Problems peculiar to specific industries are considered by the Industrial Committees in which the appropriate industrial associations are represented. In the case of plantation industry, for instance, the Industrial Committee on Plantations (which incidentally was the first of such committees to be constituted) has been functioning since 1947. On this body, the Indian Tea Association, the Indian Tea Planters' Association and one or two other Associations in the North-East India represent the tea industry in the North while the United Planters' Association of Southern India represents the plantation industry in South India comprising tea, coffee, rubber and minor products like cardamom.

Policy in the Third Plan

The nation is on the threshold of the Third Five-year Plan, which, *inter alia*, has outlined the labour policy to be pursued in the next five years. The keynote of the policy aimed at a socialist society is to be found in this statement:

"Economic activity has not to be conceived of solely in terms of output and return; the principal test of this would be the good of all those who are engaged in it, the quality and growth of the individual human being and the service and happiness of the entire community. The surpluses that are generated are a social product, to which neither the employer nor the working class can lay exclusive claims; their distribution has to be according to the worth of the contribution of each, subject to the requirements of further development and the interests of all the sections of society, in particular the satisfaction of the basic needs of all its members."

The future of industrial associations would depend on their success in adapting themselves to the objective of the planned society which is envisaged by the Third Plan. In the immediate post-war and post-independence years, labour policy was posited on the theory that the workers being the exploited class were in need of governmental protection from the omnipotent employers—an unfortunate impression which survived in spite of the enlightened and constructive role played by industrial associations. Professor Charles A. Myers in his well-known book on *Industrial Relations in India*, observes: "Although the business federations have helped to create a more favourable climate for private business enterprise in India, one of the major problems still facing Indian business today is the negative and sometimes hostile attitude towards it held by other segments of the community, and even by Government." It is, therefore, a welcome opportunity for private industry that the Third Plan proposes to place industry and labour on the same footing and judge them only by their contribution to the community at large. This is, indeed, a challenge which industrial associations should accept and fulfil with credit.

Defensive Role Alone Not Sufficient

As in other industrialised countries, employers' associations in India were 'combative' in origin, having been formed or strengthened in response to the rise of trade unions. They had the limited purpose of opposing what they considered the undesirable features or defects of various labour measures proposed from time to time. Their duties were primarily to advise members on various labour problems, make unilateral recommendations for the guidance of constituents and represent members in industrial disputes and other cases before the appropriate statutory authorities. This is at best a defensive role, which would be found to be progressively out of place in the future. Industrial Associations must break new ground if they are not to become effete. They should reckon with the fact that, in this shrunken world, all developments in India are bound to be influenced by the trends and innovations in other countries faster than ever before. In the field of industrial and labour relations, the tendency would progressively be to draw on the experience of advanced industrialised countries and adapt techniques and methods such as collective bargaining, arbitration, Joint Consultation, profit-sharing, work study, etc. It would be unwise and even dangerous to brush them aside as fads, for the dynamics of social change has often shown that what was once rejected as fanciful or impracticable had become eminently workable and desirable. Industrial Associations should not fall into the error of self-complacency. On the contrary, they should show initiative and undertake daring experimentation, thereby demonstrating what is really useful and what is worthless. The assertion "It wouldn't work" would carry little conviction. But "It hasn't worked" will be incontrovertible.

Research

Experimentation means continual research. An Industrial Association is better fitted for this task than an individual employer. The best and largest of companies cannot have the sweep or the reach of a large association with a variety of members. The few notable autonomous institutions like the Ahmedabad Textile Research Association and the S.I.T.R.A., Coimbatore, are the exceptions than the rule. The expansion of research in industrial relations and human relations should be pursued for its own sake as one of the principal endeavours of industrial associations.

Research requires expertise which is a scarce commodity. With the growing public sector, there would be acute competition from that quarter for the available experts. It would be sensible under the circumstances for private enterprises to make use of their respective industrial associations for procuring the services of experts for the collective benefit of all members. Talent could be shared at a minimum cost, but to the maximum advantage. The Associations should also maintain close liaison with Universities and other research institutions in the country.

SPECIALISTS FOR FLUSH DOORS & LATEST MODEL BANK COUNTERS

With the shift in emphasis from individual services such as representation in trade disputes to projects of collective utility, Industrial Associations might safely leave members to look after themselves so far as purely local problems are concerned or decentralise such services as much as possible. By effective co-ordination, industrial associations should be able to gather and publish complete statistical data on all aspects of industry. In this connection, the unique example of the Employers' Association in Denmark is worth mentioning. The statistical department of that Association collects and processes all wage data which are then published as the official Government statistics. According to Professor Walter Galenson, "this provides an interesting example of the manner in which the Employers' Association (and the Federation of Labour as well) has been evolving towards the status of a quasi-public institution." Industrial Associations in India should aim at a similar status, notwithstanding the contemporary prejudices and handicaps.

The scope of Industrial Associations would go beyond labour-management relations. Many of the associations started only for the limited purpose of safeguarding commercial interests, but proceeded to tackle labour problems as well. In some cases, the commercial and industrial relations portfolios became bifurcated, the former being dealt with purely by trade associations and the latter by employers' associations. In other cases, the same body continued to look after both branches. In the future, it would be necessary for industrial associations to have a comprehensive view of all aspects of industry, for they are all closely interlinked and would be much more so in a planned economy. Specialisation and an integrated approach should therefore go hand in hand.

Standard-setting and the Like

Standard-setting and policing the observance of standards should be among the important functions of industrial associations of the future. For instance, the Code of Discipline has been ratified by the All-India Employers' Federations who have consequently an obligation to ensure implementation by their constituents. Such responsibilities would progressively increase and associations should prepare themselves to face them.

Effective co-ordination and integration are very essential if Industrial Associations are to be strengthened. At present, in many industries there is more than one association at the same level. At the All-India level also, there are two major organisations of commerce and three organisations of employers. Although there is some formal machinery for mutual consultation, the multiplicity of institutions only results in wasteful duplication. Nothing could be more damaging to the position and prestige of industrial associations than the lack of unity of purpose and approach. Yet instances are not lacking in which employers have spoken in many voices on identical issues at all-India conferences and elsewhere. Co-ordination is also not satisfactory between the various industrial associations and the Central organisations. Early steps should be taken to reorganise and integrate the existing industrial associations and the all-India federations, so that they might play an effective part in the future.

A Goal Worth Aiming

A strong and well-knit structure composed of the various industrial associations would necessarily command respect and attention from the community at large, which, according to the Third Plan, would be the arbiter on all issues affecting the common weal. Industrial Associations could, therefore, stay away from the main stream of national life only at their peril. In their own interest, therefore, they should take a positive interest in all public issues and actively participate in the promotion of public welfare. Under State planning in India which aims at a mixed economy, Government would necessarily play a large part in developing and regulating countervailing power. The different powers and forces will, therefore, have to co-exist and strive towards the achievement of the national aspirations from within their respective areas of action and interaction. To the extent Industrial Associations succeed in playing the role assigned to them, they are bound to be acclaimed as an important segment of the "popular movements," which term is used in the Scandinavian countries to denote all voluntary organisations, including employers' associations, in token of the affection and public esteem in which they are held.

Notice

THE EAST INDIAN COAL COMPANY LIMITED

(Incorporated in England with Limited Liability)

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Ninth Annual General Meeting of the Company will be held at the Head Office of the Company, 4, Clive Row, Calcutta, on Friday, the 13th October, 1961 at 11 a.m. for the following purposes:—

1. To receive and consider the audited Accounts for the year ended 30th April 1961, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in place of the one retiring.
4. To fix the Auditors' remuneration.

Notice is also given that the Share Transfer Books of the Company will be closed from the 29th September to the 13th October, 1961, both days inclusive.

A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of him. A proxy need not be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents & Secretaries.

4, CLIVE ROW,

PRODUCTIVITY AND MANAGEMENT

SOME MISCONCEPTIONS AND MISUNDERSTANDINGS

By J. B. Soutar

"IN the final analysis, the level of productivity of a country determines its national wealth and *per capita* income and standard of living of the people."

This is an important statement, to which we are so accustomed by now that most of us probably accept it without question.

"Higher productivity is not an end in itself but a means of promoting social progress and strengthening the economic foundations of human well-being."

This assertion removes productivity from its usual commercial connotation, but again we are probably conditioned to agree that productivity is a factor of great social significance.

Productivity is one of the key words of our times, and, therefore, it is a pity that there are so many misconceptions as to what it means.

Misunderstandings lead to the opposite, but equally erroneous, reasonings that workers must base their case for higher wages on higher productivity, and that an increase in productivity justifies a demand for more wages.

Definition

It will be noted that the misunderstandings which I have cited are both in the context of relation of productivity to the particular case of wages, whereas this article began with very wide generalisations on the subject of productivity, and it is from the restriction of the meaning of "productivity" to "productivity of labour" that wrong conclusions result.

Formally, the word "productivity" stands for the ratio between the "output" of wealth produced, in the form of goods and services, and the "input" of resources used up in the process of production. In the broadest concept, productivity may be taken to constitute the ratio of all available goods and services to the potential resources of the group, community or the country.

From these statements one is tempted to take refuge in Benjamin Disraeli's aphorism, "I hate definitions," and to leave the whole thing to professional economists, but that temptation should be resisted.

An important consequence of the difficulty of understanding what productivity means, in its broad and fundamental sense, is that attention is directed to the limited, and apparently easier, concept of productivity of labour. Thence one can progress by easy stages, first to forgetfulness of the other very important factors concerned in productivity, and, secondly, to the idea that all that matters in productivity is the productivity of labour. Very serious trouble arises once this conclusion is reached, which can be explained with reference to the theories of the economists of whom I hopefully said that we should remain independent.

Locke and Marx

In the classical school of British economists, Locke first outlined the theory that private property could be defended on the ground that a man was entitled to that to which he had given value by his labour, and the British school thus made labour the criterion of value.

Marx, and other champions of labour, seized upon this theory of value, and turned it to ends which its sponsors had not foreseen. For, if the value of a commodity was due to the labour which had gone into it, why, they asked, should not the whole value be paid to the men who had produced the commodity?

Marx's theory of "surplus value" is often taken to be his distinctive contribution to economic theory, although all that he did was to say that the part of the whole value of a commodity which was not paid to the worker who produced it was fraudulently taken from him in the guise of "profit."

In the first volume of Capital Marx argues that, as profit is created solely by surplus value, and as labour is the sole value-producing agency, the rate of profit will depend on what he calls the "organic composition of capitals," that is, the proportion of labour (variable capital) to machinery (constant capital) employed in a given undertaking; and that it will thus tend to fall as technological improvements lead to the employment of less labour.

Yet although this conclusion logically follows from its premises, it is demonstrably false in practice. Marx was aware of the difficulty, and referred to it in a letter to Engels in August 1862. But he did not face it at the time, and set it aside for further treatment. There the matter rested until 1883, when he died.

This fallacious theory of value is the cornerstone of the Marxist economic system.

Keynes has described *Capital* as "an obsolete economic textbook . . . not only scientifically erroneous, but without interest or application for the modern world."

However, if the greatness of a book is to be measured by its influence, *Capital* must be accepted as one of the most important ever written, and it will be seen that the prevalent idea that the productivity of labour is all-important is an obvious extension of the Marxian fallacy that a worker must be paid the full value of the commodity which he produces.

Value of Good Management

A number of things begin to fall into place when the implications of this situation are considered. Good management is not, generally speaking, accepted by Government and by public opinion in India as "a means of promoting social progress and strengthening the economic foundations of human well-being." Why should it be so considered, if the function of management is looked upon as solely to provide a structure and organisation within which labour can exercise its exclusive function of productivity? If management's functions are thus misunderstood, it is easy to follow why it is thought that private business can be taken over and run with equal efficiency by bureaucrats, or, for that matter, by committees of workers with Government support.

The mechanistic theory that manual labour is, in the last resort, the only productive resource, is now discredited in advanced industrial countries as an eighteenth century superstition.

An example is the concentration of Soviet economic effort on the creation of heavy industry, while their political emblem remains the hammer and sickle.

The truth is that increased production, in a modern economy, is never achieved by muscle effort. It is, in fact, never achieved by the labourer. It is always the result of doing away with muscle effort, of substituting something else for the labourer. One of these substitutes is, of course, capital equipment, that is, mechanical energy.

At least as important but unexplored is the increase in productivity achieved by replacing manual labour, whether skilled or unskilled, by educated, analytical, theoretical personnel—the replacement of 'labour' by managers, technicians and professionals, the substitution of 'planning' for 'working.' The basic factor in an economy's development is not the 'rate of capital formation' to which the economists give so much value, but the rate of 'brain formation,' the rate at which a country produces people with imagination and vision, education, theoretical and analytical skill.

Importance of Managers

Recent studies show that the productivity differential between Western Europe and the United States is not a matter of capital investment. In many European industries capital investment and equipment are fully equal to those of America; yet productivity is as much as two-thirds below that of the corresponding American industry. The only explanation is the lower proportion of managers and technicians and the poor organisational structure of European industry with its reliance on manual skill.

Mr. J. R. D. Tata has something very pertinent to say in his speech as Chairman of Tata Engineering and Locomotive Co., Ltd., for the year 1960-61:—

"It should be noted that it took the Company some fifteen years of hard work to achieve its present stage of maturity and efficiency. There is a tendency in our country to believe that the establishment of new industries requires little more than the provision of the necessary buildings, plant and equipment, and to criticise the lack of immediate results. We have ourselves had our share of such criticism. Enterprises such as ours are not, however, made up merely of buildings and machines. These are the mere bones of industry; the flesh, muscles, blood and nerves essential to productive effort, which in industry are represented by materials and money, management and staff, take nearly as long to build up as it takes for a child to develop into a grown and productive human being. Productivity and efficiency can be achieved only step by step with sustained hard work, relentless attention to details and insistence on the highest standards of quality and performance. I trust that this important aspect of industrial growth will not be ignored in the implementation of the great plans of industrial development on which the country has embarked."

It may well be that it is the refusal to accept that "sustained hard work, relentless attention to details and insistence on the highest standards of quality and performance" by management is essential to improvement in productivity which results in the poor record of growth of the Indian economy shown in the World Economic Survey and the Economic Survey of Europe in 1960.

Of 19 underdeveloped economies, India's growth rate, at an average of 3 per cent from 1950 to 1959, is, with that of Egypt, second from the bottom of the list.

All managers know from their experience in negotiating on labour matters in India, how little attention is paid to pleas for "the highest standards of quality and performance."

I would not wish it to be thought that I am endeavouring to turn the Marxian fallacy inside out and to show that labour, as a material resource, has no potential for adding to productivity. What I do wish to say is that that potential lies in recognition of the fact that many rank-and-file jobs are in effect managerial in their nature. When the managerial function in any job is identified, and steps taken to free initiative and planning in execution of the managerial function in the job, the way is opened for increase in productivity.

Management is Not Parasitical

It follows that an important feature of management, at all levels, is to manage managers. We are now getting away from the old idea, still tenaciously held in this country, that all that is required to make an enterprise out of resources is to put them together in logi-

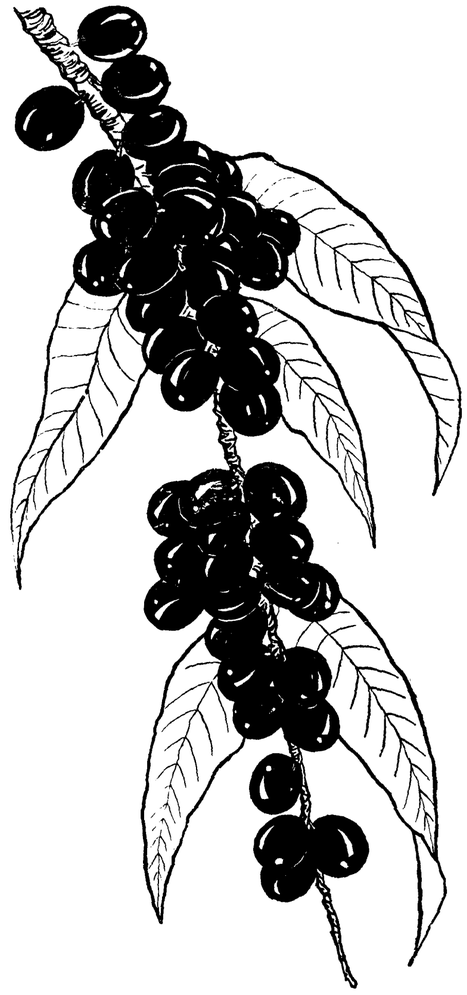
COFFEE LANDS AND INDUSTRIES (MYSORE) LTD.

AND OTHER PRIVATE PROPERTIES

Acreage: The Company owns 7,173 acres of Coffee and 913 acres of Minor Produce situated in North and South Coorg.

The Management of Coffee Estates in Coorg and Mysore is undertaken.



Pioneers in Plantations

One of the largest groups of planting companies in South India today lies within the Peirce Leslie & Company Limited fold. Resources, experience and skill have combined in PL & Co. to command wide confidence. The diversification of interests from fertilisers to estate stationery has firmly emphasised that PL & Co., are now part of the planter's life. Tea, rubber and coffee interests are blended in the PL & Co. group.

The Rupee companies that Peirce Leslie & Co. Ltd., look after as Managing Agents are:

The Perla Karamalai Tea & Produce Company Limited; The Ouchterlony Valley Estates (1938) Limited; The Kil Kotagiri Tea and Coffee Estates Company Limited; Chembra Peak Estates Limited; The Cochin Malabar Estates Limited; Kumergode Estates Limited; The Kalasa Tea & Produce Company Limited.

Peirce Leslie & Co. Ltd., are also Secretaries and Treasurers of: The Savamalai Estates Limited; The Thirumbadi Rubber Company Limited; Cowcoody Estates Limited and Lingopur Estates Limited.

cal order and then open the factory gates.

Management, in its relation to productivity, is not just passive, adaptive, behaviour. The concept that success in business means rapid and intelligent adaptation to events occurring outside, in an economy shaped by impersonal, objective forces, has to be abandoned. Management is not parasitical, nor is its contribution purely the shifting of resources to more productive use. What is needed is a transmutation of resources, and the resources capable of enlargement can only be human resources. To make a whole that is greater than the sum of its parts requires the directed, focussed, united effort of free human beings.

This means that another function of management, that of managing workers and work, is a highly important one.

Management, and management alone, can provide to the worker motivation, participation, satisfactions, incentives and rewards, leadership, status and function. These requirements can only be satisfied through work and within the enterprise, and management is the directing force of the enterprise.

How does a manager manage a business, manage managers, and manage workers and work, while balancing and harmonising these three major functions?

A Thought-provoking Quotation

Mr. Peter F. Drucker, in his remarkable book "The Practice of Management" gives the following as the basic operations in the work of a manager:

"A manager, in the first place, sets objectives. He determines what the objectives should be. He determines what the goals in each area of objectives should be. He decides what has to be done to reach these objectives. He makes the objectives effective by communicating them to the people whose performance is needed to attain them.

"Secondly, a manager organises. He analyses the activities, decisions and relations needed. He classifies the work. He divides it into manageable activities. He further divides the activities into manageable jobs. He groups these units and jobs into an organisation structure. He selects people for the management of these units and for the jobs to be done.

"Next a manager motivates and communicates. He makes a team out of the people that are responsible for various jobs. He does that through the practices with which he manages. He does it in his own relation to the men he manages. He does it through incentives and rewards for successful work. He does it through his promotion policy. And he does it through constant communication, both from the manager to his subordinate, and from the subordinate to the manager.

"The fourth basic element in the work of the manager is the job of measurement. The manager establishes measuring yardsticks—and there are few factors as important to the performance of the organisation and of every man in it. He sees to it that each man in the organisation has measurements available to him which are focused on the performance of the whole organisation and which at the same time focus on the work of the individual and help him do it. He analyses performance, appraises it and interprets it. And again, as in every other area of his work, he communicates both the meaning of the measurements and their findings to his subordinates as well as to his superiors.

"Finally, a manager develops people. Through the way he manages he makes it easy or difficult for them to develop themselves. He directs people or misdirects them. He brings out what is in them or he stifles them. He strengthens their integrity or he corrupts them. He trains them to stand upright and strong or he deforms them."

Every one of these categories can be divided further into sub-categories, and each of the sub-categories could be discussed in a work of its own. The work of the manager is complex, and everyone of its categories requires different qualities and qualifications.

Qualities Required of A Manager

What makes a manager? The standard definition is that a man is a manager if he is in charge of other people and their work. That definition is too narrow. The first responsibility of a manager is to the enterprise of which he forms a part. His relations with his superior are as essential to his performance as are his relations and responsibilities to the people under him.

Another definition—though one that is usually implied rather than given formal expression—is that importance defines a manager. But in the modern enterprise no one group is more essential than another. It is not importance, but function, that differentiates the various groups within an enterprise.

The most common concept of what defines a manager is rank and pay. This is not only wrong, but it is destructive. Unless we can give adequate pay to engineers and scientists, salesmen and statisticians, as examples, and can provide for them status, dignity and self-respect, we will simply not be able to manage the ever-increasing numbers of such specialists who must be employed if productivity is to be increased.

What a manager is can be defined only by his function and by the contribution he is expected to make. The one contribution he is uniquely expected to make is to give others vision and ability to perform. It is vision and moral responsibility that, in the last analysis, define the manager.

In fulfilling his responsibility in all these varied ways to the enterprise which employs him, it will be appreciated that the good manager is the prime factor in increasing productivity, and that every restriction which is placed on his activities, so long as these activities are fulfilled with integrity, is a deterrent to increased productivity.

Conversely, a manager who interprets his function as that of merely keeping men at work is not a manager at all. However he deals with them, all the operations in Mr. Drucker's list present themselves to a manager as challenges, whether he knows it or not, and, if he fails to meet these challenges, he is depriving the economy of the country of an increase in productivity.

A Recognition Long Overdue

Public recognition of the value of good management is, in my submission, long overdue. Management has, so far, been treated in India as a "necessary evil" by reason of a faulty appreciation of what its functions are. It is my argument that poor management constitutes a bottleneck which will stultify all attempts to increase productivity, and that good management can create a torrential increase in productivity if it is encouraged to do so. If increases in productivity are to be obtained, a fundamental change in the approach to production is necessary, and an essential to that approach is that management must be recognised as the most important factor affecting production. Management can no longer just be permitted to survive on sufferance.

On the other hand, it is the duty of management to do everything it can to fulfil its responsibilities. Nothing less than a very high standard of performance can possibly be accepted, in view of the onerous nature of these responsibilities.

If public recognition of the value of good management is accorded, with all that that implies in the field of Government policy making, and if management takes advantage of this "New Deal" to invigorate business enterprise while contributing to the stability, strength and harmony of society, the way lies open to an increase in productivity which will release a cumulative process of improvement in conditions of human welfare.

LABOUR PRODUCTIVITY

"It is believed by many that the increase in production achieved by the (plantation) industry is due largely to labour. This is, of course, a labour-intensive industry and might give the impression that labour is responsible for the rise in output. On the other hand, many of us who are concerned with the future of the industry are distressed about the steadily falling output of work by our labour. Increased production has been achieved by greater bush productivity. In a survey which was recently made, we found that we have been applying more capital resources and the output in relation to each invested rupee was falling not rising. This is, indeed, a disturbing trend, although it is generally also true of manufacturing industries in the country."—H. C. KOTHARI, *President, U.P.A.S.I.*

FUTURE REQUIREMENTS OF RAW RUBBER IN INDIA

HEAVY INCREASE EXPECTED—TIMELY EXPANSION NEEDED

By S. P. MALHOTRA, M.A.

PLANTATIONS generally take 5 to 7 years before the trees or the plants start bearing fruits. Since rubber belongs to this category, it is essential to estimate well in time its demand at some future period, so that timely action is taken to augment its supply. An attempt has been made here to estimate the requirements of raw rubber—natural, synthetic and reclaimed—in India at the end of 25 years. The demand for rubber is a derived demand, since it is utilised in the manufacture of a variety of industrial goods. These goods consist of (1) tyres and tubes of all kinds, (2) rubber footwear, and (3) miscellaneous goods. The last category consists of abonite rod and sheet, latex-foam cushioning and sponge, hoses of all types, belts, water-proof rubberised fabrics, etc. Demand for rubber at the contemplated period will depend on the rate of expansion expected in these industries.

Although rubber is used for manufacturing various goods, listed above, it is principally the transportation industry such as motor vehicles, bicycles, etc. which has been responsible for placing a heavy demand on it. It is estimated that 65-70 per cent of the total consumption of raw rubber in India is accounted for by this industry alone.

Rubber footwear industry probably comes next in importance, its share being 15 per cent of total consumption. These two industries combined, therefore, take away a major portion of rubber consumed in the country. The remaining 15-25 per cent is consumed for the manufacture of miscellaneous goods mentioned above.

Steady Rise in Demand

Internal consumption of rubber has risen steadily. Whereas prior to 1939, India was exporting 50 per cent of her raw rubber out of a meagre total production of 14,000 tons, she is today importing an equivalent of the home production, namely, 24,000 tons.

Table I below shows the rate of growth in the production of rubber industries during the first and second Plan periods, and the targeted increase for some of these industries during the coming 5 years:

TABLE I

	Percentage increase in		
	1956 over 1950	1960 over 1956	1965 over 1960
1. *Tyres*—			
(a) Automobiles ..	47.0	42.3	124.7
(b) Bicycles	90.0	70.9	187.0
2. *Tubes*—			
(a) Automobiles ..	31.6	47.6	195.3
(b) Bicycles	51.6	116.3	129.7
3. Rubber footwear ..	130	17	Not available
4. Miscellaneous goods* ..	93	30	Do.

* Increase in weighted index on the basis of production.

Automobile Industry

During the last decade, production of automobile tyres and tubes has gone up by 109 and 94 per cent, respectively, as against 47 and 32 per cent during the first Plan and 42 and 48 per per cent in the second Plan period. However, the third Plan envisages a considerable step up in the rate of production of these goods. This is natural, since, in India, there exists a vast scope for road transport. Even if we presume that, by 1985, the country may be able to have a well spread out network of railways, there is hardly any likelihood of any competition between the two. It is, indeed, becoming rather difficult to cope with the increasing demand for both of them. It is estimated that about 20 million tons of long distance traffic generated during the second Plan could not be carried by the railways. This gap is bound to increase rapidly, as industrial development in the country gets into stride. There will still be left areas, which, for long, will depend only on road service.

The additional purchasing power expected to be generated during the coming two and a half decades is likely to make a heavy demand both on goods and passenger transport. On the basis of Road Development Plan for India, the long distance traffic would grow to more than five times the present traffic.

Besides this, more than 600 million tons will have to be carried over short distances. All this would need an annual production of 250,000 trucks against the present figures of 12,000.

An increased demand for motor transport will also increase the demand for rubber required in the manufacture of tyres and tubes. In addition to increase in income and employment, the rapid pace of urbanisation and spread of metalled roads in rural areas may also help in expanding the demand for road transport. This trend may be further accentuated by the commercialisation of agriculture.

As for the motor vehicles, their number increased by 20 per cent during the first Plan. In order to meet the requirement of greater demand for transport which will be generated because of higher tempo of development, it may be estimated that, by 1985, we will require about 3,000,000 automobiles as against 600,000 required by the end of the second Plan.

Increase in the number of automobiles works out to 400 per cent over the 1961 level. Tractors for agricultural purposes during this period will also go up. Similar may be the position with regard to animal driven vehicles. If even half of the existing iron-tyred carts are converted to pneumatic ones, the demand for rubber on this account will show a 400 per cent rise. Thus, the production of automobile tyres and tubes may increase at the rate of 16 per cent per annum during the next 25 years. This increase may be expected, in view of the fact that the rate of increase per annum is estimated to go up from 8 to 12 per cent and 9 to 25 per cent in the case of automobile tyres and tubes, respectively, during the third Plan.

With all the anticipated expansion in the automobile industry, tractors and carts etc., a minimum increase of 400 per cent in the consumption of rubber can be expected during the next 25 years period. In absolute terms, the total consumption of rubber for these items by 1985 comes to 160,000 tons.

Bicycle Industry

The demand for bicycle, the cheapest means of personal transport, has increased considerably during the recent past. With the increased number of bicycles on road, replacement demand for tyres and tubes has also gone up. Home production of bicycles in India during the 10 years of post-independence decade has multiplied 13 times. Along with this, the production of cycles tyres and tubes during the last decade has also gone up by about 224 and 228 per cent, respectively.

The demand for cycles on account of urbanisation and road development is likely to go up further during the coming 25 years. The minimum that may be expected is that the mancycles ratio in India may reach near about 20 by 1985 as against 80 in 1956 and 58 in 1960-61. This would mean that there would be over 40 million cycles on road by 1985 as compared with the second Plan target of the order of 6 millions.

If the number of cycles on road by 1985 is 40 million, annual production of new cycles by that year should be of the order of 5 million. The requirements of bicycle tyres and tubes would then be about 60 million, against an annual production of 31 million during the third Five-year Plan—10 million each of tyres and tubes would be required for new cycles and 50 million each for replacement purposes at the rate of 1.5 (tyres and tubes) per year. Thus, the cycle industry would require roughly 35,000 tons of raw rubber.

Footwear

Another item of importance from the point of view of consumption of rubber is the rubber footwear. The production at the end of the second Plan was 42 million pairs. With more of purchasing power being made available to an average Indian, an upward trend can be expected. If the masses are enabled to purchase footwear, the first preference is no doubt for durable and economical but not fancy material. In spite of this, the market for cheaper goods such as rubber footwear is likely to expand appreciably; more so in a country like India where most of the people do not have any type of shoes at all. Prejudice of some people not to wear leather footwear may also favourably affect the production of rubber footwear.

Production of rubber footwear went up by about 170 per cent during the years 1950 to 1960, but a considerable expansion occurred during the first Plan, the percentage increase in production as revealed in Table I being 130, as against only 17 per cent increase during the second Plan. The slow progress during the later period is attributed to the non-availability of raw rubber in the country. But, in estimating the demand for some future period, it is imperative to assume that there will be no shortage of the basic raw material.

In the light of all this, it may be expected that demand for rubber shoes in the coming 25 years may go up by about 10 per cent per annum or 250 per cent by 1985.

Rubber footwears are also exported in large quantities while imports are negligible. Exports of rubber footwear during the past few years have been quite encouraging. The whole of South East Asia, Middle East and East Africa, is a potential market where larger quantities can be exported. Some exports were also made to Norway and Belgium in recent years. It may not be possible to lay down any specific target for export of footwear after 25 years, but the possibility of a sufficient expansion in this direction cannot be ruled out.

As in the case of home consumption, exports of rubber footwear may also go up by about 250 per cent. This industry is estimated to have consumed about 7,000 tons of raw rubber at the end of second Plan. The demand for 25 years hence may be of the order of 30,000 tons.

Miscellaneous Rubber Goods

This head which accounts for the manufacture of various types of rubber goods, mentioned earlier, is estimated to have consumed 11,000 tons or 20 per cent of raw rubber in 1960.

The demand for these items is directly related to the industrial progress of the country. Prior to first Plan, most of these goods were not produced in the country. That is why the index of these goods, with base year 1950, went up rapidly during the first Five-year Plan, by about 93 per cent. But the pace during second Plan, with base year 1956, slowed down. Firstly because most of these goods were being produced in the country and, secondly, production of a few goods such as vacuum hoses and rubber components of railway fittings which were found to be below standard declined during the second Plan. The index of miscellaneous goods thus went up by only 30 per cent. For the future, it is assumed that this handicap will be overcome.

Huge expansion in the development of major industries, particularly steel and coal, is going to enlarge the scope for the production of conveyor and transmission belting, V-belts and other mechanical products. Expansion in the automobile industry will put a corresponding demand for latex foam cushioning and sponage. Several specialised items which are not manufactured in India at present are also likely to be taken up.

The country today has reached a state of self-sufficiency in most of the rubber products. The industry will now have to turn its attention increasingly to exports.

Since India has the geographical advantage of having no other advanced manufacturing country nearby, our cost of distribution of finished article will be far cheaper as compared with consignments from the U.S. or Europe. The supply of labour is also plentiful here which may help in making the cost of production competitive. Now that the Indian factories are replacing worn-out and out-of-date machinery, the industry will be well set for any competition.

In the light of all this, a 250 per cent increase in production in this sector is a minimum that can be expected. This would mean that the demand for raw rubber for the manufacture of these miscellaneous items may go up from 11,000 tons in 1960 to 40,000 tons in 1985.

The total demand for raw rubber by 1985 thus comes to 265,000 tons as shown below:

Raw Rubber Targets for 1985

	1960	1985	Percentage rise in 1980-1981
	(Thousand tons)		
Transport Industry—			
Automobile and others ..	32	160	400
Bicycle	7	35	400
Rubber footwear	7	30	328
Miscellaneous	11	40	250
Total ..	57	265	365

Consumption of raw rubber in India, in 1960 was estimated at 57,200 tons. During the last decade, consumption increased by 160 per cent. It is estimated that, by the end of third Plan, we will require about 94,000 tons of rubber. Estimated demand at the end 1965 represents 183 per cent increase over demand in the second Plan period. Our production at the end of third Plan would be about 95,000 tons, consisting of 45,000 tons of natural rubber and 50,000 tons of synthetic rubber. In addition to this, about 20,000 tons would be available from the reclaimed rubber. But the thing is that we will not be in a position to absorb this much quantity of synthetic rubber, since, at present, we are consuming hardly 11 per cent of synthetic rubber. Except for the U.S., where synthetic rubber accounts for 55 per cent, percentage consumption of this rubber ranged between 22 and 24 per cent in case of other industrially advanced countries such as Germany, U.K. and France. Thus, some of the synthetic rubber will have to be exported to the South East Asian Countries and in its place natural rubber will have to be imported.

Rubber experts are of the view that of the total consumption of rubber, 30 per cent will be the minimum in natural rubber. Thus, considerable reliance will to be placed on the reclaimed and synthetic rubber.

All this means that India should aim at the production of at least 85,000 tons or more, if possible, of natural rubber by 1985. Since a rubber plant takes about 8 years before it can become productive, a decision about the future plantation programme has got to be taken now. It is estimated that the production area under rubber at the end of the third Plan would be of the order of 300,000 acres. Distribution of this area under different varieties and age is given in Table II below:

TABLE II

Area planted under different varieties, replanted areas, area required to be replanted

(Acres)

Period	Area planted				Area replanted	Area needed to be replanted
	Ordinary unselected seedlings	Clonal seedlings	Budded plants	Total		
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Before 1938 ..	92,034	407	7,510	99,951	1,908	..
1938 to 1958..	120,989	46,269	32,791	200,049	21,918	..
Total..	213,023	46,676	40,301	300,000	23,826	78,033

Of the total area of 300,000 acres, more than 200,000 acres is under ordinary unselected varieties, clonal seedlings and budded plants accounting for the remaining 90,000 to 100,000 acres only. As many as 105,000 acres of the total area came under new plantations during the years 1954-58. But nearly 55 per cent from this also was under the ordinary varieties. When the yield of ordinary varieties is less than one-third of the improved ones, all new plantations should be of improved types. There is actually no purpose in planting new areas under ordinary varieties. The third Plan programme aims at the planting of 120,000 acres of new areas. Of this, 105,000 acres are in Kerala alone and only 13,600 acres in Andamans. Before this programme is launched, we must make sure that we have sufficient seedlings of improved varieties to cope with this programme. Annual requirements of the clonal seedlings should be worked out and a provision made for the supply of the same. Timely attempts should be made in this direction so as to augment production and ensure that sufficient supply of raw rubber is made available to our expanding industries.

19 SEP 1961 PUBLIC DEPARTMENT

Notice

THE BURRAKUR COAL COMPANY LIMITED

NOTICE OF INTERIM DIVIDENDS

AT A MEETING OF THE BOARD HELD ON the 31st August, 1961, the Directors have decided to pay the following Interim Dividends subject to deduction of tax in respect of the Company's financial year ended 30th June, 1961.

ON 1st Preference Shares at the rate of Rs. 4.55 per cent.

ON 2nd Preference Shares at the rate of Rs. 2.66 per cent.

The above Dividends will be paid on or after 7th October, 1961 to those Shareholders (or their mandatees) whose names appear in the Company's books as the registered shareholders of the above shares on 16th September, 1961.

The Share Transfer Registers of the Company will be closed from 13th September to 16th September 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, *31st August*, 1961.

With Best Compliments from

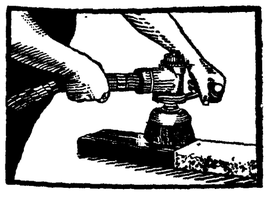
MESSRS. JAY SHREE TEA & INDUSTRIES LIMITED

Owners of

Sholayar T. E. (Coimbatore)
Kallyar T. E. (,,)
Merchiston T. E. (Kerala)
Towkok T. E. (Assam)
Nahor Habi T. E. (,,)
Risheehat T. E. (Darjeeling)

Woodcrafts, Assam (Mariani)
Jay Shree Plywoods (West Bengal)
The Jayshree Chemicals & Fertilisers (West Bengal)

"SCCO"



For removing heavy scale from large metal surfaces, such as rust, old paint, and incrustations giving the metal renewed surface for painting, etc. These cup brushes are used on high speed flexible shafts electric or pneumatic tools and can be driven at higher speeds being of sturdier construction than the lighter crimped wire types. A good friend for Foundry man.

PEOPLE ARE TALKING ABOUT LIC

With LIC's mounting business turnover, comes a steady increase in its premium income. A large part of this income is invested in the country's economy—averaging more than Rs. 1½ million every day.

These investments stimulate the economy, creating new wealth. By helping to finance industries LIC catalyses more jobs, more incomes and more goods.

Today there is increasing recognition everywhere of the part which LIC is playing towards domestic and national stability.

ASP/LIC-8-24

ROLE OF TEA IN INDIA'S ECONOMY

STATISTICS FOR 1960 ANALYSED

INDIA can look forward to a substantial increase in its exports of tea in the coming years; the crop position during 1961 has been quite good, a "very hopeful pointer" to better export. This was the note of optimism struck by the Chairman of the Tea Board, Mr. A. S. Bam, at Madras last week. While this forecast is encouraging, it must be stressed that its materialisation will depend to a great extent on the Government's policy, especially in regard to taxation on tea. In view of the vital role played by tea in the country's economy, the industry has a right to expect fair treatment at the hands of the authorities. Tea is the largest earner of foreign exchange, next only to jute manufactures. The actual value of exports during the calendar year 1960 was Rs. 121.05 crores, which represented as much as 20 per cent of the aggregate exports of all commodities, amounting to Rs. 634.39 crores. Besides being an earner of precious exchange, the tea industry contributes to the Central Exchequer sizable sums of money by way of export duty (Rs. 12.00 crores in 1960-61) and excise (Rs. 7.65 crores) and gives direct employment to more than a million persons; the daily average of labourers employed in the industry was 980,238 in 1958 and 1,004,257 in 1957.

The need for utilising the vast potentiality of tea as foreign exchange earner by enabling the industry to weather the growing competition in world markets is urgent. The past few years have witnessed a distinct setback to export trade in tea. The quantity actually shipped during 1960 was 195.11 million kgs. (1 kg.=2.2 lbs.), valued at Rs. 121.05 crores, as against 214.32 million kgs. (Rs. 126.39 crores) in 1959 and 237.48 million kgs. (Rs. 142.82 crores) in 1956, according to *Tea Statistics* 1960, published by the Tea Board.* The drop in foreign exchange earnings from tea exports during 1960 as compared with the year preceding it would have been steeper but for the rise in the average value of teas exported, from Rs. 5.90 per kg. in 1959 to Rs. 6.20 per kg. in 1960.

Losing Ground

India is steadily losing ground in the world tea map. This point was well brought out by Mr. J. N. A. Hobbs, Chairman of the Periakaramalai Tea and Produce Company Limited, in his speech at the last annual meeting of the Company. He said:

"Competition from the new tea producing areas of Africa, coupled with a lack of appreciation by Government of the value of propaganda in popularising tea overseas, have contributed to the loss of markets long regarded as outlets for Indian tea. It is pertinent to mention that, during the past ten years, the production of Ceylon, Africa and other tea producing has increased by nearly 40 per cent, but the Indian output rose by 20 per cent only. World shipments increased by nearly 30 per cent during this period, but the proportionate increase is no more than 8 per cent in the case of India.

"The Planning Commission has set a production target of 900 million lbs. (and an export target of 610 million lbs.) during the third Plan which compares with 694.2 million lbs. produced in 1960 and 714.5 million lbs. in 1959. But expansion of the size envisaged requires a great deal of funds and the industry does not possess the necessary finance. If fresh investments are to be attracted, it is essential that they are made more remunerative. At present, the profitability of the industry has been hampered by high taxation which also contributes to making the Indian commodity uncompetitive in foreign markets. The Central budget for 1961 increased the excise duties for tea, and reduced the export duty from 53 nP per kilogram to 44 nP per kilogram with the declared object of encouraging exports. It would appear, however, that any benefit out of the reduction in export duty went to the foreign buyer and not the producer."

The decline in tea exports during 1960 was due to some extent to the fall in output. The total quantity actually gathered in that year was 325.96 million kgs., as against 320.40 million kgs. in 1959. The fall was accounted for entirely by production in North India which was lower by 12.74 million kgs. at 242.20 million kg., whereas that in South India was higher by 7.18 million kgs. at 78.20 million kgs. The setback to N.E. Indian tea crop was due to a prolonged draught during the early part of the year which also resulted in a marked deterioration in quality. Since both quality teas and common teas were in short supply, the prices realised were appreciably higher. The trend of tea output in different States for the past four years is shown in the following table:

(In million kgs.)

States	1960	1959	1958	1957
Assam	157.58	171.05	171.16	161.36
W. Bengal	81.36	80.11	76.19	75.40
Kerala	38.17	35.60	37.03	35.56
Madras	37.37	33.01	34.75	32.82
Tripura	2.11	2.48	2.41	2.09
Mysore	1.69	1.53	1.66	1.55
Punjab	1.01	1.03	1.03	1.10
Uttar Pradesh ..	0.94	0.95	0.81	0.74
Himachal Pradesh	0.13	0.15	0.12	0.08
Bihar	0.04	0.05	0.07	0.10
Total	320.40	325.96	325.23	310.80

How Indian production and exports of tea during the years 1959 and 1960 compare with the other tea producing countries is indicated in the following table:

(In million kgs.)

Country	Production		Export	
	1960	1959	1960	1959
India	320.40	325.96	195.11	214.32
Of which:				
N. E. India ..	242.20	254.94	155.60	175.56
S. India ..	78.20	71.02	39.51	38.76
Pakistan	19.03	25.93	1.83	5.85
Ceylon	197.18	187.39	185.88	173.95
Indonesia	45.44	43.74	36.14	32.34
Kenya	13.78	12.64	11.60	10.60
Uganda	4.67	4.43	3.98	3.39
Tanganyka ..	3.72	3.70	3.34	2.86
Nyasaland	11.83	10.56	11.13	10.18
Mozambique ..	..	..	7.37	7.99
China	N.A.	152.86	47.63	46.27
Formosa	18.05	16.96	N.A.	14.37
Malaya	..	..	1.61	1.72
Japan	N.A.	79.48	9.81	7.68
Brazil	N.A.	—	0.76	0.80

Tea exports from India to traditional consumer countries such as the U.K., the U.S. and Canada are declining owing to increased competition from other exporting countries. Fortunately, however, some of the countries in West Asia appear to have been taking greater interest in Indian teas. The table below shows the trend of actual shipments from India to the major importing countries in the past four years:

(In million kgs.)

	1960	1959	1958	1957
United Kingdom	122.18	128.17	150.10	136.86
Irish Republic ..	6.24	7.46	7.19	8.82
Netherlands ..	1.43	1.53	1.29	0.86
U.S.S.R.	10.25	12.41	11.47	7.23
Afghanistan ..	3.36	2.59	1.28	0.68
Iraq	2.14	1.66	0.05	0.02
Iran	3.55	3.45	5.45	4.51
Kuwait	0.94	1.05	1.24	1.45
Turkey	2.43	4.75	3.73	3.23
Egypt	14.38	11.70	11.58	7.63
Sudan	3.93	10.72	6.33	1.98
Canada	7.00	7.27	8.64	7.66
U.S.A.	8.60	10.73	11.56	10.59
Australia	2.43	2.88	3.31	3.58
New Zealand ..	0.67	0.74	0.53	0.74
Other countries ..	5.58	17.21	5.75	5.15
Total ..	195.11	214.32	229.50	200.79

The table clearly brings out the importance of the U.K. for Indian tea. What are the prospects of retaining this major market for our tea in the context of the U.K.'s move to join the Common Market? The observations of Mr. Hobbs mentioned above are worth being recorded here, as they are quite relevant to the question:

"During the past few weeks, we have seen a lot in the papers about Britain's entry into the European Common Market. The crux of the whole question, as far as we are concerned, is the extent to which Indian exports of tea to the U.K., valued at Rs. 75 crores, and amounting to about 70 per cent of total exports, would be effected if we have to deal with the U.K. as a member of the Common Market. It must be realised that the U.K. is by far the largest consumer of Indian tea, whereas consumption in the E.C.M. countries is relatively small. It may well be that, if Britain becomes a member of the E.C.M., a tariff will be placed on our teas, and this may affect prices to some extent. However, our main worry would be on the competitive aspect of our teas and, in this respect, there are not likely to be any serious repercussions, as the major suppliers of tea to the U.K.—namely, Ceylon, Pakistan, Kenya, Uganda and Tanganyika—are all in the Commonwealth and would be similarly affected. The future will, therefore, depend mainly on the concessions which the U.K. is able to obtain from the E.C.M. for Commonwealth produce, such concessions being in the nature of *quid pro quo* for the concessions which the Six have already allowed to the produce of their own Colonies and Associates. The result could, perhaps, be that tea prices in Europe would be reduced and consumption in these countries increased. If so, that would be a most welcome result in the light of our increasing production.

"It has been argued that, since the U.K. is a confirmed tea drinking country, an import duty will not make much difference to the tea consumption there and that, in any case, India will be no worse off than her Commonwealth competitors. This tends to overlook the question as to whether India would be able to maintain its present level of sales to the U.K. by retaining a high export duty in India, while a fairly high import duty may be imposed in the U.K. In this respect, East Africa, in particular, may gain some advantage over India by virtue of there being no export duty on tea in that country.

"This brings me to what I consider to be a matter of prime importance, namely, publicity and propaganda for our teas. For too long we have relied on traditional habits to sell our teas in Britain, but the pattern is now changing. Production is increasing rapidly in other countries, and they are sparing no effort to widen their markets. As can be seen from the figures I have mentioned earlier, India is already getting left behind in the race. Although the Government has recently taken certain steps to promote publicity in the U.K., no time must be lost in stepping up the tempo of Indian tea propaganda, and it will be of vital necessity to conduct an intensive campaign in the E.C.M. countries—especially if tariffs are reduced and tea drinking in Europe becomes cheaper than it is today."

Demand for Tea

There is a good scope for augmenting tea exports from India, provided the quality and price compare favourably with those of other supplying countries. An idea of the demand for tea in other countries can be had from the following table which gives the tea imports for consumption in various countries:

(In million kgs.)

	1960	1959	1958	1957
United Kingdom ..	220.84	217.70	252.13	253.23
United States ..	51.78	49.11	46.56	46.00
U.S.S.R.	28.12	29.03	25.58	20.87
Australia	28.46	26.76	26.40	27.52
Egypt	20.34	19.42	22.89	15.73
Canada	19.44	20.26	19.82	20.83
Iraq	17.77	15.50	12.29	13.27
South Africa ..	13.86	12.54	13.26	12.46
Ireland	9.80	10.09	8.67	12.51
Netherlands ..	9.06	8.99	8.95	8.09
Iran	8.55	9.39	11.62	13.32
New Zealand ..	7.21	6.98	7.45	7.93
Arabia and Bahrein	7.12	5.35	6.43	4.78
W. Germany ..	6.42	6.38	6.26	6.09
Italy	1.51	1.44	1.31	1.05
Denmark	1.26	1.16	1.28	1.20

It may be noted, in this connection, that the total world supply of tea during 1960 was 702 million kgs., while total absorption was 701 million kgs., thus leaving a surplus of one million kgs., according to the provisional estimate prepared by the International Tea Committee. The table below gives the relevant details:

(In million kgs.)

	1960	1959	1958	1957
Supply—				
Production ..	613	615	615	584
Export	89	85	77	79
Total supply ..	702	700	692	663
Absorption—				
U.K.	229	228	235	232
Other importing countries ..	306	301	299	288
Producing countries ..	166	165	160	156
Total absorption	701	694	694	676
Balance	1	6	—2	—13
Closing stocks at the end of the year	37	36	30	32

The world's biggest consumer of tea is the U.K. Its actual consumption in 1959 is estimated at 498.38 million lbs., the *per capita* consumption being 9.57 lbs. The other important tea consuming countries are India, Japan, Eire, U.S.S.R., Russia, Canada, Australia, New Zealand, Egypt, Libya and Iraq. The actual total consumption and *per capita* consumption of tea in these countries as well as in a few others during 1959 is indicated below:

Countries	Total consumption (In thousand lbs.)	*Per capita* consumption (In lbs.)
India	254,026	0.63
United Kingdom	498,380	9.57
Eire	22,236	7.85
Netherlands	19,821	1.75
Denmark	2,557	0.56
West Germany	14,083	0.27
Iraq	34,162	5.18
Iran	20,710	1.06
Saudi Arabia	6,450	1.07
Pakistan	41,410	0.48
Ceylon	28,479	1.26
Japan	160,730	1.73
U.S.A.	108,261	0.61
Canada	44,663	2.55
Chile	19,234	2.64
Union of South Africa ..	27,639	1.88
Libya	6,587	5.63
Morocco	20,247	1.93
Egypt	42,805	1.89
Sudan	20,690	1.87
Tunis	9,875	2.48
Australia	58,985	5.86
New Zealand	15,338	6.58
U.S.S.R.	64,000	0.31
Fiji Island	817	2.16

It will be seen from the above figures that the *per capita* consumption of tea in India is rather low. The total consumption of tea, however, has steadily gone up in recent years, from 79 million kgs. in 1954-55 to 109 million kgs. in 1958-59 and 115 million kgs. in 1959-60. The total domestic consumption of tea in the calendar year 1960 is estimated at about 120 million kgs. The annual average increase has been of the order of 6 million kgs. which may be expected to be more marked in the coming years, what with the rising population and the higher demand for hot beverages as a result of the improvement in living standards.

Tea Auctions

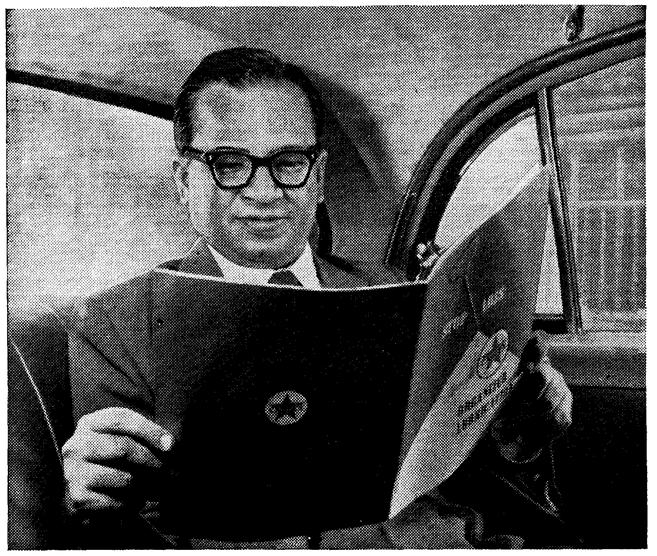
The total quantity of tea sold at Cochin during 1960 was higher at 32.1 million kgs., as against 26.8 million kgs. in 1959. The average price per kg. obtained during 1960 was lower at Rs. 4.71 for export leaf and Rs. 4.02 for internal leaf, as against Rs. 4.82 and Rs. 4.36, respectively, in 1959, while that of internal dusts was higher at Rs. 4.31, as against Rs. 3.96. At the London auctions, 59.9 million kgs. of North Indian teas and 16.9 million kgs. of South Indian teas were sold, the corresponding figures for 1959 being 83.4 million kgs. and 15.3 million kgs., respectively. The average prices per kg. obtained were higher at 10s. 10.49d. and 8s. 9.09d., as against 10s. 8.02d. and 8s. 2.02d. The total quantity of tea sold at Calcutta auctions during the 1960-61 season was 98.0 million kgs. (105.5 million kgs. in 1959) for export, the average price being Rs. 5.34 per kg. (Rs. 5.05 in 1959-60). About 37.6 million kgs. (39.0 million kgs. in 1959-60) were sold for internal consumption at an average price of Rs. 5.11 for internal dusts and Rs. 4.30 internal leaf (Rs. 4.66 and Rs. 3.96 in 1959-60).

The total area under tea crop in India as on 31st March 1960—more recent figures are not available—was 329,153.78 hectares (0.40468 hectare=1 acre), of which North India accounted for 2,55,173.60 hectares and South India for 73,980.18 hectares. The area under tea in the different States was 160,390.41 hectares in Assam, 82,289.79 hectares in West Bengal, 39,693.40 hectares in Kerala, 32,484.25 hectares in Madras, 5,215.79 hectares in Tripura, 3,763.16 hectares in Punjab, 2,369.72 hectares in Uttar Pradesh, 1,802.53 hectares in Mysore, 724.72 hectares in Bihar and 420.01 hectares in Himachal Pradesh. The average yield per hectare is higher in India than elsewhere, being 990 kgs. (the figure relates to 1959), as against 799 kgs. in Ceylon, 814 kgs. in Pakistan, 787 kgs. in East Africa and 606 kgs. in Indonesia. The average yield of 990 kgs. for 1959 compares favourably with 955 kgs. secured in the years 1956 and 1957.

The total number of tea estates in India registered with the Licensing Committee as on 31st March 1960 was 8,923, of which more than half—4,604 to be precise—was in the Madras State. The number of estates in other States was 1,723 in Kerala, 1,159 in the Punjab, 791 in Assam, 300 in West Bengal, 226 in Himachal Pradesh, 56 in Tripura, 47 in Uttar Pradesh, 13 in Mysore and 4 in Bihar.

Tea Statistics 1960. Issued by the Statistics Branch, Tea Board of India, 14, Brabourne Road, Calcutta 1. Price: Rs. 2. Pages: 126. The publication contains 93 tables and 12 charts. Five tables are devoted to the most important items of information collected through the random sample surveys conducted by the Statistics Branch during 1960. The tables included in this article have been compiled on the basis of figures given in the publication.

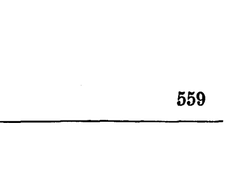
TOP MANAGEMENT FINDS OUT



HOW TO STOP LOSS THROUGH ORGANIZED LUBRICATION

Alert leaders of industry are fast realising that organized lubrication can increase production, extend machine life and reduce down time... vital factors that make for increased production and profits.

The new Caltex booklet "STOP LOSS through ORGANIZED LUBRICATION" discusses specific benefits of organized lubrication and shows how Caltex Lubrication Engineers can help you effect real savings in your maintenance costs.



Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

SAVING AND INVESTMENT IN INDIA

RESERVE BANK'S ESTIMATES FOR 1950-59

AUTHORITATIVE estimates of saving and investment in India in the period 1950-51 to 1958-59, prepared by the Division of Development and Planning of the Economic Department of the Reserve Bank of India, are contained in the latest (August, 1961) issue of the Bank's *Bulletin*. The earlier estimates made for the period 1950-58 and published in the *Bulletin* in March last year have been revised in the latest estimates in the light of fresh data which have since become available. The sector-wise estimate of the volume of national saving covers the three sectors—Government, Domestic Corporate and Household; the Household sector is broken up into Rural Household and Urban Household sectors. Table I-A in this article gives the relevant estimates of savings for each year in the period 1950-59 at current prices; Table I-B gives the estimates at constant (1948-49) prices so as to correlate them to the national income series at constant (1948-49) prices. The aggregates in the latter table are more meaningful, as they provide an idea of the variations in saving, from year to year, in real terms. When they are correlated to figures of real national income in the respective years, the results appear as follows:

Year	National Saving as per cent. of National Income at constant prices
1950-51	6.7
1951-52	5.1
1952-53	6.0
1953-54	5.7
1954-55	7.1
1955-56	9.1
1956-57	8.8
1957-58	7.2
1958-59	7.7
Average Saving-Income ratio for the period 1950-59	7.1

The major findings of the study are represented by the above figures of saving-income ratios for the economy as a whole and by the sector-wise aggregates of saving at current and constant prices in Tables I-A and I-B. The researchers of the Reserve Bank have not claimed a hundred per cent accuracy for the estimates, for the data on which these estimates are based are known to be inadequate. For instance, the estimates of saving of the Central and State Governments are based on their respective income accounts. But these basic data suffer from the limitation that the classification of receipt and expenditure items as between the current account and the capital account is not precise. Secondly, the saving estimates of the Local Authorities are based on surveys which are not comprehensive. Thirdly, the depreciation allowances for the corporate sector (private and Government) are taken from their respective accounts and may not reflect the actual depreciation of assets on the basis of their replacement costs. Moreover, the data regarding assets, including inventories, of both these sectors, are also taken from their respective accounts and include valuation changes. Fourthly, the saving estimates of the non-financial corporate sector are based on sample studies of their accounts and these samples may not be truly representative of the respective sectors. Fifthly, some of the liquid and financial assets of the household sector, too, are estimated partly on the basis of such sample studies. Particularly some of the assets of the household sector are estimated on the basis of data which were collected for a different purpose, and on the basis of survey results which are not comprehensive and, in some cases, are available only for one year and are subject to important limitations. Lastly, the accounting years of the different units belonging to the Government as well as the private corporate sector are different, and the survey results, too, are not available uniformly for the financial year; in all such cases, the accounting as well as the survey year data are assumed to hold good for the financial year. While referring to these limitations of the data on which the saving estimates have been based, the authors of the Reserve Bank's study have also admitted that certain arbitrary estimation procedures have had to be adopted. Accordingly, they say, no precision can be claimed for the estimates. The estimates, in their view, are likely to be much more reliable for a period of years than for any single year.

Apart from the limitations of the basic data used in the estimates, the latter themselves are by no means complete. This is what the authors say:

"These estimates do not include the household sector's saving in the form of inventories in agriculture and trade, non-monetised investment, and consumers' durables. Further, the saving in the form of urban non-corporate investment is probably underestimated because of the particular estimation procedure adopted. On the basis of such fragmentary information as is available, and taking a qualitative view, it appears that the aggregate saving-income ratio may be about *two* percentage points higher than that estimated in this study, if these items of saving are also fully taken into account."

In other words, the average saving-income ratio for the economy as a whole in the period 1950-59 may be taken to have been around 9 per cent. Of course, the average saving-income ratio for the period, based on the incomplete estimates, is only 7.1 per cent. But neither this average for the whole period nor the year-to-year ratio is quite meaningful. So the whole period 1950-59 has been conveniently divided in the study into three sub-periods of three years each. As the saving-income ratios are presented for these sub-periods, namely 1950-53, 1953-56 and 1956-59, comparisons of trends in such periods become more meaningful. Such a division into sub-periods has also the advantage that the data for the last three years of the first Plan—years when the development programme had gathered momentum—can be compared with the data for the first three years of the second Plan. The marginal saving-income ratio, that is, the rate of saving out of additions to income, has also been calculated for each of the two latter periods with reference to the preceding period. But the marginal ratios, the authors of the study have taken the precaution to emphasise, merely seek to describe the relationship between saving and income as it existed during the period with reference to a base period. No predictive value is, therefore, attached to these ratios. The aggregate and sector-wise average saving-income ratios in terms of percentages are given below:

	1950-59 (Whole period)	Sub-period I (1950-53)	Sub-period II (1953-56)	Sub-period III (1956-59)
Government sector	9.7	13.5	7.4	8.8
Domestic Corporate Sector	35.8	34.2	41.0	32.5
Household Sector	5.8	4.3	6.3	6.7
(i) Rural Household	2.6	2.6	2.6	2.7
(ii) Urban Household	14.1	9.5	16.0	16.9
Aggregate saving	7.1	5.9	7.3	7.9
Aggregate Marginal Saving-income Ratio	..	..	19.1	14.5

The above figures call for some explanation. The income-estimates for each sector, on the basis of which the saving ratios for the corresponding sector have been worked out, have been made in the following manner:

(1) For the Government sector, the data in respect of current revenue for the Central as well as the State Governments are obtained from the relevant Budget papers. The Reserve Bank's profits retained for the purpose of operating the National Agricultural Credit Funds are added to the income of the Central Government. For the State Governments, their income is estimated by deducting from their current revenue the grants-in-aid and such other contributions from the Central Government. (The manner in which the current income of local authorities and the disposable income of Government companies have been estimated is also explained in the study).

(2) The disposable income of the corporate sector is estimated on the basis of the current accounts of the constituent units of the sector. From the total disposable income of the corporate sector, the disposable income of the subsidiaries of foreign companies is deducted to derive the income of the domestic corporate sector.

(3) The income of the household sector is estimated on the basis of figures of private income given by the Central Statistical Organisation in its *Estimates of National Income*. From this private income, retained earnings of the domestic corporate sector and branches and subsidiaries of foreign companies, as well as taxes paid by the corporate sector are deducted; the disposable income of the household sector is then estimated by deducting direct taxes paid by the household sector from its income.

(4) Within the household sector, the disposable income of the rural household sector is obtained by adding to the estimated rural consumers' expenditure the saving of the rural household sector; the urban household sector's disposable income is also derived in a similar manner. For this purpose, the entire household sector's consumption expenditure is first estimated by deducting its saving from its disposable income; its consumption expenditure is then divided into the consumption expenditure of the rural household sector and that of the urban household sector on the basis of the proportion of rural consumers' expenditure to the urban consumers' expenditure as estimated from the relevant *National Sample Survey* data.

The sector-wise saving-income ratios are otherwise self-explanatory. The variations in the figures from one period to another may be noted. The two figures which call for comment are 19.1 per cent (being the aggregate marginal saving-income ratio in Sub-Period II with reference to Sub-Period I) and 14.2 per cent (being the aggregate marginal saving-income ratio in Sub-Period III with reference to Sub-Period II). The substantial fall in the ratio in the first three years of the second Plan, as compared with the ratio in the last three years of the first Plan, probably signifies that the rise in prices and costs of living in the first three years of the second Plan had stood in the way of saving a larger proportion of the additions to income in that period, as compared with the preceding period. But neither the trends relating to marginal saving-income ratio nor the ones relating to average saving-income ratio have been projected in the Reserve Bank's study to provide an insight into the future. The reasons for not doing any projections are given in the following paragraph:

"No attempt is made to estimate either the average or the marginal saving-income ratio by fitting a trend on the basis of the saving and income estimates, for the following reasons. Firstly, the number of observations is quite small; for such a short period, it is hardly possible to attach much meaning to trend-fitting, especially in view of the considerable year-to-year fluctuations. Secondly, the year-to-year estimates themselves are admittedly not quite reliable; any trend, therefore, on the basis of these year-to-year estimates can hardly be meaningful."

Still the authors have ventured to suggest that the marginal saving-income ratio may well be higher in future. Their reasons for this view are to be found in the following passage:

"The distribution effects of gestation lags in future would be progressively smaller and may even disappear if the lags become shorter: they would, in fact, be shorter as, with more experience, the avoidable lags would be eliminated. Further, the food prices are not likely to rise as much as they did in period III, if the more recent trends in agricultural output continue, and in view of the larger stocks. The marginal saving-income ratio may, therefore, be expected to be higher in future than in period III."

As for investment in the period 1950-59, the study has made some estimates. Here aggregate investment is defined as the increase in the aggregate reproducible capital stock of an economy. It is derived by adding the estimated capital-inflow from abroad (as worked out from the balance of payments statistics) to the estimated saving. The estimates of aggregate investment at current as well as constant (1948-49) prices are given below:

Year	Aggregate investment (Saving + net capital inflow) (In crores of rupees)		Investment as per cent of National Income (at constant prices)
	at current prices	at constant prices	
1950-51	607	564	6.4
1951-52	693	633	7.0
1952-53	550	530	5.6
1953-54	583	553	5.6
1954-55	714	765	7.4
1955-56	951	998	9.5
1956-57	1,349	1,313	11.9
1957-58	1,273	1,217	11.2
1958-59	1,347	1,246	10.7
1950-59 Annual Average	—	869	8.5

The sub-period classification in the study shows that the average investment-income ratio has risen from 6.3 per cent in Sub-Period I to 7.5 per cent in Sub-Period II and 11.3 per cent in Sub-Period III. It may be recalled here that the saving-income ratio, on the other hand, has risen from 5.9 per cent in Sub-Period I to 7.3 per cent in Sub-Period II and just 7.9 per cent in Sub-Period III. The steep rise in the investment-income ratio of the third sub-period corresponding to the first three years of the second Plan is explained chiefly by the large volume of foreign aid during that period.

It would be interesting to make a brief comparison of the main findings of the Reserve Bank's survey with those of the National Council of Applied Economic Research which published in May last its monograph *Saving in India* in the ten-year period 1948-58. The estimates of the two bodies are not strictly comparable, for the following reasons:

(1) In the N.C.A.E.R. study saving at constant prices has been estimated on the basis of 1952-53 prices, whereas in the Reserve Bank's study the estimates have been done in terms of 1948-49 prices.

(2) In the Reserve Bank's study the estimates do not include the household sector's saving in the form of non-monetised investment in agriculture and trade, whereas in the N.C.A.E.R.'s study the latter type of saving has been estimated at least partially.

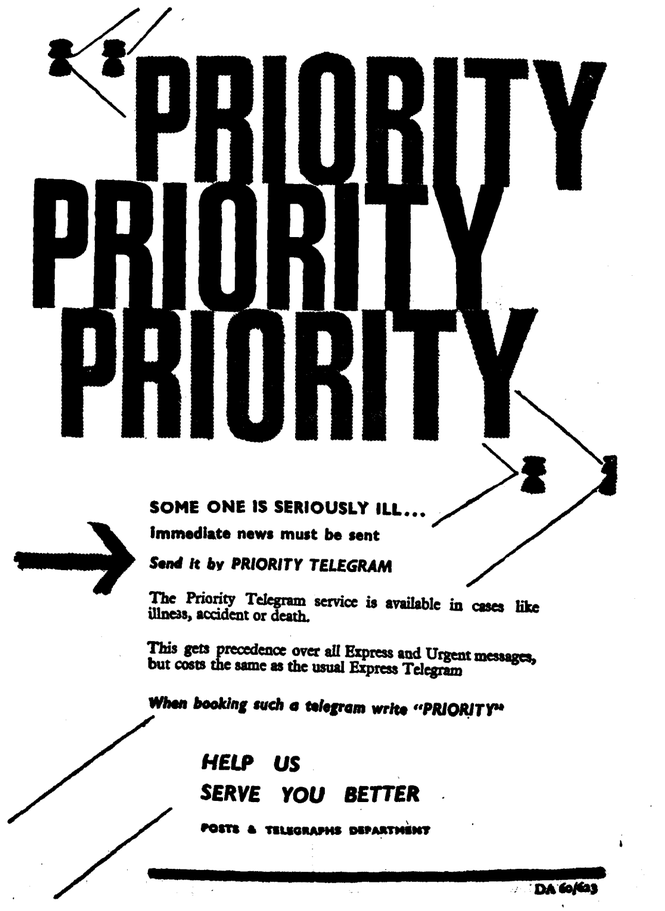
The N.C.A.E.R.'s finding is that the saving-income ratio for the economy as a whole was about 9 to 10 per cent in the first two years of the second Plan. The marginal annual saving-income ratio in the early part of the second Plan period, according to the N.C.A.E.R., "appears to be in the neighbourhood of 20 per cent, which may be compared with the marginal saving-income ratio of 17.3 per cent worked out in the Reserve Bank's study for the first three years of the second Plan in comparison with the first Plan period. Since the period for calculation of the ratio and the base reference period are not uniform in the two studies, the two ratios are not strictly comparable. However, in one respect, namely, corporate saving-income ratio, the estimates in the two studies happen to be more or less the same, being an average of 32 per cent in the first three years of the second Plan according to the Reserve Bank's study and around an average of 30 per cent in the first two years of the second Plan according to the N.C.A.E.R. study. Both the studies recognise the limitations of their estimates due to data deficiencies, but provide a basis for further research on the subject.

I.D.A. CREDIT TO REPUBLIC OF CHINA (TAIWAN)

The International Development Association (I.D.A.) has extended a development credit amounting to the equivalent of $4.4 million to the Republic of China for financing the expansion and improvement of water supply facilities in Taipei, the capital of Taiwan, and in eight suburban communities. The credit is for a term of 50 years, interest-free. It is repayable in foreign exchange, amortisation beginning, after a ten-year period of grace, that is, on 15th March 1972. Thereafter, 1 per cent per annum of the principal will be repayable for 10 years and 3 per cent each year for the final 30 years. A service charge of ¾ per cent per annum on the amounts withdrawn and outstanding will be made to meet the I.D.A.'s administrative costs.

The proceeds of the credit will be re-lent by the Chinese Government to the Taipei Water Works an agency established under the jurisdiction of the Taipei City Municipal Council to supply water in the Taipei area. The Taipei Water Works will repay this loan to the Chinese Government over a period of 23 years, on conventional terms. Water rates to be charged to consumers will be sufficient to cover operating costs, debt service and a portion of future expansion costs. The project provides for a river water pumping station and pipeline, a new filtration plant with an estimated capacity of 200,000 cubic metres per day, reservoirs at two sites, a substantial increase in the distribution system, and at least three new deep wells. The credit will cover about 38 per cent of the total cost of the project, estimated at the equivalent of about U.S. $11.4 million. Goods financed by the I.D.A. credit will be procured on the basis of international competitive bidding.

This is the third credit to be extended to the Republic of China by the I.D.A., bringing the total commitments to $10.3 million. The previous two credits, for tubewell irrigation and harbour dredging projects, were signed on 30th August 1961.



NEW PUBLICATIONS

The New Issue Market and the Stock Exchange. By A. K. Sur. Published by the author through the Indian Institute of Social Welfare and Business Management, Calcutta. Pages: 179. Price: Rs. 12.50.

THERE seems to be some obvious confusion in defining the scope of this book between the author and Dr. B. C. Roy who has contributed a foreword. The West Bengal Chief Minister has introduced the book as the outcome of a research project undertaken by the Indian Institute of Social Welfare and Business Management, Calcutta, to enquire into the question whether the new issue market, which has so far had a very smooth run, would continue to enable the public and the private sectors to raise the funds required by them. Mr. Sur, however, has preferred to make only modest claims and has clearly indicated in his preface that this work is based upon the author's previous work on the subject—dating back to 1949—but that he has taken every care to bring the study up-to-date. In the latter objective, he has only partially succeeded.

This book is at best a reasonably clear description of the evolution of the new issue market in India and of the utility of stock exchanges in fostering investment habits. Familiar and beaten track has been covered and a substantial part of the book is elementary in character. This is regrettable, as the book is said to have been written by one who has been introduced as "India's foremost authority on the subject." This is neither a full-fledged book on the Indian Capital Market nor a penetrating analysis arising out of intensive research on any one of the individual aspects of it.

Part I of the book deals with the various aspects of the new issue market; thus the sources of demand for and supply of funds, the role of the institutional investors like Banks, L.I.C., Provident Funds, etc., are discussed in a comprehensive way. This is followed by a description of the types of securities marketed and of the purposes, methods and techniques of new issues. There is also a review of the trends in new floatations over the past decade. The author points out that, despite the progress made in the field of underwriting, thanks to the L.I.C., I.C.I.C.I. and I.F.C., one cannot quite yet aver that an integrated new issue market has already come into operation in this country; the real test of progress in this direction lies in the support of institutional and professional underwriters which the market can get even at times of recession in stock values.

While discussing the role of the L.I.C. in the long-term capital market, Mr. Sur shares the opinion held in several financial circles that the present law relating to the investment of life insurance funds is very stringent and argues that, if only this law is relaxed, the L.I.C. can supply larger amounts of venture capital to private business and industry. But Mr. Sur has not offered any concrete suggestion about the direction in which such relaxation can be made. On the other hand, he seems to have fully understood the limitations of following any bolder investment policy. He concedes that the L.I.C. *has* to invest its funds in such a way as to secure the maximum yield consistent with the security of such funds and gives his tacit approval to the cautious investment policy pursued by the Corporation since the Mundhra Scandal of 1957. In this part of the discussion, if one looks for an examination of the suggestion made by the 134th Report of the Estimates Committee of the Parliament that the Government itself should take over the entire investible funds of the L.I.C. as an "unfunded debt," one will be disappointed.

In the paragraph on finance corporations (page 45) it is stated that such corporations do not have to deal with funds received from the public. The author seems to have missed the point that State Financial Corporations are empowered to receive long-term deposits from the public and that, in fact, in Kerala and Madras some progress in this direction has already been made.

On Provident Funds, all that is stated in the book (page 47) is that the bulk of the funds of recognised provident funds has been invested in Government bonds and that they have not any role to play in the new issue market for corporate securities. With the rapid expansion of compulsory provident fund schemes, more and more funds are mobilised every year from the private sector and an issue which could have been usefully examined by the author is whether the investment law regarding provident funds should be amended not to ensure the flow of some of these funds to private business but also to give a better yield to the contributors.

Part II of Mr. Sur's book deals with the Stock Exchange and contains basic information about the utility of a stock exchange, the constitution of stock exchanges in India, the functions of a stock exchange, its internal organisation, trading practices, etc. One is surprised to see that among the measures listed for controlling excessive speculation on the stock exchanges, there is no mention about the role of the Reserve Bank and its directives to banks regarding advances against shares and for purposes of cornering the shares of companies. Nor has he critically examined the impact of stock exchange legislation and company law on the future growth of new issue market.

Part III of the book is devoted to an epilogue, running to a little over three pages. Mr. Sur is on the whole optimistic about the future for the security market in India, but is of the firm opinion that mere legal provisions for the protection of investors alone would not create confidence in the minds of the investors and thinks that the country's tax system which is now acting as a great disincentive should be modified. But his research project has not indicated the directions in which the tax structure should be amended. He only points out that it must be the concern of the Government to formulate its fiscal policy in such a manner as would stimulate the development of the domestic capital market.

Finally, a word about the select bibliography. In a book essentially devoted to the study of the Indian Capital Market, one is really surprised to see that not a *single book* published by Indian authors on Indian conditions is mentioned.

The Public Sector in India: By Dr. Nabagopal Das. Published by Asia Publishing House, Bombay. Pages: 180. Price: Rs. 11.25.

This book appears in its second edition in a new garb. It is almost a new one, bigger in size, more comprehensive in content and coverage and up-to-date in the facts and data presented. The rapid expansion of the public sector in India since 1955, when the first edition of the book was published, and its present, prominent position in the economic landscape of the country, merit the exhaustive and detailed treatment which Dr. Das has given it. Consequently, the book has emerged as a fuller and more satisfying monograph on a subject in which, barring some official reports and appraisals, very little objective, independent studies have been made in this country.

Public sector has been defined in this book not in the wider sense of the entire range of Governmental activities but in a narrower sense, so as to cover only commercial and industrial undertakings. Such activities, as are not essentially economic in their objectives (e.g. defence, education, public health, etc.), have been excluded from the scope of the study. Even so, the field is sufficiently large and important enough to make any discussion of it of vital public importance.

The book may be conveniently divided into three parts. The first part, covering chapters one to four, traces the evolution of the public sector in India and briefly surveys the results of the experiments in State management of industrial and commercial undertakings in communist as well as democratic countries. This forms a suitable background to a discussion of public sector in India. This is done in the second part (chapters five to eleven), which is the kernel of the book. Issues such as organisation and management, accountability, financing, price-fixing, labour relations and personnel, which have a vital bearing on the successful functioning of public undertakings, are dealt with in this part. Particularly interesting and topical is the discussion relating to price-fixing and profits of public undertakings in view of the fact that much store is set by the profits of public undertakings for financing the third Plan. Dr. Das vigorously assails the concept of "planned profit" propounded by Dr. V. K. R. V. Rao at the Ooty Seminar and argues, with considerable force, that, in the conditions of monopoly under which most State enterprises function, it can be so stretched as to justify artificially inflated prices of the products of public enterprise with all the attendant evils which such a course might lead to. He is not opposed to public enterprises making profits; his contention is only that it will be highly undesirable and positively harmful if prices are so manipulated as to yield a predetermined level of profit. It would have been helpful if the author had given instances, if any, of excessive profits made by the public sector units so far.

What the future holds for the public sector and the related question of the role of private enterprise are discussed in the last section. The question is no longer whether the public sector should or should not exist. It has come to stay, whether one likes it or not. The extent to which it should expand and the manner in which it should function are the real issues. In the emerging circumstances of developing countries like India, no one, of course, can say in advance the precise, mathematical proportion of the economy which must be publicly owned. These are matters on which honest differences of opinion are possible. The author's views are commendably pragmatic and free from doctrinaire considerations. The public sector is bound to grow and should grow, in the author's opinion, but the private sector, too, he believes, will continue to flourish. There is ample scope, he maintains, for both to co-exist and function in the larger interest of the country.

Dr. Das does not, however, think that a mere extension of the public sector will automatically bring economic gain or serve social purpose. There is no magic in the words "public enterprise"; nor does public ownership provide an answer to the problems of *entrepreneurship*, production and fair deal to consumers.

The author's treatment of the subject is scholarly but simple, the language refreshingly free from jargon and the approach pragmatic. The book is certainly an estimable addition to the scanty literature on the subject in this country.

TITAGHUR PAPER MILLS COMPANY, LIMITED

SUPPLY OF PAPER LIKELY TO EXCEED DEMAND BY 1965

CHAIRMAN, SIR WALTER MICHELMORE, EXPRESSES CONCERN OVER COAL SUPPLIES

THE view that the demand for paper is not likely to double every quinquennium and that, by 1965, there might well be an excess of supply over demand is expressed by Sir Walter Michelmore, Chairman of the Titaghur Paper Mills Company Ltd., in a statement circulated to shareholders along with the Directors' report and statement of accounts for the year ended 31st March 1961. The third Plan target for production of paper, at 700,000 tons, is double the present output, but the total capacity licensed or approved by the Government is over 1.2 million tons. This very high figure seems to indicate, says Sir Walter, the expectation that not much more than half the schemes would reach completion. Dealing with the problems of paper industry, the Chairman observes that the imposition of a cess of 80 nP per ton on coal, on top of the higher cost involved in moving coal by road, following the failure of the Railways to haul sufficient quantities by rail, is a gross discrimination.

The following is the full text of Sir Walter's statement:

"It gives me pleasure once more to review the Company's affairs and to comment on the state of the paper industry.

"*The results for the year ended 31st March* 1961 have been somewhat disappointing and the fall in profit has resulted from a combination of lower selling prices, increases in the cost of chemicals and coal and a loss sustained at No. 3 Mill. Your Directors have, therefore, decided to declare a final dividend of one rupee on the ordinary shares, making a total of two rupees for the year. To do so it has been necessary to transfer to the credit of the profit and loss account the sum of Rs. 7 lakhs from dividend equalisation reserve.

"Your Company has this year felt the full force of the cuts in selling prices recommended by the Tariff Commission which has resulted in a drop of 3.8 per cent in the value of sales. The prices of our raw materials, chemicals and coal, however, show no signs of going down and since my last statement your company has had to suffer an excise duty on caustic soda of Rs. 40 per tonne, an increase in the cost of coal of 78.7 nP per tonne, an increase in the cost of power supplied by the Calcutta Electric Supply Corporation arising out of the higher coal price and, as I write, there is a probability that the Company's contributions to the Employees' Provident Fund will be increased from 6¼ per cent to 8⅓ per cent. Your Directors are alive to the necessity of making economies to offset the slow but steady rise in costs, and some success has been achieved. I trust, nevertheless, that *Government will show some sympathy with* the predicament in which the industry at present finds itself and give due consideration to the modification of paper selling prices where it is clear that they are too low.

Teething Troubles

"The results at No. 3 Mill during the year have been disappointing, as the teething troubles, inescapable in a project of this size and complexity, have not been overcome as quickly as had been hoped, and a loss has again been incurred. The Mill was started up with a single machine and it was considered advisable not to hurry the transfer of the second machine from No. 2 Mill until the workers at No. 3 Mill, most of whom were recruited locally and were, therefore, unskilled in the operation of a paper mill, had become reasonably proficient. Since the Mill was designed to produce 1,000 tonnes per month, one-machine operation could not be economic. Your *Managing Agents* felt, however, that this disability should be accepted in the initial stages and the second machine used to the best possible advantage at No. 2 Mill during the intervening period. This was done, and therefore part of the profit at No. 2 Mill can be considered in a manner of speaking to be attributable to No. 3 Mill. Trade Unionism is well developed in Orissa, even in its infant industries, and it was not long before inter-union rivalry developed at No. 3 Mill. This has unsettled the workers and has greatly affected the efficiency of the Mill. Despite this disability, however, it was considered that the transfer of the second machine could no longer be delayed; this is, therefore, now well in hand and the machine should be in operation shortly, after which we anticipate that, before long, the Mill will be on a profit-making basis.

"The Mills in West Bengal ran satisfactorily in the year under review and continue to do so in the current year. At one stage stocks of both bamboo and coal were dangerously low and it was necessary to supplement bamboo by using paddy straw and bagasse and to bring in coal by lorry which is extremely expensive. The Railways, still contending with major transport difficulties, have done their best to help us and have staved off any serious closure due to lack of supplies.

Problem of Coal Supply

"A special reference is necessary to the problem of the supply of coal to the Mills. We have not, during the period under review, experienced any major shut-down in the Mills in West Bengal owing to shortage of coal. But it must be realised that this has been achieved solely by the extremely costly expedient of *moving to the Mills by* road coal which it is the duty of the Railway to have been able to move by rail. A new and remarkable feature of this failure by the Railways to implement their obligations is the imposition by the Central *Government* of a cess of 80 *naye* paise per ton on all despatches of coal to all consumers wherever situated. The purpose of this cess is that for coal consumers in Southern and Western India to whom the Railways cannot convey their coal by rail the 'difference between the actual freight by the rail-cum-sea route and the freight by the all-rail route will be made good to the consumer in the form of a subsidy.' (My quotation is from a recent answer by a Union Minister to a question in the Lok Sabha). So we have the position in our Company that, on the one hand, we are paying as much as Rs. 100,000 per month extra in transport charges for coal brought to the Mills by road and, at the same time, we are now paying something like Rs. 16,000 per month extra cess on all our coal receipts, the benefit of which goes entirely to other companies—including no doubt some of our own competitors—located in South and West India. This gross discrimination seems to require much more attention than it has yet received from the industrialists, and indeed the Governments concerned, in North East India.

Excise Duty

"Another point I should like to make is on the subject of the excise duties. The correct purpose of these duties is to spread the taxation net more widely among the teeming millions of the country and to bring into it some of those who escape the very limited numerical scope of corporate and personal taxation. I therefore do not quarrel with the excise duty on paper, provided it is kept at a reasonable rate and within the capacity of the consumer to pay. Excise should not, however, be used to increase the already high cost of manufacturing industries. A case in point is the excise duty on caustic soda to which I have already referred and which is a heavy burden on your Company. Basic materials such as caustic soda, whose sole use is as a raw material in other industries, are *not*, I suggest, a suitable subject for excise duty as their imposition serves only to increase manufacturing costs which are already high.

"In view of the vital importance of economies and operational efficiency, Messrs. Urwick Orr and Partners, as I mentioned in my last statement, made a survey of the organisation of the Company and of the costing system, and their recommendations are in process of being implemented.

Third Plan Targets

"The paper industry is now at the commencement of the third Plan period, having virtually achieved the targets set for the first and second Plans. The target for the third Plan is a production of 700,000 tons, double the present output, and this is supposed to be achieved by the creation of additional mills or expansion of existing units to bring the total capacity to 900,000 tons. Against this, the total capacity licensed or approved by Government is just *over 1,200,000 tons. This very high figure seems* to indicate the expectation that not much more than half the new schemes will reach completion.

"With the output of paper having doubled during the *second Five-year Plan, there are* indications that the supply position has eased considerably. It seems to me doubtful that demand will continue to double each five years and, as I said last year, there may well be an excess of supply over demand by 1965. While in general the supply position has eased beyond anything thought possible two years ago, our Mills remain heavily committed. A consistent policy of quality and service, in good times and bad, is undoubtedly responsible for our full order books. The severe shortage of railway wagons has seriously hampered despatches, but all possible steps have been taken to deliver supplies in time for various seasonal requirements. I have no doubt that, in the light *of recent experience*, our Mills will be able to improve their performance still further. Our sales force is being strengthened and expanded solely with a view to improving liaison between the Mills and our customers.

Staff

"Although a reference to the efforts of the staff generally closes a Chairman's statement, this does not mean they are last in importance and I am sure you will wish me to thank them for the very hard and constructive work they continue to do on your behalf, often under *circumstances of considerable difficulty*. I should like to mention, in particular, the staff of the bamboo forest organisation who are responsible for the *cutting and extraction* of bamboo from an area covering large tracts of jungle in Orissa, Bihar and Assam. This is a lonely and exacting task carried out in conditions never easy and often of extreme discomfort, if not danger, and you will agree with me that their efforts on your behalf are highly valued."

Note: *The above statement is not a report of the proceedings of the annual general meeting, which will be held on the 29th September,* 1961.

IMPERIAL TOBACCO SHOWS EXCELLENT RESULTS

RISE IN DIVIDEND, HOWEVER, SMALL

THE rapid growth of the smoking habit in India and the increasing popularity of the various brands of cigarettes manufactured by the Imperial Tobacco Company of India Ltd. (Chairman: Mr. F. A. Collett, Calcutta) are fully reflected in the financial results of the Company for the year ended 31st March 1961. Thus, its sale proceeds have jumped up from Rs. 36.88 crores in 1959-60 to Rs. 42.18 crores, representing an expansion of 14.3 per cent. The gross profit also shows an impressive rise of Rs. 60.58 lakhs or 17.7 per cent to Rs. 403.23 lakhs and is only Rs. 12.47 lakhs less than the peak of Rs. 415.71 lakhs established in 1955-56. The profit margin has improved, albeit slightly, from 9.3 per cent in 1959-60 to 9.55 per cent but is still much lower than that at 13.7 per cent for 1955-56. The main reasons for the lower profit margin in the year under review, in contrast with that for 1955-56, are the high incidence of commodity taxation and the rapid increase in the costs of production and in the advertisement outlay necessitated by the keen competition from the other tobacco manufacturers. As compared with the previous year itself, the burden on account of customs and excise duties has gone up from Rs. 15.47 crores to Rs. 18.09 crores. Similarly, the value of raw material consumed has been up by Rs. 1.87 crore or 19.7 per cent to Rs. 11.32 crores. Other manufacturing expenses, which include salaries and wages, however, have risen only moderately to stand at Rs. 9.37 crores, as against Rs. 9.08 crores in 1959-60.

The provision for taxation has been stepped up from Rs. 156.22 lakhs to Rs. 171.19 lakhs. Depreciation, however, is actually a shade lower at Rs. 44.05 lakhs, as against Rs. 44.81 lakhs last year. After deducting these provisions, the net profit works out to Rs. 187.99 lakhs, representing an increase of Rs. 46.37 lakhs or 32.7 per cent over the previous year. The Directors have sharply raised the appropriation to reserves from Rs. 20.20 lakhs in 1959-60 to Rs. 49.37 lakhs. As a consequence, the dividend to shareholders has been stepped up only slightly from 8 per cent taxable for 1959-60 to 9 per cent taxable giving a net dividend of 6.3 per cent only. This dividend is only a shade better than the tax free dividend of 6 per cent distributed in 1958-59 and is actually lower than the tax free dividend of 7 per cent for 1957-58. It is difficult to understand why the Directors have kept the dividend so low.

It is not surprising therefore that the Company's ordinary shares of Rs. 10 are currently quoted at no more than Rs. 12.12 *cum*-final dividend. At the proposed rate of dividend and on an *ex-div.* basis, they offer a net yield of 5.32 per cent per annum.

The salient features of the working of the Company during the past four years are depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	42,17.62	36,88.07	34,20.40	32,61.20
Other income	62.85	54.46	63.06	66.16
Closing stocks	2,50.98	2,29.51	2,56.92	2,92.07
Raw materials consumed	11,31.91	9,45.02	9,04.75	9,14.53
Customs and excise duties	18,08.67	15,47.27	13,69.15	12,99.13
Other expenses	9,36.65	9,07.60	8,76.20	7,58.87
Gross profit	4,03.23	3,42.65	3,33.35	3,56.79

	(9%)*	(8%)*	(6%)	(7%)
Carry forward	26.96	24.78	24.64	24.05

* Subject to deduction of tax.

The financial position of the Company, as disclosed by its balance-sheet as on the last day of March 1961, is quite strong. Only, its capital is unduly high, quite out of proportion to its fixed assets. This is one reason why the Company's shares have not staged any significant capital appreciation all these years, in contrast to several other equities of consumer goods industries. As against the paid-up capital of Rs. 15.16 crores, which is supported by reserves and surplus at Rs. 10.02 crores, the gross value of the block account is only Rs. 11.57 crores and its net value is Rs. 8.30 crores, the depreciation provided being Rs. 3.27 crores. It may be noted here that the block account includes goodwill and trade marks valued at Rs. 4.90 crores. This item is not being written down at all. The additions to buildings, plant and machinery, etc. during 1960-61 were Rs. 59.13 lakhs, while withdrawals and transfers were Rs. 33.51 lakhs. The current assets and liabilities show that the Company has a big margin of current assets over its indebtedness, which is relatively small. The Company has no secured loans. Its unsecured loans are no more than Rs. 2.88 lakhs. Current liabilities and provisions are Rs. 3.28 crores. As compared with these, the current assets without investments are of the magnitude of Rs. 18.87 crores, showing a clear margin of Rs. 15.59 crores over total indebtedness to outsiders. In addition, there are investments of the value of Rs. 1.32 crore, of which Rs. 1.22 crore are in Government securities and Rs. 4.42 lakhs are in the shares of Molins of India Ltd., a new Company formed for the manufacture of spare parts of cigarette making machinery.

The above review of the financial position of the Company seems to suggest that the best way for the Company to improve its fortunes in coming years would be to diversify its manufacturing activities by taking up some new lines. If a jute or cotton mill can take to cement, rayon and chemical industries, there is no reason why a tobacco company such as this, with sizable surplus assets and large borrowing capacity, should not take up one of the big industrial projects included in the third Plan.

(*Concluded from next column*)

newed upto 30th September 1961 at a higher rate of commission. Negotiations are now in the course of finalisation for the extension of the agency arrangement for a further period.

The production of fans and so their sales are expected to increase in the current year.

There has been a revival in the business of transformers due to growing electrification in the country, but the prices continue to be keenly competitive as there is a substantial production capacity in the country.

The demand for electrical and scientific instruments continues to be good and, therefore, an expansion in the Company's capacity is envisaged. The Company has received a further licence for manufacture of insulation testers.

Striking features of the Company's financial position are its heavy dependence on borrowings, the small level of reserves and the low level of fixed assets. Out of the balance-sheet total of Rs. 198.41 lakhs, borrowings from outside aggregate Rs. 150.77 lakhs (made up of Rs. 84.37 lakhs secured loans, Rs. 35.16 lakhs unsecured loans and Rs. 31.24 lakhs current liabilities and provisions). These are, of course, well covered by current assets (excluding investments at Rs. 28.80 lakhs) standing at Rs. 155.57 lakhs. The reserves and surplus amount to Rs. 6.24 lakhs, as against a paid-up capital of Rs. 40.36 lakhs, excluding call money paid in advance of Rs. 1.07 lakh. The total investments of Rs. 28.80 lakhs are mostly in trade investments which are not quoted. The gross block account has risen from Rs. 17.33 lakhs to Rs. 21.20 lakhs and stands depreciated at Rs. 14.07 lakhs, which is equal to about only one-third of the paid-up capital. The features reflect the predominantly trading character of the Company's business and its participation in manufacturing activities through subsidiaries.

In view of the expected increase in the activities of the Company in the coming years and the consequent need for additional capital, the Directors propose to raise the authorised capital from Rs. 50 lakhs to Rs. 2 crores, of which Rs. 50 lakhs will be in preference shares. The Directors are of the view that the Company should participate in the plans of N.V. Phillips to manufacture in India tungsten filament wire and allied products. At present, India is dependent upon imports for tungsten filament, an essential component in the manufacture of electric lamps, fluorescent tubes, etc. The Phillips are planning to establish a separate company with a capital of Rs. 25 lakhs for making these products.

The current market quotation for the Rs. 100 paid-up shares is Rs. 115 *cum*-dividend at which rate, the net yield works out to 5.5 per cent per annum on a net dividend of Rs. 6.30 per share.

BAJAJ ELECTRICALS

PERFORMANCE ENCOURAGING

THE performance of the Bajaj Electricals Ltd., till recently known as Radio Lamp Work Ltd. (Managing Agents: Jamnalal Sons Private Ltd., Bombay) during the year ended 31st March 1961 is quite encouraging. The financial results show an all-round improvement. Sales were higher; profits are better; a sizable amount has been put into the reserves; and the equity shareholders have been allowed a slight increase in the dividend. The appropriation policy adopted by the directors is conservative, with an eye on the future development requirements of the Company.

The sales of the Company have more than doubled in last four years to Rs. 239.11 lakhs during the year ended 31st March 1961. The sales of various items continue to show improvement except those of fans as can be seen from the comparative figures for the last two years:

	1959-60 (Rs. in lakhs)	1960-61 (Rs. in lakhs)	Percentage change
Lamps and lighting equipment	89.52	116.11	+29.7
Fans	98.58	83.11	—15.6
Transformers	12.85	20.59	+60.2
Instruments and others	11.62	19.29	+66.0
Total	212.57	239.10	+12.4

The main income of the Company which was from fans till last year has given place to lamps and lighting equipments. The income from transformers, instruments and others also continues to grow. The decline in sales of fans is due to the shifting of the fan manufacturers factory from Delhi to Poona which had an adverse effect on production.

The gross profit as jumped up by 60.3 per cent, that is, from Rs. 9.48 lakhs to Rs. 15.20 lakhs. The ratio of gross profit to sales, though still very low, has increased from 4.4 per cent in the preceding year to 6.3 per cent. This is probably because the main function of the Company has continued to be trading. The expenses on goods sold and materials consumed is 65 per cent and other expenses account for nearly 29 per cent of the sales, thus leaving only 6 per cent for gross profit and only 1.5 per cent for shareholders. The dividend to shareholders has been raised from 8.10 per cent, taxable, to 9 per cent per annum taxable.

The following comparative table reveals at a glance the steady improvement in the working results of the Company during the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958

In view of the fifty per cent interest in the Hind Lamps Ltd., the Company is supplied half of the latter's production of electric miniature and fluorescent lamps. With the expansion programme of the Hind Lamps nearing completion, the Company will have a larger volume of goods for sale during the current and future years. The Hind Lamps is now planning a further expansion programme for implementation during the third Plan period.

The Company has recently introduced in the Indian market Rotaflex shades for which it holds exclusive selling rights. It has also added electrical appliances and accessories and annodised aluminium hardware to the lines handled by it.

The sole selling agency for Kassels which expired on 31st December 1960 was

(*Continued in previous column*)

TITAGHUR PAPER SUFFERS A SETBACK

PROFITS DECLINE—DIVIDENDS PRUNED

THE somewhat disappointing results of the Titaghur Paper Mills Company Ltd. (Managing Agents: Messrs. F. W. Heilgers and Co. Private Ltd., Calcutta) for the year ended 31st March 1961 are to be ascribed, in the ultimate analysis, to the combined effect of three factors. In the first place, the year under report has been the first full year during which the reduced prices of paper and paperboard have taken effect. This change in price has been instrumental in reducing the value of sales by Rs. 33.74 lakhs to Rs. 952.44 lakhs, notwithstanding an increase in the actual production for the year of no less than 1,723 tonnes. Secondly, the working of the Company's newly started mill in Orissa has been disappointing, as the teething troubles, inescapable in a project of the magnitude and complexity of the mill, could not be overcomed as quickly as had been hoped. This has not only restricted the output but also reduced the available profit margins. And, finally, the mounting costs of raw and essential materials, power and fuel, transport and services have led to a further worsening of the profit position. The percentage of gross profit to sales has deteriorated from 12.6 in 1959-60 to 11.1 in 1960-61, while, in absolute terms, the gross profit has decreased by Rs. 18.52 lakhs to Rs. 106.07 lakhs.

Provision for the Managing Agents' commission has been lowered from Rs. 9.62 lakhs to Rs. 4.35 lakhs and that for taxation by Rs. 7.04 lakhs to Rs. 20.05 lakhs. Consequent to the large-scale additions to fixed assets during the previous year, the provision for depreciation has been stepped up by as much as Rs. 25.29 lakhs to Rs. 57.75 lakhs. With a lower gross profit and higher depreciation, it is but natural that the net profit should show a decline. Accordingly, the net profit stands reduced by 56.8 per cent, that is, from Rs. 55.42 lakhs to Rs. 23.92 lakhs. Transfer to the statutory development rebate reserve has been curtailed from Rs. 24.90 lakhs to Rs. 6.26 lakhs only.

In view of the enactment of the Act governing the payment of preference dividends, an additional amount of Rs. 60,975 towards preferred dividends for the previous year has become payable. Inclusive of this, the total sum payable to preference shareholders during the current year amounts to Rs. 3.26 lakhs. This leaves a balance of Rs. 16.89 lakhs for distribution among the equity shareholders. Of this an interim dividend of Re. 1.00 per share of Rs. 10 each, absorbing Rs. 11.20 lakhs, has already been paid. A final dividend of like amount has now been proposed. In order that the final dividend could be paid, a sum of Rs. 7.00 lakhs has been transferred from the dividend equalisation reserve to the profit and loss account. Thus, the profit for the year under review has not been sufficient to maintain the dividend.

An idea of the progress made by the Company during the past four years can be had from the comparative table that follows:

(Value in lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958

† Subject to deduction of tax.

As disclosed by its balance-sheet as at 31st March 1961, the financial position of the Company is extremely sound. Against a paid-up share capital of Rs. 142.92 lakhs, reserves and surplus amount to as much as Rs. 352.59 lakhs. Secured loans, comprising of 5½ per cent registered debenture bonds and cash credits from banks amount to Rs. 220.32 lakhs while current liabilities and provisions aggregates Rs. 370.80 lakhs. The gross block of the Company as at the date of the balance-sheet stands at Rs. 955.90 lakhs inclusive of the transfer of Rs. 54.62 lakhs from capital work-in-progress outstanding at the close of the previous year. This has been written down to Rs. 463.32 lakhs to which must be added Rs. 23.53 lakhs as capital work-in-progress to get a net block of Rs. 486.85 lakhs. Current assets, loans and advances and investments, all amount to Rs. 599.78 lakhs and more than fully cover all current liabilities.

With a ceiling on the selling prices of paper and paperboard, any increase in profit-margin must come only through increased production and operational efficiencies. It is heartening to note that the management proposes to take steps for attaining these objectives, first by putting the working of the mill No. 3 on a profit-making basis and second by introducing a system of cost control. As regards the prospects for the paper industry in the years to come, it is best to reproduce the views expressed by the Chairman, Sir Walter Michelmore in his statement to the shareholders. He says:

"The paper industry is now at the commencement of the third Plan period, having virtually achieved the targets set for the first and second Plans. The target for the third Plan is a production of 700,000 tons, double the present output, and this is supposed to be achieved by the creation of additional Mills or expansion of existing units to bring the total capacity to 900,000 tons. Against this, the total capacity licensed or approved by Government is just over 1,200,000 tons. This very high figure seems to indicate the expectation that not much more than half the new schemes will reach completion.

"With the output of paper having doubled during the second Five-year Plan, there are indications that the supply position has eased considerably. It seems to me doubtful that demand will continue to double each five years and, as I said last year, there may well be an excess of supply over demand by 1965. While, in general, the supply position has eased beyond anything thought possible two years ago, our Mills remain heavily committed. A consistent policy of quality and service, in good times and bad, is undoubtedly responsible for our full order books. . ."

The current market quotation for the Company's Rs. 10 fully paid ordinary share is Rs. 33.25 *cum-div.* On an *ex-div.* basis, the net yield works out to 4.1 per cent per annum.

(*Concluded from next column*)

large measure to the satisfactory working of its manufacturing projects and that of its associated and subsidiary companies. The cone and tube plant improved its production substantially and made a useful contribution to the Company's increased turnover. The present position of the order book indicates that the position would be maintained during the current year. The turnover and profit of Crompton Parkinson (Works) Ltd. for the year ended 30th June 1960 showed a marked improvement and this has resulted in the Company receiving a higher net dividend of Rs. 3.01 lakhs as against Rs. 1.48 lakh during the previous year. In spite of the severe competition in the electrical field, Greaves Cotton and Crompton Parkinson Ltd. was able to secure a substantial increase in turnover during its year ended 31st December 1960, and this improvement is being maintained during the current year. Rustom and Hornsby (India) Ltd. secured a considerable expansion in production during its financial year ended 31st December 1959, as a result of which it was possible for that company, after a lapse of several years, to pay a net dividend of Rs. 2.07 lakhs to the Company. The Directors report that, if allowance were made for prior deductions of tax, the comparable investment income for the year would be Rs. 14.99 lakhs as against Rs. 9.25 lakhs for the previous year.

Besides enhancing the production capacity of its associated and subsidiary companies and adding to their product lines, the Company has taken steps to diversify further its own activities. Technical collaboration agreement has been concluded with Messrs. Mindrill Ltd. of Australia for the manufacture of diamond drilling bits. In the light of the increasing demand for this product and the high reputation enjoyed by the technical collaborators, there should be a ready demand for the products which are expected to come out of the factory this year.

The Rs. 100 fully paid ordinary share of the Company is currently quoted at Rs. 185.50 *cum-div.* and offers, on an *ex-div.* basis a net yield of 5.2 per cent.

GREAVES COTTON'S SALES HIGHER

DIVIDEND STEPPED UP—OUTLOOK PROMISING

A SUBSTANTIAL expansion in turnover, despite increasing restrictions on imports and mounting competition, has been reported by Greaves Cotton and Co., Ltd, (Managing Director: Mr. N. M. Wagle, Bombay) for the year ended 31st March 1961. Sales which had amounted to Rs. 495.13 lakhs during the previous year have increased by as much as Rs. 165.98 lakhs to Rs. 661.11 lakhs. This expansion, however, could only be achieved through sacrificing even the normal profits on several very large orders which were secured in the face of stiff competition. This deterioration in profit margins worsened further by the rise in the establishment expenses following large-scale expansion in the marketing and sales organisation of the Company. Consequently, the gross profit shows an improvement of a mere Rs. 4.69 lakhs to Rs. 52.25 lakhs, or 9.9 per cent, as compared with the substantial rise of over 33 per cent in the total turnover. After providing a higher amount for depreciation at Rs. 1.62 lakh against Rs. 1.24 lakh for 1959-60, and Rs. 20.25 lakhs for taxation against Rs. 18.50 lakhs, the net profit stands improved by Rs. 2.56 lakhs to Rs. 30.38 lakhs. A small amount of Rs. 0.82 lakh has been written back to the profit and loss account, while Rs. 10.35 lakhs have been transferred to reserves as against Rs. 9.12 lakhs a year ago. These adjustments leave a sum of Rs. 21.29 lakhs for distribution among the shareholders.

Payment of dividends on preference shares in respect of the year under review, is governed by the provisions of the Preference Shares (Regulation of Dividends) Act 1960, and claims Rs. 3.57 lakhs against Rs. 3.92 lakhs, subject to deduction of tax. After making this provision, the Directors have recommended a dividend of Rs. 13.00 per share, subject to deduction of tax on equity shares, absorbing Rs. 17.55 lakhs. In view of the several expansion projects now in hand, demanding a larger plough-back of profits, the Directors would have been justified in maintaining equity dividends at the previous year's rate of 11 per cent subject to deduction of tax. However, as in the past, the Company has been adjudged a section 23A Company in the terminology of Income-tax Act and its changed status since the issue of new capital in 1958 has not been sucessfully established with the authorities. In these circumstances, therefore, the Directors have found it prudent to recommend a rate of dividend for the year which would comply with the requirements of the said section of the Act.

The following comparative table depicts the progress made by the Company during the past four years:

(Value in lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	661.11	495.13	450.98	453.36

* Subject to deduction of tax.

† On increased capital of Rs. 135 lakhs raised by the issue of additional capital of Rs. 40.6 lakhs in 1958.

For successful operation, a trading company must have a strong financial position with adequate working capital. A perusal of the Company's balance-sheet as at 31st March 1961, reveals that its financial position is sound. The share capital aggregates Rs. 185.00 lakhs, supported by Rs. 62.99 lakhs in reserves. Secured and unsecured loans total Rs. 138.15 lakhs; in addition, there are current liabilities and provisions of Rs. 186.41 lakhs, raising the total current liabilities to Rs. 324.56 lakhs. Against these, current assets, investments, loans and advances together amount to Rs. 556.64 lakhs, leaving a net working capital of Rs. 232.08 lakhs. Fixed assets possess a gross value of Rs. 24.11 lakhs which has been written down to Rs. 15.91 lakhs.

The progress made by the Company during the year under review is to be attributed in a

(*Continued in previous column*)

GANNON DUNKERLEY FARES BETTER

CAPITAL TO BE RAISED

THE financial results of the Gannon Dunkerley and Company Ltd. (Chairman: Mr. M. R. Morarka, Bombay) for the year ended 31st March 1961 are only a shade better than those for the previous year. Although the gross income of the Company from all the three sources together, trading, manufacturing and contracts, has gone up by Rs. 73.43 lakhs, or by 39.2 per cent, to Rs. 260.58 lakhs, the gross profit has risen by just Rs. 1.04 lakhs to Rs. 13.31 lakhs. This disproportionately small rise in profit is mainly the result of the sharp rise in the total expenses by Rs. 77.12 lakhs to Rs. 266.40 lakhs, an increase which has more than neutralised the entire expansion in the gross income. As, however, the closing stocks are higher at Rs. 78.99 lakhs, as against Rs. 62.55 lakhs in the year 1959-60, the gross profit is better as noted above.

After providing a slightly higher amount of Rs. 2.88 lakhs for depreciation (Rs. 2.35 lakhs last year) and of Rs. 3.60 lakhs for taxation (Rs. 3.50 lakhs in 1959-60), the net profit amounts to Rs. 6.83 lakhs; this is only fractionally better than that (Rs. 6.38 lakhs) for the previous year. But the amount actually available for allocations is much higher at Rs. 11.95 lakhs, as the net profit is supplemented by (*a*) Rs. 2.08 lakhs, being the refund of tax for 1947-48 and 1948-49, (*b*) Rs. 2.02 lakhs, being the provisions of previous years written back, and Rs. one lakh, being the transfer from provision for taxation of earlier years. The Company's tax liability for the years 1951-52 to 1954-55, it may be noted, has been reduced as a result of the favourable disposal of its appeal to the Income-tax Tribunal.

Out of the amount of Rs. 11.95 lakhs available for distribution and appropriations, the Directors have judiciously conserved as much as Rs. 8.13 lakhs, by transferring it to reserves, as against a small sum of Rs. 1.63 lakhs last year. As the total amount ploughed back is in excess of the amounts withdrawn by Rs. 3 lakhs, nearly 50 per cent of the profit for 1960-61 has been utilised to strengthen the finances of the Company. Hence, the Directors could only maintain the dividend at the previous year's level of 10 per cent gross or 7 per cent net.

The following comparative table gives a synoptic view of the Company's progress in the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Gross income	260.58	187.15	161.48	185.50

In their report to the shareholders the Directors have stated that the turnover of the General Department has improved further, as the Company has expanded the marketing of products made in India. Thanks, however, to prohibitive foreign exchange situation and the difficult import restrictions, the indent business for foreign manufactures has declined. The books of the civil and mechanical engineering departments showed considerable expansion, but the rapid increase in the cost of materials and labour charges kept the net earnings from these lines at a low level.

As readers are aware, the Company has been diversifying its activities in order to offset the loss in its trading business on account of import restrictions. The Company has undertaken in the past few years a number of manufacturing lines and established three small subsidiaries the total investments in which (as of 31st March last) are Rs. 4.05 lakhs. It now proposes to establish one more subsidiary under the name of Indore Wire Company Ltd. for starting at Indore a wire drawing unit, with a capacity of 3,900 tons per annum. The necessary Industrial Licence has already been obtained. The application for licence to import plant and machinery for this venture is, however, still under the consideration of the Government of India,

INDIA STEAMSHIP GOES OFF THE DIVIDEND LIST AGAIN

RESERVES DEPLETED—OUTLOOK OBSCURE

WHEN the shipping industry as a whole, where the boom periods are few and lean ones many, runs into heavy odds, how difficult it is even for a well managed and firmly established company to keep its head above water is obvious from the working results of the India Steamship Company Limited (Managing Agents: Messrs. Lionel Edwards [Private] Ltd., Calcutta) for the year to 31st March 1961. The Company has incurred a loss of Rs. 41.05 lakhs, which, on top of the previous year's deficit of Rs. 42.85 lakhs, is, indeed, huge and has compelled the Directors to pass over the dividend on equity capital. For 1959-60, the Company had paid a 10 per cent taxable ordinary dividend, against 10 per cent tax-free for the preceding year.

The Company had no escape from the industry's past two years' problem of a decline in international trade and the available shipping freight. This decline not only persisted but became sharp during the year under review, resulting in yet severe competition among shipping companies in the liner trade as also in the calling at an even greater number of ports in the tramp service in search for the cargo. That this was done with most of the freight rates unchanged over their 1957 levels is common knowledge. It only led, therefore, to much larger costs of operations without a proportionate increase in the freight earnings. This apart, the problem was further aggravated by the excessive berthing delays at different Indian and foreign ports.

Though freight earnings rose during the year to a record level of Rs. 863 lakhs (thanks to prudent management) from Rs. 838.59 lakhs in 1959-60, this was at a cost of the Company's fleet completing 49 round voyages in the liner service and seven in the coast, as against 47.5 and 9, respectively, in the previous year and 39 and six in the year 1958-59, which earned a total freight of Rs. 804.04 lakhs in that year. The record freight earnings made no impression on the Company's net profit position due to increased costs of operations, with port expenses rising to Rs. 337.27 lakhs and other expenses to Rs. 474.80 lakhs from Rs. 314.42 lakhs and Rs. 432.15 lakhs, respectively, in the previous year and Rs. 281.09 lakhs and Rs. 375.33 lakhs, respectively, in the year 1958-59.

As against a loss of 85 days on account of berthing delays in the previous year in the liner services taken together, no less than 332 days were lost during the year under review. Considering that the daily expenses of a ship (in port) approximate Rs. 10,000, the huge financial loss suffered during the year due to such delays can easily be imagined. After providing for depreciation at Rs. 118.20 lakhs as against Rs. 91.29 lakhs previously, and deducting all other charges, the result is a loss of Rs. 41.05 lakhs. This and the previous year's debit balance of Rs. 40.76 lakhs in the profit and loss account are set off against the general reserve which now stands depleted at Rs. 58.19 lakhs.

A glance at the comparative table below will show how badly has the Company suffered during the past two years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958

† Subject to deduction of tax.

‡ On increased capital of Rs. 247.50 lakhs, raised by the capitalisation of Rs. 22.50 lakhs from the share premium account during 1957-58.

Retrospectively, the Company has been placed in a worse position than what obtained in the year 1954-55, a year described by the directors as "the most disastrous," when the ordinary dividend was passed over for a second time in succession and the net profit was only of Rs. 0.80 lakh, and, in fact, lower as compared with Rs. 0.99 lakh in the preceding year. Between 1955-56 and 1957-58, the Company prospered and the net profit increased impressively from Rs. 38.73 lakhs to Rs. 174.97 lakhs. It has suffered reverses again, however, as already noted.

During last year, the Company also suffered the tragic loss of s.s. "Indian Navigator" and the 13 officers and crew of s.s. "Indian Navigator" who gallantly boarded the fire-bound ship to salvage it. The Company has recovered the entire amount, Rs. 35,90,879, for which the vessel had been insured.

In order to surmount the present difficult conditions, the Company has joined a money pool arrangement agreed to by all the Conference Lines operating on the India-U.K.-Continent route. It is expected that the pooling arrangement will put an effective stop to the unhealthy competition among the participating member Lines, the outcome of which, it is hoped, will have a beneficial effect on the trading results of the Company. But there is no way out of the problem of rising costs of operations except proposing an increase in freight structure, which solution, however, has its own difficulties and demerits. The future outlook for the shipping industry, in general, continues to be obscure and uncertain. How idle and fruitless is all talk of further expansion of Indian Shipping!

On account of depletion of reserves, there has been a perceptible setback in the financial position of the Company and the reserves and surplus need to be augmented at the first available opportunity. Against the issued capital of Rs. 272.50 lakhs, the reserves and surplus total Rs. 246.52 lakhs. Loans from the Government of India are shown at Rs. 13.15 crores and are secured by mortgage of ships and a bank guarantee for Rs. 8.48 lakhs. Unsecured loans and advances total Rs. 4.44 lakhs against Rs. 2.28 lakhs in the previous year. Current liabilities and provisions at Rs. 266.70 lakhs exceed current assets, loans and advances at Rs. 192.21 lakhs. Investments are higher at Rs. 20 lakhs as compared with Rs. 13.51 lakhs in the previous year, with the quoted investments of Rs. 19.55 lakhs commanding a market value of Rs. 19.46 lakhs. The gross block increased during the year from Rs. 22.69 crores to Rs. 30.57 lakhs, after providing Rs. 13.75 lakhs as depreciation.

but the Directors have been advised that the application would receive favourable consideration as soon as the next credit from the United Kingdom is finalised.

The Company's efforts to explore new avenues of technical collaboration are being vigorously pursued and the Directors are hopeful of achieving substantial progress in the current year. As the diversification and expansion require more and more capital resources, the Company has decided to increase the subscribed capital from Rs. 36 lakhs to Rs. one crore, that is, by Rs. 64 lakhs. The necessary sanction for this has already been received from the Controller of Capital Issues. The Company will shortly be entering the capital market with an offer of 64,000 equity shares of Rs. 100 each at par for public subscription. The Company's shares are not yet listed in any of the Stock Exchanges.

The Company's balance-sheet as on 31st March 1961 shows that the paid-up capital of Rs. 36 lakhs is supported by reserves and surplus of the order of Rs. 15.48 lakhs (as against Rs. 7.37 lakhs last year). The Company's secured and unsecured loans amount to Rs. 20.22 lakhs. In addition, there are outstanding current liabilities and provisions aggregating Rs. 70.78 lakhs. As against this total indebtedness of Rs. 91 lakhs, current assets stand at Rs. 105.70 lakhs, showing a clear surplus of Rs. 14.70 lakhs. Further, the Company has investments of the order of Rs. 6.21 lakhs of which Rs. 1.36 lakhs are in Government securities and Rs. 4.05 lakhs in the subsidiaries of the Company. The gross block of the Company has increased from Rs. 40.31 lakhs in 1959-60 to Rs. 44.32 lakhs and has been well written down to Rs. 30.57 lakhs, after providing Rs. 13.75 lakhs as depreciation.

SYNOPSES OF COMPANY REPORTS

Amalgamated Coffee Estates Ltd.

(*Managing Director*: Mr. K. N. Neelakantan, Seetagundy Estate, Sitharkunda P.O., *via* Kollengode, Palghat Dist.)

	(20%)	(10%)
Carried forward	1,84	7

* This amount represents the balance of profit forward.
† This is the amount transferred from general reserve.

Extracts from the Directors' report: Trading Conditions: During the year under review the cost of production in the Textile Industry further increased as a result of a steep rise in the prices of cotton, a substantial increase in the wages of workers under the recommendation of the Wage Board and several other factors. Consequently, the prices of cloth also began show an upward trend. To bring the prices down to a reasonable extent and to keep them under check, the Government of India and the representatives of the Indian dustry held negotiations in August, 1960 and it was decided that the Industry should make a voluntary reduction in prices of cloth taking into consideration the prices ruling in the month of August 1959, which were fair, and after making a reasonable allowance for various factors. Accordingly, the first reduction in the prices was made in the month of September 1960. Then again a second voluntary reduction of 5 per cent in the prices was made from 1st January 1961. For the convenience of consumers, a system of stamping of prices on each piece of cloth was also introduced and it is working satisfactorily.

The Finance Act 1961 has increased certain excise duties on cotton cloth and has also imposed a new levy of excise duty on cotton yarn. The Finance Act also increased the rates and enacted new levies of custom duty and excise duty on various items like machinery, stores, colours, chemicals etc., which are required by the textile industry. The cost of production in the industry has consequently gone up without any corresponding increase in the prices of cloth which were agreed to be charged by the industry before the imposition of these duties.

On the whole the working results of the Company's Textile mill have been satisfactory during the year under review. The company have added the latest type of winding and warping machines namely the *Barber Colman* type to the textile mill. Several other machines have also been ordered for replacement of old machinery or for improving the various processes. An application has also been made to the Government of India for permission to install additional spindles for balancing the existing ratio of looms to spindles. The permission is awaited.

The Ginning and Pressing Factory at Malout could not work well this year due to the uncertainty in cotton trade which resulted owing to a very poor crop of cotton. One more ginning and pressing factory has been put by the company at Kesrisingpur (Rajasthan) which also started working during the later part of the financial year, but no substantial business could be done by this factory.

The Tent Factory was unable to utilise its full capacity on account of paucity of orders from the Government of India. Orders worth Rs. 50 lakhs, however, were received at the end of the financial year and the deliveries against these orders are to be completed by December 1961. During the current year, therefore, the work is going on in full swing.

Amalgamation: As reported last year, the two companies, Messrs. Merchandise and Stores Ltd. and Rajputana General Dealers Ltd. were amalgamated with this company during the year under review and their assets and liabilities taken over. As a result of amalgamation, the reserves of the company have increased by Rs. 19,06,046 which represents the excess of assets over liabilities and capital issued to the shareholders of these companies.

Accounts in brief are as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	39,95,950	Gross block	1,75,41,824
Reserves and surplus	1,13,91,207	—Depreciation	1,27,42,738

To adjustment of loss brought forward	16	Nil
Carried forward (loss)	(—) 9,33	(—) 9,49

* Loss for the year after providing for depreciation and development rebate.

† This represents unclaimed balances written back.

‡ This is the amount transferred from dividend equalisation reserve for the purpose of paying preference dividends of all classes.

‡ This is the total loss carried forwarded on 31st March 1960 including the loss brought forward from the previous year, i.e., 1959 of Rs. 4,82,050.

Extracts from the Directors' report: In view of the previous losses incurred by the Company, the Secretaries and Treasurers have agreed at the request of the directors to forgo the balance of Rs. 36,500 of the minimum remuneration for the year, Rs. 13,500 having been already paid.

As the directors had reported in the previous year, the important contributing factor for the unsatisfactory results was the high labour cost. The question of labour cost was referred to a joint arbitration and the award of the arbitrator was also received. The workers have, however, not implemented the award in proper spirit and have adopted "go slow" tactics, with the result that the production during the last year suffered greatly and therefore, the results for the year were unsatisfactory.

The Company is negotiating for technical "know-how" collaboration with a foreign firm and it is expected that the agreement will be finalised very shortly. The directors hope that the necessary approval of the Central Government will be available for the same.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	63,57,065	Gross block	1,25,61,022
Reserves†	4,97,204	—Depreciation	79,69,414
Other liabilities	87,12,686		
		Net profit	45,91,608
		Current assets	1,08,92,888
		Investments	4,000
		Cash	78,659
	Rs. 1,55,66,955		Rs. 1,55,66,955

* Paid-up capital consists of:—(*a*) 31,070 ordinary shares of Rs. 100 each; (*b*) 5,000—5 per cent. redeemable cumulative preference shares of Rs. 100 each; (*c*) 7,000—5½ per cent redeemable cumulative redeemable preference shares of Rs. 100 each; (*d*) 1,926—5½ per cent. redeemable cumulative preference shares of Rs. 25 each; and (*e*) 20,000—8.57 per cent redeemable cumulative preference shares of Rs. 100 each. There is also an amount of Rs. 1,916 being forfeited shares (amount paid up).

† Reserves are shown after deduction of the debit balance of Rs. 9,33,453 in the profit and loss account.

Indian Plastics Ltd.

(*Secretary*: Mr. B. S. Verdia, Bombay.)

Annual General Meeting—29th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (gross)	84,78	89,35
Closing stock	16,72	15,33
Gross profit	5,02	3,60
Transfer to depreciation	3,72	1,64
Net profit	1,30	1,96
Adjustments	34	2
Appropriations:		
Total available balance	1,64	1,98
Transfer to development rebate reserve	36	41
Proposed dividends (taxable) 5½% C. R. Preference	1,24	1,24
,, ,, Ordinary	Nil	Nil
Carried forward	4	34

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: The working during the year under review was better in comparison with the previous year in spite of heavy competition in *Plastics*, as well as *P. F. Moulding Powders*. The Central Excise Duty came into force with effect from 1st March 1961. Since then, the demand for *P. F. Moulding Powder* has gone down considerably. At the increased rates on account of addition of duty, there is buyers' resistance. The price of raw material has further increased due to Central Excise and cost of production has further gone up but the price of finished goods has not gone up in the proportion to the increase in the cost of production as a result of levy of the Central Excise. The directors are trying their best to improve the working results and it is hoped that in the near future, working will improve.

The Company could not avail themselves of collaboration with Messrs. Bakelite Gesellschaft M.B.H. of West Germany, as permission from the Central Board of Revenue to remit the first payment intimating the amount considered as taxable was received only recently. Money is being remitted now.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	52,43,375	Gross block	54,89,157
Reserves and surplus	1,09,737	—Depreciation	21,21,520
Other liabilities	45,67,683		
		Net block	33,67,637
		Current assets	65,25,192
		Cash	27,966
	Rs. 99,20,795		Rs. 99,20,795

* Paid-up capital consists of 22,500—5½ per cent cumulative redeemable preference shares of Rs. 10 each, fully paid up and 2,98,825 ordinary shares of Rs. 10 each, fully paid up. The paid-up capital also includes Rs. 5,125 being amount paid up on ordinary shares forfeited.

Jost's Engineering Co., Ltd.

(*Chairman*: Mr. T. V. Baddeley, Bombay.)

Annual General Meeting—28th September. Dividend payable on and after 29th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales	21,93	17,35
Closing stock	2,85	3,73
Gross profit	1,51	88
Transfer to depreciation	9	7
,, ,, development rebate reserve	7	Nil
,, ,, provision for gratuities	10	15
,, ,, ,, taxation	43	25
Net profit	82	31
Adjustments	3	20
Appropriations:		
Total available balance	85	51
To allowances, etc., to customers in respect of previous years	23	Nil
To sales tax	*	Nil
Proposed dividend (taxable)	60	48
	(10%)	(8%)
Carried forward	2	3

N.B.—Adjustments include the balance brought forward from the previous year and excess provisions for taxation, etc., no longer required written back.

* Only Rs. 321.

Extracts from the Directors' report: Review of the year's working: Despite the difficult trading conditions on account of continuation of import restrictions, the sales during the year under reference are 25 per cent higher than those in the previous year. The order book of the Company also shows an improvement in the current year, compared to the same period last year, and if the present trend continues, it should have a more satisfactory year.

Factory: Since April 1961, the Company undertook the manufacture of some of the goods in which it has been dealing and material results may be expected by the year end. The Company also acquired, in July last, a plot of land admeasuring 8,300 sq. yds. near Thana, with a view to construct a factory building of its own.

Collaboration Arrangement: Negotiations with a foreign Company for the collaboration arrangement in regard to the manufacture in India of certain products imported in large quantities, are still in progress.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,00,000	Gross block	2,05,518
Reserves and surplus	4,58,829	—Depreciation	1,38,653

		Current assets	16,64,401
		Investments	9,100
		Cash	1,92,235
	Rs. 19,32,610		Rs. 19,32,610

* Paid-up capital consists of 12,000 ordinary shares of Rs. 50 each, fully paid up. Of the above 12,000 ordinary shares 4,000 shares were allotted fully paid up by way of bonus shares.

COLOUR

Nature's Beauty Aid!

MAN has taken his lesson from Nature... has employed many and varied processes from the brewing of dyes from herbs and leaves to the most modern scientific methods — to make his own life as colourful and gay as the variegated hues of Nature. Judging from the frescoes of Ajanta, 'colour-chemistry' in India has been an advanced science since ancient times.

Today, AMAR DYE are leaders in the indigenous manufacture of dyes — having established a name for the excellent quality of their Amarthols & Fast Bases. Intensive research and a rapid expansion programme will soon make India totally self-supporting in the requirements of coal tar dyes.

—enrich India's life with COLOUR!

SONE VALLEY PORTLAND CEMENT COMPANY, LIMITED

Registered Office:

11, Clive Row, CALCUTTA-1

NOTICE

THE ANNUAL GENERAL MEETING OF THE Shareholders of Sone Valley Portland Cement Company Limited will be held on Saturday the 30th September, 1961 at 10.30 a.m. at the Registered Office of the Company at 11, Clive Row, Calcutta, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st December, 1960.
2. To declare dividend.
3. To elect a Director in place of Shri B. N. Chaturvedi, who retires by rotation, but, being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. Lovelock & Lewes, Chartered Accountants, being eligible, offer themselves for reappointment.

AS SPECIAL BUSINESS:

5. To consider and, if thought fit, to pass with or without modifications the following resolutions, which will be proposed as Ordinary Resolutions:

(i) "RESOLVED that pursuant to clause (d) of sub-section (1) of Section 293 of the Companies Act, 1956, the consent of the Company be and is hereby granted to the Board of Directors of the Company borrowing moneys for the purposes of the Company, from time to time, notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business), will or may exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose but so that the total amount up to which moneys may be borrowed by the Board of Directors shall not at any time exceed Rupees two crores."

(ii) "RESOLVED that pursuant to sub-section (1)(e) of Section 293 of the Companies Act, 1956, the Board of Directors be and they are hereby authorised on behalf of the Company to contribute and/or subscribe from time to time in any financial year to any body, institution, society, person, trust or fund for any charitable or other purposes not directly relating to the business of the Company or to the welfare of its employees upto a total amount of Rupees one lac or five per cent of the Company's average net profits as determined in accordance with the provisions of Sections 349 and 350 of the Companies Act during the three financial years immediately preceding, whichever is greater; provided however that any contributions to any political party or for any political purpose to any individual or body will be subject to the restrictions in Section 293A of the Companies Act."

(iii) "RESOLVED that the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301 302, 304, 307, 362 and 372 of the said Act, shall be available at the Registered Office of the Company for inspection to the persons entitled thereto, to the extent and in the manner and on payment of fee, if any, specified in the aforesaid provisions between the hours of 11 a.m. and 1 p.m. on each business day.

Provided, however, that the register required to be maintained under Section 307 of the Act shall be open for inspection of the persons entitled thereto between the times abovementioned only during the period prescribed by sub-section 5 (a) of Section 307."

Share Transfer Books and Register of Members of the Company will remain closed from the 25th September 1961 to 30th September 1961, both days inclusive.

SAWAI-MADHOPUR (W.Rly.)

NOTICE

THE ANNUAL GENERAL MEETING OF the Shareholders of The Jaipur Udyog Ltd. will be held at the Registered Office of the Company at Sawai-Madhopur on Saturday, the 30th September, 1961 at 4 p.m. to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the financial year ended 31st March, 1961.
2. To declare dividends.
3. To elect a Director in place of Shri Ramnath A. Poddar, who retires by rotation but, being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. R. D. Joshi & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

As Special Business

To consider and, if thought fit, to pass with or without modifications the following resolutions, which are proposed as Ordinary Resolutions:—

5. "Resolved that, pursuant to clause (d) of sub-section (1) of Section 293 of the Companies Act, 1956, the consent of the Company be and is hereby granted to the Board of Directors of the Company borrowing moneys for the purposes of the Company, from time to time, notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company, (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business), will or may exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose but so that the total amount up to which moneys may be borrowed by the Board of Directors shall not at any time exceed Rupees five crores."

"Resolved that, pursuant to sub-section (1) (e) of Section 293 of the Companies Act, 1956, the Board of Directors be and they are hereby authorised on behalf of the Company to contribute and/or subscribe from time to time in any financial year to any body, institution, society, person, trust or fund for any charitable or other purposes not directly relating to the business of the Company or to the welfare of its employees upto a total amount of Rupees two lakhs or five per cent of the Company's average net profits as determined in accordance with the provision of Sections 349 and 350 of the Companies Act during the three financial years immediately preceding, whichever is greater, provided however that any contributions to any political party or for any political purpose to any individual or body will be subject to the restrictions in Section 293A of the Companies Act."

The Share Transfer Books and Members' Registers of the Company will remain closed from Saturday, the 23rd September, 1961, to Saturday, the 30th September, 1961, both days inclusive.

By Order of the Board,
For THE JAIPUR UDYOG LIMITED,
M. L. RATHI,
Secretary.

CALCUTTA,
2nd September, 1961.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

The Explanatory statements under Section 173 of the Companies Act relating to the Special Business have been forwarded to the members of the Company.

THE DEHRI-ROHTAS LIGHT RAILWAY COMPANY LIMITED

NOTICE

The Dividend Warrants will be made collectable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

PRIVATE ENTERPRISE IN DEVELOPING ECONOMIES

(*Concluded from page 533*)

if this is fruitful, I believe it can be an important source of a free supply—free in the sense of not being attached to technical or other control—of foreign exchange to underdeveloped countries.

Economic Policy Decisions

Summing up, I would say that, while the broad structure of economic policy has remained unchanged, its implementation has become more flexible and in many ways more favourable to the exercise of the private sector, both indigenous and foreign. I would not, of course, deny that the Government still has considerable power over economic policy decisions. The very scale of Government operations has increased considerably under the Plans: the Government invested in industry about Rs. 60 crores during the first Plan period and is scheduled to invest Rs. 1,500 crores during the third Plan period. In many lines, to name a few, iron and steel, machine tools, antibiotics, fertilisers, coal, cement—the Government and the private sector operate side by side as competitors; in some of these, the relationship is that of buyer-and-seller.

Many fields of enterprise—a recent addition to this is oil—still remain closed to private enterprise. On the other hand, Government has shown greater flexibility in its attitude towards participation and expansion of private enterprise in some others, for example, fertilisers and basic chemicals. If licensing has ceased to be an obstacle, it still remains an irritant to a prospective investor.

I should like to emphasise that, in most underdeveloped economies, private enterprise is on probation. In many ex-colonial countries, private enterprise has been under suspicion mainly because it was identified with the imperial power. The newly developing economies are like people in a hurry—they are keen to reach the destination as quickly as possible irrespective of the means adopted to achieve the end.

In India, much water has flowed under the bridge during the last ten years. As events have shown, Government's attitude towards private enterprise has been more understanding. However, as I mentioned earlier, the Government still retains in its armoury a wide range of powers which, if circumstances or attitudes change, may be sought to be used.

Social Utility of Private Enterprise

The milieu within which private enterprise functions today is far different from that prevailing in the eighteenth and the nineteenth centuries. Private enterprise is no longer taken for granted, and its justification is no longer sought to be measured only by the profit-rate it is able to earn. Private enterprise will be judged by—and its survival depends upon—its social utility to the economy. This casts a heavy responsibility upon those who sponsor, organise, finance and operate private enterprise.

Private enterprise has, indeed, to play a role which has to be in consonance with the social philosophy of the times. In the nineteenth century, private enterprise was able to bring about, consistent with its own objective of individual profit, rapid development of the economies, considerable improvement in the living standards of the common people, and tremendous growth in the social and cultural development of the community. These were often by-products of the growth of private enterprise in the advanced economies. These goals will need to be kept more consciously in view in the future. Private enterprise in India has not always been unconscious of these requirements. Many educational institutions in India owe their existence to the munificence of private industrialists. Even today, a considerable portion of the dividend income from the largest steel company in India goes to finance charitable purposes.

Responsibility always goes with power. The advantage of private enterprise has been to share this power and this responsibility—to bring about its wider distribution. To every individual's power—whether it be the power of ownership of means of production or of employment of individuals—there exists under private enterprise the countervailing power of another who is a competitor or a customer, and, ultimately, of the State which acts as arbiter in case of conflict of interests.

Private enterprise, in brief, cannot expect to be a vested interest in itself. Like any social institution, it must stand ready to be judged by the results it produces. By its nature, it is dynamic and resilient as phenomenal developments in your country, in the U.K., in West Germany and other countries show. I am sure that it will not be found wanting in the challenge it faces in the emergent economies.

THE INDIA CEMENTS LIMITED

SPEECH OF CHAIRMAN, MR. P. SURYANARAYANA

THE view that the cement industry has a bright future was expressed by Mr. P. Suryanarayana, Chairman of the India Cements Limited, in his speech at the Fifteenth Annual General Meeting of the Company held at Madras on Monday, 4th September 1961. The recent trends in the demand for cement, Mr. Suryanarayana said, indicated that the estimated requirements for 1960-61 might have been somewhat on the low side. He felt that the possibility of having to revise the production target upwards could not be ruled out, if the construction activities, besides the need to repair the damages caused by the recent floods all over the land, were allowed to have their way.

The following is the full text of Mr. Suryanarayana's speech:

"GENTLEMEN,

"On behalf of the management and on my own behalf, I extend to you all a cordial welcome to the Fifteenth Annual General Meeting of your Company and place before you the annual accounts of the Company and the report of the Board of Directors for the year ended 31st March 1961. Printed copies of these have been circulated to all the members and, with your kind permission, I will take them as read.

"You are aware that the third Five-year Plan, which marks a vital phase in India's progress towards a self-generating economy, was presented to the nation on 7th July 1961 with a call for an overall investment of Rs. 10,400 crores. The final report of the Plan says that the range and magnitude of the task will strain the country's resources to the utmost. One of the principal objectives of the third Plan is to expand basic industries like steel, fuel and chemicals to accelerate industrialisation. To attain the objectives, this Plan report has prescribed a total investment of Rs. 10,400 crores in the next five years, which represents a 54 per cent increase over the second Plan investment of Rs. 6,750 crores. Of the proposed investment, Rs. 6,300 crores are to be in the public sector and Rs. 4,100 crores in the private sector. The roles of the public and private sectors are conceived of as complementary to each other. The planners look forward to the stepping up of the industrial output by 70 per cent. In 1965-66, the general index of industrial production is expected to reach the level of 329 (1950-51 base), as against 194 provisionally estimated for 1960-61 and 139 for the last year of the first Plan.

Bright Future

"In this new set up, the cement industry has an assigned place. It has made considerable progress. The installed capacity of cement industry at present is 8.93 million tonnes per annum. This is to be raised to 15 million tonnes in the third Five-year Plan. Its production was 7.89 million tonnes in 1960-61 and is expected to go up by 1 million tonnes this year. All these show that the industry has a bright future before it. Recent trends in the demand for cement indicate that the estimated requirements for 1960-61 might have been somewhat on the low side. This matter is expected to be reviewed in the subsequent year. The possibility of having to revise the cement target upwards cannot be ruled out, if the construction activities—besides the need to repair the damages caused by the recent floods all over the land—are allowed to have their way.

"As regards the working of your Company during the year under review, you would have noted that the gross profit (without deducting depreciation and Managing Agents' commission) has increased only by 3.52 lakhs, as compared to the previous year.

"Production of clinker, cement and sales were higher at 451,540 metric tonnes, 464,295 metric tonnes and 462,083 metric tonnes, respectively. This was due to the fact that the benefit of higher production arising out of the operation of our third unit was available to the Company throughout the year as against a partial period during the previous year. There has thus been a 27 per cent increase in the production of clinker during the year under review, though, however, there has been no proportionate increase in the profits earned.

"This is particularly due to the fact that the cost of production had gone up during the current year, for instance, coal was not only not available in required quantities, but a much higher quantity had to be moved by sea-cum-rail route which, in effect, had increased the cost of coal delivered at the Factory. Due to the extremely difficult position in regard to coal supplies, we had to switch on to the use of furnace oil for one of the kilns. The use of furnace oil was quite prohibitive from the point of view of cost and was not covered in the existing retention price available for our factory. In order to maintain production to the extent possible, we have had to resort to this mode of usage of fuel.

"Wages and salaries for various categories of staff were also revised during the year in conformity with the recommendations of the Central Wage Board for Cement Industry, but the increase on this account was, however, reimbursed to the Company by way of enhancement of retention price. The cost of spare parts and stores have registered substantial increases.

Packing Charges

"The cost of gunnies required for packing cement had spurted considerably in the latter half of 1960 and, in spite of this abnormal increase in rates, the Government of India did not choose to effect an upward revision in the quarterly packing charges till 20th January 1961. The Government of India, by this time, had reversed their previous decision and permitted the use of old gunnies so as to offset the increase in the price of new bags. However, this sudden decision of the Government was of no immediate benefit, inasmuch as the revival of the organisation set up for the collection of gunnies had necessarily to take some time to yield results.

"Subsequently, from the third week of February 1961, the Government also enhanced the packing charges though by this time, the Company had already sustained losses on this account. In effect, therefore, it may be noted that, for a very small increase in the gross profit, an increase of production of 27 per cent as compared to the previous year was necessary to offset the increases in cost under various items.

Cement Prices

"The Tariff Commission have now taken up the question of revision of cement prices and your Company have made necessary representation to the Commission in this regard. It is hoped that the Commission would take into account all matters pertaining to the cost of production in the case of your Factory and fix a reasonable price for cement produced.

"I am pleased to inform you that the Government of Andhra Pradesh have issued orders sanctioning mining rights over the area applied for by us. Your Company has also submitted an application to the Central Government for the issue of a licence to start a cement factory in Salem District.

"The State Government have been pleased to accord sanction to construct 450 tenements under the Subsidised Industrial Housing Scheme and work in this connection is in progress.

"I am indeed happy to report that our relation with labour continues to be very cordial as usual. Before I conclude, I should, both on your behalf and on my own, like to tender our sincere thanks for their co-operation and hard work. The Company looks forward to their devoted service in the years to come."

Note: *This does not purport to be the full proceedings of the annual general body meeting.*

opportunity for those that take it

AN important feature of the educational facilities at Jamshedpur is the leisure-time training of employees. Instruction provided, after hours, helps steelmen like J. P. Pathak to acquire wider knowledge and new skills.

Pathak, who started his career in Tata Steel as an office boy in 1929, passed his matriculation examination from the Company night school in 1944. Pathak next took up an evening course in basic mechanical drawing at the Jamshedpur Technical Institute. In 1957, he was selected for overseas training, and went to Canada, the U.S.A., West Germany and Holland, to learn techniques of operating a sinter plant. Today, Pathak is operator-in-charge of the sinter plant added under the two million ton expansion programme.

Notwithstanding initial handicaps, enterprising men like Pathak have the opportunity to better their prospects through further education and training at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

CALL RATE HARDENS FURTHER

(From Our Own Correspondent)

BOMBAY, 13*th September*

Thanks to the heavy subscriptions to State loans, which stripped off the banks of liquid resources, stringency in the short-term money market increased further during the week under review. Borrowers encountered severe difficulties in obtaining their requirements and it is stated that some of the banks had to approach the Reserve Bank for accommodation. As a sequel to the tight supply position and the rising demand, the inter-bank call money rate among Indian and Exchange banks which stood at 3½ per cent per annum last week went up gradually from that level to as high as 4½ per cent today. The term rates, however, were unchanged, as under:

	Per cent
Notice Money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The sales of 91-day Treasury Bills of the Government of India through weekly tenders were resumed on the 12th inst. Their results showed that, as against an invitation for Rs. 2 crores, the actual amount offered was *Rs. 2.10 crores*. The total amount accepted was, however, Rs. 2 crores only. The average rate of accepted tender stood unchanged at 2,400 per cent 91 days' intermediate Treasury Bills sold from the 4th inst. to the 9th inst. aggregated Rs. 1.28 crores. Their sales are being continued from 13th September to 16th September, both days inclusive.

A sharp rise of Rs. 26.25 crores in notes in circulation is disclosed by the statement of the Reserve Bank of India for the week ended 8th September 1961, as compared with that for the previous week. As the notes held in the Banking Department have declined by Rs. 12.89 crores, the total notes issued have gone up by Rs. 13.36 crores only. The foreign securities held by the Issue Department are unchanged at Rs. 116.86 crores, but as the balances held abroad have dropped by Rs. 85.81 lakhs, the aggregate foreign assets have declined by that amount to Rs. 135.59 crores. On the liabilities side of the Banking Department, the deposits of the Central Government have improved by Rs. 10.99 crores as well as those of other Governments by Rs. 12.11 crores. But deposits of banks have declined by as much as Rs. 25.40 crores. On the assets side, other loans and advances, which include loans advanced to scheduled banks against usance bills, have risen by Rs. 17.97 crores. Investments have shrunk by Rs. 14.27 crores.

An expansion of Rs. 1.95 crore in demand deposits and a contraction of Rs. 2.19 crores in time deposits are disclosed by the statement of the scheduled banks for the week ended 1st September 1961. The deposits of the State Bank of India rose by Rs. 1.65 crore. Borrowings from the Reserve Bank of India increased by just Rs. 28.45 lakhs of which the share of those against usance bills was Rs. 25 lakhs. The scheduled banks also borrowed larger amounts from the State Bank. Their borrowing of demand nature went up by Rs. 41.78 lakhs and of time nature by Rs. 79 lakhs. Investments of the scheduled banks, as a whole, improved by Rs. 9.53 crores, of which the share of the State Bank alone was as large as Rs. 8.99 crores. Advances and bills discounted (bank credit) declined further by Rs. 3.92 crores to Rs. 1,219.94 crores, on top of a contraction of Rs. 7.63 crores in the preceding week. Of the fall of Rs. 3.92 crores in advances of all scheduled banks, the State Bank accounted for Rs. 1.99 crores.

The Gilt-edged market was, on the whole, steady. In the Central loans section, the Conversion Loan gathered 20 nP to Rs. 73. 3½ per cent 1965 second National Plan bonds rose by 5 nP to Rs. 99.85. But 3 per cent 1966-68 funding loan dropped 5 nP to Rs. 96.25 and 3½ per cent 1964 National Plan loan eased by a like amount to Rs. 99.90. In the State loans section, some selling was in evidence in the newly acquired 4¼ per cent 1972 securities. Such issue of Andhra Government eased by Re. 1.50 to Rs. 98.25. 4¼ 1972 Uttar Pradesh dropped a rupee to Rs. 98.75. New loans of the Bihar and Orissa Governments also declined by a rupee to Rs. 98.50.

In the foreign exchange section, the rupee improved further in relation to the U.S. dollar. Banks' selling and buying rates for ready T.T. on New York were Rs. 476.00 and Rs. 472.50 per 100 dollars, respectively, as against Rs. 476.50 and Rs. 473.25 last week. In the New York Exchange, the pound sterling recorded a modest recovery *vis-a-vis* the U.S. dollar. The latest available rates are 281.200-281.240 per £ for spot and 278 350-278.390 per £ for three months' forward. As compared with the last week's rate, the pound sterling put on 0.20 cent in the spot and 0.03 cent in the forward.

HIDES WELL SUPPORTED

(From Our Own Correspondent)

MADRAS, 11*th September*

The tanned cow hides market ruled firm due to good demand for lower grade kips suitable for inland trade. Export trading, however, was small. Buffalo hides remained firm. Demand for cow calf was negligible. Inquiries for buff calf were fair sized, but the volume of business booked was poor.

Better grades of tanned goat skins were held firm except in light weights. Tanned sheep ruled unchanged.

BULLION PRICES RECEDE AFTER EARLY RISE

(From Our Own Correspondent)

BOMBAY, 13*th September*

The bullion market ruled distinctly firm in the first three sessions of the week under review, but developed a sagging tendency yesterday which persisted today also. In earlier sessions, there was good buying by spot houses and advices from upcountry centres were also quite encouraging. Fresh offerings were scarce, thanks to reduced arrivals, the daily average arrival rate being 4,600 tolas of gold and 23 bars of silver, as against 6,335 tolas and 27 bars, respectively, last week. The rate of offtake was higher at 4,400 tolas (3,665 tolas last week) and 10 bars (9 bars). Consequently, both gold and silver scored handsome gains. The upward trend was somewhat halted yesterday (Tuesday the 12th inst.), following heavy arrivals—7,000 tolas of gold and 35 bars of silver—and rumours regarding further sales by the Reserve Bank. Values, therefore, suffered a setback and the declining trend gathered further momentum today. The closing rate for gold today was well above that prevailing a week ago, whereas the white metal was a shade lower.

Adjustment rates fixed today were Rs. 124.10 per 10 grams of gold and Rs. 202.50 per kilogram of silver. The corresponding rates on *Wednesday last* week were Rs. 122.8§ and Rs. 202.55, respectively.

A notable event of the week was the commencement of business in *Margashir* (December) settlement on Monday the 11th inst. The starting rate was Rs. 124.85 for gold and Rs. 205.50 for silver. There was a large switching over of outstanding business in gold from the *Bhadrapad* (25th September) to *Margashir* settlement. Since the distant settlement was quoted at a discount under the nearby settlement, the bears had to pay *budli* to bulls (backwardation rate), though the actual rate today was lower at 5 nP, as against 30 nP on Monday. The reverse was the position in silver, the *budli (contango)* being payable by bulls to bears; the actual rate was as high as Re. 1.05 on Monday and Tuesday which widened further to Re. 1.20 today.

Both ready gold and silver were quoted at a discount under the forward (*Bhadrapad* settlement) throughout the week. The actual discount today was 35 nP in gold (same as last week) and 60 nP in silver (65 uP).

The following table shows the trend of prices during the week under review:

	13-9-1961 (closing)	High	Low	6-9-1961 (closing)

SAGGING TENDENCY IN PEPPER

(Messrs. Parekh and Co.)

BOMBAY, 13*th September*

Malabar black pepper showed a sagging tendency during the week, in view of poor export inquiries and liquidation by stale bulls who took sizable long position in October delivery. Ready ungarbled and garbled remained comparatively steady, but the weakness in the forward had its reflection and, as such, holders of ready stock became at times soft sellers. Some parcels of ungarbled changed hands at Rs. 387.50-Rs.389.50, while garbled found sellers at price ranging from Rs. 403 to Rs. 398. October delivery came down to Rs. 404 under pressure of selling by bulls who became anxious sellers as the *star-gazers and the chart-readers forecast easy* market for the future. December delivery moved down to Rs. 388, in sympathy with October which is being pressed by demoralised bulls.

Singapore also showed quiet tendency for want of export business and under pressure of arrivals from Sarawak. Arrivals of Lampong were poorer and a major stockist of Lampong in Singapore was an unwilling seller at the present level, as the crop of Lampong under harvest is very much less than the production last year. Black pepper in Singapore came down from Str.$147 to Str.$142½ and white from Str.$180 to Str.$175.

New York was *continuously buying* at progressively lower prices. Fair-sized purchases were reported done at prices ranging from $0.44 to $0.43. New York dealers are buying steadily but slowly as they do not want to excite the market as otherwise sellers may withdraw. Spot in New York is *fairly steady* at $0.45½.

Brazil crop is reported to be late and there are *chances of Malabar crop also being delayed* by a month, in view of the prevailing uncertain weather. Crop reports from Malabar are conflicting. Most of the traders now forecast an average crop of about 25,000 tons, while the growers are *estimating it at about 20,000 tons. The market*, however, is treating the estimate of the growers with reserve.

Ready pepper in Bombay is nominally quoted at Rs. 214 per 50 kilos, with demand poor.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, 13*th September*

Distinctly firm conditions prevailed in the cotton futures market during the week under review. The firmness was due mainly to large-scale buying induced by reports of adverse of weather in many parts of the cotton growing tracts and the fear of the consequent damage to the crop. The apprehension that the untimely rains and floods might delay the movement of new crop sparked off brisk mill buying in the spot market which imparted strength to futures. Under pressure of persistent buying by both local and upcountry operators, the March contract spurted early in the week and crossed the Rs. 600 mark to quote at Rs. 605 on Friday. Later reports, however, indicated that the damage to the crop had been exaggerated. A wage of selling ensued as a reaction to this news. The March contract declined to Rs. 603.50 on Monday. Profit-taking and liquidation by weak holders accelerated the downward trend. This trend was, however, again revised yesterday, thanks to renewed news of unwanted rain and damage to the crop. The expectation that an export quota for Bengal *Deshi* will be announced soon after the meeting of the Export Promotion Advisory Council (held at New Delhi yesterday) favourably influenced sentiment and the contract firmed up to Rs. 608.50 on Tuesday. The market ruled steady today. The March contract is currently priced at Rs. 607.25, as compared with the last week-end quotation of Rs. 595.75.

In the sot market, mill demand for ready cotton was greatly enlarged. Last week's announcement of Indian cotton quota for mills and reports of crop damage and delay in the movement of new crop induced spinners to make extensive purchases. Both current and new crop were in good demand. Popular varieties such as Co2, L.147, Digvijay, Khandesh, etc., were easily picked up. Prices went up by Rs. 10 to Rs. 15 per candy.

There was a revival of interest in Bengal *Deshi* in anticipation of quota. Other exportable varieties were comparatively neglected. Preliminary figures indicate that exports of cotton during the 1960-61 season aggregated 300,000 bales, comprising 190,000 bales of Bengal *Deshi*, 50,000 bales of cotton stapling 23/32" and below, 30,000 bales of cotton stapling 24/23" and 30,000 bales of yellow pickings, Assam and Comilla. Total value of cotton exports is estimated at Rs. 12 crores.

In addition to moderate interest in Sudan, *Egyptian and U.S.* cottons, good mill buying was evident in current and new crop East African cotton. B.P.52 was done at Rs. 1,240 per candy. Busoga (U.N.U.G.) changed hands at Rs. 1,235 per candy for prompt shipment. Sudan G5S was absorbed at Rs. 1,425 per canly for prompt shipment and XG2L at Rs. 1,500 per candy for October-November shipment. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 610; Gadag Laxmi 925; Digvijay 933; Cambodia (New) 930; L.147 955.

In contrast to the easy trend witnessed last week, Karachi cotton futures market ruled firm during the week under review. A revival of export inquiries, coupled with good domestic mill support prompted by reports of adverse weather, touched off a general buying movement which resulted in a smart rally in prices. The N.T.R.G. over the week. The March contract was also markhardened on good spinner demand and overseas interest.

Alexandria cotton futures continued to remain closed.

Steady conditions prevailed in the Liverpool cotton futures market during the week. Inspite of the higher September U.S. forecast, futures prices in Liverpool did not register any appreciable fall. The lower ginning figures and the expectation that a good part of the crop will move into Government loan imparted steadiness to the market. Both the American and American type contracts remained practically unchanged. Sudan contracts, however, were firm, thanks to higher Khartoum advices. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 24.30; December 24.80; March 25.25; May 25.65.

American cotton mixed growth contract: October 24.70; December 25.15; March 25.55; May 25.95.

Sudan: September, November, January 31.75.

The most important development of the week as far as the New York cotton futures market was concerned, was the September crop report published this week by the U.S. Department of Agriculture. The Department estimated the crop at 14.26 million bales, as against 13.92 million bales forecast a month ago and the 1960 crop of 14.27 million bales. The rise in production is due mainly to the increase in yield which at 437 lbs. per acre, is 10 lbs. more than last month's estimate and compares with last season's yield of 446 lbs. per acre. The higher yield indicates the favourable development of the crop during the past few weeks.

New York cotton futures market ruled subdued early in the week in anticipation of the crop estimate which, when published, turned out to line with general trade expectation. Consequently its effect on prices was negligible. In fact, prices tended to move up towards the close of the week, on report of hurricane in certain parts of the cotton belt which gave rise to the fear that the crop will be damaged. The anticipation that a good percentage of the crop will move into Government loan also an influencing factor.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	12-9-61	5-9-61	29-8-61
New York Spot	35.30	35.25	35.20
October	34.77	34.00	34.48
December	35.26	35.00	35.02
March	35.90	—	—

ADDITIONAL VISCOSE YARN QUOTA

(From Our Own Correspondent)

BOMBAY, 13*th September*

All art silk powerloom units which have received allocation cards for indigenous yarn for the July-September 1961 quarter will get an additional viscose yarn quota to the extent of 30 per cent of their total allocation. An announcement to this effect was made early in the week by the Art Silk Yarn Distribution Committee. The powerloom units have been asked directly to approach the viscose spinners whose names are endorsed on their cards for the additional allotment. If, however, such spinners do not have stocks, then the card-holders may approach other spinners in their respective regions. In case the cards are endorsed only for acetate yarns, their holders have to approach the viscose spinners in their region for additional allocation. The viscose spinners have been requested to honour the cards when presented by granting additional quota (30 per cent). When any card is also endorsed for acetate yarn, the spinners are required to make a reference to the Committee for instruction before releasing the quota.

