London—				
Silver Ready	80d.	—	—	80d.
Silver Forward	80¼d.	—	—	80¼d.
Gold	250s. 1d	250s. 1d.	249s. 11¼d.	249s. 11¾d.
New York—				
Silver	91.875 cents	—	—	91.875 cents

* 25th December settlement. † 26th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES SPURT

(From Our Own Correspondent)

BOMBAY, 1st *November*

In contrast to the steady conditions witnessed last week, the cotton futures market ruled distinctly firm during the week under review. The firmness was due mainly to two factors. First, the fear that foreign cotton proposed to be imported during the current season would not be available until at least mid-February. Secondly, firm advices from the spot market, following reports of untimely rains in the Punjab and the consequent damage to the crop, especially 320 and 210F, which are in the picking stage. The general firmness of other commodity markets, particularly oilseeds, imparted further strength to cotton futures. Heavy speculative buying sparked off by these considerations lifted the March contract from Rs. 626 last week-end to Rs. 639.50 on Monday. This level, however, could not be maintained for long. Profit-taking and selling prompted by the apprehension that the Forward Markets Commission might intervene to curb the rise in price and might even resort to such drastic measures as suspension of trading, as it did in the case or oilseeds futures, and news of larger arrivals of new crop in up-country markets resulted in a break in values. The March contract receded from Rs. 639.50 on Monday to Rs. 633.25 yesterday. A partial recovery was evident today. The March contract is currently quoting around Rs. 637, as compared with Rs. 626 at the close of last week.

Mill demand for ready cotton was brisk. New crop attracted good attention. The quality of early arrivals was satisfactory and they fetched prices around the ceiling. Apart from new crop, moderate interest was also noted in ready lots of old crop varieties such as Kalyan, Laxmi, L.147 etc. Following complaints that there was an undue rise in the price of new crop Co2, the Textile Commissioner issued a warning that, if prices were rigged up, the Government would not hesitate to requisition cotton. Bengal *Deshi* cotton evoked only stray export inquiries. But prices tended to harden, thanks to the internal demand for this cotton for mixing purposes. Foreign cotton also attracted some attention. Moderate business passed in selected East African, Sudan, Egyptian and American growths.

It is reported that the proposal to reintroduce compulsory survey of cotton made by the Cotton Advisory Board and endorsed by the East India Cotton Association, is meeting with stiff opposition from cotton interests of Gujarat, one of the major cotton producing States in India. Spokesmen of cotton growers and the trade, who met the Textile Commissioner's representative at Ahmedabad recently, are reported to have pointed out that compulsory survey was one of the factors that caused a crisis in cotton last season which resulted in heavy losses to cotton growers. They are, therefore, opposed to the reintroduction of compulsory survey. Some of them also challenged the crop estimates and said that the crop would be over 5 million bales and not 4.8 million bales, as had been estimated. In the event, they are understood to have argued, the survey had no relation to the crop estimate and, if the Government intended to check the prices from piercing the ceilings, it could introduce survey in respect of those varieties in which the ceilings had been pierced. It was contended that the rise in prices above the ceiling levels would occur, if at all, in respect of hardly ten per cent of cotton and there was no reason for imposing the cumbersome and costly system on all cotton and handicap the growers. The representatives are said to be unanimous in the view that voluntary survey would be adequate to meet the situation. In fact, it was pointed out, more than 80 per cent of the growers were likely to avail of the voluntary survey to secure higher prices for better varieties of cotton.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* (December) 650; Kalyan 945; Hubli Laxmi 935; Hubli Laxmi (choice) 1,000; East African B.P. (U.N.U.G.) (Nov.) 1,260; Jinga (Nov.) 1,145; Sudan XPL 1,540.

Cotton futures in Karachi recorded small gains during the week under review. A revival of mill buying, coupled with better export inquiries, led to a modest improvement in futures prices. N.T.R.G. January rallied from Rs. 76.50 last week-end to Rs. 77.10 on Monday but receded to Rs. 76.75 at close. Nevertheless, this week's closing is 25 nP higher than last week-end quotation. The March position too followed the same course and finished at Rs. 75.85, as compared with Rs. 75.15 a week ago.

Quiet trading and narrow price movements characterised business in the Liverpool cotton futures market during the week. A limited volume of commission house selling was absorbed by local operators. Lower advices from New York, reflecting favourable crop progress in that country, also imparted weakness to the market. Both the American and American type contracts receded. The October position went off the Board on 31st October. Sudan cotton contracts in Liverpool were quietly steady. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December 24.30; March 24.80; May 25.30.

American cotton mixed growth contract: December 24.65; March 25.10; May 25.60.

Sudan: November, January, March 32.25.

Reflecting a general lack of buying interest cotton futures in New York ruled subdued during the week under review. Weekly Government re-

ports of crop progress indicated satisfactory crop developments. Values tended to ease in slow dealings.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	31-10-61	24-10-61	17-10-61
New York Spot ...	35.65	35.65	35.65
December	34.63	34.69	34.67
March	35.40	35.46	35.38
May	35.81	—	—

ART SILK YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 1*st November*

The yarn market presented a mixed pattern during the week. While staple fibre and cotton yarns ruled steady, art silk yarn came in for selling and prices declined as a consequence. Local stock position in respect of art silk yarn was reported to be comfortable. Fresh arrival, which did not therefore find ready buyers, exerted a downward pressure on prices. The rejection by the Textile Commissioner of the plea of exporters of rayon fabrics for higher incentives under the export promotion scheme for art silk fabrics was an additional damper. Staple fibre yarns attracted some support in anticipation of better performance of fabrics on the export front. Cotton yarns met with some selective buying.

It has been officially notified that the manufacturers of art silk hosiery will be permitted to import single stretch nylon yarn to the extent of 100 per cent of the face value of import licences issued to them for art silk yarns for the licencing period April to September. If, however, hosiery manufacturers desire to import double stretch nylon yarn they will be allowed to do so only to the extent of 50 per cent of the value of their licences. The balance value of the licence will have to be utilised for the import of art silk yarn only or ordinary synthetic yarn to get it processed indigenously.

Art silk yarn Amilan December (per 100 kg.) came under selling pressure and receded from Rs. 3,385 to Rs. 3,343. National Rayons 150 Bt. cones declined by 33 nP to Rs. 13.75. 120 Bt. cones dropped 48 nP to Rs. 18.22 Among imported art silk yarn, 120 Japan came in for selling and lost Rs. 55 at Rs. 1,874. 150 Japan too declined by Rs. 56 to Rs. 2,094. 120 Italy, however, gained Rs. 3 to Rs. 1,903.

Staple fibre December elicited support and was quoted Rs. 16 higher at Rs. 879. Spot Hinds were unchanged at Rs. 9.90. Cotton yarns, as noted above, were generally steady. The quotations were virtually unchanged from last week's. Forty counts Maduras continued to attract attention and appreciated by 25 nP to Rs. 31.50. 20 counts Gokaks, however, came in for selling and eased by 13 nP to Rs. 22.62.

The following table gives the prices of rayon staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	1-11-1961	25-10-1961
	Rs.	Rs.
Art silk yarn—		
20/1 Amilan (100 kg.)—		
October	—	3,398.00
December	3,343.00	3,385.00
40×1 JF		
October	—	3,490.00
December	3,515.00	3,525.00
120 Japan (per 100 kg.)	1,874.00	1,929.00
150 Japan (per 100 kg.)	2,094.00	2,150.00
120 Italy (per 100 kg.)	1,903.00	1,900.00
Nat. Ray. 150 Bt. I	13.75	14.08

80s Modern	67.25	67.25

SEEDS MARKETS CLOSED

(From Our Own Correspondent)

BOMBAY, 1*st November*

Trading in oilseeds markets remains suspended, thanks to the over-indulgence by speculators. During the first two days of the week, oilseeds and oils forged ahead, under the leadership of groundnuts. This invited the wrath of the Forward Markets Commission. On Friday 27th October, the Commission directed the recognised Associations at Bombay, Saurashtra, Delhi, Adoni, Sangli, Hyderabad and Madras to suspend all trading until Thursday the 2nd November. Since then the Commission has been busy examining the question of taking suitable steps for keeping speculation under check. The Board of the Bombay Oils and Oilseeds Exchange has also been examining the books of several members to find out the extent of their recent purchases. The Forward Markets Commission has explained the circumstances leading to the temporary closure of markets in the following words:

"As the developments in the groundnut market in the past few days were not conducive to orderly and healthy trading, the Commission, in its Press Note dated 25th October, reiterated the hope that the concerned associations would curb unhealthy speculative tendencies and make it unnecessary for the Commission to intervene. Despite this, the Commission observed that speculative fervour was being worked up, pushing groundnut prices by Rs. 13 during the course of a week, notwithstanding the fact that new groundnut crop has started moving. The Commission feels that such price behaviour at the commencement of the crop movement is not in the overall interests of the economy."

By the time, these lines appear in print, the Commission would have taken a decision on the measures to control speculation. The Board of the local Exchange is reported to have advocated a scheme to restrict daily price rise to Rs. 2 only, whenever the groundnut prices ruled over Rs. 210 per 250 kgs. In the meantime, prices of oilseeds, and oils in unofficial transactions have moved down slightly. But the closing quotations are generally higher than those prevailing a week ago. Now, what are the factors responsible for the upward trend in prices of oilseeds and oils during the few days preceeding in action taken by the Commission? There was, of course, considerable speculative activity. Following the enhancement of special margin on mustard seed November 1961 contract in North Indian markets, upcountry interests turned their attention to groundnuts. The bullish fervour was also induced by reports that the yield from the current crop at Saurashtra and other parts of Gujarat would be lower than what was anticipated earlier. The new crop has started arriving, but it found keen buyers in local crushers and *vanaspati* manufacturers, on account of the pre-*Divali* demand for groundnut oil.

The local bulls were also enthused by the recent rally in world market prices for groundnut oil. The price of Nigerian oil at the London Market rose from about £103 per ton a month ago to £106. This improvement was mainly the result of large purchases (amounting to about 35,000 tons) of Nigerian groundnut oil by Morocco. Besides, contrary to earlier expectations, the pressure of supplies from Argentina was only modest.

Groundnut January 1962 contract, which had closed last week at Rs. 203.75, rose to Rs. 208.25 by Friday. It declined, in private deals, to Rs. 207. Subsequently, Khandesh quality rose from Rs. 44.50 to Rs. 45.50 by Saturday. But it eased subsequently to Rs. 44.75, *albeit* with a net gain of 25 nP. Oil Ex-mill put on 35 nP to Rs. 18.55. Groundnut oil January 1962 contract closed higher at Rs. 17.05, as against Rs. 16.60.

Castorseed May 1962 contract rose from Rs. 160 to Rs. 163.25, before winding up the week at Rs. 161. Ready Madras improved by 25 nP to Rs. 33. Oil Commercial was higher by 5 nP at Rs. 13.30.

Linseed March 1962 contract advanced from Rs. 36.44 to Rs. 36.87. Linseed oil hardened by 5 nP to Rs. 16.75. Bold ready, however, eased by 13 nP to Rs. 38.62.

Cotton January 1962 contract rose from Rs. 94.75 to Rs. 97 and remained at this level. Both Berars and non-whites were unchanged at Rs. 18.90.

It must be noted here that the prices mentioned in the review pertaining to the days after suspension of trading are based on unofficial transactions.

The following table shows the closing prices of oilseeds and oils on Friday, 27th October, as compared with those of the two previous weeks:

	27-10-1961	25-10-1961	10-10-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	210.12	203.75	197.62
Khandesh	44.75	44.75	42.25
Khandesh quality	45.50	44.50	42.25

January 1962	97.00	94.75	93.00
Niger seed	38.10	38.50	38.50
Kardi seed	22.00	22.00	22.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

AGRICULTURAL MARKETING IN INDIA AND ABROAD

R. S. SRIVASTAVA

Deputy Director, Programme Evaluation Organisation, Planning Commission, New Delhi.

Marketing constitutes the crux of the food and agricultural problem. A special feature of this book is that it combines the presentation of the principles and economics of marketing with comparison of policies and programmes in different countries which throw into relief the extent of various leeways, drawbacks and also provide an analytical framework for agricultural marketing policies.

Price Rs. 12.50

MALABAR BLACK PEPPER

(Messrs. Parekh and Co.)

BOMBAY, 1*st November*

After touching the worst level of the season at Rs. 317 per quintal for ungarbled, Malabar black pepper during the week improved by way of a technical correction with an undertone uncertain and weak as the holders for the old crop in India are anxious sellers in view of the approaching new season, while stockists in Singapore are panicky under the fear that they may not get the chance to sell once Malabar pepper starts moving. Ungarbled improved to Rs. 320 from Rs. 317, while garbled climbed to Rs. 334 from Rs. 330. December delivery moved erratically from Rs. 308 to Rs. 349 to go down to Rs. 325. Calicut is selling at Rs. 320.

Singapore after touching the lowest level of the year M$117½ for black improved to M$122½ by way of reaction to nervous undertone owing to the uncertainty prevailing as to the future attitude of the holders of Lampong and the final production of Lampong during 1961. Within a short period of about 24 months, pepper appears to have completed the bull cycle engineered by a combination of Chinese speculators in Singapore, white pepper, after touching the highest at 9*s.* in London during January 1960, has now almost reversed to an earlier low level of 2*s.* 9*d.* Black pepper in Singapore, after touching the highest at M$340, came down to M$117½, while white pepper, after surging forth to M$506, has now returned to M$160. This means that Singapore Black and White have still to travel back to old levels of August 1959, i.e., $84 for black and $127 for white to complete the bull cycle. Singapore speculators cleverly pinpointed the timing of a fairly regular cycle in pepper observed with an average interval of 14 years between successive peaks for their speculative squeeze, but forgot to take into account the accumulated stocks of Lampong in Indonesia in view of the currency uncertainty and the prospect of the new crop in 1960. As a consequence, their attempt proved abortive.

Spot in New York, after coming down to $0.39, improved to $0.40 to finish at $0.39 with grinders sidelining. The undertone of the market is reported to be weak as some of the traders there expect still lower prices from December onwards when there will be keen competition between the new crop Malabar and holders of Lampong old and new in Singapore and Indonesia.

The future of the market is very much uncertain in view of accumulation of stocks of old and new crop of Lampong and the fear of competition between Lampong and Malabar.

Sarawak position is also not so happy as the holders there withheld selling in expectation of higher prices as the Government gave them facility for storing and loan. Holders of Sarawak are now getting nervous as Singapore is going down.

Ready pepper in Bombay is selling at Rs. 182 for 50 kilos.

GRAINS OTHER THAN RICE STEADY

(From Our Own Correspondent)

HAPUR, 30*th October*

Barring rice, prices of which were slightly depressed thanks to arrivals of new produce in markets, prices of other grains were steady during the week under review. Wheat prices were steady at Rs. 15 to Rs. 15.25 a maund for average quality and upto Rs. 16.50 for better farm produce. Daily arrivals were at an average of about 200 maunds but declined in week-end following monsoonish conditions which would very much damage recently sown *rabi* crops and delay further sowings. Wheat average quality was quoted at Rs. 17 a maund on the corresponding date last year and Rs. 17.50 in 1959. *Rabi* sowings, which were being done with vigour, are now being hampered following last night's rains.

Rice prices sought lower levels as new produce, *gaddakutcha* and *mainpuri* rice, is reaching the market. *Mainpuri* rice was quoted at Rs. 20 per maund as against Rs. 23 on the corresponding date last year and prices of other qualities in week-end were (in rupees per maund): *gaddakutcha* new 19.50, *ramajuagan sela* 21, *raimunisela* 22, *basmati sela* 28, superior 31 to 35, new paddy 11.50 to 13. Gram prices recorded further fractional gains on firm Punjab advices and, as demand was better for seed purposes, local stock drifted lower to 31.000 maunds. Barley and *bejhar* prices ruled quiet in the absence of active demand. New maize continued to reach the local market and today's arrivals were heavy at 2,000 maunds from Rampur rural areas but prices stayed steady on good consumers' support as seasonal demand has been switched on to this cereal. *Methi* prices were steady on good demand from Rajasthan and Calcutta side in face of poor stocks. New *bajra* arrivals also commenced in small quantity but prices were depressed as quality offered was poor. Other sections were quiet and week-end prices (in rupees per maund) were:—gram Punjab 14.37 (corresponding prices last year 16.75), barley 10.50 to 11, *bejhar* 11 to 12, maize 12 to 12.50, maize *desi* 13, *bejra* new 14, *methi* 28.25, *juwar* 11, *guwar* 14, oats 12. Local stocks approximately: rice 4,000 maunds, gram 31.000, maize 4,000, *juwar* 7,000, barley 3,000, *bejhar* 2,500.

In pulses, while peas were steady at unchanged price levels, *arhar* and *dal* improved on good demand. There was no selling pressure as stockists expect better prices later in off season. *Urd* prices sought lower levels as new produce grain is reaching the market while *moong* prices were steady on good demand. Week-end prices (in rupees per maund) were:—*peas dara* 11.62 to 11.75, farm 12 to 12.50, peas *dal* 13.25, *arhar* 13.25 to 14.25, *arhar dal* 16.50, *urd* 22 to 23.50, *urd dal* 25 to 26, *moong* 16 to 19, *moong dal* 20 to 22, *massor* 14 to 16, *massor dal* 16.50, *moth* 16, *moth dal* 19. Stocks: peas 47,000 maunds, *arhar* 39,000.

TEA IRREGULAR

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 24*th October*

At sale No. 43 held today, a total of 511.000 kilograms was on offer. The market met with useful general demand with more interest being shown for brokens than for fannings. Quality of highgrowns was irregular with some useful invoices on offer. From other districts quality showed slight improvement. Plain and low medium brokens came in for good inquiry and were firm on last prices. Medium brokens were about steady, but similar fannings and good mediums showed an easier tendency. Highgrown brokens came to an irregular market, following quality but were generally dearer. Fannings were, however, easier. Black leaf teas sold around last rates. There was good demand for whole leaf grades with prices steady on last. C.T.Cs were a little dearer and C.T.C. types and legg-cuts sold at fully firm to dearer rates. Plain and stalky teas were a little easier.

The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low mediums	3.85/4.15	4.30/4.60
Mediums	4.15/4.40	4.50/4.85
Good mediums	4.40/5.20	4.85/5.50
Nilgiri B.O.P.	5.20	8.10

The average price realised in sale No. 43 was Rs. 4.78 per kilo, as compared with Rs. 4.79 a week ago and Rs. 5.02 in the corresponding sale last year.

Dust Sale No. 43: There was a total of 248,000 kilograms on offer in dust sale No. 43 held on Thursday, 26th inst. There was less demand at easier rates. All mediums showed a decline of about 20 to 30 nP and there were a number of withdrawals. Highgrowns came to fair demand but were irregular and often easier. Residuals sold well at slightly easier rates. C.T.Cs and C.T.C. types were up to 15 nP easier

The average price realised in dust sale No. 43 was Rs. 4.52 per kilo, as compared with Rs. 4.74 a week ago and Rs. 4.52 in the corresponding sale last year.

Export Quota: There are sellers quoted at ½ nP per kilo with no buyers.

Colombo: There was good general demand which strengthened as the sale progressed. Highgrowns met with good enquiry with Dimbulas appreciating 5 to 10 cents. Uvas showed a decline following quality. Lower descriptions were a little dearer. Highgrowns B.O.P.F. were the strongest feature of the sale and these were generally up to 25 cents dearer. Mediums met good competition and sold at firm rates, but plainer descriptions were up to 5 cents easier. Lowgrown teas came to an easier market by up to 8 cents per lb. Persian Gulf types also were easier.

London: North Indian and other growths: In Monday's sale the market met with good demand, but prices were rather irregular. Brown leaf and fibery sorts sold at lower rates. On Wednesday, the market met a good demand, although somewhat irregular, and prices, in the main, followed the trend of Monday's market.

Ceylon and South Indians: In Tuesday's sale 19,203 packages were on offer of which 6,187 originated from South India. There was an active demand. The Ceylons on offer were well competed for with lowgrowns and better teas showing improved quality being dearer. South Indians were fully firm.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as under:

"*Sale No.* 44: 577,000 kilograms. Good demand for brokens and whole leaf. Low medium and mediums irregularly 10 nP lower. Good mediums steady, highgrown brokens fully firm to dearer. All fannings weakest feature."

TEA IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 31*st October*

There was good demand for tea at the export auctions held yesterday. In the internal sale held in the last week also, there was good demand and buyers followed quality. Tea bookings in the last two weeks continued to maintain steady improvement, and increased arrivals of tea in Calcutta from gardens show that tea would continue to occupy good space in the coming weeks also.

Considering the level of world prices and the increasing trend in world production, tea prices are unlikely to rise any further. In fact, the chances are for a decline in prices. As such, the trade has pointed out that it will be desirable to offer all teas for sale as they are received. If a bigger quantity is kept over, the same may have to be sold for internal consumption.

It should be noted that prices in Calcutta are higher than in Ceylon. As such, gardens in India would have to remain content by selling a higher output at lower prices compared to last year. India's exports of tea have been higher in this year than last. However, since prices have been lower, higher exports would not have led to any noticeable change either in the country's earning of foreign exchange or the industry's profitability. The poor interest being displayed in shares of tea companies shows that investors doubt if dividends for the current year would be higher than last year. For, production costs have also steadily increased.

In view of increased output in most producing countries, greater competition in world markets is understandable. It would be remembered that Pakistan recently increased its export quota from five to ten million lbs., and it is now reported that, encouraged by the continued rise in production, a further increase is now contemplated. Pakistani production in September amounting to 9 million lbs. has brought the total of the current season's output so far to 40 million lbs., or two-thirds of the expected production of 60 million lbs. for the current season.

China has stepped up its exports even at the cost of lower internal consumption in view of its acute need for foreign exchange. Russia is believed to have increased tea output, but since that country continues to import tea from India, its production falls short of internal demand. With competitive prices, Ceylon has been able to get greater attention from foreign buyers. Considering that internal consumption in most countries has increased, trade circles think that India should be able to export more to countries in South-East Asia and Africa. This is a sphere in which the Tea Board can be of assistance.

Dusts on offer in the internal sale held in the last week aggregated 20,586 packages. There was good demand, and buyers showed a marked preference for quality. Keen competition was offered to the better C.T.Cs, prices of which rose. The plainer C.T.Cs, however, eased by 15 nP, and the fibrous varieties attracted poor attention. Orthodox teas sold well at rates which were below 10 nP, as compared with previous rates. Legg-cut teas were irregular, but demand was good. The bright teas of the last category were fully firm. The prices per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 5.90 to Rs. 6.20, medium Assam C.T.C. dust Rs. 5.20 to Rs. 5.60, legg-cut dust Rs. 4.10 to Rs. 4.60, plain orthodox dust Rs. 3.70 to Rs. 4.00, and medium Assam dust Rs. 4.00 to Rs. 4.20.

Leaf offerings amounting to 38 packages were irregular.

Offerings during yesterday's export sales amounted to 73,019 packages. The trend was irregular, although there was a good general demand. Prices of plain brokens and fannings eased up to 10 nP. Legg-cut teas showed a loss of up to 20 nP. Medium and best orthodox teas were met with good support, but prices were irregular. Among C.T.Cs, prices for the poorer and fibrous lots rose, but those for the best kinds lost by 30 nP. Tippy teas were subjected to some withdrawals, while Darjeelings were irregular.

JUTES STEADY

(From Our Own Correspondent)

CALCUTTA, 31*st October*

Steady conditions prevailed in both the raw jute and goods markets during the period under review. Although in both greater quantities changed hands, prices fluctuated only narrowly. After the *Pooja* holidays, the markets reopened on 20th inst. and, after the session on the following day, closed again for the week-end and the *Lakshmi Pooja* holidays to reopen on the 25th. During the holidays, too, business took place; however, this was not due to ready demand, but was covered in anticipation of orders and against earlier sales. That, though foreign demand for goods considerably increased in the last two weeks, prices had not gone up should be considered as an encouraging sign. For if only prices rose, trade circles felt that foreign demand would decline. There is also the danger that prices of fibre would move up. With the recent increase in working hours and a proposal to unseal 2½ per cent of the looms being strongly advocated, it can be said that mills, as a whole, have returned to profitable working. This can be seen by the increased interests being displayed in the shares of jute mills. However, it would take months before mills could wipe out the loss, estimated at Rs. 6 crores, which had resulted in uneconomic working from April to September when mills faced one of the worst crises in the history of the jute industry.

While the reports of good rains and the consequent expectation of increased farms output in Australia have led to greater Australian purchases of sacking goods, it cannot yet be stated that consumers abroad are switching back to jute goods from substitutes and bulk handling methods. Trade circles would attribute the current demand for increased jute goods to general recovery in world trade, assisted by the deepening crisis in the international political horizon. While a world war may not be an immediate possibility, it is no secret that the preparations by the powers that count have received an impetus, thanks to the continued intransigence of the U.S.S.R. to respect world opinion and discontinue the harmful nuclear tests. Jute goods being so essential to any kind of warfare, modern or old, trade circles thought that it was possible that some of the countries had embarked on a programme of stockpiling. This leads to the inference that, even at current prices, jute goods are unable to face competition from substitutes. It is against such a background that the trade feels that any rise in prices of fibre and goods should be avoided.

The U.S. burlap market remained dull and uninteresting during the period under review. It was reported that business done there was relatively low. This caused no surprise against the background of burlap consumption in September, which was only 63.6 million yards, as against 67.2 million yards in the previous month and 78.3 million yards in September 1960. The monthly average consumption so far was only 64 million yards, as against 72 million yards in the corresponding previous period. Such a low level of consumption in the face of increased world trade should be taken as an indication that substitutes are continuing to hold their sway against jute goods. U.S. burlap stocks at the end of September were 203.3 million yards, as against 216.9 million yards in the previous month and 260.5 million yards at the end of September 1960. Increased interest is now being shown by U.S. buyers, along with others, and it is expected that U.S. stocks at the end of the current year would show a rise.

In the absence of adequate buying, quiet conditions were also in evidence in the Narayanganj (Pakistan) fibre market. Loose jute arrivals continued to increase, but a marked fall in quality had been reported. Prices of white jute generally showed a falling trend, while cuttings, on Indian interest, remained steady. The Pakistani crop has now been estimated at 7 million bales, and, with the programme of Indian mills to increase production, it is expected that sales to India are likely to increase. The Government of India has already indicated that it would permit the jute mills to procure as much fibre as desired from anywhere. That Indian interest in cuttings is lively is indicated in the steady prices for them. Overseas purchases of the Pakistani fibre in this season are estimated to aggregate 3½ million bales, and requirements of Pakistani mills would be about 2 million bales. Allowing for Indian purchases and the loss on account of smuggling across the border, a crop of 7 million bales would hardly leave any carryover.

Although fibre prices in India have been maintained at above Rs. 32 a maund basis Assam bottoms during the period under review, cultivators' organisations, perturbed at the rapid increase in arrivals at marketing centres and apprehending a possible fall in prices, have revived the demand for the creation of a buffer stock agency independent of the I.J.M.A. and the fixation of minimum prices.

After the *Pooja* holidays, the goods market reopened firm on 20th October, induced by short-covering in near and ready delivery packing. Inquiries from overseas were encouraging, and ready B. twills scored from Rs. 139.75 to Rs. 141.75. In sympathy, ready hessian 40" 10 oz. was steady at Rs. 54.25. On the following day, prices gained to Rs. 143.50 and Rs. 55.00 respectively. This was followed by good business, both covering and genuine. After the week-end and the *Lakshmi Pooja* holidays, the market reopened on Wednesday last, when covering business in heavy goods took place on a moderate scale. B. twills improved to Rs. 144.75, while hessian 40" 10 oz. was quiet at Rs. 54.75. At the higher levels, mills sold heavily; this was followed by profit-taking which, on Thursday, brought down B. twills to Rs. 143.50 and hessian 40" 10 oz. to Rs. 54.25. Overseas buyers were not prepared to follow the higher levels touched earlier, and lack of business with them indicated that they had withdrawn their support. Local bazar dealers then turned sellers, and this on Friday forced down B. twills to Rs. 142.50 and hessian 40" 10 oz. to Rs. 53.60. On Saturday, prices rose following bullishness in the futures market and buying interest displayed in ready goods. Hessian 40" 10 oz. hardened to Rs. 54.25 and B. twills to Rs. 144.00. These prices were maintained during yesterday.

Prices of fibre were maintained for most part of the week and the subsequent fall fractionally was only a temporary feature. Sellers were eager for business, but mills preferred to show interest sparingly. Assam bottoms opened at Rs. 33.50 and, after rising to Rs. 34, eased to Rs. 33. However, the price soon regained to Rs. 33.50. This followed week-end reports that the Government of India was taking action to constitute a buffer stock agency within the next two to three weeks. The agency would be authorised to buy if the price declined to Rs. 32. In no case, it was stated, would the Government allow the price to fall below Rs. 30.

METALS INACTIVE

(From Our Own Correspondent)

CALCUTTA, 31*st October*

Owing to holidays, activity in the metal market in the last week was limited. Since the beginning of the New Year for the business community was not far off, few in the market were inclined for fresh business in an attempt to keep inventories as low as possible. A rapid fall in the price of electrolytic copper was recorded on the London Metal Exchange. From £230 a ton the price fell to £233½. The fall was attributed to the absence of adequate demand, although the metal was believed to be in short supply and the contago featured itself twice with a brief interval. On the other hand, although the price on the New York Commodity Exchange fell to 30.15 cents a lb., a rapid recovery to 30.40 cents was recorded and customs smelters reported good offtake. With subdued demand in Calcutta, berry scrap fell from Rs. 492.25 a quintal to Rs. 484.25; however, utensil scrap was quoted higher at Rs. 452.75, as against Rs. 449.50 previously.

The steady rise in the price of tin from £940 a ton to £953 was a feature of trading in the London market. The high rate was maintained for most part of the week. The rise followed higher advices from Singapore and the low level of stocks in Britain. The release of a further quantity of low-grade tin by the U.S. did not reverse the London trend. Although the stock position improved in Calcutta, the price rose from Rs. 1,509.75 a quintal to Rs. 1,525.50 in sympathy with the bullish London trend. The fall in the price of electrolytic zinc here from Rs. 281.50 to Rs. 279.50 was in line with weaker overseas advices. However, subsequently in the week the price recovered, although in London the quotation fell from £78 a ton to £71.

Notices

THE NATIONAL NEWSPRINT AND PAPER MILLS LIMITED

NEPANAGAR

NOTICE

THE FOURTEENTH ANNUAL GENERAL Meeting of the Shareholders of the National Newsprint and Paper Mills Limited will be held at Nepanagar on Wednesday the 6th December 1961 at 3.30 p.m., to transact the following business:

1. To receive and adopt the Directors' Report, the Auditors' Report, the audited Profit and Loss Account for the period from 1st April 1960 to 31st March 1961 and the Balance Sheet as on the 31st March 1961, together with the comments of the Comptroller and Auditor General of India with the observations of the Board of Directors.
2. To elect a Director in place of Shri K. Radhakrishnan who retires under Article 132 of the Articles of Association and is eligible for re-election.
3. To elect a Director in place of Dr. A. Seetharamiah who retires under Article 132 of the Articles of Association and is eligible for re-election.
4. To elect a Director in place of Shri B. R. Mishra who retires under Article 132 of the Articles of Association and is eligible for re-election.
5. To elect a Director in place of Shri G. C. L. Joneja who retires under Article 132 of the Articles of Association and is eligible for re-election.
6. To elect a Director in place of Shri N. Swami who retires under Article 132 of the Articles of Association and is eligible for re-election.
7. Notice to the members regarding the appointment of Shri Ragho Raj Singh, ex-Managing Director and Shri S. L. Visvanadhan, Managing Director:—

   "It is notified for the general information of the members of the National Newsprint and Paper Mills Ltd. that the Company proposes to make an application pursuant to the provisions of Section 86(J) of the Indian Companies Act 1913 and Section 269 of the Companies Act 1956 to the Central Government for its approval regarding the appointment of Shri Ragho Raj Singh, ex-Managing Director and Shri S. L. Visvanadhan the present Managing Director of the Company."
8. To transact such other business as may be placed before the meeting by the Managing Director with the permssion of the Chair.

By Order of the Board of Directors,

S. L. VISVANADHAN,
Managing Director.

NEPANAGAR,
Dated 1st November 1961.

The Share Transfer Books of the Company will remain closed from the 23rd November 1961 to 6th December 1961 (both days inclusive).

Shareholders desirous of having at the Annual General Meeting any information concerning the Accounts of the Company are requested to send a written requisition to the Managing Director so as to reach him seven (7) days before the meeting.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Explanatory Statement of Item (7) as Required By Section 173 of the Companies Act 1956.

Under Section 412 of the Companies Act it is necessary to obtain formal approval of the Central Government to the appointment of Managing Directors of the Company. Before application is made to the Central Government under the above section a general notice has to be issued to the shareholders of the Company signifying the Company's intention to move the Central Government for their approval.

TEXTILES

(Concluded from page 870)

certain other features which cannot be satistically categorised, thanks to the inadequate data available, but which throw some interesting sidelights on the textile industry in the Communist countries. Generally speaking, the textile industries of the Communist countries, work a three-shift system. Czechoslovakia, however, worked only 1⅓ shifts in 1959 and Poland 1.8 to 2 shifts. Official working hours in Communist countries vary between 40 and 48 per week. Some of the Eastern European countries as, for example, Bulgaria and Yugoslavia, report 48 hours, whereas in Russia and Hungary the number of hours worked works out to 40 a week. In other countries, weekly working hours average 44 to 45 a week. In China, weekly hours worked is estimated at 48.

The structure of the cotton industry in the Communist countries, according to the survey, shows a clear trend towards establishing the so-called vertical combines, that is, multi-staged mills. The industry seems to have progressed differently in the various Eastern European countries. The Russian cotton industry is probably organised already in larger part, according to a multi-stage system. As for the Chinese cotton industry, which has practically been built up during the past ten years, it, too, is organised vertically.

The main conclusion that emerges from the survey is that the Communist countries in general, and China in particular, are energetically enlarging the spinning and weaving sectors of its cotton textile industry. Moreover, Russia and China are striving for an improvement and enlargement of their own raw material supplies. They have already succeeded in raising the production of raw cotton above consumption. Thus, the Communist countries can be said to be theoretically self-supporting. However, as the qualities of cotton produced do not meet with all the requirements of the cotton industry, imports will be necessary for some time to come.

Not only capacity but also production of yarn and fabrics is increasing. Productivity is remarkable in some cases. The expansion of cotton industry and its raw material basis might have been caused by military motives. But it is also reasonable to infer that the necessity to raise the standard of living to as high a level as possible in order to justify political doctrines and to obtain a sufficiently strong economic means to distupt the Western markets might have been equally responsible for such growth. In conclusion, the author of the survey gives the following warning to the cotton industry in the West:

"The cotton industry of the West, therefore, will be well advised to observe attentively the further development of the cotton industry in the East, and in particular that of China. It must never grow weak in creating an effective protection against a possible flooding of our markets with fabrics at lowest prices, mostly calculated for political reasons, if it wishes to avoid serious and substantial damage. The Western European cotton industry must never be deceived by the absolute figures concerning the Eastern cotton industry, but it must confront its own retarding development with the rate of expansion of the Eastern cotton industry. Furthermore, it must never be overlooked that the impetus of a free trade economy is much stronger than that of a State economy."

The author of the survey is confident that taste, ideas, economic flexibility and initiative, combined with an appropriate rationalisation of enterprise and with a certain measure of Governmental protection against unlimited imports from Communist countries, should offer the Western European cotton industry a fair chance to withstand Communist competition.

ENGINEERING

(Concluded from page 876)

become self-sufficient in regard to these, and thus reduce imports substantially.

"The Council reiterates its earlier recommendation that the duty anomaly on the import of aluminium ingots/bars and rods for the manufacture of A.C.S.R. conductors and for the manufacture of all-aluminium conductors should be removed early. Also lower rates of duty should be made applicable to the aluminium used in the manufacture of various types of cables and wires under the scheme of 'substitution of aluminium for copper.'"