Thanks largely to the aforesaid release of additional quota to weavers and on fears that demand from upcountry centres (Surat, for instance) would suffer a setback following curtailment of production in view of heavy rains and floods, art silk yarns encountered selling, with prices showing a declining tendency. J.P. Bemberg yarn (40 x 1), however, ruled distinctly firm on renewed bearcovering due to scarcity of supplies. The categorical declaration by the Union Minister for Commerce and Industry at the Import Advisory Council meeting that there was no question of liberalising the import policy also imparted strength. In sympathy with these yarns, staple fibre yarns tended to move up. Cotton yarns continued to present a dull appearance, notwithstanding reports suggesting better offtake of cloth. Export enquiries were poor. Consequently, business put through was restricted and values moved narrowly.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	13-9-1961	6-9-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Oxpressa Bemberg (100 kg.)—

80s Modern	68.00	68.50

GROUNDNUTS GIVE WAY

(From Our Own Correspondent)

BOMBAY, 13*th September*

The feature of trading in the oilseeds market this week was the sharp decline in prices of groundnuts and groundnut oil, the futures contracts touching the lowest levels of the season. The decline followed nervous liquidation by some stockists who feared a bumper crop during the current (1960-61) season. One estimate placed the total output at as high as 2.8-3.0 million tons (kernels), as against only 2.3 million tons gathered in the previous season. Even the rumours that Government would soon announce an incentive scheme for groundnut oil exports in view of Government's anxiety to promote exports, as revealed during the discussions at the Export Promotion Advisory Council meeting at New Delhi, failed to enthuse the market. For operators felt that the world prices, too, would come down further in view of the anticipated substantial increase in world groundnut crop. In the meantime, the Oilseeds Exchange has addressed communication to the Union Ministry of Commerce and Industry, opposing any move to ban exports of groundnut expeller oilcake. The Exchange is of the view that exports of expeller cake should continue to be allowed on a quota basis as at present. The communication followed a meeting held on the 8th inst. at New Delhi under the auspices of the Ministry of Commerce and Industry whereas the possibility of imposing a ban on expeller cake exports was indicated, presumably as a sequel to the plea put forward by solvent extraction industry for the reservation of the entire indigenous expeller cake supplies to itself.

Castorseeds, too, ruled easy on account of the persistent bleak prospects for castor oil exports. The reports that the U.S. Government proposed to release as much as about 70,000 tons of castor oil *from out of* the stockpile ruled out the possibility of the revival of large scale buying of Indian castor oil by the U.S. The domestic production of castorseeds is also expected to be larger this season. In contrast, linseeds were held firm, thanks mainly to tight supplies and good demand, partly from certain industries, and partly for the purpose of mixing it with more costly edible oils. Cotton seeds ruled quietly steady.

Groundnut January 1962 contract were moved down from Rs. 207.75 to Rs. 203, before finishing at Rs. 205. Nizam bold fell by Rs. 3 to Rs. 45. Both Coromandels and Khandesh quality dropped Rs. 2 to Rs. 46. Oil ex-mill and railway receipts declined by 60 nP each to *Rs. 19.75 and Rs. 16.55*, respectively. Oil January 1962 contract shed 35 nP to Rs. 16.55.

Castorseed March 1962 contract receded by Re. 1.87 to Rs. 162.25, after fluctuating between Rs. 161.87 and Rs. 163.25. Ready Kanpur lost 87 nP to Rs. 32.25. Madras quality eased by 38 nP to *Rs. 33.62*. Oil B.S.S. slipped from Rs. 15 to Rs. 14.80.

Linseeds September 1961 contract picked up Re. 1.50 to Rs. 39.75. Bold ready advanced by Re. 1.13 to Rs. 39.25 and oil by 40 nP to Rs. 16.75.

Among cottonseeds, September 1961 contract strengthened by Rs. 2.75 to Rs. 93. March 1962 contract gathered 50 nP to Rs. 90.50. Whites were maintained at Rs. 19.25. Both Non-Whites and Berars, however, *lost 25 nP to Rs. 18.50*.

Sesame bold were hammered down from Rs. 270 to Rs. 240. Sesame oil fell by Re. 1.20 to Rs. 20.80.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	13-9-1961	6-9-1961	30-8-1961
Groundnut	Rs.	Rs.	Rs.
January 1962	205.00	207.75	214.62
Nizam bold	45.00	48.00	49.00
Coromandel ready	46.00	48.00	49.25
Khandesh quality	46.00	48.00	49.25
Oil ex-mill ready*	20.00	20.60	20.75
Railway receipts*	19.75	20.35	20.50

Kardi seed	24.00	24.50	25.00

* Rates include *excise duty but exclude sales tax*.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA IRREGULAR

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 5*th September*

At sale No. 36 held on Tuesday, 5th September a total of 362,145 kilograms was on offer. Nilgiri quality was irregular with only one or two invoices showing improvement. From other districts quality showed little change. There was less general demand with prices declining as the sale progressed. Highgrowns met with good support. Brokens were generally *easier* but the one or two invoices showing improved quality were fully firm to dearer. Similar B.O.P.F. were irregular and sometimes dearer. Plain and low mediums came to an irregular market and were lower by about 10 to 20 nP. Mediums were *in less demand than previously and* declined by up to 25 nP per kilo. Black leaf teas were slightly easier. Whole leaf grades came to an easier market although the best sold well. C.T.C. and C.T.C. types met weak support and were generally lower.

The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low mediums	4.20/4.40	4.00/4.25
Mediums	4.25/4.45	4.30/4.55
Good mediums	*No quotation*	4.55/5.15
Nilgiri B.O.P.	5.00	7.70

The average price realised in sale No. 36 was Rs. 4.66 per kilo, as against Rs. 4.79 in the previous week and Rs. 4.80 in the corresponding sale last year.

Dust Sale No. 35: In dust sale No. 36 held on Wednesday, 6th September 17,311 kilograms were on offer. There was good general demand. Low mediums and poorer sorts met good but irregular demand with prices about steady but sometimes easier. Mediums were well supported with the coloury types selling well at firm rates but others often selling easier. The few highgrowns on offer sold well with prices barely steady. C.T.C. and C.T.C. types were slightly easier to buy.

The average price realised in dust sale No. 36 was Rs. 4.69 per kilo as compared with Rs. 4.78 a week ago and Rs. 4.35 in the corresponding sale last year.

Export Quota: Some business was reported in Calcutta at 1 nP per kilo. There are now sellers at this price with no buyers.

Colombo: 6.7 million lbs. were on offer in this week's sale. The market opened on an easier note for Westerns but was dearer at the close. Best mediums were easier whilst others were slightly dearer. Uvas met fair demand and were irregular following quality. Lowgrowns were barely steady.

London: North Indian and other growths: In Monday's sale there was good demand for nearly all types except plainest sorts. The best teas on offer met strong and active demand. In Wednesday's sale best Assams met good support and showed a dearer tendency. Other sorts came to a firm market.

Ceylon and South Indians: In Tuesday's sale when 33,746 packages were offered, 8,831 originated from South India. All teas came to an irregular market with fair demand. The trend of the market was considerably easier.

TEA HARDENS

(From Our Own Correspondent)

CALCUTTA, 11*th September*

Increased demand at the internal sale held here in the last week pushed up prices of dusts. Arrivals of teas from upcountry areas to Calcutta port received a setback, and it is apprehended that the heavy rains which Eastern India is experiencing now, would result in hold-ups all along the route. Nevertheless, tea bookings to the United Kingdom during the week were satisfactory, but the smooth progress of the season has been affected. That explained for the trend of higher prices in the internal sale held in the last week.

Prices in export auctions, too, are expected to improve. It was noted that in the last week's sales in Mincing Lane keener demand pushed up prices of Assams. African good liquorings were keenly competed for but support for other Africans being poor there were a number of withdrawals, prices of South Indian teas on offer declined, and that Ceylon teas met with poor demand. Trade circles felt satisfaction that while teas from other producing areas including South India fared badly Assam teas were in the forefront, *scoring a modest* gain in price. That explained for the expectation that prices in export auctions here would move up. Tea stocks in London amounting to 125.5 million lbs. in the week ended 1st September are almost the same as in the previous week.

At the internal sale held in Calcutta on Wednesday last, offerings of dusts amounted to 25,320 packages. Demand showed a rise and prices realised were higher. Among C.T.Cs, the small and bright teas were firm and occasionally dearer, while the fibrous teas found no buyers. The small *powdery teas were in good demand*, but the plain leafy teas eased by 10 nP. The bright liquoring Assams met with increased demand. Non-withered-cut teas were generally a weak feature, but a few selected lines sold well. The quotations per 1 kg. including excise duty were: good Assam C.T.C. dust Rs. 6.50 to Rs. 6.90, medium Assam C.T.C. dust Rs. 5.70 to Rs. 6.10, legg-cut dust Rs. 4.50 to Rs. 5.20, medium Assam dust Rs. 4.40 to Rs. 5.00, and plain orthodox dust Rs. 4.10 to Rs. 4.40.

Prices of leaf offerings amounting to 223 packages eased.

JUTE GOODS ADVANCE

(From Our Own Correspondent)

CALCUTTA, 11*th September*

On good support, both raw jute and jute goods were well maintained during the week under review. In fact, hessian scored modest gains, as there was buying on behalf of both the U.S. and Argentina. In view of increased production, mills require more fibre. The bufferstock authority is expected to come into being by the end of this month. However, there is at present no intention to fix minimum prices. Appreciating this view of the Government, trade circles point out that, now that mills have started buying in increased quantities, there can be no question of fibre prices moving down. The creation of bufferstocks is a step in the right direction, as this will prove to be in the interests of mills as well as growers, and keep down speculative manipulation. As experience has shown, it is in the initial months of the season that fibre prices fall and, towards the end of the season, prices shoot up to unrealistic levels. Both these can be avoided through bufferstocks. When prices of goods move up, overseas buyers withdraw from the markets causing a decline in exports and leading to a fall in the country's earnings of foreign exchange. In the interests of the fibre trade and the jute mills industry, it is essential that conditions in the markets should be stabilised, and it is realised that bufferstocks of fibre will substantially contribute to such an aim.

It is a well-known fact that prices of raw jute and goods are often fluctuating widely, in view of large speculative manipulations. The recent high levels touched was in no small measure due to speculation. As such, the reduction of trading hours of the East India Jute and Hessian Exchange and imposition of a daily limit of transactions on its ring members in sacking bags with effect from 9th September have been hailed as steps in the right direction. A ring member cannot now put through transactions in sacking bags for more than 6,000 bales. No such limit has, however, been fixed in hessian and raw jute contracts. Ring members are required to submit daily returns showing business done on own account and that done on behalf of non-ring member clients. These steps followed recent discussions by the Forward Markets Commission with the I.J.M.A. representatives and the Exchange. The Commission also proposed to take stringent measures to prevent kerb trading. The Commission has made no secret of its plan to take more stringent measures, if the steps taken now do not lead to fruitful results. It should be noted that the steady conditions in fibre markets during the week had been in no small measure due to the Commission's loud thinking on the subject of stabilising the conditions in the market.

The publication of details of goods in stock with mills as at the end of August was one of the factors which caused prices of goods to firm up. For these details showed that stocks had now touched low levels. Stocks at the end of August were as low as 84,100 tons, representing a decline of 7,100 tons as compared with the previous week. Sacking

fell by 3,600 tons, hessian by 3,400 tons and miscellaneous constructions by 3,400 tons. Output in August was no doubt affected by the shortage of fibre. There was good covering business reported on Tuesday last in both hessian and sacking against ready delivery. There was also keen activity in the futures. The result was the price of ready hessian 40" 10 oz. steadied around Rs. 49.25 and that of ready B. twills around Rs. 132.25. On Wednesday, prices fluctuated widely as a result of activities in the futures market. Mills utilised the opportunity to sell as prices advanced. However, profit-taking intervened to reduce gains to Rs. 133 in respect of B. twills and to Rs. 49.75 in respect of hessian 40" 10 oz. The stock figures were announced on Thursday and, although they revealed a heavy fall in August, the decline in fact failed to come up to earlier expectations in the market. The immediate reaction, therefore, was a decline in goods prices, with B. twills quoting at Rs. 132 and hessian 40" 10 oz. at Rs. 49.25. But, soon, it was realised that the statistical position had reached the danger level and that, in the interests of stabilisation of prices and greater business from export agencies, production in mills should be increased. At this stage, fair business in hessian with the United States and Argentina took place, and on Friday ready hessian 40" 10 oz. was marked higher at Rs. 51. B. twills rose to Rs. 133.00. Although during the week export business had not been as much as anticipated, there was brisk covering business. Over the week-end, covering business was again a feature pushing up ready hessian 40" 10 oz. to Rs. 32.00. In sympathy, B. twills hardened to Rs. 135.00.

Mills showed greater interest in fibre. Prices were well maintained. Heavy rains during the week have further accelerated harvests. Arrivals are on the increase and are expected to go up week by week. However, there have been complaints as regards quality. While Northern bottoms recorded a fractional rise to Rs. 36.00 a maund, Assam bottoms and Daissee bottoms were unchanged and firm at Rs. 35.50 and Rs. 39.00, respectively.

Firmer conditions were also reported in Pakistan markets. This followed higher Calcutta advices, and a fall in arrivals into baling centres. For middlemen who had purchased fibre in the mofussil markets at rates lower than those existed at that time in Narayanganj had sustained losses, since by the time the fibre moved to baling centres prices had further declined. As a result of this, those who had sustained losses are slowing down arrivals now. Arrivals in Narayanganj were about 10,000 to 15,000 maunds a day during the last week, as against 30,000 to 40,000 maunds a day at this time in the last year. As a result, prices of cuttings and loose jute have gained by a few points. The firm announcement by the Pakistan Jute Board Chairman that there would be no further cut in the E.P.C. price led to the feeling in Narayanganj that the worst phase of the slump was now over. That explained for this week's recovery. In the export market in Pakistan, buyers paid little attention; however, now that prices have begun to move up, chances of raising E.P.C. prices are not ruled out. Overseas buying is expected to get accelerated. During the week, exporters showed greater interest at the rise, and Pakistan mills were also active buyers. The feature was the good business done in *pucca* bales with Poland and Czechoslovakia.

BASE METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 11*th September*

Base metals were maintained firm at higher levels earlier during the week under review. However, a subsequent reaction set in following a break in prices on the London Metal Exchange, where tin opened at £972 a ton and gradually receded to close at £950. At Calcutta, there was a seasonal fall in demand owing to the consideration of impending *Pooja* holidays. It was reported that the Madras Government was opposed to any further expansion of industries using non-ferrous metals as raw materials in view of the shortage. An acute shortage of copper scrap contributed to the firmness of berry quality scrap at Rs. 480.25 per 100 kgs. and utensil scrap at Rs. 442.75 in the local market. A prominent cable factory in the Calcutta area reported the apprehension that Government's insistence on cable plants to gradually replace copper by aluminium for producing cables might result in a setback to its production programme. A Government tender for substantial quantity of copper wire was a feature of the week.

In London, copper closed lower at £231½ a ton, after opening higher at £234½. The fall was attributed to the increased stock position in London, despite the difficult strike situation in Chilean copper mines. Continental inquiry on London was on a modest scale. The forthcoming meeting of International Tin Council, now scheduled to take place in mid-September, was awaited with keen interest. For the meeting would consider and announce the floor price of the bufferstock manager. A higher floor price was anticipated, as on that depended prospects of increased production. Producing countries, namely, Malaya, Congo, Bolivia, and Indonesia, look forward for a higher ceiling price in order to compensate them for increased cost of production in the event of a glut in supplies and a reaction in open market conditions. It was estimated that world consumption of tin was running in the order of 188,500 tons, while production this year is not expected to be more than 151,000 tons. Floods have hampered production in Bolivia, whereas that in Congo cannot be estimated due to the continuing political uncertainties. Bolivia has announced its intention to produce as much as 18,000 tons, but whether this figure will be realised is doubted by market circles. Malaya, the largest producer of tin, is eager to increase production if it is assured of compensation for increased cost of production in working abandoned and marginal mines. The break in London price just on the eve of the meeting of the Council would only add to Malaya's apprehensions. The release of 1,000 tons of Longhorn grade tin by the U.S. Government, market circles noted, preceded the fall in London.

Electrolytic zinc in London opened at £75 a ton and, in sympathy with copper and tin, moved down to close at £73¼ a ton. Lead in London was unchanged at £64 a ton. In Calcutta, in view of high prices, demand for zinc declined, but the price was firm at Rs. 328.75 per quintal. There was no change in the price of lead at Rs. 135.75 per 100 kgs.

FOODGRAINS ARRIVALS SMALL

(From Our Own Correspondent)

HAPUR, 11*th September*

Steadier conditions were witnessed in the foodgrains market during the week under review. Arrivals were small and reports of heavy losses to *kharif* crops as a result of floods continued to pour in. The flooded areas are evincing good demand. Wheat recorded fractional gains to be quoted on Monday at Rs. 15 to Rs. 15.25 a maund for *dara* quality and Rs. 15.50 to Rs. 16.25 for better farm produce. Daily arrivals of wheat continued to be small at an average of 75 maunds which were being lifted by consumers and local stock with trade was almost stationary at 25,000 maunds.

Preparation of land for *rabi* sowings is now in full swing, thanks to clear weather in the last few days. As the land recently vacated from *kharif* crops is now available for cultivation, it is gathered that *rabi* sowing acreage would increase on that account.

Rice ruled quietly depressed. Following last year's bumper crop, prospects this year are also bright, thanks to fairly heavy rains. Week-end price were:—rice *mainpuri sela* Rs. 22.25; *gadda kutcha* Rs. 22.12; *ramajwayan sela* Rs. 24; *raimunia sela* Rs. 25; *basmati sela* Rs. 29 to Rs. 31; superior Rs. 34 to Rs. 38 a maund.

Gram recorded modest gains on firm Punjab advices. It was again reaching here from the Punjab and reports of damage to *kharif* crop was the only hardening factor. The local stock was still heavy around 40,000 maunds. Barley and *bejhar* also recorded fractional gains on better buying support in the face of poor arrivals of new maize crop. Harvesting of maize had been done on a large-scale but arrivals of new produce were being hampered due to cloudy weather, though they were expected to rise soon. Maize was quiet, as quality reaching the market was damp. *Juwar* and *guwar* were listless on poor demand. *Methi* was much in request from Calcutta and Rajasthan side and prices were steady. Week-end prices (in rupees per maund) were:— gram Punjab 13.50 to 14; barley 11.25; *bejhar* 11.25 to 12; *juwar* 11.50; *guwar* 14.25; maize 12; *bajra* 15; *methi* 27; oats 12.

U. P. REMOVES CONTROL ON SUGAR

(From Our Own Correspondent)

HAPUR, 11*th September*

After ruling quiet during the major part of the week, sugar sought lower levels towards the week-end, thanks to the removal of sale and distribution restrictions from sugar in the U.P. Mill delivery was quoted at Rs. 104.50 per bag. The supply position of sugar was easy and became more comfortable, following the fresh monthly release of 200,000 tons for sale. Exports were still far from satisfactory and a heavy carryover was expected at the beginning of new season on 1st November. Prevailing prices were: Rs. 105.50 per bag spot delivery and retail 97 nP per *seer*.

Sugar also drifted lower in the Muzaffarnagar market, owing to the withdrawal of curbs on sugar movement in the State. Damaged sugar registered a sharp decline of Re. 1 to Re. 1.50 per bag, due to slack demand from *boora* manufacture. Week-end prices were:—spot delivery dry C-29 and E-29 at Rs. 107.75 and Rs. 106 per bag, respectively. Damaged sugar was done at Rs. 100.50 to Rs. 102.50 per bag.

Quiet conditions were witnessed in the *khandsari* market. *Galawat* lost a rupee per maund following depressed prices in the crystal section. *Dana minja* attracted good buying support from east U.P., Jammu and Kashmir and week-end prices were: *galawat* Rs. 25 to Rs. 30, non-crystal Rs. 32.50 to Rs. 36.50, crystal Rs. 34.50 to Rs. 36.50 per maund; *dana minja* Rs. 17 to Rs. 20.50 a maund.

Dry *gur* attracted good buying support, while inferior wet stuff was not at all in demand. Stocks here as well as in other *mofussil* markets were better than last year and, as the week's offtake was five wagonloads, local stock declined to 16,000 maunds. Cane crop prospects were bright and, as factories were not going to increase their purchasing bonds and cane crop would be a bumper one following increased acreage and heavy rains, it was gathered that *gur* production would increase in the coming season which would begin early in October. Week-end prices were: dry selected *gur* Rs. 16; *kotha* Rs. 14 to Rs. 15; wet Rs. 12.75; *shakker* Rs. 18.

Buyers from Gujarat were hesitant to make bulk purchases in the Muzaffarnagar market during the week, owing to commencement of new *gur* in the South and Punjab dealers only purchased dry stuff. Week-end prices were: *Chaku* dry Rs. 19; *shakker dara* Rs. 17 to Rs. 20; *masala* Rs. 21 to Rs. 23.

Gur futures ran down sharply during the week, as bears predominated the market. Fagun opened at Rs. 13.29 on Monday and, after touching the highest of the week the same day at Rs. 13.37 and declining in successive sessions, was quoted at the lowest level of Rs. 12.95.

WEEK'S STOCK EXCHANGE TREND

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2633 BOMBAY, 23rd SEPTEMBER 1961 PRICE Rs. 2

I.M.F. AND DEVELOPING COUNTRIES

OF the Bretton Woods Twins and their offspring, it is the I.M.F., the short-term lender in the last resort, that has stolen the show this year. At the annual meetings of these specialised U.N. agencies, currently being held at Vienna under depressing international political atmosphere heightened by the Congo tragedy resulting in the death of the widely-respected U.N. Secretary-General, Mr. Dag Hammarskjoeld, it is Mr. Per Jacobsson, and not Mr. Eugene R. Black, who is the central figure. It has fallen to the lot of Mr. Jacobsson to conduct some delicate negotiations, particularly with the French, German and Italian delegations, for expanding the Fund's resources. And it is equally true to say that, of the annual reports of the I.M.F., the World Bank, the I.F.C. and the I.D.A., all released this week, that of the Fund holds the interest of readers more than those of the remaining three. This report contains some significant admissions and suggestions, on top of the customary review of world economic trends, which serve as a useful background for the discussions now taking place at Vienna on world payments situation and maintaining the stability of foreign exchanges. There is, for the first time, perhaps, an increasing recognition in the I.M.F's annual report of the importance of primary producing countries, an expression used to cover the underdeveloped areas. The report, for instance, concludes its description of the world payments situation thus: "The Fund has been able to extend financial assistance to a number of countries which have adopted programmes aimed at economic stability; it is equally anxious to contribute, within the powers given to it, as its Articles of Agreement stipulate, 'to the development of the productive resources of all members.'" This reaffirmation is in refreshing contrast to the impression given by the earlier reports of the I.M.F. that its primary concern was with the developed countries.

Almost all the borrowers of the Fund's resources in the fiscal year 1960-61 were the developing countries, while the developed countries repaid their earlier borrowings. The Fund lent currencies equivalent to $577 million during the year ended 30th April 1961, while it received, by way of repayment, $659 million, quite a good part of which represented advance payments. This picture of outgo on account of developing countries and receipts from industrial countries reflects the pattern of balance of payments situation in 1960-61. The liquidity position of the latter countries experienced a distinct improvement, while that of the former deteriorated. The Fund's report shows that the international reserves of the industrial countries other than the U.S. increased from $19.6 billion at the end of 1959 to $24.2 billion at the end of 1960. So far as the U.S. was concerned, the crisis of confidence in the dollar came to an end as the year drew to a close and a return of confidence was in evidence even during the first quarter of 1961, thanks to the firm stand taken by the Kennedy Administration and a large trade surplus. The primary producing countries as a whole suffered a balance of payments deficit of $1.25 billion, as their imports expanded faster than exports. As this deficit was in excess of the inflow of capital and economic aid, their foreign exchange reserves suffered a net fall. Although the high level of economic activity in the developed countries enabled the developing countries to export more, the terms of trade were unfavourable to them. It is true that, notwithstanding an increase in wages in industrial countries, price levels there were substantially stable due to large increases of productivity, but as against this stability in import prices, the developing countries had to accept lower prices on their exports due partly to keener competition among them and absence of strong demand from the U.S.

This trend has continued so far in the current year also. While the prospects of an improvement in the terms of trade of underdeveloped countries are remote, thanks to a variety of factors such as expansion in the productive capacity of primary products, domestic inflationary pressures and the increasing self-sufficiency of industrial countries in many directions, their import needs are bound to grow, because of their understandable and legitimate desire to raise their living standards through industrialisation. So what is the solution? The Fund's annual report faithfully reflects the desires of the developing countries when it says:

> "The primary producing countries are naturally eager not only to have the upward trend in economic activity in Europe continue, but also to have recovery in the United States gather momentum and lead to increased U.S. imports. For them, it is a matter of vital importance to find satisfactory outlets both for their traditional products and for such other commodities as they may produce by diversification of their economies. In particular, the primary producing countries ask the industrial countries not to seek solutions for the problems of their farmers, miners, or industrial producers, by means of policies that transfer the weight of adjustment on to the economically weaker producers in the other countries. The strength and wealth of the industrial countries should be used not only to give economic aid to the countries with lower *per capita* incomes, but also to absorb more readily the growing diversity of their products."

The point made in the last sentence of the quotation above was reiterated in the speeches of many Governors of the Fund and the Bank at Vienna, including Mr. Morarji Desai, India's Finance Minister. At the same time, the underdeveloped countries have to help themselves by following prudent economic policies and practices. Drawing attention to this requirement in a gentle and unassuming manner, the Fund's report says:

> "These less developed countries will wish to put themselves in a position where their own economies produce more effectively, and where their economic and financial policies will create a climate that will encourage domestic saving, attract foreign capital, and permit the channelling of these resources into the most productive lines of investment."

None can disagree with the relevancy of this advice. Nor can one say that all underdeveloped countries have already been following it to the fullest extent possible. There are many instances in this country itself which can be quoted to justify this remark. The powers that-be in India and other underdeveloped countries will do well to realise (1) that the developed countries, at least the vast majority of them, have succeeded in mastering inflation and are determined not to allow it to raise its head again, and (2) that their faith in multilateral trade and free convertibility of currencies is stronger than ever before in the post-war period. These features constitute both a welcome development for, and a challenge to, the underdeveloped countries. It is welcome because maintenance of monetary stability in the developed countries is an advantage for the developing countries too, as it means stable prices for their imports and exports alike. It is a challenge because it is necessary for them also to endeavour the attainment of economic growth with stability. Surely, the underdeveloped countries cannot afford to mismanage their economic affairs continuously and then expect the developed countries to pay for their mistakes also.

The I.M.F.'s direct help to underdeveloped countries can only be of a limited nature for the simple reason that, in the case of most of them which have large, continuing deficits on their international payments account, the main cause is their endeavours for a rapid economic development; the provision of loans repayable in a few years is no solution for their problems. Nevertheless, they have a vital stake in the I.M.F. as an organisation meant for ensuring stability of exchange rates, avoiding discriminatory currency practices and facilitating increase in world trade on competitive lines. In this respect, the Fund has to concern itself chiefly with the big industrial countries which have given up exchange controls, abandoned most of the import restrictions, and accepted the obligations of multilateral convertibility. Accordingly, the I.M.F. is essentially a lender to big powers. Since economic stability and growth of big powers are important for the well-being of small powers, a strong I.M.F. that can effectively help the former in overcoming their balance of payments difficulties is also to the latter's benefit. Naturally, therefore, they cannot but wish success to the serious attempts that are being made to enhance the resources of the Fund further. It is gratifying to find that the lines along which this is sought to be done are realistic and modest, the aim being to use the large accumulation of foreign exchange reserves by the Continental countries and Japan for financing the growing volume of world trade and checking speculative attacks on international reserve currencies more effectively than is the case at present. Some of the ambitious proposals—Triffin, Stamp and Bernstein—which envisage radical changes in the powers and functions of the Fund have rightly been kept out of the Vienna meeting, as [illegible] ready for them yet.

QUALITY CONTROL FOR EXPORTS

AMONG the various export promotion measures that are being currently discussed, there is one that is of significant value. This pertains to a more systematic process of quality control (through standardisation, certification, grading or other means) and pre-shipment inspection. 'Quality control' here is to be understood as a deliberate and planned activity, having for its object the determination of the quality of a product with a view to accepting it as such in case it satisfies the stipulated requirements, or, to taking necessary measures to correct the quality appropriately in case it does not satisfy those requirements. Such control of quality (which includes statistical quality control) is best exercised during the course of production of an article, actually starting with the raw materials, going through the various processing stages and ending up with the final product, paying due attention to packing, storage and transport. Germane to this process of quality control are: 'standardisation' which establishes a level of comparison (a standard) for judging the quality or suitability of an article for a particular purpose; 'certification' by which a third party, not directly concerned with the purchase or sale of an article, may be called upon to vouchsafe the quality of that article; and 'grading' under which a given produce (particularly natural produce) may be classified into different grades in accordance with agreed standard specifications for the grades. 'Pre-shipment inspection,' which is the process of inspecting a batch of goods just prior to shipment to determine whether it satisfies the conditions for shipment concerned with quality or weight, packaging or contraband character, etc., also forms part of the process of quality control.

The basic and long-range importance of such quality control is all the greater now, for elimination of complaints from overseas buyers about the quality of goods exported from India and their packing so as to maintain enduring trade connections and popularise Indian goods in the foreign markets will, by itself, make for export promotion over the next decade during which the country will need more export earnings. Quite a few relevant factors, which emphasise the need for stricter quality control, have also come into operation in recent years. First, the post-war boom conditions which continued right up to 1953, when overseas buyers used to seek the largest quantity rather than appropriate quality, have ceased to operate since, with the result that the question of quality has assumed importance in the context of keen competition. Secondly, India has reached a stage of development, where it is in a position to export, besides the usual primary products, a variety of manufactured items to the neighbouring countries in Asia and Africa, the communist countries and the industrially advanced countries for the first time. The effect of this shift in the pattern of trade, in so far as quality is concerned, is that the country has now to cater to new specifications other than those traditionally known to the trade. Such diversification of trade, both in commodities and in destinations, is already having a considerable impact on aspects relating to maintenance of the quality of goods exported from the country. Thirdly, the stage has now been set for a big effort to increase the country's exports during the next few years through a series of incentive measures. This is verily the most opportune time to organise maximum possible control of quality of the export products for sustaining and even enhancing their reputation and thereby stabilising the markets for those goods. Special care will have to be taken in the matter of quality control and pre-shipment inspection of both traditional and new export goods, particularly because the Indian exporter will have to face the twin disadvantages of higher internal price and consumer preference abroad for the established brands of other countries.

If this special care is to be exercised, the Government must implement, at the earliest, its decision to accept the recommendations of the *Ad Hoc* Committee on Quality Control and Pre-shipment Inspection (Chairman: Dr. Lal C. Verman). In making its recommendations, the Committee has also been guided by the success which has flowed from the enforcement of the Export Inspection Law which the Japanese Government enacted in 1948. In the light of this Japanese experience and also of our own limited effort so far at quality control and pre-shipment inspection as under the Tea Act, 1953, the Coffee Act, 1942, the Coir Industries Act 1953, and the Drugs Act 1940, the Committee has categorised the types of controls which should be exercised on goods exported from the country. The recommended types of controls are:

1. There should be a prohibition on the export of articles intended for human consumption or applications and those affecting the health and safety of persons, unless they conform to rigid quality standards. Items which fall within this category are drugs and medicines, toilet articles, food articles, poisonous substances, explosives, cosmetic goods, electrical appliances, etc.

2. Where a buyer stipulates, in the contract or in the order, certain specifications for goods, provision should be made to prevent the export of articles which are not certified by an inspection agency as conforming to those specifications. This would require official recognition of many private and public sector agencies which are in a position to issue test certificates for a miscellaneous array of commodities. What is to be guarded against in this, as in the case of any other category of goods, is the element of delay of which the exporter often complains.

3. In respect of those items where standard specifications have been or could be laid down, it should be required that they be inspected and certified before export through the appropriate agency concerned at the time of manufacture or packing. This includes a large category of goods covered (and which could be covered) by the I.S.I. Certification Marks, Agmarks, Itex Mark and several Q-Marks of the States.

4. In regard to some of the other commodities, which are not considered important enough for trade, provision may be made for certification under one or other of the schemes as evidence of conformity to standard specifications. But it may not be necessary to prohibit the export of non-certified goods in this category immediately, until a definite need arises as a result of complaints received.

5. Regarding certain other commodities where standard specifications may not exist or where it may not be advisable to formulate such specifications, it would be useful to introduce a factual inspection of goods before export and to issue a report regarding the actual condition of the goods so that the overseas importer is made aware of the nature of the consignment. Normally, this procedure may not be required to be made compulsory, but, where the pattern of trade is such that there is a possibility of collusion between the importer and the Indian exporter, it may be found useful to require compulsory labelling of goods with factual data.

Having so categorised the types of controls necessary, the Committee has proceeded to make certain recommendations pertaining to organisation. While no violent changes are considered necessary in the existing facilities and operations, there is, according to the Committee, the need for exercising an overall co-ordination of all efforts at quality control and pre-shipment inspection through a central authority established under Parliamentary legislation. It is also recommended that an appeal procedure should form part of the overall scheme for quality control and pre-shipment inspection. On the side of organisation, the recommendations made by the Committee would, however, increase the problem of training the necessary inspection personnel. It has, therefore, uttered a note of caution to the effect that the decision whether a new scheme of quality control and inspection for export should be made compulsory or remain voluntary would have to depend not only on the needs of the trade at the time but on the facilities and personnel available for inspection.

In all cases where quality control and pre-shipment inspection are to be made compulsory, it would, of course, be necessary to introduce I.S.I. Certification Mark or Agmark. For instance, there is immediate need for formulating Indian standards for jute manufactures and for prescribing a procedure for inspection within the mills at the stage of production in accordance with the I.S.I. Certification Marks Scheme. Similarly, national standards are considered necessary for such items of export trade as coir, handloom products and certain handicrafts. An Indian Standard for tea would also need to be evolved by the Indian Standards Institution and the Tea Board together. Cashew kernels shipped from India should be compulsorily graded by the Cashew Export Promotion Council; similarly, pepper should come in for compulsory grading under Agmark. Groundnut oil, linseed oil, castor oil and oilcakes are other export products for which compulsory grading under the Agmark would be necessary. These and some other export commodities which are expected to hold their own in foreign markets would thus have to be brought under appropriate schemes of standardisation and grading. If, at the same time, seaworthy packing standards for individual commodities are also specified, it will go a long way towards promoting exports. All this, of course, cannot be done overnight. But they would need to be done sooner than later, for export promotion today depends as much on the quality of Indian goods as on their competitive costs and the availability of surpluses for export.

MR. H. P. MODY, AN OUTSTANDING INDIVIDUALIST

MR. Homi P. Mody, who completes 80 years today, can proudly look back upon a remarkable career of usefulness to the economic life of the country, generally, and to the Indian cotton mill industry, in particular. If it was in his capacity as the President of the Employers' Federation of India that he served the cause of Indian industry, it was as Chairman of the Millowners' Association, Bombay, that he did yeoman service to the mill industry. In both these capacities, it is noteworthy, Mr. Mody had the enviable distinction of holding office for a considerably long period. His association with the Millowners' Association, Bombay, began in 1927 and, except for the interruption of but one year, he was Chairman consecutively for six years. And, after his election as the first President of the Employers' Federation of India, he held that office for over a generation. That a chairman of the Millowners' Association should have held office as President of the Employers' Federation for so long a period is no chance coincidence. It represents the recognition by the members of the Federation of the pioneering efforts of Bombay millowners, as also of Mr. Mody, in establishing the Federation.

Mr. Mody had ample opportunities, thanks to his long association with the Bombay Municipal Corporation (for over 30 years) and his membership of the Central Legislature (from 1929 to 1943) to serve the business community. But his unremitting service to the cotton mill industry is bound to be gratefully remembered for all time. Commencing with the valiant struggle for the abolition of the excise duty on Indian mill-made cloth and yarn imposed by an alien government in 1896, he ably championed the cause of the industry both before the Tariff Board of 1927 and before the Government of India as the head of a deputation in July 1932 to seek protection against the effects of the depreciation of the yen on the prices of cloth and yarn imported from Japan to the detriment of the Indian cotton mill industry. Nor can a student of the Indian cotton mill industry afford to forget the Mody-Lees Pact of 1933. Although, at the time it was concluded, there were severe criticisms, the pact came to be vindicated eventually by its restrictive effects on imports of foreign textiles into this country. In short, by helping both to reduce imports of textiles into this country and to secure broad-based protection to the indigenous industry, Mr. Mody has served the Indian cotton mill industry to a degree that cannot but evoke respect and recognition.

Mr. Mody's interests were not, however, confined to the cotton mill industry alone. By reason of his association with the House of Tatas, with which, again, he had a long connection of about 27 years, he was in a position to study and appreciate the problems of a number of other industries, including iron and steel, hydro-electric and cement. For a number of years, as Chairman of the Associated Cement Companies Ltd., Mr. Mody used to regale the shareholders at annual meetings with his sparkling wit and innocuous humour. In fact, few chairmen at company meetings have got on as well as Mr. Mody with the shareholders. Mr. Mody has also been associated with insurance and banking. In fact, he is still the Chairman of the Central Bank of India Ltd.

Besides his interest in industry and finance, Mr. Mody is a connoisseur of the liberal arts and a distinguished member of several social bodies and clubs in the City. In political field, he has been a true disciple of Sir Pherozeshah Mehta. He was a member of the Indian Legislative Assembly, of the Constituent Assembly, and of the First Round Table Conference. He was a member of the Viceroy's Executive Council, even which high position he hastened to resign when Lord Linlithgow refused to release Mahatma Gandhi during the latter's fast in jail in 1943. Mr. Mody was also Governor of two States—the U.P. for a full term and Bombay, his home State, for a short while.

The high esteem in which Mr. Mody is held by everybody is the result of his exceptionally amiable disposition, coupled with an unerring sense of humour. There was no field to which he did not import his utter good sense and easy cheerfulness. No better tribute can be paid to Mr. Mody than that paid to him by Mr. J. R. D. Tata at the time of his retirement from the Board of Tata Sons Ltd., in May 1959. Mr. Tata is reported to have then stated: "Sir Homi could consider himself as the chief adviser of Tatas on any and every subject under the sun for as long as he likes or thinks us worthy of his advice." It will be in the fitness of things if we wish this outstanding individualist many happy returns of the day.

MARKET GOSSIP

THE beating of election drums has begun in right earnest, for the General Elections to be held in February-March 1962 are not very far off. Already the Jan Sangh, which aspires for the role of a main national opposition to the Congress Party, has issued its manifesto to the electorate. The Congress has just issued its draft manifesto which has been drawn up broadly in the light of the basic principles laid down early in January last by the Bhavnagar session of that Party. Some of these principles, especially the controversial ones, on which we commented at that time, seem to have been twisted or stretched in the draft manifesto to convey meanings different from what they originally conveyed. Not that these principles, such as the ones pertaining to the role of the public sector, egalitarian taxation and even distribution of economic power, seemed to be good when they were laid down at Bhavnagar; they were bad enough even then. But now they appear worse and still more controversial in the kind of paraphrasing to which they have been subjected in the draft manifesto.

For instance, the directive principle laid down at Bhavnagar said no more than that "taxation should be so devised as to aim at lessening disparities of income and increase the resources available for development." Any further egalitarian twist to the country's tax system which had already its egalitarian bias, we then pointed out, would have the certain effect of vitiating the climate for enterprise and investment and, thereby, of lessening the chances of greater production on which alone would depend the attainment of greater economic equality through additional social services and increases in real incomes and, thus, in real standards of living. To those who could then easily visualise the ill-effects of ill-conceived egalitarian taxation, the following passage in the draft manifesto has come as a painful reminder that, basically, the Congress Party is a doctrinaire socialist organisation, the Prime Minister's disavowals of dogmatism notwithstanding:

"Taxation should be so devised as to aim at lessening disparities of income and increasing the resources available for development. In view of ceiling on land being fixed in rural areas, the question of having a similar ceiling on urban incomes has been raised. The same principle is not *wholly* applicable to urban incomes. But, it is *necessary* to have some limitations on high urban incomes through taxation and *other means* in order to lessen (italics ours) the great disparities that exist today."

The italicised words in the above passage have a disquieting significance. It was said at one time by no less a person than Mr. Nehru himself that ceiling on landholding did not amount to a ceiling on rural income. What was then sought to be conveyed was that land ceilings would not logically lead to ceilings on urban incomes. We had our own misgivings then, for we thought that land ceilings would inevitably generate left-wing pressures for limitation of urban incomes too. That our fear was not exaggerated is now unfortunately proved true, for the draft manifesto conveys that the principle of land ceiling is partly applicable to urban incomes also. It goes a step further and underlines the necessity for some limitations on urban incomes through means other than taxation.

This is, indeed, a disturbing development, even though it is now rather vague and only in the stage of talking. Its ill-effects are already reflected in the share markets where, while it has luckily not caused a scare or a landslide in values, it has certainly checked the recovery from the recent bearish tendencies. As election drums are more loudly beaten in the months to come over the length and breadth of the country, this particular point in the manifesto is bound to have a more chilling effect on the markets. And that will be an ill wind that will do nobody any good. The man-in-the-street, who may be taken in by this 'vision' of greater income equality, will never care to know that an individual (who is not an agriculturist) getting an annual income of about Rs. 50,000 pays a third of it by way of income-tax alone and an individual (who is again not an agriculturist) getting an annual income of about Rs. 20 lakhs pays as much as four-fifths of it as income-tax. If the incidence of wealth tax and other direct taxes are taken into account, the net income will be much less. If this is not already a crippling ceiling on urban incomes, what else is it? To contemplate anything worse would be to generate damaging repercussions in the economy of private enterprise which draws its life blood from private savings.

As for the "dominant" role visualised for the public sector and the proposal to prevent the growth of 'monopolist' tendencies and the 'concentration' of economic power, readers of *Commerce* should be pretty familiar with the views expressed in its columns in January and April last. It has only to be added here that the latest idea that "larger enterprises should normally be in the public sector" is, to say the least, astounding. If this idea were to be implemented, it would mean nationalisation of such big units as T.I.S.Co., I.I.S.Co. and T.E.L.Co., to mention only a few. Is this what the Congress High Command has in mind? If the public sector is to become 'dominant' and if 'larger enterprises' are also to be concentrated in that sector, will not the State become the largest monopoly sector with the heaviest concentration of economic power? Is there any reason to believe that State capitalism will be more humane and beneficent than private capitalism? It would be utterly unwise to revive an unseemly conflict between the public sector and the private sector in a mixed economy in which the two sectors are expected to be, as in fact they are, complementary to each other. As the manifesto itself recognises that the national interest requires harmony between the two sectors, it is folly to give the impression to the general voter that it would be feasible and desirable to enlarge the public sector at the expense of the private sector. Somewhere the line will have to be drawn, so that the growth of the public sector will be strictly limited to the 'infra-structure' and some basic or heavy industries requiring enormous capital outlays which cannot be easily raised by the private sector in the context of the prevailing high rate of taxation and other disincentives.

Jute Industry

It is, indeed, the misfortune of jute industry that it has been subjected to a lot of uncharitable criticism. The criticism is, of course, understandable, if it comes from either the jute growers or the workers in jute mills, both of whom have a direct stake in the fortunes of the industry, but not when it is hurled by some politicians who have styled themselves as the spokesmen of growers and workers. The criticism is all the more uncharitable, inasmuch as it is levelled against the industry by the spokesmen of the West Bengal Government and responsible members of the State Legislative Assembly. The perusal of the Press version of speeches made by some members during the debate on the jute situation in the Assembly on Friday last week betray either an utter lack of understanding of the problems confronting the jute industry or a desire to fish in troubled waters with political gains as the motive. How else is one to explain certain funny suggestions put forth by some members, such as State trading in raw jute, full-fledged controls on jute goods, fixation of price for raw jute at the fantastically high level of Rs. 55 per maund and taking over by Government of jute mills which refuse to implement the Special Committee's recommendations?

None of the aforesaid suggestions was, however, accepted by the West Bengal Assembly. The resolution adopted by it merely commended for acceptance a fivefold approach: (*a*) fixation of a minimum price for raw jute each year, the same being announced before the new crop comes to the market; (*b*) buying of raw jute through an independent agency to weaken the grip of monopolists and speculators and to ensure a fair price for farmers; (*c*) compulsion on mills to set up a buffer stock under the supervision of the Jute Commissioner; (*d*) intensive research work on production of jute goods; and (*e*) provision of adequate loans through co-operative societies to farmers in order "to strengthen their hands against speculators."

Excepting for the suggestion pertaining to the compulsion on mills to establish a raw jute buffer stock, the responsibility for which should be shouldered by the Central Government, the other measures urged by the Assembly are quite sensible. Evidently, the Assembly was convinced by the reply of Dr. B. C. Roy, Chief Minister of West Bengal. Dr. Roy certainly deserves praise for having sought to dispel some of the misgivings expressed by certain members and to put the whole problem in its proper perspective. Here is the Press version of what he said:

"The position of jute growers must be stabilised, if the industry itself is to be stable. I would not countenance the allegation that mills manipulate prices and cause heavy ups and downs in jute production. The millowners are an intelligent lot of people who understand—or who at any rate ought to understand—that stable jute production is in their own interests. . . . I cannot understand how one can suggest that the industry should not modernise installations. This is being done all over the world, and India's jute industry cannot stay in a rut. . . . The mills must be mechanised as far and as quickly as possible. . . . Its (Special Committee's) main recommendations have to be investigated further. . . . To give price support to farmers, State trading may not be very helpful judging by experience in other fields."

Unmindful of the allegations made against it, the jute industry, it must be said to its credit, is endeavouring to maintain a high level of output. The industry has already restored the production cuts effected last month and proposes to enhance the working hours per week from 42½ to 45, with effect from Monday the 25th inst. Indeed, it is felt that it will not take too long to restore the normal 48-hour week, in addition to the progressive unsealing of looms as in 1959-60. But much will rest on the position in respect of supply and prices of raw jute and the demand for jute goods. The preliminary estimates of the current (1961-62) season's crop are very encouraging. The estimates place the aggregate jute and mesta output at 6.5-7.0 million bales, as compared with the 5.2 million bales harvested in the previous season (1960-61). The jute crop in Pakistan also is said to be a high one. In view of the prospects of adequate raw jute supply and of encouraging reports about offtake of jute goods by overseas countries, it looks as though the jute industry has got out of the crisis caused by scarcity of raw jute, though there are some who are forecasting the possibility of the reverse happening, namely, a crisis induced by overproduction.

Indo-U.K. Textile Pact

Simultaneously on behalf of the textile industry in India and Britain, a statement has just been issued announcing a revision in the agreement which imposes a ceiling on exports of cotton textiles from this country to the U.K. The statement says:

"As a result of the acceptance by the Hong Kong cotton industry of the U.K. Government's proposals for an extension of the Hong Kong industry's undertaking to the end of 1962, certain changes are to be introduced in the understandings with India and Pakistan. The changes involve a supplementary quota for India for 1961 of 11 million square yards and for Pakistan of 2.3 million yards. For 1962, the Indian ceiling figure will be increased from 175 million yards to 195 million yards (this ceiling does not apply to imports meant to be re-exported subsequently) and the Pakistan ceiling from 38 million yards to 42.4 million yards. Both countries will receive their proportionate share of any supplementary quotas which may become available in 1962. The Board of Trade will be going ahead at once with arrangements to issue supplementary quotas for 1961. Next year, the administration of the licensing control will be carried out in India and Pakistan and not in the U.K. as hitherto, and detailed arrangements for the transfer, which will be worked out between the respective Governments, will be announced in due course. . . ."

The increase of 20 million yards in the ceiling on Indian cloth exports to Britain for 1962 (the third and final year of the agreement, unless the agreement is extended by a further period) is less by a million yards as compared with the increase of 21 million yards (from 164 million yards to 185 million yards) allowed for Hong Kong textiles. Once again, in allocating quotas, no account has been taken of the respective productive capacities of India and Hong Kong. The quota allotted to Hong Kong is over-generous, considering that this Colony is, as was pointed out by us on an earlier occasion, a tiny island of a bare 391 square miles with a population of no more than 2.75 million, that the Colony does not grow any cotton at all, and that a sizable part of the cotton goods exported by Hong Kong represents goods imported from China and Japan and processed within the Colony. Surely, it is difficult to resist the conclusion that the spokesmen of the Indian cotton textile industry have failed to bargain effectively for a more liberal ceiling with their counterparts in Britain.

World Sugar

Another United Nations Sugar Conference is now in session at Geneva; it began on Tuesday the 12th inst. The main task before the Conference is to make additions and amendments to the International Sugar Agreement, with a view to achieving its primary objective which is twofold: to provide both a fair and a stable price for sugar producers. The plenary session of the Conference ended early this week and the general debate at the Conference proper concluded on the 20th inst. No information is available as to the duration of the Conference, though the general indication is that it may extend upto 4th or 5th of next month.

The outcome of the Conference is awaited with utmost interest by all sugar interests the world over, which is not surprising, for it is on this outcome that will depend the future of the Sugar Agreement, nay, the very existence of the Agreement. So marked are the changes that have occurred in the pattern of world sugar trade since 1958 when the current Agreement was drawn up that the provisions of the Agreement as they stand at present have ceased to be effective in holding the price between 3.25 cents per lb. (minimum) and 3.45 cents (maximum), a price range considered to be equitable for both producers and consumers. Raw sugar in world markets is currently quoted at not more than 2.60 cents per lb.; a few weeks ago, it had touched its lowest level recorded since the war.

The failure of the Sugar Council to bring effective demand and supply into balance must be attributed to the following three factors, besides the Cuban-U.S. sugar impasse:

1. Some countries sell sugar outside the free market under special bilateral and barter agreements with the only purpose of getting the sugar resold later at highly discounted prices, as, for example, Cuban sugar sales by Soviet Russia.

2. There have been sizable sales of sugar by countries which are not members of the Sugar Agreement.

3. A few European producers have been selling semi-refined beet sugar at a depressingly low price of £25 per ton which is well below the actual production cost of £50, the balance being covered by subsidies of various sorts.

These are the conflicting forces at work which will have to be properly reconciled, if the Sugar Agreement is to ensure market stabilisation. Happily, the importance of this aspect was well recognised in the speeches of the representatives of almost all the countries at the plenary session of the Conference. It is particularly gratifying to find that the Russian and Cuban delegates offered the full co-operation of their countries in this task. The maintenance of a balance between the supply of and, the demand for sugar is absolutely necessary but, at the same time, one should, as the U.K. representative, Sir George S. Dunnett, aptly stressed, look to *constructive* marketing policies by exporting countries and domestic policies by importing countries.

The deliberations of the Geneva Sugar Conference are of special interest to India, in particular, because of its emergence as a regular exporter of this commodity. India, it will be recalled, became a member of the Sugar Agreement only recently and was allocated a quota of 112,500 long tons. The quota is, however, too small in relation to the available exportable surplus. In his speech at the Conference, Mr. A. M. Thomas, Union Deputy Minister for Food and leader of the Indian delegation, did well to plead for suitable upward revision in the quota. In support of this plea, he pointed to the "great concern" caused as a result of high produc-

(Continued on page 627)

EQUITIES ERRATIC

UNDERTONE UNCERTAIN

(From Our Own Correspondents)

BOMBAY, *21st September*

THE share market was distinctly erratic during the week under review. Under the impact of a revival of bull support, equities staged a recovery on Friday the 15th inst. But, on the following day, the recovery was halted, with final quotations recording widespread losses, quite marked in some cases. In the subsequent two sessions, the market again resumed the upward march only to be followed by a break on Wednesday. This was mainly due to the socialistic overtones of the Congress Election Manifesto. Further, the proximity of end of account, coupled with the unusual stringency in the money market, induced the bulls to lighten their commitments. Today, the market once again displayed a slightly better tone, probably due to bear covering. There was also some selective buying on reports of L.I.C. support and imminence of an increase in the ex-factory price of cement. Market circles believe that the L.I.C. made sizable purchases of Associated Cements, Larsen and Toubros, Svadeshis, Bombay Dyeings, and Tractors Ltd.

The basic trend of the market is still uncertain. Neither the bulls nor the bears are aggressive. Reports of strike and lockout in the works of Hindustan Motors at Calcutta have reminded the operators that labour troubles will be a factor to be reckoned with in judging the near-range outlook for the market, especially for shares of companies which have not concluded agreements with workers for a period of years. The tense international situation is also having a restraining effect on the bulls. Another factor is shortage of money for speculators and the possibility of revival of many big new issues in the coming weeks. Again, the discussion on the election manifesto of the Congress Party at the forthcoming A.I.C.C. meeting at Madura may also have a disturbing effect on the bulls. Moreover, the stock exchange presidents are under an obligation to evolve new regulations for keeping speculation under control. All in all, therefore, the odds are still heavily against a bull market.

In the steel section, Tata Steels opened steady at Rs. 143.50 on Friday and after spurting to Rs. 143.75 in initial dealings swiftly came down to Rs. 140.75 on Saturday. In the subsequent sessions bear covering and some fresh buying raised the value. Today's closing quotation was Rs. 142.50. Over the week, the share has suffered a loss of one rupee. Indian Irons put on 4 nP to Rs. 24.24 and Mukand Irons gathered 5 nP to Rs. 27.40.

In the textile section, Khataus were a bright feature of the market. They evoked good support induced by the proximity of dividend and reports about the possibility of a bonus issue. They gained Rs. 21.25 during the week to finish at Rs. 492.50. Central Indias improved by Rs. 8 to Rs. 133. Morarjees advanced by Rs. 6 to Rs. 394 and so also Standards to Rs. 1,208. Svadeshis hardened by Rs. 7 to Rs. 264.50 on account of investment support, probably from the L.I.C. In the cash list, Kohinoors gained Rs. 3.50 to Rs. 288.50 after going down to Rs. 279.50. Laxmis rose by Rs. 8.75 to Rs. 615. Bombay Dyeings were marked up by Re. 1.30 to Rs. 67.20; the lowest level touched this week was Rs. 65.90. Centurys, however, were hammered down by Rs. 13.50 to Rs. 551. They opened at Rs. 564.50 on Friday the 15th inst., and moved up to Rs. 569 in initial dealings, but, in the subsequent sessions, the scrip was neglected and declined gradually to finish at Rs. 543 yesterday. Today, however, lower levels attracted considerable fresh support and the share closed at Rs. 551. Simplex encountered some selling pressure and lost Rs. 2 to Rs. 164.

Electric shares were active. Tata Powers jumped up from Rs. 1,110 to Rs. 1,155. Andhras improved by Rs. 10 to Rs. 1,040. Tata Hydros gained Rs. 2.50 to Rs. 110.50. Bombay Suburbans put on Rs. 2 to Rs. 100.50. Not long ago, they were standing at an appreciable discount. Ahmedabad Electricity, however, moved up only fractionally by 30 nP to Rs. 90.80.

Cement shares, too, received good investment-*cum*-speculative support. Operators were influenced by reports that the Government of India had decided to raise the retention prices of cement. Another favourable factor at work was the buying support given by the L.I.C. to Associated Cements. These shares opened at Rs. 162, as against the previous close of Rs. 161.50 and advanced steadily in subsequent dealings to touch a high of Rs. 166.75 today. At close they were slightly lower at Rs. 166, the net gain over the week being Rs. 4.50 Digvijay Cements spurted in sympathy from Rs. 172.50 to Rs 180 Orissa Cements gathered 16 nP to Rs. 16 16 and Dalmia Cements 28 nP to Rs. 11 48. Only Bagalkots remained neglected at Rs. 7.84.

In refreshing contrast to the usual trend, shipping shares evoked good buying enquiry and made some gains. The upturn is said to have been induced by reports that coastal freight rates were likely to be raised in the near future.

In the automobile section, Premier Automobiles met with bull liquidation and were marked down by Rs. 2.75 to Rs. 153.50. Hindustan Motors, which were being well fancied in the past two weeks and had gone up from about Rs. 18 to the neighbourhood of Rs. 20, have suffered a setback and retreated to Rs. 19.20 due to unfavourable labour reports.

Rayon shares on the whole remained quiet. National Rayons opened fractionally higher at Rs. 533 on Friday and after spurting to Rs. 534, declined gradually to finish at Rs. 523.50 yesterday. Today the scrip looked up again and advanced to Rs. 530. Over the week, the loss amounted to Rs. 2.50. Gwalior Rayons were marked down further this week, the loss being Rs. 2.92 to Rs. 44.50 *ex-div.* Not long ago, these shares had stood as high as Rs. 57. India Rayons shed 50 nP to Rs. 72. But S.I. Viscose were keenly bid and spurted from Rs. 182 to Rs. 185, following the report that the Company had commenced production on a commercial scale. Baroda Rayons gained a rupee to Rs. 140.

In the chemical section, a mixed trend was in evidence. Amar Dyes received good support and shot up by Rs. 11.25 to Rs. 293.75. Colour-Chems were marked up by Rs. 4.25 to Rs. 340 *ex-div.* and Synthetics by Rs. 4.50 to Rs. 188. Dhrangadhras (new) advanced by Re. 1.50 to Rs. 108. But Indian Dyestuffs encountered heavy selling and were hammered down by Rs. 17.50 to Rs. 432.50. Citrics shed a rupee to Rs. 69. Polychems slipped by Re. 1.25 to Rs. 201.25. Alembics were quiet at Rs. 232.50 and so also United Dyestuffs at Rs. 52.

In the engineering section T.E.L.Cos. opened firm at Rs. 343.50 and rose fractionally to Rs. 344. Subsequently the scrip was neglected and fell to Rs. 332.50 on Monday. Lower levels attracted good support and the share improved to close at Rs. 339.50 today. Alcock Ashdowns received good buying support and spurted by Rs. 9 to Rs. 303. Larsen and Toubros gained Re. 1.50 to Rs. 39 and Texmacos just 28 nP to Rs. 17.36. Coopers were neglected and shed 50 nP to Rs. 182. T. Manekalals (old) were keenly bid and shot up by Rs. 40 to Rs. 550. Hind Electricals were also a bright feature and advanced by as much as Rs. 29.50 to Rs. 135. Kirloskar Pneumatics gathered Rs. 15 to Rs. 253.75. Jyotis put on Rs. 3 to Rs. 177. Mahindras rose by 56 nP to Rs. 18.88. But Kamanis were quiet at Rs. 15.76. Structurals, were actually slashed down by Rs. 7 to Rs. 168. Hind Cycles declined by Rs. 7.50 to Rs. 102.

In the miscellaneous section, Bombay Burmahs evoked good speculative support. After opening at Rs. 590, as against the previous close of Rs. 588, they moved up to Rs. 598 in initial dealings. On Saturday, they declined to Rs. 587. In subsequent sessions they moved in a narrow range and finished at Rs. 595 today, showing a net gain of Rs. 7. Voltas were also highly favoured and advanced by Rs. 6 to Rs. 290. Wimcos received good support and staged a rise of Rs. 15 to Rs. 292. Hingir Rampur Coals improved by Rs. 2.24 to Rs. 27. Indian Hume Pipes put on a rupee to Rs. 179. Hindustan Levers gained an equivalent amount to Rs. 48.75. Escorts gathered Re. 1.40 to Rs. 24.52. But Bombay Safe Deposits lost Rs. 30 to Rs. 375.

Madras Stock Exchange

MADRAS, *20th September*

The upward trend in values noted on the Stock Exchange last week gained further momentum during the week under review. There was notable rise in the volume of business put through in all counters excepting coffees which encountered selling due to persistent uncertainty over the disposal of accumulated stocks. Textiles staged a smart rally, following good domestic offtake of piecegoods and yarn. Teas were well favoured, despite reports of reduction of export duty on Pakistan tea and allocation of a bigger export quota for it. Active conditions prevailed in the rubber section as well.

In the textile section, South India Viscose attracted speculative support and spurted by Rs. 6 to Rs. 185. Lakshmis advanced by Rs. 2 to Rs. 158. Coimbatore Spinnings rose by a like amount to Rs. 57. Loyals strengthened by Re. 1.75 to Rs. 47.75. Coimbatore Cottons moved up from Rs. 193 to Rs. 194.50. Buckinghams gathered a rupee to Rs. 250. Madurais gained 75 nP to Rs. 88 and Radhakrishnas 50 nP to Rs. 33. Travancore Rayons rose from Rs. 38.80 to Rs. 39.20 before closing at Rs. 38.85. Kotharis improved by Rs. 12.50.

Among teas, Haileyburias gathered 20 nP to Rs. 13.60. Peermades increased by 13 nP to Rs. 23.50. Highlands hardened by 12 nP to Rs. 14.12. Chembras by 10 nP to Rs. 3.56. Parksides by 8 nP to Rs. 29.70. Waterfalls by 6 nP to Rs. 3 and Neelamalais by 5 nP to Rs. 4.30. Periakaramalais edged upward from Rs. 3.62 to Rs. 3.68, but closed lower at Rs. 3.65. Devasholas were maintained at Rs. 30.25. Nonsuch Teas, however, declined by 8 nP to Rs. 28.62. Blue Mountains shed 6 nP to Rs. 3.08.

Among rubbers, Cochin Malabars moved up from Rs. 7.10 to Rs. 7.43; they were higher still at Rs. 7.55 earlier in the week. Midlands and T.R. and Ts. improved by 10 nP each to Rs. 11.75 and Rs. 9.95, respectively. Malankaras were firm at Rs. 18, as also Travancore Rubbers at Rs. 11.87 and Valkundams at Rs. 32.20.

Unlike other plantation shares, coffees ruled easy. Balanoors suffered a setback of 60 nP. today's closing rate being Rs. 14.75. Coffee Lands dropped 50 nP to Rs. 16.75. Consolidated Coffees shed 35 nP to Rs. 20.65. Ouchterlony Valleys were dull at Rs. 3.78, Cowcoodys at Rs. 4.45 and Rajendras at Rs. 12.12.

Sugars continued to show signs of good recovery. Cauverys evoked buying enquiries and firmed up by Rs. 7 to Rs. 120. East India Distilleries strengthened by 37 nP to Rs. 38.12, following news that the Reserve Bank of India had given permission to transfer the 188,112 rights shares of £1 each issued on the London Register in September 1960 to the Madras Register after the 18th inst. Andhra Sugars were fully steady at Rs. 26.85. The Company proposes to issue 100,000 equity shares of Rs. 10 each at par at the rate of one share for every three held to holders as on 25th October 1961. The new shares will rank *pari passu* with the existing equity shares in all respects except for dividend which will be proportionate from the date of payment. United Breweries were steady at Rs. 106.50. Indias at Rs. 11.75 and Mysores at Rs. 57.75. But Travancores declined by 10 nP to Rs. 10.50, reflecting the disappointment of operators over the reduction of dividend from 10 per cent (taxable) distributed during the year ended April 1960 to only 7½ per cent (taxable) for 1960-61.

Among miscellaneous industrials, Orissa Cements spurted by 92 nP to Rs. 16.12. Dalmias rose by 60 nP to Rs. 11.70 and Travancores by 10 nP to Rs. 7.40. India Cements picked up 8 nP to Rs. 6.60. In the chemicals group, Travancores hardened by 37 nP to Rs. 18.62 and F.A.C.Ts. by 15 nP to Rs. 9.50. Mysore Chemicals were firm at Rs. 23.85 and Mysore Fertilisers at Rs. 11.60. Among others, Tube Investments gathered Rs. 3.50 to Rs. 260 on hopes of a bigger dividend. Textools advanced by a rupee to Rs. 175. Ashok Leylands gathered 32 nP to Rs. 8.82 and Aluminium Industries 25 nP to Rs. 23.30. Western India Plywoods were done at Rs. 200 and Indian Steel Rollings at Rs. 10.65.

Calcutta Stock Exchange

CALCUTTA, *20th September*

Following investment support and replacement buying, a slow but sure recovery was in evidence on the Stock Exchange during the week under review. The recovery was, however, interrupted by occasional profit-taking, revealing the caution exercised by operators. The official indication that the question of stock exchange reforms would be left to the exchanges themselves continued to inspire market circles. Obviously, if reforms are forthcoming from below the foundation will be solid, and both the Government and the exchanges stand to gain. Support from the L.I.C., though meagre as it was, also contributed to making confidence. At a time such as this, when surplus funds have been mopped up by new issues, a full-stage recovery could hardly have been expected. But the fact that, despite tight money market conditions, new issues attracted support should be construed as a shift in the investment habit from purchasing old shares at a premium to purchasing newly-floated shares at par. Such a shift has sprung from the improved industrial prospects, the increased output costs and growing difficulties for transport and raw materials notwithstanding.

Notices

THE MYSORE PAPER MILLS LIMITED
BANGALORE-9

NOTICE

SHAREHOLDERS ARE HEREBY INFORMED that Letters of Offer regarding issue of additional Shares, together with Forms, viz., 'A' form for Right Shares; 'B' form for Renunciation of Right Shares, and 'C' form for additional Shares; and Balance Sheet for the year ended 31st March 1961, have been posted on 2nd September 1961. The last date for receiving the sum of Rs. 3 being the application and allotment money and a premium of 50 nP is 16th October 1961 and the balance will be collected in three equal instalments later after giving due notice. Shareholders who have not received the letter of offer on account of change of address etc., are requested to correspond with the Registered Office of the Company regarding their Right Shares.

C. V. RAMACHANDRA RAO,
Secretary.

NOTICE

TRANSFER BOOKS OF THE COMPANY will be closed from Monday the 9th October 1961 to Wednesday the 18th October 1961 (both days inclusive).

G. D. MAKIM,
Secretary.

NEWS IN BRIEF

A PROPOSAL to establish port trusts at Visakhapatnam, Cochin and Kandla ports is under the consideration of the Central Government.

The total tax revenue of the Central Government during the first four months (April-July) of 1961-62, amounted to Rs. 269.60 crores, as against Rs. 231.48 crores in the corresponding period of 1960-61.

The Government of Mysore has entered into an agreement with the State Trading Corporation for sharing the profit earned on exports of manganese and iron ores, its share being two-thirds of the total.

The Government of India is contemplating to set up a 30,000-ton newsprint factory in Kashmir in the public sector. Two Russian experts have already started conducting an on-the-spot survey on the availability of raw materials, etc.

All public sector undertakings, except Railways, Posts and Telegraphs and also Defence establishments, will be governed by the recommendation of the Bonus Commission. A decision to this effect is reported to have been taken by the Central Government.

The construction of the Indian Oil Company's oil installation at Kandla port, the first of its kind designed in India, has been completed. The new installation has a capacity to store about 12,000 tons of refined oil products. The present capacity will be expanded further to 60,000 tons by 1962.

The all-India final estimates of tobacco for 1960-61 puts the area and production of tobacco at 968,000 acres and 294,000 tons, respectively, as against the partially revised estimates of 914,000 acres and 281,000 tons for 1959-60. This shows an increase of 54,000 acres, or 5.9 per cent, in area and 13,000 tons, or 4.6 per cent, in production, as compared with the previous year.

The extraction of lignite in bulk at Neyveli in Madras State was inaugurated on Saturday last. The Rs. 90-crore Neyveli Project is designed to exploit the rich lignite resources estimated at about 2,000 million tons spread over an area of hundred miles. The lignite is being sent to foreign countries for detailed testing in low-shaft furnaces and electro-chemical process for production of iron.

An agreement has been signed between the State-owned oil organisations of India and France for carrying out oil exploration in the Jaisalmer area in Rajasthan. Under the agreement, the French Government will give a credit for Rs. 4 crores to meet the foreign exchange expenditure involved in this exploration by oil experts of the State-owned French Petroleum Institute. The entire risk, however, will be borne by the Oil and Natural Gas Commission of India. The Agreement provides for the formation of an Indo-French collaboration team for carrying out the exploration in Jaisalmer.

Loan assistance under the middle-income group housing scheme, which is being financed from funds provided by the L.I.C., can now be availed of by persons with incomes up to Rs. 15,000 per annum, as against the previous limit of Rs. 12,000 per annum. In order to encourage the construction of comparatively smaller houses, the minimum floor area to be built under the scheme has also been reduced from 700 sq. ft. to 400 sq. ft. The Government has further decided that the amount of loan to be granted for construction of a house should be 80 per cent of the cost including the cost of land, subject to a maximum of Rs. 20,000 per house.

The number of collieries working during the month of June 1961 was 861, with an average daily employment of 391,995 workers. The corresponding figures for the previous month were 861 and 389,575, respectively. The output of coal per man-shift was estimated at 1.17 metric tons for miners and loaders, 0.61 metric tons for all workers below ground and in open-cast workings and 0.42 metric tons for all persons employed including above-ground workers, as compared with 1.18, 0.44, respectively, for May 1961. The percentage of absenteeism was of the order of 14.20, as against 14.03 in the preceding month. The overall cash earnings of workers per week for the whole of the Indian Union was Rs. 23.32, the figures for Jharia and Raniganj fields being Rs. 23.69 and Rs. 22.76.

Fish production in India during 1960 was the highest ever recorded, with 1.4 million tons. A production target of 1.8 million tons has been fixed for the third Plan. A sum of about Rs. 30 crores has been provided for schemes in the Central and State sectors in the Plan. Mechanisation of fishing craft, introduction of improved gear and marine fishing techniques, location of new fishing grounds and encouragement for the setting up of Indian companies for fishing and fish processing, if necessary with foreign collaboration, are some of the measures to increase marine fish production. So far as inland fisheries are concerned, the programme of work includes the setting up of demonstration and fish farms, and the reclamation of estuarine areas and marshy lands. About 1,200 million additional fry and fingerlings will also be stocked in ponds, lakes and reservoirs.

An agreement covering a credit of DM. 170 million (Rs. 20.24 crores) from the Government of West Germany to India was signed at Bonn last week, as further assistance from that country for the third Plan. The entire credit is untied and the bulk of the amount will be paid to the Government of India account in the next few days. The rate of interest is 3 per cent per annum and the credit is repayable in twenty years, including a period of seven years during which no repayments are required to be made. This amount is part of the W. German assistance amounting to DM. 1,700 million (Rs. 202.38 crores) indicated by West Germany at the last meeting of the Consortium of Governments and institutions interested in development assistance to India. Together with the sum of DM. 330 million for which credit agreement was signed in April this year, the total assistance received from W. Germany this year comes to DM. 500 million (Rs. 59.52 crores).

A two-month training course for warehousemen and technical assistants, organised by the Central Warehousing Corporation, began at New Delhi last week. The first batch of 67 trainees from the Central Corporation and the State Warehousing Corporations of Punjab, Mysore, Andhra Pradesh, Kerala, Madras, West Bengal, Rajasthan and Assam will undergo training in storage and preservation, marketing, banking, co-operation and allied subjects up to 16th October. The second batch of 82 candidates from various State Corporations, co-operative societies and private persons will commence their training on 9th October. The new warehousemen and technical assistants will man warehouses being opened in the country by the Central and State Warehousing Corporations. More than four hundred persons have been trained at the five courses organised by the Corporation so far.

The Government of India has accepted a recommendation, made at the Housing Ministers' Conference, held at Udaipur in December 1960, for liberalising the conditions under which ownership of houses, built under the subsidised industrial housing scheme, could be acquired by workers on a hire-purchase basis. An industrial worker will now be able to buy a house, built either through a co-operative society or the State Government, on a hire-purchase basis, at any time, on payment of the cost of the house, irrespective of his length of service, period of actual stay in or age of the house. The ownership of the house cannot, however, be transferred by the new owner, except to the society or the Government, nor can he rent the house to another industrial worker, without obtaining prior permission for it. The Government has also asked the States to utilise a good proportion of their allocation under the scheme to acquire suitable sites and develop them either for constructing houses themselves or for selling the developed sites to employees of co-operative societies of industrial workers on a no-profit-no-loss basis.

The Government of India is examining the possibility of transferring to the Directorate-General of Supplies and Disposals in Delhi much of the work at present being done by the India Store Department, London, and the India Supply Mission, Washington. Small units, however, will continue to be maintained at London and Washington for specialised purchases, to be made from sterling and dollar area countries, respectively. It is expected that this step, primarily aiming at reorganisation of the scope of work and set up of the overseas purchase missions, will lead to a substantial saving in foreign exchange. Yet another important consideration weighing with the Government is the application of its declared policy to effect purchases, as far as possible, on the basis of tenders issued from India, thereby encouraging foreign manufacturers to appoint agents in India, who, in collaboration with their principals, may in course of time set up manufacture in the country of goods at present imported. As a first step in this direction, it has been decided to undertake studies of the categories of stores and equipment, the procurement of which could be transferred to the D.G.S. and D., and to draw up a phased programme for it. Mr. T. Sivasankar, Secretary, Union Ministry of Works, Housing and Supply, has left for London and Washington to make recommendations to the Government in this connection.

From Abroad

The Ceylon Government has received offers from the British Shell Company, the Italian E.N.I. and a Yugoslavia firm for the establishment of an oil refinery in the country.

The Government of Pakistan has fixed the export quota for tea at 10 million lbs., which is double the quota allocated three months ago. It has also reduced the export duty on tea from 38 paise to 25 paise per lb.

The number of motor vehicles manufactured in West Germany during the first eight months of 1961 was 1,418,589, representing an increase of 7.6 per cent, as compared with the corresponding period of 1960. Exports rose by 9.7 per cent to 683,919 vehicles.

The Japanese Government is reported to have decided to impose certain restrictions on imports from the U.K., South Africa, and various European countries as a measure of retaliation against restrictions maintained by these countries on Japanese goods.

British exports in August were valued provisionally at £305 million, imports at £359 million and re-exports at £13·4 million. The rate of exports in the first eight months of the year was 4½ per cent more than the average for 1960, but imports were lower by 3½ per cent.

The weekly consumption of chocolate confectionery per head in Britain is 2·3 ozs., which is nearly double that in the U.S. and West Germany

PERSONAL

MR. K. R. K. Menon, till recently Chairman of the Industrial Finance Corporation of India, has been appointed a Director of Messrs. Tata Industries Ltd.

Mr. R. Krishnaswamy, Senior Deputy General Manager, Western Railway, has been appointed General Manager of the Chittaranjan Locomotive Works, Calcutta.

Dr. Mohamed Abdul Rauf, Ambassador of India to Belgium and Luxembourg, has been appointed Indian Ambassador to Switzerland and concurrently Minister to the Vatican.

Mr. R. Fell, hitherto an Assistant Secretary in the Tariff and Import Policy Division of the Board of Trade in London, has arrived in New Delhi to take up his new assignment as the British Trade Commissioner in India.

Mr. K. B. Lall, I.C.S., has left for Bangkok. He will be the Chairman of the three-man Commission proposed by the E.C.A.F.E. to examine the possibility of forming an Asian Common Market. The other members represent Japan and Thailand.

Mr. Mathuradas M. Parekh, Chairman of Mangaldas Group of Mills, and Mr. Baidyanath Banerji, who is associated with the Bihar Fire Bricks and Potteries Ltd., have been co-opted to the Board of Directors of the Selected Satgram Collieries Ltd., Calcutta.

Mr. Pierson Dixon, British Ambassador in Paris, has been appointed official head of the British delegation in the negotiation arising out of Britain's application to join the European Common Market. Mr. Eric Roll, a Deputy Secretary in the U.K. Ministry of Agriculture, Fisheries and Food, will be his deputy.

and far above the level of consumption in several developed countries, according to Mr. Paul S. Cadbury, Chairman of Messrs. Cadbury Bros. in the U.K.

Exploration for nickel and cobalt is due to start at the end of this year in Dutch New Guinea by the Pacific Nikkel Maatschappij N.V. which will be formed by three leading Dutch enterprises as a joint venture with an American firm, the United States Steel Corporation, and its associated Navegen Company at Nassau in the Bahama Islands.

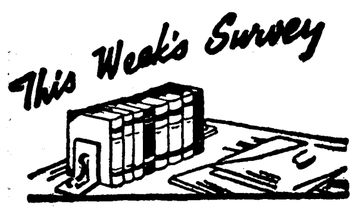
The Imperial Chemical Industries (U.K.) has commissioned a pilot plant for producing the new high-tenacity polypropylene filament yarn—*Ulstron*—in its Wilton Works at North Yorkshire. The yarn, which can be used for fishnetting, twines and ropes, is expected to be on the market early next year. It is claimed to be stronger than any other polypropylene yarns currently being produced anywhere in the world.

A total of DM. 10,400 million has been raised by West Germany as financial aid to lesser developed countries between 1957 and 1960. This is about one per cent of its gross national product in each year during the period under review. In 1961, West German development aid is expected to amount to DM. 4,300 million almost 70 per cent more than in the preceding year and about 30 per cent more than in 1959, the year in which its development assistance reached its peak.

The well-known British firm of Elliott-Automation Ltd., which has recently supplied several equipments for the Indian Refineries Ltd. near Gauhati, Assam, has created a new Directorate of Overseas Operations as part of its policy of expanding its export business. Specialists in the industrial control and measurement instruments field, the E-A group has ten operating subsidiary Companies abroad. Over one-third of the Company's products are exported. The group already has manufacturing interests in India, and is seeking expansion now.

Proposals for tightening anti-trust legislation are expected to come up in the next year's session of the U.S. Congress. The Justice Department has already asked for powers to demand company records without a subpoena. It has also supported a suggestion of Senator Kefauver, Chairman of the Senate Anti-Trust Committee, to increase criminal penalties for violations of the Act. The Chairman has suggested, among others, that the Court should be allowed to levy fines upto $100,000 for each separate violation and remove the existing ceiling level for a fine of $50,000.

The International Finance Corporation and the Pakistan Industrial Credit and Investment Corporation Ltd. have announced financial commitments of $4 million and $3 million, respectively, to the Ismail Cement Industries Ltd., for the construction and operation of a Portland cement plant near Gharibwal, West Pakistan. The Bank of America National Trust and Savings Association, San Francisco, is participating in the I.F.C. investment to the extent of $172,000. The I.F.C. investment commitment is in two parts: one of $2,750,000 in dollar debentures bearing 7½ per cent interest, maturing between 1966 and 1973 the balance of $1,250,000 being in convertible dollar income notes entitled to income, in rupees, equal to dividends on an equivalent amount of common stock; these mature between 1974 and 1976, and are fully convertible into common shares at par any time prior to maturity. The P.I.C.I.C. commitment, of Rs. million, will be in debentures bearing [illegible] interest, repayable in rupees with a [illegible] value clause maturing between [illegible] and 1973.



CODE OF DISCIPLINE

AT a meeting of the Central Implementation and Evaluation Committee, a top tripartite body appointed by the Union Ministry of Labour to keep a close watch over the effective implementation of the Code of Discipline in Industry, held at New Delhi on the 15th inst., representatives of both workers and employers expressed the opinion that the Code had generated a sense of discipline towards decisions taken by tripartite conferences and that industrial relations had considerably improved as a consequence of the adoption of the Code. This opinion, coming as it does, from the two parties most directly concerned with the Code, can be taken as an authoritative and favourable verdict on the Code, about which much misgivings had been expressed earlier by some sections of employers and is a tribute to the foresight of the Union Ministry of Labour which had evolved the Code and worked with zeal and dedication to ensure that it developed into an effective instrument for promoting industrial peace. Since the development of cordial and fruitful industrial relations in the third Plan period is regarded by the authors of the Plan as resting on the foundations created by the Code, it is necessary to strengthen these foundations. This calls for an examination of the working of the Code, with particular reference to the practical difficulties in the way of its implementation. The Seminar on Code of Discipline organised jointly by the Employers' Federation of India and the All-India Organisation of Industrial Employers this week at New Delhi, has this object in view.

Although it is agreed that, by and large, the Code has been a success, there is no doubt that the degree of success would have been much greater had certain difficulties in its implementation been removed. It is common knowledge that the Code partakes the form of an agreement between employers and employees, but, in fact, it is not a bilateral agreement. It is only a declaration of obligations and responsibilities by employers and trade unions in the interest of industrial peace. The spirit underlying the Code is, therefore, more important than its letter and, when attempts are made to interpret the latter in a way which runs counter to its spirit, the object of the Code is defeated.

Lack of precision in the wording the Code has also given rise to difficulties. The Code, for instance, lays down that "no unilateral action should be taken in connection with any industrial matter." Differences of opinion have frequently arisen as to what is "unilateral" action. Instances are not lacking of certain actions which are solely within the province of management but which have been questioned by unions on the ground that they were unilateral.

A second difficulty relates to recognition of unions. The Code enjoins on management to recognise a union in accordance with the criteria for recognition evolved at the sixteenth session of the Indian Labour Conference. According to the criteria, a union which had been functioning for at least one year and which covered 15 per cent of the workers in an establishment should be recognised, provided it had not committed a breach of the Code for one year immediately preceding the time when recognition was claimed. It is not easy, according to employers, to prove a breach of the Code by a union, especially if the spirit of the Code is violated and, so long as proof is not given, the employer is bound to recognise the union's claim for recognition or continue recognition of unions already recognised, though, in fact, they do not deserve the privileges of recognition. A further difficulty arises from the fact that the criteria for recognition of unions are not clear as regards unions recognised on an all-India basis which are confined to one establishment and do not represent the entire industry.

A third difficulty springs from the contradiction between clause (ii) of Section II of the Code which urges management and workers to "utilise the existing machinery for the settlement of disputes with the utmost expedition" and from clause (iv) of the same section which binds both parties to settle all disputes through mutual negotiation, conciliation and voluntary arbitration. Since adjudication has not been mentioned in clause (iv), it has been contended by trade unions that employers should not resort to adjudication whereas the term "existing machinery" in clause (ii) includes adjudication also.

In spite of these difficulties, the Code would have worked more smoothly and successfully had the implementation machinery at the State level functioned with as much zeal as the Central Implementation and Evaluation Committee. It is no doubt true that the successful functioning of the Central Committee is due to the fact that it is presided over by no less a person than Mr. G. L. Nanda, Union Minister for Labour. Even after making allowance for this, the fact remains that the working of the implementation machinery at the State level leaves much to be desired. The Implementation Officers of State Governments are burdened with so many other duties that they are not able to pay attention to ensuring the observance of the Code by the employers and workers. Further, the Implementation Committees in some of the States, instead of confining themselves to their legitimate work of fixing responsibility for the violation of the Code, assumed functions akin to conciliation and mediation in certain disputes under a mistaken notion of their duties and responsibilities. Special attention to such practice was drawn by Mr. H. C. Kothari, the retiring President of the U.P.A.S.I., in his presidential address to the recent annual conference of the U.P.A.S.I. held at Coonoor. As Mr. Kothari pointed out, the procedure laid down in the Industrial Disputes Act should be followed in the case of disputes between management and workers and, except when both parties agree, the Implementation Committee should not intervene in such disputes.

The defects in the working of the Code enumerated above could be corrected without much difficulty, through suitable amendments to the Code, if the representatives of Government, employers and workers were to get together in a spirit of understanding and genuine co-operation. There is no reason to feel disheartened at the difficulties or failures. As the authors of the third Plan themselves remarked, a new concept, with far-reaching aims in a difficult field, requires a considerable period of earnest endeavour before it gets firmly established." What is important to note here is that not only has a good beginning been made but the results achieved so far are encouraging. Better results are sure to come if all the parties genuinely desire and work for it.

BOMBAY GAS PRICE

There is no justification whatever for the persistent refusal of the Maharashtra Government to concede the oft-reiterated plea for a suitable increase in the price of gas supplied by the Bombay Gas Company. The anxiety of the authorities to avoid an additional burden on the consumer is no doubt understandable, but it is utterly wrong to deny the supplier of this fuel a basic economic price which covers the mounting costs and yields a minimum fair return to investors. Pegging of prices at artificially low levels amounts to subsidising consumers at the expense of capital. Such capital erosion will ultimately undermine the capacity of the concern even to maintain the normal level of production and supply, let alone to expand in order to take care of the growing requirements of gas in the city. The price of gas in Bombay, it may be noted, continues to be pegged at the unconscionably low level of Rs. 3.94 per thousand cubic feet, which is lower than that prevailing 35 years ago, whereas the price of every other commodity has gone up several-fold. How incongruous is the Maharashtra Government's gas price policy was convincingly explained at some length by Mr. B. L. Jalan, Chairman of the Bombay Gas Company Ltd., in the course of his speech at the annual meeting of the Company last week; extracts from his speech appear elsewhere in this issue (*vide* pages 600 and 601).

It will be noted from Mr. Jalan's observations that the need for a suitable upward revision in gas price is long overdue and urgent. The costs of raw materials (coal and diesel oil) are increasing and the trend of wage bill continues to be upward. As compared with 1926, the price of coal has risen by 97 per cent (from Rs. 26.53 to Rs. 52.36 per ton) and the wage bill by 60 per cent. On top of this, there is the problem of irregular and inadequate supply of coal. The price of diesel oil has recently risen by Rs. 24.01 per kilo-litre. Again, the increase in excise duty on coal from Re. 1 to Rs. 4 per ton has cost the Company a further sum of Rs. 3 lakhs annually. The cumulative increase of costs without a corresponding rise in the sale price of gas has seriously cut into the Company's profit-margin. Incidentally, it may be noted that the effective price allowed by the Company, namely, Rs. 3.94 per thousand cubic feet, is much less than what is allowed (Rs. 5.25) to the Oriental Gas Company at Calcutta. The disparity is all the more glaring considering that the Bombay Gas Company has to get its coal supplies at a delivered price of Rs. 52.36 per ton, as against Rs. 35 paid by its counterpart at Calcutta. The price of gas is also ludicruously low *vis-a-vis* the price charged by the petroleum refineries in Bombay for the gas supplied by them in cylinders. We would like to invite here the attention of the Maharashtra Government to the following clear-cut statement of the Planning Commission on the price policy for the third Plan:

"Price rigidity is incompatible with development. ... Price regulation involves action at various points. The necessary incentives to larger production have to be preserved."

Viewed thus, it is certainly regrettable that the Bombay Gas Company is being prevented from charging an economic price to its consumers. And this state of affairs has gone on for several years. If the question of gas price had been referred to an impartial and autonomous body like the Tariff Commission for investigation, the Company would have doubtless had the benefit of a higher price long back. Such is the logic of facts of the case that this assertion is not unjustified. Even now, it is not too late to request the Commission to examine this issue as a special case and recommend a price for gas that will be fair enough to both the Company and the consumers. If the Maharashtra Government is unwilling to let the issue be examined by an impartial expert committee, it would only mean that it wants to force the Company out of existence by starving it. That would be an unfair means of nationalising a concern.

CAUSTIC SODA

The current term of tariff protection to the caustic soda industry is due to expire at the end of this calendar year. The industry had recently put forward a plea for continuance of protection beyond that period. The customary public inquiry into the claim for protection was held on Friday the 15th inst., with Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, presiding. The industry has been enjoying protection for over six years now, the relevant existing duty being 30 per cent *ad valorem* preferential and 40 per cent *ad valorem* standard on tariff values of Rs. 56 per quintal for fused solid grade and Rs. 70 per quintal for other sorts.

Under the shelter of protection, the industry has given a good account of itself. There are at present 18 units in operation, of which 11 produce for sale and seven for self-consumption. As against this, the total number of units was only 15 in 1958 and 12 in 1955. The three new units which have come into existence since the previous inquiry (1958) are: (1) the Saurashtra Chemicals, Porbander; (2) the Dhrangadhra Chemicals Ltd., Sahupuram and (3) Messrs. J. K. Chemicals Ltd., Bombay. Out of the 18 units, one unit employs the chemical process, another both chemical and electrolytic processes. All the other units have adopted electrolytic process.

The rated annual capacity of the industry has risen from 39,946 tonnes in 1954 to 68,270 tonnes in 1958 and 131,630 tonnes in 1961. The present capacity of the self-consuming units is 25,630 tonnes. The actual output has gone up from 29,457 tonnes in 1954 to 58,311 tonnes in 1958 and further to 97,402 tonnes in 1960. During the six months ended June 1961, production aggregated about 58,000 tonnes, or an annual average of well over 100,000 tonnes, representing a fourfold increase in about eight years. The industry has several schemes for development and expansion. Ten of the existing units themselves have been permitted to expand their capacities substantially. In addition, industrial licences have been issued to 14 new units. When these plants are commissioned, the aggregate annual capacity of the industry will increase to about 366,500 tonnes. This will come within a close range of the capacity target of 400,000 tonnes laid down in the third Plan. It may be added here that the quality of the domestic product is said to be satisfactory. Manufacturers claim that they have been adhering to standards specified by the Indian Standards Institution.

The major consumers of caustic soda are soap, textiles, paper, *vanaspati*, rayon, aluminium and certain ancillary chemicals. The total domestic demand for the product, according to the Development Wing, is now 195,000 tonnes annually and is expected to go up to 300,000 tonnes by 1964.

A disconcerting feature of the development of the caustic soda industry is that the extent of utilisation of chlorine, a joint product, continues to be at a very low level. This factor is very important to the growth of caustic soda in that, unless sufficient demand is created for chlorine, it is difficult to reduce the prices of caustic soda. It is said that 78 per cent of the aggregate "theoretical capacity" for chlorine had been utilised in 1958. But this proportion came down to 68 per cent in 1959 and still further to 57 per cent in 1960. Licences, of course, have been granted for establishing plants for certain chlorine based products, such as chlorinated organic chemicals, solvents, insecticides and plastics. As a result, the demand for chlorine, it is estimated, will go up from about 51,000-67,000 tonnes annually at present to 130,000 tonnes by 1964.

In the electrolytic process of production, common salt is the main raw material for caustic soda. Manufacturers do not appear to have any difficulty in obtaining salt in adequate quantities. Some of them, however, have complained about the quality of salt supplied to them, its high cost and difficulties in transporting it. The quality of salt supplied from the Kutch-Saurashtra area is reported to be quite satisfactory. In the electrolytic process, which is power-intensive, the cost of electricity accounts for a significant portion of the cost of production of caustic soda. The basic raw materials required in the manufacture of caustic soda by the chemical process are soda ash and limestone. The two producers of chemical caustic soda use their own soda ash and, except for transport bottlenecks, they have not experienced any difficulties in obtaining their requirements of suitable quality limestone and coke.

The domestic production of caustic soda is still insufficient for the country's requirements. Some imports are, therefore, permitted. Generally, imports are channelled through the State Trading Corporation. In terms of value, imports rose from Rs. 395 lakhs in 1958 to Rs. 985 lakhs in 1959. But, in 1960, they fell to Rs. 281 lakhs. Judged from the planned expansion of the industry, it would appear that the reliance on imports will gradually diminish. But it looks as though the difficulties of consumers of caustic soda will not be over, since the industry has, once again, requested the Tariff Commission to allow an increase in the existing ceiling prices. While it is essential to take into account the increase in cost of production, this protected industry should, at the same time, realise its obligation to domestic consumers and rely mainly on efficiency and better utilisation of chlorine to neutralise the rise in cost of production.

COAL DISTRIBUTION POLICY

At New Delhi last week, the Union Ministry of Steel, Mines and Fuel discussed the Government's coal distribution policy with the representatives of State Governments, coal industry, coal merchants and major consumer interests. The discussions were held against the shortage of transport facilities—a shortage which has already led to a fall in coal production to the tune of 300,000 to 400,000 tons a month. The Ministry's scheme for supplying coal from zonal dumps was defended on the ground that it would reduce the number of destination points on the railways and thereby ensure expeditious wagon movement. The view expressed on behalf of consuming industries that handling of coal under the new system would raise production costs was not accepted by the Ministry. It was obvious that the authorities would stick to the scheme in spite of the opposition which came from consuming industries as well as from most State Governments. The discussions, however, ended with the hope that the Government might revise at least one feature of the scheme—the feature pertaining to allocation of coal supplies on the basis of quotas moved last year by the railways—in the light of views expressed by the State Governments and the consuming industries. These views were to the effect that coal supplies last year were irregular and inadequate and that allocations now on the basis of such supplies would aggravate the coal shortage further. Any substantial increases in coal allocations to industries would, however, appear to be difficult, in view of the high priorities governing coal supplies to railways, steel plants, power stations and defence establishments in that order. Since no formal decisions have been taken at the New Delhi Conference, there is still a chance that the requirements and representations of industries will be given fuller consideration by the authorities in their measures for improving the turnround of wagons and creating zonal coal dumps.

Whatever revision is made in the scheme of coal dumps, it looks as if the scheme as such will be unpopular with the industries. Quite a few practical difficulties may arise in the working of the scheme. First, the selection of collieries by an agency other than the consumers (who have been doing such selection all along with the help of normal trade channels) will not be a workable proposition from the point of view of the required quality of coal. Secondly, drawing of coal from dumps will add to its cost, and this additional cost of handling will have to be borne by the consuming industries. Thirdly, the quality of coal will go down as a result of deterioration and double handling at the consumers' end; it is stated, in this connection, that the wastage of broken and dust coals in the dumps will add to the loss. Fourthly, thousands of trucks will be required to transport coal from the dumps to the factory sites; there will, thus, be the additional cost of road transport. Fifthly, the elimination of middlemen who used to afford credit facilities to industries will create financial difficulties for some of them. Sixthly, as the system of dumps is for all consumers, it will particularly affect smaller industries, because of the expected higher cost of coal. These, then, are the chief practical difficulties envisaged in the working of the coal dumps scheme. According to one estimate, these difficulties will be responsible for ultimately increasing the landed cost of coal by as much as 25 per cent. There is, therefore, some force in the stand of consuming industries that they should be mostly supplied with coal directly from collieries, instead of from dumps, in block rakes and box-type wagons by the railways. If at least the bigger industries which account for about 80 per cent of coal consumed by all industries, are not forced to depend partly or wholly on the dumps, there will be no need for making the dumps themselves unduly large and unwieldy or for centralising marketing on a large-scale. The powers-that-be would not be in the right if they were to reject completely many of the practical views expressed on behalf of industries in the light of their actual experience of coal supply problems.

WOOL EXPORTS

Almost half the total wool output of about 72 million lbs. in India is sold abroad, the foreign exchange earned every year being Rs. 10 crores. The current annual rate of raw wool exports is over 35 million lbs., which compares very favourably with the actual shipment of only 20 million lbs. in 1953-54. Although the export performance is thus quite encouraging, it should not engender any sense of complacency among wool interests. It is true that Indian wool, the bulk of which consists of carpet type, is well known for its resilience and durability. Even so, the need for exploring possibilities for expanding exports to the traditional customers as well as for finding new markets is urgent in the context of (*a*) the importance of earning foreign exchange, (*b*) the anticipated rise in domestic production, and (*c*) the growing competition in world wool markets. Dr. Punjabrao Deshmukh, Union Minister for Agriculture, certainly struck a note of realism when he declared, in his inaugural speech at the tenth annual conference of the All-India Wool Trade Federation held at Bombay on Monday this week, that the necessity of maintaining quality standards was "absolute and imperative."

Compulsory Agmarking has been introduced on all exports of raw wool and it is gratifying to learn that the results of such control have been very encouraging. Recently, the specifications were made a little more rigid, following the persistent demands of overseas consumers. Alluding to this development, Dr. Deshmukh assured the wool trade that it was not the intention of the Government to cause any unnecessary hardship to the trade. While the trade must appreciate the need for such

ON THE ARENA

By "Archer"

"*Obsecro, Tuum Est? Vetus Credideram*"

THIS is a Latin gibe at a plagiarist meaning, "Really, is it yours? I had supposed it was something old."

Casually browsing through the *Journal of Infectious Diseases*, Vol. 108, No. 3 (May-June 1961), published for the John Rockefeller McCormick Memorial Fund of the University of Chicago, I came across "An Apology" which ran as follows:—

"We have learned that at least five of the six figures in the paper by P. G. Pande, P. C. Sekariah and P. H. Ramachandran, entitled 'Studies on Toxoplasmosis. 1. Histological demonstration of pseudocysts in the brain of hill cattle, together with a note on the isolation of *Toxoplasma gondii* from a Himalayan flying squirrel, PATAURISTA INORNATUS GEOFFREY, a new natural host,' which appeared in the January-February 1961 number of this journal (Vol. 108, No. 1, pp. 68-74) were taken from the previously published works of other authors. The sources of these illustrations are:

Figures 4 and 5—Frenkel, J. K. 1956, Ann NY Acad. Sci. 64: 215-251.

Figures 2, 3 and 6—Lainson, R. 1958, Trans. Roy. Soc. Trop. Med. Hyg. 52: 396-407.

"We offer our sincerest apologies to Dr. Frenkel, to Dr. Lainson and to the readers of our journal for our unwitting participation in this regrettable incident.

THE EDITORIAL BOARD."

I then got hold of the offending paper in Vol. 108, No. 1, of the *Journal* and read through it with some considerable effort which was occasioned by the presence of a large number of scientific terms with which even a liberally educated person like me is not usually familiar. I must say that the paper had all the look of authenticity. In the section dealing with "Methods," the sources of materials were mentioned, namely, that the hill bull was purchased from a village in the neighbourhood of Mukteswar and the flying squirrel was trapped in the adjoining reserve forest. In the section dealing with "References," the paper by J. K. Frenkel dated 1956 was specifically mentioned, though not the one by R. Lainson, although two other papers by this scientist published in 1955 and 1958 were referred to. And the three joint-authors of the offending article are stated to be responsible members of the Staff of the Division of Pathology and Bacteriology in the Indian Veterinarian Research Institute, Mukteswar—Kumaon, Uttar Pradesh.

It is amazing that a "regrettable incident" of this type, alleging plagiarism, has had to be publicised in a foreign scientific journal with world-wide circulation. The pride of many an Indian scientist and research worker will be greatly hurt by the allegation (which, apparently, has been proved, as is implied in the apology) of intellectual dishonesty against research workers of one of our old and well-known National Laboratories. What its reputation is going to be in the future is a million Naye Paise question.

Introspection Among Policemen

Even from the somewhat sketchy reports that came out in the papers about the proceedings of the All-India Police Science Congress which took place in Bombay last week, it would seem that the members of the force present there must have had an interesting and thought-provoking meet. Mr. B. N. Mullick, Director of the Central Intelligence Bureau, is reported to have asked a number of provocative questions, answered some himself, and, as for the rest, encouraged the policemen present to subject themselves to a lot of introspection. A very important question that he asked was why policemen were not generally popular with the people, for which, it would appear, no clear answer was forthcoming from the panel (of the Congress) which dealt with it. He criticised the tendency to shift the blame to historical reasons (that is, by reference to the fact that policemen were still identified with association with British rule), as also to the tendency to "relate unpopularity to the pay scales, circumstances and the law as administered." In his view, the main reason for any unpopularity can only be some defect in the treatment given to the common man in the discharge of day-to-day duties.

In common with the majority of our countrymen, I am scared of the policemen; and it is fear complex that is the basis of the policeman's unpopularity with most people of my type—the common type. The fear is not physical but mental; detention by a policeman even for a trivial or technical offence brings visions of endless harassment and indignity totally out of proportion to the seriousness of the offence itself. The average policeman is needlessly stern, officious and difficult in dealing with people whether they are offenders or suspects or even witnesses; may be because he is overworked and harassed, but that can be no excuse for the pomposity which is characteristic of almost every police officer in uniform. Sometime ago, a servant of mine was nabbed by a traffic constable for riding a bicycle the wrong way in a one-way street. He was marched off to a police station, about a mile away, his cycle was impounded, and he was asked to be present at a magistrate's court the next day at noon. When he returned home after a delay of three hours, during which time I had made up my mind to believe that he had been killed in a traffic accident and that nothing else could have accounted for his delay, he held no receipt for the bicycle and no slip of paper to indicate which court he should attend the next day. There were half a dozen magistrates dealing with "nuisance and traffic cases" and their methods were summary. And so I had to take my servant along to the police station to get all the facts, only to get cheeky answers from the police officials present there that, if I expected them to be entering particulars in registers and handing over receipts for impounded property and serving written summonses, I was the biggest booby in creation. May be, I was, and may be, there was no point in blaming the officer and not the system under which he worked, for it is the system that contributes to the unpopularity of the policeman. At the same time, it is not the policeman alone (among public servants) who is unpopular; almost all persons who are clothed in brief authority in exercising which some imagination is not expended and suavity is not ensured by the formulation of methods which would avoid annoyance, will be unpopular, if not positively despised. A stamp vendor at a Sunday post office was seen berating a mild old gentleman a few days ago for asking for stamps of different denominations for a total value of seven rupees, for, so the vendor stated, sales on Sundays were to be restricted to small requirements, the exact limit of which he was not able to define, but believed was subject to his discretion. Apparently, there was a stupid circular which had given him discretion to decline fantastic demands. Instances of this nature can be multiplied to indicate that the unpopularity of many officials dealing with "common men" is, by and large, due to lack of system, lack of imagination, and overworked conditions, all of which, incidentally, is due to the fact that the top officials and policy makers do not usually acquaint themselves with the manner in which the trivialities of day-to-day business are handled by the harassed employees who deal directly with the public.

When will the policeman be more understanding or, at least, less pompous is the question often asked. The obvious answer is when he is treated the way he treats others, when he is told off, asked to take his place in the queue, stand aside, get off his perch, asked not to be silly or pompous, and so on; but that is just a lot of wishful thinking. For a policemen is almost always and everywhere in uniform and enjoys priority and deference on that score. As for a police officer in mufti, he is invariably escorted by or is accompanied by or followed by a uniformed "orderly," and that factor elevates him to the status of a V.I.P. almost automatically. And thus, alas, most of the people employed in the police force are denied the opportunity to learn things the hard way, which most of us have.

Confused Thinking Plus *Avarice*

One of the most amusing things nowadays is the way stock exchange commentators and market surveyors make their observations on the viability of new flotations. Many of them, however, do not stop with being amusing. They become provocative and disseminate positively harmful theories with a display of economic jargon. This kind of harmful trend is particularly visible in dealing with the cases of companies which embark on a process of rebirth through expansion of capacity and output. Some of these companies with small capacities have been operating successfully in the past with considerable profitability due to fortuitous circumstances such as lack of competition in their area of operations, a fairly good demand from Governmental and institutional sources, steady flow of raw materials, and confinement to a compact area of distribution. With increasing competition and the need to extend activities over a wider market as also to diversify production, such companies have been finding it necessary to increase their capacities and enlarge their production. Indeed, during the last two years, most of such companies have discovered that the only way to maintain profits and dividends at a consistent level without increases in selling price is to enlarge and widen output and absorb rising costs of raw materials and labour. They thus find the need to issue fresh capital, in some instances, aggregating four to five times their existing capital, and offer rights shares to existing shareholders. Inevitably, of course, the return to shareholders after the issue will result in a precipitous fall for a period of three to five years, partly because the new plant and equipment will take that much time to reach full productivity, and, in the meantime, there may be teething troubles to face. Provision will also be required for larger depreciation, development rebate, etc. In these circumstances, a company which embarks on a fourfold or sixfold expansion should be considered to be almost a new concern which will be reborn with added strength and viability in a matter of three or four years. It should not be looked down upon, if, for instance, its dividend payment goes down from, say, 20 per cent or 15 per cent to a small 5 or 6 per cent, or even if it has to pass over dividend in the course of expansion for one or two years. As far as the original shareholders are concerned, they should reconcile themselves to smaller returns for a few years, for the very good reason that the alternative, in the present period of expanding economy and increasing competition, *plus* rising costs, is extinction. It would be good wisdom to support the rights issue and wait for prosperity, which is a factor of greater certainty in the case of an old company expanding its output than in the case of an entirely new venture. The former's experience, established distribution system and goodwill should be taken as assured intangible assets. As regards new subscribers to the issue who are offered the left over in the rights, they have no cause to complain as their investment will be in a growth equity of established merit at lower than market prices.

Unfortunately, however, the general attitude to such issues has been carping and unduly critical, mainly because such companies have chosen the difficult, albeit wise, policy of scaling down dividends for a period of years in their expectations of profitability. The result will of course, be that the market value of the shares will suffer depression, and the yield for those who bought them at peak prices in the past will go down. But no company can function in a reasonably economic way, if it keeps on being unduly solicitous about share market operators. It has to consider its very existence and economic viability as of greater importance than the approbation of those who buy and sell their shares only to collect capital gains.

TIGHT-ROPE WALKING BETWEEN AUTONOMY AND ACCOUNTABILITY

WHY EXEMPT O.N.G. COMMISSION FROM CONTROL?

From Our Special Correspondent

NEW DELHI, 19*th September*

DELHI LETTER

PARLIAMENTARY control of the State undertakings is a vexed subject on which the Government of India has not yet formulated a comprehensive set of principles, though it has already taken a decision to set up a Committee of Parliament which would substitute its jurisdiction for that now exercised by the Public Accounts Committee and the Estimates Committee. That there should be more autonomy and greater freedom for the managements of these undertakings is, in theory at least, readily conceded. The recommendations of the Krishna Menon Sub-Committee of the Congress regarding pricing policy, budgeting and accountability (*vide* paras 110-116 of that Report) also appear to have been fully accepted. Thus, the principle of charging "what the traffic can bear" will be a guiding factor in price fixing; a second will be the system of price equalisation, when several units produce goods at different costs, through a special fund and a part of the consequent benefits from low-cost factories will be passed on to the workers to provide incentive. A common financial year for all State undertakings (the same as the Government's) and the preparation of a performance budget were among the other suggestions of the Krishna Menon Committee which are now favoured.

The implementation of these decisions through a comprehensive resolution in Parliament has been delayed, though most of the other details have been settled by a Cabinet Sub-Committee. It is understood that all State undertakings governed by the Companies Act will be brought under the purview of the Parliamentary Committee. But the two State-controlled Banks, Control Boards (Bhakra-Nangal, Chambal, and Nagarjuna Sagar), Commodity Boards (for coffee, tea, coir, silk and rubber), Commissions (Oil and Natural Gas Commission and Khadi and Village Industries Commission), Port Trusts, Local authorities and departmental undertakings will all be excluded from the jurisdiction of the proposed Parliamentary Committee. While all statutory corporations will be subject to the Committee's scrutiny, the Krishna Menon Committee's special pleading on behalf of the two major Defence establishments—Hindustan Aircraft and Bharat Electronics—seems to have prevailed and, in view of their importance for national security, the Committee will be asked to deal with them according to special procedures suited to their character.

It seems that Government will take no chances in regard to the scope of the Committee's activity and would seek to define its powers of control and supervision in such a way that conflict of purposes between the Government and the Committee is avoided. The Estimates Committee's reports have undoubtedly proved very embarrassing sometimes when they made suggestions for changes in policies on which the Government was committed one way or another and had no intention of changing its attitude. One such was the recommendation regarding the Planning Commission and its composition made some years ago; there was another recent instance in regard to the investment of funds of the L.I.C. In the 80th Report of the Estimates Committee, a sweeping change was suggested to the effect that public undertakings should be normally constituted into statutory Corporations and that the system of establishing joint-stock companies should be adopted only in emergencies or when an enterprise is started in association with private capital or with a view to transferring it eventually to private management.

Such suggestions for drastic changes have not found favour with the Government and to avoid possible repetition of similar situations, it is proposed to exclude both matters of major policy and also of day-to-day administration relating to State enterprises from the scope of the future Parliamentary Committee's scrutiny. The former is necessarily a matter for the Minister to decide and take responsibility for in Parliament; the latter is a field in which autonomy should be fully conceded to managements. Besides these two aspects, any matter for which special formal machinery is set up under the statutes or articles of association creating an undertaking will not be the subject of a probe by the Parliamentary Committee; also excluded will be wages and service conditions of public sector units which are subject to collective bargaining or negotiation between the managements and unions.

Obviously, such tight-rope walking between autonomy and accountability will not be easy. Ultimately, sound conventions set up by the Committee and the good sense of its members will determine whether supervision can be usefully exercised without subject managements to harassment or without being put off by evasive replies from the latter under the pretext of their autonomy. The Committee will be in a position to collect much information and learn about the working of the enterprises so as to be in a position to guide discussions in Parliament into useful channels. Personal contacts with those in charge of enterprises will also remove the growing sense of injustice felt by many of them when criticisms are based on misconceptions without any opportunity being provided to them for furnishing explanations. The setting up of the Parliamentary Committee will not, however, be an answer to the pressing need for increasing efficiency or profitability of the public sector; it can only help to make parliamentary control less sporadic and capricious and better informed than when it is exercised almost wholly through formal questions and answers in the Houses.

The reasons for the proposed exclusion of the Oil and Natural Gas Commission from the Committee's restricted purview are not clear. As a statutory Corporation, it stands on no different footing and should neither be denied autonomy nor relieved of accountability. If excluded, a situation similar to that of the British Air Corporations may arise; the Select Committee on Nationalised Industries in the U.K. observed that the Minister's unofficial powers of advice added up "to a degree of control far in excess of that envisaged by the statutes under which B.O.A.C. and B.E.A. were created." There is no reason why in respect of all Corporations there should not be a clear-cut division of responsibility, so that, when a Minister wishes his orders to have overriding priority, he is compelled to make them so only through a special directive. The Employees' State Insurance Corporation seems to be yet another candidate for special exemption like the O. & N. G. and the Khadi Commission.

The setting up of the Parliamentary Committee may have to be postponed, however, until after the General Elections, since there can be no assurance of continuity in its membership, if one is set up now. The proposal is for a Joint Committee of both Houses, with 10 members from the Lok Sabha and five from the Rajya Sabha chosen for a period of three years (though 2½ years seems preferable in view of the quinquennial elections).

Conference on Coal

New Delhi has been concerned in the last few days with more down-to-earth matters like coal and exports than the broader policies of the third Plan. At a conference of consumers and producers of coal, there was much heated discussion of the proposal to create coal dumps at important centres, for distribution to consumers who can be served by each. The Railways were again in the pillory and Sardar Swaran Singh, Minister for Steel, Mines and Fuel (who personified in himself both producer and consumer) made it clear that there was no shortage of production but only difficulty in movement of coal. The demand for imports was thus ruled out, though it was in any case an unreasonable one, in view of the foreign exchange shortage; the Minister's answer was not, however, specific as to whether output of all the desired grades of coal is now adequate.

The main objection of representatives of industry to coal dumps was that they would increase transport charges and make coal costlier; also the prospect of increased congestion of goods traffic on the roads in industrialised cities of Calcutta and Bombay is not, indeed, a very pleasing one. Whether road transport has been built up to the level at which it can cater to this additional demand is also another issue which has not been squarely faced: perhaps the establishment of coal dumps will relieve the two Ministries—Railways and Fuel—of their responsibility for supplies and transfer some of it to the industrial users who may have to make their own arrangements for transport from the dumps. The Railways have held out the distant hope that, at the end of the third Plan, when they get their 20,000 box cars, one-fourth of this number would be reserved for moving additional coal other than that needed by the steel plants.

Two advantages are claimed for the system of coal dumps; by reducing destination points, it offers the possibility of speedier movement; it will also facilitate movement in the slack season when wagons are available. Against these advantages are some serious drawbacks; one is the likelihood of deterioration of quality and the other higher cost of transport.

Theoretically, the critics are right. If Railways had turned out to be as efficient as they were expected to become as a result of the investments made so far, the need for dumps may not be urgent, though the scale of requirements under the third Plan would still necessitate some special devices. But practical considerations have to be taken into account and the major one among them is the proved incapacity of the Railways to work at their maximum efficiency. The reasons have been discussed before without anyone approaching a clear finding; the two Ministries responsible for coal and transport have so far been blaming each other but have now called a truce, since their wrangles were becoming too open and unseemly. An increasing tendency to attribute all shortcomings to the "pangs of economic growth" helps the cause of inter-Ministerial amity, if not of close co-ordination of their policies.

As these lines are being written, the Coal Council of India is engaged in a detailed review of the third Plan target of coal production of 97 million tons, including the financial resources required for achieving them. The field-wise and grade-wise break-up of this target is being examined as also the gap in the development of coal washeries, technical personnel and their training, besides the fourth Plan schemes for prospecting and drilling of coal-bearing areas. The private sector is represented in the Council and, while it has several major problems—like mining leases for development of contiguous areas and adequate return on its investments—the question of transport will remain inseparable from these perspective plans.

While a system of priorities in transport will be unavoidable, the proposal to make allocations on the basis of the distribution in 1960—admittedly a bad year—has been assailed by representatives of industry and of State Governments. The former have stated that their actual needs are about 15 per cent larger; subject to better organisation of wagon supplies, these additional requirements can be met at least partially; but no definite assurances have been forthcoming. When such is the planning of coal supplies for the immediate future, it may be difficult for the Coal Council to approach its task of long-term planning with any sense of realism.

Meanwhile, the Labour Ministry has decided to embark on a departmental inquiry on the entire question of labour-management relations in coal mines, which would cover the law and order situation, non-implementation of awards and agreements and breaches of the (now increasingly popular) Code of Discipline. This inquiry may prove to be as important to the future of coal as the other discussions.

SURVEY

(*Concluded from page* 583)

rigid specifications in the interest of sustaining the markets already established and finding new ones, it has to be borne in mind that there are some hurdles in the way of wool exports which should be removed at the earliest. To these a brief reference was made by the President of the Federation, Mr. Jayantilal K. Anjaria. He wants the abolition of the new grading rules. Wool exports can be allowed, Mr. Anjaria suggests, on the basis of checking yields and testing lots to be free from ginned and limed wools. Another suggestion which deserves to be implemented relates to the setting up of a carbonising plant at Bikaner for the removal of burrs and thorns in raw wool. It is, however, difficult to understand the rationale behind Mr. Anjaria's plea for incentives in the form of import licences for raw wool and wool tops against exports of wool from India.

EARNING AND SPENDING

PERSONAL SAVINGS LARGER THAN COMPANY SAVINGS

(*From Our Own Correspondent*)

LONDON, 15*th September*

LONDON LETTER

THE Treasury has produced this week its annual budget for the nation, that is, its estimates of the income earned by the nation as a whole and the corresponding expenditure and savings. The figures naturally relate to the year 1960.

The total of national income has now reached the astronomical figure of £22,300 million. To those familiar with the levels of income ruling in the years after the war this figure appears enormously inflated. It is in fact 90 per cent greater than the figure for ten years before. However, as soon as one makes a check on the rise in prices, one discovers that, in terms of the real income, that is the total quantity of goods and services produced, the rise is instead 29 per cent only. In other words, real income has been rising at an average of only about 3 per cent per annum.

Recently, the rise has been a little faster and money income rose twice the normal rate between 1959 and 1960, that is, 6 per cent, and, in terms of production, real income rose some 5 per cent.

The increases in expenditure covered all the categories over the past year; for example, fixed investment rose by 10 per cent, public consumption (that is expenditure by public authorities) rose by 6½ per cent, private consumption rose by 4½ per cent and exports rose by 6 per cent. A cursory glance at these figures show that expenditure has risen a great deal more than the 6 per cent rise in the total national income. The difference was financed by a 13 per cent increase in imports. This is the measure of the extent to which the United Kingdom as a nation was living beyond its means in 1960 and running up a deficit on the balance of payments.

Incomes Nearly Double

And yet it is difficult to blame the private income earner and spender. Personal incomes were nearly double what they had been ten years before and were 7½ per cent higher than in 1959. Since private consumption only rose by 4½ per cent—less than the increase in consumption in any other sector of the economy—the result was a big rise in personal saving which totalled nearly £1,500 million. Compared with 1959 the percentage of the average person's income saved rose from 6 to 8. Incidentally, all these figures can be taken as representing real income and expenditure, since very little of the rise in consumption was absorbed by higher prices.

In the matter of saving, we find that the private saver did a good deal better than the company saver. Company saving rose by 12½ per cent (against the one-third increase in private saving), but more than this amount was earmarked for tax reserves and dividend reserves. The savings left over were actually rather less in 1960 than in 1959.

There is an interesting piece of information available about the distribution of incomes through the different classes of the community. Before allowing for tax, 41 per cent of the income earners received less than £500 a year and 2 per cent received over £2,000. After taxation, 44 per cent received less than £500 nett and only 1 per cent of the income earners received over £2,000. The total number of income earners is a fraction under 11 million (eleven million) people. We thus have a total of about 100,000 people with incomes in excess of £2,000, after tax.

Turning to overseas investment, the picture is distorted by the movements of hot money, since nett investment is the same as the current surplus in the balance on international payments, and, in 1960, there was a nett investment in the United Kingdom of £334 million by foreigners, as compared with a net investment outside the U.K. of £51 million in 1959. These figures naturally conceal the steady stream of fixed investment overseas as well as the inflow and outflow of short-term foreign capital. Britain is still lending long and borrowing short.—*All Rights Reserved.*

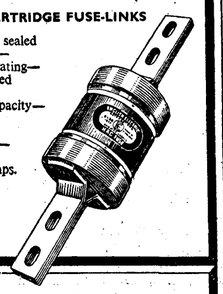
'ENGLISH ELECTRIC'

HIGH RUPTURING CAPACITY HEAVY DUTY

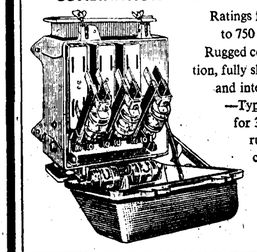
FUSEGEAR

H. R. C. CARTRIDGE FUSE-LINKS

Hermetically sealed construction—Non-deteriorating—ASTA certified for 35 MVA rupturing capacity—Visible indication of operation—Ratings up to 300 amps.



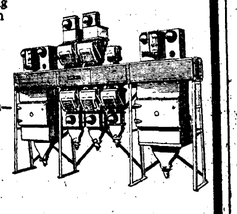
COMBINATION FUSE-SWITCHES



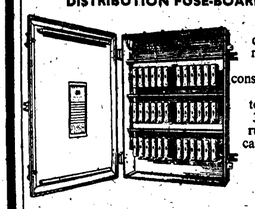
Ratings from 30 to 750 amps—Rugged construction, fully shrouded and interlocked—Type tested for 35 MVA rupturing capacity.

COMBINATION FUSE-SWITCHBOARDS

Incorporating Combination Fuse-Switches upto 750 amps—Robust and compact construction—Readily modified and extended—Type tested for 35 MVA rupturing capacity.

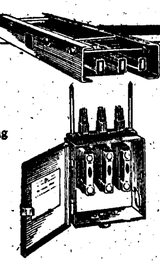


DISTRIBUTION FUSE-BOARDS



Robust, dust and moisture proof construction—Type tested for 35 MVA rupturing capacity—Ratings from 15 to 100 amps.

Flexibility of power distribution—Can be installed without disturbing existing layout or production—Avoids chasing of floors for ducting—Approved by Fire Insurance Authorities.



OVERHEAD BUSBAR EQUIPMENT

A complete range of distribution equipment manufactured at the Madras Works of The English Electric Company of India (Private) Ltd.

MANUFACTURERS, PROCESSORS AND EXPORTERS OF ART SILK FABRICS

SCHEME FOR ENROLMENT

The Scheme for Enrolment as announced by the Government of India, is to be introduced from a date not later than 1st October, 1961.

Manufacturers, Processors and Exporters of Art Silk fabrics are advised to enrol themselves under the Scheme with the Council, as the facilities provided under the Export Promotion Scheme will be available from that date onwards only to those who are enrolled.

Application Forms and particulars can be obtained from the Council's Office.

The Silk & Rayon Textiles Export Promotion Council,

Resham Bhavan, 78, Veer Nariman Road, Bombay-1.

ACTIVITIES OF INTERNATIONAL FINANCE CORPORATION

PROBLEMS OF INDUSTRIAL OPERATIONS DISCUSSED

FORMED in July 1956, as an affiliate of the World Bank, the International Finance Corporation (I.F.C. for short) has completed the first five years of its working on 30th June 1961. As is well known, its main purpose is to further economic development of its developing member-countries by investing, without Government guarantee, in productive private enterprises in association with private capital and management. Essentially, the I.F.C. is an investing rather than a lending institution. It judges projects on the basis of their merits and participates in investment, without exercising any control on management. The I.F.C. has so far invested in productive enterprises in 18 countries. It has not only supplemented much larger amounts of private business capital but has begun to draw private investment funds into participation.

The annual report of the I.F.C., covering the year ended 30th June 1961, does not provide a comparative study of its activities; it gives the figures of its operations only for 1960-61 and the cumulative totals for the five years. A comparison with the annual report for the previous year shows that the Corporation made very poor progress during 1960-61. It made new investment commitments of the order of only $6.2 million, covering 10 projects in eight countries, as against $21.75 million on 13 projects in nine countries. No explanation is available in the report for this marked contraction in its activities. It was probably due to the change in the character of the I.F.C.'s investments which was in the process of finalisation. As readers are aware, I.F.C. was originally investing in the form of debentures with a right to convert a part or the whole of the bonds into equity capital at a later date. An amendment was proposed last year to enable the I.F.C. to participate in equity capital of a concern straightaway. This amendment has been favourably received and the I.F.C. can now make investments in such form or forms as it may deem appropriate in the circumstances. It must be added here that, even if the I.F.C. takes up equity capital in a concern, it shall not exercise voting rights for such purpose or for any other purpose which, in its opinion, properly is within the scope of marginal control.

India was one of the eight countries in which the I.F.C. made a new investment in 1960-61, the others being Argentina, Chile, Columbia, Finland, Jamaica, Mexico and Venezuela. It will thus be seen that the Latin American countries continue to be the major area of the Corporation's activities. The investment made in India was a small one, $210,000, in a new enterprise with a total capital outlay of $630,000. The enterprise concerned is the K.S.B. Pumps Ltd., which is building a plant near Poona for manufacturing pumps designed for a variety of local needs. It will be interesting to note here that the Corporation's first two investments in this country, which were in Kirloskar Oil Engines Co., Ltd. ($850,000) and the Republic Forge Co., Ltd. ($1.5 million) did not fructify, as the Companies had cancelled the arrangement. The report of the I.F.C. does not say as to why these two arrangements fell through. Anyway, the I.F.C.'s total investments in India so far are only two, the other being in Assam Silliminite Ltd. for a sum of $1.36 million.

Terms not Attractive

Inclusive of the commitment of $6.2 million made in 1960-61 the cumulative total of I.F.C. investments, net of cancellations and expirations, is of the magnitude of $44.40 million. The effective operational investments held by the Corporation amounted to $27.9 million, as on 30th June 1961, of which $24.4 million were actually disbursed. It may be noted that, with a capital stock of $96.57 million and a reserve of $10.56 million, the Corporation has still plenty of loanable resources. That it should be so even after five years of its existence and at a time when the demand for risk capital is pretty high in the underdeveloped countries is proof of the contention in this country, as well as elsewhere in Asia, that the I.F.C.'s terms of investment are not attractive to private entrepreneurs.

It is interesting to find that the I.F.C. has already started receiving repayment of principal. During the year 1960-61 it received $91,250 by way of repayments on two of its investments, one in Australia and the other in Mexico. Further, it received more than $288,000 in excess of fixed interest attributable to payment of contingent interest and profit-sharing.

The gross income of the I.F.C. during the fical year 1960-61 amounted to $4.4 million, of which $2.5 million were derived from investment in U.S. Government securities and $1.9 million from operational investments. As the operating expenses were of the order of $2 million, the net income for the year was $2.4 million. The entire net income has been allocated to the reserve against probable losses.

Another interesting bit of information gleaned from the I.F.C.'s latest annual report is that, during 1960-61, I.F.C. sold its entire holdings in three operational investments, of the value of $2.457 million, situated in Brazil and Thailand. In addition, it sold participations aggregating $1 million in two investments, one in Colombia and the other in Finland. The Corporation, however, repurchased the investments in Peru of $572,000.

A Valuable Feature

A valuable feature of the latest annual report of the I.F.C. is the observations on problems of industrial operations in developing countries. Thanks to the competent staff, highly qualified and experienced in examining investment projects situated in widely different economic settings, the I.F.C.'s analysis of the difficulties confronting the promoters of new ventures is, indeed, excellent and deserves to be carefully studied not only by our businessmen but also by the planners.

Industrial operations in the newly developing countries, the authors state, present a number of problems which do not exist or are of minor importance in highly developed industrial societies. The I.F.C. has found that some of these problems are typical from country to country and company to company. The first problem facing every new enterprise is one of knowing the probable size of the potential market for its goods. It is usually more difficult to make such an appraisal in the less developed countries, for want of statistical and other information. The more uncertain the political and financial stability of a country, the more difficult it is to estimate its potentials for economic growth and probable changes in the disbursement of income, the standard of living and consequent purchasing power of its people. The I.F.C.'s experience is that it is the rule rather than the exception that both local and foreign businessmen, tend to overestimate potention markets or at least to underestimate the time required for the markets to materialise. It was found by the I.F.C. that, in several companies in which it had invested, importers had stocked up goods in anticipation of an increase in tariffs or imposition of quotas, so that, when the new local production began, it found a market oversupplied with competing imports. Thus, the demand for the local products is slow in building up. The authors, therefore, advise businessmen investing in import-substitution lines to make the most careful estimate of the market, and to allow, in the financial set-up, for an ample margin of error in their expectations.

Indivisibilities

Another problem pertains to indivisibility of fixed assets. There may be an unquestioned market for, say, 50,000 tons of cement which is being imported. But, if a cement plant of less than 100,000-ton capacity is uneconomical to build and operate, the question which needs careful analysis by a sponsor of a cement plant is whether he is in a position to make the investment in the larger plant and accept a minimum return during the period when his operations are likely to be 50-60-70 per cent of capacity. The authors of the report, accordingly, caution businessmen to appraise this problem before embarking on the venture.

Dealing with the problems of getting into production by a new venture or by one of the existing units undertaking a large expansion programme, the report says:

"Even assuming good engineering and selection of proper equipment, the amount of time required to get things done is often much greater than in more highly developed countries. There are more frequent delays in obtaining necessary governmental approvals, in arranging financing, in selecting, purchasing and securing delivery of materials and equipment, particularly those which must be imported. Supervisory personnel is apt to be scarce. There are likely to be fewer skilled and semi-skilled workmen available, so that longer training periods for the operating force are required.

"If, in the planning, some piece of equipment has been overlooked, or if some minor piece of machinery does not operate satisfactorily, or if a spare part is needed, months may pass before it can be obtained from abroad.

"In most of the developing countries, power and transport are either in short supply or subject to frequent interruptions.

"It is, therefore, reasonable to assume that the time required from the planning stage to the time when the plant can operate at reasonable capacity will be considerably longer than, say, in the United States or Western Europe."

Financial Planning

Referring to financial problems facing new businesses in developing countries, the I.F.C. report recognises that there are inevitable uncertainties and errors in calculating costs for physical facilities. But the I.F.C. has found in its scrutiny of investment projects sent for its approval that there is also inadequate provisions for working capital. On this point, the observations of the I.F.C. should prove immensely helpful to entrepreneurs. To quote the relevant portion from the report:

"Even if there is reason to rely upon a relatively stable value for the currency, problems of working capital should not be pushed aside with happy confidence that the commercial banks will be willing and able to provide the required credits. Bankers live on loans, and if the financial climate permits, they will serve their good customers year in and year out. But the decision may not be wholly in their hands. A tightening in the general economic and financial situation may well force them to restrict rather than expand credits. Inflation and the consequent decrease of purchasing power make the problem of maintaining adequate working capital even more acute.

"There is no way of avoiding the problem of working capital. It is a constant one and demands careful attention in establishing and maintaining a sound financial structure. To the extent that the basic requirements for working capital are provided in the form of equity the problem is minimised. Frequently, a balanced capital structure is sacrificed for an undue proportion of debt in order to improve the prospective value of the equity."

Both the extracts given above are true of the experience of industrialists in this country.

Another subject on which the I.F.C. has offered some valuable guidance in its latest annual report pertains to technical collaboration agreements with foreign businessmen. Viewing them from the point of view of domestic entrepreneurs, the report observes:

"The value of such arrangements varies greatly—from a minimum of a formal contract with a few blueprints, formulas and instruction manuals to a realistic working partnership in which the licensor provides the guiding hand of experience in determining the scope of the operation, designing the factory, selecting the equipment and the most suitable suppliers, supervising the progress of construction and installation, training of personnel and probably supplying a few key supervisors during the period of initial operations. In many cases a most valuable aspect of such relationships is that the local company will have the rights to improved processes or new products developed by the licensor.

"It is obvious that broad arrangements such as outlined above require that the licensor should assume very considerable responsibilities and expend substantial effort and manpower. It is likely that the licensor will not voluntarily offer such a wide range of services, and satisfactory arrangements may involve considerable negotiation. The amount of royalties and similar payments needs to be carefully appraised in relation to the value of the services to be rendered. It may be well worth the cost to the local businessmen to obtain the advice of lawyers or others experienced in these matters in working out the arrangements.

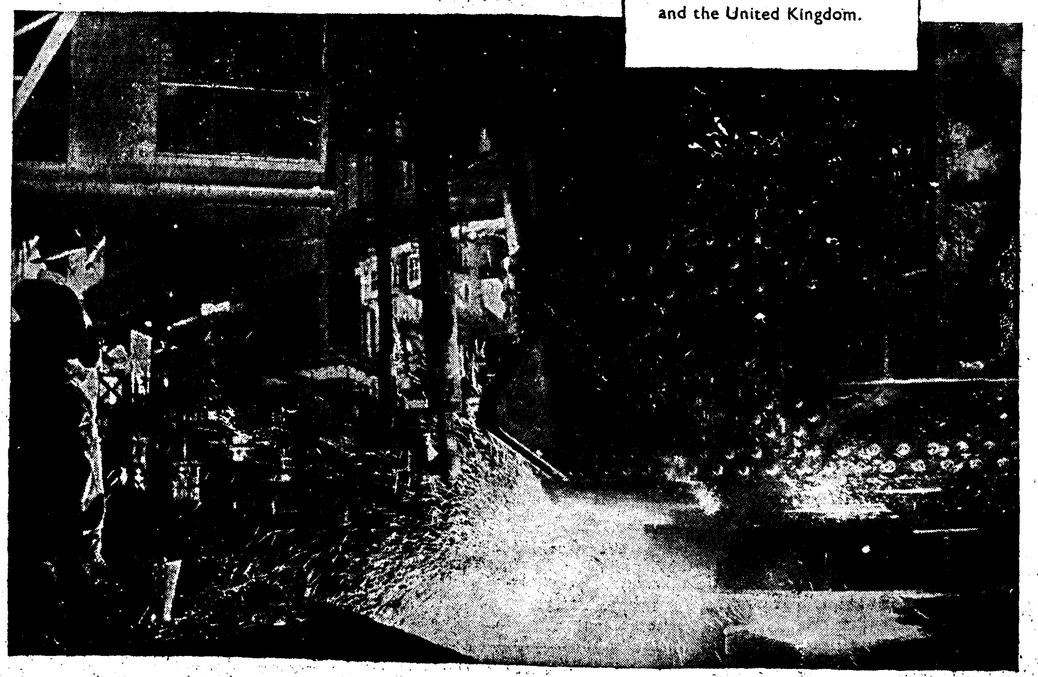
"That good technical operation is necessary to successful industrial enterprise is widely recognised. What is more often overlooked is the importance of competent and experienced executive direction, effective administration and operation, financial planning and control, and effective selling organisation. It is in these fields that we see the greatest weakness in business operations in the newly developing countries. If the businessmen in these countries would more fully appreciate the importance of these elements for successful management, they could draw on the experience of their friends in the industrialised countries for help along these lines as well as in purely technical fields."

On the question of joint enterprises, the I.F.C. report avers that, if industrialisation is to proceed to any substantial extent, there must be considerable adjustment between the use of machines and the habits of the peoples. "This successful merging of these unfamiliar elements," it concludes, "calls for broad knowledge and understanding on the part of both national and foreign businessmen."

The Canara Bank Ltd. has opened two more branches in Bombay City this week, one at Parel and the other at Kurla, bringing the total number of offices in the City to 17 and in the whole of India to as many as 117.

10,00,000 TONS

DURGAPUR STEELWORKS WHEN IN FULL PRODUCTION



- will help to feed those subsidiary industries which will raise India's per capita consumption of steel, considered today as the index to prosperity.
- will save India many crores of rupees in foreign exchange.
- will help to create full employment.
- will raise the standard of living.
- and it will remain as a monument of the united effort of the peoples of India and the United Kingdom.

EXPORT TRADE IN COTTON TEXTILES

SOME USEFUL SUGGESTIONS BY DELEGATION TO AFRICA

ALTHOUGH there is not much that is new in the report of the Indian cotton textile delegation to North and West Africa, sponsored by the Cotton Textiles Export Promotion Council, it is nevertheless of considerable value in the context of the urgent need for energetic action to step up the exports of such a staple earner of foreign exchange as cotton textiles. The perusal of the report indicates the competent manner in which the delegation has performed its task which could not, of course, be otherwise, considering that the delegation consisted of three textile experts, namely, Mr. Chinoobhai C. Javeri (leader), Mr. Prabhu V. Mehta and Mr. P. Nagersheth (Secretary of the Council), besides six other delegates who concentrated on spot-selling of Indian textiles in addition to a study of the markets. Indeed, there is no exaggeration in the claim of Mr. Javeri that the delegation "made every endeavour to do justice to the terms of reference that were given to it," the limitation of time notwithstanding. The terms of reference were:

Study the general economic conditions prevailing in the countries (Nigeria, Libya, Tunisia, Ghana, Ivory Coast, Senegal, Morocco and Gibraltar); study the market conditions with particular reference to availability of foreign exchange, duties and other charges levied on textile imports, etc.; make an on-the-spot study of the cotton textiles requirements and report on the types of cloth generally in demand in these countries; study the competitive capacity of Indian textiles *vis-a-vis* the product of other countries; report on the improvements necessary in both organisation of trade and presentation of Indian cotton textiles to make them more competitive in the various markets; study the prospects of exporting Indian cotton yarn, readymade garments and hosiery to these markets; and to promote the exports of Indian cotton textiles, yarn, readymade garments and hosiery of all sorts to the countries to be visited.

Vigorous Export Drive

In its report, the delegation has impressively highlighted the urgency of a vigorous drive to promote cotton textile exports. Appropriately enough, the delegation describes this task as "The challenge" and observes:

"Cotton textiles constitute one of the major items of our export and the bulk of the cloth exported has been greys. Since Indian cotton was cheap, the greys manufactured from it withstood foreign competition. Now that advantage is lost and, for a variety of other reasons, Indian greys are slowly losing ground. On the other hand, most of the consuming countries have started manufacturing greys and have either banned or imposed restrictions on their imports to give protection to the local industry.

"... Take away the figure of our export to the U.K. and the balance will indicate the sorry figure of our total exports to the rest of the world. It is an eye-opener. This warrants that we cannot remain complacent. The writing on the wall is very clear and it is high time we took it seriously and looked danger in the eye. Besides, every year more and more textile mills are coming up in the consuming countries for the manufacture of greys and they have expansion schemes under way for increasing the production of greys and for the manufacture of processed cloth. It is true that the consumption of cloth is mounting up on account of growing population and the rise in the standard of living of the people throughout the world; but, at the same time, the international competition is gaining strength and the production of cloth in the consuming countries is on the increase. Today, we are faced with global competition even in greys, drills and bleached longcloth in these territories, particularly from Spain and Communist countries, namely, East Germany, Poland, China, Bulgaria, Czechoslovakia, who having no price basis, undersell their textiles. The recent increase in the use of synthetic fabrics will further accentuate competition. Already they have replaced cottons in many sorts. That struggle is further intensified by the emergence of trading blocks in Europe."

The assessment of the outlook for exports to countries visited by the delegation as contained in the report reveals that the countries are potential and promising markets for cotton textiles, especially printed, fancy and quality cloths. Despite the keen competition offered by the other supplying countries, India can certainly sell these types of fabrics, if, as the delegation has rightly stressed, a concerted, organised and determined effort is made by mills to cater to the specific requirements of the markets. The consumers in most of these countries, as elsewhere in the world, have, we are told, become increasingly selective in their choice and exacting in regard to price and quality. Although price is the main criterion, most of the discriminating consumers whose number is fast increasing prefer to pay a little more to buy quality material.

Viewed thus, it is somewhat disquieting to hear from the delegation that the textile mills in India are apathetic towards export promotion. They are, according to it, unwilling to sell for export, if they get a slightly better price in the local market. There are frequent complaints from foreign buyers that Indian mills, unlike their competitors, do not maintain continuity of supply nor of quality, nor take pains to produce what they want nor adhere to their contractual obligations. Likewise, there is lethargy in responding to inquiries and unwillingness to manufacture qualities in accordance with buyers' requirements, lack of quality control, and inefficient make-up of goods as against extremely aggressive approach of other competitors. "These things," to quote the delegation, "irritate buyers and cause them great annoyance and inconvenience. At times, they are even put to a loss. Ultimately, the complaints give Indian cloth a bad name, and buyers turn to alternative sources of supply for their requirements."

Modernisation and Rationalisation

It is against this background that the delegation has put forward quite a number of valuable suggestions. At the very outset, the delegation has urged the Government and the industry to take immediate steps to implement the scheme for modernisation and rationalisation as recommended by the N.I.D.C. Study Group. In particular, it has called upon the Government to encourage mills to install automatic looms. The following are the other suggestions addressed to the Government:

The Government should seriously examine the balance of trade position between the countries visited and ourselves, and having regard to the adverse trade balance, endeavour to find out a suitable basis for concluding trade agreements with them.

Having regard to the misconception that persists in Senegal and Ivory Coast that the Indian textile industry is a low wage industry, the Government should take steps to convince the Governments of Senegal and Ivory Coast as to the correct position.

The Government should sponsor an industrial mission to these countries at an early date to investigate the opportunities for our industrial and technical collaboration for the setting up of new industries there.

The Government should appoint Trade Commissioners in the newly independent countries of West and North Africa for fostering our trade in these countries.

Many of the countries visited by the delegation enjoy the privileges of Associate Members of the European Common Market and thus import textiles from the E.C.M. nations at preferential rates of duty. Drawing attention to this aspect, the delegation says that our export promotion scheme should be examined and necessary modifications effected, so that the country will be able to sell textiles at competitive prices. The Export Promotion Council has been specially asked to keep the Indian representative at the G.A.T.T. informed of this position.

The delegation has also commended for acceptance the following other general suggestions:

Important export qualities which have been exported for many years and internationally accepted "printers' greys" should be classified by the ITEX respectively under distinct chaps or numbers and thereby protect the interests of our trade in India and the importers abroad.

In the context of our developing the exports of finished goods a Design Centre, on the lines of a similar organisation in Japan and the U.K., should be established in Bombay for undertaking studies of modern designs and colour schemes, registration of designs and other related problems.

The three Textile Research Institutions in India should undertake research for developing techniques and finishes for meeting specialised export demand.

The future of our export trade in cotton textiles to these countries lies in our adaptability to cater to their specific demands as to colour, design and finish at competitive prices. Manufacturers in India should make all-out efforts in this direction.

Both mills and exporters should appoint agents in foreign countries to handle their sales. They should frequently send out salesmen experienced in international trade to sell and to undertake spot-studies of markets and gauge the extent of foreign competition.

A textile trade delegation should be sent once a year to different countries by rotation.

Due to the persistence of complaints about numerous markings on Indian bales, the Council should reconsider the present packing and marking standards for further improvement.

The piece packing of textiles from India still being considered unattractive, it is recommended that the pieces of finished fabrics which are double folded should be wrapped in cellophane paper and, in the case of single folded pieces of finished fabrics, the quality of the kraft paper should be improved.

The stamping on pieces of finished fabrics should be transfer printed in gold ink.

The Indian trade samples continue to be poor, clumsy and frugal as compared with those of other countries and do not represent the character of the quality being offered. Immediate steps should be taken to remedy this situation.

Arrangements should be made with the Government of India for periodical and frequent displays of representative cotton textiles at the Trade Centres and showrooms. Fashion Parades may be organised in different countries for effective propaganda for our finished fabrics.

The salient features of our schemes to create confidence in the trade and other changes in our policies and procedures should be circulated to the various chambers of commerce in the territories visited by the delegation.

Industrial supplements on cotton textiles should be brought out periodically in important centres. The cost of such supplements should be largely met from advertisements by mills.

While the aforesaid suggestions are important, one wonders whether, even if all these were implemented, the export trade in cotton textiles would be placed on a sound footing. For much will depend on the actual available supplies of cloth in the coming years. This aspect has to be specially stressed, because the third Plan production target of 5,800 million yards fixed for mill cloth may fall short of the total consumption requirements, what with the continuously rising trend of population and the expected increase in the *per capita* consumption of cloth. The Chinoobhai delegation has done well to make special mention of this point, with a warning against a possible acute shortage of cloth and the consequent runaway prices. Such a development is bound to have far-reaching repercussions on exports. What is, therefore, wanted is the immediate adoption of measures designed to step up production of mill-made cloth, in order to ensure sufficient availability for exports at competitive prices.

DIVERSIFICATION OF INDUSTRIAL ACTIVITY IN LANCASHIRE

TRADE UNIONS PLEAD FOR DIRECT MEASURES TO CURTAIL IMPORTS

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 12th September

DIVERSIFICATION of industrial activity in North-West England—formerly the undisputed home of the Lancashire cotton industry—has been one of the major features of post-war development, despite the tendency for textiles to play a smaller part in the working life of the region. Historically, the tremendous change in the comparatively short period of less than a decade provides the most remarkable story of development in any area, a point often emphasised by Mr. Eric Allen, Director of the Lancashire and Merseyside Industrial Development Association.

Writing in the latest issue of the *District Bank Review*, Mr. Allen describes how 550 cotton mills went out of business between 1951 and 1960. "It was fortunate for Lancashire that the closing date under the cotton reorganisation scheme, 31st March 1960, occurred during a period of industrial expansion and the expected unemployment did not materialise," he says. "Various local authorities in the cotton belt, the Lancashire County Council, the millowners and their agents were very active, and where land for industrial development was in short supply, these ready-made factories proved valuable in attracting new industries into towns which previously were almost entirely dependent on spinning and weaving."

Although admitting the difficulty of giving an accurate assessment of the number of people now employed in former cotton mills working in other types of industry, Mr. Allen suggests that the total is approximately 130,000. About 160 mills are still available and this number will be increased as firms close under the cotton finishing scheme.

Migration Halted

During the 1960's North-West England lost 37,000 workers by migration, which represents 90,000 people when the families which accompanied them are included. Mr. Allen contends that this drift has now been halted and, with improved employment opportunities now available, many families can return, confident of the area's ability to provide them with work in the future.

The general policy of encouraging industry to move to areas of high unemployment should be supported, he adds, but it is important at the same time to maintain the economic strength of the areas from which that industry must be transferred. "Surely it is a little early for firms in the North-West to be asked to move to areas of high unemployment when only three years ago many parts of the region were qualifying to receive industry by Government measures," he asks.

Town redevelopment schemes should be pushed forward as quickly as possible, Mr. Allen urges, in order to improve the appearance of the area. "The older industries left many scars which must be healed, so that industrial growth may be matched and encouraged by improvements to the surroundings and amenities."

Trade Union Fears

Much has been said and written by Lancashire company chairmen and spokesmen of various trade associations about the depressing effect of foreign cloth imports, and in particular the Hong Kong agreement. Throughout the negotiations the cotton trade unions have been equally insistent that action should be taken to provide safeguards against arrivals which threaten to overwhelm the flow of locally-produced yarn and cloth and create havoc in the Lancashire industry.

Mr. J. W. Whitworth, Secretary of the Operative Spinners' Amalgamation, has voiced the fears of many workers in the trade about the prospects unless direct measures are taken to curtail this flood. "To say that we in the trade unions are unhappy about the outlook would be a gross understatement," he says in his latest quarterly report.

"Whilst imports are bounding, and in consequence building up a surplus to requirement, there is an obvious danger to reasonable profitability in the home producing trade which would make it exceedingly difficult to maintain and recruit the type of labour required."

The original plan of the Cotton Board, he discloses, was to secure an agreement with the Hong Kong industry to extend the existing undertaking for at least four years ahead at virtually the same global ceiling, adjusted, if necessary, by the experience of the past three years. As is known, the result of the inter-Government discussions between Britain and the Colony has been an extension only until the end of 1962.

On the other hand, the British Government has officially indicated that some control should be maintained over purchases of Commonwealth cloth during the re-equipment phase of the Lancashire industry. Presumably, the intention is to re-open negotiations—perhaps on a round-table basis—between Lancashire and representatives of the three Eastern countries involved before the extended pact expires at the end of next year. Any further moves in this direction must await wider deliberations at Geneva which start next month.

New Manpower Drop

Nearly 800 workers have left the Lancashire cotton industry in a month without being replaced, and figures issued in Manchester last week by the Cotton Board show that mill manpower is now down to 178,160. The number of operatives is 5,000 fewer than a year ago.

Output of cotton and mixture yarns in July averaged 11,770,000 lbs. weekly, compared with 12,350,000 lbs. in the corresponding period.

Cloth production was higher than a year ago, however, reaching a week-end average of 24,620,000 yards a week, as against 23,900,000 yards.

Production of both cloth and yarn was affected by holidays.

Textile Scholarship Plan

Up to £2,000 is to be spent annually by the Cotton Board in providing scholarships for textile designers—the first scheme to offer substantial awards for established designers already working for the British cotton industry.

Applications for the 1961 scholarships must be submitted before the end of October enabling the successful candidates to undertake their projects in the spring of 1962. The object is to provide designers with the opportunity to travel abroad to refresh their creative abilities and stimulate their enthusiasm; enlarge their knowledge of design and design trends likely to be of importance in those markets in which the British cotton industry has a substantial interest and to study the requirements and potentialities of a particular market from the design viewpoint.

Candidates must be practising designers with a minimum of 5 years experience in working for the British cotton industry and will be expected to continue working in or for the British cotton industry on the completion of the scholarship. They will submit an illustrated report of their activities to the Cotton Board which will be able to use the information in whatever way is considered to be in the best interests of the industry as a whole.

Meanwhile, the Productivity Centre of the Cotton Board is sponsoring further courses on modern management techniques. The first concerns foremen in the finishing section and, spread over a period of four weeks starting this month, will deal with the appreciation by foremen of management controls and work study methods.

A new course on mathematics for mill testing is being introduced to train young laboratory or testing room staff for particular types of calculation. This will start next week and will be completed before the month-end.—*All Rights Reserved.*

COTTON EXPORT POLICY

TRADE'S PLEA FOR EARLY LARGE QUOTA

THE cotton trade is anxiously awaiting the first export quota for the current (1961-62) season which began on the 1st inst. Although more than two weeks have now passed since the season started, no quota announcement has been made till the time of writing (Tuesday afternoon). This has left the trade in a state of animated suspense. The delay is attributed, in some quarters, as due probably to the fact that the Government is finalising a comprehensive export policy in respect of cotton. Some feel that the announcement will be made only after the meeting of the Cotton Advisory Board which is scheduled for the 25th inst. In any case, there is a consensus of opinion among trade circles that the present export policy in respect of cotton should be revised. It has been repeatedly demanded by the trade, and the plea was again reiterated at the recent meeting of the Export Advisory Council, that export quota for cotton should be released early in the season and in bulk, so that the traders could take advantage of the conditions in world markets and sell the cotton at the best possible price. It was suggested at the above meeting by representatives of the trade that the initial quota for the current season should not be less than 150,000 bales in view of the strong possibility of a larger crop. It was also urged that there should not be any link up of exports with sales to domestic mills as was the case with some quotas released during the last season and that the basis of licensing, once announced, should hold good for the entire season.

It was pointed out that the untimely issuance of quota and the frequent changes in the procedure of export and the basis of licensing were responsible for India losing some of its traditional customers. Not only was the export quota released during the last season less than that warranted by the size of the crop but the quota releases were ill-timed, so that the country earned less foreign exchange than it could otherwise have earned had a more realistic policy been followed by the Government. It is pointed out, for instance, that though it was clear even as late as in April 1961 that there would still be a sizable surplus of Bengal *Deshi* cotton, the fourth export quota for 30,000 bales of such cotton was announced as late as the end of July last. The fact that applications against the third quota of 60,000 bales aggregated as much as 85,000 bales was a clear indication that the foreign demand was brisk at the then ruling price. But by the time the fourth quota was announced at the end of July, foreign buyers had either turned to Pakistan and covered their requirements or revised their price ideas downwards, so that the cotton had to be sold at a much lower price than that prevailing in April. The total export quota for Bengal *Deshi* issued during the season amounted to only 190,000 bales. The crop during the season, however, was as much as 400,000 bales which, together with a carry-over on 1st September 1960, of 25,000 bales made an aggregate supply of 425,000 bales. Of this, domestic consumption, it is estimated, would not have exceeded 160,000 bales. Even allowing for a carryover of 30,000 bales, there was still a surplus of 45,000 bales. The country could have easily spared this surplus for export and earned valuable foreign exchange.

Exports Higher

As it is, foreign exchange earnings from exports of all varieties of cotton, including yellow pickings and Assam/Comillas, but excluding cotton waste, amounted to only Rs. 12 crores in the 1960-61 season. The quantity exported during the season amounted to 288,806 bales as compared with 198,433 bales in the previous season. The following table gives the destination-wise break-down of exports:

(In bales of 400 lbs. each)

	1960-61	1959-60
United Kingdom	6,765	1,810
Continent	23,524	10,640
Hong Kong	19,575	7,568
Japan	228,008	160,945
U.S.A.	10,238	7,238
Other countries	396	1,208
Total ..	288,806	198,433

It is evident from the above table that, as in the 1959-60 season, Japan was the largest single buyer during the 1960-61 season also, accounting for 228,008 bales. The Continent of Europe ranked second, followed by Hong Kong, the U.S. and the U.K. in that order.

While it is true that more appropriately timed and liberal export quotas will enable the country to sell the cotton it can afford to spare more profitably, the emphasis should not be on exporting cotton at any cost. Bengal *Deshi* and other short staples in which India, along with Pakistan, enjoys a virtual monopoly is in demand abroad because they are special quality cottons which lend themselves to mixing with other fibres. Why should not this country do what others are doing with this cotton and then export the finished product? By so doing not only more employment is created within the country but the value of exports is also increased. It has been suggested in some quarters that, if the entire Bengal *Deshi* crop grown in this country is earmarked for export, Rs. 20 crores could be earned therefrom instead of Rs. 12 crores earned at present from exports of all varieties of cotton. Although, from the point of view of the immediate need for foreign exchange, this proposition is attractive, it is a shortsighted policy from the long-term point of view. The aim, therefore, should be to find ways and means of converting Bengal *Deshi* into finished goods to the maximum extent possible and exporting such goods.

This does not, of course, mean that export of raw cotton as a foreign exchange earner has no future whatsoever, or need not be encouraged at all. On the contrary, a time may come in the forseeable future when export of raw cotton may have better prospects than that of manufactured goods, in view of the fact that every country in the world, especially the newly-independent nations of Asia and Africa, wants to have cotton mills of its own rather than be dependent on imports of piecegoods. Most of these countries do not grow cotton or grow only a small quantity and they will have to import raw cotton to feed their mills. It will pay India to keep a keen watch on these developments and to make sure that, if it cannot sell cotton manufactures to these countries, it is able to supply their requirements of raw cotton at least, so that its foreign exchange earnings do not suffer a permanent setback.

ARBITRATION ON U.S. COTTON

The East India Cotton Association, Bombay, has made arrangements for carrying out arbitrations, including appeals, in Bombay in respect of the quality of imported American cotton, according to a Press note issued by the Association. Till now, disputes regarding quality of American cotton were mostly forwarded to the Liverpool Cotton Association. Arbitrations and appeals could be now carried out in Bombay by the East India Cotton Association if the contracting parties agreed. In order to meet the wishes of the American Cotton Shippers' Association, a special provision has also been made in the by-laws of the Association to the effect that if the contracting parties so desire at the time of entering into a contract, appeals against arbitration awards in Bombay could be lodged with the Liverpool Cotton Association up to 31st July 1962 or later if mutually agreed upon by the Associations.

The East India Cotton Association became a signatory to the Universal Cotton Standards Agreement in the year 1951, thereby entering into an agreement with the United States Department of Agriculture for use of Universal Cotton Standards for grade. The Association's representatives are regularly attending the Universal Cotton Standards Conference since 1953, for the purpose of passing Universal Cotton Standards for grade.

The Universal Standards for grade, as prepared by the United States Department of Agriculture and last approved by the Conference in 1959, are kept in the rooms of the Association at Sewri. Imported American Cotton has to be examined against these standards. All the six sworn surveyors of the East India Cotton Association Ltd. have been designated as Board of Cotton Examiners by the United States Department of Agriculture in the year 1959 and they are authorised to carry on arbitrations and appeals on quality of American cotton since then. The East India Cotton Association has also framed by-laws to govern c.i.f., c. & f. and f.o.b. contracts and contracts for cotton imports to arrive and for forward delivery, and the same have also been approved by the American Cotton Shippers' Association. The by-laws have also been approved by the Government of India.

Vintage 1900

One of the first typewriters ever sold in India the old Remington Standard No. 7 is now virtually a museum piece. Although a good efficient machine in its day, progress and 'Old Father Time' have passed it by.

Today at the Remington Rand factory at Howrah, (the largest in Asia), new sleek typewriters are rolling off the production line. Already over 1,00,000 machines have been manufactured in India by the Indian Company.

85% of the components of Remington typewriters are manufactured at this factory—with Indian raw materials—by Indian Staff.

Each part of each machine is made to exact universal specifications so that every part is interchangeable no matter where the machine was manufactured.

40 years ago the Remington organisation pioneered the adaptation of Indian languages to their typewriters and today Remington Rand produce typewriter keyboards in 8 regional languages. The blue prints for further languages are under preparation and these typewriters will go into production soon.