The Development Council has attached special importance to the creation of enough tool-making capacity in the country. It has suggested, in this connection, the supply of adequate quantities of tool steel. Some action seems to have been taken on these recommendations; but, at the time of going to press, the relevant information is not readily available.

MARKET GOSSIP

(Concluded from page 859)

cement with certain minor adjustments to cover the varying cost of some units. Secondly, it has raised the ex-factory price by less than what the Commission had recommended—by Rs. 13 per tonne, including selling and distribution charges of Rs. 3 per tonne, as against Rs. 16 per tonne recommended by the Commission.

As a sequel to the upward revision in ex-works prices, the Government has also raised the selling price of packed cement from the existing price of Rs. 122.60 per tonne to Rs. 135.60; this works out to a rise of 65 nP per bag of cement. The revised price will remain in force during the entire period of the third Plan, as against three years recommended by the Tariff Commission. Although they came into effect on 1st November, they will be valid only upto 31st March 1966.

Giving reasons for making departures from the Tariff Commission's recommendations, the Government has stated that, in its opinion, differential prices based on individual costs are not conducive to efficiency and greater production. It has felt that, in order to promote efficiency and better working and to induce, as far as practicable, the high-cost units to seek economies and to reward those units which are able to achieve economies and higher production, there should be a uniform ex-works price. In a few cases, nine to be precise, on account of special reasons of their higher production costs, extra prices, based broadly on the recommendations of the Tariff Commission, have, however, been allowed for a limited period to enable them to continue production, become economic units and reach nearer the uniform ex-works price level. Further, the new prices have been fixed after taking into account the suggestion of the Tariff Commission that, if it was not administratively feasible to give retrospective effect to the revised prices, they should be so adjusted that the producers did not suffer any loss on acount of their sales during the period 1st July to 1st November when the old prices were in force.

Explaining why the ex-works prices were raised by a margin less than what the Commission had recommended, the Government observes that, while it appreciates the need to provide incentives for greater production, it could not accept the full extent of the increase in prices recommended by the Commission, because it is anxious to avoid any undue rise in the price of an essential construction material like cement.

On the question of distribution, the Government has found no reason to interfere with the recommendation of the Tariff Commission that no change should be made in the present arrangements, under which the State Trading Corporation has the monopoly. The Tariff Commission has patted the S.T.C. on the back by saying that, on the whole, it has acquitted itself well.

The Government has also stipulated that, in view of the importance of rehabilitation of the industry and the need for research and development, particularly in the context of the new materials of construction and greater utilisation of substitute materials such as blast furnace slags and pozzlanic materials, each cement producing unit should earmark, out of the price now fixed, a sum of Rs. 2 per tonne for research, development, modernisation, rehabilitation and other purposes. The amount should be funded in a joint account with the Government to be utilised only for these purposes.

The table below shows at a glance the position of ex-factory prices prevailing before, recommended by the Tariff Commission, and sanctioned by the Government:

(Ex-Works Prices per tonne in rupees)

Units	Price prevailing before 1st Nov. 1961	Price recommended by Tariff Commission	Price sanctioned by Government
Dalmia Bharat ..	55.54	67.50	69.50
Andhra Cement ..	65.68	73.00	69.50
Orissa Cements ..	60.80	73.00	69.50
Rhotas Industries ..	57.27	73.00	69.50
Mysore Iron and Steel Works ..	58.20	73.50	69.50
A.C.C. ..	58.64	73.50	69.50
K.C.P. Ltd. ..	61.97	73.50	69.50
Dalmia Dadri ..	59.78	75.00	69.50
Bagalkot Cement ..	62.18	75.00	69.50
U.P. Govt. Factory ..	58.14	75.00	69.50
Jaipur Udyog ..	59.04	75.00	69.50
Ashoka	67.56	75.50	69.50
India Cement ..	63.21	76.50	72.50
Shiva	67.52	77.50	72.50
Kalyanpur ..	62.24	79.00	72.50
Sone Valley	58.70	79.00	72.50
Digvijay	57.23	79.00	72.50
Panyam	74.99	79.50	75.00
Travancore	82.12	103.00	95.00
Madras	69.64	77.50	75.00
Saurashtra	68.00	77.50	75.00

The initial reaction of share markets to the aforesaid development was bullish, but, on second thoughts, operators took a less favourable view of it, for the ex-factory prices for many units have been fixed at levels which are less than what they had hoped for.

As the full text of the Tariff Commission's report is not available at the time of writing, our comments on the Government's decision on cement prices have to be deferred to our next issue. Meanwhile, our tentative conclusion is that the Government has tried to follow a policy of via media which is unlikely to serve the interests of consumers in the long run, as it will tend to perpetuate the shortage of cement.

WEEK'S STOCK EXCHANGE TREND

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2640 BOMBAY, 11th NOVEMBER 1961 PRICE Rs. 2

MR. MORARJI DESAI'S "DIVALI" MESSAGE

INDIA is a nation of diversity and typical of this characteristic are its new year days. Not only has almost every linguistic group separate new year days but also each religious community. Besides, the Governments, Central and State, have new year days of their own. But Divali and the Christian New Year Day are surely more important than the rest. The former is becoming more and more a national day just as Hindi is gradually gaining the status of the national language. The latter is of universal character just as the English language. It would not be inappropriate, therefore, if one were to indulge in some loud thinking on a few aspects of Governmental policy in this auspicious week, marked by two colourful and joyous holidays, instead of the usual stock-taking which many commentators do and which is done by this journal at the end of every calendar year. Fortunately, Mr. Morarji Desai, Union Finance Minister, has rendered our task a little easier by making a few observations on taxation and public sector versus private sector at a gathering of businessmen of Maharashtra. He was provoked to make them by Mr. Lalchand Hirachand, President of the Maharashtra Chamber of Commerce, who complained in his speech, while welcoming the Union Finance Minister to the Chamber, that the direct taxes in India, especially on individuals, were one of the heaviest in the world and stressed their disincentive effects on entrepreneurs in an underdeveloped country where the emphasis in tax policy ought to be on incentives for hard work, larger saving, greater investment and energetic initiative and enterprise by businessmen. He further made the point that the public sector was still needlessly entering industrial fields where the private sector had proved its ability to find resources and deliver the goods; he gave the instance of the small car project, sponsored by the Union Minister of Industry, to justify his point.

Quite a few instances of this type can be given to show that the plea by Government spokesmen, as well of some businessmen, that there is no need for continuing the controversy about the public and private sectors, is rather untenable. While there is undoubtedly greater understanding, as well as appreciation, by both sides of the role which each sector has to play in speeding up industrialisation of the country and while the Government has, in certain cases, allowed the private sector to expand to a greater extent than it had intended in the initial years of the first and second Plans, there is no gainsaying the fact that the Government continues to be provocative by doing or saying something or other that keeps the controversy alive. No convincing case, for example, has been made out for taking up manufacture of small cars and that, too, by establishing a new factory in the public sector. The Union Ministry for Oils and Mines has not only not given up its policy of dog in the manger in regard to oils and minerals but wants to take up the manufacture of petrochemicals on the dubious ground that this activity is an integral part of oil industry. The S.T.C.'s tentacles are still vigorously spreading; there are persistent reports that it is going to take over the export of groundnut oil and that it is about to conclude a deal for large-scale exchange of jute goods for American fertilisers. There are no reasons to believe that either of these moves will yield any additional foreign exchange and that they are designed to achieve results which exporters in the private sector are not capable of producing. Shipping companies in the private sector allege that their confreres in the public sector are taking away their business by operating in a way which is contrary to the assurances given by Mr. Lal Bahadur Shastri when merchant shipping was under his care. Now comes the report that the S.T.C. is using its influence as a lender to, and investor in, industries to prop up the general insurance companies under its care. Then, there is the controversy between railways and road transport as well as the one about generation and distribution of electricity by the private sector. The observations made by Government spokesmen at the last meeting of the Central Advisory Council of Industries clearly smacked of partisanship. Mr. Morarji Desai's contention to the effect that the Government's actions are motivated by the desire to serve the public is too broad a generalisation to carry conviction on specific instances just as those mentioned here. Who suffers when there are shortages, many of which are traceable to the Government's policies flowing from its socialist philosophy that ownership of certain industries and services must be in the public sector? Mr. Morarji Desai suggested that the business community should discuss its problems with the Government rather than raise controversies in public, thereby creating an exaggerated adverse impression abroad which was not conducive to attracting foreign capital. This is sound advice from the practical point of view, but what are businessmen to do when the Ministers adamantly stick to their points of view?

On the issue of taxation, Mr. Morarji Desai disagreed with the view that taxation in India was so heavy that it was having a crippling effect on industrial development. On the contrary, he averred that this was a false cry, as the rate of corporate taxation compared favourably with the U.S. and that various concessions such as development rebate and extra depreciation given to industries were more liberal than in many countries in the world. He quoted in support of his view the boom on stock exchanges, the impressive response from investors to the numerous capital issues by public limited companies and the high rate of company formation. On taxation of individuals, he did not say much, except that businessmen should not ignore the difficulties of 99 per cent of the people and that the general public wanted jam today and not tomorrow. These remarks imply that a high level of taxation on rich individuals is necessary to pacify the masses who are now awake and to prevent a revolution. He advised businessmen not to nurse a feeling of dissatisfaction, as it was not good for them, and not to raise public controversies on economic policies in a vociferous manner as it tended to scare away foreign entrepreneurs and capital. In a way, Mr. Morarji Desai is correct. In the last three years, the Government has effected significant modifications in taxation of companies and tax laws which have brought about a distinct improvement in the climate for investment. Constant complaints of high taxation create a mental complex that will breed defeatism. It is high time the business community appreciated the fact that, from the political point of view, it may not be feasible for any Government today to effect a substantial reduction in taxes on individuals, heavy though they are. The high incidence of taxation is, however, offset, to a considerable extent, by the immense opportunities for development arising as a result of planning, the vigorous attempts of the public sector to establish heavy industries and infra-structure facilities, and import restrictions forced by foreign exchange difficulties.

While commending the advice of Mr. Morarji Desai to the business community, it is necessary to draw his attention to the scope for improvement in the Government's policy of price fixation in regard to manufactures that are subject to price control, either directly or indirectly, and to the need for fiscal concessions for exports. This reform is urgent. Defective price fixation has a greater inhibiting effect on expansion of production than the present level of direct taxation. It encourages malpractices and penalises the honest producer. The quality of goods produced suffers and the consumer ultimately pays more than he would if a better margin of profit is ensured to manufacturers. Similarly, the export drive will fare better if sizable tax concessions are shown to all deserving cases than it will under the scheme of compulsory exports. Thus, the plea for incentives is quite pertinent on these two scores.

The Finance Minister undoubtedly struck the right note when he said that "the Government did not want to lessen anybody's wealth, be it individual or institution," and that, on the contrary, the Government was engaged in creating more wealth and its better utilisation. Even if all the wealth of the rich people were taken and redistributed among the poor people, it would make no significant impact on poverty in this country. The only way in which the lot of poor people could be bettered is to create opportunities along gainful lines, that is, jobs with multiplier effect. With agriculture sustaining more than sixty per cent of the population, all positive encouragements to this occupation are worthwhile and will do more to reduce poverty than even the most effectively enforced redistributive taxes. Unfortunately, the Congress Government's performance on this front leaves much to be desired. There has been more talk, not to mention appeasement of the "have-nots" at the expense of the "haves," and less action calculated to increase the production per acre. Under various guises and excuses, inefficiency has been protected and efficiency shown the door.

CEMENT RETENTION PRICES

INDIA'S cement industry, which is represented in all the States except West Bengal, Assam, Maharashtra and Jammu and Kashmir, occupies a position of basic and strategic importance in the economy today. Its 34 factories have an aggregate annual production capacity of 9.5 million tonnes as of April 1961. They account for a capital outlay of Rs. 62 crores in all and provide employment to 37,300 persons. At present, the industry consumes 3.3 million tonnes of coal and also a sixth of the total production of sacking goods by the Indian jute industry. It is a growing industry, for the demand for cement (estimated at 9 million tonnes for 1961) is expected to rise by 12.5 per cent a year to 12.8 million tonnes in 1964. If the schemes which have already been licensed for substantial expansion of existing units and for establish-

ment of new units materialise as scheduled, the industry's aggregate annual capacity will be 10.1 million tonnes by the middle of 1962, 10.5 million tonnes by the middle of 1963 and 11.6 million tonnes by the middle of 1964. The industry will then (that is, in 1964) have 42 factories and be represented in all the States, except West Bengal. If actual production is assumed at 95 per cent of capacity, the industry's total output in 1964 will, however, amount to no more than 11.0 million tonnes. The overall cement shortage, caused by actual production falling short of demand by about one million tonnes now, may, therefore, be expected to be aggravated by 1964 when production is expected to fall short of demand by about 2.0 million tonnes. There is thus urgent need for licensing additional capacity for cement manufacture and also for taking active steps to ensure that such capacity is actually installed by 1964. While giving this finding, the Tariff Commission, in its latest report on the cement industry (vide Market Gossip column of last week's *Commerce*) has also wisely and strongly recommended that the Government should adopt a flexible policy as regards licensing of additional capacity and ensure that established producers with resources and know-how are not discouraged or prevented from implementing their schemes for establishing new units, or adding to existing capacity.

It is this vital recommendation that provides the clue to the Tariff Commission's approach to the question of fair ex-works prices payable to cement producers. As the Commission, by its very terms of reference, was expected to "conduct a comprehensive review and take into account all aspects of the industry, such as production, prices, distribution, development, etc.," it has adopted, by and large, a fair-minded approach to the question of ex-works prices in the light of actual conditions and of the need for quicker expansion of capacity and production in the industry. As the cement industry, according to the Commission, will have to be under continuous control in view of the shortage that is expected to continue and as it is not likely to have a system of internal regulation of prices and operation of a supply pool by itself, the Tariff Commission has done well to emphasise the importance of price as a means to stimulate the planned expansion of the industry in a controlled economy. It has, therefore, recommended a scheme of differential prices for different sets of units, so as to serve three main objectives. These are: (i) existing units must be encouraged to maintain production at the highest possible level, consistent with proper maintenance of plant and machinery; (ii) low-cost units should have sufficient inducements to expand, while the high-cost ones should not be impaired in their capacity for production; and (iii) new capital should continue to be attracted to this industry and even small units should have a chance to get established and develop. With these objectives in view, the Commission has meticulously estimated, for the three-year period from July 1961 to June 1964, the ex-works costs of sales (excluding gunny bags) separately for 19 units, including the A.C.C. with its 14 factories, the returns to be permitted to them, the rehabilitation allowances to be granted to some of them and the final fair ex-works selling prices for each unit (after rounding off to the next higher 50 nP). These are presented in the following table:

(In Rs. per tonne)

Name of unit	Ex-works cost of sales (excluding gunny bags)	Return	Rehabilitation allowance	Final fair ex-works selling price (after rounding off)
Dalmia Bharat	55.5	10.7	1.0	67.5
A.C.C. factories	59.3	12.2	2.0	73.5
K.C.P.	59.7	13.5	..	73.5
Andhra Cements	60.2	10.7	2.0	73.0
Dalmia Dadri	60.6	10.2	4.0	75.0
Orissa Cements	60.8	11.9	..	73.0
Rohtas	62.1	6.6	4.0	73.0
Bagalkot	62.3	12.0	..	75.0
U.P. Govt. Factory	63.2	11.5	..	75.0
Jaipur Udyog	63.8	11.2	..	75.0
India Cements	63.0	12.4	..	76.5
Mysore Iron and Steel Works	64.6	8.5	..	73.5
Satna	64.8	12.2	..	77.5
Panyam	64.8	14.4	..	79.5
Ashoka	66.7	8.4	..	75.5
Kalyanpur	67.1	11.9	..	79.0
Sone Valley	68.2	6.7	4.0	79.0
Digvijay	68.2	10.7	..	79.0
Travancore Cements	89.9	12.7	..	103.0
Madras (new unit)	..	..	..	77.50
Saurashtra (new unit)	..	..	..	77.50

The weighted average of the ex-works costs in the above table is Rs. 61.6 per tonne. The corresponding average in the Commission's 1958 estimates (including the selling agents' commission paid by the S.T.C. and the incidental charges included under cost of gunny bags) was Rs. 50.3 per tonne (net). The rise of Rs. 11.5 per tonne, indicated by the present weighted average, is attributable mainly to the upward revision of wages following the Cement Wage Board Award and extension of the award to cover labour in quarries and consequent rise in the cost of limestone/sea sand, to higher railway freight and to increases in the rates of coal, in electricity tariffs and taxes on electricity and in prices of inventory stores. This time the Commission has also included, in the ex-works cost, stockists' commission and a provision for gratuity; the latter item, namely, gratuity, was previously left to be met from the return on capital. As for the uniform allowance of Rs. 2 for contingencies for all units, such is deemed sufficient, for it is supplementary to the provisions made in the ex-works cost for covering increases on account of coal, stores, etc. and normal annual increments to staff and workers. Depreciation, as an element in ex-works cost, has been calculated at the normal income-tax rates on the written-down values of the assets for each of the three years 1961-62, 1962-63 and 1963-64. It is noteworthy that the Commission has not adopted the principle of weighted average for determining the final ex-works selling prices on a uniform basis. On the other hand, it has worked out the returns separately for each unit and arrived at the final ex-works price individually. Of course, the weighted average of ex-works selling prices for naked cement has been worked out at Rs. 74.5 per tonne to indicate the extent of increase that would be involved in the f.o.r. destination price. This increase, as calculated by the Commission, is Rs. 12.6 per tonne of naked cement.

On the issue of return on capital, the scheme adopted by the Tariff Commission certainly represents an improvement over its 1958 scheme. It may be recalled, in this connection, that the Commission had then differentiated between high and low-cost units and units not liable to taxation and allowed rates of 12 per cent, 10 per cent, 8 per cent and, in some cases, 6 per cent on "employed capital" (defined as "net assets comprising fixed and current assets used in the business, less current liabilities and provisions"). In the latest report, the Commission has, of course, retained the "employed capital" basis for fixing fair return (that is, gross profit, out of which bonus to workers, interest on borrowed capital and debentures, dividend to preference shareholders, managing agency commission, income-tax and dividend to equity shareholders are paid), instead of entertaining the industry's plea for a net distributable return of 9 per cent, free of tax, on capital employed. This it has done on the grounds that a given quantum of return will enable different companies to declare different rates of dividend depending on the composition of their capital employed (as between net worth and borrowings) and also of their net worth (as between share capital and reserves) and that prudent producers should be enabled to retain more reserves in industry. The Commission has, instead, increased the rates of return this time as follows:

(i) A return of 14 per cent in the case of units in the lowest cost group, namely, Dalmia Bharat, A.C.C., Andhra Cements, Dalmia Dadri and Orissa.

(ii) A return of 12 per cent in the case of K.C.P., Rohtas, Bagalkot, Jaipur Udyog, India Cements, Mysore Iron and Steel Works, Ashoka, Kalyanpur, Sone Valley and Digvijay.

(iii) A return of 10 per cent in the case of Satna, Panyam and Travancore Cements.

(iv) A return of 8 per cent in the case of U.P. Government Cement factory.

The above differential rates of returns have been justified by the Commission on the ground that high-cost units or new units enjoying some tax concessions should not expect returns on the same scale as low-cost units. The increased rates have also been found necessary in the present financial condition of the cement industry. A similar fair-minded approach has marked the Commission's recommendation of varying rates of rehabilitation allowance as an element in the fair ex-works prices of six units (namely, Andhra Cements, A.C.C., Dalmia Bharat, Dalmia Dadri, Rohtas and Sone Valley) covering 19 factories, although it has refused to grant this allowance uniformly to all units, particularly those newer units which had installed their plant in 1955-56 and thereafter. After taking into account these selective rehabilitation allowances and differential returns, the Commission has evolved a system of differential ex-works prices (that is, retention prices) payable to the cement producers. The Commission has had to do this in view of the wide disparity in costs of different units.

But it is surprising that the expert findings and recommendations of the Tariff Commission have just been mostly rejected by the Government. The final ex-works prices, sanctioned by Government with effect from 1st November 1961, represent a reduction of Rs. 3.50 per tonne from the price recommended by the Commission in the case of Andhra Cements, Orissa Cements and Rohtas; Rs. 4.00 in the case of Mysore Iron and Steel Works, A.C.C., K.C.P., and India Cement; Rs. 5.50 in the case of Dalmia Dadri, Bagalkot Cement, U.P. Government factory and Jaipur Udyog; Rs. 6.00 in the case of Ashoka; Rs. 5 in the case of Satna; Rs. 6.50 in the case of Kalyanpur, Sone Valley and Digvijay; Rs. 4.50 in the case of Panyam; Rs. 8.00 in the case of Travancore Cements; and Rs. 2.50 in the case of Madras and Saurashtra. Only in one case—Dalmia Bharat—does the Government's revision of the Tariff Commission's scheme of differential prices involve an increase of Rs. 2.00 per tonne in price. The reductions effected by the Government also mean that the rehabilitation allowances considered necessary by the Commission in the case of Andhra Cements, A.C.C., Dalmia Dadri, Rohtas and Sone Valley have not been conceded. As if this were not enough, the Government has gone to the extent of stipulating that each unit should earmark Rs. 2.00 per tonne, out of the fair ex-works prices now fixed by it, for research, development, modernisation and rehabilitation and that this amount should be funded in a joint account with the Government for utilisation for these purposes only.

The reductions, ranging from Rs. 2.50 to Rs. 8.00 per tonne, in the prices recommended by the Commission and the earmarking of Rs. 2.00 per tonne ordered for modernisation, rehabilitation, etc., are tantamount to a harsh judgment on the Tariff Commission's recommendations, which, though fair, were not unduly generous to the industry. The revised system of ex-works prices now sanctioned has the effect of not only denying even selective rehabilitation allowances but of reducing the rates of return recommended by the Commission. If the Government has chosen not to rely on the scientific cost estimates of an expert body, has it had a better source of information for its revision? What the Government has done seems to be wholly arbitrary. The only justification it can think of is that the system of differential fair ex-works prices is not conducive to efficiency and greater production and that a uniform ex-works price, as far as practicable, is necessary to induce the high-cost units to seek economies and reward those units which are able to achieve economies and higher production. It is not as if the Commission has not considered this line of argument. Indeed, it is only after carefully considering this aspect, the Commission has decided in favour of differential prices.

To any objective student of the cement industry, it should be obvious that the Commission's arguments and estimates have been made with a sense of responsibility and fair-mindedness. Its argued refusal to entertain some of the major demands of the industry, such as those for a general rehabilitation allowance as an element in fair ex-works price and for a net distributable return of 9 per cent, free of tax, on capital employed and its estimates of ex-works costs made with the help of its own cost accountants are too significant to be ignored. But it is a pity that the Government has chosen to stick to its preconceived stand, virtually to doubt the reliability of the Commission's estimates and thereby lessen its importance in the eyes of industry, in general, and to deny a fair deal to the cement industry, in particular. Although the Government has claimed that, under its formula, the consumer would be paying about Rs. 3 per tonne less, as compared with the price he would have had to pay under the Commission's recommendations, the relief to the consumer would be rather insignificant. After all, the f.o.r. destination price (which includes the three major components of excise duty, freight and packing—together accounting for about Rs. 57) will still be as high as Rs. 135.60 per tonne, as compared with the average ex-works price of Rs. 71.5 per tonne payable to producers. While the relief to the extent of Rs. 3 per tonne to the consumer will not mean much, the denial of that much amount to the factories is likely to slow down the growth of production and prolong the shortage of cement to a longer period than the two years now considered as inevitable. In that event, the consumer will suffer more, for the costliest form of cement will be what cannot be had in time for construction purposes. The vaunted relief will then turn out to be a burden to the consumer.

MARKET GOSSIP

F.M.C. Hugs the Bear

THE Forward Markets Commission has resolved the tangle it had created in the oilseeds and oils market by (a) placing a ceiling of Rs. 215 per 250 kgs. for groundnuts and of Rs. 17.65 per 10 kgs. for groundnut oil in Bombay, with similar maxima at parity prices in other recognised centres, and (b) by withholding outward payments to "longs." Contrary to earlier expectations, no margins have been imposed, but the detention of payments due to bulls itself constitutes a margin, in a way, on bulls. The Commission has clearly stated that these measures shall be in force until further orders. Accordingly, not only are the bulls who have already to receive payments from the market by way of difference in the fortnightly clearing affected by this decision but also those who go "long" henceforth and find the clearing rate in their favour. It further means that, if this rate turns out to be against them, they will have to pay the difference. Consequently, the handicaps are only on the bulls and the bears are at an advantage.

This discrimination is deliberate and understandable in the light of the Government's known objective of bringing about a fall in commodity prices. It is no exaggeration to say that the bears are the Government's favourites. In fact, in allowing the resumption of futures trading (without any restrictions) in the closing days of June 1961, the Government must have felt that the futures market would help them bring about a fall in prices. At that time, the signs of favourable monsoon were very good. On top of that, there was the fact that the high prices realised by farmers on oilseeds in the 1960-61 season would encourage them to devote a larger acreage to this cash-cum-food crop. The trend of world prices, too, was downward. The pointers were thus in favour of bears. The Government's strategy did work to a considerable extent. The bears fully exploited the diligent anticipation that the crop this year would be heavy. They had succeeded in bringing down the prices of futures from about Rs. 225 early in July to as low as about Rs. 195 in the first half of October. But this decline was mostly artificial. No doubt, the spot prices also had come down, but they were always well above the futures.

When there were sufficiently strong reasons to suspect that the premises on which the futures were being forced down were unlikely to be borne out, the bears realised that their position would not be tenable and started booking their profits. The bulls, too, saw that the climate had changed in their favour and started acting. The result was a swift rise in price. The groundnut futures touched a high of about Rs. 211, an increase of about Rs. 16 over a period of a fortnight. On one day alone, the rise was as much as Rs. 4. In terms of percentage, the rise from the lowest level is about eight. This is doubtless not a big rise. It is also not easy for an outsider to say precisely the respective contribution made by bear-covering and rigging by bulls to the rise in prices. But there is no need for making such fine distinctions. Nor is there any relevance in the argument that the F.M.C. should have intervened only if the rise in prices had been spectacular. The most important point to be borne in mind is that the trend was upward and there were signs that it would soon be pretty sharp under the pressure of both bear-covering and heavy bull support. Surely, the F.M.C. would have been guilty of complacency and of bolting the door after the horse had been stolen had it allowed the bulls to have an easy walkover. Its action was thus timely. The moment it realised that its strategy had failed, it did not hesitate to act against the bulls by resorting to direct action and providing cover for the bears. These developments also go to show that dependence on bears to bring down prices can be useful only up to a point and that it can prove quite dangerous if the climate changes against the bears. An excessive short position itself provides a great attraction for the bulls.

While the F.M.C. deserves to be complimented on the vigilance with which it acted, it cannot be said that the measures taken by it to check speculation are rational. The imposition of a ceiling on the futures prices during the currency of a contract is a highly arbitrary action, though the Commission has the power to do so under the Act amended last year. God only knows the basis on which the ceiling has been chosen. The spot rate is even now well above this ceiling and it can go to any height, the only determining factor being the law of supply and demand. By its action, the F.M.C. has transformed the futures contract into a wagering contract. We perfectly understand the attitude of the authorities of the Oilseeds Exchange in meekly submitting themselves to this decision, because for them something is better than nothing. They must have a counter for speculation and they are not very much worried about principles. But must the F.M.C. also be of that mind?

Textile Commissioner's Dire Warning

The strongly worded warning issued by the Textile Commissioner against surreptitious transactions in cotton above the ceiling prices fixed under the Cotton Control Order will not accomplish anything, unless it is followed up by stern measures against those who are guilty of violating the law. But punitive measures alone can hardly solve the problem of spiralling prices which is a reflection of the tightening supply position of cotton. The Textile Commissioner evidently does not subscribe to the view that there is shortage of cotton, present or prospective. In the Press note issued by him on Monday, he is at pains to show that there is no dearth of cotton in the country. According to him, the carry-over of Indian and foreign cotton with mills and the trade was more than 2 million bales at the beginning of the season. The estimated crop during the current season is not less than 4.8 million bales in any case; the crop estimate, according to him, may even bear an upward revision at a later date. To supplement these, within ten weeks of the commencement of the season, that is, from 1st September 1961 till to date, import quotas covering 238,000 bales of cotton, including 28,000 bales of short-staple cotton from Pakistan, have been announced. A quantity of 200,000 bales of foreign cotton has actually arrived in the country during the season against last season's outstanding quota. Further imports will be announced during the course of the season, if found necessary. The cotton mill industry, argues the Textile Commissioner, is thus in a position to continue production uninterruptedly during the entire season and still have a reasonable carryover of raw material at the end of the season.

In view of this situation, a serious view has been taken by the Textile Commissioner of reported transactions of cotton in some areas above the ceiling prices. Some mills and traders alike are said to be guilty. He has warned that he will not hesitate to undertake random requisitioning of cotton on behalf of mills in areas where the crop has started moving and where it is feared that prices will pierce the ceilings and that cotton in the hands of both mills and the trade would be requisitioned, irrespective of contractual obligations. Steps will also be taken, if found necessary, to seal off certain cotton areas, freeze the stocks and regulate the movement of cotton therefrom. It has also been brought to his notice, says the Press note, that certain mills, in complicity with traders, are paying higher prices on purchase of *kapas* and thereby surreptitiously circumventing the ban on the mill purchase of *kapas* without the express permission of the Textile Commissioner. Heavy mixing of good cotton with inferior varieties has also been reported. Taking a grave view of these malpractices, the Textile Commissioner has asked the mills and traders not to pay prices above the ceiling.

If exhortations could bring down cotton prices, this appeal of the Textile Commissioner is enough to set cotton prices on a downward course. But, unfortunately, prices are not so easily brought down; nor are they overawed by the statistics presented by him or by reiteration of the Government's determination to import as much cotton as the industry needs. As long as there are buyers who, for whatever reasons, are prepared to pay prices above the ceiling, prices will not decline. Higher prices are paid not for the fun of it, but because the buyer feels that there is, or there is going to be, a scarcity of supplies. The sharp decline in crop estimate for the current season is mainly responsible for the firmness of cotton prices. The crop is currently estimated at only 4.8 million bales, as against last season's 5.4 million bales, a decline of 600,000 bales. None can assert, even at this stage, that the crop estimate may not go down in the coming months. A severe cold wave, or untimely rains in Gujarat, Madhya Pradesh and Maharashtra, can still do much damage to the crop. Similarly, the position of Karunganni and Cambodia crops in the Madras State is still vulnerable to the vagaries of the weather. Accordingly, assertions about the size of the crop would be hazardous and, therefore, unwise. Similarly, although liberal imports have been promised, consumers of raw cotton still apprehend that, either actual supplies will not be available, as and when required, or that imported cotton will be costlier than comparable Indian growths. It is significant that the U.S. is very reluctant to supply cotton on a liberal basis this year, as it feels that its stock position may not be comfortable. India's foreign exchange position, too, is very uncomfortable, so that imports from other sources against cash payment will be difficult. All this explains the readiness of some mills to pay fancy prices above the ceiling for popular styles. The remedy, therefore, lies in expediting whatever imports that are possible and in rationing out the limited supplies sufficiently in advance. It is true that the quota system, which is still in force, prevents the financially strong parties from cornering the supplies. This could be supplemented by the reintroduction of compulsory surveys which was lifted only a few months ago, at the commencement of this season. It may be noted that the Indian Cotton Mills' Federation, the Cotton Advisory Board and the East India Cotton Association, Bombay, have all expressed themselves in favour of reviving compulsory survey. Certain vested interests in Gujarat are, however, said to be opposed to it. In a period of scarcity, controls, which are undesirable in normal times, become a necessity and are in the larger interest of the country.

HINDUSTAN SHIPYARD

In a note under the above title on page 810 of our issue of 28th October 1961, it was mentioned that the Government had acquired the Scindia interest in the Company at a valuation of only Rs. 30.38 lakhs. Our comment and inference were based on the cyclostyled copy of Mr. G. L. Mehta's speech in which there was presumably a typing error. We have just been informed that the agreed valuation is Rs. 80.38 lakhs. Incidentally, we also understand that there was a marked difference of opinion between the Government and Scindias in regard to valuation and that the matter was referred to an independent official whose report formed the basis of the ultimate settlement of Scindia interest.

POPULATION PROBLEM IN REVERSE

MUCH has been said and written about the population growth in India and its explosive potentialities that the mere mention of the term instantly brings to one's mind a picture of unrelieved squalor and misery resulting from having too many mouths to feed. In a country which is bogged down by the weight of its massive population, it is difficult to conceive of a situation in which the lack of sufficient number of people, rather than excess of them, constitutes a major problem. It is precisely this population problem in reverse that threatens a country like Sweden, which has one of the highest living standards in the world and the benefit of full social security. In fact, Sweden is a typical instance of an ideal "affluent society." Its population problem, as opposed to that of a poor country like India, is, therefore, an interesting phenomenon. The basic facts of the problem are outlined in the latest issue of the *Index*, published by the *Svenska Handelsbanken*, and it is refreshing to refer to them for a change.

In 1960, the birth rate in that country, at 13-14 per thousand, was the lowest rate ever recorded in Swedish population statistics. At the turn of the century, the birth rate was about 27 per thousand; by 1920, it had fallen to about 20 per thousand and by mid-1930s it reached the previous lowest point of 14 per thousand. After a slight rise in the closing years of the 'thirties, the rate rose sharply at the beginning of the 'forties to reach a peak of just over 20 per thousand in 1944. Since then, the curve has shown a consistent downward trend, apart from a minor revival in 1955. As compared with this, a number of other European countries, such as Britain, Switzerland, and Austria, for example, have had a rising birth rate during the 1950s, and the same has been the case in most countries in other parts of the world. The proportion of births to population in Sweden is at present the lowest in the world and there are no discernible signs of any improvement.

Since the death rate in Sweden has remained relatively constant at about 10 per thousand, the fall in birth rate has meant a gradual retardation in the net rate of growth of population. In 1960, births exceeded deaths by only 27,000, as compared with 40,000 in 1950.

Birth and death statistics do not, however, tell the whole story as regards future population development. The marriage rate, fertility and the age distribution of the population must also be taken into account. In the past decade, a falling infant mortality and an increasing marriage rate contributed to an optimistic view of the population problem in spite of the decline in birth rate. At present, infant mortality is very low and any considerable further reduction is hardly to be expected. Nor can one count upon a continued increase in the marriage rate. There remains only one factor which could have a considerable influence upon population development and that is fertility. The average number of children per family, however, shows a tendency to decrease. In the mid-1950s, the fertility rate was almost one-fifth lower than in the early 1930s. The constant demand for a higher and higher standard of living and the large-scale migration of people from country districts to large towns, where the size of the family has necessarily to be limited for a number of considerations, are said to be the chief reasons for the decline in fertility.

In spite of the decline in birth rate, the population of Sweden has continued to increase in absolute numbers. At present, that is, as of 1960, the total population is 7.50 million. This represents an increase of 500,000 in ten years, or just 50,000 per annum (as compared with 8.6 million per annum in India). The upward trend, according to recent forecasts, is likely to persist for the next fifteen years. The composition of population by age, however, is expected to become steadily less favourable. Thus, it is estimated that the number of persons over 65 years of age will increase by more than 40 per cent during the years 1960-75, while the working population, that is, men and women between the ages of 15 and 64, is expected to increase by only 4 per cent during the years 1961-65, 2 per cent in 1966-70 and 0.4 per cent in 1971-75.

This unfavourable composition of the population by age groups, it is feared, will gradually reduce the growth of labour force. This may, in turn, impede production and lead to inflationary pressure on the wage level. With the rising average of the working population, the readiness of the individual worker to change his job may decline and this, it is said, can lead to recruitment difficulties for new and expanding industries. On the whole, the population problem of Sweden might hamper economic growth, even if the effect were partly counterbalanced by rationalisation.