WORLD BANK'S OPERATIONS IN 1960-61

HIGHLIGHTS OF ANNUAL REPORT

THE fifteenth year of operations of the International Bank for Reconstruction and Development (World Bank) had several outstanding highlights. These have been reviewed in the Bank's annual report, just released, for 1960-61. First, the Bank's new affiliate, the International Development Association, began its operations during the year when it provided the equivalent of $101 million in the form of 50-year interest-free development credits to four countries. Its first annual report is dealt with separately elsewhere in this issue. Secondly, the Inter-American Development Bank began its operations during the year; and the first pre-investment survey financed by the U.N. Special Fund was completed, with the World Bank acting as Executing Agent. Thirdly, the Bank took a leading part in evolving the programmes of aid to India for the first two years of its third Plan and to Pakistan for the first year of its second Plan by a consortium consisting of Canada, France, West Germany, Japan, the United Kingdom, United States, World Bank and the I.D.A. The proposed consortium aid to India is $1,295 million for 1961-62 and $930 million for 1962-63; that to Pakistan for 1961-62 is $549 million. Fourthly, thanks to the sustained effort of the Bank, the Indus Basin Settlement passed from negotiation to action during the year and the Indus Waters Treaty was formally signed, on the 19th September 1960, by the Prime Minister of India, the President of Pakistan and the Vice-President of the World Bank. Simultaneously with the signing of the Treaty, an international financial agreement was executed by representatives of the Governments of Australia, Canada, West Germany, New Zealand, Pakistan, the United Kingdom and the United States. This agreement created an Indus Basin Development Fund to finance the construction of irrigation and other works in Pakistan consequent on the Treaty Settlement. Action began during 1960-61 on the ten-year task of constructing the works included in the Settlement Plan at a total cost of about $900 million. Fifthly, another milestone was reached in 1960-61, with the total of sales of the Bank's bonds having crossed the $1,000-million mark. The amount of loans provided by the Bank during the year, however, was a shade lower at $610 million, as compared with $659 million in 1959-60.

The Bank's annual report under reference is notable, as usual, for the review of its financial operations. The new loans ($610 million) made during the year 1960-61 brought the cumulative total of Bank's lendings, net of cancellations and refundings, to $5,669 million, of which $4,320 million had been disbursed by 30th June 1961. Of the latter amount, $1,452 million had been repaid to the Bank or sold to other investors. The effective loans were $3,996 million. A classification of the loans given by the Bank by purpose and area is provided in Table I on this page. It will be seen from this table that development loans given upto 30th June 1961 were largely for electric power projects ($1,741 million) and transportation projects ($1,823 million).

The Bank's net income (exclusive of receipts from the 1 per cent annual commission payable on all Bank loans) during the year was $63 million. This was derived as under:

(In million dollars for 1960-61)

Income from investments	48.4
Income from loans:	
Interest	114.4
Commitment charges	7.7
Commissions	28.8
Other income	1.1
Gross income	195.4
Deduct—Amount equivalent to commissions appropriated to special reserve	28.8
Gross income less reserve deduction	166.6
Administrative expenses	12.0
Interest on borrowings	86.2
Bond issuance and other financial expenses	1.9
Discount on sale of loans	3.4
Gross expenses	103.4
Net Income—Appropriated to supplemental reserve against losses on loans and guarantees.	63.2

The Bank's total reserves, as on 30th June 1961, stood at $602 million, as compared with $507 million at the end of 1959-60. The reserves consist of two parts. One, the Supplemental Reserve accumulated from net earnings and net gains from exchange revaluations, stood at $406 million at the end of the fiscal year, compared with $341 million a year earlier. The increase consists of the $63 million of net earnings and $3.3 million representing net profit resulting from revaluation of the Bank's holdings of the currencies of various member-countries, credited directly to the Supplemental Reserve. The other, the Special Reserve to which are credited receipts from the 1 per cent annual loan commission, increased by $29 million to a total of $194 million.

All borrowings during the year took place outside the United States, with Germany continuing for the third consecutive year to be the largest single supplier of borrowed funds for the Bank. Most of the borrowing transactions were for the purpose of lengthening the term of the outstanding debt: refunding operations amounted to $466 million. New borrowings totalling $321 million were arranged, of which less than $139 million had been drawn down and added to the outstanding debt at the end of the year. The net result of these and other developments affecting the funded debt was to increase the total of the Bank's outstanding obligations by $155 million. At 30th June 1961, the funded debt amounted to $2,228 million, of which about 53 per cent was held outside the United States by investors in more than 40 countries.

The financial highlights of the Bank's operations in 1960-61, as compared with 1959-60, are presented as follows to round off this review:

(In $ million)

	1959-60	1960-61
Loans made	659	610
Sales of parts of Bank loans	243	202
Repayments of loans to Bank	74	101
Gross income	151	167
Net income	59	63
Total of supplemented reserve	341	408
Total of special reserve	165	194
Total reserves	506	602
Banks's borrowings (gross)	375	787
Net increase in Bank's funded debt	168	155
Subscribed capital	19,308	20,093

Apart from its lending activities, the World Bank continued to provide during the year technical assistance in various ways. For instance, its general economic surveys of Libya, Tanganyika and Venezuela were published during the year and its general survey of Uganda had reached the stage of a draft report; a large general economic survey mission was sent to Spain, and recruitment began for a similar mission to be sent to Kenya in September 1961. Development advisory missions were sent to Kuwait, the Philippines and Chile, and the mission to study agricultural problems in Ireland completed its field work during the year. The Bank also continued to provide advisory assistance in other forms to the extent that its personnel resources permitted; for instance, staff members of the Bank remained as resident representatives in Thailand, Pakistan, Ethiopia and India. An important development in technical assistance during the year was the Bank's agreement to finance from its own funds a part of the foreign exchange costs of transportation studies in Colombia and Peru. The Bank also continued its close co-operation with the U.N. Special Fund. Its final report of the survey of electric power needs and potential of Argentina was submitted to the Government of that country and to the Special Fund early in the year under review. The other Special Fund projects, which are being executed by the Bank, are in British Guiana, Nigeria, Surimam, Thailand, Gautemala and Peru, and these are connected with surveys of natural resources, power and irrigation potentialities, transportation, etc. Above all, the Bank has continued to assist member-countries in the establishment or reorganisation of industrial development banks and has also provided training at headquarters for key staff members of several development banks.

TABLE I

Bank Loans Classified by Purpose and Area

(Millions of U.S. dollars, net of cancellations and refundings)

Purpose	Total	Areas				
		Africa	Asia and Middle East	Australia	Europe	Western Hemisphere

FIRST NINE MONTHS OF I.D.A.

WIDE GEOGRAPHIC DISTRIBUTION OF DEVELOPMENT CREDITS AIMED

THE first annual report of the International Development Association—I.D.A. for short—gives a resume of its activities during the first nine months of working, that is, from 24th September 1960 (the date on which the Articles of Agreement came into force) to 30th June 1961 (the date on which the fiscal year ends). The review reveals that the I.D.A. has made quite a notable beginning in the direction of achieving its aims: "To provide economic development, increase productivity and thus raise standards of living in the less developed areas of the world." The establishment of this body as an affiliate of the World Bank, it may be recalled here, was the outcome of, many years' discussions of the desirability of accelerating economic growth in the less developed areas by adding international funds, repayable on other than conventional terms, to the flow of development capital. I.D.A. credits are of particular significance to countries such as India whose foreign debt service burden over the short- and medium-term is already so high that they cannot prudently borrow, on conventional terms, all the external capital they require to carry out their priority programmes. The I.D.A. has certainly "begun its work at an opportune time," as will be evident from the following extract from the annual report:

"In the era of economic growth and political change which has followed the war, the demand for development capital has markedly expanded. In a growing number of developing countries, however, the need for, and the ability to make effective use of, outside capital is increasing faster than the ability to service conventional loans; some countries have already begun to draw close to the limit of the debt they can prudently assume on conventional terms. The problem is confounded by the circumstances of many newly independent countries; they are not able to rely to the same extent as before on the financial support of the metropolitan powers, including guarantees on loans floated abroad; but they have not yet developed a credit standing of their own sufficient to enable them to borrow on the scale they require."

Resources Small

The aforesaid quotation underlines the need for the type of development capital that the I.D.A. can provide and indicates its sphere of operations. But in relation to these, its resources are small, the total subscriptions amounting to no more than $906 million, including $7.56 million which the I.D.A. may convert as required for its operations. The annual report itself admits this fact, but makes no mention of any move to augment the resources. All that it says is this: "The Articles of Agreement require I.D.A. to keep the adequacy of its resources under regular review. The first review is to take place within the first five years of operation, with reviews at five-year intervals thereafter. The Articles of Agreement also provide, however, that general or individual increases in the subscriptions of member-Governments may be authorised at any time."

Since it is on the size of resources at its disposal that will depend the success of the I.D.A. to venture further than the World Bank is able to do in countries that have only a limited capacity to service conventional foreign debt and support development projects that hold out promise, there is the pressing need for enlarging the size of resources. The I.D.A. can, of course, enter into arrangements to receive from any member or members supplementary resources in the currency of another member.

Be that as it may, the I.D.A. has no policy of allocating its funds in advance. It is, however, stated in the annual report that an effort is being made to ensure a wide geographical distribution of development credits, taking into account the priority which should be given to the poorer countries. At the same time, it is considered necessary to observe a limit on credits for some countries that can quickly present enough suitable projects to absorb a disproportionate amount of I.D.A. funds. The I.D.A., we are told, has a "lengthening list" of proposals under investigation all over the world. They include projects for the development of electric power, transport, agriculture and other activities of a kind traditionally financed by the World Bank, as well as projects of a kind not hitherto financed by the Bank, such, for instance, as municipal water-supply and technical training.

During the first eight months of its operations (8th November 1960—30th June 1961), the I.D.A. extended development credits aggregating $101 million to four countries. The first country to receive I.D.A. credit was Honduras in Latin America (the credit was signed on 12th May 1961), followed by Sudan (14th June 1961), India (21st June 1961) and Chile (28th June 1961). More recently—on 10th September 1961—the second I.D.A. loan to India was announced. The actual amounts of the credits and the purposes for which they have been made available are indicated below:

India: First loan of $60 million for covering half the cost of improvements to national highways. Second credit of $6 million for expansion of tube-well irrigation in Uttar Pradesh.

Honduras: $9 million for financing a programme of highway development and maintenance.

Sudan: $13 million for the construction of Roseires Dam on the Blue Nile. This is a joint loan of the aggregate value of $32.5 million, the balance of $19.5 million being made available by the World Bank.

Chile: $19 million, extended jointly with a World Bank loan of $6 million, for road maintenance equipment.

The terms and conditions of the aforesaid loans are all similar. The loans are interest-free and are repayable after a ten-year period of grace. Thereafter, one per cent of the principal will be repayable annually for ten years and 3 per cent per annum over the next thirty years. The loans bear a service charge of ¾ per cent on the outstanding amount. Repayment is to be made in foreign currency and not in local currency.

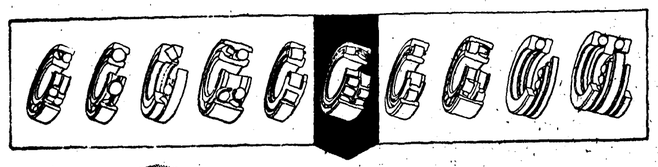
By the end of June 1961, the I.D.A. had member-Governments with total initial subscriptions equivalent to $905.56 million. Of this total, the 15 economically more advanced countries (classed as Part I members) together account for 81.65 per cent, actual subscriptions being $739.36 million. The balance of 18.35 per cent ($166.20 million) represents the share of the less developed countries (classed as Part II members). Included in this category is India with a subscription of $40.35 million, representing 4.46 per cent of the total.

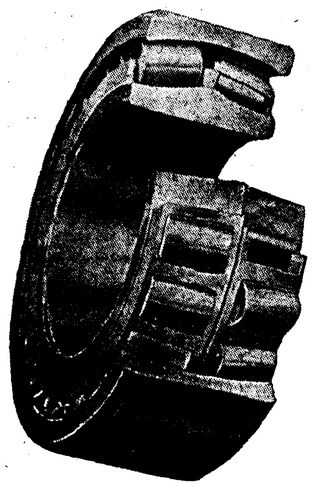
Part I countries, it may be noted here, make an initial payment of 23 per cent, the balance being payable in four equal annual instalments. All these funds are convertible and usable by the I.D.A. for development credits. Part II countries make payments on the same instalment basis, but, of the total, only 10 per cent—half paid initially and the rest in four instalments—is in convertible funds. The remaining is paid in the members' own currencies and may not be used by the I.D.A. without the consent of the member concerned. Part I countries are to be contributors for the I.D.A. purposes, though credits may be extended for projects in their dependent and associated territories. All Part II countries are eligible to receive I.D.A. credits; those assisted may receive a blend of Bank loans and I.D.A. credits and still others, depending on the circumstances, may be assisted by I.D.A. credits only.

The biggest member of the I.D.A. is the United States, the subscription of which accounts for as much as 35.37 per cent of the aggregate—$320.29 million. Next in order comes the United Kingdom with a subscription of $131.14 million—14.48 per cent of the total. The other large members, together with their subscriptions in million $ and percentage share of the total in brackets, are: W. Germany 52.96 (5.85 per cent); France 52.96 (5.85 per cent); Canada 37.83 (4.18 per cent); Japan 33.59 (3.71 per cent); Taiwan 30.26 (3.34 per cent); Netherlands 27.74 (3.06 per cent); Australia 20.18 (2.23 per cent); Italy 18.16 (2.01 per cent).

The gross income of the I.D.A. during the period 24th September 1960 to 30th June 1961 amounted to $913,383, the bulk of which, namely, $892,475 was accounted for by interest on investments. Excluding the expenses of $558,658, the net income was $354,725.

SKF *offer the widest selection of bearings*





Illustrated here is the latest improved design of **SKF** SPHERICAL ROLLER BEARING designated the C type, regarded as the pre-eminent type of bearing for carrying heavy loads, having approximately 40% greater load carrying capacity than bearings of the original design.

It is completely self-aligning—a feature which is only present to a limited extent, if at all, in other types of roller bearing.

SAVINGS BANK ACCOUNT RULES

The following additional rule has been made in our rules governing Savings Bank Accounts with effect from 4th August 1961.

"*Rule 18 (a)*. Contravention of the Provisions of Rules 3 and 5 by making more than two withdrawals in a week, or by making withdrawals in excess of Rs. 5,000/- in a week, may at the Bank's sole discretion, be penalised by forfeiture of interest for the month during which the contravention takes place."

General Manager.

BOMBAY INDUSTRIES GUIDE

A Special Supplement to

management executive

edited by

K. S. GUPTA

Director, Bombay Labour Bureau
Post Box 2394, Bombay-2

Priced **Rs. 25/-**

CONTENTS

1. EMPLOYER-EMPLOYEE RELATIONS illustrated with 33 cartoons

* What are your responsibilities to management?
* What are your responsibilities to the worker?
* How can you maintain discipline?
* How can you develop team work?
* How can you make sure your workers get a square deal?
* What can you do to build morale among your workers?
* How would you break in a new worker?

2. Salient Features of:

* Factories Act, 1948
* Payment of Wages Act, 1936
* Industrial Disputes Act, 1947
* Employees State Insurance Act, 1948
* Employees Provident Funds Act, 1952
* Industrial Employment (Standing Orders) Act, 1946
* Workmen's Compensation Act, 1923
* Bombay Shops & Establishments Act, 1948
* Indian Companies Act, 1956 with Penalties made thereunder.

3. List of Factories in Greater Bombay and Thana District with names, factory addresses and telephone numbers (in alphabetical order);

4. List of Public and Private Limited Companies in Greater Bombay with names, office addresses and telephone numbers (in alphabetical order);

5. Revised Procedure for Industrial Licensing in India.

A MESSAGE

As Industry expands, and becomes more complicated both by reason of its size and by reason of the introduction of technology, the role of Management Personnel becomes more onerous. While machines can be kept under control once the technique of handling them has been mastered, the men and women who labour in factories do not lend themselves so easily to management by rules. The handling of human beings calls for much tact, skill and above all, sympathy—sympathy not so much with them as individuals but with their needs and requirements as dictated by the circumstances in which they function.

It is therefore imperative that the persons who are chosen to manage and get the best out of workers should themselves first be trained in the art and science—for it is both—of management. I, therefore, welcome the efforts of the Bombay Labour Bureau. On Management Executives devolves the delicate and difficult task of extracting the maximum out of industrial units without at the same time straining them too much—without, in a word, killing the goose that lays the golden eggs.

Hon'ble Shri Y. B. CHAVAN,
(Chief Minister, Maharashtra).

AUTOMOBILE IN DEVELOPING COUNTRIES

HIGH TAXES STIFLE GROWTH

IT is generally conceded that the motor car has become an object of desire wherever people are living above a subsistence level. The reasons are obvious and universal: mobility, speed, convenience, enjoyment, and perhaps also prestige. What, however, is not so generally recognised is that in underdeveloped and developing countries motoring can carry with it valuable assets beyond the immediate benefits of improved transport facilities. If simply constructed, highly functional cars—of which the 2 h.p. Citroën is an outstanding example—can be made available cheaply on a large-scale, activity and income will be generated while a valuable incentive to work and save will be provided.

A rather different approach to the question of car ownership from the conventional western one is involved. The scale of priorities in which a car is something of a luxury and is therefore placed below other amenities is not the only valid one. There are environments in which the climate is such that housing is relatively unimportant, in which social security is taken care of by close family relationships and in which the more sophisticated pleasures of life are not available. In such a society a car will be significantly higher on the scale of priorities than it is in Europe.

Low Costs Imperative

Motoring in underdeveloped countries is, however, of a rather different order from that in the developed countries. First, because of a low level of income, cars need to be cheap to permit any spread of ownership. Thus in India the Jha Committee on the Automobile Industry had, as one of its terms of reference, to examine the feasibility of producing a car within the price-range Rps. 5,000/7,000 (£375-£525) which is considerably below the cost of current models in India but still within the price range of the cheaper smaller car in Europe which enjoys the advantage of large-scale production. It is open to the question how far the price of a very simple car may be brought down. Government co-operation on the question of any taxation of both vehicles and fuel is needed to keep the cost of motoring to a minimum, but not only must the cars be basic and simple, they must also be strong and roomy to meet the conditions of poor roads and large families obtaining in many developing areas. There is therefore need for a specially designed car, which means that underdeveloped countries cannot be regarded as a vast potential overspill market for established models designed for wealthier and different markets. This is one of the reasons why such countries may find it beneficial to set up their own industries.

The idea of widespread private motoring is not acceptable to some Governments in underdeveloped countries who point out that resources for improving transport facilities can be spent more economically on, for instance, buses which can be used far more intensively than private cars. The attitude can be taken, as in the U.S.S.R., that the development of capital goods should have the highest priority and to this end self-denial must be imposed. Car ownership is made difficult as well as costly, and there are few roads. Despite all this the Russian people, like people elsewhere, want cars. Their hopes are now pinned on the Zaporozhyets baby car which came on to the market towards the end of last year, and which is to reach an output level of 100,000 in 1965—to western minds, a slow development considering the state of technological progress in Russia. But a bad climate greatly restricts the attractions of private motoring in large parts of the U.S.S.R.

There is undoubtedly very great potential scope for expansion in the developing countries. At the beginning of this year one country, the United States, had almost two-thirds of the world's cars. The same country also has by far the highest ratio of cars to population, there being only about half the number of people per car than the number an average American car can hold. Although American conditions have become exceptional, the density of cars in many other countries is getting greater and, for example, France, U.K. and Germany now have the same density of cars in relation to population as the U.S.A. had in the early 1920s. It should be noted that a large proportion of these cars are run for business purposes. However, the very great differences in car densities does afford some indication of the long-term prospects in developing countries.

Car Population in Selected Countries 1961 *and* 1940.

	No. of cars (a) (thousands)		Population (millions)		People per car (c)	
	1961	1940	1960 (b)	1940	1961	1940

U.S.A.	61,270	26,087	181	131	3	5

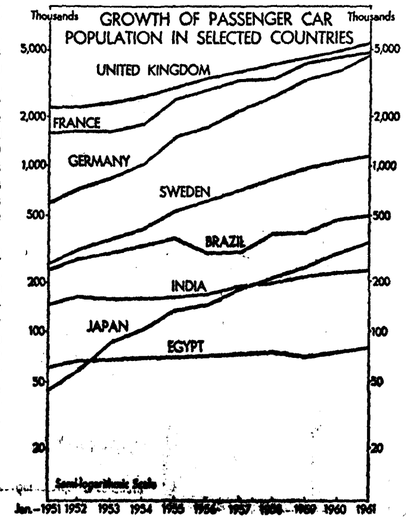
(a) Beginning of 1961 from the American Automobile; 1940 from Automobile Facts and Figures.
(b) Latest United Nations figures.
(c) Estimated to nearest whole number.
(d) Pakistan included in India in 1940.

The Income Factor

It is generally recognised, however, that an economy must have reached a certain stage of development before car ownership can spread beyond a few privileged people. It is obvious that those countries where there is a high income per head are also those with a high ratio of cars to population. In a developing country it is difficult to show how the number of cars increases with rising prosperity because the trend is obscured by factors such as inflation and the growth of population, while car ownership may be held down artificially by measures such as import regulations, and high vehicle or fuel taxes. Moreover, the number of cars in a country is cumulative in a way that income cannot be. In India, during several years of difficult economic conditions, the number of cars has been rising much faster than real income per head, but the disparity in the scale of the figures prevents any useful generalisation being made from them. In this instance, the growth of the relatively very small governing layer of the population and rising commercial uses for motor cars are sufficient to account for the growth.

The most important prerequisite for expanding motoring is that income per head should have risen some way above subsistence level, while some progress must also have been made in a more equitable redistribution of it. In other words, there should be an emerging middle class, as is happening in some urban areas of Asia and Africa, the members of whom have regular jobs in Government or business and who are therefore credit-worthy. A financial structure, including facilities for purchasing out of income, which will hasten the spread of ownership, and facilities for saving the deposit or even the whole sum are also necessary.

The more specific conditions relating to the running of cars present no significant problems.



Although cars do better on hard surfaced road they can run, but more slowly and with mor wear and tear, on unmade roads. Cars spec fically designed for rougher conditions woul need to be generally tougher and have a highe road clearance. European miniature cars are for example, often unsuited to roads in tropica conditions. In the underdeveloped areas c Africa it has been estimated that traffic mus reach an average of 300 vehicles a day before taking into account wear and tear of vehicles it is economic to replace gravel roads, whic easily become corrugated, by hard-surface roads. The necessary ability to repair and ser vice motor vehicles is usually a quickly acquire skill and this offers no obstacle to expansion.

Domestic Manufacture

Since the manufacture of cars economically must be a large-scale operation, any deman arising in an underdeveloped country must b satisfied initially by imports. The setting-up o local production will usually begin with assembly, and gradually build up toward self-sufficiency. There are many reasons why a country may wish to take this step. One o the most compelling reasons will be a desir to save foreign exchange; but if the plant an a large number of components have to be im ported initially, the strain on the reserves may in the short run be greater. If the import o a large quantity of parts continues for any length of time and is accompanied by increase imports of fuel this objective may not be achieved. However, the setting up of a car industry will act as a spur to industrialisation and diversification since a car needs a very large number of components calling upon the skills of many industries, some of which can be developed locally. For its value in industrialisation projects a car industry could well be set up somewhat in advance of demand, assuming that its products, if suitably priced, will create the necessary demand. Another advantage is that designers can concentrate on producing a car particularly suited to local conditions. Again, prestige is involved—a car industry is a significant mark of progress for a developing country.

Although a country setting up its own car industry may aim at producing cars more cheaply than comparable imported vehicles, it is unlikely to be able to do so immediately. The scale of output required to make really cheap cars may be far too great for the market, and a smaller, relatively more expensive one has to be chosen. This difficulty could be reduced to some extent by concentration on one model and by the standardisation and common manufacture of parts which might also be used for other vehicles such as vans; or possibly by centralising production. Lack of skilled labour may also be an initial handicap, but one which can often be overcome surprisingly quickly. The high capital cost of the plant might well be a deterrent but this is frequently undertaken by foreign car manufacturers.

Assembly of imported unassembled cars represents a certain saving on the foreign exchange cost of imported cars while not requiring very great capital expenditure. Again, in many cases the assembly plants are set up by major foreign producers; in Australia most of the assemblers are subsidiaries of British, North American or Continental producers. A year ago, a report by the German motor industry showed that German manufacturers had by then established 34 assembly plants in ten or more undeveloped countries. From France a recent report suggests that Citroën may set up an assembly plant in Algeria following Renault who have just produced the first Dauphine from a new assembly plant near Algiers. In 1960 the United Kingdom exported some 148,000 unassembled cars (including station wagons)—over a quarter of total car exports. This was some 28,000 more than in 1959 in which year the main customers were, however, developed countries—South Africa, New Zealand and Eire, followed by Australia which has had assembly plants since 1925 and now has its own car industry.

Subsidiary companies of the world's major car producers are often closely associated with the initiation of a domestic car industry in a developing country. Thus, in Australia the "Big Four" are General Motors Holden, Ford, B.M.C. and Volkswagen, while others concerned in the market include Standard, Renault and Daimler. Similarly in Brazil and Argentina, where the motor industry is still fairly new, production is in the hands of foreign owned-subsidiaries. The Egyptian Ministry of Industry has chosen the Italian Fiat Company to set up a plant for medium-sized cars to supplement the existing

(Continued on page 614)

NEW PRODUCTS AND PROCESSES

Oil Burners

HOT oil heaters, which first brought automation to the boiler room, have now eliminated the oiler room from factory layouts. The heaters, which have cheapened and simplified many manufacturing processes, are now being manufactured so that they can be installed in the open and operated by remote control from the factory or workshop. The simplicity of use, the improved thermal efficiency and high thermal storage which initially made heated oil such an attractive alternative to steam, has now been developed to the stage where hot oil is the main source of indirect heat for a multiplicity of manufactures. Radco Boilers Ltd., of Sydney, a leading Australian boiler manufacturer, has in six years seen its output of hot oil heaters exceed boiler production and it is anticipated that within two years the heaters will account for two-thirds of total production. Radco's chief engineer, on a recent inspection tour of the United States, United Kingdom, Scandinavia, France and Germany, found that Australia was making the most rapid advances in the development of hot oil heaters. Research by oil companies which resulted in development of heat transfer oils of only one-third the viscosity of those originally available, opened the way for the new economy, efficiency and versatility of hot oil heating. One main use of hot oil heaters has been for road and for airfield construction, for which they have won universal acceptance because there is no cheaper permanent road surface than one sealed with hot bitumen. There is no cheaper way of laying hot bitumen than by hot oil heaters, which have superseded steam heating for road construction.

Dirt-resistant Finish for Textiles

Synthetic textiles such as nylon and Terylene can be provided with an anti-static and therefore dirt-resistant finish which is strongly bonded chemically to the fibres of the fabric. It lasts as long as the garments made from the treated fabric, however savagely they may be washed. Applied to the fabric at the finishing stage, it consists of impregnation with the anti-static agent followed by treatment of the bolts of cloth with gamma rays. These produce the cross-linking between molecules at the surface of the textile fibres and those of the anti-static substance which ensures the permanence of the finish. The treatment reduces the surface resistivity and the static charge on synthetics to below the figure for cotton. One immediate application has been the processing of hospital blankets made from synthetic fibres to eliminate any danger of sparking in cases where inflammable anæsthetic vapours are present. With coloured fabrics it improves dye take-up, so that smaller amounts of dyestuffs are needed. The process has passed beyond the laboratory stage and is awaiting semi-industrial scale trials by a leading manufacturer in Britain. At the present stage, with irradiation carried out in a pilot plant, it costs about 2d. to process one pound weight of cloth. With an irradiation plant designed to suit the job, and used solely for textile operations, it would probably be possible to cut this figure by half. One-eighth of a penny per garment would seem a reasonable cost estimate for the process.

Automatic Saw Mill

Equipment which it is claimed puts primary timber preparation for the first time on a conveyor system has been developed by a British company. The equipment includes an entirely new design of tilting, travelling unloader hoist and completely orthodox mechanised tables for the cross-cut which allow the use of automatic feed and take-off devices. The hoist is able to lift a half standard timber sett, or a whole one, unaided, from a truck, tillage or floor chains in the yard and then take the load through a door opening into the mill before discharging it layer by layer on a side delivery conveyor. The latter spaces the timber lengths and delivers them, one by one, onto the cross-cut infeed table. The cross-cut saw is a hydraulic straight-line saw and there are up to 16 adjustable stops provided for length-gauging. Hydraulic kickers push the cut piece clear of the stop tongues as the saw completes its cutting stroke. The cut pieces are then automatically fed into a moulder via constant-running belt conveyors and nipping rollers. The conveyors may be arranged to feed round a bend or in a straight line into the moulder. The conveyor can be arranged to feed more than one machine. The transfer equipment makes possible fully efficient machine utilisation and eliminates production bottlenecks present with conventional unit machines.

Power Station Waste Ash as Fertiliser

Land in the English Midlands which 10 years ago was a waste of worked-out gravel pits is today producing crops comparable with the best in the area. The reclamation came about as a result of an electricity-generating station in the area producing waste ash at a rate of 2,000 tons a day and there being no easy way to dispose of it. Birmingham University was asked to consider the problem and, as a result of experiments, the ash was used to fill the gravel pits, which were then covered with a layer of topsoil and the land returned to agriculture. There were difficulties to overcome. The ash was difficult to handle and transport, so it was sluiced into lagoons and allowed to dry out before being removed to the pits in a moist condition. In some areas a pipeline took the ash direct from power station to pits. One thousand acres of land scarred by gravel pits are being restored to agriculture in the county of Warwickshire alone. Farmers report that the restored land has given very good results. Because it drains easily, it is particularly useful in very wet weather when other fields become unusable, and yet in dry weather the fields remain green because the ash permits moisture to be drawn to the surface.

Photography in Relief

Photography giving a relief effect by direct viewing without any optical aids such as polarised glasses, binocular viewers, etc., has just been launched by a Swiss firm. Mr. Jean Bourguignon, inventor of the "Vidireal" process, explains that it has been possible to achieve a stereoscopic effect from the direct viewing of a single plane surface—hitherto considered to be completely impossible—by means of an optical imitation of the physiological process which enables us to see in relief an image that the retina of our eyes sees only in two dimensions. Such a result is now perfectly feasible in all fields of photography, whether films, slides or typographic reproductions (book illustrations, postcards, posters, advertising leaflets, etc.). In addition, this process opens up a new mode of artistic expression —that of three-dimensional painting. With the stereoscopic effect, the "Vidireal" process combines two others: overall sharpness at all depths and a very wide field of view. Any camera can be used to obtain these results, provided it is fitted with a special patented lens, which can be screwed on in the same way as a telephoto lens, for example. A photograph taken in this way can be printed or projected by ordinary apparatuses. The "Vidireal" process has already been put to commercial use, both in Switzerland and abroad, in particular for touristic and advertising slides.

Synthetic Gems

A new method of making synthetic rubies suitable for use in optical masers is being perfected in Britain. Ruby is an aluminium oxide in which some aluminium atoms have been replaced by chromium atoms. The maser (microwave amplification by stimulated emission of radiation), first investigated some 12 months ago, can produce virtually non-diverging beams of almost pure monochromatic light with an intensity such that it can heat a target to a temperature of 3,000 degrees C. in the 2,000th part of a second, delivering power at a density of 100,000 kw. per square centimetre. Uses envisaged include space communication, telephony, accelerating chemical reactions and investigation of highly refractory materials. The well-known method of flame-fusion used to produce synthetic gems for jewel bearings and gramophone styli is not very satisfactory for this new application because the crystals grown in this way are not homogeneous. The new method consists in producing the crystals from a solution of aluminium oxide in lead fluoride contained in a platinum crucible which is heated in an ordinary laboratory furnace. Crystals have been produced in the form of hexagonal plates two to three centimetres in diameter and up to one centimetre thick. For maser use, rubies are generally machined to rods some four centimetres long and half a centimetre in diameter.

Adaptable Car Port

A lightweight structure which offers a new approach to covered parking and which is also adaptable for numerous other applications is the "Unispan Carport"—a 21-ft. span "drive-under" cover made in England. The Unispan is architecturally designed to provide a modern and æsthetically pleasing covered area for the protection of parked vehicles and is also available in the form of a washbay, showroom, canopy and car valet unit. Essentially it is a translucent curved awning open at both ends and near ground level at the back and is supported by cantilevered metal trusses anchored in a concrete base. The roofing is made of a new resin bonded glass fibre material, light in weight but very strong. Claimed to be non-corrosive and crackproof it is supplied in a range of colours including blue, red, green, violet and orange. Alternatively aluminium sheeting can be used. There are no horizontal joints and the trusses are made from rolled hollow rectangular sections suitably stiffened with gusset plates and are supplied as complete units ready for bolting to base mounting. They are 21 ft. span and give 9 ft. 9 ins. headroom at the extremity.

Anti-corrosion Plastic Tape

A plastic adhesive tape of polyvinyl chloride (P.V.C.) is being increasingly used as a protection against corrosion. One company that has specialised in technical tapes and whose P.V.C. tape is widely used is Rotunda Ltd., Denton, Manchester. Such tape wrapped on pipes and joints takes the place of several coatings of paint, which in any case takes time to harden and is vulnerable to certain corrosive atmospheres. One large gas-producing plant in the North of England had just such a problem with acidic atmosphere. Metal handrails along gangways kept a full-time painter occupied all the time in repainting these rails. Then black P.V.C. plastic adhesive tape was wound on spirally. It has lasted two years without apparent deterioration. A pressure-sensitive version of the tape is now being used for buried pipeline joints and overhead pipelines in the chemical industry. The tape is about eight thousandths of an inch thick and is available in several widths and colours. It is waterproof, moistureproof and resistant to many chemicals.

LET YOUR APPLICATION DECIDE WHICH HONEYWELL INSTRUMENT FITS YOUR NEEDS

Do you have a temperature or control job to handle?
There is no need to "shop around." From one source—
Honeywell—you can be sure of getting exactly the right instrument to fit your needs and budget.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.
Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.
Precision electronic instruments and control systems for aircraft and missiles.

For information on any control or instrumentation problem, contact

THE BOMBAY GAS COMPANY LTD.

CHAIRMAN, MR. B. L. JALAN'S SPEECH AT ANNUAL MEETING

PLEA FOR HIGHER GAS PRICE REITERATED

ONCE again, Mr. B. L. Jalan, Chairman of the Bombay Gas Company Limited, reiterated the plea for raising the price of gas when he addressed the Annual General Meeting of the Company held at Bombay on Friday, 15th September 1961. Mr. Jalan pointed out that, while there was a clear and strong case for providing incentives for further expansion of the Company by allowing a reasonable price so as to enable it to create its own resources for expansion, it had been denied even a basically economic price which would cover its mounting costs and yield a minimum fair return to investors. The gas price chargeable by the Company, he added, had been rigidly held at a level lower than that of 1926, whereas the general level of prices had increased fivefold since the beginning of the Second World War. He said: "I am not aware of any such instance in any other industry."

The following are extracts from Mr. B. L. Jalan's speech:

"GENTLEMEN,

"In a recent address in Calcutta, I had traced the three distinctive stages of economic growth which the country will have passed through in a relatively very short span of three decades. As I said then, what we should aim at is a kind of 'incentives-based regulated economy.' Much of the progress which we have achieved would not have been possible but for such incentives. At the same time, it is true that a lot more could be achieved if we relied more on incentives rather than on restrictive regulations. To satisfy the growth-hunger of our economy, as perhaps of all developing economies, we will have to devise an ingenious system of incentives without permitting the growth of a lop-sided economic system. The objective of orderly and balanced development should not interfere with the larger objective of acceleration of the growth rate.

Incentives-based Regulated Economy

"The incentives take many forms: positive and negative; direct and indirect; financial and non-financial; and tangible and notional. Sometimes negative incentives in the form of removal of deterrents to industrial production, such as shortages of feed stocks, fuel, power and transport facilities, may be as effective in the promotion of industrialisation as direct, positive and financial incentives.

"During the last few months, disquieting news flashes regarding such shortages have appeared. Steel production, which is so vital to the country's industrialisation and general progress, was hampered by non-availability of coal which again was due to transport bottlenecks. In fact, transport difficulties and production and distribution of coal have become the subject of an ominous controversy in the official and non-official quarters. We are aware of the power failure in Calcutta and Delhi. These failures only aggravated the chronic power shortage in the country. Many industrial proposals in several States could not be promoted owing to non-availability of power or cheap power.

"My object in pointing out the specific instances is merely to establish that there is a great scope for the State to provide increasingly and to strengthen the basic sinews of industry and thus accelerate the pace of industrial and economic growth in the country. While it is true that the national income in the country increased by 42 per cent during the first decade of planning, we are conscious of the great leeway which we have to make in order to catch up with the economic standards of more advanced countries. Owing to the population growth at a rate of over 3 per cent per annum, the *per capita* income during the first two Plan periods could increase by only 18 per cent. We are still ranked among the lowest group, our *per capita* income being Rs. 302 in 1959-60, as against Rs. 1,426 in Japan, Rs. 4,863 in the U.K. and Rs. 11,118 in the U.S.A.

"An attempt has been made recently to recodify our tax law by passing a new Income-Tax Act. While there is, no doubt, a lot of scope for differences of opinion on the changes which this new Bill has or has not brought about, one thing is patent: it has not gone far enough in simplifying or rationalising our tax system. The adherence to a system of multiple taxes such as expenditure tax and wealth tax has been guided by doctrinaire approach rather than by pragmatic approach to economic problems. While these taxes have not been given up, the highest rate of individual income-tax continues to be as high as 84 per cent, while Prof. Kaldor, on whose suggestions the so-called integrated tax system was adopted, desired the rate to be reduced to 45 per cent only.

"As regards a liberal credit system, we may refer to the proposal being discussed at present among the banking circles to reduce the advance-deposit ratio. In support of the proposal, it is mentioned that the ratio is higher as compared to those prevailing in advanced countries such as the U.K. and the U.S.A. One would easily see the futility of comparing such ratios with those of advanced countries, if the basic objective of accelerated rate of growth is kept steadily in view. First, our ratio is lower as compared to rapidly developing countries such as Japan where it is as high as 100 per cent. Secondly, the banking habit in countries like the U.K. and the U.S.A. is so widespread that even a lower ratio would meet the requirements. Thirdly, our deposit-advance ratio has not been growing appreciably in the past. While it was 64.42 per cent at the end of 1951 and rose to 71.63 per cent at the end of 1956, it was as low as 52.79 per cent at the end of 1959. If in March 1961 it was 72.12 per cent, it fluctuated between 56 per cent and 72 per cent during the preceding 12 months, depending on seasonal requirements of the money market. Moreover, the insecurity to which the bank depositor is exposed will be well taken care of by deposit insurance which is very rightly being sponsored and by a more vigilant policy followed by the Reserve Bank.

Gas Price: A Case of Disincentive

"When we think of incentives, the case of our Company for raising the price of gas sold by it comes to my mind in bold relief. If one were to mention a glaring case of disincentives by restrictive regulations, one could easily cite the example of our own Company. While there is a clear and strong case for providing incentives for further expansion of the Company by allowing a reasonable price so as to enable it to create its own resources for expansion, it has been denied even a basically economic price which would cover its mounting costs and yield a minimum fair return to the investors. While the general level of prices has increased fivefold since the beginning of the Second War, the gas price chargeable by your Company has been regidly held at a level lower than that of 1926. I am not aware of any such instance in any other industry. The rates and prices charged by public utilities, such as railways, road transport services and air lines run by the Government have been increased from time to time.

"The increasing costs of raw materials—coal and diesel oil—and the continuous upward trend in salaries, wages and dearness allowance have resulted in a precipitate fall in net revenues. Since the close of accounts, the cost of diesel oil has increased by Rs. 24.01 per kilo-litre. The increase in the excise duty on coal from Re. 1 to Rs. 4 on acebunt of the Coal Mines Amendment Act will cost your Company a further sum of Rs. 3 lakhs annually.

No Surplus Left

"The cumulative increase of costs without a corresponding rise in the sale price of gas has resulted in yielding negligible, if any, profits from the main operations of the Company, namely, production and distribution of gas. Leaving out the income from investments and providing for taxation, the net profit from the main operations of the Company comes to the meagre amount of Rs. 20,694, which means practically no profit.

"The prices of basic commodities like steel have been increased from time to time, on the recommendation of the Tariff Commission, in view of the increased costs. The Government of India have similarly granted repeated increases in prices in the case of many other basic and important industries such as cement, caustic soda, paper, coal and the like. The hydel companies in Bombay regularly levy in their bills 'fuel adjustment charge' on account of increases in the cost of fuel. Likewise, in the case of the Calcutta Electric Supply Corporation, the coal surcharge on the rates for electricity is raised automatically by the Corporation so as to cover increases in the pithead price of coal and/or in freight. There have also been increases in prices levied by several public utility concerns such as electricity, water, telephones, railways, post and telegraphs, airlines, and the like. The Tariff Commission is presently engaged in an inquiry relating to the price of cement, pursuant to a representation made by the cement industry to the Government of India that the price of cement fixed in 1958 was uneconomic today. You can view this factor in juxtaposition with the authorised price of town gas payable to your Company, which is lower today than the 1926 level. The price of coal has gone up from Rs. 26.53 per ton delivered at factory in 1926, as against Rs. 52.36 per ton in 1960. This represents a 97 per cent increase. Similarly, the wage bill during the same period increased by about 60 per cent per thousand cubic feet of gas sold.

"We may also compare the cost of coal to and price of gas charged by the Oriental Gas Company, Ltd., in Calcutta, which is a directly comparable case. While the Calcutta Company gets its coal at a delivered price of approximately Rs. 35 per ton (against the price paid by your Company at Rs. 52.36 per ton) and charges an effective gas price of Rs. 5.25 per thousand cubic feet (against the price allowed to your Company of Rs. 3.94 per thousand cubic feet).

"It has to be impressed on the Government than an industry subjected to price regulation should be enabled to provide substantial funds for rehabilitation, modernisation and expansion from internal sources, and that the return on investment in such an industry should have some relationship with the return in other industries, so that it might be in a position to compete effectively for new funds in the capital market.

Increasing Production and Efficiency

"In spite of all sorts of adverse factors affecting the growth of the Company, I am proud to inform you, gentlemen, that your Company has kept up the tradition of increased production from year to year, to meet the increasing demand of the existing customers.

"At this juncture, it would not be out of place to mention that your Directors do not wish to rest content by meeting only the increased needs of existing customers with increased production, but have a keen desire to expand its present capacity by installing additional plant and equipment so as to meet the greater requirements of those who do not enjoy the benefit of this cheap and highly convenient fuel. The greatest factor inhibiting this growth, as you know, is the uneconomic selling price of gas. We cannot, you will appreciate, approach investors to invest more funds in an industry which does not permit an adequate and fair return, more particularly in view of the many competing and growing demands on the limited financial resources available in the country.

Summing Up

"I may now sum up the case of the Company for an adequate rise in the price of gas:

1. The Company continues to get the price lower than that prevalent in 1926.

2. The prices of all components of cost have risen phenomenally.

3. The gas price received by the Company is about the lowest town gas price in the world.

4. While the Company pays 50 per cent more for coal delivered ex-factory, as compared to the Oriental Gas Company, Ltd., Calcutta, it is allowed a price which is 25 per cent lower than that being charged by the Calcutta Company.

5. The price received by the Company is only a fraction of the price of bottled gas, which is only a by-product now being sold in the town by large companies.

6. The Company has, in spite of the meagre or no profit earned, maintained perfect service by supplying quality gas to its consumers.

7. Since 1946, the Company has increased the production of gas by over 60 per cent.

8. The Company has been denied the benefit of an escalator clause which is allowed to electricity and public utility companies in Bombay, Calcutta and elsewhere.

9. The Company has been denied also the necessary margin in price for creating internal revenue for financing an expansion programme, which is a feature of price-fixation by the Tariff Commission in other industries such as steel and which is invariably an important factor in industrial expansion in all the fast-advancing countries of the world.

10. The Company has practically ceased to earn any profit from its operations of gas production and distribution.

11. By denying compensatory allowance for meeting the rising costs, in spite of continued good services and expansion in production, efficiency has been penalised and the investors denied a fair return on the capital invested.

12. Without an adequate return on capital, investors are not interested for further investments to expand the capacity of the Company to keep pace with the ever-increasing demand and to replace the use of costlier gases by some 33,000 Bombay consumers, which is about double the number of the existing consumers of your Company.

"We have again moved the Government of Maharashtra for allowing us a reasonable and adequate rise in the price of gas in order to cover increases in the manufacturing costs, and also to enable us to launch a programme of expansion in gas connections. As you are aware, rapid industrialisation is the sheet-anchor of the present economic policy and programmes of Government. We have every hope that the Government will make a realistic reappraisal of the Company's case this time, and allow the Company to make an adequate increase in the price of gas.

Coal Supplies

"The Company has recently been experiencing considerable difficulties in securing full or regular supplies of coal: the total wagon allotment during the first six months of this year was only 2,118 wagons, as against a quota of 2,520 wagons.

"The coal supply position showed further and marked deterioration from July this year. The total loadings in July were only 308 wagons (as against the quota of 420 wagons). But, as most of these were loaded in the second half of the month, the actual deliveries during July were only 227 wagons. The shortage of coal was so acute that the fuel gas supply to the consumers had to be drastically reduced during the period from 23rd to 30th July.

"In spite of continuous representations from the Company to all competent State and Central Government authorities, the supply position during August deteriorated alarmingly. The Company was compelled to cut down gas supplies to the extent of 15 to 20 per cent to all its consumers except for public lighting with effect from the 22nd August. The inconvenience caused by such a cut to important consumers like hospitals and maternity homes and to major industries like the Government Mint can be easily imagined. The shortage of coal results in reduced coke production, which also causes widespread inconvenience to those using coke for domestic purposes.

"A study of the causes of the present sharp fall in the coal supplies reveals

1. that there is a downgrading of the priority of supplies to this public utility concern by the Coal Controller;

2. that alternate supplies from other collieries programmed for the Company during the third week of August, were diverted to other shipments, thereby causing a further delay in loading for the Company; and

3. that the Company's allotted and programmed supplies from the colliery scheduled to load in box wagons, were diverted to the railways and steel plants at the last moment.

"An examination of the question as to how far the present difficulties with regard to coal supplies can be solved by the movement of coal by the rail-*cum*-sea route from Calcutta to Bombay would show:

1. that sea transport is open to a variety of risks and delays due to labour troubles, port detentions and weather conditions;

2. that movement by sea with the completion of necessary formalities may take about 8 to 12 weeks and is of no help in improving the present position; and

3. that the landed cost of coal at the Gas Works by the rail-*cum*-sea route may involve an additional financial burden of about Rs. 10 to Rs. 15 per ton, over and above the subsidy offered by the Government.

"Moreover, the proposed mode of transport being in an experimental stage, it is not appropriate that the fuel supplies to a public utility concern, playing a vital part in the civic and industrial life of Bombay, should be exposed to the risks and uncertainties of an altogether new experiment.

"Your Directors feel that, when the selling price of the major product of this Company, town gas, has been frozen at an uneconomic level by the State Government, the imposition of any additional burden on the Company at this stage would further aggravate the critical financial position with which it is faced."

Note: *This does not purport to be the proceedings of the annual general meeting.*

STEEL FURNACE ASSOCIATION

The first meeting of the Executive Council of the Steel Furnace Association of India was held in Bombay on the 16th inst. It was attended by representatives of the furnace owners from Kanpur, Calcutta, Madras and Bombay (Messrs. J. K. Iron and Steel Co. Ltd., Kanpur; Textile Machinery Corporation of India, Calcutta; Messrs. K. C. P. Limited, Madras; Messrs. Dalmia Iron and Steel Ltd., Calcutta; Messrs. Kumardhubi Engineering Works Ltd., Calcutta; Messrs. Singh Engineering Works, Kanpur; and Messrs. Mukand Iron and Steel Works, Bombay). Mr. Viren J. Shah of the Mukand Iron and Steel Works Ltd., Bombay and Mr. N. S. Gilani of Messrs. Kumardhubi Engineering Works, Calcutta, were elected Chairman and Vice-Chairman, respectively, of the Association.

The Association expressed grave concern at the shortage of scrap prevailing in all parts of the country and expressed the hope that the Government of India would take suitable steps to prevent indiscriminate export of those qualities of scrap for which melting capacity already existed within the country whilst indigenous furnaces suffered from want of raw materials. It was of the opinion that there was considerable scope for expansion for electric furnace industry within the country. It noted that the Government of India had recently issued a number of industrial licences for setting up electric furnaces. It was expected that, during the next 10 years, the steel furnaces would grow at a phenomenal rate in keeping with the country's increasing demand for various types of steel and steel products.

The establishment of the Scrap Committee by the Government of India was welcomed and hope was expressed that the Committee would investigate thoroughly all aspects relating to scrap generation, utilisation, distribution, exports and imports. The Association urged that a long-term ferrous scrap policy should be evolved which would give prime importance to the need for further industrial progress of the nation, and create a proper atmosphere conducive to rapid expansion of steel-melting capacity within the nation. It pleaded for continuance and tightening of price control on ferrous scrap so long as the prices of most categories of finished steel were controlled. In this context, it requested the Government of India to consider the imposition of an export levy on scrap, so that internal prices of scrap were stabilised, relatively free from fluctuations in remote overseas export markets, and at the same time provide a useful source of revenue to the national exchequer. It felt that ferrous scrap should be utilised as far as possible within the country and that the export drive in respect of finished products made out of scrap may be pursued vigorously whilst export of cheap raw materials like scrap may be progressively curtailed. Welcoming the latest announcement by the Iron and Steel Controller of ferrous scrap policy for July 1961, the Association felt that, though this policy took a few steps in the right direction, it was necessary to go further and impose a total ban on export of heavy melting scrap, sheet cuttings No. 1 and steel turnings and borings.

A decision was taken at the meeting to examine the possibilities of standardisation of refractories, so that its manufacturers could streamline their production programmes and help the country to utilise its limited resources to the greatest advantage.

I.O.C. OIL FOR NORTHERN RAILWAY

The Indian Oil Company, a Government of India oil marketing body, has just inaugurated, at New Delhi, the first diesel fuelling service for the Northern Railway Deluxe trains. The Company will now supply high speed diesel oil to the Northern Railway through this as well as another fuel station to be set up at Delhi. It is stated that the I.O.C. intends to set up progressively many more such fuel stations to take over the Northern Railway's entire requirements of high speed diesel oil all over the Punjab and U.P.

According to the Press Information Bureau of the Government of India, the I.O.C. already supplies large quantities of high speed diesel oil to the Central and Western Railways and expects to sell about 11 lakh tons of oil in the coming year. It has finalised plans to construct 50 inland bulk depots at big ports and cities in the country.

AIRCRAFT INDUSTRY AND AIR TRANSPORT

SOME DIFFICULT YEARS AHEAD

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

THE rapid progress of aviation during the last 58 years, culminating in exceptional technical advances during the last 20 years, has produced a situation in both aircraft manufacture and operation that may well defeat those engaged in the business of aviation.

Aircraft manufacture has throughout its whole history been founded on military orders. As a result, performance has been given top priority as the effectiveness of military aircraft depends entirely on their ability to outclass their enemy in the air. Unfortunately, commercial air transport has always had to take second place and, almost without exception, Governments have had their eye on air transport as a reserve for military airlift. This has produced an uncommercial brand of air transports due to ignoring the essential business factor that the price of the product is all-important. In the case of air transport, it is the price of the ticket that counts.

In 1957, a very curious theory was officially expounded by responsible authorities in both the United States of America and the United Kingdom. It is conceivable that Russian propaganda was responsible for this theory. The Russians claimed considerable success with their guided missiles, they visualised that any future war would be exclusively carried on with this type of weapon, thus eliminating the need for manned aircraft. Both America and Britain hastened their missile programmes. The British Government issued a White Paper in which it virtually laid down the policy that, in future, Britain's air defences would be based on missiles and manned aircraft were going out of date.

The impact of this White Paper on the British aircraft industry has been little short of disastrous. At the same time, the British Government formulated a merger policy for the manufacturers; this was forced upon the industry under the threat that future orders would only be placed with the merged groups of companies.

America approached this new policy somewhat differently but did cut back all military aircraft orders, and, in fact, brought to a stop the development of the supersonic B-70 bomber Valkyrie, on which the U.S. Air Force was depending for its most important strategic weapons system.

Faced with reduced military aircraft orders, manufacturers naturally placed their faith in air transports as the only way of filling their factory space and keeping their skilled labour employed. Even the considerable orders that have been placed for air transports do not fill the factories and, as will be shown, production of air transports has already far exceeded actual requirement. Also, it is questionable if the types produced are, in fact, the most suitable for commercial air transport.

Missiles

The manufacture of missiles is a comparatively simple undertaking, Even though, technically, these weapons require extremely delicate guidance systems, the total volume of work to produce missiles is very much less than the work required in the manufacture of military or commercial aircraft.

As a result of work starvation, many aircraft manufacturers have engaged in other lines of manufacture by no means closely associated with aviation. A fantastic situation has arisen in the British aircraft industry, the total number employed increasing, whilst skilled aircraft technicians are actually being discharged as redundant. What is happening is that this diversification of manufacturing effort is bringing into the factories semi-skilled labour for commercial manufacture. The ranks of the aircraft industry are swollen with semi-skilled labour, which, in fact, is no longer solely concerned with aircraft manufacture. This creates an entirely wrong impression of the strength of the aircraft industries as well as their prosperity.

Missile design and development are still in the experimental stage and, unfortunately, there is no clear cut policy regarding this new class of weapon. In America, progress with missiles has been comparatively slow and there has been a number of failures, because all three Defence Services have been developing missiles on their own, under their individual budgets. There is conflict of opinion as to which of the three Defence Services should control missiles. As their sphere of operation is in the air space, it would seem logical that their development and control should be the responsibility of the Air Force. This would immediately create a powerful lever in the hands of the Air Force leaders which they could use to direct and influence both Army and Navy operations. Naturally, there is considerable opposition from the two surface Defence Services.

Manned Military Aircraft

The policy announced in 1957 that manned military aircraft were not to be further developed has just been reversed, so that frantic efforts are being made to recover the years lost in the research and development departments of the manufacturers. Fortunately, there have been some new scientific advances which have produced an entirely new type of military aircraft. Generally referred to as VTOL (vertical take-off and landing), a fighter with supersonic performance has been produced by the Hawker Siddeley Group in the United Kingdom, which is capable of taking-off vertically on its deflected jet streams. On reaching suitable altitude, the jet thrust is re-directed so as to give the aircraft forward speed. The aircraft is undoubtedly the most revolutionary design development to appear so far. If it proves successful operationally, it will completely change the whole procedure of air war, as aerodromes as we know them today will no longer be a necessity.

It is quite probable that this new use of jet power to give aircraft vertical take-off will be applied to air transport aircraft. In the first instance, as the cost will be considerable, military transports will be the first to use VTOL. It will be appreciated that, once successful application is achieved economically, commercial air transport will benefit tremendously.

Jet Air Age

With the introduction of jet turbine power plants for commercial air transports, the world has come to regard this era of aviation as the jet air age. The speed with which jet air transports were produced and rushed into airline service has been the subject of strong criticism. Such an enormous change in a commercial transport undertaking did not appear practical to the commercially minded. The critics advocated a much slower introduction of jet airliners, leaving adequate time for the operators to utilise their existing equipment, much of which had only just been purchased, and depreciate it over a reasonable period.

Economists warned that the enormous seating capacity being introduced would far exceed the public demand for air travel. The situation was further complicated by the realisation that jet aircraft are extremely critical vehicles. Their tremendous efficiency with near supersonic speed means that, to achieve their economy, they must operate according to programme; also they must be kept in the air for as many hours per day throughout the year as it is possible. The moment the air services become dislocated due to weather or poor communications, or faulty air traffic control, or technical and traffic handling congestion, the economic advantages of the jet aircraft are destroyed.

The operators having purchased large fleets of 130-seaters soon began to realise the complications with which they were faced. They have yet to find solutions to their problems and last but not least, they must discover a way of filling the seats they now offer.

The North Atlantic air route has proved to be the world's most popular and profitable air route, and it acts as an indicator for all other international air routes. The number of passengers travelling since 1950 steadily increased up to the year 1955, after which the annual increase climbed at a fantastic speed passing the one million passenger mark in 1957 and reaching close on 2 million by the middle of 1959. At this point, the increase showed a very considerable drop and is now barely 4 per cent. Seat capacity has increased by at least a third and, what is so alarming, *before the end of* 1962, *another* 270 *large jets will be added to the operators' fleets and, during the year* 1963, *a further* 150 *will join the services.* This means that, unless some inducement is offered to get passengers into the air, the majority of the jet airliners will be operating with revenue loads well below their breakeven point.

North Atlantic operators, accustomed to 70 per cent revenue loads, have been operating their big jets with revenue loads as low as 38 per cent. Not even the most economically operated jet can be expected to return profits with such poor loads.

The losses liable to be incurred may be appreciated, when it is realised that, without taking into consideration the cost of passenger service and administration charges, operating a big jet comes to Rs. 6,552 per hour, which means approximately Rs. 46,000 for a one-way Atlantic crossing. Administration is usually estimated at 100 per cent of the direct operating costs, so if all the costs are to be covered, the figure is little short of Rs. 1,00,000.

Already this depressing situation is drawing the attention of the Press on both sides of the Atlantic and important financial journals are devoting considerable space to dealing with the whole air transport business.

The London *Financial Times*, on 30th August 1961, went so far as to suggest that at least one helpful move would be to delay the delivery of any more jet aircraft to the airline operators. It is probable that some operators will not be able to take delivery of the aircraft they have on order, because their finances will not enable them to meet the payments. Refusal to take delivery of aircraft on order is not a total solution. Besides, it is only shifting the financial burden from the operators to the manufacturers.

Assuming that the situation does not improve and the operators are forced to cancel or postpone the acceptance of the aircraft still building for them, the question immediately arises—what is going to be the result on the aircraft industries involved? The American, the British and the French aircraft industries are all heavily involved. Such a sudden change could well produce a crisis that would wreck many manufacturers.

Aircraft, 420 of them costing millions of dollars each, are due for delivery before the end of 1963. They are already building and all raw materials are being worked. The contracts not only concern the big names in the aircraft industry, but also hundreds of sub-contractors who are directly concerned, as well as all those who supply accessories and systems for both the airframe and the power plant. The magnitude of the danger ahead is positively staggering. This situation has undoubtedly been produced by the anxiety on the part of operators to get into the jet air age with the minimum of delay. It has to be admitted that they were considerably encouraged by the manufacturers themselves, who were anxious to fill their empty workshops with commercial orders. The whole aviation industry is virtually to blame, but, to cry over spilt milk, is not going to help solve the situation.

Lower Air Fares

The only logical way out of the tangle is to lower the air fares substantially. This is quite possible but it will require a good deal of reorganisation on the ground so as to handle a much larger number of passengers at all airports. At present, although some operators favour lowering the air fares, as also the cargo rates, others are opposed. If reductions are mac over the North Atlantic, it will not be mo than 12 months before similar reductions ha to be introduced over the rest of the world a routes.

There are interlinking problems, as wor capitals are so crowded that they are not ab to accommodate hoards of travellers. In Indi the situation is quite deplorable and, during th coming winter season, more than 20,000 foreig tourists are expected to visit the Industries Exh bition in Delhi, but how they are going to b accommodated nobody seems to know. Wit drastic lowering of international air fares, th number of visitors would undoubtedly increa tremendously. The airlines' problems would b solved. But would they be able to justify th way out, if the related facilities for handlin international travellers do not exist? In fac lack of available accommodation might kill th air passenger increase after the first rush ha suffered through lack of accommodation, a others would refrain from booking.

In October, the International Air Transpo Association is going to hold its annual gener meeting at Sydney, Australia. It is believed tha the I.A.T.A. Director General, Sir William Hi dred, in his report, is going to announce som important suggestions. Whether the operator will listen to this advice is quite another matte

U.K.'S BID TO JOIN COMMON MARKET

SIR PAUL GORE-BOOTH ON REASONS AND POSSIBLE RESULTS

AT the meeting of Commonwealth Finance Ministers held at Ghana's capital, Accra, from 12th to 14th September, Britain's application for membership of the European Economic Community, popularly known as European Common Market, came in for stringent opposition from all the other members of the Commonwealth. The latter were unanimously of the view that Britain's membership of the E.C.M. would adversely affect their economic fortunes and fundamentally alter the relationship between the U.K. and the Commonwealth countries. There are grave misgivings in this country, as well as in the rest of the Commonwealth, barring, perhaps, Pakistan, because of the widespread belief that the existing Common Market countries will not permit Britain to safeguard the interests of the Commonwealth and that a compromise, satisfactory to the Commonwealth countries the economies of which will be jeopardised by Britain's participation in the Common Market, will not be a feasible proposition. While these misgivings were being expressed in unequivocal language at Accra, Sir Paul Gore-Booth, the British High Commissioner in India, elucidated at New Delhi, on 14th September, to be precise, Britain's case and outlined the possible advantages of its membership of E.C.M. to the whole Commonwealth, in particular, and the free world, in general. This he did in the course of a lecture on "Relationship between Britain and Europe," under the auspices of the Indian Council of World Affairs. In view of the topical nature of his observations, we give below the relevant extract from Sir Paul Gore-Booth's address.

After tracing the background to the formation of the Common Market and E.F.T.A., Sir Paul said:

"We must look, in a moment, at some Commonwealth, and specifically Indian, interests, but I should like to interpose a general observation. I have told this story at some length because there is about it something of the impersonal process of history. Economic and political events have moved in such a way that, while the British public of 1951 would almost certainly have greeted the Government's present initiative with hesitation, if not suspicion, in 1961, there is widespread agreement that this is something that ought to be tested by negotiation. Britain does not *need* to join the Common Market and, curiously enough, persuasion from outside to do so is somewhat less persistent than it used to be. But it is now widely accepted that Britain's economic health, while sound, would be invigorated by closer integration with the European economy. It now seems that in a closer relationship with Europe a national interest and a wider interest may coincide. Such coincidence of interests is, after all, the prerequisite for a successful foreign policy.

Object of Negotiations

"If we enter the European Common Market, we shall work towards a common tariff, a common commercial policy and a common agricultural policy with our fellow-members. If we entered without negotiation (which is, of course, unthinkable), we should find ourselves imposing tariffs, sometimes of considerable height, on Commonwealth products—Indian tea for instance—of a kind to which our Commonwealth friends and the British public would strongly and rightly object. Again, if no special arrangement were made in respect, for instance, of butter, we should be in danger of completely upsetting the New Zealand economy—something which would be quite unacceptable in Britain and which I am sure our European friends would not for a moment expect of us.

"On such obvious issues, there will no doubt be negotiations and there must be some success. More difficult, however, are situations such as the following. There are a number of goods on which the European Common Market has a *nil* tariff and the U.K., while at present giving free entry to Commonwealth products, has a tariff against third countries. If we equate our tariff in such a case to that of the Common Market, we are not treating Commonwealth goods any worse, but competitors from elsewhere will be given equal opportunities in the British market which they do not have at present. In such cases, Commonwealth countries will have to mind their competitiveness. More difficult still may be the case of manufactured items exported from the advanced, industrialised Commonwealth countries.

No Overnight Change

"It is important, however, to remember that, even in those cases where a Commonwealth interest cannot be preserved absolutely intact, there will not be an overnight change. The process would be gradual. It would allow time for readjustments in production and marketing policy. Not only that, but compensating changes should occur such as a strengthening of the United Kingdom economy and a better access to the markets of the Six. Much of the worry about these developments comes from the unconscious assumption that everything will happen overnight.

"We, in Britain, are very conscious of the special case of Indian textiles, on which I am glad to see that the inter-industry agreement has just been prolonged. Again, until negotiations take place, we do not know what we can do, but I think we can assume from the general European attitude to aid and to the needs of developing countries that all Governments are aware of your need for foreign exchange and the importance to this of sustained and increased exports. In any case I understand that we are likely to have an able and vigilant Indian official at our elbows as we negotiate, and we shall welcome his advice and help.

Broader Outlook

"These matters of which I have just spoken are very important, but they are technical. Today, we have promised ourselves the broader look. Are these developments going to weaken the Commonwealth? The short answer is that that depends on all the members. If we all find that the Commonwealth, as an institution transcending all bounds of race, colour and creed is of value to the world—and this is what we have affirmed this very year—then we shall not let it be weakened. It will evolve. Britain, participating in a common commercial policy with Europe, will speak in Commonwealth economic gatherings with part of the collective voice of the Community and not freely as Britain—a Britain, be it remembered, limited already by many international commercial engagements. On the other hand, when Britain speaks in the councils of Europe from an 'outward-looking' point of view and in full knowledge of Commonwealth interests and feelings, it will speak with the moral status and the voting strength of a member, and not with the relatively uninfluential voice of an outsider, however friendly and respected.

"Moreover, these developments are not new or sudden. The strictly economic preferences which the U.K. enjoys in the Commonwealth have gradually weakened since 1932 with the reductions in preferential rates in the Commonwealth, the effect of exchange restrictions, and for other reasons. But the real links of the Commonwealth are not measured by mathematics. Past preferential advantages have been important, and the great flow of supply and demand within the Commonwealth will continue. But the Commonwealth is not just a superior market-place. It has other ties and other responsibilities to the world which, I would think, the members would not wish to abandon or repudiate.

"It has been suggested that we should seek a Commonwealth's Common Market. Politically and sentimentally, this would be attractive. Economically, the developing countries could never accept it, for it would render impossible the building up in those countries of new industries which must have tariff protection in order to get started.

"This inescapable conclusion again leads us to acknowledge that there are things other than pure economics which bind the Commonwealth together, certain ideals and aspirations, for example, which we believe to be constructive and good. It will certainly be our object to maintain these principles just as much in the European Common Market as out of it.

Covert Form of Imperialism?

"Another frequent question is whether Britain joining the Common Market is not some covert form of imperialism. We can, I think, drop the overworked slogan, but we must look at the genuine worry which lies behind it. Could this action in some way impede the real independence of the States benefiting from close economic contact with the enlarged community? I believe this fear to be misplaced, though it is up to Europe to dissipate it. There are technical reasons for this view, but there is also one very simple and general one. In the present political state of the world, I just do not believe that any politically independent State would fail to notice and to stop any tendency to limit its genuine independence, no matter whence it came. Let me add that no one in the enlarged European community would be disposed to try to reverse history in this way; even if they were, the attempt would be vain.

"I have heard occasionally the political objection, why does Europe need to form itself into a bloc? There is a debating answer to this of which I have first-hand experience. In the early years of the United Nations, there were several blocs—the Communist bloc, the Latin American bloc, the Arab bloc and the first signs of an Asian bloc. The only people who voted all over the place according to the individual or national conscience were the Commonwealth and Western Europe. Sooner or later there was bound to be a tendency by Western Europe to come together, if only in self-defence.

"But the basic reasons are much more constructive than this. One does things in the end *not because one can answer the reasons for not* doing them, but because one sees advantage in doing them. I should like therefore in the concluding part of this talk to face two reasons why we consider that there is advantage to us and to the world in closer relations between Britain and Europe.

Ample Scope for Growth

"There is first a good economic reason. Recent economic experience has shown that there is ample prospect of growing trade between industrialised countries—our own trade with Germany is a good example. Such trade creates wealth, not for the few these days, but for the many. This wealth becomes available as purchasing power and as money for investment. While there is division between neighbouring countries in Europe, this wealth is artificially limited, and resources for investment are wasted in attempts to jump tariff barriers which would be better removed. On both these scores, a wider unity between these expanding markets could benefit not only the inhabitants thereof, but also the rest of the world. Greater European purchasing power would benefit the sellers of goods elsewhere in the world, tariff or no tariff, and at least part of the increased investment would flow towards developing countries.

"But there is more to it than this.

"In announcing in the House of Commons the British Government's decision to apply for membership in the European Common Market, Mr. Macmillan spoke in terms of strengthening and upholding freedom.

"This is a bold proposition: It is important to understand it and to realise that it is basically not controversial. In the difficult world in which we live, certain ideals persist. One of these is an ideal which enjoyed a spectacular, if imperfect, springtime in the ancient Greek city-states, which disappeared from history for long periods and found its rebirth in Europe, particularly Britain, and in the United States. This Western ideal, with its emphasis on the status of the individual man and woman, has expressed itself in the phrase 'liberty under the law.'

"Loyalty of Free Men"

"Now we know that not all of us in the West are equally good representatives of liberty under the law. Not everybody living in a democratic country is necessarily a democrat. All of us human beings, as individuals and groups, fall short of what we would like to think we are. But because there is in the West, despite all shortcomings, inequalities, vulnerabilities and procrastinations, a basic belief in this ideal, this liberty under the law, and because we know that Britain would not be the country it is without it, we also believe that greater unity between Britain and Europe will lead to that ideal being upheld and strengthened.

"Liberty under the law, or as one American writer has so well expressed it, the "loyalty of free men," means the most idealistic and therefore the most difficult system of government that mankind has yet devised. It is the most difficult because it seeks for and depends on the best in man and rejects the organisation of mass hatreds and conflicts. It demands a courageous and not a despairing view of mankind; it needs faith if it is to be won, and patience (a somewhat unfashionable virtue) if it is to be maintained. It has taken us in Britain many hundreds of years to reach somewhere near this ideal; there is much still to be done. Fortunately it is no monopoly of ours or of anybody's. Indeed, all the evidence is that there is a desire for it which is universal. But, because this ideal of liberty under the law exists, there is a mission to be performed in upholding and realising it. We believe that, in closer unity with a Europe which has contributed so much to the philosophy of that ideal, we can promote its stability and its continued acceptance. . . . I do think that, at this immensely troublous moment in world history, it is a wise exercise to look both at the wood and the trees, to see what, technically, we may be trying to do, and what the relation, not always conscious, may be between that action and the bigger ideas and events around us. If we in Britain fail in our approach to Europe, it will be discouraging but not fatal. If we succeed, if we and Europe can do this business right, not only will the rest of the world have nothing to fear, but it can in fact derive from it a greater prosperity, a more real freedom."

CARBOXY METHYL CELLULOSE

"CELLPRO" (C. M. C.)

Used in

*Textiles *Soaps *Oil-well drilling
*Rayon *Paper *Distemper Colours
*Foundry *Synthetic Detergents

COMMERCE EDUCATION COMMITTEE REPORT X-RAYED

PRACTICAL TRAINING DISCOUNTED—ADMINISTRATIVE ASPECT IGNORED

By Prof. S. S. Jhanwar

GOVT. ARTS AND COMMERCE COLLEGE, INDORE

A SPECIAL Committee for Commerce Education was appointed in April 1958 under the chairmanship of Dr. V. K. R. V. Rao, "*to enquire into and report on the present position of commerce education in India in all its aspects, and to suggest measures for its reorganisation and improvement, so that a sound and reasonably uniform system of commerce education suited to the needs and resources of our developing economy may be provided for the whole country.*" The Committee submitted its Report to the Hon'ble Minister for Scientific Research and Cultural Affairs, Government of India, in July 1961.

The Report is divided into 11 small chapters. It is, in the words of the Committee itself, a brief document and not a comprehensive volume on commerce education. It appears that the Committee has not examined the problem in all its aspects and hence it has not been able to present a well-studied, full and comprehensive report. This might not help us to the desired extent in evolving a sound, reasonably uniform and properly reorganised system of commerce education as required by our developing economy.

The Committee has, of course, done a good job, by focussing attention to the growing importance of commerce education. The Committee is very right in stating that "it must be recognised that commerce and management education is a twin sector to technical education in determining the pace and volume of industrial progress; and it is high time that commerce education received Government and public attention comparable at least in some measure to that received by technical education." With this end in view, the Committee has strongly recommended the establishment of an All-India Council for Commerce Education, on the lines of the All-India Council for Technical Education. The proposed council "should be concerned exclusively with the subject of commerce and management education. It should have advisory functions for maintenance and co-ordination of standards, registration, recognition and inspection of institutions, evaluation of courses and examinations, and making of grants." This is an important recommendation and should be implemented by the Government as early as possible. It is extremely necessary that all-India importance and recognition are accorded to commerce education and the proposed body can certainly do some good work in this direction.

However, this will depend more on the content of our commerce courses and the system and method of commerce education in our universities. Here, the Committee has not given us the desired effective lead. The Committee does not appear to tread a new path or to give us new ideas or plans in this regard. More attention and thought should have been bestowed on these matters.

An Incongruous Proposal

It is difficult to agree with the views of the Committee that "*it is quite unsound to introduce commerce in the IXth class.*" The Committee would wish to see 'commerce' group abolished from the Higher Secondary course. This view of the Committee not only goes against the views expressed by the Secondary Education Commission, but would also, if accepted, belittle the importance of commerce education. Here the Committee comes to destroy what it was expected to nurture and uphold! And the Committee is not clear about its own stand, because, after doubting the utility of the 'commerce stream' at the secondary school level, it proceeds to recommend that "*commerce*, as a group, should be taught only in the XIth class and that this should consist of only two subjects, namely, commercial geography and elements of book-keeping." Then, the Committee does not suggest what the student should read in the IXth and Xth classes in lieu of the existing commerce subjects in these classes. It seems the subject could not be studied by the Committee in its entirety and hence a thorough examination is not available in their Report. Commerce ought to remain as a group at the secondary education level and should be taught well. At present, commercial practice, book-keeping, commercial geography, elements of economics and civics, and stenotyping (a student offering any three) are taught in the commerce group and all these are useful subjects. One wonders why commercial practice, stenotyping, and elements of economics and civics should have failed to get justice at the hands of the Committee (the other two subjects the Committee is prepared to teach but only in the XIth class!) Their apprehension that the students are not able to understand properly the other subjects or are not able to benefit by their study is ill-founded. When elements of economics and civics, and commercial practice are taught, these do develop their mental ability and knowledge and definitely give them an advantage in acquiring commerce education at the university level. And, we all know, stenotyping assists them in getting a job. If, at the university level, the students are not able to reveal their brilliance or latent capacities, that is due to the general decline in our standards—it is no fault of the commerce subjects as such. With large numbers, meagre resources, lack of studious habits in the students, and not-upto-the mark-teaching—this state of affairs is found in all the Faculties and is no special disability of commerce education. One very much wishes the Committee had realised this fact.

Changing of Labels

The existing National Diploma in Commerce should, according to the Committee, be abandoned and, instead, a new Diploma in Commercial Practice be instituted. Let us see whether this changing of labels will help us very much. Truly speaking, if there is proper study of the commerce group at the higher secondary level, we shall not very much need this new Diploma, as other similar Diplomas are already in existence.

While examining university courses in commerce, the Committee remarks; "Commerce courses started—with a strong bias for economics subjects, because the professors who were in charge were mostly men with their university training in economics. This lingered on for a long time." Quite correct—so much so that, even now, commerce education has not been permitted to come to its own and the Special Committee has also not been able to assign the proper place to effective commerce education and practical training. The Committee wants to reduce the subjects taught at the B.Com. level and would not like us to teach even such important subjects as planning, public finance, advanced accountancy, and banking. It is not possible to agree with these views of the Committee. Their contention is that more opportunities should be given to the students for the cultivation of logic and intelligence. No one denies this. But the cultivation of logic and the capacity for thinking can be developed by adopting the questions-and-answers method in the class, by having more written work and by organising tutorials and seminars. The sacrificing of the above important commerce subjects will not, *ipso facto*, lead to the development of logic or correct thinking. This, again, is essentially a question of proper teaching and active and intelligent student-participation. That is also the essence of the 'Case Method' of study and we should develop these discussions and seminars rather than abolish or relegate to the background the teaching of important commerce subjects. That might otherwise be tantamount to suggesting an operation for yellow fever!

It is heartening to note that the Committee agrees that M.Com. should be a specialised course and should train specialists for employment in business and industry, on the one hand, and the academic profession, on the other. The Committee has also, in effect, agreed that there should be two Departments for Commerce studies. I had suggested in an earlier article* that the Faculty of Commerce, in which are taught 36 papers today, should consist of 4 Departments. The Science Faculty consists of more than 4 Departments and each one of them—Physics, Chemistry, Mathematics, Botany, Zoology, etc.—is important. And this setting up of these Departments has also added to their recognition and development. The Committee has not been able to give due consideration to this aspect and to the creation of the necessary administrative structure. Yet, the Committee suggests that another Department—the Business Administration Department—should be established. They recommend that "Business Administration should be treated as a separate discipline and should be allowed to develop in the university but with sufficient freedom and flexibilty." This is a welcome recommendation. The degree to be awarded should, however, not be M.B.A. but M.Com. (Bus. Adm.). I would only like to add that besides this Business Administration Department under the Faculty of Commerce, there should also be these three other Departments—the Trade and Industries Department, the Applied Economics and Finance Department, and the Accounts and Income Tax Department. Each of these Departments should be headed by a Professor. Specialised teaching, practical training and advanced research work ought to be their forte. These departments deserve to be set up soon and the earlier it is done the better for Commerce Education.

I entirely agree with the findings of the Committee that the present attainment of the students in English and in the regional languages is very poor. Their communicative ability and the power to express themselves effectively and clearly must be developed and for this a much greater attention not only to the teaching and learning of English and a regional language but also to acquiring a sound knowledge of our national language ought to be paid by all. The Committee has recommended that English and a regional language should be taught at the B.Com level—to this should be added the teaching of Hindi (or a neighbouring State language in Hindi areas) in keeping with the spirit and requirements of our Constitution and the desirability of every student to learn it. The Committee should have given due consideration to this requirement. This will also give a larger share to Humanities and liberal education which the Committee has repeatedly advocated. Much greater attention ought to be paid to the proper learning of languages at the secondary school level also.

Practical Training

According to the Committee, "there should be a well-organised scheme of practical training for commerce teachers." This is good so far as it goes. The Committee, however, thinks that there is no scope for practical training for B.Com. students and that even for the M. Com. students "practical training will have to follow the completion of academic instruction and may be a condition to be fulfilled before the actual conferment of the degree." The Committee adds, "Apart from this, we feel that practical training has no place in commerce education." And yet the Committee wants to "introduce a practical bias in commerce education." All this means that half-hearted support is given to the need for practical training or that there is not a clear appreciation of the needs and requirements of commerce education and of our developing economy. I strongly feel that there is not only much scope for but actual need of practical training both for our B.Com. as well as M.Com. students. And this actual observation, visits to factories, offices and establishments and talks with business and other executives, etc., should be arranged for all these students. That would enable them to better understand the working of our trade and industry and to appreciate the various problems and the different types of people a manager is required to tackle and handle. And this scheme of practical training should be properly correlated with our teaching and courses and should form an integral part of an organic whole. It should not just be an appendix as suggested by the Committee. The desired practical bias can then be imported in our studies; else the dread of water might come in our way of learning to swim. A clear cut and effective approach is again called for here.

This would, of course, mean limiting the size of the class and the Committee has rightly held that admissions to B.Com. and M.Com. classes should be restricted and be based on merit. But, in the same breath, the Committee suggests that, at some places, evening classes for M.Com. (with 3 years' duration instead of 2) may be opened. This is neither proper nor necessary. For those B.Coms. who are actually in service, their work in their establishments alone will pay them and what they need is not another degree but a refresher course or good seminars, etc.

The Committee recommends the establishment of commerce workshops in colleges and universities for making the student familiar with the appliances, forms and documents that are used in industry and trade. This, together with surveys, field work, problem study and practical training (or call it actual observations, analysis and description, etc., of business and business problems and some actual work there) is what is urgently needed. More and better research work is also called for. "High priority be given to the development of research of a practical character in the field of commerce and management."

There is also the need for more co-operation between the Industry and the University, and a mutually appreciative liaison should be established and developed not only between the two but also between the professional commerce institutes and the Universities.

Done A Good Job

On the whole, the Committee has tried to do a good job and some of its recommendations are quite satisfactory. The establishment of the All-India Council for Commerce Education and the creation of a separate department for Business Administration (under the Faculty of Commerce) should go a long way towards giving due recognition to commerce education. The moral drawn by the Committee from the establishment of an All-India Council for Technical Education and the subsequent growth of technical education should also have been drawn from the creation of four or more Departments under the Faculties of Science and Medicine. They should also have recommended the constitution of four Departments under the Commerce Faculty and should have suggested specialised courses for these (as they have done for Business Administration). To this aspect and to its administrative details the Committee should have given more thought. Not merely practical bias but actual practical training should also have been recommended in keeping with the requirements of our developing economy. With such training, we would be in a better position to provide our planned economy with the executive, managerial, secretarial and ministerial personnel at different levels. The approach should, therefore, have been more practical rather than general and should have been such as would have assisted and enabled Commerce Education to be duly recognised and respected. We must, of course, appreciate the fact that it is the first Report of its type on commerce education and so probably the Committee could not go ahead as much as one might wish. The Report can, therefore, be welcomed only with mixed feelings. A subsequent committee would be able to tread the path with more confidence, with new ideas and with a much larger information and study at its command.

*"Commerce Education in India" published in *Commerce* dated 6th June, 1959.

AIRCRAFT INDUSTRY AND AIR TRANSPORT

(*Concluded from page 602*)

The I.A.T.A. is a most curious organisation, for to make any change in its air fare policy, the voting of the members has to be unanimous. One tiny member with perhaps only a few aircraft can refrain or vote against an otherwise unanimous decision, and the whole work of the meeting becomes void and nothing can be done. This has happened on many occasions in the past, usually a group of airlines holding out against the larger operators who are anxious to reduce air fares.

The situation is very far from healthy and it remains to be seen which way aviation is going to turn. Will it find a sensible solution to its present manufacturing and air transport problems? Finally, what is to be the answer to the introduction of supersonic air transport? This is yet another problem which has been referred to as a ghastly nightmare. It is still under consideration by Governments. If supersonic travel is to be introduced before 1975 at the very earliest, the situation regarding the operators and their seat capacity is going to be worsened many times, as their present fleets of subsonic jet aircraft will become surplus long before they have been written off the

INDUSTRIAL IBCON CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT—

PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL
STORES ORGANISATION • CONSUMABLE STORES CONTROL
RAW MATERIALS CONTROL • FUEL AND STEAM UTILISATION
TRANSPORTATION METHODS • MECHANICAL HANDLING
PRODUCT QUALITY CONTROL • OPERATIONAL RESEARCH
WORK STUDY • BUDGETARY CONTROLS

PROMOTION OF TECHNICAL TRAINING

EMPLOYERS MUST CO-OPERATE WITH GOVERNMENT

INDIA, along with other countries of the British Commonwealth, celebrated its National Technical Training Week from 17th to 23rd September. Although the actual dates of observance vary from country to country for reasons of climate and other factors, every country in the Commonwealth is expected to observe National Technical Training Week. The idea of the Technical Training Week was conceived by Prince Philip, the Duke of Edinburgh, who, during his visit to Australia, was so impressed by a scheme which was in operation in that country for a number of years and the Apprenticeship Week being observed every year in that country that he wanted every country in the Commonwealth to follow suit, so that national consciousness about the value and importance of technical training may be promoted and young workers and apprentices in industry encouraged to take full advantage of the training facilities available in their respective countries.

The Week is also intended to draw attention to the various apprentice training schemes and the technical training programmes in the country and to drive home to employers, workers and the citizens in general, the importance of technical training. During the period, visits to training centres will be open to parents of students, teachers of schools and colleges and the general public. The idea behind this is to bring together the parties most directly interested in technical education, namely, parents, teachers and employers and to facilitate mutual exchange of views and experience. As Mr. G. L. Nanda, Union Minister for Labour, pointed out, while inaugurating the Week at New Delhi on the 17th inst., this annual drive should create a sense of urgency about the need for training among our young men and women, on the one hand, and among the industrialists and other employers, on the other, so that the training programmes could be organised on a co-ordinated basis at different levels of skilled workers, whether operatives, foremen, supervisors or managers. Further, through the celebration of the Technical Training Week, the message should reach all concerned and make them realise that a single purpose ran through the variety of training programme organised in different fields in the country.

Requirements of Technical Personnel

Manpower requirements of the various training programmes are among the most important aspects of any plan of economic advancement. The National Training Week will give an opportunity for all concerned to ponder this important problem. Matching of natural and material resources with human resources with as much precision as possible calls for an examination of the requirements of trained and capable persons equipped with knowledge of the various processes of production and modern developments in science and technology. Along with engineers and technologists, who are required for designing and carrying out research programmes and executing big projects, a large number of technicians and craftsmen or skilled workers are also required.

No precise estimates of the requirements of skilled workers or craftsmen are available. However, the demand during the third Plan period is estimated by the authors of the Plan at 1.3 million and during the fourth Plan period at 1.8 to 2 million. These estimates, which are very rough and need to be checked up periodically, are arrived at as follows:

The ratio between engineers and craftsmen or operatives is estimated to have been 1:32 at the end of the first Plan on the basis of the calculation that there were 31,200 engineers and about one million craftsmen in engineering and non-engineering trades. The ratio improved to 1 : 25 at the end of the second Plan. It is assumed that the ratio will remain unchanged during the third Plan period. The additional number of engineers required during the third Plan period is placed at 51,000. The number of craftsmen and operatives required, therefore, works out to 1,275,000 or roughly 1.3 million. It has been estimated that, during the fourth Plan, about 80,000 additional engineers would be needed. Additional craftsmen and operatives required would, on that basis, be about 2 million.

At present craftsmen or skilled workers and operatives are trained in several types of institutions and in different ways. These include, according to the third Plan: (1) industrial training institutes under the scheme of the Ministry of Labour and Employment; (2) Government Departments or agencies having their own facilities such as Defence, Railways, Posts and Telegraphs, and individual public enterprises; (3) facilities for training provided by the State Department of Industries and the Ministry of Commerce and Industry for small-scale industries; (4) centres for training rural artisans under the Community Development programme; (5) privately-run industrial schools; and (6) the traditional methods of transmission of skill from father to son.

Training on the Job

The majority of workmen required in industry are operatives and skilled craftsmen who must be given training on the job. The only place where tools, machines, materials and processes are available is where the work is being done and relatively only a small percentage of jobs can be reproduced in a training centre or a school room. What the Government does and is potentially capable of doing in this regard will touch only a fringe of the training needs in the country. It is, therefore, evident that, if industrial output is to be expanded, if standards of quality are to be improved and if wastage of human and material resources is to be prevented, industry must come forward to organise intensive training programmes on the job itself for the vast army of workers in industry. The example of industry in advanced countries is worthy of emulation. There, industry plays a very important role in imparting technical training to young people. The State does its part of the job by setting up technical schools, institutions and colleges and the industry does its own part by admitting for training boys from vocational and general schools. In Britain, for instance, most firms have well-organised courses of training and the trainees are expected, under the terms of their indenture, to attend vocational, evening or one day-a-week release classes. The latest trend has been for establishments to have their own pre-apprenticeship whole-day classes or to allow boys to attend the nearest school for one day a week till they attain the age of 18. Thereafter, for the rest of the period of apprenticeship, the boys are enabled to attend technical schools or institutions in the evenings to study for their vocational certificate or diploma. In fact, in Britain, training in actual practice of the craft continues to rest with the employers, although it is usual to supplement this by regular study which includes the basic science and technology.

In West Germany, we are told, there is a high degree of Governmental control over apprenticeship backed by statutes. The associations or federations of industry have organised apprenticeship schemes and almost every employer admits and trains a number of young boys. Regular tests and examinations are held and certificates of proficiency are granted. The employers pick the best among the apprentices, who have shown aptitude and ability to gain by further experience to qualify themselves for a master certificate, and give them the required training facilities. Some of the more promising of them would eventually become supervisors, superintendents, and may even rise higher up in the ladder and hold top technical positions in due course. In Australia, too, apprenticeship of technical workers is regulated by legislation.

Advani Committee's Recommendation

The apathy of employers in India, barring, of course, a few, to the training of young men and the slow progress of the National Apprenticeship Scheme introduced by the Union Ministry of Labour (so far only 1,215 apprentices have been trained under the scheme) have forced the Government to introduce legislation to make training of apprentices compulsory for employers. It may be recalled here that legislation for this purpose was also recommended by the Advani Committee on Apprentice Training as appointed by the Small-scale Industries Board. The purpose of the Bill now before Parliament is to ensure full utilisation of the training facilities available and to regulate the programmes of practical training in industry. Although, to start with, employers were opposed to making apprenticeship compulsory by law, they have been persuaded to give their consent to the broad lines on which legislation has been proposed.

Legislation can at best result in an increase in the number of young men given training every year. The quality and standard of training, which are important if the trainees are to be an asset to the industries, depend largely on the facilities and opportunities provided by the employers. If the latter do not implement the training programme wholeheartedly but consider it only as another imposition by the Government, the standards of training are bound to go down. The worst sufferers of this outcome will be the employers themselves. Every employer should, therefore, regard such training as of the utmost importance and the facilities provided in his establishment as his personal contribution to national development and to the preservation of the system of private enterprise. It is to be hoped that the Technical Training Week will have helped in promoting a healthy awareness of the importance of training and will inspire an intensive effort to improve and expand the facilities available in the country.

GAINS OF U.S. LABOUR

On Monday, 4th September, the United States observed its annual celebration of Labour Day, the American holiday dedicated to honouring the working men and women of the nation. This year the holiday had special meaning for millions of workers who benefit from the 1961 amendments to the Fair Labour Standards Act, raising the national minimum wage in progressive steps to $1.25 an hour and extending the protection of the Act to 3.6 million workers in the retail and service trades. The amendments came into force on 3rd September, the day preceding Labour Day, and the workers affected received their first pay increases on the payday following the national holiday.

Upward revision of the minimum wage had long been advocated by organised labour as a means of increasing the purchasing power of the people. It was one of the measures proposed by President Kennedy in his legislative programme for spurring the nation's rate of economic growth and combating unemployment. Other major legislation urged by the President provided for extension of unemployment compensation for workers who had exhausted their benefits; loans and grants to depressed areas to stimulate new industry and train workers in new skills; improvements in social security benefits; federal aid to education; federal programmes for expanding low and middle-income housing and a Government-supported re-training programme for workers displaced by technological change.

Labour strongly supported the Administration's proposals, finding in them the promise of fulfilment of many of its own economic and social goals. Most of the measures have been approved by Congress and enacted into law.

Apart from these legislative gains, labour's progress ledger for 1961 showed both plus and minus signs as the year approached the halfway mark. By May, recovery from the mild recession of earlier months was well on the way. Production, led by the steel and automobile industries, was expanding, employment was gaining and labour income was on the rise. In June average weekly earnings of factory workers rose to a record level of $94.24, an increase of $1.34 over the May average and $2.64 above a year ago.

In collective bargaining, wage rates continued to advance but at a slower rate than previously. Average wage settlements at the year's midpoint provided increases of about eight cents an hour. Emphasis in labour-management negotiations was on long-range job security. A number of major contracts included provisions for severance pay, for re-training of workers displaced by technological advance, and for moving workers to other plants.

On the minus side of the ledger, unemployment as usual lagged behind recovery and continued at a relatively high level. Much of it was of the hard core type usually referred to by the economists, as technological or structural unemployment. It results from the displacement of jobs by machines and the development of new production methods for which the worker is untrained.

In a vigorous attack on this problem, President Kennedy laid before Congress a Government-sponsored plan to set up "a new manpower development and training programme, to train or re-train several hundred thousand workers in new occupational skills over a four-year period, in order to replace those skills made obsolete by automation and industrial change with new skills which the new processes demand." The legislation provides for training allowances, including subsistence and relocation allowances for the long-term unemployed. Another move in the same direction was initiated by Labour Secretary, Mr. Arthur J. Goldberg. He established within the Labour Department an Office of Automation and Manpower to plan educational and guidance programmes that will help workers displaced by automation find new employment. The new office will develop proposals for training and placement of workers coming into the economy, and for re-training and replacement of those who must change their places within it.

FIRE — MARINE — ACCIDENT

BIRDS are stepping it up

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

PROTECTION FOR TITANIUM OXIDE EXTENDED

LARGE EXPANSION PLANS UNDER WAY

TITANIUM dioxide is a lustrous, white and non-toxic pigment, which, because of its competitive opacity and chemical stability, is fast displacing traditional colouring materials, such as lithophane, while lead and zinc oxide. The importance of this industry had not been fully realised in the initial stages of its development in the country a decade ago; consequently, when the factory belonging to the Travancore Titanium Products Ltd., the only producer of titanium in India, commenced production in 1952, the Company found it difficult to sell even 300 tons of pigment annually. But, of late, the situation has changed for the better, with the current demand for this chemical from industries like paints, rubber and textiles estimated at about 6,000 tons annually. The development of the industry is in no small measure due to tariff protection, which it has been enjoying since 1953 onwards. Following an enquiry earlier this year, the Tariff Commission recommended continuance of protection to the industry for a further period of three years beyond the end of 1961 at the existing rate of 35 per cent *ad valorem* (preferential) and 45 per cent *ad valorem* (standard). This suggestion has now been endorsed by the Government of India.

The Tariff Commission has pointed out, in its report on the industry, that, during the seven years of protection, the industry has shown good progress in production and succeeded in improving operating efficiency and bringing down costs. The Commission has, however, accepted the industry's argument that, in view of its programmes for expansion and diversification, it has a legitimate claim for continuance of protection.

Installed Capacity

At the time of last enquiry (1957), the installed capacity of Travancore Titanium was 1,830 tonnes annually. It had then a plan to expand its capacity to 3,660 tonnes at a cost of Rs. 76 lakhs. The first stage of expansion programme had been completed at the time of the latest enquiry, bringing the total capacity to 2,900 tonnes. The second stage of expansion is scheduled to be completed this year, thus, raising the total capacity to 3,660 tonnes, which include about 900 tonnes for rutile variety. A sulphuric acid plant, with a daily capacity of 50 tonnes, has also been commissioned by the Company. In addition, the Company has taken up another expansion scheme to raise its capacity to 6,600 tonnes per annum. The scheme, which will be undertaken next year, will entail an additional capital outlay of Rs. 22.23 lakhs, and this will be met from the Company's own resources.

As readers are already aware, the Travancore Titanium will lose, in the not distant future, the distinction of being the sole producer of this modern pigment. A new undertaking of Messrs. Nowrosjee Wadia and Sons Ltd., Bombay, has been granted a licence for the establishment of a new titanium dioxide unit in the name of Botanium Ltd., with an annual capacity of 4,470 tonnes, as against 6,600 tonnes which the Travancore Titanium is expected to attain in a couple of years from now. This proposed new unit of Wadias is expected to secure the technical collaboration of the British Company, the *Laporte* Titanium Ltd. It will also put up a sulphuric acid plant, with a capacity of 100 tonnes daily. The new company proposes to produce 3,300 tonnes of anatase grade and 1,100 tonnes of rutile grade of titanium dioxide per annum. Its factory, which is expected to go into production by 1963, will be located near Thana (Maharashtra State). The total capacity for the production of titanium dioxide will thus rise to 11,070 tonnes per annum by the end of 1963.

Production

The production of titanium dioxide has been steadily going up in recent years. Thus, the total production rose from 1,701 tonnes in 1957 to 1,743 tonnes in 1958, 1,872 tonnes in 1959 and 2,721 tonnes in 1960. In 1961, the Company expects to produce 2,700 tonnes of anatase, and for the first time 900 tonnes of rutile from the middle of the year. During the years 1962 and 1963, the Company expects to produce about 1,800 tonnes each of anatase and rutile.

According to the Development Wing, the current demand is about 5,080 tonnes (comprising anatase 3,861 tonnes and rutile 1,219 tonnes), as compared with about 2,600 tonnes in 1957 and no more than about 400-500 tons in 1953. It expects the demand to go up to 6,096 tonnes (anatase 4,572 tonnes and rutile 1,524 tonnes) in 1962 and further to 8,128 tonnes (6,096 tonnes of anatase and 2,032 tonnes of rutile) in 1963. The producer's estimate, however, is 5,588 tonnes for 1961 and 6,706 tonnes for 1962 and 8,738 tonnes for 1963. The sole selling agents of the product, Messrs. T. T. Krishnamachari and Co., have placed the demand at 6,060 tonnes for the current year and 7,482 tonnes for 1962 and 8,685 tonnes for 1963. A broad picture of the pattern of demand for this pigment can be had from the breakdown figures furnished by the selling agents. The major consumers:

(Estimates in tonnes)

	1961	1963
Paints	3,674	5,299
Rubber	918	1,230
Textiles	436	581
Vitreous enamels ...	224	325
Printing ink	183	265
Rayon	147	256
Plastics	156	243
Paper	67	109
Soap	94	122

Consumption

The Tariff Commission has estimated the total demand for titanium dioxide at 6,000 tonnes for 1961 and 8,500 tonnes for 1963. On the basis of sales and imports, the apparent consumption of titanium dioxide was 3,279 tonnes in 1959 and about 4,335 tonnes in 1960. The total imports, despite the restrictive import policy, rose from 552 tonnes in 1957 to 1,635 tonnes in 1960. The entire demand for rutile has so far been met by imports. The following table shows the value of imports in 1960, as compared with the previous three years:

(In Rs. lakhs)

	Anatase	Rutile	Total
1960	15.53	24.56	40.09
1959	14.99	19.27	34.26
1958	10.09	9.64	19.72
1957	6.49	8.26	14.75

The imports of titanium are bound to come down in the years to come in view of the expansion in domestic production, particularly the development of the rutile grade pigment. The prospects for the growth of the industry in India are quite bright. For its major raw material, namely, ilmenite, is available abundantly from indigenous sources. The beach sands of certain parts of Kerala are rich in ilmenite. The new unit to be established near Thana will "in the beginning use ilmenite from Kerala." This unit, according to the Tariff Commission, expects to utilise the deposits at Ratnagiri, "when they are proved."

Raw Materials

Ilmenite sand is supplied by the Travancore Minerals Ltd., a Government Company, the shares of which are held by the Central Government and State Governments of Kerala and Madras. It is supplied to the manufacturer at naked ex-works price which at present is about Rs. 59 per tonne. This is the same as the export price. In this connection, the Tariff Commission has reiterated its recommendation in its previous report that ilmenite should be made available to indigenous producers at a lower rate than at present. In the resolution on the report, the Government of India simply says that the attention of the Travancore Minerals is drawn to this recommendation for "examination and such action as may be feasible." Since this Company is in the public sector, it lies in the power of the Government to make this raw material available to the domestic industry at a cheaper rate than that charged for exports. It is not clear, therefore, as to why there should be such a long delay in coming to a decision on this vital point. After all, the requirements of ilmenite by the domestic industry are only a fraction of the total export of ilmenite. And, if the price of the raw material is reduced, the export prospects for titanium dioxide itself will become more favourable.

Besides ilmenite, there are certain other raw materials required by the industry, such as sulphuric acid, scrap iron and also some auxiliary chemicals. All the basic raw materials as well as most of the auxiliary chemicals are indigenously available.

The quality of indigenous titanium dioxide is said to be quite satisfactory. The product conforms to the specification of the Indian Standards Institution. The Tariff Commission has, however, struck a note of warning that the industry should not content itself with present quality of its products but must carry out research and make reasonable diversification of the grades produced, so that, when there is a substantial demand for any grade, indigenous production might be started.

The price of domestic product compares well with that of imported variety. Fair ex-works price (inclusive of freight and delivery charges) of the domestic product is Rs. 2,173 per tonne for anatase and Rs. 2,588 per tonne for rutile. For anatase, the c.i.f price per tonne of the U.K. product is Rs. 2,320-2,373, that from West Germany Rs. 2,195-2,453. The price of the Japanese product only is lower than the Indian quotation, the former being Rs. 2,040. If the clearing charge of Rs. 102 is added, the Japanese price comes to Rs. 2,142. This means that the excess of fair ex-works price over landed cost is so small as Rs. 31 or 1.52 per cent for anatase. For rutile grade made in India, ex-works price works out at Rs. 2,588, which is, however, pretty high as compared with the c.i.f. price of Rs. 2,090-2,186 for the pigment from Japan, and Rs. 2,200-2,500 for that from the U.K. When the delivery charge of Rs. 104 is added to the lowest quotation (Japanese), the landed cost without duty comes to Rs. 2,184 per tonne, the excess over ex-works price being Rs. 404, or about 20 per cent. On this basis, a protective duty of 20 per cent for rutile alone would have been sufficient. But the Commission has preferred to maintain the duty at the higher existing rate on both the varieties since it feels that extension of protection at that level will enable the industry to increase its capacity and operational efficiency so necessary for taking care of the future needs of the country. Larger production, it is needless to add, will ultimately enable the producer to bring down the price for the consumer.

CENTRAL WAREHOUSING CORPORATION

The Central Warehousing Corporation, the annual general meeting of which was held at New Delhi on the 17th inst., has made striking progress during 1960-61. There was an all-round increase in the number of Central and State warehouses established, their storage capacity, stocks handled, revenue received from storage charges and advances made by the banks to depositors on the basis of warehouse receipts. The number of Central warehouses rose from only 27 in 1959-60 to 40 in 1960-61, thus fulfilling the second Plan target. The number of warehouses opened by the State Corporations increased to 266, as against 148 at the end of 1959-60. New Central warehouses were opened at Hyderabad, Tenali and Adoni (Andhra Pradesh), Nadiad (Gujarat), Trichur (Kerala), Virudhunagar (Madras), Sainthia and Sheoraphulli (West Bengal), Gulbarga (Mysore), Bhatapara (Madhya Pradesh), Gauhati (Assam), Theog (Himachal Pradesh) and Delhi.

The storage capacity of Central warehouses rose from 14,040 tons to 79,020 tons. The revenue collected from storaged increased from Rs. 3,81,198 to Rs. 7,87,505. At the end of the year, outstanding advances made on the basis of warehouse receipts stood at Rs. 5 crores, as against Rs. 2.86 crores a year ago.

The Corporation has approved project reports for the construction of additional warehouses at 34 centres, with a total storage capacity of 163,400 tons at an estimated cost of Rs. 231.27 lakhs. Warehouse, buildings, with a storage capacity of nearly 27,000 tons, have been completed so far at Amravati and Sangli (Maharashtra). Warangal (Andhra Pradesh), Davangere (Mysore), Sriganganagar and Kota (Rajasthan) and Morena (Madhya Pradesh). The Corporation is said to have taken steps to accelerate its construction programme, so that warehouses at present located in hired accommodation may be shifted to new buildings constructed on modern and scientific lines. The State Corporations have also undertaken construction of their own buildings at more than 20 centres in the country so far.

LEIPZIG AUTUMN FAIR

The one-week International Autumn Fair of consumer goods held at Leipzig, East Germany, came to a close on the 10th inst. On display in its pavilions were over 850,000 exhibits from 45 countries, including India, Soviet Russia, the U.S., the U.K., France, Italy, Czechoslovakia and China. The foreign trade organisations of East Germany concluded contracts worth 2,923 million marks with trading organisations and firms which participated in the fair. Among the East German exhibits, there was wide range of consumer goods, including household articles and agricultural products. Exhibits in the Indian pavilion were, *inter alia*, tea, coffee, jute, coir products and handicrafts.

HANOVER FAIR 1962

The next Hanover Trade Fair will be held from 29th April to 8th May 1962. Several highly industrialised and developing countries are expected to take part in the Fair. It may be recalled here that the 1961 Hanover Fair attracted 5,120 manufacturers, of which 1,015 were from abroad. The range of exhibits included clocks and watches, fine chemicals, optics, electrical and mechanical engineering products.

MARKED RISE IN SALES OF INDIAN CABLE

IMPROVEMENT IN PROFIT, HOWEVER, SMALL

DESPITE a large-scale improvement of Rs. 156.84 lakhs to Rs. 948.20 lakhs in sales during the year ended 31st March 1961, the gross profit of the Indian Cable Company Ltd. (Chairman: Sir John Brown, Calcutta) has risen very nominally by Rs. 5.84 lakhs to Rs. 173.78 lakhs. The reasons for this apparent disparity are, in the words of the Chairman, threefold. In the first place, the downward trend in world copper prices resulted in a loss on the Company's stocks which had to be dealt with in the year's account, whereas a profit had arisen under this head during the previous year. Second, the marked increase in the stocks of finished goods, from Rs. 50.88 lakhs to Rs. 76.13 lakhs, on account of the failure to effect deliveries as a result of transport deficiencies, affected the profit-ratio. And, third, the price reductions effected towards the close of the preceding year led to a further fall in profits. In view, particularly of the last mentioned reason, the net profit stands slightly improved by Rs. 5.18 lakhs to Rs. 85.46 lakhs.

The above figure of the net profit has been arrived at after providing Rs. 3.95 lakhs for Directors' commission, Rs. 17.37 lakhs for depreciation, and Rs. 67.00 lakhs for taxation, the comparative figures for the preceding year being Rs. 3.92 lakhs, Rs. 17.24 lakhs, and Rs. 66.50 lakhs, respectively. The relatively smaller charge for taxation arises mainly from the increase in the development rebate admissible against the year's profits. The cost of financing the expansion, to which a reference is made later in this review, and particularly the provision for a greatly increased working capital which will be required, has imposed the necessity to continue to conserve resources for the time being. It is in these circumstances that, notwithstanding the slight increase in net profit, the Directors have been obliged to recommend the same rate of dividend, namely, Rs. 2.25 per share, subject to deduction of tax, on both the preference and ordinary shares as was declared in respect of the previous year. This has enabled the Company to transfer Rs. 28.43 lakhs, as against Rs. 20.58 lakhs last year, to reserves and provisions and carry forward Rs. 48.73 lakhs, against Rs. 45.64 lakhs brought in.

The progress made by the Company during the past four years is presented synoptically in the table that follows:

(Value in lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	948.20	791.36	720.36	688.52
Internal consumption of goods	12.69	17.89	9.76	1.43
Other income	5.71	7.23	7.59	9.55
Closing stocks of finished goods	76.13	50.88	47.32	45.90
Raw materials, finished goods and stores consumed	600.88	463.89	405.00	407.53
Salaries, wages and bonus	148.52	128.00	109.45	94.46
Other expenses	69.17	60.71	79.88	83.41
Gross profit	173.78	167.94	144.80	111.32

The continued policy of ploughing back a large portion of available profits into business has enabled the Company to build up a financial position of formidable strength. As compared with the issued and subscribed capital of Rs. 248.65 lakhs as on 31st March 1961, the reserves and surplus amount to as much as Rs. 277.91 lakhs. Secured loans stand at Rs. 97.80 lakhs, in addition to current liabilities and provisions of Rs. 310.79 lakhs, giving total current liabilities as Rs. 408.59 lakhs. Against these, current assets, loans and advances, and investments aggregate Rs. 771.37 lakhs. The gross block is carried in the books of the Company at Rs. 317.93 lakhs inclusive of the addition of Rs. 23.14 lakhs made during the year, and has been written down to Rs. 163.79 lakhs.

The full production which was planned to be obtained from the extended plant having been achieved, the Directors, after reviewing the prospects for the industry over the next decade in the light of the indicated expansion of electric power generation and supply throughout the country, came to the conclusion that it would be appropriate to undertake a further expansion in the Company's manufacturing capacity. Licence applications were accordingly submitted for substantial expansion in the production of paper insulated power cables, plastic insulated cables and flexibles, enamelled copper wires, and cotton and paper covered wires and strips. The required licences have now been received and the Company has reached agreements with the I.C.I.C.I. in regard to a foreign exchange loan while negotiations are in progress with the Commonwealth Development Finance Co. Ltd., London, for a similar loan. These two loans should take care of the foreign exchange element in the cost of the latest expansion. The balance of expenditure in rupees, including the additional working capital requirement, is to be met from internal resources and as such the Company does not find it necessary to approach the shareholders for any further finance for the time being.

As regards the prospects for the Company, the Chairman, Sir John Brown, expresses himself as follows:

"....we are now facing greatly increased competition from a number of factories which have commenced production and this will further increase during the next year or two as other new factories come into production. You will naturally be concerned to know the effect which this competition is likely to have on the Company's profits during the coming years. My colleagues and I believe that, provided Government's plans for the expansion of electricity generation and supply during the next five years are implemented, the demand for our manufactures will be such that cable-makers operating at a reasonable level of efficiency should not experience undue difficulty in disposing of their output at a fair margin of profit. The extent of expansion in the generation and supply of electricity throughout the country is undoubtedly the governing factor: it seems reasonable to suppose that, if the lessons of the second Plan have been learnt and if the effects of recent power-shortage throughout the country have been fully appreciated, every effort will be made by those in authority to maintain the planned scale of expansion in electricity supply throughout the third Plan period even if expenditure in other directions has to be cut back or deferred from time to time. If this view is correct, the prospects for shareholders is fair. The latest expansion schemes to which I have referred will involve a reorganisation of certain departments at the factory and this opportunity is being taken of carrying out the replacement of some old plant in the V.I.R. insulated cable section. The reorganisation is bound to result in interruption to production for a time which in turn must be reflected in net profits which, therefore, are unlikely to rise further to any substantial extent until the reorganisation and expansion programme has been completed. Nevertheless, with our long experience in the industry and having regard to the position of financial strength which has been built up over the years, it is reasonable to look forward with sober confidence to a further period of steady growth in the value of our undertaking to the ultimate advantage of shareholders."

The present market quotation for the Company's Rs. 10.00 fully paid-up share is Rs. 37.50 *cum-div.* The net yield on an *ex-div.* basis works out to 4.4 per cent per annum.

(*Concluded from next column*)

has obtained during the year a loan of Rs. 13.06 lakhs, which is secured by the balance in cash credit account with the State Bank of Mysore, Bhadravati. Other current liabilities and provisions total Rs. 48.83 lakhs, giving a total indebtedness of Rs. 61.95 lakhs. This is well covered by current assets, loans and advances of Rs. 68.04 lakhs. The gross block has been well written down from Rs. 166.15 lakhs to Rs. 55.50 lakhs. On the whole, the financial position of the Company leaves nothing to be desired.

Considering the big expansion programme on hand on top of a scheme of replacements, renovation and improvements undertaken in the previous year to secure uninterrupted, maximum efficiency and economy, the future outlook for the Company is bright. The financial position is also balanced properly. However, the new loans and fresh capital issue will have to be supplemented adequately by reserves and surplus. In other words, more profits after taxation and depreciation, will have to be ploughed back to reserves in the years to follow than ever before. At the same time, the Directors will have to keep in mind the need for an adequate return to the investors.

At the current market value of Rs. 20.62, the Company's Rs. 10 fully paid ordinary share offers a return of slightly more than 5 per cent, free of tax.

PROFIT OF MYSORE PAPER SUFFERS SETBACK

OUTLOOK, HOWEVER, PROMISING

REDUCED prices for paper and paper products, fixed by the Union Government from 1st January 1960, in accordance with the Tariff Commission's recommendations, have slightly affected the working results of the Mysore Paper Mills Limited, Bangalore (Chairman and Managing Director: Mr. M. D. Shivananjappa), for the year to 31st March 1961. Sales realisation is lower at Rs. 123.22 lakhs as compared with Rs. 141.31 lakhs in the previous year and so is gross profit at Rs. 21.53 lakhs, as against Rs. 23.71 lakhs previously. The net profit is a little higher at Rs. 8.34 lakhs as against Rs. 8.08 lakhs in the previous year, but this is because of relatively smaller provisions for depreciation and taxation. The dividend on equity capital is, however, maintained at 15 per cent, subject to tax, and gives a net dividend of 10.5 per cent.

Taking the figures for raw materials, stores and spare parts consumed at Rs. 53.70 lakhs against Rs. 60.44 lakhs previously and the closing stock of Rs. 4.67 lakhs against Rs. 1.96 lakh, production during the year under review appears to have been lower. Total expenses declined from Rs. 129.56 lakhs to Rs. 104.13 lakhs, though the essentials like power and fuel cost Rs. 25,000 more at Rs. 17.25 lakhs and salaries, wages and bonus increased from Rs. 21.06 lakhs to Rs. 22.00 lakhs. Income from other sources at Rs. 1.94 lakh is nearly the same as in the previous year.

SECRETARIAT LIBRARY 25 SEP 1961 GOVT. OF KARNATAKA PUBLIC DEPARTMENT

The comparative table below gives an idea as to how the Company has fared over the recent years:

(In lakhs of rupees)

	1961	1960	1959	1958
Sales	123.22	141.31	125.35	108.58
Other income	1.94	1.06	1.76	1.85
Closing stocks	4.67	1.96	4.01	3.13
Raw materials, stores and spares consumed	53.70	60.44	56.05	46.03

* Subject to deduction of tax.

Equipment ordered for the installation of the recausticising unit was received during the year under review, and the machinery was installed and put into service. Improvement is expected now in the working of the soda recovery plant, and the bamboo pulp plant will operate smoothly, with the result that the percentage of caustic soda recovery will increase and the costs will be minimised. Necessary import licences for the machinery needed for stepping up production from 8,000 tons to 18,000 tons have been obtained and negotiations with foreign suppliers have been completed. Negotiations for securing loans of Rs. 200 lakhs—Rs. 70 lakhs from the Commonwealth Finance Company, Ltd., London; Rs. 70 lakhs from the Industrial Credit and Investment Corporation of India Ltd., Bombay, in foreign currencies to cover expenditure for importing plant and machinery; and Rs. 60 lakhs from the Industrial Finance Corporation of India to cover part of local expenditure—have been successfully concluded, the three institutions having agreed to lend the requisite amounts. The necessary permission for the foreign exchange loans has also been secured. The Controller of Capital Issues has sanctioned the Company's proposal to issue 10 lakh ordinary shares of Rs. 10 each at a premium of Rs. 2 per share, and steps are being taken to issue the shares to the existing shareholders.

Meanwhile, the last instalment of Rs. 4 lakhs due to the Industrial Finance Corporation of India for a Rs. 50-lakh loan has been paid. The Redemption Fund for the loan has been closed and the amount of Rs. 12.50 lakhs transferred to the general reserve which now stands at Rs. 25 lakhs. Reserves have been augmented by transferring Rs. 4.20 lakhs during the year, as against Rs. 3.64 lakhs previously, from the profits available for appropriation. (Dividend equalisation fund gets as much as Rs. 2.50 lakhs and the reserve for development rebate Rs. 1.70 lakh, against Rs. 0.63 lakh and Rs. 0.80 lakh respectively in the previous year.) Reserves and surplus now total Rs. 37.49 lakhs and cover adequately the issued capital of Rs. 25.00 lakhs, all on equity shares of Rs. 10 each. The Company

MUKAND IRON FORGES AHEAD

EXPANSION PLANS MAKE SATISFACTORY PROGRESS

THE financial and production results of the Mukand Iron and Steel Works Ltd. (Managing Agents: Jeewan Ltd., Bombay) for the year ended 31st March 1961 make impressive reading. Thanks, in the main, to the comfortable supply position of billets, the Company's total output of steel castings and rolled products witnessed a substantial expansion during the year under review. Thus the production of rolled products shot up from 46,299 tonnes in 1959-60 to 69,552 tonnes, representing an increase of 50 per cent, and that of steel castings from 4,284 tonnes in 1959-60 to 5,624 tonnes or by 31 per cent. The Directors have, in fact, stated in their report to the shareholders that the Company's mills could have rolled half as much more of rolled products, if the supplies of billets had been still more abundant.

On the financial side, too, the performance of the Company is quite excellent. Sales have advanced by as much as 51 per cent from Rs. 422.11 lakhs to Rs. 637.45 lakhs. Reflecting partly the higher level of output and the increased costs of materials, the value of raw materials, stores, power, etc. consumed has risen very sharply from Rs. 299.29 lakhs in 1959-60 to Rs. 460.90 lakhs or by 53 per cent. But, as the other manufacturing expenses, which include salaries and wages to staff, have expanded only modestly by Rs. 25.60 lakhs to Rs. 109.73 lakhs, the gross profit was able to expand by 69.7 per cent to Rs. 68.64 lakhs, as compared with that for 1959-60 at Rs. 40.43 lakhs. The increase in net profit, however, is only modest; at Rs. 21.68 lakhs, the net profit shows a rise of no more than Rs. 3.43 lakhs or just 18 per cent. This relatively small growth in net profit is principally due to the fact that the Company had to provide Rs. 18.25 lakhs more for taxation at Rs. 31.50 lakhs and Rs. 4.38 lakhs more for depreciation at Rs. 9.74 lakhs. In keeping with the enhanced gross earnings, the commission to Managing Agents has risen from Rs. 3.57 lakhs to Rs. 5.72 lakhs.

It is noteworthy that, out of the net profit of Rs. 21.68 lakhs, the Directors have conserved as much as 55.3 per cent or Rs. 11.99 lakhs for financing future expansion and utilised only Rs. 10.40 lakhs for distribution to different classes of shareholders. The dividend on 5 per cent preference shares absorbs Rs. 46,000 and that on deferred shares Rs. 2.72 lakhs. The dividend on ordinary shares has been maintained at the previous year's level of 12 per cent gross or 9.4 per cent net but on a higher paid-up capital. Thus, as the dividend on a *pro rata* basis on 409,033 partly paid shares takes up Rs. 2.46 lakhs, as against only Rs. 61,335 last year, the aggregate sum required for paying the dividend on ordinary shares amounts to Rs. 7.22 lakhs, as compared with Rs. 5.38 lakhs last year. The net dividend of 8.4 per cent for the year under review is, it may be noted, lower than the tax-free dividend of 10 per cent for 1958-59 and much less than that for 1957-58 at 12 per cent.

The progress of the Company in the past four years is presented in a nutshell in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	6,37.45	4,22.11	3,56.10	3,03.01

* Subject to deduction of tax.

It is heartening to note that the Company has commenced regular supplies of centre buffer couplers to the Indian Railways. The progress of the output of roller-bearing, axle-boxes, automobile components and steel castings for sugar machinery manufacturers is stated to be quite satisfactory.

The Company's expansion programme was held up as a result of a dispute regarding the acquisition of land at Kalwe, Thana. This dispute has been fully settled and the preliminary work has commenced at the site. During the pendency of the land acquisition proceedings, the Directors accorded a more thorough consideration to the entire project and have decided to specialise in the production of wire rods of various qualities. In accordance with this decision, the Company intends to set up a wire rod mill in addition to the originally planned installation of equipment for increasing substantially the steel milling capacity of the works. Furthermore, the Company has planned a three-year expansion programme for its foundry at the Kurla Works, which is scheduled to be completed in two stages. In the first stage, covering the initial two years, the capacity of the foundry will be increased to 750 tonnes per month and in the second stage to 1,000 tonnes per month.

The outlook for the current year will be primarily governed by the supply position of billets. In this connection, the Directors have stated that, though the Government of India had indicated that billets would be allocated to the re-rolling industry in the current year on the basis of its performance in the year ended 31st March 1961, the supplies are not in keeping with this criterion. It may be underlined that if the re-rolling industry has to complete its targets of production and satisfy the requirements of the railways and engineering industries like machinery manufacturers which are quite vital to the rapid industrialisation of the country, the allocation of billets to the Mukand Iron and Steel Works and other similar units must be adequately carried out.

The balance-sheet as on 31st March 1961 discloses a sound financial position. As the Company had redeemed the entire block of 1,000 five per cent cumulative preference shares of Rs. 100 each on the last day of March 1961, the paid-up capital is lower by Rs. 10 lakhs at Rs. 61.43 lakhs comprising Rs. 60.17 lakhs in 806,439½ ordinary shares of Rs. 10 each and Rs. 1.25 lakh in 12,483 deferred shares of Rs. 10 each. The reserves and surplus at Rs. 57 lakhs, constitute more than 92 per cent of the paid-up capital. As against the paid-up capital and reserves of Rs. 118.43 lakhs, the gross block of the Company is valued at Rs. 138.14 lakhs and is well written down to Rs. 87.71 lakhs. The Company's secured loans have been reduced by Rs. 32.41 lakhs to Rs. 15.32 lakhs, of which the loan from the Industrial Finance Corporation accounts for Rs. 12.95 lakhs. In addition, it has outstanding current liabilities and provisions of Rs. 84.60 lakhs. Against this total indebtedness to outsiders of Rs. 99.92 lakhs, the current assets, exclusive of investments of Rs. 10.61 lakhs, amount to Rs. 120.03 lakhs, showing a comfortable surplus of Rs. 20.11 lakhs.

The Rs. 10 fully paid shares of the Company are currently quoted on the Bombay Stock Exchange at Rs. 27.60 *cum-div.* On an *ex-div.* basis and at the proposed rate of dividend, the net yield works out to 3.7 per cent per annum. These shares are held in high esteem by investors and enjoy a ready market even at the current low yield. There are strong expectations in market circles that the Company has a further big expansion scheme and that right shares may be offered in the not distant future.

(Concluded from next column)

present capital of Rs. 56.94 lakhs, comprising 500,000 ordinary shares of Rs. 10 each and 6,948 9.1 per cent taxable cumulative preference shares is sizably supplemented by reserves and surplus of Rs. 46.71 lakhs. Secured loans have increased during the year from Rs. 129.85 lakhs to Rs. 165.97 lakhs and are secured variously by fixed assets, debenture trust deed and stocks, stores and book debts. Current assets, loans and advances at Rs. 257.46 lakhs, however, far exceed these and other current liabilities and provisions at Rs. 66.96 lakhs. Miscellaneous expenditure, shown at the previous year's level of Rs. 2.24 lakhs, is yet to be written off. Gross block account increased during the year by Rs. 5.01 lakhs to Rs. 103.29 lakhs and has been adequately written down to Rs. 76.92 lakhs.

At the current market value of Rs. 13.87 *ex-div.*, the yield on the Company's Rs. 10 fully paid ordinary shares works out to a little more than 5 per cent per annum, free of tax.

BRITANNIA ENGINEERING

ALL-ROUND PROGRESS

A FURTHER all-round progress in the face of nearly Rs. 10-lakh rise in costs of operations highlights the working results of the Britannia Engineering Company Limited (Managing Agents: Messrs. McLeod and Company Ltd., Calcutta) for the year ended 31st December 1960. Sales turnover has increased sizably from Rs. 185.64 lakhs to Rs. 198.79 lakhs, and so has gross profit from Rs. 18.86 lakhs to Rs. 22.10 lakhs and net profit from Rs. 6.53 lakhs to Rs. 9.19 lakhs. Relatively, production must have gone up modestly, considering the small increase of Rs. 2 lakhs to Rs. 179.46 lakhs, in the cost of raw materials and stores consumed and stocks and work-in-progress at the close of the year. Other expenses have risen to Rs. 77.42 lakhs from Rs. 70.18 lakhs in the previous year and Rs. 49.70 lakhs in the year before that. While practically all items cost more, wages, commission and royalty together account for an increase of more than Rs. 3.50 lakhs. Last year, the Directors stepped up the dividend on equity capital from 6 per cent, free of tax, to 10 per cent, subject to deduction of tax, or 7 per cent, tax-free, and the same is maintained for the year under review, albeit on the increased capital of Rs. 50 lakhs, absorbing Rs. 5 lakhs against Rs. 4 lakhs previously. The 6 per cent tax-free preference shares now get a dividend of 9.1 per cent, subject to deduction of tax, and accordingly additional dividend of Rs. 2.10 per share has been recommended for the previous year. In consonance of improved results, the Directors have transferred Rs. 3.35 lakhs, against Rs. 1 lakh last year to development rebate reserve.

The recent progress of the Company is brought out in the comparative table below:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1959
Sales and work done	1,98.79	1,85.64	1,57.94	1,22.85

* Subject to deduction of tax.

† Including Rs. 0.15 lakh paid at Rs. 2.10 per share for the previous year.

‡ On increased capital of Rs. 50 lakhs.

Note.—The Company's preference shares originally carried a dividend of 6 per cent, per annum, tax-free, but it has been raised from the last year to 9.1 per cent., subject to deduction of tax, and the previous year's dividend has accordingly been paid now.

Last year's plans for further diversification of the Company's activities have come to fruition, with the finalisation of a collaboration agreement with Messrs. Machine Outils Somua, Paris, France, for the manufacture of milling machines, which has also been approved by the Government of India. Planning has begun and production is expected to start in the near future. A few additional lines of production in collaboration with some well-known foreign firms will be taken up soon at the Company's plants at Titaghur and Mokameh and, with these, the unit is expected to assume a much bigger size than what it commands at present. This programme of diversification and expansion is to be financed by a Rs. 50-lakh loan from the Industrial Finance Corporation of India. The Company has also received the consent from the Controller of Capital Issues for raising the capital by Rs. 50 lakhs. The authorised capital has already been raised from Rs. 1 crore to Rs. 2 crores.

With the completion of an educational order for 250 wagons, the wagon factory at Mokameh has effectively overcome the teething troubles. With proper manufacturing methods and technique, smooth flow of production has been achieved. The factory has received a further order for 575 Nos. CF type BG wagons from the Railway Board, and indications are that orders for more wagons for metre-gauge will come through in the near future. The Company is well set on the road to prosperity.

However, future profits will have to go to consolidate the financial position of the Company, particularly in the light of the new I.F.C. loan and the proposed increase in capital, a part of which may be issued in the near future. The

(Continued in previous column)

RUIA COTTON GROUP REPORT GRATIFYING RESULTS

BRADBURY AND PHŒNIX RAISE DIVIDENDS

HIGHER sales and increased gross profits characterise the working of the three cotton mills under the management of Messrs. Ramnarain Sons Private Ltd., namely, the Bradbury Mills Ltd., the Dawn Mills Ltd., and the Phœnix Mills Ltd., for the year ended 31st March 1961. This improvement is all the more noteworthy since it has been effected despite a voluntary cut in prices of certain counts of yarn and all varieties of cloth. With the exception of Dawn Mills, the other two have raised the rates of ordinary dividends.

The working of the Bradbury Mills has resulted in an increase of more than 25 per cent in sales, from Rs. 155.80 lakhs to Rs. 196.15 lakhs, and a rise of as much as Rs. 8.36 lakhs to Rs. 17.31 lakhs in gross profit. After providing a higher amount for the agents' commission (Rs. 1.21 lakh, against Rs. 0.52 lakh) and depreciation (Rs. 4.51 lakhs against Rs. 4.20 lakhs) and making a provision of Rs. 5.00 lakhs (against *nil* for 1959-60) for taxation, the net profit shows a rise of Rs. 2.36 lakhs to Rs. 6.59 lakhs. It will be recalled that, during the previous year, no provision for taxation was found necessary. As such, the improvement in net profit during the year under review is really substantial.

Despite a rise of Rs. 10.25 lakhs in sales, the gross profit of the Dawn Mills has improved only marginally from Rs. 30.46 lakhs to Rs. 31.29 lakhs. The explanation for this is afforded by the fact that, unlike its sister concerns, the Dawn Mills is engaged mainly in the manufacture of yarn. The prices of certain counts of yarn were reduced during the year, leading to a lowering of the profit-margin, and, although the position was alleviated partially by increased sale of hosiery goods, the net effect was still adverse.

During the year under review, the Phœnix Mills increase the sale of yarn, cloth and waste by Rs. 17.42 lakhs to Rs. 314.90 lakhs and the gross profit by Rs. 5.34 lakhs to Rs. 36.62 lakhs. After providing Rs. 2.75 lakhs, as against Rs. 2.64 lakhs for agents' commission, Rs. 6.78 lakhs as against Rs. 6.75 lakhs for depreciation, and Rs. 12.00 lakhs as compared with Rs. 10.50 lakhs for taxation, the net profit stands improved by Rs. 3.70 lakhs to Rs. 15.09 lakhs.

With a larger profit available, the Directors of the Bradbury Mills have recommended a higher ordinary dividend of 25 per cent subject to deduction of tax, as against 10 per cent, subject to deduction of tax, a year ago. On a tax-free basis, the proposed dividend works out to 17.5 per cent and compares quite favourably with 10 per cent, free of tax, for 1958-59 and 15 per cent, free of tax, for 1957-58. The cut in dividend in the previous years has thus been more than fully restored.

Due to the unsatisfactory profit position, the Directors of the Dawn Mills, however, have been constrained only to maintain the ordinary dividend at 30 per cent, subject to deduction of tax. A higher dividend would have been permissible, had it not been for the fact that tax liabilities for a previous year amounting to no less than Rs. 4.50 lakhs had to be provided for from the profit for the year under review. In any case, a dividend of 30 per cent itself is quite handsome and its maintenance alone is sufficient for satisfaction among shareholders.

For the second year in succession, the Directors of the Phœnix Mills have raised the rate of ordinary dividend for the year from 15 per cent, subject to deduction of tax, to 20 per cent, subject to deduction of tax. This has been done only after transferring Rs. 4.31 lakhs to reserves, as against Rs. 1.73 lakh last year. The balance left to be carried forward is still substantial at Rs. 4.01 lakhs, as against Rs. 2.83 lakhs brought in.

The results of operation of the three companies during the past three years are set forth in the accompanying table from which it will be observed that there has been a consistent improvement in the working of all the three units. With an increase in the offtake of cloth and demand for yarn in the internal markets as a result of an improving standard of living, this trend can be expected to continue, other things remaining the same.

Under the scheme of modernisation and renovation, all the three mills continued to make sizable additions to plant and machinery. The Bradbury Mills have spent Rs. 3.51 lakhs towards addition to fixed assets, over and above Rs. 7.94 lakhs spent during the previous year. The Dawn Mills have added new machinery worth Rs. 4.74 lakhs and the Phœnix Mills have increased the book value of their assets quite sizably by Rs. 8.83 lakhs through the purchase of new equipment.

A glance at the following table, presenting a synopsis of the latest balance-sheets will show that the financial position of each mill is fairly strong. In all cases, the reserves exceed the subscribed share capital by a fair margin. The current liabilities are more than fully covered by current assets and the gross block has been well written down.

(In lakhs of rupees)

	Bradbury	Dawn	Phœnix
LIABILITIES	Rs.	Rs.	Rs.
Paid-up capital	24.85	28.00	48.00
Reserves and surplus	35.98	31.10	99.31
Borrowings	56.50	27.86	89.58
Other current liabilities and provisions	32.10	77.18	91.02
	Rs. 149.43	164.14	297.86
ASSETS			
Gross block	89.54	102.39	189.78
Less—Depreciation	57.46	68.42	129.96
Net block	32.08	33.97	60.42
Investments	4.20	3.80	5.52
Current assets, loans and advances	113.15	126.37	232.58
	Rs. 149.43	164.14	297.86

The current market prices of the Rs. 50.00 fully paid shares of Bradbury and Dawn and the Rs. 100.00 fully paid share of Phœnix are Rs. 141.50, Rs. 132.00, and Rs. 178.00 respectively, *cum-div.* On an *ex-div.* basis, these yield a net annual return of 6.6, 8.6 and 8.5 per cent, respectively.

ASHOK LEYLAND'S GEAR CUTTING SECTION

Another major development in the manufacturing programme of Ashok Leyland Ltd. is the commissioning of the new gear cutting section. Covering an area of over 7,000 sq. ft., the new gearbox section is equipped with a battery of lathes, gear shapers, hobbing and grinding machines costing over Rs. 30 lakhs which are installed on vibration-proof foundations. The important machines employed are the famous Swiss "Maag" gear grinding precision machines for grinding the involutes of the spur and helical gears in almost all the gears involved in the gearbox to very fine limits, Potter and Johnston automatic machines fitted with pneumatically operated chucks and special capstan lathes of the Herbert No. 7 and No. 2D types for turning operations and the "Orcutt" spline grinders for accurate machining.

The type of gearbox taken up for manufacture is the GB-241 5-speed constant mesh, heavy-duty type as fitted to Ashok Leyland Comets. This gearbox has earned a name for quietness of operation and has withstood the toughest treatment over a number of years. Consistent with the manufacture of the gearbox is the training of operators and setters by two technicians, one from Albion Motors Ltd. and the other from Leyland Motors Ltd.

MYSORE CHEMICAL MANUFACTURES

PROFIT LOWER, BUT DIVIDEND SAME

THE Mysore Chemical Manufactures Ltd. (Managing Director: Mr. S. Ramanathan) is the first company to manufacture copper sulphate in India which is an excellent fungicide for spraying coffee, rubber, grape, paddy, cotton, coconut and other crops. Besides the manufacture of this heavy chemical, the Company is also producing sulphate of alumina and alum.

During the year ended 31st March 1961, the production of copper sulphate increased by 6.1 per cent to 1,433 tons, but that of sulphate of alumina, alum, etc. dropped by 48.7 per cent to 1,219 tons. The receipts from sale of finished goods, excluding fertilisers, fell slightly for the second year in succession to Rs. 28.29 lakhs from Rs. 28.89 lakhs in the previous year and Rs. 29.85 lakhs in 1958-59. The small fall in receipts is attributed to competition, but it seems remarkable that, despite a sharp reduction of 48.7 per cent in production, sale proceeds have suffered only a fractional decline. The income from sale of fertilisers, which had increased sharply in the previous year from Rs. 1.13 lakh to Rs. 4.95 lakhs, went up further to Rs. 5.15 lakhs during the year under review. The gross profit of the Company has dropped by nearly Rs. 1 lakh from Rs. 6.19 lakhs to Rs. 5.22 lakhs on account of increase in the cost of raw materials and manufacturing expenses. The net profit, however, is a shade better, due chiefly to lower provision for taxation. The credit to depreciation account, however, has been stepped up a little. The dividend on ordinary shares has been comfortably maintained at 20 per cent per annum, as will be seen from the comparative table below showing the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale of finished goods	28.29	28.89	29.85	23.85
Sale of fertilisers	5.15	4.95	1.13	0.04
Handling charges on fertilisers	0.23	0.86	..	..
Work in process	0.49	0.44	0.66	0.42
Stock of finished goods	3.20	2.87	5.52	6.66
Raw materials consumed	16.43	15.59	14.28	16.52
Other expenses	7.31	6.86	6.06	4.85

Net profit	2.43	3.04	2.31	1.15
To reserves	0.03	0.18	0.88	1.56
Dividends—				
Preference	0.19*†	0.12*	0.12	0.12
Ordinary	1.60 (20%)*	1 60 (20%)*	1.20 (20%)	1.20 (20%)
Carry forward	1.45	0.85	0.41	0.25

* Subject to deduction of tax.

† Includes Rs. 0.04 lakhs for previous years.

The Company's financial position is strong. The paid-up capital, which was increased by a bonus equity issue of one for three shares in 1959-60 stands at Rs. 10 lakhs (Rs. 2 lakhs in 6 per cent cumulative tax-free preference shares of Rs. 10 each and Rs. 8 lakhs in ordinary shares of Rs. 10 each). The reserves and surplus are higher at Rs. 6 lakhs as compared with Rs. 5.37 lakhs a year earlier, due to the larger amount carried forward. The secured and unsecured loans have risen from Rs. 15.93 lakhs to Rs. 18.56 lakhs in view of the need for financing large quantities of nitrogenous and other fertilisers allotted by the Coffee Board for marketing. The total of all current liabilities and provisions is Rs. 27.48 lakhs; these are well covered by the current assets at Rs. 37.61 lakhs. The gross block of the Company of Rs. 12.57 lakhs is heavily written down to Rs. 5.87 lakhs, following the provision of Rs. 6.70 lakhs for depreciation.

The current market quotation of the Rs. 10 full-paid ordinary shares of the Company is Rs. 23.85 *cum-dividend*. On an *ex-dividend* basis, the net yield works out to 6.2 per cent., taking the net dividend at Re. 1.40 per share.

STURDIA CHEMICALS

The Sturdia Chemicals Limited, Bombay, has been granted consent to issue capital of the nominal value of Rs. 30 lakhs in equity shares of Rs. 10 each for cash at par. The proceeds will be utilised for establishing the manufacture of precipitated and activated calcium carbonate, in collaboration with Messrs. John E. Sturge, Ltd., of Birmingham, U.K., who will be offered shares of the value of Rs. 9 lakhs, partly for cash and partly for consideration other than cash.

ROHTAS INDUSTRY SUFFERS SETBACK

REASONS NOT OF ITS MAKING

INADEQUATE and irregular supply of power, *transport bottlenecks, enhanced production* costs and unremunerative prices fixed by the authorities for sugar, cement and paper have adversely affected the working results of the Rohtas Industries Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) for the year ended 31st March 1961. Power supply from the D.V.C. was interrupted as many as 64 times on account of tripping of the D.V.C's equipment. The Company's internal power generation was also obstructed by shortage of good quality coal. Despatches of finished products, especially paper and paper boards, were held up due to inadequate provision of wagons. Again, the year under review was the first full accounting year, in which the impact of the Tariff Commission's recommendations was felt on realisation from the Company's products. As a cumulative result of the aforesaid factors, the sale proceeds dropped sharply from Rs. 17.64 crores to Rs. 16.24 crores, representing a fall of as much as 7.9 per cent and the closing stocks rose by Rs. 40 lakhs to Rs. 260.39 lakhs. The decline in sales turnover is only partly due to the fall in production. It chiefly reflects the un*remunerative prices fixed by the Tariff Com*mission for cement, sugar and paper. Only in the case of three commodities, namely, paper and paper boards, sugar and caustic soda, did the output suffer a setback. The production of cement, clinker, asbestos cement and *vanaspati*, however, actually registered a rise as will be evident from the following comparative figures for 1958-59, 1959-60 and 1960-61:

(In tonnes)

	1958-59	1959-60	1960-61
Paper and paper boards	47,884	54,021	50,936
Cement	330,576	305,456	314,945
Clinker	274,743	268,658	286,981
Asbestos cement	10,618	9,937	15,510
Sugar	15,175	16,186	14,809
Vanaspati	9,018	10,424	10,655
Caustic soda	5,072	5,071	5,484

In view of lower sales, realisations and heavier cost of production, the gross earnings have declined very precipitately from Rs. 230 lakhs in 1959-60 to Rs. 124.32 lakhs. In spite of the decline in output of sugar, caustic soda and paper, the value of raw materials, stores and spares consumed went up by Rs. 37.85 lakhs to Rs. 842.33 lakhs, or by 4.75 per cent. Other manufacturing expenses which include wages and salaries to staff rose by Rs. 51.80 lakhs to Rs. 465.24 lakhs. In keeping with the reduced output, the outgo under royalty, cess and duties is lower by Rs. 9.61 lakhs at Rs. 261.01 lakhs.

A comparative picture of the working of the Company in the past four years can be had from the following table:

(In lakhs of rupees)

	For the year ended March			For 17 months ended 31-3-58
	1961	1960	1959

* Subject to deduction of tax at 30 per cent.

The Company has *not to pay any managing* agents' commission. The amount provided under depreciation has been reduced by Rs. 17.71 lakhs to Rs. 58.32 lakhs. The Directors have not provided any sum for taxation in view of the relief available to the Company under Section 15C of the Income-tax Act. After deducting the depreciation from gross profit, the net profit works out to Rs. 66 lakhs, as against that of Rs. 118.77 lakhs in the previous year. Because of such a sharp setback to net profit, the amount transferred to reserves has been drastically reduced from Rs. 29.10 lakhs in 1959-60 to Rs. 5.05 lakhs. It may be noted here that the Company had ploughed back as much as Rs. 64.05 lakhs in 1958-59 and Rs. 96.27 lakhs in 1957-58. This comparison clearly shows how the unremunerative ex-factory prices fixed by the Government without any realistic relationship to production costs are impairing the Company's capacity to accumulate adequate funds for financing expansion and unforeseen contingencies. The Directors have also not been able to pay any bonus to employees, who had received Rs. 30.94 lakhs in the previous year. The dividend to ordinary shareholders has been cut down from Re. 1.50 per share, free of tax, for 1959-60 to Re. 1 per share subject to deduction of tax, giving a net amount of 70 nP per share of Rs. 10 each. But, as the Company's ordinary capital had been nearly doubled, from Rs. 250.80 lakhs to Rs. 498.81 lakhs to be precise, during 1960-61 by the issue of 2,480,090 rights shares of Rs. 10 each at par, the amount required for paying even this reduced dividend is Rs. 50 lakhs, which is only a shade lower than that for the preceding year at Rs. 50.16 lakhs.

The Directors have provided a comprehensive review of the difficulties confronting the various manufacturing lines that are being handled by the Company. In fact, their report reflects fully the lack of co-ordination in official policies in the sphere of power supply, transport, provision of raw materials and maintenance imports, and fixation of fair prices.

As stated at the outset, power supply from the D.V.C. was irregular. As cement and paper are processing industries, requiring a continuous flow of electric energy, any interruption in it causes great dislocation and loss of production. On top of the irregularity, the D.V.C. also reduced the quantum of energy for various reasons from time to time. Another serious handicap affecting the profitability of operations of the Rohtas Industries was the imposition of statutory control on ex-factory prices of sugar in South Bihar, which was not in accordance with the costs of manufacture. The quality of sugarcane was also poor.

While the ex-factory price of paper was reduced, the cost of manufacture rose on account of higher prices that had to be paid for stores, chemicals, power and transport. Whatever improvement was secured through greater efficiency was more than neutralised by this adverse development.

During the year under review, the capacity of paper machines was improved, but the same could not be utilised fully for want of pulp. Import licences were not granted to the Company for requisite quantities of pulp to utilise its paper manufacturing capacity although the Government otherwise permitted import of paper involving the use of a larger amount of foreign exchange. Production of paper was also affected by the stoppage of the main board machine on account of fire in one of the sections. Yet another factor that had an unfavourable effect on sales realisation was the rise in excise duty on paper and boards from 22 nP to 35 nP per kilogram of common varieties and 35 nP to 50 nP on other varieties.

In the cement division, costs of manufacture rose sharply, again due to higher costs of coal, stores, spares, increased railway freight and inflated packing charges. The recommendations of the Central Wage Board were implemented with effect from 1st January 1960 and the consequent additional burden was not fully neutralised by an appropriate increase in the retention price of cement.

In spite of the aforesaid difficulties, the Company is going ahead with its plans for expansion, with conndence in the future. It has already received an industrial licence for the manufacture of slag cement. As the demand for asbestos cement is rising rapidly, the Company is actively considering steps to expand the capacity of its plant. In order to meet the shortage of pulp, steps have been taken to expand the capacity of pulp and bleaching plants. Orders have been placed for some of the equipments required for this project. It is also proposed to remodel the existing paper machines, with a view to *expanding the capacity and improving* further the quality of production.

The outlook for the Company in coming years will be governed primarily by the policies followed by the Government in the determination of controlled prices. The Directors anticipate that there will be improvement in the working results if the expected increase in retention price for cement is granted by the authorities. They also expect that, with the increased production resulting from expansion of pulp capacity and improvement in prices and through remodelling of the existing paper machines the position should improve.

The Company's balance-sheet, as on 31st March 1961, discloses a satisfactory financial position. Its share capital increased from Rs. 355.37 lakhs in 1959-60 to Rs. 603.58 lakhs. This comprises Rs. 20 lakhs in 7-9 per cent cumulative preference shares of Rs. 100 each, Rs. 85.05 lakhs in 85,047 4½ per cent cumulative preference shares of Rs. 100 each and Rs. 498.81 lakhs in 4,988,090 ordinary shares of Rs. 10 each. This is supported by reserves and surplus of the order of Rs. 260.57 lakhs. In addition there is share application money of Rs. 9.44 lakhs. The Company's secured loans amount to Rs. 590.49 lakhs. Further, there are outstanding current liabilities and provisions of Rs. 300.98 lakhs. As against a total indebtedness to outsiders of Rs. 891.47 lakhs, current assets, loans and advances aggregate Rs. 770.42 lakhs. Besides, there are investments (at cost) of the value of Rs. 162.72 lakhs. The gross value of the block account rose from Rs. 14.76 crores in 1959-60 to Rs. 15.08 crores. As depreciation provided so far amounts to Rs. 6.76 crores, the net block stands at Rs. 8.32 crores.

Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 15.87 *cum-div.* on the Calcutta Stock Exchange. On an *ex-div.* basis and at the proposed net dividend of 70 nP per share, the net yield on them works out to 4.6 per cent per annum.

COMPANY MEETINGS AND DIVIDENDS

PENCH VALLEY COAL CO., LTD. Annual General Meeting, Calcutta, 28th September 1961. Dividend: 10 per cent or Re. 1.00 per share subject to deduction of tax. Transfer books will remain closed from 18th to 28th September 1961, both days inclusive.

ALEXANDRA JUTE MILLS LTD. Annual General Meeting, Calcutta, 28th September 1961. Dividend: Rs. 44.00 per ordinary share, subject to deduction of tax payable on or after 15th October 1961. Transfer books remain closed from 15th to 28th September 1961, both days inclusive.

AGRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 28th September 1961. Dividend: 11 per cent or Rs. 11.00 per share, subject to deduction of tax. Transfer books will remain closed from 21st to 28th September 1961, both days inclusive.

JUBBULPORE ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 28th September 1961. Dividend: 10 per cent or Re. 1.00 per share, subject to deduction of tax. Transfer books will remain closed from 21st to 28th September 1961, both days inclusive.

SEJAULI TEA CO., LTD. Annual General Meeting, Calcutta, 28th September 1961. Dividend: 22½ per cent or Rs. 2.25 per share, subject to deduction of tax. Transfer books will remain closed from 21st to 28th September 1961, both days inclusive.

PRAGA TOOLS CORPORATION LTD. Annual General Meeting, Hyderabad, Andhra Pradesh, 28th September 1961. Dividend: *Nil*. Transfer books will remain closed from 22nd to 28th September 1961, both days inclusive.

JARDINE HENDERSON LTD. Annual General Meeting, Calcutta, 28th September 1961. Dividend: 7 per cent or Rs. 7.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 14th to 28th September 1961, both days inclusive.

AMALGAMATED COALFIELDS LTD. Annual General Meeting, Calcutta, 29th September 1961. Dividend: 12½ per cent or Rs. 1.25 per share, subject to deduction of tax. Transfer books will remain closed from 19th to 29th September 1961, both days inclusive.

HOWRAH-AMTA LIGHT RAILWAY CO., LTD. Annual General Meeting, Calcutta, 29th September 1961. Dividend: 5 per cent or Rs. 5.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 20th to 29th September 1961, both days inclusive.

DISHERGARH POWER SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th September 1961. Dividend: Rs. 10.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 15th to 29th September 1961, both days inclusive.

ORIENT PAPER MILLS LTD. Annual General Meeting, Brajrajnagar, District-Sambalpur, Orissa, 29th September 1961. Dividend: Rs. 2.25 per ordinary share, subject to deduction of tax, payable on or after 25th October 1961.

ESTRELA BATTERIES LTD. Annual General Meeting, Bombay, 29th September 1961. Dividend: 10 per cent or Rs. 5.00 per ordinary share, subject to deduction of tax, payable on and after 12th October 1961. Transfer books remain closed from 8th to 29th September 1961, both days inclusive.

BISRA STONE LIME CO., LTD. Annual General Meeting, Calcutta, 29th September 1961. Dividend: Rs. 3.00 per share (includes interim dividend of Re. 1.25 per share), subject to deduction of tax. Transfer books remain closed from 15th to 29th September 1961, both days inclusive.

TALAYAR TEA CO., LTD. Annual General Meeting, Kottayam, Kerala State, 30th September 1961. Dividend: 10 per cent or Re. 0.20 per ordinary share, subject to deduction of tax, payable on or after 15th October 1961. Transfer books will remain closed from 23rd to 30th September 1961, both days inclusive.

SONE VALLEY PORTLAND CEMENT CO., LTD. Annual General Meeting, Calcutta, 30th September 1961. Dividend: 4 per cent or Re. 0.20 per share, subject to deduction of tax. Transfer books will remain closed from 25th to 30th September 1961, both days inclusive.

HINDUSTAN WIRES LTD. Second Annual General Meeting, Calcutta, 30th September 1961. Dividend: *Nil*. Transfer books remain closed from 15th to 30th September 1961, both days inclusive.

BENGAL LUXMI COTTON MILLS LTD. Annual General Meeting, Calcutta, 30th September 1961. Dividend: 5 per cent on ordinary shares subject to deduction of tax. Transfer books remain closed from 16th to 30th September 1961, both days inclusive.

* This includes a sum of Rs. 15,00,000 transferred from general reserve.

† Preference dividends are calculated in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: Trading.—The profit for the year shows little variation from that of the previous twelve months, although earnings from the Tea and Engineering Departments were lower and the working results of the Shipping Department continued to be unsatisfactory. Dividend income and revenue from the Jute, Insurance and Agency Departments, however, showed improvement. Income from the Railway Department and miscellaneous trading remained practically unchanged.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	95,00,000	Gross block	21,96,009
Reserves and surplus	80,95,908	—Depreciation	13,63,603
4% Convertible Notes	45,00,000		
Other liabilities	1,47,95,748	Net block	18,32,406
		Current assets	31,35,179
		Investments	2,63,84,693
		Cash	5,42,278
	Rs. 3,68,94,556		Rs. 3,68,94,556

* Paid-up capital consists of: (a) 10,000—5 per cent taxable cumulative first preference shares of Rs. 100 each; (b) 40,000—5 per cent. cumulative second preference shares of Rs. 100 each; (c) 50,000 deferred ordinary shares of Rs. 10 each, and (d) 40,000 ordinary shares of Rs. 100 each. Out of the 40,000 ordinary shares, 5,000 ordinary shares were allotted as fully paid bonus shares by way of capitalisation of reserves.

Malankara Rubber and Produce Co., Ltd.

[*Managing Agents*: John Sons' Estates and Agencies (Private) Ltd., Kotayam, Kerala State.]

Annual General Meeting—29th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (rubber and cocoanuts, etc.)	11,88	11,30
Closing stock (rubber, cocoanut and pepper)	67	1,08
Gross profit	5,21	5,20
Transfer to Managing Agents' remuneration	37	37
,, ,, depreciation	33	33
,, ,, taxation	2,72	2,36
Net profit	1,79	2,09
Adjustments	37*	11
Appropriations:		
Total available balance	2,16	2,20
Transfer to general reserve	Nil	5
Proposed dividend (taxable) Ordinary	2,16† (D. 14% +B. 2%)	2,03 (15%)
Carried forward	‡	10

N.B.—Adjustments include the balance brought forward from the previous year.

* This includes an amount of Rs. 37,000 transferred from general reserve.

D = Dividend. B = Bonus.

† In view of the Golden Jubilee year the directors have recommended payment of an extra 2 per cent as Jubilee Bonus.

‡ A small amount of Rs. 46.93 is carried forward.

Extracts from the Directors' report: *Rubber*: The crop harvested during the season was 3,20,254 kg. (7,06,038 lbs.) including conversion difference at an estate cost of Rs. 4,38,700.20 i.e. 151.97 nPs per kg. compared to 3,03,986 kg. at 157.58 nP per kg. during the previous season. The average crop was 247 kg. (545 lbs.) per acre which is the highest so far obtained. The average price received for the season's rubber was 324.88 nP per kg.

Cocoanut: The crop for the season was 3,96,528 nuts as compared to 5,56,222 nuts obtained during the previous season. The average price realised for the season's crop was Rs. 25.98 per 100 nuts as compared to Rs. 22.39 for the previous year's crop. The lower crop was mainly owing to conversion of about 50 acres of cocoanut area into rubber plantation and also due to rapid spreading of cocoanut disease in our estate also.

Pepper: A crop of 3,447 lbs. pepper including rejections was collected during the season. This crop and the crop for the previous year have not yet been sold.

Capital expenditure incurred during the year was Rs. 83,291.10 of which Rs. 42,067.90 was spent for replanting and new planting of rubber and other development, Rs. 40,313.04 was spent for new buildings etc. and Rs. 914.06 for furniture, fittings, etc.

The amount of subsidy at the enhanced rate received from the Rubber Board during the year was Rs. 49,424 which has also been transferred to development reserve account. Thus the total amount transferred to development reserve account during the year was Rs. 83,215.10. The details of Rs. 31,752.89 shown as deduction in the schedule against land value and development are (1) Rs. 6,665.11 received for the electricity department of the State as compensation for trees cut down by them and (2) Rs. 25,087.78 received by sale of rubber trees, cocoanut trees and other timber cut down from areas intended for replanting or new planting of rubber.

The estimate for the current season is for a crop of 6,50,000 lbs. (2,94,835 kg.) dry rubber at an estate cost of 84.87 nP per pound (187.11 nP per kg.). An area of 69.11 acres is being replanted with rubber under the Rubber Board subsidy scheme during the current year. The estate is reported to be in good condition and it is expected that the actual rubber crop during the year will exceed the estimate. During the year under report an experiment in aerial spraying on rubber trees was conducted on Malankara Estate as a combined effort of Messrs. Cambatta Aviation Ltd., Bombay and Messrs. I.C.I. and Burmah-Shell Companies. This experiment was considered to be satisfactory as fairly good penetration of the spray on the foliage was observed. During May this year about 600 acres of the Company's rubber area was sprayed from the air with oil bound copper fungicides using a helicopter. It took only 1½ days to complete this spraying operation and from the results so far found, aerial spraying could be considered a success in spite of the unusually heavy rainfall this year. As an experiment the Company had a major part of its cocoanut area also sprayed from the air with oil bound copper fungicides.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	13,50,000	Gross block	22,23,838
Reserves and surplus	5,41,503	—Depreciation	4,40,673
Other liabilities	5,33,396		
		Net block	17,83,165
		Current assets	1,91,824
		Cash	4,49,910
	Rs. 24,24,899		Rs. 24,24,899

* Paid-up capital consists of 1,35,000 ordinary shares of Rs. 10 each, fully paid up. Of this 90,000 ordinary shares were allotted as fully paid bonus shares by way of capitalisation of reserves.

Raghuvanshi Mills, Ltd.

(*Managing Agents*: Messrs. Ravindra Maganlal & Co., Private Ltd., Bombay.)

Annual General Meeting—30th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (gross)	1,28,67	1,17,84
Closing stock	13,21	8,52
Gross profit	29,34	22,14
Transfer to Managing Agents' remuneration	1,64	1,65
,, ,, depreciation	6,23	5,78
,, ,, provision for taxation	6,47	5,65
Net profit	9,00	8,08
Adjustments	21*	8
Appropriations:		
Total available balance	9,21	8,11
Transfer to development rebate reserve	1,96	1,17
,, ,, gratuity reserve	1,25	58
,, ,, general reserve	Nil	2,00
Proposed dividend (taxable)	4,20 (10½%)	4,20 (10½%)
Carried forward	1,80	21

N.B.—Adjustments include the balance brought forward from the previous year.

* This includes a sum of Rs. 20,000 being the amount of proposed dividend for the year ended 31st March 1960, reduced from Rs. 11.00 to Rs. 10.50 per share at the adjourned annual general meeting of the Company held on 24th March 1961.

Extracts from the Directors' report: The working of the Mills during the year under report and also after the end of the last financial year todate has been quite satisfactory. The position regarding imports of long-staple cotton and art silk yarn continues to be difficult due to acute shortage of foreign exchange. The Company has availed itself of the incentives offered under the Export Promotion Scheme by exporting art silk fabrics and cotton yarn to the extent possible.

The Company has been continuing a policy of progressive modernisation of the Mills so as to make it a modern mills and thus be able to compete successfully with the other manufacturers. The blow room has been completely modernised with the installation of new *Rieter's Blow Room Machinery*. A bye-passing arrangement has also been ordered which is expected shortly. A major part of the *Soinning Frames* have already been converted into *High Draft* and the conversion of the balance frames is also in progress. The old *cards* are being replaced by new *NMM Cards*. So far 20 *Cards* have been replaced by new ones. 40 more *Cards* are on order and further orders will be placed in due course. The Combing Department is equipped with *Rieter's High Speed Combing Machinery*. The Sewing Thread Department is also equipped with modern machines. The *Warping, Winding* and *Sizing* departments have also been equipped with new machineries. A new *Hank to Cone/Cheese Winding Machine* is also on order. Rep'acement of old *art silk looms* with new ones is also under active consideration. The art silk preparatory department is already equipped with modern machinery. Further orders for new machinery are also under consideration. As a result of the above policy of modernisation, it is expected that the working of the Mills will *considerably improve*.

Members are aware that the scheme of amalgamation between the Company and the Sidhpur Mills Co. Ltd. was considered by the Board of Directors and approved. Thereupon, application was made by the Company under Section 391(1) of the Companies Act, 1956 to the High Court of Bombay for orders and direction for summoning of a general meeting for the purpose of considering and if thought fit for approving with or without modification the said *scheme of amalgamation*. Due to judicial delays the scheme of amalgamation has not yet become effective and operative.

The working of Messrs. Emsons Bleaching Dyeing and Printing Works, of whom the Company is a Partner, during the period ended 31st March 1961 has resulted in a loss of which the Company's share comes to Rs. 3,637. This loss is due to the fact that the firm has been newly established and had a working of only three and a half months during this period and it has not been possible to consolidate and achieve full working within such a short time. A *Cloth Mercerising Machine* has been purchased recently by the firm and it is being put into commission making it a complete *Processing Plant*. They expect that during the current year the working would be satisfactory.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	40,00,000	Gross block	1,11,49,244
Reserves and surplus	13,78,824	—Depreciation	64,30,817
Other liabilities	87,89,635		
		Net block	47,18,427
		Block in progress	2,56,330
		Goodwill	77,700
		Current assets	79,77,820
		Share in Messrs. Emsons Bleaching, Dyeing and Printing Works	10,46,888
		Investments	61,269
		Cash	29,970
	Rs. 1,41,68,459		Rs. 1,41,68,459

* Paid-up capital consists of 40,000 ordinary shares of Rs. 100 each, fully paid up. Of this 20,000 ordinary shares of Rs. 100 each, were issued as fully paid up as bonus shares, by capitalisation of reserves.

United Breweries Ltd.

(*Chairman*: Mr. Vittal Mallya, Bangalore.)

46th Annual General Meeting—30th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (*less returns*)	45,83	39,74
Closing stock	1,80	1,84
Dividend from subsidiary companies	1,50	2,44
Other income	2,50	2,19
Gross profit	25,80	20,23
Transfer to depreciation	2,14	2,29
,, ,, taxation	10,00	7,00
Net profit	13,84	11,08
Adjustments	9,20	15,09
Appropriations:		
Total available balance	23,04	26,13
Transfer to development rebate reserve	15	440
,, ,, general reserve	12,35	15,10
To additional taxes (paid in respect of previous years)	Nil	8,17
To dividends (taxable) Ordinary	10.00* (60%)	6,20 (60%)
Carried forward	54	1,25

N.B.—Adjustments include the balance brought forward from the previous year; excess provisions in previous years no longer required and other credit items.

* This consists of an interim dividend at 25 per cent, or Rs. 2.50 per share, on 1,20,000 ordinary shares and a final dividend at 35 per cent. or Rs. 3.50 per share, on 2,00,000 ordinary shares. Thus it will be noted that while the interim dividend of Rs. 2.50 per share was paid on a paid-up capital of Rs. 12,00,000; the final dividend proposed at Rs. 3.50 per share is on the increased capital of Rs. 20,00,000.

Extracts from the Directors' report: *Capital*: During the year the subscribed capital was increased to Rs. 20 lakhs with the allotment of 80 000 equity shares of Rs. 10 each. The directors are recommending the issue of equity share capital to the extent of Rs. 5 lakhs to be offered for subscription at par to the holders of the existing equity capital *pro rata* to their holdings.

Extracts from the Chairman's Statement: *Operations*: With *uninterrupted working*, production increased appreciably and sales of bottled beer rose by 16.3 per cent as compared with the previous year, the total turnover and profit being the highest so far achieved. Selling prices in Mysore State, which had been reduced by 14.3 per cent in September 1959, were restored to their former level on 1st July 1960. Thus the benefit of the increased rates was available during nine months of the year only. Selling prices to customers outside the State, which had remained unaltered over a long period, were increased in February 1961 to allow for a change in the basis of calculating the drawback of duty. This change, however, came into effect from October 1959 and the benefit of the compensatory increase in price was available for only two months in the year. In the circumstances the results achieved may be considered very *satisfactory*.

Prospects for the current year: During the first four months of the current year sales have increased by approximately 14 per cent as compared to the corresponding period of the previous year. Profits have shown a similar trend and the directors have decided to declare an interim dividend at the rate of Rs. 2.50 per share, subject to deduction of tax which will be payable to shareholders in February 1962.

The new machinery on order has just been shipped and it is expected that it will be installed in October 1961. This will enable the Company to further increase the production of first class bottled beers. Specifications for the new maltings to be installed are being finalised.

To meet part of the capital commitments, the directors have recommended an increase in the capital by Rs. 5,00,000 and the new shares which will rank *pari passu* in all respects with the existing shares, will be offered in due course for subscription at par to shareholders *pro rata* to their holdings.

The Company as well as the several Companies in which it has a substantial interest continue to make steady progress and although the threat of prohibition is always present, the Company can look forward to the future with confidence.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,00,000	Gross block	58,86,994
Reserves and surplus..	60,53,924	—Depreciation ..	19,50,050

" " general reserve	4,00	Nil
Proposed dividends (taxable) 7½% Preference.	30†	29
" " Equity ..	14,29	10,99
	(32½%)	(25%)
Carried forward	17	Nil

* This represents Rs. 6,33,530 transferred from general and taxation reserve.

† Preference dividend is calculated at 8.325 per cent. (less tax) under Preference Shares (Regulation of Dividends) Act, 1960, and includes additional dividend for the year ended 31st March 1960 of Rs. 3,202.

Extracts from the Directors' report: During the year under report, the Company has acquired 88,557 equity shares of the paid-up value of Rs. 10 each of The Alagappa Textiles (Cochin) Ltd., out of a total of 1,50,000 for a consideration of Rs. 18,03,877. By virtue of this purchase, The Alagappa Textiles, with a working spindleage of 38,296 has become a subsidiary of this Company. After taking over this unit, the Company has been able to obtain sanction for additional 7,680 spindles for installation there towards replacement of idle spindles.

There was a voluntary cut in yarn prices in accordance with the decision of Tamil Nad Millowners' Association with effect from September, 1960. There was a further reduction in January, 1961. The Company had also to face an acute shortage of indigenous cotton and hence had to switch over part of the production to superfine counts out of high priced foreign cotton. Even so, the Mills have been able to make substantially larger profits than in the previous year.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	49,05,030	Gross block ..	2,57,22,558
Reserves and surplus..	88,26,112	—Depreciation	1,32,27,590
Other liabilities ..	2,87,56,461		
		Net block ..	1,24,94,968
		Current assets	1,66,87,572
		Investments ..	33,48,440
		Cash	50,06,623
	Rs. 3,74,87,603		Rs. 3,74,87,603

* Paid-up capital consists of—(a) 2,19,804 ordinary shares of Rs. 20 each, fully paid up—of which 1,64,846 ordinary shares of Rs. 20 each, are issued by way of bonus shares; (b) 34,258—7½ per cent. cumulative preference shares of Rs. 20 each, fully paid up, and (c) a sum of Rs. 28,790 being forfeited shares (amount paid up).

New Manbhoom Coal Co., Ltd.

(*Managing Agents*: Messrs. Octavius Steel & Co., Ltd., Calcutta.)

Annual General Meeting—28th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales	27,71	28,78
Closing stock	2,26	2,10
Gross profit	2,31	2,68
Transfer to Managing Agents' remuneration ..	23	24
" " depreciation	60	61
" " development rebate reserve ..	1	10
Net profit	1,47	1,73
Adjustments	58	1,06
Appropriations:		
Total available balance	2,05	2,79
To sundry adjustments	*	16
To payment of salaries, wages, etc. (for previous year)	Nil	11
To transfer to general reserve	1,00	1,50
Proposed dividend (taxable)	54	45
	(9%)	(7½%)
Carried forward	51	57

N.B.—Adjustments include the balance brought forward from the previous year; excess provision for taxation for previous years and provision for development rebate reserve in respect of previous year if any.

* Only a small sum of Rs. 21.

Extracts from the Directors' report: *Raisings and Despatches*: The raisings and despatches for the year ended 31st March 1961, amounted to 1,47 702 tonnes and 1,24,954 tonnes respectively as against 1,42,220 tonnes and 1,18,432 tonnes respectively for the previous year.

Prospects: Although there has been increase in raisings as compared to last year, it has not been possible to achieve the Company's target of increased raisings. Due to acute shortage of wagons specially during the last few months of the accounting year despatches were far less than the raisings resulting in accumulation of heavy stock at the pithead. On account of unavoidable reasons the installation and operation of the second Stowing and Crushing Plant has unfortunately been delayed but it is hoped that the machinery will start operation by the end of this year. With effect from 1st June, 1961, the prices of coal and soft cake were raised by 6 nP per tonne and 8 nP per tonne respectively. So far this year despatches have shown an improvement.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,00,000	Gross block ..	32,74,155
Reserves and surplus..	4,41,436	—Depreciation	24,17,216

		Net block ..	8,56,939
		Current assets	12,37,422
		Investments ..	500
		Cash	80,216
	Rs. 21,75,077		Rs. 21,75,077

* Paid-up capital consists of 60,000 ordinary shares of Rs. 10 each, fully paid up.

Kemp & Co., Ltd.

(*Chairman*: Mr. Jal H. Mehta, Bombay.)

Annual General Meeting—28th September. Dividend payable on or after 1st November.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (gross)	56,29	56,40
Closing stock	7,98	9,29
Gross profit	3,21	3,37
Transfer to depreciation	68	66
" " development rebate	4	10
" " taxation	1,10	1,45
Net profit	1,39	1,66
Adjustments	1,23	31
Appropriations:		
Total available balance	2,62	1,97
Transfer to general reserve	50	Nil
" " dividend equalisation fund ..	6	Nil
Proposed dividend (taxable) Ordinary ..	1,50	1,50
	(12½%)	(12½%)
Carried forward	56	47

N.B.—Adjustments include the balance brought forward from the previous year; excess provision for taxation for previous years no longer required and reserve against investment no longer required.

Extracts from the Directors' report: The directors consider the provision for taxation as sufficient to meet this liability, and the depreciation on fixed assets as adequate. The Company's properties and stocks have been insured against fire, riot and civil commotion. Since the end of last financial year premises have been acquired on ownership basis on the Linking Road at Khar to open another retail shop of the Company.

Accounts in brief as at 31st March 1961 are as under:—

Notice

THE KALPETTA ESTATES LIMITED

ALLEPPEY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 25th Annual General Meeting of the Company will be held at the Registered Office at W-15/9847 Beach Road, Alleppey, at 3 p.m. on Saturday the 14th October 1961 to transact the business as set out in the Notice sent to the members of the Company, individually.

The Directors have recommended a dividend of 12½ per cent on the Equity Shares for 1960-61, subject to deduction of tax under Section 18(3D) of the Income-tax Act, and the same if approved by the General Body, will be paid to those Equity Shareholders whose names stand registered in the Books of the Company on the 14th October 1961.

The Dividend Warrants will be posted to the Shareholders on or about the 28th October 1961.

The Share Transfer Books and Registers of Members of the Company will remain closed from 7th to 14th October 1961 (both days inclusive) during which period no transfer of shares will be registered.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead; a proxy need not be a member.

By Order of the Board,

A. V. THOMAS & CO., LTD.,
Managing Agents.

ALLEPPEY,
15th September 1961.

AUTOMOBILE IN DEVELOPING COUNTRIES

(*Concluded from page 598*)

output of 60 a month of the small Ramses car in which a large proportion of German parts is used. It is to start with assembly next year and to work towards full local production of cars at an ultimate rate of 12,000 a year.

Self-sufficiency

Progress towards self-sufficiency can be made in three directions simultaneously: an increase in the number of cars being produced, an increase in their indigenous content, and the gradual change from assembly to production. Significant growth thus has been achieved in several countries where vehicle assembly or production began comparatively recently. Australia, which first appeared in world statistics as a producer in 1948 with only 163 passenger cars, produced nearly 29,000 eleven years later, and many manufacturers have in hand plans which will increase substantially production in the near future. Similarly India, which produced 1,640 cars in 1953, reached 19,100 in 1960 of which a large proportion were made by the Indian concern, Hindustan Motors, followed by Fiat (Premier) while the remainder were Standards. Future production depends on many factors including the probable introduction of a small car; one estimate is for output of cars to reach 25,000 by 1963 and 40,000 by 1965. In Brazil development has been very rapid; a flourishing industry which now supplies a large proportion of the country's needs has been built in the last four years.

Progress towards a high indigenous content, which depends to a considerable extent on the development of ancillary industry, is also difficult to measure, but some estimates have been made. Thus in Brazil in 1959 it was estimated that only 40 per cent of car components were made in the country, although the proportion was 90 per cent for Volkswagen cars. By mid-1961 local production accounted for 90-95 per cent by weight, while Volkswagen expects to cease importing parts altogether next year. In India the Jha Committee found that considerable progress had been made recently, and that more was planned. In the period October 1959 to March 1960 the car with the highest indigenous content was the Hindustan Ambassador with just over 70 per cent, followed by the Fiat with less than half indigenous content, while the Standard 10 had less than one-third. The indigenous content of all passenger cars reached 65 per cent last year, and the industry expects to achieve an overall indigenous content of 85-90 per cent by the end of next year.

There is no doubt at all that the production and use of the motor vehicle is a powerful agent of economic development, creating local skills, promoting new needs and activities and, in the case of the motor car, giving also a high incentive to effort. Developing countries seeking to promote activity without overemphasis on heavy industries, should not, as is so often done, stifle the growth of the use of motor vehicles by high taxes on vehicles and/or their fuels. On the contrary, there is a good case for positively promoting motor transport and motoring, and seeking to make the reality of car ownership as widely spread as the desire undoubtedly is. —*By Special Arrangement with Petroleum Press Service.*

U.S. LOANS TO RIVER VALLEY PROJECTS

The U.S. Government has concluded an agreement with the Government of India for a loan of Rs. 45 crores to the Chambal, Nagarjunasagar, Kosi, Bhadra and Tungabhadra river valley projects. This amount will come out of the sums earmarked as loans to the Government of India from the sale proceeds of agricultural commodities supplied to India under U.S. Public Law 480. The loan is repayable in rupees.

By previous agreements the U.S. Government had made available Rs. 85.1 crores to these five projects and also the Hirakud, Damodar Valley, Mahi, Kakrapar, Mahanadi, Kunda and Koyna projects. Rs. 3.9 crores has been saved from this allocation. This amount is being added to the sum of Rs. 45 crores covered by the latest agreement.

It may be recalled that the five agreements between India and the United States under Public Law 480 provided for the sale of agricultural commodities worth Rs. 1.113 crores ($2.337 million). Of this, Rs. 517 crores is reserved for loans to the Government of India for economic development. Rs. 375 crores for grants, Rs. 77 crores for loans to private enterprise under the Cooley Amendment, and Rs. 143 crores to meet the expenses of the American Government in India.

MONEY EXTREMELY STRINGENT

(*From Our Own Correspondent*)

BOMBAY, *20th September*

The short-term money market is in the grip of ite stringency. Borrowers are finding it extreme- difficult to obtain their requirements. As a con- quence, the call money rate among exchange and lian banks has shot up further from the al- ady high level of 4½ per cent to 5 per cent. The nds locked up in the recent State loans have not t returned to the market. Meanwhile, a larger mand for credit is reported from Calcutta for ancing tea and jute. This had led to diversion funds to the Calcutta market. Exchange banks' pendence on local resources has increased, as ey cannot bring money from London on account much higher interest rates there. The term oney rates are at the following levels:

	Per cent
Notice Money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of 91-days Treasury Bills of the overnment of India sold through weekly tenders lowed that, as against an invitation for Rs. 2 ores, the total amount offered and accepted was ie same. The average rate of accepted tenders, eflecting the stringent conditions in the market ent up from 2.4 per cent per annum to 2.5 per nt 91-day intermediate Treasury Bills sold from ie 13th inst. to the 16th inst. amounted to Rs. 5 akhs only, as against Rs. 1.28 crores in the pre- ding week. Their sales are being continued from 0th September to 23rd September, both days clusive.

A contraction of Rs. 9.40 crores in notes in circulation is disclosed by the statement of affairs of he Reserve Bank of India for the week ended 15th eptember 1961. As the notes held in the Banking epartment have gone up by as much as Rs. 10.36 rores, the total notes issued show a modest rise of s. 95.70 lakhs. The foreign securities are unhanged at Rs. 116.86 crores, but, as the balances eld abroad have fallen by Rs. 96.82 lakhs, the total oreign assets have shrunk by that amount to s. 134.62 crores. On the liabilities side of the anking Department, deposits of Central Governents have improved by Rs. 10.03 crores and those f other Governments by Rs. 6.22 crores, deposits f banks are higher by Rs. 1.26 crores only, on the ssets side, other loans and advances, which in- lude loans to scheduled banks against usance ills, have gone up by Rs. 2.22 crores.

A contraction of Rs. 3.18 crores in demand depoits and of Rs. 14.75 crores in time deposits is disclosed by the statement of the scheduled banks for he week ended 8th September 1961. The depoits of the State Bank of India, too, have shrunk by Rs. 2.81 crores. Reflecting the stringency in the money market, borrowings from the Reserve Bank of India have shot up from Rs. 1.55 crores in the week ended 1st September 1961 to Rs. 14.98 crores or by Rs. 13.43 crores, of which the share of advances against usance bills was as much as Rs. 5.13 crores. The scheduled banks, however, borrowed less from the State Bank. Their borrowings from that institution of demand nature shrunk by Rs. 19.78 lakhs and those of time nature by Rs. 56 lakhs. Investments of the scheduled banks, as a whole, went up by Rs. 2.83 crores, but those of the State Bank of India actually declined by Rs. 1.97 crores. Advances and bills discounted (bank credit) rose by Rs. 11.47 crores to Rs. 1,231.41 crores, in contrast to the fall of Rs. 3.92 crores last week. Of the aggregate improvement in advances of Rs. 11.47 crores, the State Bank accounted for as much as Rs. 8.83 crores.

The Gilt-edged market was dull. The turnover was limited. Because of keen demand for money, some sellers were anxious to unload their holdings of some securities, but buyers were scarce. The Conversion Loan shed 20 nP to Rs. 72.80. 3½ per cent 1967, third National Plan bonds and 3½ per cent 1969 eased by 5 nP each to Rs. 98.95 and Rs. 98.35, respectively. Other central issues were unchanged. In the State loans' section new issues of some States recovered a small part of the ground lost last week. Thus 4½ per cent 1972 Andhra hardened by 25 nP to Rs. 98.50 and 4½ per cent 1972 put on 5 nP to Rs. 98.85.

In the foreign exchange section, the rupee gained only slightly *vis-a-vis* the U.S. dollar. Banks' selling rate stood at Rs. 475.75 per 100 dollars, as against Rs. 476 last week. The buying rate was unaltered at Rs. 472.50 per 100 dollars. In the New York foreign exchange market, the pound sterling appreciated further in relation to the U.S. dollar. The latest available rates are 281.380-281.420 cents per £ for spot and 278.490-278.530 cents per £ for three months' forward. Over the week, the pound has improved by 0.18 cent in the spot and 0.14 cent in the forward.

TIN EASY

(*From Our Own Correspondent*)

CALCUTTA, *19th September*

While copper scrap and zinc were maintained firm at around previous levels, tin eased in consonance with lower overseas advices. On the London Metal Exchange, electrolytic copper opened quiet at £231½ a ton under the impact of better news from Chilean mines, where earlier the strikes were suspended. At lower levels, there was active demand in London and this, coupled with the new developments in Katanga, pushed up the price to £232½. The higher level could not however, be maintained, and the news that Phelps Dodges were proposing greater production as a temporary expedient was followed by a decline in the rate to £231½. In the local market, scarcity in copper scrap maintained the price of utensil scrap at Rs. 442.75 per 100 kgs. and that of berry scrap at Rs. 490.25 per 100 kgs.

In London, tin recovered from £935 to £944 a ton. It was thought that the price was likely to touch a new high, as a decline in the Singapore price had already set in. Also, there was the news that it was likely that the U.S. Congress would waive the six months' waiting period for the release of 10,000 tons of stockpiled tin. Locally, there was little demand for the ready metal which eased from Rs. 1,657.50 per 100 kgs. to Rs. 1,653.50. Forward metal was quoted at a premium.

Electrolytic zinc was unchanged at Rs. 319.00 per 100 kgs. There was little demand. In London, the price eased from £73¾ to £73 a ton.

Lead was quoted here quiet at Rs. 134.75 per 100 kgs.

SPURT IN BULLION

(*From Our Own Correspondent*)

BOMBAY, *20th September*

Both gold and silver recorded a handsome improvement in values during the week under review. The improvement followed good buying induced by tense world situation, seizure of large parcels of contraband gold in Bombay and some other places in the past few days, and expectations of better offtake in the coming weeks. Calcutta advices were also quite encouraging. There were, of course, reports suggesting sales of some gold by a bank and of silver by the Reserve Bank, but these reports did not have any significant effect. The undertone of the market was distinctly bullish.

Arrivals of the two precious metals during the week were lower than those last week, the daily average rate being 3,500 tolas of gold and 16 bars of silver, as against 4,600 tolas and 23 bars, respectively. The rate of offtake, too, was lower at 3,750 tolas and 8 bars, as against 4,400 tolas and 10 bars. The floating stocks in the city are reported to be around 25,000 tolas of gold and 1,200 bars of silver.

Adjustment rates fixed today were Rs. 125.25 per 10 grams of gold and Rs. 203.45 per kilogram of silver. The corresponding rates on Wednesday last week were Rs. 124.10 and Rs. 202.50, respectively.

The *Bhadrapad* (25th September) settlement in gold began at Rs. 124.60 (on Friday the 15th inst.), as against the previous close of Rs. 124.70, and gradually moved up to touch a high of Rs. 125.75 today before finishing at Rs. 125.30. The *Margashir* (December) settlement advanced from Rs. 124.65 to Rs. 125.75, though the closing was a shade lower at Rs. 125.35. The rate payable for transferring commitments from the *Bhadrapad* to *Margashir* settlement, which was against bears last week, turned in their favour to the extent of 5 nP on Friday and Saturday. Subsequently, both the settlements were quoted on par. Today, it was again in favour of bears to the tune of 5 nP.

Ready gold attracted excellent support and rose from Rs.124.95 to Rs. 125.90 today before closing at Rs. 125.50. At this level, the premium over the forward (*Bhadrapad* settlement) was 20 nP, as against a discount of 35 nP on Wednesday last week.

In silver, the *Bhadrapad* (26th September) settlement encountered selling on Friday and declined from Rs. 203.10 to Rs. 202.40. But, thereafter, the settlement staged a recovery, today's closing rate being Rs. 203.65. The *Margashir* settlement registered a net gain of 50 nP over the week, the actual value improving from Rs. 204.20 to Rs. 204.70. Since the nearby settlement was quoted at a discount under the distant settlement, the bulls had to pay the *budli* for getting their commitments transferred. The actual *budli* was as high as Re. 1.05 throughout the week excepting on Saturday when it stood at Re. 1.10.

Ready silver continued to be quoted at a discount under the forward (*Bhadrapad* settlement) though the actual discount declined from 60 nP last week-end to 20 nP today. The closing rate was Rs. 203.45 today, as against Rs. 202.50 a week ago; at one time today, it was higher still at Rs. 203.45.

The world price of gold in the London bullion market eased from $35.18⅞ to $35.18⅛ during the week. The sterling price of gold also declined from 250s. 3d. to 250s. 1½d. Ready and forward silver, however, were unchanged at 79¼d. and 80⅛d., respectively. Silver in New York, too, was unaltered at 91.375 cents.

The following table shows the trend of prices during the week under review:

	20-9-1961 (closing)	High	Low	13-9-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	125.50	125.90	123.75	124.35

New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

FURTHER RISE IN COTTON

(*From Our Own Correspondent*)

BOMBAY, *20th September*

Weather news continued to dominate the cotton futures market during the week under review also. Reports of untimely rains and floods in many areas and a possible delay in the movement of the new crop fanned the bullish fervour noted last week. Extensive mill purchase of ready cotton and the sharp rise in price of some of the popular varieties, particularly Khamgaon, prompted large-scale covering by local and upcountry operators. The announcement made on Monday, that Rs. 1.50 crores worth of Pakistan cotton, having a staple length of one inch and below, would be allowed for import had no bearish effect on the market. This was because (1) Pakistan cotton was not considered attractive price-wise *vis-a-vis* comparable varieties of East African cottons, said to be superior in quality. Even if the price and quality factors are not taken into account, it was feared that new crop Pakistan cotton would not be available for immediate shipment. Considering all these, operators were inclined to discount the announcement. The Jarilla March contract met with keen bidding and rallied from Rs. 607.50 (per three quintals) last week-end to Rs. 614.50 yesterday. The trend of the market was steady today and the Jarilla March contract ruled round Rs. 614.

Favourable weather during the rest of September and the early part of October is of crucial importance to the cotton crop. A prominent firm of cotton traders sums up weather conditions as at mid-September as follows:

"Weather reports from all over the country are generally not encouraging. Kalyan area had rainfall in general but a break in the weather is urgently required; otherwise progress would be retarded. Broach and Surat areas had sunshine with intermittent rains and so far crop accounts are satisfactory. Part of Berar had very heavy rains and some damage is apprehended, especially in Wardha and Nagpur districts. The extent of damage, however, could be ascertained only after the weather had cleared up. Gaorani area in the Moglai reported heavy rains. Madhya Bharat also reported a heavy downpour and plants are waterlogged resulting in stunted growth. Bhatinda circle in the Punjab requires bright clear weather. The prevalent cloudy weather, with easterly winds, is hampering progress. On the Ganganagar line, the condition of the crop so far is satisfactory. Westerly winds now will accelerate progress."

The spot market at Sewri reported a further burdening of mill demand. There was good demand for cotton spinning fourteen to sixteen counts. Staple varieties such as Vijay, Digvijay and L.147 were also well favoured. There was a spurt in the price of new crop Khargaon on fears that movement of the crop would be delayed. Thus variety of cotton was traded at round the ceiling price.

Export demand was confined to Bengal *Deshi*. Some business was done on a subject-to-licence basis. Shippers are anxiously awaiting the first export quota for the new season. The announcement is expected to be made before the expiry of September, probably after the meeting of the Cotton Advisory Board scheduled to be held on the 25th inst.

Import of Pakistan cotton having a staple length of one inch and below worth Rs. 1.50 crores will be allowed under the Indo-Pakistan Trade Agreement signed on 28th March 1961, according to a Trade Notice issued by the Joint Chief Controller of Exports and Imports in Bombay. Import licences issued in this connection will be valid for shipment up to 1st March 1962.

The varieties of Pakistan cotton permitted to be imported are Punjab American 289F (124F, 199F, 289F/43), Punjab American Sind N.T., Punjab American L.S.S. and Punjab American 4F.

Licences to import the cotton mill be issued to the trade and/or mills on "first-come-first-served" basis on application against offer and acceptance. The trade may sell this quantity to any mill of its choice.

Applicants should produce a certificate from the Karachi Cotton Association Limited, indicating that the cotton proposed to be imported is one of the varieties allowed for import.

The trade welcomed the announcement especially because a chance has at last been given to it to participate in it. This is probably the first time since the introduction of the export incentive scheme for textiles that the trade has been given an opportunity to participate in an import quota on its own. Interest in foreign cotton centred mainly around East African and Sudan cotton. At the auction held yesterday at Kampala for East African cotton, no bids were forthcoming as the reserve prices were considered too high. Nevertheless, there were offers from shippers at Rs. 20 per candy below the reserve prices. Sudan cotton too evoked attention of spinners. Demand for Egyptian cotton was slow, thanks to the upward revision by the Egyptian Cotton Commission of the sales price for Egyptian cotton with effect from the 17th inst.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri.

Bengal *Deshi* 600; Gadag Laxmi 920; Khamgaon 861; East African B.P. 52 1,220; Buiaga (U.N.U.G.) 1,225; Jinga (new) 1,115; American 1" 1,115; Sudan G3L 1,455.

Firm conditions continued to prevail in the Karachi cotton futures market during the week under review also. The main influencing factor was weather which threatened possible damage to the crop in some areas. Better demand from

from foreign countries also imparted strength to the market. The N.T.R.G. January contract spurted on keen bidding from Rs. 73.30 last week-end to Rs. 77.50. The March contract too, was marked up from Rs. 74.15 to Rs. 76.60. Spot Values also improved.

Alexandria cotton futures market continued to remain closed during the week. Shippers quoted higher prices from Karnak and Menufi cotton, thanks to the upward revision in official export selling price effective from the 17th inst. bullish interpretation of new crop prospects. Foreign demand for Sudan cotton was brisk at the recent auctions. Shippers offers were reported to be at annual auction levels.

Quiet conditions prevailed in the Liverpool cotton futures market during the week. Values tended to look down in thin trading. Operators were inclined to await a precise picture of the damage due by hurricane Carla to the U.S. crop. A limited volume of commission house selling was the main feature of trading. Both the American and American type contracts receded. Sudan cotton contracts in Liverpool were subdued.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 24.20; December 24.70; March 25.15; May 25.60.

American cotton mixed growth contracts: October 24.60; December 25.05; March 25.45; May 25.90.

Sudan: September, November, January 32.00.

In spite of the announcement of a higher mid-August parity price of 38.83 cents, as against the mid-July price of 38.70 cents and reports of damage to the crop owing to hurricane in certain parts of the cotton belt, cotton futures in New York eased during the week. The bullish effect of these developments were more than counterbalanced by the speculative selling by some prominent Commission and spot houses based on the calculation that the damage to the crop would not be as large as was anticipated earlier and that the season's crop would not, in any case, fall far short of last season's 14.27 million bales. Spot prices, however, tended to hardened on good spinner demand.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	19-9-61	12-9-61	5-9-61
New York Spot	35.40	35.30	35.25
October	34.56	34.77	34.00
December	35.10	35.26	35.00
March	35.80	35.90	—

FURTHER FALL IN BLACK PEPPER

(Messrs. Parekh and Co.)

BOMBAY, 20*th September*

Last week's weakness in Malabar black pepper was extended during the week and October delivery took a further dip to Rs. 390, with buyers conspicuous by their absence. December delivery moved down to Rs. 375, in sympathy with October. In ready section, the market remained comparatively steady, as New York continued to pick up a few parcels at about $0.42½. Growers who were withholding till now became sellers, in view of the proximity of the new season, and fair quantity of ungarbled was sold at Rs. 380. Garbled was sold at Rs. 392. Inland demand failed to pick up, as the Punjab, one of the biggest consumers of pepper, remained cautious buyers in view of the political uncertainty stemming from the *Punjabi Suba*. Calicut came down to Rs. 380.

Singapore remained quiet for lack of foreign demand. Values there moved within narrow brackets. Black was quoted at Str.$142½ and white at Str.$175. Despite higher check price of Lampong in Indonesia, Singapore traders are willing sellers below the replacing parity, but no important business to overseas was reported as India continued to undersell.

Spot in New York remained steady at $0.45½. Dealers there remained selective buyers at $0.42½. Most of the dealers having gone to the Annual Outing of the Spice Trade Association, market remained quiet with small business. Some of the traders expect revival of demand after their return from the outing. But everything depends on the attitude of the sellers in India. If they become soft sellers, buyers will withdraw. If they remain firm, New York after haggling will come out to pay sellers' price, as stocks with the dealers and grinders in the U.S.A. are running low and are considered to be insufficient for the autumn requirements.

The future of the market depends upon the prospect of new crop Malabar and the selling policy of Lampong by both Singapore and Indonesia.

Ready pepper in Bombay is nominally quoted at Rs. 212 per 50 kilos with demand poor.

BEMBERG YARNS RISE FURTHER

(From Our Own Correspondent)

BOMBAY, 20*th September*

There was a further rise in the prices of Bemberg yarns during the week under review, thanks to renewed buying support. It was stated that some bulls had cornered whatever stocks that were available on fears of an acute scarcity of supplies developing in the coming weeks. Reflecting these fears was the high level of import licence premium rates. Staple fibre yarns also tended to move up, following good demand from certain consuming centres. Imported and indigenous 120 and 150 denier art silk yarns, however, drifted downward. The decline followed selling by indigenous producers. Cotton yarns continued to rule dull in the absence of any fresh encouraging news.

The Committee of the Indian Cotton Mills' Federation, at its meeting in Bombay last week-end, reviewed the working of the industry's voluntary scheme relating to the stamping of prices on yarn and cloth. In order to ensure that the stamped prices were not frequently changed, it was felt that the introduction of new sorts should be restricted. To achieve this end, production of new sorts by any mills would be restricted to one variety per month for every 200 looms installed.

J.P. Bemberg yarn (40 x 1) December delivery advanced from Rs. 3.225 to Rs. 3.270. October contract strengthened by Rs. 20 to Rs. 3,340. Cupressa Bemberg yarn (60 x 1) October position spurted by Rs. 30 to Rs. 2,900. December settlement gathered Rs. 10 to Rs. 2,860. Spot Cupressa was fully maintained at the last week's level of Rs. 2,798. Among imported art silk yarns, 120 Japan climbed down from Rs. 1,984 to Rs. 1,874. 150 Japan was neglected at Rs. 2,205 and 120 Italy at Rs. 1,900. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade fell by 51 nP to Rs. 17.36. 150 Bt. cones 1st grade dropped 16 nP to Rs. 13.82.

Staple fibre yarn (40 x 1) October contract hardened by Rs. 6 to Rs. 850. December settlement improved by Rs. 2 to Rs. 846. Spot hinds were firm at Rs. 9.90. Centurys were done at Rs. 10.09 and Coimbatore Spinnings at Rs. 9.48.

In the cotton yarn section, 10 counts Podars were fully steady at Rs. 17.37, as also Moderns at Rs. 19.75. Twenty counts Gokaks picked up 25 nP to Rs. 23. Moderns changed hands at Rs. 23, Maduras at Rs. 23.50 and Podars at Rs. 21.37. Thirty counts New Greats were unchanged at Rs. 26.75. Forty counts Minaxis were firm at Rs. 34 and Maduras at Rs. 32.62. Sixty counts Finlays were unaltered at Rs. 62.87. Business was put through at Rs. 60 in Moderns. Sixty counts Moderns shed 50 nP to Rs. 67.50. Finlays were dull at Rs. 81.62 and Mahendras at Rs. 69.37.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	20-9-1961	13-9-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
October	2,900.00	2,870.00
December	2,860.00	2,850.00
Spot	2,798.00	2,798.00
40 x 1 P		
October	3,340.00	3,320.00
December	3,270.00	3,225.00
120 Japan (per 100 kg.)	1,871.00	1,984.00
150 Japan (per 100 kg.)	2,205.00	2,205.00
120 Italy (per 100 kg.)	1,900.00	1,900.00
150 Italy (per 100 kg.)	1,819.00	—
Nat. Ray. 150 Bt. I	13.82	14.92
Staple fiber yarn (40 x 2)—		
October (per 90.72 kg.)	850.00	824.00
December	846.00	844.00
Hind (per kg.)	9.90	9.90
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.37	17.37
20s Gokak	23.00	22.75
30s New Great	26.75	26.75
40s Madura	32.62	32.62
60s Finlay	62.87	62.87
80s Modern	67.50	68.00

GROUNDNUTS RALLY

(From Our Own Correspondent)

BOMBAY, 20*th September*

Barring castorseeds which ruled distinctly easy, the oilseeds market depicted a firm trend during the week under review. Groundnuts, which suffered a sharp setback last week, staged a notable rally this week. The rally followed reports from Saurashtra and Hyderabad suggesting that the output in the current season would not be as large as was anticipated earlier. There were also hopes of some export quota for groundnut oil and expeller cake, as a sequel to the representation made by the Oilseeds Exchange to the Union Ministry of Commerce and Industry. The Exchange has pointed out that this is the opportune moment for announcing export policy, which, it is emphasised, should be on a long-term basis. Further, traders noted the stress laid on the execution of package programmes for groundnuts and other integrated oilseeds development schemes, at the half-yearly meeting of Central Oilseeds Committee, held at Hyderabad from the 12th to 15th inst. In sympathy with groundnuts, linseed, cottonseed and sesame tended to move up. The bullish fervour of the market was also fanned by the release of a quota of 50,800 metric tonnes of linseed oilcake and 15,240 metric tonnes of coconut oilcake for export outside Africa, South West Africa and Portuguese possessions in India during October 1961-May 1962. Castorseeds, however, encountered selling, due to apprehensions regarding a possible decline in the world prices of castor oil.

The Forward Markets Commission has decided to remove the existing special margins and limits on long open position in respect of rape and mustard forward contracts of the 1961-62 crop at Delhi, Agra, Kanpur and Bhatinda exchanges. Instead of margins, the Commission will impose a limit on the daily rise in prices. At Delhi, the limit for the daily rise will be 50 nP for 40 kgs., whenever the price exceeds Rs. 32 per 40 kgs. The same limit has also been imposed at the other centres but the price limit is Rs. 32.25 for Agra, Rs. 32.75 for Kanpur and Rs. 31.25 for Bhatinda. Trading in the next season's crop will be permitted at the different centres in the month of October 1961, as soon as the Association complies with the requisite formalities.

Groundnut January 1962 contract rose from Rs. 205 to Rs. 210.37 (on Monday) before winding up the week at Rs. 205. Nizam bold spurted by Rs. 3 to Rs. 48. Oil ex-mill picked up 65 nP to Rs. 20.65 and Railway receipts 50 nP to Rs. 20.25. Oil January 1962 contract hardened by 45 nP to Rs. 17.

Linseeds March 1962 contract forged ahead from Rs. 36.25 to Rs. 37.12 initially, but declined subsequently to Rs. 36.59. The net gain over the week was 34 nP. Linseed oil put on 15 nP to Rs. 16.90. Bold ready, however, eased by 25 nP to Rs. 39.

Cottonseed March 1962 rose from Rs. 90.50 to Rs. 93.50 on firm advices from raw cotton markets. Berars improved by 40 nP to Rs. 16.90.

Castorseeds March 1962 fell from Rs. 162.25 to Rs. 161.37. Ready Madras declined by 37 nP to Rs. 33.25. Oil Commercial lost 15 nP to Rs. 13.35.

Sesame bold firmed up by Rs. 10 to Rs. 250 (per 250 kgs.). Sesame oil, however, picked up 20 nP to Rs. 21.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	20-9-1961	13-9-1961	6-9-1961

TEA SLIGHTLY EASY

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 14*th September*

Dust Sale No. 37: Offerings amounted to approximately 141,000 kilograms in dust sale No. 37 held on Thursday, 14th September 1961. There was less general demand. Mediums came to an irregular market and were generally easier, with the more fibrous kinds declining by up to 20 nP per kilo. Highgrowns came in for better support and sold well at fully firm rates. C.T.Cs and legg-cuts received good support and can be quoted about firm.

The average price realised in dust sale No. 37 was Rs. 4.67 per kilo as compared with Rs. 4.69 a week ago and Rs. 4.52 in the corresponding sale last year.

Export Quota: Small business is being transacted at 1½ nP per kilo, at which rate there are sellers.

Colombo: There was strong general demand particularly for improved quality teas. The Best Dimbulas realised rates which were 10 cents below last. The plainest sorts received better support and were quoted firm to dearer, whilst mediums were fully firm.

London: North Indian and other growths: In Monday's North Indian sale there was an improved tone and best Assams came to a market which was fully firm to dearer. The remainder of the offerings were irregular and realised rates which were similar to the previous week.

Ceylon and South Indians: The 26,470 packages (of which 7,974 originated from South India) on offer on Tuesday met fair demand at about steady rates. The exception to this was the poorer liquoring fannings which met enquiry.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 38: 515,000 kilograms. Less demand. Plain and low mediums irregularly about 20 nP easier. Fibrous sorts discounted. Mediums and good mediums 10 to 15 nP easier. Highgrowns very irregular and easier. Only best selling dearer."

TEA RECEDES DESPITE GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 19*th September*

Although there was greater demand at the tea export sale held yesterday, the prices realised were lower. Such a trend reflects current thinking among foreign buyers that with production outpacing demand, prices must come down in favour of buyers. North-east Indian production up to the last month at 147 million kgs. has been higher by 25 million kgs. as compared with the corresponding period last year. The other producing countries have also increased their output and have been able to put up more tea in the export market.

Considered against the above background, trade circles point out that it is unfortunate that the Tea Board is not paying any attention to increasing the internal market. The country needs more foreign exchange, and as such the Tea Board has called upon all concerned to export more, even at the cost of a decline in internal consumption. It has accordingly withdrawn all internal propaganda units. In this connection, trade circles have read with much enthusiasm the studied and fact-filled speech of Mr. H. C. Kothari at the annual meeting of the United Planters' Association of Southern India which he delivered in his capacity as the Association's President at Coonoor last week.

During the week there was the announcement in Pakistan reducing the export duty on tea from 38 to 25 per cent, that is, a reduction of 34 per cent. This has been done, trade circles have no hesitation in stating, with a view to enabling Pakistan to export all the surplus and earn foreign exchange. India should be able to draw a lesson from Pakistan's example, and the trade demands that, considering that the revenue loss in the concession in export duty granted earlier in this year has been made good by the increase in excise duty, the Government of India should consider the drawback of excise duty on tea exports. The U.P.A.S.I. President has also made a justifiable plea in this regard. The more correct course would no doubt be the abolition of the export duty *in toto*.

It cannot be expected that, at a time when world production is tending higher, overseas buyers would buy some of the poorer qualities of Indian tea, including rains tea. These can best be disposed of within the country and, with increased industrial activity if only efforts at propaganda are resumed, internal consumption can be increased and can serve as a buffer against increased production and greater competition in world markets.

Mr. Kothari's fear of the U.K.'s entry in the E.C.M. and of the possibility of tea being subjected to import duty in the U.K. is not shared by the trade here. For trade circles say that, even if the U.K. imposed a duty on tea India's exports to that country would not fall, considering that such a duty would be levied on teas of all origins. However, in which event, the British consumer would have to pay more for his tea and, considering that tea has become a national drink in Great Britain and that tea there like bread is a commodity in inelastic demand, the British Government may not afford to risk its popularity by pushing up the cost of tea. Viewed thus, trade circles hope that, even after the U.K.'s entry in the E.C.M., tea from the Commonwealth would be allowed entry into the U.K. duty-free.

In the internal sale held last week, dusts on offer amounted to 26 325 packages. There was fair demand at lower rates. Legg-cut teas eased in an irregular trend. Plain orthodox dusts recorded a fall of 20 nP to 30 nP. There were heavy withdrawals of the Assam varieties without a bid. C.T.Cs were generally easy, but the few bright liquoring teas met with better support. Fibrous teas failed to find bidders. The quotations per 1 kg. (inclusive of excise duty) were: good Assam C.T.C. dust Rs. 6.30 to Rs. 6.50; medium Assam C.T.C. dust Rs. 5 50 to Rs. 5.80; legg-cut dust Rs. 4.30 to Rs. 5.00; medium Assam dust Rs. 4.30 to Rs. 4.70; and plain orthodox dust Rs. 4.00 to Rs. 4.25.

Leaf offerings amounting to 227 chests met with good demand at firm prices. Green teas were much in the forefront.

Bidding was keen and prices gained at the Pakistani internal sale held on 13th September at Chittagong. Offerings aggregated 14,361 chests of leaf and 3,675 chests of dusts, in addition to the supplement of 98 chests. Withdrawals aggregated 323 chests. Green teas and polished varieties, among the leafy teas, were in good demand. Legg-cut fannings, on keener competition, were quoted at Rs. 2.35 to Rs. 2.40 a lb. Stalky residue teas eased by 20 nP to 30 nP per lb., while best liquoring teas realised valuations. Dusts on offer eased by 10 nP. The quotations per lb. were: O.F. Rs. 2.10 to Rs. 2.15; P.F. Rs. 2.00; B.O.P. Rs. 2.10; B.Ps Rs. 2.00 to Rs. 2.10; B.P. Re. 1.85; and dust Rs. 2.00 to Rs. 2.20.

Offerings at the next internal sale in Pakistan, scheduled for 27th September, are expected to amount to 4,300 chests of dust and 15,320 chests of leaf.

In the export sale held here yesterday, offerings aggregated 66,307 chests which met with good general demand, albeit at lower prices. An irregular trend was recorded by plain orthodox teas, while well-made teas free from stalk and fibre were about firm. Most other teas eased. Darjeelings eased, as did whole-leaf grades. Tippy teas met with fair demand. Medium and orthodox teas recorded an irregular trend, but useful liquoring teas and O.Fs were subjected to keen competition. Among C.T.Cs a few selected best liquoring teas were dearer. The balance of C.T.Cs eased by 20 nP. B.Ps met with fair demand. Generally teas with useful liquors were in good demand. The quotations per 1 kg (inclusive of excise duty) were: best Assam C.T.C. fannings Rs. 5.30 to Rs. 5.90; best Assam C.T.C. B.P. Rs. 5.30 to Rs. 5.70; medium Assam C.T.C. B.P. Rs. 4.80 to Rs. 5.20; clean plain Pekoe Rs. 4.20 to Rs. 4.40; plain fannings Rs. 3.90 to Rs. 4.10; plain B.P. Rs. 4.10 to Rs. 4.30; and medium Assam C.T.C. fannings Rs. 4.80 to Rs. 5.20.

JUTE MILLS TO RAISE WORKING HOURS

(From Our Own Correspondent)

CALCUTTA, 19*th September*

Both raw jute and jute goods fluctuated within narrow limits during the week under review. With fibre arrivals showing a further improvement, sellers were anxious for business and offered more freely. Fair business was reported with mills. In both hessian and sacking, although export business continued to be limited, there was greater buying on local consumption accounts and there was also good covering demand against anticipated orders from foreign markets. As a result, fibre and goods finished for the week with small gains. According to New York burlap market reports, the mid-week gains in prices could not be sustained, in view of resistance from buyers. Purchases were limited to immediate and nearby requirements. Thus the 40" 10 oz. hessian gave way from 13.10 cents a yard to 12.75 cents (duty paid) and the 7½ oz. hessian from 10.50 cents to 10.35 cents. Market circles here realised that an improvement in the statistical position of goods with mills was essential for stability in prices and to revive confidence among foreign buyers.

Against this background, the announcement that the mills have decided to raise working hours from the existing 42½ a week to 45 from the week commencing from 25th September has been hailed with satisfaction. This increased production will enable mills to purchase more fibre, and thus contribute to stability in fibre prices. Since fibre is quoting at Rs. 35 and above, it is believed that there is no question of fixing any minimum price now. Purchases by mills have been so satisfactory as to lead to the inference that they are building up stocks to the extent possible. It will be remembered that the Governments of West Bengal and Bihar had considered Rs. 35 to be a justifiable minimum price, but the Government of India officials had thought that Rs. 30 would be a more agreeable figure. So long as the price remains above Rs. 30 as at present, the demand for fixation of a minimum price would not be pressed. It is stated that New Delhi will issue import licences for 600,000 bales of Pakistan cuttings.

A glance at the production and stock figures of mills for the month of August brings forth the need for increasing production in mills. The output of all constructions was higher, the total at 78,300 tons showing a rise of 13,900 tons as compared with July. It should, however, be remembered that production in July was affected by the acute shortage of fibre. Stocks at the end of July being 71,200 tons, the total availability of goods in August was 149,500 tons. The demand in the month was of the order of 85,400 tons, stocks at the end of August being 64,100 tons. Foreign demand had been confined to small quantities, and it was thus clear that purchases against internal consumption were satisfactory. It is believed that the declining trend in prices of both fibre and goods has been arrested. Foreign consumers are, therefore, expected to lend active support to the market in the coming weeks. Judging from increased arrivals of fibre and the improvement in crop prospects, it cannot be stated that fibre prices may not at all fall. Mills are paying little attention to buying forward fibre.

As demand was slack on Tuesday last, prices of goods eased. Mills exhibited eagerness to do simultaneous business in immediate and nearby goods, as this was profitable. Forward goods were considerably lower than nearby goods and, with the trend of fibre prices remaining uncertain, mills were disinclined to accept orders for forward deliveries. Ready B. twills eased from Rs. 134.00 to Rs. 132.50 and ready hessian 40" 10 oz. from Rs. 50.50 to Rs. 50.00. In the first half of Wednesday, prices declined further. But as at lower levels local dealers showed keen interest towards the end of the day, a recovery was in evidence. Thus B. twills at Rs. 132.00 and hessian at Rs. 49.75 closed higher than the lowest levels of the day, though on balance the loss was maintained. With the market remaining officially closed on Thursday, B. twills at Rs. 131.50 and hessian 40" 10 oz. at Rs. 49.75 were quiet. Demand revived at lower levels and, on Friday, B. twills recovered to Rs. 133.50 and hessian 40" 10 oz. to Rs. 50.50. Over the week-end, the recovery continued and B. twills was pushed up to Rs. 134.00 and hessian 40" 10 oz. to Rs. 50.70. Quiet conditions were in evidence yesterday and, with no fresh overseas business taking place, hessian 40" 10 oz. eased to Rs. 50.50 and B. twills to Rs. 133.00.

Fair business was done in fibre with mills. In the agencies, arrivals increased and sellers were eager for business. However, since in the mofussil areas growers showed no inclination to sell at lower rates, prices, in fact, recorded small gains. This week's price movements are indicated below:

(In Rs. per maund, delivery 15 days)

	Opening	*Closing*
Assam bottoms	35.50	35.50
Northern bottoms	35.50	36.00
Daissee bottoms	39.50	39.00

COARSE GRAINS STEADIER

(From Our Own Correspondent)

HAPUR, 18*th September*

A mixed trend was witnessed in the foodgrains market during the week. Wheat sought lower levels, thanks to better arrivals, while coarse grains were steadier on reports of losses to *kharif* crops. The overall food situation, however, was satisfactory, as heavy imports had yet to follow from U.S. under previous commitments and stocks were heavy with Government. Wheat here recorded a fall of 25 nP per maund during the week to Rs. 14.75 to Rs. 15 a maund for *dara* quality and Rs. 15.50 to Rs. 16 for better farm produce. Daily arrivals mounted to an average of 200 maunds and some quantity reached here from Aligarh side. The entire arrivals were being lifted by consumers and local stock was stationary around 25,000 maunds. Ploughing operations for *rabi* sowing were in full swing, thanks to absence of rains in the last ten days and increased acreage expected as land vacated from *kharif* crops would be available for such sowing.

Rice was depressed during the week on expectations of good crop following last year's bumper crop and week-end prices were: rice, *sela*, *basmati* Rs. 27 to Rs. 30; superior Rs. 23 to Rs. 28; *mainpurisela* Rs. 22; *gaddakutcha* Rs. 22; *ramajwayansela* Rs. 23.50; *raimuniasela* Rs. 25 per maund.

Gram recorded fractional gains to be quoted at the week-end at Rs. 14.12 a maund for Punjab produce, while local inferior quality was quoted at Rs. 13.62 a maund. Some quantity reaching here from the Punjab to be lifted by consumers and local stock with trade also ran down to 35,000 maunds. Barley was quoted slightly higher at Rs. 11.25, *bejhar* inferior at Rs. 10.75 and *moongia* variety at Rs. 11.75 a maund. New maize arrivals continued to be small, at an average of 100 maunds, and, with old stocks put at 2,500 maunds, new maize was quoted at Rs. 12 to Rs. 12.50 a maund. *Juwar* and *guwar* were listless at Rs. 11.50 and Rs. 14.25 a maund, while *methi* was steady at Rs. 26 to Rs. 27 a maund, thanks to demand from Rajasthan and Calcutta side. Other sections were quiet at: oats Rs. 12, *bajra* Rs. 15.

Among pulses, peas was steady at Rs. 11.50 per maund for *dara* quality and *khati* was quoted at Rs. 11.75, thanks to good demand from Calcutta side. The week's offtake was seven wagonloads of peas and *dal* and local stocks were lower at 65,000 maunds. Farm quality superior peas quoted at Rs. 12 and peas *dal* at Rs. 13 per maund. Demand for *arhar* was small in the form of *dal*. The week's offtake was three wagonloads and as stocks were heavy at 44,500 maunds, *arhar* lay flat. *Moong* ran down further on reports of good crop from the producing areas of the South and other pulses were depressed in sympathy to be quoted in week-end (in rupees per maund) at: *arhar* 12 to 12.25; *arhar dal* 15.50; *urd* 19 to 20; *urd dal* 22; *moong* 18 to 19; *moong dal* 20 to 21; *massoor* 13 to 16; *massoor dal* 16; *moth* 18; *moth dal* 21.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 18*th September*

Sugar ruled quiet during the week, thanks to easy supply position, following removal of some curbs from sugar trade by the State Government. It was further gathered that the Union Government might soon lift inter-State movement restrictions on sugar in order to encourage consumption in the country. In view of the heavy carryover from the previous season, the sugar factories were reported to be reluctant to start crushing earlier in the coming season. Week-end prices here were: wholesale Rs. 105.50; mill delivery Rs. 104.50 per bag; retail 97 nP per *seer*.

Sugar also ruled easy in the Muzaffarnagar market due to lack of buying interest, coupled with easy supply position. Damaged sugar eased by 50 nP per bag for want of support. Although inter-State movement restrictions on sugar have been lifted by the State Government, these orders were not being implemented and tenders from non-licensees were not yet being accepted. Week-end prices of sugar were: damaged Rs. 100 to Rs. 102 per bag. Dry C29 and E29 were quoted at Rs. 107.50 and Rs. 105.75, respectively, while deliveries at Mansurpur gate were Rs. 104.69 to Rs. 106.25 per bag. Retail prices ranged from 97 nP to Re. 1 per *seer*.

Khandsari was depressed during the week, owing to slack interest. Week-end prices were: *galawat* Rs. 25 to Rs. 29; non-crystal Rs. 32 to Rs. 36; crystal Rs. 34.50 to Rs. 36.50; crystal *boora* Rs. 39; and *dana minja* Rs. 17 to Rs. 20 per maund.

Trading in *gur* was poor, as only dry selected stuff was in demand. The week's offtake included some truckloads to east U.P. and three wagons to South consuming areas: Local *gur* stock ran down to 13,500 maunds. Cane crop prospects were bright and, as supplies of cane to factories in the coming season was not likely to show any increase over last year, a rise in *gur* and *khandsari* production is predicted. Production in the next season would begin early next month. Latest prices here were: dry selected Rs. 16.25, *kotha* dry-wet Rs. 14 to Rs. 15.25; wet Rs. 12.50; *shakker* Rs. 17 to Rs. 17.50 a maund.

Gur futures were firm on vigorous bull support. *Fagun* was quoted today at Rs. 13.21, as against the week's opening of Rs. 12.94 and the highest of Rs. 13.25 and the lowest of Rs. 12.84.

LINSEED FIRM AGAIN

(Messrs. A. Bradley and Co.)

CALCUTTA, 18*th September*

Firm conditions continued to prevail in the linseed market during the week, due mainly to shortage of supplies from upcountry, and several mills have stopped crushing linseed for the time being. The price of oil has firmed up a bit, as supplies are limited, local buyers are showing more interest due to the rise in prices of other oils, but sellers are reserved.

The oilcake market is keeping steady due to local requirements and small stocks available.

Ready September is quoted at Rs. 29.75 per maund.

HIDES ARRIVALS LARGE

(From Our Own Correspondent)

MADRAS, 18*th September*

Arrivals of E.I. tanned cow hides were larger than last week, and clearances were fair sized. Inquiries from importers were brisk and important quantities, especially in light and medium weight kips, were sold. Other sections were unchanged.

Demand for tanned goat skins 8/9 lbs. and 11/12 lbs. was insistent, as also for prime sheep top grades. Importers were offering higher prices for special selections. Inquiries for middle class sheep were good.

Raw market ruled firm.

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked E are not included. I—Commenced from 2nd January 1959. N.B.—Five-year prize Bonds were issued from 1st April 1960 and the total outstandings at the end of May 1961 amount to 16.03 crores of rupees.

B.—The reserves of Straw Products Ltd. include a non-distributable amount of Rs. 63,40,654 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December 1955. ‡‡ Investment at cost.
H.—Clive Row Investment—Dividend for 1958 includes additional dividends of 9 nP for the year ended 31st March 1956 and 87 nP for the year ended 31st March 1956. * Includes bonus.
B.—Managed by the Board of Directors. *N.B.*—Dividends paid since 31st March 1960 are shown as taxable. (k) Investments.
K.—Associated Battery Makers (Eastern) Ltd. The effective dividend for the year 1960 would work out to 16.36 per cent. approximate, as the final dividend of 10 per cent. was paid on the increased capital of Rs 118 lakhs, [redacted] interim dividend of 15 per cent. was on a paid-up capital of Rs. 50 lakhs only.

MARKET GOSSIP

(*Concluded from page 579*)

tion, as well as to the urgency of earning valuable foreign exchange for its development plans. It had become essential for India, he declared, to export large quantities of sugar. And he added: "The quota fixed should be in relation to the size of our industry and the export surplus that we have."

The chances of India's plea being conceded appear to be quite bright. though it cannot be said now as to what exactly would be the size of the quota.

French Economic "Miracle"

The popularity of the West German Deutschemark and the strain it imposed on the payments position of other countries have held the attention of world currency experts for so long that the gathering strength of the French franc, which is pregnant with serious payments difficulties, has received little notice. In fact, the developments in the French economy have been so remarkable that the franc, which only a few years ago was regarded as the sickest currency in Europe, bids fair to be one of the strongest currencies in the world. According to one London commentator, "if there is any worry about European currency movements at present, it is that the French franc may replace the D-mark as an overstrong currency and as a deflationary influence on the rest of the world."

The credit for strengthening the French economy should be laid mainly at the door of the French Government, headed by President de Gaulle, which, by following bold and realistic policies, has transformed the erstwhile crisis-ridden State into one of the most economically strong and politically stable countries in Europe. To quote the latest O.E.E.C. assessment of the French economy: "The external position is excellent, the Exchequer has seldom had such abundant resources available and France is in a position to encourage further expansion." The rate of economic growth in France has been higher than in the U.K. or the U.S. The rise in gross national product during the current years is estimated at 5 per cent. as against the average annual growth of 2.5 per cent in the U.K. and 3.3 per cent in the U.S.

This buoyancy of the French economy is reflected in the growing surplus in its external payments which is causing concern for other European countries, especially Britain as well as the U.S. It is true that the franc is not as yet a source of major

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2634 BOMBAY, 30th SEPTEMBER 1961 PRICE Rs. 2

SENSIBLE, THOUGH BELATED

AT long last, Mr. S. K. Patil, Union Minister for Food and Agriculture, has acted boldly in the only direction which is open to him now for tackling the problem of surplus sugar stocks. He has taken off all the controls on movement, distribution and prices of sugar, with effect from Thursday the 28th inst., retaining only the control on releases with a view to preventing violent fluctuations in prices. He cannot, however, claim any credit for this action, because he has acted only when forced by circumstances. If he had taken this step in February or March last, he would have earned the reputation of having acted in time and with foresight. It was pretty clear even six or seven months ago that the country would be faced with a surplus heavy enough to cause a severe headache to all, unless effective measures were promptly taken to stimulate domestic consumption. If all the controls had been abolished then, a part of sugar stocks would have moved into the hands of the trade and freer availability of sugar in all parts of the country would have led to larger consumption.

Although Mr. Patil had stated even as early as last year that he would not keep the controls a day longer than necessary, he hung on to them even after they had become not only useless but positively harmful. Apparently, the vested interests in sugar which had thrived under controls were strong enough to subdue Mr. Patil's dynamism. The Central and State Governments, the cane growers, the co-operatives and even the sugar millowners, all were reluctant to face the consequences of decontrol. The Centre was interested in its excise revenue and in making sure that there was a sufficiently large surplus of sugar to force everyone into accepting the need for exporting the commodity even at a heavy loss. The State Governments, barring a few perhaps, were chary of losing the controls for two reasons: One, none likes to give up power and more so those who are already in power. Two, the co-operative sugar factories, in which they have large investments and which are relatively less efficient than the joint-stock companies, would not be able to withstand the bracing climate of free markets. Having enjoyed the best of both worlds for nearly a decade, cane growers were naturally unwilling to accept anything less. The sugar millowners, too, were of the same mentality. They were keen to see that they did not suffer any depreciation in the value of their stocks and a deflation of their profit-margin. Indeed, as late as in the first week of August last, the President of the Indian Sugar Mills Association pleaded for a higher ex-factory price and a concrete floor to walk on. None of them worried about the consumer of sugar, who was already groaning under the weight of high prices of all his necessities and heavy taxation. Each wanted his pound of flesh, though they were all prepared to make a little sacrifice for the benefit of consumers outside India for the simple reason that foreign exchange was more precious than Indian currency.

It is contended by some—this view seems to be shared by Mr. S. K. Patil—that, as the monthly releases were large enough to take care of everybody's requirement of sugar and as not all the sugar released by the Government were taken up, the view that controls were hampering the growth of consumption is rather far-fetched. This contention is far from convincing and is, in any case, not accepted by the sugar trade. The President of the Bombay Sugar Merchants' Association Ltd., for instance, argued thus, in a statement to the Press on the 23rd inst.; after pointing out that the per capita consumption of sugar had fallen from 11.70 lbs. in 1958-59 to 10.50 lbs. in 1960-61, despite a record production of nearly three million tons, he said:

> "It is now agreed on all hands that consumption must be increased. But how? What factors are coming in the way of achieving this objective? With so much sugar in the country, why is it that there exist in the country several areas and pockets where scarcity of supplies and higher prices than the fixed ones still prevail? Basic thinking is needed on these points. The root cause lies in the defective system of distribution of the States. While some State Governments have relaxed their distribution policy as required by the changed sugar position, some other State Governments, for reasons best known to them, continue to exercise rigid controls, such as were thought necessary and devised to meet the conditions of shortage in 1959. In Maharashtra, which is a surplus sugar producing State, the scheme of distribution of sugar, which was initiated in 1959 to meet conditions of scarcity which prevailed then, is being continued with unabated rigidity. Quite a large number of established traders, both wholesale and retail, have been shut out from the distribution trade and have been facing the threat of being displaced from their avocations. Recently, some relaxations were made at the retail level, enabling retailers to get some extra sugar, but these are of a

their mill. With an increase in the production of brown sugars, their prices will go down and this in turn is bound to force a fall in the price of refined (that is, white) sugar also. One can argue, of course, that, as sugarcane growers have had a good time for a number of years, they should not mind accepting lower prices for a part of their crop in the coming season. If they are prepared to accept lower prices, the mills may not mind crushing the extra cane, as the reduction in the price of cane will neutralise the penal excise levy. But this will aggravate the problem of surplus stocks and upset the Government's plan for bringing down production.

It will be seen from the foregoing account that the Government will not be able to avoid wholly the unpleasant political consequences of a direct cut in the price of sugarcane. Such a cut would have been desirable, once it was found that more than enough acreage was being devoted to sugarcane, as it would have avoided diversion of land from other badly needed crops. At least, in future, the Government should not pursue this kind of dubious policy. The so-called minimum price for sugarcane for the 1962-63 season must be cut and some means must be found whereby the aggregate price the farmer gets is related to the sucrose content of his cane. All this must be done well in advance of the sowing season, so that farmers may be under no illusion.

Since the price of sugarcane is subject to a minimum, which is so high that it is very nearly the maximum that a factory can afford

SUGAR STATISTICS AT A GLANCE

(In tons)

* Estimates.

N.B.—In arriving at the opening stocks for 1961-62, allowance has been made for an export of 300,000 tons.

to pay, the decontrol of sugar prices complicates the position for millowners. In case the price of sugar were to go below Rs. 38.50 per maund, as it well might, the profit-margin of most of them would be markedly affected; some of them may even have to incur losses. As mills have to bear a part of the loss on exports of sugar also, they will be put to severe hardship. The suffering will be more for the units which have expanded their capacity to a considerable extent, as they cannot use it to the fullest extent possible. The one way to minimise it is to lower the price of sugarcane. As this will not be possible in the 1961-62 season, it looks as though the mills will have to endure lower profits or even losses next year. Not a pleasant prospect, of course, but there seems to be no way out of it. Since the mire in which the sugar industry finds itself today is the result of wrong policies pursued for many years, it cannot extricate itself out of it easily and quickly. Some muddling through is inevitable. The least the Government should do now are two: one is to reduce the excise duty on sugar, thereby providing a positive stimulus to domestic consumption, and the other is not to obstruct the economic forces that will eliminate inefficient producers of sugar and growers of sugarcane, in whichever sector (co-operative or private enterprise) they may be.

LAND CEILINGS AND EXEMPTIONS

BY now, land ceilings legislation has been enacted in all the States except Madras and Bihar and in the principal Union Territories. While the Bihar Bill is yet to be passed by the State Legislative Council, just at the moment the relevant Bill in Madras is being passed clause by clause in its Assembly. While it is unfortunate that the principle of land ceilings has been given effect to with a determination worthy of a better cause—unfortunate because it will put a stop to investment in large-scale farming and also generate left-wing pressures for ceilings on urban incomes—it is no less unfortunate that the level of ceiling has also turned out to be pretty low. Generally speaking, the level at which ceilings on existing landholdings have been fixed in the different States and Union Territories does not, by any means, seem to be generous, for, in terms of good quality land or irrigated land, the maximum size ranges around just 20-25 acres in most cases. This size will, on an average, yield a net income, at current prices of produce, of only Rs. 3,000 to Rs. 4,000 per annum. In Kerala, for instance, it is as low as 15 acres of double crop paddy land, in Maharashtra 18 acres of land under perennial canal irrigation, in Gujarat 19 acres of perennially irrigated land, in Bihar 24 acres of canal-irrigated land, in Delhi 24 acres of irrigated land, in Tripura 25 acres of *nal* or *lunga* land, in Orissa 25 acres of land under perennial irrigation, in Andhra Pradesh and Mysore 27 acres of wet land with secure irrigation, in Madhya Pradesh 25 acres of perennially irrigated land, and in Madras 30 acres of first class wet land. In the Punjab and Rajasthan, it is 30 acres in terms of good quality land, with a certain standard productivity, and in Uttar Pradesh 40 acres of 'fair' quality land. In some other States and Territories, it is merely so many acres without reference to quality or irrigation; the respective extents in Jammu and Kashmir, Manipur, West Bengal and Assam are 22½ acres, 25 acres, 25 acres and 50 acres.

Of course, in terms of poorer quality land or unirrigated land, the maximum limits may seem to be more liberal, ranging as they do upto 324 acres in Andhra Pradesh, 72 acres in Bihar, 132 acres in Gujarat, 37.5 acres in Kerala, 75 acres in Madhya Pradesh, 120 acres in Madras, 126 acres in Maharashtra, 216 acres in Mysore, 100 acres in Orissa, 60 to 80 acres in the Punjab, 80 acres in Uttar Pradesh, 60 acres in Delhi and 75 acres in Tripura. But these are, by and large, only the equivalents, in terms of yield, of the maximum sizes in respect of irrigated lands. And, in many States such as Andhra Pradesh, Bihar, Kerala, Madhya Pradesh, Madras, Maharashtra, Mysore, Orissa, Rajasthan, Uttar Pradesh, Delhi, Manipur and Tripura, varying allowances for size of family have been provided, and these will have the effect of increasing the respective sizes of maximum holdings. Perhaps the only redeeming feature of the level of ceiling is that the varying extents in terms of unirrigated land are pretty substantial. What amount of surplus land, that is, land in excess of the ceiling limits, will have been released for redistribution in the country as a whole is not precisely known. But one broad estimate or guess is that it will be no more than 3 million acres at the most. From the point of view of making land available to the landless, the reform, therefore, will not have fulfilled the hopes it had engendered among them. But, from the point of view of levelling down the class of substantial landowners, it will have brought about (through ceilings on existing holdings and future acquisitions) a permanent limitation of landownership at a relatively low level which will leave practically no scope for investment in large-scale farming, except in those categories of farms exempted from ceilings.

Whatever chance there is for scientific agriculture on large-scale lines is to be found only in these exemptions. According to the second Plan's exemption policy, which, as it is stated in the final report of the third Plan, remains 'generally' valid now, tea, coffee and rubber plantations, orchards constituting reasonably compact areas, specialised farms engaged in cattle breeding, dairying, wool-raising, etc., sugarcane farms operated by sugar factories and efficiently managed farms, consisting of compact blocks, on which heavy investment or permanent structural improvements have been made and whose break-up is likely to lead to a fall in production —all these are eligible for exemption from ceilings. While it is gratifying to find that, in the land ceilings legislation in all the States, plantations have invariably been exempted from ceilings and there are also provisions in favour of specialised farms, it is distressing to know that there has been no such uniformity in the approach to sugarcane farms operated by sugar factories and to efficiently managed farms. Legislation in many States—Andhra Pradesh, Assam, Gujarat, Madhya Pradesh, Orissa, Punjab, Rajasthan, Mysore and Bihar—has provided for the exemption of efficiently managed farms from ceilings; but it is only in Kerala, Madras, Maharashtra and Uttar Pradesh that such exemption has not been envisaged. Again, legislation in several States—Andhra Pradesh, Assam, Madhya Pradesh, Orissa, Rajasthan, P.E.P.S.U. area of Punjab, Mysore and Bihar—has provided for the exemption of sugarcane farms operated by sugar factories. In two States—Maharashtra and Uttar Pradesh—no such exemption for sugar factory farms has been provided for; and in Madras there is provision only for the setting up of a Sugar Factory Board to review whether individual factories should or should not be exempted from ceilings. It is, indeed, strange that the Planning Commission, which has been laying so much stress on uniformity in the approach to land reform measures in all the States, has permitted a significant variation among the States in the matter of exemptions for sugar factory farms and efficiently managed farms. This is a lamentable failure on the part of the Planning Commission, in spite of its recognition that there are advantages in following the course of exemptions proposed.

Currently, the Bill passed very recently by the Mysore legislature has dealt with the question of exemptions in a commendably fair manner. The fairness consists not only in the provision of exemptions for plantations, sugar factory farms and efficiently managed farms from ceilings but also in the permission accorded to owners of plantations to keep *other* lands upto the ceiling, besides 100 acres for development purposes. The only niggardly provision in the Mysore scheme of exemptions is that the future acquisitions of land by owners of sugar factories and efficiently-managed farms will be limited to the ceiling, if the extent of land held by them is less than the ceiling. This is as illogical as the principal provision in the Mysore Bill for a ceiling of 27 standard acres in the case of existing holdings and 18 standard acres in the case of future acquisitions. If ceilings on existing holdings and future acquisitions should, in all fairness and logic, be at the same level, current exemptions for the holdings of sugar factories and efficient farmers should be logically accompanied by the provision that future acquisitions by such owners will be similarly exempted from ceilings. There is, again, something illogical in the Mysore provision for exemption of lands belonging to religious, charitable and educational institutions from ceilings only to the extent of lands personally cultivated by them. It would have been *prima facie* fair, if the lands of such institutions—lands which had been mostly donated by religious and charitable-minded people—had been straightaway exempted from ceilings irrespective of the consideration whether they were personally cultivated or cultivated by tenants. Another unsatisfactory feature of the Mysore legislation pertains to compensation which has been fixed at 10 times the annual net income of land to be taken over, as against the 15 times mentioned in the original Bill. It is doubtful if this compensation will work out to even 50 per cent of the market value of land. Even at an assumed level of 50 per cent of market value, this compensation will be less than just to individual owners; it will adversely affect the finances of religious, charitable and educational trusts which have not been exempted from ceilings.

In the Madras Bill, now on the anvil of the legislature, the scheme of exemptions leaves much to be desired. No doubt plantations and religious trusts have been exempted from ceilings. But efficiently managed farms, lands of charitable and educational trusts and sugar factory farms have not been specifically and straightaway exempted. Particularly the provision pertaining to the constitution of a statutory Sugar Factory Board to deal with the question of possible exemption of sugar factory farms implies uncertainty in individual cases. The reply of the Madras Land Revenue Minister, who has been piloting the Bill in the Assembly, is to the effect that the ceiling legislation should not stand in the way of the growth of the sugar industry in the State and that the Sugar Board has been envisaged to determine to what extent land for cultivation of cane should be allowed to the factories. This is, of course, reassuring. But it remains to be seen how far the spirit of the Minister's reply will guide the labours of the statutory Board, when constituted. The most salutary feature of the Madras scheme of exemptions is, on the other hand, represented by the complete exemption of plantations from ceilings. And this is in welcome contrast to exemption provisions in some other States like Kerala which place restrictions, in varying degree, on extensions and future acquisition of land by plantations.

MARKET GOSSIP

Decontrol and Sugar Shares

AN important development of the week which affects investors in sugar shares is the complete decontrol of sugar. This measure is bound to have an adverse effect on the profits of sugar industry. It is true that the Government has retained the power to regulate the flow of sugar from the factories, so that there may be no violent fluctuations in prices either way. It is also true that Mr. S. K. Patil is anxious to see that the mills do not suffer unduly. But the withdrawal of tax incentives that were allowed in the 1959-60 and 1960-61 seasons for securing increase in production of sugar, the loss on exports, the inevitable decline in the price of sugar and the compulsory cut in production in the next (1961-62) season, all these will bring about a substantial fall in the profit-margin of mills. For the Deccan sugar factories, in particular, the decontrol, which is an inevitable outcome of the steep rise in production, in the face of static domestic consumption, will mean a big setback, coming as it does on top of the application of Land Ceiling legislation to their sugarcane farms. These factories may have the benefit of agricultural profit for one more season (that is, 1961-62), but, thereafter, they will have to rely only on the profit they can make on the manufacture of sugar.

Those who fear that decontrol will result in higher prices for sugar are seriously mistaken. In the initial stages, better grades of sugar may command a slightly higher price, but, as more and more stocks come on the market, the premium will be no more than what it should be on quality considerations. With a surplus of nearly 1.2 million tons and a prospective output of 2.7 million tons at least, if not more, in the 1961-62 season, there is no prospect of prices going up again in the foreseeable future, unless a war were to break out. It will take at least two seasons of restricted production for the present huge surplus to be absorbed. The position for producers may be somewhat better, if the excise duty is reduced substantially to push up domestic consumption. Although Mr. Patil conceded this need in principle some time ago, it is not known whether the relief will at all be given and, if so, when and to what extent. It will not be surprising if Mr. Morarji Desai, who has the final say in this matter, turns round and quotes some of the spokesmen of the sugar industry itself who used to argue until recently that the consumer price of sugar in this country was by no means unduly high as compared with that in most countries of the world.

Life Insurance: Premium vs. *Bonus*

Reports in the daily Press claim that the Life Insurance Corporation of India is not in favour of a reduction in life insurance premium rates. The Corporation is said to have argued, in a report prepared by it on the recommendations of the Estimates Committee, that, if the current inflation continues, expenses are bound to go up, offsetting any future improvement in mortality or increase in interest yields. The Corporation has not taken a final decision on the question whether premium should be reduced or not. The actuarial investigation of the question is still going on and the premium rates, it is said, would be reduced only if the results thereof warrant such a course.

It may be recalled here that the Estimates Committee of the Lok Sabha, in its recent report on the Life Insurance Corporation of India, had suggested that a committee of experts, consisting of the Controller of Insurance, representatives of the Corporation and independent actuaries, should be set up to review the rates of premia charged by the Corporation. The Estimates Committee did not say whether premium rates should be reduced or not. It preferred to leave this question for the expert committee to decide. But it did emphasise that, in the nationalised set-up, the premium rates should not be any higher than are warranted by strict actuarial considerations. The Committee pointed out that the experience of the Corporation in respect of mortality, yield on investments and expenses of management, the three basic elements that enter into the computation of premium rates, was favourable, and hence there was a case for consideration of the question of premium revision. It seemed to suggest, by implication, that, since the premium rates charged by the L.I.C. were broadly based on the rates offered by the 'Oriental' immediately before nationalisation (they are one rupee lower per thousand sum assured), which itself was determined on the basis of actuarial investigation conducted during the decennial period 1925-35, a reduction was justified.

It is true that mortality experience since 1935 has been favourable. For instance, an investigation of mortality experience relating to 1953 and 1954 showed that actual deaths during the period were only about 45 per cent of those expected on the basis of the 'Oriental' (1925-35) Ultimate Mortality Table. Interest on dividends and expenses have also shown an encouraging trend hitherto. The Corporation, while not denying these favourable developments, argues that the probable trend of yield and expenses should also be taken into account. If the present inflation were to persist, it is likely to offset, the Corporation maintains, any improvement in mortality or yield.

There is considerable force in this contention of the Corporation. It is not desirable to change the premium rates frequently. Hence, when a revision of premium is sought to be made, it is advisable to take into account not only present trends but also what, on reasonable anticipation, is likely to be the trend in the foreseeable future. A reduction in premium rates is, however, not the only way of passing on the benefits of better underwriting results to policyholders. It can as well be done by declaring higher bonuses on with-profit policies. It is true that those who have not taken participating policies would not benefit from the bonus and that a portion of the surplus, which is partly the result of improvement in mortality, for which the community as a whole is responsible, should be distributed among non-participating policyholders, on grounds of equity, although they are not entitled to profit under the terms of the contract. This could be done not by a general reduction but by a cut in the premium on non-participating policies. This, of course, will not benefit the existing policies but might encourage people to take more of non-participating policies.

As a means of distributing the surplus, a higher bonus is, however, preferable to a reduction in premium rates, because the former is more flexible and therefore lends itself to adjustment according to changing circumstances of insurance business. Moreover, in an inflationary era, when the purchasing power of money is being eroded almost every day, bonus will compensate, in part at least, the fall which will have taken place in the real value of the policy amount when it falls due for payment.

Steel and Pig Iron Supplies

Almost everybody in industry and trade knows that the most glaring failure of second Plan was that steel production (2.2 million tons in terms of finished steel in 1960-61) fell very much short of the target (4.3 million tons). But Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, who addressed the third meeting of the Iron and Steel Advisory Council at New Delhi on the 26th instant, obviously lacked the courage to admit the failure frankly. What, on the other hand, he said was a laboured apologia. "During the past few years," he said, "I must admit that the pace of our industrial development has been so fast that steel production has not been able to keep up with it." This circumlocutory way of putting it was, to say the least, misleading. It must, however, be said to his credit that he was at least frank in admitting that, for want of many items of steel, substantial capacities in the steel processing industry have not been fully utilised. And, for the first time in recent years, the Minister had a word of cheer for the re-rolling mills. This is what he said:

"One of the disturbing features of the industry during the last few months has been the shortage of billets that the re-rolling mills have been experiencing. The acute shortage was due mainly to maintenance works that were taken up in the mills at Bhilai and the reduced supply from Tatas and Indian Iron. The period of this shortage, I am happy to say, is practically over and supplies are gradually coming back to the level of expectations. We have also arranged imports of some small quantities of billets. No doubt from the point of view of re-rolling mills, the shortage is important. I appreciate the demand that is being placed before us for importing larger quantities of billets. We have to look at the matter from the point of view of availability of the end products. The supply of bars and rods in the country is adequate, except in certain pockets due mainly to transport difficulties. Therefore, foreign exchange which is limited should be utilised to import categories which are more scarce than bars and rods.

"During the last meeting, I mentioned that the only scarce categories were sheets and wire. I am happy to say that the supply position of wire has improved. I am sure the position in sheets will also improve in the near future. It is indeed gratifying to note that a number of re-rollers are making arrangements to produce wire rods. This, along with the wire rods from Indian Iron, will be able to supply the raw materials to the wire drawers to meet a considerable portion of their demand. We propose to set up a rod mill at Bhilai which, after its completion, will be able to meet substantially the future demand of wire drawers."

Sardar Swaran Singh also held out the hope to consumers of steel in general that the rest of the current year (1961-62) would be comparatively easier for them, thanks to the higher rate of production now and the larger import arrivals. The pig iron supply position, however, has again become difficult and so the Government has stopped making any further commitments for export of foundry pig iron. The most heartening piece of information given by the Minister, in this connection, is that there has been good response to the policy of licensing 5 or 6 pig iron plants (each of 100,000 tons capacity) in the private sector. If, as the Minister himself acknowledged, the pig iron produced in such relatively small units is of high quality suitable for use in foundries, why should not the Government license more such units, assuming that a sufficient number of entrepreneurs will come forward and that the requisite capital resources will be readily available?

Kirloskar Oil Engines

The Kirloskars have done it: carrying coal to Newcastle. Kirloskar Oil Engines Ltd. has penetrated the U.S. market, famed the world over for its machines and electrical gadgets. On Tuesday, the 26th inst., Mr. Y. B. Chavan, Chief Minister of Maharashtra, released at Poona the first consignment of Kirloskar oil engines, for shipment to the U.S.

For a young enterprise such as the Kirloskar Oil Engines Ltd. to have made a debut in the highly competitive U.S. market is proof that Kirloskars, as industrialists, are second to none. It is no doubt an eloquent testimony to the fact that Kirloskar oil engines have the two most important elements that go to make a product competitive, namely, high quality and reasonable price. An equally important factor, which is responsible, in no mean measure, for the popularity of Kirloskar oil engines in Asian and African markets, is the prompt and efficient after-sales service that goes with all Kirloskar products.

Speaking at the ceremony, Mr. S. L. Kirloskar pointed out that the Company was hoping to double exports of oil engines this year. The Company's exports last year were valued at Rs. 30 lakhs, as compared with only Rs. 30,000 five years ago, and this year they are expected to be Rs. 50 lakhs. Mr. Kirloskar, however, had no illusions about exports. "I must point out," he said, "that export is not an easy job. The competition in the overseas markets is always extremely keen and goods, even of high quality, cannot be sold, unless they stand the price competition." He did not think that compulsion will result in exporting more. For a detailed treatment of the limitations of compulsory exports, see our Delhi Letter on page 638 of this issue. What the Government could do to help export more, Mr. Kirloskar suggested in his speech at the annual meeting of the Company, was to create conditions for the production of high quality goods at reasonable prices, so that they could stand up to the fierce blast of competition abroad.

Mr. Kirloskar detailed the various expansion programmes undertaken by the Company. He disclosed that, for financing these programmes, the Company proposes to issue, in the near future, 25,000 equity shares of Rs. 10 each for which permission has already been obtained. It may be recalled here that the Company issued, early this month, 400,000 redeemable cumulative, participating preference shares of Rs. 10 each at par; these have been fully subscribed.

Imperial Tobacco

From just Rs. 40 lakhs to over Rs. 42 crores! This is the extent to which the sales proceeds of the Imperial Tobacco Company of India Ltd. have expanded since 1911 when the Company was purely a selling organisation. It is true that, in the year ended 31st March 1961, almost 43 per cent of the present turnover, or Rs. 18.09 crores, is accounted for by customs and excise duties. Even so, the expansion of business is, as Mr. F. A. Collett, Chairman of the Company, claimed in his speech at the Company's fiftieth annual meeting held at Calcutta on Tuesday this week, no mean achievement. The Company owns today five cigarette making factories and two printing factories. Its capital is now over Rs. 15 crores, as against only Rs. 25 lakhs fifty years ago.

It is not merely at the notable progress made by Imperial Tobacco that the shareholders of the Company have reason to feel gratified. There is also the welcome statement by the Chairman that the Company has certainly no intention of resting on its past achievements and that it will not be found wanting in the task of supplying the anticipated demand for cigarettes following the improvement in living standards under the Five-year Plans. While the statement is reassuring, the heavy load of taxation and the steadily increasing costs of labour, raw materials and freight, to which Mr. Collett drew attention, are somewhat disquieting. Surely, the Company cannot absorb all this burden if the increases in the various items of cost outstrip the gain resulting from higher productivity. No wonder, then, that the outlook for the Company, as assessed by Mr. Collett, could not but be one of moderate optimism. Since it is difficult to say whether there will not be any further increases in tobacco duties and that rising costs do not outpace improvement in turnover, the Company will, as was mentioned by us while reviewing the working results of the Company two weeks ago (*vide* page 565 of *Commerce* dated 16th September 1961), do well to diversify its manufacturing activities by taking up some new lines.

India and Commonwealth Sugar Agreement

An interesting suggestion that India should apply for membership of the Commonwealth Sugar Agreement was thrown by the Chairman of the Indian Sugar Mills Association's Export Agency Division, Mr. S. S. Kanoria, at Calcutta the other day. The claim of India to such membership, Mr. Kanoria said, could be strongly pressed, because this country was not in a position to export sugar in 1951 when the Agreement was concluded. "Now that a substantial export surplus exists," he went on to say, "there is no reason why India should be denied the benefits enjoyed by the other sugar exporting Commonwealth countries. India's case is further strengthened, because South Africa has withdrawn from the Commonwealth and its export quota could be allotted to this country without disturbing the arrangements with other Commonwealth countries."

The suggestion of Mr. Kanoria has evidently been prompted by two important considerations: (*a*) the pressing need for earning foreign exchange and (*b*) the disposal of the sizable exportable surplus at the highest price possible. The chief advantage of India joining the Commonwealth Sugar Agreement lies in the fact that the heavy loss on sugar exports to free markets can be reduced considerably, inasmuch as the price paid by the United Kingdom for the sugar bought by it from the Commonwealth countries is higher than the world price, as is the case in respect of sugar bought by the United States under special

(Continued on page 673)

EQUITIES FIRM

SUGARS, HOWEVER, DEPRESSED

(From Our Own Correspondents)

BOMBAY, 28*th September*

EQUITIES displayed a firm trend during the major part of the week, thanks to heavy short-covering and some fresh investment buying. The bullish sentiment was also sustained by encouraging advices from Calcutta and Ahmedabad, where there was a considerable broadening of activity. The Bombay Stock Exchange authorities, too, gave a fresh stimulus by lifting the special margin deposits against bulls in Centurys and lowering margins against bears in Standards (from Rs. 140 to Rs. 40) and Khataus (from Rs. 35 to Rs. 25). Further, the *badla* rates at the last settlement were below normal and the bulls had no difficulty in paying them. Consequently, the majority of scrips recorded a rise in price. The upward trend was, however, checked yesterday when the market received a severe jolt following the breakdown of talks on Punjabi Suba, discouraging advices from Calcutta and above all the news about the sharp cut in the dividend of Khatau Mills from 32 per cent to 16 per cent (subject to tax). Today, again, the market edged upward on revival of bull support. Sugar shares, however, encountered renewed selling, as operators feared that the widthdrawal of controls on movement, distribution and prices of sugar with immediate effect would compel the mills to sell at reduced prices and suffer a fall in their profit. The undertone of the market at the time of writing was distinctly firm, with several counters well above the rates prevailing a week ago.

In the steel section, Tata Steels began the week at Rs. 143, as against the previous close of Rs. 142.50, and spurted to Rs. 144.75 on Tuesday the 26th inst. Yesterday, however, they were marked down to Rs. 142. Bear covering and fresh buying raised the value today to Rs. 143.50. Indian Irons gained 20 nP to Rs. 24.44. Following the statement by the Chairman of the Mukand Iron Company, Mr. Kamalnayan Bajaj, that the Company intended to issue right shares in the near future, the shares advanced from Rs. 27.15 *ex-div.* on Monday to Rs. 27.50 on Tuesday. After declining to Rs. 27 yesterday, they recovered to Rs. 27.35 today.

The uncertainty regarding the question of retention prices influenced trading in the cement section. Associated Cements opened lower at Rs. 165.50 on Friday, as against the previous close of Rs. 166, and moved up to touch a high of Rs. 167 on the same day. At this level, profit-taking set in and the scrip receded to Rs. 163.50 before finishing at Rs. 166 today. Jaipur Udyogs advanced by 44 nP to Rs. 11.88. Digvijay Cements were firm at Rs. 180. The Company has finalised negotiations with Messrs. Johns Mauville International Corporation of the U.S. for both technical and financial collaboration for its asbestos cement and high pressure pipe project. But Orissa Cements dropped 25 nP to Rs. 14.76 *ex-div.*

Among textiles, Centurys jumped up from Rs. 551 to Rs. 562 on Tuesday, the 26th inst. Profit-taking and bull liquidation brought them down to Rs. 554.50 yesterday. They, however, recovered to Rs. 555 today. Kohinoors were done at Rs. 290 *ex-div.* on Monday the 25th inst. as against the previous close of Rs. 288.50 *cum-div.* After fluctuating within a narrow range, the share finished at Rs. 290 today, representing a net rise of Rs. 5.70 over the week. Simplex opened at Rs. 167 on Friday, as against the previous close of Rs. 164, and improved to Rs. 168 on the same day. After receding to Rs. 163 they finished at Rs. 164 today. Standards hardened by Rs. 50 to Rs. 1.258. Swans gathered Rs. 3.75 to Rs. 615. Shree Niwas advanced by Rs. 3 to Rs. 267. New Greats gained Rs. 2 to Rs. 228. Morarjees improved by an equal amount to Rs. 396. But Khataus were hammered down from Rs. 492.50 to Rs. 430, following reduction in dividend. In the cash list, *Mafatlals* were a bright feature, the quotation climbing up by Rs. 75 to Rs. 905. Vishnus gathered Rs. 8 to Rs. 147. Sassoons Rs. 2.70 to Rs. 70.50 and Dawns Rs. 2.50 to Rs. 136.50. But Phœnix eased by 50 nP to Rs. 178.50.

Shipping shares showed a mixed trend. Scindias opened at Rs. 12.72 and advanced to Rs. 12.88 on Monday the 25th inst. In the following sessions, they were quiet and closed at Rs. 12.64 today. Great Easterns received support and improved by 20 nP to Rs. 13.68.

Sugars suffered a setback to values for the reason mentioned above. Belapurs opened at Rs. 274 as against the previous close of Rs. 273 and, after fluctuating within a narrow range, moved to Rs. 263. The net loss over the week was Rs. 10. Phaltans declined by Rs. 4.75 to Rs. 132. Walchandnagars lost Rs. 3 to Rs. 162.50. Kesars eased by Rs. 2.50 to Rs. 222.50. Maharashtras shed Rs. 2 to Rs. 190 and Ravalgaons 70 nP to Rs. 62.30.

Automobile shares were slightly better in contrast to the easy trend noted last week. Premier Automobiles moved up from Rs. 153.50 to Rs. 155.50. Hindustan Motors gathered 8 nP to Rs. 19.28.

A smart rise of Rs. 20 in National Rayons following hectic buying induced by rumours of a likely issue of right share was the feature of trading in the rayon section. The scrip opened firm at Rs. 532.50 and advanced to Rs. 548.50 on Monday the 25th inst. Profit-taking ensued at this level and the value came down to Rs. 541.50 yesterday. Today, the bulls were again aggressive and raised the value to Rs. 550. Gwalior Rayons evoked buying support and gained Re. 1.50 to Rs. 46, in contrast to the drop of Rs. 2.92 suffered last week. Baroda Rayons put on 50 nP to Rs. 140.50. But Indian Rayons receded by Rs. 2.50 to Rs. 69.50. South Indian Viscoses shed 50 nP to Rs 184.50.

In the chemical section, Indian Dyestuffs jumped up by Rs. 17.50 to Rs. 450. Colour-Chems strengthened by Rs. 6.25 to Rs. 346.25. Alembics fathered Rs. 5 to Rs. 237.50 But Polychems lost Rs 7.50 to Rs. 193.75 Adarshs fell by Rs. 6 to Rs. 86. Amar Dyes dropped Rs. 2.50 to Rs. 291.25 Dhrangadhras shed Re. 1.50 to Rs. 121. Universal Dyestuffs eased by a rupee to Rs. 51. Citrics shed an equal amount to Rs. 68. Some chemical shares, however, remained steady. Thus, synthetics were quiet at Rs. 188, Chemo Pharmas at Rs. 26 and Pesticides at Rs. 4.12.

The engineering section ruled irregular. T.E.L.COs. opened at Rs. 342.50, as against the previous close of Rs. 339.50, and rose to Rs 344.25 in initial deals. After fluctuating narrowly both ways in subsequent sessions, they were marked down to Rs. 337 yesterday. Today, however, they met with fresh support and improved to Rs. 340, showing a gain of 50 nP over the week. Premier Constructions advanced by Rs. 4 to Rs. 189. Alcock Ashdowns put on Rs. 3 to Rs. 306. Coopers gained a like amount to Rs. 185. But Larsen and Toubros were neglected at Rs. 39. Texmacos shed 32 nP to Rs. 17.04. In the cash section, T. Maneklals spurted by Rs. 10 to Rs. 560. New Standard Engineering gained Rs. 2.50 to Rs. 189. Hind Electrical advanced by Rs. 7.50 to Rs. 142.50. But Asian Cables lost Rs. 2 to Rs. 104. and Mahindras 12 nP to Rs. 18.76.

Among miscellaneous industrials, Bombay Burmahs received good support. After opening at Rs. 596 on Friday, they spurted to Rs. 614 on Tuesday the 26th inst. At this stage, profit-taking ensued and the share was marked down to Rs. 611. In keeping with the general trend, the scrip declined yesterday to Rs. 601 but recovered to Rs. 607 today. Over the week, the scrip gained Rs. 13. Voltas was well favoured Rs. 6 higher at Rs. 296. G. Claridges advanced by Rs. 8.75 to Rs. 215. New India Industries met with good support and rose by Rs. 11.25 to Rs. 402.50. West Coasts improved by Rs. 6.50 to Rs. 177, Rohit Papers by Rs. 5 to Rs. 85 and Bombay Oxygens by Re. 1.50 to Rs. 57, Permanent Magnets gained a rupee to Rs. 85. Hindustan Levers gathered 75 nP to Rs. 49.50. Shivrajpurs put on an equal amount to Rs. 97.50. But Wimcos lost Rs. 4 to Rs. 288 on stray bull liquidation. Ceat Tyres dropped Rs. 3.75 to Rs. 203.75, while Premier Tyres picked up 50 nP to Rs. 122.50. Tata Chemicals gathered 68 nP to Rs. 17.84.

* * * *

Madras Stock Exchange

MADRAS, 27th September

Barring coffee shares which lacked support, equities on the Stock Exchange put on a cheerful appearance during the week under review. The Congress election manifesto did not contain any fresh surprises for the market. In particular, textiles ruled firm on large investment buying. Teas were steady, notwithstanding reports that tea production in South India during the first half of 1961 was lower at 40.8 million kgs., as compared with 42.05 million kgs. in the corresponding period last year. Rubbers moved up in sympathy. Sugars scored handsome gains on hopes that controls on movement of sugar would soon be lifted. Miscellaneous scrips were generally firm. The easiness in the coffee section was due mainly to the unremunerative export prices in the past few months, though the quantity actually shipped was pretty high.

Among textiles, Coimbatore Spinnings advanced by Rs. 11.50 to Rs. 68.50. Vasantas firmed up by Rs. 11 to Rs. 281. Metturs rose by Rs. 3 to Rs. 387 and Radhakrishnas by Rs. 2.50 to Rs. 35.50. Janardanas spurted by Rs. 2 to Rs. 66. Lakshmis strengthened by a rupee to Rs. 159. Bangalore Woollens and Buckinghams hardened by a like amount to Rs. 216.50 and Rs. 251, respectively. Madurais picked up 75 nP to Rs. 38.75. Loyals improved by a similar amount to Rs. 48 50. Travancore Rayons improved from Rs. 38.85 to Rs. 39.40 before closing at Rs. 39.10. South India Viscose were maintained at Rs. 185. Cannanores at Rs. 156 and Coimbatore Pioneers at Rs. 282.

In the teas group, Devasholas attracted good attention and rose by 25 nP to Rs. 30.50. Haileyburias gathered 20 nP to Rs. 13.80. Chembras increased by 6 nP to Rs. 3.61, Neelamalais by 5 nP to Rs. 4 35 and Kil Kotagiris by 2 nP to Rs. 475. Periakaramalais fluctuated between Rs. 3.63 and Rs. 3 70 before closing at Rs. 3.66. Highlands were fully steady at Rs. 14.12, as also Nonsuchs at Rs. 28.62 and Parksides at Rs. 29.70. But Peermades lost 13 nP to Rs. 23.37, despite the announcement of an interim dividend of 7½ per cent, taxable, for 1961.

Among rubbers, Travancores gathered 25 nP to Rs. 12.12. T.R. and Ts and Vaikundams rose by 5 nP each, the former to Rs. 12.12 and the latter to Rs. 10. Malankaras changed hands at Rs. 18. Cochin Malabars fell initially from Rs. 7.43 to Rs. 7.32, but improved to Rs. 7.38, with a net loss of 5 nP.

Coffee shares were listless. Coffee Lands eased by 13 nP to Rs. 16.62. Consolidated Coffees were dull at Rs. 20.65. Outcherlony Valleys at Rs. 3.78 and Balanoors at Rs. 14.75. Similarly, Rajendras were neglected at Rs. 12.12 and Anaparais at Rs. 3.85.

A feature of trading in the sugar section was the spurt in Cauverys from Rs. 120 to Rs. 124. East India Distilleries advanced by Re. 1.08 to Rs. 39 20. Deccans picked up 20 nP to Rs. 13.50. United Breweries were firm at Rs. 106 50 and Mysores at Rs. 57.75. Travancores, however, shed 25 nP to Rs. 10.25 and Indias 15 nP to Rs. 11.60.

Among miscellaneous industrials, Textools hardened a rupee to Rs. 177. The Company has maintained the dividend for the year ended April 1961 at the previous year's level of 15 per cent (taxable). The Company also proposes to increase its authorised capital from Rs. 50 lakhs to Rs. 1 crore. Indian Steel Rollings put on 60 nP to Rs. 10 50. Aluminium Industries advanced by 50 nP to Rs. 23.80 and Ashok Leylands by 34 nP to Rs. 9.16. Among cements, Travancores gathered 40 nP to Rs. 7 80 and Orissas 38 nP to Rs. 15. India Cements moved up from Rs. 6.60 to Rs. 6.68 before finishing at Rs. 6.63. But Dalmia Cements lost 20 nP to Rs. 11.50 and Andhras 15 nP to Rs. 9.25. Among chemicals, Metturs changed hands at Rs. 14.11, same as last week. Mysore Chemicals were firm at Rs. 23.85 and Mysore Fertilisers at Rs. 11.60. But Travancore Chemicals declined by 37 nP to Rs. 18.25, despite the announcement that the Company proposed to issue 50,000 equity shares of Rs. 10 each at par to shareholders as on 1st December 1961, a sum of Rs. 5 per share payable on or before 15th January 1962, entitled for dividend for three months, January-March 1962. The balance of Rs. 5 per share is payable on or before 15th April 1962 and the new shares rank for dividend *pari passu* with the old shares from 1st April 1962.

NEWS IN BRIEF

THE Kerala Government is examining the possibility of transferring small-scale industrial units now run by the Government to the private sector.

A $19.8-million contract for three of the major plants in the Trombay fertiliser project has been awarded to the U.S. firm, the Chemical Construction Company of New York.

The Assam Government has constituted a committee to explore the possibilities of holding internal tea auctions in Assam. The committee is expected to submit its report within three months.

The Central Railway Laboratory, Bombay, has claimed to have developed a simple and inexpensive method of preparing combustion boats, an essential requirement of metallurgical laboratories for the estimation of carbon in steels.

The Government of India has set up a freight investigation bureau, under the charge of a director, whose duty will be to deal with the complaints regarding freight rates on goods exported from India and lack of shipping facilities emanating from trade interests.

Austria proposes to become a member of the Aid India Club, now consisting of six members, namely, the U.S., the U.K., West Germany, Japan, Canada and France. The Austrian Government has already offered to extend a loan of $14 million for the third Plan.

Denmark has been recognised as "convention" country for the purpose of the Trade and Merchandise Marks Act, 1958. Arrangements have been made between the two Governments for the registration and protection of trade marks of the citizens of one country in the territory of the other.

Member mills of the Indian Jute Mills Association have raised their weekly working hours from 42½ to 45, with effect from Monday the 25th inst. following a decision to this effect by the I.J.M.A. last week, in an effort to stabilise jute prices through larger purchases of jute by mills.

A four-member delegation, headed by Mr. M. R. Sachdev, Secretary, Union Ministry of Irrigation and Power, has left for the U.S. for negotiating loan assistance from the International Development Association for the Shetrunji (Gujarat) and the Salandi (Orissa) irrigation projects and the drainage schemes in the Punjab.

As a measure of export promotion, the Government of India proposes to grant certain concessions to manganese mine-owners. These concessions are expected to be in the nature of reduction of railway freights, royalty charges and port dues. This move follows a recent meeting of the representatives of industries and Government officials.

A committee has been set up by the Government of India to review the functions of the different organisations for development of small-scale industries, both at the Central and State levels, and make recommendations in order to reduce the multiplicity of organisations and eliminate overlapping of functions by a clear demarcation of duties between them.

The possibility of manufacturing heavy earth-moving equipment required by river valley projects in the public sector is being studied by the Government of India. One proposal is to entrust the work to the Union Defence Ministry, which is already manufacturing certain tractors. This is necessitated by the refusal of two U.S. firms to manufacture such equipment in India, which, it is learnt, they had previously undertaken to do.

A seminar on Industrial Estates, organised by the E.C.A.F.E. in co-operation with the Division of Industrial Development of the United Nations, the Department of Economic and Social Affairs and the U.N. Bureau of Technical Assistance Operations, will be held at Madras from 1st to 11th November next. The scope of the seminar is confined to finding solutions to problems faced by countries in the region in respect of planning and organisation of industrial estates.

A team of about a hundred Soviet technicians will be arriving in Hyderabad shortly to erect the plant and machinery for the synthetic drug factory to be set up in the public sector with the help of the Soviet Government. The factory which will go into production by the middle of 1964 will manufacture sulpha drugs, anti-T.B. drugs and vitamins and intermediates required for these drugs. The total investment on the project is Rs. 8.5 crores.

The Government of India is considering a proposal for establishing six additional centres for training in chemical engineering, with a total admission capacity for 330 students. Besides, it proposes to increase the intake of the existing seventeen institutions in the country imparting training in chemical engineering from 611 to 930. The Planning Commission has estimated that, at the beginning of the fourth Plan, India will require about 7,000 chemical engineers.

The first electric locomotive manufactured in India will be launched on the track at Chittaranjan by the Prime Minister on 14th October 1961. This is one of the ten D.C. 1,500-volts electrical locomotives which the Chittaranjan Locomotive Works will turn out [illegible] mechanical [illegible] built [illegible]

will be imported, till the Heavy Electricals at Bhopal develop capacity for manufacturing it.

The State-owned Hindustan Steel Ltd. has signed an agreement with Atlas Steels Ltd. of Canada, under which the latter will provide production know-how and training services for the alloy and special steel plant being set up at Durgapur in the public sector. The alloy steel plant, which will involve an outlay of Rs. 40 crores, will manufacture 48,000 tons of finished saleable products annually, consisting of carbon tool steels, alloy tool steels, engineering and construction tool steels, stainless steels and other qualities of special steels. The plant, which is expected to be commissioned by 1965, will employ about 4,000 workers.

The Indian Refineries Ltd. in the public sector and the Assam Oil Company in the private sector have come to an understanding for the distribution of oil in Assam. For this purpose, the State has been divided into three areas. While in western Assam, Indian Refineries will sell their products, the eastern districts will be reserved for the Assam Oil Company. In the third area, comprising the remaining districts, surplus products of both the Nunmati and Digboi refineries will be pooled for sale. The Nunmati refinery in the public sector will go on stream by 1st January 1962 as scheduled. The full annual capacity of the refinery will be 750,000 tons.

A conference of Afro-Asian countries will begin on 3rd October 1961 in New Delhi, in order to discuss problems encountered in the development of small-scale and handicraft industries. Organised by the International Labour Organisation, the conference will be attended by delegates from twelve other countries. The meeting will examine questions relating to credit facilities, supplies of raw materials, marketing of products, improved technology, productivity and organisation, sales and management problems of small industries. It will also consider problems relating to mechanisation and labour standards as also the role of international technical assistance in the development of small-scale and handicraft industries.

The Government of India has advised the State Governments to formulate schemes, financed from their own resources, for granting house-building advances to their employees. This is already being done by the Government of India for their employees, who, under the present arrangement, can obtain loans equal to twenty-four months' salary, subject to the maximum of Rs. 35,000. The State Governments have also been informed that the loans obtained from the Life Insurance Corporation, under the rental housing schemes for State Government employees, could be repaid in thirty years, instead of twenty years. The rate of interest will, however, be higher for the thirty-year loan. Fresh loans could also be granted to the States for building of houses under the scheme on revised terms and conditions.

From Abroad

Average monthly gross income in West Germany was DM. 506 per employed person, or an increase of 8.9 per cent over the previous year.

A group of ten Swiss financiers has offered to finance the major projects of the £62 million five-year development plan of Cyprus.

The Government of Ceylon proposes to introduce legislation to reserve for Ceylonese alone a certain proportion of vacancies for labour in plantations.

Ceylon has signed a trade agreement with Hungary, seeking to expand mutual trade. Ceylon will export rubber, copra oil and certain other consumer goods in exchange for sugar, textiles and foodstuffs from Hungary.

The Federal Government of Nigeria has rejected the plea for nationalisation of foreign banks in the country put forward by a section of the trade. It is alleged that foreign banks are not assisting Nigerian traders.

The Government of Pakistan has set up an Oil and Natural Gas Development Corporation, with an initial capital of one crore of rupees, for exploration and development of mineral oil and gas.

With the granting of a patent to a California scientist for his invention of an automatic reading system, which can process bank cheques at a rate of 740 per minute, on the 12th inst., the total number of patents issued in the U.S. touched the three million-mark.

Italy's largest ship-building group, the Fincantieri Corporation, has secured a Soviet order for the building of six tankers of 48,000 tons each. The contract, which is worth about $50 million, is equivalent to about 30 per cent of the total annual capacity of the Italian yards.

A Japanese delegation, led by Mr. Heroshi Shio, is now in the Portuguese enclave of Goa, and is currently negotiating for the purchase of Goan iron ore for Japanese steel industry. It will also study the possibilities of mechanising ore mines belonging to a Goan concern.

There was a further improvement in Britain's balance of payment on current account in the second quarter of this year, according to official estimates. The balance on current account in the second quarter showed a deficit of £18 million, as compared with a deficit of £65 million in the first quarter and £30 million in the corresponding quarter [illegible]

PERSONAL

MR. Shiv Rattan Mohatta and Mr. Chand Rattan Chandak of Bikaner have been elected Chairman and Vice-Chairman, respectively, of the All-India Wool Trade Federation for 1961-62.

Mr. Murarji J. Vaidya, the well-known industrialist and Honorary Consul for Austria in Bombay, has been granted personal rank of Consul General by the Austrian Government.

Mr. M. G. Rungta has been elected President of the Bharat Chamber of Commerce, Calcutta, for 1961-62. Mr. H. S. Singhania will be the Senior Vice-President and Mr. M. K. Mookerjee the Junior Vice-President.

Mr. W. J. M. Paterson, C.M.G., has been appointed U.K. Deputy High Commissioner at Madras *vice* Mr. Mark Allen, C.V.O., who has become the Political Counsellor in the British High Commission, New Delhi. Mr. Paterson will arrive in India to take up his new assignment at the end of October.

Prof. D. R. Gadgil, Director of the Gokhale Institute of Politics and Economics, Poona, has left for the U.K. From there, he will be going to Geneva to attend the first meeting of the Advisory Committee of the International Institute of Labour Studies sponsored by the International Labour Organisation.

Mr. M. Gopala Menon, until recently leader of the Indian delegation to the International Supervisory Commission in Viet Nam, has been appointed Director of the New York branch of the Indian Investment Centre which will be inaugurated next week by Mr. Morarji Desai, Union Finance Minister, during his U.S. visit.

Mr. Courtland S. Gross, President of the Lockheed Aircraft Corporation, California (U.S.), has been elected Chairman of the Corporation in place of his brother, the late Mr. Robert E. Gross, founder of the Company, who died earlier this month. Mr. Daniel J. Hughton, until recently Executive Vice-President, has succeeded Mr. Courtland Gross as President.

Mr. S. S. Kanoria, Chairman, Export Agency Division of the Indian Sugar Mills Association, left for Geneva on Saturday, the 23rd inst. to attend the United Nations' Sugar Conference as a member of the Indian delegation to the Conference which opened in Geneva on the 12th inst. The leader of the delegation, Mr. A. M. Thomas, and two other members, Mr. D. D. Puri, President, Indian Sugar Mills Association, and Mr. K. P. Jain, Chief Director (Sugar), Government of India, are already in Geneva.

Mr. R. G. Saraiya has been appointed Chairman of the reconstituted Cotton Textile Fund Committee for a period of two years from 1st September 1961. The Textile Commissioner, Mr. W. R. Natu, will be the Vice-Chairman. The other members of the Committee are: Mr. Vikram A. Sarabhai, Mr. Padampat Singhania, Mr. Naranji L. Kara, Mr. M. N. Savani, Mr. R. V. Deshmukh, Mr. Neville N. Wadia, Mr. A. D. Gorwala, Mr. Pratap Bhogilal, Mr. E. F. G. Hunter, Mr. C. S. Bharkatiya, Mr. Arvind N. Mafatlal, Mr. G. D. Ambekar, Mr. Bharat Ram, Mr. T. P. Chakravarti and Mr. N. M. Veerbhadra Chettiar.

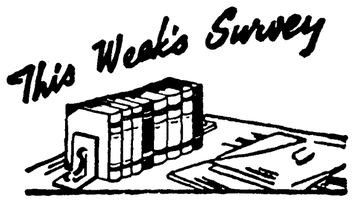
The representatives of the British woollen textile industry have urged the Government to reject the Japanese request for import licence for wool imports into the U.K. They maintained that Japanese wool textiles should not be allowed to enter the U.K. under the provision of the G.A.T.T., until Japanese industry ceases such practices as subsidising of exports out of the home trade.

Cuba exported 2.43 million tons of raw sugar to Soviet Russia during January-August 1961, which was more than half of its total exports amounting to 4.16 million tons. China was the second largest buyer, accounting for 810,000 tons, followed by Japan and Poland, which purchased 233,000 tons and 214,000 tons, respectively. Total exports of refined sugar aggregated 238,000 tons, the principal buyers being the United Arab Republic (42,000 tons) and the Canary Islands (31,000 tons).

Tanganyika is making vigorous efforts to expand sugarcane cultivation. This began with the Kilembero scheme, introduced in May 1960, which was financed by an international consortium of banks. Already, about 2,000 acres of dense bush have been transformed into sugarcane farms. It is estimated that 1,650 acres of commercial sugarcane will be ready for production by August 1962. Production of refined sugar is expected to be 10,000 tons in 1962, rising to 20,000 tons in 1963 and still further to 30,000 tons in 1964.

Ceylon has signed an agreement with Soviet Russia for the establishment of a rubber tyre and tube factory. The contract, valued at Rs. 2.8 crores, provides for the supply of machinery, designs and technical know-how from Soviet Russia. The amount will be treated as loan repayable from out of the profits of the factory. The factory, which is expected to go into production in 1965, will produce 250,000 tyres annually in the first stage and 360,000 tyres in the second stage.

A contract valued at approximately £2[illegible] for the design and supply of a coal preparation plant for Compania Carbonifera e Industrial de Lota in Chile, South America, has been won by Simon-Carves Ltd., Cheadle Heath, Stockport, in the face of world-wide competition. This is the first contract for coal preparation plant that Simon-Carves has won in South America. The plant will be capable of handling [illegible] tons of coal each [illegible]



EVALUATION OF CODE OF DISCIPLINE

THE two-day Seminar on the working of the Code of Discipline in Industry, jointly organised by the Employers' Federation of India and the All-India Organisation of Industrial Employers, which concluded at New Delhi on the 23rd inst., has made certain important recommendations which deserve to be considered at tripartite level, preferably by the Indian Labour Conference. The recommendations pertain to (1) the recognition of unions, and (2) the implementation machinery. As regards the first, the Seminar made the following recommendations:

(*a*) The Code enjoins upon an employer to recognise a union in accordance with the criteria evolved at the sixteenth session of the Indian Labour Conference. Broadly stated, the criteria require that a union, which has been functioning for at least one year and which covers a minimum of 15 per cent of the workers in an establishment, should be recognised. Authentic and speedy verification of membership of unions for purpose of recognition is not always possible. While the existing law does not enable the employer to secure information about membership, etc., in some States, appropriate procedures have not been followed, while, in others, verification takes an unduly long time. These defects should be removed.

(*b*) Since recognition is voluntary under the Code, where there is a clear-cut and gross violation of the Code, the management should have the right to suspend recognition of the union concerned, pending consideration of the breach reported to the implementation machinery. Similarly, in dealing with claims for recognition, the employer may withhold such recognition, pending investigation by the implementation machinery into the breaches already reported.

(c) A convention should be established whereby industrial disputes raised by unrecognised unions should not be taken cognizance of by the industrial relations machinery. If unrecognised unions are to enjoy the same privileges as recognised unions, the purpose of recognition, it is pointed out, will be defeated.

As regards the implementation machinery, the Seminar felt that it was not functioning satisfactorily in a number of States. There was no clear conception of its functions, nor were there adequate and informed implementation personnel. The following main suggestions were made to strengthen the implementation machinery and make it more effective:

(i) The number of investigating officers should be increased whenever necessary and seminars should be organised for these officers, so that they may appreciate the principles and spirit underlying the Code, its objects and intentions and the rights and obligations of the parties, including those of the Government.

(ii) The Implementation Committee should not deal with matters which normally come under the purview of the industrial relations machinery or those involving interpretation of law; nor should it take upon itself the work which is entrusted to the authorities prescribed under the various enactments.

(iii) There must be immediate, on-the-spot inquiries about the breaches of the Code and all inquiries should be undertaken only after giving due notice to the parties concerned.

(iv) It should be clearly recognised that voluntary arbitration implies willingness on the part of both employers and workers to resort to arbitration. A demand for arbitration by one party and non-acceptance of it by the other party should not be construed as violation of the Code.

The Seminar declared that, as far as the employers were concerned, they had accepted the Code in the belief that it would prepare the ground for better industrial relations. From the very beginning, it was understood that the Code was a moral instrument and should not be looked upon as a legal document. The Seminar agreed that, during the three years the Code was in force, it had created a sense of awareness in the parties of the need to follow certain principles to promote industrial peace. It, however, pointed out that the actual working of the Code revealed that the purpose of the Code had been misconceived in certain quarters and that this had reduced, to some extent, the effectiveness of the Code. There were instances, according to the participants in the Seminar, where parties had endeavoured to use the Code for their own purpose by interpreting the wording of certain provisions to suit their convenience. Also, the divergent interpretations given by the State Governments added to the confusion and, consequently, the working of the Code had suffered. Further, State implementation officers were not adequately informed of the principles and purpose of the Code. At the level of individual workers, the Code was almost unknown. Besides, there was need for popularising the Code among employers also.

It must be conceded that the above is a fair assessment of the working of the Code. The suggestions made by the Seminar should be seriously considered for possible adoption. It should, however, be emphasised that no improvement in the wording of the Code or changes in its provisions can automatically ensure the success of the Code, unless the parties have faith in it and agree to observe it in both letter and spirit. The findings of the first inquiry into the Calcutta Tramway Strike (1958) made by a tripartite committee, presided over by Mr. R. L. Mehta, Joint Secretary, Ministry of Labour and Employment, clearly indicate that, if the right spirit is lacking, the Code is doomed to fail, however foolproof the Code and vigilant the implementation machinery may be. The Committee held both the Company and the union guilty of violating the Code, the former by not evolving a grievance procedure, setting up Works Committees, making arrangements for collective bargaining and recognising the majority union and the latter by taking to strike as the first, instead of the last, resort and keeping up a spirit of agitation among the workers on issues already settled by tribunals.

DEVELOPMENT OF PORTS

Judged in purely financial terms, development of ports in the second Plan period may be said to have fallen very much behind schedule, for no more than Rs. 45 crores were actually expended under this head, as against the originally proposed outlay of about Rs. 100 crores. In physical terms, therefore, even the more important second Plan schemes which were designed to increase the aggregate handling capacity of the six major ports from 31 million tons to 41 million tons are now expected to establish that target capacity fully only in the early years of the third Plan. A break-up of this capacity of 41 million tons is as follows:

	Million tons
Bombay	13.1
Calcutta	12.5
Madras	4.5
Cochin	4.0
Visakhapatnam	5.0
Kandla	2.0
Total ...	41.1

The more important carryover schemes of the second Plan are the ones pertaining to the ports of Cochin and Madras. In Cochin, the construction of four berths in the Ernakulam channel is expected to be completed by the middle of 1962, when the capacity of the port will increase to about 4 million tons per annum. In Madras, the wet dock scheme is expected to be completed by the end of 1962 or early in 1963. The fact that no serious congestion developed at the major ports in the last one or two years of the second Plan period would appear to suggest that the shortfall in the achievement of the physical target did not have serious repercussions. But this, of course, cannot justify any further delay in completing all the major and minor carryover schemes of the second Plan in the first one or two years of the third Plan.

These carryover schemes alone will now account for about Rs. 37 crores in the third Plan provision of Rs. 115 crores (Rs. 80 crores for major ports *plus* Rs. 25 crores for the Farakka barrage which is related to Calcutta port development *plus* Rs. 10 crores for the new major ports at Tuticorin and Mangalore). If the third Plan schemes are executed according to schedule, as they ought to be, the handling capacity of the major ports by 1965-66 will be about 49 million tons and that of minor ports 9 million tons. According to present official estimates, an aggregate handling capacity of 58 million tons will be sufficient to meet the demands of trade and industrial development during the third Plan period. It is to be presumed that this estimate of handling capacity required by 1965 66—an estimate which the tenth meeting, held at Ernakulam over the week-end, of the National Harbour Board, seems to have accepted—has been carefully worked out.

The chances of port development attaining its physical targets under the third Plan may be rated high, on present indications. According to Dr. P. Subbarayan, Union Minister for Transport and Communications, who inaugurated the latest meeting of the National Harbour Board, several important schemes have already been taken on hand. First, with the World Bank's recent second loan of $21 million for Calcutta port development, the required dredgers will be shortly purchased. Secondly, a contract for the dredging of the harbour channel in the Bombay Port has just been awarded; at the same time, the Bombay Port Trust is now expected to go ahead with the scheme of modernisation of the port, as outlined in Mr. Posthuma's recent report. Thirdly, in Visakhapatnam, a contract for the construction of four additional berths, of which two are intended for the shipment of ore, has just been awarded. Fourthly, the essential data required for designing the ports of Tuticorin and Mangalore as major ports are already being collected. Fifthly, all the schemes relating to minor ports have been accorded first priority in terms of the recommendations of the Intermediate Ports Development Committee. And, sixthly, the three major ports of Visakhapatnam, Cochin and Kandla, which are directly administered by the Government at present, may soon be having Port Trusts, so that commercial and trade interests will have a direct voice in their administration. These, then, are some of the hopeful indications pertaining to development of ports in the third Plan period. But commercial interests in Gujarat will have some cause for dissatisfaction, for the proposal for the development of Porbandar as an all-weather port seems to be marking time.

POWER SITUATION IN EAST INDIA

The failure of power supply earlier this year in the West Bengal-Bihar area, it may be recalled, led to the constitution, by the Government of India, of an enquiry committee under the chairmanship of Mr. M. R. Sachdev, Secretary, Union Ministry of Irrigation and Power. This committee enquired into the causes of the power crisis and assessed the power requirements in the two States, including the D.V.C. area. Some of the findings of the Committee make disquieting reading. First, the power crisis caused by the simultaneous breakdown of a number of generators of the Calcutta Electric Supply Corporation and the D.V.C. could have been averted, if the C.E.S.C., the State Government and the D.V.C. had taken care to exercise a little foresight and imagination. When the D.V.C. made the attempt to make the contracted supply of 105 MW. to the C.E.S.C. from June 1961, it had to overwork its machinery; this might have contributed to the failure of both D.V.C. and C.E.S.C. generators. Secondly, there was no smooth and harmonious working in the D.V.C., because of some basic differences between West Bengal and Bihar—the former being more interested in flood control and irrigation and the latter in power development. Power planning in the D.V.C. area had, therefore, suffered in the process. Thirdly, the C.E.S.C's estimate of power demand in West Bengal had turned out to be an underestimate. The West Bengal Government's approval to the C.E.S.C's application in 1960 for a new 50 MW. unit was also not granted on the ground that future requirements could be met by the Government's Durgapur thermal station. Here, the West Bengal Government had overestimated its capacity, if not competence, to complete the job in time and supply power according to schedule. Since the Durgapur station too ran into difficulties, this year's February-April power breakdowns became still more serious. That the power crisis was largely a man-made one could thus be inferred.

But the years ahead may have to experience recurrent crises of the kind, unless, of course, the estimated shortages of power in West Bengal and Bihar are promptly eliminated. According to the Sachdev Committee, the power demand in West Bengal will be 950 MW. by 1965-66 and that in Bihar 415 MW. After taking into account the additional capacities of the new schemes sanctioned under the third Plan, the Committee has estimated the shortage in West Bengal at 128 MW. and that in Bihar at 45 MW. by 1965-66. But it has not outlined the measures necessary for eliminating these shortages by greater power generation. Instead, it has merely suggested that steps be taken for reducing the shortage of power to the minimum by laying down priorities for allotment of power. The first priority, according to the Committee, should be given to railway traction, coal production, iron and steel, aluminium smelting and electro-metallurgical industries, fertilisers and electro-chemical industries, defence equipment, cement, food products, waterworks, hospitals, broadcasting and street lighting. The second priority should be for copper smelting and rolling, mica mining and processing, steel re-rolling and fabrication, paper mills, chemicals, jute mills, and domestic and commercial services. All other primary and secondary industries should be assigned the third priority for allotment of power. These are priorities for some kind of rationing in the expected conditions of power shortage by 1965-66. This, again, is a disquieting forecast. The Committee does not seem to have examined the possibilities of further expansion of the Calcutta Electric Supply Corporation which, if everything goes well, should be in a position to put up a new 50 MW. unit by 1964 and another such unit by 1966. Its recommendation that all preliminary steps for power projects in West Bengal and Bihar, including the D.V.C. area, for the fourth Plan should be taken in good time in order to avert a serious power shortage in the early years of the fourth Plan may be farsighted, but is of no consequence in so far as the expected shortages by 1965-66 are concerned. What is required is a greater effort in the field of power generation in the private sector in the next three or four years, if the total saleable capacity of the D.V.C. system cannot be increased beyond 727 MW. by 1965-66.

EXPORTS OF MARINE PRODUCTS

The Indian peninsula, with a coastline of over 3,500 miles, offers great scope for the development of marine products. Marine fisheries, an inexhaustible source of wealth, abound in the west coast of the country in particular. Although the techniques of fishing are, by and large, outmoded, India is the sixth largest producer of fishes, with its total catches being 1.16 million metric tons in 1960 (according to the preliminary estimates of the F.A.O.), as compared with 6.19 million tons in Japan, about 5.00 million tons in mainland China, 3.05 million tons in Russia, 2.80 million tons in the U.S. and 1.60 million tons in Norway. According to the latest estimates of the Government of India, fish production touched an all-time record of 1.40 million tons in 1960. By the end of the third Plan, it is proposed to be raised to 1.80 million tons. It is, however, disconcerting to note that India's exports of fish products have not kept pace with the increase in production. In fact, the foreign exchange earned from fish and fish products in 1960 was lower at Rs. 425 lakhs, as compared with Rs. 609 lakhs in 1959 and Rs. 579 lakhs in 1958.

This trend, of course, would have been forestalled had these products been brought within a concerted scheme of export promotion in time. The establishment of an export promotion council covering these products, therefore, has come not a day too soon. The Export Promotion Council for Marine Products, inaugurated by Mr. K. C. Reddy, Union Minister for Commerce and Industry, at Ernakulam (Kerala State), on Monday the 25th inst., will be concerned with exports of fresh, frozen, canned and dried fish and prawns, fish oil and shark fins, as well as other sea food, such as lobster tails and frog legs. It will also recommend measures of assistance to the industry designed to step up exports. Besides, the Council will undertake market research in foreign countries and start publicity campaigns and send trade missions abroad.

It is to be hoped that the efforts of the Council will be directed towards diversifying the composition and direction of exports of marine products. Traditionally, Ceylon has been buying dried fish and Burma dried prawns from India. These two countries continue to be the major importers. But Ceylon is making efforts to develop its own marine resources. Burma has already imposed certain restrictions on imports. So these markets are bound to decline in importance for Indian products. Of late, India has, however, been able to send sizable quantities of canned and frozen prawns to the U.S. This is certainly a welcome trend. Some other European countries have also developed interest in Indian marine products. The prospects for the export of the relatively new item of export, namely, canned and frozen prawns, to countries of Europe, the U.S. and Canada are quite bright, if only Indian exporters study the consumer preferences in these countries and take suitable action on the export front.

The target for exports of fish in the third Plan is laid down at Rs. 12 crores annually, or an increase of about three times the current level. It should be remembered that the most important criterion for expansion of exports will be the quality of the products. Mr. Reddy did well to stress the need for maintaining high standards of quality, which alone would ensure sustained relationship with buyers on a steady basis. In this connection, it is learned that a detailed Fish Control Order, pertaining to the quality control of sea food, right from the stage of catching to packing, is being drafted by the Central Government. The earlier this order is publicised, the better. It may also be noted here that the *Ad Hoc* Committee on Quality Control (Chairman: Lal C. Verman, Director, Indian Standards Institution), in its report just submitted to the Government, has emphasised the need for strict quality control on exports of fish and fish products, particularly dried prawns. The Committee has suggested that the scheme of enrolment of exporters be immediately made compulsory for sea food and that only such exporters be enrolled who maintain requisite standards of cleanliness and have proper storing and drying facilities. This is a good suggestion calling for early implementation.

Another basic requirement of expansion of exports is a steady increase in production of fish, both marine and inland. This is particularly urgent, since domestic consumption of fish is apparently going up. Despite the increasing trend of domestic output, imports, too, have been steadily rising. Imports of fish products amounted to as much as Rs. 369 lakhs in 1960, as against only Rs. 299 lakhs in 1959 and Rs. 227 lakhs in 1957. The third Plan has set apart a sum of about Rs. 29 crores for the development of fisheries. In view of the valuable technical assistance being given by the F.A.O., the T.C.M. of the U.S. and Indo-Norwegian Foundation, there is reason to believe that modern methods of production will be progressively employed in the field of Indian fisheries. There are now over 1,500 mechanised fishing boats in India, as against only 850 in 1957. About 4,000 new mechanised crafts are proposed to be put into operation in the next five years. It is gratifying to note that the Council will devote some attention to (1) measures for promotion of mechanisation of fishing craft and fishing methods, (2) improvement of harbour facilities for fishing purposes and (3) installation and extension of shore-based facilities for landing, processing, transport and marketing. These efforts should be supplemented by adequate measures to remove wide fluctuations in prices of fish, as suggested by Mr. V. V. Giri, Governor of Kerala, at the aforesaid meeting.

THE PUNJAB NATIONAL BANK LIMITED

Registered Office:

PARLIAMENT STREET, NEW DELHI

CLARIFICATION

THE BOARD OF DIRECTORS HAVE ISSUED 7,50,000 shares in the Capital of the Bank for which Letters of Offer have already been posted to the Registered Shareholders as on 2nd September, 1961. In response to enquiries it is hereby clarified that these shares are *pari passu* with the existing shares save and except that they shall carry right to dividend at one-fourth of the total dividend that may be declared at the next Annual General Meeting for the whole of the year 1961 including Interim Dividend of Re. 1 per share already paid.

By Order of the Board of Directors,

A. M. WALKER,
General Manager.

Dated 18th September, 1961.

Dag Hammarskjoeld

THERE is an old Chinese proverb which says "There are two good men—one dead, the other unborn." Dag Hammarskjoeld is dead; an equally good man is yet to be born. It has been recognised from very ancient times that good men are invariably destined to martyrdom. The phrase "unnatural death" will not, therefore, apply to the case of a man like Hammarskjoeld, because, like Count Folke Bernadotte, who was assassinated thirteen years ago, almost to a day, he deliberately chose the dangerous path of striving for peace, and his sudden death, whether designed or accidental, was almost inevitable. In a wicked world such as we live in today, where "Flies look for ulcers, kings for war, wicked men for quarrels, but good men look only for peace" (*Niti Shastras*), it is both tragic and paradoxical that men and nations who walk humbly in the sight of God and strive for goodwill towards men are most despised, reviled and hated, because they come in the way of those that revel in their might and affluence and display their perpetual lust for power.

Although he was a very important person in the true sense of the phrase, little has been written of Dag Hammarskjoeld's personal virtues, probably because he was a retiring type of person who did not encourage too much personal intimacy. A great believer in work for its own sake and not for its reward, he quoted the *Bhagwad Gita* in his address to the American Association for the U.N., in September 1953, thus: "The *Bhagwad Gita* echoes somewhere an experience of all ages and all philosophies when it says that work with anxiety about results is far inferior to work without such anxiety, in calm self-surrender. These words express deep faith and we will be happy if we can make that faith ours in all our efforts." A posthumous revelation about his personal conviction was made at the memorial service held at Leopoldville by the staff of the U.N. operation in the Congo, when Dr. Sture Linner, Chief U.N. Representative, read from "The Life of Christ" by a French author, the only book Mr. Hammarskjoeld took to the Congo with him, and from the Secretary-General's Oath of Office, which was found on a slip of paper inside the volume.

Such purity of personal conduct and such abiding faith in the goodness of the cause which he undertook entitles Dag Hammarskjoeld to a place of the highest esteem and veneration among the few truly great and good *men of modern history.*

The Bombay Gas Company

Speeches by company chairmen these days are all of a windy pattern, and that of the Chairman of the Bombay Gas Company (15th September) was no exception. Perhaps, he had an excuse, considering the fact that the product of his Company's manufacture was gas. Even so, the first seven paragraphs consisting of about 750 words was all about the need for an incentive-based regulated economy—positive, negative, direct, indirect, financial, non-financial, tangible, notional—and about the steel shortage, transport difficulties, power shortage, national income, *per capita* income, the Income-tax Act, Professor Kaldor, a liberal credit system, and deposit insurance—almost every one of which inhibited the increase in gas production, or so it seemed. I suppose the general feeling is that the longer and more erudite a company chairman's speech is, the better is its value to advertising agencies. More space in newspapers is purchased by the company and, if two-thirds is taken up by meaty matter concerning its specific problems, the remaining one-third has to be effervescent material. Nature abhors a vacuum.

The interesting point, however, is that the Chairman of the Bombay Gas Company has made out an exceedingly good case for the grant of a "positive, direct and tangible incentive-based economic price" for his product in order to enable the Company to extend gas connections to about 20,000 new-comers by the end of 1963. Several thousands of residents in Bombay have been waiting in the queue for years, and 36,000 among them have taken to the use of 'bottled gas,' the price of which is over 300 per cent more than the price of the Bombay Company's gas. It is thus clear that there will be no [illegible] from consumers if a price increase is granted to the Company, especially if there is an expansion in its supply; on the other hand, many thousands of them will welcome the long-looked-for amenity.

The case for a price increase is presented thus. The Company's present price (Rs. 3.94 per thousand c. ft.) stands at a level lower than that prevalent in 1926 (Rs. 4 per thousand c. ft.). During the last 35 years, the price of coal has gone up from Rs. 26.53 per ton (1926) to Rs. 52.36 per ton (1960) and the wage bill has increased by 60 per cent. A Calcutta company which gets its coal at Rs. 35 per ton is allowed to charge an effective gas price of Rs. 5.25 per thousand c. ft. Bottled gas, which is a by-product, is sold at 300 per cent more per thousand c. ft. The rate in London is Rs. 7.15 and that in Colombo Rs. 11.75. The Bombay Gas Company wants an increase of just Rs. 1.31 per thousand c. ft. to bring its price to Rs. 5.25, the same as in Calcutta.

I don't think any bones will be broken, if the Government of Maharashtra permits the price increase on the assurance given by the Company that the increase in the number of gas connections will be effectively brought about during the next two years. If the present sufferings of the Gas Company have been left unremedied so far on account of any shortfalls in past performance, the State Government may assume enough powers and necessary safeguards to ensure effective future performance, but any considerations that stand in the way of ensuring a fair selling price to the Company will be totally irrelevant in the context of the imperative need for ensuring an urgent extension of public amenities.

The Gas Company's very effective and forthright presentation of its case for an upward revision in gas price needs the urgent attention of the Maharashtra Government; and, if there is a case against such revision, a clear exposition of of the counter-arguments is urgently called for. The citizens of Bombay are entitled to enlightenment in this matter, which, as it stands at present, furnishes another instance of "economics for the exasperated."

The Angry Lord Mayor of London

He was not quite as dignified and elegant as one would expect "the Chief Citizen of London" to be. He slipped up so badly as to administer a 'rebuke' to the Prime Minister of India on Indian soil after eating an Indian lunch. His excuse was that the Prime Minister had accepted the Freedom of the City of London and thus "had, to some extent, put himself under the discipline of the Lord Mayor of London." This piece of Anglo-Saxon logic is as ludicrous as what was in vogue in the ancient days of British rule in India when the thingumajigs, who held sway over vast areas as Sub-Divisional Officers and Collectors, conferred puerile titles like 'Rao Sahib' on zamindars and extracted their servility in full measure.

All that Mr. Nehru said at a Press conference in Delhi was that he admired very much the attitude of Lord Russell and was rather envious of him for his crusade against nuclear explosions. Any person, with a sense of humour and average understanding, would appreciate this observation as that of an old stager commending the entry of a newcomer into his own field. Mr. Nehru, the seasoned passive resister and pacifist, is expected to welcome the distinguished Lord Russell into the *Satyagrahi's* camp, when the cause he espouses is good by all standards, in much the same way as Don Bradman is expected to commend the performance of a test cricketer for scoring 200 runs or Bill Tilden is expected to congratulate a Davis Cup winner for winning the Wimbledon Trophy. Alas, for the days of British sportsmanship, Sir Bernard Waley-Cohen, the first citizen of London, seems to have a bad liver and a bad tongue. Did the lunch in Calcutta suddenly upset him? *Rasagollahs* do not usually cause liver upset, or was it fried fish?

The Lord Mayor's pompous thesis is that Mr. Nehru, while holding a Press conference as the Prime Minister of India, is expected to bear in mind the great and important fact that he is a Freeman of the City of London, and moderate his observations suitably. How utterly fantastic! And how equally fantastic is the allegation that merely by expressing his admiration for Lord Russell for his part in the "Ban the Bomb" demonstration, Mr. Nehru was expressing views on the internal affairs of England. At this rate, one should not say that the English weather is foul, or that English roads which never run straight for long were designed by drunken road-makers—these would be expressing views on the internal affairs of England.

If the Lord Mayor wants to make world statesmen unfree by conferring the Freedom of the City of London on them, he might as well present them with mouth girdles instead of keys, designed like the Chastity girdles of Roman days. The recipients will then know that, by accepting the honour, they are binding themselves to an utterly outmoded concept of discipline under the Mayor.

The Tirumalai-Tirupathi Devasthanam

The Tirupathi temple has a large canvas sack which is called the 'Hundi,' into which all offerings of money, jewellery and bullion are anonymously deposited by devotees. The *hundi* is opened out every night by the *Devasthanam* officials, the contents sorted, sealed in bags and entered in a register in the presence of responsible witnesses, and deposited in a chest overnight. The money is banked the next day and the other valuables are duly taken into account in accordance with a regulated procedure. The entire administration of the *Devasthanam* is governed by the Tirumalai-Tirupathi *Devasthanam* Act; it has a Board of Trustees, Executive Officer, and a hierarchy of officials in charge of its various institutions and endowments. The *Devasthanam* maintains the Sri Venkateswara University, arts and professional colleges, hospitals, choultries, *patasalas*, etc., and is considered to be one of the most progressively managed bodies in the southern part of the country.

Gifts and endowments to the *Devasthanam* have been vast and varied in the past; while, in recent years, the numbers and amounts have increased enormously. Sri Venkateshwara is considered to be a very benevolent diety, very forgiving to penitent sinners, thousands of whom salvage their consciences by depositing liberal offerings in his *hundi*. One such offering was noticed in the *hundi* a few days ago—a bundle of one-hundred-rupee notes to the aggregate of Rs. 1 lakh. This caused some flutter, a lot of speculation, and publicity. As a result, the Intelligence Department of the State Police and the Income-tax Department are reported to have sat up and taken notice of this occurrence, apparently with a view to tracing the unknown devotee and lay their hands on other undisclosed profits and capital gains or hoarded money. The Chairman of the Board of Trustees of the *Devasthanam* is reported to have come out with a statement that it was no business of the Police or the Tax Department to investigate the occurrence which was purely a matter of personal devotion, and any investigation will impinge on further anonymous munificence.

I should imagine that most liberally minded people will agree with the Chairman. Human behaviour is unpredictable especially in regard to invocation of Divine Grace and, if the most painful forms of mortification of the flesh is understandable, the parting of a large sum of money should be equally so. There is no limit to the sacrifice which a man may make when he is utterly frustrated or abjectly surrenders to faith. I know of a very intelligent businessman who is reported to have smashed a costly automobile and items of machinery to smithereens and distributed several hundred pieces of blank endorsed Government securities to passers-by on the road when he felt miserable after (what he thought was) harassment by tax collectors. Similarly, in this case, there is no reason to adopt a sinister presumption to the exclusion of other possibilities; for, it may well be that the anonymous donor has just given away the one lakh of rupees from his lawful savings in sheer devotion, or to spite a nagging wife or a vagrant son or even in a sudden fit of renunciation. In any case, it was a matter of conscience between him and Sri Venkateshwara and, if his bid for Divine Grace was much too high for the tastes of the Police or the Income-tax Officials, all that may be said is that there can be great disparity in the sense of values of different individuals. One happy feature is that the money will go to fulfil many a good social purpose, though not directly into the State Exchequer.

A thing to be remembered, in this context, is to let the pilgrims to Tirupathi have their own way in regard to their faiths, vows and observances, as, otherwise, any interference might adversely affect our foreign exchange earnings. Hundreds of them have their heads shaved at Tirupathi, in fulfilment of vows taken years ago and the human hair that is left behind is collected by contractors, graded and exported overseas for making wigs and what-not.

3 OCT 1961 PUBLIC DEPARTMENT

SOME ECONOMIC IMPLICATIONS OF THE LAST CENSUS

PRODUCTION OF BASIC NECESSITIES OF LIFE NEEDS TO BE RAISED MARKEDLY

By Dr. V. K. R. V. Rao

PUBLICATION of the preliminary results of the 1961 census has given a big shock to the country. During the ten years 1951 to 1961, the population of India has increased by 77.2 millions. This one decade has seen an increase in our population that is nearly 60 per cent of the entire increase during the previous five decades. In absolute terms, the addition to our numbers has been more than the entire population of either France or Germany or Great Britain. No wonder that, almost overnight, the country has now woken up to the terrifying reality of its population problem. This increase in India's population has many aspects—regional, political, sociological, and economic. It is my purpose to deal here with some of the economic aspects of the 1961 census.

The first thing to note is the effect it has had on the *per capita* income. During the period 1951-61, we have had two Five-year Plans of economic development and this had resulted in an increase in the national income by 42 per cent. The Planning Commission had calculated, at the beginning of the Second Plan, that the population would be reaching 408 millions in 1961; if this had proved correct, the increase in *per capita* income would have been 24 per cent. In 1959, the Planning Commission revised its population estimates in an upward direction and placed it at 431 millions. Now the 1961 census has revealed that the actual figure is 438 millions. This has led to a scaling down of the estimated increase in *per capita* income over the decade to only 16 per cent, as against the 24 per cent which was based on the original estimate of the Planning Commission regarding the population in 1961. The 1961 census has thus belied the expectations of the magnitude of change in the average levels of income and consumption following the planned volume of investment; and, by the same logic, it has also underlined the need for stepping up the rate of investment beyond the previously contemplated levels, in order to achieve the target rise in the *per capita* level of income. Another obvious conclusion that follows is the need for taking more positive action for bringing down the rate of increase in our population during the coming years.

625 Million By 1976?

Meanwhile, we have to cope with the economics of the figures revealed by the 1961 census. We have also to take into account not only the difficulties inherent in implementing a population policy aimed at reducing the rate of growth, but also the fact that, even if successful, the policy takes time to become effective. We must, therefore, reconcile ourselves to a substantial increase in numbers over the next few years. The Planning Commission has shown its awareness of this fact by estimating the increase in population by 1976 at 187 millions. This means that, within the next 15 years, our numbers are expected to increase by 42 per cent over that in 1961 or by 2.4 per cent times the increase that has taken place in the last ten years. We have, therefore, to deal with the economic implications of a population of 438 millions in 1961 increasing by 187 million in 15 years and reaching a total of 625 million in 1976.

The first thing that stands out, in this connection, is the need for a substantial increase in the production of the basic necessities of life, if the additional population is to be maintained even at the unsatisfactory level which is the lot of most of the existing population. These necessities include food, clothing, shelter, education, and health. This alone means an increase in the production of consumption goods and services by 42 per cent in 15 years or an average annual rate of increase of 2.8 per cent. To this must be added a factor for taking care of the reality of unequal distribution and the fact that many millions in the country have *per capita* availabilities of basic necessities much below the national averages. Nor must we forget that national production figures include large elements of output other than basic necessities. In addition, there is the inevitable need for finding from the national income the much larger volumes of saving and investment needed for bringing about the required increase in production. It is my guess that, with the increase in population revealed by the 1961 census and the projections based thereon, we would require, in terms of national income, an increase of at least 75 per cent by 1976, if the population in 1976 is to have a *per capita* availability of basic necessities for every one of its number equivalent to the current national averages of *per capita* availabilities of basic necessities. This means an annual average rate of increase in national income of at least 5 per cent over the next 15 years.

Bigger Investment Needed

But this will not mean any progress in the national standard of living. We cannot obviously rest content with the prospect of having, after 15 years of planned national effort, a standard of living of the same unsatisfactory character that we have today. We have to think in terms of an increase in the *per capita* availabilities of basic necessities. Nor can we ignore the reality of the demand for goods and services other than basic necessities that is bound to accompany any attempt at having a growth rate of the magnitude contemplated even for maintaining the *status quo* in *per capita* terms. It would also be very unrealistic to think that such a big increase in national income can take place without some increase in inequalities, not so much in terms of a top high income class as in terms of middle and medium income classes. Inevitably, this also means a much higher volume of savings and investment than is needed merely to guarantee the current *per capita* availabilities of basic necessities to the additional population. All this means that the annual rate of increase we need in terms of national income has to be much higher than 5 per cent, if there is to be a real difference in the standard of living for the masses of our people, both those who are with us today and those who will be added within the next 15 years. It is my guess that the growth rate we need for this purpose in terms of national income has to be at least 9 to 10 per cent a year during the next 15 years.

The other major economic implication of our population figures is that of employment. It is very difficult to estimate the size of the labour force in India in terms of the number of persons who are able and willing to work in order to earn their livelihood and feed their dependants. The Planning Commission has estimated that, quite apart from the back-log of unemployment existing in 1961 and of the underemployment which is an inevitable accompaniment of the current structure of our economy, the next 15 years would see an addition to our labour force of the order of 70 million. This figure is likely to be somewhat of an underestimate, for it does not take adequately into account the rise in the employment-seeking rate of the population of working age, due partly to the conversion of disguised unemployment into overt unemployment and partly the increasing tendency for women to seek employment.

Even if we do not take this into account, the task of finding productive employment for 70 million more persons within 15 years is a truly gigantic one, when it is remembered that this represents more than the entire labour force currently employed in the United States. Another way of looking at the magnitude of the employment problem is to note that the additional employment we seek to create within the next 15 years is expected to be nine times that which was achieved within the previous five years. In other words, we have to step up our annual rate of additional employment to three times of what was achieved during the second Five-year Plan.

The Challenge

The implications of our population growth are certainly frightening in the challenge they pose for the Indian economy. But the challenge can be met, if only we can rise to the occasion and adopt the policies they call for, irrespective of the strain they impose on personal and short-period interests. Labour, after all, is economic power; and, with a labour force numbering several times that of the United States and an expected addition equivalent to that of the entire U.S. labour force, it should be possible for the country to achieve a growth target of 9 to 10 per cent a year in terms of national income during the next 15 years. We have a large labour force and this is bound to increase by many millions. Family planning and birth control are essential, but they provide no answer for our immediate problem. Labour has to be the principal instrument for increase in the output of consumption goods and of capital formation. We have to find ways and means for putting our vast labour power into economic and productive work. This is the economic implication of the 1961 census. How successful we will be in meeting the challenge is more than I can answer.—*Courtesy A.I.R.*

EXPORT PROMOTION BY FIAT

FEASIBILITY OF SOLUTION BEING EXAMINED

From Our Special Correspondent

NEW DELHI, 26th September

DELHI LETTER

THE Government of India is increasingly becoming export-conscious. In the backrooms of Udyog Bhavan, some more reports have been produced in recent weeks on the wide range of measures required for providing encouragement for exports but there is little to indicate yet that these have gone beyond the stage of generalities. This is not a subject on which original ideas abound nor can new techniques be discovered quickly; willingness to profit by example and from expert advice is all that has been necessary and there are indications that the constructive contribution recently made by Sir Donald MacDougall is well appreciated. Many of the incentive schemes that may be tried with greater boldness in future months may be traced to this source—as in the case of the export target of Rs. 1,400 crores by 1970 which has come to be accepted in the third Plan.

There is, however, a wide gulf still separating these plodding efforts of the departments from the thinking and actions of the exporters or producers, who, in the last resort, have to take on the job of selling abroad or produce goods suitable for such sale. To transmit some of its new-found enthusiasm for export promotion to these sections of the business community calls for qualities of leadership which has been deficient all along in the Ministry of Commerce and Industry. The last meeting of the Export Promotion Advisory Council was in many ways disappointing, because the Government did not seem eager to seize the occasion for enlisting the Council's support for specific programmes requiring sharing of burdens by all sections. Also, the proposal for transferring the portfolio of trade to the younger and broader shoulders of Mr. Manubhai Shah has apparently been shelved—at least until the elections are over. Thus, while the capacity at the Departmental level to produce reports is still very vigorous, there is nothing to encourage the hope that new schemes will be implemented with imagination and courage at the political level.

Abandoned Idea Revived

At the Export Council meeting, Mr. K. C. Reddy renewed the old talk of compulsory exports and even hinted at legislation to make it possible. Since Mr. Lal Bahadur Shastri abandoned such talk after some initial loud thinking, it had been generally assumed that the impracticability of the idea was being recognised. Public curiosity has, therefore, been sharpened by the recent revival of the talk of compulsion. What form will legislation take and what sanctions will operate to implement it? Some observers are inclined to make light of such pompous pronouncements as just desperate attempts of the Ministry to show that it is doing something about the business. Even if there is a great deal of truth in this view, the issues have to be carefully analysed, so that the Government is warned in time against adopting hasty steps which may create more complications for all concerned without furthering the main objective.

Some skeleton legislation can always be promoted in which there is no obligation to disclose the actual nature of the policies to be enforced. Officials connected with production and trade may be authorised to issue directions to achieve larger exports and to enforce consequential schemes for distribution of losses, etc. In such cases, a formal law appears *prima facie* unexceptionable and the public will have no means of judging the appropriateness or legality of the steps to be taken, until specific cases arise; meanwhile, the Government can go about claiming the enactment of the law as a token of its continuous interest in the subject. A typical example is the Price Page Schedule Act which has remained on the statute book all these years as an answer to those groups which pressed for the measure; its doubtful Constitutional validity has been exposed as soon as it was sought to be implemented.

How To Do It?

Which laws are likely to be changed for export promotion and how? The Industries (Development and Regulation) Act is possibly one; the Essential Commodities Act may be another. The Government is reported to be examining the possibility of amending the former in order to provide that licensing policy may include requirements as to export a part of the output. This will, naturally, apply only to new units to be licensed after the enactment of the law and, even here, a large element of consent of the licencee is inherent in the sanction, so that there is no one-sided imposition of a duty. Such agreed conditions of licensing are possible even now, if persuasive methods can be substituted. In the case of all existing industries, a new law will not be of any great advantage and will not relieve the Government of the obligation to seek the maximum measure of co-operation and voluntary effort from industry and trade. In their case, it is possible only to link certain benefits with obligations to export; import licences for raw materials or machinery, rebate on railway freight, permission for expansion of capacity to enable large-scale production and reduction of costs are all conceivable as *quid pro quo* for export efforts and these will not constitute a departure in principle from the methods already adopted.

Curtailing Domestic Intake

Though ideas had not crystallised on this subject when the third Plan was finalised, there is mention there of the need, in some cases, "to set physical limits to the total internal sales of individual manufacturing units, so that the rest of the production becomes available for exports." Such deliberate limitation of the internal market may, however, have some very undesirable consequences. A manufacturer can reduce unit costs —especially wage costs—only if his production is expanding continuously and a growing internal market can assure this result (except where production is primarily for export as in the case of jute goods). To make economy in costs dependent on the dubious chances of sales abroad—in the face of import quotas, tariffs and other restrictions—is to introduce more uncertainty. So long as the domestic market is an expanding one, a producer will be able to spread his losses on exports over a larger output. Thus, a limitation on internal sales seems to be a wrong method of restricting consumption; fiscal measures seem always preferable, as they can be readily adjusted to changing situations.

The reverse method of compelling a producer to earmark a percentage of his output for export is far less objectionable. It is not an altogether new idea; originally, the proposal to license automatic looms in the cotton textile industry was conditional on export of the entire output. But, even there, there have been controversies about the wisdom of imposing a penal excise duty, on the ground that situations may arise when, for reasons beyond his control, a producer is unable to export the entire quota. When the market is short of goods, the entire burden of the penal excise may be transferred to the consumer, so that it ceases to be penal on the manufacturer and he is under no compulsion to make the extra effort for export; when the internal market is well supplied, there will be an outcry against a penal rate which affects sales and hence leads to a fall in output. Earmarking of goods for export without a penal excise is pointless. Ultimately, a solution to this dilemma can only come through mutual agreement. The only virtue of legislative authority is that it may sometimes compel industry or trade to reach such agreement.

Differences in Cost Structure

A point of detail which has a bearing on the general principle of compulsion is the need for provision for differences in cost structure within each industry. The cotton textile and sugar industries, for example, show a very wide variation according to different regions and age and size of units. Obviously, any exercise of statutory and executive authority should be based on uniform principles about the proportion of output to be exported for the industry as a whole. But this is inexpedient when certain units are designed to produce varieties suited only for local requirements and others are capable of adapting themselves to consumer tastes abroad. If decisions are left to the associations of each industry (like the Indian Sugar Mills Association) and to the Development Councils and Export Promotion Councils connected with each group of industries (as at present), internal adjustments can be made. Thus, from all points of view, enforcement of statutory percentages for exports seems to be fraught with serious difficulties.

Whom to Compel?

Not the least of them will be the problem of whom to compel in the case of primary commodities and semi-processed goods (like vegetable oils or leather) handled by a large number of cottage and factory units. In these cases, compulsion will, perhaps, take the form of requisitioning certain quantities from the trade at controlled prices; this may be comparable to State trading in foodgrains through a levy on the trade and the Essential Commodities Act may have to be amended to enable such measures to be taken, presumably on behalf of the S.T.C. Whether this would not further complicate matters for the Indian consumer and push up prices is one of the matters that needs careful thought; so far, the speculative activity in some commodity markets has gone unchecked, with the result that supply of raw materials for industry, exports and consumers have all suffered.

The whole idea of compulsion for export seems to spring from the belief in Government circles that some engineering industries are not doing their best to push sales abroad, because of the strong pull of the internal market. The threat of compulsion (after sufficient authority is secured from Parliament) may spur them to make fresh efforts; the actual number of cases in which the powers may have to be directly used is likely to be so small as to make compulsion almost of marginal importance. It may still be prized for its psychological effect and to dramatise the importance of export promotion; the fear that Government may sometimes become a nuisance may help in turning the attention of producers to foreign markets.

It may be urged that Government should be impartial as between the public and private sectors; in fact, the third Plan makes special mention of the need for public undertakings giving a lead by earmarking a portion of their output for exports; drugs, machine tools, telephone equipment, locomotives are already providing some examples. But there is a basic limitation in most of these industries, in view of the internal demand for their products for further development; fertilisers, for example, cannot be exported for any foreseeable period of time—at least not in sufficient quantities to increase substantialy our foreign exchange earnings.