In poor, overpopulated countries like India family planning is aimed at restricting the population growth. In contrast to this restrictive approach, in rich countries like Sweden the official policy seeks to encourage an increase in population growth. Nevertheless, the official family policy has been blamed for the decline in birth rate since the war. It has, therefore, been suggested that the Government should enhance the attractions for bigger families. Thus, it is proposed by some that children's allowances should be increased or that families with children should be allowed special tax reductions. There have also been suggestions that cheaper houses for families should be built and that more day nurseries should be established. The conclusion of the *Index*, however, is that, while these further concessions are welcome, they are by themselves no remedy for the decline in fertility, which is the crux of the problem, and the exact cause of which has not been definitely established so far.

EQUITIES BUOYANT

SIZABLE BUYING ON 'MOORAT' DAY

(From Our Own Correspondents)

BOMBAY, *8th November*

EQUITIES staged an all-round rally during the week under review, which marks the turn of the *Samvat* year 2017. On Friday and Saturday, the stock market presented a distinctly cheerful tone, when several leading scrips recorded handsome gains. Tata Chemicals were specially buoyant on consistent support induced by reports that the Company had decided to take over the Bombay Mineral Supply Company. Standards, too, became a hot favourite with several operators, following the Chairman's statement that the shareholders of the Company would be allowed to participate in the new petro-chemical venture of the Company. The overall sentiment was also aided by the Government's decision, rejecting the recommendations of the Estimates Committee regarding the take-over of the investible funds of the L.I.C.

The *'Moorat* session' held on Tuesday the 7th inst., was marked by sizable buying in select counters both in the forward and cash sections. The turnover, though modest, was on a much larger scale than in the previous year. Cotton textile shares, in particular, were highly fancied on encouraging news from the cloth market. In the cash section, a number of new scrips like Premier Tyres, Synthetics, Ceat Tyres, Asian Cables, Chemicoat and Camphor and Allied Products elicited substantial support. In most of these cases, the rise in prices was disproportionate to the volume of business put through in them.

In the steel section, Tata Steel's opened slightly higher at Rs. 146.75, as against the previous close of Rs. 146.25, and advanced to Rs. 147 in the initial deals. Profit-taking then brought down the value to Rs. 146. In the *Moorat* session, they received some support and were lifted up to Rs. 147, before closing at Rs. 146.25. Indian Iron gathered 35 nP over the week to Rs. 25.15 and Mukand Iron put on 15 nP to Rs. 28.65.

Among textiles, Centurys and Standards were the brightest features. The former opened at Rs. 598, as against the closing rate of Rs. 595 last week. At this rate, they encountered selling pressure and eased to Rs. 594. But they again picked up strength and touched the high of Rs. 602 in the *Moorat* session, a gain of Rs. 7 over the week. Standards jumped up to establish a gain of Rs. 101 during the week to Rs. 1,518. The closing rate was Rs. 1,518, the highest level for some months. Elphinstone Textiles advanced by Rs. 15 to Rs. 345. Khataus also attracted good support and gained Rs. 11.25 to Rs. 483.75. Kohinoors were marked up by Rs. 5 to Rs. 313.50. In the cash section, New Citys changed hands at Rs. 150 as against Rs. 131 last week. Laxmis, too, recorded a handsome profit of Rs. 12.50. Mafatlals were up by Rs. 10 at Rs. 960 and Phœnix by Rs. 5 at Rs. 171.

In the shipping section, Scindias opened at Rs. 13 and, after fluctuating within a narrow range, closed at Rs. 13.04 yesterday. Great Eastern shares have softened by 32 nP to Rs. 13.40, following the cut in the dividend of the Company from 10 per cent to 7.2 per cent. In the automobile section, Hindustan Motors have gained 44 nP to Rs. 20.36. Premier Automobiles were quiet at Rs. 156.50.

Cement shares were on the whole quiet. Associated cements opened at Rs. 170.25, as against the closing rate of Rs. 170 last week. After fluctuating narrowly they touched the high of Rs. 171.50 on the *Moorat* day, before closing at Rs. 170. Digvijays spurted by Rs. 2.50 to Rs. 191 and Orissa hardened by 16 nP to Rs. 15.24. But Bagalkots were quiet at Rs. 8. Ashoks and Jaipurs, however, actually shed 24 nP to Rs. 12 and Rs. 9, respectively.

Rayon shares displayed a firm trend. National Rayons opened the week higher at Rs. 558.50, as against the previous close of Rs. 556.50. The level, however, could not be maintained as a sequel to profit-taking, and the share eased to Rs. 555.50. It, however, received a fair amount of support in subsequent sessions and moved up to Rs. 561, before closing at Rs. 559.50 on the *Moorat* day. Over the week, the share had scored a gain of Rs. 3. South Indian Viscoses also attracted some support and advanced by Rs. 7 to Rs. 194. Indian Rayons were better by Rs. 3.50 at Rs. 85.50. Gwaliers gained Rs. 1.75 to Rs. 50. But Barodas were quiet at Rs. 160.

Chemical shares which were buoyant last week gathered further momentum this week Synthetics shot up by Rs. 18 to Rs. 238, Indian Dyestuffs by Rs. 10 to Rs. 470, Kemps by Rs. 7.50 to Rs. 307.50, Polychems by Rs. 5 to Rs. 203.75, Dharangadhras by Rs. 4 to Rs. 124 and Tata Chemicals Re. 1.36 Rs. 19.84.

The engineering section was on the whole firm. T.E.L.Cos began the week at Rs. 368, as against the past week's closing rate of Rs. 366.50 and spurted in initial deals to Rs. 369.25. At this rate, selling pressure brought down the value to Rs. 365.50. The scrip received good support in the *Moorat* session and advanced to Rs. 370.50, before finishing at Rs. 368. Texmacos moved up by Re. 1.20 to Rs. 19.88. In the cash list, Asian Cables advanced by Rs. 6 to Rs. 120. T. Maneklals (old) jumped up by Rs. 45 to Rs. 710. Khandelwals attracted a fair amount of support and gathered Rs. 9 to Rs. 80. Mysore Kirloskars made a gain of Rs. 3 to Rs. 128.

In the miscellaneous section, Bombay Burmahs provided a bright feature. They began the week at Rs. 640, as against the closing rate of Rs. 635 last week, and after fluctuating between Rs. 642 and Rs. 650, closed at Rs. 651.50. Premier Tyres were keenly bid and jumped up from Rs. 135.50 to Rs. 165 on reports that the Company would commence production before the end of the year. Ceat Tyres were wanted even at Rs. 225.50, a rise of Rs. 7.50 over the week. Permanent Magnets advanced by Rs. 12.50 to Rs. 147.50. Chemicals shot up by Rs. 18 to Rs. 120.

Madras Stock Exchange

MADRAS, *7th November*

Equities on the Stock Exchange displayed firm conditions during the week under review. Sugars were, however, an exception to this trend, thanks to the persistent uncertainty over the disposal of accumulated stocks. The strength in other counters was induced mainly by the decision of the Government of India not to take up the investment of Life Insurance Corporation funds. Textiles were particularly buoyant, with Travancore Rayons touching a new high. Plantation shares put on a cheerful appearance. Miscellaneous industrials too elicited good support.

Travancore Rayons provided a feature in the textile section, with a spurt in the quotation by Re. 1.50 to Rs. 44.75. As there has been a sustained rise in the value of this scrip in recent days, the Council of Management has imposed a margin of one rupee per share on outstanding purchases carried on from one settlement to another, with effect from the settlement of 9th November 1961. After this decision, announced on the 6th inst., the upward trend in the scrip has distinctly slowed down, having gone up by 25 nP only thereafter. Dhanalakshmis spurted by Rs. 10 to Rs. 252. South India Viscoses advanced by Rs. 7 to Rs. 191. Bangalore Woollens rose by Rs 3 to Rs. 233. Premiers gathered a like amount to Rs. 310. Lakshmis moved up by Rs. 2.50 to Rs. 170.50. Madurais fell initially from Rs. 40.25 to Rs. 40.15, but rallied subsequently to Rs. 40.50.

In the coffee section, Consolidateds rose by Re. 1.35 to Rs. 22.35. Coffee Lands strengthened by 90 nP to Rs. 17.60. Cowcodys were higher by 10 nP at Rs. 4.65. Among rubbers, T. and Ts increased by 90 nP to Rs. 11.10. Midlands picked up 10 nP to Rs. 11.10. Cochin Malabars were tanned at Rs. 7.40. Among teas, Kil Koteries improved by 2 nP to Rs. [illegible]. Highlands were steady at Rs. 14.10, as also Hill Tops at Rs. 13.90. Parksides were heavy at par of Rs. 29.45, reflecting the disappointment of speculators over the retention of dividend.

Among miscellaneous industrials, Travancore Cements went up by a rupee to Rs. 3.60. Dalmias put on 41 nP to Rs. 12.75 and Andhras 10 nP to Rs. 9.50. India Cements picked up 9 nP to Rs. 6.60. Ashok Leylands gained 5 nP to Rs. 9.15. Aluminium Industries changed hands at Rs. 23.65.

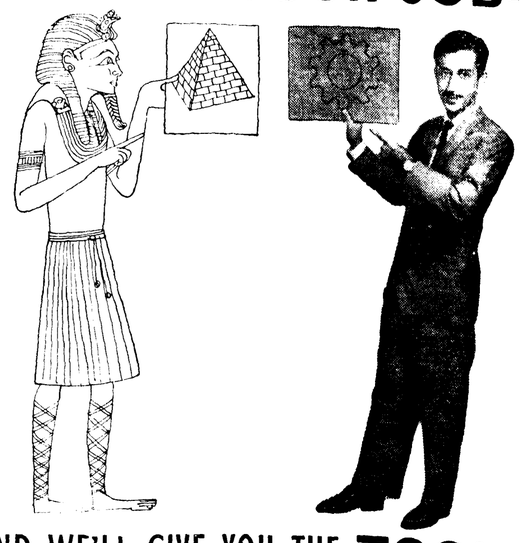
Calcutta Stock Exchange

CALCUTTA, *7th November*

The upward trend in equities noted last week gained further momentum during the week under review on sustained bull support. But several shares encountered profit-taking towards the close, especially at the *Moorat* session, resulting in a cut in the earlier gains. Jute shares were well favoured, following the decision of jute mills to increase production in the wake of increased foreign demand. The distribution of *Pooja* bonus to several employees of industrial and mercantile houses also contributed to increased activity by the small investors. The Government's decision to increase the price of cement, albeit at a lower rate than that recommended by the Tariff Commission, had a favourable effect generally, as this was an indication that the claim of other industries for higher prices to cover increased production costs would be favourably considered. Higher advices from Bombay, followed by reports of increased output in T.I.S.Co. for October and higher level of activity in Wall Street, had also a bullish effect. In addition, the news of the rise in I.I.S.Co. output in October, together with expectations of increased retention prices, accounted for the greater speculative interest. The statement by the I.I.S.Co. management that, due to wagon shortage, 3,000 tons of finished products could not be despatched in October was, however, ignored.

TELL US YOUR JOB—



AND WE'LL GIVE YOU THE TOOLS

The size, shape or complexity of a project doesn't overawe us. We have the tools to help build it with a minimum of time, labour and cost. For nearly 70 years, BATLIBOI have supplied Industry and Trade in India with goods ranging from complete power plants to hacksaw blades. We represent internationally known manufacturers from the United Kingdom, U.S.A. Czechoslovakia, France, Germany, Japan and many other countries. BATLIBOI also represent some of India's leading manufacturers of Machine Tools, Diesel Engines and various other types of machinery. Industry and Trade are vitally connected with the economic growth of any country, and BATLIBOI are vitally connected with Industry and Trade in India.

FORWARD MARKETS BULLETIN
(Monthly)
Published by Forward Markets Commission
Government of India, Bombay

REGULAR FEATURES

- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

Annual subscription: In India .. Rs. 24.00; Abroad .. Rs. 40.00
Single copy: In India .. Rs. 2.50; Abroad .. Rs. 4.00

THE SWATANTRA MANIFESTO

THE Swatantra Party fancies itself in the role of "an Opposition with a clear-cut alternative way of governance, which can take over from the present ruling party whenever the people call upon it to do so." Its draft election manifesto, just released to the public, claims to present a clear-cut programme. In this manifesto, the Party pledges itself to certain objectives and policies for which it will work, if given the opportunity. First and foremost among these is the 'primary obligation' of Government to provide the 'common man' with food, clothing and shelter, and also fuller employment, more schools, more minor irrigation and more small industries. Secondly, top priority is to be given to the supply of clean drinking water in rural areas and to housing in both urban and rural areas. Thirdly, the development of roads and bridges and of road and inland water transport is recognised to be supremely important. Fourthly, mobile ambulance facilities are to be organised to cater to the medical needs of the rural population. These objectives, it is claimed, will be within the easy reach of the country, if funds are diverted from spectacular and gigantic projects.

On the question of prices, the Swatantra stand is that they should be stabilised. The Party also promises a drastic reduction in the present excessive burden of taxes, particularly indirect taxes. It is against 'joint farming' because of the official control that it involves and of its conviction that individual ownership and effort will be more conducive to better results than collective ownership and organisation of production. And it has made a number of attractive promises to the agriculturists, in particular, and the villagers, in general. These are: abolition of land taxes except to the extent necessary for maintaining ownership records: support to an adequate level of agricultural prices relative to the prices of industrial commodities; establishment of an insurance fund against natural calamities; adequate wages to landless agricultural labour and protection of permanently employed labour in agriculture; speedy electrification in rural areas; establishment of small-scale modernised industries in the countryside, in order to absorb surplus agricultural labour.

Some of these objectives, it will be seen, are not different from those of the Congress Party. Some others—the ones pertaining to reduction of indirect taxes and land taxes, price parity between agriculture and industry, crop insurance, rural electrification, etc.—are rather promises, the fulfilment of which will be pretty difficult. Further, it is not enough for the Swatantra Party to say *what* it will do or not do. A responsible democratic party like the Swatantra is rightly expected to indicate *how* it proposes to achieve what it has promised.

The Swatantra stand against what it calls "the lop-sided priority to heavy industry," and against State trading, bureaucratic controls, the "extra-constitutional dictation of the Planning Commission" and centralised planning, excessive foreign debts, etc., is well known by now. This is forcefully reiterated in the manifesto. Some of its arguments, however, seem to be unrealistic. For instance, the alleged bias in favour of heavy industries in India's planning has still not meant adequate supplies of iron and steel and machinery and equipment for the growing needs of processing, engineering, consumer goods and other secondary industries in the private sector. Even the Swatantra Party's greater emphasis on small-scale modernised industries, consumer goods industries, rural electrification, housing, road transport, and so on, will not mean much if heavy industries are not more fully established in the earlier years of planned industrialisation to provide the basic iron and steel and machinery requirements of all other industries. The Swatantra opposition to monopoly and conceptration of economic power, whether in the public or in the private sector, may be logical. But what kind of anti-monopoly legislation it will promote is not quite clear.

Again, the Swatantra Party's stand against centralised planning by the Planning Commission and its preference for planning by the Cabinet itself seem to be unrealistic, for Cabinet planning of the kind will be less efficient, will interfere with the administrative functions of Government and will most certainly involve greater, not less, governance in the form of State control and regulation. If there is any extra-constitutional dictation by the Planning Commission now, it should be possible for Parliament, which has created the Commission, to remedy this state of affairs. As for the Swatantra stand against extensive foreign aid, the less said about it the better. Although it ignores the realities of economic situation in a developing country like India, with its continuing need for capital goods, technical knowledge and maintenance imports, the Party's preference for greater exports and inflow of foreign private capital is quite sensible. But it is doubtful if the latter objective can be easily or speedily achieved in the absence of an adequate inflow of foreign public capital so very necessary for the creation of certain basic facilities which attract domestic or foreign private capital to secondary industries in the private sector.

U. S. FOREIGN TRADE POLICY

The European Common Market of the Six, in which industry has adapted itself to the opportunities of an expanding market, is not a purely European arrangement. On the other hand, it is the centre of a trading system, covering 16 other independent countries and a number of 'associated overseas territories.' All these other countries and associated territories have free access to the Common Market. The United Kingdom, which has applied for membership in the Common Market, is the hub of another trading system, covering 60 countries and territories and resting upon tariff preferences in the Sterling Area. Denmark and Ireland are two other countries which have submitted their applications for membership. It is expected that Norway will also apply. Sweden, Austria and Switzerland have announced their intention to seek 'association' with the Common Market, though not full membership therein. Thus, most of the countries of the European Free Trade Association are seeking membership in or close association with the Common Market. It is, however, the possible British entry into the Common Market that is likely to involve some modification and redefinition of the relationships involved in that European system. But it will also involve some modification and redefinition of the British system of tariff preferences in the Sterling Area. While Mr. George W. Ball, U.S. Under-Secretary of State for Economic Affairs, has referred, in his speech at the forty-eighth National Foreign Trade Convention at New York, to the likelihood of such modifications which would result from the current negotiations between the Common Market and the U.K., he has also refrained from making any predictions as to the final outcome of the negotiations. He has, however, made it clear that, whatever may be the form and substance of the solutions which are ultimately arrived at, they will affect the vital interests not only of the United States but of many other countries too.

Mr. Ball's reference to the vital interests of the United States may appear to suggest that that country—which itself, according to Mr. Ball, is a common market, consisting of 180 million people and 50 States and surrounded by a common external tariff—foresees new industrial and agricultural competition from a bigger European Common Market. Although Mr. Ball has sought to allay the fears of apprehensive American businessmen, who have been saying that the very competitors who are defeating the United States in world markets are also invading America's home markets, there has been some indication in recent weeks about the dilemmas confronting the Kennedy Administration. What these dilemmas are, may be known from the following passage in Mr. James Reston's 'Washington column in *The New York Times*, dated 22nd October 1961:

"Britain's movement toward joining the Common Market and the Treaty of Rome illustrates what is happening. This inevitably raises questions, not only about the future markets for temperate and tropical agricultural products from the British Commonwealth countries but of the effects of these changing trade patterns on the United States, Latin America and Japan.

"The Kennedy Administration feels that it cannot stand aside and watch new forms of protectionism or new preference systems develop in the world without getting involved in trying to defend its own vital interests in advance. And the more our officials have studied the implications of the British move toward the Common Market, the more they have found themselves deeply enmeshed in the staggering effort of reshaping world trade on a commodity-by-commodity basis.

"Europe, for example, is modernising its agriculture and exploiting the new hybrids and cheap fertilisers to the point where it expects to be able to feed itself without food imports within a decade. France has already become a major food exporter.

"Japan is today the object of more economic discrimination than any country in the world, and the feeling here is that some way must be found to market Japan's low-wage products in the free world or face the prospect of seeing Japan move closer to the Communist bloc.

"In studying the problems of new industrial and agricultural competition from Europe, the Kennedy Administration has considered the advisability of joining the Common Market. For the time being, however, it has rejected this course of action, because it would mean the repudiation of the present most-favoured-nation principle of trade and also give the impression that the rich industrial nations of the world were ganging up on the poor.

"The Administration has also rejected the idea of raising higher protective tariffs against the new competition on the grounds that this would only encourage a savage trade war that would hurt everybody economically and weaken the free world politically."

As Mr. James Reston's standing with the Kennedy Administration is reputedly high, his observations may be taken to reflect, more or less, accurately the current 'wait-and-watch' approach of the U.S. Government. But even in this approach there are some elements to which that Government seems to attach great importance. These, according to Mr. Ball, are: (i) as the United States has always pleaded for freer world trade, it will have to avoid any line of policy that calls for import restrictions by the U.S; (ii) the concept that every American industry must be protected against the adjustments required by competition is alien to the spirit of the U.S. economy; (iii) the President's authority to negotiate (with the Common Market) for reductions in tariffs and other trade restrictions must be sufficiently broad in scope (that is, not limited to trading on an item-by-item basis) to meet the opportunity and the challenge of the European Economic Community; and (iv) to the extent that the U.S. and the Common Market lower their trade barriers as a result of the negotiations between them, they will also be expanding the opportunities of other nations, for any such reductions in trade barriers would be on a non-discriminatory basis. These concepts, as described by Mr. Ball, represent so many rays of hope for freer world trade. But it is too early to visualise what world trading patterns will finally emerge from the compromises that will have to be made by the leading parties concerned—the United Kingdom, the United States, the European Economic Community, and the Commonwealth.

INDO-GERMAN CO-OPERATION

West Germany deserves a big bouquet for the valuable help it has been rendering India in promoting the tempo of development in this country. This help falls mainly under three categories, namely, liberal credit, larger flow of private capital and facilities for training Indian technicians. It is, however, disconcerting that, in the field of trade, West German attitude has been far from encouraging. Despite all the pleas for liberal import policies made not only by the Indian Government and business community, but also by international organisations like the G.A.T.T. and the U.N. Economic Commission for Europe, West German Government continues to maintain quota restrictions and high import duties on several commodities and manufactured goods from developing countries like India. India's imports from West Germany have risen by almost 500 per cent during the last decade, whereas West German purchases of Indian goods have gone up by just about 50 per cent. India has an adverse balance of trade of as much as about Rs. 100 crores annually in its trade with West Germany, as against only Rs. 13 crores in 1952.

The following table shows the recent trends in India's trade with West Germany:

(In crores of rupees)

	Imports	Exports	Balance of trade
1952	25.15	12.54	— 12.61
1953	29.54	10.46	— 19.08
1954	38.60	14.75	— 23.85
1955	53.96	15.79	— 38.17
1956	81.54	14.64	— 66.90
1957	122.82	16.22	— 16.60
1958	93.95	14.82	— 79.13
1959	120.31	19.56	—100.75
1960	112.70	19.59	— 93.11
1960 (January-June).	58.25	9.98	— 48.27
1961 (January-June).	64.88	11.61	— 53.27

It is, no doubt, a welcome sign that, during the first half of 1961, exports from India rose

albeit slightly. But imports from West Germany too increased much faster. Consequently, India's adverse balance of trade widened from Rs. 48 crores in the first half of 1960 to Rs. 53 crores, or an annual average of Rs. 106 crores, which is a record level. It is not suggested, in mentioning these figures, that a country must somehow balance its trade with each country. Only, there should at least be some reasonable relation between imports and exports. If India is a big buyer of West German goods, it should, in fairness, be provided with a fairer opportunity by West Germany to sell its goods to that country. Alternatively, W. Germany should be willing to provide a larger amount of long-term aid than it has agreed to now. In this context, the renewed plea made by Mr. Morarji Desai, Union Finance Minister, for the removal of West German quotas and reduction of import duties on Indian goods is prefectly justified, though it may be annoying to Germans. Mr. Desai, who was addressing the fifth annual meeting of the Indo-German Chamber of Commerce at Bombay held on Monday this week, made no bones about the fact that, unless fresh efforts were made to balance the trade between the two countries, it would be difficult for India to increase its imports from that country. The prospects for a substantial increase in India's exports to West Germany will improve, provided India diversifies the pattern of its exports to include semi-finished and finished goods, especially engineering products. This is the view of Mr. G. Wilhelm, President of the Indo-German Chamber of Commerce. In theory, it sounds good. Its practicability, however, will depend on the extent to which the German Government is prepared to liberalise import restrictions, assuming, of course, Indian goods are competitive in all respects. India has already proved its ability to compete in Western markets, for example, in sewing machines and diesel engines. But these goods are finding it pretty difficult to get a reasonable share of the West German market owing to severe import restrictions.

Since India is the largest market for West German goods in Asia, it has reason to expect a fair deal from the latter in the sphere of trade at least as a reciprocal gesture. As pointed out by Mr. P. A. Menon, Indian Ambassador at Bonn, in a message to the Special number of *Aussenhandels Dienst* dealing with this problem, "it should be possible, for instance, for Germany to increase the import of Indian products, if the Defence Authorities, the German Railways, or similar large State-owned organisations consider the purchase of a part of their stores (such as clothing) from India." The Indo-German Chamber can do a lot of service to this country by bringing home to the West German Government and industrialists the need for buying more from India.

A gratifying feature of Indo-German co-operation is the growing interest shown by private industrialists in India's economic development. The total number of Indo-German collaboration schemes, which have either already materialised or are in the course of being finalised, is 300. About 60 per cent of these schemes envisage technical collaboration on a royalty basis, and the rest actual capital participation along with the provision of technical know-how. In this connection, the Indo-German Chamber, in its annual report for 1960-61, has stressed the need for an agreement guaranteeing West German investments in India on the lines of the agreement reached between India and the U.S.

As a leading member of the Aid-India Club, West Germany has made a substantial contribution to India's development plans. It has already agreed to provide $425 million during the initial years of the third Plan. Thus it is the second largest contributor to the fund for financing India, next only to the U.S. A feature of this aid is that West Germany is the only donor, apart from the World Bank, which has given completely "untied credits, the only exception being the outlay on Rourkela expansion project. Apart from this aid, West Germany has also been giving assistance under the technical aid scheme. Under this scheme, it has so far participated in about 50 projects, small and large, with a total capital outlay of about DM 40 million. This sum has been granted as a gift. Notable among the projects under the scheme are the proto-type production and training centre at Okhla and the Technical High School at Madras. While we in India fully appreciate all this assistance, there is, as already stated, need for more help. The terms of loans could be made easier as has been done by the U.S. and the I.D.A. Even the World Bank President, Mr. Eugene Black, has said that this should be done by all the developed countries as a matter of enlightened self-interest.

The brands always in demand by the textile industry are:

INDIA BRAND
COTTON HEALDS: Best Egyptian Cotton Healds and Heald Piecing Yarn

BRITISH AID TO INDIA

PRIVATE INVESTMENTS ON THE INCREASE

By A Special Correspondent

TO the traditional and well-known links between British private industry and finance and India, which multiply and diversify annually, there has been added in the last few years considerable direct lending by the British Government to the Indian Government, especially in support of India's public development programmes. The latest important episode under this head took place last May.

At the "Aid India" meeting held in Washington in that month, the British Government announced a substantial contribution to the external financing scheme for launching the third Plan. The sum was £90 million (Rs. 120 crores)—by far the largest single amount of money ever promised by Britain to another country for development.

In order to get this financing off to a quick start, arrangements had in fact been made with the Government of India earlier than this announcement for the signing of two formal agreements covering £40 million (Rs. 53.3 crores) of the new money. These were signed in New Delhi on the 1st May last. The first of them was for a development loan for £30 million (Rs. 40 crores)—covering both the finance for a number of high priority projects and for a shopping list of miscellaneous items essential to India's economic expansion. The second agreement covered a sum of £10 million (Rs. 13.3 crores) for the purchase of a broad range of goods from Britain—a type of import often referred to as "maintenance imports."

In addition, talks are already well advanced on the financing by Britain of the foreign exchange costs of the extension to the great Durgapur steel plant. Subsequent negotiations will be held between Britain and India about arrangements for the balance of the £90 million (Rs. 120 crores) commitment.

Second Plan Loans

These new official loans for the third Plan follow on British Government assistance to India for the second Plan which amounted in all to £80.5 million (Rs. 107.3 crores). The details are:

	£ million	Rs. crores
1958 for Durgapur steel works ..	15	20
1958 for general imports	28.5	38
1959 for Assam pipeline	3	4
1959 for genera imports	19	25.33
1960 for general imports	10	13.33
1960 for general imports	5	6.67

Besides these loans, a sum of £22 million (Rs. 29.3 crores) representing various repayments in advance by Britain of surplus pension funds was paid over to India during the second Plan. Another sum of £1.7 million (Rs. 2.2 crores), in respect of the British Technical Assistance programme under the Colombo Plan, was disbursed to India during the period 1951-60. During the second Plan period too, the Indian economic effort was greatly supported by India's drawings on her sterling balances account in London.

The warmth of British interest in India's economic endeavours is shown both by the amount of aid made available in spite of recurring anxieties in Britain about her own balance of payments position, and by two other features. The first of these is the appreciation that India needs a quantity of general assistance not linked to projects so that she can maintain a balanced move forward in her economic expansion. The second is the progressive lengthening of the repayment term of British loans in order to mitigate the burden of debt servicing on India. For instance, the £30 million (Rs. 40 crores) loan agreement signed earlier this year carries, to begin with, a seven-year grace period when no repayments are called for, and is not finally repayable for 25 years—in other words, the last payment will be made in 1986 which may well be the last year of the seventh Five-year Plan! The second and third loans mentioned also have the same features. It is believed that Britain has been well to the fore among friendly nations in appreciating the special character of Indian needs in the sphere of development finance.

Colombo Plan Aid

Britain is the second largest contributor of aid under the Colombo Plan for Co-operative Economic Development in South and South-East Asia, now celebrating its tenth anniversary, which was designed as a framework within which an international co-operative effort could be promoted to higher developing countries of South and South-East Asia to raise their living standards. Since 1951, when the Plan was launched, until the end of June 1961 Britain's actual expenditure for development by way of capital aid and technical assistance together totalled £182.78 million (Rs. 243.7 crores). Outstanding capital and technical aid commitments at the middle of this year on the basis of agreements actually signed was about £84 million (Rs. 102 crores).

Under the Technical Co-operation Scheme training facilities have been provided in Britain for over 4,000 men and women. Of these 1,110 went from India, and cost Britain £0.82 million (Rs. 1.1 crores). In addition, the scheme has also sent to India experts and equipment at a cost of £0.87 million (Rs. 1.16 crores).

Durgapur Steel Works

The Durgapur steel works, with an output of one million tons of ingot steel a year, is an impressive landmark in India's industrial progress and a dramatic example of Indo-British co-operation. A consortium of 13 British engineering companies banded together under the title of ISCON (The Indian Steelworks Construction Company) to carry out the biggest single overseas engineering project ever planned by the United Kingdom. Out of the final cost of about £104 million (Rs. 138.7 crores) sterling expenditure accounts for at least £70 million (Rs. 93.3 crores). To help meet this call on foreign exchange the British Government lent to India £15 million (Rs. 20 crores) and London banking houses have provided a further £11 million (Rs. 15.3 crores).

The contract for the project was signed in October 1956 and such has been the speed of progress that the fourth and final stage of constructing this complex plant is already nearing completion and should have been completed by the time this article is in print.

A plan to expand the capacity of the plant up to 1.6 million tons of ingot steel a year has been approved. The cost of the expansion is estimated at £42 million (Rs. 56 crores) and the British Government is to provide a loan of £20 million (Rs. 26.7 crores) towards the foreign exchange element.

Britain has also provided training facilities for 400 of Durgapur's future supervisory staff and technicians and over 200 of the 358 men selected have finished their training in Britain and are now at work at Durgapur.

Heavy Electrical Plant

Another important project in the public sector built with British collaboration is the heavy electrical plant factory at Bhopal. This factory was opened in November 1960 and will eventually supply the bulk of India's needs for heavy electrical equipment. Associated Electrical Industries Limited of Great Britain, who have been technical consultants for the project since its inception, will continue to work closely with the Government of India in running the factory.

The first step was the construction and equipping of a large training school and workshop, undoubtedly the largest and best equipped in India (and ranking high even by world standards), where some 3,000 artisans and engineers of all grades are now being trained. In addition, other experienced engineers are being sent for extended training courses, some for as long as three years, to the British factories of Associated Electrical Industries.

Target Redoubled

Side by side with this training programme, work has been vigorously pushed on with the construction of the factory. The output target for the factory was originally Rs. 12.5 crores per annum, but this was raised progressively to Rs. 25 crores. This target is expected to be reached by the end of the third Five-year Plan and raised later to Rs. 50 crores, a target which will be reached during the fourth Five-year Plan. The maximum size of generators and transformers planned has also been increased from the original 50,000 kw. to 150,000 kw. in view of the latest assessment of India's needs.

Since independence, Britain's private investment in India has more than doubled itself. It constitutes more than 75 per cent of all foreign private investment. In 1948, British capital invested in India totalled Rs. 206 crores. In 1959, out of the total foreign investment of Rs. 528 crores, United Kingdom invested capital amounted to Rs. 400 crores. This represents an average increase of Rs. 18 crores a year.

Some of the best known names in British industry are now investing in India and the number of such new enterprises and joint ventures continue to increase.

Chemicals

Imperial Chemical Industries Limited have many interests in India and among notable developments was the first commercial explosives plant built in Bihar as a joint enterprise by I.C.I. and the Government of India.

At Rishra, in West Bengal, in May 1960, India's first polythene plant was opened. This project cost Rs. 4 crores, has an annual capacity of 3,500 tons. It was built by an I.C.I. subsidiary, the Alkali and Chemical Corporation of India Limited, is based on alcohol obtained from molasses and will save India Rs. 1.5 crores a year in foreign exchange on imports. The same Corporation is also to build a rubber chemical plant at Rishra.

Road Transport

Instances of Indo-British co-operation in road transport include the motor car manufacturing agreement between Hindustan Motors Limited and the British Motor Corporation, and the agreement between Standard Motor Products of India Limited, Madras, and the Standard Motor Company of Coventry. In addition, Ashok Leyland Limited of Madras are associated with Leyland Motors Limited of Lancashire, in the production of lorry and bus chassis, and have already exported 24 Comet chassis to Ceylon. By early 1962 all the castings for Ashok Leyland Ltd. will be produced by Ennore Foundries Private Ltd., another company in which Leyland Motors Ltd. have a large interest and investment.

Joseph Lucas Ltd. have a large investment in a new company formed to undertake the manufacture of all types of electrical equipment.

Many of the bicycles in use in India carry familiar British names. The "Hercules" bicycle is produced in the Madras factory of T.I. Cycles of India Limited, which is associated with the Tube Investments Limited, and the Hercules Cycle and Motor Cycle Company Limited, both of Birmingham. Since 1952, the "Raleigh" has been manufactured at the Asansol factory of Sen Raleigh Industries Limited, in association with the Raleigh Cycle Company Ltd. of Nottingham. Tube Products of India Ltd. in association with Tube Products Limited, Oldbury, produce steel tubes at their Avadi plant for the cycle industry.

The Enfield Cycle Company Ltd., Redditch through their associates Enfield India Limited are producing motor cycles at a plant in Madras at the rate of 5,000 machines a year.

Dunlops are another well-known British company actively engaged in new projects. In February 1959, their new tyre factory at Ambattur began production of tyres for lorries, buses and bicycles, and they have plans for a collaboration venture with an Indian company to produce truck wheels and rims in Madras.

Electrical Goods

In the electrical field, machinery of various types is being manufactured by A.E.I. Manufacturing Company Private Limited of Calcutta, and Indian subsidiary of Associated Electrical Industries.

The English Electric Company Limited is putting up the whole of the Rs. 40 lakhs for the manufacture of low voltage switch and fuse distribution equipment in Madras.

W. T. Henley's Telegraph Works Company Limited, in co-operation with Henley's Cables (India) Limited, is putting up 60 per cent of the Rs. 1.1 crores capital required for an electric wire and cable factory in Bombay.

The Automatic Telephone and Electric Company (India) Private Ltd. with its factory in Bangalore, was the first major concern of its kind to be set up by the Government of India with foreign collaboration after independence and is generally regarded as one of the most successful examples of Indo-British collaboration.

There is a large-scale project at Durgapur for the manufacture of heavy machinery for cement plant, coal mining equipment, boilers, pressure vessels and similar items. This plant, which is expected to be in production by 1962, is to be established by a new company, A.C.C. Vickers-Babcock Ltd., in which two leading British companies, Vickers Armstrong and Babcock and Wilcox are collaborating with Associated Cement Companies of India (these three firms together holding 98 per cent of the total capital, the remaining 2 per cent invested is held by Indian firms). The British share of the finance to be subscribed in the first three years is likely to amount to over Rs. 2.5 crores.

Consolidated Pneumatic Tool Company Limited has invested Rs. 0.15 crore to manufacture pneumatic tools and air compressors at Mulund, Bombay.

Other Schemes

During 1960 eighty new collaboration schemes with British firms were approved by the Government of India and another 64 were approved during the first half of 1961.

A factory for the manufacture of cold rolled steel strip is to be set up in Bombay. The project has been sponsored by Graham Firth Steel Products (India) Private Ltd., a new company formed by Indian interests in collaboration with Graham Firth Steel Products Limited of Walsall, England. One-third of the capital outlay of the project will be subscribed by the British company and the remainder by the Indian participants. The contribution of the British company will take the form of complete plant, machinery, tools and other equipment and technical advice. The collaboration agreement does not involve any payment of royalty and the new company has the right to use the "Firsteel" trade mark of the parent company. The factory will have a final capacity of 25,000 tons of finished steel strip a year.