Workers' Share

One of the questions that may arise for determination is whether the obligation to export should rest solely on the industry even when its disability is demonstrably due to its wage costs or low productivity per unit of labour. There should at least be some understanding to check further increases in wage costs; and the Government cannot at least keep on imposing fresh burdens on one side while compelling sales at loses on the other. A comprehensive examination of the question of compulsion is also necessary for its effects on the bargaining position of the Indian seller in relation to the foreign purchaser. While price reductions will in any case be needed to become competitive in foreign markets, such reductions may sometimes weaken the seller and become an uneconomic way of earning foreign exchange. The principle applied in sugar that sales at very heavy losses should not be encouraged should apply to other goods also.

At the moment, it appears that official efforts are concentrated only on finding out which Acts require amending and how, though, side by side, some parallel efforts are also being made to study commodity-wise and country-wise the scope for export promotion and to set targets accordingly.

SPICES AND CASHEWNUT COMMITTEE

The Government of India has set up a central body, called the Indian Central Spices and Cashewnut Committee, under the ægis of the Indian Council of Agricultural Research, for the all-round development of spices and cashewnut. The Committee will deal with all aspects of research, development and marketing of spices and cashewnut and coordinate these activities. The main function of the Committee will be to assist in the improvement and development of the cultivation and marketing of spices and cashewnut and in the production and marketing of their by-products. An annual grant of Rs. 10 lakhs will be available to the I.C.A.R. for the purpose of the Committee. The Vice-President of the I.C.A.R. will be the ex-officio President of the Committee. The Committee has yet to make a decision on the location of its headquarters.

AMERICAN LETTER

SEPTEMBER HAS BEEN A HISTORIC MONTH

PERSONAL INCOMES IN U.S. RISE

From Our Special Correspondent

NEW YORK, 22nd September

AMID a rising tide of prosperity at home, there has arisen a grave atmosphere of uncertainty, occasionally bordering on hysteria, as a result of the death of Dag Hammarskjoeld, Secretary-General of the United Nations. This Swedish gentleman had done so much to create the U.N. image as that of a truly peace-loving organisation that a great void was felt immediately. Hundreds of correspondents from all over the world converged on the U.N. headquarters at New York for the opening of the General Assembly.

While all Governments without exception offered their condolences through their U.N. representatives, a spokesman for the Soviet group said in effect "We never liked Mr. Hammarskjoeld" which is a new twist to the old Latin expression *de mortuis nil nisi bene*.

Investigations of the circumstances which led to the airplane crash which killed the Secretary-General are under way. But it may be observed that, in the *Coup D'Oeil* of the U.N., which publishes daily Press comments in summaries from all over the world, a very large number of editorials in many languages raised the question of sabotage, if not deliberate murder.

It is fairly obvious to any trained observer that the Soviet Union wants the U.N. as a forum for its spokesmen and for its propaganda, but the Kremlin desires an ineffective U.N. which is incapable of action. That is why the suggestion has been made to replace one Secretary-General with a Troika, one from the East, one from the West and a neutral. At this writing, the Soviet bloc is engaged in what may be called electioneering bribery. The nub is: "If you, an uncommitted and new nation, vote for the Troika, we shall give you this and that."

All this is being done behind closed doors and against the background of the "gravest crisis in the history of the U.N." The fear of war is also ever present, at the moment at least. Even in this perspective, the nearly unanimous election of Ambassador Mongi Slim of Tunisia to the office of President of the Sixteenth General Assembly was a miracle. It was the first time that a member of the Afro-Asian bloc has gained such recognition. Mr. Slim is very highly regarded, indeed.

The Western bloc and many uncommitted nations favour Frederick H. Boland, a former temporary U.N. President, as the new Secretary-General. Mr. Boland's people, the Irish, have borne the brunt of the fighting in the Congo and that may help him. Moreover, the uncommitted countries have been scared by the provocative nuclear bomb explosions of Soviet Russia. They have been shocked by Chairman Khrushchev's appeal for peace on the basis of the utterings of Pope John XXIII.

The feeling here is that the Kremlin is overstepping all boundaries of reason which it can do at home with impunity, because nobody can speak up against it, but the Soviet propaganda people have not learned yet that one cannot fool all of the people all the time. As was expected, the discussions between U.S. Secretary Dean Rusk and U.S.S.R. Foreign Secretary Andrei Gromyko led nowhere.

There is also grave doubt that President Kennedy's speech helped much to clarify the picture. As stated at the outset, there are fears and uncertainties created by the void caused by Mr. Hammarskjoeld's demise. Upon closer examination, this feeling is, of course, the subconscious fear of lack of leadership, of lack of practical diplomacy, of lack of experience, of lack of unity against the one force in East which cannot stand still, but perishes otherwise. Thus, September 1961 may well go down as the turning point either for the better, or for the worse of Western civilisation.

The U.S. Economy

Business activity has continued to advance with production, incomes, construction and total expenditures reaching record levels. Employment still leaves much to be desired. Unemployment persists by staying at about 7 per cent of the labour force. At any rate, there was no prolonged automobile strike and the atmosphere is one of extraordinary optimism.

Steel expects a big upsurge of orders in October, particularly from automobile manufacturers and Government. Manufacturing firms are increasing their inventories in anticipation of a continuing rise in sales. Tax collections have been increasing and capital investments in plant and equipment have gone up. Private investors and U.S. business increased their assets abroad by more than $5,000 million to a total of $50,000 million. Direct investments overseas rose by nearly $3,000 million in 1960 to $32,700 million.

But the protectionist forces in this country are not dead. The Ways and Means Committee of the House of Representatives approved the other day a Bill, over the opposition of the Administration, which would raise sharply the tariff on lead and zinc. It would hurt such good friends of the U.S. as Mexico, Canada, Peru and Australia, but, in the eyes of the members of the Committee, the wishes of their own lobbying constituents, apparently, come first, despite the prevailing international tension.

Second quarter corporate profits were about 7.5 per cent higher than last year. Sales rose, prices were firm with exceptions and average unit costs declined. The productivity rate of goods and services in relation to man-hours also increased, with better automation as the primary cause. This was particularly true of farm production which made notable gains with fewer workers, but crops were lower this year owing to extended droughts and the reduction of planted acreages due to Government directives and accompanying subsidy payments.

Personal incomes increased further in July, the latest reporting date. However, if special life insurance dividends received by veterans are left aside, the rise for the month amounted to only ½ of 1 per cent. As personal income has gone up, so has disposable income after taxes.

The public's buying intentions, as determined by various surveys, point to a rather promising sales outlook, particularly for automobiles. Interest is also anticipated in household appliances. There seems to be a tendency among consumers to spend more, because of the promising outlook rather than because of a higher bank balance, even at the risk of going into debt on hire-purchase plans.

The general expectation is that this will be another year of very large exports of farm products. Such shipments are expected to reach $5,000 million this year. And there will be increased agreements with foreign countries, providing for sale against foreign currencies.

For example, the U.S. has agreed to finance India's purchase of $12,560,000 worth of milled rice from U.S. suppliers on that basis. The authorisation covers about 100,000 metric tons of milled rice in bags, grade U.S. No. 5 or better, containing not more than 20 per cent broken kernels. Shipments from U.S. ports will be from this month to the end of April 1962. The rice will be purchased by the India Supply Mission at Washington.

Stock prices displayed a hesitant mood. It was caused by the uncertainties of the international situation, by fears of greater interference with business as exemplified by President Kennedy's request to the major steel companies not to increase prices as well as by many other factors, including a high Federal Budget deficit which seems inevitable. So far, inflationary forces have been held to a minimum, but how long can this last under current crisis conditions? That is one of the most frequently asked questions.—*All Rights Reserved.*

India will shortly open talks with the U.S. for raising its exports of cotton textiles to that country. A delegation, lead by Mr. T. Swaminathan, India's Commissioner-General for Economic Affairs in Europe, will be in Washington early next week for this purpose. He will be assisted by Mr. Bharat Ram, Chairman of the Indian Cotton Mills' Federation, and Mr. B. G. Kakatkar, Secretary of the Federation.

INTERNATIONAL LIQUIDITY

VIENNA SOLUTION INADEQUATE

(*From Our Own Correspondent*)

LONDON, 24th September

LONDON LETTER

IF the members of the International Monetary Fund meeting at Vienna this week discussed privately the possibility of the Fund ever establishing a Central Bank for Central Banks not a word of this has leaked out in any of the reports of the Conference. And yet, of course, this is the only way in which the disturbance caused by speculative flows of money from one country to another can be prevented. If the I.M.F. had the sort of resources in relation to the Central Banks of the world which, for example, the Bank of England has *vis-a-vis* the great joint-stock banks, then there would be no difficulty at all in these resources being used to counteract speculative movements.

Moreover, the gold and foreign currency reserves of every Central Bank being at the disposal of the I.M.F. and usable at its discretion (assuming that it would not pour away its resources into a country dissipating them in bankruptcy), then every Central Bank would have the sense of the world's resources behind it in case of need.

But the Managing Director of the I.M.F. has had to be content with the promise of a mere addition to the Fund's existing resources of one-third. The Fund has had subscribed to it by the member countries $15,000 million and it seems that another $5,000 million (there is a possibility of some small increase on this figure) will be added. But what a fuss many of the member-countries—not the U.K. or the U.S.A.—are making about this trivial addition to the resources of the world's central organisation for maintaining currency stability! If it is true, as was suggested in the course of the Conference, that the U.S. would advance $2,000 million, the U.K. $1,000 million, West Germany $1,000 million, and all the rest of the European countries $1,500 million (£535 million), what is there to get excited about? After all, the gold drain on the U.K. earlier this year amounted to about £600 million, that on the U.S.A. earlier exceeded this and, when these drains take place, it is not a question of simply supplying currencies in general but one currency in particular. If, for instance, hot money is flowing into West Germany or Switzerland, it is Deutsche marks and Swiss francs which are needed.

Fear Justified

The Managing Director of the I.M.F. is well aware of this problem and has done his utmost at the Conference to assure himself of adequate resources in individual currencies, but he had to meet the fear, particularly from France and Holland, that the lenders will be signing open cheques to doubtful borrowers. Are the French, then, really afraid that, if the I.M.F. calls on the Bank of France to extend their lines of credit to meet a hot money drain from the U.K. that they will be menacing their security by supporting a spend thrift? Are the Dutch really afraid that if funds are flowing from New York to Amsterdam that the security of the florin will be endangered if the Federal resources system is helped by Holland? Oddly enough, the answer to this question is probably "yes." There are still in international banking circles men convinced that the pound sterling will be devalued when Britain enters the Common Market and that President Kennedy's heavy spending programmes will plunge the U.S. into international bankruptcy and their fears are reinforced by the fact that the world's recent monetary crises have concerned the pound and the dollar and not a once dubious continental European currency. So there is to be consultation when international crises arise and safeguards must be drawn up to make sure that money is not advanced for unworthy causes.

In studying the conclusions of the I.M.F. report one cannot but feel that the minds grappling with these monetary problems are still too small for the international issues involved.—*All Rights Reserved.*

CAPITAL FOR DEVELOPING COUNTRIES

MR. BLACK'S TIMELY ADVICE

THE full text of the address of Mr. Eugene R. Black, the celebrated President of the World Bank, at the Vienna meeting of the Bank's Governors, was received after our last issue went to press. A perusal of it shows that the main concern of Mr. Black continues to be the capital needs of the underdeveloped countries. Thus, he devoted the major part of his speech to the International Development Association (I.D.A.), as he thought that, in the context of the diminishing capacity of developing countries to absorb conventional loans of the type given by the World Bank, the need for expanding the scope of the I.D.A. for providing soft loans had become crucial. Accordingly, he wanted the developed countries to pay more attention to this problem than they were doing hitherto.

At the outset, Mr. Black informed the delegates that the activities of the World Bank continued at a high rate. Loan commitments during the year ended 30th June 1961 amounted to about $610 million, as against $659 million last year. The year's loans conformed to the usual pattern of Bank's operations, with some growing emphasis on transportation. The Bank's bond marketing department was very active, but the Bank's outstanding funded debt rose by only $155 million, as compared with an increase of $168 million in 1959-60. In fact, the rise during the year 1960-61 was the smallest in five years. There were two reasons for this fall in the Bank's borrowings: (i) Disbursements on loans were not moving as fast as previously, as the construction of many of the projects financed by the Bank took longer time. And (ii) the Bank sold from its loan folio about $200 million of the borrowers' obligations. As in more recent years, the Bank's borrowings during the year were done outside the United States, the countries tapped being Germany, Switzerland, the Netherlands and Italy. Mr. Black expressed his satisfaction with the reception which the Bank's bonds had been accorded in all European capital markets. He assured the European bankers that he and the Executive Directors would do everything they could to keep the Bank "as an attractive channel for investment funds flowing from Europe to the underdeveloped countries."

Guarantee for Private Investors

Alluding to what he termed as the "extra curricular" activities of the Bank, Mr. Black gave an account of the meeting in Tokyo in July last of the Development Assistance Group, wherein a number of measures that could be taken by the Governments of capital exporting countries to encourage the flow of capital into the underdeveloped countries were discussed. He welcomed the tendency in the world to give increasing attention to the contribution that foreign private investment could make to the development of the underdeveloped world. Among the measures discussed at the Tokyo meeting was the possibility of devising a multilateral scheme for the insurance of foreign investments against various non-commercial risks. The D.A.G., Mr. Black disclosed, had asked the World Bank to study and report on the potentialities and problems involved in the establishment of such a programme. The Bank had accepted the request and was conducting a study with no preconceived ideas about the usefulness or feasibility of the proposal.

As mentioned at the outset, the I.D.A. and the provision of more soft loans received the bulk of the space in Mr. Black's speech. In view of the importance of the subject to India, which is one of the main beneficiaries of the I.D.A.'s lending facilities, we are reproducing the relevant portion of Mr. Black's address:

"As of 1st September, 1961, 54 countries had completed all the formalities to join I.D.A. Together they have subscribed the equivalent of $908 million to I.D.A.'s initial capital: of this amount $756 million will be available in freely convertible currencies by the end of 1964. $178.5 million of convertible currencies are now paid in, in accordance with the terms of the Articles.

"During the period of eight months from the beginning of I.D.A.'s operations in November 1960 to the end of its first fiscal year, development credits totalling $101 million had been extended to four countries. Since 30th June 1961, $36 million in additional I.D.A. credits have been extended and two further countries have been added to the list of recipients.

"Each of these credits has a fifty-year maturity and there are no interest or commitment charges. Each credit, however, carries a small service charge to provide I.D.A. with income to meet its administrative expenses. Amortisation begins after a ten-year period of grace. This pattern, we think, effectively meets the organisation's objective of providing development capital on terms which do not bear heavily on the borrower's balance of payments. However, I.D.A.'s charter allows considerable flexibility in setting terms, and we are not committed to any uniform pattern for I.D.A. financing.

Flexibility

"I.D.A.'s charter also allows considerable flexibility in determining the countries in which I.D.A. will operate. There is a variety of circumstances where we feel an I.D.A. credit may be justified. A necessary condition in all cases is evidence that the borrowing Government is making a real effort to mobilise its own resources and to gear its financial policies to development. This standard, as I have said before, had been borrowed from the Bank and is being applied in I.D.A. operations. But, I.D.A. need not apply the same standards as the Bank with respect to a borrowing country's capacity to repay in foreign exchange. There are a number of countries, especially those that are very poor, whose foreign exchange situation is such that they cannot borrow abroad at all on conventional terms. Because of their bleak balance of payments prospects, I.D.A. is prepared to assist these countries, when the Government can show a definite will to mobilise domestic resources and to avoid inflationary policies.

"A second, and large, group of countries in which I.D.A. is prepared to operate consists of those whose burden of foreign debt service is so high that, while they can borrow, on conventional terms, *some* of the external capital which they require to carry out their priority programmes, they cannot prudently borrow the whole of it. In these circumstances, you may find the World Bank making loans and I.D.A. extending credits at one and the same time. This, in fact, has happened with India, Chile, Sudan and Colombia, for example.

"These are very broad criteria. In practice, the decision for or against an I.D.A. credit or the decision on the right blend of I.D.A. funds and conventional funds calls for a large element of judgment. It is just not possible to apply to all countries a single yardstick of creditworthiness. Ratios of debt service to exports, or of debt service to local budgetary receipts or gross national product —while indicative—cannot be used as rigid criteria. Much depends on the particular circumstances of the borrowing country, on the stage of development it has reached, on the structure of its economy, on the prospects for increased exports, and so on.

"There is yet another element of flexibility in I.D.A.'s charter of which we shall take advantage, namely, the range of projects which I.D.A. will consider. The charter authorises us to go beyond the usual types of projects financed by the Bank, and the authors of the charter clearly expected us to do so. The recent I.D.A. credit to assist in the financing of a municipal water supply makes a first step in this direction. We are also actively considering a project to finance the construction of an industrial estate and another to finance a technical training programme. We are considering these kinds of projects in consultation with other organisations including the appropriate Specialised Agencies of the United Nations.

Eligibility

"In the administration of I.D.A. funds, questions of terms, eligibility and project selection all raise problems, many of which we are still in the process of resolving. But we have seen enough of the picture to be convinced that I.D.A.'s major problem will be the meagreness of its present resources. There is in sight now a volume of promising applications which, if approved, would absorb a substantial part of the convertible funds initially subscribed for I.D.A.'s first five years of operations. India and Pakistan together are already in a position where they could quickly absorb in worthwhile projects all of I.D.A's capital by themselves.

"Some members of I.D.A. cannot yet present concrete proposals for credits, because they are not yet able to present adequately prepared and justified projects. But others show every indication of coming forward with very substantial requirements, demonstrating that, once a country organises itself for development, it can rapidly build up a burden of debt which may limit, at least temporarily, its ability to borrow abroad on conventional terms. In these circumstances, even on a conservative estimate, I.D.A.'s funds are likely to fall far short of the need. And, considering this, it is none too early to ask ourselves what the future of I.D.A. ought to be.

"More is at stake here, however, than just the future of I.D.A. Development is now accelerating on a broad front in the underdeveloped world, and this presents two important problems to be tackled, if we are to maintain productive co-operation between lenders and borrowers. First, we must redouble our efforts to ensure that the aid offered really serves a priority development purpose; we must use all the influence that we can command, and extend all the help that we can, to ensure that the underdeveloped countries themselves effectively utilise all their available resources. Secondly, quite apart from whether the funds flow through I.D.A. or some other channel, our common objectives require that a greater proportion of the development capital provided should bear terms comparable to I.D.A.'s.

Importance of Programming

"On the first of these points, let me say that, in my view, the ability of a borrower to use capital for sound development purposes is no less important—and, indeed, it is more important in the long run—than the form in which a lender makes capital available. This is why the Bank and I.D.A. insist on every borrower presenting a well-conceived project which could fit into a sound development programme. This, in fact, is the justification for our whole range of technical assistance services.

"Over the past fourteen years the Bank has been steadily increasing its technical assistance activities. We have deliberately adopted a liberal definition of these services. In the budget for the current fiscal year, we are providing funds which will be applied to the financing of General Survey Missions; to the costs of our Economic Development Institute; to our General Training Programmes; to the expenses of resident Bank representatives and of Bank staff members seconded to member-Governments in an advisory capacity of one kind or another; to the cost of sector surveys, such as a general transportation study in Colombia and a highway study in Peru; and, in special cases, to the cost of feasibility studies on individual projects. In addition, we have done considerable work as Executing Agent for the United Nations Special Fund on some large pre-investment studies.

"The Executive Directors have shared my view that one of the most important activities in which the Bank can engage is trying to help member-Governments through services of the kind I have mentioned to organise their advance along the road to development. Today, the need is greater than ever—in part because of the increase of the development effort in many countries, in part because of the emergence of many nations with Governments still lacking experience in the development field, and in part because of the increase in the number of aid-giving agencies whose efforts can be co-ordinated most effectively only in the recipient country. There is at once a much greater recognition than ever before of the essential importance of development programming and of sound project preparation; and at the same time there is an urgent need for competent people to help the underdeveloped countries to achieve these ends.

Development Advisory Service

"Against this background, we have recently decided that the Bank should expand its assistance to member-countries by forming a group of highly qualified development advisers who will be available to our member-countries on request for extended periods of time. These advisers will be integrated into a Development Advisory Service administered by the Bank. They will perform such duties as chief or senior economist of a general survey mission; resident economic or financial adviser to a Government; member of, or adviser to, a planning office; administrator, or adviser to the administrator, of a development programme; or simply an adviser on current economic and financial problems. We aim to recruit for this service only those with the highest professional qualifications. We are under no illusions that this will be an easy job, so we can expect that at first the Development Advisory Service will be very limited in numbers.

"These members of the Service, of course, will not go out equipped with model development programmes. The task of the development adviser is not to try to impose solutions but rather to illuminate the choices which Governments must make if they are to proceed along the road to economic growth. The choices may be among the various economic sectors covered in a national programme or among the various projects within a sector. In any case, the development adviser's job is to present choices in an orderly way, gathering cost data and identifying the benefits of projects so that the Government can decide more confidently how fast to proceed and in what direction, given all the competing claims on its financial resources.

"This is all a very practical exercise, not just for the underdeveloped countries but for the capital-exporting countries as well. In debates over development assistance there is too much emphasis, I think, on the quantity of the aid and too little emphasis on the quality of the effort. The questions, 'How much aid?', and, 'On what terms?', can only be answered dispassionately, if there exists the element of sound development programming and administration. This is the lesson, I think, of our consortia meetings on India and Pakistan. In each case, the background was the country's development programme. Without these programmes, there would have been little basis for concerted action by the aid-giving agencies. Indeed, without a well-conceived development programme as a basis, I do not see how the appropriate quantity of aid can ever be realistically determined for any country, whether with a consortium or without one.

More Soft Loans Needed

"Now I come to the second of the two important problems that I earlier referred to, namely, the need for a greater proportion of development capital bearing terms comparable to those of I.D.A. This problem gives me—and indeed should give all of us—serious concern.

"If I have any criticism to make of the results of the India and Pakistan consortia meetings, it is that too much of the capital subscribed will be provided on terms which bear too heavily on the balance of payments of the recipients. I do not mean to dwell on these cases, but they illustrate what is true not just of these two countries but of a growing number of others as well; it is going to be harder and harder to keep development projects and programmes moving ahead in an orderly fashion and at an orderly pace, unless the aid mixture has a larger component of funds on a grant basis or on terms comparable with I.D.A.'s.

"When the Organisation for European Economic Co-operation looked at the flow of official—not private—capital to the underdeveloped countries for the years 1956-59, it found that more than half went in the form of outright grants. This seems a very creditable record, and it was in its time. But there are signs that the ratio between conventional credit and what one might call unconventional credit is already changing—and, from my point of view, changing for the worse.

"During the period studied by O.E.E.C., more than nine-tenths of the aid extended on other than 'hard' terms came from the United States and France. Other countries, during this period and since, have become substantial lenders to the underdeveloped world, but they have not yet brought themselves, to the extent that existing circumstances require, to extend their aid otherwise than on conventional terms.

Financial Reefs Ahead

"Furthermore, when one looks at the outstanding 'hard' debt of individual underdeveloped countries, one sees in most cases a rapid increase and, in too many cases, a persistent tendency for debt repayments to pile up in the early years. Taking some examples from Latin America, there is one country where at the end of 1953 only 24 per cent of its outstanding debt was repayable in the next five years while at the end of 1959, 56 per cent was repayable in the next five years. In another, the ratio went up from 16 per cent at the end of 1953 to 50 per cent at the end of 1960. There is a similar trend in Asia and elsewhere. In one case, the ratio went up from only 8 per cent at the end of 1953 to 33 per cent at the end of 1959; in another, from 28 per cent at the end of 1952 to 50 per cent at the end of 1960.

"To me these figures are warnings of possible financial reefs ahead. I do not have to explain to this audience how the machinery of economic development could be overloaded with foreign debt, until it sputtered to a halt amid half-built projects and mountains of discarded plans. I expect, indeed, that there are some in this audience who can point to projects in their own countries which are at this very time suspended in mid-air, so to speak, for this very reason. Maybe, it is a half-finished highway or a hospital that has been built but not equipped. This kind of disruption kills peoples' hope in orderly economic progress and, if it persists, can lead to serious disillusionment.

"Superficially, it would be nice if we could devise some reliable index of creditworthiness which would tell us in every country and with complete assurance when we were headed into financial trouble. But, as I have said, there is no such index. Of course, there is the possibility that, when debts fall due, defaults will be forestalled by voluntary action on the part of creditors to extend the period of repayment. But this would only magnify the accumulation of interest payments, which by themselves have in many cases already attained a formidable size. Surely our objectives demand that we minimise this kind of financial uncertainty and avoid the risk of disrupting the march of development through financial default.

"The safe and sane way to minimise these dangers it to maximise the amount of official capital which is supplied at very long term with only a token interest burden. I sincerely hope that, in the months ahead, lending countries will make every effort to reverse the trends I have cited by increasing the share of capital that goes to the underdeveloped countries on terms properly geared to their requirements.

"It may be that some of our capital-exporting member-countries interested in further development in the underdeveloped world may find it difficult to administer aid on non-conventional terms through bilateral programmes. To them I would say that I.D.A.'s charter allows us to accept supplementary contributions from them at any time. Indeed, more generally, I think it is none too early for member-Governments to turn their minds towards the possibility of handling a greater share of the common burden in this way."

WORLD GOLD PRODUCTION

World production of gold, excluding output in Russia and countries associated with it, increased in 1960 to a new post-war peak for the seventh consecutive year. The increase, of about 1.5 million fine ounces, brought output to 33.5 million ounces. The value, at U.S. $35 per fine ounce, was $1,175 million, as compared with $1,125 million in 1959 and $1,049 million in 1958. Production in 1960 was about 60 per cent more than the lowest post-war total touched in 1945, but about 7 per cent (2.5 million ounces) less than the all-time peak of about 36.1 million ounces, valued at $1,264 million, attained in 1940.

India's (and Asia's) LARGEST DAIRY

...air conditioned by BLUE STAR

The gigantic dairy plant of the Delhi Milk Scheme—the pride of the nation's Capital—will be handling over half a million pounds of milk per day when in full production. A major Second Plan project of the Union Goverment, it will help solve the Capital's milk supply problem.

Hygienic handling of such vast quantities of fresh milk and other dairy products daily has been made possible by WORTHINGTON air conditioning. Throughout the processing, bottling and storage of milk, a 350-ton WORTHINGTON air conditioning system helps provide absolutely sanitary conditions by eliminating dirt, dust and temperature variations which could cause adverse bacterial action in milk... it also provides cool comfort in offices, recreation rooms, auditorium.

Engineered and installed by BLUE STAR, the plant comprises

- *Two Centrifugals, 175 TR each, with their respective induced draft cooling towers*
- *Six chilled-water Air Handling Units*
- *Two giant Air Washer Systems which cool and ventilate the engineering workshops and stores, machine rooms, bulk can and bottle washing areas, milk reception and despatch, dry storage, etc.*

This is yet another instance where high performance and economy in operation led logically to a BLUE STAR engineered WORTHINGTON installation. Whether your requirements are large or small— you will find that BLUE STAR can serve you best in 'climate control'

CLAIM FOR HIGHER WAGES REJECTED

NO POSSIBILITY OF STRIKES—SHORTENING ORDER BOOKS CAUSE CONCERN

From Our Special Correspondent

MANCHESTER, *19th September*

A CLAIM for a 10 per cent increase in wages submitted on behalf of nearly 180,000 cotton operatives was rejected outright by representatives of the millowners in Manchester.

MANCHESTER LETTER

Although the union leaders refused to comment on the possibility of strike action being taken, the fact that no conciliation machinery now exists for settling disputes in the industry caused some sources to suggest that a stoppage covering many hundreds of mills might be caused.

The union spokesman, Sir Alfred Roberts, Secretary of the Cardroom Workers' Amalgamation, said: "The employers did not base their opposition to the claim on the pay pause but advanced arguments in opposition to the points we put forward. They contended we have had a bigger increase in earnings than the cost of living justified in the past."

The operatives' case was based on the rise in the cost of living, the profitability of the industry, the relation of earnings in the cotton trade to those in competing industries and the need to attract more recruits to the mills. The last wage increase—of 7½ per cent—was granted to cotton workers 18 months ago but in the meantime, the hours of work in the mills have been reduced from the beginning of this year from 45 to 42½ weekly without loss of earnings.

Serious Situation

An official statement by the employers following the negotiations expressed grave concern at the recent deterioration in trading conditions and shortening order books. This, they said, was accentuated by the impact of a growing volume of low cost imports.

"The situation is serious," the statement continued, "and the industry is in no position to incur further rises in costs of manufacture, unassociated with productivity which would be bound to impair its competitive position even in relation to Western European countries. Cost increases would also undermine stability of employment and discourage capital investment in the industry.

"At a time of depressed trading conditions, the employers feel strongly that the claim was inopportune and that they must reject it."

But a fresh approach to the employers in support of their claim for a 10 per cent wage advance is to be made by the cotton unions.

Leaders of the nine unions concerned at a meeting in Manchester considered the situation arising from the flat rejection of their demand by the millowners the previous week.

Sir Alfred Roberts, Secretary, of the Cardroom Workers' Amalgamation, said a decision had been reached to restate the claim to the employers. A sub-committee had been set up to consider what action should be taken in the event of another rejection of their application. "I do not think strike action is involved at this stage," he declared. "There are other alternatives which we shall have to discuss if the employers refuse the claim again."

September Doldrums

Nothing could be more depressing for traders than to reach the end of the summer season and then be forced to extend the long week-end holidays in the mills because of a shortage of orders. This, however, is the unpalatable prospect which has faced employers since the end of last month. Once such a movement starts, imitators quickly follow so that as each district comes to take its autumn break, the tendency has been to lengthen the usual couple of days' stoppage into a full week.

At the beginning of the year it was widely stated that most spinners and weavers had enough work in front of them to keep their machinery occupied until at least the third quarter. Now that September has arrived and orders lists have dwindled almost to vanishing point, the absence of follow-on business during the intervening months needs no elaboration. Throughout this period, however, sellers have kept their heads high in the belief that a revival in purchasing power would surely materialise; their disappointment at its non-appearance can be appreciated.

A feature of the big business which was done during 1960 was the steadily broadening margins on which negotiations were conducted. Distributors built up their supplies, fearing that they might be caught short, and although bargaining was inevitable, the usual result was agreement to pay the rate quoted. As contracts held by producers have grown smaller this year, so the mood has altered.

For several months resistance among buyers has been strong and salesmen have been equally determined to avoid cutting their margins, until their position became untenable. Only within the last few weeks, however, have there been signs that concessions were being offered, together with much improved delivery terms, as very few spinners and weavers are prepared to make for stock at a time when interest charges are so high.

Faulty Timing?

The opposing viewpoints are sufficiently well established to need no recapitulation. From the union angle, it might well be said that the timing of the pay claim was ill-advised in that they had allowed trading conditions to deteriorate up to a point where the millowners could justifiably point to stopped machinery, shortage of order and the very uncertain outlook.

Some months ago, although the prospect even then were discouraging, the application might not have received such an emphatic refusal, nor would the Chancellor of the Exchequer's pay pause then have added a further bulwark to the employers' case.

For many reasons, however, it seems unlikely that any extensive withdrawal of work will be ordered by the representatives of the operatives. The history of industrial relations between millowners and employees hardly suggests a direct collision of interests. In existing circumstances, there would be many individual firms to which isolated stoppages would be no embarrassment and, in fact, such action is already being taken by management in order to curtail output.

On the other hand, the strongest card in the union hand is the effect of the dispute on the growing generation of school-leavers who might be prepared to join the industry. The average age of those already employed in the mills is far too high for any complacency and the competitive earnings offered by the many rival firms, which have settled in the mill towns, are an inducement to those setting out in their industrial life to seek jobs away from cotton.

The decision to re-submit the claim to the employees puts the unions on the defensive; they can hardly hope for a sudden change of heart at such a time. What their "other alternatives" to strike action are remains a mystery. Sir Alfred Roberts was careful to stress the words "at this stage" when he dismissed the possibility of immediate stoppages.

Although there is no sign as yet of any revival in trade activity the optimists constantly hope that the tide will turn, perhaps before the end of the year. The Chancellor's appeal for restraint may be regarded as a temporary measure and within a few months the position of both sides can alter substantially.

Once again, the question of profits earned by the mills needs to be re-emphasised. Results are still coming to hand showing a distinctly favourable picture, but these accounts cover a trading period when business was very brisk and orders were being obtained on remunerative terms. The present "pause," whether it applies to wages or buying pressure, will eventually be reflected in figures which will not be to the liking either of shareholders or union leaders demanding higher wages for their members.

Decline in Prices

Yarn quotations in the American range reached a peak during March and held steady for some time thereafter. During the past six months the fall registered has ranged from about 2½*d.* per lb. in the lower counts to as much as 6½*d.* in the finer qualities or ring beams.

A much bigger decline has taken place in the values of Egyptian type yarns but the reduction has been spread over a longer period. In this section prices have been dropping since late last year and quotations for carded yarn are about 10*d.* per lb. below their 1960 peak. In combed descriptions, the current rate is up to 15*d.* lower than last November and in doubled yarns a reduction of some 13*d.* per lb. has occurred.—*All Rights Reserved.*

RAW COTTON PRODUCTION DURING 1961-62

A WORLD-WIDE ANALYSIS OF PROSPECTS

DESPITE the fact that acreage under cotton has gone up in most countries, free world cotton production during the current (1961-62) season is likely to fall short of last season's record level of 33.2 million bales (of 500 lbs. each). This is the conclusion reached by the International Cotton Advisory Committee, Washington, from a survey of world cotton production prospects during the 1961-62 season published in its latest (August 1961) monthly bulletin. According to the Committee, total acreage under cotton in the free world has increased for the third year in succession and is estimated at around 62.5 million acres, as compared with 61.1 million acres in 1960-61. This increase of about a million and a half acres has occurred mostly outside the U.S. But the decline in production is confined mainly to the U.S., where, in spite of an increase in acreage, output is expected to be 500,000 bales less than in the previous season.*

It is still too early to make a precise estimate of production of cotton. Any calculation must, to a large extent, be conjectural and subject to considerable revision as the season progresses. Based on the information available till 25th August, however, the Committee estimates total production at 32.8 million bales, as compared with 33.2 million bales in 1960-61. This slight decline in production during the current season is offset by the modest increase in carryover stocks on 1st August 1961, so that, on present reckoning, supply would be at about the same level as in 1960-61, that is, roughly 50 million bales. If, however, these estimates are revised on the basis of the September crop estimate for the U.S., it is found that supply will, in fact, be more by about 300,000 bales. The following table gives a statistical picture of the supply of raw cotton during the 1961-62 season, as compared with the supply and distribution during the previous three seasons:

(In million bales)

	1961–62*	1960–61*	1959–60	1958–59
Stocks (as on 1st August)				
United States	7.2	7.6	8.9	8.7
Other net exporters	3.4	3.2	3.5	4.0
Net importers	6.7	6.0	5.3	6.1
Total	17.3	16.8	17.7	18.8
Production:				
United States	13.9	14.4	14.6	11.5
Elsewhere	18.9	18.8	16.6	17.6
Total	32.8	33.2	31.2	29.1
Stocks plus production:				
United States	21.1	22.0	23.5	20.2
Elsewhere	29.0	28.0	25.4	27.7
Total	50.1	50.0	48.9	47.9
Consumption:				
United States	8.3	9.0	8.7	
Elsewhere	22.8	22.0	20.4	
Total	31.1	31.0	29.1	
Destroyed				
Net exports to Communist bloc	0.1	0.1	0.1	
	1.6	1.3	1.2	
Total disappearance	32.7	32.4	30.4	
Exports	14.7	15.3	11.5	

* Estimate.

The analysis of the overall production is supplemented by a country-wise analysis of the production prospects. In the U.S., the largest cotton producing country in the free world, a prospective reduction in average fields more than offsets the increase in acreage for harvest. Taking into account the reduction in opening stocks, total supply in that country is likely to be half a million bales less than in 1960-61.

Acreage Allotment

The national acreage allotment in the U.S. for the 1961 crop was 18.5 million acres, as against the total allotment, including additions under the choice "B" programme, of 17.6 million acres in 1960. Farmers, therefore, were given the opportunity to expand cotton acreage by nearly one million acres, but, in actual fact, planted acreage increased by only about half this amount. The area planted to cotton was estimated on 1st July 1961 at about 16.6 million acres, as compared with 16.1 million acres a year earlier. The heavy rate of underplanting this season is attributed, in large part, to regional shifts in basic acreage allotments. Acreage allotments for the Western States, which normally plant up to the permitted maximum, were reduced significantly. The allotment for all other producing areas was increased, with the largest proportionate increase in the South-East where underplantings are usually high. A larger cotton acreage was sown in all these areas, but the percentage planted declined.

Changes in the distribution of acreage could be expected to have some influence on the yield potential during this season. The shift in acreage away from the high-yielding Western States and the increase in most other States tended to reduce average yield prospects for the country as a whole. This, plus the cool, wet weather in the Central and Eastern cotton States, explains the reduction in the average yield from 446 lbs. last season to 427 lbs. as per the August report. Although the yield has been estimated higher at 437 lbs. in the September estimate, it is still 9 lbs. below the 1960-61 yield.

With lower carryover stocks and smaller crop, total supply in the U.S. is estimated at a little over 21 million bales, as compared with 22 million bales in 1960-61. Preliminary ideas are that disappearance will amount to about 14.5 million bales. Should that be so, stocks on 31st July 1962 are likely to fall to around 7 million bales.

*This calculation, based on the August crop report, has been belied by the September report which put the crop at 14.26 million bales, virtually the same as in 1960-61.

Mexico and Egypt

As regards prospects elsewhere in the free world, though production potential has been adversely affected by the probability of a much smaller crop in Mexico and the United Arab Republic (Egypt), the total outturn should be in line with that in the last season. The present estimate of production is 19 million bales. Carryover stocks in other net exporting countries, as of 1st August last, were fractionally higher in total than a year before, so that total supply should at least equal last season's record total. Opening stocks in net importing countries (mainly India) were again significantly higher and total supply outside the U.S. will definitely be larger than during the last season. The table below gives preliminary estimates of acreage and production in the leading cotton-producing countries in the free world including the U.S.

Countries	Acreage (in million acres)		Production (in 1,000 bales of 500 lbs. each)	
	1961–62*	1960–61	1961–62*	1960–61
India	18.8	18.8	4,500	4,600
United States	15.7	15.3	13,900	14,400
Mexico	2.0	2.2	1,875	2,100
C. America	0.5	0.4	630	450
Egypt (U.A.R.)	2.1	1.9	1,750	2,205
Turkey	1.6	1.5	900	810
Syria (U.A.R.)	0.6	0.5	580	510
Pakistan	3.2	3.2	1,400	1,940
Sudan	1.2	0.9	600	525
Uganda	1.7	1.6	385	305
Brazil	5.2	5.0	2,000	1,800
Argentina	1.3	1.2	550	500
Peru	0.6	0.6	600	580
Others	8.1	8.0	3,180	3,075
World (excluding U.S.S.R. and China)	62.6	61.1	32,800	33,200

* Preliminary.

The failure of cotton production outside the U.S. to expand in anything like the same proportion as the increase in acreage is due to the marked reduction in production in Mexico and the U.A.R. In Mexico, the much smaller crop can be attributed mainly to sharply reduced acreage. In Egypt, prospects were promising earlier in the season. According to the first official estimate, total acreage planted to cotton was estimated to be about 6 per cent larger than during the last season, with increases in all varieties, except Karnak and Giza 30. Recently, however, there have been reports of damage from leaf worm and, despite emergency measures which have been taken to bring the situation under control, it is believed that crop losses have been considerable in some areas and the overall effect could be a fall in production. The marked reduction in production in Mexico and Egypt, the largest exporters outside the U.S., is likely to have some impact on the total amount of non-U.S. cotton available for export which may, ultimately, benefit other exporting countries.

In many other countries, however, acreage has been expanded and, other things being equal, this should result in increased production. Proportionately, the increase in cotton acreage has been most pronounced in the Central American countries. Throughout the Middle East, too, interest in cotton is high, with a prospective increase in acreage in all countries.

In India, with the exception of the areas in the South, most of the cotton has already been sown, although it is still too early to give a precise estimate of the total area planted. Trade sources, however, estimate the commercial crop at 5 million bales (of 400 lbs. each), as compared with 5.4 million bales last season.

Considerable resowing and much late planting of cotton in Pakistan mean that the crop is late this year. Expectations are that production will show some increase over last season's 1.34 million bales.

Africa

Africa's cotton crop prospects vary considerably but, excluding the U.A.R., production potential is, on balance, about the same as during last season, increases in some countries offsetting declines in others. Acreage in both the largest producing countries, the Sudan and Uganda, is expected to increase.

Estimates for South America are rendered very difficult, in that total production is a composite of two crops—one harvested at the beginning of the season and the other towards the end. Based on the probable acreage expansion in Brazil and Argentina, it is, however, estimated that production in South America will set a new record this season, exceeding the post-war high of 3.3 million bales produced last season.

EXPORT QUOTA FOR COTTON

The long-awaited export quota for Bengal *Deshi* cotton has at last been made. It was notified officially on Saturday, the 23rd inst., that a minimum quantity of 150,000 bales of Bengal *Deshi* cotton will be allowed for export during the 1961-62 season. This quantity is only the minimum permissible. The announcement specifically states that, later, more cotton would be allowed for export, if subsequent estimates of the size of the crop warrant such a step. Of this quantity, 125,000 bales will be immediately allowed for export on a first-come-first-served basis for shipment upto 31st March 1962. A small quantity of 6,250 bales out of the 125,000 bales, has been earmarked, as usual, for co-operative societies.

A notice issued in this regard by the Joint Chief Controller of Exports and Imports, Bombay, sets out the licensing procedure as under:

Allotment letters will be issued on registration by exporters on the principle of first-come-first-served, subject to a maximum of five per cent per shipper of the total quantity available for export. Licensing, which would be valid for shipment from 3rd October to 31st March 1962, against the allotment letters, will be done on presentation of shipping bills.

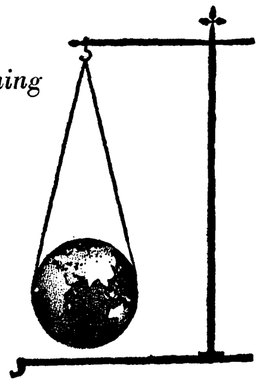
The quota has been welcomed by the trade which is particularly happy that most of its suggestions have been accepted by the Government. The release of a large quota, with an assurance that more cotton would be permitted for export should crop conditions warrant it, the first-come-first-served basis of licensing and the absence of any grade stipulation show that the pleadings of the trade have not fallen on deaf ears. It is for the trade now to ensure that the quantity earmarked for export is sold at the best possible price, and thereby maximise the foreign exchange earnings.

COTTON COMMITTEE MEETING

The eighty-fourth half-yearly meeting of the Indian Central Cotton Committee will be held in Bombay from 3rd to 7th October 1961. Mr. V. Shankar, Vice-President, Indian Council of Agricultural Research and Special Secretary to the Union Ministry of Food and Agriculture, will preside. The full meeting of the Committee will be held on 7th October. Most of the subjects on the agenda, numbering 154, will be examined, in the first instance, by the appropriate sub-committees, namely, the Policy, Agricultural Research, Agricultural Extension, Technological Research, Cotton Ginning and Press Factories and Cotton Forecast Sub-Committees which will meet earlier.

Some 96 subjects figure on the agenda of the Agricultural Research Sub-Committee, which will meet on 3rd and 5th October. Apart from a large number of progress reports on research and development schemes which will come up for review, the Sub-Committee will examine proposals for 14 new schemes and nine extension of existing schemes. Other important items on the agenda are: (i) the report of the Standing Sub-Committee constituted to formulate a pattern of cotton research for the new river valley project areas in respect of the Chambal Projects area in Madhya Pradesh and Rajasthan and Nagarjuna Sagar Project area of Andhra Pradesh, (ii) the report of the Special Sub-Committee constituted to prepare a comprehensive account of the important pests and diseases and measures for their control, and (iii) the report of the Standing Special Sub-Committee constituted to inspect the Sea Island cotton crop and examine the various aspects of its development.

Among other matters, the Cotton Forecast Sub-Committee will consider the reports on the crop estimation surveys on cotton in the major cotton-growing States in 1960-61. Apart from these, one of the items of interest, which will receive attention at the session of the main Committee, is the report on progress of cotton extension work in the States for 1961-62.



Weighing the world up...

...even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

DESIGN... for finest performance

Of all aspects of industrial endeavour the most intriguing is thermo-dynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story...a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is *tailor-made* to give optimum performance under varying *local* conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities of waste material in the form of bagasse for fuel; again, in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digestors in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will *tailor-make* not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

OIL EXPLORATION

A SEARCH THAT NEVER ENDS

By V. S. Swaminathan, M.A., M.Sc. (Lond.)

UNDER the latest Government-Burmah Oil Company agreement initialled on 31st May 1961, Oil India secured a new concession area covering 1,800 square miles adjoining the Digboi-Nahorkatiya-Moran fields. Oil India is launching an immediate exploration programme. Geophysical surveys are to be resumed in October and the first well drilled early in 1962. Let us recapitulate what this search for oil means and entails.

Time was when oilmen sunk their wells where there were clear indications of petroleum such as surface seepages. More often, however, they drilled simply by hunch. On occasion, they fell back on divining rods which were supposedly capable of detecting underground oil.

In the meantime, accumulating experience was providing a basis for the scientific study of how oil occurs in the earth. Nowadays, modern techniques of exploring for petroleum make use of our inherited fund of knowledge of its origin, and of how it accumulated within certain portions of the earth. Oil pools are found only here and there, where conditions are favourable such as in domes and structural traps. Such reservoirs may lie near the surface or miles deep. They may be of almost any size and shape.

Diverse Devices

The amount of information that can be gathered from the study of the surface and core drilling by geologists is limited. So other related branches of science have been pressed into service by the explorers for oil. Various devices have been developed for probing beneath the earth to learn more about the lie and nature of the rocks buried below.

It is in this context the modern geophysical exploration methods offer the possibility of locating structures favourable for the accumulation of oil or gas at great depths by measuring the characteristics of rocks from the surface. Successful mapping of structures, three miles or more in depth, is now an everyday occurrence. The main geophysical instruments used are the magnetometer, gravity meter and seismograph.

As the name implies, the aeromagnetic survey is made with the help of an aircraft fitted with a magnetometer which records variations in the earth's magnetism. From the readings recorded by the instrument, the depths of the older rocks can be estimated over a wide area. In a gravity survey, information is obtained by recording variations in the gravitational pull of rocks buried at various depths. Lastly, the seismic survey employs charges of explosives. These are fired in holes bored in the ground to create minor, man-made earthquakes. The time taken for the sound to rebound from the hidden rocks and reach the recording instruments gives an indication of their depth.

Although none of these methods can determine whether oil exists at depth, they give a fairly accurate picture of the structures or traps where petroleum may be found. The driller's bit, the constant vigilance of the geologist examining cores and samples for oil or gas and electrolog are the principal means of proving or disproving the presence of this elusive, much-sought-after, commodity.

Other Hurdles

Then there are other hurdles to overcome so far as oil exploration in Upper Assam is concerned. All the specialised equipment has to be imported from abroad and brought by air, rail or a thousand miles up the Brahmaputra river from Calcutta. After the conclusion of the geophysical surveys in the field, the results must be computed, corrected and analysed. And then, if everything is found satisfactory, another risk must be taken. A test-well must be drilled. An approach road to the test-well site may involve miles of jungle clearing and construction under adverse climatic conditions. Geological evidence from test cores calls for examination in the light of the geophysical surveys. If all this goes according to plan, the experts can only say: "You *may* find oil in such and such a location."

Turning Point

Nahorkatiya Well No. 1 enjoys the distinction of being the first oil-bearing structure in the alluvial area of India to be discovered by purely geophysical methods. It thus marked a turning point in the history of oil exploration in India. Even as the finding of the now historic Leduc field in Western Canada led to an intensification of the search for oil and gas, so did the Nahorkatiya discovery give a shot in the arm to oil exploration in India.

Thus, the Assam Oil Company (A.O.C.) intensified their search for new sources of oil with the help of the most modern methods known to industry. These surveys ranged from Mishmi Hills in the north-east extremity of Assam to the Mikir Hills in the south-west and further to Gauhati. Its aeromagnetic surveys covered 14,300 square miles and other geophysical surveys 6,000 square miles. These involved the Company in an expenditure of Rs. 1.65 crore.

Hazards of the Search

Two examples may be cited to illustrate the hazards attached to oil search. From 1920 onwards, the Whitehall Petroleum Corporation Ltd. carried out extensive geological work in the south-western Naga Hills, North Cachar Hills and southern Mikir Hills and drilled three wells near Nichuguard. It engaged eminent geologists like L. G. Weeks, Past President of the American Association of Petroleum Geologists, and Dale Condit of Oil Search Ltd., Australia. This Company ceased its operation in India in 1927 without discovering any oil.

Also, some hundred wells were drilled in the Digboi area itself by the Company with disappointing results. It was only when the Burmah Oil Company came forward with a team of able geologists and drillers and employed the latest geophysical techniques in oil exploration that drilling resulted in oil-producing wells.

Secondly, the Standard-Vacuum Oil Company started geological and geophysical exploration in India in 1949. An aeromagnetic survey of the entire West Bengal basin was carried out in 1951 and, subsequently, 12,000 gravity observations and nearly 19,000 seismic shots were completed. The Indo-Stanvac project, a joint venture with the Government of India since 1953, drilled ten test-wells in the West Bengal basin, but, despite the highest professional skill brought into play, all the ten wells proved to be dry. The total expenditure of the project is estimated at Rs. 9 crores.

Oil Struck

The State-sponsored Oil and Natural Gas Commission (O.N.G.C.) has spread its exploration net far and wide. During 1960-61 field season, it had plans to prospect 2,859 square miles, mostly in the Punjab, Assam, Cambay and Kutch. The O.N.G.C. hold two separate concessions in the Sibsagar area. In 1959, a test-well was drilled in the northern area to a depth of 12,503 ft., and abandoned as a dry hole. A second well, completed in the southern area near Rudrasagar last October (1960), has yielded promising results. The very first O.N.G.C. test-well at Cambay, located largely on the basis of the early geophysical work carried out by the Geological Survey of India, yielded oil. Drilling of development wells both at Cambay, Ankleshwar, and Kalol (an even more valuable find) are proceeding according to plan.

Mr. P. Evans, at one time Chief Geologist of the Burmah Oil Company, has stated that "as an average test-well in India costs approximately Rs. 30 lakhs, the discovery of a single new oilfield might cost as much as Rs. 6 crores for exploration before any development begins.... Suppose we take 1 in 20 as a reasonable expectation of finding a commercially profitable field, the cost of a deep exploratory well in India would be anything from Rs. 30 to Rs. 80 lakhs, according to the depth, difficulty of drilling and accessibility."

The oil industry's search for new fields is one that never ends. New reserves must constantly be found to replace that which has been used. Only thus can the oil companies maintain their crude reserves and keep feeding the refineries and so the markets.

IN THE SPACE OF 10 YEARS...

the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140—*100 more than existed ten years ago.*

PRICE POLICY IN A DEVELOPING ECONOMY

By Khetramohan Patnaik, M.A., A.M. (Stanford)

SINCE the beginning of the second Five-year Plan, wholesale prices in India have gone up by at least 25 per cent. The all-India working class price index (1949=100) has also risen by the same order. Between 1955 and 1960, prices of food articles rose by 42 per cent and those of industrial raw materials by 40.6 per cent. Rapidly rising prices have adversely affected living standards and made the common people suspicious about the benefits of a planned economy. Against this background, the issue of price policy has been in the forefront of public discussion and there is almost a universal demand that our Government should make "a positive affirmation that a degree of price stability is not only inconsistent with expansion but is an essential part of the strategy of economic development." Hence, it is imperative that we should disentangle the basic issues involved in the formulation of a price policy in the context of economic development so as to avoid the pitfalls in policy-making.

Agricultural Prices and Production During the Two Plans

When we are thinking of the price policy for a country where agriculture accounts for roughly 50 per cent of the national income, it is natural that agricultural prices should engage our attention first. It is argued that, in a developing economy, there is a long-term tendency for prices to rise which ceases to operate only after the stage of self-generating growth has been reached. The assumption implicit here is a closed economy, where there is increase of investment for creation of new capital goods. The result would be generation of incomes in the capital goods sector and rise in prices if the elasticity of supply of different goods does not match with the income elasticity of demand. In a poor country like India, expenditure on food forms the bulk of total consumer expenditure and the income elasticity of demand for foodgrains is high. But, as compared with this position, the elasticity of supply of foodgrains is very small. The influence of prices on agricultural production, particularly that of cereals and pulses, seems to be negligible. This is seen from Table 1 which shows the trend of production of cereals and pulses in our country during the last few years.

TABLE I

Trends in Food Prices and Production

Year	Index No. of wholesale prices (1952-53 = 100)		Total production (Million tons)	
	Cereals	Pulses	Cereals	Pulses
1953-54	98	91	58 2	10.4
1954-55	80	59	55.7	10.8
1955-56	76	62	54 9	10.8
1956-57	96	81	57 2	11.5
1957-58	101	82	52.8	9.2
1958-59	107	104	63.3	13.4
1959-60	103	87	61.5	11.4

Source: *Reserve Bank of India Bulletins.*

It will be seen that a significant rise in the wholesale price index from 76 in 1955-56 to 96 in 1956-57 produced little effect on the 1957-58 crop. Cereal production actually declined in 1957-58 by 8 per cent as compared with that in the previous year. The rise in cereal prices between 1957-58 and 1958-59 had no effect on the crop in the subsequent year. The same trend is seen in the case of production of pulses in Table No. 1. These figures illustrate a high degree of inelasticity of the supply of foodgrains and the negligible role of prices in stimulating primary production.

Increase in investment under conditions of high income elasticity of demand for foodgrains and its low elasticity of supply has inevitably resulted in the dislocation of the price structure. As compared with 1955-56 (last year of the first Plan), food prices increased by 37.4 per cent during 1959-60, as against an increase of 26.5 per cent in the general price level. Prices of industrial raw materials increased by 25 per cent and those of manufactured goods by 11 8 per cent Thus, price increases have been much higher in the case of foodgrains. This, in all likelihood, must have resulted in the diversion of a large part of income from the urban sector to the rural sector.

Ricardian Model

Our experience during the two Plan periods immediately recalls to our mind the various models of growth which indicate the role of agricultural prices in the process of economic development. The classical writers showed how the economy develop from a progressive state into a stationary one with no net investment, subsistence wages, and zero profits. Ricardo points out that capital accumulation gradually leads to a reduction of profits due to rise in corn prices. The price of corn, according to him, is determined by the quantity of labour necessary to produce it. The price of manufactured goods rises and falls in accordance with the amount of labour necessary to produce them. The whole value of manufactured goods and of the corn grown on the no-rent land is divided into two parts only: profits and wages. Ricardo then points out: "Supposing corn and manufactured goods always tend to sell at the same price, profits would be high or low in proportion as wages were low or high. But suppose corn were to rise in price because more labour is necessary to produce it; that cause will not raise the price of manufactured goods in the production of which no additional quantity of labour is required. If, then, wages continue the same, the profits of manufactures would remain the same, but, if, as it is absolutely certain, wages should rise with the price of corn, then these profits would necessarily fall."

In the Ricardian model, the developing economy is characterised by a high level of investment which increases production and helps to keep up wages. A rise in wage-level stimulates growth in the population. The rise in population increases the demand for food and necessitates the cultivation of progressively less fertile lands, resulting in a continual rise in the price of food. Ricardo believed that "the only adequate and permanent cause for the rise of wages is the increasing difficulty of providing food and necessaries for the increasing number of workmen." As population increases, wages, therefore, tend to eat up the total product after rent payment and thereby reduce the profitability of investment until the inducement to invest disappears and the stationary state is attained. Thus, in the dynamic analysis of Ricardo, money wages go on rising due to rise in agricultural prices which ultimately affects profits and hence growth of the economy.

Lewis' Model

Arthur Lewis points out: "the central problem in the theory of economic development is to understand the process by which a community which was previously saving and investing 4 or 5 per cent of its national income or less, converts itself into an economy where voluntary saving is running at about 12 to 15 per cent of national income or more." Saving would increase if the distribution of incomes is altered in favour of the saving class. Practically all saving is done by people who receive profits. In the words of Lewis, "the major source of savings is profits, and if we find that savings are increasing as a proportion of the national income, we may take it for granted that this is because the share of profits in the national income is increasing." He points out that, if unlimited supply of labour is available at a constant real wage, profits will rise continuously, facilitating an increasing proportion of national income set apart for investment. But this process would stop if real wages rise so high as to reduce the profits. This would happen if the price of food in terms of manufactured products goes up. This is one of the ways in which industrialisation depends on agricultural improvement. Thus, Lewis emphasises the crucial role of agricultural prices in the process of economic growth.

It is this realisation that lies at the root of the repeal of the Corn Law in England in 1846 by Sir Robert Peel. If there is no hope of agricultural prices falling, there is the danger of a shrinkage of the volume of profits adversely affecting capital formation. To avert this, Japan followed the policy of raising rents against the farmers and taxing them more heavily so as to divert a large part of the rapid increase in productivity from the farmers for capital formation.[1] A similar policy was followed in the U.S.S.R., where farm incomes were held down by raising the prices of manufactures relatively to farm products and also by levying heavy taxes upon the collective farms.[2]

Necessity of Stabilising Agricultural Prices

The foregoing discussion would underline the necessity of stabilisation of agricultural prices in the interest of rapid economic growth. Such a policy, as pointed out above, becomes conducive to increased investment by enlarging the share of profits in the national income. Raising prices of agricultural commodities divert a large proportion of the national income to the agricultural sector where the average *per capita* income is less than half of that in the non-agricultural sector. Consequently, "the sector which is the main saver in society is obliged to save less while the sector which habitually does not save very much, gets more income and cannot save very much more.[3]" Hence every shift of income in favour of the agricultural classes adversely affects savings and hence investment which is the basis of rapid economic advance. Again, in the case of our country, the general price level follows very closely the trend of foodgrains prices. Therefore, a rise in prices of foodgrains would bring about a cost-induced inflation. A rise in the prices of foodgrains would induce the labourers to demand a corresponding rise in wages. This, in turn, would lead to a rise in the cost of production and thus set in motion the inflationary spiral. The fall in purchasing power, brought about by inflation, reduces the rate of interest in real terms and thereby serves as a drag on savings. This has been our experience during the last decade, as revealed by the estimate of saving in the Indian economy, made by the Reserve Bank of India.

TABLE II

Trends in the Volume of Saving in India

Year	Total saving (Rs. crores at 1948-49 prices)	Saving as percentage of national income
1950-51	591	6.7
1951-52	460	5.1
1952-53	504	6.0
1953-54	573	6 7
1954-55	731	7.1
1955-56	955	9 1
1956-57	908	8 8
1957-58	782	7.2
1958-59	902	7.7

Source: *Reserve Bank of India Bulletin* (August, 1961.)

It would be seen from the table above that the volume of saving in the economy declined during 1951-52, 1953-54 and 1957-58. These were the years when the food prices and the general price index had gone up steeply. The Indian price level experienced a sharp upswing from June 1950, mainly as a result of the outbreak of the Korean war. The general index of wholesale prices (base: year ended August 1939=100), which had risen from 397.1 on 24th June 1950 to 449.6 by the end of March 1951, advanced further to the peak figure of 462.0 by mid-April 1951. It stood at 428.8 at the end of January 1952 and declined to 378.2 at the end of March 1952. The average general index of wholesale prices (base: year ended August 1939=100) which stood at 380.6 in 1952-53 rose to 397.5 in 1953-54. Thus, prices in general recorded a rise of 4.4 per cent in 1953-54 over the previous year; during the same period, the prices of food articles rose by 7.4 per cent. The decline in the volume of saving as well as the saving-income ratio during 1957-58 is explained by a fall in the marginal profits-wages ratio reinforced by the rise in food prices which led to increases in wage incomes.

Thus, from all points of view, it becomes imperative to check the rise in food prices in the interest of economic development.

Functional Role of Prices Limited

Holding the price line of foodgrains, as advocated above, in the face of increased demand can be successful only if there is an increase in the output of these commodities. Some say that an increase in the output of foodgrains cannot be assured by holding the price line, since "the only practicable way in which production incentives can be effectively given is through rising prices." If increase in agricultural output follows a rise in its price, the price rise tends to be self-liquidating and hence should not be interfered with. Primarily, the function of prices is to bring about an equilibrium between demand and supply and, where this mechanism has a smooth operation, a deliberate control of prices would be harmful.

All this is recognised. But, as pointed out above, price-mechanism has failed to perform its legitimate role so far as agriculture is concerned in our country. This has been explained above with the help of the data given in the first table earlier. It would be seen from this table that the role of prices in stepping up agricultural production has been negligible. Moreover, there is the danger that a price rise would induce the farmers to increase their own consumption of the foodgrains they produce and to build up stocks with a view to realising higher prices. The marketable surplus then would not increase at the same rate at which agricultural income increases[4]. In such cases, as Dr. V. K. R. V. Rao pointed out not long ago, some other means must be found for achieving within the short period the economic objectives behind the policy of holding the price line. "Price controls and controlled distribution," to quote him, "would be especially necessary in the case of consumption goods the supply of which fails to respond to price or any other stimulus within a reasonable period." A clever manipulation of a bufferstock seems to be a better way of enforcing a policy of agricultural price-stability since it would avoid bureaucratic control and other dangers inherent in the former method.

Coming to the industrial field divided between the public sector and the private sector, we can notice the same limited functional role of the price mechanism. The public sector is the watch-dog of the national interest and as such does not need the price-incentive. Hence we are left with the private sector, predominantly supplying consumption goods in our country, where a flexible price policy seems to be called for both for increasing output and for influencing the composition of this output. A system of flexible or freely fluctuating prices, in an unplanned economy, serves not only to give incentives to production but also as a powerful allocative mechanism, helping the producers to move along the lines in which the incentives impel them to act. But the successful working of such a system assumes the existence of perfect competition on both sides of every market and perfect divisibility of all resources and products. Hence, such a price system becomes limited in application in an underdeveloped economy, in view of the excessive market imperfections and large physical inelasticities in supply of resources here. Moreover, automatic market forces, in the context of the high degree of inequality of incomes prevalent in these countries, would inevitably give rise to conflicts between private and social interests in the use of scarce resources. Hence, it becomes necessary to abate the pull of prices by powerful monetary and fiscal measures, if direct control devices smack of totalitarianism. Thus, monetary and fiscal policies become indispensable adjuncts of a system of flexible prices in the context of democratic planning, in order to divert demand and direct resources to channels most helpful to growth and social interest.

Conclusion

In the light of the foregoing discussion, the essentials of a price policy for a country like India in the process of development may be laid down. In the first place, there should be stability of food prices, a policy which can be maintained by the Government by operating bufferstocks. This has to be continued as long as agriculture is not responsive to price incentives. Secondly, there should be a system of flexible or freely fluctuating prices so far as the private sector is concerned. This has to be supplemented by monetary and fiscal policy aimed at safeguarding the social interest. Third, since the basis of the public sector is not profit-motive, it is not the price incentive that matters here but appropriate monetary and fiscal measures designed to divert resources for facilitating increased investment. These three principles ought, perhaps, to guide any decision about price policy during the third Plan period.

JOLLYBOARD

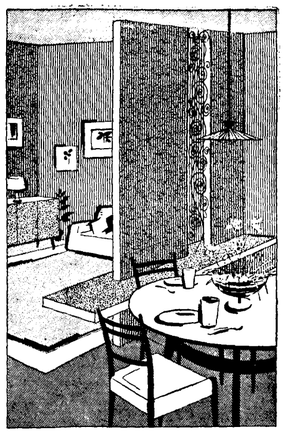
the modern material

so handy & so economical

Q: What is JOLLYBOARD?

A: It's fibre board, made to B.S.S. There are oil created standard boards, and oil tempered boards for higher water-resistance and extra strength.

JOLLYBOARD AT HOME In today's modern homes, JOLLYBOARD can be found *everywhere!* It makes partitions, room dividers, flush doors etc. And JOLLYBOARD Melamine decorative boards are wonderful for table tops, kitchen counters, bathroom furniture and other decorative pieces.



JOLLYBOARD IN USE JOLLYBOARD is so versatile...it can be used for almost everything. It's light, strong and durable. It cannot split, crack or come apart. It has no knots; there is no wastage. It's highly decorative...there's a wide choice of surfaces. Perforated boards are also available for acoustic purposes. JOLLYBOARD saves 50% of your money and labour in painting and varnishing.

JOLLYBOARD AT WORK In department stores, factories and offices JOLLYBOARD is used for making internal walls, partitions, ceilings and shelves. It's also used in the ship-building, bus building and packing industries. It helps to make wireless sets and other consumer goods. And it's used for cinema seat backs and furniture.

Available everywhere

JOLLYBOARD

NEW PUBLICATIONS

The Estate Duty Act. By D. H. Nanavati. Published by N. M. Tripathi Private Ltd., Princess Street, Bombay 2. Pages : 430. Price : Rs. 25 ; 50s.; $8.

THE Estate Duty Act came into force from the 15th October 1953. This is a piece of socio-economic legislation intended to rationalise the social order by reducing the inequalities in the distribution of wealth. It is nearly seven years since the Act has been in force and it is only the Finance Department of the Government of India that can give us the statistics as to how far this legislation has helped the country to progress towards the avowed object of a socialist welfare society.

Estate Duty, though a modern measure of taxation at the time of its inception in this country, has been in existence as a levy in England since 1894 and quite for some time in the United States of America. Pakistan and Ceylon also introduced this piece of legislation some time back. There are many reasons given for this taxation. The oldest and the probable justification is that the State is represented as a silent partner in the business of each citizen, without whose aid and protection it would be impossible to transact business or amass wealth, and when the partnership is dissolved by the death of the citizen, the silent partner is entitled to a share of the estate.

Estate Duty is a tax charged according to the value of the property changing hands on death irrespective of to whom it passes. Tax is payable on the capital value of all property, real or personal, settled or not, which either passes or is deemed to pass on the death of any person on or after 15th October 1953. This is the basic idea of the Act.

The Estate Duty Act closely follows the language of the U.K. provisions on Death Duties. Lord Radcliffe, in the case of *St. Aubyn* vs. *Attorney-General*, observed that "no one could suppose that Section 43 of Finance Act 1940 is anything but an obscure section." He also further stated that it was regrettable that when in 1940 opportunity was found to wipe out the old sections and to enact a new set of provisions, opportunity was not at the same time found to make those provisions more readily intelligible. In the very same case, Jenkins L.J. observed that "the terms of Section 56(2) are far from being a model of clarity and they demand a feat of imagination by no means easy to perform." These observations from learned and well experienced judges of the British Courts are not compliments to the draftsmen of the British provisions of the Death Duties. One can imagine the position of an Indian lawyer with little background of the law relating to estate duty when he is confronted with the Indian Act which closely follows the English provisions.

It is here that the Indian lawyers as well as others require guidance. Mr. Nanavati, the author of the book under review, has sought to do precisely this. He is one of the ablest solicitors practising in the taxation field in Bombay. His experience in that field, his study of the Estate Duty Act and the corresponding provisions of the U.K. Finance Acts and the case law on the subject in England have resulted in the present book.

This book is written in the form of a commentary. The author has given the relevant pages of the commentary at the foot of each section for easy reference. The Estate Duty Rules, Controlled Companies Rules, with the amendments upto the date of publication, a copy of the agreement between India and the U.K. for avoidance of double taxation, have been printed at the end of the book. The book also contains the amendments passed to the original Act under each section. A comparative table of Indian and U.K. provisions is also given along with a table of cases and an index. The book is a must to all those who practice in the Estate Duty Courts and/or before authorities and to persons who are liable to attract the provisions of this Act.

Pattern of Corporate Savings and Investments. By Miss Kishori C. Shah. Published by Popular Book Depot, Bombay-7. Pages: 263. Price: Rs. 15.00.

Recent trends in our growing and rapidly advancing economy have witnessed greater emphasis on industrial development and stimulation of internal savings for planning needs. With such growing tempo of industrialisation, the relatively underdeveloped corporate sector is growing at a rapid pace. Development of corporate sector in an economy is the function of its industrial growth and, in the evolution of economic growth, the corporate sector invariably grows more rapidly and tends to increase by the conversion of proprietary and partnership concerns into limited companies, be it public or private.

This work on the "savings and investment" pattern of this sector of the economy, evidently based on the research study made by the authoress, Miss Kishori C. Shah (which had been accepted for the Ph.D Degree of the University of Bombay in 1957), presents clearly and succinctly the economic and financial trends in industrial and, more particularly, the corporate side of it. A study in institutional economics, it deals with the role of corporate investment and savings in the country during the last war and post-war years. After a general assessment of the framework, the nature and growth of the corporate sector and its economic significance in industrial planning, the study throws light on capital formation, income retention and investment trends. Broadly for the purpose of her analysis, five major industries, namely, iron and steel, cotton textiles, jute, cement and paper are considered. This coverage is adequate. The predominant feature of internal reserves mobilisation is vividly explained; the concluding chapter on corporate income retention and asset expansion, fluctuations in savings and the trends in disposable profits, yield and retentions in the industries concerned, offers much interesting information. The process of industrialisation has shown diverse trends in concentration of economic power; the licensing policy of the Government has enabled new parties to enter the industrial field in recent years and made it difficult for old companies to maintain their share in the total industrial expansion.

The data the authoress has taken for her analysis relates generally to the period 1939-55. Recent developments in the light of planning and growth of the corporate sector seem to have changed the position, and so the conditions now may be at variance with those of the period taken up for this work.

The paucity of published data and reluctance of company management to supply even published material to research students appear to have limited the scope of the study to an extent. It is fortunate that the trend is much improved at present with the easy availability of data thanks to the Governments role in collecting facts and figures relating to the corporate sector and utilising them for research purposes.

Industrial Organisation and Industrial Finance. By V. R. Sonalkar. Published by Sonalkar Publishing Co., Poona. Pages: 207. Price: Rs. 12.00.

In the context of developmental planning in the country industry occupies today a place of basic importance. The shift to and emphasis on industry as a tool for economic development has come about in the last few years. This publication, coming at the right time, carries with it the rich experiences of the author, a former Managing Director of the Industrial Finance Corporation of India.

The book broadly deals with the two problems connected with industry, namely, organisation and financing. In Part I of the book which covers the organisational aspect, the author details the various problems connected with the setting up of an industry, working out schemes, capital needs, formation and running of the undertaking, production planning, etc. The place of market research in the formulation and operation of the schemes as also the role of cost accounting and control have all been rightly emphasised.

Part II of the book deals with the problems of financing industrial enterprises. Tracing the historical development in this regard, the author distinguishes commercial banking and industrial financing, the latter naturally calling for funds on long-term basis, as compared with commercial banking which generally caters to the short-term and, in certain cases, the medium-term requirements.

The experiment and role of industrial financing in India are explained in the subsequent chapters with special mention of the various credit agencies like I.F.C., and State Finance Corporations, Industrial Credit and Investment Corporation of India and other organisations. The practical points which matter for consideration of applications for financial assistance have also been covered in some detail.

A separate chapter on the financial needs and resources for small industries, which have been engaging much attention in recent years, adds to the utility of this publication. The progress and achievements of international financing agencies like the World Bank, International Finance Corporation, the Export-Import Bank, etc. have been lucidly reviewed in the concluding chapters of the book, making it interesting and of much practical utility.

Investor's Guide 1961. Edited and Compiled by Waman P. Kabadi for Messrs. Chimanlal J. Dalal and Co., Dalal Street, Bombay. Pages: 1,150. Price : Rs. 15.

The second edition of the *Investor's Guide*, published by Messrs. Chimanlal J. Dalal and Co., a well-known firm of share and stock brokers of Bombay, was released on Friday, the 15th inst., at a meeting held in Bombay, presided over by Mr. Kantilal Ishwarlal, Vice-President of the Bombay Stock Exchange. Edited by the veteran journalist, Mr. Waman P. Kabadi, the *Guide* seeks to provide the investing community with a compendium of information on the structure and working of industrial enterprises in India. It deals with almost all the major industries in the country, with particular reference to their growth, present position and future prospects. The analysis of each industry is accompanied by relevant case histories and statistical information relating to a wide range of important companies. The information provided in the table pertaining to each company covers all the vital aspects of a company's working about which an investor would like to know before buying a share. The total number of companies covered is as many as 600. Another section consists of a few informative articles pertaining to the third Plan, taxation, foreign exchange position, Company Law, etc. Particularly useful to investors will be the article on taxation by Mr. N. R. Mandviwalla and Dr. R. Cooper, both of whom are well-known experts, and another, entitled "How to Invest Your Money" by Mr. A. V. Deshmane. Display, printing, binding and the general get-up are quite pleasing to the eye, reflecting the endeavour of the publishers to maintain high quality. For a reference volume of this nature and size, the price of Rs. 15 should be considered quite modest. The volume is a useful addition to the guides on the subject that are already available, such as *Place, Siddons & Gough's Year Book, Kothari's Year Book, Calcutta Stock Exchange Year Book* and the *Madras Stock Exchange Year Book*. Considering that no Year Book was being published in Bombay, Messrs. Chimanlal J. Dalal and Co. have filled the vacuum in this side of India.

Economic Aspects of the Indian Constitution. By B. R. Misra, M.A., Ph.D. (Lond.), D.Sc. (Econ.) (Lond.). Published by Orient Longmans. Pages: 140. Price: Rs. 7.

The successive phases in economic advancement, particularly rapid economic development in underdeveloped countries, call for huge public expenditure in the process of planning. The ultimate goals of economic independence, self-sufficiency and welfare are made possible of achievement only by systematic planning. The most important event that has immensely influenced the economic character of the Indian Constitution is thus developmental planning. Planning again needs a highly integrated economic pattern for the country as a whole, with a view to bringing about swift and uniform economic progress.

In this publication the author, Mr. B. R. Misra, a member of the Bihar Legislative Council, views the various aspects of the Constitution from the economic angle. The book has been carefully planned. After introducing the subject with a sketch of the historical and general background of the Indian Constitution, the author discusses the economic functions of the State in the light of the fundamental rights and the directive Principles of State Policy. On the financial side, the review of the principles of distribution of revenues is followed by a lucid and detailed discussion of the role of the Finance Commission in fulfilling planning needs as between the Union and the States. Finally, the principles relating to the freedom of inter-State trade and commerce are examined, particularly the aspects of uniformity in taxation and reciprocal immunity from taxation of property by the Federation and the States; the underlying objective is that within the State, trade and commerce should develop to the largest possible extent, without being hindered by artificial restrictions placed by several States forming the Federation. The broad and distinct analysis of all the economic aspects of this vast subject makes interesting reading.

METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD.

PROGRESS OF EXPANSION SCHEME SATISFACTORY

CHAIRMAN, DR. P. S. LOKANATHAN, POINTS OUT NEED FOR RAISING FRESH CAPITAL

A BRIEF résumé of the progress of the expansion scheme undertaken by the Mettur Chemical and Industrial Corporation Limited, was given by the Chairman of the Company, Dr. P. S. Lokanathan, in his speech at the Twenty-fourth Annual General Meeting of the Company, held on Saturday, 9th September 1961, at Mettur Dam R. S. He observed that all equipment for the second stage of expansion of the caustic soda production from 20 to 40 tons per day had been either received at site or was in transit. The Company, he disclosed, was proposing a further expansion of production of caustic soda to 100 tons a day and that the Directors were exploring ways and means of financing it.

The following is the full text of Dr. Lokanathan's speech:

"LADIES AND GENTLEMEN,

"It is again my pleasant privilege to welcome you all here for the annual meeting and to place before you the salient aspects of the Company's present working and future potentialities. The Directors' report has been in your hands for sometime, from a perusal of which, I should say that the Company has had a satisfactory year of working. On the whole, the results have been better than last year and the turnover in volume and in value has been the highest in the Company's history.

Expansion Programme

"The second stage of expansion for increasing our production of caustic soda from 20 to 40 tons per day is making satisfactory progress though the plant has not yet started production, consequent on delays in the delivery of electrical and rectifier plants. However, all the equipment has been either received at site or is in transit. Such equipment as has been received is being installed and tuned up. When this plant starts production, we will have installed a more economic unit which will be eight times the original capacity with which the Company started operations.

"I have to invite your special attention to the further expansion scheme referred to in the report, which, your Directors consider, will place the Company in a competitive position and keep us abreast of developments elsewhere in the years ahead. The stepping up of production of caustic soda from 40 to 100 tons per day, the entire increase in production being of rayon grade quality, is a necessary development for us during the third Plan period, in which caustic production in the country is expected to reach 3,50,000 tons, as against the second Plan target of 1,35,000 tons. One important feature of our expansion will be that ours will be a fully integrated plant utilising all the co-product chlorine, quite beneficially contributing to the high profitability of our expanded plant.

Financing

"Your Directors are actively exploring ways and means of financing this third stage expansion in such a way that the dividend percentage is not materially affected during the period of our stepping up production. This would therefore involve procuring both loan and share capital in [illegible] stages depending on the progress of [illegible] and construction. We shall place before you definite proposals with regard to the financing of the expansion scheme as soon as exact estimates are worked out for the project, which it is hoped will be in the course of the current year.

Two New Consumers

"In this context, I am happy to mention two salient features. The first important development is that we shall shortly have two big consumers of our products in our immediate vicinity at Mettur Dam. First is the Madras Aluminium Company, who are putting up their plant at Mettur and who will be substantial consumers of the caustic soda produced by us. The second interesting development is the proposal by India Cements Ltd. to put up a plant for the manufacture of 6,000 tons of PVC in collaboration with the well-known American firm, Messrs. B. F. Goodrich and Co. The PVC project will be a big consumer of the chlorine produced by this Company. As you are aware, the Company has now received a licence for manufacture of a number of important organic chemicals based on chlorine. Mr. S. Ramaswamy, our General Superintendent, who was recently in the United States, has been assured of technical and financial collaboration by leading American chemical firms in the production of these chemicals. We are therefore on quite concrete ground in our future programme and we look forward to your fullest co-operation in the task lying ahead of the Company in the coming two years.

Assistance from I.F.C.

"As you are aware, the Industrial Finance Corporation of India have been of continuous assistance to this Company in all its expansion projects from the very inception. In our recent discussion in connection with the present expansion, we have been broadly assured of full financial co-operation in the implementation of the new project.

"Since the close of the financial year, this Company has had its share of electricity cuts resulting in slightly reduced production. Now that all our hydel dams are full and the Electricity Board has assured us that there is no likelihood of power cuts in the rest of the year, I have reason to anticipate that there will be no disturbance to our production for the remaining period of the year. With the commissioning of the Neiveli Thermal Unit, it is my hope that we shall have seen the last of the power cuts in the State.

Dividend

"You would have seen from the appropriation account that we have had to draw on our deferred taxation reserve to maintain the same dividend as in the previous year. This is because, capital equipment of the value of Rs. 55 lakhs for which payment has already been made, which is now under erection, has not yet been brought into commission which would increase our caustic soda production from 20 to 40 tons per day. It is my hope that the additional plant and equipment would be in commercial production in the last quarter of the current financial year. I am glad to say, nevertheless, that the accounts reveal a very satisfactory state of affairs.

"In conclusion, I must place on record our appreciation of the valuable and devoted services rendered by the Managing Agents and by all ranks of staff and workers during the year."

Note: This does not purport to be a report of the proceedings of the annual general meeting.

KINNISON JUTE MILLS COMPANY LIMITED

CHAIRMAN, SIR WALTER MICHELMORE, WANTS VIGOROUS STEPS TO OVERCOME RAW JUTE SHORTAGE

CRITICAL YEAR IN INDUSTRY'S HISTORY FORECAST

IN his statement to the shareholders of the Kinnison Jute Mills Company Limited, sent along with the Directors' report and statement of accounts for the year ended 31st March 1961, Sir Walter Michelmore, Chairman, states that the trading conditions for the jute industry were extremely difficult throughout the year ended 31st March 1961, due to an acute shortage of raw jute and the consequent abnormally high prices of the raw material which bore no relationship to normal conditions in the international market for jute goods. He has struck a note of warning to the effect that, if such high prices were maintained, the Indian jute industry would lose all its export business. He suggests that every possible effort must be made to ensure a regular supply of raw materials at reasonable and stable prices. As concrete steps in this direction, he recommends the adoption of modern agricultural practices in the cultivation of raw jute and the creation of an organisation to ensure that prices do not fall to levels unremunerative to cultivators. Alluding to the prospects for the current year, Sir Walter remarks that it "could well be the most critical year in the long history of the jute industry."

The following is the full text of Sir Walter Michelmore's statement:

"DEAR SIR/MADAM,

"Last year, for the first time, a statement by the Chairman was enclosed with the accounts, and I am again issuing a statement this year with a view to providing to all shareholders of the Company more detailed information in regard to the Company and the industry as a whole.

"It will be seen from the Directors' report and accounts that profits for the year ended 31st March 1961 show a reduction from those of the previous year—a feature which is common to the majority of companies in the Birds-Heilgers Group—due partly to the extremely difficult trading conditions in October-December 1960, when jute purchased at advantageously cheap prices was not delivered until long after contract due dates. It is regretted that the improvement in the overall efficiency of the mills and the number of spindles being operated per loom from June 1960 was not maintained up to the end of the financial year and this also militated against profits reaching the level of the previous year.

Prospects

"The current year could well be the most critical the jute industry has encountered in its long history. The disproportionately high price of raw jute has involved mills in crippling losses on simultaneous trading up to the time of writing. Block closures of one week each month in June and July 1961 and curtailment of production in August and part of September due to shortage of raw material have added their burden in the shape of lay-off compensation to the labour force and increased costs consequent on the reduced volume of goods produced.

"The drastic curtailment of the electrical power supply between the hours of 6.00 p.m. and 10.00 p.m. from February 1961 called for a rearrangement of shifts in your mill and factory, but it is pleasing to record that the flow of production was not interrupted.

"News of the 1961-62 crop both from India and Pakistan is heartening in regard to expected outturn—although quality may not be up to normal due to shortage of steeping water. It is hoped that ample supplies of fibre will be available at a price which will permit mills to do simultaneous business without incurring a loss.

Modernisation

"Apart from a small quantity of additional machinery on the fine side still to be received, the modernisation programme of the preparing and spinning sections of the mills is completed for the time being. The spinning and preparing machinery installed in No. II Mill in 1949 still continues to give excellent service.

"In pursuance of the policy of developing and extending the most modern techniques in machinery, your Directors have placed orders with Messrs. James Mackie and Sons Limited for 24 'Onemack' Weaving Machines. Application has been made for the relative import licence.

Wide Looms

"The wide looms installed in No. I Mill have contributed their share to the year's profits. It was not, however, found possible to work looms to capacity and for two periods during the year one shift had to be cut back in order to adjust supply to demand. It is becoming increasingly apparent that the scale of installation of additional wide looms is such that supplies will tend to be in excess of demand and the competition arising from this situation will inevitably result in a shrinkage of profit margins.

Labour

"The Wage Board for the Jute Industry set up by the Government of India, while considering the issues involved, made a unanimous recommendation as to the grant of interim relief to all categories of workers involved, and this was accepted by Government. The extent of the relief amounted to:—

(a) Rs. 2.85 monthly per worker from 1st October 1960 to 31st December 1960.

(b) Rs. 3.42 monthly per worker thereafter.

"While there can be no doubt of the desirability of raising the income and standard of living of agricultural and industrial labour in the country as a whole, including the jute mill industry, regard must, nevertheless, be had to the competitiveness of the industry, not only in relation to other countries which produce jute goods, but also in relation to alternative packaging (or non-packaging) media, such as paper and bulk handling. Unless, therefore, higher remuneration and standards of living can be related to productivity, which might be achieved by the extension of piece-rates and the system of payment by results, indiscriminate wage increases can only be to the long-term detriment of this vital export industry.

Raw Jute

"The quality of the 1960-61 crop was better than that of the previous season and could be considered as being above normal. The quality of deliveries to the mills was satisfactory.

"The period covered by these accounts was characterised by an acute shortage of raw jute, which dominated market trends. The small 1959-60 crop, resulting mainly from the low prices prevailing at the time of sowing in the early months of 1959 and unrelieved by the relatively small imports permitted from Pakistan, was followed by another short crop in 1960-61. On this occasion, the crop failure was caused by the unseasonably dry weather during the period February-May 1960 which delayed sowings so long that the eventual area put under jute was restricted, while in certain areas the young plants died and a scarcity of seed handicapped re-sowings. The industry, therefore, started the new season in July 1960 with the by no means large carry forward of 1.25 million bales and faced the prospect of another season of reduced supplies. Unfortunately the situation was aggravated by the fact that licences for the import of Pakistan cuttings were not issued in time for them to be a factor in preventing jute prices from reaching uneconomic levels.

"The Indian Jute Mills Association was under no illusions as to the seriousness of the outlook for the industry and, in addition to making representations for a greater liberalisation of fibre imports, urged upon Government the need for a controlled restriction of output in order to conserve jute and avoid the complete dislocation of the industry, when supplies started to fall off towards the end of the season. From early June 1960, the Association permitted its member-mills to seal loom voluntarily on the understanding that the loom-hours lost would be recoverable after 1st November, although, as it so happened, this recovery became largely impossible owing to the persistent deterioration in the jute supply position. In October 1960, the Association introduced a jute purchase quota system, designed to control buying and ensure an equitable distribution of available fibre supplies. This arrangement has been successfully maintained up to the end of August 1961 and has levelled out mills' stocks.

Total ..	275.93	Total ..	275.93

Compulsory Sealing

"Early in December, after consultation with Government, the voluntary sealing scheme was abandoned in favour of a total compulsory sealing, under the Working Time Agreement, of 17 per cent of the total looms. Towards the end of the month, again with the approval of Government, this arrangement was replaced by a reduced working week of 45 hours with a 12 per cent loom sealing, in order to permit a greater number of the labour force to obtain employment. From the end of January 1961, the working hours were further shortened to 42½ per week.

"Despite these corrective measures, the industry's jute stock position showed no signs of improving and it became increasingly evident that the available supplies were even less than anticipated, and that the final crop figure would be somewhere in the region of 5.2 million bales, including mesta. With stocks continuing to dwindle, the Indian Jute Mills Association approached the Central and State Governments in May on the need for further production cuts to conserve jute, and agreement was finally reached on a block closure of the industry for a week in June and a week in July. Even these measures have proved insufficient to bridge the gap until new crop became available in quantity, and from the beginning of August, mills individually have taken steps to adjust their output in accordance with their jute supplies in each case.

"It is now abundantly clear that the initiative taken by the industry in regulating production from October 1960 was instrumental in saving the industry from complete disaster.

"Every possible effort must be made to ensure that there is no recurrence of this unfortunate set of circumstances, and it would seem the only lasting remedy possible is a guaranteed supply of raw material at reasonable and stable prices. This entails a substantial increase in the yield per acre by the adoption of modern agricultural practices and the creation of an organisation to ensure that prices do not fall to levels unremunerative to the jute cultivators. The Association has forged ahead with its plan for supplementing the jute development work of the Central and State Governments. Three intensive cultivation blocks have been started in each of the three different zones in West Bengal with the object of demonstrating to the growers the advantages of using improved seeds, fertilisers and mechanical implements. A seed multiplication scheme has also been worked out in detail envisaging financial assistance from the Government of India for the purpose of improved seed multiplied by registered growers and its sale at subsidised rates to the cultivators.

"Your Company held substantial stocks of jute in the first six months of the period under review and was, therefore, spared the disastrous experience which befell a section of the industry at a time when jute prices were entirely out of parity with those of finished goods.

Jute Goods

"The policy of selling up and down the market in small lots was continued throughout the year with generally satisfactory results.

"Trading conditions were far from satisfactory throughout the period under review and, latterly, have been as difficult as the industry has experienced for many years. The root cause of the trouble has been, of course, the abnormally high prices of jute which in February 1961 reached the level of Rs. 67.00 per maund, a price which bears no relationship to normal conditions in the international market for jute goods and which, if maintained, would gradually lose the Indian jute industry all of its export business. That overseas buyers have been antagonised by the high prices is unquestionable, and business has been slack as a result. Buyers have deliberately followed a policy of digging into their stocks and replacing only to a limited extent, waiting for a levelling off of prices at lower levels. Consumption has also been restricted in a number of markets: in the U.S.A. alone, it has fallen by 60 million yards in the first seven months of 1961, as compared with the corresponding period of 1960.

"Owing to this limited purchasing activity, and with Pakistan capturing the greater share of the business that has been offering, the prices of Indian jute goods while still high by normal standards have not been in parity with jute prices. It is for this reason that the mills have suffered severe financial losses in recent months. Business was also retarded by the stringent controls imposed by the Forward Markets Commission in November 1960 on trading in Transferable Specific Delivery Contracts, controls which were designed to curb speculation, but which necessarily affected genuine traders as well. The further restrictions introduced by the Reserve Bank of India to limit credit facilities by scheduled banks against stocks of jute and jute goods had the same effect.

"A healthy finished goods market will not be possible until the industry's raw jute supply problems have been solved: and in the long term the expanding jute industry in Pakistan will become even more of a force to be reckoned with unless means can be devised of strengthening the Indian mills' competitive position.

"Buyers generally are becoming increasingly quality-conscious and with a view to improving the products of your mills and supporting export promotion, further progress has been made in Statistical Quality Control.

Competition from Pakistan

"I feel that pointed attention must be drawn at this juncture to the very serious threat posed by Pakistan to Indian exports of sacking goods. In recent months, Pakistan has been undercutting India to the extent of Rs. 8 or Rs. 9 per hundred bags, and as I write their prices are approximately Rs. 5 per hundred bags below our market prices. It follows, inevitably, that they take first cut of the business of any importing country and it is only when their manufacturing capacity is fully booked that the foreign buyers turn to India for the balance of their requirements. In the result no less than 80 per cent of the recent Australian business in cornsacks was placed with Pakistan, whose mills have also made serious inroads into the markets of Cuba, Africa and Burma and of other countries which have traditionally been the prerogative of India.

"So much for the present, but if the present position in which India—the home of the jute trade—finds itself is most unhappy, the prospects for the long-term future are even more bleak. Pakistan is understood to be placing orders for an additional 6,000 looms, to be installed over the next few years, and these looms are expected to be operative by 1965. It is anticipated that, of this total, 5,000 looms will be for the manufacture of sacking, and assuming an average of two and a half shifts per day, production would be of the order of 30,000 tons monthly. In recent years, India's exports of sacking have averaged 32,000 or 33,000 tons monthly, so it will be readily seen that, if the present price differential remains and Pakistan continues to be able to take priority in all export markets, then by 1965, India's export trade in sacking goods will have vanished entirely, leaving it only to satisfy its indigenous demands.

"The reasons why the Pakistan mills can undercut the Indian are threefold; first, Pakistan mills can normally buy better quality jute and at cheaper prices than the Indian mills; second, wage rates in Pakistan are appreciably lower than in India; third, the export bonus scheme operating in Pakistan has the effect, in present conditions, of adding approximately Rs. 200 per ton to the trading profits of Pakistan mills. Even allowing for the fact that efficiency is lower and power costs higher in Pakistan, I estimate that there is at present a price advantage of approximately Rs. 300 per ton in their favour. In the result, while undercutting Indian mills to the extent necessary to sell their entire production they can still make substantial profits—and will continue to do so at India's expense.

"In these circumstances it is vital that Indian mills be given the earliest opportunity of competing on even terms with Pakistan; the longer action in this matter is delayed, the more difficult it will be to regain the markets lost. The jute industry being the premier export industry of the country, and its highest dollar earner, the consequences of a serious decline in it can be nothing but a disaster to the general economy of the country.

Subsidiary Company—The Standard Jute Co. Ltd.

"This Company continues the manufacture of goods on a limited scale. Last year it was mentioned that fairly substantial funds had been accumulated, and while these were being loaned to Kinnison at a rate advantageous to both Companies, it was hoped to utilise them in a diversification of interests outside the jute industry.

"Your Directors have now to advise it has been decided to invest:—

(a) Rs. 6 lakhs in the purchase of 6,000 equity shares of Rs. 100 each, at par, of McNally-Bird Engineering Company Private Limited;

(b) Rs. 6,75,000 in the purchase of 9,000 equity shares of Rs. 10 each in Coates of India (Private) Limited.

"Approval of these investments was obtained in general meetings of the Company held on 12th July 1961 and 12th August 1961, respectively.

"The McNally-Bird Engineering Company Private Limited is a new Indian company formed and registered in relation to a collaboration between Bird and Company (Private) Limited, and the McNally Pittsburg Manufacturing Corporation of Pittsburg, Kansas, U.S.A., and will establish a manufacturing undertaking at Kumardhubi.

"Coates of India (Private) Limited is an Indian company formed and registered in 1947 to take over the Indian business of Coates Bros. Co. Ltd., London, manufacturers of inks for the printing and packaging trades, and has established factories in Calcutta, Madras and Bombay."

A cool, comfortable and clean room...,
that's what an *Airtemp* gives you at home

PROGRESS OF CENTRAL WAREHOUSING CORPORATION STEADY

MR. B. B. GHOSH, CHAIRMAN, OUTLINES THE PLAN FOR THE FUTURE

THE view that the warehousing scheme in the country was making steady, though not spectacular, progress, "in spite of difficulties and occasional differences of opinion about the respective roles of different organisations," was expressed by Mr. B. B. Ghosh, Chairman of the Central Warehousing Corporation, in his address at the Fourth Annual General Meeting of the Corporation held at New Delhi on the 17th inst. He disclosed that the Corporation had set up forty warehouses by the end of 1960-61, thus fulfilling the target set in the second Plan. This number would be doubled during the third Plan period. Commenting on the working of the Corporation, Mr. Ghosh observed that the net loss in 1960-61 was less than that in the previous year. This was so, in spite of the fact that the Corporation was not earning any return on its investments in the State Corporations. He added, however, that the Corporation was, by and large, recovering the direct expenses incurred on the Central Warehouses.

The following is the full text of Mr. Ghosh's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to this fourth annual general meeting of this Corporation. The report of the Directors and the annual accounts, which have been supplied to you, give an account of the working of the Corporation for the year 1960-61. Both the types of audit prescribed under the Act, namely, one conducted by the auditors appointed by the Government of India and the other by the Director of Commercial Audit on behalf of the Comptroller and Auditor-General, have been completed, though the report of the latter is yet to be received.

Plan Target Fulfilled

"The year under report marked the end of the second Five-year Plan. As you are aware, the Central Warehousing Corporation started its activities midway through the second Plan and it could not be expected to achieve in two or three years what it could have achieved if it were able to function for the entire period of the second Plan. How many warehouses should be set up during the second Plan was the subject matter of numerous discussions and the target was ultimately set at forty warehouses. It is a matter of some satisfaction that the Corporation was able to achieve this target. This is a modest number, considering the size of the country, but if we take into account the warehouses set up by the State Warehousing Corporations, of which we hold 50 per cent shares, the total number is over 300. We have, thus, at the beginning of the third Plan, a fairly good number of warehouses spread throughout the country. It is expected that this number will probably be doubled before the end of the third Plan.

Storage Capacity

"While the number is important, we have come to a stage where we ought to think more about the size and capacity of each warehouse, the volume of business and, in general, the services which the warehouses may claim to be rendering to the community. Speaking about the Central Warehouses alone, the storage capacity has been increased by about 80 per cent during 1960-61. As an indication of the increase in business, I may mention that the outstanding advances against warehouse receipts at the end of the year under report exceeded Rs. 5 crores, as against Rs. 2.86 crores at the end of the previous year. There is little doubt that the warehousing scheme is becoming more and more popular.

"You are aware that, in order to avoid delay, we had to set up warehouses generally in hired accommodation and the volume of business has been limited by the capacity of the hired accommodation available. The policy, however, has been to start construction of warehouses of economic size as soon as possible. We have already got new warehouses in certain places and construction work is now going on at many centres. It has recently been agreed that the Engineering Organisation functioning under the Department of Food will also undertake and look after the construction programme of the Central Warehousing Corporation. This is expected to expedite the works. As new warehouses become available, our storage capacity will increase. In fact, during the third Plan, our main emphasis will have to be on building up warehouses of proper size, at least at the centres where we have already set up warehouses and to take up construction also increasingly at the new centres. We may, therefore, expect that, while the number of Central Warehouses will increase, there would be a proportionately larger increase in storage capacity and hence of the volume of business. In designing the Corporation's own warehouses, the need for specialised types of storage for certain commodities is always kept in view. The question whether cold storages for perishable commodities can be set up is also under consideration.

Rise in Deposits

"I understand that deposits from producers have also been showing a gradual increase. This is a welcome trend. We should be able to attract them more as, between the Central Corporation and the State Corporations, we succeed in covering the country more intensively. I would request you all to convey to the agriculturists, in your respective spheres, the genuine benefits which they will derive by coming to the warehouses direct.

"The Corporation will constantly keep in view the increasing warehousing needs of our developing economy. The Central Corporation is concerned not only with the establishment of some big Central Warehouses and making their a success, but is responsible for ensuring through constant help and advice, that each of the fourteen State Warehousing Corporation fulfils its role. It took some time to set up these State Corporations and many of them were set up rather recently. Even so, the State Corporations are, I am happy to say, making on the whole good progress. As many as 266 warehouses were set up by the end of the year under report, with total storage capacity of 278,000 tons. During 1960-61, the Central Corporation contributed about Rs. 35 lakhs to the share capital of the State Corporations and, by the end of 1960-61, the total contribution of the Central Corporation to the share capital of the State Corporations amounted to about Rs. 132 lakhs. Some of the State Corporations have also started their construction work and I hope that they will be able to show better performance in this regard soon.

Smaller Loss

"You will see from the profit and loss account that the net loss in 1960-61 was less than in 1959-60. This is so, in spite of the fact that we are still not earning any return on our investments in the State Corporations. We are by and large, recovering our direct expenses on the Central Warehouses.

"In spite of difficulties an occasional differences of opinion about the respective roles of different organisations, I am glad to say that the warehousing scheme has been making steady, though not spectacular, progress. It has created a general consciousness of the need for good storage and this is bound to result in widespread benefits.

"Before I conclude, I would like to express on your behalf and on behalf of the Board of Directors our appreciation of the work of the officers and staff of the Corporation.

"I now invite you to consider the annual accounts and the report of the Directors which have been supplied to you."

Shell arch roofing requires light weight water-proofing. Shalimar Tarfelt provides the answer

MUKAND IRON AND STEEL WORKS LIMITED

SPEECH OF MR. KAMALNAYAN BAJAJ

CALL FOR LIBERAL ALLOCATION OF RAW MATERIALS

ADDRESSING the Twenty-third Annual General Meeting of the Mukand Iron and Steel Works Ltd., held at Bombay on 22nd September 1961, Mr. Kamalnayan Bajaj, Chairman, drew pointed attention to the fact that the rerolling industry was passing through a crisis of shortage of essential raw materials, namely, billets and melting scrap. He urged the authorities concerned to take necessary steps to meet the current needs of the industry by larger allocation of billets from the main producers, supplemented by imports. Mr. Bajaj also called for progressive abolition of export of ferrous scrap which could be used within the country. He was of the opinion that ferrous scrap should be utilised to the fullest extent and that emphasis should be laid on exporting finished products, instead of resorting to direct exports of raw materials.

The following is the full text of Mr. Bajaj's speech:

"I have great pleasure in extending you a cordial welcome.

"The second Plan period is over. We have embarked on the third. Apart from the objectives to be achieved during the Plan period, it outlines the development over the next fifteen years and more.

Third Plan Projects

"Industrial projects of the Central Government have been divided into three categories: (i) projects carried over from the second Plan; (ii) new projects for which external credits are assured, wholly or partly; and (iii) other projects. Provision has been made for compensating the shortfalls of the second Plan. This should ensure a more realistic approach to the fulfilment of objectives and avoid waste. I had made a somewhat similar suggestion last year to divide the programme of the Plan into two parts, the first consisting of essential projects depending mainly on internal resources and the second consisting of remaining schemes listed in order of priority to be taken up as and when external assistance is available.

"Industrial expansion is proceeding at an accelerated tempo in the country. New companies are formed, existing companies expanded and foreign technical collaboration agreements concluded almost every day. The second Plan, with its emphasis on heavy industry, has provided the mainspring for this phenomenal growth.

"The index of industrial production increased by about 39 per cent during the first Plan and nearly doubled during the second. The third Plan target of 329 per cent will probably be exceeded as a large number of new industries have been excluded from estimates.

Price Control

"The persistent upward trend in prices and the rising cost of living give cause for anxiety. Over the last five years, the index of wholesale prices has gone up by about 30 per cent, industrial raw materials by 45 per cent, manufactures by 25 per cent and cost of living by 30 per cent. Part of this increase is corrective to the earlier decline towards the end of the first Plan. The successful implementation of the third and future Plans and an equitable distribution of their benefits will require a close watch on prices and prompt remedial measures to prevent the imbalance likely to result from large fluctuations.

"When the country is planning for comprehensive development, it is unfortunate that diversions are being created by certain interests who are exploiting parochial, communal and caste prejudices. We should refuse to be influenced by such narrow sectarian considerations and work for national integration, integrity and discipline without which no people or nation could ever dream of achieving greatness.

People's Participation

"The success of our Plans will depend largely on the enthusiastic participation of the people. *Panchayats* will ensure such participation as they are entrusted with responsibility for development. The *Panchayats* are in keeping with our traditions. They are suited to our genius. But in recent years we have lost touch with the system. Elections to the *Panchayats* are influenced by party and group politics and communalism and casteism. This has often created bitterness. I am sure this is only a passing phase. As we get more education and experience in the working of democracy, we shall rise above petty considerations.

"Shortage of industrial raw materials has been hampering development of many industries. Imports of even essential raw materials are restricted. Various steps are being taken to provide for more imports through barter deals, export incentives, rupee payments and foreign assistance. But the problem needs constant watching and corrective action, whenever necessary.

"Ultimately, we must strive for self-sufficiency. It is necessary to make a realistic appraisal of our needs and plan for their fulfilment. Ours is a mixed economy. The public and the private sectors are complementary and we must, therefore, plan for overall development on a national basis.

Role of Rerolling Industry

"The Government seems to have underestimated the importance and potentialities of the rerolling industry, which looks small and unimposing in comparison with the huge integrated steel plants. That it is a necessary complement to the main iron and steel industry cannot be gainsaid. Over the last thirty years, rising from humble beginnings and despite heavy odds, the industry has achieved a position of national importance. Comparatively low initial investment and higher employment potential, dispersal over widely scattered areas in proximity to consuming centres, adaptability to produce easily and economically a variety of sections even in small quantities to meet regional and local demands, ability to create pools of technicians and skilled labour in many parts of the country are significant features which cannot be ignored. With an investment of Rs. 25 crores, the industry employed about 35,000 people and rolled 900,000 tons of steel products, which is about one-third of the total national production of finished steel in 1960-61.

"The rerolling industry has an installed capacity of nearly 2 million tons, which is greater than the projected output of Bhilai or Rourkela at the end of the third Plan. It is a national waste to allow part of this capacity to remain unutilised, while at the same time planning to increase the rolling capacity of the main producers by installing new machinery at heavy cost.

Billets Inadequate

"The allocation of one million tons of billets to rerollers from the main producers at the end of the third Plan is far from adequate. It needs to be drastically revised. The prosperity of this industry essential to the national economy warrants that this is the least that should be done.

"The rerolling industry is passing through a crisis of shortage of billets and melting scrap. The Government is apprised of the situation. Steps should be taken to meet the current needs of the industry by larger allocation of billets from the main producers, supplemented by imports. It is also essential that the Government should progressively ban the export of ferrous scrap which can be used within the country. We should utilise it to the fullest extent and export finished products instead.

Technical Personnel

"The training of personnel at all levels, especially managerial and technological, needs special attention. In the absence of a pool of such trained personnel, avoidable wastage will increase and our industrial growth will be hampered. We shall not only have to institute special courses of study for existing personnel, but also go down to the roots by orienting our system of education to build up a vast cadre of scientists, technologists, engineers and managers.

Wire Rod Mill

"The Company is planning to put up a new wire rod mill along with a 20-ton electric furnace at Kalwe. The output of this furnace will provide about half of our requirements of billets for rerolling.

"The delay in the acquisition of land at Kalwe and the larger requirement of finance have necessitated a fresh application for loan to the Industrial Credit and Investment Corporation of India Ltd. A preliminary project estimate has been submitted to the I.C.I.C.I. The Commonwealth Development Finance Company Ltd. of the United Kingdom has also evinced interest in our project. We are hopeful of finalising arrangements in due course.

"We have put up a third furnace of 4½-ton capacity at Kurla. This has been largely fabricated by us. Due to shortage of power, there has been a slight delay, but it is expected to go into production shortly.

Expansion

"The foundry is being expanded along with the increase in melting capacity. We hope to reach an output of 750 tonnes per month by the end of 1962, and 1,000 tonnes by 1963.

"In order to meet the demand for thinner sections, our rolling mills are being fitted with additional equipment, which has also been largely fabricated by us. We expect to commission it shortly.

"The covered area at Kurla is being progressively enlarged and additional material-handling equipment has been acquired.

"The workers' canteen has been renovated and the employees are now provided with improved facilities.

"We are thankful to Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, for visiting our factory in April this year on the occasion of the Annual Sports and Social Club Day. On the same day, we had the honour to receive the delegates to the Convention of the Institute of Indian Foundrymen who held one of their sessions at our Works.

"During the year, we also had the pleasure of a visit from Mr. David Brown, Chairman of the David Brown Group of Industries of the United Kingdom.

Achievements

"In the last five years, the Company has been taking vigorous steps to increase production and productivity. The capital was increased and foreign technical collaborations entered into. Steel-making capacity was increased and range of products expanded. Technical personnel were sent for training abroad. The workers were encouraged to attend technical courses and provided with better training facilities within the works. Considerable improvements were made in methods, plant layout and facilities. The Company and the workers have been reaping the cumulative benefits of these improvements and developments.

"Management and technicians are the brains and nerves of industry, and labour its limbs. Shareholders provide it with sustenance. Their co-operation and co-ordination are essential for the successful working of any industry.

Agreement with Labour

"The Company has entered into a five-year agreement with labour relating to wage scales and other benefits. Our Chief Executive, Mr. Viren J. Shah, has been mainly responsible for negotiating this settlement. The happy relations which subsist between management and employees are in a large measure due to his personality and human approach.

"I would like to congratulate the technical and administrative personnel, the workers and the management for last year's record annual production."

(This does not purport to be the record of the proceedings of the annual general meeting.)

NO CUT IN BRITISH AID TO DEVELOPING COUNTRIES

"The United Kingdom is at present incurring substantial and increasing financial commitments to countries in the process of attaining political independence," said Britain's Chancellor of the Exchequer, Mr. Selwyn Lloyd, in a speech at the annual meeting of the World Bank in Vienna on 19th September 1961. The Chancellor said that, though this was a time of stringency in its financial policies, Britain was not cutting its aid to developing countries. On the contrary, he said, total aid expenditure by Britain, which was about £150,000,000 in 1960, was so far running at an annual rate of £180,000,000 this year.

Mr. Selwyn Lloyd paid tribute to the growing importance of the co-ordinating role of the World Bank in joint financing operations—that is, the so-called consortium arrangements which already support the development plans of India and Pakistan. There are other cases where, without a formal consortium arrangement, the resources of the developing country itself can be augmented by finance from the World Bank helped by bilateral finance from one or more countries.

PROGRESS OF ENGINEERING INDUSTRIES

RESULTS OF A NON-OFFICIAL SURVEY

ENGINEERING industries form the backbone of all other industries, for the engineering stores required by the latter are many and varied. Most of these stores used to be imported ten years ago. But, thanks to the progress made by indigenous engineering industries, there has come about a fourfold increase in production from Rs. 92 crores in 1947 to Rs. 340 crores in 1957. In 1947, there were only 1,534 registered engineering factories; this number had doubled by 1958-59 when there were 3,042 registered factories. The data pertaining to 1947 and 1957, as found in the relevant reports of the Census of Indian Manufactures, provide the following picture:

	1947	1957
No. of registered factories ...	1,534	2,642
No. of factories which submitted returns	1,333	2,287
Productive capital (Rs. crores)	74.3	279.9
No. of persons employed (in lakhs)	2.32	3.43
Value of raw materials purchased (Rs. crores)	35.3	183.3
Total value of gross output (Rs. crores)	92.0	340.5

According to the data collected by the Research Department of the Engineering Association of India, Calcutta, in a survey* of engineering industry in India in the year 1958-59, the number of registered factories in that year was 3,042. But the number of factories (employing 20 workers and more) which submitted replies to the Association's questionnaire was only 1,387, employing in all 2.14 lakhs of persons and accounting for a total productive capital of about Rs. 200 crores and for a total value of gross output of Rs. 322 crores. The coverage of the Association's survey for 1958-59 was thus relatively much smaller than that of the Census of Indian Manufactures for 1957. This fact precludes comparison of 1958-59 figures with the figures for 1957. But the data for 1958-59 are useful, within the limits set by the number of factories which submitted returns, for the light they throw on some aspects of the industry. The Association's analytical study of the structure of the industry, covering 1,387 factories only, has led to the following results:

(1) In 1958-59, proprietory firms constituted about 20 per cent, partnership firms 38 per cent, private limited companies 26 per cent, public limited companies 11 per cent and others 5 per cent of the total number of factories which submitted replies.

(2) The distribution by size of employment shows that about 73 per cent of the factories employed less than 100 workers, about 22 per cent between 100 and 500 and the rest, 500 and over.

(3) Only 12.5 per cent of the factories employed during the year less than Rs. 50,000 by way of productive capital per factory. About 52.5 per cent of the factories employed between Rs. 50,000 and Rs. 5 lakhs of productive capital per unit, 15 per cent between Rs. 5 lakhs and Rs. 10 lakhs, and 20 per cent over Rs. 10 lakhs.

Classification of Engineering Industries

(Engineering Association's Survey—1958-59)

Category	No. of firms which sub-mitted returns	Productive capital em-ployed (in Rs. crores)	No. of persons em-ployed	Total sales value of output (in Rs. crores)
Industrial machinery	113	25.5	27,222	23.8
Machine tools	74	4.8	7,308	5.1
Small hand tools	20	0.6	1,088	0.8
Structural engineering	24	4.2	4,302	6.0
Diesel engines	38	4.6	4,225	9.2
Oil expellers	35	0.7	1,728	1.2
Iron and Steel (re-rolling) ..	68	18.0	19,505	64.1
Non-ferrous metal (processing) ..	104	28.2	13,107	36.9
Expanded metal	5	0.4	501	0.5
Automobiles	4	12.5	4,553	9.3
Bicycles	45	12.1	9,974	13.2
General transport equipment ..	36	11.4	9,268	12.7
Pipes and tubes	58	7.1	9,527	6.9
Builders hardware	37	0.8	2,522	3.3
Bolts and nuts	41	2.5	4,710	2.5
Buckets	40	0.5	2,003	3.9
Containers	68	3.6	3,603	40.5
Steel furniture	33	5.9	9,310	4.7
Lanterns	10	0.9	2,951	1.0
Sewing machines	10	3.4	4,248	11.4
Pumps	27	0.9	3,335	2.2
Umbrella ribs	8	0.7	1,190	0.7
Steel trunks and suit cases ..	3	0.1	210	0.1
Surgical instruments	13	0.3	715	0.3
Mathematical and survey instruments	7	1.5	1,313	0.6
Agricultural implements	74	2.5	4,390	3.8
Electric lamps	17	3.2	2,558	2.7
Electric fans	18	3.8	4,150	4.3
Storage batteries	9	0.7	1,828	2.1
General Electrical Engineering	62	28.9	10,827	20.6
General engineering	281	14.1	42,077	28.1
Total ..	1,387	198.9	214,257	322.0

*Survey of Engineering Industry in India (1958-59), issued by the Engineering Association of India, India Exchange, Calcutta 1. Price: Rs. 10.

The Association's study has also analysed some of the data provided by the Census of Indian Manufactures upto 1957. One of the results of this analysis is that the productivity rate (value added by manufacture divided by man-hours) in engineering industries has increased from 1.0 in 1951 to 1.5 in 1957. This increase in productivity might have been due to greater mechanisation, better labour effort, better production technology, etc. An analysis of the production statistics of engineering industries in 1960 shows that 18 such industries (covering 162 units) had a capacity utilisation of 147 per cent, whereas 30 other industries (covering 173 units) had a capacity utilisation ranging from 5 per cent to 74 per cent. The industries in which there was over-utilisation of capacity are aluminium foils, copper (virgin metal), wood screws, hurricane lanterns, crown cork, ball bearings, electrical steel sheets, diesel engines, sewing machines, conduit pipes, storage batteries, electric motors, electric fans, fluorescent lamps, house service meters, pig iron and steel ingots and metal for castings. The fact of over-utilisation, according to the study, is a clear indicator that there is sufficient demand in the country for the products of the relevant industries and that there is scope for new industrial units. But over-utilisation also means that the production resources are being over-worked; this is bound to affect plant life. The dangers of under-utilisation are, however, much more serious than those of over-utilisation, for the former implies that a part of productive capital remains continuously unemployed and the reduced production not only carries the full overhead burden resulting in increased prices but also affects economic running of the industry as a whole. The reasons for under-utilisation are lack of demand, lack of raw materials, shortage of power and lack of balancing parts and components and plant equipment. A significant trend noted in the study is that the engineering industries have rid themselves, to a large extent, of the necessity of importing parts, components and raw materials. The percentage of indigenous content in 54 selected engineering industries now ranges from 25 to 90. As for imports and exports of engineering goods in 1960, the relevant figures are Rs. 98.6 crores in respect of the former and Rs. 9.5 crores in respect of the latter. The study is also notable for the estimates of requirements of finished steel for 60 selected engineering industries. The aggregate requirement of finished steel is placed at 1.66 million tons for 1965-66 and 2.72 million tons for 1970-71, as compared with the earlier estimated requirement of 800,000 tons for 1960-61. With the expected availability of more steel over the third Plan period, the engineering industries, which are already established on a mature footing, may have a more prosperous and better future.

A NEW ENGINEERING INDUSTRY

The engineering products which the Khandelwal Manufacturing Corporation Private Ltd. (6 Itola St., Iron Market, Bombay 9) has just started manufacturing represent, together, a unique addition to the aids for building construction. These are steel tubular props, interlocking steel tubular scaffolding and steel roll lathing. The first two products have been designed to ensure speed as well as safety in construction work.

The steel props, for instance, can be erected in one-eighth of the time taken by wooden ballies which are used to support concrete slabs in the course of construction. Being adjustable, they can be used for various heights; and they have infinite life, as they are made of steel. While the wooden ballies usually look strong from outside but may be hollow inside and thus liable to crack when any weight is put on them, the steel tubular props are tested to bear particular loads and are, therefore, more dependable and safer in performance.

As for the 'K' Brand scaffolding, its unique features are that it is interlocked and has no clamps. It is much safer than the clamp type scaffolding from which the clamps can be easily stolen. It can be put up in a much shorter time than wooden scaffolding. Actually a 40' wide and 110' high scaffolding of this kind has been recently erected for a building ('Mistry Gagan,' Peddar Road) in Bombay in just four hours, whereas wooden scaffolding would have normally taken a week for erection. Being made of steel, this type of scaffolding will have an infinite life.

Both the products—steel props and steel scaffolding—have the triple advantage of saving time, saving labour and saving material. The saving in material will result from the use of the products over and over again, whereas timber in wooden ballies and scaffolding needs to be frequently replaced. Of course, the two steel products will involve bigger initial outlays which only substantial building contractors can afford. As the number of such contractors is already considerable and is expected to increase in future, the Khandelwal Manufacturing Corporation foresees a big market for their products which have been designed for greater efficiency, speed and safety in building construction.

The third product, namely, steel roll lathing is a steel reinforcement which eliminates the use of shuttering completely. It can be used in the construction of shell roofs, partition walls (2" thick), sunbreaker fins, staircases, slabs and in any other place (like concrete road) where steel reinforcement is used. Because it eliminates shuttering, the work is speeded up considerably, thereby reducing capital outlay, interest, overheads and actual cost in construction. The saving that it effects in construction materials like cement, sand, metal and steel, it is claimed, establishes its superiority over the currently used reinforcement of the welded fabric of steel wires.

PROPOSED SITES FOR HEAVY INDUSTRY PROJECTS

The Government of India has just announced the following location sites for the first seven major heavy industrial projects to be taken up in the public sector during the third Plan:

Name of the project	Location site	Estimated cost (In Rs. crores)
1. Precision Instruments Project (for the manufacture of electrical and electro-magnetic instruments) with Soviet assistance.	Kotah (Rajasthan)	8
2. Precision Instruments Project (for the manufacture of hydraulic, pneumatic and mechanical instruments) with Soviet assistance.	Kerala	8
3. Heavy Electrical Equipment Project with Soviet assistance.	Ranipur (Uttar Pradesh)	25—30
4. Heavy Electrical Equipment Project with Czechoslovak assistance.	Hear Hyderabad (Andhra Pradesh)	30
5. High Pressure Boilers Plant with Czechoslovak assistance.	Tiruchi area (Madras State)	15—20
6. Heavy Plate and Vessel Works and Heavy Structural Works.	Near Wardha (Maharashtra)	15
7. Machine Tool Project	Pinjore near Chandigarh (Punjab)	8

The seven projects are estimated to cost about Rs. 120 crores involving a foreign exchange expenditure of about Rs. 50 to Rs. 60 crores. Foreign exchange has already been arranged in all these cases. Preliminary project reports are also under way for these projects. The final decisions on the location of these projects have been taken, having regard to the need for a regional dispersal of central heavy industries projects.

A.E.I. AGREEMENT WITH FACIT ELECTRONICS

The Associated Electrical Industries Ltd. has made an agreement with Facit Electronics A.B. of Sweden, as a result of which the Electronic Apparatus Division of A.E.I. has been appointed sole agents in the U.K. and the British Commonwealth (except Canada) for Facit Carousel memory, high-speed tape punch and high-speed reader.

Facit's Carousel is a completely new type of random access magnetic tape memory and differs radically from all other random access external memory machines previously introduced. When full, it contains more than three million checked alpha numerical characters or more than five million checked decimal digits. The average access time for a block of information is about two seconds. Facit high-speed tape punch is transistorised and designed to accept 5-6-7-8 channel paper tapes. The moving parts have been kept to a minimum, a feature which ensures more reliable operation and easier servicing. Facit high-speed tape reader is fully transistorised and will read tapes of 5-6-7-8 channels by means of a dielectric reading unit which ensures that there is no ageing of components and that the unit is not affected by dust or light.

PREVENTION OF WATER LOSSES THROUGH EVAPORATION

Some experiments, conducted recently under the aegis of the Council of Scientific and Industrial Research, in preventing large-scale evaporation losses of water stored in open tanks and reservoirs are stated to have been successful. Studies conducted for two years successively with cetyl alcohol at the Badhkal Tank, Faridabad (Punjab) have shown that a layer of cetyl alcohol helps to restrict evaporation of water. Cetyl alcohol is insoluble in water and forms a film when spread on the water surface and thereby retards evaporation from the surface.

The experiments revealed that larger doses of cetyl alcohol than normally required are necessary to maintain the film layer over the water during heavy rains or when a strong wind keeps on blowing. The method of spreading cetyl alcohol over the water in the form of an emulsion was found quite effective.

NEW PRODUCTS AND PROCESSES

Bottle Wrapper

A NEW machine for wrapping bottles in cellulose film, with an output of between 40 to 60 per minute according to the type of bottle, has been introduced by Rose Brothers (Gainsborough) Ltd., Lincolnshire, U.K. The machine applies a wrap of film with a neat twist finish at the head of the bottle and with the finish about one inch from the base. The wrap not only enhances the appearance of the bottle, it is claimed, but also ensures against pilferage, particularly if an easily removed stopper is used. The wrap also preserves the appearance and legibility of any label which is applied. Before entering the machine, the bottles are positioned so that the film overlap appears on the glass and not on the label. The bottles, previously moistened, are automatically laid in a pocket chain made from rollers so that they can rotate easily. As each bottle rotates, cellulose film cut from a reel clings to the wet surface, thus forming a tube which is gathered round the neck and twisted tightly round the stopper. The wrapped bottle is transferred automatically in the upright position on to a slow moving belt where the pleats in the film are sprayed with moisture. Since the film is not moisture proof, it becomes skin tight as it dries.

Recording Apparatus for Service Vehicles

The Precision-Instrument Department for the Zenith Watch-Manufacturing Ltd., Le Locle, Switzerland, has designed and constructed a new recording apparatus for service vehicles. It was shown to the public for the first time at the 31st International Motor Show held at Geneva from 16th to 26th March 1961. The Zenith tachygraph, it is claimed, is the latest and most modern creation among instruments of this class. It embodies all the technical experience acquired up to the present time and offers every guarantee of the well-known precision and strength that Zenith watches have exemplified throughout the world since 1865. By using Zenith tachygraph, all vehicle-owners are in a position to obtain valuable information on the work and the qualities of their drivers and the way in which their vehicles are treated. It indicates, beyond dispute: the exact time; the individual working-hours of two drivers; the vehicle's stopping- and running-times; the speed of the vehicle, which is recorded; any breaking of the speed-limit that is stipulated; the number of miles travelled per hour, day or week; improper driving of the vehicle; sudden breaking and repeated accelerations. It will thus enable to improve the performance of the valuable rolling stock.

Glass Fibre Chute

A new spiral sack chute made of glass fibre which is considerably lighter in weight but more rigid in construction than previous metal chutes has been produced by Thomas Robinson Ltd., England. Claimed by the manufacturers to be the first of its type the chute is easier to erect, and the load on the building, in which it is installed is considerably reduced. It is also cleaner and more modern in appearance. Designed in easily assembled sections, each 10½ inches deep, the chute has an overall diameter of 5 feet. There are eight sections to a pitch, each pitch having a height of 6 feet 10½ inches. The sections are bolted together at four points and are rigidly held by a 4½ in. steel tubing centre column fixed to a cast iron base. Tests for deflection and compression carried out with various products, in bags up to 2¼ cwt. capacity, have shown that the chute is equally rigid when used for the storage of bags over a period.

Concentrating Beryllium Ores

A flotation process which will successfully concentrate dilute ores of the strategic metal beryllium has passed the pilot-plant stage and will be applied in a full-scale industrial installation by the end of the current year in the U.K. Material concentrated by this method has been used in normal beryllium metal production runs. This is an important step in the winning of the ore, which is normally collected piece by piece by prospectors and not mined, precisely because most beryl-bearing deposits contain such small amounts of interesting mineral that their exploitation is far less economical even than the expensive hand-cobbing method. Once the commercial-scale plant is operating, it is anticipated that other concentrators using the process will be set up in South Africa, Mozambique, Brazil, Argentina and Rhodesia.

New Steel Product

A new steel product has been developed in the United States, which may be used as a parachute material to help solve the problem of slowing space vehicles as they re-enter the earth's atmosphere. It is steel cloth, woven of stainless steel wire drawn to one-half the thickness of human hair. One mile of the wire is required for each square foot of the steel fabric, which is so finely woven that water will scarcely pass through it. The material may be of value for re-entry parachutes because ordinary materials cannot stand up against the 1,500 or more degrees Fahrenheit of friction heat generated by re-entry.

Immobiliser for Vehicles

An automatic immobiliser for private vehicles, which is made ready by switching off the engine, is being marketed by Hartwood Alarms, Golders Green Road, London. The manufacturer's ignition switch is substituted by an alternative switch with an exclusive key, without which the vehicle will not start. The wiring is enclosed in flexible armoured steel tubing and the ignition coil is completely encased. Should a thief tamper with the ignition an alarm sounds. The Company also markets an alarm system for commercial vehicles.

ORISSA CEMENT LIMITED

UNECONOMIC CEMENT PRICES HIT INDUSTRY

CHAIRMAN, MR. J. DALMIA, SUGGESTS INCREASE IN OUTPUT OF SLAG CEMENT

ADDRESSING the Eleventh Annual General Meeting of Orissa Cement Ltd., held at Rajgangpur (Orissa State) on Thursday, 21st September, Mr. Jaidayal Dalmia, Chairman of the Company, observed that the unrealistic estimates of production made by the Tariff Commission for the purpose of calculating cost of production had led to the fixation of very low retention prices. The Commission had estimated cost on the assumption (which was questioned by the industry even then) that production would equal the rated capacity. Even in the major cement producing countries of Europe, the actual output was only about ninety per cent of rated capacity, whereas, in India, it was not more than eighty-five per cent. Mr. Dalmia expressed the hope that the latest tariff enquiry now completed would result in the fixation of more realistic retention prices. He also suggested that an effective way of increasing supplies of cement would be to increase the output of cement manufactured from granulated slag from steel plants.

The following are extracts from Mr. Dalmia's speech:

"FRIENDS,

"I have great pleasure in welcoming you to the eleventh annual general meeting of your Company.

"You will be glad to know that a long-term agreement has been reached with the workers of your Company in regard to wages, bonus and other demands. As a result of this agreement, which would remain in force for a period of four years, I expect that industrial peace would be maintained and, with joint efforts, there would be all-round improvement in the production and the working results of your Company would be better than last year.

Retention Price

"The cement industry is suffering a great deal on account of the uneconomic retention prices recommended by the Tariff Commission in 1958. In determining the retention prices the Tariff Commission made estimates of cost on the assumption that production would equal the rated manufacturing capacity of the plants. Even in the major cement producing countries of Europe, the actual production ranges around 90 per cent of the rated capacity. The position in India is in no way better. The utilisation of the installed capacity of the industry last year was only 85 per cent. The unrealistic estimates of production made by the Tariff Commission for the purpose of cost calculation led to fixation of very low retention prices. Moreover, there have been various increases in costs since the last price inquiry. The retention prices fixed in 1958 were to remain in force till 30th June 1961. It is hoped that the Commission would adopt a more considerate approach this time and the industry would be given fair retention prices with retrospective effect from the 1st of July 1961. This would enable the industry to attract capital for new projects and to increase the installed capacity to the level of 15 million tonnes by 1965-66, the target set under the third Five-year Plan.

Manufacture of Slag Cement

"Cement supplies can be increased quickly and with relatively smaller capital investment and lesser outlay on foreign exchange by expanding the manufacture of slag cement. Your Company was granted a licence in October 1957, for producing slag cement on the basis of supply of granulated slag from Hindustan Steel Limited and I hope that the difficulties in the way of slag granulation will be resolved and slag will now become available early in view of the very considerable importance that is being given to the production of slag cement in the third Five-year Plan.

"The scheme of granting subsidies for coal supplied by the sea-cum-rail route to the Southern and Western regions will, I am sure, encourage the dispersal of the industries all over the country in the larger interests of our nation. Coal and fuel oil should be delivered at all rail-heads at an equalised price based on the calorific value, irrespective of the mode and route of transport. All industries will thereby receive supplies from the nearest source either of coal or fuel oil as the case may be and this would increase the consumption of fuel oil which is available.

Demand for Refractories

"There is a very wide divergence of expert opinion in India on the consumption rate of refractories per ton of ingot steel produced. As the main consumer of refractories, the steel industry controls the pattern of the demand. Thus, with the present trend towards adoption of the basic roof in the open hearth furnaces instead of the silica roof, the overall consumption of fireclay and silica bricks would fall while that of basic bricks would increase. This is illustrated by the estimates of demand and installed capacity for various kinds of refractories required by the end of the third Plan as shown in the following table:

(In lakh tons)

Item	Silica roof Demand	System Capacity required by 1965-66	Basic roof Demand	System Capacity required by 1965-66	Capacity existing and additional capacity licensed.
Fireclay refractories ..	10.0	12.0	7.0	9.0	15.0
Silica refractories ..	3.5	4.5	1.8	2.2	3.3
Basic refractories ..	2.0	2.5	3.5	4.3	3.0
	15.5	19.0	12.3	15.5	21.3

"The impact of this uncertainty regarding the pattern and quantum of the future demand of refractories has created a certain imbalance in the installed and licensed capacities of the different types of refractories *vis-a-vis* the potential requirements at the end of the third Five-year Plan. For instance, the above figures will show that the total capacity existing and licensed for fireclay refractories is far in excess of what is required. With the increasing shift towards the basic roof system it would appear that excessive capacity has also been created or being provided for silica refractories. There, however, appears to be some scope for further expansion of the basic refractories capacity. The pattern and volume of future demand for refractories in our country should be determined as early as possible so that the industry may develop on proper lines, unhealthy expansions may be avoided, and the country's limited foreign and internal resources are employed gainfully.

Expansion of Capacity

"Your Company has undertaken a substantial expansion of its basic bricks capacity, including the manufacture of chemically bonded refractories. Success has also been achieved in producing high quality blast furnace and ladle bricks, which it is hoped will be supplied in large quantities to the steel industry, thus meeting a very important item of refractories which have been mainly imported so far.

"I had referred last year to the need for proper exploration, utilisation and conservation of the essential raw materials required by the refractory industry. I would like to mention particularly refractory grade chromite ore which is required in very large quantities for certain types of basic bricks, and which is in very short supply. The position could be improved by a closer control on the quality of chrome ore which is being exported, by a more rational and broader-based exploitation and utilisation of known deposits and by a more intensive search for new deposits. As the major actual consumer, the refractory industry should be given an overriding preference over others in exploiting the deposits of these raw materials.

"Before I conclude, I would like to express our sincere appreciation of the services rendered by the workers, staff and officers of the Company during the year under review."

N.B.—*This does not purport to be a report of the proceedings of the general meeting.*

U.K. INSURERS SEEK STRENGTH THROUGH MERGERS

WHY NOT INDIAN COMPANIES FOLLOW SUIT?

A SIGNIFICANT feature of British economy since the end of the last war has been the growing trend towards the merger or amalgamation of even large and strong industrial and commercial establishments. These mergers have been inspired by many factors, but the main objectives have been (1) diversification of activities, (2) concentration of control, and (3) economy in management and operation. "Once it reaches a certain level of financial, technical, manufacturing and managerial resources, the big modern company develops built-in, 'institutional pressures' to explore beyond its existing commercial frontiers, reinforcing the basic incentive of spreading one's risk." Diversification is often achieved without outright merger of identity, but by joining resources, as was done by the I.C.I. and Alcoa in 1959 by forming a new joint company called Impalco, or by working arrangements without financial links as in the case of the consortium that builds for India the steel plant at Durgapur. Mergers have also been aimed at concentration, that is, to obtain a bigger share of the market, as also to achieve economies of scale. Another objective is penetration of foreign markets. The rigorous interpretation of the Restrictive Trade Practices Act by the Courts of Law in Britain has left less and less scope for price agreements and other monopoly practices and encouraged mergers as an alternative.

The wave of mergers began in the distributive trade and spread to such diverse branches of the economy as building trade and insurance, traditionally a highly competitive business. In fact, the largest merger in the history of British insurance occurred towards the close of last year when the Royal Insurance Company took over the shares of London and Lancashire Insurance Company, resulting in the creation of an insurance group having total assets exceeding £480 million. This merger followed close on the heels of the amalgamation of the Commercial Union Assurance Company Ltd. and the North British and Mercantile Insurance Company, Ltd. to form a giant group having total assets of £300 million.

The main purpose of these insurance mergers was stated to be "expansive, not restrictive," to develop more fully the resources at the disposal of each unit by effecting maximum economy in operation and administration. The need to strengthen the financial position of companies, with a view to facing competition in overseas markets, especially the U.S., and meeting the challenges and opportunities offered by Britain's possible entry into the European Common Market, is also at the back of the merger of insurance companies.

Benefits of Merger

A cogent analysis of the benefits of insurance mergers and the reasons behind the recent amalgamations of insurance companies in Britain were made by Mr. F. R. Norton, a Director of the Guardian Assurance Company, in a paper entitled "Insurance Company Mergers," presented at the annual conference of the Chartered Insurance Institute held at Aberdeen on 14th September 1961. The British insurance industry, according to Mr. Norton, had been brought to recognise that it will solve its problems more readily by closing the ranks to some extent and by a more economic deployment of its resources. He pointed out that, although the term "merger" was of comparatively recent origin, amalgamations had taken place in insurance since the eighteenth century. In his view, before any danger of monopoly arose, many more insurance mergers would have to take place. Usually, according to Mr. Norton, there were good reasons to merge, such as enlargement of insurance business in a particular home or overseas territory, financial instability of a weaker partner or a decision to launch into a branch of insurance business not previously transacted by the larger unit in the merger.

In Mr. Norton's opinion, there had been, in British insurance, a measure of uneconomic activity beyond the requirements of healthy competition. The problem had to be considered with due regard to the number of companies operating independently, many of them, in much of the business, competing not in terms of conditions or contracts but solely in services rendered to policyholders, with inevitably some overlapping of activities.

British insurance has had to face a number of adverse factors such as the high level of loss ratio, which, in Mr. Norton's view, would be ill-advised to be regarded as cyclical, substantial rise in costs in a period of considerable inflation, greater concentration of risks in home and overseas markets and severe competition resulting in a downwards trend of premium. The position has been intensified by a number of overseas companies starting business in Britain.

Minimum Scale of Operation

Important among the factors having particular relevance to the recent grouping of companies were that there was a minimum scale of operation necessary to meet the costs of an organisation adequate to give a comprehensive insurance service. Mergers provided a unique opportunity for reviewing the basis of insurance operations. They should lead to the employment, more widely, of electronic computers for accounts and renewal work, the calculation of gross and net dividends and the preparation of dividend warrants, valuation of assets and so on and for obtaining more promptly much more information of a statistical character leading to a closer contact with the problems of cost, experience, trends, etc. There would also be less work in connection with reinsurance, though there would be continued need for reinsurance at least for "target risks." It is also sometimes possible to do with less staff or, possibly, to restrict the intake of new junior staff. But termination of employment is against the tradition of British insurance companies and their recently expressed intentions. The best effect on staff, according to Mr. Norton, is the enlarged scope for all those able and willing to accept responsibility in merged units. Thus, mergers bring a wider sharing of the burden of work which had for so long been placed on too few responsible shoulders.

The thought that comes uppermost to one's mind as one reads of insurance mergers in Britain is that, if British insurance companies, the majority of which are, by any standards, giant units, as compared with Indian companies, have found it necessary to merge in the interest of economy of operation and competitive strength, how much more is the need for amalgamation or group working for Indian companies which are too small in size and too large in number in relation to the size of the market. About 90 Indian companies constitute the Indian market and the gross premium derived from Indian business is hardly Rs. 25 crores. As compared with this, about 100 companies, out of a total of 300 incorporated in the U.K., account for the bulk of the business (of all classes), yielding a gross premium of about £1,750 million. Indian insurers know the solution to their unsound financial conditions, and that is integration of all the 90 companies into fifteen or twenty units, with a premium income of at least Rs. 1 crore each, if not more. But they do not appear to have the will-power to try it in actual practice.

PERSONAL ACCIDENT POLICIES

A new type of insurance policy, covering the risks of death by criminal violence, has been issued recently in London insurance company. According to it, a person can secure, for a premium of 30 shillings a year, cover for £5,000 for death or total disablement resulting from criminal assault. The Company permits even such people, as policemen, bank cashiers and bullion van drivers, who are most prone to attack, to take out insurance at the standard rate. The only criminal risks excluded are injuries "sustained as a result of family rows or brawls" and those sustained while engaged in "any kind of sport or criminal activities."

Commenting on this new type of policy, the Insurance Correspondent of the *Financial Times*, London, observes: "It is another indication of the interest which is being shown in personal accident policies of all kinds."

"A great deal of business has been transacted in recent years, for instance, in respect of the assault risk associated with the carrying and handling of money. Usually such policies are taken out by employers for the benefit of those members of their staff who carry or escort money to and from the bank, as well as employees who are engaged in cashier and wages operations. There are so many ways in which death or injury can be caused by violence nowadays that a considerable response is expected to the new cover now made available to every individual."

REFORM OF CENTRAL EXCISE SCHEME

I. M. C. URGES SIMPLIFICATION OF PROCEDURES

AS an important form of commodity taxation, Central excise duties have become an indispensable source of revenue to the Government of India. The Central excise now accounts for about 42 per cent of the aggregate revenue of the Central Government, as compared with only 19 per cent in 1950-51 and no more than about 11 per cent in 1938-39. The growth of excise duty during the last decade, in particular, has been spectacular. The revenue from Central excise, which was only Rs. 67.54 crores in 1950-51, increased to Rs. 145.25 crores in 1955-56. This source of revenue rose at a still more rapid pace subsequently. The excise revenue touched Rs. 360.65 crores in 1959-60. The revised estimates for 1960-61 place it at Rs. 394.98 crores and the budget estimates for 1961-62 at Rs. 406.24 crores. This increase in excise duty has been due mainly to the appreciable expansion of the coverage of the duty, a marked increase in production and the stepping up of rates. As many as 56 items are now subjected to excise duty. With this wide coverage of the Central excise duty, the number of factories coming within the purview of the Excise Law has also markedly increased, and is bound to increase in future. The table on this page shows commodity-wise details of Union Excise duties as in 1959-60, as compared with revised estimates for 1960-61 and budget estimates for 1961-62.

In view of the expansion in the scope of the excise duty in the scheme of Central revenues, it is only natural that the Central Excise Act and other relevant Rules, which were designed originally to apply only to a few specific commodities, should have become anomalous in many respects. Appropriately enough, a Central Excise Reorganisation Committee was recently appointed by the Government to advise it on possible lines of reform in the existing machinery and system of duty collection. In response to the questionnaire issued by the Committee in this connection, the Indian Merchants' Chamber has submitted a memorandum, which is a significant contribution to the studies made on this branch of Central revenues.

Account-check System

The Chamber has not made any bones about the fact that the present system of excise taxation is "cumbersome and irksome, involving too many procedural formalities." It has, therefore, urged the substitution of the existing scheme of physical-*cum*-accounts check by a new system based on accounts check and supplemented by surprise visits by excise officers. The existing scheme, it may be noted here, is based on physical checks supplemented by scrutiny of statutorily maintained accounts. The check is exercised by the officer of the Excise Department posted at the factory. His duty is to keep a constant watch over the operation of the various departments of the factory, the object of such a constant watch being to prevent illicit disposal of the manufactured goods. The manufacturers are permitted to store manufactured goods without payment of duty in store-rooms within the factory premises and the duty is actually collected only at the time of clearance of the goods from the factory premises. The clearance of the goods is also under excise supervision. Over and above this, the manufacturers are required to maintain detailed accounts of production, quantity deposited in the store-room and the quantity issued out of the factory. These accounts are checked by the Central Excise officer in-charge and also by the Supervisory officers. The manufacturer is required to provide, free of cost, office accommodation for the staff of the Central Excise posted at the factory, and in certain cases residential accommodation for the staff near the factory at a rent not exceeding the stipulated percentage of pay of the officer concerned. This method of control has come in for a good deal of adverse criticism at the hands of the interests concerned. Their main ground of criticism is that this rigid system of Excise control unnecessarily interferes with the manufacturing processes. It is also expensive.

The new scheme suggested by the Chamber seeks to simplify these procedures. Under the proposed system, it is claimed that the difficulties and procedural work involved for the manufacturing units can be substantially reduced, and, in the process, the administrative expenditure will also be curtailed. An examination of the accounts of manufacturers which may be kept according to Government requirements, and of periodical returns in the prescribed form showing details of the goods manufactured and delivered, the duty payable thereon, etc., submitted to the Government should, in the opinion of the Chamber, be an adequate and effective safeguard to the revenue. The Chamber, however, concedes that it will be necessary to take measures to plug loopholes which may arise in particular cases or particular commodities, so as to ensure that there is no evasion of tax.

An aspect of the procedure concerning the payment of duties and charges, which is causing difficulties to the industries is that manufacturers who produce a number of excisable items have to maintain separate accounts for each item. This rigid procedure regarding accounts, according to the Chamber, results in avoidable hardships to manufacturers "because, in the event of heavy clearances of one item, the deposit account relating to that item is depleted and further clearances are blocked, whereas large balances remain unutilised in the deposit accounts relating to other items, the clearances in respect of which are meagre." This difficulty will not arise, if, as for customs purposes, manufacturers are allowed to maintain only one deposit account for all excisable items.

Basis of Calculation

Another common complaint of the business community is that the present procedure relating to levy of excise duty on an *ad valorem* basis does not provide for the full deduction of the incidental or overhead charges incurred by the factories in the form of selling and distribution costs, freight, interest, insurance, publicity and advertising. Trade discounts, commission charges and such other items are not allowed deduction. The memorandum seeks to emphasise that excise duty should be levied only on ex-factory cost, consisting of cost of raw materials and packing materials, other manufacturing expenses and the producer's profit margin, "as excise duty, by its very concept, is a levy on goods produced and cleared from the industrial units and not a duty on sales." A strong case for reconsidering the question of the basis of calculating excise duty has been built up by the Chamber in the following words:

"Under the normal trade practice, goods are sold by the manufacturers to their selling agents at a fixed price and the latter, in turn, sell the same to wholesalers, retailers and consumers. The price at which sales are effected by the selling agents to their customers depends on various factors, such as the extent of demand, credit facilities required by them, etc. If the prices charged by the selling agents to the different parties are adopted as the basis for calculating the excise duty, the quantum of excise duty naturally varies in different cases. Under the circumstances, the manufacturers are not in a position to know, in advance, their exact liability on account of excise duty. . . . Excise duty, by its very concept is a levy on goods produced and cleared from the factory and not a duty on sales. There is, therefore, no justification for the collection of the duty on the basis of the prices at which the goods are sold by the selling agents of the manufacturers. . . the correct basis for collection of excise duty would be the ex-works price."

Union Excise Duties

(In lakhs of rupees)

Basic Duties	1959-60* Accounts	1960-61 Revised	1961-62 Budget

Refunds and Rebates

The memorandum has devoted some thought to the question of improving the system of refunds and rebates of duties prescribed for export of excisable goods. Under the existing rules, full duty is refunded on excisable goods exported from India. Where an exempted or a favoured sector exists, as in vegetable non-essential oils, or where excisable goods enter into the manufacture of another product which is subsequently exported, the rate of rebate is adjusted in an *ad hoc* manner. The Chamber is of the opinion that the system of *ad hoc* adjustment of rebate should be replaced by "a more positive system" allowing for full remission of excise duty on excisable goods entering the manufacture or production of other products which are exported. Besides, the Chamber has called for expeditious payment of refunds. It has also drawn attention to a lacuna in the present procedure, under which excise duty is not allowed when the goods are shipped from a godown outside the factory premises. This causes practical difficulties, "as the manufacturing units have to keep stocks of manufactured goods ready in godowns other than those in the factory premises, so as to be in a position to effect exports from the nearest port, immediately on receipts of orders from the importing countries." Another condition for grant of rebate (except in a few cases) is identification of the goods cleared from the place of production with the goods exported. Appealing for a relaxation of this provision, the memorandum says as follows:

"The condition regarding identification of the goods cleared from the place of manufacture/production with the goods exported, for grant of rebate, is found to be cumbersome in actual operation. For instance, in the art-silk weaving industry, since there are only a few composite units both manufacturing and processing, movement of goods from the weaving unit to a processing unit and again back to the weaving unit so as to conform to the said requirement involves unnecessary time and labour. After all, before excisable goods are cleared from the factory godowns and removed to outside warehouses, excise duty should have been paid. The condition regarding identification can, therefore, be dispensed with and the descriptions on the shipping documents and manufacturers' invoices should constitute sufficient evidence of the payment of excise duty. In any case, we feel that the condition can be safely waived in the case of standard products."

Multi-point Levy

A strong plea has been made in the memorandum for the abolition of multi-point levy of excise duty (as in the case of tobacco, cigarette paper and cigarettes, vegetable oils and vegetable products and loose tea and packaged tea), and the introduction of single point levy on the ultimate product. It stresses that manufacturers of excisable products should be permitted to procure other excisable items, under bond, free of excise duty.

Appellate Authority

Another important aspect of the Central Excise Administration to which the Chamber has invited attention relates to the Appellate procedure. The Committee has pointed out that the appeal, as provided under the Central Excise Act, is only in the nature of Departmental review and cannot claim the merit of an appeal to an independent authority. The Chamber has suggested that an independent appellate authority should be set up on the lines of Income-tax and Sales Tax Tribunals.

The Chamber has, further suggested that, while penalty should be imposed in cases of deliberate defaults, delays in payments for valid reasons or because of circumstances beyond the control of assessees should not attract penalty. Although it appreciates that Government dues should be paid within a reasonable period and the defaulters should be penalised, it has expressed the view that the provision in this regard should not be one-sided.

KIRLOSKAR OIL ENGINES LIMITED

IDEA OF COMPULSORY EXPORTS ILL-CONCEIVED, SAYS MR. S. L. KIRLOSKAR

FRESH EQUITY CAPITAL TO BE RAISED FOR FINANCING EXPANSION PROGRAMMES

A HIGHLY encouraging picture of the all-round progress of, and the bright prospects for, Kirloskar Oil Engines Limited, was given by Mr. S. L. Kirloskar, a Director of the Company, in his speech delivered, in the absence of the Chairman, Lala Shri Ram, at the Annual General Meeting of the Company held at Poona on Saturday, the 23rd inst. During the year ended 31st March 1961, the Company was able to produce and sell more; export of Kirloskar engines during the year was double that in the previous year. Referring to the suggestion of compulsory exports, Mr. Kirloskar observed that the idea was ill-conceived, because exports could not be accelerated by compulsion but only by producing cheaper and better quality product on an expanded scale. It was for the Government, if it wanted to promote exports, to create conditions favourable for economical production. Dealing with the expansion programme, Mr. Kirloskar pointed out that the Company had decided to manufacture (1) M.A.N.-type diesel engine with the technical collaboration of M.A.N., the internationally famous German firm, (2) air-cooled diesel engines with French help and (3) prime movers with U.S. technical aid. Striking a note of optimism regarding the prospects for the Company, Mr. Kirloskar said that the current year's results were expected to be equally good, if not better.

The following is the full text of Mr. Kirloskar's speech:

"LADIES AND GENTLEMEN,

"It gives me pleasure to welcome you to this meeting.

"In the normal course, Sir Shri Ram should have been here to preside over this meeting. Unfortunately, due to indisposition, he is not able to be present here today. He is associated with the Company, as its Chairman, from the very beginning and has given his valuable guidance in shaping the policy of the Company all these years. We have been fortunate in having his services which, in no small measure, account for the success the Company has been able to achieve. I am sure, you will join with me in our good wishes for his speedy recovery to normal health.

"The report of the Directors and the audited accounts had been sent to you well in advance. With your permission, I shall take them as read.

Another Successful Year

"I am happy to mention that we had another successful year. The accounts for the year reveal a profit of Rs. 71,26,088, after providing for depreciation, commission to Managing Agents, etc. Adding to this the balance of the last year, the total comes to Rs. 71,42,460. Your Directors have indicated in their report, their recommendations for the appropriation of this profit under various heads.

Production and Sales

"The year was one of general progress in the fields of production and continued growth in the Company's undertaking. The increase in profit may be mainly attributable to continued demand and higher rate of production. We have been able to produce more and sell more. There has been increased activity in our Bearing Division and more bearings for automotive and industrial stationary type engines have been developed and manufactured. In short, there has been all-round increase in production and sales.

Export

"We have always been very conscious of the great importance to the country, as well as to the industries, of the continuation of a healthy export trade. I am pleased to mention that 10 per cent of our production went abroad during the year and our export trade increased cent per cent, as compared with the previous year. This success was achieved in the face of enhanced competition. Our main difficulty during the year has been to meet lower price competition and offers of better financing terms. We are well-equipped to provide the goods, if our offers to customers are associated with competitive credit facilities. The Government alone can help us in this by creating conditions for our affording improved credit facilities to our foreign customers.

"One of the important problems the country has to face today is how to improve its foreign exchange position. The immediate means of achieving this would be (1) to increase our exports, and (2) to prevent the drain of foreign exchange from the country by starting such of the important industries as are immediately essential to the economy of the country and which are at present consuming a lot of foreign exchange. It should be admitted that the Government and the public are displaying an awareness of the importance of exports to the economy of the country at the present juncture. No doubt, the Government has taken certain measures to boost the country's export trade. But more remains to be done to get the desired results.

Compulsion Undesirable

"However, the recent announcement of the Union Planning Minister, indicating the possibility of investing the Government with statutory powers to limit sales of manufactured commodities in the country and to reserve certain quantities for export, is rather misconceived. The contemplated measures reveal a doctrinaire approach to the problem. If the measures are to be really helpful, the approach should be more realistic and practical. Export drive cannot be accelerated by compulsion. It is a basic problem affecting the economy of the country and as such, can be solved only by the co-operative effort of the Government, the manufacturers and the public and not by restrictive legislation. The other measures contemplated, namely, possible remission in taxation, a comparative advantage to exporters in the levy of excise duties, widening of the scheme of refunds, reduction in railway freight, price concession in raw materials and giving priority in allotting foreign exchange to industries producing for export are indeed incentives for export. The concessions and facilities already afforded to exporters by the Government, coupled with these further facilities, when afforded, will go a considerable way in promoting export trade.

Prerequisites for Export Success

"But it should be borne in mind that production of quality goods in quantity at a competitive price is a prerequisite for the success of the export drive. It is for the Government to create a favourable climate for this. All impediments in the way of smooth production will have to be removed. The third Five-year Plan has set a target of Rs. 800 crores for exports in 1966. This can be achieved only by a concerted effort on the part of the Government, manufacturers and the exporters. By the concessions and facilities, the Government may, at best, induce manufacturers to export a certain portion of their production. But that alone would not solve the problem. Our goods to be sold in foreign markets should be competitive in price and quality. It is only the manufacturers that can tackle the question of quality and cost in their factories, by increasing their productivity and improving the quality of their products. Any amount of legislation would be of little use, unless manufacturers extend their willing co-operation in this. Ultimately, it is the co-operation of industries, in providing quality goods in quantity and at low cost, that determines the degree of success of this export drive. So, I sincerely feel that the Government should proceed, taking the manufacturers into confidence and, by enlisting their co-operation, make them willingly participate in this great national effort to achieve the target set for export in the third Five-year Plan. This would be the only means of increasing our exports and setting our foreign exchange position on a sound footing. Much has been done to facilitate exports; but more remains to be done.

Cost of Vacillation and Delay

"The next problem to be tackled in this connection is to establish, immediately, industries which are vital to the economy of the country and which are draining a lot of foreign exchange from the country at present. Immediate establishment of such industries would save all this foreign exchange. Quick decisions and speedy execution are two important factors in accomplishing this. Unfortunately, there is too much hesitancy and delay in taking decisions which invariably cost the country a lot of foreign exchange. Even when a decision is taken, the Government adopts a very vacillating policy, which results in undue delay in implementing decisions taken, to the detriment of interests of the country. To quote an instance, it was realised several years ago that the manufacture of diesel locomotives should be started in the country urgently, as the import of diesel locos required by the railways will consume a lot of foreign exchange. When the idea was conceived, several concerns in the private sector came forward with an offer to start this industry in collaboration with foreign concerns. The question before the Government was, whether to leave it to the private sector or to take it up in the public sector. Years passed before the Government could take a decision. It was then decided that the private sector should take up the manufacture of these diesel locos. Some time later, the Government reversed its decision and it was decided that this industry should be taken up in the public sector. But as yet very little progress seems to have been made. In the meanwhile, import of diesel locomotives for railways is going on at the cost of considerable foreign exchange. A quick and firm decision either way in the beginning, as soon as the idea was conceived, would have saved the country considerable foreign exchange. By now, a factory could have been set up, and production of diesel locomotives easily started, either in the public or in the private sector.

"This is a point to be considered by the Government in the matter of establishing new industries vital to the economy of the country. The Government machinery should move faster in taking decisions and implementing them, especially, in such matters where there is a possibility of saving considerable foreign exchange, so essential to the economy of the country today. I am not offering these remarks as a criticism of the policy of the Government; but I am bringing to light certain facts which should receive the serious attention of the Government, considering the gravity of the situation in which the country is placed.

Expansion

"The Company has planned for several expansion and development schemes. The third Five-year Plan has set a target for production of 100,000 engines per year in the range upto 30 h.p. In keeping with this national target, we have to step up our production. To achieve this, our installed capacity will have to be exploited to the full and further increase in production will have to be planned. Steps are being taken to increase our capacity to fulfil our target, in view of the national target mentioned earlier.

"It was reported to the shareholders last year that the Company had taken in hand the manufacture of M.A.N.-type diesel engines in the range 50 to 440 h.p., in technical collaboration with M.A.N., a German firm of international reputation, as manufacturers of higher h.p. diesel engines of all types. All our efforts to secure the necessary foreign exchange did not materialise. This delayed our progress considerably. However, the Government have now been pleased to grant us a licence to import these machines on condition that we increase our export of engines over and above our present performance. We are proceeding to import the machines as early as possible.

M.A.N. Engines

"In the meanwhile, our engineers have been busy exploring the possibility of building a few M.A.N. engines with the machinery and equipment at our command. Acquiring some more machines available in the country, devising some special machines and making the necessary jigs and fixtures, they set about building the first batch of these engines. Necessary castings and some finished components were secured from indigenous manufacturers. This, naturally, took some time. However, I am happy to report that we have been able to build the first batch of these engines and they have been found to be quite upto the specifications and are giving satisfactory performance. But our normal production cannot be undertaken until the machines, for which import licences have been issued, are received here. These machines are on their way to India.

"The Company has recently concluded an agreement with a French company for the manufacture of air-cooled diesel engines. The engines, being modern in design, simple in construction, light in weight and air-cooled, will be most suited to our conditions. The Company hopes to be able to put in the market the first batch of these engines in about a year.