Three Scottish firms formed a Rs. 10-lakh syndicate to establish and operate a factory to produce paper-making machinery at Calcutta. The firms are Bertrams Limited, Ernest Scott & Co., and James Bertram and Sons Ltd. A former jute mill was converted for the project and will be in production shortly. Initially a staff of Scottish technicians will train local workers.

A well-known British engineering firm, Head, Wrightson and Company Ltd. of Thornaby-on-Tees, County Durham, which has had close links with India for many years, is forming a new subsidiary with administrative headquarters in Calcutta. It has been announced that the new company will trade under the name of Head, Wrightson India Limited, and will act as contracting company for the supply—as far as possible from Indian sources—of various types of plant to the designs of the parent company.

The Glamorgan (Wales) firm of P. Leiner and Sons—whose factory at Treforest is the largest single British producer of gelatines—is establishing a factory at Nagpur in association with Kapurthala and Northern Indian Tanneries (K.N.I.T.), of Kapurthala. The new company will be known as the Leiner-K.N.I.T. Gelatine Company Limited. The authorised capital of Rs. 50 lakhs will be held jointly by the two companies.

The heavy engineering firm of John Thompson Limited of Wolverhampton, Staffordshire, has entered into an agreement with the Indian Sugar and General Engineering Corporation for the manufacture of some of its major products in India. The agreement provides for erection at the Indian corporation's Punjab works of a new plate shop capable of carrying out welding to class 1 specification.

There is participation to the extent of 70 per cent by Messrs. Fisons Limited of Britain (the principals of Messrs. Bengers Laboratories Limited) in a collaborative venture with Bengers Laboratories (India) Private Limited, covering all aspects of the manufacture and packing of Dextran B.P. and Iron Dextron (Pharmaceuticals).

Horlicks Limited have provided 84 per cent of the Rs. 0.12 crore for a factory for the manufacture of powdered milk at Nabha, Punjab, which was opened on 10th November 1960.

There is a technical collaboration agreement between Twyford Limited (England) and Hindustan Twyfords Limited for the manufacture of sanitaryware and household ceramics.

Isaac Holden and Sons Limited of Bradford are collaborating in the establishment of a woolcombing plant in West Bengal with an annual capacity of 10 million lbs.

Gannon Norton Metal and Diamond Dies Ltd., Bombay—a joint venture of Gannon Dunkerley and Company Ltd., Bombay, and Wire Drawing Dies (Manchester) Ltd.—has been formed to manufacture wire drawing dies of tungsten carbide and diamonds. Wire Drawing Dies is a subsidiary of the British firm Sir James Farmer Norton and Company Ltd. The plant is expected to manufacture dies to the value of about Rs 7,20,000 a year, which would help in saving foreign exchange to the extent of some Rs. 5,30,000 annually.

Bookers, a leading British industrial group, have announced the incorporation of a company in India in partnership with the Sawhney organisation. The company will set up a heavy engineering works to manufacture sugar machinery and industrial process turbines.

Boots Pure Drug Company Ltd. are to undertake the manufacture of insulin in collaboration with an Indian firm.

Among other well-known firms which have recently had schemes approved are the following:—

Molins Machine Co. Ltd. (cigarette and tobacco-making machinery).

Spencer (Melksham) Ltd. (conveyors).

Wild Barfield Electric Furnace Co. Ltd. (furnaces).

Mirlees Watson & Co. Ltd. (sugar machinery).

Holman Brothers Ltd. (air compressors).

Alfred Wiseman & Co. Ltd. (worm reduction gears).

Scott Bader & Co. Ltd. (plasticizers).

Stanton Iron Works Ltd. (C.I. spun pipes etc.).

H.C. Slingsby Ltd. (lifting trucks and spare parts).

Colchester Lathe Company Ltd. (lathes).

Project Constructors Ltd. (potassium chlorate).

Heath, Hicks and Perken (Thermometers) Ltd. (thermometers and glass syringes etc.).

Oil Industry

Work was started in November on what is described as one of the largest pipelines in the world, the 720-mile line from oilfields at Nahorkatiya and Moran, in Assam, to the projected refineries at Nunmati, in central Assam, and Barauni, in Bihar. The pipeline, which is expected to be completed early in 1962, is being laid by Oil India (Private) Ltd. This company, owned jointly by a British firm, the Burmah Oil Company Limited, and the Indian Government, now operates on a fifty-fifty basis following an agreement signed early in June 1961. The cost of the project is estimated at £33.5 million (Rs. 44.6 crores) towards which loans totalling £20 million (Rs. 26.7 crores) have been made by the Burmah Oil Company and a £3 million (Rs. 4 crores) credit has been provided by the British Government.

Stewarts and Lloyds Limited will supply about 31,000 tons of 16-inch pipelines, valued at £1.9 million (Rs. 2.5 crores), for the first stage of construction—the 260-mile link between the Nahorkatiya oilfields and the Nunmati refinery. W. H. Allen Sons & Co. Limited will supply 51 engines (£600,000—Rs. 80 lakhs) for pumping duties in nine stations, and 21 for power generation in seven power stations. The order includes diesel engines, dual-fuel engines (to run on oil or natural gas), and diesel engine-driven generating sets with associated switchgear. A subcontract valued at £60,000 (Rs. 8 lakhs) for control equipment for the seven power stations has been placed with Brookhirst Igranic Limited.

Murphy Radio Company Ltd. will supply £1.2 million (Rs. 1.6 crores) worth of radio equipment to provide the control headquarters of Oil India (Private) Limited in Nunmati, with telemetering facilities, ensuring a constant check on oil flow output along the pipeline. This includes £130,000 (Rs. 17 lakhs) worth of carrier transmission equipment from Electrical Industries Telecommunications Division and control instruments worth £300,000 (Rs. 40 lakhs) from Honeywell Controls Company Ltd.

Third Plan Requirements

The examples instanced of Indo-British co-operation are just a few of the many taking place throughout India, and the range of goods covered is very wide. "Making it together" is a broadly based operation, contributing an important part to India's economic structure in terms of goods, foreign exchange and technical know-how.

The size and scope of India's third Five-year Plan will demand a major effort to raise the resources needed to carry it out. The requirements of foreign exchange will be considerable. Most of this will doubtless come in the form of Government loans or credits, or from other international funds of one kind or another. But there is a limit to such assistance. It is now generally acknowledged that India must also attract an increasing volume of private investment and earn more exchange by export.

Scholarship Schemes

Private investment from overseas means a living, creative relationship between the industries of other countries and India; and there is no doubt that in this partnership for progress and prosperity, British industry will continue to play a leading part. This relationship is further strengthened by the training facilities and scholarships offered to Indian engineers and technologists by several British industrial concerns.

The Federation of British Industries scholarship scheme, which provides for practical training with British engineering firms for graduate engineers from developing countries, has steadily expanded since it began in 1950, and India has been one of the major beneficiaries. This is in addition to over a thousand Indians sent to Britain for training of one sort or another under the Colombo Plan. Leading British firms such as Burmah-Shell, Imperial Chemical Industries, Imperial Tobacco, as well as Lever Brothers, have also sponsored scholarship schemes for providing opportunities for Indians to go to Britain for post-graduate training.

U.S. INVESTMENTS ABROAD

OIL HEADS THE LIST

WITH U.S. economic recovery under way, direct capital investment abroad by U.S. companies in plant and equipment is rising and for all enterprises—manufacturing, extractive and trading—is expected to exceed $4.5 billion this year, or 20 per cent more than in 1960. This high level of overseas capital spending will be maintained next year, according to the latest survey by the U.S. Department of Commerce. This also shows that the petroleum industry will continue to be by far the biggest U.S. spender abroad among the major industries. Excluding investment in minor trade, distribution and service industries amounting to about $530 million, other capital investment will amount this year to $3,969 million, of which the U.S. oil industry will provide 44.7 per cent, and 45.9 per cent in 1962. And of the $700 million increase this year in capital expenditure on plant and equipment projected abroad by all U.S. manufacturing and extractive industries, $300 million will be by the petroleum industry; next year, it will increase its foreign outlays slightly by a further $18 million, while those of other industries will be $80 million lower.

Capital outlays on fixed assets by the U.S. petroleum industry and abroad are rising again, after three years of decline following the record $2.3 billion in 1957 which was a consequence of the Suez crisis. In 1961, they are expected to reach $1,776 million and in 1962 $1,795 million, as compared with $1,467 million last year. These figures are for direct expenditures on plant and equipment. In addition, the oil companies spend about $400 million a year abroad for exploration and development which is charged against income and not capitalised. As will be seen from Table I on this page, most of the $300 million increase in 1961 expenditures over last year is being made in Europe ($470 million, against $345 million in 1960). Investments in North Africa will also rise from $75 million to $150 million. In Latin America, the stagnation of exploration and development in Venezuela is more than offset by investments in other countries, so that the total is 10 per cent up this year at $379 million. In Canada, this year's investment of $375 million is about the same as last year. The relatively small new investment in the Middle East is a reflection of the very big reserves and productive capacity already developed there.

Cash Flow Increases

The Department of Commerce's survey of investments abroad by the U.S. companies also covers the sources of financing for the actual expenditures on fixed assets. These are shown in Table II and it will be noted that the investment funds available abroad are greater than the amounts shown as actually spent on plant and equipment in particular years. As already mentioned, there is exploration expenditure not included in Table I, while these aggregate figures cover, of course, the varied circumstances of many concerns and there will be time lags in actual equipment. The deriving of data from different sources also accounts for some of the difference. Finance provided from the U.S. by parent oil companies and other sources in the U.S.A. was lower in 1960 than in 1959 and 1958, while the funds obtained from other capital markets were heavily down as compared with 1958. With the heavy investment in recent years, charges for depreciation and depletion amounting to $957 million made a somewhat greater contribution to the cash flow available for direct overseas investment last year than in 1959, and considerably more than in 1958. Of the finance available for the overseas expenditure of U.S. oil companies last year, about 56 per cent came from depreciation and depletion provisions.

Within these overall figures, however, there was considerable regional variation. In Latin America, depreciation charges in 1960 amounted to $350 million (1959: $327 million), about the same as expenditure on fixed assets at $341 million. On the other hand, in Europe, where investment in refineries, pipelines and distribution facilities is rising, the amount required for equipment and property in 1960 was $345 million, considerably exceeding the $145 million yielded by depreciation. External finance had, therefore, to be called on to the extent of $273 million from the U.S. ($150 million in 1959), which was also used to reduce local capital liabilities slightly, there being no net retained earnings available. In Canada, depreciation charges amounted to $207 million in 1960 and funds from the U.S. to $138 million. In the rest of the world, the total flow of funds from the U.S. dropped sharply in 1960 to $19 million from $134 million the previous year and the investment funds obtained outside the U.S. amounted to $144 million compared with $160 million in 1959; depreciation charges, on the other hand, rose to $255 million from $230 million.—*By special arrangement with Petroleum Press Service.*

INDUSTRIAL GROWTH IN W. GERMANY LOWER

(From A Correspondent)

AN outstanding feature of W. German economic trends in the autumn of this year was the virtual end of the upward trend in industrial production which had reached a high plateau. Economic experts in Bonn expect industrial production to increase by not more than five per cent this year, as compared with an eleven per cent growth in 1960. The latest figures for January to September show production to have been almost 7 per cent above that of the first nine months of 1960. But the levelling off of the growth rate is clearly visible: thus, though the January to June result was 8 per cent above January-June 1960, the increase from August to August was only 4.7 per cent and that from September to September only 0.9 per cent.

Two factors can be taken as principally responsible for this development: the marked increase in imports of finished industrial goods and a careful, if not reluctant inventory policy which the trade is following. To give an example as far as imports are concerned: imports of machine tools into Federal Republic in the first eight months of this year exceeded by about 50 per cent (in weight) those in the same period of 1960. A running down of inventories has been observed, especially in the steel industry. The value of new orders received by this industry in September was 22 per cent below that in September last year.

But there are also factors which at least partly offset the retarding influences: consumer spending is staying at a comparatively high level and continues to be the main factor making for business expansion, although an increasing amount of private demand is satisfied by imports; the other factor is the continuing labour shortage and the resulting need for utmost rationalisation. This need will become all the greater, now that the Communist authorities in the Soviet Zone have taken drastic action to prevent migration of refugees to the west. Nevertheless, the West German industry has been able to in-

JAPANESE STEEL PRODUCTS EXHIBITED

THE INDIAN INDUSTRIES FAIR, 1961

Huge tonnage of iron ores from India flow into steel mills of Japan every day to be made into quality steel and steel products. Japanese steel producers, now achieving the 4th largest output in the world, thus contribute to solidify the trade relations between India and Japan. Japan Iron & Steel Exporters' Association invites you to inspect quality steel and steel products from Japan at The Indian Industries Fair.

AMERICAN LETTER

BUSINESS RECOVERY SLOWS DOWN

NEW STEPS TO PUSH UP EXPORTS

From Our Special Correspondent

NEW YORK, *4th November*

THE upgrade in the United States economy has not been as boisterous as Government spokesmen would like the people to believe. In fact, there has been a slowdown in the recovery movement since September. Contributing factors included the automobile wage negotiations which produced a number of short strikes, electioneering for local Government posts for which the voters cast their ballots this month and walkouts in a variety of industries such as the milk delivering teamsters trade union which has now deprived New Yorkers, for example, of milk for more than a week.

Political corruption on the Municipal Government level are complicating this situation, but it did not stop President Kennedy to lend his name and office to come here to help re-elect Mayor Robert Wagner of this city, whose Administration has reeked with scandals for the past eight years besides gross inefficiency and ineffectiveness in major matters.

Government spokesmen do not mention these pitfalls or shortcomings. Instead, they speak of the glorious times ahead, the coming drop in unemployment, the prospective new high in the gross national product and all the other increases in the economy which are being induced by Government spending. The Federal deficit is now projected at between $6,000 and $7,000 million for the current fiscal year. This announcement was followed by a widely publicised White House statement. President Kennedy has just urged economy, and suggested semi-austerity as the way out. Federal Departments should not replace employees who have left. What has not been said is that hiring of new ones goes on rapidly, but only of such people who are imbued with the "New Frontier" philosophy.

World Trade and Investments

Renewed losses in U.S. gold stocks gave emphasis to a new Government-sponsored programme to increase the volume of exports. It is a two-pronged drive. One represents a system of export credit insurance to merchants, and the other is a guarantee against losses to commercial banks and other financial institutions. Both phases will be administered by the Export-Import Bank of Washington.

Export credit insurance will be issued through the Foreign Credit Insurance Association, a voluntary syndicate of 20 large private insurance companies doing casualty, property and marine business. A single policy insures the payment of credit by exporters, short and medium-term, against both commercial and political risks. The commercial portion will be insured jointly by the association and by the Ex-Im Bank. The political risk is underwritten by the Ex-Im Bank alone.

Other insurance companies are being invited to join the association. Commercial credit risks to be covered include insolvencies of buyers and protracted default. Political risks include inconvertibility of a currency into dollars, cancellation or restriction of export or import licences, expropriation, confiscation, war, civil commotion or like disturbances. Commercial banks and insurance brokers will handle the details on behalf of the Ex-Im Bank. Organisational arrangements are expected to be completed before the end of the year. Stiffening competition from other countries in the world markets as well as balance of payment corrections are cited as two prime motivating factors for these moves.

The second phase of the programme is complementary to the first. It consists of a guarantee by the Ex-Im Bank to commercial banks and those financial institutions which undertake non-recourse financing of exports. This programme came into effect on 27th October 1961. The principal feature is a political risk guarantee on that portion of an export transaction in which the commercial bank assumes the credit risk.

But the guarantee is available only if a financial institution does not seek an Ex-Im Bank participation in the transaction. The guarantees apply to export sales where the foreign buyer pays not less than 10 per cent of the invoice value by the time the goods are delivered and the exporter retains 15 per cent of the balance. President Kennedy called the response from private industry "splendid in furthering the national interest in this area."

The fact of the matter, however, is that an export insurance programme has been under discussion for years, but the matter was not pressing since the world was a seller's market for American machinery and goods. The American insurance programme is not too far different from those in other countries, where the scheme has been in operation for years because of the necessity for exports.

While there is considerable private industry co-operation in setting up the programme, just how it will work is another matter. The insurance will, of course, be an inducement for banks to discount exports drafts and many decisions to sell overseas in what otherwise might be borderline cases may be resolved favourably because of the programme. Yet, relatively speaking, the average American merchant has never been as export-minded as, say, his British or German counterpart.

Foreign Trade Convention

The biggest gathering of people interested in foreign trade is always the annual convention of the National Foreign Trade Council. This year's meetings lasted three days. About 2,000 people were in attendance. Like in the national meetings of the American Bankers Association, there is always much jockeying behind the scenes on how the final resolutions should be drafted to outline industry positions in relation to the Government policy and to proposed legislation.

The foreign trade convention, however, is hardly the sounding board responding to the wishes of the average merchant. It is concerned chiefly with the problems of the large operators in the petroleum, steel and finance industries with their extensive stakes overseas, with foreign subsidiaries, with the Common Market and similar trading areas elsewhere, with East-West trade and other international complexities.

The final declaration of the foreign trade convention, just concluded, had a good deal to say about private enterprise. By implication, it was a mild condemnation of the creeping socialism and Government direction which is part of Mr. Kennedy's "New Frontier" philosophy. The declaration also suggested that newly developing countries should try and create conditions which would stimulate free enterprise to grow and flourish. But no details were spelled out.

The convention favoured the extension of the President's authority to negotiate trade agreements which would otherwise expire next June. The main point here is to prevent erection of tariff barriers abroad which would hinder American exports. The final declaration also pleaded for "less onerous" tax treatment of overseas profits that is contained in U.S. Treasury proposals to plug "tax haven loopholes."

(Concluded from next column)

canvassed here in recent weeks, but unfortunately once Britain enters the Common Market, any device which savours of unfair competition will be excluded (G.A.T.T. already excludes the more obvious) and the British exporter may then have to rely solely on straightforward competitive power and on checking to see that his competitors do not get away with any tax advantages which are denied to him! The Federation of British Industries has simplified the export problem as one of expanding our shipments abroad from £10 million a day at present to £11 million a day. But that extra £1 million takes a lot of selling—even when the present handicaps on producing it have been eliminated.

In all this it will still be necessary for both sides of industry to conform to the basis of effective planning, which is decisions on how the nation's productive power should be utilised—which means some control over incomes (wages and profits) and over investment. The need for this sort of discipline has yet to be accepted by all concerned.

LONDON LETTER

MORE ON PLANNING

(From Our Own Correspondent)

LONDON, *3rd November*

MR. Selwyn Lloyd's National Economic Development Council is being generated in a great deal of heat without so far forming much substance.

The two sides of industry are mutually suspicious, the palm for suspicion going to the trade unions. The employers have already shown themselves keen on the Council, though they are not anxious that it should concern itself with profits; the trade unions, after their first formal meeting with the Chancellor, are anxious that the Council shall not turn into a machine for regulating wages and nothing else.

But little has emerged (apart from the friendly advice of bystanders) as to *how* the Council is going to operate and under what policies. At the moment economic policy-making in this country is in the hands of the Treasury and it is to get it into the ostensibly more down-to-earth hands of industry that the Development Council is being formed. But how is policy going to emerge if the employers and the unions are pushing and pulling against each other—and if the Chancellor in the midst of this is to be supported by the same Treasury organisation that thinks primarily in terms of deflating and inflating the economy? At the moment the Chancellor of the Exchequer proposes that policy shall be determined by a Council of twenty drawn from employers, unions and officials. The idea of having a planning body at all was derived by the British Government from the French, and the London *Economist* in a remarkable article has made a study of just how the French machine does work. The first point it notes is that the comparable French council is about three times as large as the British, too large to be effective, and takes no votes. Everyone's interests are taken care of by it, but it is harmless. The real work is done behind the scenes by a planning office of permanent officials—the secretariat, as it were, of the Council. This is the reason for the effectiveness of French planning. Will the British Chancellor be able to comprehend this and can a devoted, imaginative and skilled body of officials be built up and allowed into the saddle? These things are usually managed by stealth and only the Chancellor could bring such arrangements about.

The next point concerns the policy itself. France has never allowed her balance of payments problems or her domestic fiscal difficulties to interfere with her need for capital development. Britain has even greater need for such an approach.

At the moment this country is bedevilled by a policy which must create a recession every time there is a balance of payments difficulty. The problem of the day is how to foster the growth of production without inflation.

In France, according to the *Economist* study, the planning body and the French Finance Ministry agree, the one on technical, the other on financial grounds, on the target rate for long-term expansion. Of course, the technical data are dominant, but in the light of British tradition it would help smooth working if the Development Council and the Treasury saw eye to eye on objectives. Let the Treasury think it is the source of the inspiration and it will co-operate wholeheartedly! But really what will have happened is that a new objective will have been introduced into Government policy—the objective that national production must be increased to hit the target even if there are balance of payments or inflationary problems.

The trade unions would be subjected to a wages pause, or squeeze, as now, as a counter to inflation; the City would have to swallow high interest rates if sterling had to be defended; but there would be no credit squeeze (though credit would cost more) and investment and expansion would be encouraged to hit the production target. If such a new approach could be made, then the Development Council (or rather its Secretariat) would have justified its existence and liberated the British economy from the dead hand of restriction which has hitherto been the Government's only weapon against inflation. Without such a policy, real national income per head in the U.K. will, within a decade, fall below that a Germany and France.

The need for expanding exports is the second major issue the Council will have to face. Various incentive devices have been

(Continued in previous column)

MR. WANKHEDE'S THREAT TO BANKS

IRRITATION OVER POOR RESPONSE TO NEW STATE LOANS THE CAUSE

By "Kuber"

THE Indian Communists have been talking about the nationalisation of Indian banks for quite a long time now. But, ordinarily, in banking circles at any rate, no one takes any serious note of it. We have become, more or less, used to hearing that sort of things from them. However, when a responsible minister, particularly the Finance Minister of a State like Maharashtra, belonging to the present ruling party sings the same tune, it is entirely a different matter. One has to sit up and take notice of his statement. According to a recent report from Nagpur, Mr. S. K. Wankhede, Maharashtra's Finance Minister, has publicly stated that nationalisation of banking cannot be avoided in the context of present conditions. Since quite a few days have gone by without any denial, one can safely assume that this report is true and correct. It is not known whether this statement forms part of his obiter dicta, in which politicians are in the habit of indulging, or whether it represents his well-thought-out views; if it is the former, it need not concern the bankers very much. If, on the other hand, it is the latter, the bankers cannot afford to take it lightly; they have to do something about it, as, otherwise, their case, which is a very good one, is likely to go by default.

The pity, nay, the irony, if I may say so, of it is that bankers are being hanged on an issue for which they can hardly be blamed. Let us see what has been the provocation for Maharashtra's Finance Minister to make such a statement at all. According to the report, the provocation is that the bankers do not seem to have co-operated sufficiently, apparently with the Maharashtra Government, in the recent flotation of loans. Whatever the reasons may be, this year's poor response to State loans, which has been construed by the Maharashtra Finance Minister as non-co-operation on the part of the banks, is apparently not to his liking. And he seems to be upset about it. According to the report from Nagpur, the Minister has not cared to give any details as to facts and figures to support his conclusion. The solution put forward by the Minister and the reasoning behind it are simple; the banks must be nationalised, because they cannot get away with the misbehaviour on their part of not going all out to support the Maharashtra Government in its loan programme—never mind the economic and financial conditions of the banks or of the country. The fact that there may be something wrong with the very basis and the terms of loan does not seem to have bothered him at all nor is he very much bothered about the very elementary principles of economics that, in every economy, it is all a matter of price; at a particular price—in this respect, the rate of return on securities—people will refuse to buy these securities, whereas, at a higher rate of interest, they will be only too glad to take up the whole lot and ask for more.

Realities Ignored

Mr. Wankhede appears to be blissfully unaware of the implications of his statement in the context of the present-day banking conditions in India and abroad. Banking conditions in India are simple enough. The Indian banks, as on 13th October 1961, have invested Rs. 611 crores in Government securities, a figure which works out to nearly 32 per cent of their deposits, besides maintaining cash balances with the Reserve Bank, other banks, including money at call and short notice about Rs. 200 crores, the ratio being about 9 per cent. The rest, amounting to Rs. 1,234 crores, is invested by the banks in loans and advances to trade and industry. From these statistics, two main conclusions emerge: one is that they cannot invest any more in Government securities, except at the expense of financing trade and industry; if it does, it will affect very badly the future of our third Plan. Secondly, the bankers cannot ignore the basic economic and banking principles. On term deposits, they are paying anything more than 4 per cent. On call loan, even in the slack season they are paying 5 per cent. On the bulk of short-term loans from the Reserve Bank, the banks have had to pay, in the recent past, and will have to pay again in the coming months, 6 per cent. Why should the banks invest in Government securities, giving them hardly 3 to 4 per cent? The wonder of it is that they have invested as much as they have done under these conditions. And that is so because they are compelled by the law to maintain a certain level of liquidity; in other words, it is forced upon them.

What about the other countries? In Britain, according to the recent Bulletin of the Bank of England, the return on Government securities—short, medium and long—varies between 6½ and 6¾ per cent per annum. The British Government also is faced with the problem similar to the Indian Government of raising funds by public subscriptions to their loans. And yet the return on the British securities is at least 2½ per cent higher than the return on Indian securities. People will argue that the British case is entirely different. Quite so. But the difference, if anything, is against us and our return should be still higher. England is a highly developed country, where people naturally save very much more and, therefore, there are more savings to be had. India is an underdeveloped country, which, if it means anything at all, implies comparatively less savings and capital.

Fundamental Difference

Let us take another, the American, example. According to the recent trends in America, with the help of the Federal Reserve Bank, the Government is consciously bringing about a fall in the long-term rates by 'nudging' the market in the Government loans. But there is a fundamental difference and it is that, firstly, the U.S. has got resources to pursue such a policy and, secondly, it has reduced all the rates on long-term lending and borrowing by manipulating the Government securities market, the benefit of which is enjoyed by the entire business world. The object is to reduce the long-term interest rates not merely for the benefit of the public sector, as is being done in India, but in the interest of boosting up industrial development and housing construction, all in the private sector. The manipulation of the return on Government securities is not an end in itself as it appears to be in India—but merely a means to an end, namely, the development of trade and industry. To put it more precisely, keeping the return on securities at a low level is an end in India, whereas it is merely a means in America.

Leaving aside the above theoretical basis of difference in England and America, the fact remains that the British banks are able to get about 40 per cent more on their investments in Government securities than the Indian banks do. In other words, on the basis of a difference of 2½ per cent in yield, on an investment of Rs. 600 crores, the Indian banks are losing about Rs. 15 crores annually and yet the Maharashtra Finance Minister threatens the Indian banks with nationalisation for alleged non-co-operation on this issue.

Banks are Not Free from Blame

For this state of affairs, the Indian banks themselves are to be blamed. For a long time, they have been taking all sorts of allegations and accusations lying down and there seems to be no public opinion against this sort of things in India. In England, the British banks would have raised a hell of a storm on this very vital fact affecting their income and future. The Indian banks by now should have brought out several publications pointing out the great injustice that is being meted out to them by the policy of the Reserve Bank and the Government. They have done nothing of the sort. Past speeches of the Chairman of the Indian Bank Association have been singularly silent on these vital issues. Till today, the Indian bankers have not cared to appreciate the value of moulding public opinion through proper public relations work. But the majority of them have been votaries of cheap money policy. Left to them, they would prefer to pay nothing on deposits and charge low rates of interest on loans and advances to industry. Strange as it may seem, they seem to have more regard for borrowers than for depositors. This attitude is fully reflected in the inter-bank agreement on deposit rates. With this sort of attitude, how can they try to mould public opinion in their favour successfully?

The Reserve Bank, too, is equally to be blamed, because it is a party to the present monetary policy by which the return on Government securities is pegged at an unremunerative level. It is also a party to the inter-bank agreement which is a piece of restrictive practice. The Reserve Bank's stand, if it can be called that at all, is that any rise in the return on Government securities will raise the Government's debt service charges which India can ill-afford. Quite so, but why penalise one section of the community—the banks and through them the public who have invested in bank shares or investors who would wish to maintain more of their savings in the banks but which they are unable to do, because the banks are not able to offer them sufficiently remunerative returns on their deposits.

Incidentally, the banks are able to make good the loss by overextending their loans. A section of the public is able to protect itself by taking its savings to the unorganised sector where they get better returns than what the banks are willing to offer. So, the net result of the present monetary policy is nothing else than cutting one's nose to spite one's face. The banks in future will find it increasingly difficult to attract sufficient savings from the people to play their legitimate part in the third Plan. The Government will have to bell the cat and find the necessary finance to make up for the shortfall in the banks' resources.

Vigilance Needed

To return to the Maharashtra Finance Minister's statement. Enough has been said in the foregoing paragraphs to show that his threat was unwarranted and irresponsible. The Indian banks are at present suffering from many defects and, perhaps, a more convincing case for nationalising them can be made out, if one wants to. But, surely, not the way the Maharashtra Finance Minister has done. If anything, he has strengthened the case against nationalisation. But the remedy for the defects in Indian banking, I must hasten to add, is not nationalisation but the elimination of the basic causes. In any case, it is up to the Indian banks to make a suitable representation to the Reserve Bank and the State Government against the statement made by Mr. Wankhede. I am sure that his view is not the view of either the Union Government or of the Union Finance Minister. The Government of India has categorically stated on more than one occasion that it would not nationalise banks. All the same, there is need for vigilance on the part of Indian banks in this matter.

WORLD BANK'S RESERVES RISE

The financial statement of the International Bank for Reconstruction and Development (World Bank) for the three months ended 30th September 1961 shows that the Bank's reserves have risen by $24.2 million to $626 million, as against the quarterly average of $23.7 million for the previous financial year. Of this rise, net earnings alone accounted for $16.8 million, the balance being loan commissions. The gross income for the quarter under review, exclusive of loan commissions, amounted to $44.2 million, as against which expenses amounted to $27.4 million, including $23.5 million by way of interest on the Bank's funded debt.

The Bank made eight new loans of the aggregate value of $160.5 million during the quarter, raising the total number of loans to 300 and the gross total of Bank's commitments to $5,951 million. India received two loans. The other recipients were Colombia, Costa Rica, Finland, Israel, Philippines, Trinidad and Tobago.

The outstanding funded debt increased by $83.2 million to $2,311.7 million, as at 30th September 1961. The gross borrowings rose by $186.5 million, consisting of an Italian lire public bond issue equivalent to $24 million, the private placement of $100 million of U.S. dollar bonds and the credit of DM 250 million (equivalent to $62.5 million). Repayments amounted $103.3 million on account of the maturing $100 million of bonds and $3.3 million cancellations through purchases of the Bank's obligations from the sinking fund.

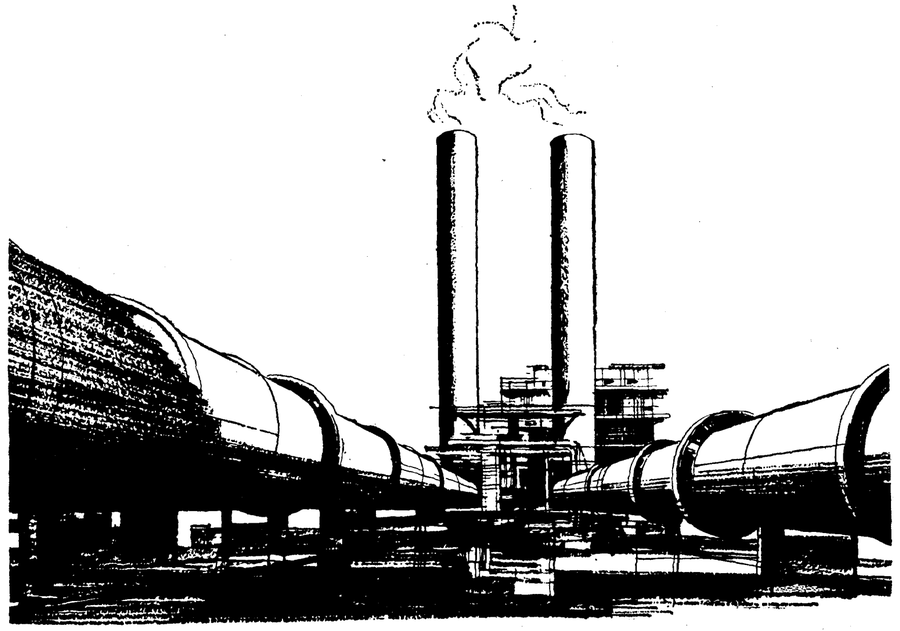
During the quarter under review, Laos, New Zealand and Nepal became members of the Bank and the Dominican Republic was readmitted. As a result, the subscribed capital rose by $185.8 million to $20,278.8 million.

STANDARD BANK OF SOUTH AFRICA

The Standard Bank of South Africa has decided (a) to eliminate "South Africa" from its name and call itself merely as The Standard Bank and (b) to form a subsidiary to run its affairs in South Africa, under its full name the Standard Bank of South Africa, with probable capital participation by South Africans. The Standard Bank operates extensively in many parts of Africa where the expression South Africa is regarded as a "dirty word" and the dropping of this word will, it is believed, enable the Bank to retain its goodwill in these African territories.

Only a few weeks ago, the Netherlands Bank of South Africa increased its capital in order to enable South Africans to participate in its capital.

Several companies with South Africa to their name, having operations outside South Africa, have begun seriously to think of dropping the word South Africa. Already, Gold Fields of South Africa has hived off its overseas interests. Amalgamated Packaging has recently formed a Canadian subsidiary to take over its former South African interests, and many products made and exported from South Africa carefully expunge any indication of being "made in South Africa."



AVB
CEMENT-MAKING MACHINERY
equal to the World's Best
TREMENDOUS BOOST TO CEMENT AND ALLIED INDUSTRIES

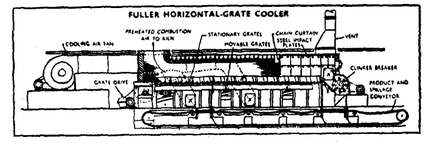
ACC-VICKERS-BABCOCK LTD., the powerful new engineering enterprise, will **'tailor-make'** for industry the very latest cement-making machinery.

The AVB Plant at Durgapur is in the final stages of construction. It is equipped with some of the world's most up-to-date machine tools and staffed by highly skilled technicians and experienced design engineers.

AVB are now ready to accept orders for cement-making machinery which will be **'tailor-made'** to specific requirements.

Now in a position to make a major contribution to the cement industry, AVB will help the nation achieve the Third Five Year Plan target of 15,000,000 tons of cement every year.

AVB will be able to draw on the vast technical knowledge and rich experience of three famous engineering concerns:



THE ASSOCIATED CEMENT COMPANIES LTD.,
INDIA'S PIONEERS IN THE MANUFACTURE OF CEMENT AND CEMENT-MAKING MACHINERY AND

VICKERS LTD., London, WORLD-RENOWNED MANUFACTURERS OF HEAVY EQUIPMENT FOR MANY LEADING INDUSTRIES

IN CLOSE COLLABORATION WITH

FULLER COMPANY, CATASAUQUA, PA., U.S.A.,
THE WORLD-FAMOUS MANUFACTURERS OF FULLER COOLERS AND OTHER FULLER EQUIPMENT WHO HAVE UNRIVALLED ENGINEERING AND RESEARCH FACILITIES

PROSPECTS FOR EXPORT OF COTTON TEXTILES FROM BRITAIN GLOOMY

RENEWED PLEA TO CUT IMPORTS

From Our Special Correspondent

MANCHESTER, 31*st October*

WHATEVER the general views of traders in Lancashire about prospects—and these differ quite remarkably at times—there is one topic on which virtual unanimity prevails. On the outlook for exports, practically every observer is convinced that Britain's share of the overseas market in cotton textiles will shrink still further, although there is no general agreement on how far the drift will continue.

MANCHESTER LETTER

Quite apart from the persistent inroads made by foreign competitors on the home market, shippers of Lancashire-made cloth would be facing a fough proposition in any case. Many of the markets to which they once sent millions of yards have now put up the barriers to such an extent that the available business has completely disappeared—and this includes several countries which are only too glad to avail themselves of duty-free entry into Britain. Quotas and higher duties complete the picture, which involves so remarkable a transition from even 25 years ago, when Lancashire was able to despatch more than 2,000 million yards of cotton cloth abroad annually.

Variations in Overseas Trade

The latest figures extracted from the Cotton Board's recently published statistical review illustrate the variation which has occurred in the overseas trade secured by the major world exporters during the first half of this year and the corresponding period in 1960. The returns are incomplete in some instances but have been adjusted in line with the latest information:

(In million yards)

	1st half 1961			1st half 1960		
	Cotton	Rayon	Total	Cotton	Rayon	Total
U.K. ..	154.7	25.73	180.43	171.82	29.00	200.82

Portugal ..	62.80	0.98	63.78	87.08	1.49	80.17
Spain ..	84.14	8.32	92.46†	91.91	13.73	105.64

Adjusted in line with returns for *five months, †three months.

Two aspects stand out. Japan has gained further ground and Lancashire has fallen behind to a greater extent. Shipments of Japanese cloth increased by some 80 million yards, mainly as a result of larger exports to Indonesia and the Netherlands.

Britain's situation as an exporter of cotton goods, on the other hand, has become even more precarious. Long since passed by Japan, India and the United States by *volume of shipments*, the French mills exceeded Lancashire's export totals last year for the first time. Now, on the basis of current returns, Holland is already ahead and Hong Kong and Germany may well have passed the United Kingdom total if their rate of shipments in the early months of the year has been maintained.

On the assumption that Britain will sooner or later join the Common Market countries in a European federation, however, there is some ground for moderate optimism. Several of the Continental textile industries have been busily engaged in exchanging their goods and it is noticeable that exports within Europe seem to have shown a marked expansion in the past few years. Lancashire should be able to join in this enterprise if suitable arrangements can be made to safeguard her home market from subsidised imports and the Continental countries do not join together in refusing to accept supplies from Britain, contending that this represents low-cost arrivals from Commonwealth areas.

Cut Imports Plea

Another Lancashire textile chief has taken up the demand that the Government must come to the aid of the industry.

Mr. Roger M. Lee, Chairman of Calico Printers' Association, told the annual meeting in Manchester: "The time has surely come when the Government will have to take some action to curb imports of finished goods if the Lancashire textile trade is to continue in anything like its present form."

Switching from the flood of imports to Lancashire's own declining exports, Mr. Lee said: "One would like to see the Government give some practical help rather than exhortations to industry for increased exports."

Fuel tax increases, announced by the Government early this year, would add nearly £200,000 to C.P.A. costs in a full year. "This is no way of helping us to compete against the foreign printers," said Mr. Lee.

Textile Finishing Conference

Some of the latest technical advances in the field of mechanical finishing of textiles were outlined at a one-day conference of the Finishing Group of the Textile Institute in Manchester.

Members of the textile finishing industry were told by Professor C. S. Whewell, of Leeds University, that progress was being made and an increasing amount of information was now being produced on the qualitative aspects of mechanical finishing.

Mechanical finishing of textile fabrics was almost as old as cloth making itself but it was only comparatively recently that serious attention had been given to the qualitative aspects of the subject and to the fundamental principles underlying the many operations which had been developed on a trial-and-error basis.

He added that in the past, success in applying finishes depended almost entirely on the skill of the operative. "Indeed, even today it is ungenerous and unrealistic to minimise the part played by a skilled craftsman in obtaining commercially acceptable results. Under present-day conditions, however, it is essential to combine the highest degree of personal craftsmanship with the best and most controllable machines available and to supplement this with a sound understanding of the principles involved in each process. Only in this way will the best results be obtained and progress maintained."

Textile Trade Mission

A Lancashire textile mission, composed of three representatives of millowners on the manufacturing side of the industry and three representatives of the weaving trade unions, are to visit Holland and Germany to study trends in the cotton and man-made weaving industries in the two countries.

The mission will be led by Mr. H. K. Cockcroft, Director of John Cockcroft and Sons, of Todmorden.

The team will spend five days in Holland, visiting mills in the Enschede area and a week in Frankfurt, visiting German mills. They will also consult employers and trade union officials.

Among the wide range of mill activities they will study management techniques, relations between management and workers, the types of machinery in use and the hours and conditions of work.—*All Rights Reserved.*

CHINESE COMPETITION IN TEXTILES

Cotton textile deliveries at cut-throat prices, coming from Communist China, are once again cutting into traditional Japanese markets, according to reports from Osaka. Red China has recently stepped up its export drive selling cotton yarn and cotton fabrics alike at prices from 10 to 30 per cent lower than similar products manufactured in Japan. As one result, some 7,000 bales of yarn destinated for Indonesia and Burma are said to be lying unshipped in Japanese port warehouses. In addition to low prices, Communist China is reported to be making prompt delivery and is now also turning out quality textile goods by no means inferior to goods manufactured in Japan.

INTERNATIONAL TEXTILE TALKS

LANCASHIRE FIRM ON ITS STAND

THE statement made by Lala Bharat Ram, Chairman of the Indian Cotton Mills' Federation, at a meeting of the Committee of the Federation held at Bombay on the 1st inst., on the textile talks that took place recently in Geneva and Washington, do not throw any fresh light, over and above the reports that have already appeared in the Press, on what transpired at these conferences. It is, however, clear from Lala Bharat Ram's statement that the proposed long-term agreement regarding imports of textiles, for working out the details of which a technical sub-committee has been appointed by the G.A.T.T., will cover a period of three to five years. It was felt by the participants at the talks, observed Mr. Bharat Ram, that the issue called for a detailed examination of various factors such as the production and consumption of textiles by the importing countries and their absorptive capacity in regard to imported goods. While indicating the terms of the liberalisation formula, the sub-committee has been requested to bear in mind such factors as automatic increase in the size of quotas, the proportion of imports in relation to domestic production and consumption in the importing countries and the existing arrangements whereby importing countries were already affording to exporting countries a comparatively high share of the total supply on their markets, while at the same time maintaining some check on such imports. The aim of such detailed investigation, said Mr. Bharat Ram, was to devise a scheme that would avoid what was called "disruption" in the domestic markets of importing countries. The sub-committee has also been requested to consider whether the proposed long-term agreement should contain provision relating to certain specified categories of textiles and, if so, how many such categories should be included. During the discussions at these meetings, according to Mr. Bharat Ram, suggestions were made for the incorporation of mutually acceptable bilateral agreements in the long-term arrangement. The sub-committee, he further disclosed, has been asked to suggest ways and means for ensuring that the terms of the agreement were not circumvented by the non-participating countries.

Lala Bharat Ram also disclosed that from discussions which the Indian delegation had with the officials of the U.S. Government and representatives of the U.S. textile industry at Washington, there emerged the common view that the two countries should strive for affording a greater access to Indian textiles in the world market. This was embodied in a joint communique which gave expression to the general principle that the developing countries should be given wide opportunities for sending out their exportable goods in greater quantities as a means of expanding and developing their economies. It is gratifying to note a further confirmation of this view by Mr. George Ball, U.S. Under Secretary of State for Foreign Affairs. In his address at the National Foreign Trade Convention, Mr. Ball reiterated that the U.S. is committed to foster open competitive trading system throughout the free world. Exhorting businessmen, who expressed fears of foreign goods invading and flooding the U.S. markets, to throw away their defeatism and pessimism and face up to the challenge of competition, Mr. Ball said that a free trading system, apart from curbing inflationary forces in the domestic economy, also served to put a perpetual pressure on domestic industries to continuously increase their efficiency.

While the American attitude, at least the official one, to imports from developing countries is more helpful, a renewed plea to cut imports into Britain has again been made by prominent textile magnate in Lancashire. (For details see page 906 of this issue). The curious thing is that, in spite of the persistent cry of wolf by Lancashire millowners, the latest trading profits and dividends of cotton goods manufacturers have been better than in the previous year, as will be seen from the table in column 1.

BHARAT CHAMBER ON TEXTILE PROBLEMS

In a memorandum submitted to the Tariff Commission in connection with the inquiry on yarn and cloth prices, the Bharat Chamber of Commerce, Calcutta, has pointed out that the crisis in respect of cotton textiles is a crisis of inadequacy, both quantitative and qualitative, and that the present price is inter-linked with it. By comparing the percentages of average production of cloth in 1946-48 and 1958-60, as also in 1955 and 1960, to total production, which indicates the changes in the relative position of different qualities of cloth, the Chamber has argued that increased and diversified production is the only solution to the problems of price and distribution. It has suggested that both from the point of view of catering to the changing tastes of the domestic consumer and that of earning more foreign exchange through higher exports, the industry should be given facilities to undertake production of larger volume of finer cloth.

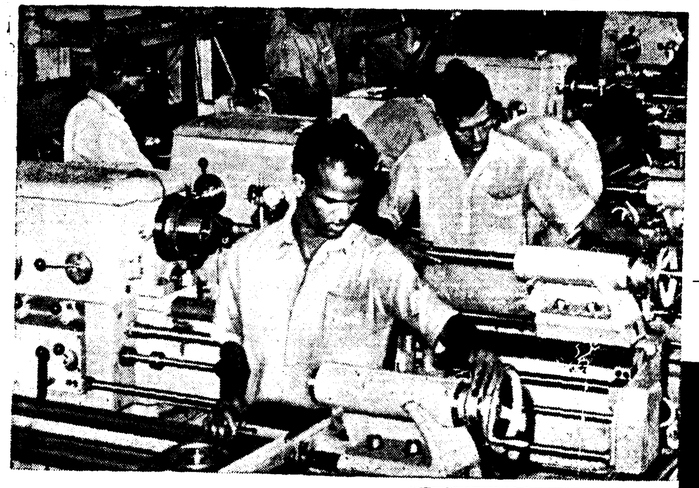
Tracing the origin of the crisis, the Chamber has pointed out that the effect of the steep increase in excise duty in 1956 was that the relative production of coarse qualities increased till almost a critical level of stocks was reached in the middle of 1957. The basic imbalance that was sought to be rectified by adjustment in excise duties after 1957 was not removed but was rather aggravated and still continues to be the basic problem of the industry and trade.

The level and pattern of excise duty, according to the Chamber, have significantly affected the pattern of production and also the price. To correct this basic malaise, it has suggested that the basis of duties should be reverted to *ad valorem* and that break-up figures of stocks should be regularly compiled, analysed and published by the Textile Commission's Office.

The Chamber is strongly of the view that price stamping or price fixation is no solution to the basic problem of establishing internal adequacy at reasonable price levels. Increased production of such varieties as are in demand, is the only solution, the Chamber avers.

Referring to distribution, the Chamber points out that the present system of distribution, though somewhat disturbed in recent years, ensures regular supply of yarn and cloth to the ultimate consumer at fair prices.

HINDUSTAN MACHINE TOOLS rely on CARBORUNDUM UNIVERSAL ABRASIVES for all grinding operations



"Precision grinding is an all important part of machine tool production, and Carborundum Universal Grinding Wheels, which permit grinding to close limits of accuracy and with fine surface finishes, are helping us to produce better quality precision products."

– HINDUSTAN MACHINE TOOLS LTD. BANGALORE.

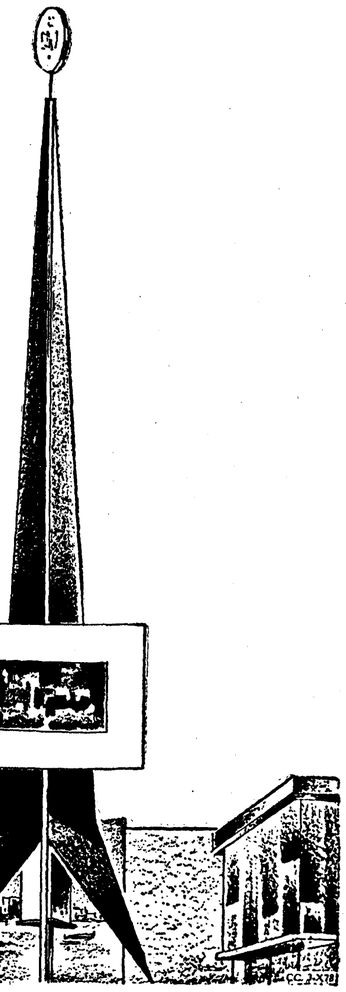
Visit

BASF and **CASSELLA**

at the Indian Industries Fair



BASF and CASSELLA, who bring to India a wide range of chemicals, dyestuffs and raw materials, are participating in the Indian Industries Fair at New Delhi from November 14, 1961 to January 1, 1962.

Their display will consist of a large number of products of special interest to the Indian Industries.

BADISCHE ANILIN-& SODA-FABRIK AG, Ludwigshafen am Rhein, West Germany, is the largest individual complex of chemical industry on the European Continent. They manufacture more than 5,300 products, from Dyestuffs to Fertilizers to Magnetic Recording Tapes. There are BASF products for almost every branch of industry.

CASSELLA FARBWERKE MAINKUR AG, Frankfurt/ Main-Fechenheim, West Germany, make a famous range of textile dyestuffs—and specialised products for the paper, leather, and paint industries.

Come and see the BASF and CASSELLA stand in the West German Pavilion.

IMPORTANCE OF MANAGEMENT TRAINING IN INDIA'S ECONOMIC DEVELOPMENT

INDIGENOUS NEEDS MUST BE BORNE IN MIND

By Prof. Norman C. Hunt
UNIVERSITY OF EDINBURGH

THE opening of the Indian Industries Fair this month will serve to draw the attention of the world to the magnificent efforts which are being made to industrialise in a few decades an economy of 430,000,000 people which has been predominantly agrarian for centuries. What has taken 200 years to accomplish in the West is being attempted in a tenth of that time in the East. The problems involved in such a programme are, and must inevitably be, vast and complex and the needs are great. It is not surprising in this situation that great stress has been placed upon the need for additional financial and technical resources to be found both from within the sub-continent and also from friendly countries overseas, for without this, industrialisation would be virtually impossible.

Serious Danger

Nevertheless, there is a serious danger involved in thinking of industrialisation solely in technical terms—buildings, machinery, technical knowledge and the rest—rather than in dynamic terms, taking into account the importance of enlightened, progressive, expansionist-minded management. Most of the external assistance which has been given to India has been of this financial and technical kind, whereas it is arguable that India's greatest need is for trained manpower, particularly in the managerial skills which alone can turn to good account whatever economic resources may be available. Mr. Nehru recognised this when he said some time ago, "The danger is that we may have to slacken our pace for lack of trained personnel. We have manpower enough and sometimes manpower can take the place even of capital, but, without trained manpower, we cannot go far. We have, therefore, in our planning, to think ahead and train an adequate number of persons for all branches of national activity."

Britain, like most other industrialised countries, has become increasingly aware in the post-World War II years of the critical importance of efficient management in the process of economic development. One of the Anglo-American productivity teams spoke of management as the "group whose actions can be decisive in bringing about the desired increase in prosperity." If this is true of the already advanced industrialised countries like Britain and America, how much more important must it be for India, a country which is attempting so much, so quickly, with relatively so few resources.

Among the many ways in which the great importance of efficient management has been recognised in Britain has been by the rapid development of facilities for management research and training, and there is little doubt that India could profit from some of the lessons which have been learned during the course of this development. This is, in fact, an area in which Indo-British collaboration could be particularly valuable because of the long historical connection between the two countries, with its resultant considerable similarities of economic, social and political institutions.

Management Training

One of the greatest difficulties to be encountered in the development of British management training has been the traditional view that managers are born and not made. Few of the older generation of senior managers have had any formal management training and many of them still argue that management is an art which can only be learned by experience. However, this view is rapidly changing and there is increasing recognition of the part which training can play in the development of managerial skills. This same difficulty exists in India where there is considerable mistrust if not contempt on the part of many senior industrialists for the management training at present being offered.

In Britain, this prejudice is rapidly breaking down as business men and academics come closer together in active participation in research and training programmes. Such working together is promoting mutual confidence and removing barriers of misunderstanding. In India, the gulf between the academician and the industrialist seems to be even wider than it has traditionally been in Britain and it simply must be bridged if progress is to be made.

Collaborative research and training programmes could do much to accomplish this; moreover, the emphasis should be upon the tackling of real and indigenous management problems rather than upon the reproduction of British or American management theory of the conventional text-book type which would merely be regarded by the successful Indian industrialist as irrelevant nonsense on which the practical, hard-headed business man need spend neither time nor money.

Closer Relationship

British experience has shown clearly that, if management training is to be effective, the really top people in industry must be involved in and committed to it. The British Institute of Management and the Institute of Directors have both done useful work in encouraging this involvement and comparable developments in India might have a similar salutary effect. A much closer relationship between the Indian and British associations working in the management field could do a great deal to promote such a development and create a climate of opinion among influential Indian leaders favourable to management training and research.

As far as management courses are concerned, the emphasis in Britain is shifting away from long courses for young people with little or no experience in management towards shorter, more intensive, often residential courses for experienced managers. Such courses are now provided by the Universities of Oxford, Cambridge, Edinburgh, St. Andrews, Leeds and Durham and also by several of the larger colleges of advanced technology and the consulting firms. They have proved to be highly acceptable to industrial firms requiring facilities for senior management training and are almost invariably over-subscribed for the limited number of places available.

Many Indian business men are critical of the courses in commerce and management which are at present available in Indian universities and it may well be that short, residential courses planned in conjunction with interested and influential industrialists would be much more acceptable to the business community.

Great Stimulus

By holding these courses during vacations, additional buildings would not be required, nor would it be necessary to set up elaborate and costly new management training institutions. The difficulty of staffing would be minimised as more use could be made of outstanding practitioners and teachers drawn from academic disciplines such as economics, psychology and sociology.

In many Indian universities, there are first-class teachers in these departments and they do not have to be specialists in management theory to make a valuable contribution to management courses. Moreover, British experience has shown that such people find participation in these residential courses a great stimulus to their own teaching and research. There is general agreement that much more is accomplished in management training by residential courses than by long drawn out evening programmes.

Another important shift of emphasis in Britain has been away from the proliferation of management courses towards a greater concentration of effort on management research. This is merely a somewhat belated recognition of the fact that much of what is written and taught about management—in America and Europe as well as Asia—is dogmatic, opinionative and even mythological. The status of management training will remain low until it is based upon a solid foundation of good, scholarly research.

In Britain, considerable progress has been made in this regard in recent years and an increasing number of able young social scientists—psychologists and sociologists as well as economists—are finding a challenging area of research in the field of management. Here is a further opportunity for Indo-British collaboration, in the long run perhaps the most important opportunity of all, in that the future of Indian management as well as of management training depends largely upon the development of indigenous management patterns and techniques rather than the adoption of American or European practices.

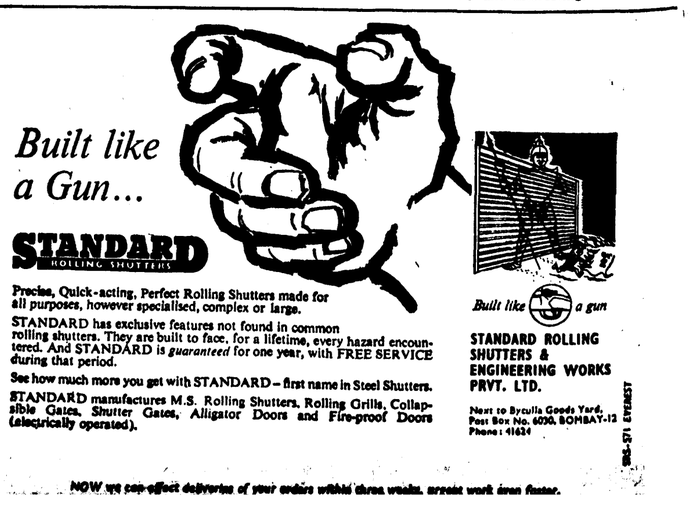
Work Study Techniques

On the operational rather than the academic level, great progress has been made in Britain in recent times in the application of work-study techniques. There is considerable scope for raising Indian standards of productivity by the application of simple work-study methods which do not require costly capital equipment. The basic skills are fairly easily taught and already quite a number of Indians have been trained in Britain in work-study methods, notably in the well-known firm of Imperial Chemical Industries. This is an example of Indo-British collaboration which might well be extended.

Another opportunity for collaboration exists in the exchange of management information. The several British management institutions produce periodicals, broadsheets and reports which would be relevant to the Indian situation and these might well be made available through such agencies as the Indian management associations or the productivity bodies.

Many other opportunities for co-operation between the two countries spring readily to mind. The case for grasping them depends not simply upon sentiment or historical association but upon the mutual needs of the two societies. It is upon this kind of relationship that the "ties of friendship," of which President Rajendra Prasad spoke when he welcomed Queen Elizabeth II early this year, are most likely to become lasting and effective.

The best means of ensuring good industrial relations are being considered by Mr. Rafiuddin Amir Shaikh, Deputy Commissioner of Labour, Maharashtra State, during a six-month visit to Britain arranged under the Technical Co-operation Scheme of the Colombo Plan. Mr. Shaikh said in an interview that he was impressed by the remarkable volume of industrial relations work carried out on a voluntary basis in Britain by the Industrial Welfare Society, the Institute of Personnel Management, and the British Productivity Council. The trade unions and the employers themselves did a great deal in this field, especially with their training programmes. He was particularly impressed with the methods of instruction at the Industrial Welfare Society, and the way in which the subject was made "so lively and interesting."



MODI SPINNING AND WEAVING MILLS COMPANY LIMITED

CHAIRMAN, RAI BAHADUR SETH GUJAR MAL MODI, STRESSES IMPORTANCE OF SYNTHETIC FIBRES

PLEA FOR EXPANSION OF TIMBER RESOURCES

THE need for developing India's forest resources, particularly timber, which are essential for the manufacture of synthetic textile fibres, was emphasised by Rai Bahadur Seth Gujar Mal Modi, Chairman of Messrs. Modi Spinning and Weaving Mills Company Ltd., in his address at the Fifteenth Annual General Meeting of the Company held at Modinagar on 31st October 1961. He observed that five acres of forests could give a ton of synthetic yarn per annum, whereas, in order to raise one ton of raw cotton, eleven acres of land would be required. He suggested that, since India was already short of cereals, cultivable land could be conserved by encouraging forestry and, in particular, the growth of pine trees for producing synthetic fibres. On the question of expansion of the Company, the Chairman disclosed that it was proposed to set up shortly a Rs. 10-crore synthetic fibre producing plant.

The following is the full text of the Chairman's speech:

"LADIES AND GENTLEMEN,

"It is a matter of great pleasure for me to welcome you to this fifteenth annual general meeting of the shareholders of the Company. The Directors' report and the audited accounts have been with you for some time now and, with your permission, I shall take them as read.

Better Results

"I have to report with immense pleasure that the results of the Company for the year ended 30th April 1961, have enabled your Board to recommend 17 per cent dividend (inclusive of 8 per cent interim dividend already paid), subject to tax. This compares most favourably with last year's results as only 13 per cent dividend, subject to tax, was declared. It is gratifying to note when we compare the results of production, earnings and turnover of the Company for this year with that of last year. The production during the year is worth Rs. 654.21 lakhs, as against last year's production of Rs. 543.96 lakhs, showing an increase of about 20 per cent. Similarly, the sales have also increased to the extent of Rs. 647.12 lakhs, as against the last year's figures of Rs. 561.09 lakhs, showing an increase of 11.4 per cent. The net revenue earnings have also increased from Rs. 584.39 lakhs to Rs. 651.35 lakhs this year, and the net surplus has increased from Rs. 16.01 to Rs. 21.73 lakhs, showing a net increase in the profits to the extent of 35.7 per cent.

"I am glad to record that, on account of the additions, alterations and extensive renovation we have made during the year under review by installing one hot pin and clip stenter, one mercerising machine and two sets of high productive combing equipments, consisting of combers with requisite preparatory machine, on which we have spent about Rs. 20.55 lakhs, the quality of our yarn and cotton cloth has immensely improved. We are further adding one sanforising machine in the cloth section and high drafting plant and 6,400 spindles in the yarn section, which will further improve the quality and production.

Cotton Crop

"The cotton year of 1960 was a most difficult one and the production of cotton which was estimated at 48 lakh bales crop was reduced to 38 lakh bales, resulting in a short production of 21 per cent, in comparison to the estimates. Due to the acute scarcity of cotton, it resulted in a sharp increase in prices and non-availability of good quality of cotton. Every year, nearly Rs. 70 crores are drained out from the country by way of import of cotton, after adjusting the export of short-staple cotton to other countries. The cost of Indian cotton is very high, and thus it hampers the export trade of cotton fabrics to the Eastern countries where it has an established trade. More attention is required to be given to produce improved quality of cotton in the country; otherwise, the Indian cotton fabrics are bound to diminish gradually as the importing countries are becoming self-sufficient in the matter of cotton textiles.

"Agricultural improvement in the country is not such a process which may bring immediate effective results, but it will be a matter of satisfaction if due attention is paid to it. Adequate drainage of the fields is as important as irrigation. I believe it has not yet been realised that the immense loss was caused by the floods due to the defective drainage system. In some cases, irrigation facilities have caused floods even in such areas where there were deserts. Construction of canals, culverts and roads without providing drainage has affected the natural flow. Thus due attention should be paid to the drainage.

Synthetic Fibres

"In olden days only natural fibres—cotton, wool and silk were available for making fabrics. The natural silk fibre has now become so costly that it is not within the reach of the common man. Therefore, various new synthetic fibres have come within the living memory. Their coming has made a considerable difference to us not only industrially and economically, but also socially. The introduction of synthetic fibre along with the natural fibres was very popular in twenties. It is one of the main reasons that the fabrics produced by foreign countries are more attractive than that of ours because they have got the facilities of having blended yarn.

"Similarly, wool is also very expensive and is sometimes scarce. India spends Rs. 10 crores per year for the import of wool from foreign countries. The blending of wool with the synthetic fibre enabled fabrics and garments look like all wool to enter the market at a lower price range. Furthermore, most of the natural fibres have defects of one kind or another and the man-made fibre, when properly applied in blends, helped to correct these deficiencies and increase the strength and durability. Another factor which is advantageous in blending of man-made fibres is that the price of man-made fibres is much more stable than that of natural fibres which varies from year to year according to the harvest and, consequently, the price of blend is more stable than that of the natural fibres alone. Low moisture regain, high strength, chemical resistance and biological resistance are few of these which have made it possible for synthetic fabrics to find quite new uses, such as for productive clothing, outdoor furnishing, industrial filters, etc.

Timber

"Most of the man-made fibres are made from timbers and chemicals. To grow timber is much easier than to grow cotton and our country is very well favourably placed to grow timber suitable for producing synthetic fibres. In the world, man-made fibres are leading the way to cheaper products and forcing the natural fibres, which are sold at soaring prices, to come down to a reasonable price. The production of man-made fibres is increasing in multiples throughout the world.

"The total reported area of India is 72.10 crore acres, out of which the cropped area is 36.85 crore acres and the non-agricultural land is 11.62 crore acres. Out of the cropped area, 1.98 crore acres is already under cotton sowing and, every year, near about Rs. 70 crores are spent by importing foreign cotton. India's population is 44 crores and it is increasing at the rate of 2 per cent per annum. It imports its food cereals to the value of Rs. 140 crores. Food always comes first. Thus it is desirable to supplement the need of fabrics. More attention should be paid to forestry. India's forests cover 2.69 lakh square miles, being about 21.3 per cent of the total geographical area of the country. The productivity per acre per annum is 3.0 c.ft. which is substantially below the yield of forests in other countries, such as France 56.8 c.ft., Japan 37.0 c.ft. and the U.S.A. 18.0 c.ft. 5 acres of forests can give a ton of synthetic yarn per annum, while to get one ton of cotton, it requires eleven acres of land. When we are already short of cereals, attention for growing more pine trees may be given for producing synthetic fibres.

Cotton Linters

"Another method of making synthetic fibre is to utilise cotton linters. In India, it is not a practice to delint the cottonseed. Generally, cottonseed is fed to cattle without removing such cotton linters. It is one of the major reasons that the feeding of cotton harms cattle and their milk is reduced. If the cotton lint is removed and cotton cakes are used for animal feeding, then out of 18 lakh tons of cottonseeds produced in India, it is expected that 90,000 tons of cotton lint, being 5 per cent of the total cottonseed, and 2,16,000 tons cottonseed oil being 12 per cent of the seed, may be obtained. Cottonseed oil is used throughout the world as best edible oil. A simple change in habit of using the cottonseed cake, instead of cottonseed, will bring a saving of Rs. 42 crores in the shape of oil and Rs. 4 crores in the shape of cotton lint for which, already, there is an acute shortage in the country.

"It is not easy to change the minds of villagers who have been accustomed to use seed, but the Government could take steps to educate them.

Acetate Yarn

"India is the biggest sugar producing country of the world and molasses is one of the important by-products of the sugar factories. By distillation of the same and with chemical treatment, the alcohol produced is mixed with the cotton lint to produce the synthetic fibre called acetate yarn which is much superior than any other synthetic fibre. Its use is increasing very rapidly throughout the world.

"Two months back, I, along with your Managing Director, went for a world tour to study the methods of production of various new fabrics in different parts of the world and we are fortunate to have succeeded in studying the various textile and synthetic factories there. In collaboration with some important foreign firms, we propose to install shortly one synthetic fibre producing plant, which will involve about Rs. 10 crores, but it is expected that more than half of the total investment will be available to us from foreign collaboration.

"I must mention herein that synthetic fibre, commonly known as 'artificial silk,' does not command the support for its expansion which it should deserve. Though it has not got the remotest relation with silk, it is more near to cotton fabrics. It is, therefore, expected that the false prejudice against artificial silk would go.

"You will be glad to know that various other expansion schemes are under Government consideration, and we hope that we shall be able to achieve substantial expansion.

"The relations between the labour and the management in our factory have been very cordial for which I congratulate all concerned.

"I am glad to inform you that the results of six months current year working are encouraging and very satisfactory.

"Before I conclude, I sincerely thank all of you and record high appreciation for the services rendered by the staff and workers of the Company who are mainly responsible for the results which are before you."

N.B.—*This does not purport to be a record of the proceeds of the meeting.*

Notice

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

DRAWING OF 5 PER CENT RUPEE DEBENTURE STOCK, 1970 FOR REDEMPTION

HOLDERS of 5 per cent Debenture Stock (Indian Issue) are hereby advised that a Drawing will be held on Friday, the 1st December, 1961, at 10.30 a.m.

Notice is hereby given that the Indian Debenture Register and the relative Transfer Books will be closed for a period of 11 days from 21st November to 1st December, 1961, both dates inclusive.

By Order of the Board,
D. PUGH,
Acting Agent.

VICTORIA HOUSE,
CALCUTTA, *1st November*, 1961.

TRAVANCORE SUGARS AND CHEMICALS LTD.

PRICE FIXED FOR ALCOHOL UNREALISTIC

CHAIRMAN, MR. G. N. NOEL-TOD'S SPEECH AT ANNUAL MEETING

PRESIDING over the Twenty-fourth Annual General Meeting of the Travancore Sugars and Chemicals Ltd., held at Trivandrum on Monday, 30th October 1961, Mr. G. N. Noel-Tod, Chairman of the Company, made a brief survey of the main problems facing the Company. He detailed the circumstances leading to the proposed closure of the Pharmaceutical Works of the Company. It was a sequel to the Kerala Government's decision not to place orders for 50 per cent of its pharmaceutical requirements with the Company on a cost-plus basis, as it used to do hitherto, but to choose the suppliers on the basis of open tenders. Government orders accounted for half the turnover of the pharmaceutical section of the Company.

Mr. Noel-Tod was not happy with the way sugar was released for sale in the Kerala State. He reiterated the plea, made time and again by the Company, that the full production of sugar in Kerala should be released for sale before outside sugar moved in. He also pointed out that the ex-distillery price of alcohol, fixed by the Ministry of Commerce and Industry, was unrealistic, as it had no relation to the cost of production, at any rate in the South.

The following is the full text of Mr. Noel-Tod's speech:

"GENTLEMEN,

"The accounts and Directors' report for the year ended 30th April 1961 have been in your hands for the statutory period and, with your permission, I shall take them as read.

"Results for the year have not been, unfortunately, as good as last year, and this, in spite of the fact that the sugar factory, which is your Company's main interest, enjoyed a normal crushing season, having produced 10,502 tonnes sugar from a crop of 1,18,281 tonnes cane with 8.88 per cent recovery compared with 10,050 tonnes sugar from 1,21,187 tonnes cane with 8.29 per cent recovery last year. Your Company can sell only that much of sugar as is released every month by the Government of India. Releases over the year under review were smaller than last year, and for this reason the total quantity sold was only 8,270 tonnes, as against 12,711 tonnes last year. This mainly accounts for the lower profit this year.

Releases of Sugar

"Shareholders must be aware that the consumption of sugar in Kerala is more than the production and therefore sugar has to be brought in from other parts of India. Against the background of the increasing strain being placed upon the railways and the extreme difficulty of goods movement, one would have thought that at least the full production of sugar in Kerala would be released for sale before outside sugar is moved in. Representations to the Government of India to this end have been made by the Company, without so far achieving any success, but yet a further representation will be made, because, compared with the all-India production, the production of your factory is so small that the additional release to this Company, made with the object of reducing movement of sugar by rail, would not inflict any material hardship whatsoever elsewhere. Further, under the Government's scheme for export of sugar, the Company has to bear a loss estimated at Rs. 2,48,000 on export quotas totalling 466 tonnes. This is more than I anticipated in my speech last year and is all covered in the accounts before you. There was no export in the previous financial year.

"There was control on sugar prices throughout the year and distribution was in the hands of the State Government through appointed stockists.

"The situation regarding the Company's liability in respect of the Government of India's price linking formula for cane, to which reference was made in the last year's speech, continues to remain uncertain. It is understood that the Tariff Commission's report is still under consideration of the Government of India. Meanwhile, provision has been made in the accounts for Brix bonus amounting to Rs. 2,36,000.

"The factory commenced crushing for the 1961-62 season on 6th September with prospects of a crop of 1,20,000 tonnes. The quality has, however, dropped slightly due to the abnormally heavy floods to which the crop was subjected during this year's monsoon.

Production and Stocks Position

"Production of sugar in the country reached an all-time record of 29.7 lakh tons in 1960-61. After allowing for exports and an internal offtake, which has remained static over the last three years, the surplus to be carried over into 1961-62 is likely to be well over 10 lakh tons. In these circumstances, with a view to stimulating the consumption of sugar, the Government of India decontrolled sugar on 27th September, the only remaining control being on the releases from factories. At the same time, an Ordinance was promulgated empowering Government to fix the quantity of sugar each factory shall produce. It has been announced that, in respect of the year 1961-62, the production is to be cut by 10 per cent. How this cut is to be implemented in practice will not be known until the Rules under the Ordinance are published. Any excess production is sought to be penalised by the imposition of double the prevailing rate of excise duty.

"The action of the Government in seeking to put a curb on production is an indication that prospects of export, even at considerable loss to the Exchequer and the industry, are limited and the country has to rely more and more on internal consumption to sustain a high level of production.

"In my speech last year I referred to the proposal to start a co-operative factory at Pandalam, at a site only eight miles from our Pamba River factory, and stated that the result could only be competition for the available supplies of cane to the disadvantage of both factories. Your Company's representations to Government have so far not produced any favourable response. Meanwhile, it is understood that the sponsors are taking active steps to establish the factory, heedless of the consequences that, in the opinion of your Directors, are bound to follow.

Alcohol Price Unrealistic

"The new still ordered for the Distillery is expected to be delivered early in 1962. A new vertical boiler has been installed. While thus the modernisation of the distillery is proceeding, the Ministry of Commerce and Industry has, by notification, fixed the ex-distillery price of alcohol throughout the country at a figure which, to say the least, has no relation to the cost of production, at any rate, in the South. Representations have been made to Government that due consideration should be given to the size of the distillery at Pamba and its limited production before enforcing the new price.

"Sales of potable liquor are slightly better than last year. This branch of your Company's activities at Pamba continues to make a useful contribution to its revenues.