Strip Mill

"The Company has been manufacturing bi-metal bearings and bushes from imported metal strips. These strips are not as yet being manufactured in India. Consequently our production depends mainly on the quantity of strips we are permitted to import. Owing to shortage of foreign exchange, imports are rather restricted. So, it has been decided to put up a strip mill in the factory. A portion of the strip mill will be got manufactured indigenously, as per designs supplied by Messrs. Glacier Metal Company Ltd., our British collaborators, and the remaining will be imported. An application for import licence has already been made in this behalf. This would enable us to increase our production of bearings as per our plans, without being dependent on foreign sources of supply for these strips.

"We are pressing on all these expansion and development programmes and satisfactory progress is being maintained.

Issue of Capital

"All these expansion schemes mean more capital. So, your Directors have issued, during the current year, in all 400,000 redeemable cumulative participating preference shares of Rs. 10 each, which have been fully subscribed. The Company will be issuing further 25,000 equity shares of Rs. 10 each in the near future for which the Company has received permission from the Controller of Capital Issues.

Investment

"The Company is engaged in the manufacture of prime movers. Cummins Engine Company, Inc., of the State of Indiana, U.S.A., is one of the biggest manufacturers of high-speed diesel engines in America, mostly used as prime movers for tractors, earth-moving equipment, air compressors, etc. The American company has acquired considerable experience in the manufacture of engines and commands a big portion of the world market for diesel engines. Their products enjoy a world-wide reputation for their quality and performance. This American company, being desirous of opening a factory in India for the manufacture of Cummins engines, approached us with a proposal for promoting such a company in India in collaboration with them. Your Directors, after considering the proposal in all its aspects, have decided to make an investment in the capital of the new company to be promoted in collaboration with Cummins in India, subject to the approval of the Government.

Termination of Collaboration

"You know, we have been working under a collaboration agreement with Messrs. Hawker Siddeley Brush International Ltd., of England, from the very beginning. The agreement is terminated by effluxion of time on 26th June 1961. We have to mention here that the Company's association with the British collaborators had been most happy and cordial and we both have learnt much from our association with each other. The collaboration has been quite a success and has worked to the best advantage of both the parties. We tender them our sincere thanks for their helpful co-operation all these years.

Recent Floods in Poona

"The recent floods in Poona—a most unfortunate event in the history of this city—affected us indirectly to a great extent. The houses of more than 100 workers were washed away by the floods and their families were rendered homeless and destitute. The plight of the victims of the floods was indeed pitiable. The Company, by way of immediate relief, made cash payments to these employees affected by the floods. Our distributors, suppliers and workers readily came forward with generous contributions for their relief work. We were able to collect quite a large sum, in addition to what the Company itself contributed and to distribute the same among the workers affected by the floods. The Company has further submitted its scheme for building houses for rehabilitating these employees.

Prospects

"As to the prospects for the current year, we have started well and are working at full capacity. Subject to any sudden change in the outlook, which is not at the moment foreseen, I would anticipate equally good results, if not better during the current year. Our orders and commitments are heavy and the demand for our engines and bearings at the present time exceeds our ability to supply. The market reports from our dealers all over the country show no apprehension of any immediate recession in the market for our products. It should, however, be mentioned here that, due to the serious breakdown in the power supply in the month of May and after-effects of the unfortunate floods in the month of July, we lost nearly four weeks' production. However, every effort is being made to make up this lost production. We hope to be successful in our efforts.

Accumulation of Stocks Explained

"You must have read from the papers that considerable stocks of small diesel engines have accumulated with small-scale manufacturers in various parts of the country. These manufacturers have been complaining to the Government about the situation and seeking assistance. A word about this situation will not be out of place here. The reason for this is not far to seek. Till recently, there has been a heavy demand for small engines suitable for pumping sets used by agriculturists. Of late, we are noticing a gradual fall in the demand for such engines.

"Firstly, there has been a gradual fall in the prices of agricultural products due to various reasons. As a result, the demand for small horse-power engines has been going down.

"Secondly, to some extent this is due to the changing over of the authority to sanction *Tagai* loans to agriculturists, from the Agricultural Department to the Land Mortgage Banks.

"Now, when the demand was heavy, the delivery of good quality engines was rather prolonged and agriculturists, therefore, used to purchase engines of any manufacture which offered immediate delivery. So, the manufacturers of such diesel engines, irrespective of the quality of their products, could readily sell their engines to farmers who came to their doors for immediate delivery of engines. This group of manufacturers mainly consist of those who manufacture from a few engines to a couple of hundred engines a month. A certain section of them are opportunist assemblers of one to five engines a month, without having the machinery nor the know-how to do the job. Their methods of manufacture are not standard. Their shortcomings are want of proper machinery, equipment and technical know-how. Consequently, their products are not upto the standard and their performance poor. Such engines are not backed up by arrangements for adequate after-sales service and prompt supplies of spares and non-interchangeability of spares is a further handicap in their case.

Farmers are Choosey

"Now that the demand has gone down to a certain extent, the engines, which give good performance and are backed up by adequate after-sales service facility, are available easily and their delivery periods are considerably short. The farmers, therefore, have become choosey and prefer to purchase engines which are reliable and which give good performance and afford after-sales service facility. This is the real reason for the accumulation of stocks of engines with smaller manufacturers in certain areas.

"The excellent results presented to you with the accounts have been achieved largely by team work. It gives me pleasure to report that the whole organisation is on its toes and alive to the need for growth and efficiency. It is no mere formality for me to express to the management, staff and workers our sincere thanks for their concerted efforts to achieve these results."

(Note: *This does not purport to be the proceedings of the annual general meeting.*)

Notice

THE NATIONAL ROLLING AND STEEL ROPES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Annual General Meeting of the Shareholders of The National Rolling and Steel Ropes Limited, will be held at the Registered Office of the Company, NICCO HOUSE, Hare Street, Calcutta, on Monday the 30th October 1961, at 3-30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1961.
2. To declare Dividend.
3. To appoint a Director in place of Sir B. P. Singh Roy, Kt., K.C.I.E., who retires by rotation and is eligible for re-appointment subject to compliance with the provisions of Section 281 of the Companies Act, 1956 and to consider and if thought fit to pass the following Resolution of which a Special Notice as required under Section 281 of the Companies Act, 1956 has been received by the Company.

   "RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir B. P. Singh Roy, Kt., K.C.I.E., who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act, shall not apply to him."
4. To appoint a Director in place of Shri R. K. Deb, who retires by rotation and is eligible for re-appointment.
5. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will remain closed from 13th October to 30th October, 1961, both days inclusive.

By Order of the Board,

FOR THE NATIONAL ROLLING & STEEL ROPES LIMITED,

FOR ASSOCIATED INDUSTRIAL DEVELOPMENT CO. (PRIVATE) LTD.,

S. C. ROY,
Director,
Managing Agents.

NICCO HOUSE,
HARE STREET,
CALCUTTA-1,
The 8th September, 1961.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and that a proxy need not be a Member.

The Dividend, if declared, will be paid to those Shareholders whose names appear in the Register of the Company on 13th October, 1961 or their mandatees and the dividend warrants will be posted from 14th November, 1961 onwards.

An Explanatory Statement pursuant to Section 173 of Companies Act, 1956 in respect of Item No. 3 has been appended to the Notice of the Meeting which is being forwarded to the Shareholders.

TO ALL SHAREHOLDERS:

And in particular to:

R. R. Bhandary, Esq., Lt. Genl. Shanker Shum Shere J. B. R., Messrs. Mahendra Prasad and Hrishikesh Prasad and Messrs. Gouri Nath Rimal and Durga Nath Rimal, Sm. Durga Kumari Rimal and Sri Siddhi Nath Rimal.

RESULTS OF THREE COAL COMPANIES

EAST INDIAN—AMALGAMATED—PENCH VALLEY

DESPITE the coal industry's acute problems of interrupted production due to frequent power failures, shortage of explosives, inadequate transport facilities to carry coal from pitheads to sources of consumption, and increasingly high cost of operations which has rendered the current selling price unremunerative, the East Indian Coal Company Limited (Managing Agents: Jardine Henderson Ltd., Calcutta), the Amalgamated Coalfields Limited and the Pench Valley Coal Company Limited (Managing Agents: Shaw Wallace and Company Ltd., Calcutta) have made considerable improvement, with higher production, sales, gross profit and net earnings, during the year 1960-61. Nonetheless, the Directors of these Companies are unanimous in their opinion that the problems the industry is at present faced with are too serious and call for immediate attention of the authorities to save the industry from being thrown completely out of gear. Unless this is done, they warn, the industry is unlikely to fulfil its third Plan target of 97 million tons, which represents a 37-million-ton increase over the second Plan.

East Indian Coal

Raisings by the East Indian Coal Company during the year ended 30th April 1961 were nearly double at 1,087,040 tons as compared with 583,111 tons in the previous year, and so were despatches at 1,020,537 tons against 519,824 tons previously. Gross profit has increased substantially from £0.16 lakh to £1.88 lakh. The net profit amounts to £1.22 lakh, after providing for depreciation of £0.27 lakh (£0.18 lakh) and taxation of £0.39 lakh (£2,251), against a debit balance of £3,196 in the previous year. In consonance with the better results, the Directors have stepped up the dividend from Re. 1 to Rs. 2 per share, subject to deduction of tax, absorbing £0.36 lakh, and giving a net return of Re. 1.40 per share. Allocations to reserves are also higher, with the development rebate reserve getting £0.62 lakh against £1,360 in the previous year and the sand stowing and development reserve £0.20 lakh against *nil* previously. Last year, the Directors had transferred £0.20 lakh from the reserve for equalisation of dividends for paying the dividend. The carry forward is higher at £0.16 lakh, against £7,006 brought in.

Although the cess on coal increased from £9,300 to £13,388, the greatly increased output resulted in a reduction in the overall cost per ton with beneficial effects on profitability. However, the output was below the planned target. Increased production was obtained from open cast workings, but the Directors point out that, in future, such workings, will contribute a much smaller proportion to the Company's output which is proposed to be raised further by nearly 20 per cent during the current year. Production this year has been slightly out of schedule, as it has been interrupted frequently by irregular power supply and a shortage of explosives. Considering the higher cost of development underground, including depreciation on newly installed machinery, the saving in cost per ton owing to increased output will be limited in future. Nevertheless, the Directors observe, the present progress can reasonably be maintained. The reorganisation and expansion is expected to be completed on revised schedule.

The Company has received the consent of the Controller of Capital Issues to the issue of Rs. 50 lakhs in 6¼ per cent debenture-stock at par and the necessary arrangements for this are being made. While the proceeds of this issue will reduce substantially the Company's indebtedness to its bankers of £3.89 lakhs at present, additional capital expenditure in the current year and the following two years on the substantial development programme on hand will amount to Rs. 65 lakhs. Arrangements have been made for further accommodation from the bankers, but early next year fresh sources of finance will have to be considered. It will be necessary to conserve the Company's resources to provide for amortisation of the debenture-stock about to be issued.

The issued capital of £2.40 lakhs (in shares of £1 each) is covered by revenue reserves and undistributed profits of £3.56 lakhs. Capital reserves are shown at £0.89 lakh. Current liabilities and provisions at £8.07 lakhs, including secured bank loan of £3.89 lakhs, are slightly higher as compared with current assets of £7.58 lakhs. Investments of £1.23 lakh, quoted in Great Britain, command a market value of £0.91 lakh, and those of £0.12 lakh, quoted outside Britain carry a market value of £0.10 lakh. The cost of unquoted investments is £0.16 lakh, including U.K. Treasury Bills of £0.15 lakh. The gross block account was increased during the year by £3.39 lakhs, making a total of £14.64 lakhs, which has been written down to £6.06 lakhs.

Amalgamated

The Amalgamated Coalfields Limited raised 1,004,283 tons of coal and despatched 1,002,147 tons during the year ended 31st March 1961, against 915,000 tons and 920,000 tons, respectively, in the previous year. Gross profit has increased nearly two-and-a-half times from Rs. 8.81 lakhs to Rs. 20.80 lakhs and, after making a much larger provision for taxation of Rs. 5.82 lakhs against Rs. 1.86 lakh in the previous year, the net profit has improved from Rs. 2.80 lakhs to Rs. 8.05 lakhs. Depreciation has been provided for Rs. 5.35 lakhs against Rs. 3.61 lakhs previously. Managing Agents' remuneration amounts to Rs. 1.58 lakh against Rs. 0.54 lakh a year before. The Directors have stepped up the dividend on equity capital from 10 per cent, taxable, to 12.5 per cent, subject to deduction of tax, per share, which gives a net return of 8.75 per cent. It takes away Rs. 3.19 lakhs against Rs. 2.55 lakhs previously. Transfers to reserves have also been increased to Rs. 5.01 lakhs from Rs. 3.08 lakhs, with general reserve getting Rs. 3.75 lakhs (Rs. 0.85 lakh) and development rebate reserve Rs. 1.26 lakh (Rs. 2.23 lakhs). The carry forward is Rs. 0.28 lakh, against Rs. 0.12 lakh brought in.

Costs have gone up by about Rs. 10 lakhs, from Rs. 150.30 lakhs to Rs. 164.37 lakhs, and 90 per cent of this increase is due to a sharp rise in salaries, wages and bonus from Rs. 109.06 lakhs to Rs. 118.42 lakhs. Such upward trend, the Directors point out, has not been covered by an increase in selling price, and having "vigorously represented" to the Government the need for raising the price, they are awaiting the result. The Company has planned for increased production during the third Plan period for which substantial capital expenditure will be required. The necessary foreign exchange for capital equipment imports is likely to be facilitated by the loan sanctioned by the World Bank. The Directors caution, however, that future production will be increasingly from thinner seam workings at higher raising costs. To provide for the heavy capital expenditure envisaged, they have transferred a larger sum to general reserve.

Capital expenditure during the year under review was Rs. 16.49 lakhs, in addition to Rs. 14.71 lakhs incurred in the previous year, and includes Rs. 7.41 lakhs being the cost of acquisition of Junnordeo Colliery to replace the loss of production from Delta East Colliery which has been closed. The fixed assets of the value of Rs. 139.23 lakhs are very adequately written down to Rs. 53.87 lakhs. The issued and paid-up capital is maintained at the previous year's level of Rs. 25.50 lakhs and is more than fully covered by reserves and surplus of Rs. 39.49 lakhs. Bank borrowings dropped sizably during the year from Rs. 13.86 lakhs to Rs. 7.07 lakhs and are secured by hypothecation of book debts. Current liabilities and provisions of Rs. 50.75 lakhs exceed current assets, loans and advances of Rs. 41.46 lakhs, excluding book debts of Rs. 27.58 lakhs.

Pench Valley

During the year to 31st March 1961, the Pench Valley Coal Company raised 529,153 tons of coal and despatched 523,464 tons, against 504,946 tons and 505,386 tons, respectively, in the previous year. Gross profit has increased modestly from Rs. 7.87 lakhs to Rs. 8.23 lakhs and net profit from Rs. 2.05 lakhs to Rs. 2.23 lakhs. The dividend on equity capital has been maintained at 10 per cent per share, subject to deduction of tax, giving a net return of 7 per cent and absorbing Rs. 1.57 lakh. Essential allocations include depreciation Rs. 3.83 lakhs (Rs. 3.25 lakhs) and taxation Rs. 1.65 lakh (Rs. 2.11 lakhs). Managing Agents' remuneration amounts to Rs. 0.52 lakh, as against Rs. 0.46 lakh in the previous year. Transfers to reserves comprise only a transfer of Rs. 1.11 lakh, against Rs. 1.09 lakh last year, to the development rebate reserve and are lower as compared with a total of Rs. 2.44 lakhs transferred in the previous year. The carry forward is Rs. 0.52 lakh, against Rs. 0.15 lakh brought in.

Costs increased during the year by Rs. 7.90 lakhs to Rs. 88.90 lakhs, with the wage bill alone going up by Rs. 5.23 lakhs. Since such rise in the cost of labour is not covered by the present selling price, the Directors have sought the permission of the authorities to raise it suitably. The Company has plans to increase production substantially during the third Plan, which will involve a sizable capital expenditure. Arrangements are being made for a World Bank loan to cover capital equipment imports. Future production will, however, be increasingly from thinner seam workings at higher raising costs.

During the year under review, the Company incurred a capital expenditure of Rs. 7.09 lakhs, against Rs. 8.86 lakhs in the preceding year. The gross block of the value of Rs. 88.62 lakhs is well written down to Rs. 32.35 lakhs. Issued and paid-up capital is unchanged at the last year's level of Rs. 15.75 lakhs and is well supported by reserves and surplus of Rs. 23.87 lakhs. Bank borrowings, secured by hypothecation of book debts, are lower at Rs. 2.75 lakhs as compared with Rs. 8.57 lakhs in the previous year. The total of current assets at Rs. 38.31 lakhs exceeds all current liabilities and provisions (including secured loans) by Rs. 13.27 lakhs.

METAL BOX TO INVEST IN ITALY

The British Treasury, which some six weeks ago had refused permission to the Metal Box Company to spend about £1 million on building a factory in Italy, has now allowed it to go ahead with its proposal, following the Company's undertaking to borrow abroad a part of the capital. Details as to how and to what extent the Company has modified its scheme to satisfy the criteria laid down by the Chancellor in his "little budget" have not been disclosed.

AHMEDABAD ELECTRICITY FARES WELL

EXPANSION PROGRAMMES GATHER MOMENTUM

THE progress made by the Ahmedabad Electricity Company Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay) during the year ended 31st March 1961 is satisfactory. Thus, sales of energy were higher, followed by a modest improvement in profit. The return to shareholders has been kept unchanged at 7 per cent taxable. Thanks to the increased demand for electricity in the Gujarat region, which exceeded the Company's generating capacity, the sales of energy staged a sizable rise of Rs. 49.28 lakhs, or about 10 per cent, to Rs. 542.55 lakhs. Reflecting partly the larger output of electricity and partly the inflated prices of coal and fuel, the value of coal and fuel consumed went up sharply by Rs. 32.81 lakhs to Rs. 288.42 lakhs, or by more than 12 per cent. The other expenses, which include the wages and salaries of staff, also rose sizably from Rs. 106.65 lakhs in 1959-60 to Rs. 120.50 lakhs, thus neutralising a part of the expansion in earnings. Accordingly, the gross profit has improved by just Rs. 4.65 lakhs, or 3.2 per cent to Rs. 143.23 lakhs.

In keeping with the expansion in gross profit, the Agents' remuneration has increased by Rs. 51,000 to Rs. 8.46 lakhs. The provision for depreciation is also higher at Rs. 49.68 lakhs, as against Rs. 48.52 lakhs in 1959-60. No amount has been set aside for taxation, as the benefit of accelerated depreciation allowances was still available. After these necessary provisions, the net profit works out to Rs. 87.09 lakhs, and compares favourably with that of Rs. 84.11 lakhs for the previous year and Rs. 72.76 lakhs for 1958-59. After writing off a sum of Rs. 1.07 lakh as capital expenses, the Directors have been cautious enough to set aside Rs. 19.73 lakhs to reserves, as against Rs. 16.87 lakhs a year ago. It will be noted that whatever increase there was in the net profit has been used entirely to enhance the amount ploughed back. The dividend to ordinary shareholders has been maintained at the modest level of 7 per cent subject to tax, giving a net return of 4.9 per cent. This compares unfavourably with the tax-free rates of 6¾ per cent and 6.5 per cent paid for 1959 and 1958, respectively.

The progress of the Company since 1957-58 is depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale of energy	542.55	493.27	455.76	399.99
Other income	11.60	9.57	7.06	7.48
Consumption of coal and fuel ..	288.42	255.61	241.23	202.75
Other expenses	120.50	106.65	92.37	86.05
Gross profit	145.23	140.58	130.12	118.61
Agents' remuneration ..	8.46	7.95	6.96	5.74
Provision for—				
Depreciation	49.68	48.52	45.34	44.28
Taxation	..	..	5.06	5.00
Net profit	87.09	84.11	72.76	63.59
Transfer from reserve or excess provision written back	..	..	0.13	2.07
Capital expenses written off ..	1.07	0.36	0.37	0.37
To reserves	19.73	16.87	9.67	8.48
Dividend	61.23	61.23	59.05	56.86
	(7%)*	(7%)*	(6¾%)	(6½%)
Carry forward	..	0.01	0.04	0.01
Sales of energy (in million kw.h.) ..	755.43	698.21	689.80	630.68

* Subject to deduction of tax.

The Company connected as many as 11,574 new consumers during the year under review, as against 10,082 in the previous year taking up the number of consumers to 83,557 as on 31st March 1961. Sales of energy for public and private lighting and fans which had risen by 4.58 million kw.h. in 1959-60, staged a further rise of 6.75 million kw.h. to 41.51 million kw.h. during 1960-61. Sales of energy for power purposes, too, went up by 39.69 million kw.h. to 564.76 million kw.h. on top of an increase of 24.17 million kw.h. in the previous year. Likewise, the supply of energy to North Gujarat Grid witnessed an expansion of 10.78 million kw.h. during the year under review in refreshing contrast to the decline of 20.34 million kw.h. registered in 1959-60. Total sales of energy showed a perceptible increase of 57.21 million kwh. or of 8.2 per cent in 1960-61, as against just 8.41 million kw.h. or 1.22 per cent in the preceding year.

The generating capacity of the Sabarmati power station remained unaltered at 157,000 kw. during 1960-61, but the station peak increased by 8,400 kw. to 149,200 kw. In their report to the shareholders, the Directors state that the continuity of supply from the Sabarmati power station was maintained during the year under review and that the whole plant had been kept in efficient operating condition.

(Continued on page 672)

RESULTS OF ORIENT PAPER STEADY

DIVIDEND AND TRANSFERS TO RESERVES MAINTAINED

INCREASED production, due to better efficiency, and normal working account for the satisfactory results of the Orient Paper Mills Limited [Managing Agents: Messrs. Birla Brothers (Private) Ltd., Calcutta] for the year ended 31st March 1961, which was characterised by higher manufacturing costs and additional burden of excise duty, on the one hand, and reduced sale prices for paper and paperboards, on the other. Production went up during the year, as is borne out by a rise in the consumption of materials, stores and spares and the stocks at close. Although the year witnessed the full impact of lower sale prices which came into effect from 1st January 1960, gross sale proceeds improved from Rs. 785.22 lakhs to Rs. 894.21 lakhs. But, in terms of gross and net earnings, the performance is not so impressive, as profit before taxation and other statutory provisions has improved only slightly from Rs. 197.71 lakhs to Rs. 203.66 lakhs and the net profit at Rs. 74.90 lakhs has been practically maintained at the last year's level of Rs. 72.44 lakhs. This is largely due to increase in costs of the prerequisites for production. Expenses other than raw materials, stores, etc., rose from Rs. 232.59 lakhs to Rs. 256.59 lakhs. The Company paid excise duty and discount of Rs. 142.62 lakhs, as against Rs. 106.16 lakhs in the previous year, with excise alone accounting for an increase of Rs. 31.02 lakhs. The dividend on ordinary shares has been maintained at Rs. 2.25 per share of Rs. 10 each, subject to deduction of tax, which gives a net return of Re. 1.32. Allocations to reserves are maintained at Rs. 30 lakhs, with development rebate reserve getting Rs. 3 lakhs and general reserve Rs. 27 lakhs.

The comparative table below gives an idea of the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds (gross)	8,94.21	7,85.22	7,01.22	5,41.27

* Subject to deduction of tax.

† Rs. 1.56 lakhs paid later under Preference Shares (Regulation of Dividends) Act, 1960.

The modernisation programme of the Company is expected to be practically completed by the end of the current year. The Export-Import Bank of Washington has sanctioned a 18.5-million-dollar loan to the Company for the Amlai Paper Mills project, the capacity of which was raised last year by the Government from 100 tons to 150 tons per day. Clearance of the credit and issue of necessary import licences for machinery to be supplied by Messrs. Beloit Iron Works, Beloit, Wisconsin, U.S.A., are being considered by the Government. Meanwhile, preliminary work on the project has been started. It has been decided to amalgamate the Hindustan Cellulose and Paper Mills Ltd., a wholly-owned subsidiary of the Company, with the Orient General Industries Ltd., another wholly-owned subsidiary unit, with the latter agreeing to allot one fully paid-up ordinary share of Rs. 10 for each fully paid-up ordinary share in the former. Necessary petitions have been moved before the High Courts of Calcutta and Cuttack for sanction of the scheme. The Company has filed a writ petition before the High Court of Orissa at Cuttack challenging the validity of the levy under the Orissa Taxation (on Goods carried by Roads or Inland Waterways) Act, 1959, and obtained an interim stay order. It will be recalled that the representations made by the Company last year to the Orissa Government for abolition of or reduction in the rate of levy on bamboos and coal carried by means other than railways or airways did not yield any results.

Subsequent to the modification of the rights of the holders of tax-free and taxable preference shares in respect of dividends payable to them for the year ended 31st March 1961 and the subsequent financial years, the Directors have recommended payment of increased dividends. Accordingly, the holders of these shares will get, after deduction of tax, the same amount of dividend which they received before enactment of the Finance Act, 1959.

The paid-up capital of the Company, as at 31st March 1961, amounted to Rs. 326.83 lakhs, of which Rs. 146.83 lakhs are in ordinary shares of Rs. 10 each and the balance of Rs. 180 lakhs in preference shares. Since then, the equity capital has been raised by the issue of 440,475 shares of Rs. 10 each, at a premium of Rs. 12 per share, yielding Rs. 44.05 lakhs by way of capital and Rs. 52.86 lakhs by way of capital reserves, representing the premium. As against this addition to the capital account, the Company redeemed Rs. 1 crore worth of debentures on 30th June 1961. Before these changes in capital account, that is, as at the close of March last, the Company's reserves and surplus were Rs. 353.67 lakhs. Secured loans at Rs. 176.52 lakhs, including the mortgage debentures subsequently redeemed, were lower as compared with Rs. 209.47 lakhs in the previous year. Current liabilities and provisions were reasonably low at Rs. 166.28 lakhs, giving a total indebtedness of Rs. 343.80 lakhs. They were more than adequately covered by current assets, loans and advances aggregating Rs. 358.56 lakhs, excluding investments at Rs. 22.67 lakhs. Gross block increased during the year to Rs. 1,030.98 lakhs from Rs. 1,001.40 lakhs in the previous year and has been adequately written down to Rs. 655.25 lakhs.

At their current market value of Rs. 36.60 ex-div., the Company's Rs. 10 fully paid-up ordinary shares yield a net return of 3.59 per cent per annum, free of tax.

(Concluded from next column)

a 3-Bowl Pneumatic High Efficiency Water Mangle were installed and put into service.

"A sum of Rs. 3,45,000 has been paid to the Vasant Industrial and Engineering Works, Bombay, for a complete 6-Colour Roller Printing Plant supplied by them which is in the course of erection. A Rodney Hunt Continuous Peroxide Bleaching Plant which was ordered last year has arrived and is also under erection for which payment of Rs. 7,48,000 has been made to the suppliers. A sum of Rs. 4,50,000 has also been paid for High Speed Whitin's Combing Equipment consisting of one Drawing Frame, one Superlap machine and 5 Combers which have all arrived and are being installed. For housing all the new processing machinery, the Bleach and Dye House which was acquired last year from the sister company, the Minerva Mills Ltd. is being renovated and a large new block is being added involving a capital expenditure estimated at approximately Rs. 7,50,000 out of which about Rs. 4,50,000 has already been paid to the contractors in respect of work already done by them. All the new machinery when fully commissioned, together with certain other machinery yet to be ordered, will considerably improve the quality of the manufactured products and render the working of the Mills much more profitable.

"By way of expansion, a Waste Spinning Plant of 1,200 spindles for which a licence was received last year, has also been ordered for which an irrevocable letter of credit for Rs. 9,52,000 has been opened. This machinery is expected to arrive about the middle of next year, and when put into service, is expected to further increase the earnings of the Company. With regard to the 144 automatic looms to be installed by way of expansion under the Export Promotion Scheme, efforts are being made to obtain a licence for importing them from America."

The financial position of the Company, as disclosed by its balance-sheet as on 28th February 1961, is quite satisfactory. The paid-up capital has been raised from Rs. 37.25 lakhs in 1959-60 to Rs. 47.15 lakhs, comprising Rs. 39.68 lakhs in 79,365 ordinary shares of Rs. 50 each and Rs. 7.45 lakhs in 14,901-4½ per cent taxable cumulative preference shares of an equivalent amount. This is supplemented by Rs. 39.57 lakhs of reserves and surplus. The gross block rose from Rs. 117.74 lakhs to Rs. 129.63 lakhs during 1960-61 and is well depreciated to Rs. 55.13 lakhs. The total borrowings and other current liabilities at Rs. 100.96 lakhs are adequately covered by current assets of the order of Rs. 109.43 lakhs. In addition, there are investments of the value of Rs. 21.48 lakhs. Of these, Rs. 18.21 lakhs are in the shares of Modern Mills Ltd., the market value of which as at the end of February last, was Rs. 28.71 lakhs.

The Rs. 50 fully paid ordinary shares of the Company are currently quoted at Rs. 68.50 cum-dividend on the Bombay Stock Exchange. At the proposed rate of dividend of Rs. 7 per share (taxable), the net yield, on an ex-dividend basis, works out to 7.7 per cent per annum.

MYSORE SPINNING'S SALES LOWER

DIVIDEND MET FROM RESERVES

THE two successive reductions in the prices of cloth and yarn effected during the latter half of 1960 and the high prices of raw cotton have adversely affected the financial results of the Mysore Spinning and Manufacturing Company Ltd. (Managing Agents: Messrs. N. Sirur & Co. Private Ltd., Bombay) for the twelve months ended 28th February 1961. In spite of the buoyant trading conditions during the first half of the year under review, the Company's sales fetched a lower sum of Rs. 168.12 lakhs in 1960-61, as against Rs. 171.17 lakhs in the preceding year and Rs. 197.64 lakhs in 1958-59. The closing stocks, however, were higher at Rs. 43.99 lakhs, as against Rs. 34.16 lakhs in the previous year. Other income, the bulk of which represents the dividend from the Modern Mills Ltd., has improved from Rs. 3.70 lakhs to Rs. 4.79 lakhs. The value of cotton, stores and power consumed, however, rose only modestly by Rs. 1.33 lakhs to Rs. 113.03 lakhs and other expenses by Rs. 5.05 lakhs to Rs. 59.73 lakhs. The gross profit is, therefore, higher at Rs. 9.98 lakhs, as compared with Rs. 8.49 lakhs for the previous year and Rs. 5.50 lakhs for 1958-59.

The net profit, however, is only Rs. 1 lakh. This is due to two reasons: (1) the provision for depreciation has absorbed Rs. 6.04 lakhs as against less than Rs. 5,000 in the previous year, and (2) certain expenditures aggregating Rs. 2.49 lakhs pertaining to previous years have had to be adjusted. These expenses are the result of a decision of the Supreme Court in the Cotton Octroi Duty Case (Rs. 2.32 lakhs) and bonus to clerical staff for 1960, following special settlement with them. The sharp rise in the provision for depreciation is the result of the Company having to follow the basis laid down in the Company Law, instead of that adopted for tax purposes; under the latter, the Company would have had to provide no more than Rs. 3.79 lakhs. No provision for taxation has been made for the third year in succession, as none was considered essential on account of unabsorbed depreciation allowances of previous years.

So far as the shareholders are concerned, the most important factor is dividend. This the Directors have maintained at 14 per cent taxable, and that on a higher equity capital following the issue of 19,780 new ordinary shares of Rs. 50 each; the dividend on these new shares is for the second half of the year only. In order to permit the payment of both ordinary and preference dividends, the Directors have had to withdraw Rs. 5.80 lakhs from the general reserve.

A synoptic view of the progress of the Company in the last four years can be had from the comparative table given below.

(In lakhs of rupees)

	For the year ended 28th/29th February			
	1961	1960	1959	1958

The management of the Company has continued to pay close attention to the problem of improving the efficiency, and expanding the capacity, of the mills. In 1960-61, a sum of Rs. 13.69 lakhs was spent on additions to fixed assets, raising the total capital expenditure in the past four years to Rs. 22.27 lakhs.

The following extracts from the Directors' report will give readers a clear idea of the progress of the renovation and expansion programme of the Company:

"The Company's plans for renovation and expansion are progressing satisfactorily. During the year under report a 7-Bowl Kunitech Calender and

SYNOPSES OF COMPANY REPORTS

Kalpetta Estates Ltd.

(*Managing Agents*: Messrs. A. V. Thomas and Co., Ltd., Alleppey, Kerala State.)

Annual General Meeting—14th October.

Working Results:

	For the year ended 30th April (In thousand rupees)	
	1961	1960
Sales (tea, rubber, coffee, cardamom and other produce)	13,06	9,84
Closing stock (tea, coffee, rubber cardamom, etc.)	2,52	2,28
Gross profit	3,10	1,95
Transfer to Managing Agents' remuneration ..	26	15
,, ,, depreciation	46	41
,, ,, taxation	1,35	40
Net profit	1,03	99
Adjustments	1	7
Appropriations:		
Total available balance	1,04	1,06
Transfer to development reserve ..	Nil	5
Proposed dividend (taxable) Equity ..	1,00 (12½%)	1,00 (12½%)
Carried forward	4	1

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Tea*: The crop secured during the year was 1,59,711 kgs. at a cost of Rs. 2.77 per kg. against an estimate of 1,40,614 kgs. at Rs. 2.87 per kg., the average sale price realised being Rs. 4.46 per kg. against Rs. 4.10 per kg. last year.

Rubber: The crop harvested during the year was 1,36,334 kgs. at a cost of Rs. 2.72 per kg. against an estimate of 1,20,201 kgs. at Rs. 2.52 per kg. The average sale price realised was Rs. 3.32 per kg. against Rs. 3.37 per kg. in the previous year.

Cardamom: Against an estimate of 4,535 kgs. to cost Rs. 11.43 per kg. a crop of 5,024 kgs. was secured at a cost of Rs. 13.73 per kg. The average selling price realised was Rs. 18.66 per kg. against Rs. 19.77 per kg. last year. The increase in the cost of production in spite of a better crop is due to intensive cultivation works and pest control measures.

Coffee: The coffee crop harvested this year was 1.442 bushels of dried cherry estimated to yield about 12,600 kgs. against the estimate of 10,160 kgs.

Estimate for 1961-62

Tea	...	154,222 kgs.	to cost Rs. 2.99	per kg.
Rubber	...	1,36.078 ,,	,, 2.73	,,
Cardamom		6.804 ,,	,, 10.39	,,
Coffee	...	15,240 ,,	,, 2.42	,,

The properties of the Company have been regularly visited by the visiting agents and the managing agents' representatives and are maintained in good condition. Since the close of the year under review, 56 acres of the old rubber area have been replanted with budded rubber of high yielding clones and 51 acres of reserve area have been cleared for new planting with rubber in 1962 on Poonoor Estate. About 130 acres of reserve land on Chulika have been planted with cardamom and further areas are proposed to be planted up with this crop before the close of the current season.

Accounts in brief as at 30th April 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital* ..	8,00,000	Gross block ..	19,45,239
Reserves and surplus..	8,67,516	—Depreciation ..	3,96,051

* This includes Rs. 3,00,000 transferred from general reserve No. 1.

Extracts from the Directors' report: Production and despatches have been as under:

(Tonnes)

	Production		Despatches
	Clinker	Cement	Cement
1959	1,72,993	1,67,425	1,54,559
1960	1,95,451	2,12,051	2,21,414

Substantial improvement in production of clinker and cement during the report year is responsible for marked improvement in the working results. This improvement has been achieved inspite of increase in cost of production due to higher cost of coal, stores and spare parts and enhanced railway freight. Fixation of uneconomic packing charges for the last quarter of the year substantially affected profits in the closing months. The formula for determination of packing charges in vogue for the last decade was given up and fixation for the quarter October-December 1960 was made by the Government arbitrarily.

Movement and supply of coal and gypsum have been causing considerable anxiety. Due to this difficulty, production in the current year is being affected. In the face of prevailing general scarcity of cement, the Company's works is confronted with accumulating stocks due to lack of transport. Transport position has remained acute despite the high priority for Cement Industry and there are also no signs of any improvement at present. While determining attainable production and manufacturing cost in relation to price fixation, the impact of transport inadequacy on production should not be ignored.

The Company along with other cement producers has formed a Cement Manufacturers' Association. This fulfilment of a long-felt need will help in putting up the industry's case on a united basis on all important matters.

The Company has been granted an industrial licence for the manufacture of slag cement. Negotiations in this respect are in progress. The process of gradual rehabilitation and modernisation is continuing and with the expected revision in cement price the Company will be able to accelerate the pace. This improvement and the expected increase in cement price would better the working results.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.

Carried forward	21	36

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: There was a substantial reduction in the number of looms and in the working hours during the period under review due to an acute shortage of raw jute.

The year was a trying one for the industry and trading conditions were difficult throughout. The rise in prices of jute fibre, the resistance of foreign buyers to high prices in finished goods, the increase in the incidence of fixed overheads over a decreased production due to reduction in working hours of looms and the interim relief granted to workers have all contributed to the reduced profits during the year. The Company's mill was unfortunate to face a labour strike from 16th January 1961 to 29th January 1961 due to retirement of some workers above 58 years of age and the matter was favourably settled with the workers before the labour Commissioner.

Trading conditions continued to be difficult during the current financial year but with the prospects of a large jute crop, it is hoped that conditions will soon improve and return to normal.

The 24 "One Mack" automatic weaving machines, which were on order, have been received during the current year. The looms have just been installed and are working satisfactorily.

Accounts in brief as at 31st March 1961 are as under:—

‡ Only a sum of Rs. 774.

Extracts from the Directors' report: The directors feel that the working results for the year ended 31st March 1961 have been quite satisfactory. The general condition of the estate has very much improved.

Crop:—The coffee crop realised for the year under review was 194 tons or 3,880 pounds (the crop for 1960 was 1,080 pounds) as against the estimate of 126½ tons.

The coffee crop estimate for the year 1961-62 is 155 tons Robusta and 10 tons Arabica.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital* ..	4,00,000	Gross block ..	3,80,760
Reserves and surplus..	1,81,838	—Depreciation ..	47,874
Other liabilities ..	2,89,312	Net block ..	3,32,886
		Current assets ..	4,21,365
		Investments	1,00,000
		Cash	10,893
Rs.	8,71,150	Rs.	8,71,150

* Paid-up capital consists of: (a) 40,000 ordinary shares of Rs. 5 each, fully paid up; (b) 10,000—6 per cent. tax-free cumulative preference shares of Rs. 10 each and (c) 10,000—5½ per cent. tax-free cumulative redeemable preference shares of Rs. 10 each.

Estrela Batteries Ltd.

(*Managing Agents*: Messrs. Choonilal Manilal Private Ltd., Bombay.)

Annual General Meeting—Held on 29th September. Dividend payable on or after 12th October 1961.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (gross)	1,30,59	1,10,06
Closing stock	12,40	11,40
Other income	1,70	1,13
Gross profit	13,45	7,09
Transfer to Managing Agents' commission ..	77	47
,, ,, depreciation	2,00	1,51
,, ,, taxation	3,16	1,71
,, ,, development rebate reserve ..	4	47
To payment of bonus to employees	3,77	1,75
Net profit	3,71	2,08
Adjustments	18	16
Appropriations:		
Total available balance	3,89	2,24
Transfer to general reserve	1,50	Nil
Proposed dividends (taxable) 5½% C. R. Preference ..	71	71
,, Ordinary ..	1,50 (10%)	1,35 (9%)
Carried forward	18	16

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: During the year under review the Company has achieved another high peak by increasing the sales to Rs. 130 lakhs from Rs. 111 lakhs, with the result that the Company's profit also reached a high peak, and the Board of Directors were able to recommend the distribution of the highest amount amongst shareholders in the Company's history.

In view of the Finance Act, 1960, the dividend on Company's preference shares was declared for the year 31st March 1960, in such a way that they got nearly the same amount of 5 per cent on their holdings as they used to get in the past. At the last annual general meeting, this procedure, followed in regard to preference dividends, was approved. Very recently, however, the Preference Shares Act was passed and became law. This Act, however, aiming to give relief to holders of preference shares, does not fully restore to them the amount which they were getting before revised structure of Company's taxation was introduced. Hence, the directors thought it desirable to change the rate of dividend to 7.14 per cent, subject to tax, under Section 18(3)(d) of the Income Tax Act, so that the preference shareholders may receive practically the same amount as they used to get before this change was made. Separate meetings of different classes of shareholders are, therefore, called to modify suitably the Memorandum and Articles of Association of the Company.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital* ..	24,97,680	Gross block ..	38,55,996
Reserves and surplus..	6,95,663	—Depreciation ..	24,53,865

* This represents amount written off to bring down the net value of fixed assets to income-tax written down value.

† A small sum of Rs. 301.

‡ Includes Rs. 1,20,000 transferred from contingency reserve.

§ Preference dividend is calculated at 9.1 per cent. subject to deduction of tax, in accordance with the Preference Shares (Regulation of Dividends) Act, 1960. This also includes Rs. 84,000 being the additional dividend on preference shares, for the year ended 31st March 1960.

Extracts from the Directors' report: Whilst the current new crop prospects appear to be favourable, the full flow of new crop jute will not be felt until early September and for the first half of the current year, therefore, trading losses have already been incurred. The prospects for the second half of the year are obscure but the directors hope that with an abundant supply of raw material the mills will be able to increase production and work profitably.

The most disturbing feature of the year, however, has been the fall in the industries' exports to India's traditional markets. A proportion of this is due to the severe and increased competition that Indian Jute Mills are experiencing from Pakistan mills. During the last three years that country has doubled its exports of sacking goods and during the last three months particularly considerable quantities of sacking orders have been lost to India. The greater loss, however, is that of buyers who are turning to other packaging materials and bulk handling due to high prices and violent market fluctuations. Shareholders are aware that Government and the Indian Jute Mills Association are most seriously concerned with this grave problem and the directors hope that the coming year will see a reversal of this disastrous trend.

The Company's mills also experienced considerable difficulty during the period of electric power shortage in the Calcutta area and as a result Sunday working was introduced which is still continuing. New *Winding* and *Pre-beaming machinery* was installed at Lower Mill during the year and with the completion of the modernisation of the spinning and preparing sections of the mills, the directors are now considering the introduction of new forms of weaving equipment. Orders have, therefore, been placed for a unit of *One Mack weaving machines* and delivery is expected in 1962.

The Company's investment in Messrs. Isaac Holdens (India) Ltd. was increased during the year with the purchase of 86,516 equity shares at the time of the public issue for that company. The first and final call of Rs. 5 per share has since been paid on this issue. This issue was extremely well received by the public and this Company's investment should prove to be a substantial asset in due time.

Messrs. Landale & Clark Ltd. were also adversely affected by the shortage of jute and the sharp fluctuations in price as defaulting sellers made them liable for payments of market differences to their buyers. The Salvage Department of this company, however, continued to operate profitably and the prospects for the current year are not unsatisfactory.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital* ..	89,20,700	Gross block ..	2,80,85,747
Reserves and surplus..	89,45,363	—Depreciation ..	1,84,94,034
Other liabilities ..	2,24,21,288	Net block ..	95,91,713
		Current assets ..	2,44,56,135
		Investments	58,06,816
		Cash	4,32,687
Rs.	4,02,87,351	Rs.	4,02,87,351

* Paid-up capital consists of: (a) 40,000—7 per cent. cumulative preference shares of Rs. 100 each, fully paid up; and (b) 49,207 ordinary shares of Rs. 100 each, fully paid up.

Phillips Carbon Black Ltd.

(*Secretaries and Treasurers*: Messrs. Duncan Brothers and Co., Ltd., Calcutta.)

First Annual General Meeting—30th September.

Working Results:

The accounts for the year ended 31st March 1961 (the first year of the working of the Company) disclose a loss of Rs. 1,76,940 after providing Rs. 19,726 for Secretaries and Treasurers' minimum remuneration and providing Rs. 40,000 for taxation.

Extracts from the Directors' report: The Company was incorporated on 31st March, 1960 and an issue of 12,49,989 equity shares of Rs. 10 each was made in April, 1960. Of this issue, 4,99,999 shares were offered for public subscription. These shares offered to the public were 20 times over-subscribed.

Licensed Capacity: The Company was originally licensed by the Government of India to manufacture 22,000,000 pounds of carbon black per annum but this licence has since been increased to permit manufacture of 30,000,000 pounds of carbon black per annum.

Development: Work on the Company's plant at Durgapur is proceeding well. Good progress has been made with civil works, foundations, buildings and other structural works while orders for all other essential items of equipment, etc., have been placed. The plant is expected to commence production in about the middle of 1962 provided the necessary items of equipment are delivered within the time schedule stipulated with the suppliers. Some storage tanks have been completed on the site and the delivery of raw materials to build up stocks against the commencement of production has been taking place for some months now. Work is also proceeding on the Company's housing colony for employees. The site for this housing colony has been leased from the Government of West Bengal for this purpose. This site is situated along the north side of the Grand Trunk Road in the vicinity of milestone 111 adjoining a green belt and is within easy distance of the plant site.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital* ..	62,50,000	Block	4,38,081
Other liabilities ..	8,07,532	Construction work in progress	8,92,014
		Current assets ..	2,82,685
		Cash	48,28,532
		Miscellaneous expenditure	4,89,279
		P. & L. A/c (deficit) ..	1,76,940
Rs.	70,57,532	Rs.	70,57,532

* Paid-up capital consists of 12,50,000 equity shares of Rs. 10 each, Rs. 5 per share paid up in cash.

COMPANY MEETINGS AND DIVIDENDS

MIDNAPORE ZEMINDARY CO., LTD. Annual General Meeting, Calcutta, 6th October 1961. Dividend: *Nil*. Transfer books will remain closed from 4th to 6th October 1961, both days inclusive.

EAST INDIAN COAL CO., LTD. Annual General Meeting, Calcutta, 13th October 1961. Dividend: Rs. 2.00 per share, subject to deduction of tax. Transfer books remain closed from 29th September to 13th October 1961, both days inclusive.

KALPETTA ESTATES LTD. Annual General Meeting, Alleppey, Kerala State, 14th October 1961. Dividend: 12½ per cent or Re. 1.25 per share, subject to deduction of tax. Transfer books will remain closed from 7th to 14th October 1961, both days inclusive.

HINDUSTAN ELECTRIC CO., LTD. Annual General Meeting, Bombay, 17th October 1961. Dividend: 4 per cent or Rs. 4.00 per share, subject to deduction of tax, payable on and after 28th October 1961. Transfer books remain closed from 30th September to 14th October 1961, both days inclusive.

NEW KAISER-I-HIND SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 18th October 1961. Dividend: *Nil*. Transfer books will remain closed from 7th to 18th October 1961, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Final dividend of £4 per cent net (tax applicable at 7s. 9d. in the £), for the year ended 31st March 1961, payable on 11th November 1961.

TRAVANCORE SUGARS AND CHEMICALS LTD. Taxable dividend of 7½ per cent or Re. 0.75 per ordinary share, for the year ended 30th April 1961. Transfer books will remain closed from 16th to 30th October 1961, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Dividend of Re. 1.50 per ordinary share (on old capital), for the year ended 31st March 1961. Transfer books will remain closed from 27th September to 13th October 1961, both days inclusive.

THE WATER OIL CO. (INDIA) LTD. Taxable interim dividend of Re. 0.70 per share, for the year ending 31st October 1961.

KINGSLEY GOLAGHAT TEA CO., LTD. Taxable ordinary dividend of Rs. 35.00 per ordinary share, for the year ended 31st December 1960. Transfer books were closed from 20th to 30th September 1961, both days inclusive.

RANE (MADRAS) LTD. Taxable dividend of 14 per cent or Re. 0.70 per ordinary share, for the year ended 31st March 1961. Transfer books remain closed from 23rd September to 6th October 1961, both days inclusive.

NEW CHUMTA TEA CO., LTD. Taxable dividend of 15 per cent or Re. 1.50 per share, for the year ended 31st December 1960. Transfer books were closed from 16th to 29th September 1961, both days inclusive.

HULDIBARI TEA ASSOCIATION LTD. Taxable dividend of 22½ per cent or Rs. 2.25 per share, for the year ended 31st December 1960. Transfer books were closed from 16th to 29th September 1961, both days inclusive.

HASIMARA INDUSTRIES LTD. Taxable dividend of 17 per cent or Re. 1.70 per ordinary share, for the year ended 31st December 1960. Transfer books were closed from 16th to 29th September 1961, both days inclusive.

SAPOI TEA CO., LTD. Taxable dividend of 22½ per cent or Rs. 2.25 per share, for the year ended 31st December 1960. Transfer books were closed from 21st to 29th September 1961, both days inclusive.

ETHELBARI TEA CO., LTD. Taxable dividend of 5 per cent or Re. 0.50 per share, for the year ended 31st December 1960. Transfer books were closed from 21st to 29th September 1961, both days inclusive.

HOOGRAJULI (ASSAM) TEA CO., LTD. Taxable dividend of 20 per cent or Rs. 2.00 per share, for the year ended 31st December 1960. Transfer books were closed from 20th to 29th September 1961, both days inclusive.

GILLAPUKRI TEA AND SEED CO., LTD. Taxable dividend of 25 per cent or Rs. 2.50 per share, for the year ended 31st December 1960. Transfer books were closed from 21st to 29th September 1961, both days inclusive.

A NEW DEVICE IN SUGAR MAKING

A British firm (William Boby and Company, Ltd., of Rickmansworth, Hertfordshire) is marketing a new instrument to eliminate the severe corrosion caused by small amounts of sugar in the feed water of boilers used by sugar-processing firms all over the world. Invented by the British Sugar Corporation, it will sound the alarm when the sugar content of water exceeds two parts in 1,000,000 of water. The operation of the instrument depends on detecting photoelectrically the darkening produced when an aniline dye is added to water containing very small amounts of glucose. If 10 parts of glucose are present in 1,000,000 parts of water, the colour produced is deep blood-red, almost black. The instrument automatically samples boiler water every 12 minutes, adds a small dose of sulphuric acid to the sample—enough to convert it to glucose—boils it, and finally adds caustic soda to neutralise the acid and the dye (tetrasolium salt). The pink colour produced is measured by a photoelectric cell which causes the alarm to ring if the colour is darker than it should be.

With automatic operation, the instrument enables continuous watch to be kept on boiler water and cuts out expensive and time-consuming laboratory analysis. Twelve instruments, each costing less than £350, have been made and the first sold to the West Indian Sugar Corporation.

THE MYSORE PAPER MILLS LIMITED

CHAIRMAN, MR. SHIVANANJAPPA, URGES INCREASE IN PAPER PRICE

LARGE EXPANSION SCHEME UNDER WAY

ADDRESSING the Twenty-sixth Ordinary General Meeting of the Mysore Paper Mills Ltd., held at Bangalore on Friday the 29th inst., Mr. M. D. Shivananjappa, I.A.S., Chairman and Managing Director, made a cogent plea to the Government of India for a reconsideration of the paper industry's claim for upward revision of controlled prices for its products. The Tariff Commission's price formula, according to him, adversely affected the small units, in particular, and discouraged the expansion of existing ones and establishment of new ones. Mr. Shivananjappa reminded the authorities that the cost of production was mounting on account of increase in prices of raw materials, power, coal and chemicals. He also complained about the disproportionately high excise duty on packing and wrapping paper, as also the increases in railway freight. Despite these adverse circumstances, the Company had formulated a large expansion programme, with the object of more than doubling the annual capacity from 8,000 tons now to 18,000 tons.

The following is the full text of Mr. Shivananjappa's speech:

"LADIES AND GENTLEMEN,

"It gives me very great pleasure to welcome you to this the twenty-sixth ordinary general meeting of the shareholders and to place before you the report of the Directors and the audited balance-sheet for the year ended 31st March 1961. These have been circulated already and, with your permission, I shall take them as read and would proceed to review the main features of the year's operations.

Production

"Production during the year under review is quite satisfactory. Sales realisation during the year amounted to Rs. 123.22 lakhs, as against Rs. 141.31 lakhs in the previous year. The reduction in turnover is largely due to the revised prices fixed by the Government of India in accordance with the recommendations of the Tariff Commission from 1st January 1960, the effects of which were felt for the full year under review, as against only one quarter during the previous year. The efforts of the paper industry to move the Government of India for a suitable revision of prices in the interest of existing units, particularly to minimise the adverse effects on smaller units like ours, and in the interest of expansion of existing units and starting of new ones have not borne fruit and repeated requests are being made to the Government of India by the industry for a suitable revision, and I hope that the Government of India would view this question with sympathy.

"In regard to despatch of papers, I would like to keep you informed that during some months in the year, there were continuous railway booking restrictions and this led to accumulation of stocks which caused strain on our liquid resources—common to companies which finance capital projects by current resources—which necessitated drawals from the cash credit account. This year, we had also to meet tax liability to the extent of Rs. 9,32,700 and also to deposit advance tax under Section 18A of the Income-tax Act to the extent of Rs. 7,44,775. To provide for adequate working capital, your Directors have taken steps to raise the limit of cash credit account with the State Bank of Mysore to Rs. 25 lakhs. I should hasten to state that conditions have improved now and our products are moving quickly and there is no cause for anxiety.

Rise in Costs

"I must bring to your notice that manufacturing costs are mounting on account of increase in prices of raw materials, power, coal and chemicals and there are no signs of decline. Recently, the Government of India have levied an excise duty of Rs. 40 per tonne on caustic soda. Having regard to the rates of excise duty for writing and printings, it must be said that the rates of excise duty levied on packing and wrapping paper are disproportionately high and, in addition, there has also been an increase in railway freight and all these have added considerably to our expenses. The only hope, as it appears to my mind, lies in increasing production and improving efficiency and securing maximum economies calculated to reduce costs. It is with this view—pending implementation of the expansion scheme—action was taken to secure Dorr Oliver's Recausticising Unit, and I am glad to inform you that the equipments have been installed and taken to service and it is expected that appreciable economies would be secured which would go to reduce production costs.

I.F.C. Loan Fully Repaid

"Coming to the consideration of the balance-sheet, I have to mention that provision has been made for depreciation on fixed assets, calculated in accordance with the rates allowed for normal depreciation and extra shift allowances as per Income-tax Act, amounting to Rs. 6.69 lakhs, Rs. 1,69,700 towards development rebate and a further sum of Rs. 55,000 towards retirement gratuity. A provision of Rs. 6.5 lakhs has been made towards taxation. I am glad to inform you that the only one instalment of Rs. 4 lakhs that was due to the Industrial Finance Corporation of India has been paid during the year under review and the loan of Rs. 50 lakhs obtained from them for financing the first Expansion Scheme has now been fully repaid, about a decade ahead of due date. A sum of Rs. 12,50,000 remaining in the Industrial Finance Corporation of India Loan Redemption Fund has been transferred to general reserves. As the loan has been completely repaid, the Industrial Finance Corporation of India have withdrawn their nominee, Mr. T. Bhaskara Rao, from our Board of Directors. I am glad to acknowledge that the Board received valuable assistance and advice from Mr. T. Bhaskara Rao and your Board have placed on record their appreciation of his services to the Company.

"In regard to disposal of surplus, namely, Rs. 6,61,663, including carryover of last year, which stood at Rs. 51,968, your Directors have decided to transfer Rs. 2,50,000 to dividend equalisation fund, which fund now stands at Rs. 3,12,500, a sum of Rs. 62,500 having been provided for in 1954. Further, your Directors, having regard to the satisfactory working during the year under review, have proposed to maintain the rate of dividend at the level of previous year and to recommend declaration of a dividend of 15 per cent, subject to tax, absorbing Rs. 3,75,000; the balance being carried forward, and I am confident that these proposals will meet with your approval.

Labour Relations

"I am happy to inform you that the labour-management relations continue to be very cordial. Your Directors have been pleased to sanction a bonus of four months' salary or wages to the employees for the year ended 31st March 1961 and the same has been disbursed.

"In regard to the celebrations of the Silver Jubilee of our mills, you will remember that I had said on the last occasion that your Directors would fix a suitable date, and I am glad to announce that it has been proposed to celebrate the silver jubilee in a befitting manner during the last week of March or first week of April 1962, and invitations will be sent to the shareholders and I do hope that a very good number of shareholders will participate in the function.

Developmental Activities

"I now come to the important subject of the developmental activities of our mills in which you are deeply interested. When I had the privilege of addressing you, for the first time, in August 1959, having regard to the tightness of the foreign exchange position obtaining two years preceding, I cautiously expressed the hope that our application for increasing the production capacity of our mills from the present level of 8,000 tons to 18,000 tons would receive sympathetic consideration at the hands of the Government of India and that I would be able to formulate specific proposals for expansion. Last year, about this time I informed you that the necessary industrial licence had been received from the Government of India and that discussions with the Commonwealth Development Finance Company, Ltd., and the Industrial Credit and Investment Corporation of India for exchange loans had been encouraging, the only difficulty that had delayed implementation of our scheme of expansion. I should also like to recall that I informed you that, having availed myself of the opportunity of studying at close range the conditions and trends obtaining in capital goods market in foreign countries, I was confident of formulating a scheme of expansion which would be both sound and economical. It is indeed a matter of gratification to me, and I have no doubt it will be to you, that we have been able to secure loans to cover the value of plant and machinery to be imported from abroad and I shall come to the details presently.

"Though I do not wish to burden you with technical details relative to the scheme of expansion, yet I should like to state a few details of fundamental importance. You are aware that our existing unit is an integrated pulp and paper unit with a capacity to manufacture 8,000 tons, the primary raw material being bamboo, supplemented by rags, waste paper and wood-pulp. The paper-making capacity exceeds the pulp-making capacity, if only the primary raw material, bamboo is used. It has been explained in previous years that it is this imbalance between pulp-making and paper-making capacity that stood in the way of achieving the target production earlier.

Soda Recovery Plant

"The current capacity of the mills does not permit installation of a modern soda recovery plant, which alone secures higher percentage of chemical recoveries, procuring considerable economies. The present scheme of expansion contemplates use of only bamboo for manufacture of pulp, discarding rags and waste paper used at present. In this connection, I am glad to inform you that the Government of Mysore have agreed to supply annually 50,000 tons of bamboo required for the expanded plant. The pulp plant, after expansion, will have a capacity to produce sufficient quantity of pulp to feed the existing two paper machines of 15 tons each and also the new paper machine of 30 to 35 tons capacity. This increased capacity will enable us to install a modern soda recovery plant which secures considerable economies and reduce cost of production to a great extent and the production of 18,000 tons of marketable paper will greatly help to reduce costs by way of overheads, labour charges, etc., and also help to serve the needs of the community better. I have heard it said that, with the going into production of new units and additional units of the existing units, production may exceed demand by 1965, yet I feel that with the progress of educational and developmental activities of the Government of India and State Governments under the Five-year Plans, entailing expenditure of crores of rupees, there will be created a demand for paper in the ensuing years which will be positively favourable to the indigenous paper manufacturers. Speaking of ourselves, I should like to say that production of 18,000 tons of marketable paper will undoubtedly increase the earnings of our Company and will place the Company on a firm and sound basis ensuring a fair return on capital, and in so far as marketability is concerned, I wish to add that our steady and sustained supplies during good years and bad have established for our products a regular and an assured market.

"The scheme of expansion is estimated to entail a total expenditure of about Rs. 350 lakhs which is proposed to be financed as under:

	(Rs. in lakhs)
Share capital by rights issue	100
Rupee loan from the I.F.C.I.	60
Foreign exchange loans from C.D.F.C. and I.C.I.C.I.	140
Bank borrowings and other resources	50
	350

"As you are aware, the shareholders at their meeting held on 7th October 1960 accorded approval to the increase of authorised capital from Rs. 25 lakhs to Rs. 150 lakhs. In pursuance of that resolution, application had been made to the Controller of Capital Issues and his sanction obtained to raise Rs. 100 lakhs by issue of 10 lakhs of equity shares of Rs. 10 per share, attaching a premium of Rs. 2 per share. I do not wish to go into great details regarding the issue as you have all been in possession of the Letters of Offer issued in terms of the Controller of Capital Issues sanction order. I am glad to inform you that the Government of Mysore have agreed to take 10 per cent of the shares which are their quota of right shares and the balance of 90 per cent has been underwritten in compliance with the condition laid down by lending institutions, underwriting commission being 1½ per cent without brokerage.

"I am happy to inform you that the response from our shareholders has been encouraging and there have been numerous inquiries from non-members regarding the availability of the shares and I am hopeful that the issue would be a success.

Loans

"Reverting to the question of loans, I am very happy to inform you that I signed the Subscription Agreement with the Commonwealth Development Finance Company Ltd. on 18th August 1961, when I happened to be in London in connection with the expansion scheme of the Mysore Iron and Steel Works. According to the agreement, the Commonwealth Development Finance Company Ltd. would give us a loan of £525,000, or Rs. 70 lakhs, carrying an interest of 7¾ per cent repayable in seven equal annual instalments, the first instalment to be paid on 31st March 1970. This amount will suffice to finance 50 per cent of our purchases of equipment in the U.K. and Europe. Further, I am glad to inform you that the agreement between the Industrial Credit and Investment Corporation of India Ltd., and ourselves has also been signed on 1st September 1961 and, according to the terms and conditions, the Industrial Credit and Investment Corporation of India Ltd. will give us a loan of United States $1,470,000, or Rs. 70 lakhs, carrying interest at the rate of 7¾ per cent, repayable in 13 half-yearly instalments, the first instalment to be paid on 1st May 1965. This loan will finance the purchases abroad to the extent of 50 per cent and the two loans referred to above will fully cover our foreign exchange requirements. I am very happy to keep you informed that all the necessary permissions, consents and licences have been received from the Government of India. The terms and the conditions governing the loan from the Industrial Finance Corporation of India have been settled, and the agreement is being signed. According to the terms and conditions, the Industrial Finance Corporation of India have agreed to give us a loan of Rs. 60 lakhs, carrying an interest at the rate of 7 per cent, subject to a rebate of ¼ per cent repayable in 15 instalments, the first instalment to be paid on 1st July 1965. I should like to add that the Industrial Finance Corporation of India and the Industrial Credit and Investment Corporation of India Ltd. have each sought representation on our Board of Directors and we have agreed to it. In compliance of a statutory requirement, the Industrial Finance Corporation of India has stipulated a condition that the repayment of their loan should be guaranteed by a scheduled bank and I am glad to inform you that the Canara Banking Corporation Ltd., one of our bankers, has agreed to stand guarantee on a nominal guaranteeing commission of ½ per cent on the day-to-day balances due to the Industrial Finance Corporation of India.

"As you know, certain legal formalities have to be observed for execution of loan documents referred to above. To simplify the procedure and to avoid somewhat heavy expenditure, it has been agreed to appoint a common trustee and to execute a common Trust Deed for the purpose, and I am happy to inform you that the State Bank of Mysore has accepted our offer to be appointed trustee, who will look after the interests of the three lending institutions and on a nominal commission of 6 nP per cent on the amount of the loans. You have before you resolution No. 5 relating to the borrowing powers of the Directors and, as stated in the explanatory note, you are requested to pass the resolution to comply with the statutory requirement.

Imports of Machinery

"Having dealt with the question of finances, you will naturally expect me to say a word or two regarding the plant and machinery to be imported from abroad. We have had full discussions and consultations with well-known manufacturers and suppliers of plant and machinery in the U.K. and Europe, and it is important to bear in mind that we are free to select and buy equipment from well-known firms in the U.K. or the Continent as ours is not a package deal, and funds are available for the necessary purchases in the U.K. and Europe. As a result of extensive survey and study, we have formulated a scheme and a schedule of purchases and, in accordance with it, arrangements have been made to secure best equipments at economic prices. We have concluded arrangements to secure pulp plant and paper machine from Germany and boilers and modern soda recovery plant and cross cutters from the U.K. I should mention here that, agreeably with the policy of the Government of India, provision has been made in our scheme for the purchase of balance of equipment necessary from indigenous sources.

Technical Personnel

"I feel it a pleasant duty particularly to bring to your notice that the chief merit of our scheme lies in the fact that the work of erection assisted by two or three foreign erectors, installation, supervision and co-ordination of several units of the scheme is being undertaken by a devoted team of our own technical and administrative officers and operatives, who have the requisite knowledge, experience and skill, acquired and accumulated over years, and I am glad to acknowledge that it is these human resources that embolden me to launch this scheme of expansion and I am quite hopeful that the scheme will be implemented successfully and expeditiously.

"I have now to refer to resolution No. 6 regarding amendments to our Articles of Association. As has been stated in the explanatory note, our Articles of Association were framed and incorporated in 1936 at the time of inception of the Company. The Indian Companies Act 1956 and the subsequent Amendment Act 1960 have introduced considerable changes. As you are aware, our shares are quoted in the Stock Exchanges of Bombay, Calcutta and Madras and certain amendments to our Articles are called for to be in conformity with their regulations and all these amendments have been made and I seek your approval to the same.

"I am happy to say that, as mentioned in your Directors' report, your Directors have contributed a sum of Rs. 5,000 towards the Centenary Celebrations of Bharata Ratna Dr. M. Visvesvaraya, engineer-statesman of Mysore who has rendered meritorious services to the State and, I hope, you will appreciate and approve of contribution made.

"I am obliged to you all for the wholehearted support you have been extending and look forward with confidence for a full measure of support and encouragement in the implementation of the scheme of expansion.

"On behalf of the Company, I should express my grateful thanks to the Government of India and the Government of Mysore for their abiding interest in the progress of the Company and for having granted the necessary permissions, consents and concessions in connection with our scheme of expansion. On behalf of the Company, I should also express my grateful thanks to the Board of Directors of the Commonwealth Development Finance Company Ltd., London, Industrial Credit and Investment Corporation of India Ltd., Bombay, the Industrial Finance Corporation of India, New Delhi and the State Bank of Mysore and the Canara Banking Corporation Ltd., for their valued assistance in securing funds for the expansion scheme.

"I am grateful to my colleagues on the Board for the uniform courtesy, consideration and valuable guidance I have been receiving. I wish also to express, on behalf of the Directors and myself, our warm appreciation of the willing and efficient co-operation of all our employees.

"Ladies and gentlemen, I now move that the Directors' report and the audited balance-sheet and the profit and loss account for the year ended 31st March 1961 be 'approved and adopted.'"

N.B.—*This does not purport to be a report of the proceedings of the shareholders' meeting, a copy of which shall be sent to the shareholders separately.*

Notices

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

FINAL DIVIDEND FOR THE YEAR ENDED 31st MAY 1961

AT A MEETING OF THE DIRECTORS HELD ON THE 26TH SEPTEMBER, 1961, the following Final Dividend was recommended for the year ended 31st May, 1961, subject to deduction of Tax under Section 18(3D) of the Indian Income Tax Act:

Rs. 585 per share on the 100 original shares of Rs. 2,500 each.

Rs. 29.25 per share on the 71,400 Old shares of Rs. 125 each.

Rs. 11.70 per share of the 84,000 New shares of Rs. 125 each (Rs. 50 paid up).

This, together with the Interim Dividend paid in June 1961, makes a total distribution for the year, subject to Income Tax, of:

Rs. 825 per share on the 100 original shares of Rs. 2,500 each.

Rs. 41.25 per share on the 71,400 Old shares of Rs. 125 each.

Rs. 16.50 per share on the 84,000 New shares of Rs. 125 each (Rs. 50 paid up).

By Order of the Board,
WALLACE & COMPANY,
Secretaries and Treasurers.

Registered Office
9 WALLACE STREET,
BOMBAY 1.
26th September 1961.

THE ALKALI AND CHEMICAL CORPORATION OF INDIA, LIMITED

PAYMENT OF DIVIDEND ON PREFERENCE SHARES

IN CONNECTION WITH THE PAYMENT OF the above dividend for the half-year ending 30th September 1961, the Preference Registers of the Company will be closed from 4th October 1961 to the 11th October 1961, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LIMITED,
Secretaries.

CALCUTTA, 21st *September* 1961.

THE PEERMADE TEA COMPANY LIMITED

(*Incorporated in India*)

THE BOARD OF DIRECTORS HAVE SANCtioned payment of an interim dividend of 7½% on the Ordinary shares for the year ending 31st December 1961, subject to deduction of income-tax. The dividend will be paid to those members whose names are on the Company's Register as on 29th October 1961, or their Mandatees.

The transfer books of the Company will remain closed from 22nd October 1961 to 29th October 1961, inclusive.

By Order of the Board,
ASPINWALL & CO. (TRAVANCORE) LTD.,
Secretaries.

ALLEPPEY, 23*rd September* 1961.

The National Council of Applied Economic Research has undertaken a survey of ancillary industries in the States of Madras, Maharashtra and Bihar. Sponsored by the Government of India, the survey covers fifteen groups of industries in the field of light engineering, including machinery and machine tools, industrial, scientific and mathematical instruments, household equipment, automobiles, bicycles, radios and air-conditioning equipment. The objects of the survey are to collect information on the nature and extent of the existing ancillary relationships in industry, to present an analysis of these relationships and the factors favouring or hampering their development and to recommend measures for promoting the establishment and development of ancillary industries. The survey will cover small and big units as well as assembling and manufacturing units. Based on the findings of the survey, a plan for the development of ancillary production in engineering industries will be drawn.

MONEY STRINGENT AGAIN

(From Our Own Correspondent)

BOMBAY, *27th September*

The acute stringency in the short-term money market noted last week eased a little in the initial days of the week and yielded place to comfortable conditions later. Today, however, the tendency was stringent again. The inter-bank call money rate among Exchange and Indian banks eased gradually from 5 per cent at which level it stood last week to 3½ per cent. Today, however, the rate spurted to 4½ per cent, following heavy demand for funds from the Exchange banks. Other rates remained unaltered as under:

	Per cent
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3¾
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91 days' Treasury Bills of the Government of India sold through weekly tenders showed no new features. As against an invitation for Rs. 2 crores the total amount offered and accepted was the same. The average rate of accepted tenders remained unchanged at 2.5 per cent per annum. 91 days' intermediate Treasury Bills sold from the 20th to 23rd inst., aggregated Rs. 55 lakhs. Their sales will be continued from the 27th to 30th inst., both days inclusive.

A further contraction of Rs. 20.77 crores in notes in circulation, on top of a decline of Rs. 9.40 crores in the previous week, is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 22nd September 1961. As the notes held in the Banking Department have advanced by Rs. 2,71 crores, the total notes issued have declined by Rs. 18.06 crores. The foreign securities remained unchanged at Rs. 116.86 crores; the total foreign assets have, however, improved by Rs. 66.41 lakhs to Rs. 135.28 crores, as the balances held abroad have gone up by that amount. On the liabilities side of the Banking Department, the deposits of Central Government have fallen by Rs. 18.48 crores and those of other Governments by Rs. 16.80 crores. Deposits of banks, however, have improved by Rs. 5.64 crores. On the assets side, other loans and advances, which include advances to scheduled banks against usance bills, declined by Rs. 1.07 crore.

The statement of the scheduled banks for the week ended 15th September 1961 discloses a modest improvement of Rs. 1.45 crore in demand deposits and a contraction of Rs. 4.40 crores in time deposits. The deposits of the State Bank declined only slightly by Rs. 15 lakhs. Thanks to the stringent conditions in the money market, the borrowings from the Reserve Bank went up by Rs. 2.27 crores, of which the share of borrowings against usance bills was Rs. 1.10 crore. Their borrowings of demand nature from the State Bank also went up by Rs. 63.74 lakhs, but those of time nature shrank by Rs. 1.64 lakh. Investments of the scheduled banks, as a whole, declined by Rs. 5.06 crores, but as those of the State Bank fell by as much as Rs. 8.18 crores, it is quite obvious that investments of the other scheduled banks must have actually improved by Rs. 3.12 crores. Advances and bills discounted (bank credit) rose by Rs. 2.16 crores to Rs. 1,233.57 crores, on top of a rise of Rs. 11.47 crores in the previous week. Advances of the State Bank alone had gone up by Rs. 2.55 crores.

The Gilt-edged market did not display much activity. The Central loans were dull. The conversion loan shed 5 nP to Rs. 72.75. 3 per cent 1970-75 first Development Loan dropped an equal amount to Rs. 90.95. All other Central loans were unchanged. In the States section, 4 per cent 1969 Gujarat loan declined by 25 nP to Rs. 99. 4½ per cent 1972 new loans of West Bengal and Madras lost 50 nP and 15 nP, respectively, to Rs. 99.25 and Rs. 99.10. But 4½ per cent 1972 Andhra and U.P. loans were a little better by 10 nP and 20 nP at Rs. 98.60 and Rs. 99.05, respectively.

In the foreign exchange market, the rupee showed no change in relation to the U.S. dollar. Banks' selling and buying rates stood at Rs. 475.75 and Rs. 472.50 per 100 dollars, respectively, same as last week. In the New York foreign exchange market, the pound sterling weakened slightly in spot and gained fractionally in three months' forward. The latest available rates are 281.340-281.370 cents per £ for spot and 278.680-278.710 pe £ for three months' forward. Over the week, the pound sterling lost 0.04 cent in the spot and gained 0.19 cent in the three months' forward.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, *25th September*

Madras kip prices ruled steady. There was a fair volume of business for cow hides lower grades. Export trading was small because of the higher prices quoted by the tanners. Tanned buff hides and calves ruled steady and cow calf weak.

Tanned goat market remained unchanged. There was good overseas demand for prime sheep while inferior fifths in middle class sheep remained unsaleable. Tanners have been finding that the current output from their tanneries do not yield the anticipated higher selections.

In the German Tanned Skins Auctions held last week, clearance of stocks was small. Attendance was poor due to the elections in West Germany.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, *27th September*

The upward trend in bullion witnesed last week gathered further momentum during the week, marked by occasional dips caused by profit-taking by bulls at higher levels. Over the week, silver appreciated by some Rs. 3 and gold by a rupee. No special reasons can be attributed to the continuing rise in the value of bullion, except that operators as a whole feel bullish. It is mainly a question of sentiment.

In the first half of the week, the bears were in a hurry to cover their outstanding positions. Later, some bull support emerged, especially for gold, on reports that gold bars of the value of Rs. 11 lakhs were seized by customs officials from a ship, s.s. Roebia, that called at Madras port. Daily arrivals of both silver and gold were more than the offtake, but this had no sustained effect on prices, as adjustments of outstanding forward positions in upcountry markets such as Jaipur and Indore had a bullish impact. Arrivals of silver averaged 20 bars a day, while the offtake was just 5 bars. In gold, arrivals were 3,500 tolas and the offtake 2,500 tolas.

Adjustment rates fixed today were Rs. 206.20 for silver and Rs. 125.75 for gold; the corresponding rates a week ago were Rs. 203.45 per kilogram and Rs. 125.25 per 10 grams, respectively.

Both spot silver and spot gold were at a discount as compared with *Magshar* (December) settlement, which is the live forward contract now. This trend is in keeping with the poor daily offtake and the bullish view that is being taken for the distant months.

The world price of gold in the London market is a little higher at $35.18⅜, as against $35.18⅜ a week ago.

The following table shows the trend of prices during the week under review:

	27-9-1961 (closing)	High	Low	20-9-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine) ..	126.00	126.00	125.10	125.50
Forward: Bhadrapad* ..	125.10	125.50	125.05	125.80
Margashir ..	126.35	126.35	125.15	125.85
Sovereign	96.75	96.75	96.50	96.50
SILVER				
Ready (.996 fine) ..	206.20	206.45	203.80	208.45
Forward: Bhadrapad† ..	205.40	205.85	203.50	208.65
Margashir	207.80	207.65	204.55	204.70
London—				
Silver Ready	79¼d.	—	—	79¼d.
Silver Forward	80¼d.	—	—	80¼d.
Gold	250s. 2¼d.	250s. 2¼d.	250s. 1d.	250s. 1¼d.
New York—				
Silver	91.875 cents	—	—	91.875 cents

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

BLACK PEPPER IMPROVES

(Messrs. Parekh and Co.)

BOMBAY, *27th September*

During the earlier part of the week Malabar black pepper moved further down to Rs. 374 for ungarbled and Rs. 384 for garbled in sympathy with forward delivery for October which climbed down to Rs. 386 under pressure of panicky bull liquidation and short selling by bears. In the melee following the heavy fall in October delivery, some of the exporters are reported to have sold to New York some quantity at as low as $0.41½.

In the later part, however, the market showed some improvement as New York continued to show interest at round about $0.42½. Weak holders in spot and tired longs in forward having liquidated, prices both in spot garbled and October spurted to Rs. 394 and Rs. 404, respectively. A knowledgeable source from New York informs that after the annual get-together of the members of the American Spice Trade Association which is generally serving as a forum for exchanging views regarding the future of various spices, New York dealers in general think that the price of $0.42 to $0.45 for black pepper is a safe level and a good-buy in view of the lower production of Lampong resulting in a stronger statistical position of world pepper.

The stock position of Malabar is strong as the floating stock at the terminal markets and holdings of the growers are running down. But, some incentive in the form of revival of inland and foreign inquiries for the upturn in the prices and in the improvement of the morale of the stockists is required. October, after improving to Rs. 404, came down to Rs. 400 and December from Rs. 390 to Rs. 382 while ready remained fairly steady at Rs. 383. Callcut is quoted at Rs. 380 after receding to Rs. 370. Stock in the hands of the growers and traders is estimated to be not more than 2,500 tons.

Constructive news from Singapore is lacking as the foreign inquiries there are also restricted. The main holders of Lampong in the Port are unwilling sellers at the present lower price but the secondhands among the importers are selling at the lower either for keeping themselves in touch with overseas or in expectation of replacing at some future date with profit.

Spot in New York remained fairly steady at $0.45. The dealers there are said to be accumulating contracts for nearby shipments. They continue to sell small quantity even at a loss on their former holdings in order that the grinders may not get excited, thus spoiling their chance of buying at a lower level from the origins.

Ready peppes in Bombay is nominally quoted at Rs. 390 per 20 kilos with demand poor.

COTTON FUTURES DECLINE AT CLOSE

(From Our Own Correspondent)

BOMBAY, *27th September*

The firm trend witnessed in the cotton futures market last week gathered strength during the week under review. Short covering and speculative buying induced by bullish weather news resulted in a spurt in values. Heavy rains in Vidarbha and other regions gave rise to fears that the crop would be damaged. In fact, on account of the untimely rains, some private trade estimates of the crop were revised downwards to about 4.9 million bales; as against 5.2 million bales a month ago. The release of a large quota of 125,000 bales and good mill demand for ready cottons imparted further strength to the market. Persistent buying by local and up-country operators pushed futures values higher. The Jarilla March contract steadily firmed up from Rs. 613.25 last week-end to Rs. 624 yesterday. Profit-taking and liquidation, which ensued, resulted in a fall in the quotation to Rs. 620 towards the end of the session. The trend of the market was irregular today, with the contract hovering around Rs. 620.

The spot market at Sewri reported good mill demand for both current and new crop varieties. Scarcity of choice quality cottons was beginning to be felt. Interest was centred round popular varieties such as Surti, Laxmi, Vijay, Digvijay, L.147, Co2, Kalyan and 197/3. New crop varieties also evoked good attention.

A noteworthy development of the week was the commencement of trading in non-transferable, specific delivery contracts in 216F H-14, 320F. L.54, Bengal *Deshi* of Punjab, Rajasthan and U.P., 197/3, L.147, Jarilla G-6 and G-12. This is expected to stimulate trading in spot cotton.

The trade welcomed the export quota announcement (for details of the quota see page 644). It is particularly happy that its suggestions in respect of the quantity and the basis of licensing have been accepted by the Government. A welcome feature of the quota is the stipulation that allotment letters would be issued on registration of sales by exporters and not on presentation of shipping bills as was the case hitherto. The quota, it is pointed out, would provide an opportunity for a greater number of shippers to participate in it, as the clause relating to the eligibility for export on the basis of performance has been extended to cover a period up to 31st August 1961, as against 31st August 1958.

Typical of the trade's reaction to the quota announcement was the statement made by Mr. Madanmohan Ruia, President of the East India Cotton Association. Welcoming the quota, Mr. Ruia said:

"Apart from the quantum released, what makes me very happy is the fact that a simple export licensing procedure is prescribed in line with the recommendations which the trade has made earlier. I am sure the foreign buyers will also appreciate the gesture in that they are assured of a supply of a difinite quantity of this popular variety right at the beginning of the season and that they can obtain shipments according to their own needs since a fairly lengthy shipment period of six months has been provided for. Although the foreign reaction to this announcement is not readily available, I am quite hopeful that the entire quota would be absorbed and a sizable amount of foreign exchange for the country earned before long. I am convinced that, more than anything else, timely announcements like these tend to bring the Government and the trade closer together. I daresay that the trade will wholeheartedly co-operate with the Government in the task of fully exporting the quotas released from time to time to the best possible advantage of the country."

The quota had no marked effect on the prices of Bengal *Deshi* cotton in the Bombay market. This is attributed to the long shipment period which extends up to end of March 1962.

Demand for foreign cotton was largely confined to East African, Sudan and Pakistan cottons. Some mills showed interest in short staple U.S. cottons, thanks to fear of a possible scarcity of cotton spinning lower counts. Mills did not show much enthusiasm in buying Pakistan cottons because the prices were not considered sufficiently attractive. It has been officially notified that import of AC.134 cotton, belonging to 289F variety from Pakistan, would be permitted, provided it is accompanied by a survey certificate, certifying that the staple length of the particular lot sought to be imported is 1" or below, as the case may be.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Kalyan 825; Co2 1,300; Gadag Laxmi 916; American 1,175; B.P.-52 1,225; Busoga (U.N.U.G.) 1,230; Karnak-151 1,830.

In contrast to last week's strident advance, cotton futures in Karachi staged a retreat during the week under review. Apprehension that the disparity between the prices of Pakistan and Indian cottons might affect actual business in cotton between the two countries and lack of buying interest on the part of domestic spinners, who were inclined to await a clear picture of the crop before entering into heavy commitments, were mainly responsible for the decline in futures values. N.T.R.G. January declined from Rs. 77.50 last week-end to Rs. 76.90. The March position receded from Rs. 76 to Rs. 75.25.

Futures trading in Alexandria cotton market continued to be suspended during the week under review also. Reports from Alexandria indicate that picking of Menufi and Karnak cottons began a week ago in Lower Egypt and has now become general. On the whole, cooler weather has been favourable to the normal progress of the plants but it has also favoured, in some places, fresh attacks of leaf worms which have already caused considerable damage, particularly on the smaller plantations. At present, the loss of cotton caused by leaf-worm is estimated at about 30 per cent in lower Egypt and not more than 20 per cent in upper Egypt.

Quiet conditions prevailed in the Liverpool cotton futures market. Values ruled steady in thin trading. Business was confined to near deliveries in which small trade covering met with long liquidation. The quotation for both the American and American type contracts were unchanged. Sudan cotton contracts at Liverpool ruled steady on report that the prices realised by the Gezira Board auction held at Khartoum during the week were the same as at the earlier auction.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 24.20; December 24.70; March 25.15; May 25.60.

American cotton mixed growth contract: October 24.60; December 25.05; March 25.45; May 25.90.

Sudan: September, November, January 32.00.

Cotton futures in New York suffered a further setback during the week under review. Selling prompted by the calculation that the damage caused by hurricane, "Carla," would not be as large as was anticipated earlier resulted in a decline in prices. The fall would have been more marked but for the support forthcoming at lower levels. This was prompted by the lag in ginning operation and the delay in harvesting. Spot values, however, ruled firm, thanks to good domestic mill and export demand.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	26-9-61	19-9-61	12-9-61
New York Spot	35.45	35.40	35.30
October	34.41	34.56	34.77
December	35.01	35.10	35.26
March	35.75	35.80	35.90

BEMBERG YARNS FIRM

(From Our Own Correspondent)

BOMBAY, *27th September*

The firm trend in Bemberg yarns witnessed last week gathered further momentum during the week under review. Continued fresh buying by some operators, who feared that supplies would get scarce in the coming weeks, resulted in a further hardening of prices. Certain counts of imported art silk yarns also firmed up, thanks to better demand from consumers. Staple fibre yarns and cotton yarns, however, lacked buyers.

Production of cotton yarns in August 1961 is provisionally estimated at 167 million lbs., as compared with 159 million lbs. in the previous week, bringing the total production during the eight months (January to August 1961) to 1,238 million lbs., as against 1,140 million lbs. during the corresponding period last year.

Cupressa Bemberg December advanced from Rs. 2,860 (per 100 kgs.) to Rs. 2,880. Spot improved from Rs. 2,798 to Rs. 2,021. J.P. Bemberg yarn (40 x 1) December delivery firmed up from Rs. 3,270 to Rs. 3,314. The October contract put on Rs. 10 to close at Rs. 3,340. 120 Japan, among imported art silk yarns, was steady at Rs. 1,875. 150 Japan was transacted higher at Rs. 2,150, as against Rs. 2,205 last week-end. 120 Italy was priced Rs. 5 lower at Rs. 1,875.

Staple fibre yarn (40 x 1) October met with selling and receded to Rs. 839, while the December delivery strengthened by Rs. 3 to Rs. 849. Spot Hinds were neglected at Rs. 9.83.

Cotton yarns presented a quiet front. 10 counts Podars were practically unchanged at Rs. 17.37. 20s Gokaks were quoted 10 nP higher at Rs. 23.10. Thirty counts New Greats were traded at Rs. 26.75, the same in the previous week. Sixty counts Finlays were quietly steady at Rs. 62.87. So was 80 counts Moderns at Rs. 67.50.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	27-9-1961	20-9-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
October	2,900.00	2,900.00
December	2,880.00	2,860.00
Spot	2,021.00	2,798.00
40 x 1 J.P.		
October	3,350.00	3,340.00
December	3,314.00	3,270.00
120 Japan (per 100 kg.)	1,875.00	1,874.00
150 Japan (per 100 kg.)	2,150.00—	2,205.00
120 Italy (per 100 kg.)	1,875.00—	1,900.00
150 Italy (per 100 kg.)	—	1,819.00
Nat. Ray. 150 Bk. I	13.68—	13.83
Staple fibre yarn (40 x 2)—		
October (per 90.72 kg.)	839.00—	850.00
December	849.00+	846.00
Hind (per kg.)	9.83—	9.90
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.37	17.37
20s Gokak	23.10	23.00
30s New Great	26.75	26.75
40s Madura	32.62	32.62
60s Finlay	62.87	62.87
80s Modern	67.50	67.50

OILSEEDS DECLINE

(From Our Own Correspondent)

BOMBAY, *27th September*

A feature of trading in the oilseeds market during the week under review was the sharp setback suffered by groundnuts on heavy liquidation, in distinct contrast to the pronounced firmness noted in the previous week. The protracted delay in the announcement of incentive scheme for the export of groundnut oil dampened the enthusiasm of bulls. Besides, there was some improvement in the supply position of groundnuts, with the arrival of new crop from upcountry centres. The forward contract, however, tended to look up towards the close, following reports of drought in some part of Andhra and excessive rains in some other groundnut growing areas. But spot seed and oils continued to rule easy. Castor-seeds were subdued, thanks mainly to lack of any encouraging overseas enquiries for castor oil. Despite the relatively tight supply position, linseed ruled easy. The export quota for 50,000 tons of linseed oilcake, announced by the Government, did not evoke much interest in view of the disparity in Indian and world prices. Cottonseeds, however, ruled somewhat steady in sympathy with raw cotton market. The sesame section was featureless.

Groundnut January 1962 contract gave way from Rs. 208 to Rs. 204.12, but closed slightly higher at Rs. 206.25. Both Nizam bold and Coromandel sustained a loss of Rs. 3.50 to Rs. 44.50. Oil ex-mill fell by Re. 1.65 to Rs. 18.90 and railway receipts by Re. 1.35 to Rs. 16.80.

Castorseed March 1962 slumped from Rs. 161.37 to Rs. 157.75; it was still lower at Rs. 157.50 yesterday. Madras small moved down by 75 nP to Rs. 32.50. Oil B.S.S. fell by 30 nP to Rs. 14.50 and Commercial by 20 nP to Rs. 13.20.

Linseed September 1961 contract drifted lower by 50 nP to Rs. 39. March 1962 contract declined by 25 nP to Rs. 36.34. Bold ready dropped 75 nP to Rs. 38.25. Linseed oil eased by 70 nP to Rs. 16.20.

Cottonseed March 1962 contract, however, put on 25 nP to close at Rs. 93.50. Both Berars and whites were steady at Rs. 18.90, and also non-whites at Rs. 19.

In the sesame section, bold ready hardened by Rs. 5 to close at Rs. 250. But sesame oil sagged by a rupee to Rs. 20.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	27-9-1961	20-9-1961	13-9-1961
Groundnut	Rs.	Rs.	Rs.
January 1962	206.25	208 00	205.00
Nizam bold	44.50	48 00	45 00
Coromandel ready ..	44 50	48 00	46 00
Khandesh quality ..	44.50	48.00	46 00
Oil ex-mill ready* ..	19.00	20.65	20.00
Railway receipts* ..	18.90	20.25	19.75
Oil January 1962	16.80	17.00	16.55
Castorseed			
September 1961	159.50	—	166.75
March 1962	157.75	161 37	162.25
Ready Madras	32.50	33 25	33.62
Ready Kanpur	31.25	31.75	33 25
Oil B.S.S.†	14.50	14.80	14.80
Oil commercial†	13.20	13.35	13.50
Linseed			
September 1961	39.00	39.50	39.75
March 1962	36.34	36 59	36.25
Bold ready	38.25	39 00	39 25
Oil ready†	16.20	16.90	16.75
Cottonseed			
September 1961	96.50	98.25	98 00
January 1962	93 50	90.50	90.50
Niger seed	39.50	39 50	39 50
Kardi seed	22.00	23.00	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seedsjare per 50 kilograms and oil per 10 kilograms.

TEA SLIGHTLY EASY

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *19th September*

Sale No. 38 held on 19th September 1961 comprised a total of 515,000 kilograms. For the fair number of highgrowns on offer quality was irregular but on the whole good. Quality from other districts was barely maintained. The market met less general demand. Highgrowns met fair support and came to a very irregular market. Only a few of the best invoices on offer sold at slightly dearer prices; all others were somewhat easier. Plain and Low medium descriptions met less enquiry and declined by up to 30 nP. Fibrous sorts were particularly discounted. Good mediums showed a decline of 10 to 15 nP but the few best mediums on offer were barely steady. Black leaf teas met fair selling at rates below last. Whole leaf grades were the weakest feature and were considerably easier. C.T.C's and C.T.C. types met fair demand but at easier rates.

The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low mediums ...	4.00-4.20	4.40-4.70
Mediums ...	4.20-4.30	4.70-5.00
Good mediums ...	4.30-4.90	5.00-5.70
Nilgiri B.O.P. ...	5.00	7.70

The average price realised in sale No. 38 was Rs. 4.63 per kilo, as against Rs. 4.66 in the previous week and Rs. 5.06 in the corresponding sale last year.

Dust Sale No. 38: A total of 200,000 kilograms was on offer in sale No. 38 held on Thursday, 21st September 1961. There was only fair demand as easier rates. Mediums received less support and commenced selling at rates which were up to 25 nP lower. The demand, however, slackened and at close these types were 20/40 nP below last. Highgrowns came to a keen market and realised rates which were about steady. C.T.C. and legg-cuts were barely steady and the other unorthodox sorts came to a much easier market.

The average price realised in dust sale No. 38 was Rs. 4.46 per kilo as compared with Rs. 4.67 a week ago and Rs. 4.57 in the corresponding sale last year.

Export Quota: Small business is being transacted at 1½ nP per kilo.

Colombo: In this week's export sale the market opened to strong general demand with Uvas irregular with quality. Best Dimbulas were firm but the lesser types were often 10/20 cents dearer. Good mediums were firm whilst lowgrowns declined by 3 cents per lb.

London: *North Indian and other growths*: In this week's North Indian Sale there was strong demand with best Assams selling at steady rates. The remainder were generally firm to dearer.

Ceylon and South Indians: On Tuesday 17,669 packages were on offer of which 6,138 originated from South India. There was good general demand with prices generally firm and sometimes dearer.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale* 39.—756,000 kilograms. Useful demand at lower rates. Plain and low mediums irregularly 5 to 10 nP easier. Poorer black leaf descriptions 20 to 30 nP easier. Mediums and good mediums upto 10 nP easier. Highgrowns steady following quality."

FOODGRAINS QUIETLY DEPRESSED

(From Our Own Correspondent)

HAPUR, *25th September*

Foodgrain prices ruled quietly depressed during the week, thanks to poor demand as new *kharif* grain is meeting the demand in rural areas. It is now learnt that in 1960-61 the output of wheat, gram and barley in U.P. is expected to be 3.75 million tons, 1.75 million tons and a little more than 1.5 million tons, respectively, as against the corresponding figures of 3.25 million tons, 1.5 million tons and a little less than 1.5 million tons in 1959-60. This increased supply of foodgrains has prevented the foodgrain prices in U.P. markets from rising and has enabled the U.P. Government to supply a larger quantity to the flood-affected areas.

Wheat average quality prices here continued stationary at Rs. 14.75 to Rs. 15 a maund for average quality and better farm produce was lifted at Rs. 15.50 to Rs. 16 a maund. Daily arrivals of wheat were about 100 maunds which were being lifted by consumers and stocks, therefore, here are unchanged at 25,000 maunds. Preparation of land for *rabi* sowings is in full swing and in the week-end some rains were received but rainfall for *rabi* sowings is still insufficient. Rice prices recorded a modest fall during the week on expectation of easy availability following last year's bumper crop of rice and crop prospects being bright this time also. Week-end prices were: *mainpuri sela* Rs. 21.50; *gaddakutcha* Rs. 22; *ramajwayan sela* Rs. 23 50; *raimunia sela* Rs. 24.50; *basmati sela* Rs. 27 to Rs. 30; *superior* Rs. 34 to Rs. 38 per maund.

Gram prices recorded modest gains in week-end, on firm advices from Punjab, to be quoted on Monday at Rs. 13.87 to Rs. 14 a maund for Punjab produce and local stock is put at 35,000 maunds. *Bejhar* prices were stagnant while barley sought lower levels thanks to arrivals of some truck loads from Punjab. New maize prices drifted to lower levels, thanks to two truck load arrivals from east U.P. and slack demand. *Jowar* and *guwar* prices were listless while *methi* continued to attract demand from Calcutta and Rajasthan side and prices ruled steady. Prices in other sections ruled quiet and week-end prices (in rupees per maund) were: barley 10.50 to 11; *bejhar* 11 to 11.75; new maize 11.75 to 12; *bajra* 15; *jowar* 11.50; *guwar* 14 25; *methi* 26 to 27; *oats* 12; stocks approximately: gram 35,000; rice 6,000; *jowar* 7 000; maize 2,500; barley 3,000; *bejhar* 2,700 maunds.

Among pulses, peas ruled steady, thanks to good demand from consuming areas coupled with support from grinders for conversion into *dal*. But local stock is still heavy around 64,000 maunds. *Arhar* also attracted some support for conversion into *dal* and as stocks were heavy at 44,000 maunds, prices lay flat. *Moong* prices drifted further lower on good crop reports and other pulses were depressed in sympathy. Week-end prices (in rupees per maund), peas *dara* 11.50; *khatti* 11.56; farm 12.50; *khatti* 13; peas dal 13; *harhar* 12.25 to 12.37; *arhar dal* 15.50; *urd* 18; *urd dal* 21; *moong* 17; *moong dal* 20; *masoor* 13 to 16; *masoor dal* 16; *moth* 16; *moth dal* 19.

SUGAR QUIET TO STEADY

(From Our Own Correspondent)

HAPUR, *25th September*

Sugar prices ruled quiet to steady during the week as some centres were facing shortage of sugar despite heavy stocks with factories due to uncertainties of Government policy. Although the Union Food Minister has stated that all controls on sugar would go soon, no such orders have been passed as yet and traders have been following a "wait and watch" policy. Here in U.P. the State Government has already, from 6th September, withdrawn control on the price of sugar, restrictions on the inter-district movement and the licensing of dealers and, with this, the Government has also withdrawn its order reserving 50 per cent of the total quota of sugar allotted to U.P. for fair-price shops. But no action on these orders has yet begun. Although new sugar production season would officially begin on 1st November, factories would be reluctant purchasers of cane in the very beginning due to heavy stocks of sugar accumulated with them. Week-end prices here were:—Rs. 106.25 per bag wholesale; mill delivery Simbhauli E-29 at Rs. 103.57 per bag.

Sugar prices were quoted higher during the week in the Muzaffarnagar market due to the dwindling of stocks as quota for the month has not yet been received. Week-end prices were: damaged sugar Rs. 100 to Rs. 102.50 per bag at

2 maunds 30 *seers*. Mill delivery business for Iqbalpur A-29 was done at Rs. 98.31. Dry sugar of Mansurpur (C29) and (E29) grade was sold at Rs. 107.25 and Rs. 106 respectively. Mill delivery quotations were Rs. 106.62 and Rs. 105.06.

Quieter conditions prevailed in the *khandsari* market during the week under review on slack demand and week-end prices were:—*Galawat* Rs. 25 to Rs. 30; non-crystal Rs. 32.50 to Rs. 36.50; crystal Rs. 34.50 to Rs. 36.50, per maund.

Gur prices ruled steady during the week on good outside demand with the result that local stock shrunk to 12 000 maunds, which is likely to be wiped off by the time when new *gur* reaches the market after some ten days. As factories would start their season late and cane crop prospects were good, an increase in *gur* and *khandsari* production was expected in the coming season. Week-end prices were:—Dry selected Rs. 17; *kotha* dry-wet Rs. 14.50; to Rs. 15.25; wet Rs. 11.25; *shakker* Rs. 17 to Rs. 17.25.

Gur market remained idle during the week in Muzaffarnagar where stockists were now anxious sellers and demand was slack. *Gur* stocks were still heavy at 60,000 maunds, the corresponding figure last year being 25,000 and 15,000 in 1959. Week-end prices: *Chaku* Rs. 16 to Rs. 18; *rusket* Rs. 5 to Rs. 6 per maund.

Gur future prices ran down sharply during the week on bear pressure influenced by good rain reports in nearby districts. *Gur fagun* is today quoted at the worst level of the session at Rs. 12.83 as against the week's opening at Rs. 13.22 and the highest touched in mid-session at Rs. 13.24.

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *26th September*

Good demand was in evidence in the export sales held yesterday and prices of the best descriptions gained. There was also good demand in the internal sales held last week, but prices registered a mixed pattern. Bidders in both the sales were encouraged by the gains in prices at last week's auctions in London. Tea arrivals from upcountry areas to the Calcutta port continued to register the improving trend. Forward bookings of tea were put through during the week.

Referring to the Indian propaganda now being carried on in Great Britain on the methods of making good tea, the trade here say that the *per capita* consumption of 10 lbs. in Britain is the highest in the world, and any increase will be insignificant to be reflected significantly in total offtake of tea by Britain. Britain with a population of 50 million consumes about 520 million lbs. a year, whereas the E.C.M. countries with a population of about 200 million consume only about 35 million lbs. Obviously, there is the urgent need for propaganda in the E.C.M. countries, and it is time that the Tea Board directed its attention to explore new markets such as the E.C.M. countries.

The trade is not at all happy that the Tea Board had ceased all internal propaganda aimed at greater consumption. The proportion of production of inferior teas to good quality teas has increased. Consumption of inferior teas can certainly be increased within the country. The trend at recent auctions has shown that prices are being pushed down under the impact of increased production returns published month after month and also reports of continued good weather in the gardens. It is apprehended that, if internal consumption of dust teas is not increased, a situation may arise towards the end of the year when restriction of production would be the only way for the tea industry to avoid a glut in the market. Towards the end of the year, usually inferior teas are produced in greater quantities.

Doubling of the export quota to 10 million lbs. was announced in Pakistan during the week. This has been done with a view to enabling the country to dispose of increased production. The export duty has already been reduced, as stated previously, in order that Pakistan tea may compete more successfully in international markets. Pakistan estimates production this year to touch a record figure of 60 million lbs., production up to August aggregating 30.84 million lbs. The figure for August alone was higher at 9.47 million lbs., as against 6.91 million lbs. in August last year. The three months beginning August are usually the best production months. Pakistan has embarked on a scheme of increasing the tea acreage.

Dusts on offer at the internal sale held in the last week aggregated 25,380 chests. As already stated, there was good demand. Among C.T.Cs, the teas having a clean leaf appearance gained in prices, but other C.T.Cs were irregular. Although orthodox teas eased there was better demand with the better liquoring legg-cut teas realising higher prices. Fibrous teas eased. The quotations per 1 kg. (including excise duty) were: good Assam C.T.C. dust Rs. 6.30 to Rs. 6.60; medium Assam C.T.C. dust Rs. 5.65 to Rs. 5.90; legg-cut dust Rs. 4.30 to Rs. 5.00; medium Assam dust Rs. 4.20 to Rs. 4.60; and plain orthodox dust Rs. 3.90 to Rs. 4.20.

Leaf on offer amounting to 212 chests were bout firm.

Yesterday's offerings for export amounting to 2,310 chests met with strong demand. C.T.Cs were generally dearer. Keen competition was in evidence n off-grade teas, prices of which, however, were irregular. The larger B.P. kinds and the better teas were taken at advancing rates. Medium and better quoring teas were readily absorbed. Clean plain rokens were about firm, but similar fannings eased y 10 nP. Stalky and fibrous teas were difficult to e sold. Whole leaf grades met with more inquiries nd prices, particularly of the cheaper varieties, were: best Assam C.T.C. fannings Rs. 5.40 to Rs. 6.20; best Assam C.T.C. B.P. Rs. 5.40 to Rs. 6.00; medium Assam C.T.C. B.P. Rs. 5.00 to Rs. 5.40; ex-medium Assam C.T.C. fannings Rs. 4.90 to Rs. 5.30; clean plain pekoe Rs. 4.30 to Rs. 4.50; plain B.P. Rs. 4.15 to Rs. 4.35; and plain fannings Rs. 3.85 to Rs. 4.10.

NO FLOOR PRICE FOR RAW JUTE

(From Our Own Correspondent)

CALCUTTA, *26th September*

Both raw jute and jute goods were well maintained during the week under review. Although actual business done in goods for export was small, there was good covering demand in anticipation of overseas orders in the near future as well as for fulfilling higher-priced earlier contracts. Foreign demand for goods no doubt revived, but buyers were yet reluctant to enter into forward commitments, as, in view of the higher fibre crop in India, Pakistan and Thailand, they anticipated a further decline in prices. Trade circles derived encouragement from the figures of gunny shipments in August published during the week. Goods exported amounted to 68,600 tons, showing an impressive rise of 17,800 tons, as compared with the previous month, while goods despatched against local needs at 15,200 tons showed a small fall of 3,800 tons. The heavy discount for forward goods continued to restrain mills from offering forward deliveries. The experience in recent months has shown that it is expedient for mills to sell nearby and ready goods, since, by waiting, mills realise better prices as the delivery periods come nearer.

Mills have noted with relief the statement by Dr. B. C. Roy that there is no intention to fix a floor price for raw jute, at least in the current season. The Government of India has also made a similar announcement. Now that the official thinking in respect of the persistent demand of growers to fix a floor price has been firmly indicated, it is expected that fibre purchases will increase in the near future. Mills need more fibre, first, because they have unsealed the looms sealed in August and secondly because they have increased the working hours from 42½ to 45 a week. It cannot be stated now when mills would consider putting to operation the 9 per cent of the looms now remaining permanently sealed or when a full week would begin to be worked. Mills had in recent months been purchasing fibre on a hand-to-mouth basis. But now that arrivals have increased, they are expected to purchase substantially towards stocks. In view of the greater need of fibre by mills, activity in the market is expected to get more lively, and the present level of price is likely to be maintained. Considering that the difference in prices in Calcutta and in primary markets normally varies from Rs. 2.92 to Rs. 7.56 a maund, depending mainly on distance, the ruling price in Calcutta, i.e. Rs. 35 a maund, basis Assam bottoms, is above any floor price that can be considered fair. Growers must be getting Rs. 30 or above, and the cost of production is estimated at Rs. 25 a maund. This enables the inference that, at existing rates, farmers are making adequate profits. It has been stated on behalf of he Union Commerce Ministry that, if at any time there was a wider disparity in prices, it would take suitable remedial measures. In addition to mills' support, purchases for buffer stocks, for which an agency would be constituted in the near future, would also pave the way towards greater stability in the fibre market.

Meanwhile, the trend in Pakistan markets for prices to move up in the wake of the official announcement, according to which the crop was now estimated at 6.5 million bales, as against the earlier estimate of 8 million bales and the increase in acreage by 35.8 per cent as compared with last year (original estimate showed the increase as being by 50 per cent) intrigued market circles here. This is one of the factors why prices in India are showing a tendency to move up. However, market circles were not prepared to give credence to such a huge variation in estimates and were prone to believe that this was one of the measures which Pakistan was taking in order that cultivators might get fair prices. It would be remembered that the recent fall in prices nerved Pakistan officials, and cultivators were advised not to release huge quantities to the market in their own interests. Since then arrivals in Pakistan marketing centres fell markedly, and prices began to gain. It is significant that the price of loose fibre in Pakistan during the week under review gained Re. 1-8 per maund, and those for export grades £4 a ton. The Government raised the E.P.C. levels by £2 a ton. Overseas interests including Communist countries are now lifting Pakistan fibre in increasing quantities, and this leads to the inference that they are satisfied that prices would not decline from present levels. However, Pakistan mills are purchasing only in meagre quantities. In consonance with increased demand, arrivals in Pakistan have also increased. Such steady support has raised forward rates to levels of ready fibre.

Strong conditions developed in the goods market on Tuesday last, following good covering demand. Ready B. twills firmed up to Rs. 133.50 from Rs. 133.00, with ready hessian 40" 10 oz. remaining unchanged but firm at Rs. 50 50. Overseas buyers were disinclined to purchase at these rates, and, therefore, on Wednesday B. twills eased to Rs. 132.70. However, hessian 40" 10 oz. was firm at Rs. 50.50. Although covering demand continued, the absence of adequate support from overseas customers alarmed stockists. Following this, B. twills eased to Rs. 132 50 and hessian 40" 10 oz. to Rs. 50.00 on Thursday. On Friday, a steadier trend was in evidence following good covering demand, and B. twills recovered to Rs. 133 00 and hessian 40" 10 oz. to Rs. 50.50. New York advices showed that prices there were well maintained and subsequently [illegible] fractyard to 10.55 cents; the 10 oz. hessian remained unchanged at 10.90 cents. Over the week-end in Calcutta, there was good covering business in hessian and, as a result, ready 40" 10 oz. hessian hardened to Rs. 51.50. B. twills were unchanged but firm at Rs. 133. There was keener demand for ready 10 oz. hessian during yesterday, and the price shot up to Rs. 52.50. B. twills were lower but firm at Rs. 132.60.

Firm conditions were in evidence in fibre markets. Prices were well maintained, with ready *Daissee* bottoms quoting at Rs. 39.00, northern bottoms at Rs. 35.50 and Assam bottoms at Rs. 35.50. Mills were more interested in ready jute. Arrivals increased impressively and the Eastern Railway reported heavy accumulation in its Cossipore road shed. It apprehended that, if the congestion were to continue, bookings would have to be restricted.

METALS IMPORT POLICY AWAITED

(From Our Own Correspondent)

CALCUTTA, *26th September*

While both tin and electrolytic zinc recorded a small recession, despite advices to the contrary from overseas markets, and virgin lead continued to be quoted unchanged, the feature of trading in the metal market during the week under review was the gain in the price of copper scrap following an improvement in demand from small consumers. Copper berry scrap advanced from Rs. 480.25 to Rs. 482.25 per 100 kgs. and utensil scrap from Rs. 442.75 to Rs. 448.75. These were acutely in tight supply position. The forthcoming import policy announcement was being eagerly awaited by the trade, as it was expected that quotas for non-ferrous metals would be increased. It would be remembered that, at the recent meeting of the Import Advisory Council, industry representatives had pleaded for increased quotas of components and industrial raw materials, especially non-ferrous metals. Although the Union Commerce Minister did lose no time in advising the Council members that there was going to be no liberalisation, and the Industry Minister rejected outright the trade plea to discontinue imports of capital goods until full capacity of existing industrial units was realised on the plea that industrialisation of the country could not be sacrificed at the cost of temporary difficulties for industries already established, the trade was prepared to hope for an increase in quotas of essential raw materials, including non-ferrous metals, as, in order to prevent possible criticism of inadequate increase in quotas, it is expedient to sap hope and increase the quotas to the extent considered necessary by officialdom to maintain economic progress.

Meanwhile, now that import licences for non-ferrous metals under the Development Loan Fund have begun to be issued, imports under this are expected to begin to arrive some eight to ten weeks hence. On the London Metal Exchange, electrolytic copper opened at £230 a ton and gradually eased to close at £226½. The reasons attributed were lack of adequate interest by consumers and the Japanese decision to place cuts on copper imports. Some sales were also reported in London. On the New York Commodity Exchange, the price fell from 30.78 cents per lb. to 30.58 cents.

Local demand for tin has subdued and, as a result, the price fell from Rs. 1,655.50 to Rs. 1,633.75 per 100 kgs. Advices from Singapore showed that the price dropped for most part of the week, but, over the week-end, a small recovery was recorded. In Bombay, the price at Rs. 1,660 per 100 kgs. opened for the week higher by Rs. 30, but gradually eased to Rs. 1,640.00. In New York, the price eased, as the market was preparing to receive the expected release of 10,000 tons of stockpiled tin, as per the decision of the General Services Administration. The price on the L.M.E. opened at £943 a ton and soon eased to £936, but recovered to close for the week higher on balance at £950.

The Calcutta quotation for electrolytic zinc closed easier at Rs. 315 per quintal, as against the opening of Rs. 317.00. Demand was poor, though the supply position showed no signs of easing. The London quotation closed at £75-1/8 a ton, as against the opening of £73¾. The recovery followed good demand generated by the earlier fall in price. In New York, the price eased, while in Bombay the price at Rs. 317.00 was unchanged. Virgin lead was quiet here at Rs. 135.75. In London, lead regained the opening quotation of £64 a ton after falling to £63¾.

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, *25th September*

Though activity in the linseed market has been limited and the general condition of the market dull, prices are well maintained, as there are very little offerings of seeds from the centres. Mills are buyers daily at prevailing prices, but sellers are hesitant.

The oil market remains steady. Local stocks are small and sellers are not inclined to do much at these prices.

The oilcake market remains firm, due to good local demand. But stocks are very small and business is restricted.

October delivery is quoted at Rs. 30 per maund.

The total capital expenditure by both manufacturing industries and distributive and service industries in the U.K. touched a record level of £493 million (at current prices) during the second quarter of 1961, representing an increase of 5 per cent over the first quarter. The share of the manufacturing industries alone was £315 million. Of this, a sum of £205.6 million was spent on plant and

A NATIONAL PLAN OF SOCIAL INSURANCE

OUTLINE OF A BOLD PROGRAMME

By P. A. Gopalkrishnan, I.C.S.

CHAIRMAN, LIFE INSURANCE CORPORATION OF INDIA

INDIA has adopted a socialistic pattern as its goal. The three Five-year Plans of the country have built-in devices which are calculated to advance us towards this goal. The first such device is the increasing number and variety of public sector undertakings from which the profits will go to the benefit of the whole nation instead of to a few individuals. The active encouragement provided to co-operative societies engaged in production and distribution of goods and services is another device to cut out the middleman's profit and disperse the benefits of economic activity among the participating members. Fiscal and monetary policies are also geared to the objective of reducing disparity of incomes, and controls on industry, finance and commerce have, as their aim, the prevention of concentration of economic power. All these policies have begun to produce their effects and more may be adopted in future to keep the economy on the path of the socialist goal.

Using Employable Potential

There is, however, a serious lacuna in all our Plans. While the Plans provide for increased outlays from year to year, they do not seek to provide employment to all those in the country who are employable. In the result, unemployment has been increasing, in spite of heavy investments and progress in many directions. According to the Planning Commission, the backlog of unemployment at the end of the Second Plan period was 9 million and the number of underemployed was 15—18 million. During the period of the third Plan, the additional employment created would only be of the order of 14 million, while the addition to the labour force is estimated at 17 million. At the end of this Plan, therefore, we will be still left with 12 million unemployed and a much larger number of underemployed persons. The loss to the nation caused by this widespread unemployment is a negative force, not only corroding the Five-year Plans, but eating into the socialist objective. *The Plans should, therefore,* be reorientated to provide full employment to those who are underemployed as well as to those who are unemployed. It is only thus that the present colossal waste of human resources could be avoided and foundations laid for realising the objective of social security.

Serious Omission

Another serious omission in the Plans is the absence of a national plan of social insurance. This is understandable because, when the Plans leave so many million unemployed and underemployed persons, it is impracticable to think of any comprehensive scheme of social insurance. Moreover, there is such a lot of poverty, even among those who are employed, that their saving capacity is almost nil. I would, however, suggest that the Planning Commission should appoint a committee for surveying the nature and volume of unemployment and underemployment in different parts of the country and for suggesting schemes for providing employment to all these persons. This is absolutely necessary if we have to make full use of our manpower for increasing our national wealth. Simultaneously, another high-powered committee should be appointed to make inquiries, collect the necessary data and draw up a national plan of social insurance.

Indeed, the Planning Commission is not unaware of the need for social security and insurance. In their Report on the third Five-year Plan, they have made the following remarks:

"As economic development proceeds, social security and insurance will come to have high priority. Through the scheme of provident funds and health insurance for industrial workers, the first important steps in this direction have already been taken. *In the course of the* third Plan, it is proposed to introduce a scheme of employment assistance for industrial workers and to make a small start with relief and assistance for destitute persons, orphans and physically handicapped persons without means of support or livelihood. In areas in which the rural works programme is taken in hand, facilities for registration are to be provided for persons seeking work. Thus, social services, along with intensive economic development, the provision of scholarships and other facilities in the field of training and education and the beginnings of social security should go some distance in providing more equal opportunities to different sections of the community."

While all the above steps will certainly be helpful, they do not provide an effective answer to the formidable challenge of unemployment or general absence of social security. The working population soon gets old and security for old age can be provided only through life insurance. The working man may die prematurely, leaving his wife and children unprovided for. Here again, it is only life insurance that can come to the rescue of his family. The Life Insurance Corporation of India is making valiant efforts to insure people on a voluntary basis, but, so far, it has been able to extend life insurance benefits only to a fraction of the population. A national plan of social insurance is, therefore, called for which will not only cover the entire working population but also cater to the differing needs of the different categories of workers.

In certain Western countries like West Germany and Sweden, social insurance has been compulsory for several years. In West Germany, every worker who has an income upto DM. 1,250 per month is required by law to join the social insurance scheme. 7 per cent of his salary or wages is deducted at source and another 7 per cent is contributed by the employer. When the worker retires, he is guaranteed a reasonable pension under the social insurance scheme. Even housewives, who do not earn wages or salaries, can join the social insurance scheme if they pay the appropriate premium.

Social Insurance For All

The social insurance schemes to be introduced in India need not necessarily be similar to those which are working in foreign countries. We have to suit our schemes to the conditions prevailing here and even the nature of the benefits under different schemes will have to be decided in accordance with the differing needs of our working population. This population may be conveniently divided into four categories for the purpose of social insurance; workers in the organised industrial sector and in Government departments, farmers engaged in agriculture, workers organised into co-operative societies and all other workers, either self-employed or working for others. An income of Rs. 500 per month may be fixed as the upper limit for social insurance.

With regard to the first category of workers, I would like to refer to a scheme of issuing mass insurance policies which I described in my recent address to the Bombay Insurance Institute. What I mean is that, instead of issuing individual policies, with different rates of premium depending upon the age at entry and the duration of the policy, mass policies should be issued to industrial and commercial establishments, Army personnel and workers in Government departments, insuring them up to a standard amount. There will be no medical examination and no requirement of age proof. Not even the names of the policyholders need be known to the insurer. The mass policy will merely mention the number of workers in the establishment, the policy amount to be paid on the death or retirement of each worker and the premium to be paid by the establishment. The insurer will, in short, deal with each establishment as a single holder of a mass policy. If a claim arises, the establishment has only to certify that a worker has retired or died and the policy amount will then be paid to the establishment.

Revolution in Insurance Business

Such a mass revolution in the business of life insurance can be brought about only by a similar revolution in our actuarial technique. The actuaries will have to evolve flat premium rates for mass policies which will continue indefinitely, subject only to benefit payments on the occurrence of the contingencies mentioned in the policy. The Corporation's top actuaries are now working on this problem.

Adoption of these mass policies will considerably simplify life insurance administration. The insurer will directly contact the head of each establishment and issue a mass policy. There will be no payment of first year's or renewal commission, no administrative work dealing with field officers and agents and no payment of medical fees. For millions of policies, the number of premium notices and receipts to be issued will be only a few thousands. The renewal expense ratio for this mass business will be reduced to one or two per cent and premium rates can be reduced to astonishingly low levels. This will make the scheme highly attractive and industrial and other establishments will find it worth their while to take out this mass policy.

With regard to the second category of workers, namely, farmers, who cultivate their own holdings, a slightly different form of social insurance is called for. A farmer has his land, which is the best security, and, when he becomes too old to work on his land, one or more of his sons take up the work. There is, therefore, a continuity of occupation and economic security is provided by the land in the possession of the farmer. As the majority of farmers have the joint family system, a farmer, who becomes too old to work, is looked after by his joint family. An ordinary life insurance policy or a guaranteed pension in old age is not necessarily the answer to the farmer's problems. A farmer really needs financial assistance when his crops fail and he is unable to pay off his monetary obligations and provide seeds, etc. for his next crop. Similarly, he needs funds when he has to replace old and unserviceable cattle. Any social insurance scheme for farmers has, therefore, to provide for these two or their needs. It is estimated that heavy failure of crops occurs, on the average, every five years. This means that, in the course of twenty years, a farmer may need financial assistance four times in respect of failure of crops. His need for replacing unserviceable cattle may arise, on the average, twice in twenty years. If a farmer's insurance policy could be devised, which would enable lumpsum payments to be made to him for replacing his cattle or for providing against failure of crops, six times during the currency of the policy, such an insurance scheme should not only prove most attractive to our farmers but provision of assistance, at the time that it is needed, would help in maintaining and increasing our agricultural production.

Coming now to the third category of workers, who are organised into co-operative societies, it might be possible to lump similar types of co-operative societies actuarially and evolve standard plans of social insurance for them on a mass basis. Co-operative societies of handloom weavers, fishermen, milkmen, etc. and societies engaged in tanning, toy-making or marketing of consumer goods can each be taken up separately and mass policy, with appropriate benefits, issued to each society.

Workers in the unorganised sector, whether in the urban or rural area, present a more formidable problem. They will have to be dealt with on an individual basis as the L.I.C. is doing at present. It should be possible, however, to devise a simple form of social insurance card on which will be entered the details of the policy and the premiums paid. Payment of premium will have to be made through post offices so that every insured person has an office nearby at which he can pay his premium.

Wanted—A Special Committee

I have given only the barest outline of a plan of social insurance. It is not possible for a single individual to draw up a plan of this kind without collection of all the necessary data and consultation with the interests concerned. That is why I suggested that the Planning Commission should constitute a special committee for the purpose. Unless preparatory steps are taken during the third Five-year Plan itself, it may not be possible to introduce social insurance even during the period of the fourth Plan.

The next question that arises is the agency which should operate these social insurance schemes. Some of the schemes, like mass insurance policies and policies to co-operative societies, can be managed by the Life Insurance Corporation. In respect of other schemes, the State Governments may find it more convenient to operate. Even in such cases, the Life Insurance Corporation can give expert advice on actuarial and other problems involved in introducing the schemes. The committee, which I have proposed, may be asked to go into the whole question. Whatever role is assigned to the Life Insurance Corporation in these schemes, it will continue to insure people on a voluntary basis as at present, whether they are in or outside the sphere of social insurance.—(*Adapted from the talk given at the weekly dinner meeting of the Bombay Suburban (West) Rotary Club on Wednesday, 27th September* 1961.)

COMPANY AFFAIRS

(*Concluded from page 662*)

The extension programmes C-2 and C-3 seem to be making satisfactory progress. Erection work of 1 x 30 Mw. Turbo-Alternator set with the associated boiler is proceeding apace and the Directors expect to commission the plant by March 1962, the scheduled date. The foreign exchange required for the plant is covered by a loan of $3.9 million from the D.L.F. For the C-3 extensions, repeat orders for 1 x 30 Mw. Turbo-Alternator set have been placed with Messrs. Associated Electrical Industries. Boilers for this extension are being ordered from Messrs. Babcock and Wilcox. The necessary import licence for this project has already been issued by the Government of India on cash payment basis.

In order to adjust the demand to the available supply, certain controls have been introduced by the Company under the overall direction of the Gujarat State Government. The power position is, however, expected to improve after the commissioning of the first and second 30 Mw. sets in March 1962 and March 1963, respectively.

The Company's paid-up capital of Rs. 8.75 crores is supplemented by reserves and surplus amounting to Rs. 1.47 crore. The 4½ per cent mortgage debenture loan of Rs. 2 crores was redeemed on 14th June 1960 by replacing it with 30,000-5½ per cent debentures of Rs. 1,000 each (that is Rs. 3 crores), the difference of Rs. 1 crore being for the purpose of financing expansion. In addition, the current borrowings (unsecured loan Rs. 12.97 lakhs and current liabilities and provisions Rs. 2.08 crores) stand at Rs. 2.21 crores. The current assets are, however, of the order of only Rs. 2.13 crores but in addition there are investments of the value of Rs. 31.55 lakhs all in Government securities. The value of gross block has gone up from Rs. 15.24 crores to Rs. 16.05 crores over the year, following additions to assets. As the depreciation provided upto 31st March 1961 amounts to Rs. 4.53 crores, the net block is of the order of Rs. 11.52 crores. In addition, there is capital work-in-progress aggregating Rs. 1.31 crore.

The Rs. 100 fully paid shares of the Company are being currently quoted at Rs. 91 *cum-div.* On an *ex-div.* basis and at the proposed rate of dividend, the net yield on them works out to 5.69 per cent per annum.

MARKET GOSSIP

(*Concluded from page 631*)

arrangement. It is not surprising, therefore, that the aforesaid suggestion has found favour with the Government of India. Here is what Mr. S. K. Patil, Union Minister for Food and Agriculture, said on Wednesday this week:

" .... India could obtain a negotiated price for its sugar exports to Commonwealth countries for the quota allowed under the International Sugar Agreement. The negotiated price will be slightly higher than the international price, and it will be to India's advantage to concentrate on such deals rather than sell sugar at international prices or even lower to Pakistan or Iran, which involves a lot of competition."

Under the terms of the Commonwealth Sugar Agreement, it will be recalled, the exporting countries are assured of an outlet for some quantity of sugar in the U.K. at a certain annually negotiated price (guaranteed, uniform price) which is specifically intended as an inducement to and reward for efficiency, notwithstanding differences in the cost position of various countries. Moreover, annual adjustments in price are based on a formula that reflects cost changes in the exporting regions as a group, and there is a provision for rewarding areas that respond best to contract prices, if quotas are substantially raised. In addition to the so-called "negotiated price quota," a further purchase of some quantity is guaranteed by the U.K. but only at the world price plus Commonwealth preference.

It is thus obvious that India's membership of the Commonwealth Sugar Agreement, together with the allotment of a 500,000-ton quota asked for by India under the International Sugar Agreement and the allocation of a sizable import quota in the U.S. market, will go a long way towards the establishment of a stable export market for Indian sugar. But it is imperative that India spares no efforts to produce quality sugar at an economic price. It is this factor which invests the need for a realistic sugarcane price policy with urgency.

I.F.C. TO INVEST IN COLOMBIA

The International Finance Corporation has decided to invest $2 million each in two Colombian private financing institutions, the Corporacion Financiera Colombiana de Desarrollo Industrial of Bogota, and the Corporacion Financiera Nacional of Medellin. The investment is represented by unsecured peso notes which are fully convertible into shares. They bear no fixed interest, but I.F.C. will receive interest equal to the dividends paid on capital stock. The notes mature from 1971 and 1973. This will be I.F.C.'s first investment in financial institutions.

ASIAN ECONOMIC CO-OPERATION

THE Conference of Asian Economic Planners, convened for the first time by the U.N. Economic Commission for Asia and the Far East in pursuance of a decision taken at the E.C.A.F.E.'s 1961 session, has concluded its deliberations in New Delhi this week. It was attended by Government representatives playing key roles in the shaping of their countries' economic development programmes and its purpose was to provide a forum for discussion of high policy questions relating to development planning. This kind of conference—which will meet every three years in future, with sessions of E.C.A.F.E.'s Working Party on Economic Development and Planning meeting in the intervening years—came to be convened not a day too soon, for practically all countries in the E.C.A.F.E. region had already adopted planning to guide and quicken their economic growth. And it was eminently worthwhile, too, for, while planning was naturally geared to the needs and potentials of each country, the collective experience gained in preparing and executing plans could benefit individual countries and the region as a whole.

An appraisal of the progress made in economic planning over the last decade in the region, the kind of administrative machinery needed for planning and the prospects for regional co-operation were the three most appropriate subjects discussed at the conference. The discussions on these three subjects were greatly facilitated by three working papers which had been prepared by the E.C.A.F.E. Secretariat. According to the paper on the experience of planning over the decade, many countries in the region have not been able to achieve a desired growth rate of national income and *per capita* income. Bad weather and adverse terms of trade have been mentioned as contributing causes in this connection. But the more fundamental problem, according to the paper, has been how to absorb a higher rate of investment into the economy in order to gather momentum for a successful take-off. This working paper has also welcomed the tendency for external financial aid to increase and be extended over a longer period. At the same time, it has also rightly emphasised the point that the ability of the receiving countries to repay would depend not only on their development efforts but also on a more liberal trade policy on the part of the aid-giving countries.

The second working paper, that on the subject of administrative machinery for planning, has listed three essentials for effective planning —first, the creation of a new organisation to formulate plans; second, the need for equipping the existing departments executing the programmes in a manner consistent with the general framework; and, thirdly, the provision of effective liaison between the planning agency and the executive agencies.

The third working paper, the one pertaining to regional co-operation, which has been highly praised at the conference, has wisely rejected the idea that Asian countries must automatically follow the example of other regions that have formed economic blocs such as the European Common Market and the European Free Trade Association. It has, therefore, cautioned that any scheme for Asian economic co-operation must be tested by the criterion of maximum advantage to the respective countries, individually as well as collectively. But it has also recognised that, purely for self-protection, Asian countries need joint deliberation and execution of trade and investment policies. The desirability of some kind of scheme aiming at freer trade on a regional preferential basis has been indicated, along with the finding that there is considerable scope for profitable specialisation among the countries of the region. But the conference as such has refrained from suggesting definite steps for regional economic co-operation; it has merely affirmed the need for some regional machinery embracing the primary producers, aimed at ensuring stable markets and fair prices for their commodities.

Neither this affirmation nor the broad statement of the conference that regional co-operation should be so evolved as to become an instrument of economic development of the region as a whole means much in the absence of practical suggestions for a regional machinery for broadly regulating co-operation between the E.C.A.F.E. countries *inter se* and for evolving suitable relations between the E.C.A.F.E. region and the economic groupings elsewhere in the world. This is not surprising, because a practical solution is extremely difficult, if not impossible, in the case of a region which is more heterogeneous than homogeneous, both politically and economically. The only significant suggestions made by the conference are that the member-countries should consider measures for promoting greater regional co-ordination in economic development plans and that the E.C.A.F.E. Secretariat be asked to project economic growth over the next 10 or 15 years for each country in the context of a perspective of development for the region. These suggestions will only be an academic exercise, though they have the potential to develop into some pattern of regional co-operation in the distant, but certainly not near, future.

All this does not mean that there is no room at all for economic co-operation in the E.C.A.F.E. region in the foreseeable future. The paper prepared by the Secretariat itself indicates the very wide possibilities in the sphere of trade, provided there is a sincere desire on the part of leaders to co-operate. It is no secret that there exists a feeling abroad in South-East Asia that India is not doing enough to help the other countries in the region; particularly in Burma and Thailand, an impression seems to prevail that India's restriction on imports of rice and its drive towards food self-sufficiency are depriving them of markets. Japan is another country which still has a problem of balance of payments and has steadily reduced imports of rice in recent years. The E.C.A.F.E. paper recommends a policy of import substitution on a "broader and more rational basis at the regional level. The scope for greater intra-regional trade is, perhaps, still large and needs to be further explored. India, for instance, may be able to take more non-ferrous metals and rubber in exchange for machine tools, electrical goods and other equipment needed for new schemes in these areas, but these can be best investigated through bilateral discussions.

It is the E.C.A.F.E.'s proposal for industrialisation on a regional basis, in order to enable the smaller countries to achieve economies of large-scale production and specialisation, that is radical, highly controversial and quite unlikely to be implemented in the foreseeable future. India, for instance, has reasons to feel that (*a*) Pakistan need not expand its jute textile industry further and could profitably divert its savings to other industries, leaving its surplus raw jute to be processed by the mills in West Bengal; and (*b*) the enormous expansion of cotton and rayon textile industry in Hong Kong out of all proportion to its size and population runs contrary to the principle of specialisation voiced in the note of E.C.A.F.E. Secretariat. But it will be unrealistic to think, having regard to the prevailing political conditions, that there could be the requisite degree of co-operation among the countries concerned. The fact that India's attempts to revive the International Tea Agreement in some form or other failed to evoke enough response is an indication of the lack of will for forging such co-operative [illegible]

owe their inspiration chiefly to the trends towards economic integration in Western Europe and Latin America, but they have overlooked some of the obvious differences in the E.C.A.F.E. region. The countries in Europe and Latin America are in a position to accept even mobility of labour where necessary, but, in Asia, racial minorities are regarded as a serious political problem, the position of Indians in Ceylon or of Chinese in Indonesia and elsewhere being examples. It is premature to expect the leaders in these countries to adopt a liberal approach yet. When even within a large country like India and Pakistan decisions on location of industry create rivalry and conflicts between different areas, it is extremely doubtful whether mutually agreed solutions are possible as between the various countries on such matters. Even the proposed Asian Development Bank may find itself embarrassed in channelling aid from outside the region, if it finds that sound bankable projects are forthcoming only from certain countries; accusations of discrimination are likely, if it adopts the same standards of lending as the World Bank and I.D.A. and helps those who can quickly absorb aid.

The New Delhi conference itself started with some disadvantage, because of the conflict of ideas and interests. While India may have some useful techniques to offer in regard to agricultural schemes and community development if it succeeds in its efforts, the present stage of development and the nature and scale of its endeavours in other directions are quite different from those required in other Asian countries. The rather elaborate discussion of administrative procedures in planning that took place in New Delhi may not have much relevance to constitutional systems based on other patterns; in Indonesia, Pakistan, and Nepal, administrative problems of responsibility and accountability are obviously of a different character, though problems of ensuring efficiency in execution may be the same. Most other countries lack the sizable middle-class which happily provides in India large numbers of administrators, engineers, managers, technical personnel and professional men like accountants, lawyers and doctors. The same results cannot be obtained elsewhere through the mere expansion of facilities for training as in this country. Simpler techniques, more roads, primary schools and greater political stability may be needed in some, before more complex techniques of planning such as those adopted in India can be considered. Fiscal systems and statistical data have to be improved. Consultations under the Colombo Plan, it is noteworthy, make allowances for such variations in social conditions. Learned dissertations by the Indian delegates on perspective planning, deficit financing, public sector, social inequality and so on could not, therefore, have been of much use. In certain other respects, some of the other Asian countries are better placed than India, as, for example, in tackling social evils, since traditional prejudices and class distinctions are not so powerfully entrenched as in this country.

A possible advantage of close Asian collaboration will be an increase of enthusiasm among the authorities in the underdeveloped countries for more development. If E.C.A.F.E. were well equipped for the purpose, it could undertake detailed surveys of the economy of its member-countries and indicate the right order of priorities for each and the policies required for achieving rapid economic progress within the available resources. It has now offered to lend its services to those desiring them, but considerable skill and diplomacy will be needed to advise Governments which may be interested in constructing showpieces and grandiose projects rather than in businesslike planning and sustained development.

PANCHAYAT RAJ

THERE is nothing new about Panchayat Raj in the sense of village self-government, covering simple law and order or civic functions, for panchayats in many parts of India have always been active in either field within a limited framework of powers or resources. But what is new about the concept of Panchayat Raj, otherwise called "democratic decentralisation," which has come into vogue in the last two years, is that responsibility for rural or community development is being increasingly entrusted to popularly-elected village panchayats and panchayat samitis (generally covering community development blocks). This new responsibility, however, is not absolute, for it is to be shared by these democratic institutions with the extension services of the community development movement within the general scheme of administration. In effect, it means that extension personnel at the block and village levels, who form part of a larger administrative and technical network extending to the district and even beyond it, will function within the jurisdiction of the panchayat samiti and use it as an instrument of rural development. This is, indeed, a formidable task, for it is by no means certain that panchayats and panchayat samitis will be able to rise above local feuds—social or political—and function at a high level of popular unity and enthusiasm so very necessary for local development. But the experiment, which is informed by both idealism and realism, is certainly worth a country-wide trial, provided it can be reasonably well financed.

Already, in the last two years, the States of Rajasthan, Andhra Pradesh, Assam, Madras, Mysore and Orissa have introduced the scheme of Panchayat Raj. Punjab has just (on 2nd October 1961) brought it into force. Most of the other States are also going ahead with legislation. In Uttar Pradesh, a Bill relating to panchayats has been passed by its legislature and elections to these bodies have been held. The Madhya Pradesh Panchayats Bill, as passed by the legislature, is now awaiting the President's assent. Panchayat Raj legislation has also been introduced in the Maharashtra and Bihar State legislatures. Gujarat's draft Panchayat Raj Bill is nearly finalised, Kerala, West Bengal and Jammu and Kashmir are the only States that have not yet initiated action to prepare the necessary legislation. But panchayats in Kerala will, however, shortly begin to function with enlarged powers. In a few years' time, Panchayat Raj will have thus covered the entire country.

The legislative framework within which the newer panchayats are to function involves the vesting of considerably greater powers in them, as the responsibility for maintaining and managing rural development works and administering social services goes very much beyond the usual responsibility for providing some simple civic amenities like street lighting and water-supply. The vesting of greater powers in the panchayats both for raising more resources and for administering development and welfare activities will not, by itself, mean much, if the experience of the older panchayats, which have not been noticeably efficient in raising even the permitted resources for running purely civic services, is any guide. The official comment that the newer panchayats have been reluctant to raise resources by the levy of duties or taxes is, therefore, not surprising. For instance, in Andhra Pradesh, every panchayat *must* levy taxes on property, professions and trades, vehicles and transfers of immovable property; these are compulsory taxes and, if a panchayat fails to levy them, the Government can take steps to impose them. The panchayat samitis, on their part, can levy surcharges on taxes levied by the panchayats. But the powers vested in these bodies to raise these tax resources remain largely unused. The relevant findings and arguments contained in the report of a team, which studied Panchayat Raj in Andhra Pradesh on behalf of the Association of Voluntary Agencies for Rural Development (New Delhi), are most revealing in this connection. These are extracted from the report just published:

"The question of the adequacy of the resources provided for the panchayats is important in an examination of their general future functioning. . . . Everywhere, we came across a reluctance on the part of the panchayats (and Panchayat Samitis) to tax themselves. . . . The panchayats are the basic bodies of the Panchayat Raj structure and it is their health and vigour that will determine its efficiency and ultimate success. As such, they have to be endowed with adequate resources. Besides their own funds, the State Government even today is giving them certain grants (one at the rate of 25 nP per head of the population, another out of the land revenue or local cess, and matching grants for improvement of village roads, drinking water supplies, schools, latrines, etc.). Various suggestions have been made for augmenting the resources of the panchayats. . . . One suggestion is that the State Government should give more grants to panchayats. While we would be extremely reluctant to come in the way of such a measure, we realise that this course makes the panchayat look up to outside agencies for its development and thus accentuates an already existing malady. Besides, the State Government may find it increasingly difficult to provide these bodies with adequate grants. . . ."

The Study Team's own suggestion is that the State Government should hand over all the present proceeds from such taxes as land revenue, cesses and surcharges on these and taxes, if any, on commercial crops to the panchayats, subject to an equalisation adjustment based on population. If this is done, the panchayats, in the opinion of the Study Team, will not be justified any longer in demanding grants from the State on the ground that it levies direct taxes on them in the form of land revenue, cesses, etc. But the issue is not that simple, although, according to the Team, "this will make the panchayats feel that they have to look to their own resources, as it will cut at the very basis of their claim on the State." The Team's latter argument could very well be applied to the other local sources of tax revenue permitted to panchayats under statute. So long as land revenue and direct administration are organically related to each other, in the sense that the former virtually finances the latter, it would not be fair to suggest that the State should forgo completely that source of revenue. It may, however, be possible for the State to earmark a certain proportion, say 25 or 50 per cent of land revenue and agricultural income-tax, provided the panchayats agree to raise resources from other tax sources. The arrangement will yield quite a tidy sum, if the land revenue itself is enhanced, as it can very well be, in view of the handsome increases in agricultural incomes. Unless the panchayats take steps to tap all possible local resources including unutilised rural manpower, the villagers will not come to feel that they have a direct stake in welfare and development activities. The villagers who pay taxes, however small, for the purpose of financing such activities will find it easier, by virtue of their physical proximity to the panchayat machinery, to demand that these functions be more efficiently discharged. If, at the same time, the National Integration Council lays down that panchayat elections should not be conducted on party lines and if the different political parties agree not to attack the sources of revenue for the panchayats in their campaign for winning general elections, the prospects for raising more resources locally will be greatly advanced.

Surely, it would be too much to expect that the panchayats, with their slender resources, will be able to perform so well as to pass the main tests by which, according to the Planning Commission, the success of Panchayat Raj will need to be measured from time to time. These tests, which will be most exacting in our opinion, are laid down in the final report of the third Plan. They pertain to agricultural production, development of rural industry, development of co-operative institutions, full utilisation of local manpower and other resources, development of facilities for education and adult literacy, optimum utilisation of resources such as personnel and technical assistance, available from higher levels to Panchayat Raj institutions, assistance to the economically weaker sections of the village community, and so on. These objectives are doubtless very impressive on paper. But there is bound to be a big gap between ideals and achievements, and this gap will be largely due to lack of resources and competent leadership. The chances of finding a sufficient number of local leaders, capable of rendering honorary service have been greatly reduced by the series of land reform measures. It has only to be remembered, in this connection, that, in Andhra Pradesh, for instance, where there are about 15,000 panchayats, covering about 30,000 villages, the average total income of a panchayat from *all* sources, including grants and matching grants, is just Rs. 3,500 per annum at present. This works out to an average of Rs. 1,750 per village. Of course, money may not be all, for local manpower resources can conceivably be mobilised for local works in cheaper ways. But more money will certainly be required even for the limited purpose of managing and maintaining the development works created by the Community Development Agency and for administering the educational and welfare activities initiated by that Agency. A minimum annual income of Rs. 10,000 would seem to be necessary for an average panchayat anywhere in the country. And that would mean raising an aggregate income of about Rs. 300 crores per annum for all the panchayats, existing or to be created, assuming that roughly two villages will be covered by one panchayat. If financial resources of this magnitude cannot be found, it is doubtful whether panchayats can be shaped as efficacious and reliable instruments of rural development. One should, therefore, have a closer look at the resources side of the ambitious Panchayat Raj before one lays down difficult tests of performance.

MARKET GOSSIP

Seven Wise Men Meet

It is gratifying to hear that the Committee of Stock Exchange Presidents is trying to minimise the scope for unhealthy speculation in right earnest. At the first meeting of the Committee, held at Bombay on 4th October, certain broad principles are understood to have been agreed, to by the Presidents in regard to imposition of margins, curbing kerb trade and option business. Full details are not available and judgment has, therefore, to be deferred till then. But it is significant that, in agreeing to a system of automatic margins, the chiefs of stock exchanges have conceded, at least impliedly, that the steps so far taken are inadequate. That is something, considering that some of them were contending, all along that everything was perfect in their kingdom and that those who were advocating stiffer handicaps against speculators were either theoreticians or partisans.

The reports appearing in the daily Press about the decisions taken at the meeting, which we understand was a prolonged one, having lasted the whole day, however, suggest that the presidents of the seven stock exchanges have given in only grudgingly and haltingly. It is understood that exemption limits for margins are not to be abolished and ten limits for margins are not to be abolished and will be retained in some form or other. This means that a speculator can continue to escape the hardships of margins by operating through scores of brokers. Some may argue that there is nothing wrong in his doing so, for the risk of his failing the market will be shared by a large number of brokers. But this is an irrelevant point, in that the objective is to prevent excessive speculation which misleads innocent investors and engenders overtrading.

It is not clear as to what type of automatic margins is being contemplated. The consensus of reports, obviously inspired by an authoritative source, is that margins will be applied automatically, on a uniform basis by all the stock exchanges, on the outstandings carried forward from one settlement to another at rates varying from 2 per cent to 50 per cent. It is further said that the existing system of free limits will be abolished, but credit will be given to the extent of deposits held by the brokers and the market value of their membership cards. In effect, however, this concession will mean the continuation of the present exemption limits. The loophole is thus being allowed to stay as before. The levy of margin on outstanding business carried forward from one settlement to another means that a speculator can freely gamble till the settlement day, either reduce or square up his position on paper on the eve of settlement by collusion or through some understanding with the opposite party and continue the game when the next account begins. This, therefore, seems to be a dubious system.

According to our information, however, the stock exchange presidents have agreed, after much discussion and with great reluctance, that, as soon as the value of a scrip goes up by 10 per cent from the previous settlement rate, the buyer will have to deposit as margin 50 per cent of the rise and that, in order to avoid manipulation by interested parties, such margin should be made payable even if the rise in prices in the subsequent settlement is no more than 5 per cent, that is, by 15 per cent in all in two consecutive settlements. Similarly, when prices decline, the deposit should be made by bears.

Under this system, for example, if a share valued Rs. 25 were to go up by Rs. 2.50, that is, to Rs. 27.50, the buyer would have to deposit margin at the rate of Re. 1.25 per share. If in the next settlement it goes up by a further Re. 1.25, that is, to Rs. 28.75, he will have to pay half of that increase by way of margin. Similarly, if prices decline at these rates, the margins will have to be paid by the seller.

This system is undoubtedly a more tangible one than that referred to earlier. The important point to be noted here is that the operator will be called upon to pay the margin, even though he will not have received the difference in price from the opposite party. Further, all the other stock exchanges on which the scrip involved is quoted, will also have to impose the margin simultaneously, even though the price variation in their markets may not have been of the same magnitude. If it is true that stock exchange presidents have agreed to this scheme, then they have done something more substantial than is indicated by the reports in the daily Press on Thursday.

It is not clear how the seven wise men are going to check, let alone eliminate, kerb trading and options. The Calcutta Stock Exchange claims to have done away with the evil of kerb trading by keeping the market officially open till 5. p.m. and by ring out the operators. Persistent appeal to the good sense of members by the President and the Board of the Exchange is also said to have had a salutary effect. It is noteworthy that quotations of late deals are available only from the Bombay market and not reported at all from Calcutta. Here is surely something that the Bombay Stock Exchange and others can learn from their Calcutta confrere. Options, however, will prove a harder nut to crack. The best thing to do, perhaps, will be to emulate the London Stock Exchange, where option business has been accorded a respectable place by giving it official recognition.

The enforcement of minimum margins seems to have been cold-shouldered by the seven wise men, even though they know very well that the proposal is in the interests of their own members who want to render efficient service to investors. It passes one's comprehension as to why they are reluctant to introduce this very desirable reform. Is it because they are so solicitous of their members' interests that they do not wish to provide the tax collectors with one more means of harassing the share brokers?

Groundnut Oil Retreats

Consumers of edible oils have reason to be happy over the recent decline in the price of groundnut oil. For this marks the end of the two-year boom in groundnuts. The price of groundnut oil, which had been steadily going up since 1959, touched a record of about Rs. 2,300 per ton in March-April 1961. Thereafter, a downward trend began to manifest itself. But, until recently, one was not sure that the boom had definitely ended, as the crop position was uncertain. There is, however, good grounds now for hoping that the worst is over for the consumer. At present, the groundnut oil is quoted at about Rs. 1,600-1,700 per ton, which is more or less the level that prevailed in 1958-59. In the local oilseeds exchange, oil ex-mill is currently quoted at Rs. 18.50 per ten kgs., as against Rs. 23 six months ago and Rs. 20 a-year ago. This decline is the cumulative result of a number of forces, both domestic and international.

Among the bearish factors of domestic origin, the outstanding one is the expectation of a bumper crop in India this season. According to the latest trade estimates, the acreage under groundnuts during the current season in the two major producing regions, namely, Saurashtra and Andhra, has gone up by 10 per cent. This will more than compensate for the somewhat lower acreage in certain parts of Maharashtra. The yield per acre, too, is expected to be substantially higher. Although the vagaries of monsoon this year have adversely affected the food crops in several States, the groundnut crop has on the whole not suffered any perceptible setback. Besides, while last year drought around Kurnool in Andhra and floods in certain districts of U.P. had adversely affected the crop, weather conditions this season would appear to have been quite favourable in these areas. Trade circles feel that total production of groundnuts in the 1961-62 crop year will go up by 20 per cent to 2.8-2.9 million tons (kernels), as compared with the previous year. Even those experts who doubt the accuracy of trade estimates agree that an increase of 10 to 15 per cent is a certainty. What is more, arrivals of new crop at terminal centres during the last two weeks have been quite sizable.

The current decline in groundnut oil prices would have led to an improvement in the prospects for their exports, but for the almost simultaneous setback in world markets. The price of groundnut oil (B.W.A.) in the London market, which had touched £137 earlier during the year, has fallen to just over £100. This rate is below the Indian parity by well over £30 per ton. With such a substantial fall in world prices, the ability of Indian groundnut oil to compete effectively will depend on the quantum of export incentive allowed by the Government.

The main factor responsible for the setback in world prices has been the unexpected emergence of Argentine of late as a major exporter of groundnut oil. Further, recent reports from West Africa, one of the major suppliers of groundnut oil, indicate that the 1961-62 crop there, which will be harvested shortly, will be substantially higher than that in 1960-61. South Africa, too, will have a larger exportable surplus. The supply position of two other major edible oils, namely, soyabean and coconut oils, is also quite comfortable. In the U.S., soyabean crop is expected to touch a record of 700 million bushels during this season, or an increase of one million bushels over the last season.

Despite the deterioration in world oil markets, exporters in India are clamouring for an early announcement of export quota for groundnut oil. Mr. Ratilal M. Gandhi, President of the Indian Oil Produce Exporters' Association, made a strong plea, at a meeting of the Association held at Bombay on Wednesday, that the Government of India should immediately announce an export quota for groundnut oil. There is, however, the other side of the coin. If an export quota is announced now, on the lines generally anticipated in market circles, it may serve to widen the disparity between Indian and world prices to the disadvantage of domestic consumers, as buying by exporters will push up the prices in the country. There are some who feel that, if domestic prices of groundnut oil are allowed to go down further by delaying the announcement of export quota, it will facilitate export of finished products such as *vanaspati*, besides helping the cost of living in the country to go down. At the same time, there is also the risk of world prices going down further and India missing the opportunity of making the best possible bargain. It will be interesting to see what view the Government takes on this tricky issue.

L.I.C's Investments

Details of the stock exchange investments of the Life Insurance Corporation of India, made available in the fourth annual report and accounts of the Corporation published this week, indicate that, while the Corporation's investments in the public sector have been steadily increasing, those in the private sector have been gradually declining. Thus, of the total stock exchange investment in India of Rs. 457.43 crores as at the close of 1960, investments in the public sector (comprising Central and State Government securities, the major portion of approved securities and shares in Government-owned companies) amounted to Rs. 360.06 crores, or 78.7 per cent, while investments in the private sector (comprising debentures and shares of joint-stock companies and also some of the approved securities) amounted to Rs. 97.37 crores, or 21.3 per cent of the total. As compared with this, the percentage of investments in the public sector to the total was 78.2 at the end of 1959, 78.1 in 1958 and 77.37 in 1957, the corresponding figures of investments in the private sector being 21.8, 21.9, and 22.63. The following table indicates the trend of stock exchange investments of the Corporation in the two sectors during the four years 1957 to 1960:

(Rs. in crores)

	As at the end of December			
	1960	1959	1958	1957
Stock Exchange Investments:				
In India	457.43	388.28	368.43	329.75
Outside India	13.29	11.54	9.96	8.84
Total	470.72	399.82	378.39	338.59
Of investments in India:				
In public sector ..	360.06	311.60	288.12	255.13
(Percentage to total) ..	78.7	78.2	78.1	77.37
In private sector ..	97.37	86.68	80.84	74.62
(Percentage to total) ..	21.3	21.8	21.9	22.63

It is noteworthy that both the absolute amount and the percentage of investments in the public sector were increasing from year to year, whereas in respect of investments in the private sector, the percentage was declining, though the absolute amount invested was increasing. Thus, while stock exchange investments in the public sector increased by Rs. 48.46 crores from Rs. 311.60 crores at the end of 1959 to Rs. 360.06 crores at the end of 1960 (that is, from 78.2 per cent to 78.7 per cent), investments in the private sector increased by Rs. 10.69 crores from Rs. 86.68 crores to Rs. 97.37 crores (percentage-wise, a decline from 21.8 per cent to 21.3 per cent). It is evident that a larger share of the increase in stock exchange investments has been going to the public sector.

The Corporation's investment of Rs. 360.06 crores in the public sector as at the end of 1960 comprised Rs. 228.25 crores in Central Government securities, Rs. 94.90 crores in State Government securities, Rs. 35.93 crores in approved securities, Rs. 65.98 lakhs in Municipal loans not included in approved securities and Rs. 30.98 lakhs in debentures, preference shares and ordinary shares.

Of the total investments of Rs. 97.37 crores in the private sector, Rs. 5.64 crores were in approved securities and Rs. 91.74 crores in debentures, preference shares and ordinary shares. The following table gives an industry-wise breakdown of the Corporation's major investments (that is, those in excess of Rs. 2 crores), excluding approved securities in the private sector:

(Rs. in crores)

Industries	1960	1957
Electricity	9.55	8.29
Engineering	9.10	7.14
Cotton textiles	8.57	6.91
Iron and steel	7.07	5.48
Mineral oil	7.49	..
Cement	5.34	3.66
Jute	4.31	4.15
Paper and boards	4.09	3.09
Electrical goods	3.06	..
Banks	2.97	2.63
Sugar and breweries	2.90	1.43
Aluminium	2.65	..
Insurance	2.60	1.36
Coal	2.30	1.92
Plantations	2.00	1.36
Rubber products	2.16	..
Total ..	76.82	47.42
Other industries	15.23	21.72
Grand Total ..	92.05	69.14

As will be seen from the above table, electricity industry topped the list, followed by engineering, cotton textiles, iron and steel, mineral oil, cement, jute, paper and paper boards. It is noteworthy that, as compared with 1957, six new industries, namely, aluminium, electrical goods, mineral oil, matches, rubber products, and food, drink and tobacco have been added to the Corporation's portfolio, making the number of industries in which the Corporation has investments 28, as compared with 22 at the end of 1957.

Britain and E.C.M.

Britain has come nearer to the European Common Market and, if everything goes well, it will be within the Market as a full-fledged member in the not-too-distant future, perhaps, before the end of 1962. The E.C.M. Council of Ministers, at its meeting held in Brussels on 25th, 26th and 27th September, welcomed in principle Britain's application for membership. In accordance with the decision taken at this meeting, Britain has been invited to a preliminary conference in Paris on Tuesday and Wednesday next week, where it will be asked to give more information about the safeguards it requires for the Commonwealth, British agriculture and the European Free Trade Area. From the procedure indicated thus, it is clear that France has modified its earlier stand that Britain should, as a precondition for the opening of negotiations, submit to the E.C.M. a written "Shopping List" specifying the problems it wishes to discuss and outlining the possible solutions. Apparently, France must have now realised that the submission of such a shopping list prior to negotiations might prompt the opponents of British membership in the U.K. and the Commonwealth to claim that the safeguards asked for are not adequate. "They (the French)," to quote a London report, "appear to have come round to the view, shared by Britain and some members of the Commonwealth, that many of the British problems can best be dealt with on a Community basis." If Bri-

SHARE MARKET EASY AT CLOSE

T.E.L.COS, HOWEVER, SPURT

(From Our Own Correspondents)

BOMBAY, *5th October*

THE firm trend noted on the Stock Exchange last week abated somewhat during the week under review, though the values of quite a number of scrips were higher on balance. The market ruled distinctly firm on the opening day of the week (Friday, 29th September), but developed a sagging tendency in the subsequent two sessions. Some operators tried to unload a part of their holdings on fears that the meeting of the Committee of Stock Exchange Presidents, convened for Wednesday the 4th inst., might decide to take measures to curb unhealthy speculation. But buyers were hesitant to enter into fresh commitments. Rumours regarding renewed labour trouble in the Hindustan Motors factory at Calcutta, which induced selling in that scrip, also affected the general sentiment of the market. Yesterday, the market picked up some strength and a recovery in values was in evidence, barring a few shares which continued to rule quiet. The recovery, however, proved short-lived, as today the market staged a retreat following the decision of the Committee of Stock Exchange Presidents to adopt a uniform automatic margin system based on outstanding commitments on the settlement day, though a section of operators thought that the decision might not have any significant impact. The direct action threat held out by the National Dock Workers' Union also acted as a damper. Consequently, equities drifted downward.

In the steel section, Tata Steels opened higher at Rs. 144 on Friday, as against the previous close of Rs. 143.50, and advanced to Rs. 146.25 on Saturday. After declining to Rs. 145.25, they moved up again and touched a high of Rs. 147 yesterday but declined to Rs. 146. The net gain over the week was Rs. 2.50. Indian Irons improved from Rs. 24.44 to Rs. 24.56 on Friday and, after receding to Rs. 24.08 today, finished higher at Rs. 24.28. Mukand Irons fluctuated between Rs. 27 and Rs. 27.50 before winding up the week at Rs. 27.25.

In the textile section, Centurys advanced from Rs. 555 to Rs. 560.50 on Friday. In the subsequent sessions, they evoked good buying support and spurted to touch Rs. 581 yesterday. Today profit-taking brought down the value to Rs. 576. Over the week, the net gain was Rs. 21. Azam Shahis went up from Rs. 70 to Rs. 80. New Greats gathered Rs. 7 to Rs. 235. Shree Niwas put on an equal amount to Rs. 274. Indores rose from Rs. 169 to Rs. 176. Kohinoors advanced by Rs. 6.50 to Rs. 296.50. Gokaks also received good support and improved by Rs. 6 to Rs. 199. Simplex opened at Rs. 165, as against the previous close of Rs. 164, and jumped up to Rs. 170 yesterday. Today they eased by a rupee to finish at Rs. 169. Over the week, the share gained Rs. 5. Svadeshis received institutional support and put on Rs. 4.50 to Rs. 270.50. B.R. Cottons gained Rs. 2.50 to Rs. 44. Elphinstones gathered Rs. 2 to Rs. 88. Tata Mills were marked up by a rupee to Rs. 68. In the cash section, Victorias gained Rs. 16.25 to Rs. 482.50. Mafatlals advanced by Rs. 12.50 to Rs. 917.50. In the forward section, Morarjees, however, suffered a loss of Rs. 5 to Rs. 391. Standards shed Rs. 4 to Rs. 1,254.

Sugar shares displayed a mixed trend. Belapurs opened at Rs. 263, as against the last week-end rate of Rs. 264, and advanced to Rs. 266 in initial deals. At higher levels, profit-taking set in and the scrip eased to Rs. 265. After fluctuating narrowly, it finished at Rs. 263.50 today. Over the week, the share thus gained 50 nP only. Maharashtra Sugars declined by Rs. 3 to Rs. 187. Ravalgaons shed Rs. 2.30 to Rs. 60. Walchandnagars lost 50 nP to Rs. 162. Changdeos shed 20 nP to Rs. 23.72. But Phaltans received good support and advanced by Rs. 2.50 to Rs. 134.50.

Cement shares displayed an easy trend. Associated Cements opened steady at Rs. 166 and advanced on good enquiry to Rs. 167 on Tuesday. Today they finished lower at Rs. 165.75, following profit-taking at the higher level. Digvijays lost 50 nP to Rs. 179.50. Orissas shed 4 nP to Rs. 14.72.

In the shipping section, Scindias began firm at Rs. 12.72 as against the previous close of Rs. 12.64 and increased to Rs. 12.80 yesterday. Today, however, they were subjected to bull liquidation and fell to Rs. 12.64. Great Easterns softened by 16 nP to Rs. 13.52. In the automobile section, Hindustan Motors encountered heavy selling from local as well as Calcutta interests and were hammered down from Rs. 19.28 to Rs. 18.84 early in the week on reports that there was renewed labour trouble in the factory. In the subsequent sessions, however, they recovered to finish at Rs. 19.28, same as last week. Premier Automobiles gathered 50 nP to Rs. 156. Bajaj Autos advanced by Rs. 2.50 to Rs. 55.50. The Company has applied for a licence to expand its annual production capacity of its scooters and autorikshaws.

Electricity shares recorded sizable gains. Tata Powers spurted by Rs. 30 to Rs. 1,172.50. Andhra Valleys improved by Rs. 25 to Rs. 1,050. Ahmedabad Electricity hardened by Rs. 3.80 to Rs. 96.80. Tata Hydros picked up Rs. 2.50 to Rs. 113. Bombay Suburbans gathered Rs. 2 to Rs. 103.

In the engineering section, T.E.L.Cos. opened at Rs. 340.50 on Friday, as against the previous close of Rs. 340, and advanced to Rs. 344.50 on the same day. After easing to Rs. 339 on Tuesday, they recovered to Rs. 344 yesterday. Today they received sizable support from institutional investors and advanced to Rs. 352. Over the week, the share thus gained Rs. 12. Alcock Ashdowns strengthened by Rs. 5 to Rs. 311. Coopers gathered Rs. 2 to Rs. 187. Texmacos put on 32 nP to Rs. 17.36. In the cash list, T. Maneklals spurted by Rs. 75 to Rs. 635. Jost Engineerings rose by Rs. 7 to Rs. 101. New Standard Engineerings increased by Rs. 2 to Rs. 191. Mahindras gained just 24 nP to Rs. 19. But Greaves Cottons shed a rupee to Rs. 185.

A smart rise of Rs. 14.50 to Rs. 154 in Baroda Rayons was the feature of trading in the rayon section. National Rayons, however, shed Rs. 3 to Rs. 546.50 over the week. They opened steady at Rs. 550 and rose to Rs. 551.50 in initial deals. Subsequently, they were neglected and touched the low at Rs. 543 on Saturday. On Tuesday they again recovered to Rs. 549.50. Today, they finished at Rs. 546.50. South India Viscoses gathered Rs. 2.50 to Rs. 187, and Indian Rayons 50 nP to Rs. 70. Gwalior Rayons were quiet at Rs. 46.

Chemicals ruled generally firm. Amar Dyes were keenly bid and spurted by Rs. 23.75 to Rs. 315. Indian Dyestuffs advanced by Rs. 25 to Rs. 475. Colour Chems jumped up by Rs. 13.75 to Rs. 360. Kemps put on Rs. 12.50 to Rs. 302.50. Polychems gained Rs. 10.63 to Rs. 197.50 *ex-div.* Synthetics gathered Rs. 5.50 to Rs. 193.50. But Dharamsis encountered selling and lost Rs. 7.50 to Rs. 182.50. Dhrangadhras shed a rupee to Rs. 120. Tata Chemicals softened by 72 nP to Rs. 17.12 reflecting dissatisfaction of operators over the dividend of 65 nP per share proposed for the year ended 30th June 1961, as against 60 nP for the previous year. The Company intends to issue rights shares as well as debentures for raising Rs. 113 lakhs for financing its expansion programme.

In the miscellaneous section, Bombay Burmahs opened higher at Rs. 608, as against the previous close of Rs. 607, and rose to Rs. 616 on Tuesday induced by hopes of bonus issue. In the subsequent session, profit-taking set in and the scrip receded to Rs. 606 before finishing at Rs. 612. The net gain over the week was Rs. 5. Voltas shed 50 nP to Rs. 295.50, on rumours that the Company proposed to issue debentures and not right shares, as expected by market circles earlier. Hind Electricals were keenly bid and jumped up by Rs. 27.50 to Rs. 170. Ceat Tyres gained Rs. 6.25 to Rs. 210. Jayant Papers advanced by Rs. 11 to Rs. 92. West Coast Papers rose by an equal amount to Rs. 188.

Madras Stock Exchange

MADRAS, *4th October*

Equities on the Stock Exchange were well maintained during the week under review with the exception of coffees which encountered selling. Persistent rumours suggesting the possibility of good buying enquiries by the Life Insurance Corporation were enough to sustain the enthusiasm of bulls in the absence of any other fresh incentives. The decision of the plantation labour in Madras, Kerala and Mysore to go on strike with effect from the 14th inst. to press its claims for wage increases, bonuses and other facilities, did not have any perceptible effect on plantation shares. Teas, in fact, ruled distinctly firm. Rubbers moved up in sympathy. Textiles attracted good attention, though, towards the close, a few shares moved down on account of profit-taking. Sugars did not show any signs of weakness, despite the removal of control on distribution and prices of sugar and the Government of India's decision to effect a cut of 10 per cent on output during the coming season. Miscellaneous industrials put on a cheerful appearance. Reports that the Government of India might not endorse the Tariff Commission's recommendations for raising the price of cement did not have any adverse impact on cement shares.

Among teas, Hailey burias strengthened by 20 nP to Rs. 14. Highlands improved by 12 nP to Rs. 14.24. Kil Kotagiris, Waterfalls and Neelamalais picked up 5 nP each to Rs. 4.80, Rs. 3 and Rs. 4.40, respectively. Chembras closed at Rs. 3.65, as against Rs. 3.61. Blue Mountains gathered 2 nP to Rs. 3.09. Periakaramalais rose from Rs. 3.66 to Rs. 3.69 before relapsing to last week-end's level.

In the rubber group, Midlands increased by 20 nP to Rs. 11.95. T.R. and Ts put on 6 nP to Rs. 10.06. Malankaras were firm at Rs. 18 and Vaikundams at Rs. 32.25. Nellithanams were done at Rs. 11. The Directors of the Company have passed over the dividend for the year ended March 1961, for the second year in succession.

Consolidated Coffees were particularly weak in the coffee section, the quotation declining by 28 nP to Rs. 20.37. Coffee Lands eased by 12 nP Rs. 16.50. Ouchterlony Valleys shed 3 nP to Rs. 3.75. Cowcoodys were quiet at Rs. 4.45, as also Rajendras at Rs. 12.12 and Balanoors at Rs. 14.75.

Among textiles, Buckinghams spurted by Rs. 3.80 to Rs. 248.80 *ex-div.* Bangalore Woollens advanced by Rs. 2.80 to Rs. 212.80 *ex-div.* Radhakrishnas were higher by 50 nP at Rs. 36. Loyals rose by 30 nP to Rs. 48.80. Travancore Rayons hardened by 15 nP to Rs. 39.25. Madurals improved by 2 nP at Rs. 38.77, after an initial fall from Rs. 38.75 to Rs. 38.70. Asher Textiles were fully firm at Rs. 204.05, following the announcement of a higher dividend of 30 per cent (taxable) for the year ended June 1961, as compared with only 12½ per cent (taxable) for the previous year.

Among sugars, Cauverys continued to elicit good enquiries and rose by 50 nP to Rs. 124.50. United Breweries were steady at Rs. 106.50, as also Indias at Rs. 11.60 and Mysores at Rs. 57.75. Travancores were well fancied at Rs. 10.25. But East India Distilleries declined by 33 nP to Rs. 38.87 and Deccans by 30 nP to Rs. 13.20.

Textools provided a bright spot in the miscellaneous section, the quotation spurting by Rs. 3 to Rs. 180. Among chemicals, Travancores picked up 25 nP to Rs. 18.50 and Metturs 19 nP to Rs. 14.30. Mysore Chemicals changed hands at Rs. 23.85 and Mysore Fertilisers at Rs. 11.60. In the cements group, Andhras increased by 10 nP to Rs. 9.35. India Cements improved by 2 nP to Rs. 6.65. Dalmias and Travancores were held firm, the former at Rs. 11.50 and the latter at Rs. 7.80. Orissa Cements, however, shed 25 nP to Rs. 14.75. Among others, India Steel Rollings rose by 30 nP to Rs. 10.80. Aluminium Industries hardened by 15 nP to Rs. 23.95. Tube Investments were steady at Rs. 260, Western India Plywood at Rs. 200.

Calcutta Stock Exchange

CALCUTTA, *4th October*

Although the impending holiday considerations led both operators and investors to lessen their commitments and the volume of business remained unimpressive, the prevailing lower levels attracted buying support. The gains were, of course, small and were interrupted by occasional profit-taking. But closing levels were higher on balance. Reports that the committee of Stock Exchange Presidents was likely to submit interim recommendations in the near future and that these would deal with margins and hours of working and inter-market clearings led to caution, while the announcement of increased dividends by several companies and plans for diversification were taken as signs indicating bright prospects for the corporate sector during the third Plan period. The reduction of import quotas for several items now being produced largely within the country also reflected in improved outlook for industries. Such an outlook should have led to a greater rise in prices than recorded in the week, but monetary stringency in the wake of diversion of funds as a result of a number of new issues necessarily caused a diminution of interest. At the same time, L.I.C. support remained insignificant, and bank funds to the stock market are not only costly but also small, in view of greater demand on these by trade and industry. The reports that the Government's decision on the Tariff Commission's report on new cement prices would not be favourable and that sugar production would be restrained during the coming crushing season, in view of the problem of surplus sugar, were the factors that added to the hesitant tendency among operators.

BUNDESBANK REDUCES RESERVE RATIOS

As a logical continuation of the policy adopted in November 1960, when the Bundesbank decided to liberalise credit controls for balance of payments considerations, the Council of the Bank has announced further reduction in minimum reserve requirements of West German commercial banks. This decision, in fact, removes the last vestige of the restrictive credit measures begun in 1959. It is estimated to release DM 400 million or an equivalent of about £36 million.

As a cumulative result of the successive measures undertaken to liberalise bank credit by the Bundesbank during the last ten months, the minimum reserve ratios in respect of residents' sight and time deposits are now only 5 per cent above the level of October 1959. Ratios in respect of savings deposits are actually back at the level of that month. The discount rate is also at the level prevailing in October 1959, namely, 3 per cent. The Bank has, however, not made any change in the minimum reserves ratios regarding the deposits of non-residents as a measure to ward off "hot money."

FURTHER RISE IN JAPAN'S BANK RATE

The following three credit restraint measures have been announced by the Bank of Japan to restore equilibrium in the balance of payment of Japan:

(1) With effect from 29th September 1961, the Bank of Japan has raised its official rediscount rate (Bank rate) from 6.9 per cent to 7.3 per cent.

(2) The Bank has also stepped up the special rates of interest (penal rates) charged on its loans to commercial banks exceeding certain prescribed limits set for each bank. These penals rates were already substantially higher than the basic Bank rate.

(3) The reserve ratios—the proportion of reserves which the commercial banks are required to maintain with the Bank of Japan against their deposits—have also been increased.

Explaining the background of the above decisions, Mr. Mikio Mizuta, Japan's Finance Minister informed the Diet on 28th September that Japan's current account deficit was of the order of $821 million during the first eight months of 1961. He said that Japan would require long-term measures to overcome its current balance of payments problems.

NEWS IN BRIEF

A LICENCE has been granted by the Government of India to a private industrialist to set up an alloy, tool and special steels plant, with an annual capacity of 50,000 tons, at Salem in Madras State.

Three foreign trade delegations from the United Arab Republic, Afghanistan and Malaya have arrived in New Delhi for discussions with Government officials on questions relating to expansion of mutual trade.

The Oil and Natural Gas Commission has decided to undertake, with French assistance, intensive oil exploration in Rajasthan deserts. The aero-magnetic surveys already conducted on an area of 45,000 sq. miles in the State have indicated prospects for the discovery of natural gas.

As a measure of further encouragement to the cottage match factories for using bamboo, the Government of India has reduced further the rate of duty applicable to them by 25 nP per gross of 50s and 20 nP per gross of boxes for 40s, with effect from the 1st inst. The new concessional rate will be applicable to only those factories, the annual output of which does not exceed 50 million matches.

The Praga Tools Corporation (Hyderabad), a public sector undertaking, signed an agreement last week with the C.E.K.O.P., a Polish enterprise, under which the latter will supply machinery and equipment for the plant to be put up by the Corporation to manufacture machine tools. Apart from supervising the construction of the plant, the C.E.K.O.P. will provide facilities for training a few Indian technical personnel in Poland.

The All-India Coir Board, approved at its meeting held at Hyderabad last week, a scheme for regulating exports of coir and coir products. The scheme, which envisages an amendment of the Coir Industry Act, empowers the Board to license retters after examining the quality of products as well as to regulate export of coir fibre and coir products by asking for deposits from exporters.

India's exports (including re-exports) during the month of August 1961 were higher at Rs. 61.36 crores, as compared with Rs. 60.74 crores in July and Rs. 55.35 crores in August 1960. Imports at Rs. 71.54 crores showed an increase of about Rs. 3 crores over the previous month, but were lower by as much as Rs. 31 crores as compared with August 1960. Consequently, the adverse balance of trade during August was smaller at Rs. 10.18 crores, as against Rs. 18.26 crores and Rs. 47.60 crores.

A symposium on the ferro-alloy industry in India will be held at the National Metallurgical Laboratory, Jamshedpur, in February 1961 to consider the latest advances in the production technology of ferro-alloys in relation to laboratory scale, pilot plant and industrial prototype production trials. The symposium will survey the raw materials position for ferro-alloys production in India and evaluate the various productive techniques in the context of indigenous resources. Also on the agenda of the symposium is the question of utilisation of by-products of ferro-alloy industries and overall production economics.

A Rs. 6-lakh pre-fabricated three-storey office building, with 66,000 sq. ft. of floor area, will be constructed for the Delhi Administration by the Hindustan Housing Factory of the Union Ministry of Works, Housing and Supply at the Indrapratha Estate in New Delhi. The technique in constructing the building, which has been developed in the Factory, consists of casting completely pre-fabricated pre-stressed concrete and reinforced cement concrete units, suitable for floors and walls.

The Government of Rajasthan has decided to organise 300 joint farming societies by establishing thirty pilot projects in all the districts of the State during the third Plan. Ten such societies will be organised in each of the pilot project area. In the first year of the third Plan, 30 joint farming societies will be organised in the three pilot project areas of Bharatpur, Ganganagar and Pali districts. The societies will be organised voluntarily. The bulk of their members will consist of small cultivators or landless persons or both pooling of land as far as possible for a minimum period of five years. Intensive cultivation through labour-intensive methods will be the main activity of the farms.

From Abroad

The Government of Malaya proposes to float a loan in the West German money market next year.

Air Ceylon has secured a link with the British Overseas Airways Corporation to run its international services, following the expiry of its contract with the Dutch K. L. M. Airlines, on the 1st inst.

The total production of cashew nuts in Tanganyika during the current year is estimated at 40,000 tons. The Government of India is said to have agreed to grant sufficient licences for imports of this entire crop.

Exports of manufactures from the twelve main industrially developed countries (excluding Communist countries) rose by 15 per cent in 1960, as compared with the previous year, according to the British Board of Trade.

The prices of Dunlop, Goodyear and Michelin and Pirelli tubeless and tube tyres and inner tubes for cars, commercial vehicles and for agricultural use (with the exception of cycle and motor cycle tyres), have been reduced by about six per cent.

Russia has become the second largest buyer of Malayan rubber, with its imports during January-August 1961 touching 87,016 tons, which are four times more as compared with the corresponding period last year. The U.K. was the leading customer, its intake rising by about 10 per cent to 122,175 tons.

The Brooke Bond Tea Group in the U.K. has decided to acquire control of the Dooma Dooma Tea Company, at a total cost of £1.59 million, each share costing £3. The Directors of the Dooma Dooma have undertaken to accept the offer in respect of their personal holdings and commend the same to all other stockholders for acceptance.

The Japanese Government has formulated plans to remove progressively restrictions on 90 per cent of its imports by October 1962. At present, 65 per cent of imports is free of restrictions. Restrictions on imports from the U.K., Italy and France may not, however, be completely removed, unless they reciprocate by easing their own controls on Japanese products, which are based on Article 35 of the G.A.T.T.

Industrial production in West Germany is expected to go up by only about 5 per cent in 1961, as against 11 per cent in 1960. During the first eight months of 1961, output rose by just 7.5 per cent. Demand for capital goods is flagging and has almost consistently been below last year's level since last April. But there are no indications of any large setback, particularly in view of the continuing labour shortage in the country and also prospects of a boom in the U.S.

PERSONAL

MR. K. R. F. Khilnani, Commissioner-designate to East Africa, left Bombay for Mombasa on the 3rd inst.

Mr. K. P. Mathrani, Chairman of the Industrial Finance Corporation, has been appointed Chairman of the National Industrial Development Corporation.

Mr. P. S. Rao, I.C.S. (Retd.), has been appointed Chairman of the Praga Tools Corporation in place of Mr. S. Ranganathan, I.C.S., Secretary to the Union Ministry of Commerce and Industry.

Mr. Shadilal Jain has been elected President of the All-India Plastics Manufacturers Association for 1961. Mr. S. N. Kasera and Mr. K. K. Mody have been elected Vice-Presidents.

Mr. Bharat Ram and Mr. B. G. Kakatkar, President and Honorary Secretary, respectively, of the Indian Cotton Mills Federation, have left for the U.S. to participate in the Indo-U.S. textile talks at Washington.

Mr. Donald Fleming, Canadian Finance Minister, has been elected the first Chairman of the new 20-nation Organisation for Economic Co-operation and Development (O.E.C.D.), at its inaugural meeting held at Paris on Saturday last.

Dr. N. Wadia, Geological Adviser, Department of Atomic Energy, New Delhi, has been elected representative of the Board of Scientific and Industrial Research of the Council of Scientific and Industrial Research, on the Governing Body of the C.S.I.R. Dr. Wadia fills the vacancy caused by the demise of Dr. K. S. Krishnan.

4½ PER CENT

MADRAS STATE ELECTRICITY BOARD BONDS, 1971

FOR RS. 200 LAKHS

(Payment of Interest and Repayment of Principal, Guaranteed by the Government of Madras)

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

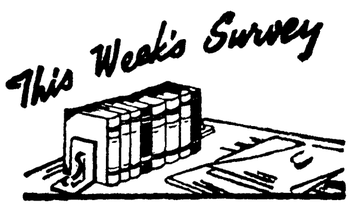
ISSUE PRICE RS. 99·50 PER CENT.

REDEEMABLE AT PAR ON THE 16TH OCTOBER, 1971.

Subscriptions will be received in cash or cheques from the 16th October, 1961. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 200 lakhs and in any case not later than the close of business on the 23rd October 1961.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Calcutta, Delhi, Bangalore and Bangalore City.

Copies of the notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all Offices of the State Electricity Board and its undertakings.



SHIPPING IN PUBLIC SECTOR

WITH effect from 2nd October 1961 the two shipping concerns in the public sector—the Eastern Shipping Corporation and the Western Shipping Corporation—have been merged into a single undertaking called "The Shipping Corporation of India Ltd." This merger, which has been brought about in pursuance of the recommendation of the Estimates Committee of Parliament in 1959 and the relevant resolutions of the Board of Directors of the two Corporations in February last, will, it is expected, make for better co-ordination in their working and for economy in the long run. The single new Corporation will operate scheduled passenger-*cum*-cargo services between Bombay and East Africa, between Madras and Singapore and between Calcutta and Madras/Andamans. It will also operate regular cargo services (as members of governing conferences) to and from the U.K.-Continent, the U.S.S.R., Poland, Middle East, Australia, Far East and Japan. As a member of the Indo-U.K.-Continent Conference Lines, it will, however, have to fall in line with them in so far as the move to increase freight rates is concerned; this will have the effect of making Indian goods somewhat costlier in foreign markets, for members of Conference Lines cannot compete against one another on rates of freight. But, whatever be the freight rates, the Corporation, which now has 17 vessels engaged in the overseas trade, will continue to earn or save some foreign exchange for the country; even the two coastal tankers, which the Corporation has chartered to the oil companies, are earning, and will continue to earn, foreign exchange.

The Corporation will be in a better position to play the role of a foreign exchange earner in the third Plan period, if its programme of substantial expansion is carried out according to schedule. Under this programme, the Corporation will be adding in 1962-63 five fast cargo vessels (now in advanced stages of construction at the Hindusthan Shipyard) to its existing fleet of 19 vessels of an aggregate gross registered tonnage of 138,593. In addition to these five vessels, orders have recently been placed with the Hindusthan Shipyard Ltd. for a second series of six fast cargo liners of the Mitsubishi type; these vessels are also expected to be delivered within the third Plan period. With their addition, the Corporation's tonnage will go up to about 240,000 g.r.t. by the end of the third Plan. There is also a proposal to acquire for the Corporation at least one ocean-going super-tanker for the transportation of crude oil reasonably soon. Thanks to this expansion programme, the Corporation will be in a position to expand its tramping operations, too, as will be seen from the following passage taken from the speech delivered by Dr. Nagendra Singh, Director General of Shipping, at the joint annual general meeting of the former Eastern Shipping and Western Shipping Corporations held at Bombay last week:

"Having regard to the orders for tonnage which have already been placed by the Corporation with the Hindusthan Shipyard, we are assured of a fairly steady development in so far as fast modern vessels for liner operation are concerned. As and when these vessels are delivered, we propose to divert some of the existing slower units to tramping. It is my considered view that, apart from the liner services in which we ourselves and other shipping companies have done reasonably well, there is a good field for the expansion of tonnage in tramping. The Corporation will keep this in mind, when they plan their activities for the coming years."

The working results of the two erstwhile Corporations, taken together, for the year ended 31st March 1961, suggest that the single new Corporation will perform much better in the coming years. An increase of about Rs. 2 crores (from Rs. 4.08 crores in 1959-60 to Rs. 6.07 crores in 1960-61) in overall earnings, a depreciation provision of about Rs. 1.07 crore and a net profit (after covering all expenditure, interest charges and normal depreciation) of Rs. 47.5 lakhs are the highlights of the year 1960-61. The net profit works out to only 2 per cent on the total paid-up capital of Rs. 23 crores as on 26th September 1961. That the rate of return will steadily go up in the third Plan period in the wake of the Corporation's expansion in operations may be reasonably foreseen.

SUGAR OUTPUT REGULATION

For the first time in the history of sugar industry, the Government of India has assumed powers to regulate production by fixing output quotas for every individual sugar mill. An ordinance providing for such powers, entitled Sugar (Regulation of Production) Ordinance 1961, was promulgated on Tuesday the 3rd inst. The issue of the Ordinance has been necessitated by the fact that Parliament is not in session, and will not be meeting before the 1961-62 season commences on 1st November. The Ordinance seeks to implement the policy decision pertaining to output regulation announced by Mr. S. K. Patil, Union Minister for Food and Agriculture, at a Press Conference on Wednesday, 27th September.

The Ordinance, which will come into effect from the beginning of the next season (that is, 1st November 1961), empowers the Government to make rules for fixing production quotas for each individual factory. In fixing such quotas, the Government will, we are told, bear in mind some of the important factors involved. They include (*a*) opening stocks at the commencement of the season in the territories to which the Ordinance extends; (*b*) quantity of sugar required for consumption during the year; (*c*) quantity likely to be available for export; (*d*) working capacity of the factory concerned in the period; (*e*) number of days on which the factory actually worked during the relevant period; (*f*) quantity of sugar produced expressed as percentage of cane crushed in the relevant period; and (*g*) such other matters as may be prescribed. If any factory produces sugar in excess of the quota for it, it will have to pay on such excess output a special excise duty equal to the duty chargeable on sugar under the Central Excise Act for the time being in force. This penalty, it may be noted, is twice as much as the incentive given in the 1959-60 and 1960-61 seasons for stepping up production. The present excise being Rs. 14.56 per cwt., the penal levy will be as high as Rs. 29.12 per cwt. and is bound to act as a strong deterrent to mills that desire, and are in a position, to produce sugar in excess of their quotas. Further, the Ordinance authorises the Government to make rules providing for the submission by mills of returns or reports or other information relating to the production and stocks of sugar, the manner in which the factory should maintain accounts in respect of sugar manufacture, and the inspection of records and registers of factories. The Ordinance also authorises the Government to impose a fine extending up to Rs. 5,000 for any breach of a rule prescribed under the Ordinance.

The chief consideration that has weighed with the Government in deciding to regulate sugar production is to avoid a further increase in accumulated stocks. As it is, the problem of excess sugar is acute and, naturally, the "Government has," to quote Mr. Patil, "come to the conclusion that it is desirable, in the interest of the cane growers, to set a production target or quota for each factory, so that the cane growers may have the opportunity of diverting the surplus cane, if any, in time to other uses." The question that springs to one's mind is this: what is to be done with the cane that for some reason or other cannot be diverted to other uses? There is no answer to this poser in the Government's plan for the coming season. The farmer will, however, learn a lesson, if he is wise, and plant less sugarcane for the 1962-63 season. Some fear that, if he were to do so for another season, there would be an acute shortage of sugar again. But such a possibility could be avoided by wise planning in advance. And there would be plenty of time for taking the necessary corrective steps.

SOAP INDUSTRY

The soap industry has nearly doubled its output during the last decade. The production of soaps in the organised sector rose from only 73,000 tons in 1950 to 130,000 tons in 1959 and further to 140,000 tons in 1960. The chief factors that have stimulated production are the ban on imports since June 1957 and the increase in domestic demand. Despite this progress, the soap industry in general cannot be said to have established itself on a sound basis. For the installed capacity of the industry, ever since it was brought within the purview of the Industries (Development and Regulation) Act, continues to be around 253,000 tons; this means that the unutilised capacity is large. As much as 45 per cent of the total installed capacity lay idle in 1960, the corresponding proportion for the previous years being still higher. The Government of India has, therefore, been restricting the expansion of the capacity of the existing units, apart from preventing new ones from entering the field, with the object of "enabling the existing units to utilise their capacity to the maximum extent."

The paradox of the situation is that, although the overall soap output is below capacity, several major units within the industry are working to full capacity and these have resources for sizable expansion but are not permitted to expand. It looks as though these units are being penalised for the omissions of several other uneconomic units within the organised sector itself. This imbalance deserves to be rectified. It is, therefore, just as well that Mr. S. P. Godrej, the retiring Chairman of the Indian Soap and Toiletries Makers' Association, should have suggested at the annual meeting of the Association held at Calcutta last week, that the Government should allow expansion of all those existing units which were desirous of raising their capacity to an economic level. If only the Government is prepared to shed its doctrinaire solicitude for small-scale soap units, the industry will expand on sound lines. This will have the effect of reducing the cost of production and, thus, the prices of soap, which is an article of universal consumption.

It cannot be denied that the present structure of the industry, in general, is in a quite unsatisfactory condition. For, apart from the inefficient units in the organised sector, there are a large number of small units engaged in the production of soap. An official estimate puts the current annual output of soaps by the small-scale sector at as much as 200,000 tons, or well above the aggregate output of organised units. The preponderance of small units, which produce only inferior quality, tends to obstruct the development of the organised industry on a steady basis. It is well known that a sizable increase in demand cannot be expected, unless prices are reduced. In the present circumstances, price reduction will be possible only by ensuring larger recovery of the valuable by-product, namely, glycerine (which, incidentally, has good export prospects), and by modernising existing equipments. The small units are ill-suited for taking these measures. But the Government does not seem to have realised this point yet. Otherwise, it would not have acceded to an annual production target of 278,000 tons in the third Plan for the small-scale sector alone. The corresponding target for output in the organised sector is lower at 222,000 tons, a level much below the existing installed capacity. The least that should be done at present, as suggested by Mr. Godrej, is to make available to small units adequate quantity of fatty acids, which will help conserve glycerine, that would otherwise be wasted (when small units use oils for soap production). Besides, the growth of small units in the urban areas should be discouraged, permitting them only in rural areas where their products will not find much competition.

The soap industry is facing several difficulties on account of the shortage of such raw materials as coconut oil, palm oil and tallow. The supply position of oils and fats, in particular, is quite tight; their prices are also high. Much greater efforts are, therefore, needed for tapping oils from non-edible oilseeds. Some efforts are, of course, being made in this direction. In view of these difficulties, it is not surprising that exports of soaps have not made any significant headway, although certain incentives are now offered by way of drawback in duties, import licence for raw materials against exports, etc. Exports of soaps rose from about Rs. 10 lakhs in 1957 to Rs. 16 lakhs in 1959, but fell back to about Rs. 14 lakhs in 1960. It would be particularly relevant in this connection to examine how far the higher freight rates are hampering exports—a problem to which attention was drawn by Mr. Godrej—and to explore the possible solutions to minimise their impact on exports.

MR. RUNGTA ON BUSINESSMEN'S PROBLEMS

In his presidential address at the half yearly general meeting of the Bharat Chamber of Commerce, Calcutta, held at Calcutta on Saturday, 30th September, Mr. Madangopal Rungta admirably summed up the difficulties facing the businessmen in India when he declared that the fundamental fact confronting businessmen today was that they had to serve two masters, the vigilant critical public, on the one hand, and the powerful Government, always sceptical of private enterprise, on the other. Elaborating this point, Mr. Rungta observed:

"The public seems to be more concerned about their immediate problems and expect of us to expand employment and maintain supplies at prices they can afford to pay, and the Government demand of us to tie ourselves to the professedly long-term socialistic plan of capital-intensive pattern. We are in this great gap between the people and the Plan, and you (businessmen) must have been daily experiencing the complexities inherent in such a situation."

A number of basic problems of economic growth confronting the Indian economy in the current phase of developmental planning also received expert treatment at Mr. Rungta's hands. As the problem of exports is proving a tough one, it is natural that the President of the Bharat Chamber of Commerce should have devoted the major part of his address to it. He gave detailed statistics to show how the export aspect of foreign trade has lagged behind over the last decade. As a proportion of national income, the export earnings have actually declined from a little over 7 per cent in 1950-51 to 4.4 per cent in 1960-61, whereas imports have gone up from 6.9 per cent in 1950-51 to 10.2 per cent in 1957-58. Subsequently, however, the latter, too, have contracted to 7.2 per cent in the closing year of the second Plan.

But the country cannot afford to neglect exports, for maintenance imports alone would require foreign exchange of the order of Rs. 740 crores a year on an average over the third Plan period, as against which the average annual earnings during the second Plan period aggregated only Rs. 614 crores. It is for this reason that the export target has been pitched at Rs. 850 crores for 1965-66 by the Planning Commission. How to achieve such an ambitious target is the question that is baffling even the experts. Mr. Rungta, of course, realised that the solution to this problem lay in making Indian goods competitive in terms of both quality and price. Being, however, a practical businessman, Mr. Rungta was quick to realise that the inflated cost-price structure in India was the main fly in the ointment and prevented the exports from rising. He rejected State trading or increased official intervention as proper methods of stepping up exports. Citing Japan's example, he stated that India could learn many things from that country. It is well known that Japan allows the export industries a larger degree of freedom in regard to costs, including the cost of labour. But the picture in India was exactly the opposite. The wage cost in India is the highest among the developing countries. As 72 per cent of the gross value of manufactured products had to be spent on raw materials, fuel and depreciation, and of the balance of 28 per cent a little over 57 per cent had to be spent on wages and salaries, 23 per cent on other business expenses, including indirect taxes, and 9 per cent on income-tax, Indian industry found it extremely difficult to meet competition in external markets. Mr. Rungta, therefore, made a strong plea for a new approach in regard to wage and taxation policies of the Government, in the interests of achieving a faster pace of growth with stability and of promoting exports.

Another problem to which Mr. Rungta drew attention was the growing extent of under-utilisation in as many as 81 lines of production out of a sample of 98 lines. In these lines under-utilisation ranged from 20 per cent to 75 per cent. This is really a serious situation in a capital-hungry economy, where every piece of machinery should be fully utilised to maximise production, profits and employment. It is high time the Government took some vigorous steps to remove the evil of under-utilisation.

IMPORT POLICY

An outstanding feature of the import policy for the period, October 1961-March 1962, announced this week, is the emphasis it lays on promotion of exports as a pre-condition for granting import licences in respect of several items. It is the considered view of the authorities that export industries should not be starved of raw materials and equipments. Accordingly, the scope of schemes seeking to link exports and imports has been widened. In the first place, it has been decided to grant import entitlements to 75 per cent of the value of goods exported in excess of exports made by the manufacturer in 1956, or twice the amount of imported raw material components, whichever is less, in the case of fifteen industries. This is subject to the condition that at least 20 per cent of the value of the finished goods would be exported. The industries brought within this scheme include certain non-ferrous metal products like aluminium semis, extrusion and full processed products like plain aluminium and A.C.S.R. conductors, cables and wires, as also fruit and vegetables preservation industry. This scheme has, no doubt, the attraction of ensuring the recovery of that part of foreign exchange spent on imports. But it cannot be said that it will by itself guarantee any sizable increase in exports. It is possible that, under the new scheme, only the channels of existing exports will be altered, without causing any *net* increase in exports. All the same, the scheme is commendable to the extent that it tends to make the manufacturers conscious of their vital obligations on the export front at this juncture.

Of the other measures designed with an eye on export promotion, mention may be made of the special procedures laid down for the grant of import licences against shipment of certain selected industries with good export potential. These industries cover engineering goods, cotton textiles, yarn, handloom goods, art silk fabrics, plastics, cashew kernels, chemicals, sports goods, unmanufactured tobacco, coir yarn and its products, *vanaspati*, etc. Special procedures for grant of import licences for raw materials have also been evolved in respect of 24 exportable items, such as leather shoes and other leather goods, tanned hides and skins, shellac and seedlac, pencils, vegetable and food products. These procedural reforms are welcome, in that they will reduce the impact of protracted procedural measures which will only chill the enthusiasm of exporters. What is more, special priority is expected to be given for applications for import of plant and machinery for industries with export prospects, whether they are for new units or for expansion of existing ones.

As was only to be expected, the overall import policy continues to be severely restrictive. Even an optimist would not have dared to expect any marked liberalisation, considering that at present sterling balances are at a low level, being no more than about Rs. 135 crores. The cut in imports effected is expected to result in a foreign exchange saving of one crore of rupees. Imports of three items, namely, bicycle parts and accessories, butyl acetate and butyl alcohol, have been completely banned. Besides, import quotas for established importers have been cut (ranging from 10 to 75 per cent) in respect of over 120 items. It is claimed that the cuts have been made in respect of items for which adequate indigenous capacity has been created. It is, however, not clear whether the Government has taken due consideration of the time-lag between licensing of capacity and actual production. The other features of the import policy are, (1) the continuation of "repeat licensing," (2) decentralisation of licensing of certain articles like essential basic drugs, brass, bronze and equipments required by pharmaceutical industry, and (3) expansion of the items licensable to actual users to cover wire cloth, seive cloth, microcrystalline wax, shuttle-cock cork, buttons for sports goods and hosiery needles. Further, the basic period for a number of items has been extended in some cases upto 1959-60 and in others upto 1960-61. The validity period has also been extended to 18 months (from the previous 12) in the case of taper roller bearings and their components, and to twelve months (previously six) for milling cutters, textile machinery accessories, wireless instruments, etc.

Considered against the background of the present foreign exchange difficulties of the country, the import policy, on the whole, is satisfactory. Certain sections of trade, for instance established importers, have not, however, concealed their displeasure over certain restrictions. In a country where new domestic industries are coming up, it is only natural that the role of established importers of certain industrial products should become less important. The complaint of the protagonists of development imports and of maintenance imports are not likely to be vociferous, since an effort has been made to reconcile, as far as possible, the demand arising from both the sectors.

TOURISM AND HOTEL INDUSTRY

In his address to the All-India Hotels and Restaurants Convention, held at Madras this week, Mr. S. N. Chib, Director-General, Department of Tourism, Government of India, stated that the three principal reasons why the number of foreign tourists visiting the country was not more than it is at present were (1) insufficient hotel accommodation, (2) lack of proper domestic air services linking the different parts of the country to serve tourists coming in groups and (3) high air fares. The first deficiency could, according to him, be removed by the Government taking over and running the hotels and the second and third by increasing the carrying capacity of the Indian Airlines Corporation and reducing air fares to enable more tourists with modest means to visit the country. Mr. Chib, however, did not seem to regard these solutions as practicable, at least for the present. The Government, he felt, was already burdened with too many economic activities that it did not want to take on any more additional responsibilities. As to air fares, Mr. Chib did not say whether there was a case for reduction or whether his Department would press for a cut in fares. But indications are that there would not be any reduction in fares, which had only recently been put up. Mr. Chib wanted the hotel industry to show better results through better management, thereby infusing confidence in the minds of financiers to invest more in hotel business.

Hoteliers recognised the crucial role which hotel industry had to play in the promotion of tourism. They, however, felt that the facilities available for financing hotel industry were inadequate. Hence it was suggested at the conference that the Government should set up two finance corporations for the hotel industry, one with a revolving fund of Rs. 10 crores for financing larger hotels and the other, with a fund of one crore of rupees, for offering financial help to small and medium-scale hotels and restaurants which did not possess their own land and buildings to offer as security. The conference also pleaded that hotels and restaurants managed by private limited companies should be enabled to get loans from the State Financial Corporations and that they also be made eligible for assistance under the small-scale industries scheme.

Dealing with these suggestions, the Director-General of Tourism stated that the Government of India, in consultation with the Department of Tourism, was already contemplating an amendment to the legislation pertaining to State Finance Corporations in order to enable them to grant loans to hotels and restaurants run by private limited companies and proprietory concerns. This was being done, according to him, to help medium-class hotels. It may be noted that hotels run by public limited companies have been made eligible for loans from the Industrial Finance Corporation of India. In fact, the I.F.C. has already sanctioned two loans, one for Rs. 9 lakhs for a hotel in Bombay and the other for Rs. 1.60 crore for the construction of three hotels, one each at Agra, Bombay and Delhi, in addition to guaranteeing a dollar loan, amounting to Rs. 1.47 crore, from the U.S. Ex-Imp Bank.

Mr. Chib, however, did not favour the creation of separate finance corporations, on the ground that existing financial institutions could meet the needs of the hotel industry without much difficulty. Unless, therefore, it was proved that the rules and regulations of the existing financing agencies were very stiff, there was, he added, no justification for yet another agency. He, however, assured hoteliers that, if they drew up a well-defined scheme, indicating how the establishment of a separate finance corporation would meet their requirements and how they would like it to be, the Government would be prepared to consider it. This, it must be conceded, is a fair offer. It is now for the Federation to present a convincing case for setting up separate finance corporations. But as things are at present, and if the State Financial Corporations are authorised to give loans to hotels and restaurants, there does not appear to be any need for a separate financing agency for hotel industry. It must be mentioned here that commercial banks also can, and some do, lend money to sound units of hotel industry, as such loans are eligible for the facilities provided by the Refinance Corporation of India. Apart from the important consideration that the turnover would not be large enough to warrant a special corporation and make for economy in working, the creation of separate financing agencies for each industry is not desirable.

The Government of India has, in consultation with the State Governments, authorised the use of metric length measures throughout the country from the 1st inst. These measures are the metre (approximately three inches longer than the yard) and its decimal multiples like the kilometre (1,000 metres). The yard and the other length measures, now in vogue, will, however, be permitted till 1st October 1962. They will cease to be recognised by law thereafter. The use of these measures, it may be recalled, was permitted in certain organised industries as early as October 1958.

CUT IN SUGAR PRODUCTION

FOR WHOSE BENEFIT?—WHY NOT THINK ON POSITIVE LINES?

By Rameshwar Das

Director, The Lakshmi Sugar and Oil Mills Ltd., Hardoi

THE latest Government action, imposing a 10 per cent cut on sugar production, has been received with great misgiving and disappointment by the consumers and cane growers who have been stunned by a move which is not only negative and reactionary but will also have far-reaching economic and political repercussions.

For whose benefit has this cut been imposed? The question requires our immediate answer. Obviously, not in the interest of millions of consumers and cane growers over the length and breadth of the Indian Continent. During recent years, the price of sugar has been successively raised and it is now double the price of what it was only eight years ago. For the teeming millions, sugar is the only sweetening agent in their otherwise poor and scanty meal. But, by pricing it beyond their capacity, the consumption of sugar has practically been halted to a stationary figure. Measured by the low cost of living standards obtaining in India, sugar is relatively the most expensive food item to consume. While the consumer starves for sugar, the Government is trying to restrict the release of sugar for internal consumption in a vain effort to export small quantities at practically one-fourth of the internal sale price. Nobody will question the imperative need to build up exports, but by no stretch of imagination are our sugar exports at ruinous losses a reasonable or sound business proposition? And who is being sacrificed now through production cut and ruinous export? Obviously, consumers and cane growers.

Rs. 12-crore Loss for Government

The industry and the sugar trade are happy on account of the props provided by the Government to maintain artificial price levels, as their interest becomes secure and they expect to thrive on account of this arrangement. On the other hand, the Governments—Central as well as States—have unwittingly committed themselves to a revenue loss of more than Rs. 12 crores by the proposed cut in production for the coming season.

The Government will levy a penal extra duty on sugar made in excess of 90 per cent of last year's production. Such a punitive measure will certainly rule out any likelihood of sugarcane being sold to sugar factories with cane acreage standing at an all-time high figure. What will happen to millions of tons of surplus sugarcane which otherwise would have been processed into another 0.6 to 0.7 million tons of sugar? Without going into the controversy of what should be a reasonable price for sugarcane, it is a tragic fact that the closure of sugar factory gates to the cane grower would leave him no outlet except to make *gur* and *khandsari* at practically throwaway prices and at a great national loss. The conversion of all the surplus sugarcane into colossal quantities of *gur* and *khandsari* will also create equally big problems for their disposal and will eventually lead to below bottom prices.

One Solution

Having regard to all the above factors, the only solution lies in the utilisation of the present cane crop to the fullest extent for the production of sugar and ensuring a fair return to the cane grower. Further, the price of sugar, including the stock of the previous season should be substantially reduced, say, by Rs. 5 to 6 per maund, and the sugar be made freely available for internal consumption (1) by removing all kinds of trading and movement restrictions, and (2) by providing speedy railway transport at concessional rates, so that sugar reaches quickly and cheaply all the sugar deficit regions of India.

The price reduction must be equitably shared by cane growers, the marketing societies the sugar industry and the State and Central Governments.

The reduction of sugar price from nearly Rs. 38 at present to Rs. 32 or so will provide a tremendous impetus for increased internal consumption which should rise from the present level of 2.1 million tons to 2.8 million tons. Government revenues will not be materially affected, even if excise and sugarcane cess rates are reduced initially, as larger production will nearly compensate them instead of the expected net loss of Rs. 12 crores under the present production cut.

Instead of leaving the cane growers and consumers to their fate, another way out of the present impasse, though not equally effective, may be suggested.

An Alternative

For all intents and purposes, the cane grower is now left to fend for himself in regard to the disposal of his surplus cane. Why not plan separately for its disposal and also benefit the consumer? The cane grower should be offered the choice of either converting his surplus cane into *gur* and *khandsari* or selling it to the factories at 25 per cent reduction on the minimum price. The marketing societies should forgo their commission, State and Central Governments their sugarcane cess and excise duties, and the sugar factories their profits on this sugar. After the end of the season, the surplus sugar could be pooled with the quota sugar and the price of total sugar be reduced by approximately Rs. 5 per maund. In the alternative, this surplus sugar, produced economically at an equal sacrifice by all the parties, could be earmarked for export. The cost will be sufficiently low to make exports at least to the U.S. possible at practically no loss. This suggestion is in line with our Food Minister's views that losses on sugar export be shared by all.

I have touched briefly the deep economic repercussions of the proposed sugar production cut, but I am afraid the political reactions will be equally damaging. How will the different political parties, especially the party in power, which is responsible for taking the decision for production cut, be able to face the public and the cane growers during the next elections? In some important regions of the country, of which U.P. may be quoted as an example, the major part of agriculture and industry is centred round cane cultivation and sugar production. It will not be easy for the political leaders to explain to cane growers and the general public why sugar is so expensive, why the larger sugarcane crop this year cannot be utilised to make it cheaper and still win the Elections.

ON THE ARENA

As "Archer" is on a long holiday, the weekly feature "On The Arena" will not appear for two months from this week.—EDITOR.

ROURKELA RECOVERING FAST

The marketing of rolled cold steel products made by the cold rolling mills at Rourkela, which went into production in August last, began in September. The blooming and slabbing mill in Rourkela rolled 25,330 tons of steel. Based on this performance, the target for September was raised substantially. The dolomite calcining plant has started full-swing production. During August, it met the full requirements for burnt dolomite for the LD-converters and the open hearth furnaces. Meanwhile, the Rourkela pipe plant produced 4,594 tons of pipes in August, a new record. From weekly figures for September, it is predicted that this record will be better still. Altogether, Rourkela has shown all-round improvement during August. Steel production rose by 24 per cent as compared with July, and the plate mill and the pipe plant exceeded the monthly targets by 16 per cent and 11 per cent, respectively. This improvement is reflected in Rourkela's earnings which increased to Rs. 125 lakhs in August. Earnings would have been better if wagon supply had matched requirements.

In collaboration with the A.E.G. (Allgemeine Elektrizitaetsgesellschaft) of Frankfurt/Berlin, W. Germany, the Government of Mysore will set up a new factory for the production of transformers up to 20,000 KVA. motors up to 1,500 HP and industrial high tension and low tension switchgear. When in full production, the new factory will have an annual turnover of about Rs. 7 crores, as against Rs. 1.8 crore envisaged in the original scheme. An agreement was signed between the Government of Mysore and the representatives of the A.E.G. at Bangalore on 15th September 1961. The foundation stone for the new buildings will be laid on the 19th inst.

THE COMMONWEALTH AND EUROPE

U.K.'S ASSURANCES

(From Our Own Correspondent)

LONDON, *28th September*

LONDON LETTER

THE meetings in London this week of the Commonwealth Parliamentary Conference have concentrated on the negotiations with which the United Kingdom is currently engaged over its entry into the European Common Market. It might not be unfair to sum up the views of the speakers by quoting the words of the British Minister in charge of these negotiations, Mr. Heath, Lord Privy Seal: "The Government are entirely satisfied," and, on the other hand, the words of one of the African representatives that the matter of the Common Market was "not all business but all politics." One of the Indian representatives, Mr. Sardar Hukam Singh, M.P., voiced a very general fear when he thought that British negotiations were inevitable and that he had no great confidence of any good coming to the Commonwealth which to the United Kingdom would become of no more interest than "a museum piece."

Although all the statements of British intentions were applauded by the delegates to the Conference, it was noticeable that the greater applause was reserved for the critics.

Both the Secretary of State for Commonwealth Relations, Mr. Sandys, and the Lord Privy Seal, emphasised—indeed the reiteration became boring—that, at this stage, there was only negotiation, that special arrangements were being insisted upon to protect vital Commonwealth interests, that Britain in drawing closer to Europe would not draw away from the Commonwealth, that Britain would not become a junior partner to the Six nor the Commonwealth a backwater. And yet these Ministers failed to inspire confidence that the drift into Europe, to use an unkind phrase, would not involve a drift away from the Commonwealth.

India's Interest

It was not so much the economic aspects of the entry into the European Market that bothered some of the Commonwealth delegates but the political implications. But the balance of fears on these two issues appears to have depended very much upon the political maturity of the speakers. It was the least thinking delegates who seemed genuinely bothered about the position of the Crown and the future relations of the Crown to a Commonwealth outside the Common Market. The Indian spokesmen, on the other hand, were more concerned with the trading results of the proposed move. More than one delegate voiced the thought of a Commonwealth Common Market, but, as Mr. Heath pointed out, the countries of the Commonwealth were very concerned about developing their own resources and the process which had begun many years ago, when tariff barriers grew up inside the Commonwealth, has not yet been concluded. The Commonwealth countries are not prepared, by and large, to throw in their lot without tariff protection with a group of highly industrialised States.

However, as far as the United Kingdom is concerned, the negotiations to join in the Common Market involve a transfer of sovereignty limited to economic interests and not including defence or foreign policy, and, on the matter of trade negotiations, they are designed to see what terms can be struck and not to go in regardless of terms.

Thus, the Conference is concluding on a note of apprehension from the Commonwealth delegates who have firmly voiced their desire to continue in the Commonwealth and, although the British Government have firmly stated that, if they have to choose between the Common Market and the Commonwealth, they would choose the latter, it is to the future implications of the choice that everyone is looking.—*All Rights Reserved.*

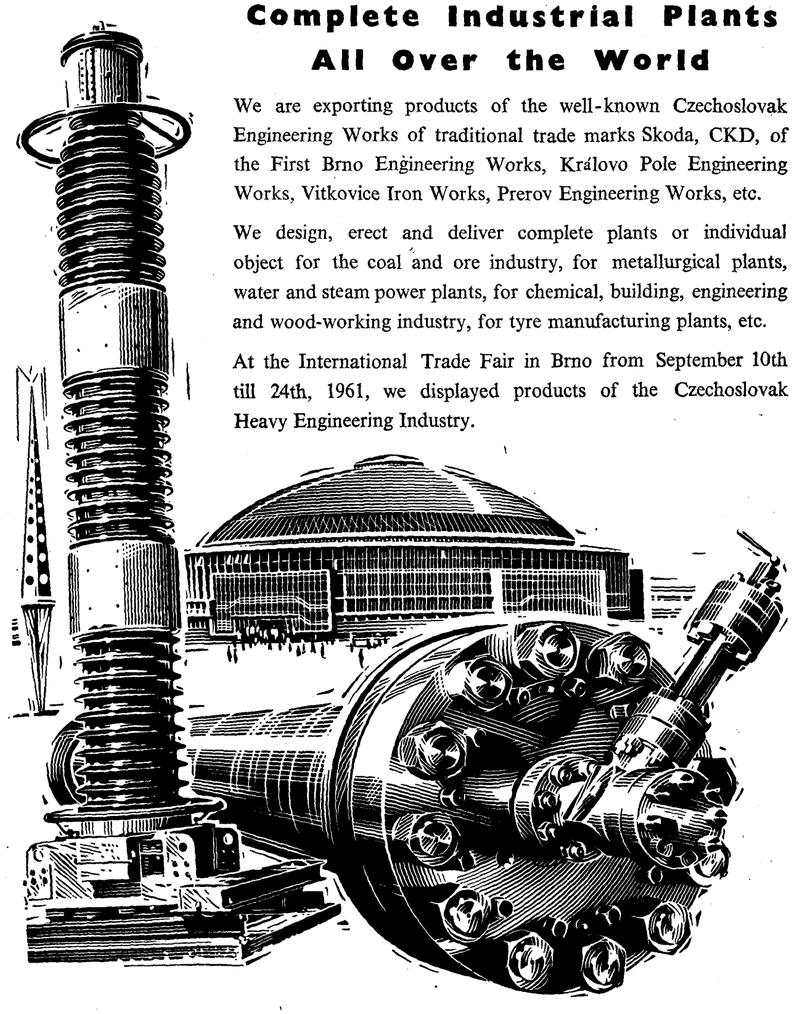
Britain's imports of all types of tobacco from Commonwealth countries during the first seven months of this year aggregated 103.8 million lbs., 10.9 million lbs. more than in the same period a year ago. Of this quantity, the share of Indian tobacco alone was 36.5 million lbs., an increase of 1.8 million lbs.

Complete Industrial Plants All Over the World

We are exporting products of the well-known Czechoslovak Engineering Works of traditional trade marks Skoda, CKD, of the First Brno Engineering Works, Královo Pole Engineering Works, Vitkovice Iron Works, Prerov Engineering Works, etc.

We design, erect and deliver complete plants or individual object for the coal and ore industry, for metallurgical plants, water and steam power plants, for chemical, building, engineering and wood-working industry, for tyre manufacturing plants, etc.

At the International Trade Fair in Brno from September 10th till 24th, 1961, we displayed products of the Czechoslovak Heavy Engineering Industry.



TECHNOEXPORT Foreign Trade Corporation for Export of Complete Industrial Plants

PRAHA — THE CZECHOSLOVAK SOCIALIST REPUBLIC

SKODA (INDIA) PRIVATE LIMITED

VULCAN INSURANCE BUILDING, VIR NARIMAN ROAD

P. O. BOX 1963, BOMBAY-1

BRANCH OFFICES AT:

NEW DELHI — National Insurance Building, Parliament Street

CALCUTTA — P-38, Mission Row Extension

MADRAS — 35, Mount Road

MAGNITUDE OF COAL SHORTAGE

RESULTS OF FEDERATION'S INQUIRY

THE *supply and movement position of coal* started deteriorating from the middle of 1960 and assumed such grave proportions that a number of industrial establishments all over the country were *either forced to slowdown or, in some cases, even close down for want of coal.* While it is true that the pace of industrial development far exceeded the most optimistic hopes of the planners, the fact remains that due attention was not given to the transport needs and the planners could not anticipate the transport requirements at the end of Second Plan. The Federation of Indian Chambers of Commerce and Industry had taken up the matter with the Coal Controller, the Ministries of Steel, Mines and Fuel, Commerce and Industry and the Railways. In order to collect additional factual data, a questionnaire was issued by the Federation in two parts on 22nd July 1961; Part 'A' was meant for the consumers of coal, while part 'B' was for the use of the suppliers of coal, that is, collieries and coal merchants. In response to the questionnaire, replies were received by the Federation from 236 industrial consumers and six suppliers of coal and coke, including an association of collieries, which sent a consolidated reply in respect of 200 collieries. The following broad conclusions have emerged as a result of the Federation's Study:

Part A—Consumers of Coal

Regional Distribution: Of the 236 units consuming coal and/or coke, 117 are located in Maharashtra and Gujarat; 67 in the Central, Western and North-Western India comprising Madhya Pradesh, Rajasthan, Delhi, Western U.P. and Punjab; 31 in the Eastern Zone i.e. Assam, Bengal, Bihar, Orissa and Eastern U.P. and 21 in the Southern Zone i.e. Andhra Pradesh, Madras, Mysore and Kerala. This indicated that the shortages were more widespread in the Western and the North Western regions of the country as compared with the rest. Regional distribution is not, however, the right index of the extent of shortages, because units in areas where shortages were widespread got their supplies both from the Bengal and Bihar coal-fields and the C.I. and C.P. coal-fields. An analysis has, therefore, been made on the basis of the distance between a unit and the supplying colliery or collieries with the following results:

Distance from the supplying colliery/collieries	Number of units
Upto 100 km.	7
100 to 250 km.	50
250 to 500 km.	7
500 to 1,000 km.	55
1,000 to 2,000 km.	74
2,000 and above km.	30

(13 units have not given the distance of supplying colliery from the factory site.)

Distribution of Units on the basis of Industries: The 236 units which have furnished replies are distributed as under:

Industry	Number of units
Textile (cotton, woollen, jute, silk and art silk)	86
Engineering (this includes foundries and steel re-rolling)	50
Chemicals, paints and varnishes	22
Food processing and dairying	14
Paper and board	10
Vegetable oils, vegetable products and soap and cosmetics	9
Sugar	5
Pottery and ceramics	5
Cement	4
Distilleries (including power alcohol distilleries)	4
Electricity generation	3
Glass	2
Automobile	1
Sewing machine	1
Cycle	1
Electric bulbs	1
Ferro manganese and ferro alloys	2
Miscellaneous	16
	236

Stock Position: Excepting 8 units which have reported an excess availability of between 4 to 100 per cent, all others have stated that their stock position was precarious.

In order to maintain regular production, units situated over 1,600 kilometres from the supplying collieries were normally maintaining stocks for three months. All of these have, however, stated that this was not possible now, as they were invariably from hand to mouth.

While 46 units had no stocks at all, 41 units had stocks for seven days or less. Stocks varied from half a day's consumption to 180 days' consumption in the case of 153 factories. Wherever stocks have been maintained for beyond 60 days' consumption, the factories involved are of a seasonal nature like the sugar factories or power alcohol distilleries or cotton pressing and ginning units. Before the season starts these have to accumulate stocks lasting the whole season, so that production is not suspended during the intervening period. Sugar factories have pointed out that, if the process of production is suspended even for once, it takes about two months to re-start the furnace and, therefore, the apparently large stocks in these cases were in fact less than what the factories normally maintained.

The position of units consuming coke, both of the 'B.P.' and 'Bee Hive' type, was worse. Being mostly foundries and engineering units, the slow-down in their case is likely to reflect itself in the output of other industries also.

Requirements of Coal, sanctions of wagons and the actual availability of wagons: The study reveals that, on an average, the wagon requirements of the factories were higher by 10 to 15 per cent as compared to 'sanctions' granted to them. The actual availability has, on the other hand, been nearly 25 to 30 per cent less as compared to the 'sanctions'. The percentage of shortfall in the actual availability of wagons as compared to the 'sanctions' was the highest for the Western region and ranged between 15 to 63 per cent. It is, however, strange that there were six cases in this very region where actual availability had been more than the 'sanctions' which indirectly proves that the distribution had been faulty, inasmuch as these units had been getting more coal than they needed while others were experiencing severe shortages. The extent of shortfall in the North Western region came second and was followed closely by the Southern region as a third. However, the proximity from the coalfields did not help the units in getting the requisite amount of coal and shortages ranging from 4 to 71 per cent have been reported from the Eastern region, also.

Slowdown: 111 units (47.0 per cent.) had to slowdown as a result of shortage of coal and the duration of slowdown ranged from one day to nine months. In the majority of cases, slowdown continued for a period of two to three months. Some of the units have expressed the extent of slowdown in terms of percentages and these ranged from 5 to 50 per cent, the average being 20 to 25 per cent.

Suspension of Production: 44 units (or 18.7 per cent) had to suspend production; 36 of these (or 15.3 per cent) were obliged to close down completely while, in 9 (or the remaining 3.4 per cent) cases, though the shut down was not complete, some shifts, kilns, furnaces or departments had to be closed. The periods of shut down ranged from a minimum of 2 days to a maximum of 100 days. None of the large scale industrial establishments had to close; they only slowed down. Medium and small-scale establishments, particularly foundries and engineering industries, have reported relatively more cases of shutdown, because these mostly needed coke or metallurgical coal of superior qualities and, in many cases, their furnaces were not designed to use alternate fuels.

Workers Affected: Most of the units have not been able to work out the extent of loss suffered by them or their workers but seventeen have reported that a total of 23,319 workers had to remain unemployed for various periods. In ten of these, workers lost wages to the tune of Rs. 64,145. Twelve units stated that a total of 7,99,186 man-hours were lost as a result of the shortage of coal and consequent suspension of production. Eight units had paid Rs. 57,794 as lay-off compensation to their workers. The majority of establishments have, however, stated that they would have laid-off their workers, but, as they were keen not to disturb the employer-employee relations, they avoided lay-offs by giving alternative employments to their workers or by encouraging others to go on long leave.

Use of Alternate Fuels and other related arrangements: The study reveals, on a average, a shortage of 25 to 30 per cent in the actual availability of coal as compared with sanctions. The question, therefore, arises as to how the factories have been arranging to tide over of the shortages. Seventy-nine units have replied that they have been using alternate fuel in the form of either wood and wood charcoal, bagasse, groundnut husk and furnace oil. Of these, 46 have been using either wood or bagasse, one each charcoal and groundnut husk and the remaining 31 furnace oil. Boilers and/or furnaces in use in 15 units were so designed that they could not use any other fuel excepting coal. It appears that, in the case of many other units also, who had to suspend production, the boilers were so designed where coal alone could be used as fuel. The cost of furnace oil is much higher than that of coal, with the result that the increase in the cost of production has been any where from 2 to 6 per cent in these units. In the case of those using wood, the position was not very different, because enormous quantities of wood were required for generating the same amount of energy which was obtained by the use of relatively smaller quantities of coal. Therefore, the cost of production in the case of these units also went up and in some cases it was said to have increased by as much as 15 per cent over a short period. Mills from Ahmedabad, who are in the membership of the Ahmedabad Millowners' Association, have reported that the Association has been maintaining a pool from where their constituents have repeatedly taken loans of coal during periods of crisis. As a result, no closures were reported from among the mills in the membership of this Association, though cases of slowdown were not uncommon. Small scale units whose monthly requirements of coal ran into a few tons had been purchasing from the open market at higher prices, in order to meet the recurring threats of breakdown.

Quality of coal: One of the main causes of slowdown was the sub-standard quality of coal. For example, if a factory needed selected 'A' grade coal, it was being supplied either with selected 'B' grade or with coal which, though designated as selected 'A', was in fact of a lower quality. With regard to the supply of grade II and slack coal, instances were reported where, on receipt of wagons, coal was found so much below the stated quality that the consumers had no other alternative but to refuse to take delivery. There were complaints that black stone and slate had been liberally mixed in some of the consignments. A few units stated that their actual availability of wagons was almost equal to the number of 'sanctions'. But this could not be taken as an indicator that their supply position was relatively better, because much of the coal received by them was of a sub-standard quality having a higher ash content. Consequently, they had not only to use more coal at greater expense but such coal did not give the requisite amount of energy. Many of these units are located in the Western and North Western region, nearly 1,600 to 2,000 kilometres and over from the collieries. This indicates that considerable transport capacity is being wasted by supplying coal with higher ash content over long distances.

Movement by Road and Rail-cum-Sea Route: It is obligatory on the part of all private sector consumers situated within 40 km. of the supplying colliery to meet their entire requirements by road transport. Three such units responding to the questionnaire are located around the West Bengal coalfields. All the other units situated in the Eastern region which are within 160 kms. of the supplying colliery had also been getting a part of their coal through road trahsport on a regular basis for the last two or three months. In some cases, road transport accounted for 30 to 35 per cent of the total coal needed. Road transport is, however, stated to be costlier by about 25 to 30 per cent. This resulted in enhanced costs. The extra cost of haulage by road in some of the representative cases had been between Rs. 10 and Rs. 16 per ton.

Only five of the units were getting coal by rail-cum-sea route. The difference in freight charges per ton between rail route and rail-cum-sea route in these units was as follows:

Gujarat (two units)	Rs. 23 and Rs. 25
Mysore (two units)	Rs. 46 and Rs. 49
Andhra Pradesh (one unit)	Rs. 51.20
Madras (one unit)	Rs. 38.85

Some of the units situated on the Western coast stated that, as a result of supplies of coal by sea route, their cost of production was likely to go up by 5 to 6 per cent. None of the units had received any subsidy under the provisions of The Coal Mines (Conservation and Safety) Act.

Part B—Suppliers of Coal

As stated at the outset, the Federation received, in all, six replies from the suppliers of coal including one from the Indian Colliery Owners' Association which purports to give information in connection with about 200 collieries situated in the coalfields of West Bengal and Bihar. These mine all grades of coal.

The collieries have not given the exact information about the proportion of their supplies to the public or the private sector enterprises. But they estimated that more than 50 per cent of their raisings was consumed by the public sector enterprises, including railways and steel plants.

The raisings in respect of the collieries in the membership of the Indian Colliery Owners' Association and of the N.C.D.C. were as follows:

Month	Lakh tons
October 1960	43.30
November 1960	46.38
December 1960	50.99
January 1961	51.37
February 1961	52.25
March 1961	55.24
April 1961	45.40
May 1961	45.99

It would be noted that the coal industry had made all-out efforts to achieve the targets of production towards the end of the last year and in the beginning of this year. After reaching the targetted rate of production, the collieries were obliged to fall back, as would be clear from the figures of production in the month of March 1961—the last month of the Second Plan period, and in April 1961—the month when the Third Plan commenced. A decline in the production by about a million tons in one month had never before been witnessed in the coal industry. This was mainly due to the fact that transport for moving all the raisings could not be arranged.

On account of the chronic paucity of rail transport, Government has, of late, relaxed the movement of coal and domestic coke by road but the offtake is not likely to be substantial, because road freight is relatively higher than the rail tariff. A suggestion has been made that Government should be requested to make it a rule for consumers situated within a radius of 200 miles of the coalfields to lift a part of their supplies by road transport. But it might be noted that consumers of coal situated within 160 kilometres of collieries have already been lifting a part of their needs by road transport, the result of which has been a heavy increase in the cost of production.

As a result of the drop in production, the collieries are faced with the problem of laying-off the workers, but, in the present day circumstances, it is not easy to effect such lay-offs. Most of the collieries in private sector, therefore, have tried to provide some sort of alternative employment to their workers and encouraged others to go on long leave.

The present situation is reported to be far from satisfactory and the paucity of transport has been mainly responsible for it. It is pointed out that the position becomes worse when even the transport that is made available is not utilised in the proper manner. The railways are primarily concerned with the movement from the view point of their operational convenience. Distribution of coal as such to the consumers is not much of their concern. The Coal Controller, who is responsible for distribution of coal, pleads helplessness in the context of the impositions made by railways. As a result, bulk movement or movement in block-rakes has had to be resorted to.

The suppliers of coal feel that equitable distribution of transport capacity among the collieries is as important as equitable distribution of coal among the consumers and, unless both these features are properly knitted in the pattern of transport, the present position may deteriorate further.

There is no shortage of coal in the coalfields to meet the present requirements of consumers. It is only the inequitable distribution of the already restricted transport capacity that has created acute difficulties. The complaints with regard to the supply of sub-standard coal has been mainly on account of the State Government agents who do not know the requirements of a particular consumer. As compared with this state of affairs, established coal merchants, who have been in the business for a number of years, are well acquainted with the needs of every customer receiving supplies from them.

It is true that the average daily loading of coal-coke from Bengal and Bihar coalfields has increased from 4,190 wagons during January 1960 to September 1960 to 4,735 wagons during October 1960 to May 1961. But, it must be remembered that, as compared with the requirements of 6,500 wagons per day last year, the present demand is of the tune of 7,100 wagons per day. Railways, on the other hand, who had promised to offer 5,030 wagons per day during the past year, have now raised this figure to 5,230 wagons a day only. Thus, the shortfall is of the order of over 450 wagons per day. This is reflected in the gradually increasing pit-head stocks of collieries in the West Bengal and Bihar coalfields. For example, at the end of January 1960, collieries had a stock of 2.48 million tons. This went upto 3.96 million tons in July of the same year but had come down to 3.13 million tons in December. In 1961, however, pit-head stocks started growing and from 3.42 million tons in January they had gone upto 4.81 million tons in March and were at 4.75 million tons in May 1961.

INDUSTRIAL FINANCE CORPORATION COMPLETES THIRTEEN YEARS

LOANS SANCTIONED TOUCH RECORD LEVEL

THERE is no exaggeration whatever in the statement of Mr. K. P. Mathrani, I.C.S., Chairman of the Industrial Finance Corporation of India, made while addressing the annual meeting of the Corporation held last week, that the Corporation has played a significant role in the achievement of one of the major objectives of the second Five-year Plan, namely, establishment of a sound and progressive industrial economy. A clear testimony to this claim is borne not only by the details of working which Mr. Mathrani highlighted in his speech but also by the thirteenth annual report of the Corporation, which covers the year ended June 1961. Thus, out of the total loans amounting to nearly Rs. 106 crores sanctioned by the Corporation since its inception thirteen years ago, the second Plan period accounted for as much as Rs. 63 crores, the share of 1960-61 alone being at the record level of over Rs. 21 crores, as against Rs. 18 crores in 1959-60. The number of undertakings for which loans have been sanctioned so far is 239. Of these, 152 are new undertakings (that is, those that commenced production after independence in 1947) with loans aggregating Rs. 77 crores and 87 units are established undertakings with loans aggregating Rs. 29 crores (for purposes of renovation, modernisation and expansion). The fact that the aggregate amount of loans sanctioned by the Corporation has now exceeded Rs. 100 crores is, as Mr. Mathrani aptly described, "a landmark in the life of the Corporation." What is more, the Corporation has widened the scope of its activities by granting loans in foreign currency, guaranteeing deferred payments, underwriting equity and preference issues, and financing industrial projects jointly with other institutions, etc.

Eighteen industries (covered by 57 applications) were sanctioned loans aggregating Rs. 21.21 crores during the year 1960-61. This amount, however, was much below the total of loans applied for, that is, Rs. 36.86 crores, in contrast to the trend noted in 1959-60 when the loans sanctioned were higher than those applied for, being Rs. 17.92 crores, as against Rs. 17.54 crores. Further, there is a wide gap of Rs. 14.59 crores between the loans sanctioned (Rs. 21.21 crores) and the loans actually disbursed (Rs. 6.62 crores) during the year. This was probably due to the fact that, out of the loans sanctioned during the year under review, the approval of the Central Government was required for 32 loans aggregating Rs. 16.35 crores in terms of provisions of the I.F.C. Act and the various directives issued by it.

Securing Foreign Credits

The bulk of the loans sanctioned during 1960-61—Rs. 16.95 crores—was accounted for by new undertakings (47 applications), the balance of Rs. 4.26 crores representing the share of old industries (10 applications). In all, 76 applications were received for a total of Rs. 36.85 crores, of which two applications were rejected, 14 were treated as lapsed or withdrawn and 28 applications (Rs. 14.75 crores) were still under consideration at the end of June 1961. The amount of loans approved during the year includes dollar sub-loans of over Rs. 4.29 crores sanctioned to 14 concerns out of a loan of $10 million received from the U.S. Development Loan Fund. Six out of the 14 concerns were also sanctioned rupee loans aggregating Rs. 1.37 crore. Almost the entire amount of the D.L.F. loan (sanctioned in April 1960) stands committed. Negotiations for an additional D.L.F. loan of $20 million have been initiated. The Corporation is also exploring the possibilities of securing credits in the currencies of certain other countries.

(In lakhs of rupees)

Manufacturing industry	Amount sanctioned: Upto 30th June 1960	During the year ended 30th June 1961	Total upto the end of June 1961
Food (except beverage)	25,72.00	4,80.00	30,52.00
Textiles	9,97.75	2,16.87	12,14.62

Total	84,60.74	21,21.34	105,82.08

Assam, Gujarat, Madras, Maharashtra, Mysore, Orissa, Punjab and Uttar Pradesh. The balance of Rs. 49.70 lakhs was approved for two co-operative spinning units in Gujarat and Bihar.

The loans sanctioned during 1960-61 covered all the States, except, as in previous years, Madhya Pradesh and Kashmir. The actual share of individual States—in crores of rupees—for the entire thirteen-year period is: Maharashtra 19.10; West Bengal 12.72; Madras 11.21; Uttar Pradesh 8.51; Mysore 7.91; Bihar 7.47; Gujarat 6.69; Andhra Pradesh 6.11; Punjab 6.08; Orissa 5.17; Assam 4.72; Kerala 4.32; Rajasthan 2.74; Delhi 0.95; Andamans and Nicobar Islands 0.03.

Underwriting Facilities

The Corporation approved during 1960-61 eight proposals out of 28 received for underwriting facilities and four proposals out of those pending at the close of the previous year, to the extent of Rs. 90 lakhs in equity shares and Rs. 1.42 crore in preference shares. This brings the total amount of underwritings approved to Rs. 4.19 crores. The Corporation did not accept 10 applications for underwriting of share capital to the extent of Rs. 2 crores. Out of the applications approved, underwriting agreements were finalised in respect of four cases amounting to Rs. 1.60 crore. In the case of one applicant proposing to engage itself in the manufacture of sanitary wares and household ceramics, the issue of 7 per cent (tax-free) preference shares was fully subscribed by the public. In the remaining three cases, the Corporation had, in pursuance of the underwriting agreements, to take up shares to the extent of Rs. 1.07 crore.

As compared with the previous year, the number of applications for guarantees under deferred payments received during the year and the amounts involved registered a marked increase. Fourteen applications were received, as against five in the preceding year. The Corporation approved nine applications of the value of Rs. 13.28 crores. Of these, three were from the existing borrower concerns for a total amount of Rs. 5.83 crores. With these, the total number of guarantee proposals approved since 1957 is 20 and the total amount is Rs. 25.46 crores. The Corporation did not entertain two applications. The provision for guaranteeing for deferred payments became possible by the I.F.C. Amendment Act of 1957. Approval was given to one concern engaged in the hotel industry for guaranteeing a dollar loan of Rs. 1.47 crore, including interest, from the U.S. Export-Import Bank for implementing its scheme to set up a chain of hotels in India.

The Corporation received during the year under review Rs. 2.56 crores on account of interest and Rs. 3.71 crores by way of repayment of instalments of principal. The total amount of interest on the entire amount of loans advanced from the date of inception was Rs. 11.70 crores, out of which Rs. 11.67 crores were actually received. The amount in default constitutes 0.25 per cent of the total amount due; the corresponding percentage for 1959-60 was 1.2. The total principal due to the Corporation since its inception was Rs. 9.66 crores, of which a sum of Rs. 9.20 crores was received. After excluding a sum of Rs 23.30 lakhs, for which extension of time was granted, the amount in default was Rs. 22.65 lakhs which is 2.34 per cent of the amount due. The corresponding percentage for 1959-60 was 4.3.

Working Results

The salient features of the Corporation's working results for 1960-61 as compared with those for the three years preceding it are given below:

(In lakhs of rupees)

	For the year ended 30th June: 1961	1960	1959	1958
Interest earned	2,60.36	2,25.40	2,00.05	1,54.36
Other income	38.50	25.48	3.83	0.54
Interest paid	1,46.76	1,28.22	1,15.75	86.85
Other expenses	12.63	13.27	10.29	9.68
Depreciation	0.11	0.12	0.12	0.14
Profit	1,39.35	1,09.27	73.08	53.42
Provision for taxation	54.60	49.76	37.71	25.21
Net profit	84.75	59.51	35.37	28.21
To general reserves	63.50	38.26	14.12	11.50
Subvention returned to Government	10.00	10.00	10.00	5.45
To dividend	11.25 (2¼%)	11.25 (2¼%)	11.25 (2¼%)	11.25 (2¼%)
Loans applied for	36,85.62	17,54.10	11,16.57	14,88.50
Loans sanctioned	21,21.34	17,91.74	3,79.00	7,78.50
Loans disbursed	6,62.55	8,40.81	7,47.71	8,33.35
Loans under consideration at the end of the year	14,75.50	7,88.10	11,70. 97	14,98.40

The foregoing statement shows that the gross income earned by the Corporation during the year under review was Rs. 2.98 crores, as against Rs. 2.50 crores in the previous year. After providing Rs. 54.60 lakhs (Rs. 49.76 lakhs in 1959-60) for taxation, the net profit comes to Rs. 84.75 lakhs, as against Rs. 59.51 lakhs. Out of this, a sum of Rs. 63.50 lakhs has been credited to the general reserve raising the total of this fund to Rs. 132.90 lakhs. In addition to this general reserve, the Corporation has a special reserve fund of Rs. 36.48 lakhs. The guaranteed dividend of 2.25 per cent per annum on the paid-up share capital of Rs. 5 crores is covered by the balance of Rs. 11.25 lakhs in the profit and loss account.

Borrowings

The Corporation did not enter the money market during the year for fresh issue of bonds, as the amount drawn from P.L. 480 funds and repayments received from the borrower concerns were more than adequate for meeting its commitments. The total amount of bonds issued and outstanding as at the end of the year remained unchanged at Rs. 22.24 crores. The Corporation repaid to the Central Government a sum of Rs. 7 crores, thus reducing the outstanding loans to Rs. 6.25 crores. A sum of Rs. 9 crores sanctioned by the Government out of P.L. 480 funds was drawn during the year. Borrowing from the Reserve Bank was availed of sparingly.

Since 1957, the Corporation has not found it necessary to receive subventions from the Central Government. In fact, in the past three years, a total of Rs. 25.45 lakhs has been paid over to the Government in repayment of subventions drawn previously for payment of the guaranteed dividend of 2.25 per cent per annum to shareholders. In the year under review also, a further sum of Rs. 10 lakhs is being paid, thereby reducing the outstanding amount of subvention repayable to Rs. 18 lakhs.

In a special appendix, the report of the Corporation gives a general review of industries, particularly in the fields in which the Corporation has advanced loans. The review reveals that, during the year 1960, industrial entrepreneurs took interest in diversifying the lines of manufacture as well as in establishing new ranges of production. Several new items such as hydrosulphite, surgical catgut, zinc phosphate, infant milk food and glass insulators were manufactured for the first time in the country. The capacity for the production of several items such as sulphuric acid, ammonium chloride, soda ash, penicillin, coke-oven and coal-tar distillation products and refractories substantially increased as compared with the previous year.

BATTERIES ARE OUR BUSINESS

50 YEARS experience in India of supply, service and operation of EXIDE, CHLORIDE, EXIDE-IRONCLAD, Motor vehicle, Stationary, Marine, Train Lighting, Traction, Diesel-starting, Aircraft and other storage Batteries.

NEW AGENCY TO DIRECT U.S. FOREIGN AID

Economic help from the United States during what President Kennedy has hailed as a "decade of development" will be channelled through a new organisation to be known as the U.S. Agency for International Development (U.S. Aid). The Agency inherits the tasks of several predecessor agencies. It will absorb the work of the U.S. International Co-operation Administration, the Development Loan Fund, and local currency functions of the Export-Import Bank. Both the I.C.A. and the D.L.F. will go out of business. Heading the U.S. A.I.D. will be Mr. Fowler Hamilton, an expert in international law with previous Government experience. Mr. Hamilton will have the rank of Under Secretary of State and will report directly to the Secretary of State and the President. Two Deputy Under Secretaries will be responsible for planning and operation.

The U.S. aid programme is expected to face its peak requirements in this "decade of development" and then taper off as its objectives are achieved. Administration planners feel that, by the end of this period, many recipient countries should be able to continue their growth without large amounts of assistance. President Kennedy envisages the new agency as one with "a streamlined administrative structure," relying on the Government's 15 years of experience in administering foreign aid. The agency is expected to drop what has been ineffective and keep what has proven successful.

Commenting on the Administration's foreign aid plans before the House Foreign Affairs Committee, the Secretary of State, Mr. Rusk said: "To support our foreign policy most directly and to get the best results in economic growth for the least expenditure in resources, it is essential to develop and follow in each country a system of priorities and, where possible, a plan for long-term development."

The new U.S. agency will be set up along geographic lines, with assistant administrators for four regional bureaus—Far East, Near East and South Asia, Africa and Europe, and Latin America. Each bureau will formulate aid programmes for the respective countries and implement the programmes through country missions. The missions will use all economic, technical and educational tools to achieve the objectives of each national plan of priorities. Such a plan will be drawn up by every country concerned, bearing in mind the United States' basic belief that each nation must be permitted to develop in its own image. An overall integrated development plan for each country will avoid a piecemeal approach, U.S. officials said.

President Kennedy says that the four assistant aid administrators will be equal in rank to the geographical Assistant Secretaries of State and will work closely with them. The President has added: "The proposed rank of the aid administrator and the relationship between the Agency for International Development and other elements of the Department of State highlight a fundamental fact: Economic development assistance can no longer be subordinated to or viewed simply as a convenient tool for meeting short-run political objectives. This is a situation we can ill-afford when long-range self-sustained economic growth of less-developed nations is our goal."

U.S. A.I.D., as expressed in the Congressional Act enabling its creation, is "to help make a historic demonstration that economic growth and political democracy can go hand in hand to the end that an enlarged community of free, stable, and self-reliant countries can reduce world tensions and insecurity."

U.S. TAX PAYERS HAVE STAKE IN FOREIGN ASSISTANCE

There are a few more than 60 million workers in the United States—all of them taxpayers and, for that reason, all involved in meeting the cost of U.S. foreign economic assistance. Just what that means to the average American household in dollars and cents is graphically brought home in a report released by the International Co-operation Administration on the eve of its absorption by the new Agency for International Development (A.I.D.).

U.S. official support of economic programmes abroad, the report discloses, has cost $61,396,300,000 in the 15-year period ended 30th June last, an amount equal to about $1,000 per American household. Since the average factory worker earns

PROBLEMS OF RAYON INDUSTRY

BETTER PRODUCTION STANDARDS AND LOWER COSTS URGENT

BOTH quantitatively and qualitatively, the rayon industry has made remarkable progress in the past decade. The quantity of rayon yarn actually spun is currently running at an annual rate of about 50 million lbs., as against a bare 15 million lbs. in 1955 and 5 million lbs. in 1951. Similarly, the output of rayon fabrics is as high as 430 million yards, as against 243 million yards and 176 million yards in 1955 and 1951, respectively. The quality of fabrics has also registered a distinct improvement. But the range of varieties produced has not widened to the extent noticed elsewhere in the world. It was to this lacuna that Mr. D. N. Shroff, the retiring Chairman of the Silk and Art Silk Mills Association, drew special attention in the course of his speech at the annual meeting of the Association held at Bombay on Friday last week. Mr. Shroff pointed to the advent of new fabrics such as "Bri-Nylon" which have become a rage, especially in the U.S., and urged the industry to "be in the vanguard of units importing new fibres and to experiment in the manufacture of newer fabrics." He did well to make it clear that it was only by paying heed to the quality of products that the rayon industry could progress and keep pace with developments in other parts of the world.

It is somewhat disquieting to learn from Mr. Shroff that there are many restrictions and limitations which prohibit a change in the production pattern of the weaving industry, particularly the restrictions that come from the necessity of using such yarns as are produced indigenously and are imported by the State Trading Corporation through barter or rupee payment arrangements. If the yarn available to the industry is only of a limited variety, there is bound to be largely a "regimented production of fabrics" which may not cater to the demand abroad or within the country. Considering, however, the tight foreign exchange position which will persist for quite sometime to come, the scope for a liberal yarn import policy is greatly restricted. The rayon industry should, therefore, explore other possibilities. As Mr. Shroff stated, to the extent to which direct imports are available, full opportunity should be taken by the industry to make innovations. Some of the units also need to divert their production to a different end-use. Alluding to this, Mr. Shroff said:

"Rayon and synthetic fabrics have provided an answer for many industrial uses. Even the Defence Organisations are in need of these products. Since a long time, tents, parachutes, etc., have been made from nylon. Encouraging news from abroad has now come that many countries are using synthetic fabrics for uniforms of the Defence Corps. Our Association also receives inquiries from the Defence Organisations in our country specifying their requirements, but there has been no sufficient response to these inquiries, which are circulated amongst the members of the Association. I would impress upon you to divert your attention to newer fields, when such opportunities are afforded.

"The raw material availability has been deteriorating and there is a gloomy future before the industry about obtaining its supplies. India's own foreign exchange problems, the possibility of a world political conflagration, all point to a crisis developing within the industry for which you need to be prepared. Perhaps, more and more of you could take advantage of the Government's decision to allow you to utilise 10 per cent of your capacity, subject to a maximum of 20 looms, for the production of mixed fabrics, of rayon yarn mixed with cotton, wool or silk."

Modernisation

A radical change in the production pattern of rayon weaving industry is thus important. But such a change can be effected only if, as Mr. Shroff emphasised, the problem of rehabilitation and modernisation is tackled urgently. It will be recalled that the N.I.D.C. Working Group has estimated the total outlay on rehabilitation at Rs. 15 crores, of which the industry should be able to find about Rs. 10 crores from its own resources. Mr. Shroff suggested that the rayon industry must undertake a five-year programme for raising its resources. And he felt that the Association could play a role in accelerating the rehabilitation programme of its members.

The Chairman of the Association then expatiated on the issue of exports. He sought to impress upon the members the urgency of making a "full-blooded effort" in exporting fabrics to foreign markets. He was not unaware of the difficulties in the implementation of the export promotion scheme, namely, delays in inspection, issue of entitlement certificates, and grant of licences, obtaining of unrequired deniers and qualities of indigenous yarn against 30 per cent surrender of entitlement, etc. Nevertheless, he called for earnest export efforts. To quote him: "Whatever problems arise, and newer problems are bound to arise, there needs to be an unflagging zeal to export for the sake of the existence of the industry, for the sake of the economy of the industry and for the sake of the country. It is our duty to make a success of the export promotion efforts of the country and to earn the much-needed foreign exchange."

Reducing Cost

There are two important directions in which the export efforts have to be routed. One, the standards of production must be improved. Two, efficiency in production and larger output are needed, especially to bring down costs. Appropriately enough, Mr. Shroff dealt with both these aspects. As he rightly emphasised, the target for the rayon industry should be to manufacture fabrics not according to the specifications laid down under the scheme of inspection for exports of fabrics but to treat these specifications as the minimum standards to which the qualities should conform. On the question of production cost, Mr. Shroff alluded to the premiums paid for obtaining yarn supplies or the high prices of yarn imported through the State Trading Corporation and the demands of labour for higher wages and dearness allowance. In this connection, he pleaded for an upward revision in the selling prices of fabrics in the internal market. In support of this plea, he made the following observations:

"With the general inflationary trends in the country, the battle on the cost front seems to be a losing one for the industry. The only answer, perhaps, will be to increase the selling prices of the fabrics in the internal market as a concerted all-India move. A study made by the Association of the selling prices of fabrics in the last six years shows that, despite heavy taxation burdens and inflation in the raw material prices, the prices of our fabrics have remained unchanged, or have registered only negligible increases. A careful watch has been specially kept on the movement of the prices of the fabrics by the Association after the budget; since it was agreed with the Textile Commissioner, when the sharing of duty on yarn question was discussed, that the burden of the share that would fall upon the weaving sector would not be passed on to the consumers, and the prices of the fabrics would not be unduly increased. The prices have not increased, and it is a matter of pride that, however much it has pinched the industry, our word has been kept. But, the excise duty on yarn is not the only factor which has led to increase in costs. I have already indicated what the factors are. In my opinion, it is time that the industry discussed the question of internal prices with the Textile Commissioner and increased them to counteract the extreme financial stringency. The working of the Rayon Mills' Commercial Corporation Ltd., specially now as a distributor of yarn imported by the S.T.C. confirms the lack of liquidity in the industry and the inability of the units to pay for and take delivery of the yarns allotted to them. This is, indeed, a problem which needs to be presented and discussed until a satisfactory solution is found. . . ."

No one will dispute the fact that the cost of production in the rayon weaving industry, just as that in several other industries, has gone up recently as a result of high raw material prices, heavier wage bill, increased cost of machinery, etc., and additional tax burden. But the point is whether the present time is opportune for an upward revision in prices of rayon fabrics. It is argued by a section of opinion that the rayon weaving industry, barring a few units here and there, is quite prosperous and that there is scope for reducing the cost of production. Incidentally, this section also points out that there is a tendency among several mills to sell the yarn purchased against quotas in the open market, instead of using it themselves for producing fabrics.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

Incorporated in England by Royal Charter 1889 with Limited Liability.

TEXTILE IMPORT QUOTAS RAISED

MILLOWNERS EXPRESS DISAPPOINTMENT

From Our Special Correspondent

MANCHESTER, 26*th September*

MANCHESTER LETTER

THREE Commonwealth countries—Hong Kong, India and Pakistan—will be able between them to ship an extra 45 million yards of cotton cloth to Britain next year. This new burden for Lancashire mills, already complaining bitterly about the flood of imports, was revealed in a Board of Trade announcement of new quotas for imports from India and Pakistan.

India will be allowed to send an extra 11 million yards of cloth this year and 20 million yards next—bringing her total shipments of cotton cloth to Lancashire to 195 million yards in 1962. And Pakistan's ceiling is raised by 2.5 million yards this year and 4.4 million yards next year, giving a 1962 total of 42.4 million yards. Agreement has already been reached with Hong Kong allowing the Colony to raise the amount of cotton cloth it can ship to the United Kingdom next year by 21 million yards to 185 million yards.

The three Commonwealth suppliers between them will next year be able to send 422.4 million yards of cotton cloth for retention in Britain's home market. A Cotton Board spokesman said after the news had been announced: "Lancashire mill men regret the need for additional or supplementary imports, but knowing what level of imports can be expected should help to encourage the industry to press on with its future plans." And a leading millowner said: "At least it is some comfort to know that the level of imports from Commonwealth sources is tied to the state of trade in Lancashire."

No Respite From Imports

Hopes that the completion of the arrangements for extending the import pacts with Hong Kong, India and Pakistan would provide Lancashire traders with a safeguard against any further substantial rise in purchases from abroad have been severely dashed by the release of details of the scheme. Far from restoring confidence to the market, the situation must be regarded as distinctly less favourable than before.

The complications of the new formula to be adopted are bad enough, but the prospects opened up by the regulations show no respite ahead for local producers. The Commonwealth suppliers, on the other hand, have established a very important principle, apparently giving them the endless facility of retaining an 85 per cent share of the British home market, equivalent to the combined proportion they enjoyed before the voluntary schemes came into operation.

Under the revised scheme, the more goods received from non-Commonwealth sources, the more the three Eastern suppliers will be allowed to participate in this trade. Their only limiting factor will be the extent of order lists in Lancashire and, provided these extend for 20 weeks ahead, full supplementary quotas will not only be available but can be carried forward from quarter to quarter if local trade conditions are poor.

Order Books Restrained

The inevitable outcome will be that order books in the United Kingdom industry will be held down because, as soon as they show signs of broadening, the arrivals of foreign cloth will automatically increase. In the circumstances, the rising mood of resentment in Lancashire can be understood and lack of enterprise among customers will be perpetuated as a result.

Hard words are being said about the negotiators of an agreement which appears to undermine at the stroke of a pen virtually all the good work done in scrapping redundant machinery less than two years ago. Millowners who are contemplating re-equipment have already withheld purchases of machinery, fearing the future: now they will have even less incentive to introduce expensive modernisation schemes when the door is being opened wide for every textile producing country to cater for Britain's home market.

Some idea of the spread of arrivals of foreign grey cloth can be gained from the fact that more than 40 countries are now sending such goods to the United Kingdom. Total arrivals in the first half of this year amounted to 335 million yards, as against 291 million yards in the same period of 1960. Figures for the big Commonwealth countries have already been published, but it is interesting to note that Spain provided 20 million yards, Yugoslavia 15 million yards, the United States 14 million yards, China 13 million yards and Portugal and Formosa 12 million yards each.

A Press item which has not escaped the eyes of Lancashire traders describes the formation of a marketing organisation by the International Dress Corporation of Hong Kong. Operating initially in Britain and the Common Market countries, the intention is to handle garments made by the Corporation in the Colony and designed in Paris, exporting its products throughout the world. The dresses, made of Hong Kong fabrics, will retail at up to a maximum of 63*s.* each.

Export Nadir

Trading has been so dull lately that its reflection was sure to be shown up in export returns very soon. In all sections during August, a new low point was reached and earnings barely exceeded £4,000,000. This was a full £1,000,000 lower than in the same month last year.

Both yarn and cloth shipments were smaller than in any comparable period since the war and in relation to the level of overseas offtake in the 1930's current exports are not worth mentioning in the same breath. Cotton yarn sent abroad was only 874,546 lbs., scarcely half the August 1960 figure. For the eight months, the total was almost 4,000,000 lbs. down on last year at 10,746,450 lbs.

Cloth exports show the same regrettable trend. The August total just crept over the 20 million yard level, a fall of 6 million yards on last-year. The eight-month aggregate is still below 200 million yards, and at 198,750,000 yards is nearly 22 million yards lower than at the same time in 1960.

In contrast, arrivals of all types of cotton cloth to the end of August aggregated 539,904,000 yards, as against 471,540,000 yards last year. Grey cloth imports during the month amounted to 52,498,000 yards, as against 53,615,000 yards in August 1960, and for the eight months were 43 million yards higher at 433,699,000 yards. Cotton yarn arrivals reached almost 30,000,000 lbs., a rise of 3,500,000 lbs.

Cotton's Borrowings

A slowing down in the rate of advances made by the banks during the quarter ended August is recorded in returns collated by the British Bankers' Association. Borrowings rose by about £30 million to £3,916,968,000. Considering the steady upward trend of indebtedness, the share of the cotton industry has remained remarkably constant over the years. It still represents only 0.6 per cent of the total at £24,599,000 an increase of less than £750,000 on the May figure.

Meanwhile, during the past quarter, the wool trade has reduced its borrowings by £100,000 and advances to other textile firms have fallen by nearly £1,200,000. The big borrowers in industry remain engineering, agriculture and the retail trade.—*All Rights Reserved.*

AUSTRALIAN WOOL

Forthcoming Australian clip promises to be superior in quality to the wools marketed in 1960-61, states the National Bank of Australasia in a review of the outlook for the current season. Generally, fleeces are expected to be heavier, and offerings should comprise better-grown and sounder-stapled wools. Most districts report that widespread autumn and early winter rains have produced much more favourable conditions than at this time last year. Sheep are stated to be in excellent condition in most of Victoria and South Australia, in the southern districts and north-west plains of New South Wales, and in most areas of Western Australia.

The review says that because of the relatively low level of wool stocks in the main consuming countries, competition should be keen and the market firm for at least the early part of the season. Demand for wool is expected to increase as a result of proposed higher defence expenditures by the United States and Russia.

EXTRA LONG-STAPLE COTTON

LARGER SUPPLY ANTICIPATED

IN our last issue, we published a world-wide survey of raw cotton production prospects during the 1961-62 season. The survey naturally covered only the overall position. It did not indicate the composition of the crop staple length-wise which is necessary to have a better insight into the supply position during the season. The overall size of the crop can be misleading, in that it can conceal radical changes in the composition of the crop which may have far-reaching repercussions on prices, demand and exports. An instance in point is extra long-staple cotton, that is, cotton of staple length 1.3/8" and above.

The extra long-staple cotton does not necessarily follow the general pattern of production, consumption and trade of raw cotton in general. Hence it is difficult to make any inference of the probable trend of production, consumption and prices of long-staple cotton from the statistics of raw cotton. Although it is too early to have a precise idea of the probable size of production of long-staple cotton during the current season, a broad picture, based on provisional estimates of acreage and assuming a return to more normal yields in Sudan, can be presented. On this basis, production of extra long-staple is expected to increase during the current season. Since carry-over stock on 1st August last is also expected to have been higher, a noticeable increase in supply is anticipated. These calculations, it is necessary to qualify again, are very tentative and subject to revision as the season advances and a clearer idea of the crop becomes available. An analysis of the supply and demand position of long-staple cotton during last season (that is, 1960-61) which ended on 31st August 1961, would provide a suitable background against which the emerging crop pattern could be properly assessed.

Production of extra long-staple cotton during the 1960-61 season is estimated to have been 1.6 million bales (of 478 lbs. each), as compared with 1.9 million bales in the previous season. This, coupled with a lower carryover at the beginning of the season of 683,000 bales, reduced total supply during the season to 2.47 million bales, as compared with 2.82 million bales in 1959-60. The main reduction in supply had taken place in Egypt, where supply was lower by 300,000 bales at 1.27 million bales, as against 1.57 million bales in 1958-59. The following table indicates the supply position of extra long-staple cotton in 1960-61 as compared with that in 1959-60 and 1958-59:

(In thousand bales of 478 lbs. each)

	1960-61†	1959-60	1958-59
Stocks (August 1):			
Egypt	250	500	305
Sudan	250	250	300
Peru	25	25	20
U.S.A.	133	123	109
Others	25	17	13
Total	683	915	747
Production:			
Egypt	1,023	1,078	1,185
Sudan	508	560	546
Peru	120	120	129
U.S.A.	67	99	82
Others	75	74	53
Total	1,793	1,901	1,995
Supply:			
Egypt	1,273	1,578	1,490
Sudan	758	810	846
Peru	145	145	149
U.S.A.	200	192	191
Others	100	91	66
Total	2,476	2,816	2,742

†Estimated.

A salient feature of the extra long-staple situation in the previous two seasons was the marked increase in demand, whether expressed in terms of exports or actual consumption; the increase was as much as over 70 per cent. The increase in demand in 1958-59 was associated with an increase in purchases for stock building in importing countries as well as an increase in consumption. Last season, however, the increase in demand stemmed more from an accelerated expansion in consumption. Consumption of extra long-staple cotton in the 1959-60 season aggregated 1.36 million bales, as compared with one million bales in 1958-59 and 800,000 bales in 1957-58. This rise in consumption was attributed to, and in line with, the overall expansion in raw cotton consumption. Lower prices also might have been a contributory factor. As for the 1960-61 season, actual figures are not yet available. Consumption is, however, expected to have declined, the fall occurring mainly in the U.K.

Exports during 1960-61 are deemed to have been lower than in the previous season (that is, 1959-60) when shipments of extra long-staple cotton amounted to a record 1.9 million bales, nearly double the one million bales exported in 1956-57. The fall has mainly occurred in Sudan and Egypt, the two largest producers of extra long-staple cotton in the world.

COTTON RESEARCH

The Agricultural Research Sub-committee of the Indian Central Cotton Committee met in Bombay on Tuesday the 3rd inst. under the chairmanship of Mr. M. R. Ruia, Vice-President, I.C.C.C. in the absence of the President, Mr. V. Shankar, Vice-President, Indian Council of Agricultural Research, and Special Secretary to the Union Ministry of Food and Agriculture.

The Sub-committee divided itself into six sectional sub-committees—extension, agronomy, physiology and soil science, plant breeding (three) and pests and diseases sub-committees which examined in detail the subjects allotted to each.

The agenda of the Agricultural Research Sub-committee comprised 109 subjects on different aspects of cotton research and extension in various parts of the country. Besides the progress reports, the programme of work of various schemes on cotton research and seed multiplication and distribution were also considered.

The sub-committee also examined 11 new schemes out of which four were research schemes for breeding superior varieties of cotton, three agronomic schemes for improving the yields of cotton and four schemes for the control of various pests and diseases. Proposals for the extension of nine schemes were also considered out of which eight were research schemes and one a scheme for control of pests in Gujarat State.

The Sea-Island Cotton Development Sub-committee also met on Tuesday and reviewed the progress under the scheme for the development and improvement of Sea-Island cotton in Kerala, Mysore, Madras and Andhra Pradesh. It also considered the report submitted by the Standing Sub-committee constituted to inspect the Sea-Island cotton crop and examine the various aspects of its development.

The recommendations made at the various sectional sub-committees will be considered by the full Agricultural Research Sub-committee which, at the time of writing (Wednesday), is scheduled to meet on the 5th inst.

FOREIGN COTTON IMPORTS

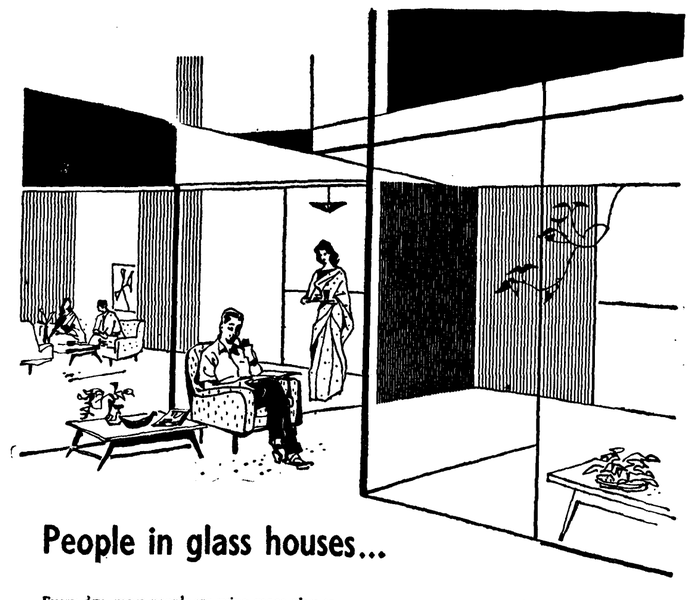
The Cotton Advisory Board, which met in Bombay on Tuesday, the 3rd inst., under the chairmanship of Mr. Ramnath Podar, is reported to have recommended to the Government to plan an import of about 1.2 million bales of cotton during the current season. Of this, according to the Board, a major portion should be American cotton under P.L. 480 programme, subject to successful negotiations with the U.S. Government and the balance sterling area cotton. The Board estimated the current season's crop at only 4.8 million bales and considered that, if the proposed import could be arranged, there would be no cause for concern as regards the overall supplies of Indian and foreign cotton during the season. The Board is expected to meet again later in the month to suggest the composition of the import recommended.

As regards exports, the Board took note of the recent release of an export quota of 150,000 bales of Bengal *Deshi*. Further quotas for this growth would be recommended some time in January or February when a clearer picture of the *Deshi* crop would be available. The Board would appear to have rejected the trade's plea for earmarking the entire *Deshi* crop for export.

The question of introducing compulsory survey and setting up regional survey committees immediately with a view to arresting the rise in spot prices is reported to have been raised at the meeting. Consideration of these measures was, however, postponed to mid-November, when the size of the domestic cotton crop could be reasonably assessed.

PAKISTAN COTTON IMPORT

The ceiling fixed for import of Pakistan cotton on first-come-first-served basis has been reached and no further application for import of Pakistan cotton will, therefore, be accepted according to the Joint Chief Controller of Imports. It may be recalled that, on September 18, the Government of India had allowed the import of Pakistan cotton worth Rs. 1.50 crore.



People in glass houses...

Every day, more people are using more glass to modernise their homes. And for more reasons than one. Glass invites cheerful, natural light; seals out moisture, noise and unhealthy dust. It's easy to clean and keep clean, too!

Why don't you try glass? Take any room. Fit good, strong glass (HPG, to be sure) and see how spacious it looks—how wonderfully livable it becomes! Or may be you could use an elegantly functional glass partition. Why not do it?

The finest and most durable in India, HPG sheet glass is tested for unvarying quality at every stage of manufacture.

Available in a wide variety of sizes and thicknesses.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

Speech by the Chairman, Mr. F. A. Collett, at the Fiftieth Annual General Meeting of the Company on 26th September 1961

Board of Directors

On the 31st of May this year Mr. N. Shiva Rao retired from the Board after serving as a Director of the Company since the 1st of April 1956. Mr. Shiva Rao has had a very long association with the Company, having first joined in February 1935, and I am sure I am expressing the sentiments of all of us when I say that we wish him very much happiness and all success in the future.

In October 1960, Mr. S. D. Gupta was appointed to the Board. Since he joined the Company in 1940, Mr. Gupta has concentrated on the production side of the business and he brings to his increased responsibilities and extensive experience and expert knowledge which has already made, and I am sure will continue to make, a substantial contribution to the progress of your Company.

Accounts

When I addressed you a year ago, I told you that during the first five months of the financial year Sales showed a welcome improvement over the previous year. I am happy to be able to tell you that the improvement then referred to was maintained throughout the year and both the volume and the value of Sales showed a very marked increase over the previous year. The measure of this increase is reflected in the Profit & Loss Account, from which you will see that Sales values have increased from just under Rs. 37 crores last year to a figure or more than Rs. 42 crores in the current year.

In a large measure I attribute this improvement to the fact that in the Central Budget presented to the Lok Sabha in February 1960 no changes were made in Excise Duties on your Company's products. This was a very welcome respite from the frequent changes which had occurred in earlier years and because selling prices in the various categories remained undisturbed the consumer knew exactly where he stood. You will see from the Accounts that, nevertheless, Customs and Excise Duties have increased from Rs. 15¼ crores to Rs. 18 crores.

As a result of the increased business the Accounts show an increase in net profits from Rs. 142 lakhs to Rs. 188 lakhs, with the result that your Board has recommended raising the total dividend from 8% to 9%. Your Board believes that there is still considerable scope for expansion and has considered it necessary to make a larger than usual transfer to Fixed Asset and Stock Replacement Reserve, for the purpose not only of making good past deficiencies in providing for the increasing cost of replacing fixed assets in due course, but also of financing the larger stocks of leaf and other material at prices which show a constant tendency to rise.

Golden Jubilee

You will have seen from the Notice convening this meeting that this is our Fiftieth Annual General Meeting and on an occasion such as this I think you will agree that I am justified in indulging in a little reminiscence.

Fifty years ago your Company was only a selling organisation and for the limited scope of its business it required a capital of only Rs. 25 lakhs; today your Company owns five cigarette making factories and two printing factories, and its capital is now in excess of Rs. 15 crores. In 1911 your Company's turnover was just over Rs. 40 lakhs; in the current year it is well over Rs. 40 crores, and even though Rs. 18 crores of the present turnover represents a collection of revenue on behalf of the Government in the form of Customs and Excise Duties, I think you will agree with me that the expansion of the business is no mean achievement.

At the time of our First Annual General Meeting, the management staff was recruited entirely from overseas; of the present staff only about one-fifth was so recruited, the remainder being Indian Nationals.

Over the same period there has been an even more comprehensive change in the source of our raw materials. Apart from one or two specialised items, all our raw materials are now produced in India. This, fact, of course, reflects the rapid development of industry in this country but I can safely say that your Company has always extended a welcome, and often a helping hand, to potential suppliers, both of raw materials and, more recently, of machinery.

However, we certainly have no intention of resting on our past achievements. The per-capita consumption of cigarettes in India is still very low and, with the successful implementation of the Five Year Plans and the resultant increase in the standard of living of the population, one must expect further increases in the consumption of tobacco goods in the years to come. I believe that your Company will not be found wanting in the task of supplying this anticipated demand.

Marketing

Although a most valuable contribution has been made by the Company's employees this year on all sides of the business, not least on the production side, it is perhaps in the field of marketing that most progress has been made. Marketing may be roughly divided into two functions, the distributive function and the creative side; both of these functions are highly technical.

The basic requirement of distribution of a consumer product of a perishable nature such as cigarettes is to make supplies available to people who want to buy them, at all times and in the freshest possible condition. This task, in a country the size of India, is of exceptional complexity. Apart from the constant activities of the Company's field staff, a most important part is played by all the links in the distributary chain. At one end we have the distributors, merchants of high standing in all the main cities and towns, most of whom have been associated with the Company for many years and have a profound knowledge both of our business and of conditions in their distributary areas. Their contribution to the Company's increased business has been most valuable. At the other end of the chain we have the tens of thousands of retailers, who are the final contact with the consumer. I am confident that your Company's distributary system is now geared to service our existing volume and indeed to meet the expanding demand of the future; incidentally it is worth noting that the cigarette business provides a livelihood to a great multitude of people.

On what I have referred to as the creative function, our marketing staff are constantly investigating and endeavouring to anticipate the changing needs and preferences of the consumer and endeavouring to meet his wishes. They have had some success this year but there is more to be done and there is no feeling of complacency.

Leaf Tobacco

In my speech last year I drew attention to the very serious problem of the growing of flue-cured tobaccos on unsuitable soil. I am sorry to say that I have seen nothing in the current year to relieve my apprehensions, and we have been much concerned about the quality of some of the tobacco which has been offered to this Company for sale. I might take this opportunity of remarking that the problem is a wider one than the immediate interests of this Company in as much as while Indian tobacco is deteriorating, tobacco grown in other countries of the world continues to improve, and this situation cannot long continue without jeopardising India's extremely valuable export trade in this commodity.

Labour Relations

In the majority of our branches and in our Head Office relations with the Trade Unions and with our employees have been generally good. During the past year we have been successful in concluding mutually negotiated long-term settlements with most of our branches and this has had the desirable effect of stabilising the employment contract with a large percentage of our work people for a three-year period. It has also had the effect of further cementing the mutual trust and confidence between management and labour which is so necessary for productive efficiency.

At one time there was a threat of large scale redundancy at our branch in Monghyr, but with requirements of increased production the economic operation of our factory there continues to improve, to the extent that redundancy has now been replaced by recruitment of new labour—an indication of what might well be expected elsewhere with increased business.

In its relations with its work people it is your Company's policy to provide emoluments and other benefits fully comparable with those of similar industries, while at the same time making further financial improvement in the terms of service dependent upon greater productivity both of men and machines. In this we are working in conformity with the labour policy announced for the Third Five Year Plan, with which we are in full agreement.

Central Excise

In presenting the Central Budget for 1961/62, the Finance Minister announced that tobacco had been one of Government's stable revenue earners, but said that experience had shown the need for some simplification and rationalisation. In practice, however, he anticipated with his changes in the tax structure an increased revenue of something over Rs. 2 crores from unmanufactured tobacco. At the same time, the Finance Minister announced large increases in the Import Duty on unmanufactured tobacco, which he expected would realise Rs. 89 lakhs.

This increase in Import Duty made an increase in the prices of the higher categories of cigarettes inevitable. The upward adjustment in Excise Duty was relatively small, and did not fully justify an increase in the unit price of a packet of cigarettes in the more popular price classes, so your Board decided, on this occasion, to absorb most of the additional duty.

Prospects

In addition to absorbing most of the increased Excise Duties, your Company is having to meet steadily increasing costs of labour, raw materials and freight, but it will be obvious to you that we cannot continue to do this if the increases in various items of cost outstrip the gain we are able to make from increased productivity.

Nevertheless, as I have said earlier, I am confident that given freedom from further increases in tobacco duties there is considerable potential for additional business accruing to your Company and, provided rising costs do not outpace increase in turnover, we can look forward to the future with moderate optimism.

TACCAVI LOANS AND AGRICULTURE

SOME DEFECTS IN WORKING HIGHLIGHTED

By Prof. V. G. Ramakrishna Aiyer

THE Government of India has constituted a twelve-man committee to examine the question of implementing the policy of routing taccavi loans through co-operative societies. An official Press release says that the Committee, which is headed by Mr. B. P. Patel, Adviser, Planning Commission, as Chairman, has been entrusted with the task of examining the existing arrangements in different States for the supply of taccavi loans to farmers and to suggest measures for ensuring the effective implementation of the policy of routing taccavi loans through co-operatives. It will also examine the adequacy of the institutional structure of co-operatives and suggest changes, if necessary, for implementing the supply of taccavi through them. The question of any guarantee or subsidy to co-operative institutions for undertaking this work will be considered. It will be recalled that the National Development Council was of the view that, by making available taccavi loans and other facilities through co-operatives, conditions could be created for attracting every peasant and rural worker to join a village co-operative. In consequence of this decision, the Government of India suggested to all the States, in May 1959, that normally all assistance to farmers should be channelled through co-operatives subject to cases of distress taccavi. Though some State Governments have taken steps to channel taccavi loans through co-operatives in specific areas, the progress in this direction has not been appreciable. It is, therefore, useful to provide the background against which the whole problem has to be considered.

One of the sources of agricultural finance is the taccavi loans given direct by the Government to the agriculturists. But in Ceylon, Pakistan and the Philippines, the emphasis seems to be on providing agricultural finance through special institutions. Although direct crop loans are given in India and Pakistan, they have not been of any direct consequence. Burma seems to be the only country where direct Government loans to cultivators have been of great importance. The Government of India have been giving substantial amounts of loans under the Land Improvement Loans Act (1883) and the Agriculturists Loans Act (1884) constituting between 80 and 90 per cent of the crop loans to the total loans granted by the Government.

Grow More Food Campaign

In most States, until the advent of the Grow More Food Campaign, financial assistance from Government was generally limited to the purposes specified in the Acts. But some States found it necessary to make special provision for advancing loans for particular purposes not covered by the Acts, as, for instance, the Bihar and Orissa Natural Calamities Act, Madras Pumping Installations and Agricultural Machinery or Plant Rules, and the Bombay Land Improvement Scheme Act for facilitating soil conservation. As a result of the seriousness of the food problem, the Grow More Food Campaign was launched and financial assistance from the Central Government to State Governments for approved schemes was given in the form of loans and grants.

But the amount of taccavi loans granted in the form of short-term and medium-term loans increased from about Rs. 1 crore in 1938 to about Rs. 25 crores in 1952-53. Similarly, the Central Government assistance for Grow More Food Campaign in the form of loans and grants, generally supplemented by equal contribution by the State Governments, has risen by stages, Rs. 2.4 crores in 1947-48 to Rs. 13.1 crores in 1951-52, Rs. 14.7 crores in 1952-53 and Rs. 22.8 crores in 1953-54 (*Report of the Centre on Agricultural Financing and Credit for Asia and the Far East*, 1956, F.A.O. p. 166).

The Rural Survey Committee which examined the working of Government finance came to the conclusion that the record of the taccavi is a record of inadequacies. As the Committee observed, in practice, taccavi is apt to be little else than the ill-performed disbursement of inadequate moneys by an ill-suited agency.

The all-India average for the borrowings of cultivators from the Government as percentage of their total borrowings is 3, according to the Rural Credit Survey. Even this meagre amount varies considerably between States. According to the Rural Credit Survey, the said proportion was less than 5 per cent in roughly two out of every three districts; between 5 per cent and 20 per cent in roughly one out of every five districts; and more than 20 per cent in only one out of twenty districts. There were eight districts in which the cultivators did not report any borrowing from the Government. On account of their small financial resources, the State Governments have so framed the rules as to provide only very small amounts. In one State, for example, the rule is that, "in the case of short-term loans, the average per head should not exceed Rs. 15 and the maximum should not exceed Rs. 25 in any case." Though the long-term accommodation predominates as a type of agricultural finance provided by the Government, individual loans often fall short of the actual requirements.

Inequality in Distribution

In the matter of the distribution of the amounts, considerable inequality in favour of the big and large cultivator is noticeable; the all-India averages in the following table gives a picture of the part played by the Government in financing different classes of cultivators:

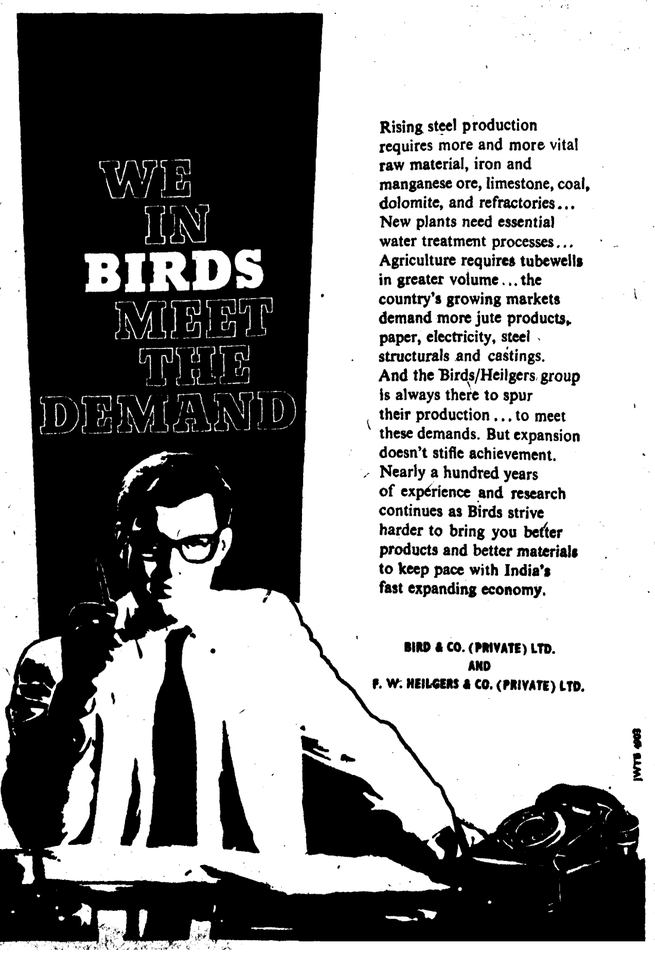
Group	Average amount borrowed from Government per family	Borrowings from Government as % of total borrowings	Borrowings from Government by the group as % of total borrowings of all cultivators from Government
	Rs.		
Big cultivators ..	24	4.5	34.5
Large ,, ..	14	3.8	58.1
Medium ,, ..	6	3.2	32.1
Small ,, ..	2	3.0	—

It will be seen from the above table that the large cultivators, who constitute about 30 per cent of the total number of cultivators, account for nearly 60 per cent of the total borrowings from Government by all cultivators. It can also be seen that the average borrowings of the big cultivator was nearly four times that of the medium cultivator and about twelve times that of the small. One important reason for this is to be found in the nature of the purpose for which Government finance is made available. These purposes are often related to forms of improvement of land or methods of increase of production, such as are beyond the scope of the medium and small cultivators, e.g., digging of wells, and buying oil engines.

Inappropriateness of Security

Part of the explanation, however, lies in the nature of the security usually demanded for Government loans. This is immovable property land. While sanctioning loans, right emphasis is laid on the value of the collateral. The result is that the loans granted have more relationship with the asset or the credit of the applicant. As the small tenants or cultivators could not offer any such solid security, they are denied the facilities for borrowing and so tend, rather are forced, to invest less and less in land. Hence it is advisable that loans are better advanced against the crop potential of each applicant.

There is also the defect of the time and manner of disbursement of Government loans. Usually there is a rush to disburse loans at the end of the financial year. In fact, sometimes, practically most of the disbursements are made on the last two or three days of March. This is, of course, not an inherent part of the scheme itself, but an inevitable consequence of the system of Government administration with its late sanctioning of allotments and rigid insistence on lapsing after midnight of 31st March. Delay which previously characterised the disposal of taccavi loans is now replaced by undue haste. Besides, inefficiency and maladministration are also there. All these defects end in overdues. But, in recent times, there is much improvement in the system of granting loans as a result of which the delay has been considerably reduced.



Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products, paper, electricity, steel structurals and castings. And the Birds/Heilgers group is always there to spur their production... to meet these demands. But expansion doesn't stifle achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

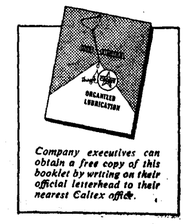
His costs will go up this month...

Because he has had a machine breakdown and has had to replace costly parts which were ruined by faulty lubrication. This didn't have to happen —a Caltex Lubrication Survey could have spotted the trouble—solved the problem.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

This service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.



Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

CALTEX PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

US MAKE COLD CASH...*

India today is caught up in the feverish activity of industrial advancement. Projects ar planned...dams are being built...all through the night we hear the ceaseless hum of men an machines at work. In the world of today, the economic development of a nation is gauged by he machines...and the STEEL consumed by them. In dams and bridges, in the railway an automobile industry, in the manufacture of the thousands of consumer goods STEEL is necessary—absolutely necessary! And so steel has come to b indicative of the economic development of a country... indicative of wha a country is worth in cold hard cash.

THE UNITED STEEL COMPANIES LTD

UNITED STEEL COMPANIES (INDIA) PRIVATE LTD

Bombay · Calcutta · Madras

The following table will make it clear that delay is not now one of the main evils of the taccavi loan system:

Proportion of the number of cultivators who received loans after the time lag stated below as % of total number of cultivators also received loans from the State Governments

1 or less	1—3	3—5	5—8	Over 8	Unspecified	Total	Type of cultivator
43	29	15	10	2	1	100	Upper 50% of the cultivators
51	40	7	2	—	—	100	Lower 50% of the cultivators

The rates of interest which the Government charge on the advances vary from State to State, but usually range about 6¼ per cent. But the procedure for obtaining loans is so laborious and expensive that the cultivator finds that, by the time the loan is granted, a third or half of it is already spent in the process of getting it. Besides, the cultivator has to repay the loans with interest thereof only from his own meagre resources. In fact, in the matter of repayment of loans, it is found more often than not that the cultivator pays dearly in the end without his land being improved in any way. Moreover, loans are almost always disbursed in the taluka headquarters and not in the village itself. Therefore, some of the conditions attached to and surrounding grant of loans must be relaxed and improved.

The revenue administration is well known for its multifarious duties. This hinders effective supervision of the credit amounts disbursed. Any effective supervision would involve a consideration of the real purpose of the loans, the technical soundness of the agricultural improvements for which the loan is applied for and the potentiality of the applicant to repay the loan amount; it also involves the verification of the manner in which the loan is used. But the existing loan-disbursing machinery of the State Governments is inadequate for such supervisory tasks.

Along with this, there is a lack of co-ordination, too, among the different departments concerned and with the operation of the taccavi loan system. As things stand, "agricultural loans" and "land improvements loans" (i.e., ordinary taccavi loans) pass through one department and loans for cattle purchase through another, a third department deals with co-operative loans and a fourth looks after the needs of displaced persons. As a result, people of promiscuous habits sometimes manage to borrow from more than one department. The administrative overlapping and wastage are also obvious. In such cases at times, the loanees may be insolvent and, consequently, much difficulty is experienced in the recovery of loans, thus resulting in financial wastefulness to the Government. If the different schemes of Government are properly co-ordinated, e.g., the Agricultural Department consulting the Revenue Department prior to granting a loan as to the solvency of the applicant, much financial wastefulness could be avoided.

Such lack of co-ordination exists as well between the State Governments, on the one side, and the co-operative agency of the State, on the other. This is a serious matter in actual practice at the district and village level. As regards the different rural development schemes of the Government, there is a measure of harmony in their objects, financial provisions, and administrative arrangements, since they are co-ordinated through the appropriate district authority. But, even here, there is at times a tendency to order about Government servants who are generally under the control of one district officer. There has been recently much multiplication of governmental activities and departments. In some cases, each is acting independently of the other even in regard to almost similar schemes. Thus the system of taccavi is characterised, among other things, by grave lack of co-ordination internally within the structure of Government itself and externally with other systems of finance for the cultivator.

Inasmuch as there is an imperative need for ensuring expanding agricultural production in India, there is a definite case for the removal of all the defects in the working of Government taccavi loans. We may stress the need for continuance of the system of taccavi loans mainly on two grounds, namely, provision of relief from distress in times of famine, floods, etc., and inadequacy of co-operative finances for productive purposes in agriculture. Relief of distress due to natural calamities has long been accepted as an important duty of the State. Moreover, risks involved in providing finance in a sufficiently large-scale for alleviating such distress are beyond the capacity of private organisations to bear. On the other hand, the co-operative movement, despite its reported development in recent years, has not reached the stage where it could cater to the needs of the bulk of cultivators. It is necessary, therefore, that the Government should continue to advance taccavi loans to the agriculturists.

The object of taccavi policy in the immediate future should be to provide necessary financial assistance to all cultivators who would be in need of it for carrying on and improving farm cultivation. Taccavi advances should be mainly given for purposes which would result in increased production and permanent improvement in land commensurate with the outlay involved.

A few observations may be made on the general characteristics of Government finance as revealed by our study. Government finance is not available in a large measure to the rural population in many districts, and the distribution is generally advanced only to the bigger cultivators. However, it is made available for distress relief and for helping particular aspects of land development. But the need for continuance of Government finance is all the more greater in view of the poor working of the co-operative movement. Again, if the Government desired an urgent change-over in the tenancy system of the economy, for instance, it could, apart from passing legislation, make for the acquisition of tenancy rights financed through Governmental or allied agencies. Similarly, when the Government desired to push forward with particular schemes of long-term improvement, it could help actively in financing these schemes by making subsidies and outright grants. And it is difficult in the present stage of co-operative organisation to expect the performance of such functions by such agencies.

PRICES OF PETROLEUM PRODUCTS

GOVERNMENT'S DECISION ON DAMLE COMMITTEE'S REPORT

THE Department of Mines and Fuel of the Union Ministry of Steel, Mines and Fuel, has been continuously engaged since 1956 in negotiations with the oil companies to bring about reductions in oil prices and profits. Since that year, Burmah-Shell and Stanvac have agreed to give up completely and Caltex partially the duty protection enjoyed by the refinery products under the refineries agreement; this has meant a revenue of about Rs. 10 crores annually to the Government. In 1958, under an *ad hoc* agreement with the oil companies, the first reduction in oil prices took place and this amounted to Rs. 9 crores annually; this sum has been mopped up by the Government as revenue under the Mineral Oil (Additional Duties of Excise and Customs) Act, 1958. In 1959, under the second *ad hoc* agreement with the oil companies, there was a further price reduction amounting to Rs. 7 crores annually; this amount, too, has been mopped up by the Government through an increase in the additional excise duty. There has been a fall of about Rs. 5 crores in the landed costs of oil since then; this represents the amount that has accrued in the Cost and Freight Adjustment Account of the oil companies under the 1959 *ad hoc* agreement. This amount is now being mopped up by an increase in the additional customs duty; according to a Press note issued by the Union Ministry of Finance on 27th September 1961, the increase in the levy has effect from 28th September 1961 and will be wholly borne by the oil companies and so will not result in any increase in the wholesale or retail prices of the affected petroleum products. It is stated that at least half of all these price reductions (which, of course, did not bring any relief to the consumer), would have taken place automatically, because of changes in the posted prices of petroleum products and in freight rates, etc.

The Government has just taken what is in effect a unilateral decision on the recommendations of the Oil Price Enquiry Committee (Chairman: Mr. K. R. Damle) which was set up in August 1960 "to examine the principles and elements according to which the selling prices of various petroleum products in India should be determined after 1st April 1961." According to a terse Press note issued by the Department of Mines and Fuel of the Union Ministry of Steel, Mines and Fuel on 27th September 1961, the Committee is stated to have evolved a pricing basis after allowing for an adequate return for the oil companies. The Press note continues:

"Their recommendations imply, on the basis of estimated sales of 1962, a reduction of about Rs. 15 crores annually in the selling prices of the major petroleum products and bitumen.

"This is composed of about Rs. 5 crores due to drop in landed costs, Rs. 7 crores towards the discounts the Committee consider reasonable in the posted prices of bulk refined products, and about Rs. 3 crores in regard to distribution charges and profit margins.

"Apart from this, ceilings in the marketing and distribution charges and profit margin on an average for the groups of lubricants, greases and specialities have also been recommended.

"Government have decided to accept the recommendations of the Committee and intend to mop up the reductions.

"The consumer prices of these products will remain unchanged."

The actual fall in landed costs that has taken place in 1960-61 has presumably been taken as the basis for the element of Rs. 5 crores mentioned in the above Press note. Here the expectation seems to be that there will be an annual saving of Rs. 5 crores on this account in the next four years suggested by the Damle Committee as the period during which a new *ad hoc* agreement is to be kept in force. The most controversial element pertains to the discounts in the posted prices of bulk refined products. It is contended in this connection that, whereas discounts on crude oil do prevail in the Middle East, no such discount is given on refined products. The element of Rs. 3 crores pertaining to reduction in distribution charges and profit margins also seems to be controversial. But the Oil Minister has chosen, most unwisely in our opinion, not to release the Damle Committee report to the Press along with the Government's decision thereon or to give sufficient time to the oil companies to make representations on the Committee's findings. By threatening to bring into force the recommendations unilaterally, the Government seems to be sneering the pitch for negotiations with the oil companies for a new *ad hoc* agreement. The following extracts from a statement issued on 30th September 1961 by Mr. L. D. Mudie, General Manager of Burmah-Shell, show how summarily the oil price question is sought to be disposed of by the Government:

"It is necessary for me to detail the sequence of events leading to the present situation in regard to the pricing of petroleum products.

"During the pendency of the (Damle Committee's) enquiry, my Company wholeheartedly co-operated with the Committee by providing all the available information and this co-operation has been acknowledged in the Damle Report itself.

"The report was submitted by the Committee to the Government of India on 19th July, 1961.

"My Company made several requests for a copy of the report to be furnished to us.

"Late on the afternoon of 27th September, my Delhi representative was handed a copy of the report and informed by Government that it had been decided to accept the report for implementation with effect from 1st October and that Government hoped that we would signify our acceptance before the 1st October.

"For the first time, I received a copy of the Damle Report on the morning of the 28th and a further few copies arrived on the morning of the 29th September.

"Early yesterday afternoon, that is, 29th September, before we had any adequate period of time in which to study and digest the report, we were told in a letter by Government that it has been decided to accept *in toto* the recommendations in the Report and to apply these with effect from 1st October 1961, 'subject to the position being reviewed after a year or two.'

"In this letter, of the 29th, Government have mentioned certain methods of implementation which in the time available are not clear to me and do not at a first glance appear to conform to the recommendations in the report which has been accepted *in toto*.

"My Company has about three days to consider the report and still less time to study the letter of the 29th September. A report of this magnitude requires time for study and furthermore my shareholders and consignors who co-operated at the enquiry stage and who are vitally affected by the recommendations of the report have not seen a copy up to now.

"I have, therefore, been compelled to protest strongly at the totally inadequate time which has been afforded for reading, digesting and understanding the many implications of a 172-page document of such complexity and ramifications."

Obviously, negotiations will have to take place between the Government and the oil companies. Since the Government has only "decided to accept the Damle Committee's recommendations and to mop up the reductions" and is yet to enforce the decision, the inference is that the oil companies will make their own counter-proposals in the course of negotiations for a new *ad hoc* agreement. It is surprising that, while the Damle Report is stated to have been accepted in its entirety, the period of four years suggested by it for an *ad hoc* agreement to be in force is now sought to be reduced by the Oil Minister to one or two years.

In the meantime, it would be interesting to know some of the findings and suggestions of the Damle Committee. These are listed below:

1. The oil companies, it has been suggested, should not insist on import of crude oil from sources of their own choice.

2. The companies should press on their suppliers for an increase in the discount rate on posted prices.

3. The companies should also seek to secure an equivalent discount on a long-term basis on imports of the same quality of crude oil from sources other than traditional.

4. It would be quite appropriate to base the landed cost of products on imports at cheaper rates, if available, from sources other than those which have been normally utilised by the major oil companies, provided continuous supplies of equivalent quality are guaranteed.

5. The companies should not only press on their suppliers for the continuance of discounts in future on the posted prices of crude oil at the current rate of 8 per cent but also for an increase in their quantum, consistent with the market trends prevailing from time to time.

6. The discount on posted prices of crude oil should, in more or less equivalent measure, be reflected in the pricing of the end products. The recent discount is not reflected in the prices of end products and the benefit, therefore, is absorbed by the refiners or consignees. To that extent, according to the Committee, their margin has been enhanced above the expectations envisaged at the time of conclusion of the refinery agreements. The Committee's view is that as discounts are admittedly available on crude oil, there is every reason to believe that the discounts should also be available on bulk refined products imported by the oil companies for marketing. It is stated, in this connection, that two oil companies admitted that they obtained their products at discounted prices.

7. In determining parity prices, the Committee has taken into consideration the following rates of discount in the f.o.b. prices: 10 per cent in the case of kerosene, aviation spirit, turbine fuel, high-speed diesel oil; 9.3 per cent in the case of light diesel oil; 5 per cent in the case of motor spirit, and 3 per cent in the case of furnace oil.

8. The weighted average of the marketing and distribution charges of Burmah-Shell and S.V.O.C. has been adopted as the "fair incidence for industry!"

NEW BRITISH AIRCRAFT UNDER TRIAL

It is reported that no fewer than nine completely new British aircraft are due to make their first flights before the end of 1962. Some of these new aircraft will form the spearhead of the British aircraft industry's export sales drive during the 1960s and early 1970s, while others will provide valuable information for the development of advanced aircraft in a few years' time.

One of these research aircraft, the Bristol T. 188, is scheduled to fly before the end of this year. Made of stainless steel to withstand the effects of thermal heating, it will be the fastest "conventional" aircraft in the world.

The Hunting H. 126 jet-flap research aircraft will be the first to explore the practical possibilities of a device conceived at the National Gas Turbine Establishment some years ago. If the jet-flap fulfils its designers' hopes, it could revolutionise air transport. Aircraft could be made with much smaller wings and higher wing-loadings than hitherto, yet needing relatively short take-off and landing runs.

The first de Havilland Trident was rolled out a fortnight ahead of schedule in August and has been undergoing taxiing trials and ground engine running. This 600 m.p.h. short/medium-range jet airliner, 24 of which have been ordered by British European Airways, is due to fly before the end of this year.

Nearing completion is the first Viscount VC-10, which is scheduled to make its first flight early next year. Already 57 VC-10s and Super VC-10s have been ordered. Up to 135 passengers will be carried by this airliner.

By way of contrast in size, the Short Skyvan will carry up to 15 passengers or 1½ tons of freight. The first Skyvan 1 is due to fly early next year.

The first eight-passenger, twin-jet de Havilland 125 was ordered during the recent Farnborough Air Show by Bristol Siddeley Engines as an executive aircraft. First flight of the 125 is scheduled for the middle of 1962.

Two new Beagle light aeroplanes will make their appearance next summer—the single-engined M. 117 two- to three-seat low-wing monoplane, and the M. 213 twin which will carry four people.

NEW PRODUCTS AND PROCESSES

Pressure Relief Valve

THE problem of manufacturing a pressure relief valve which will not stick under corrosive conditions has been the subject of special investigation by Robert Harlow and Son Ltd., England. In installations such as tar stills, corrosion gradually effects parts of relief valves, causing them to blow or cease to function effectively. Now a new valve has been developed by the Company. Designed especially for use in chemical stills and low pressure vessels the unit is made in cast iron with a choice of material for the actual valve and seating in gunmetal, phosphor bronze, nickel alloy and stainless steels. An oil sealing arrangement for the spindle ensures that, whatever the conditions, the valve will not seize. The oil also serves as a dashpot, so that the rate of closing of the valve after blowing off is controlled to reduce the damage to the valve and seat. The new range —available in 1 in., 2 in., 3 in. and 4 in. sizes— includes a number of models designed for extremely corrosive duties, which necessitate special protection for the inlet port contact surfaces. Here protective sleeves and internal valves have been included in P.T.F.E. (Polytetrafluoroethylene), stainless steels or other metals of high chemical resistance. Valves have also been made with the weights enclosed within the casing. This alteration in design was added for use on plants where the contents of the still are of an explosive or toxic nature. The full enclosure ensures that in the unlikely event of a diaphragm bursting, the contents cannot escape. The casing has a tapped boss in the side so that a supplementary discharge pipe can be fitted to join the main discharge pipe from the valve outlet.

Minecar Speed Control

A new hydraulic system which can control the speed of a train of tubs used in mines has been announced by Richard Sutcliffe Ltd., Yorkshire. The system contains three main features—the "Rotarder," as it is known, Header Tank, and one or two valves as required. Oil is fed by gravity from the header tank into the "Rotarder" body which is completely filled with the selected grade of oil. The tub axle pushes a star wheel on the rotor which revolves, and, acting as a pump passes the oil along the return line back to the header tank. A gate valve is fitted in this return line, the closing of which causes a higher pressure to be generated in the "Rotarder" with the oil passing either up the restricted return or short circuited past the brushes or down the sides of the rotor. With the valve completely closed all the oil is short circuited and the maximum retardation condition is obtained. A pull-wire-operated quick-release valve is fitted as an optional extra in the return line to by-pass the gate valve. This immediately relieves the pressure in the "Rotarder" under any circumstances, and allows sluggish tubs to be passed through. The operation of this valve can be achieved from any convenient position by means of the pull-wire, and does not affect the original setting of the "Rotarder." If tubs are required to be run or pulled through the "Rotarder" in the reverse direction, the stator is so arranged that the oil has a free flow past the rotor blades and, therefore, the resistance to rotation is kept at a minimum.

Automatic Wrapping Machine

An engineering works of Wormer, Holland has produced an automatic wrapping machine for boxes and cartons with an hourly throughput of 1800 to 2400 wrapped articles (in heat-sealing cellophane or coated materials). The machine is capable of wrapping cartons of varying dimensions, that is, from 60 to 300 mm. (about 2½-12") in length, 40 to 190 mm. (1½-7") in width and 15 to 85 mm. (½-3½") in height. For any of these sizes the machine can be adjusted simply and very quickly. During actual running, any desired correction may be made to the length of the wrapping material. With the aid of feed conveyor belts obtainable on the market products can be fed to the machine automatically without a single operator being required. Should this automatic feed be impracticable, the machine can be operated by one person in a sitting position; it is still possible even then to attain the production rate mentioned above. The machine's dimensions are: length 150 cm. (approx. 5 ft.), width 78 cm. (approx. 2½ ft.) and height 134 cm. (approx. 6½ ft.). The height of the working table is 75 cm. (approx. 2½ ft.). The machine weighs 250 kg. (about 550 lbs.), and is driven by a built-in three-phase ¼-h.p. motor with reduction box attached. The machine is engaged by a magnetic clutch without collector ring. The rating of the heating elements is 250 watt. The working table is extremely robust and corrosion-resistant. All nuts and bolts used conform to two standard sizes for each of which a wrench is supplied with the machine.

Slot Machine for Coal

The latest addition to the range of commodities which can be purchased from a vending machine is pre-packed coal and smokeless fuel. The first production model of the new slot machine, developed by a Manchester firm, is going to the Coal Board in Scotland, but it is also hoped to install the machines on selected sites in the north-west of England, probably on housing estates. The manufacturers already have a lot of orders in hand for the new machine. Large blocks of flats will probably get the first machines, but later they will be installed outside supermarkets, garages, and perhaps railway stations.

SPEECH OF MR. KAMALNAYAN BAJAJ

EXPANSION OF EXISTING UNITS PREFERRED TO ESTABLISHMENT OF NEW UNITS

THE view that demand for scooters and three-wheelers would increase with the accelerated industrialisation of the country was expressed by Mr. Kamalnayan Bajaj, Chairman of the Bajaj Auto Limited, in his speech at the Sixteenth Annual General Meeting of the Company held at Bombay on Saturday, 30th September 1961. Foreign exchange, Mr. Kamalnayan Bajaj stated, could be conserved by increasing the installed capacity of the existing manufacturers, instead of licensing more units of smaller capacity.

The following is the full text of Mr. Kamalnayan Bajaj's speech:

"LADIES AND GENTLEMEN,"

"I have great pleasure in welcoming you all, and particularly the new shareholders.

"The Company was the pioneer in introducing scooters and three-wheelers in the country. In 1947, the Bombay Government announced that they intended to ban cycle-rikshaws in the State. A motorised rikshaw was designed by us and a scheme for their manufacture was submitted to the Government. The word 'Autoriksha' was coined by us. The autoriksha was introduced in Poona in 1949. The first consignment of scooters was imported by us in 1948. Since then, scooters and autorikshas have become very popular in the country as speedy and comfortable, yet cheap, means of transport.

"In 1952, we submitted to the Tariff Commission a plan for phased manufacture of scooters and autorikshas in technical collaboration with Messrs. Piaggio and Company of Italy who were the very first to design the scooter and foremost among its manufacturers in the world. The Tariff Commission found that the conditions were not favourable for manufacture at that stage, and recommended that licensing of imports should be continued.

"In 1958, after repeated representations, the Central Government granted us a manufacturing licence for 6,000 scooters and autorikshas per annum. We commenced production of scooters in June 1960 and autorikshas from last month.

"We have applied for expansion of our annual production capacity to 15,000 on single-shift and 24,000 on double-shift working on the basis that we shall be able to commence production for the expanded capacity by early 1962 with 45 per cent indigenous content.

"With the accelerated industrialisation of the country the demand for scooters from technicians, artisans, foremen, service personnel, salesmen, insurance agents, office staff and even students is fast growing. As distances in city areas are increasing, scooters are replacing cycles.

"The demand for scooters and three-wheelers has always outstripped production. A buyer for a scooter at present has to wait for months. We could appoint dealers for scooters only in 15 towns so far on account of limited production and inadequate import licences for spare parts to maintain efficient servicing. Last month, when we commenced booking orders for autorikshas at Delhi, Ahmedabad, Poona and Bangalore, almost one year's production was booked in a few days.

"The figures of production of scooters, motor cycles and three-wheelers during the last few years are:

	Scooters and mopeds	*Motor cycles*	*Three-wheelers*	*Total*
1955	533	419	3	955
1956	4,735	1,022	529	6,286
1957	6,528	1,827	852	9,207
1958	4,391	2,113	683	7,187
1959	7,000	3,000	1,500	11,500
1960	12,880	3,998	1,403	18,281
1961 (January-June).	11,146	1,861	1,037	14,044

"The third Plan has fixed the targets of installed capacity at 60,000 and production at 50,000 units per annum at the end of the Plan period. The demand for these vehicles would be easily about 100,000 per annum at the end of the third Plan. The Planning Commission has placed the target of production at 50,000, probably on account of stringency of foreign exchange.

"The difficulties in the way of increasing the production to meet the likely demand, though formidable, are not beyond the resources of the country. Foreign exchange could be conserved by increasing the installed capacity of the existing manufacturers instead of licensing more units of smaller capacity. Ancillary and auxiliary industries should be set up and encouraged to increase the production of components.

"The Company has taken enough land in Pimpri-Chinchwad industrial area, near Poona, to provide for future expansion. The new factory building would be ready within the next few months. We hope to shift to the new premises by the end of the current financial year.

"I am happy to inform you that the Company has received very good co-operation and assistance from the collaborators, Messrs. Piaggio and Company. They have lent us the services of their technical personnel from time to time for improving our production and service-after-sales.

"I express my appreciation of the excellent work done by the technicians, staff and workers for bringing the output of scooters to 500 per month within a few months of commencement of production and keeping it up in spite of many handicaps."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

INDIA STEAMSHIP COMPANY LTD.

PORT DELAYS CAUSE HEAVY FINANCIAL LOSSES TO COMPANIES

CHAIRMAN, DR. A. RAMASWAMI MUDALIAR, CAUTIONS AGAINST ILL-TIMED EXPANSION

A WARNING against hasty and ill-timed expansion of shipping tonnage in the third Plan period was uttered by Dr. A. Ramaswami Mudaliar, Chairman of the India Steamship Company Ltd., in his speech at the Annual General Meeting of the Company held at Calcutta on Tuesday, 26th September 1961. Dr. Ramaswami said that, while he himself had advocated expansion of Indian tonnage, under the circumstances in which shipping all the world over was today, such expansion required deep thinking. The question of how and on what routes the expanded tonnage should be used, whether it should take the form of tramps or liner cargo vessels or tanker or passenger vessels and such other aspects deserved careful consideration. Deploring the extraordinarily long hold-up of vessels at various ports, the Chairman said that this was one of the main reasons for the serious loss which the Company, along with others, suffered during the year.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

"GENTLEMEN,

"The audited accounts and Directors' report for the period ending March 1961 has been in your possession for sometime and, with your permission, I shall take them as read.

"The Directors' report shows that the freight earned during the year was Rs. 8,63,00,835, as against Rs. 8,38,59,427 in the previous year. The total number of liner voyages during the year was 49, as compared to 47.5 in the previous year. Though the freight earned was higher than last year, owing to a variety of reasons, I regret to state that the net result is a substantial loss to the Company.

Naval Disasters

"At the beginning of the year, the Company suffered a serious loss by the sinking of the s.s. *Indian Navigator* after an explosion on board. All the crew, except one seaman, were rescued. A more serious and sadder calamity was the loss of the lives of some of the officers and crew of a sister ship, s.s. *Indian Success*, in their effort to salvage the abandoned vessel, the s.s. *Indian Navigator*. As both the disasters are subject of a formal enquiry, it would not be proper for me to comment on them, except to the extent that I share, and I am sure you also do, the tribute that has been paid in the Directors' report to the gallant officers and crew.

Overseas Trade and Freight Rates

"During the last two years, I referred to the decline in international trade and to its effect on international shipping. During the year under review, the position was not any better than it was last year. In an effort to chase cargo and to keep up with the severe competition, both of other shipping lines in the liner trade, and of the tramps, your ships have had to call at an even greater number of ports to secure the cargo, resulting in heavy expenses.

"The rates of freight were generally at an uneconomic level—most of the rates remaining the same as they were in 1957. Meanwhile, in the intervening period, costs in every direction have gone up. Wages of staff, both floating and on the land, have had to be increased. Concessions had to be made, by way of longer leave periods, for the floating staff, necessitating additional personnel for the purpose. Stevedoring charges in most ports had to be revised in accordance with the rules and regulations in these ports. Any freight increase required very careful consideration and could not be readily equated to the increased costs of running the service. Some of the countries in the trade were anxious to promote export of commodities and manufactured goods in a desire to earn foreign exchange and to preserve the balance of payment position of their Governments. Conflicting considerations such as these have, to a large extent, prevented the easier course which would otherwise have been adopted, of increasing freight rates to meet extra and heavy expenditure. The position is now being studied both objectively and scientifically and an effort is being made to see whether freights may be increased on commodities which can bear the increase and still maintain their competitive positions in world markets.

"I referred to the keen competition that prevailed last year and the unhealthy and unfair means by which a few of the companies or their agents tried to obtain the cargo by undercutting freight rates and giving larger rates of rebate to the shippers. These and other practices, such as the manner in which some of the forwarding agents, particularly on the Continent of Europe, tried to corner the cargoes, were referred to by me in my last address and these practices continued during the greater part of the year under review.

A Partial Solution

"In my speech last year, I referred to a possible solution that was being attempted at by the two Indian Lines in the Conference, along with other Conference Lines, who faced the same problems and were equally anxious to find a solution to put an end to unhealthy competition and to the malpractices. I stated that the solution suggested was that the allocation of freight earnings of the Conference, in certain proportions over a term of years, providing, at the same time, for the growth and development of the fleets of underdeveloped countries, through a defined and reasonable escalation of the rate of allocation during the period. Negotiations for this purpose were started as early as 1959 at a Conference in Delhi, between the representatives of British and foreign lines and the representatives of Indian Lines, and they were continued in London and Hamburg in the early part of 1960. The result, however, was not promising at that stage. Meanwhile, the evils enumerated above were on the increase. At last, at a meeting of the representatives of these Lines and the two Indian Lines in Delhi, in November 1960, an agreement was arrived at, defining the percentages of earnings which the lines under different flags would be allocated at the end of each year. It is a matter of some satisfaction that this arrangement has been arrived at and is considered beneficial by all the Lines concerned, particularly as it removes unhealthy competition, various kinds of malpractices and ensures the better working of the Conference system, as much in the interests of shippers as of the shipping lines. The pool system in the India-U.K./North Continent trade, has come into effect from 1st January 1961, and in two other Conferences of the Continent, namely the French Conference, and the Western Italy Conference, came into effect from 1st April 1961. It has to be emphasised that by this arrangement shippers will not be inconvenienced to the slightest extent and, in fact, the movement of cargo to and from Continental ports will be better facilitated. It is also hoped, provided that the international trade does not deteriorate, and there is no reason to expect it will, the earnings of the various companies will improve by this arrangement. I would only like to add that the results of this pool system, owing to the date at which it came into effect, are not reflected in the balance-sheet for the year under review.

Port Delays

"But all attempts at improving the financial position of the companies will prove infructuous if the delays that are occurring at the ports, both in India and abroad, are not seriously checked and curtailed. One of the main reasons for the serious loss which your Company, along with others, has sustained, is the extraordinarily long hold up of the vessels at various ports during the year. The Directors' report refers to the fact that 332 days were lost in the ports in the year under report, as against 85 days in the previous year, when vessels were idle without loading or unloading operations. The unofficial strikes in the U.K. and the delays in some of the Indian ports have largely contributed to this unfortunate result. When it is remembered that, on the Company's new vessels, and they are in a majority in the composition of our fleet, Rs. 10,000 is lost every day the vessel is idle in port, it requires little calculation to assess the loss to the Company on this account alone. The tugmen's strike at Bombay, which held up the port working for many days, is only an instance in point. The unofficial strikes in the U.K., particularly in London and Liverpool, which manifested themselves all too frequently during the year, contributed substantially to the loss incurred by companies.

Shipping—Public and Private

"While the position is as I have stated, there has arisen, recently, a doubt as to the part that shipping in the public sector, the Shipping Corporation of India, can or should play in relation to the private sector. Is it proper for the public sector to come in competition on routes which the private sector has been handling so far and, if so, to what extent is this desirable or justifiable? The question has come into prominence in connection with the recent entry of the Western Shipping Corporation into the India-U.K./Continent Conference, and I should like to take this opportunity of clarifying the position. The Western Shipping Corporation applied for a limited number of ships being allowed to ply in the Conference route as ships of a member of the Conference. The Corporation, with the full approval of Government, agreed on the number of ships that would ply in this route and the period during which that fixed number of ships will operate. With the agreement and approval of the two Indian Lines on this route, the Conference admitted the Shipping Corporation to its membership. In this connection, there has been some criticism that the Government-owned Corporation should not have entered into competition with the private shipping concerns, and the statement of Hon'ble Shri Lal Bahadur Shastri, when he was Minister of Transport, has been quoted which was as follows: 'I must state it very clearly that it is not our intention that shipping in the public sector should run in competition on routes which private shipping companies have established themselves.' I believe that this will still be the basic policy in the expansion of shipping, whether in the public sector or in the private sector. The vessels of the Indian flag whatever route they may be engaged in, are facing world-wide competition in many ways. They do not have the protection of tariffs, as inland industries have, and it is therefore essential that no Line or Lines engaged in a particular route should have over-competition from the same flag vessels, to the ultimate detriment of all the Lines of the flag, whether it be the vessels of the public sector or of the private sector. The only principle on which either kind of vessels can enter a route, which has been established by other Lines of the same flag, should be as stated by the Chairman of the National Shipping Board 'The new Line must be supplementary to and not in displacement of the existing shipping Lines.'

"The question of expanding shipping tonnage whether for shipping companies already in operation or for new companies, presents a problem in view of the legislation regarding development rebate, which was passed some time back. The development rebate has been allowed generously at 40 per cent of the cost of the ship. But the onerous character of this allowance arises out of the fact that 75 per cent of this allowance has to be provided out of the profits before any dividend can be declared. Shipping companies have repeatedly represented to the Government that the provision of this amount out of the profits of the Company may be extended over a period of years so that the prospect of payment of dividend to shareholders may not be seriously affected. The National Shipping Board has considered this problem on more than one occasion and has unanimously adopted the recommendation that the development rebate to be provided for by the companies may be spread over a period of years. These representations and recommendations have not so far helped in modifying the provisions regarding development rebate. I would only like to reiterate our request for the Government giving further consideration to this question.

Looking Ahead

"I do not desire to strike an unduly pessimistic note as to the future of your Company. I have reiterated often that shipping is a peculiar industry, where the boom periods are few and the lean periods are many. While we are going through a lean period, I do venture to express the hope that we may turn the corner before long. There has been in many quarters a very reasonable and legitimate demand that Indian shipping should expand fast and that during the third Plan period, a larger amount of tonnage should be added than is provided for at present. While I myself have advocated the expansion of tonnage and your Company has established its belief in such expansion, I would like to enter a caveat against hasty and ill-timed expansion under the circumstances in which shipping, all over the world, is today. Such expansion requires very deep thinking. The question how and on what routes such expanded tonnage should be used, whether the expansion in tonnage should take the form of tramps or liner cargo vessels, or tanker or passenger vessels—all these aspects of expansion require careful consideration. The National Shipping Board has paid some attention to these factors and its recommendations will, I hope, engage the serious attention of shipping companies and of Government. I am certain that the Ministry of Transport is giving careful thought to these questions. In Dr. P. Subbarayan, the Minister of Transport and Shri Raj Bahadur, the Minister of Shipping, we have gentlemen, enthusiastic and eager for the promotion of Indian shipping, but who are also at the same time, realists and cautious in approaching these problems. To them, Indian shipping owes a deep debt of gratitude for the encouragement they have given and the support they have extended, particularly in the pool negotiations. The Ministry of Transport, the Secretary to the Ministry of Transport, the Director General of Shipping, his deputies and assistants, have shown their concern in and anxiety to help Indian shipping, and to them we owe our thanks. They have helped us with advice and assistance at all times. The Shipping Co-ordination Committee has been reorganised and promises to be of real help to Indian shipping whatever the routes may be. I was rather critical of the Chartering activities of the State Trading Corporation in my speech last year and I am glad to note that this Charter Committee has now been reconstituted and my hope that it will be on a better, broader and firmer basis with more clear policies adopted is likely to be fulfilled.