"I am glad to be able to report that labour relations during the year under review have, in general, been satisfactory. The Sugar Wage Board recommendations have been published, and accepted by Government. It is expected that negotiations with staff and labour on the degree of implementation of these recommendations will take place shortly.

Closure of Pharmaceutical Works

"I am sorry to have to tell you that there is, at present, every indication that, by the end of this year or early next, the Pharmaceutical Works will have to be closed down. This has come about because the Government of Kerala has announced that it will no longer, as in the past, place its orders for 50 per cent of the State pharmaceutical requirements with this Company on a cost-plus basis, but will in future place all its orders after the issue of open tenders. On the face of it, it might appear difficult to criticise Government for preferring to purchase through tender. However, the facts are that this Company is very particular, in the manufacture of pharmaceuticals, to maintain B.P. quality by the use of the best available raw materials and manufacturing processes, and by close and qualified supervision. The levels of pay in the Pharmaceutical Works are not unnaturally governed by those prevailing in the Sugar Factory and are, I am afraid, higher than those of some competitors, but we have found that our prices, although too high to secure us Government's business in open competition, are on a level with those of other well-known pharmaceutical manufacturers, such as Bengal Pharmaceutical and Chemical Works.

Unilateral Abrogation of Agreement

"By discontinuing placing their orders with us, Government has rendered null and void a clause in our agreement with them. Your Board has taken the best legal advice available, and has been assured that Government is not competent to abrogate one part of the agreement and to expect the rest of the agreement t continue. Your Board has, accordingly, informe Government that, while regretting that th situation should have arisen, it now considers th whole of the agreement between the Compan and Government to be null and void. This, i effect, means that the Board no longer consider the Company bound, as it was when the agree ment was in force, to pay to Government commission of 10 per cent of the profits of th whole Company. Government orders repre sented about half of the Pharmaceutical Work turnover, the other half being to the trade, i which business there is only a low margin, s that the whole profit of the Pharmaceutica Works has never been substantial. The savin to the Company in the payment of commissio to Government will offset the loss of profit aris ing from the closure of the Pharmaceutica Works. Nevertheless, your Board will deeply re gret having to close the works because som small measure of retrenchment will thereby b involved. If Government will indicate tha they would be prepared to reach some accommo dation with the Company that would enable th Pharmaceutical Works to be continued in opera tion, even on only a modest margin of profit your Board would be only too glad to co-operate but so far there has been no indication from Government that this is their wish.

"I am sure you will appreciate why, in the light of the actual financial results for the year under review, your Directors have not felt it possible to recommend the same ordinary dividend as last year.

Tribute to Retiring G.M.

"Before I conclude, I would like to thank all employees of the Company for their co-operation during the year under review. The General Manager of your factory, Mr. A. W. Banks, is due to retire in June next year. He has held the appointment of General Manager for the last 10 years, a period during which there have been many problems to surmount, notably in the field of staff and labour. The fact that he has been able to overcome these problems and, I venture to say, is universally respected by all who have worked with or under him, speaks volumes for his ability, perseverance and integrity. I am sure you will all join me in wishing him many happy years of retirement. He is to be succeeded by Mr. T. J. F. Killick."

The report and accounts for the year ended 30th April 1961 were unanimously adopted and dividends for that year of 6.5 per cent on the preference share capital and 7.5 per cent on the ordinary share capital, both subject to deduction of tax, were declared payable on 31st October 1961.

The retiring Director, Mr. K. A. Sivasankaran, was re-elected and the retiring Auditors, Messrs. Lovelock and Lewes, were re-appointed.

N.B.—*This does not purport to be a report of the proceedings of the general meeting.*

About 48 per cent of all employees in W. Germany are working in small or medium-sized enterprises whose importance as supplier companies for the Big Companies is considerable. For example: Siemens-Schuckertwerke AG, Germany's giant electro-concern, is supported by 30,000 supplier companies; Fried. Krupp, equally big in steel, keeps 20,000 such firms busy. And Mercedes-Benz, Germany's foremost auto-makers, 15,000.

Furthermore, over one million employees of some 1,000 W. German firms are receiving a regular share of their companies profits.

ORIENT EXPRESS
Travel Service

Through its 4 offices in India and 350 correspondents in all principal cities throughout the world, Orient Express Travel Service places at the disposal of its clients a complete Travel Service.

Air, Rail and Steamer tickets issued at tariff rates, Hotel reservations made anywhere. Advice and assistance given in securing Passports, Visas, Health Certificates and Travellers Cheques.

CLOSER CONTROL OF FLOW AND LIQUID LEVEL

...with Honeywell's Differential Converter

USE THIS mercuryless remote transmitter for practically any application requiring precise high-speed measurement of flow or liquid level.
Accurate to within 1%, it's equally fast in response up the scale or down.
Range is continually adjustable in the field.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.
Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.
Precision electronic instruments and control systems for aircraft and missiles.

PAPER FOR THE PLANS

Paper means progress—to us it also means business.
The throbbing pulse of India's industrialization can be felt as the country races towards the "take-off" stage. The Third Plan is the threshold that offers this exciting view of vital economic activity.
We at West Coast Paper Mills, with new expansion plans in hand, endeavour to keep in pace with the country's progress.
From our plant at Dandeli, during the year 1960–61, we manufactured 17,084 tons of writing and printing and 8,583 tons of Kraft paper resulting in a net saving in exchange of Rupees 4 crores to the National Exchequer.

PROGRESS OF ELECTRIC MOTOR INDUSTRY

TARIFF COMMISSION'S REVIEW

THE electric motor industry is one of those younger industries which have enjoyed protection continuously over a fairly long period. It has been the subject of inquiry by the Tariff Commission four times since 1948. During the first three years, it may be recalled, the protective duty was 10 per cent *ad valorem* and covered all categories of motors and their component parts. In the second period, protection was limited to motors of 1 to 20 h.p. at 10 per cent *ad valorem* till 1955. In 1954, the protective duty on components was increased to 20 per cent *ad valorem*. In the next two periods, covered by the Commission's reports of 1955 and 1958, the protective duty was fixed at 15 per cent *ad valorem*; it covered squirrel cage motors of ¼ to 100 h.p. and slip ring motors of 1 to 100 h.p., excluding flameproof motors and variable speed commutator motors. The current period of protection will normally end on 31st December 1961, but the Tariff Commission's latest inquiry has led to the recommendation that protection be continued till the end of 1963. Government's acceptance of this recommendation (along with the recommended rates of protective duty for different types of motors and their components) has already been briefly referred to on page 874 of our last week's issue.

The full report of the Commission on the industry is now available. This report, like the Commission's reports on other industries, contains an authoritative review of the progress made by the electric motor industry under protection, of its competitive capacity, of the difficulties it faces in the matter of raw material supplies, and so on. The Commission's review of the progress made by the industry contains the following facts and figures:

In 1958, there were 15 units in the large-scale sector, with a total single shift capacity of 600,000 h.p. In 1960, the units in this sector increased to 27, with an aggregate capacity of 1,136,040 h.p. on single shift. Among these units, Crompton Parkinson (Works) Private Ltd. (Bombay) and Kirloskar Electrical Industries Ltd. (Bombay) were leading, with annual capacities of 216,000 h.p. and 180,000 h.p. respectively. An additional capacity of 821,900 h.p. has since been sanctioned which includes establishment of 25 new units.

In the small-scale sector, the Development Commissioner had reported 31 units, with a total capacity of 130,000 h.p. in 1958. According to him, the number of units registered with him rose to 74 in 1959, with a total capacity of 266,000 h.p. and employment of 2,890 persons.

The production of electric motors in recent years in the large-scale sector, as intimated by the Development Wing, and in the small-scale sector, as intimated by the Development Commissioner, is given below:

	Large-scale		*Small-scale*	
Year	*No.*	*H.P.*	*No.*	*H.P.*
1958	100,372	641,083	N.A.	51,533
1959	95,113	592,049	N.A.	70,064
1960 (Jan.-Oct.).	108,235	612,171	N.A.	N.A.

The proportions of different ranges of h.p. within the total production of motors in the large-scale sector are stated below:

	1958	1959	1960 (Jan.-Oct.)
	%	%	%
Upto 30 h.p.	91	85	84
Above 30 to 50 h.p. ..	6	9	8
Above 50 to below 100 h.p. .	3	5	6
100 h.p. and above	1	1	2
Total ..	100	100	100

The industry's progress in terms of production capacity in the current year and the years immediately ahead is assured. Sanction has already been given to six of the 27 older units to expand their capacity by 460,000 h.p. in the aggregate.

Of the 25 new units proposed, licences have been granted to 23 and approved in the case of two units, with a total capacity of 361,900 h.p. When all these expansion schemes materialise, the total capacity of the industry will rise to 1.96 million h.p. on single shift. This figure of capacity does not include that of Heavy Electricals Ltd., Bhopal. The manufacturing programme of that unit includes A.C. industrial motors above 200 h.p. and upto 5500 h.p. with a production target of 460 units annually totalling 300,000 h.p. In addition, it will also manufacture D.C. traction motors, D.C. industrial motors and flameproof motors for mining and oil industry. It is expected to commence manufacture of motors in the third quarter of 1963 and attain its production targets only by 1967-68.

Estimated Demand

The Tariff Commission has also estimated the current as well as the future demand for electric motors. Current domestic demand is estimated at a total of one million h.p. on two grounds. One of these is that, in 1960, the total availability of motors, as indicated by production and imports for the January-October period, was running at the annual rate of one million h.p. Secondly, the general consensus of opinion at the public inquiry was that there was no evidence of unsatisfied demand or accumulation of stocks during those months. As for future demand, the Commission has worked it out in terms of horse-power for industrial uses on the basis of generation of power as projected for the third Plan. The targets envisaged for additional generation of power in each year are given below:

Year	*Million kw.*
1961-62	1.0
1962-63	1.0
1963-64	1.2
1964-65	1.3
1965-66	1.5

For estimating the requirements of motor horse-power from these targets of power generation, the Development Council proceeded on the assumption that 50 per cent of the power generated in any year would be available for industries operating with motors and that the load-factor would be 40 per cent. On this basis, it arrived at the result that 1.66 million h.p. would be necessary for every one million kw. of additional power generated. The Tariff Commission compared this factor of 1.66 adopted by the Development Council with the ratio of availability of motor h.p. to additional electric power generated in each of the three years 1956-57 to 1958-59 and found that the factor had stood approximately at 1.85, 2.13 and 2.58, respectively, in those years. This disparity was discussed at length at the public inquiry. There was general agreement that the factor adopted by the Development Council was an under-estimate and that it would be more realistic to adopt at least 2.0 as the required factor. With 1.3 million kw. as the approximate additional power to be generated in 1964, this factor of 2.0 indicates motor h.p. requirements for that year at 2.6 million h.p.

The demand estimated by the Commission for 1964 is thus 2.6 million h.p. But the total single-shift capacity in the large-scale sector, after the expansion schemes are completed, will then be 2 million h.p. The Commission, however, has given the finding that the industry in both large-scale and small-scale sectors seems capable of meeting the requirements of the country, if it works on double shift. Such double-shift working, according to the Commission, would not only result in better utilisation of machinery installed in the industry, thereby minimising the imports of such machinery as has to be imported from outside, but also bring in substantial economies in the costs of production. The Commission has, therefore, recommended that the Government should give all possible assistance to the industry for this purpose, especially by ensuring adequate supply of raw materials. The Government, for its part, has merely taken note of this recommendation, saying that steps would be taken to implement it to the extent possible.

Competitive Capacity

The industry's competitive capacity *vis-a-vis* imported motors is, of course, greater now, for the disadvantage suffered by it in comparison with the latter is, except in a few cases, only nominal. The Commission's comparison of the estimated fair ex-works prices of indigenous motors with the landed costs, without duty, of corresponding imported motors has indicated the following: (i) in the case of motors of squirrel cage drip-proof types, the fair ex-works prices are lower than the landed costs without duty; only in one case there is disadvantage of 19.7 per cent; (ii) in the case of motors of totally enclosed fan-cooled types, the diadvantage of the domestic industry ranges from 11.7 per cent to 42.8 per cent; (iii) in the case of motors of squirrel cage screen protected types, the disadvantage ranges from 8.5 per cent to 40 per cent; and (iv) in the case of fractional motors, the disadvantage ranges from 2.8 per cent to 8.6 per cent. While these findings and the satisfactory quality (to which the Commission, the Development Wing, the Director-General of Supplies and Disposals and the Bombay Mill-owners' Association have all testified) of the domestic product might suggest that the industry can stand on its own feet without any further protection, the Commission has had to recommend the continuance of tariff protection for some very good reasons. These are:

1. The industry has only recently emerged from a slack period in 1959 and early 1960 when demand and, consequently, production had fallen.

2. It is just now embarking on large-scale expansion and diversification and is attempting to take up the manufacture of motors of progressively higher ratings and special types which were not manufactured in the past. Such an enterprise needs the continuance of a sense of security at present enjoyed by the industry under protection.

3. While the Commission's comparison of fair ex-works prices with c.i.f. prices has been attempted only in the case of low horse-power motors, it is not improbable that the domestic industry will be at a greater disadvantage in the case of higher horse-power motors.

Raw Material Supplies

With continued protection for a further term of two years, the industry may be expected to consolidate its present position and carry out its plans for future expansion. At the same time, if the Government takes steps to remove the difficulties confronting the industry in the matter of raw material supplies, its progress in the future is bound to be even more impressive than in the past. Of the different raw materials required by the industry, the ones pertaining to stampings and electrical steel sheets required for such stampings have been highlighted by the Commission. According to it, the capacity of T.I.S.Co. for electrical sheet steel, with the expansion already planned, will be only 24,000 tonnes, as against the demand of 58,000 tonnes. It is emphasised that the deficit will have to be covered either from imports or from the projected plant at Rourkela and/or the expansion schemes of T.I.S.Co. As for stampings, the demand for them in 1964 is expected to exceed 23,000 tonnes. But the existing capacities for stampings aggregate 8,000 to 9,000 tons only. Additional capacity for the manufacture of stampings would, therefore, have to be established. The Tariff Commission has recommended that this should be expedited.

HYDRO-ELECTRIC SURVEY OF INDIA, NEPAL AND SIKKIM

According to a preliminary survey of the hydro-electric resources of India, recently completed by the Central Water and Power Commission, the total power potential (at 60 per cent load factor) of about 260 schemes in India, Nepal and Sikkim is 50 million kw. The power potential in India alone is 41 million kw., covering about 240 schemes. The remaining potential is of schemes in Nepal and Sikkim.

This survey is based on specific schemes worked out after detailed studies from topo-sheets and other data available to the Commission. It is expected that this hydro-electric survey will help in drawing up the pattern of power development in the future Five-year Plans.

RIGHT TOOLS FOR LEFT-HANDERS

A Birmingham firm, with the revealing name of Left-Hand Ltd., is stated to be the only one in the world specialising in the supply of tools for the left-handed.

Just after the war the Company bought up a large stock of left-handed taps, drills, milling-cutters, and other tools designed to produce a left-handed thread, and found the demand for such products so great that it decided to specialise in left-handed products.

Today most of the Company's business is with tools having a left-hand rotation. The firm can supply any type of left-handed tool or instrument. Left-handed potato-peelers are commonplace, but supplies of left-handed notebooks, and a left-handed cork-screw, though rarely heard of, are said to be much in demand.

The total electricity produced by the public utility power stations in India in July 1961 was 1,581 million kw.h., of which 1,342 million kw.h. was sold to ultimate consumers. Corresponding figures for July 1960 were 1,343 million kw.h., and 1,106 million kw.h., respectively.

13 NOV ... PUBLIC DEPARTMENT

NEW PRODUCTS AND PROCESSES

Transistorised Burglar Alarm

A TRANSISTORISED burglar alarm, manufactured by the Electronic Laboratories Ltd., London, is now available for the oversea market. Known as the "Sonalarm," the instrument has a transmitting transducer which fills the room—or a warehouse, bank vault or stores—with sound pitched beyond the reach of the human ear. If the room is empty, and there is nothing moving in it, sound waves echoing from the walls, ceilings and furniture create a fixed pattern of sound in the room. The receiving transducer detects this sound, which continues at an even volume. However, should this fixed pattern of sound be disturbed by an intruder or equally effectively, by the start of a fire, a relay in the instrument automatically closes. It is, therefore, possible to incorporate the alarm as an integral part of a conventional fire or burglar alarm system. The alarm does away with all bars and catches of most other systems, yet gives an alarm even if a burglar comes through the ceiling, roof, wall or floor. Should he be concealed in a cupboard, his emergence from it would still set off the alarm. A manually operated sensitivity control has been incorporated which enables the level of sensitivity to be predetermined in any installation so that, for example, the movement of cats and mice will be disregarded. In addition to this manual control, the instrument also incorporates an automatic sensitivity control which compensates for day-to-day variations in the amount of merchandise, etc., stored within the enclosure. A stand-by battery takes over in the event of a mains failure. One control unit can protect two adjacent rooms at the same time, and in large warehouses multiples of the equipment can be used to provide effective coverage.

Optical Digitizer and Decoder

An optical digitizer and decoder, by means of which visual readings on a variety of instruments can be translated into digital form for the purpose of operating controls or producing records, has been produced by Lindars Automation Ltd. Typical applications are the production of punched tape or cards and/or weight print-out by a weighing machine having a dial scale; the indication of angular position with remote visual indication: the remote weight setting on dial scales; and data logging and machine tool control. The digitizer is a self-contained, totally enclosed unit which houses a transistorized printed circuit amplifier. An aluminium drum containing 12 coded tracks is mounted on a precision-ground shaft, and 12 photo-electric cells inside the drum receive the light from a standard 60W lamp through the coded tracks. The output of each cell is amplified by a transistor and is transmitted to a relay decoder. When applied to weighing machines the circuit is so designed that the digital output cannot be obtained until the coded drum is stationary. The decoder unit is housed in a separate case which can be rack or panel mounted. It receives the signals from the digitizer in coded form and translates them by means of relays into three decades, 0-9. This can be converted by the fitting of additional equipment into avoirdupois, angles or fractions of the decimal output. The decoder can be provided with or without an illuminated in-line indicator. Alternatively, this can be supplied separately for panel mounting. The unit will also provide the feed for printed, typewritten, punched card or tape output and, if desired will re-encode for a computer. This versatile equipment has applications in a large number of industries from the machine and fitting shops to process control installations in the chemical and food industries where information on flow pressure, temperature and weight is required to control the process of feed information to recorders or computers.

Instrument to Prevent Corrosion of Sugar Plants

A British firm is marketing a new instrument to eliminate the severe corrosion caused by small amounts of sugar in the feed water of boilers used by sugar processing firms all over the world. Invented by the British Sugar Corporation and manufactured by William Boby and Co., Ltd. of Rickmansworth, Hertfordshire, it will sound the alarm when the sugar content of water exceeds 2 parts in 1,000,000 of water. The operation of the instrument depends on detecting photoelectrically the darkening produced when an aniline dye is added to water containing very small amounts of glucose. If 10 parts of glucose are present in 1,000,000 parts of water, the colour produced is deep blood-red, almost black. The instrument automatically samples boiler water every 12 minutes, adds a small dose of sulphuric acid to the sample enough to convert it to glucose, boils it, and finally adds caustic soda to neutralise the acid and the dye. The pink colour produced is measured by a photo-electric cell which causes the alarm to ring if the colour is darker than it should be. With automatic operation, the instrument enables continuous watch to be kept on boiler water and cuts out expensive and time-consuming laboratory analysis. Twelve instruments, each costing less than £350, have been made and the first sold to the West Indian Sugar Corporation.

Methane Detector for Mines

An instrument developed over the past two years by the Safety in Mines Research Establishment of the Ministry of Power for the detection of firedamp in the air of mines has been officially approved and is now being manufactured by private industry for sale. The Methanometer is a hand-operated device with a range of 0 to 5 per cent methane calibrated in divisions of 0.2 per cent. To operate it, a button is depressed which passes a sample of air over a platinum filament. Changes in the amount of methane present will produce variations in the electrical resistance of this filament. All circuits, except the measuring filaments, are encapsulated in epoxy resin contained in a nylon moulding, while a second nylon moulding encloses a pair of mercury cells adequate to provide power for at least 6,000 tests under normal conditions. The instrument is self-compensating for changes in battery voltage and is unaffected by normal changes in atmospheric pressure, temperature, or humidity.

Safety Tyre

A high hysteresis car tyre for the family motorist has been produced by The Avon India Rubber Co., Ltd., England. Named the H.M. Safety it has cling treads which are estimated to give 23 per cent improvement in wet road holding. Like the Turbospeed Mk. II, which the firm produce for high speed cars, the new tyre is of twofold construction with the 'cling' treads allied to resilient sidewalls. A 'side' benefit of the tyre is the absence of tyre squeal when cornering. A company spokesman describes high hysteresis rubber as "lazy rubber." When it is deformed by an irregularity in the road, much of the work done is dissipated as heat. The rubber remains longer in contact with the deforming irregularity, consequently, says the spokesman, there is much improved 'cling' to the irregularity and the road, particularly in wet conditions. Extra resilient undertread and sidewalls compensate for the additional heat built up in the cling tread and ensures a cool running tyre. Prior to the tyre building process the cling tread and extra-resilient sidewalls are married by a twofold extrusion technique.

Bus Ticket Machine

A bus ticket issuing machine which not only produces the actual ticket but code-punches details of the transaction in paper tape, has been produced by Creed and Co., Ltd., London. Designed in collaboration with public transport undertakings, the machine will speed up the collection of fares by releasing the conductor from the task of filling in waybills. The punched tape is produced as a by-product of the normal ticket issuing operation and involves no additional operator effort. The tape is subsequently fed into an "analyser" which automatically produces all relevant statistical information. With this new system, information—such as the total number of passengers carried and the total number of tickets issued for each fare and journey—is quickly available. Moreover, since the punched tape produced is identical to that employed in teleprinter communications networks, the encoded details handed in at one depot may be transferred telegraphically to a central location for the automatic production there of complete accounting and statistical data. The machine, which weighs about 6 lbs., can be used equally well on car parks, race courses, or cinemas.

New Synthetic Rubber

Synthetic rubber that is essentially the same as natural rubber can now be made by a new process developed by the Goodyear Company and the Scientific Design Company in the United States. The new process combines two molecules of propylene, a by-product of petroleum cracking, to form a six-carbon atom molecule called methylpentene. One carbon atom is then knocked off this molecule to create the five-carbon atom molecule called isoprene. This compound is then polymerised to form a rubber that is essentially identical to natural rubber. The Goodyear Company will manufacture the rubber in a new plant located at Beaumont, Texas.

Strengthening Metals

By adding small amounts of laboratory-grown sapphire "whiskers" the strength of silver has been increased fivefold. This has been demonstrated in experiments conducted by the General Electric Company in the United States. Similar techniques applied to high-strength metals may be expected to produce materials that are several times stronger at white heat than any presently known high strength alloy, according to Dr. Willard H. Sutton of the company's missile and space vehicles department. These new ultra-strong materials will have an important part in the United States' space programme. The purpose of General Electric's work in this field is to help overcome the heat barrier, a major problem in space vehicle and advanced aircraft design. There is still a lack of structural materials that will maintain their strength at the high temperatures created by re-entry into the earth's atmosphere, by personic airspeeds, and increasingly powerful jet and rocket engines. The "whiskers" used in the work consist of a single crystal of sapphire or alumina, grown in the laboratory. They are embedded inside the metals that are to be strengthened.

INVESTMENT POLICY OF L.I.C.

GOVERNMENT REJECTS ESTIMATES COMMITTEE'S SUGGESTION

THE reported decision of the Government of India to reject the suggestion made by the Estimates Committee to the effect that the Government should take over the investments of the Life Insurance Corporation of India as an unfunded debt is not so much a reflection on the merits of the proposal as an indication of the Government's diffidence in its ability to resist extraneous pressure in making investments on its own. While the frankness with which the Government has confessed that "it would be subjected to much greater pressure than any outside body in making investments," is commendable, it certainly does not rebound to the credit of a Government which should, and claims to be, guided solely by the larger interests of the nation. Its decision to advise the L.I.C. to constitute a special expert committee, which would help the Corporation in carrying out its investment programme in conformity with the basic objectives of the third Five-year Plan, is a partial acceptance of the Estimates Committee's view that the objectives of social advancement, diversification of investments and avoidance of speculation have not so far been fulfilled by the L.I.C. The Estimates Committee went a step further and suggested that these objectives, as also the other aims of nationalisation of life insurance, could be better served if the entire investible funds of the L.I.C. were taken over by the Government as an unfunded debt.

The aforesaid negative decision would appear to have been made by the Government after taking into consideration the views of the Ministry of Finance, which had, in its evidence before the Committee, opposed the suggestion. Reports have it that the L.I.C., too, was opposed to the proposal and that it had contended that it had successfully raised the level of investments of the Corporation which was now claimed to be one-third more than in pre-nationalisation days. This was done within the framework of the existing policy and bearing in mind the objective of nationalisation. The L.I.C. is also said to have recalled the assurances given in Parliament at the time of nationalisation that the private sector would continue to be supported by insurance funds as in the past. Investment made by the L.I.C. in debentures and shares of companies in the private sector constituted 22 per cent of the total investment made by it in three years following nationalisation, as compared with 17.2 per cent representing investment by private companies prior to nationalisation. Nothing should, therefore, be done, the L.I.C. is reported to have argued, which could be interpreted as going back on earlier promises and which make L.I.C. investments less profitable.

Chairman's View

This stand of the L.I.C., if the aforesaid report is true, is against the view expressed by the Chairman of the L.I.C., Mr. P. A. Gopalkrishnan, before the Estimates Committee. The Chairman, according to the Estimates Committee, was in favour of the Government taking over the investment of the L.I.C. He is quoted by the Committee as having said, while welcoming the proposal: "The only thing is that a reasonable rate of interest will have to be assured to the Corporation. We will be rid of a lot of bother." Did the Chairman make this statement in his personal capacity or as the representative of the Corporation? If the latter, why did the Corporation take a different stand when asked to offer its comments on the Estimates Committee's proposal.

To return to the Estimates Committee's suggestion. The Committee had made a careful and thorough study of the performance of the L.I.C. *vis-a-vis* the objectives of the investment policy. Broadly stated, these objectives, it may be recalled, are (1) to safeguard the interest of policyholders and (2) consistent with this, to help further the objectives of the Plan. The term "interest of policyholders" has a twofold meaning. First is the security of investments, for which the Government has a direct responsibility, in that, under Section 37 of the L.I.C. Act, the Government is the guarantor for all payments of sum assured in respect of policies written by the Corporation or taken over by the L.I.C. The second is an adequate return on investments to meet the liabilities of the Corporation. At present, about 71 per cent of the Corporation's investments are in Government and approved securities. The net return that the Corporation is getting from its investments is 3.4 per cent excluding refund of income-tax which works out to 4.08 per cent gross. In the Estimates Committee's view, the investments of the Corporation, by and large, fulfils both the considerations of security and adequacy.

The second objective has been interpreted, in terms of practical policy, to mean social advancement, diversification and avoidance of speculation in the share market. The Committee's comments on the extent to which these objectives have been realised and the suitability of the L.I.C. as an agency for furthering them, are worth quoting:

"First is the goal that the L.I.C. 'will invest in ventures which further the social advancement of the country.' The objective is so large and comprehensive that it is the Government as a whole, rather than L.I.C., which can hope to achieve it. This is a responsibility which it is hardly possible for the L.I.C. to carry out, charged as it is with the duty of business-like investment of its funds in the interests of policyholders. There can be no question of the Corporation furthering this goal by making purchases of Government securities, for, to the extent that the L.I.C. funds are invested in the Government securities, the responsibility passes on to the Government. If it were to further the objective of social advancement through other investments, it can hardly do so without resorting to selective purchase of stocks and shares. Whether this could be done, satisfying the requirements of security and steady return, is itself rather doubtful. But, even so, it will be difficult to avoid the criticism that it may be discriminatory and result in speculation. It is interesting to note that, in the matter of investments in housing loans, which the Corporation claimed as its major contribution to the goal of social advancement, the Central and the State Governments come largely into the picture.

"Then there is the question of diversification of investments, geographically and industry-wise, which has not yet been achieved. The limited contribution that the L.I.C. can make towards diversification is obviously possible through investments in stocks and shares. In making such investments through the stock exchange it has again to look to a secure and steady return. That would mean that, in the interest of its policyholders, it has to invest generally in established and sound concerns. Its scope to encourage establishment of new industries in an effort to repair existing regional imbalances can hardly go hand in hand with its primary duty to the policyholders in making sound investments of the life fund.

"On the other hand, there is a real danger that L.I.C.'s purchases in the share market may lead directly or indirectly to speculative activities. The Committee have referred earlier to the representations made before them to the effect and the admission of the Chairman, L.I.C., that their operations in share market, though not speculative in themselves, may be the cause of speculation. There is at least one case relating to a mining concern where the availability of ore was not substantial. There, as a result of L.I.C.'s purchases, the shares showed a rise and then firmed up during the third month and it was later found that the dividends fell. It is admitted that substantial purchases by L.I.C. cannot be kept secret and they are bound to have a bullish effect on the market. The Committee are not sure whether a close investigation may not bring any other such cases to light.

"Thus, the Committee feel that the Corporation's investment in shares and debentures fulfil little of the objectives of social advancement, diversification and avoidance of speculation... Investments in stocks and shares lead to allegations and aspersions which, though might not be justified in most cases, yet may do little to increase the prestige of the Corporation. This is not desirable. A nationalised body such as the L.I.C. should be like Cæsar's wife, above all suspicion."

Main Reason

These arguments are too sensible and logical to be brushed aside easily. The Government's main reason for not accepting the Committee's suggestion seems to be that it is not prepared to risk a new experiment, however, sensible it may be. One would have thought that nationalised life insurance would break new ground in insurance administration and that ways would be devised for putting the mounting life insurance funds to better and more constructive use than has been the case when insurance was under private management. In rejecting a proposal, the adoption of which would have enabled the

DEVELOPMENT OF PHARMACEUTICALS

STRESS ON BASIC DRUGS—NO NEED TO CHANGE PATENT LAW

THE drugs and pharmaceutical industry in India is passing through an unprecedentedly exciting period in its history. Its very structure and pattern of production are undergoing momentous changes, with increasing stress laid on the development of basic chemicals within the country for the manufacture of synthetic drugs. Until a few years ago, India's drugs industry worth the name was confined either to simple preparations based on medicinal plants available locally (for instance, production of quinine from cinchona as in Nilgiris and Darjeeling) or processing of semi-manufactured drugs imported from other countries and bottling them. Mention may, of course, be made here of the pioneering efforts in this field made by Acharya P. C. Ray in the development of galenicals and other drugs, for the first time, towards the end of the last century. The industry received considerable stimulus during the last world war, following curtailment of imports. And the manufacture of several new lines was taken up during the period, particularly alkaloids like ephedrine, morphine, emetine and also such glandular products as liver extracts, pituitary extracts and adrinaline solutions. What is more, some efforts were made to produce synthetic drugs, especially arsenicals, anti-dysentery and anti-leprotic drugs. Most of these products, however, were dependent on imported basic drugs.

The cessation of hostilities brought in its wake imports of a wide range of highly competitive products from industrialised countries, which, in turn, threatened the growth of domestic industry. The industry, however, has been able to recover the lost ground, particularly during the second Plan period. The attention being devoted to development of basic chemicals for plastics and dyestuffs, too, has given an added impetus to drugs and pharmaceuticals. Table I on this page shows the production of different drugs and pharmaceuticals in 1960, as compared with 1959 and 1957.

Commendable Progress

Several sectors of the drugs industry have made commendable progress during the second Plan period not only in expanding production of essential drugs but also in diversifying the range of output. In pursuance of the recommendation of the Pharmaceutical Enquiry Committee, the Government of India has also been encouraging the rapid growth of basic drugs. The production of penicillin has gone up during the second Plan period from no more than about seven million mega units to 40 million mega units, thanks to the expansion of the Hindustan Antibiotics, Pimpri. Similarly, the output of sulpha drugs has risen from 83 tons to 150 tons, and that of anti-dysentery drugs from six to thirty tons. The progress of D.D.T. has been spectacular, its output having spurted by about ten times to 2,800 tons. Among the new schemes for the manufacture of basic drugs, which have come into being recently, mention may be made of tetracyclins, corticosteroid hormones, dextran and iron dextran complexes, crystalline insulin, chloramphenicol, diosgenin and intermediates for the production of sulpha drugs. Nicotinic acid, nicotinamide, salicylic acid and phenacetin are some of the other new industries which have been set up during the second Plan period.

Substantial expansion of the industry is envisaged in the third Plan. It is proposed to put up three major drug projects in the public sector, in collaboration with Soviet Russia, at a total cost of Rs. 27.3 crores. Of these, the major project will be an antibiotics plant to be located at Rishikesh (U.P.). This plant will have an annual capacity to produce 300 tons of essential drugs, consisting of 85 tons of penicillin, 70 tons each of streptomycin and chlortetracyclin (biomycin), 25 tons each of oxytetra-cyclin and tetracyclin, 15 tons of dihydro-streptomycin, as also ten tons of nystatin. The aggregate value of output of this plant is expected to be Rs. 26 crores annually. The second plant will be the synthetic drugs project at Sanatnagar (Andhra). This project will manufacture sulpha drugs, vitamins, phenacetin, other synthetic drugs and intermediates. It will produce annually 280 tons of sulphadimidine, 130 tons of sulphaguanidine, 50 tons each of sulphacetamide sodium and sulphanilamide and 25 tons of acetazolamide. The other important projects of the plan will be phenacetin (100 tons), piperazine [illegible] (50 tons), pyramidon (40 tons), vitamin B-1 and ditrazine (30 tons each), vitamin P.P. (amide of nicotinic acid—20 tons) and vitamin B_2 (5 tons). The third project envisages the establishment of a phyto chemicals plant at Nerimangalam (Kerala), with a total capacity of 76 tons per annum. Its major products will be caffein, ephedrine, vitamin P (from tea waste), resepine, etc. Several licences are also being given in the private sector, particularly in Maharashtra and Gujarat, for substantial expansion and for development of new lines of production. When all these schemes are completed, it is expected that most of the basic drugs will be available in adequate quantities indigenously.

Third Plan Targets

The following table shows the estimated installed capacity and production in 1960-61 and the corresponding targets laid down in the third Plan to be reached in 1965-66:

(In tons)

	Production		Capacity	
	1960-61	1965-66	1960-61	1965-66
Sulpha drugs	150	1,000	330	1,000
Penicillin*	40	120	45	205
Streptomycin	..	..	150	150
P.A.S.	100	400	145	400
Anti-dysentery drugs	30	75	60	75
I.N.H.	30	100	33	100
Phyto-chemicals	..	76.4	..	76.4
D.D.T.	2,800	2,800	2,800	2,800

* Million mega units.

The development of organic chemicals envisaged in the third Plan will also help the growth of drugs industry. In particular, the Basic Chemicals and Intermediates Plant, proposed to be set up in the public sector, at Panvel, Maharashtra, will serve to provide a wide range of basic chemicals for the manufacture of drugs. The project, as the supplier of intermediate chemicals, will be linked with the synthetic drugs project at Sanatnagar in Andhra. Under the B.C.I. project, it is proposed to produce 40 organic intermediates with an aggregate output of 25,160 tons. The prospect of larger availability of alcohol is another factor that serves to help the growth of drugs industry.

In the meantime, the Development Council for Drugs and Pharmaceuticals is extending some help to the industry in expanding on sound lines. In the course of the annual report of the Council, submitted to the Central Advisory Council of Industries, which met at New Delhi last week, the Council has recommended the need for organising study tours of productivity teams for each of the drugs and dyes industries. These productivity teams are expected to make general survey of the techniques in the field of plant layout and maintenance, production management and quality control, material handling and simplification of work, organisation of basic and applied research, product design, job evaluation, etc. Such studies are bound to be beneficial to India. For India can learn several fruitful lessons from those industries in countries like the U.K., the U.S. and the U.S.S.R., which have considerable experience in this field. It is to be hoped that the Government will accept the Development Council's suggestion and implement it.

Drug Prices

The progress of the domestic industry will be meaningless, unless prices of drugs are brought down steadily. According to the Development Council, the general trend at present in India is based on supply and demand, "which has led to severe price cutting by the retailers in the case of certain drugs who resort to unethical practice which is neither healthy to the profession of pharmacy nor helpful to the consumer." Drawing attention to the instances of high prices charged by dealers in certain other drugs, the Council says that these essential commodities should not be governed by the laws of demand and supply "but should be available to the consumer at all times at fixed and reasonable prices, while giving the retailer a fair return." With this object in view, the Council has recommended the following measures to Government:

1. All manufacturers should publish a list showing the consumer prices, excluding any local taxes.

2. All the price lists published by the authorised manufacturers should be of uniform size so that these could be punched and filed alphabetically in binders to enable easy reference. (This will be essential until such time as a consolidated price list for drugs and pharmaceuticals manufactured or imported for sale in the country is published.)

3. All manufacturers should allow a uniform discount to the trade depending on the general turnover of the products and the responsibility of the retailer in maintaining special conditions of storage, records, payment of extra licence fees, etc.

Another prerequisite for the healthy development of the industry is research in drugs and pharmaceuticals. Research may be classified into three categories: (1) innovational or fundamental research designed to discover new therapeutic agents. (2) formulation research to improve existing drugs; and (3) process research to develop more economical methods of production. These aspects of research have not generally received sufficient attention in India so far, although some of the world-renowned international companies directly operating in India and collaborating with Indian firms have made available to this country their technical know-how. The Development Council has observed that these foreign firms undertake production within the country of new products bringing in new methods and techniques of manufacture developed after many years of research. This has been made possible, according to the Council, on account of the patent laws in the country to protect them from others taking up their processes and competing with them "without having incurred any expenditure on developmental work."

At this stage, if patents on drugs and medicines are abrogated, as suggested by some people, says the Council, it may immediately give a temporary advantage as a result of certain firms taking up the manufacture of items for which know-how has already been brought into the country. But, according to the Council, it may block the way for know-how for newer drugs. It may also result in the blocking of the present easy access that the young scientists and engineers of the country are having now to the research laboratories and manufacturing units run by pharmaceutical manufacturers abroad. The Council feels that, if this happens, it will be a great blow to the development of technology in this country. Without the know-how for producing newer drugs, it warns, the country may even have to spend more foreign exchange by importing these drugs in finished form.

TABLE I

Production of Pharmaceuticals and Drugs

(In kgs.)

	1960	1959	1957

IRON AND STEEL ADVISORY COUNCIL

The Government of India has decided to reconstitute the Iron and Steel Advisory Council. The Union Minister for Steel, Mines and Fuel will be the Chairman of the Council, with the Presidents of the Federation of Indian Chambers of Commerce and Industry and the Associated Chambers of Commerce of India or their nominees, as ex-officio members. The Government will also nominate twenty-one representatives of producers, consumers, the trade and the mining and allied interests.

The Secretary, Department of Iron and Steel of the Ministry of Steel, Mines and Fuel and eight representatives of the concerned Ministries of the Government of India will also be members of the Council. The Iron and Steel Controller will be the Member-Secretary. The Council has been constituted for a term of two years.

DELHI CLOTH AND GENERAL MILLS CO. LTD.

POWERLOOMS POSE SERIOUS THREAT TO COTTON MILL INDUSTRY

TREND OF RAW MATERIAL COSTS DISTURBING

Chairman, Lala Bharat Ram's Speech at Annual Meeting

THE view that the crux of the problem of industry, be it sugar or cotton textiles, was the mounting raw material and labour costs was expressed by Lala Bharat Ram, Chairman of Delhi Cloth and General Mills Company Ltd., in his speech at the Annual General Meeting of the Company held at Delhi on Friday, 3rd November 1961. In the case of the textile industry, there was the further menace of powerlooms, which was threatening the entire cotton textile industry. Instead of being a help to the handloom sector, the powerlooms, which pay a very small excise duty, were becoming, according to the Chairman, a problem both for handlooms and mills. Referring to the sugar industry, in which the Company is interested, Lala Bharat Ram said that it was unfortunate that it was plagued by problem after problem. In his opinion, the danger of a crisis again overtaking the industry could not be discounted unless it were possible either to export a sizable quantity of sugar from the country or stimulate internal consumption by reducing the prices through a readjustment of cane prices.

The following is the full text of Lala Bharat Ram's speech:

"LADIES AND GENTLEMEN,

"With your permission I will take the accounts and Directors' report as read.

"As you will observe from the balance-sheet, the financial results of the Company have been better than in the last year, which naturally is a matter of satisfaction for all of us.

"The cotton mill industry this year also has had a good year as far as profits are concerned. However, I would like to mention certain aspects of the cotton textile industry.

Difficult Cotton Situation

"Last year, due to the heavy imports of American cotton, the cotton situation quantitatively was easier than in the year before last, but the industry had to use a much more expensive cotton than the local cotton for the same counts of yarn, which added to the cost of production. With the increased consumption of cotton in the existing industry and also in the third Plan period when, it is visualised, nearly 4 million spindles would be added, I feel the cotton situation is going to be very difficult in the years to come. On the basis of 9,300 million yards of cloth production and 2,250 million lbs. of yarn, as visualised in the third Plan, 14.50 lakh more bales of cotton would be required. The planners have, of course, expressed the hope that our cotton production will keep pace with the demand, but I cannot but feel rather pessimistic about our attaining this increased production of cotton. In the second Plan period, it was planned that cotton production would go up to 55 lakh bales. But it has remained stagnant around 45/48 lakh bales and, in fact, in the year 1959-60, production went down to as low as 37 lakh bales. We will, in case of shortfall, thus have to import large quantities of cotton. This stringency in cotton is bound to increase the cotton prices in India, which, in turn, will affect the cost of production and our export trade. One of the main advantages India had in the exports of textiles was its cheap cotton, but today this position does not hold good. Even today, the exports of textiles from India are falling. The exports in 1959-60 were worth about 69 crores of rupees, and in 1960-61 had dropped to only 62 crores. The tendency even now for the exports of textiles is on the decline.

Labour Cost

"What I said earlier about the disquietening trend in raw material cost applies, with equal force, to labour cost, the other main element in textile costs. Labour costs in the textile industry are continuously moving up, sometimes because of increase in dearness allowances, which comprise between one-half to two-thirds of the total emoluments of the worker, and sometimes due to other wage increases as happened after the Wage Board recommendations in 1960. While, according to the Wage Board recommendations, the industry has given the wage increases, labour, on the other hand, has not played its part in helping rationalisation which was visualised by the Wage Board. The net result, of course, is to add to the general upward pressure on wage cost.

"Only if these two main items of costs, i.e., cotton and labour are kept down, we may be in a position to become competitive in the world markets. Nevertheless it is a matter of satisfaction to us that the textile exports of the D.C.M. have not been allowed to go down in spite of the general setback.

"Another very serious problem, which is threatening the whole of the cotton textile industry, is the menace of the powerlooms. The powerlooms pay a very small excise duty. And, apart from the fact that they pay a very small amount of excise duty, thousands of unauthorised powerlooms have come into production. This situation with regard to powerlooms is not only hurting the mills but also the handloom sector, without increasing the employment potential, which is one of the basic arguments for keeping the handlooms as an important sector of our economy. Policies were designed by the Government to protect the handloom sector such as restrictions on new loomage in the mills and reservation of varieties of cloth. But the experience of the last few years has been that, instead of helping the handlooms, the powerlooms are becoming a problem for both the handlooms and the mills. While the mill industry places the incidence of unauthorised looms at a much higher level, even a recent Government survey has shown that these unauthorised looms are at least 66 per cent as numerous as the looms registered with the Government, making a mockery of the statutory provisions for registration.

"In the context of this unsatisfactory situation, I feel that the Government must take active steps to see that the powerloom industry is not allowed to run counter to the Government's own policies.

Sugar Problem

"Coming next to the sugar industry, in which your Company is again interested, it is unfortunate that it continues to suffer from one problem after another. Today there is a great problem of very large surplus stocks of sugar for which there is no market. Although the Government is putting a restriction on output in the year 1961-62, and also imposing a stiff penal excise duty on production beyond the restricted level, I am still not sure that the sugar industry will not be facing a near-crisis in the next year unless it is possible to export a sizable quantity from India or unless cane prices are so adjusted as to materially bring down the costs, and therefore, prices of sugar, whereby internal consumption would increase.

"In fact, whether it is the question of the prices of sugarcane or cotton, the main point, to which I also made a reference last year, is that unless and until the productivity in agricultural fields is going to be increased, we shall continue to face high costs and high prices, which, in my view, would have an adverse effect on the whole of our economy.

Speculation in Oilseeds and Oils

"As you know, one of the major activities of your Company is the production of edible fats, i.e., vanaspati, and in this field, we are one of the largest manufacturers in the country. The prices of the finished product, and the profitability of the industry continue to be highly erratic on account of the increasing element of speculation in the oilseeds and oils trade. The fluctuation in prices of oils between one part of the year and another have been of an order exceeding 30 per cent at times. It will be appreciated that such violent fluctuations in raw material prices must inevitably lead to similar fluctuations in the prices of the end-product. This situation has been causing considerable worry to the edible fats industry, as these violent fluctuations are not in the interests of either the consumer, or the farmer, or even of the normal trader, but only of the speculator. There is definitely a need for the Government and the industry to take stock of this situation and to take such steps as are possible for minimising the impact of these unhealthy trends.

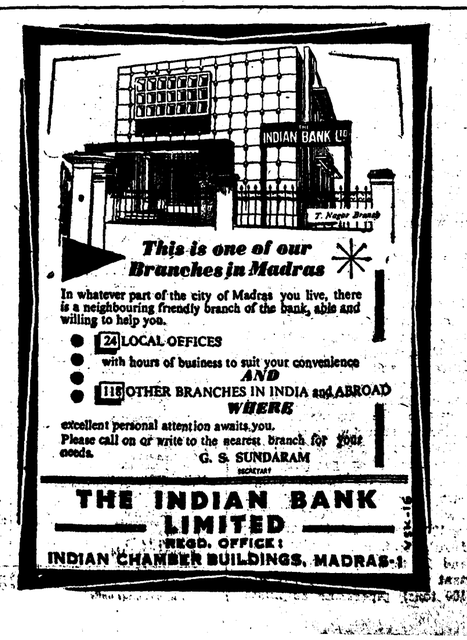
P.V.C. Plant

"Before I close, I am sure, you would be pleased to know that, in keeping with the past policy of diversification and expansion of the enterprises in your Company, it has been decided by your Board to put up a P.V.C. plant with its ancillary products like chlorine, calcium carbide and caustic soda, as also a plant for the manufacture of rayon tyre cord, both yarn and fabric. Both these are large projects involving very large investment. In addition to these two large projects, renovation, modernisation and, in certain fields, expansion are continually going on.

"Before I close, I am sure you will join me in conveying my thanks to all my colleagues who have been responsible for the satisfactory results and also express confidence in their ability to shoulder responsibilities in the future development of the Company.

"With these words, ladies and gentlemen, I move that the Directors' report and accounts be adopted."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*



BUMPER RESULTS BY BOMBAY BURMAH

DIVIDEND RAISED AFTER PLOUGHING IN MORE MONEY TO RESERVES

THE enhancement, for the third year in succession, in the rate of ordinary dividends proposed by the Directors of the Bombay Burmah Trading Corporation Ltd. (Secretaries and Treasurers: Messrs. Wallace and Company, Bombay) is fully justified by the further improvements in the Company's sales and profits for the year ended 31st May 1961. There has been an appreciable rise in sales from Rs. 458.86 lakhs in 1959-60 to Rs. 516.57 lakhs during the year under review, due mainly to increases in sales of timber, manufactured goods and coffee, though partly offset by a decline in sales of tea. Other income, comprising mostly agency commission, sundry services and dividends, has also increased simultaneously by Rs. 32.35 lakhs to Rs. 93.58 lakhs as a result of higher dividend receipts from subsidiary companies' interest charges, and sundry income. The total increase in earnings has thus been of the order of as much as Rs. 90.06 lakhs to Rs. 610.15 lakhs. The expenses have, on the other hand, increased proportionately by Rs. 72.31 lakhs to Rs. 451.44 lakhs due to a higher level of turnover and trading activity but even so the gross profit reflects an improvement of Rs. 17.75 lakhs to Rs. 158.71 lakhs.

Increased gross profit has necessitated a higher provision for the remuneration payable to the Secretaries and Treasurers, amounting to Rs. 10.21 lakhs, as against Rs. 9.03 lakhs, and for taxation at Rs. 59.00 lakhs, as against Rs. 48.20 lakhs for the previous year. Although the provision for depreciation at Rs. 26.59 lakhs, as compared with Rs. 26.68 lakhs previously, is higher by Rs. 4.90 lakhs than the amount allowed under income-tax rules, the Directors are of the opinion that both the provision charged and the basis used are appropriate. As a result of these somewhat higher allocations, the net profit has risen only modestly to Rs. 62.91 lakhs from Rs. 57.05 lakhs for 1959-60. To this is to be added Rs. 1.47 lakh as the balance brought forward, Rs. 2.81 lakhs as provisions no longer required and Rs. 4.35 lakhs as income attributable to previous year. Of the amount of Rs. 71.54 lakhs thus available, the Directors have transferred Rs. 25.80 lakhs to various reserves and have proposed ordinary dividends at 33 per cent, subject to deduction of tax. On a tax-free basis, the dividend for the year works out to 23.1 per cent and compares well with 21 per cent for 1959-60 and 19 per cent for 1958-59. Thus, the assurance given by Mr. Pratapsinh Mathuradas, Chairman of the Company, at the last annual general meeting that the dividend will be maintained at least at 30 per cent has been more than fulfilled. The ordinary dividend will absorb Rs. 44.14 lakhs, leaving Rs. 1.61 lakh to be carried forward.

The results of operations of the Company for the past four years are contained in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st May			
	1961	1960	1959	1958
Sale proceeds	5,16.57	4,58.86	3,96.79	3,64.07

* Subject to deduction of tax.
† Including a special dividend of 6 per cent. for 1955-56.

As readers are well aware, the ramifications of the Company's business are fairly wide, its trading activities cover a variety of commodities and its area of operations covers several countries. The receipts from the repair work carried out in the Rangoon dockyard were slightly higher than in the previous year and there was a useful increase in boat-building sale proceeds, derived partly from contracts carried over from 1959-60. However, a lack of new building orders was experienced and this has been reflected in the drop in the value of work-in-progress at the end of the year. Production and sales at the asbestos cement plant manifested a marked improvement, but business at the concrete production plant declined and production was accordingly restricted. Although the production and purchase of tea at Namhsan showed a substantial improvement, actual sales were considerably lower than the 1959-60 figure and closing stocks rose sharply. Costs were cut, but prices realised were lower and trading conditions continued difficult.

It will be recalled that the working permits held by the Joint Timber Company Ltd. in Thailand had expired last year and negotiations for renewal were constituted. These, unfortunately, have proved unsuccessful and as such there is no prospect of further forest operation. Activities of the Company were largely confined to clearance and disposal of remaining log stocks. These, however, proved highly profitable and the Company could declare an interim dividend equivalent to 200 per cent. Production of starch by Thai Tapioca Ltd. increased slightly and costs were further reduced. General level of prices nevertheless remained depressed and the Company has again sustained a loss.

In Tanganyika, further development of the Company's tea estate has been reported. Upto the end of the year under review, a total of 919 acres have been planted in tea and further planting programme continues. The group's first tea factory on Herkulu Estate has been completed and trial runs are in progress.

As anticipated earlier, the production of tea at the Company's South Indian plantations during the year remained in level with that during the previous year. The late arrival of spring showers and the early and heavy onset of the monsoon reduced the rush crop. Unit costs of "made-tea" increased from Re. 1.324 per lb. in 1959-60 to Re. 1.359 per lb. in 1960-61 and the average gross return also rose, albeit to a lesser extent, from Rs. 2.336 to Rs. 2.360 per lb. Thanks to favourable weather conditions, the coffee crop on the Company's Coorg estates rose sharply from 907 tonnes to 1,368 tonnes or nearly 50 per cent. Although, as reported in the previous year's report, the acreage under cardamoms was brought down substantially, increased attention given to select areas has resulted in a higher crop of 18,354 lbs., as compared with 9,812 lbs. a year ago.

At the Wallace Bay branch in North Borneo, production and purchase of hardwood logs showed a further increase. As in the previous year, the bulk of this was shipped in log form. Market demand remained fairly steady and the year's working was, once again, satisfactory.

The financial strength of the Company is as formidable as ever. There has been no change in the subscribed share capital, which, as at 31st May, 1961, stands at Rs. 134.58 lakhs, with a backing of Rs. 399.94 lakhs in reserve and surplus. Unsecured loans amount to Rs. 59.74 lakhs, in addition to current liabilities and provisions of Rs. 220.59 lakhs. On the assets side, the gross block possesses a book value of Rs. 596.96 lakhs, which has been well written down to Rs. 307.70 lakhs. Buildings, machinery, roads, etc., under construction or in transit are valued at Rs. 7.63 lakhs giving a total net block of Rs. 315.33 lakhs. Current assets, loans and advances, and investments amounted to Rs. 499.52 lakhs and exceed current liabilities by Rs. 219.19 lakhs.

Currently, the Rs. 125 fully paid ordinary shares of the Company are quoted on the forward list of the Bombay Stock Exchange at Rs. 643.00 *cum-div.* On reducing the quotation to an *ex-div.* basis, the net yield works out to 3.7 per cent per annum.

GREAT EASTERN SHIPPING COMPANY LTD.

The difficult conditions confronting Indian shipping are fully reflected in the preliminary statement of the results of the Great Eastern Shipping Company Ltd. (Managing Agents: Messrs. A. H. Bhiwandiwalla and Co., (Bombay) Private Ltd.) for the year ended 30th June 1961. The gross profit has suffered a heavy setback from Rs. 83.58 lakhs for 1959-60 to Rs. 69.48 lakhs for the year under review, representing a fall of 16.8 per cent. After providing Rs. 58.26 lakhs for fleet depreciation, as against Rs. 61.76 lakhs last year, and Rs. 50.000 (Rs. 1.95 lakhs in 1959-60) for Managing Agents' remuneration, the Company has earned a net profit of Rs. 10.72 lakhs. But it sustained a capital loss of Rs. 13.91 lakhs, on scrapping one of its vessels, namely, s.s. *Jag Janani*. If this loss is set off against the aforesaid net profit, the year's working results in a deficit of Rs. 3.19 lakhs. Further, the Directors have deemed it prudent to transfer Rs. 9 lakhs to the development rebate reserve. As a result, the deficit for the year actually amounts to Rs. 12.18 lakhs, as compared with that of Rs. 12.99 lakhs for the previous year. If, however, one takes into account the refund of Burma Income-tax of Rs. 5.35 lakhs, in respect of previous years, the deficit would be reduced to Rs. 6.83 lakhs.

In keeping with the trend of profit, the Directors have deemed it necessary to cut down the dividend from 10 per cent (tax free) for 1959-60 to 7.8 per cent for the year under review, giving a gross dividend of 78 nP per Rs. 10 fully-paid share and 39 nP per Rs. 10 partly paid-up share. As the Company has

(*Continued on next page*)

TATA CHEMICALS TURNS THE CORNER

CAPITAL TO BE RAISED FURTHER

IN refreshing contrast to the sharp setback suffered in the previous year, the Tata Chemicals Limited (Managing Agents: Tata Industries (Private) Limited) has staged a comeback during the year ended 30th June 1961. The improvement, though not smart, is all-round and holds out a promise of better working during the current year, in view of the expansion programme on hand and the acquisition of new interests recently. The most attractive feature of the results for the year under review is the sharp rise in the turnover from Rs. 341.32 lakhs to Rs. 415.72 lakhs, the maximum attained by the Company so far. However, the benefits of this are not fully translated in terms of gross profit which has but modestly improved from Rs. 50.38 lakhs to Rs. 58.41 lakhs, and is, in fact, lower as compared with Rs. 69.15 lakhs in the year 1958-59, when the turnover was Rs. 340.70 lakhs, due to a sharp rise in manufacturing costs and operative and other expenses, both of which are the highest the Company has ever incurred.

Costs of raw materials and stores consumed have gone up from Rs. 106.56 lakhs to Rs. 134.94 lakhs and other expenses have soared from Rs. 193.61 lakhs to Rs. 243.58 lakhs. The principal items of higher costs were: power and fuel Rs. 69.51 lakhs (Rs. 48.82 lakhs), freight and handling charges Rs. 35.57 lakhs (Rs. 25.64 lakhs), interest charges Rs. 19.69 lakhs (Rs. 12.61 lakhs) and the wage bill Rs. 62.14 lakhs (Rs. 58.16 lakhs). Heavy rains at Mithapur, where the Company's plant is located, plagued again its salt raisings and resulted in an avoidable expenditure of Rs. 9 lakhs on purchases of salt to maintain production of soda ash and electrolytic caustic soda, though the solar output was higher at 1.47 lakh tonnes against 72,000 tonnes in the previous year. In addition, there was a fresh burden of excise duties of Rs. 5.79 lakhs. But for an increase in the production of soda ash (by 26 per cent), of sodium bicarbonate (+11 per cent) and of benzene hexachloride (+15 per cent), which cut down the per unit cost, the gross profit would have hardly registered any improvement over the previous year. The net profit is higher at Rs. 34 lakhs, against Rs. 26.31 lakhs previously, after providing Rs. 23 lakhs (Rs. 20.75 lakhs a year ago) for depreciation and Rs. 1.41 lakhs (Rs. 2.27 lakhs) for Managing Agents' commission. The Directors have partially restored the previous year's 1.5 per cent cut in the dividend on equity capital by stepping it up from 6 per cent to 6.5 per cent, subject to deduction of tax, giving a net return of 4.5 per cent on shares of Rs. 10 each, which absorbs Rs. 11.89 lakhs against Rs. 10.63 lakhs previously, including Rs. 4.48 lakhs paid out of capital as annual interest of 4 per cent on 11.20 lakh new ordinary shares of Rs. 10 each. They have also restored a 5 per cent, free of tax, return to the preference shareholders, by stepping up the dividend to 7.14 per cent, subject to deduction of tax, and paid accordingly Rs. 0.53 lakh for the previous year. Development rebate reserve gets Rs. 17.40 lakhs, against Rs. 14.35 lakhs previously and provision for retiring gratuities has been maintained at Rs. 0.50 lakh.

The following table compares the Company's working in the past four years:—

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale of products	4,15.72	3,41.32	3,40.70	3,41.70
Other income	7.23	9.74	11.67	7.62

* Subject to deduction of tax.
† The dividend on preference shares has been raised to 7.14 per cent. (taxable) to give a net return of 5 per cent. The amount includes Rs. 0.53 lakh paid for the previous year under this adjustment.
‡ Excluding interest at 4 per cent. payable out of capital.

In his statement to the shareholders, the Chairman, Mr. J. R. D. Tata, says that the Company made fairly solid progress during the past year. The gains over the previous year "although perhaps disappointing in that they have not yet permitted the full restoration of the dividends paid two years ago, nevertheless show that the Company has recovered from last year's setback and is well on its way towards reaching the much improved position expected to result from the expansion programme which is now approaching completion." The programme includes, in the final stages, a provision for doubling the capacity of the chemical caustic soda plant, a decision on which would be taken after the recommendations of the Tariff Commission and the Government's decisions thereon are known. The increase of Rs. 10 per tonne in the selling price of soda ash from April last and of Rs. 30 per tonne in that of solid caustic soda from February last are, however, found to be insufficient to compensate for increases in manufacturing costs. Most of the remaining major units planned for the soda ash plant were commissioned or completed during the year. By the close of the year, the Company has incurred a capital expenditure of Rs. 4.15 crores on the Rs. 6-crore expansion programme, initiated in 1957-58. This expenditure was financed to the extent of Rs. 1.86 crores from borrowings, Rs. 1.17 crores from internal resources, including allocations to depreciation, and Rs. 1.12 crores from additional share capital.

According to Mr. Tata, the large investment, compressed as it has been into a relatively short period of time, has placed a severe strain on the Company's financial resources. Apart from the fact that the Company will soon be short of funds to meet its commitments on capital expenditure and working capital, he adds, the ratio of borrowings to equity (nearly 1.75 to 1) is on the high side and too large a proportion of the borrowings are of a short-term nature. To provide for the additional funds, the Directors have, therefore, decided to issue 5,03,920 further ordinary shares of Rs. 10 each at par in the ratio of one for every five shares held, and 6.5 per cent taxable debentures of Rs. 50 lakhs, to be redeemed between 1st July 1970 and 30th June 1975. The two issues are subject to the sanction of the Controller of Capital Issues, for which an application has been made.

Referring to the Tariff Commission's inquiry in August this year into the claims of the soda ash and caustic soda group of industries for which the current period of protection stops at the end of 1961, Mr. Tata says that the Company urged the Commission, amongst other things, that the selling prices of the industry's products should be such as to provide an adequate cushion for rising costs of raw materials, fuel, transport and other items over which it has no control; it also pressed for sufficient amounts to be set aside to reserves each year to maintain plant efficiency and provide for a reasonable degree of expansion out of retained earnings; and, finally, for a return on employed capital which would satisfy the legitimate claims of investors and attract further capital. It has recommended that an effective and expeditious machinery should be set up to revise the industry's price structure from time to time in place of the laborious and time consuming procedures in force at present. The recommendations of the Commission are still not known.

A significant development for the Company is its recent conclusion of negotiations with Mr. Prabhulal Shah and Bombay Mineral Supply Company (Private) Limited, resulting in the issue of a letter of intent for the acquisition by the Company of the undertaking of the mineral company which owns valuable bauxite deposits under leases from the Government at Bhatia, Saurashtra. At present, the deposits are being worked and sold as ore both in India and abroad. The purpose of the merger is to develop the deposits for industrial uses such as the manufacture of calcined bauxite, refractories, aluminium sulphate and aluminia under industrial licences for which application would be made to the Government. The consideration for the transfer of interests will be the allotment of 5.20 lakh fully paid ordinary shares of the Company to the mineral company. The undertaking will pass to Tata Chemicals from 9th November 1961, and the Company will also be entitled to the profits for the Samvat year 2017 (8th November 1961). The arrangement is subject to the approval of the Board of Directors of Tata Chemicals and also to such sanctions of the Gujarat State and Union Governments as may be required.

The financial position of the Company calls for some immediate and urgent improvement. Against the issued and subscribed capital of Rs. 311.93 lakhs same as last year, of which preference is of Rs. 59.97 lakhs, borrowings have risen sharply; secured loans, including 5 per cent debentures of Rs. 5.31 lakhs, from Rs. 116.50 lakhs to Rs. 150.44 lakhs, and unsecured loans from Rs. 208.83 lakhs to Rs. 251.28 lakhs. The reserves and surplus have, however, been stepped up from Rs. 42.32 lakhs to Rs. 59.71 lakhs. Current liabilities have fallen from Rs. 72.71 lakhs to Rs. 62.55 lakhs and, including provisions, the total amounts to Rs. 93.16 lakhs, against Rs. 112.56 lakhs a year earlier. These are satisfactorily covered by current assets, loans and advances of Rs. 270.74 lakhs. Trade investments are maintained at the last year's level of Rs. 18.78 lakhs and are in Tata enterprises. The Company has yet to write off debenture issue cost of Rs. 2.46 lakhs. The gross block account increased during the year from Rs. 589.53 lakhs to Rs. 709.66 lakhs and has been written down to Rs. 480.55 lakhs which, with works-in-progress at Rs. 93.98 lakhs, makes a total of Rs. 574.53 lakhs of fixed assets.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 20 *cum-div.*, at which rate the yield on the *ex-div.* price of Rs. 19.55 works out to 2.2 per cent per annum, free of tax, which is too low for a Tata unit. It is to be hoped that the Company will reward its investors richly in future; they have waited for long in the hope of a better return.

DELHI CLOTH MILLS' PERFORMANCE IMPRESSIVE

APPROPRIATION POLICY CONSERVATIVE

A SHARP rise of Rs. 4.10 crores in sale proceeds and yet more spectacular spurt of Rs. 1.42 crore in gross earnings, reflecting a relatively much better profitability than in recent years, highlight the all-round improvement in the working results of the Delhi Cloth and General Mills Company Limited [Managing Agents: Messrs. Bharat Ram Charat Ram (Private) Ltd., Delhi] for the year ended 30th June 1961. And it is essentially due to this that the shares of the Company have been bid up on the Delhi Stock Exchange to an all-time peak of Rs. 65.25, as against Rs. 46.50 only a month ago, though there is also talk of some buying of this share recently by the Life Insurance Corporation of India.

Sale proceeds have risen from Rs. 31.79 crores to Rs. 35.89 crores and income from other sources has gone up from Rs. 45.63 lakhs to Rs. 71.39 lakhs. Higher sales and an increase in stocks at close from Rs. 5.10 crores to Rs. 6.24 crores underline a significant improvement in production. Gross profit, which has soared to Rs. 4.35 crores from Rs. 2.93 crores in the previous year, would have been still higher but for an increase in the cost of raw materials consumed from Rs. 16.95 crores to Rs. 18.83 crores and in other expenses from Rs. 10.83 crores to Rs. 11.77 crores, of which the wage bill alone amounts to Rs. 5.32 crores. The net profit has, however, gone up but modestly from Rs. 1.04 crore to Rs. 1.66 crore following the much larger provision of Rs. 1.71 crore (Rs. 1 crore for 1959-60) for taxation and of Rs. 77.80 lakhs (Rs. 70.17 lakhs) for depreciation. Managing Agents' remuneration amounts to Rs. 20.12 lakhs, against Rs. 18.34 lakhs in the previous year.

The following table brings out the Company's progress over the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale proceeds	35,88.76	31,78.63	30,08.00	29,41.60

Carry forward	3.72	2.72	2.85	4.81

* Subject to deduction of tax.

Commensurate with the improved results, the Directors have stepped up, again, the dividend on ordinary shares of Rs. 25 each from 12 per cent to 13 per cent, subject to deduction of tax, though one feels the increase is not in proportion to the earnings, as the net return works out to 9.1 per cent against 8 per cent paid on the same amount of capital in 1958, when the gross earnings and net profit amounted to only Rs. 2.29 crores and Rs. 68.27 lakhs, respectively. Instead of distributing more profits to the shareholders, the Directors have chosen to consolidate the Company's financial position by ploughing back a big slice of the available surplus to reserves. Ordinary and preference dividends take away Rs. 48.39 lakhs against Rs. 45 lakhs previously, while the amount transferred to reserves has been increased from Rs. 54.50 lakhs to as much as Rs. 115 lakhs, which is more than three times larger than the sum of Rs. 36.10 lakhs transferred in 1958. Apart from the apparent consideration of a sound financial policy, this is done possibly to provide internal finance for the Company's expansion programme on hand. Percentagewise, the earnings during the year were appropriated as: raw materials 50, stores, power, etc., 12, wages and amenities 14, selling and distribution 3.25, administration and operation 2.5, taxes 12, depreciation and development rebate 2.5, dividends 1.25 and reserves 2.5.

During the year under review, the textile units of the Company in India and Pakistan showed good results. Their renovation and modernisation continued. The units maintained their position with regard to exports. The silk section turned the corner and is expected to fare better in future. The chemical and *vanaspati* sections maintained satisfactory progress. The sugar section's results were normal. However, in view of the very large increase in production of sugar in the country, the sugar industry is likely to pass through some anxious times in the years to follow. The distillery working was normal. The Company discontinued the tent business during the year.

As a part of its programme for diversification of manufacturing lines, the Company has undertaken installation of two new plants; a P.V.C. plant of 20-ton-a-day capacity, together with ancillary units of calcium carbide and caustic soda, and a rayon tyre cord plant, with a capacity of 10 tons per day, for the manufacture of high tenacity rayon tyre cord yarn and fabrics. Arrangements for the supply of technical know-how and machinery for these plants have been entered into with some reputed firms of Japan and the U.S.A. The plants will employ the latest technique and equipment in the field. The factories will be situated at Kotah, Rajasthan.

The foreign exchange requirements of these plants are proposed to be met from deferred payments and long-term loans from foreign financing institutions. At home, the finance will be raised by way of a share capital and debenture issues, as well as borrowings. The Directors sought and obtained the shareholders' approval at the annual meeting of the Company on 3rd November 1961 to raise the borrowing limits to Rs. 15 crores. The Company has received the sanction of the Controller of Capital Issues to issue 4 lakhs ordinary shares of Rs. 25 each at a premium of Rs. 5 per share and 2 lakhs redeemable cumulative preference shares of Rs. 25 each at par. The Directors propose to issue 6.5 per cent debentures of the face value of Rs. 2.50 crores. Under the trust deed of 27th January 1955, the existing 5.25 per cent Rs. 1 crore debentures are redeemable from 15th December 1962 to 1966. The debentureholders have, however, agreed to the proposal for redemption of the debentures earlier than 15th December 1962.

The financial position of the Company is sound. The share capital of Rs. 4.11 crores has been unchanged over the previous year's level. It has been supplemented by reserves and surplus of Rs. 6.05 crores. Borrowings have gone up from Rs. 7.36 crores to Rs. 8.69 crores, of which Rs. 6.10 crores are secured loans, comprising debentures of Rs. 1 crore, interest on them Rs. 2.63 lakhs, and loans and advances from banks of Rs. 5.07 crores; the latter were Rs. 3.92 crores in the previous year. Other current liabilities and provisions of Rs. 4.12 crores, and the total indebtedness to outsiders is amply covered by current assets, loans and advances of Rs. 15.83 crores. Investments are higher at Rs. 32.21 lakhs as compared with Rs. 26.92 lakhs in the previous year. There was an addition of Rs. 1.23 crore to the gross block account which at the end of the year stood at Rs. 15.69 crores. It has been well written down to Rs. 6.81 crores.

The Rs. 25 fully paid ordinary shares of the Company are currently quoted at Rs. 65, at which rate the yield on them works out to 3.5 per cent per annum, free of tax.

GREAT EASTERN SHIPPING

(*Concluded from previous page*)

paid 59 nP and 29 nP per share out of the reserve of exempt profit under Section 15C of the Indian Income-tax Act, the net dividend per share works out to 72 nP in respect of fully paid shares and 36 nP per share in respect of partly paid shares.

The financial position of the Company, as disclosed by the figures released to the Press, is quite sound. The paid-up capital of the Company at Rs. 90 lakhs is supported by various reserves aggregating Rs. 210.48 lakhs. The gross value of the Company's fleet as at 30th June 1961 amounted to Rs. 809.42 lakhs, on which a total depreciation of Rs. 253.35 lakhs has been provided so far. The outstanding loans are of the order of Rs. 347.46 lakhs. As against this, the liquid assets (cash and Bank balances) alone amount to Rs. 143.93 lakhs. The Company has redeemed the preference shares by drawing Rs. 25 lakhs from various reserves. The Directors have also decided to reallocate the different reserves with a view to classifying them into taxed and untaxed reserves.

In spite of the difficult conditions facing the shipping trade, the Company continues to expand its fleet with confidence in the future. It will be receiving two ships from a Japanese shipyard in February and March 1962 respectively at a cost of Rs. 2.27 crores, taking up the Company's fleet to fifteen ships—nine new ones and six old ones.

TRAVANCORE SUGARS' PROFIT LOWER

DIVIDEND REDUCED—HARD DAYS AHEAD

A TYPICAL example of how the "crisis of surplus" confronting the sugar industry is leading to lower profits is provided by the financial results of the Travancore Sugars and Chemicals Ltd. (Managing Agents: Messrs. Parry and Company Ltd., Trivandrum, Kerala) for the year ended 30th April 1961. Although the Company's sugar factory enjoyed a normal crushing season and produced 10,334 tons of sugar from 116,389 tons of sugarcane, as against 9,891 tons of sugar from 119,273 tons of cane in the previous year, its sales realisation suffered a sharp decline from Rs. 164.45 lakhs to Rs. 117.96 lakhs, representing a fall of as much as 28.2 per cent. The main reason for this setback in sales was the policy of controlled releases followed by the Government of India. The Company could, therefore, sell only a total quantity of 8,138 tons, as against 12,508 tons sold in 1959-60. The profit-margin on spirit and pharmaceuticals also was narrower, due to increased competition and higher cost of production, respectively. The gross profit has accordingly suffered a marked setback from Rs. 15.32 lakhs for 1959-60 to Rs. 10.95 lakhs or by as much as 28.5 per cent.

Of the gross profit of Rs. 10.95 lakhs, a sum of Rs. 60,000 goes for Managing Agents' commission (Rs. 1.27 lakh in 1959-60). Depreciation is only a shade lower at Rs. 3.02 lakhs as against Rs. 3.11 lakhs last year. Taxation absorbs Rs. 3.72 lakhs as against Rs. 5.50 lakhs. After these essential provisions, the net profit works out to Rs. 3.59 lakhs, as compared with that of Rs. 5.44 lakhs for the preceding year, the decline being as much as 34 per cent. It will be noted that the recession in net profit is greater than that in gross profit. The Directors have withdrawn Rs. 90,000 from the taxation equalisation reserve in order to equate income-tax depreciation with book depreciation. The amount thus actually available for distribution, together with the sum of Rs. 1.23 lakh, being the unallocated surplus brought forward from the previous year, is Rs. 5.72 lakhs. Of this, a of Rs. 1.55 lakh has been provided for current repairs to plant and machinery and a further sum of Rs. 29,000 has been ploughed back to the capital reserve. The 6.5 per cent (taxable) preference dividend absorbs Rs. 97,500. In the light of lower amount available for distribution, the Directors have felt it necessary to cut the dividend from 10 per cent (taxable) for 1959-60 to 7.5 per cent (taxable) or 5.25 per cent net, for the year under review. This dividend is the lowest on record in the last four years, as will be evident from the following comparative table of progress for the past four years:

(In lakhs of rupees)

	For the year ended 30th April			
	1961	1960	1959	1958
Sale proceeds	1,17.96	1,64.45	1,80.52	1,25.53

Sugar produced (in tons)	10,334	9,891	11,057	8,369
Sugar recovery (%)	8.88	8.29	8.80	8.31

* Subject to deduction of tax.
† After deduction of tax.

In regard to the current policy of controlled releases of sugar followed by the Government, the Company, it is learned, has made a representation to the Government of India. The Directors contend that, in order to relieve the strain on the railway system, the Government of India should release all the sugar manufactured in Kerala first and then only allow sugar from other parts of the country to move into that State. The Government of India has, however, not responded favourably to this appeal. The question pertaining to the price linking formula for cane has also not been settled so far.

Besides sugar, the Company is manufacturing pharmaceuticals and alcohol. It is said that steps are being taken to modernise the distillery. The new still ordered by the Company is expected to be received early in 1962. The Company has also installed a new vertical boiler. While the modernisation of the distillery is proceeding satisfactorily, it is, however, doubtful whether this will bring larger returns to the shareholders, because the ex-distillery price fixed by the Government of India, we are told, has no correlation to the cost of production, at any rate, in the South. The management has made a representation to the Government in this connection, as will be seen from the Chairman's speech published on page 914 of this issue. As regards pharmaceuticals, the Chairman of the Company says in his speech that the Company is thinking of closing down the works, as the Government of Kerala would no longer place its orders for 50 per cent of the Government's requirements of pharmaceuticals with the Company on a cost plus basis as in the past, but would, instead, invite tenders. It seems that the Government of Kerala is unlikely to change its mind, as witness the following remarks of the Chairman:

"If Government will indicate that they would be prepared to reach some accommodation with the Company that would enable the pharmaceutical works to be continued in operation, even on only a modest margin of the profit, the Company's Board would be only too glad to co-operate, but, so far, there has been no indication from Government that this is their wish."

The paid-up capital of the Company, as at 30th April 1961, is Rs. 45 lakhs, comprising Rs. 15 lakhs in 6.5 per cent (taxable) 150,000 cumulative preference shares of Rs. 10 each and Rs. 30 lakhs in 300,000 ordinary shares of Rs. 10 each. The reserves and surplus amount to Rs. 12.38 lakhs. In addition, there are Rs. 8.20 lakhs in taxation equalisation reserve. The Company has no secured or unsecured loans. Its current assets at Rs. 88.99 lakhs (stocks, stores, etc. Rs. 58.17 lakhs, accounts receivable Rs. 28.24 lakhs and cash Rs. 2.57 lakhs) exceed current liabilities and provisions at Rs. 58.95 lakhs by Rs. 30.04 lakhs. The gross block of the value of Rs. 71.92 lakhs has been adequately depreciated to Rs. 35.44 lakhs. It will thus be noted that the financial position of the Company is satisfactory, though the reserves are no more than modest. The Company, it may be noted, is nearly 25 years old.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted at Rs. 9.69 ex-dividend on the Madras Stock Exchange. They yield a net return of 5.4 per cent per annum. It will be a reasonable surmise from the foregoing account of the working of the Company and the various developments connected with it that the shareholders cannot hope to receive higher dividends at least for some years to come. The fact that the shares are quoted at a discount suggests that investors are quite alive to this prospect.

(Concluded from next column)

Rs. 406.16 lakhs and more than fully cover all current liabilities.

With the opening of two new factories, one in Gujarat and the other in Andhra Pradesh, the total number of factories is now 60. The working of the factories, in general, was satisfactory during 1960-61. The work of manufacture and supply of prestressed concrete poles for power transmission also progressed satisfactorily at the Company's Karad factory, especially erected for the purpose. Similar progress has been reported in the fabrication, supply and erection of steel penstocks for the first stage of the Koyna hydro-electric project. The Company has entered into a technical collaboration agreement with Messrs. Giovanola Brothers Ltd. of Switzerland for the execution of the contract for fabrication, supply and erection of steel penstocks for the first stage of the Sharawathi hydro-electric project. The Company has also secured a further order for supply and erection of steel liners for stage two of the Koyna project which will be executed almost simultaneously with the existing contract which is nearing completion.

The present market quotation for the Company's Rs. 100 fully paid ordinary share is Rs. 181.00 *cum-div.* The net return on investment on an *ex-div.* basis works out to 5.4 per cent per annum.

INDIAN HUME PIPE FARES WELL

DIVIDEND, HOWEVER, UNCHANGED

CONSEQUENT on a rise of Rs. 27.47 lakhs in the sale of products, a higher closing inventory and a sharp reduction of as much as Rs. 12.36 lakhs in the cost of raw materials and stores consumed, the gross profit of the Indian Hume Pipe Company Ltd. (Managing Agents: Messrs. Walchand and Company Private Ltd., Bombay), for the year ended 30th June 1961, has staged a smart recovery to Rs. 57.12 lakhs from Rs. 37.88 lakhs during the previous year. This improvement is all the more heartening, since it has been effected after accounting for the actual difference between expenses on and receipts from the pipe-laying contracts undertaken by the Company on behalf of various Municipal authorities. The amount so adjusted against the available profits during the year works out to a debit of Rs. 15.01 lakhs as compared with a debit of Rs. 2.04 lakhs during 1959-60 and a credit of Rs. 0.43 lakh during 1958-59.

Higher gross profit has naturally meant a higher provision for the Managing Agents' commission and taxation. The former has accordingly been raised from Rs. 2.88 lakhs to Rs. 3.85 lakhs and the latter quite substantially by Rs. 9.75 lakhs to Rs. 21.75 lakhs. Provision for depreciation has also been stepped up and claims Rs. 13.95 lakhs as compared with Rs. 8.46 lakhs previously. As a result of these substantially higher provisions, the net profit shows only a modest rise of Rs. 3.03 lakhs to Rs. 17.57 lakhs. Adding to this Rs. 0.71 lakh brought forward and Rs. 0.74 lakh as provision no longer required, the amount available for disposal stands at Rs. 19.02 lakhs. Of this, the Directors have transferred Rs. 2.33 lakhs to the development rebate reserve and Rs. 3.00 lakhs each to the debenture redemption reserve and additional provision for taxation. The total credit during the year to reserves and provisions is thus higher at Rs. 8.33 lakhs, as against Rs. 6.93 lakhs a year ago.

Preference dividends for the year claim Rs. 2.50 lakhs and ordinary dividends absorb Rs. 7.80 lakhs. Although the rate of ordinary dividends has, once again, been maintained at 13 per cent, subject to deduction of tax, it is well to remember that such have become payable on twice the number of equity shares on which dividends were paid during the two preceding years. After the aforesaid appropriation, Rs. 0.40 lakh is being carried forward, as against Rs. 0.71 lakh brought in.

The above salient features of operation of the Company during the year are set forth in the table below with corresponding figures for the previous three years thrown in juxtaposition for the sake of comparison:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sales of products	2,59.71	2,32.24	2,45.63	2,31.08

Transfer from reserves and provisions	0.74	0.38	0.13	0.26
Transfer to reserves and provisions	8.33	6.93	10.96	15.13
Dividends—				
Preference (5%)	2.50†	2.50†	2.50	2.50
Ordinary	7.80 (13%)†	5.62 (13%)†	3.90 (13%)	2.70 (9%)
Carry forward	0.40	0.71	0.84	0.88

* Inclusive of the net difference between expenses on and receipts from pipe-laying contracts.
† Subject to deduction of tax.

The financial position of the Company, as disclosed by its balance-sheet as at 30th June 1961, is strong. The issued and subscribed share capital of Rs. 110.00 lakhs, consisting of Rs. 50.00 lakhs in (5 per cent taxable) cumulative preference shares and Rs. 60.00 lakhs in ordinary shares has a supplement of Rs. 109.38 lakhs a reserves and surplus. Borrowings are higher a Rs. 101.73 lakhs, and other current liabilities and provisions aggregate Rs. 186.29 lakhs. The gross block of Rs. 246.93 lakhs has been written down to Rs. 100.42 lakhs. Current assets, loans and advances, and investments at cost, total

Equity	15,05 (28⅓%)	15,05 (28⅓%)
Carry forward	1,62	1,63

N.B.—Adjustments include the balance brought forward from the previous year.
* Preference dividend calculated at 9.1 per cent. in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act.

Extracts from the Directors' report: The raw jute crop during the year under review proved to be a very short one and to meet this shortage various measures such as purchase of jute on quota basis, reduction in weekly working hours, sealing of additional looms, fixation of maximum prices of jute etc. were introduced. In spite of all these measures the trading results were adversely affected due to restriction in output as well as due to wide disparity between prices of raw jute and finished goods.

In accordance with the working time agreement of the Indian Jute Mills Association the Mills were working 42½ hours a week with 12 per cent of the looms sealed at the end of the year under review.

The current year's working has also been adversely affected due to continued disparity between the prices of raw jute and finished goods. To tide over the crisis created by the shortage of jute additional restrictions on production were enforced by the block closure of Mills for a week each in June and July, 1961. This has naturally caused a substantial loss to the Company. The crop prospects for the year appear to be quite favourable and according to present indications working during the second half of the current year should prove profitable.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	92,50,000	Gross block	3,21,24,274
Reserves and surplus	40,35,566	—Depreciation	1,88,99,274
Other liabilities	2,30,61,254	Net block	1,32,25,000
		Current assets	2,07,55,858
		Investments	12,33,957
		Cash	11,82,005
	Rs. 3,63,46,820		Rs. 3,63,46,820

* Paid-up capital consists of: (a) 40,000—7 per cent. cumulative preference shares of Rs. 100 each and (b) 7,00,000 equity shares of Rs. 7.50 each. Out of the equity shares 3,00,000 shares were allotted as fully paid up by way of bonus shares out of the general reserve.

G. CLARIDGE AND COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at "Brady House," 12/14 Veer Nariman Road, Fort, Bombay, on Wednesday the 29th November 1961, at 11-15 a.m. (S.T.), to consider and if thought fit to pass the following resolutions as Special and Ordinary Resolutions:—

Special Resolution No. I.

"RESOLVED that pursuant to the provisions of Section 360 of the Companies Act 1956, as amended by the Companies (Amendment) Act 1960, the Company hereby accords its approval to the Company entering into contract with its Managing Agents W. H. Brady & Co. Ltd., for the sale and supply to them and for the purchase from them of all movable properties, goods and materials, owned, stocked, dealt in or manufactured by either of them and required by the other of them for the purpose of its business in terms of the draft placed before the meeting and for the sake of identification initialled by the Chairman, to be operative from the 1st day of January 1961, until it is determined by either party by one month's previous notice in writing to the other of them, subject to the conditions that all payments to be made by either of them to the other of them for any such properties, goods and materials, sold, supplied and purchased shall be made within one month from the date of the transaction and that the prices or amounts charged to the Company shall be such as are not less favourable to the Company than the market rates or which are otherwise reasonable."

Special Resolution No. II.

"RESOLVED that pursuant to the provisions of Section 360 of the Companies Act 1956, as amended by the Companies (Amendment) Act 1960, the Company hereby accords its approval to contracts being entered into between the Company and each of the following companies, namely:—

(1) The Empire Dyeing and Manufacturing Company Ltd.

(2) The Brady Engineering Company Ltd.

(3) Morris & Brady Ltd.

who are the associates of W. H. Brady & Co. Ltd., the Managing Agents of the Company, for the sale and supply by the Company to each of them and for the purchase by the Company from each of them of all movable properties, goods and materials, owned, stocked, dealt in or manufactured by the Company, The Empire Dyeing and Manufacturing Company Ltd., Brady Engineering Company Ltd., and Morris & Brady Ltd., and required by the Company from The Empire Dyeing and Manufacturing Company Ltd., Brady Engineering Company Ltd., and Morris & Brady Ltd., or any of them or required by Empire Dyeing and Manufacturing Company Ltd., Brady Engineering Company Ltd., and Morris & Brady Ltd., or any of them from the Company for the purposes of their respective business in terms of the drafts placed before the meeting and for the sake of identification initialled by the Chairman, to be operative from 1st January 1961 and to remain in force until they are determined by either party thereto respectively by one month's previous notice in writing to the other of them, subject to the conditions that all payments to be made to the Company by Empire Dyeing and Manufacturing Company Ltd., Brady Engineering Company Ltd., and Morris & Brady Ltd., or any of them in respect of the movable properties, goods and materials sold and supplied by them or any of them to the Company shall be such as are not less favourable to the Company than the market rates or which are otherwise reasonable."

Special Resolution No. III.

"RESOLVED that pursuant to the provisions of Section 360 of the Companies Act 1956, as amended by the Companies (Amendment) Act 1960, the Company hereby accords its approval to a contract being entered into between the Company and Commerce (1935) Ltd., an associate of W. H. Brady & Co. Ltd., the Managing Agents of the Company, for publication in *Commerce*, a journal of Commerce (1935) Ltd., the advertisements of the Company's products and the Company's notices and other advertisement matters, as also for printing of *Commerce*, an issue of Commerce (1935) Ltd., and also for selling movable property, goods and materials owned, stocked, dealt in or manufactured by the Company in terms of the draft placed before the meeting and for the sake of identification initialled by the Chairman, such contract to be operative from 1st January 1961 and to remain in force until it is determined by either party by one month's previous notice to the other subject to the conditions that the rates charged to the Company for such advertisements shall be the current rates charged by Commerce (1935) Limited to their other clients or which are otherwise reasonable and all payments to be made by Commerce (1935) Ltd. to the Company shall be made within one month from the date of the transaction in respect of movable properties, goods and materials sold and supplied by the Company to the Commerce (1935) Limited."

Ordinary Resolution No. I.

"RESOLVED that pursuant to the provisions of Section 359 of the Companies Act 1956, the Company hereby authorises W. H. Brady & Co. Ltd., the Managing Agents of the Company, to retain all commissions or other remuneration earned or to be earned by them as Agents of Home Insurance Company at any time during the period they continue to act as Managing Agents of the Company in respect of services rendered by them in regard to all contracts of Insurance (Policies) which have been or which may at any time hereafter during the period aforesaid be entered into by the said Insurance Company with the Company, provided always that the amounts charged to this Company in respect of such insurances are at rates which are not less favourable than the market rates or which are otherwise reasonable."

THE EMPIRE DYEING AND MANUFACTURING COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at "Brady House," 12/14, Veer Nariman Road, Fort, Bombay, on Wednesday the 29th November, 1961, at 12-45 p.m. (S.T.), to consider and if thought fit to pass the following resolutions as Special and Ordinary Resolutions:—

Special Resolution No. I

"RESOLVED that pursuant to the provisions of Section 360 of the Companies Act 1956, as amended by the Companies (Amendment) Act 1960, the Company hereby accords its approval to the Company entering into contract with its Managing Agents, W. H. Brady & Co. Ltd., for the sale and supply to them and for the purchase from them of all movable properties, goods and materials, owned, stocked, dealt in or manufactured by either of them and required by the other of them for the purpose of its business in terms of the draft placed before the meeting and for the sake of identification initialled by the Chairman, to be operative from the 1st day of January 1961, until it is determined by either party by one month's previous notice in writing to the other of them, subject to the conditions that all payments to be made by either of them to the other of them for any such properties, goods and materials, sold, supplied and purchased shall be made within one month from the date of the transaction and that the prices or amounts charged to the Company shall be such as are not less favourable to the Company than the market rates or which are otherwise reasonable."

Special Resolution No. II

"RESOLVED that pursuant to the provisions of Section 360 of the Companies Act 1956 as amended by the Companies (Amendment) Act 1960, the Company hereby accords its approval to contracts being entered into between the Company and each of the following companies, namely:—

(1) The Brady Engineering Co. Ltd.

(2) G. Claridge and Company Ltd. and

(3) Morris & Brady Ltd.

who are the associates of W. H. Brady & Co. Ltd., the Managing Agents of the Company, for the sale and supply by the Company to each of them and for the purchase by the Company from each of them of all movable properties, goods and materials, owned, stocked, dealt in or manufactured by the Company, The Brady Engineering Co. Ltd., G. Claridge & Co. Ltd., and Morris & Brady Ltd., and required by the Company from The Brady Engineering Co. Ltd., G. Claridge & Co. Ltd., and Morris & Brady Ltd., or any of them or required by The Brady Engineering Co. Ltd., G. Claridge & Co. Ltd., and Morris & Brady Ltd., or any of them from the Company for the purposes of their respective business in terms of the drafts placed before the meeting and for the sake of identification initialled by the Chairman, to be operative from 1st January 1961 and to remain in force until they are determined by either party thereto respectively by one month's previous notice in writing to the other of them, subject to the conditions that all payments to be made to the Company by The Brady Engineering Co. Ltd., G. Claridge & Co. Ltd., and Morris & Brady Ltd., or any of them from the Company for the purposes of their respective business in terms of the drafts placed before the meeting and for the sake of identification initialled by the Chairman, to be operative from 1st January 1961 and to remain in force until they are determined by either party thereto respectively by one month's previous notice in writing to the other of them, subject to the conditions that all payments to be made to the Company by The Brady Engineering Co. Ltd., G. Claridge & Co. Ltd., and Morris & Brady Ltd., or any of them for any such properties, goods and materials, sold and supplied by the Company to them or any of them shall be made within one month from the date of the transaction and that the prices or amounts charged to the Company by The Brady Engineering Co. Ltd., G. Claridge & Co. Ltd., and Morris & Brady Ltd., or any of them in respect of the movable properties, goods and materials sold and supplied by them or any of them to the Company shall be such as are not less favourable to the Company than the market rates or which are otherwise reasonable."

Special Resolution No. III

"RESOLVED that pursuant to the provisions of Section 360 of the Companies Act 1956, as amended by the Companies (Amendment) Act 1960, the Company hereby accords its approval to a contract being entered into between the Company and Commerce (1935) Ltd., an associate of W. H. Brady & Co. Ltd., the Managing Agents of the Company, for publication in *Commerce*, a journal of Commerce (1935) Ltd., the advertisements of the Company's products and the Company's notices and other advertisement matters, in terms of the draft placed before the meeting and for the sake of identification initialled by the Chairman, to be operative from 1st January 1961 and to remain in force until it is determined by either party by one month's previous notice to the other subject to the conditions that the rates charged to the Company for such advertisements shall be the current rates charged by Commerce (1935) Limited to their other clients or which are otherwise reasonable and all payments to be made by Commerce (1935) Ltd. to the Company shall be made within one month from the date of the transaction in respect of movable properties, goods and materials sold and supplied by the Company to the Commerce (1935) Limited."

Ordinary Resolution No. I

"RESOLVED that pursuant to the provisions of Section 359 of the Companies Act 1956, the Company hereby authorises W. H. Brady & Company Limited, the Managing Agents of the Company, to retain all commissions or other remuneration earned or to be earned by them as Agents of Home Insurance Company at any time during the period they continue to act as Managing Agents of the Company in respect of services rendered by them in regard to all contracts of Insurance (Policies) which have been or which may at any time hereafter during the period aforesaid be entered into by the said Insurance Company with the Company, provided always that the amounts charged to this Company in respect of such insurances are at rates which are not less favourable than the market rates or which are otherwise reasonable."

CHRESTIEN MICA INDUSTRIES LTD. Annual General Meeting, Calcutta, 27th November 1961. Dividend: 15 per cent subject to deduction of tax. Transfer books remain closed from 10th to 27th November 1961, both days inclusive.

ZENITH STEEL PIPES LTD. First Annual General Meeting, Bombay, 27th November 1961. Dividend: *Nil*. Transfer books remain closed from 6th to 27th November 1961, both days inclusive.

CHAMPARUN SUGAR CO., LTD. Annual General Meeting, Kanpur, U.P., 28th November 1961. Dividend: 12 per cent or Re. 1.20 per share, subject to deduction of tax. Transfer books will remain closed from 14th to 28th November 1961, both days inclusive.

BROOKE BOND ESTATES INDIA LTD. Annual General Meeting, Calcutta, 29th November 1961. Dividend: Re. 1.00 per share subject to deduction of tax. Transfer books remain closed from 3rd to 29th November 1961, both days inclusive.

INDIA JUTE CO., LTD. Annual General Meeting, Calcutta, 30th November 1961. Dividend: Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 20th to 30th November 1961, both days inclusive.

MEGNA MILLS CO., LTD. Annual General Meeting, Calcutta, 30th November 1961. Dividend: Re. 1.25 per share subject to deduction of tax. Transfer books will remain closed from 20th to 30th November 1961, both days inclusive.

KOTHARI SUGARS AND CHEMICALS LTD. First Annual General Meeting, Madras, 1st December 1961. Dividend: *Nil*.

TATA CHEMICALS LTD. Twenty-second Annual General Meeting, Bombay, 1st December 1961. Dividend: Re. 0.65 per ordinary share, subject to deduction of tax, payable on and after 4th December 1961.

NATIONAL NEWSPRINT AND PAPER MILLS LTD. Fourteenth Annual General Meeting, Nepanagar, 6th December 1961. Dividend: *Nil*. Transfer books will remain closed from 23rd November to 6th December 1961, both days inclusive.

GREAT EASTERN SHIPPING CO., LTD. The following dividends are recommended for the year ended 30th June 1961:—A dividend of Re. 0.78 per fully paid ordinary share (out of this only Re. 0.20 is taxable; the balance of Rs. 0.58 is to be paid out of reserves of exempt profits under Section 15C.) and a dividend of Re. 0.39 per partly paid ordinary share (out of this only Re. 0.10 is taxable; the balance of Re. 0.29 is to paid out of reserves of exempt profits under Section 15C).

TRACTORS (INDIA) LTD. Taxable dividend of Rs. 3.25 per share, for the year ended 30th June 1961 (*Rs. 3.00 per share, taxable for the year ended* 30th June 1960). Transfer books will remain closed from 24th November to 14th December 1961, both days inclusive.

LOYAL TEXTILE MILLS LTD. Taxable dividend of 6 per cent or Rs. 3.00 per ordinary share, for the year ended 30th June 1961. Transfer books will remain closed from 14th to 28th December 1961, both days inclusive.

MYSORE TOBACCO CO., LTD. No dividend for the year ended 31st March 1961. Transfer books will remain closed from 23rd to 29th November 1961, both days inclusive.

MARIKAR (MOTORS) LTD. Taxable dividend of 25 per cent or Rs. 12.50 per ordinary share, for the year ended 31st March 1961. Transfer books remain closed from 10th to 15th November 1961, both days inclusive.

UGAR SUGAR WORKS LTD. Taxable dividend of 15 per cent for the year ended 30th June 1961. Transfer books will remain closed from 5th to 20th December 1961, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Dividend: An interim dividend of Re. 1.00 per ordinary share, subject to deduction of tax, for the year ending 31st December 1961. Dividends will be paid on and after 27th November 1961. Transfer books remain closed from 6th to 27th November 1961, both days inclusive.

DECCAN SUGAR AND ABKHARI CO., LTD. A final dividend of 13.50 per cent, making a total of 21 per cent, taxable, for the year ended 31st May 1961. Transfer books remain closed from 11th to 27th November 1961, both days inclusive.

BUSY SEASON BEGINS

(From Our Own Correspondent)

BOMBAY, *8th November*

Following a sudden spurt in the demand for funds on account of *Diwali*, the short-term money market turned distinctly firm during the week under review. The busy season, too, has commenced and the upcountry branches of banks are said to have turned to their head offices in the city for accommodation. Local demand also witnessed a substantial increase, as many small firms borrowed funds for making *Diwali* bonus payments to their employees. The call money rate accordingly hardened by ½ per cent to 4½ per cent. The term rates, however, remained unchanged as under:

	Per cent
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 *months*	4

The results of the 91-days' Government of India Treasury bills showed that, as against an invitation for Rs. 2 crores, the amount offered and accepted was the same. The average rate went up slightly from 2.50 to 2.52 per cent per annum. The 91-days' intermediate Treasury bills sold from the 1st to 4th inst. amounted to Rs. 24 lakhs, as against Rs. 35 lakhs last week. This shows that on the eve of the busy season, banks are reluctant to lock up their funds in unremunerative investments. Their sales, however, are being continued from the 8th to the 11th inst.

An expansion of Rs. 22.01 crores is disclosed in notes in circulation, as compared with the previous week, by the statement of affairs of the Reserve Bank of India for the week ended 3rd November 1961. Notes held in the Banking Department, however, went down by Rs. 24.62 crores. Consequently, the total notes issued have contracted by Rs. 2.61 crores only. Foreign securities are unchanged at Rs. 116.86 crores but the total foreign assets at Rs. 137.39 crores have shrunk by Rs. 7.80 crores, on account of the decline in the balances held abroad by that amount. Deposits of the Central Government have fallen by Rs. 1.92 crore, and those of banks by as much as Rs. 12.20 crores. On the assets side, the Reserve Bank's holdings of Government of India Treasury Bills have improved by Rs. 2.07 crores, as compared with a decline of Rs. 9.30 crores last week. Investments are almost unaltered at Rs. 200.84 crores, but other loans and advances, which include advances to scheduled banks, have jumped up by Rs. 12.29 crores.

The statement of affairs of the scheduled banks for the week ended 27th October discloses an expansion of Rs. 7.45 crores in demand deposits and of Rs. 2.14 crores in time deposits. The deposits of the State Bank of India have, however, shrunk by Rs. 1.15 crore. The banks have borrowed Rs. 6.35 crores less from the Reserve Bank of India. Of this decline, borrowings against usuance bills account for Rs. 4.69 crores. Their borrowings from the State Bank of India of demand and time nature have also declined by Rs. 1.53 crore and Rs. 9.49 lakhs, respectively. On the assets side, the gilt-edged portfolio is higher by Rs. 12.04 crores at Rs. 624.93 crores. The investments of the State Bank of India alone rose by Rs. 9.01 crores. Bank credit (advances and bills discounted) has suffered a setback of Rs. 7.41 crores to Rs. 1,225.45 crores. Since the advances of the State Bank have shrunk by Rs. 5.86 crores, it is clear that those of the other scheduled banks must have contracted by Rs. 1.55 crore only.

The gilt-edged market displayed a mixed pattern. There was a tendency for prices of securities yielding lower interest to sag. 4½ per cent State loans and 4 per cent Central loans, however, recorded some gains. The Conversion loan declined further by 15 nP to Rs. 72.25. 3½ per cent 1967, 1968 and 1969 loans each shed 5 nP to Rs. 98.90, Rs. 98.65 and Rs. 98.35, respectively. 4 per cent 1973 was marked down by 10 nP to Rs. 100. But 3½ per cent 1967 (4th National Plan Bonds) gathered 20 nP to Rs. 100.30 and 4 per cent 1972 put on 5 nP to Rs. 100.30. In the State loans section, too, prices of securities carrying a higher interest rate went up. Thus 4½ per cent loans of Maharashtra, Gujarat, Madras and Bihar experienced gains ranging from 20 nP to 50 nP. But 4 per cent loans of Maharashtra and Madras suffered a slight setback.

In the foreign exchange section, the rupee softened a little in relation to the U.S. dollar. The banks' selling and buying rates for ready T.T. on New York were Rs. 475.75 and Rs. 472.25 per 100 dollars, respectively, as compared with Rs. 475.50 and Rs. 472.25 last week. In the New York Exchange, the pound sterling eased slightly *vis-a-vis* the U.S. dollar. The latest available rates are 281.420-281.450 cents per £ for spot and 279.460-279.490 per £ for three months' forward. As compared with the last week's rate, the pound sterling shed 0.06 cent in the spot and 0.05 cent in the forward.

METALS QUIET

(From Our Own Correspondent)

CALCUTTA, *4th November*

On the eve of New Year Day for the business community, quiet conditions were in evidence in the metal market. Copper scrap prices were maintained at around previous levels, i.e., Rs. 484.25 per 100 kgs. for berry quality and Rs. 452.75 for utensil scrap. Although demand was limited, supplies continued to be tight and that explained the firmness of the quotations. On the London Metal Exchange, spot copper opened at £227½ and hardened to £227¾ a ton. Trade circles noted with interest the suggestion of a barter deal with Chile for supplies of Chilean copper against export of Indian engineering goods. That Chile would be interested in such a deal was indicated in that Chilean officials recently discussed this possibility with the Indian Embassy in Santiago. While it is realised that the price of Chilean copper should be compared with that of the U.S., from where India imports copper *now, a point* that should be noted is that the increased freight from Chile to India, as compared to the freight from present sources of supply, would naturally increase the c.i.f. value of Chilean copper in India.

The fall in the price of lead in London from £63¼ a ton to £61¼ within the last fortnight was another development which the trade took note of during the week. The decline followed the realisation that world output was fast increasing and outpacing consumption. In the United Kingdom, consumption in August amounting to 24,816 tons registered a decline of 13 per cent, as compared with the previous month. Consumption including that for August for this year at 242,249 tons showed a decline of 6,376 tons or 3 per cent, as compared with the corresponding previous period. Lower consumption was attributed to the fall in output of cables and batteries in the United Kingdom, while the increased requirements of lead for battery oxides, sheets and pipes failed to compensate the fall in other industries. Further, the U.S.S.R. was believed to be exporting lead in greater quantities and nothing concrete resulted at the recent meeting in Geneva of the lead and zinc study group, which had been convened to devise measures for restricting output. In Calcutta, lead was quiet at Rs. 132.75 per 100 kgs. Electrolytic zinc fell from £71½ a ton to £71 in London. The fall was attributed to rising stocks in the face of decreasing consumption. The British consumption in August was lower by 23 per cent as compared with the previous month. Consumption for the first eight months of this year at 225,908 tons registered a 6 per cent fall. Locally, the quotation was lower at Rs. 279.50 per 100 kgs. Tin London opened at £964 a ton and after easing to £958½ recovered to £972.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, *8th November*

A distinctly steady trend characterised the trading on the bullion exchange this week, which was short by a day on account of Wednesday being a holiday for *Diwali*. Fluctuations were minor and the turnover was restricted. Excepting for a while during mid-week, forward silver managed to stay above Rs. 208 and finished the week with a gain of 50 nP at Rs. 208.40. Spot silver also improved by 50 nP during the week to stand at Rs. 207.15 at the close, with the result that the discount under forward remained unchanged over the week at Re. 1.25. Both arrivals and offtake were smaller than in the past week; the former averaged at 22.5 bars per day and the latter at 4.5 bars.

Gold fared a little better than silver, in that the gain over the week was substantially higher, Re. 1.90 in spot gold (Rs. 123.85) and 70 nP in forward (Rs. 124.80). Sovereign, which had gone up by a rupee last week, moved up further by 75 nP to Rs. 98.75. Following the appreciable rise in spot gold, the discount, as compared with the forward, has narrowed down to 55 nP from Re. 1.75 a week ago. This development was due partly to better offtake and partly to smaller arrivals. Thus, arrivals this week were only 6,000 tolas per day, as against 8,000 tolas last week, while offtake was a little less than 5,000 tolas a day, as against about 4,000 tolas last week.

The speculators were idle during most part of the week, as there were no new developments to affect their sentiment either way. It is, however, noteworthy that bears are not inclined to exploit in their favour the dull conditions and the lack of bullish news. This suggests that the vast majority of speculators do not expect the prices of these two precious metals to go down to any appreciable extent in the near future. On the contrary, they seem to feel that the prospects are in favour of a further gradual appreciation in their value.

This was the predominant feeling during the *Moorat* trading yesterday. While *Moorat* business was small and the whole ring presented a dull appearance, the trend was quite steady in silver and gold alike.

Usually, the bullion market rules a little easy for some weeks after *Diwali* and then the upward trend starts, especially after 15th of January. It would not be surprising, if this pattern were to be maintained in the coming months too.

The following table shows the trend of prices during the week under review:

	7-11-1961 (closing)	High	Low	1-11-1961 (closing)
	Rs.	Rs.	Rs.	Rs.

COTTON FUTURES RECEDE AT CLOSE

(From Our Own Correspondent)

BOMBAY, *8th November*

Firm conditions prevailed in the cotton futures market during most part of the week under review. The firmness was influenced by apprehension of a possible scarcity of raw cotton supplies later in the season in view of the delay, in the movement of new crop. The fear that the crop would not exceed 4.8 million bales and that foreign cotton would not be actually available to mills until the middle of February also imparted strength to the market. Firm advices from the spot market also aided the sentiment. Under pressure of keen buying by investors as well as speculators, the Jarilla March 1962 contract firmed up from Rs. 637.50 last weekend to Rs. 643.50 on Monday. The announcement on the 4th inst., of an import quota for 175,000 bales of foreign cotton stapling 1-1/16" from any area had no bearish effect on the market because the quota was far below expectation and was discounted as too inadequate even as the first quota. The rising trend of futures prices, however, gave rise to fears that the Forward Markets Commission, which is keeping a close watch on developments in the market, would intervene, as it did in the case of oilseeds. This consideration prompted selling on Monday which resulted in a decline of the March contract from Rs. 643 to Rs. 638.75 at close. Limited turnover and narrow price movements characterised business in today's *Moorat* trading. Although trading was fairly active to begin with, reports of slow dealings and small offtake in the cloth market, dampened the enthusiasm of operators. The March contract, after having risen from the opening level of Rs. 642.50 to Rs. 643.50, declined to close at Rs. 641.25, as against the previous day's close of Rs. 638.75. Over the week, the contract shows a net gain of Rs. 3.75.

The trend of price of the contract during the week is indicated below:

1-11-61	*High*	*Low*	7-11-61
638.50	643.50	636.25	641.25*

**Moorat* closing.

The spot market had a short trading period of only three days. It is closed for four days with effect from the 6th inst. on account of *Diwali*. Spinner interest in both old and new crop was active early in the week. Popular varieties such as L.147, 197/3, Co2 and Kalyan were in good demand. The delay in the arrival of new crop led to a hardening of prices of ready lots. Selected styles in short supply were reported to have fetched prices above the ceiling.

The Textile Commissioner has issued a warning to traders that he will not hesitate to undertake random requisitioning of cotton for the mills in areas where the crop has started moving and where it is apprehended that prices will pierce the ceiling. According to a Press note issued by him on the 6th inst., cotton in the hands of both the mills and the trade would be requisitioned, if found necessary, irrespective of the contractual obligations of delivery to mills and steps would be taken to seal off certain cotton areas, freeze the stocks and regulate the movement of cotton therefrom.