Tribute to Staff

"The financial results of the Company does not reflect the hard work and the devoted attention which officers, both ashore and afloat, and the staff of the Company have rendered during the year. In fact, owing to the conditions mentioned earlier, their responsibilities have been greater and their work heavier and I should like to express the Board's appreciation of their services. I should also like to convey the thanks of the Company to the shippers who have extended their continued and firm support to us, and to the brokers and forwarding agents who have shown confidence in us and in the quality of our shipping service."

HASTINGS STREET

A House of Memories

No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.

Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

PRODUCTION AND EXPORTS HIGHER

LALA CHARAT RAM OUTLINES PLAN FOR VIGOROUS EXPORT DRIVE

AN encouraging account of the progress made by the Jay Engineering Works Ltd. and of the prospects was given by Lala Charat Ram in his speech at the Twenty-fourth Annual General Meeting of the Jay Engineering Works Ltd., held at Calcutta on Thursday, 28th September 1961. He pointed out that the Company had been able to get a foothold even in industrially advanced countries like the U.K., U.S.A., West Germany, France and Australia. This was possible, according to him, because of the vigorous selling effort put in by the Company's selling agents. He disclosed that, in order to meet the challenge of exports, the Company was launching a three-pronged drive.

The following is the full text of Lala Charat Ram's speech:

"LADIES AND GENTLEMEN,

"It is a matter of pleasure for me to welcome you at the twenty-fourth annual general meeting of shareholders of the Company. I am, however, saddened by the fact that, due to illness, our Chairman, Sir Shri Ramji, has been unable to preside personally at this year's meeting. Sir Shri Ramji is now well on the way to recovery, and all of us fervently hope that he will soon be in a position to resume his active interest in the Company.

"I am very much touched by the feeling reference of Lala Kishenlall Poddar to Sir Shri Ramji, and though, as a son, it is somewhat embarrassing for me, I must say that he has echoed the feelings of all those who have watched with interest and appreciation the progress of Jay Engineering Works Ltd. I shall convey these sentiments to Sir Shri Ramji who will be greatly cheered by the expression of affection by the Directors and shareholders of the Company, for him.

"The Directors' report and the balance-sheet and profit and loss account for the year 1960-61, have been with you for some time, and with your permission, I shall take them as read.

Exports Up—Prices Down

"As you will have seen, the Company's profit, after providing employees' share of profit, amounted to Rs. 58.4 lakhs in the year under review, as against Rs. 52 lakhs in the previous year. The increase in profit is comparatively lower because of higher exports and reduction in fan prices to the consumer. Due to higher provision for income-tax, the disposable profit is only slightly more than last year, and the Directors have, therefore, recommended to maintain the dividend at last year's level.

Progress in Five Years

"An idea of the progress made by the Company during the last five-year period can be had from the following figures:

	Unit	1955-56	1959-60	1960-61
Net sale value	Crore Rs.	3.1	7.2	8.9
Profit (after providing employees' share of profit)	Lakh Rs.	28.4	52.0	58.4
Production—				
Sewing machines	Lakh Nos.	1.1	2.4	2.6
Electric fans	,,	0.8	3.5	5.1
No. of retail points	Number	1,115	1,800	2,000
,, schools	,,	150	700	800
,, students	,,	11,000	50,000	55,000
Value of exports	Lakh Rs.	21.0	82.5	113.0

"It is interesting to see that, while the all-India index number of industrial production for all manufacturing industries, with 1956 as base, has gone up to 126 in 1960, the corresponding figures of our Company are 207 for sewing machines and 440 for fans.

"Working results for the year are quite gratifying, and you will no doubt join with me in congratulating the officers, staff, and workers of the Company for putting in the hard work which has produced these results. Our special thanks are due to Shri Bishan Sarup Agarwal and Shri T. R. Gupta for the fine performance of our splendid team of personnel at all levels.

Lower Price for Fans

"During the year, we reduced the prices of ceiling fans by Rs. 5 and of table fans by Rs. 2.50 each. This step was in keeping with the Company's policy of continuously sharing the fruits of economy of operations with the consumers. We have found that Indian society is financially so stratified that, demand for durable consumer goods tends to be highly elastic, and with every reduction in price, a larger and more numerous class of consumers opens up to the manufacturer. Voluntary price reductions therefore enable the Company to move farther towards economies of large-scale operation, with consequential benefit to consumers, employees, shareholders and to the national economy.

New Unit at Hyderabad

"The Chairman mentioned in his speech last year that we had applied for industrial licence for setting up a new unit for producing 300,000 sewing machines per year. The Government of India has since then granted the licence, and plans for establishing the new unit at Hyderabad are in hand.

"As I mentioned earlier, our exports during the year under review exceeded Rs. 1 crore. This has been possible because of vigorous selling effort put in by the Company and its selling agents, at considerable sacrifice of immediate profits. It is a matter of pride for us that we have been in the forefront of export promotion of engineering items like sewing machines and fans, and have been able to get foothold even in industrially advanced countries like the U.K., U.S.A., West Germany, France, Australia, etc. However, the bulk of our exports is still to underdeveloped countries, and, as is natural, these countries, like our own, are anxious to build up indigenous manufacturing industries. Again, just like us, they have the foreign exchange problem. These factors put a limitation on the size of foreign markets, and the severe international competition for them makes the promotion—or even maintenance—of exports, a function of the efficiency and quality standards that we can command.

"Our country's need for foreign exchange for developmental purposes makes exports a matter of vital importance. The achievement of highest standards of productivity, efficiency, and quality thus calls for dedicated effort on the part of managers as well as workers, and no consideration of doctrinaire regard for vested 'rights' of employers or employees, should be permitted to interfere with this national effort.

Markets in Developed Countries

"We have proposed to meet the challenge of exports by reorientation of our policy in three respects. Firstly, we plan to develop further our exports to developed countries by making our products continuously more attractive to them on the basis of quality and prices; this will release us somewhat from dependence on underdeveloped markets which, by their very nature, will shrink as they develop. Secondly, we propose to start assembly and progressive manufacture of our products in those of our present export markets which are seeking to establish industries of their own. We have already got a licence for putting up a unit in Ceylon, and are registering a company under the name 'Usha Industries Ltd.' as a subsidiary of our Company. It is proposed to have similar arrangements in other countries like Burma, Pakistan, Thailand, etc. Thirdly, we plan to help the industrial concerns in other countries to set up assemblies with a phased programme of progressive manufacture by giving them technical know-how, equipment, personnel and the supply of component parts. Such an arrangement has come in operation in South Viet Nam and negotiations are going on in Iraq, Egypt and Yugoslavia.

Compulsory Exports

"You are probably aware that the Government of India is proposing a programme of compulsory exports. A prerequisite for the success of such a programme is an efficient system of rigid quality control, so that sub-standard goods do not get exported. Otherwise, there is the danger of export markets being spoiled for Indian goods, and goodwill built over long periods will be lost. Means must, therefore, be devised for checking such a situation.

"We believe that in the existing circumstances there is no alternative to a programme of enforced exports. At the same time, it is necessary to create favourable conditions for those who are themselves willing to export. Our economy is tending to be a high-cost economy; for this reason, the need for matching the incentives which exporters of other competing countries enjoy, becomes all the more emphasised. Amongst export promotion measures awaiting Government action are, reduction in steel prices for engineering goods, and the availability of long-term credit at low rates of interest. Early decision on these will considerably stimulate exports.

"It is a matter of gratification that Government has realised the need for offering income-tax relief to exporting industries. While we are happy that the proposition has been accepted in principle, I would like to submit to Government that the mechanics of granting the relief should be designed to avoid self-defeating delays and complications. I am moved to make this observation by our experience of existing incentives, with which it has unfortunately been the rule, rather than the exception, that mechanics of obtaining the promised reliefs have been far from simple and speedy.

Incentives

"I would reiterate the suggestion made by our Chairman last year that a high-power committee should go into the matter of export incentives and should devise ways of weeding out causes which defeat or delay the inducements available to exporters.

"In internal market, USHA has become a byword for the highest value in manufactured goods, and to a very large extent, consumer preference for foreign sewing machines and fans has been displaced. It appears clear from the progress of our Company and from that of other large and small-scale manufacturers, that, in our field, there is absolutely no need for foreign know-how or capital, and indigenous resources are adequate for meeting the country's requirement of sewing machines and fans.

Malpractices in the Trade

"In this connection, I refer, with some distress, to what our Company considers to be a situation not conforming with rules of fair trade practice. My reference is to the exploitation of internationally established trade-names by applying them to goods which are produced neither by the owner of those names, nor in conditions under which it is customary to permit such use. To the extent that such a practice conveys to the consumer an assurance which is not founded on facts, it needs to be discouraged in the interest of business ethics. There appear to have been only isolated instances of this type so far, particularly one in sewing machine industry, but the industry and Government have to safeguard against the continuance and spreading of this practice.

Labour Policy

"This leads us to the need for building up the intrinsic strength of our industry. I referred a little while back to the pressing demand for high standards of productivity, efficiency and quality. Our Company is committed to a policy of 'high wages—low unit costs,' and has been practising it for the past many years. By and large, our experience with this concept has been encouraging, but the realisation that the monetary impact of this policy must be reciprocated in ever-increasing measure by higher performance standards, requires more to be driven home. Employee relations in our Company are a worthy example to industries anywhere. I am, therefore, mentioning this, not in a spirit of dissatisfaction, but as a live fact, which must be increasingly realised and translated into practice if progressive employment policies are to survive the forces of competition in internal and foreign markets.

"Ladies and gentlemen, I am very proud of this opportunity of addressing you today, and I hope that operations of the Company in the year have been a matter of satisfaction to you. Thank you."

PRAGA TOOLS CORPORATION LIMITED

CHAIRMAN, MR. S. RANGANATHAN, OPTIMISTIC ABOUT FUTURE

BETTER LABOUR RELATIONS ESTABLISHED

ADDRESSING the Seventeenth Annual General Meeting of the shareholders of the Praga Tools Corporation Ltd., held at Hyderabad, on *28th September 1961*, Mr. S. Ranganathan, I.C.S., Secretary, Ministry of Commerce and Industry, and Chairman of the Company, informed the shareholders that the Company had now been placed on a sound footing and that its financial position was such that a reasonable share of surpluses accruing in future years could go to the payment of dividends. Expressing satisfaction over the conclusion of a three-year agreement with the employees' union, he hoped that this would bring peace in the industry and better working and productivity in the coming years.

The following is the full text of Mr. Ranganathan's speech:

"GENTLEMEN,

"We met last on 27th March 1961 for the sixteenth annual general meeting of the Company and I am happy to welcome you to the seventeenth meeting in six months' time. This is possible because we have been able to close the accounts for the year ended 31st March 1961 and present the same to you within the period of six months stipulated in the Companies Act.

"The audited statement of accounts and the Directors' report thereon have already been sent to all shareholders. You would have also received, as on the last occasion, a simplified balance-sheet and profit and loss account. These would give at a glance the working results of the Company. With your permission, I shall take them as read.

"As you are aware, the Government of India started taking an interest in the affairs of our Company in 1956 and appointed some of their officers to serve on the Board, even when the Industrial Trust Fund of the erstwhile Hyderabad Government acted as the Managing Agents. Later, the Managing Agents resigned as from 1st July 1958, from which date the management of the affairs of the Company has been the direct responsibility of your Board of Directors assisted by a General Manager.

Financial Results

"I propose, with your permission, to review briefly the progress achieved by the Company since your Board assumed direct charge of its affairs. At the outset I am glad to report that during the period of two years nine months from 1st July 1958 to 31st March 1961, the Company earned a gross profit of Rs. 17.36 lakhs, after providing for full depreciation. Almost all this profit, however, has had to be utilised in writing off past losses, value of intangible assets and unsaleable finished goods, developmental expenses, etc. so that the final carryover of profit on 31st March 1961 is only Rs. 23,631. Your Directors can take justifiable pride in the fact that today the Company has been placed on a comparatively sound footing and its financial position is such that a reasonable share of the surpluses accruing in succeeding years could go to the payment of dividends, and the balance ploughed back for expansion programmes.

"The capital of the Company was reconstituted in 1958 by writing down the share value from Rs. 50 to Rs. 35 per share. Even so the loss carried forward was Rs. 9.99 lakhs. Another important step was the decision of the Central Government to invest Rs. 70 lakhs in the Company. At the same time the Andhra Pradesh Government agreed that the loan granted by them to the Company of Rs. 17.75 lakhs could be converted into share capital. They also agreed to forgo the outstanding interest of Rs. 5.29 lakhs due to them. These steps put the Company in ready funds to meet its various commitments and its business could thereafter be conducted without the nightmare of constant financial difficulties to which it had been subject in the preceding years.

Paucity of Experienced Hands

"One of the handicaps this Company suffered from was the lack of adequately experienced personnel at the middle management levels. This deficiency has been remedied by the appointment as heads of departments of persons with considerable experience in their respective lines. The post of Works Manager, however, continues to be vacant since November 1959 and attempts to recruit a suitable person have not yet succeeded owing to the paucity of persons with requisite technical experience.

"In the factory itself, considerable improvements have been effected. The drainage was improved to prevent storm water entering the machine shop and causing damage to machinery as has happened in past years. The machines were relaid out to form productwise sections to the maximum extent. Considerable rewiring of the plant was undertaken in order to minimise electrical losses and breakdowns which were occurring frequently. Over sixty machines have been reconditioned. In order to minimise running repairs and sudden breakdowns a preventive maintenance unit has been formed. A systematic lubrication procedure has been introduced. A new and hygienic canteen has been built. All these steps have already yielded results in the greater utilisation of machines.

"With the available plant and machinery the factory had reached a production level of Rs. 60 lakhs per annum in 1959 itself, but, during 1960, due to unsettled labour conditions, production came down to Rs. 48 lakhs in 1960-61. In the current year 1961-62, we have every hope of reaching the Rs. 70 lakhs target provided labour continues to co-operate, and if this figure is reached the shareholders could not reasonably complain.

Settlement with Employees' Union

"As at the time of my last report to you, labour situation has been continuing to cause us concern; but I am glad to report that on the 1st July 1961 the management and the employees' union signed a settlement which gave the workers an additional dearness allowance of Rs. 10 per month and certain other benefits in the form of a night-shift allowance and supply of uniforms. In its turn the union has entered into a truce agreement for three years and has also agreed to the revision of work-norms and work-standards by mutual negotiation. This settlement if implemented in the spirit, will be a landmark in the labour-management relations in this Company, and we may look forward to peace in the industry and to a climate for better working and productivity in the coming years. The General Manager who has conducted these delicate negotiations deserves our congratulations.

Collaboration Agreements

"Thus, we have so far, with some measure of success, consolidated the position of the Company and ordinarily there should be no fear of its sliding back. With this assurance, we have now taken in hand a substantial expansion. As you are all aware, our Company has signed technical collaboration agreements with three British firms for the manufacture of drill chucks, lathe chucks and tool and cutter grinders respectively. Negotiations are currently under way with a fourth British firm for the manufacture of milling machines under licence. The Government of India have already assigned to this Company a definite role in the machine tool industry. Three hundred acres of land on the outskirts of Hyderabad near Maula Ali railway station are being acquired. When these expansion schemes are completed, the factory would produce about Rs. 2 crores worth of machine tools and accessories annually, besides the other products the Company is currently manufacturing.

New Project Report

"Since we last met here, there has been another significant development. The Company has negotiated and signed an agreement with CEKOP of Poland for the preparation and supply of a project report for a unit manufacturing machine tools of various types. This project report is expected to reach us in a month or two. The Government of India have already earmarked Rs. 1 crore for the use of our Company out of the Polish credit. A second agreement with CEKOP for the supply of machinery under this credit arrangement is under negotiations.

"You will expect me to say something about the future. All I would say is that I am optimistic, even though some of our products are in the competitive field. Already there is keen competition from other entrepreneurs in some lines; this competition could be expected to increase rather than decrease. But quality is our hallmark and if we maintain our standards, I am not unduly pessimistic about sales. There may, however, be need to reduce prices. Greater productivity is the answer and our management is fully alive to this need.

"Our General Manager, Mr. B. Venkataraman, who has been with us since July 1958, is due to retire shortly from the Company on 18th October next. I am sure you will wish to express our sincere appreciation of his services to the Company and to wish him a happy retirement. Mr. A. M. Kelkar, an officer of the Industrial Management Pool who joined the Company as Officer on Special Duty on 21st July 1961, will be taking over from him and we propose, with your permission, to designate him as Managing Director.

"This will be the last occasion I shall attend your meeting as Chairman of the Board of Directors. The President has decided to appoint Mr. P. S. Rau as Chairman and I am confident that the Company's affairs will register under his able and experienced stewardship greater and greater success."

N.B.—*The above does not purport to be the report of the proceedings of the seventeenth annual general meeting of the Company held on 28th September*, 1961.

INDUSTRIAL FINANCE CORPORATION OF INDIA

CHAIRMAN, MR. K. P. MATHRANI, REVIEWS PROGRESS

FURTHER EXPANSION AND DIVERSIFICATION OF ACTIVITIES ENVISAGED

THE grant of loans exceeding Rs. 100 crores, inclusive of loans in foreign currency, guaranteeing deferred payments, underwriting equity and preference issues, and financing industrial projects jointly with other institutions—these are the noteworthy achievements of the Industrial Finance Corporation of India which were highlighted by Mr. K. P. Mathrani, I.C.S., Chairman of the Corporation, when he addressed the Thirteenth Annual General Meeting held at New Delhi on Thursday, 28th September 1961. Mr. Mathrani stated that it was the intention of the Corporation to broaden the fields of co-operation between itself and other financial institutions, both at home and abroad. This policy, he said, would also help to diversify the risks of investment and thereby render it possible to finance large requirements, with a view to making a further contribution to the rapid industrialisation of the country.

The following is the full text of the speech of Mr. Mathrani:

"GENTLEMEN,

"Owing to the fortuitous circumstance that I assumed my duties immediately on the expiry of the year 1960-61, it is my pleasure and privilege, soon after my taking over, to present to you the annual accounts of the Corporation and the report of the Board of Directors for the year ending the 30th June 1961. The printed copies of the accounts and of the report have been circulated to all the shareholders and I shall, with your permission, take them as read.

"The year under report marks another stage in the economic development of the country—the completion of the second Five-year Plan and the beginning of the third. Your Corporation has played not an insignificant role in the achievement of one of the major objectives of the Plan, namely the establishment of a sound and progressive industrial economy. During this five-year period, we sanctioned loans of the value of Rs. 62 crores and 61 lakhs and disbursed funds to the extent of Rs. 40 crores and 62 lakhs. Over the thirteen years of the existence of the Corporation loans aggregating Rs. 105 crores and 82 lakhs have been approved, a sum of Rs. 57 crores and 35 lakhs having been disbursed during the period. It shall be our aim to ensure that the Corporation makes a further useful contribution to the economic growth of India with the specific object of reducing our dependence on the import of manufactured goods as well as plant and machinery.

A Successful Year

"The year under review has been a particularly successful one for the Corporation. Our gross income reached the record figure of Rs. 2 crores and 99 lakhs, as against Rs. 2 crores and 50 lakhs during the preceding year and our net profits, after making provision for income-tax and corporation tax, came to Rs. 84.75 lakhs, showing an increase of nearly 42 per cent over the previous year. It has, therefore, been possible for us to add substantially to our reserves which now stand at Rs. 1 crore and 69 lakhs, an increase of 69 per cent on the balance at the end of the last year. We have, in addition, as a reserve for doubtful debts, a sum of Rs. 14.61 lakhs, which is considered to be more than adequate. In fact, a review of the reserve has shown a distinct improvement in the position of our bad and doubtful debts. As in the previous two years, we have provided a sum of Rs. 10 lakhs towards progressive liquidation of the subvention of Rs. 53.45 lakhs received by us from the Central Government for the purpose of paying the guaranteed minimum dividend on our share capital in the early stages of the establishment of the Corporation. This leaves a balance of Rs. 18 lakhs only which we plan to repay in the course of the next two years. In view of the statutory restriction contained in the second proviso to Section 31(2) of the I.F.C. Act the dividend for the year is being limited to the minimum guaranteed by the Central Government, nearly 2¼ per cent.

"As will be evident from the statement of profit and loss account, there has been an appreciable diversification of our activities during the year, even though the interest on loans continues to be the major source of our income. While the income from this source has gone up by 13.3 per cent, from Rs. 2 crores and 25 lakhs during the previous year to Rs. 2 crores and 60 lakhs, that from commission on underwriting of shares and on guarantee of deferred payments has increased by over 120 per cent, from Rs. 4.60 lakhs to Rs. 10 lakhs; in addition, we have earned a handsome profit by sale of some of our investments. Moreover, during the year we also received, for the first time, a dividend on the shares held by us.

Lending Operations

"The total amount of loans approved by your Board of Directors during the year aggregated Rs. 21.21 crores, which is an all-time record for the last 13 years of the Corporation's activities, and shows an advance of Rs. 3 crores and 29 lakhs over the figures for the last year of Rs. 17 crores and 92 lakhs. The Corporation received 76 loan applications during the year under review for an aggregate amount of Rs. 36.86 crores as compared to 38 applications for an aggregate amount of Rs. 17.54 crores received during the year 1959-60, indicating an increase in the volume of business handled by the Corporation of almost 100 per cent over the previous year. The aggregate amount of loans sanctioned by the Corporation has now exceeded rupees one hundred crores, which may be considered as a landmark in the life of the Corporation. These noteworthy achievements have been facilitated by the fact that the Corporation has widened the scope of its activities by granting loans in foreign currency, guaranteeing deferred payments, underwriting equity and preference issues, and financing industrial projects jointly with other institutions, etc.

"It may not be out of place to refer briefly here to some of the joint ventures with other financing institutions in which the Corporation has participated in recent months. The Corporation has for the first time sanctioned a loan of Rs. 60 lakhs to a concern engaged in the manufacture of paper jointly with the Commonwealth Development Finance Company Ltd., of the United Kingdom (C.D.F.C.) and the Industrial Credit and Investment Corporation of India Ltd. (I.C.I.C.I.). These two institutions have agreed to grant loans of £525,000 (approximately Rs. 70 lakhs) and 1.47 million dollars (approximately Rs. 70 lakhs) respectively to meet the cost of the imported plant and machinery while the loan of the Corporation is to be utilised for the rupee expenditure. In another case, the Corporation has agreed to grant a loan of Rs. 18 lakhs to a concern engaged in the manufacture of camphor and its allied products jointly with the I.C.I.C.I. which has granted to it a loan of Rs. 30 lakhs in foreign currency. In two other cases the Corporation has agreed to finance industrial projects jointly with two State Financial Corporations. I am sure you will agree with me that these are steps in the right direction. It is our intention progressively to broaden the fields of co-operation between ourselves and other financial institutions, both at home and abroad. This policy would also help to diversify the risks of investment and thereby render it possible to finance large requirements with a view to making a further contribution to the rapid industrialisation of the country.

Foreign Currency Resources

"At the last annual general meeting, mention was made of the efforts of the Corporation in obtaining credits in foreign currency and of the sanction by the Development Loan Fund of the United States Government of a loan of 10 million U.S. dollars to the Corporation for giving sub-loans to industrial concerns in the private sector in the country. How useful this facility has proved can be gauged from the fact that during the few months of the year after signing of the agreement the Corporation approved dollar sub-loans aggregating 9,023 million dollars (Rs. 4.23 crores) along with rupee loans of the order of Rs. 1.37 crores to 14 concerns engaged in the manufacture of a variety of products such as glass, paper, chemicals including fertilisers and electrical machinery, etc. Shareholders will be glad to note that our relations with D.L.F. in the matter of these loan operations have been very satisfactory and the Fund have agreed to raise the limit up to which the Corporation can grant sub-loans without their prior approval from $250,000 to $500,000. The Corporation had, at the close of the year, pending with it application for the dollar sub-loans equivalent to Rs. 5.62 crores. As we stand almost fully committed in respect of this first loan, negotiations for an additional loan of U.S. $20 million from the D.L.F. are in progress and it is hoped that a further tranche of dollar loan will soon be available to us. Apart from the credit in dollars, possibilities of securing loans in other foreign currencies are also being explored.

Sugar Industry

"In regard to our loan operations, the sugar industry continues to lead the list of loans approved by the Corporation for the last three years consecutively. This is mainly due to the high priority given by the Corporation to the establishment of sugar factories in the co-operative sector. The Corporation has so far sanctioned loans aggregating over Rs. 23.20 crores to 37 sugar co-operatives distributed all over the country and I am glad to say that the working of most of the factories which have gone into production, has been satisfactory. The success achieved in the establishment of sugar co-operatives has led to the promotion by the Corporation of co-operative projects in other lines of production as well. The Corporation has sanctioned loans amounting to Rs. 49.70 lakhs for the establishment of two co-operative spinning units. The loans approved by the Corporation for co-operative societies represent 22.4 per cent of the total loans approved by it, which is indicative of the important role played by the Corporation in the promotion of this sector of the economy.

Paper and Textiles

"Next to sugar, paper and textiles occupied the second and third places in the quantum of loans approved by us during the year. For the first time since its inception, the Corporation has sanctioned a loan of Rs. 20 lakhs to a concern engaged in coal mining. It is also a matter for satisfaction that concerns from the less developed parts of the country are now utilising the facilities offered by the Corporation on an increasing scale. In this context you may be interested to note that 17 loans aggregating in amount to Rs. 5 crores and 93 lakhs were sanctioned to concerns located in the States of Andhra Pradesh, Assam, Kerala, Orissa, Rajasthan and Uttar Pradesh.

Underwriting

"In the field of underwriting too, we have made much progress, though our approach in this line has been somewhat cautious. The Corporation approved twelve proposals for underwriting of preference and equity issues of Rs. 2.32 crores (as compared to five proposals for Rs. 1.87 crores in the previous year), thereby bringing the total amount of underwriting approved by the Corporation to Rs. 4.30 crores. The applications for underwriting came from a variety of industries such as cement, glass, pottery, basic metals, basic industrial chemicals, fertilisers, textiles, rubber, etc.

"As in the case of applications for underwriting, requests for guaranteeing deferred payment to the suppliers of foreign machinery also showed a significant increase over the figures for the previous year. The Corporation received 14 applications for an aggregate amount of Rs. 18.61 crores against 5 applications for Rs. 3.72 crores in the year 1959-60 and approved 9 such proposals to the extent of Rs. 13.29 crores. This brings the total number of proposals approved to 20 and the total amount to Rs. 25.47 crores.

"It has been our practice to carry out regular inspections of the concerns financed by us and to obtain periodical progress reports from them. These inspections and reports, I am glad to say, show that most of the concerns have done well in the quantum of production as well as sales during the year. Many of them earned sizable profits and were, with our prior approval, able to declare dividends in excess of 8 per cent (subject to tax), which is our standard limit. An overwhelming majority of our borrower concerns met their obligations to us promptly in the course of the year. There

has been a further improvement in the position regarding defaults in the repayment of principal and in the payment of interest. The percentage of defaults in the repayment of principal has declined from 4.3 per cent in 1960 to 2.34 per cent in 1961, while that in regard to interest has come down from 1.2 per cent to 0.25 per cent. The industrial review which we have given in an appendix to our annual report will give an idea of the progress made by the various industries to which we have advanced loans and it is a matter of satisfaction to us that they have contributed significantly in the rapid industrial progress made by the country.

Capital To Be Raised

"The resources position of the Corporation during the year in regard to rupee finance was quite comfortable and we were able to meet the commitments for disbursement of sanctioned loans largely from our own resources supplemented by a net additional loan of Rs. 2 crores from the Central Government. In view of this we did not have to enter the market during the year for fresh issue of bonds; but, as and when money market conditions justify our doing so, we shall go in for fresh issues of bonds in order that we may be able to meet the demands likely to be made on us during the third Five-year Plan period. We are also assured of further loans from the Central Government for meeting a part of our requirements during this period. In addition your Board of Directors have under their active consideration the issue of further share capital of Rs. 2 crores by the Corporation, carrying a minimum guaranteed dividend of 4 per cent per annum for which the approval of the Central Government has been obtained. This will enable the Corporation to broad-base its capital structure and increase its borrowing powers in terms of Section 21 of the Industrial Finance Corporation Act, in order to meet the growing demands of industry for capital. Having regard to the progress achieved by the Corporation during the last 13 years of its working, I have no doubt that we can count upon your generous support when the issue comes in the market. While we have tried to ensure that the shareholders get an adequate return by way of dividend on the new issue, the question of enhancing the existing rate of dividend on the present paid-up capital will need an amendment to the I.F.C. Act. The Corporation is in correspondence on this subject with the Central Government.

Scope Expanded

"In December last, Parliament enacted a Bill incorporating certain amendments to the Industrial Finance Corporation Act, for which there was a pressing need in view of the changed conditions including the growing activities of the Corporation. These amendments now enable the Corporation to guarantee (a) deferred payments to machinery suppliers both within and outside India, (b) loans raised by industrial concerns from scheduled banks or State co-operative banks, and (c) loans raised and credit arrangements made in foreign currency by industrial concerns with any bank or financial institution outside India. The Corporation has also been empowered to subscribe directly to the stocks and shares of industrial concerns as also to convert at its option the loans granted or debentures subscribed to by it into stocks or shares. These are useful facilities which have been eagerly sought for by industrial concerns and we have already, in one case, agreed to guarantee a loan of Rs. 1.47 crores in foreign currency. Another amendment of which I might make a specific mention is the deletion of the provision in Section 24 of the Act which required a guarantee of the Central Government in respect of accommodation by the Corporation exceeding rupees one crore to an individual concern. Since in all such cases the Corporation carefully examines the creditability of the project and the security available, the guarantee of the Central Government was hardly necessary. After the amendment, the Corporation is, however, required to obtain the prior approval of the Central Government before sanctioning the accommodation. This gives adequate opportunity to Government to scrutinise the merits of the proposal before any commitment is entered into by the Corporation.

"As you are probably aware, the Finance Bill introduced in the last Budget included an amendment to the Income-tax Act which gives us a welcome relief. The new clause (xiva) of Section 10(2) of the Indian Income-tax Act provides that financial corporations which are engaged in providing long-term finance for industrial development and have been approved by the Central Government can claim rebate in income-tax in respect of amounts not exceeding 10 per cent of the total income of each year which are transferred to a special reserve fund, so long as the aggregate of the amounts so transferred does not exceed the paid-up share capital of the institutions concerned. I am glad to say that this Corporation has ben approved by the Central Government for the purpose of this concession, and we have been permitted this rebate in respect of our accounting year ended the 30th June 1960, the assessment in regard to which has been very recently completed. We have, as a result, got a relief of nearly Rs. 5 lakhs in our assessment and we expect to be able to get a somewhat larger relief in respect of the assessment for the accounting year 1960-61.

"Our relations with the various Chambers of Commerce and with our loanee concerns continue to be cordial. We have, during the year, nominated more non-officials on the Boards of our loanee concerns and I wish to thank them on behalf of our Board of Directors for the keen interest they have taken in the work.

Mr. K. R. K. Menon

"Shri K. R. K. Menon who held the office of the Chairman of the Corporation since 18th September 1955 with distinction and was largely responsible for the great strides made by the Corporation in the last six years, proceeded on leave with effect from the 1st July 1961 preparatory to the expiry of his tenure of office. On behalf of the Board of Directors, I should like to express our high appreciation of the valuable services rendered by him to the Corporation.

"It is with profound regret that I have to report to you the sad demise of Shri H. V. Venkatasubbiah, who was the General Manager of the Corporation for about five and half years and who rendered valuable service to the Corporation. He has been succeeded by Shri D. R. Madhok, Secretary of the Corporation.

"Before I conclude, you will, I am sure, wish to join me in expressing our warm appreciation of the co-operation and assistance made available to us by the Development Loan Fund and its officials. You would also like me to convey our sincere thanks to the members of our five Advisory Committees—non-officials and officials—for the very able and effective assistance they have rendered to the Corporation. I should also like to thank my colleagues on the Board for their very valuable co-operation and wise counsels, and their generous response to the many calls made on their time. In this connection I should like to make a special reference to our two Directors, Shri S. V. Ramamurty and Shri S. C. Roy, who have been on the Board of Directors for two full consecutive terms and are due to retire this year. Finally, I have great pleasure in conveying the thanks of the Board of Directors, as well as my own, to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part."

HARD METAL COATINGS

The pre-industrial stage has been reached with a process giving a dense, ductile coating of nickel 5-1,000ths of an inch thick by deposition from nickel carbonyl and the diffusion-bonding of the metal deposited to the protected metal at 600-650° C. The result is stated to be far better than electroplated metal. Specially suitable for the protection of reactive metals and of small components for electronic equipment, rocketry, etc., made of less resistant metals, the technique has been extended with success to coating with molybdenum and tungsten. Still under study are methods to obtain coatings of tantalum, niobium, beryllium, vanadium, titanium and zirconium. Promising results have been recorded, especially with the last two metals, by depositing them from the vapours of their iodides. Meanwhile, vapour-deposition of tungsten from its hexfluoride at 650°C., is a newly perfected method of obtaining a smooth, non-porous coating of the metal which will withstand temperatures up to 3,300°C. without melting.

If you can say so about all the purchases you make, you will be saying good-bye to the uncertainty of material, quality, durability of product etc.

Unfortunately, there are many articles produced in India which do not conform to any standard—although they should. For, standards ensure quality products, fair competition, consumer goodwill, increased profits. To manufacturers producing goods according to Indian standards, the Indian Standards Institution grants licences for applying on their goods the ISI mark which is a third-party guarantee of quality.

Write to ISI for a list of products which are manufactured to prescribed standards and carry the ISI mark. Make sure that the next time you buy anything, it is a quality product carrying the ISI mark.

PARRYS CONFECTIONERY LIMITED

MR. C. R. SRINIVASAN'S SPEECH AT ANNUAL MEETING

CONSUMPTION OF CONFECTIONERY INCREASING

ONCE again, Mr. C. R. Srinivasan, Chairman of Parrys Confectionery Limited, reiterated in his speech at the Seventh Annual General Meeting of the Company held at Madras on Friday 29th September 1961, that increased costs (of making confectionery) could be offset to some extent by higher turnover and operating economies and to a lesser extent by the acceptance of lower profit margins. Mr. C. R. Srinivasan, however, pointed out that continuing higher costs must in the long run force the Company to higher prices. On the other hand, according to him, high grade confectionery, being in the nature of semi-luxury, could not bear too high a price increase without a fall in consumption; thus, between these two opposing factors, an increase in turnover seemed to be the primary remedy which would help bring down the unit cost. He observed that, fortunately, all signs pointed to a general increase in the consumption of confectionery.

The full text of Mr. C. R. Srinivasan's speech is reproduced below:

"GENTLEMEN,

"I have great pleasure in welcoming you to the seventh annual general meeting of your Company.

"The report and accounts have been in your hands for the statutory period and, with your permission, I shall take them as read.

"As you all know, in May this year, your Board of Directors offered a 'Rights' issue of 500,000 ordinary shares of Re. 1 each at a premium of Re. 1 per share. As explained in the Letter of Rights issued on 4th May, this step was taken to bring the issued capital of the Company, standing at Rs. 10,00,000, more into line with the assets employed in the Company. The response was most encouraging, the additional shares applied for being over 17 per cent of the total offered for subscription. The increase in capital will enable the Company to reduce its dependence on bank finance and to finance increased stocks consequent upon the expansion of the Company's business. Incidentally, it has enabled us to place another Rs. 5 lakhs to our reserves under share premium account. The appropriation for the final dividend of 20 per cent subject to deduction of tax has been calculated on the increased share capital of Rs. 15,00,000.

Tax on Bonus Issue

"In my speech last year, I referred to a provision of Rs. 75,000 having been made in the accounts for the year ended March 1960 for tax arising on the bonus issue made in July 1960. You will be pleased to learn that, as a result of the reduction in the rate of bonus tax from 30 per cent to 12½ per cent introduced by the Finance Act 1961, the Company's liability for tax on the bonus issue mentioned earlier was reduced from Rs. 75,000 to Rs. 31,250. The saving of Rs. 43,750 has been taken credit for in the accounts now before you, under the item 'taxation adjustments relating to previous years.'

"The net profit after taxation stands at Rs. 5.80 lakhs, as compared with last year's figure of Rs. 4.85 lakhs. You will have noted from the accounts that, out of the net profit, a sum of Rs. 50,000 is proposed to be transferred to the capital reserve and rupees one lakh to the general reserve. The former amount has been transferred in accordance with the provisions of the Income-tax Act whereby 75 per cent of all development rebate granted must be put to a reserve which cannot be utilised for making distribution to members. The general reserve, it will be noticed, will now stand at Rs. 6 lakhs.

"In the year ended 31st March 1961, the supply of sugar to the confectionery industry was on the whole easier than in the previous year and, consequently, production of cheap confectionery on the cottage industry scale, which had received a setback in the previous two years, may be said to have been revived and, to that extent, the element of competition to the organised section of the industry has again come into the picture. In addition, the prices of packing materials are moving up. On cellophane, one of our imported packing materials, there was an increase in the import duty amounting in our case to as much as Rs. 1,60,000 on a year's requirement of this material. Fortunately we have not so far felt the impact of these factors, because the market has sufficiently expanded to cover the marginal losses.

Consumption of Confectionery

"As I said in my speech last year, increased costs can be offset to some extent by higher turnover and operating economies and to a lesser extent by the acceptance of lower profit margins. Continuing higher costs must, however, in the long run force us to higher prices. On the other hand, high grade confectionery, being in the nature of a semi-luxury, cannot bear too high a price increase without a fall in consumption. Thus, between these two opposing factors, an increase in turnover seems to be the primary remedy which will help bring down the unit cost. Fortunately all signs point to a general increase in the consumption of confectionery.

"Your products continue to be in good demand. The percentage of wrapped sweets to our total sales remains well over 70—a heartening sign on the part of the consumer indicative of the increasing importance attached to hygienic packing and better quality. The wrapping capacity has been suitably built up during the year with up-to-date machinery to meet this encouraging demand. A number of new fancy tins were introduced during the year and the initial reception has been most encouraging. Pre-packed products have definitely a place in the confectionery trade, but, naturally, it will be a long time before they supplant to any substantial extent the old-established custom of weighing out loose sweets from the jar.

"Considerable planning was also done in the year under review to replace the standard 7-lb. pack with new containers in relation to metric weights. These are the 3 kg. and 4 kg. tins. The larger tin has also been greatly improved by a wider apperture for filling and serving therefrom and a new mechanically applied pilfer-proof seal which eliminates the bottleneck of conventional taggering. Your Company was the first to put the new metric packs on the market at the end of last year and the changeover has been effected successfully. A gradual conversion to the metric sizes of tins in the industry generally is taking place.

Outlook

"I am glad to tell you that sales during the first five months of the current year are ahead of sales of the same period last year and, if, as there is every reason to expect, the progress is maintained during the remaining months of the year, your Company can look forward to yet another satisfactory year. At the same time, a note of caution may not be out of place. Shareholders should not presume from what I have said that it will necessarily be possible to maintain the same rate of total dividend on the increased capital. We have only crossed half the year yet and many imponderables may yet come into the picture which may affect the size of our profit one way or another.

"While recording our appreciation of the excellent work done by the staff and labour during the year under review, I take the opportunity also to refer to the signal services rendered to the Company by Mr. Spencer Gore who has left our service with our good wishes for his future.

"May I close this brief address on a personal note. I have been the Chairman of the Board of this Company ever since it was integrated in 1954. I have shared with you the pleasure we all felt when the Company moved from strength to strength. And now the time has come for me to bid you farewell. This is the last annual general meeting of the Company I shall preside over. My health has been failing for sometime and I have decided to retire from all active work; not merely from this Board, but all business concerns I have been associated with, for many years past, both inside and outside the Parry Group. I shall suit the convenience of those I have worked with in parting company, but I hope I shall be free of all trammels of office before the end of the current financial year. I have carried a heavy burden on my shoulders these fifty years and I need rest. I am sure you will not grudge it. My best wishes are with the companies I have lived and worked for—God bless you."

The report and accounts for the year ended 31st March 1961 were unanimously adopted and a final dividend for that year at the rate of 20 per cent, subject to deduction of tax, on the Company's ordinary share capital (as increased by the rights issue made on 4th May 1961) was declared payable on the 30th September 1961.

The retiring Directors, Mr. P. Hadfield and Mr. K. Ramunni Menon, were re-elected and the retiring Auditors, Messrs. Lovelock and Lewes, were reappointed.

Tribute to Mr. C. R. Srinivasan

Mr. G. N. Noel-Tod, in proposing a vote of thanks to the Chairman, said:

"At this meeting, which Mr. Srinivasan has said is the last over which he will preside as Chairman, it is fitting that I, who have been associated with him on the Board since the inception of the Company, should propose a vote of thanks.

"It is difficult for me to realise that my association with Mr. Srinivasan in this Company will before long terminate. It has been a great experience for me to have worked for these years with and under the guidance of Mr. Srinivasan. What that guidance has meant can be readily seen from the really remarkable progress made by the Company. Parrys Confectionery started in 1954 with a share capital of Rs. 5 lakhs. It owed to our bankers Rs. 13 lakhs for plant, etc., purchased from The East India Distilleries and Sugar Factories Limited; there was an item of Rs. 2 lakhs for goodwill appearing as an asset in the balance-sheet. There were, of course, no reserves. In the 7½ years of the Company's history, the share capital, by rights issues at rates attractive to shareholders, and by one bonus issue, has been increased to Rs. 15 lakhs. The original plant has been paid for in full, and much other plant and equipment purchased. The item of goodwill has been written off against profits. Reserves amounting in all to nearly Rs. 14 lakhs have been built up. Sales have more than doubled, moving from Rs. 53 lakhs to Rs. 117 lakhs per year. Profits before tax have advanced from Rs. 3½ lakhs to over Rs. 10 lakhs and dividends from 10 per cent to 30 per cent. Put in another way, a shareholder who in 1954 was given 100 Parrys Confectionery shares by The East India Distilleries and Sugar Factories Limited for nothing, assuming he took up his rights and bonus entitlement, would now have 300 shares for which he would have paid Rs. 300 and which are now worth on the market about Rs. 1,350. I would further remind you that this progress has been achieved over a period of time when competitive confectionery companies have by no means been showing similar consistently good results. In other words, it has not been on account of some freak boom in business.

"While I do not wish to belittle the part played by all employees of the Company, and notably by Mr. Spencer Gore to whom the Chairman has referred, these figures speak volumes for the close attention to the affairs of the Company and for the leadership given by Mr. Srinivasan. I am sure you will join with me in expressing to him our sincere thanks and congratulations, and our wishes for a long and happy retirement."

A resolution proposed by a shareholder, Mr. Zackria Sait, recording the Company's appreciation of Mr. C. R. Srinivasan's services was passed with acclamation.

N.B.:—This does not purport to be a report of the proceedings of the general meeting.

RAGHUVANSHI MILLS LIMITED

EXCELLENT PERFORMANCE ON EXPORT FRONT

CHAIRMAN, MR. RAVINDRA MAGANLAL, ON EXPANSION OF TEXTILE INDUSTRY

THE view that, for the more economical and efficient working of the textile industry, its expansion should be allowed in places where the industry is already well established, was expressed by Mr. Ravindra Maganlal, Chairman of the Raghuvanshi Mills Limited, at the Thirty-second Annual General Meeting of the Company, held at Bombay on Saturday, 30th September 1961. Referring to the export promotion scheme, he stated that the Company had considerably stepped up its exports, thus earning the foreign exchange for its own yarn requirements.

The following is the full text of the speech of Mr. Ravindra Maganlal:

"GENTLEMEN,

"It is with great pleasure that I extend to you a cordial welcome to the thirty-second annual meeting of the Company and I thank you for making it convenient to attend this meeting.

"The Directors' report and audited accounts for the year ended 31st March 1961 have been in your hands for some time and, with your permission, I propose to take them as read.

Profits Higher

"You will notice that the profit, subject to depreciation and taxation, for the year under review is Rs. 21.70 lakhs, as against Rs. 20.5 lakhs last year. You will also notice that this year an expenditure of Rs. 11.23 lakhs has been made on addition to fixed assets, as against Rs. 7.61 lakhs spent in the previous year under this head. In view of the fact that there are constant improvements in machinery, it becomes imperative for the management to add to, replace and renovate the existing machinery. Unless this is done, it will not be possible to show good results and to withstand competition. With this object in view, the Board of Directors have been following a policy of conserving the internal resources to the extent possible by allocating amounts to various reserves.

"The trading conditions and results were better than the last year. But, on the other hand, there was an increase in the wage bill due to the Award of the Wage Board which was implemented from January 1960. There was also an introduction of excise duty, for the first time, on cotton yarn and, although the incidence thereof was not very severe, the procedure being new and complicated, difficulties were experienced for some time. This tempts me to say something in general on fiscal laws and procedure thereunder.

Fiscal Laws

"I fully appreciate that, in a developing economy, it is necessary for the Government to tap all sources of revenue and that taxation is one of the main instruments of social policy and justice. It is, however, essential that the laws, rules and regulations for achieving this object should be lucid and unambiguous, more so in a country like ours, where the majority of the population is still to be literate. The Government, in its anxiety to stop all loopholes, tends to make fiscal laws more and more complicated. I think there is considerable scope for improvement in this respect and I hope that sooner or later the Government will apply its mind to this problem.

"Cotton, both imported and local, continued to be controlled during the year. Indigenous cotton was controlled both for prices and distribution and imported varieties for distribution only. It must be said to the credit of the Textile Commissioner and the Cotton Directorate that, although the year started immediately following a year of extreme shortage of cotton, the procedure adopted by the Government turned out to be satisfactory and at no time anxiety was caused to the industry as a whole in the matter of obtaining their requirements of cotton. It goes without saying that, having regard to the restricted imports of Egyptian and Sudan long-staple cotton, certain adjustments in manufacturing programme had to be made from time to time, but taking into account the prevailing conditions, this was inevitable.

"You are aware that your Company has a weaving section running on artsilk-synthetic yarns. Yarn required for this purpose continued to be in extreme short supply and your Company, therefore, took advantage of the export promotion scheme and earned some of its yarn requirements through its own exports. Exports during the current period have been considerably stepped up and it is the policy of your Company to continue to increase the exports to the extent possible so as to fall in line with the general and overall requirements of the country to earn foreign exchange and at the same time earn all permissible incentives for imports of artsilk and synthetic yarns required by your Company for consumption.

Textile Exports

"You are no doubt aware that the cotton textile exports continue to fall and the entry of the United Kingdom into the European Common Market is likely to have further adverse effect. India has all potential factors necessary to become the leader in the world of textiles. It is, therefore, necessary that vigorous steps such as extensive re-equipment, quality control, decrease in production costs and holding the domestic consumption within reasonable limits, should be taken to achieve this end. One of the steps for achieving decrease in cost would be to expand the existing units wherever possible. In my opinion, it would be a better policy if expansion is allowed to the existing units situated in places where the textile industry is very well established. This would lead to more economical and efficient working instead of scattering units all over the country in places where the textile industry is to be newly established. Admitting that improvement has to be brought about in industrially backward areas, it would be advisable to start absolutely new line of industries, instead of textile industry which works better where a large number of units are located. If this policy is adopted by the Government, I am quite certain that both increase and economy in production will be achieved quickly, which, in turn, will enable the industry to regain its hold on exports before it becomes too late.

"In the scheme of expansion of the existing units, some special consideration should be shown to the spinning units. These units feed the handloom sector which is encouraged to manufacture special lines for export in which there would be less competition from other countries.

"Prosperity of a nation depends on the prosperity of an individual and the prosperity of an individual depends on the increase in *per capita* income. If the increase in population outstrips the increase in production and the national income, there can never be real prosperity to a large majority of the population. This, in turn, would mean decrease of purchasing power which would, in the long run, adversely affect all the industries. The success, therefore, of planned development would depend on our ability to stabilise the growth of population over a reasonable period which would also enable us to hold the domestic consumption at a reasonable level creating surplus for exports.

Amalgamation with Sidhpur Mills

"As you are aware, a scheme of amalgamation between your Company and the Sidhpur Mills Company Ltd. is still pending and full particulars about the progress made in this respect are given in the Directors' report. The only development which has taken place after the Directors' report was posted to you is that the fresh meeting of the shareholders of the Sidhpur Mills Company Ltd., as ordered by the Gujarat High Court, is to be held on the 3rd October 1961. It is hoped that, as the scheme of amalgamation is equitable and beneficial to all concerned, shareholders of the Sidhpur Mills Company Ltd. will approve of it. You will be kept informed of the developments as and when necessary.

"The conditions prevailing in the modern large-scale industries are so complex that no organisation can function effectively and efficiently unless there is complete co-ordination and *esprit de corps* at all levels. I am glad to say that the management has always received unstinted co-operation from the staff and the operatives. I take this opportunity of thanking all of them and hope that we will continue to receive the same co-operation in future."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

THE ALUMINIUM INDUSTRIES LIMITED

CHAIRMAN, MR. S. NARAYANASWAMY'S SPEECH AT ANNUAL MEETING

FRESH CAPITAL ISSUE MAY PROVE INEVITABLE

THE distinct possibility of The Aluminium Industries Limited announcing a fresh capital issue for the purpose of further expansion was hinted at by Mr. S. Narayanaswamy, Chairman of the Company, in his speech at the Fifteenth Annual General Meeting of the Company held at Madras on Saturday, 30th September 1961. Today, inventories, Mr. Narayanaswamy declared, were no less formidable a problem than capital costs and it would be unwise to make frugal estimates of project requirements that might ultimately prove self-defeating. He added that, *in tackling the resources problem of the* coming year, the Directors hoped to keep in mind the interests of shareholders no less than the exigencies of Company finance. To quote him: "In the process, it is only fair to mention that a fresh capital issue may prove inevitable."

The following is the full text of Mr. Narayanaswamy's speech:

"The past year has been one of all-round increase in production of bare conductors, covered conductors and rod, as you have no doubt observed from a glance at the production graph published in the report. Bare conductor production touched 66,300 kilometres and covered conductor 9 million core metres. There has been an interesting revival in the demand for tools and accessories. Our total sales reached Rs. 435.73 lakhs, against Rs. 340.72 lakhs in the preceding year. This was to be expected with our Hirakud unit being in fuller commercial production than in the previous year. However, our net profit figure is slightly lower than in the previous year, with no very significant variation under the conventional appropriation heads. This is, perhaps, a correct reflection of the competition your Company has had to contend with in the bare conductor market, despite its patriarchal position in the aluminium conductor industry. Our production and sales testify to the acceptability of Alind cables in the bare conductor market. We have had in a measure to depend on our large turnover for profits and thus gain horizontally what has been lost vertically.

Mounting Demand

"I am happy to report that the demand for the Alind covered conductor has been steadily on the increase and we have seen a heartening degree of consumer preference for our product. This has encouraged us to increase our installed capacity at Kundara for covered conductors. This also provided us the incentive to establish one more unit for covered conductor production in Hyderabad—which will be in commission before the end of the current financial year. We are grateful to the Government of Andhra Pradesh for their kind assistance in helping us to establish this unit.

"It is a matter of no small gratification to your Board that it was possible to keep both our Kundara and Hirakud factories occupied to capacity. This was largely due to the Central Government's assistance in making aluminium metal available. It is correct to say, however, that, with larger supplies, it would have been possible for us to make more rolled rod available to other manufacturers of bare conductor in the country, having regard to our current rolling capacity.

Expansion Programme

"I would like to take this opportunity of briefly touching on our expansion plans. As you know already, our high tensile steel core wire factory, in the installation of which we have received considerable assistance from our Japanese friends, Messrs. Kokoku and Ataka, is in the final stages of erection at Kundara and will be commissioned well before the end of the calendar year, that is to say, about three months ahead of schedule. With the production of core wire in our Kundara compound we shall achieve a very satisfactory degree of self-sufficiency in bare conductor manufacture.

"The Company holds the industrial licence for the manufacture of 'Solidal' underground cable, but the import licence for the equipment has not yet been received and there has been an amazing time lag between the two. While your Board appreciates the pressure on the country's foreign exchange reserves, it is time for Government to assess the balance of advantage as between importing underground cable costing crores of rupees annually, on the one hand, and issuing the import licence for equipment costing a very modest amount that would help the cause of substituting expensive cable imports from hard currency areas, on the other. It is our hope that this will not be delayed too long.

Race Against Obsolescence

"No management worth its salt today can merely complete an industrial installation, energise and commission it to the prescribed capacity of efficient working, sit back and declare complacently that, the time-table having been *satisfactorily implemented*, there is nothing more to be done. The modern concept of industrialisation is that it is a continuous race against obsolescence, by reason of what competitors do at home and abroad to reduce costs, improve quality, diversify production and refashion goods to suit both the changed consumer tastes and the newer uses to which the articles are put. This is also the process by which earning power is maximised. Thus stagnation or non-development has become the nightmare of industry and what may be called the battle against back-numberism has to be kept up. Such a battle cannot obviously be fought without resources. Your Company has been ploughing back earnings into the industry, by practising restraint on dividend distribution all these years—to the point of making even normally contented sections of shareholders feel that dividends could have been more generous. Looking back, I cannot help feeling that your Board was never on stronger ground than when they resisted the temptation to increase distributions.

"The enlarged production of bare conductors since our Hirakud unit went into production, the stepping up in rod-rolling and covered conductor capacity and the erection of our high tensile wire plant at Kundara have cumulatively begun to impose on the Company's finances considerable strain. The capital cost of all the newer units and the tremendous physical increase in what are compendiously described as 'inventories,' which have a disconcerting knack of costing more and more every year, have kept our bank borrowings at a high level. When we get import licences for a third rod rolling unit and the 'Solidal' project, which may be coming in any time, your Directors will be confronting a ways-and-means problem, the solution of which should enable the Company to function in reasonable comfort. Today inventories are no less formidable a problem than capital costs and it would be unwise to make frugal estimates of project requirements that might ultimately prove self-defeating. Your Directors hope, in tackling the resource problem of the coming year, to keep in mind the interests of shareholders no less than the exigencies of Company finance. In the process, it is only fair to mention that a fresh capital issue may prove inevitable.

"The Tariff Commission have recommended continuance of protection for a further three-year period from 1st January 1961. There is reason to expect that on the expiry of this period, increased production of cheaper aluminium metal in India will facilitate a gradual reduction in prices of conductors and render protection unnecessary to the aluminium industry.

Metal Position

"I would like to dwell, however briefly, on the technical position of aluminium metal as it obtains currently in India. There has been considerable expansion of the cable industry in the country, apart from other aluminium-using industries in the last few years. The supply position has been getting increasingly difficult. The indigenous production of metal has had to be copiously supplemented by imports from the sterling and dollar areas and rupee-payment accepting countries. Yet the position is not free from anxiety.

"One existing metal producing unit has been doubling its installed capacity at Hirakud, another has been completing erection of its factory at Rihand and a third Company nearer home will shortly be commencing construction at Mettur. It would be unwise, all the same, to expect that we shall be freed from dependence on external supply sources for some years to come. Aluminium is both a massive and complex industry depending in large measure on steady and unfailing supply of electric energy, apart from being beset by problems peculiar to metallurgical industries. Meanwhile, indications are that the metal using industries will be making larger demands on the suppliers. It would be comforting to know that, in the coming four years, our metal-producing units would be able to meet in overwhelming measure, the processing industries' demands within the country. With the Government of India's declared desire that the copper-using cable-makers of India should switch over to aluminium in the next few years, this question of metal supply within the country assumes special importance. The transition phase, during which supplies would be partly indigenous and partly drawn from external sources, is one of some anxiety. It seems important during this period to keep the supply line from abroad in good repair.

Transport Difficulties

"I cannot omit to say a word about our transport difficulties. Owing to short supply of railway wagons, we have not been able to move our manufactured goods to consumer ends, within a reasonable period and this has seriously affected our delivery time-tables—particularly at Hirakud, which is not to say that at Kundara the wagon position is comfortable. This has led to congestion and stockpiling of finished goods in our yards, while, at the consuming end, there has been shortage of supplies. There is the inevitable chain reaction, in that the Company's inventories swell in the shape of undelivered manufactured articles and there is need for larger working capital. Financing charges tend to swell the final bill of costs. I sincerely hope this unhappy transport deficiency will be remedied in the near future.

"Our relations with labour have been very cordial indeed. Our incentive schemes have been fully vindicated in the larger production and larger earnings of our workers. We have concluded an agreement with our workers at Hirakud which must be considered a very fair deal to our workers, in that the opportunities for higher earning based on production are handsome and, if our Kundara experience is any indication, this should result in larger production for the Company and higher earnings for the workers.

"I must place on record the Board's appreciation of the continued and lively interest the Managing Agents have taken in the working of the Company and their constant efforts to secure the expansion of its activities, the excellent work put in by the supervisory and engineering staff and all ranks of workers in our diverse units at Kundara and Hirakud."

THE MYSORE CHEMICALS AND FERTILISERS LIMITED

CHAIRMAN, MR. T. SHAMANNA, ON PLANS FOR EXPANSION AND DIVERSIFICATION

THE view that the withdrawal of concessions *in the power rate granted by the Gov*ernment of Mysore to the Mysore Chemicals and Fertilisers Ltd. dealt a great blow to the economy of the Company's operations, was expressed by Mr. T. Shamanna, I.A.S., Chairman, in his address at the Twenty-fifth Annual General Meeting of the Company, held at Mysore on 22nd September 1961. Despite this additional financial burden, the Company was able to carry on in a satisfactory manner. The Company, according to Mr. Shamanna, had nearly doubled its production and sales of fertiliser products during the last three years and had laid the foundation for steady expansion. It had already placed orders for a sulphuric acid plant, which would be commissioned by March 1962. A superphosphate plant would also be set up shortly. The Chairman also disclosed that the Company proposed to enter into the manufacture of some other chemical products too. A scheme was being worked out for establishing a unit for the production of caustic soda and chlorine.

The following is the full text of Mr. Shamanna's speech:

'GENTLEMEN,

"It gives me great pleasure to welcome you all to this twenty-fifth annual general meeting of your Company. The Directors' report and the audited statement of accounts for the year ending 31st March 1961 have been with you for some time past and I trust you will permit me to take them as read.

"The Company has completed twenty-five years of useful service to the country and it is certainly an occasion to be proud of.

"We had our vicissitudes during this long period. You will recall that, soon after your factory went into production during the late thirties, the Second World War broke out. The products of the factory proved invaluable during the war period. The end of the war found us quite a stable industrial unit. Early during the post-war years, our country was faced with acute food shortage. We once again rose to the emergency and the factory's output of fertilisers afforded a most needed help to the grow-more-food campaign. We maintained a steady output in the factory and developed a sustained demand in the local market. With our small output, it was not necessary to seek outside markets.

Withdrawal of Concessions

"The position has changed radically during the last three years. The greatest single blow to the economy of our operations was given by the withdrawal of the concessions in the power rate granted by the Government of Mysore. The very basis on which the Company was formed was removed. When I assumed charge as Chairman in 1958, I had grave apprehensions about the future of the Company. But in spite of the unprecedented financial burden, we have been able to carry on in a satisfactory manner.

"We are also facing competition in the market and are no longer in a sellers' market. We have to make significant changes in our sales policy. We have to seek outside markets and adopt a more aggressive sales policy.

Production Doubled

"The last three years have also been remarkable in the history of the Company in another respect, in that we have nearly doubled our production and sales, declared handsome dividends and taken steps to lay the foundation for the expansion and future progress of the Company. Our sales last year have reached an all-time high of over Rs. 50 lakhs.

"We have placed orders for a sulphuric acid plant which we expect will go into production by March next. We shall be placing orders shortly for a superphosphate plant. These are the efforts we are making to ensure the Company's future, in spite of some of the handicaps referred to earlier.

Demand for Fertilisers

"The main occupation of our country is agriculture. With the increase in the area under cultivation and adoption of improved methods of agriculture, which are essential for our reaching a position of self-sufficiency in food, there can be no doubt that there will be a continuous and growing demand for synthetic fertilisers. Increasing agricultural production by effective use of fertilisers seems to be the best way of providing a safe base for our national economy.

"On the invitation of the Government of India, a team of experts, sponsored by the Ford Foundation, visited India during 1959. The report given by these experts takes note of the enormous increase in population and suggests the steps to be taken for meeting the demands for foodgrains as a result of this growth. It has been roughly estimated that in order to meet the requirements of foodgrains at the present subsistence level, we would require about 110 million tons by the year 1965-66, namely, by the end of the third Five-year Plan. On this basis, recommendations were made for setting up fertiliser plants all over the country, practically one for each State. Mysore will have one of these large size plants, with an annual capacity of 70,000 tons in terms of nitrogen or 350,000 tons in terms of usable fertilisers. The role that your Company has to play in the context of such phenomenal expansion of the fertiliser industry in the country is to be reviewed. The small size of our plant will be a matter of some concern in terms of the competition that we have to face. Nevertheless, I feel that there will be room for increased production of fertilisers in the country and hope, therefore, that our Company will be able to continue to play its useful and profitable role.

Chemical Products

"The Company was started, as the name indicates, with the purpose of not only undertaking the manufacture of fertilisers but also of chemical products. Due to various reasons, we have been limiting our activities to the fertiliser field and have not seriously thought so far of entering into the field of chemical industry. With the restriction regulating our activities in the fertiliser field by the small size of our factory, the imposition of very heavy financial burden as a result of the withdrawal of concessions extended by the Government in regard to supply of electrical power and also the serious competition we have to face from the large fertiliser factories that are going to be set up in the country in the near future, a time has now come for us to refer back to the objectives for which the Company was founded. Having given serious consideration to this aspect, your Directors have come to the conclusion that we should think of establishing, as a separate section in our factory, a unit for the manufacture of caustic soda and chlorine. The details as to how the scheme has to be implemented have yet to be worked out. The question of large investment that is called for in respect of this project has also to be faced. These matters will be considered and placed before you, if necessary, at the appropriate time.

"Your Directors have, considering the havoc caused by the recent floods in the State, sanctioned and paid a sum of Rs. 1,501 to the Chief Minister's Flood Relief Fund, and I have no doubt that you appreciate the action taken by your Directors in this respect.

Licence for New Plants

"I wish to express our grateful thanks to the Central and State Governments for their continued interest in the progress of the Company. I must particularly refer to the very expeditious and sympathetic manner in which the Ministry of Commerce and Industry of the Government of India has considered and sanctioned our application for sulphuric acid and superphosphate plants.

"I must express my deep appreciation of the unreserved co-operation and valuable guidance given to me by my colleagues on the Board.

"I also wish to express on my own behalf and on behalf of the Directors, our appreciation of the good work and co-operation of our employees.

"*Gentlemen, with these observations,* I move that the Directors' report, the audited balance-sheet and the profit and loss account for the year ending 31st March 1961 be approved and adopted."

N.B.—*This does not purport to be a record of the proceedings of the annual general meeting.*

TERMS OF TRADE FOR AGRICULTURAL PRODUCTS AT POST-WAR LOW

ASIA AND FAR EAST TURN NET IMPORTERS OF FOOD AND RAW MATERIALS

A DISCONCERTING feature of world trade in agricultural products has been the persistent decline in their terms of trade, or the average unit value in real terms, which reflects the producing countries' purchasing power for the goods which they customarily import. The latest annual review of the world agricultural situation, entitled *The State of Food and Agriculture*—1961, just brought out by the U.N. Food and Agriculture Organisation, discloses that the average unit value (in real terms) of world agricultural exports continued (for the sixth year in succession) to fall by about two per cent to its lowest post-war level in 1960, as compared with the previous year. The average unit value (at current prices) in 1960 as a whole, no doubt, showed an increase of one per cent. But this improvement was more than outweighed by an increase of over three per cent in average unit values of manufactured goods. Group-wise, although the price of agricultural raw materials at current prices rose by 10 per cent, in real terms (terms of trade) it declined by 7 per cent. The value of food and feeding stuffs and also of beverages and tobacco (at current prices), in fact, fell by four and seven per cent, respectively.

The following table shows the average world export unit value and terms of trade of agricultural and forest products by main commodity groups:

(Indices 1952-53 average = 100)

	Average (1948-52)	1958	1959	1960 (Preliminary)
Average Export Unit Values (At current prices)				
All agricultural products ..	100	87	85	86
Food and feeding stuffs ..	102	87	87	86
Beverages, tobacco ..	87	99	87	84
Agricultural raw materials ..	107	79	78	86
Forest products*	93	90	88	91
Manufactured Goods† ..	96	104	104	107
Terms of Trade‡ (Average unit value in real terms)				
All agricultural products ..	103	84	82	80
Food and feeding stuffs ..	106	84	84	81
Beverages, tobacco ..	100	96	84	79
Agricultural raw materials ..	110	76	75	80
Forest products ..	96	87	85	85

N.B.—These figures exclude those of Russia, Eastern Europe and Mainland China.
* Not included in "all agricultural products."
† United Nations' index of average unit value of manufactured goods in international trade, adjusted to 1952-53 base.
‡ Indices of current prices deflated by index of average unit values of manufactured goods.

Volume and Value

The aggregate value of agricultural exports (at current prices) in 1960 rose by six per cent. But their real value, as measured by their capacity to purchase manufactured goods, rose only by 3 per cent. Developments during the year thus followed the pattern which has now persisted for some time. As compared with the figures for 1960 and those with the average of 1948-52, the volume of agricultural exports has risen by 41 per cent (as against a rise of 80 per cent in the volume of world trade as a whole), but their value has risen by only 21 per cent, as measured in current prices, and by no more than ten per cent in real terms (that is, in terms of their capacity to buy manufactured goods). These figures include shipments under special terms (like those under P.L. 480), but they account for about 6-9 per cent of the world total. If commercial exports alone are taken into account, the resultant picture is still disappointing. During the last decade, commercial exports rose by 33 per cent in volume, but their value at current prices improved by only 14 per cent and their value in real terms by just 4 per cent. The F.A.O. report rightly says that a rise of about one-third in the volume of commercial exports has brought little benefit to agricultural exporters as a whole. Had the F.A.O. Secretariat made a detailed study of the country-wise effects of the adverse trends in terms of trade, it would have certainly helped policy-makers in the countries concerned in making necessary efforts to arrest the present trend, at the national as well as international level. It is not too late even now and it is to be hoped that the Secretariat will take up such a review.

The adverse terms of trade for farm products is only one aspect of the overall disadvantages faced by primary produce exporting countries in world trade. The industrial expansion in developed countries has failed to render satisfactory benefits to primary exporters of agricultural raw materials, food and tobacco. As pointed out by the U.N. Economic Commission for Europe, in its latest *Economic Bulletin for Europe*, the lesson to be drawn by the primary exporting countries from their experience during the most recent boom are "discouraging." Western Europe's imports from primary produce exporting countries rose by eight per cent in 1960, but "as compared with the rise in Western Europe imports from other areas, this was a singularly modest increase." What is more, the rate of growth of imports by Western Europe from primary exporting countries declined in 1960. "Although it is necessary that the developed areas should maintain a high rate of economic expansion and avoid cyclical fluctuations, so as to generate rising demand for the commodities traditionally exported by underdeveloped countries, this in itself," warns the E.C.E., "is not a solution for the trade problems of developing countries, and other means have to be sought." The ultimate solution, in the opinion of the E.C.E., lies in the diversification of the production and export patterns of less developed countries. But this will also be ineffective, unless the developed countries allow import of large processed and manufactured goods from the developing countries. The E.C.E. itself has urged the European countries, more than once, to do this, but the results so far in this direction have not been impressive.

Share of Developing Countries

Another trend which is a source of concern to the less developed countries is the steady decline in their share of world agricultural trade, an aspect to which particular attention has been drawn in the F.A.O. report. The volume of total world agricultural exports (excluding those of Russia, Eastern Europe and mainland China) in 1960 rose by about five per cent, as compared with about seven per cent in 1959, when trade was recovering from the effects of the 1957-58 recession. Apart from a fractional increase in exports from Latin America, the whole of the rise in agricultural exports was accounted for by North America and Western Europe (largely because of the growth in intra-regional trade). In the period from 1948-52 to 1960, the volume of gross agricultural exports from more developed regions has increased by about 56 per cent (commercial exports by less than 40 per cent), as compared with about 30 per cent in gross exports from the less developed regions (excluding mainland China). The share of the less developed regions as a whole in the total volume of world agricultural exports has thus fallen over this period from 57 per cent to 53 per cent. For foodstuffs alone, the comparable figures are 42 per cent and 38 per cent and for agricultural raw materials 58 per cent and 53 per cent. Only in the group, beverages and tobacco, have the less developed regions maintained their share of the market at about 88 per cent.

All main groups of commodities shared in the increase in the volume of exports. Food and feeding stuffs rose by about 6 per cent and beverages and tobacco and agricultural raw materials each showed an increase of 4 per cent. In the food and feeding stuffs group, the largest increases were for wheat and sugar, but for livestock products there was only a small rise.

World Agricultural Production

(In million metric tons)

	Average (1948-52)	1958-59	1959-60	1960-61 (Preliminary)

N.B.—Production figures exclude those of Russia, Eastern Europe and Mainland China, except for forest products.
* Lard and tallow.
† Beef and veal, mutton and lamb, pork.
‡ Indices: Average 1952-53/1956-57 = 100.

The increase in the volume of trade in the beverages and tobacco group was due mainly to a gain of one-fifth in cocoa exports. For agricultural raw materials, a decline in North American imports was more than offset by a rise in imports into western Europe and the Far East. World cotton exports increased by about one quarter and those from the U.S. were doubled, partly in expectation of less favourable export terms.

Imports

There are certain factors in the sphere of imports also, which are none-too-satisfactory from the standpoint of less developed countries. Asia and the Far East, for instance, have become large importers of agricultural products, comparable with North America. The F.A.O. report reveals that the growth of food imports into this region during the past decade has appreciably exceeded the growth of world trade in these commodities. There has been a still more striking increase in imports of raw materials, reflecting largely the growth of manufacturing industry in Japan, India and some other Asian countries. In 1960, Asian and Far Eastern imports of agricultural raw materials accounted for one quarter of the world total and were more than twice as large as those of North America. In Asia and the Far East, there was a rise of 18 per cent during the year in total agricultural imports and of 15 per cent in foodstuffs which make up about 60 per cent of the total. There were some increases in imports of wheat, rice, maize, sugar and vegetable oils. Much of the increase came from larger imports of cotton (mainly in India and Japan), of wool (mainly to Japan) and of jute (mainly to India).

An interesting point that emerges from the F.A.O.'s survey is that, for the first time, Asia and the Far East became a net importer of agricultural products in 1960. Commenting on this trend, the F.A.O. report says as follows:

"This change in the agricultural trading position of Asia and Far East is the culmination of a development covering the whole post-war period. Before the war, the region was a major net exporter of agricultural products, including foodstuffs. Since the war, the growth of food production in the region as a whole has not, until 1960-61, been sufficient to make good the setback of the war years. Although the food exporting countries of the region have stepped up their shipments since the early 1950s, the region's food deficit, met by imports from outside the region, has gradually risen. At the same time, while the volume of the region's raw material exports has remained more or less constant since the early 1950s and that of beverages and tobacco has risen only moderately, its raw material imports, as already noted, have risen steeply. In 1960, the volume of gross imports of raw materials was more than twice as high as the 1948-52 average, and the region as a whole became a net importer of agricultural raw materials as well as of foodstuffs."

Western Europe remains by far the largest importing region, accounting for more than half the total volume of world agricultural imports. During the past ten years, however, this region has become a relatively larger importer of the commodity group, beverages and tobacco (now considerably exceeding North America), and a marginally smaller importer of foodstuffs and agricultural raw materials. The total volume of North American agricultural imports has shown some fluctuations, but no significant trend either way during the past ten years, and in all the main categories the region now accounts for an appreciably smaller share of world trade than before.

Exports on Special Terms

The U.S. exports under Government-financed programmes, which remain by far the largest component of exports of agricultural products on special terms, again expanded in 1960. Most of the increase was accounted for by larger shipments of wheat, wheat flour, and rice. Nearly three-quarters of the total wheat and wheat flour exports from the U.S. in 1959-60 and the first half of 1960-61 were Government-financed, but for cotton the sharp increase in commercial exports greatly reduced the share of concessional sales in total U.S. cotton exports. Government-financed exports accounted for only 29 per cent of the total agricultural exports of the U.S. in 1959-60, as compared with 14 per cent in 1958-59 and a peak of 41 per cent in 1956-57. Imports on special terms covered nearly 90 per cent of the total wheat imports of India and Pakistan in 1959-60 and 70-80 per cent of those of the United Arab Republic (Egyptian Region), Turkey and Yugoslavia.

An important contribution to the increased volume of agricultural trade in 1960 came from the sharp rise in imports into Soviet Russia and mainland China. Both these countries have become major importers of sugar since the breakdown of the sugar agreement between the U.S.

LIMITATIONS OF LABOUR STATISTICS

CAUTION IN PRACTICAL APPLICATION CALLED FOR

"IT is on facts that policy must be built and, so long as there is uncertainty as to facts, there would be confusion and conflict in policy." This observation of the Royal Commission on Labour (1930) reflects the crucial importance of adequate and reliable statistics in the formulation of realistic labour policies. In spite of the recognition of their value and importance, compilation of labour statistics has been comparatively neglected in this country. Such data, as are available and on which basis policies are formulated, are restricted in scope. They are largely the by-products of administration of certain labour laws. The position in respect of labour statistics has been aptly summed up by Mr. V. V. Giri, a former Labour Minister of the Government of India and at present the Governor of Kerala, in his book, *Labour Problems in Indian Industry*:

"The collection and compilation of labour statistics in India are still in their infancy. To recount the more important lacunæ, employment statistics in India are at present limited in scope. They should be extended to other sectors and improved in quality and frequency. Statistics on earnings and conditions of work are nowhere near the expected standards, except, perhaps, in the case of coal mines. Data on occupational wages need to be properly classified and analysed to enable correct appreciation of the wage structure in different industries and areas and their changes through time. Statistics on productivity and labour turnover should be compiled in a systematic manner. Last but not the least, there are practically no reliable data on unemployment in the country as a whole. In an era of planning, with emphasis on fuller employment, this is a very important gap which should be filled immediately."

It is true that the Labour Bureau of the Ministry of Labour, Government of India, the Directorate-General of Resettlement and Employment and the Labour Departments of the State Governments collect data relating to wages, employment, industrial disputes, consumer prices, etc. But there are many gaps in the statistics collected at present and these have to be filled before labour statistics in this country can be considered as adequate for the purpose of planning.

The quality of the data available is equally important. In this respect, the statistics available in this country leave much to be desired. The limitations of much of the labour data that are being used in discussions of the country's economic progress and in collective bargaining have been pin-pointed by the *Trade Quarterly* in its latest issue, in an article entitled "Statistics of Industrial Labour." The authors of the article have examined the nature and scope of statistics relating to factory employment, employment exchanges, wages and earnings, absenteeism and consumer price indices.

Employment Data

To take the data regarding employment first. They are, according to the authors, neither useful for ascertaining short-term monthly or seasonal fluctuations in employment (because the data are collected on a half-yearly and annual basis) nor are they comparable, say, for the last ten years, because they are vitiated by number of factors, as will be shown shortly. Further, notwithstanding the fact that employment returns are a statutory obligation on the factories, a large number of them fail to submit returns and no effective action has been taken to tackle the defaulters.

The figures of employment supplied by the factories in the annual returns represent the daily average number of workers who attended work and not the number in employment, that is, the number on the pay-roll. The average daily employment is worked out by each factory according to a formula laid down for the purpose. This formula prescribes that the daily attendances, that is, man-days during the year, should be added up and divided by the total number of days worked in the factory during the year, to arrive at the figure of average daily employment. The calculation of average daily employment on the basis of this formula introduces a corrective for absenteeism which is, on the whole, high in Indian industries. To the extent to which employment figures furnished by the factory returns exclude workers who are temporarily absent, they underestimate factory employment in India. For instance, the total number of workers on the pay-roll of cotton textile mills at the end of March 1961 was 921,810 while the average daily employment in the same month, calculated according to the prescribed formula, was only 783,176, a difference of 128,434 or 16 per cent. In many countries, such as the U.K., the U.S. and Japan, employment statistics cover persons who were at work or who had a job but are not at work during the reporting period, that is, the number of workers on the rolls. This is precisely what the sixth conference of labour statisticians held at Montreal in 1947 had recommended.

Exchange Statistics

Secondly, there are the employment exchanges. In many countries, the volume and trend of employment are inferred from the statistics of unemployment. Statistics on unemployment collected on the basis of registration for unemployment benefit or from employment exchanges provide an index of the changes in the volume of unemployment. In India, too, the employment exchanges, which were first set up in 1945 for rehabilitating ex-service men but which were later thrown open to all types of employment seekers, are the only source of data relating to changes in the volume and character of urban unemployment in the country. The number of these exchanges have increased steadily, from 126 at the end of 1951 to 143 at the end of 1956 and to 296 by the close of 1960. Statistics from employment exchanges are regularly available on a monthly basis, but they are so incomplete and unreliable that they cannot be used for drawing any scientific and reliable inferences, even with a liberal margin of error, about the extent and character of unemployment. Registration with employment exchanges is voluntary and does not entitle the jobless to any unemployment benfit. A large number of the unemployed, who otherwise might be induced to register themselves with the employment exchanges, naturally, fail to do so. An inquiry conducted by the National Sample Survey in 1953 showed that nearly 75 per cent of the unemployed in urban areas did not register themselves with the employment exchanges.

Besides absence of unemployment benefit, another reason which prevents many in need and search of employment from registering themselves with the employment exchanges is that a large proportion of the jobs available are filled without reference to the employment exchanges. Under the Employment Exchanges (Compulsory Notification of Vacancies) Act, 1959, notification of vacancy has been made compulsory but the obligation is merely to notify the vacancy and not to fill it by selecting candidates recommended by the employment exchanges. Another factor which vitiates employment exchange statistics is registration even by those who are employed. As a result, all those who are on the live registers of employment exchanges are not all unemployed and, therefore, even if the data were complete, they would not constitute an index of the volume of unemployment in the country. Similarly, the number of placements reported from month to month is no index of employment opportunities. In fact, figures regarding the volume of placements are a serious understatement of the opportunities of employment in the urban areas.

Wages

To take now the statistics of wages. Such statistics are compiled on the basis of the returns submitted under the Payment of Wages Act, 1936. Till 1957, the Act was applicable only to employees earning below Rs. 200 per month. After 1957, the limit has been raised to Rs. 400. The returns provide data regarding the average daily number of employees earning less than Rs. 200 till 1957 and less than Rs. 400 thereafter, along with the total annual wage bill of these employees before deductions. The wage bill includes all the remuneration capable of being expressed in terms of money, but does not include the value of house accommodation, supply of light, water, etc., if any. Since the computation of wage bill in this sense involves conversion of certain concessions and amenities in terms of money to be added to basic wages, allowances, annual bonus, etc., and since this conversion is made by the different State authorities administering the Payment of Wages Act in different ways, there might be some lack of uniformity. Concessions in kind, however, form a comparatively very small proportion of the aggregate wage bill. The magnitude of error creeping into the calculations of the wage bill, for want of a uniform valuation of the concessions in kind is, therefore, likely to be insignificant.

Comparability of the statistics of average annual earnings over a period of years is vitiated by the same factors which operate on the data regarding industrial employment, namely, changes in the coverage of the Factories Act, 1948, changes in the geographical areas of the different States and the failure, on the part of the factories, to submit annual returns.

Although data relating to average annual earnings for all industries in one State with similar earnings in others as also earnings in one industry for the country as a whole are available, for inter-industry comparisons of average earnings in each State or inter-State comparison of earnings in the same industry statistics are not available. Even comparisons of average earnings of this kind are of a very broad character and are not very useful for a study of the wage patterns in different industries and regions and for analysing the relationship of wages to labour supply and their influence on labour mobility. Information regarding wages on an annual basis, if not on a monthly basis, for different occupations industry-wise and region-wise is essential for analysing the impact of the developmental activity in the country. The results of the wage census, which is now being conducted by the Labour Bureau in respect of selected industries, will constitute a valuable starting point for compiling wage data of this type on a continuing basis in the future.

The fourth factor is absenteeism. Of the most important factors affecting both the volume of employment and average earnings, absenteeism is one. Unlike the statistics of employment and wages, which are derived from statutory returns, the data regarding absenteeism are obtained on a purely voluntary basis. They are, therefore, far more incomplete and unreliable than the statistics of employment and earnings.

Consumer Price Indices

Lastly, consumer price indices. Consumer price index numbers acquire, particularly in times of rising prices, an unusual importance as they determine, to a great extent, the magnitude of adjustments in wages—wage rates in foreign countries and dearness allowance in India. A number of the working class consumer price indices published in India at present have only a nominal relationship to reality. As a result of the war and the subsequent changes in the general economic situation in the country, the pre-war pattern of consumption in industrial countries has undergone a radical change. The consumer price index numbers for important centres like Bombay, Ahmedabad, Sholapur, Nagpur, Kanpur and Madras, which are based on a pre-war period, have, therefore, lost their utility as a statistical tool for measuring changes in the cost of living. The majority of even the Labour Bureau indices, which have 1944 as their base year, have become out-of-date.

Fictitious Assumption

When the consumption pattern of working classes in different industrial countries has deviated substantially from the basic patterns and

(Continued on page 714)

RESULTS OF NATIONAL ROLLING STEADY

DIVIDEND RAISED—FINANCES SOUND

THE promise of further sizable progress in the working of the National Rolling and Steel Ropes Limited (Managing Agents: The Associated Industrial Development Company (Private) Ltd., Calcutta), so clearly held out in its impressive performance in the previous year, has failed to materialise during the year ended 30th June 1961, as the Company has succeeded only in maintaining the *status quo*. This is due essentially to scarce supplies of steel billets, which has hit the re-rolling industry as a whole from last year, and the absence of an indispensable balancing plant for the wires and ropes section, which made it impossible to increase production. Notwithstanding this, the Directors have recommended a higher dividend on the equity capital at the rate of Rs. 1.50 per share of Rs. 10 each, as compared with Re. 1.30 per share in the previous year, both being subject to deduction of tax, giving a net return of Re. 1.05 per share against 91 nP per share previously.

With an increase in the consumption of raw materials and stocks at close, production recorded a modest improvement over the previous year. But sales turnover at Rs. 139.98 lakhs was practically unchanged over the previous year's level of Rs. 139.68 lakhs. Gross profit of Rs. 34.36 lakhs shows hardly any improvement over Rs. 34.29 lakhs previously, and the small rise in net profit from Rs. 9.94 lakhs to Rs. 11.65 lakhs is explained by a lower provision for depreciation of Rs. 6.99 lakhs against Rs. 8.86 lakhs last year. The Company has provided Rs. 13 lakhs for taxation, against Rs. 12.50 lakhs a year ago. Managing Agents' remuneration amounts to Rs. 2.72 lakhs, against Rs. 2.99 lakhs previously. Ordinary dividend takes away Rs. 6 lakhs, against Rs. 5.20 lakhs for 1959-60. The Company has strengthened its reserves position by transferring in all Rs. 6.57 lakhs, which is more than double the amount set aside last year.

The Directors had expressed the hope in their previous year's report that supplies of M.S. billets, having improved and accounted for the smart improvement in the Company's results in the previous year, would be more satisfactory during the year under review. The rolling mill, however, experienced some acute shortage of billets and had to be temporarily closed down for sometime by the end of the first quarter. Moreover, the revised costs of conversion announced by the Government in September 1960 did not provide any benefit over the previous year's conversion charges. Production in the wires and ropery sections could not be more than normal due to the prevailing absence of a balancing plant. The Directors now caution that, as long as these difficulties in production persist, the Company cannot produce any dramatic improvement in its working results. It has, however, obtained a loan from the Industrial Credit and Investment Corporation of India to meet the necessary foreign exchange for importing a balancing plant, an order for which will be placed when the import licence is received from the Government. There has been no difficulty so far in selling the ropery section products, but, in the light of several new licensed units, some of which are under installation, there will obviously be more severe competition in future.

The share capital of the Company is maintained at the previous year's level of Rs. 40 lakhs and is made up of 4 lakh ordinary shares of Rs. 10 each. It is covered by reserves and surplus totalling Rs. 37.15 lakhs. In line with its sound policy, the Company has liquidated the balance of Rs. 2.05 lakhs of its secured loans. Current liabilities and provisions have increased from Rs. 39.91 lakhs to Rs. 55.61 lakhs, but are more than well covered by current assets, loans and advances which have also gone up from Rs. 65.97 lakhs to Rs. 92.45 lakhs. There was an addition of Rs. 0.99 lakh to the gross block account, while assets worth Rs. 2.51 lakhs were sold during the year. The value of gross block at the close of the year is shown at Rs. 81.70 lakhs and it is adequately written down to Rs. 40.28 lakhs.

At its current market value of Rs. 21.75 *cum-div.*, the yield on the Company's Rs. 10 fully paid ordinary shares works out to 4.82 per cent per annum, free of tax.

(Concluded from next column)

improvement at present. While determining attainable production and manufacturing cost in relation to price fixation, the impact of transport inadequacy on production should not be ignored."

Being new, the Company's block account is out of proportion to the paid-up capital. Debentures and borrowings are high. The former have been issued to the I.F.C.; repayment is to start in 1962 and end in January 1970. A synopsis of the balance-sheet as at 31st March 1961 is given below:

(In lakhs of rupees)

Liabilities		*Assets*	
Capital (all in equity shares of Rs. 10 each)	60.00	Gross block	179.02
Reserves and surplus	9.50	*Less:* depreciation	22.50
Debentures	42.50	Net block	156.52
Loans from banks	42.13	Book debts, stock-in-trade, stores, cash etc	65.37
Loans from others	35.02		
Other liabilities and provisions	32.74		
Total	221.89	Total	221.89

It will be noted from the figures given above that, for some years to come, the Company will have to conserve a very substantial part of its profit, in order to reduce its dependence on borrowed finance and reduce the equity-debt ratio. One should not, therefore, expect any sizable increases in dividends for some years to come even if the Government's pending decision on ex-factory cement prices turns out to be satisfactory. Apparently, the market seems to be in agreement with this view, as witness the discount at which the shares are quoted. At Rs. 9.24, the Rs. 10 fully paid shares offer a net yield of 5.30 per cent per annum. The book value of this share is Rs. 11.60. An investor who has patience to wait will, however, find the scrip not unattractive.

Head Office : New Delhi.

ASHOKA CEMENT LTD.

PRODUCTION HIGHER, BUT NOT PROFIT

A SUBSTANTIAL increase in production was effected by Ashoka Cement Ltd. (Secretaries: Messrs. Sahujain Services Ltd., Calcutta) during the year ended 31st March 1961, but, due to higher costs and unremunerative ex-factory prices fixed by the Government, the improvement in profit has only been modest. Consequently, it has not been possible for the Company to add any sizable amount to the reserves nor pay an attractive rate of dividend to shareholders. The Directors have been able only to repeat the modest dividend of 7 per cent per annum, subject to tax, which they had paid for 1959-60. The net dividend, accordingly, is only 4.90 per cent. This is by no means an enviable record for a company which has completed a decade of existence and nearly five years since production was commenced. One cannot, of course, blame the management for this small return to shareholders, for the fault lies mainly with our policy-makers and administrators who control almost every aspect of cement industry.

Here is the Company's performance in production and despatches in the year under review, against the background of that in the previous year:

(In tonnes)

Year	*Production*		*Despatches*
	Clinker	*Cement*	*Cement*
1960-61	166,512	173,733	176,014
1959-60	131,739	104,206	103,947

The production of clinker was up by 26.5 per cent and that of cement by 6.1 per cent. The improvement in despatches was of the order of 7.3 per cent.

The salient features of the financial results are presented in the following comparative table in an easily understandable manner:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	2,00.02	1,66.08	1,05.54	98.79
Other income	5.76	4.35	2.22	1.68
Closing stocks of finished goods and work-in-progress	5.02	10.84	20.46	0.56
Raw materials, stores, etc., consumed	85.33	58.83	49.64	34.16
Excise duty	41.26	38.71	25.12	22.50
Other expenses	56.74	49.33	40.90	32.22
Gross profit	16.68	13.04	12.04	1.93
Provision for depreciation	8.97	6.90	6.52	0.22
Net profit	7.71	7.04	5.52	1.71
Transfer to reserves	3.33	2.83	2.99	0.24
Brokerage on shares and preliminary expenses written off	..	..	..	1.41
Dividends	4.20* (7%)	4.20* (7%)	2.70 (4½%)	..
Carry forward	0.22	0.04	0.08	0.19

* Subject to deduction of tax.

It will be noted that the increase of about Rs. 34 lakhs in sale proceeds has been nearly offset by marked advances under raw materials consumed, excise duty paid and other expenses which include wages, administrative expenditure, etc. Consequently, the gross profit at Rs. 16.68 lakhs discloses an improvement of only Rs. 2.74 lakhs. As almost the whole of this increase has been taken up by the depreciation account, the net profit is up by a bare Rs. 67,000. Nearly half of this profit has been conserved, Rs. 3 lakhs to general reserve and Rs. 33,000 to development rebate reserve. The profit was not liable to taxation.

The following extract from the Directors' report describes the hardships which the Company has to undergo:

"The effect of substantial increase in production has not been reflected in the working results, due to increase in cost of coal, stores and spares, enhanced railway freight and fixation of uneconomic packing charge. The formula for determination of packing charges in vogue for the last decade was given up and fixation for the quarter October-December 1960 was made by the Government arbitrarily.

"The Company has implemented the recommendations of the Central Wage Board for the Cement Industry with effect from 1st January 1960. Contrary to earlier expectations, the additional burden was not fully neutralised by an appropriate increase in the retention price of cement. This is due to the incidence of increase in labour cost per ton of cement having been computed by the Government on the basis of the Tariff Commission's assumption of an unrealistic attainable production much higher than the actuals. This has further affected the year's profits.

"Transport position for movement of materials inward as well as cement despatches outwards has remained acute, despite the high priority for cement industry, and there are also no signs of any

(Continued in previous column)

PRAGA TOOLS TURNS CORNER

INDUSTRIAL PEACE ASSURED FOR THREE YEARS

ONE more year has gone by without a return on investment in the Praga Tools Corporation Limited (General Manager: Mr. B. Venkataraman, Hyderabad), manufacturers of machine tools which rank among the world's best and for which there is a good demand in this country. The working results of the Company for the year ended 31st March 1961 have no doubt improved slightly, but not to the expected level, due primarily to unsettled labour conditions. The average of both production and sales was lower than in the previous period. Thus, production during the year was Rs. 48.26 lakhs averaging Rs. 4.02 lakhs per month, as against the average of Rs. 4.50 lakhs per month in the previous period which was for nine months. The total sales amounted to Rs. 67.14 lakhs, or a monthly average of Rs. 5.59 lakhs, reflecting an improvement over the average of Rs. 5.32 lakhs per month in the preceding nine months period.

The gross profit works out to Rs. 8.39 lakhs which is not an improvement over that earned in the preceding nine months, in that it is proportionately lower; for the nine months ended 31st March 1960, the gross profit was no less than Rs. 8.14 lakhs. After providing Rs. 5.24 lakhs for depreciation, as against Rs. 3.89 lakhs in the preceding period, the net profit is lower at Rs. 3.15 lakhs. No provision has been made for development rebate and income-tax. As against the available profit for appropriation of Rs. 6.88 lakhs, inclusive of Rs. 3.73 lakhs brought forward, the Directors have written off Rs. 6.64 lakhs in respect of the work-in-process and jigs and fixtures, leaving Rs. 23,631 to be carried forward.

The working results of the Company for the past four years are summed up in the following comparative table:

(In lakhs of rupees)

	Year ended 31-3-61	Nine months ended 31-3-60	Year ended 31-6-59	Year ended 30-6-58
Sales	67.14	47.89	73.34	75.22
Closing stocks of finished goods and work-in-process	38.23	30.91	34.16	34.06
Other income	1.65	1.33	0.87	0.64
Raw materials, stores and spares consumed	27.83	19.10	25.80	35.91
Other expenses	37.34	27.73	37.31	39.73
Gross profit	8.39	8.14	11.23	8.34
Managing Agents' commission	..	..	..	0.45
Provision for—				
Depreciation	5.24	3.89	4.81	7.27
Taxation	..	..	0.65	0.14
Net profit	3.15	4.25	5.77	0.48
Transfer to reserves	..	0.80	0.65	0.60
Provisions written back	..	5.35	..	..
Losses and expenditure written off	6.64	..	..	..
Carry forward	0.24	9.73	—5.07	—9.99

In pursuance of the observations made by the Comptroller and Auditor General last year that the closing stock of finished goods had been valued at a certain percentage below the selling price instead of at cost or market price whichever is lower, the Directors have written down the stocks by Rs. 1.06 lakhs, which stand (after revaluation) at Rs. 8.84 lakhs. The management has also taken the opportunity to scrutinise the different items of work-in-process, jigs and fixtures representing the accumulation of many past years and it was found that, having regard to the current tangible value of these assets, a write off of Rs. 6.64 lakhs was necessary. But for this adjustment, it would have been possible for the Directors to declare a modest maiden dividend.

After the reorganisation of the capital structure in June 1958, when the Rs. 50 paid-up share was written down to Rs. 35 per share and the paid-up capital was increased by investment by the Government of India, the financial position of the Company has steadily improved. The reserves, however, are yet negligible and require to be strengthened. Nevertheless, it can be said that the Company has definitely turned the corner and, given peaceful labour relations, should be able to go forward.

It will be recalled that, in June 1958, the Company wrote off Rs. 20.65 lakhs out of the accumulated loss of Rs. 30.64 lakhs by writing down the value of its shares by Rs. 15 to Rs. 35. At the same time, the Government of India stepped in, in a big way, by investing Rs. 70 lakhs. The Government of Andhra's investments amounts to Rs. 48.17 lakhs and those of others Rs. 17.75 lakhs. The total paid-up capital is Rs. 136.90 lakhs, the share of Central and Andhra Governments being 55 per cent and 35 per cent, respectively. The reserves and surplus are very meagre at Rs. 2.67 lakhs. The current liabilities and provisions are Rs. 15.85 lakhs and are more than fully covered by current assets, amounting to Rs. 108.09 lakhs. The gross block of the Company has increased from Rs. 79.38 lakhs to Rs. 96.38 lakhs, reflecting the progress made in the implementation of several expansion schemes. After deducting the depreciation of Rs. 52.51 lakhs provided so far, the net block stands at Rs. 43.87 lakhs. Besides this, there is capital work-in-progress at Rs. 3.44 lakhs.

The land for erecting the new factory, which will have facilities for developing ancillary industries to feed the main factory with component parts, has been acquired. The total expenditure incurred on the expansion programme upto the end of March 1961 is Rs. 10.40 lakhs. In addition to the collaboration arrangements concluded with the three British firms for the manufacture of drill chucks, lathe chucks and tool and cutter grinders, the Company proposes to collaborate with another British firm to develop the manufacture of milling machines. The manufacture of Polish type machine tools by the Company has been authorised by the Government of India which has diverted Rs. 1 crore of the Polish credit for this purpose.

It is gratifying to find from the Directors' report that, at long last, a settlement has been reached between the management and the employees' union on the pending disputes. The financial incidence of the settlement in a full year would be about Rs. 2.5 lakhs. The union, on its part, has agreed to an expert examination of work-norms and work-standards, so as to increase productivity. An industrial truce has also been signed for a period of three years, during which the union or the workers shall not resort to any strikes, stoppage of work, or go-slow practices.

There is thus good reason to hope that the results for the current year would be much better and that the Company would soon be able to build up sizable surpluses and pay a dividend.

(Concluded from next column)

ties and provisions amount to Rs. 61.84 lakhs, giving a total indebtedness of Rs. 85.10 lakhs. A good part of it is represented by fixed assets, as current assets are no more than Rs. 5.90 lakhs. The gross block at Rs. 258.79 lakhs has been written down to Rs. 190.44 lakhs, by providing Rs. 68.35 lakhs for depreciation.

The Company has placed an order for a solvent extraction plant with Oil Corporation of India Private Ltd. Some components of the plant are to be manufactured outside India and the rest in India. The requisite industrial licence for the establishment of the plant has been received and import licence for the foreign components has also been received. The financial commitment for this project is estimated to be in the vicinity of Rs. 20,00,000, out of which Rs. 1,75,000 have been spent in the year under report and about Rs. 14,00,000 will have to be spent in the current year and Rs. 4,00,000 will have to be paid by four six-monthly instalments.

In order to finance the development schemes mentioned above, it is proposed to increase the authorised capital of the Company by the creation of 500,000 ordinary shares of Rs. 10 each and to issue 286,300 ordinary shares at par.

The current market quotation of Rs. 10 paid-up ordinary shares is in the neighbourhood of Rs. 11.12 *cum-dividend*. The net yield, on an *ex-dividend* basis, and at a net dividend of 63 nP per share, works out to 6.0 per cent per annum.

FIRST PRIZE FOR PHILIPS INDIA'S ANNUAL REPORT

Mr. K. C. Reddy, Minister for Commerce and Industry, Government of India recently handed over to Mr. P. C. Vink, Chairman and Managing Director of Philips India Limited, a shield representing the first prize for the best presented accounts for the year 1959-60 at the recent annual meeting of the Council of the Institute of Chartered Accountants of India, held at Delhi.

The scheme introducing the award of the shield and certificate has been, according to Mr. C. P. Mukherjee, President of the Institute, an unqualified success contributing effectively towards the setting up of a high standard in the presentation of accounts.

The Directors report and statement of accounts of the Alkali and Chemical Corporation of India for 1958-59, as well as those of Bajaj Electricals Ltd. and Tata Oil Mills Co., Ltd. for 1959-60 have been highly commended as worthy of emulation by others.

AMALGAMATED ELECTRICITY

SALES CROSS RS. 1-CRORE MARK

THE progress made by the Amalgamated Electricity Company Ltd. (Managing Agents: Messrs. N. C. Javeri & Co., Bombay) during the year ended 31st March 1961 is encouraging. The sales of energy crossed the one-crore mark to touch Rs. 105.75 lakhs, reflecting a rise of 16.3 per cent over the year. The generating and other expenses also expanded steadily, but in the same proportion. As a result, the profit-margin has remained practically unchanged and the gross profit has gone up to Rs. 27.06 lakhs, a record in the history of the Company; it compares with Rs. 23.42 lakhs for the preceding year, Rs. 22.42 lakhs for 1958-59 and Rs. 18.76 lakhs for 1957-58. The net profit, too, is higher at Rs. 14.01 lakhs, as against Rs. 12.20 lakhs, after higher provisions for taxation and depreciation.

The dividend on ordinary shares has been maintained at 9 per cent per annum. Only, the silver jubilee bonus of one per cent, paid last year, has not been normalised. The distribution of dividend on both classes of preference shares has been stepped up in accordance with the Preference Shares (Regulation of Dividends) Act 1960. The additional dividends for the previous year have also been cleared, as the Act is applicable for that year also. The total amount payable by way of dividend on ordinary shares is higher, as it is on a higher capital. The undistributed surplus is large at Rs. 13.53 lakhs, but it is well over Rs. 2 lakhs less than the amount brought in.

The following comparative table reveals the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale of energy	1,05.75	90.88	81.54	72.11

* Subject to deduction of tax.
† Includes additional dividend Rs. 0.40 lakh for 31st March 1960.
‡ Includes additional dividend Rs. 0.30 lakh for 31st March 1960.
§ On increased capital after issue of 90,625 equity shares issued in January 1960.

As readers may, perhaps, be aware, the Company is both a generator and distributor of electricity in several towns and villages in Maharashtra, Gujarat, Rajasthan and Mysore.

The progress in the sale of energy in recent years has been quite impressive, as will be seen from the following figures:

(In lakhs)

Year	*Units generated and purchased*	*Total load in kw.*	*No. of consumers*
1957-58	435.89	0.29	0.62
1958-59	493.06	0.32	0.67
1959-60	575.08	0.35	0.72
1960-61	712.95	0.39	0.77

The capacity of the Company's plants is being augmented to cope with the pressing demand for more power. In addition to four generating sets ordered last year, four more sets have been indented this year. The financial commitment on this latest phase of expansion is estimated at Rs. 15 lakhs, of which Rs. 5 lakhs are to be expanded this year and the balance in six-monthly instalments thereafter.

The paid-up capital of the Company as at 31st March 1961 is Rs. 126.02 lakhs, consisting of Rs. 81.56 lakhs in ordinary shares of Rs. 10 each, Rs. 24.15 lakhs in 5½ per cent preference shares of Rs. 100 each and Rs. 20.31 lakhs in 5 per cent preference shares of Rs. 100 each. The paid-up capital was increased in January 1960 by an issue of 90.625 equity shares of Rs. 10 each at par. The reserves and surplus stand at Rs. 39.73 lakhs, of which Rs. 13.53 lakhs are surplus from the profit and loss account. Over the year, the secured and unsecured loans have risen from Rs. 15.52 lakhs to Rs. 23.25 lakhs. Other liabili-

SINGARENI COLLIERIES FARE WELL

LARGE EXPANSION UNDER WAY

THE Singareni Collieries Company Limited (Managing Director: Mr. N. K. Guruswami, Hyderabad) is one of the important units of the Indian coal industry, which is primarily owned by the public sector. At present, the majority of capital is held by the Andhra Government, but, according to a recent policy decision, the State Government is reported to have decided to transfer the ownership to the Central Government. Details of this arrangement are not known at the time of writing this review.

The working of the Company during the year ended 31st December 1960 was satisfactory from all points of view. Production was higher and so also despatches. Consequently, sales realisation and gross profit were better than those for the previous year. Net profit, however, has declined, because of the heavier provisions for taxation and depreciation. The dividend has been reduced slightly from 7.5 per cent taxable to 7 per cent taxable, but this is on a vastly increased capital, and takes up Rs. 15.25 lakhs, as compared with only Rs. 4.74 lakhs for 1959.

The details of the Company's production, despatches and financial results are given in the comparative table below:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds of coal	639.98	566.21	535.90	455.42

Despatches of coal (Tons)	2,361,500	2,144,325	2,022,862	1,815,601

* On increased capital.

† Subject to deduction of tax.

In their report to the shareholders for 1960, the Directors have indicated the position of expansion scheme for the Company's collieries as follows:

"The expansion scheme under the third Five-year Plan to achieve a target of 5.65 million tons per annum by 1965-66 has been estimated to cost Rs. 20.33 crores. This involves an additional production of 4 million tons per annum, as production of approximately one million tons will be lost in the next few years, consequent on exhaustion of some of the working mines. The Government of India have for the present decided to make a provision of Rs. 12.51 crores for producing an additional three million tons of coal through shallow mining.

"As regards the additional outlay of Rs. 7.81 crores required for producing one million tons from deep mining, the Government of India have advised us that the matter be deferred for the time being, pending an examination of the development cost of deep mining on an all-India basis.

"The Government of India have been requested to provide financial assistance of Rs. 2.5 crores during the year 1961-62, as the first instalment of assistance in the third Five-Year Plan."

There has been a sharp rise in the paid-up capital of the Company during the year from Rs. 63.21 lakhs to Rs. 3 crores, of which Rs. 63.21 lakhs represent capitalisation of reserves and issue of bonus shares. Of the balance of Rs. 173.57 lakhs, Rs. 52.55 lakhs represent adjustment of loans received from the Andhra Government and the rest issue of new shares. The entire capital is in ordinary shares of Rs. 10 each. After the transfer to capital account, reserves and surplus stand at Rs. 73.73 lakhs. Loans from the Andhra Government have declined from Rs. 106.76 lakhs to Rs. 54.20 lakhs, while those from the Union Government have risen from Rs. 70 lakhs to Rs. 190 lakhs. Unsecured loans, however, have declined from Rs. 122.94 lakhs to Rs. 11.97 lakhs. Other current liabilities and provisions have jumped up by Rs. 46.17 lakhs to Rs. 236.71 lakhs. Fixed assets (net block) have grown from Rs. 392.77 lakhs to Rs. 473.34 lakhs. Additions to gross block were Rs. 146.43 lakhs, raising its total to Rs. 826.23 lakhs. The depreciation provided so far is Rs. 352.89 lakhs. Investments are unchanged at Rs. 8.42 lakhs, while all other current assets have moved up by Rs. 99.17 lakhs to Rs. 384.86 lakhs, which are more than sufficient to cover current liabilities and unsecured loans.

PARRYS' SALES LOOK UP

DIVIDEND MAINTAINED ON HIGHER CAPITAL

THE performance of Parrys Confectionery Limited (Managing Agents: Parry and Company Ltd., Madras), the well-known manufacturers of "Parry Sweets" and "Deccan Sweets," during the year ended 31st March 1961, is quite encouraging. The Company's sales fetched Rs. 116.65 lakhs, as against Rs. 113.98 lakhs in the previous year, Rs. 88.72 lakhs in 1958-59 and Rs. 78.24 lakhs in 1957-58. But as the expenses of production rose from Rs. 102.91 lakhs in 1959-60 to Rs. 104.08 lakhs, the gross profit for the year under review is slightly lower at Rs. 11.52 lakhs, as against Rs. 13.12 lakhs for the previous year. The net profit, however, has improved by Rs. 59,000 to Rs. 5.44 lakhs, thanks to the saving of Rs. 1.49 lakh under the provision for taxation and Rs. 85,000 under Managing Agents' commission. The provision for depreciation, it may be noted, is fractionally higher at Rs. 1.34 lakhs, as against Rs. 1.19 lakh in 1959-60. The amount actually available for distribution is Rs. 7.31 lakhs inclusive of the excess provision of previous years and a sum of Rs. 1.52 lakh brought forward from 1959-60. The Directors have stepped up the amount ploughed back to reserves from Rs. 1.20 lakh in 1959-60 to Rs. 1.50 lakh. The Company had already paid, on 7th April 1961 to be precise, an interim dividend of 10 per cent. The Directors have now decided to distribute a final dividend of 20 per cent, subject to tax, thus maintaining the total distribution at the previous year's level of 30 per cent (taxable) giving a net dividend of 21 per cent per annum, which is a shade higher than the tax-free dividend of 20 per cent per annum for 1958-59 and 1957-58. The final dividend, it may be noted, is being paid on the increased share capital of Rs. 15 lakhs and, as a result, the amount required for paying the dividend is Rs. 4 lakhs, as against Rs. 3 lakhs in 1959-60.

The progress of the Company in the past four years is depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	116.65	113.98	88.72	78.24
Other income	0.87	0.97	0.41	0.34
Closing stock	8.23	10.15	9.07	7.37
Expenses	104.08	102.91	84.29	70.64

Dividend	4.00 (30%)*	3.00 (30%)*	1.50 (20%)	1.50 (20%)
Carry forward	1.81	1.62	0.87	0.75

* Subject to deduction of tax.

The financial position of the Company, as disclosed by its balance-sheet as at 31st March 1961, is quite sound. The Company's share capital on that day amounted to Rs. 10 lakhs, which was supplemented by reserves and surplus aggregating Rs. 8.83 lakhs. Subsequently, on 4th May 1961, to be exact, the Company made a right issue of 500,000 ordinary shares of Re. 1 each at a premium of Re. 1 per share. Following this, the capital has gone up to Rs. 15 lakhs and the reserves and surplus (inclusive of the share premium account) to Rs. 13.83 lakhs. The Company has no secured or unsecured loans; its outstanding current liabilities and provisions are of the order of Rs. 34.14 lakhs, as against which the current assets amount to Rs. 44.89 lakhs, showing a comfortable surplus of Rs. 10.75 lakhs over current liabilities. The gross block has increased from Rs. 12.55 lakhs in 1959-60 to Rs. 15.18 lakhs, following additions to plant and machinery made during the year under review. It has been well written down to Rs. 7.93 lakhs, the depreciation provided so far amounting to Rs. 7.25 lakhs.

The Re. 1 fully paid shares of the Company are being quoted at the time of writing at Rs. 4.80 *cum*-final dividend. On an *ex-div.* basis, and at the proposed rate of dividend the shares yield a net return of 4.5 per cent per annum.

As for the outlook for the current year, the following extract from the Chairman's speech is relevant:

"... sales during the first five months of the current year are ahead of sales of the same period last year and if, as there is every reason to expect, the progress is maintained during the remaining months of the year, your Company can look forward to yet another satisfactory year. At the same time, a note of caution may not be out of place. Shareholders should not presume from what I have said that it will necessarily be possible to maintain the same rate of total dividend on the increased capital. We have only crossed half the year yet and many imponderables may yet come into the picture which may affect the size of our profit one way or another."

COMPANY MEETINGS AND DIVIDENDS

EAST INDIAN COAL CO., LTD. Annual General Meeting, Calcutta, 13th October 1961. Dividend: Rs. 2.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 29th September to 13th October 1961, both days inclusive.

KALPETTA ESTATES LTD. Annual General Meeting, Alleppey, Kerala State, 14th October 1961. Dividend: 12½ per cent or Re. 1.25 per share, subject to deduction of tax. Transfer books remain closed from 7th to 14th October 1961, both days inclusive.

HINDUSTAN ELECTRIC CO., LTD. Annual General Meeting, Bombay, 17th October 1961. Dividend: 4 per cent or Rs. 4.00 per share, subject to deduction of tax, payable on and after 28th October 1961. Transfer books remain closed from 30th September to 14th October 1961, both days inclusive.

NEW KAISER-I-HIND SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 18th October 1961. Dividend: *Nil*. Transfer books remain closed from 7th to 18th October 1961, both days inclusive.

JAYANT PAPER MILLS LTD. Annual General Meeting, Surat, 28th October 1961. Dividend: *Nil*. Transfer books will remain closed from 11th to 28th October 1961, both days inclusive.

TEXTOOL CO., LTD. Annual General Meeting, Coimbatore, 30th October 1961. Dividend: 15 per cent or Rs. 15.00 per share, subject to deduction of tax. Transfer books will remain closed from 17th to 30th October 1961, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 30th October 1961. Dividend: 16 per cent or Rs. 16.00 per ordinary share, subject to deduction of tax. (The dividend for 1960 was 32 per cent or Rs. 32.00 per ordinary share, taxable), payable on and after 6th November 1961. Transfer books will remain closed from 11th October to 7th November 1961, both days inclusive.

NATIONAL ROLLING AND STEEL ROPES LTD. Annual General Meeting, Calcutta, 30th October 1961. Dividend: Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 13th to 30th October 1961, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION LTD. Taxable final dividends of Rs. 585 per share on the original shares of Rs. 2,500 each (making a total of Rs. 825 per share); Rs. 29.25 per old ordinary share (making a total of Rs. 41.25 per old ordinary share) and Rs. 11.70 per new ordinary share (making a total of Rs. 16.50 per new ordinary share), for the year ended 31st May 1961.

PEERMADE TEA CO., LTD. Interim dividend of 7½ per cent or Re. 0.75 per ordinary share, subject to deduction of tax, for the year ending 31st December 1961. Transfer books will remain closed from 22nd to 29th October 1961, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Final dividend of £4 per cent net (tax applicable at 7*s.* 9*d.* in the £), for the year ended 31st March 1961, payable on 11th November 1961.

TRAVANCORE SUGARS AND CHEMICALS LTD. Taxable dividend of 7½ per cent or Re. 0.75 per ordinary share, for the year ended 30th April 1961. Transfer books will remain closed from 16th to 30th October 1961, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Dividend of Re. 1.50 per ordinary share (on old capital), for the year ended 31st March 1961. Transfer books remain closed from 27th September to 13th October 1961, both days inclusive.

TIDE WATER OIL CO. (INDIA) LTD. Taxable interim dividend of Re. 0.70 per share, for the year ending 31st October 1961.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Net dividend of Rs. 16.80 per ordinary share, for the year ended 30th June 1961, payable on 13th November 1961. Transfer books will remain closed from 16th October to 11th November 1961, both days inclusive.

RAJA BAHADUR MOTILAL POONA MILLS LTD. Interim dividend of Rs. 4.00 per share, subject to deduction of tax, for the year ending 31st December 1961, payable on and from 21st October 1961. Transfer books will remain closed from 9th to 18th October 1961, both days inclusive.

BISRA STONE LIME CO., LTD.

The Directors of the Bisra Stone Lime Company Ltd., have decided to issue bonus shares in the proportion of three fully paid up equity shares of Rs. 10 each for every share held by capitalisation of general reserves to the extent of Rs. 30,00,000. Necessary application has been made to the Controller of Capital Issues and steps will be taken to implement the above proposal when the approval is obtained.

BIRD-HEILGERS JUTE MILLS REPORT LOWER PROFITS

THE sorry plight faced by the Indian jute mill industry during the year 1960-61 is fully reflected in the latest annual reports of the seven companies belonging to the Bird-Heilgers group. Fair increases in sales have been reported by all the units, due, no doubt, to the prices of jute goods ruling at unusually high levels. In most cases, however, the improvement has been more than counterbalanced by a disproportionate rise in the cost of raw materials. As such and also because profitable simultaneous business of buying jute and selling finished goods was rarely possible, both the gross as well as net profits have shown sizable reductions. The only exceptions to this general trend have been provided by the Lawrence Jute Company Ltd., and the Northbrook Jute Company Ltd., which have reported higher profit figures. The Lansdowne Jute Company Ltd., the results of operations of which had disclosed a decent profit during the previous year, has recorded a loss of Rs. 1.27 lakh for the year under review. With the exception of the Auckland Jute Company Ltd., and the Northbrook Jute Company Ltd., all the other units have pruned the transfers to reserves in sympathy with the decline in their profits.

A broad outline of the performance of the seven companies during the past three years is set forth in the comparative table given on this page.

Although the articles of association of the companies make no reference to the taxability or otherwise of the preference dividends, it has been the practice of individual units to pay dividends on these shares at the stipulated rates. With the passing of the Preference Shares (Regulation of Dividends) Act 1960, a change in the situation has been brought about, with the result that all the Companies have taken steps to declare preference dividends in accordance with the rules laid down. Moreover, as per the terms of the Act, additional amounts have also become due to preference shareholders, in respect of the previous years. This accounts for the difference in the dividend amounts payable for the year under review and those for the two years preceding it. With profits lower and a higher liability in respect of preference dividends, a reduction in the rates of ordinary dividends is inescapable. All the Companies save the Lawrence Jute Company Ltd. and the Northbrook Jute Company Ltd., have, therefore, recommended drastic cuts in the ordinary dividends payable for the year under review. The two exceptions have maintained dividends at 15 per cent, subject to deduction of tax, and 30 per cent deduction of tax, respectively. Due to the loss suffered by it, the Lansdowne Jute Company Ltd. has been obliged to skip ordinary dividends for the fifth year in succession.

Owing to the restricted supply of jute, many companies found it difficult during the year to work to their full capacity. The Auckland Jute Company, for example, encountered difficulties in working the carpet backing looms to capacity throughout the year and was accordingly obliged to cut back one shift twice during the period. A similar contingency befell the Kinnison Jute Mills Company Ltd., which had to suspend one shift for an aggregate of nearly four months during the year. In the case of the Northbrook Jute Company Ltd., on the other hand, the carpet backing looms, including the 13 new looms commissioned during the year, worked to capacity and it was not until late February 1961 that it was found necessary to reduce working hours due to the fall in demand for narrower widths.

Further steps have been taken by some of the mills to complete their modernisation programme. The Auckland Jute has completed the modernisation of the sacking weft section of the mill and has placed orders for 24 automatic weaving machines and for one high-speed winding machine. In addition, licences for the import of machines for the spinning, drawing and finishing departments have also been received and orders placed. The Dalhousie Jute has completed its modernisation plan by installing seven spinning frames, five drawing frames and relevant ancillary machinery. Similar equipment has been ordered by Kinnison under its renovation plans.

An encouraging step, however, has been taken by the Lawrence Jute Company Ltd., with a view to utilising advantageously a part of its liquid funds and diversification of its interests. The Company has decided, subject to the consent of the Central Government, to invest Rs. 10.00 lakhs in the McNally-Bird Engineering Company Private Ltd. and Rs. 12.00 lakhs in Coates of India Private Ltd. The former, registered in relation to a collaboration between Bird and Co. (Private) Ltd. and the McNally Pittsburg Manufacturing Corporation, U.S.A., will establish a manufacturing undertaking at Kumardhubi. The latter will take over the Indian business of Coates Brothers and Co. Ltd., of the U.K. as manufacturers of inks for the printing and packaging trades with establishments at Calcutta, Madras and Bombay.

" " general reserve	1,84	1,78
Proposed dividend (taxable) Ordinary	2,20 (11%)	2,20 (11%)
Carried forward	47	47

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: Control of electricity supply under the provisions of the U.P. Electricity (Temporary Powers of Control) Act, 1947 is in force. The Company's power station was operating at full capacity due to the restrictions and staggering of load, and although the position has somewhat eased as a result of the commissioning of the 6 M. W. Set in February, 1961, the power supply position at Agra still continues to be unsatisfactory.

There has been an all round increase in operating expenditure, particularly in respect of generation, owing to the supply of poor quality coal and the insistence of the Government of India that power stations should utilise larger quantities of inferior grades of coal. As a result, the Company has not earned the full amount of reasonable return permitted under the provisions of the Electricity (Supply) Act, 1948. To meet the additional expenses and to enable the Company to earn the prescribed return, it has been found necessary to raise the rates for supply to consumers as from the 3rd October, 1961. The requisite notices have already been sent to the State Government and the State Electricity Board.

The following schedule indicates the progress that has been made:—

Year Ended	Units Sold	Revenue.
		Rs.
31st March, 1959	3,71,91,369	45,96,285
31st March, 1960	4,27,80,392	50,67,189
31st March, 1961	4,65,43,874	53,54,992

As the clear profit for the year under review falls short of the reasonable return calculated under the Electricity (Supply) Act, 1948, a sum of Rs. 5,28,898 representing the shortfall has been transferred from the balance at the credit of the tariffs and dividends control reserve to the profit and loss account in accordance with the provisions of Sub-Clause (2) of Clause II of the Sixth Schedule to the Act.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	19,99,600	Gross block	1,79,22,370
4½% debentures	10,22,500	—Depreciation	43,63,962
Reserves and surplus	50,05,299		
Other liabilities	1,18,43,305	Net block	1,36,58,408
		Block in progress	2,21,114
		Current assets	25,88,847
		Investments	6,53,962
		Cash	26,76,547
		Miscellaneous expenditure	71,826
	Rs. 1,98,70,704		Rs. 1,98,70,704

* Paid-up capital consists of 19,996 ordinary shares of Rs. 100 each, fully called up. Out of the above shares 4,996 shares were allotted as fully paid up without payment in cash by way of bonus shares issued on capitalisation of reserves.

Hasimara Industries Ltd.

(*Managing Agents*: Messrs. Davenport & Co., Ltd., Calcutta.)

Annual General Meeting—Held on 29th September.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales of tea (less sale charges)	83,61	94,31
Closing stock	55,43	30,75

" " " Ordinary	5,44 (17½)	4,00 (12½%)
Carried forward	2,54	2,60

N.B.—Adjustments represent only the balance brought forward from previous year.

* Preference dividend is calculated at 7.88 per cent. in accordance with the Preference Shares (Regulation of Dividends) Act, 1960. This also includes additional preference dividend for the year 1959 at .88 per cent.

Extracts from the Directors' report: The climate this year was very favourable resulting in an increased crop of 27,87,460 kg., as against an estimate of 27,32,440 kg.

	1960 Per Kg.	1959 Per Kg.
	Rs.	Rs.
Total net average sale price:		
Hasimara Divisions	4.93	4.63
Tumsong	6.52	6.59
Total working cost per Kg. of tea produced:		
Hasimara Divisions	3.62	3.81
Tumsong	5.80	6.11

Seksaria Cotton Mills: With a view to diversifying the activities of the Company for the purpose of which Memorandum of Association of the Company was altered, the Company endeavoured to obtain from the Official Liquidator of Seksaria Cotton Mills Limited (in liquidation) a licence to run the mills on a leave and licence basis. By an Order dated the 12th January, 1961 the Bombay High Court directed the Official Liquidator to accept the offer of this Company made jointly with Mr. S. L. Bajoria a shareholder of the Cotton Mill Company to run the mills for a period of nine months from the 29th January, 1961 on which date possession of the mills was given to this Company and Mr. Bajoria. The Company subsequently entered into a partnership agreement with Mr. Bajoria on the 11th May, 1961 to run the mills on leave and licence basis. This Company's directors and Mr. Bajoria have submitted to the Bombay High Court a scheme for reconstruction of the Cotton Mill Company.

Estimates for 1961 have been based on a crop of 77,370 mds. of tea at a total cost of Rs. 96,10,335.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	35,00,000	Gross block	1,23,23,075
Reserves and surplus	71,94,789	—Depreciation	64,56,075
Other liabilities	65,37,988	Net block	58,67,000
		Current assets	98,63,934
		Investments	3,62,801
		Cash	6,39,042
	Rs. 1,72,32,777		Rs. 1,72,32,042

* Paid-up capital consists of: (a) 3,20,000 ordinary shares of Rs. 10 each, fully paid up; and (b) 3,000—7 per cent. cumulative preference shares of Rs. 100 each, fully paid up. Out of 3,20,000 ordinary shares, 2,80,000 shares are allotted as fully paid up by way of bonus shares by capitalisation of general reserve.

Dejoo Valley Co., Ltd.

(*Secretaries & Treasurers*: Messrs. McLeod & Co., Ltd., Calcutta.)

Annual General Meeting—Held on 27th September.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	3,78	8,48
Closing stock	2,77	3,03
Gross profit (+) or loss (—)	—41*	(+) 3,63
Transfer to Managing Agents' remuneration	12	31
" " Secretaries' and Treasurers' remuneration	6	Nil
" " depreciation	51	46
" " taxation	Nil	1,08
Net profit (+) or loss (—)	57†	(+) 1,68‡
Adjustments N.B.	85§	17
Appropriations:		
Total available balance	28	1,85
Transfer to development rebate reserve	(a)	2
" " buildings and machinery reserve	Nil	1,00
Proposed dividend (taxable) Ordinary	18 (15%)	48 (40%)
Carried forward	10	35

N.B.—Adjustments include the balance brought forward from the previous year.

* Loss after providing for depreciation: Managing Agents' remuneration and Secretaries' and Treasurers' remuneration.

† Loss after taking account, Rs. 16,870, for adjustment account.

‡ After taking into account Rs. 9,149 on account of adjustment account and Rs. 1,241 for writing off stores in respect of obsolescence, etc.

§ This also includes an amount of Rs. 50,000 transferred from general reserve.

Extracts from the Directors' report: *Tea Crop.*—The saleable crop weighed out at 1,16,318 kilograms against an estimate of 1,99,581 kilograms and was disposed of at an average price of Rs. 5.63 per kg. The usual comparative statement for previous seasons is given below:

Season	Crop Kilograms	Average price per Kg.
		Rs.
1959	2,10,358	5.47
1958	1,87,933	5.49
1957	1,46,783	5.34
1956	1,48,524	6.08

The huge short-fall in the crop made in 1960, was due to the severe drought experienced by the garden during the year.

The Estimate for season 1961 provides for a saleable crop of 1,88,708 kilograms at a total revenue expenditure of Rs. 6,75,186.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,20,000	Gross block	12,41,948
Reserves and surplus	7,69,564	—Depreciation	4,44,443

Transfer to development rebate reserve	3	4
" general reserve	97	Nil
Proposed dividend (taxable) Ordinary	2,02 (22½%)	1,80 (20%)
Carried forward	16	20

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Tea crop*: The total crop made in 1960 was 5,31,473.71 kg. in a planted area of 421.40 hecters as against 1959 production of 6,33,067.30 kg.

The fall in production during the year was due to draught that prevailed throughout the year 1960 in Assam. But the Management fully expects that with the best endeavours such production would be increased upto the mark in 1961 i.e., more or less 6,30,000.00 kg. The disbursement of the aforesaid total crop was made as under:—By a total internal and with Export Quota rights sales effected both at Calcutta and at garden locally and in foreign markets 3,26,460.49 kg., and by staff consumption, shortage on sampling and handling and Tea waste being destroyed for which no price was obtained 14,028.22 kg. This leaves a closing stock as on 31st December, 1960 for sale in 1961 of 1,90,985.00 kg.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	9,00,000	Gross block	34,20,972
Reserves and surplus	3,72,111	—Depreciation	14,58,624
Other liabilities	39,03,956	Net block	19,62,449
		Current assets	27,32,758
		Investments	4,63,254
		Cash	17,606
	Rs. 51,76,067		Rs. 51,76,067

* Paid-up capital consists of 90,000 ordinary shares of Rs. 10 each. Out of this 6,000 shares are allotted as fully paid up without payments being received in cash and 30,000 shares are allotted as fully paid-up bonus shares by capitalisation of general reserve.

Midland Rubber and Produce Co., Ltd.

(*Managing Agents*: Messrs. A. V. Thomas & Co., Ltd., Alleppey, Kerala State.)

Annual General Meeting—Held on 30th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales—tea	32,06	31,37
Sales—rubber	17,19	13,87
Closing stock—tea	3,46	2,08
Closing stock—rubber	65	1,96
Gross profit	15,86	14,32
Transfer to Managing Agents' remuneration	83	87
" " depreciation	1,13	1,01
" " taxation	8,20	6,00
Net profit	5,70	6,44
Adjustments	66	34
Appropriations:		
Total available balance	6,36	6,78
Transfer to development rebate reserve	5	3
Proposed dividends (taxable) 6% C. Preference	1,17*	1,03
" " " Equity	5,06 (12½%)	5,06 (12½%)
Carried forward	8	66

N.B.—Adjustments include only the balance brought forward from the previous year.

* Preference dividend is calculated at 6.40 per cent. in accordance with the Preference Shares (Regulation of Dividends) Act, 1960, and includes the additional dividend in respect of 1959-60.

Extracts from the Directors' report:

Crop

Estate	For the year ended 31-3-1961 Estimate Kg.	For the year ended 31-3-1961 Crop secured Kg.	For the year ended 31-3-1960 Crop secured Kg.
Tea:			
Arnakal	7,03,069	7,40,800	6,80,979
Rubber:			
Mukampala	1,02,058	1,08,181	1,1,132
Perinad	2,49,476	2,84,000	2,51,308
Sitfar	77,111	87,747	55,580
Total	4,28,645	4,79,928	4,22,000

The tea crop for the year exceeded the estimate which was itself 22,090 kg. higher than the previous year's production. The yield per acre works out at 616 kg., as against 611 kg. for the previous year. Cost of production ex-estate was Rs. 2.77 per kg., as against Rs. 2.84 per kg. for the previous year. The average sale price realised during the year amounted to Rs. 4.47 per kg., as against Rs. 4.54 per kg. in the previous year. A portion of the Company's tea was shipped for sale in the U.K. and U.S.A., as usual, and the prices realised were satisfactory.

The rubber crop secured amounted to 4,79,928 kg. as stated above and is 51,283 kg. in excess of the estimate for the year. The cost of production was Rs. 2.11 per kg., as against the estimate of Rs. 2.10 per kg. (and Rs. 2.16 per kg. for the previous year). The average sale price realised was Rs. 3.35 per kg. as against Rs. 3.44 per kg. in the previous year.

Estimate for 1961-62

Tea crop 7,37,000 kg. at Rs. 2.75.

Rubber crop 4,92,151 kg. at Rs. 2.11.

The estimated capital expenditure for season 1961-62 comes to Rs. 4,85,286 and covers new machinery, buildings, furniture, replanting and upkeep of young rubber areas. etc.

Pursuant to the General Body's resolution at the last annual general meeting, the directors had received various offers of purchase for the balance area of Mukampalla Group of estates and have decided to accept an offer of Rs. 21 lakhs which was considered to be the best for the property.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	57,70,000	Gross block	87,24,197
Reserves and surplus	14,41,358	—Depreciation	12,48,980

		Current assets	13,50,196
		Investments	1,78,820
		Cash	4,85,561
	Rs. 94,89,893		Rs. 94,89,893

* Paid-up capital consists of: (a) 1,72,000—6 per cent. cumulative preference shares of Rs. 10 each and (b) 4,05,000 equity shares of Rs. 10 each. Out of the equity shares, 1,35,000 shares are allotted as fully paid up by way of bonus shares by capitalisation of Rs. 8,45,500 from share premium account together with Rs. 5,06,500 from general reserve.

Bishnauth Tea Co., Ltd.

(*Managing Agents*: Messrs. Williamson Magor & Co., Ltd., Calcutta.)

Annual General Meeting—Held on 29th September.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales of tea (gross)	15,51	20,82
Closing stock	15,92	15,17
Gross profit	7,43	14,75
Transfer to Secretaries' and Managing Agents' remuneration	43	98
" " depreciation	2,52	2,26
" " taxation	1,80	5,60
" " provision for bonus	57	Nil
" " " contingencies	Nil	2,32
Net profit	2,11	3,59
Adjustments	5,42	7,54
Appropriations:		
Total available balance	7,53	11,13
Transfer to building reserve	Nil	2,00
" " repairs and renewals reserve	Nil	1,00
" " development rebate reserve	4	Nil
Proposed dividend (taxable) Ordinary	4,29 (13⅓)	4,29 (13⅓)
Carried forward	3,20	3,84

N.B.—Adjustments include the adjusted profit brought forward from the previous year.

Extracts from the Directors' report: The following are comparative statistics of sales for the past three years:—

	Kgs.	Average sale price per kg.
1958	17,72,972	Rs. 5/38 nP.
1959	15,57,880	Rs. 6/07 nP.
1960	13,75,572	Rs. 5/95 nP.

The estimate for 1961 provides for a crop of 15,47,700 kg. of tea at a cost of Rs. 4.70 nP per kg.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	33,00,000	Gross block	75,43,294
Reserves and surplus	19,23,906	—Depreciation	33,49,094
Other liabilities	47,82,075	Net block	41,94,200
		Current assets	50,41,278
		Investments	4,02,461
		Cash	3,68,042
	Rs. 1,00,05,981		Rs. 1,00,05,981

* Paid-up capital consists of 3,30,000 ordinary shares of Rs. 10 each, fully called and paid up. Of the above shares, 20,000 ordinary shares are allotted as fully paid up pursuant to a contract without payments being received in cash and 1,65,000 ordinary shares are allotted as fully paid up by way of bonus shares by capitalisation of reserves and share premium account.

Kalasa Tea and Produce Co., Ltd.

(*Managing Agents*: Messrs. Peirce Leslie & Co., Ltd., Mangalore.)

Annual General Meeting—Held on 27th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (tea)	12,80	10,45
Closing stock	1,96	1,21
Gross profit	6,09	2,99
Transfer to Managing Agents' remuneration	34	20
" " depreciation	60	52
" " taxation	1,35	77
Net profit	2,80	1,50
Adjustments	60	70
Appropriations:		
Total available balance	3,80	2,20
Transfer to general reserve	1,00	50
" " development rebate reserve	20	2
Proposed dividend (taxable) Ordinary	1,50 (25%)	1,20 (20%)
Carried forward	60	48

N.B.—Adjustments include the balance brought forward from the previous year and excess provision in previous year no longer required.

Extracts from the Directors' report: *Crops and Costs*: These are given in the following table with corresponding figures for the previous two years.

Year	Crop (Kgm.)	Estate expenditure (Cents per kgm.)	All-in cost (Cents per kgm.)	Average sale price (Cents per kgm.)
1958-59	2,29,857	287	351	439
1959-60	2,18,618	292	366	467
1960-61	2,02,200	258	327	464

Debenture Stock.—Debentures bought back in the open market and cancelled during the year amounted to Rs. 22,500 making a total of Rs. 1,05,000. Besides, the first lot of Rs. 30,000 of the debenture stock which was due for redemption on 31st December 1960 was also duly redeemed. This leaves the stocks still outstanding at Rs. 1,65,000.

Estimates: The estimates of crop and costs for the current year are as follows:

Crop (Kgs.)	Estate expenditure (Cents per kgm.)	All-in-cost (Cents per kgm.)
267,165	282	348

The estates experienced exceptionally heavy rains in July 1961, and, although some 1½ acres of tea were destroyed, damage was less than what might have been expected. Communications were seriously dislocated, and it may be some months before these are fully restored. Essential supplies and services are however being maintained and production continues as usual.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	6,00,000	Gross block	15,77,488
7% debentures	1,65,000	—Depreciation	8,04,129
Reserves and surplus	9,45,732		
Other liabilities	4,23,826	Net block	11,83,359
		Current assets	4,29,866
		Cash	5,21,333
	Rs. 21,84,558		Rs. 21,84,558

* Paid-up capital consists of 3,00,000 ordinary shares of Rs. 2 each. Of this 9,240 shares are allotted as fully paid up pursuant to a contract without payments being received in cash and 1,20,000 shares are allotted as fully paid up by way of bonus shares through the capitalisation of reserves.

Orissa Textile Mills Ltd.

(*Managing Agents*: Messrs. B. Patnaik & Co. Private Ltd., Chowdwar, Dist. Cuttack.)

15*th Annual General Meeting*—5th October.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales	3,31,27	2,86,01
Closing stock	1,37,46	97,39
Gross profit	22,49	13,01
Transfer to Managing Agents' remuneration	81	26
" " depreciation	9,33	9,71
Net profit	12,35	2,94
Adjustments	(—)34,52	(—)37,46
Appropriations:		
To adjustment of loss brought forward	12,35	2,94
Carried forward	(—)22,17	(—)34,52

* Adjustments represent the previous year's loss brought forward.

Extracts from the Directors' report: The introduction of voluntary price controls towards the end of July 1960, the basis being rates prevailing in August 1959, and a further cut in prices in January 1961, has resulted in a considerable reduction in the Company's earnings. The profits would have otherwise been substantially higher.

There has been an all round improvement in the Company's working and the quality of its manufactured goods. The directors feel that the Company is now in a position to enter the export markets. Exports are essential to meet the country's growing need for foreign exchange to finance its development plans.

Despite serious floods which dislocated the entire transport system and communications in Orissa for over 8 weeks during the period from August to October 1960, the Company was somehow able to maintain production with the minimum interruptions. The position of coal supplies has been most unsatisfactory throughout the year.

A new *Hot Air Stenter* from Messrs. Mather & Platt Ltd. has recently been installed which is likely to increase the production of processed goods and to improve their quality.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	73,78,564	Gross block	2,47,39,462
Other liabilities	2,61,82,976	—Depreciation	1,39,29,109
		Net block	1,08,10,353
		Current assets	2,02,99,474
		Investments	10,000
		Cash	2,24,189
		P. L. a/c (deficit)	22,17,524
	Rs. 3,35,61,540		Rs. 3,35,61,540

* Paid-up capital consists of: (a) 4,80,020 ordinary shares (after reduction of 1,275 shares under the Displaced Persons Act) of Rs. 10 each fully called up and 25,002½ redeemable cumulative preference shares of Rs. 100 each fully called up.

Talayar Tea Co., Ltd.

(*Managing Agents*: Srinivas Agencies, Coimbatore.)

Registered Office: Kottayam, Kerala State.

Annual General Meeting—Held on 30th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales of tea (gross)	21,29	17,18
Sales of coffee	1,72	2,36
Closing stock (tea)	5,80	5,76
Gross profit	5,87	3,32
Transfer to Managing Agents' remuneration	52	28
" " depreciation	63	50
" " taxation	2,00	85
" " development rebate reserve	47	17
Net profit	2,25	1,52
Adjustments	1	1
Appropriations:		
Total available balance	2,26	1,53
Transfer to reserve for bad and doubtful debts	3	Nil
" general reserve	44	Nil
Proposed dividends (taxable) 7% Preference	52	52
" " " Equity	1,25 (10%)	1,00 (8%)
Carried forward	2	1

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: Crop and Price: 8,52,132 lbs. (3,86,520.21 kgs.) [8,65,616 lbs. for 1960] tea was harvested during the year under report against an estimate of 850,000 lbs. (3,85,553.21 kgs.). The tea crop was produced at a cost of 167.33 nP per lb. (368.88 nP per kg.) against 165.52 nP per lb. (364.91 nP per kg.) for the previous year. The net average price realised for tea works out to 250 nP per lb. (551.15 nP per kg.) compared with 225 nP per lb. (496.04 nP per kg.) realised in the previous year. The stock of tea remaining unsold as at 31st March, 1961 was 2,24,668 lbs. (1,01,907.70 kgs.) which has been valued at prices since realised and at Managing Agents' valuation.

The estimate for the year ending 31st March, 1962 is 9,00,590 lbs. (4,08,500 kgs.) tea to be produced at a cost of 166.77 nP per lb. (367.66 nP per kg.).

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,00,000	Gross block	32,25,233
Reserves and surplus	11,80,097	—Depreciation	4,11,990
Other liabilities	15,96,337	Net block	28,13,243
		Current assets	10,66,887
		Investments	5,77,011
		Cash	19,313
	Rs. 47,76,434		Rs. 47,76,434

* Paid-up capital consists of: (a) 6,85,000 equity shares of Rs. 2 each fully called up and paid up in cash and (b) 75,000—7 per cent. taxable cumulative preference shares of Rs. 10 each fully called up and paid up in cash.

BAJAJ ELECTRICALS LIMITED

CHAIRMAN URGES HIGHER PRODUCTION TARGET FOR LAMPS

PRESIDING over the Twenty-second Annual General Meeting of the Bajaj Electricals Limited, held at Bombay on Saturday, 30th September 1961, Mr. Kamalnayan Bajaj, Chairman of the Company, made the following observations:

"During the first Plan the total installed capacity of electricity increased from 2.30 million kw. to 3.42 million kw. In the second Plan it was proposed to be doubled. But due to foreign exchange difficulties and delays in the execution of some major hydro-electric projects, there was a shortfall of about 1.20 million kw.

"The installed capacity is expected to rise from 5.70 million kw. to 12.69 million kw. during the third Plan period—an increase of 123 per cent as against 67 per cent during the previous plan. According to the Plan estimates, 19,850 million kw.h. of electricity were generated during 1960-61, which is expected to rise to 45,000 million kw.h. by 1965-66.

Targets of Production

"The targets of production with regard to some products in which the Company is interested are:

Product	Unit	Estimated production in 1960-61	Target for 1965-66
		(In millions)	(In millions)
Electric transformers	kva.	1.20	3.5
Electric fans	Nos.	0.98	2.5
G.L.S. and similar electric lamps	Nos.	41.82	68.0
Fluorescent tubes	Nos.	1.66	6.0
Precision instruments: Industrial and scientific	Rs.	30	120

"While the targets fixed for transformers, fans, fluorescent tubes and precision instruments appear to be reasonable, for G.L.S. and similar lamps it is far too low in relation to the likely demand.

"Statistics over the last fifteen years indicate a direct ratio between the quantity of electricity generated and the consumption of electric lamps. This works out at approximately two-and-a-quarter lamps per thousand kw.h. On the basis of the proposed target of 45,000 million kw.h. of electricity generation, we shall need over 100 million G.L.S. and similar lamps in 1965-66. Even allowing for some shortfall in generation and a somewhat greater proportion for industrial uses and traction, the annual demand for lamps cannot be less than 90 million by 1965-66. The target of 68 million, therefore, definitely needs to be revised.

Hind Lamps' Progress

"Hind Lamps Ltd., which is jointly owned by the Company and its European partners, manufacture electric lamps and fluorescent tubes. In addition, they make components like glass shells, tubings and caps for their own requirements and for other lamp manufacturers. A large proportion of the components needed for the lamp industry is manufactured by them with considerable saving of foreign exchange. They are planning a further expansion programme for implementation during the third Plan period.

"In view of the estimated fourfold increase in production of precision instruments in the third Plan, the Company is planning to raise substantially both the volume and range of its own production.

"Some new products like Rotaflex shades, anodized aluminium hardware fittings, electrical appliances and accessories are being handled by the Company.

"The Company's activities have considerably increased and there is scope for further expansion. It is proposed to increase its authorised capital to Rs. 2 crores so that further capital could be issued as and when required.

"The Institute of Chartered Accountants of India highly commended and awarded a certificate of merit to our accounts for the year 1959-60 in their competition for best presented accounts.

"Relations between management and employees have been cordial. I thank the workers, staff and executives for their sincere efforts. I am confident that with their co-operation it will be possible to achieve better results in the coming years."

(This does not purport to be a record of the proceedings of the annual general meeting.)

Notices

THE KHATAU MAKANJI SPG. AND WVG. COMPANY LIMITED

Laxmi Building, 6, Ballard Road, Fort, Bombay

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Eighty-Seventh Annual General Meeting of the Shareholders of the Company will be held on Monday the 30th October 1961 at 4.00 p.m. (S.T.), at the Registered Office, Laxmi Building, 6, Ballard Road, Fort, Bombay, to transact the business as per the Notice dated the 26th September 1961, sent to the Shareholders of the Company at their registered addresses.

By Order of the Board of Directors,
LALDAS TRIBHOWANDAS,
Secretary.

Dated 26th September 1961.

Notes: (*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member.

LABOUR

(*Concluded from page* 707)

when many of them have ceased to be realistic as a measure of changes in the cost of living even for the individual industrial centres, the all-India consumer price index, which is an average of 27 selected series, can hardly be expected to have any significance. Yet there is no other consumer price index which is used as extensively as the all-India consumer price index number for determining the adjustment in wages and salaries and for calculating changes in the earnings of industrial workers.

There is yet another defect in the indices. In a country where climatic conditions, character of production and habits of consumption differ so widely from place to place as in India, assumption of an average all-India pattern of consumption, which underlies the compilation of an all-India consumer price index number, is highly fictitious.

These deficiencies and drawbacks of labour statistics have been recognised even by the Labour Bureau. For, it uttered the following note of caution in presenting the publication entitled *Indian Labour Statistics*, 1960: "Statistical inference in such situations is bound to be hazardous and requires deep sensing of the quality of the data and a close sizing up of the permissible error." Nevertheless, such data have been used, the *Tata Quarterly* points out, even by the Labour Bureau, without fully taking into account their limitations.

Research

Realisation of this lacunæ, perhaps, explains the keen interest now being shown in the collection and compilation of data regarding labour matters. The adequacy of reliable data and the need for sustained and objective research on a systematic basis were discussed at a conference on labour research held last year. It was agreed that, to begin with, a small central committee, for co-ordinating labour research, might be constituted and that this committee should include representatives of the Government, employers' and workers' organisations, universities and other institutions interested in the subject. It was further agreed that this body should make a survey of the existing agencies in the field and their physical resources, identify the gaps, explore the possibilities of filling up the same, determine priorities, allocate research schemes to the various agencies in order to avoid overlapping, stimulate research work in the labour field and recommend means of utilising the results of such research. Institutional facilities outside the set up of the Government but with the assistance and co-operation of organisations of workers and employers will also be provided for research in labour matters. It is to be hoped that these proposals will be speedily implemented so that labour statistics in future at least will be comprehensive, broad-based and more accurate.

COMMERCE AND INDUSTRY

(*Concluded from page* 706)

and Cuba. Moreover, following the very poor harvest in 1960, mainland China has purchased large quantities of wheat and barley, mainly from Australia and Canada; most of this, however, is for delivery between 1961 and 1963.

World Farm Output

The increase in world trade in agricultural products was made possible, to some extent, by the increase in output in 1960-61. The increase, however, was only small, being one per cent over 1959-60, as against a rate of growth of population of 1.6 per cent. The table in column two of page 706 shows at a glance the trend of production of major commodities in 1960-61, as compared with 1959-60, 1956-57 and 1948-52 average.

Comparatively few agricultural products showed substantial increases in production in 1960-61. Apart from sharp recoveries in the production of apples, copra and oats, the main expansions were in the output of sugar, cocoa, olive oil and rice. The biggest increase in sugar production was in Western Europe. Cocoa production again increased very steeply in Ghana and Nigeria, but Brazil's crop declined because of adverse weather. For bananas, coffee and tea, production fell sharply in 1960-61, a much smaller crop in Brazil being the main factor in the decline in coffee production. The production of citrus fruit, wine, jute, rubber, wool and eggs was also lower than in 1959-60. Comparing 1960-61 with the average for 1953-57, the most rapid gains in world production have been in coffee, soyabeans, cocoa, sugar, maize and rice. In Asia and the Far East, *per capita* food production in 1960-61 recovered to the pre-war level, for the first time during the last two decades. This is particularly significant. For the realisation of this object had earlier been considered to be a remote possibility in view of the rapid growth of population and the practice of relatively outmoded techniques of agricultural production in this region.

BANKING

(*Concluded from page* 685)

approximately $90 a week, this means that 11 weeks of his earnings in this 15-year period have gone to foreign aid, and continuing assistance at the present rate is costing him almost four days of earnings each year.

In addition to the $61,396 million in economic assistance, the United States has extended to partners in mutual security programmes an additional $29,130 million in military assistance, virtually all in the form of grants.

By far the greatest individual benefactors from U.S. aid programmes are France and the United Kingdom which received $9,431 million and $8,685 million, respectively, largely in the immediate post-war period, when the Marshall Plan was rebuilding war-torn Europe. Emphasis on economic aid has long since shifted to the developing countries of the Middle East, the Far East, Latin America and, more recently, the new countries of Africa.

The Communist complaint that U.S. assistance is largely of a military nature is hardly supported by the figures. For every dollar spent in military defence support, three were spent to develop the economic, agricultural and social potentials of the recipient nations. Of the countries in the Middle East, only Turkey has received military aid exceeding economic assistance and five countries in the Near East and South-east Asia area have received nothing but economic assistance. For the countries of that area, here are the 15-year totals of economic assistance by country:

Iran, $665.1 million; Iraq, $20.9 million; Israel, $792.3 million; Jordan, $281.6 million; Lebanon, $81.0 million; Saudi Arabia, $46.6 million; Turkey, $1,403.2 million; United Arab Republic, $438.8 million; Yemen, $18.0 million; Afghanistan, $180.0 million; Ceylon, $74.9 million; India, $3,071.9 million; Nepal, $43.5 million; Pakistan, $1,430.9 million.

An additional $25 million has gone to the Central Treaty Organisation (C.E.N.T.O.) to finance economic projects in that multi-national defence alliance which links Turkey, Iran and Pakistan.

DEMAND FOR FUNDS RISING

(From Our Own Correspondent)

BOMBAY, 4*th October*

Conditions in the short-term money market are dull and steady. Demand for funds is gradually rising, but, as banks have adequate funds, borrowers have no difficulty in obtaining their requirements. The inter-bank call money rate among both exchange and Indian banks has been steady at 4 per cent throughout the week. Term money rates, too, are unchanged as follows:

		Per cent
Notice money:		
3 days or more	... ...	3
Term deposits:		
(i) 3 to 30 days (inclusive)	... ...	3
(ii) 31 to 60 days	... ...	3½
(iii) 61 to 90 days	... ...	3½
(iv) 91 days and more but less than 12 months	... ...	3¾
(v) 12 months	... ...	4

The results of the 91 days' Treasury Bills of the Government of India sold through weekly tenders are colourless. The amount invited, offered and accepted was the same, namely, Rs. 2 crores. The average rate of accepted tender also remained unchanged at 2.5 per cent per annum. The 91 days' intermediate Treasury Bills sold from 27th September to 30th September amounted to Rs. 70 lakhs, as against Rs. 55 lakhs last week. Their sales are being continued from the 4th to the 7th inst., both days inclusive.

The statement of affairs of the Reserve Bank of India for the week ended 29th September 1961 shows, as compared with that for the previous week, a further decline of Rs. 11.46 crores in notes in circulation on top of a contraction of Rs. 20.77 crores in the preceding week. As the notes held in the Banking Department have risen by Rs. 12.81 crores, total notes issued have advanced by Rs. 1.35 crore. The foreign securities remain unchanged at Rs. 116.86 crores, but, as balances held abroad have shrunk by Rs. 5.55 crores, the total foreign assets are lower by that amount at Rs. 129.73 crores. On the liabilities side of the Banking Department, deposits of the Central Government have risen by Rs. 4.42 crores and those of other Governments by just Rs. 1.13 crore. Deposits of banks and others have, however, declined —the former by Rs. 5.83 crores and the latter by Rs. 25.97 crores. On the assets side, investments have fallen sharply by Rs. 29.37 crores. Other loans and advances, which include advances to scheduled banks against usance bills, have declined by Rs. 2.56 crores.

A contraction of Rs. 1.77 crore in demand deposits and an expansion of Rs. 5.51 crores in time deposits are disclosed by the statement of the scheduled banks for the week ended 22nd September 1961. The deposits of the State Bank of India rose by only Rs. 58 lakhs. Total borrowings from the Reserve Bank shrunk by Rs. 1.63 crore, but those against usance bills from that institution went up by Rs. 2.92 crores. Borrowings from the State Bank of demand nature fell by Rs. 1.85 crores, but those of time nature advanced by Rs. 1.09 crore. Investments of the scheduled banks, as a whole, expanded by Rs. 1.67 crore, while those of the State Bank alone fell by Rs. 93 lakhs. Advances and bills discounted (bank credit) contracted by Rs. 9.49 crores to Rs. 1,224.08 crores, as against an expansion of Rs. 2.16 crores in the previous week. More than half of this fall was on State Bank account, the advances of which dwindled by Rs. 5.16 crores.

The gilt-edged market, too, was extremely dull. Although the Conversion Loan gained 5 nP to Rs. 72.80, other Central loans were unchanged. In the States loans' section also, there was no activity. The prices of even the new 4½ per cent issues showed no change, the only exceptions were the issues of Maharashtra and Gujarat.

In the foreign exchange section, the rupee has advanced in relation to the U.S. dollar largely in sympathy with the pound sterling. Banks' selling and buying rates for ready T.T. on New York were Rs. 475.50 and Rs. 472.25 per 100 dollars, respectively, at the time of writing, as compared with Rs. 475.75 and Rs. 472.50 last week. In the New York foreign exchange market, the pound sterling has appreciated considerably *vis-a-vis* the U.S. dollar. This is mainly due to the inflow of short-term funds to London, as a sequel to the high interest rates prevailing in the U.K. The latest available rates are 281.510-281.560 cents per £ for spot and 278.860-278.910 cents per £ for three months' forward. Over the week, the pound sterling gained 0.17 cent in spot and 0.18 cent in three months' forward.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 2*nd October*

Quiet trend was witnessed in the foodgrains market during the week. Arrivals of grains were poor, while demand was slack, being met locally in rural areas from new maize. Fairly heavy rains were received, but rainfall had as yet been scattered and widespread rains were now needed for timely *rabi* sowings. Wheat here at Rs. 14.75 to Rs. 15 a maund for average quality and Rs. 15.50 to Rs. 16 a maund for better farm produce remained stagnant around previous week-end levels. Daily arrivals at an average of 75 maunds were small which were being lifted by consumers and local wheat stock was stationary around 25,000 maunds.

Rice drifted lower on good crop prospects and slack demand. Harvesting of new paddy had begun and new grain would reach the market shortly. Crop prospects this time were also bright, thanks to timely heavy rains. Week-end prices of rice here were: *mainpuri sela* Rs. 21; *gadda kutcha* Rs. 22; *ramdhwayan sela* Rs. 23; *raimunia sela* Rs. 24; *basmati sela* Rs. 27 to Rs. 30; superior Rs. 33 to Rs. 37 per maund.

Gram ruled quiet at Rs. 13.75 a maund for Punjab variety. Arrivals were still continuing from Punjab and local stock were heavy at 34,000 maunds. Barley drifted lower to Rs. 10.50 to Rs. 11 per maund and arrivals of about 1,000 maunds were reported during the week from Punjab. *Bejhar* was depressed at Rs. 10.75 to Rs. 11.50 a maund, as demand was slack having been switched on to new maize which was reaching here in heavy quantity from Rampur side. Week's arrivals aggregated about 2,500 maunds which were lifted by consumers and prices drifted lower at Rs. 11.50 per maund. *Juwar* and *guwar* also sought lower levels, as demand was poor and week-end prevailing prices were Rs. 11 and Rs. 14 per maund, respectively. Oats continued to be quoted at Rs. 12 per maund and *bajra* at Rs. 15 per maund.

Among pulses, peas ruled steady, thanks to good demand and better loading facilities, the week's offtake being 14 wagonloads mostly to Madras side and local stock declined to 58,500 maunds. *Arhar* also attracted some support from grinders for *dal* and week's offtake was six wagonloads to various destinations of South and local *arhar* stock was put at 43,000 maunds. *Moong* continued depressed on good crop reports, while *urd* improved fractionally during the week and week-end prices (in rupees per maund) were: peas *dara* 12.87; *khatti* 11.50; farm 12.25 to 13; peas *dal* 13; *arhar* 12 to 12.44; *arhar dal* 15.62; *urd* 19.50; *urd dal* 28.50; *moong* 16 to 18; *moong dal* 19 to 21; *massoor* 13 to 16; *massoor dal* 16; *moth* 16; *moth dal* 19.

BULLION SUBDUED

(From Our Own Correspondent)

BOMBAY, 4*th October*

The bullion market ruled easy in the first two sessions of the week and, after staging a recovery on Saturday, developed a sagging tendency again subsequently. The earlier easiness was due to absence of fresh buying support and reports suggesting increased arrivals. Consequently, both gold and silver suffered losses. On Saturday, the sentiment of the market improved following bullish advices from North Indian centres. There was also some replacement buying. The upward trend, however, proved short-lived, as, since yesterday, the market has been subdued in the absence of any encouraging news. The closing rates today were lower than those prevailing on Wednesday last week.

The daily average arrivals of both gold and silver were larger than in the previous week, being 8,250 tolas and 45 bars respectively, as against 3,500 tolas and 20 bars. The offtake was better, but the improvement was negligible in relation to the heavier arrivals. The daily average offtake was 3,500 tolas of gold (2,500 tolas last week) and 9 bars (5 bars). The floating stocks are reported to be around 30,000 tolas of gold and 800 bars of silver.

Adjustment rates fixed today were Rs. 124.50 per 10 grams of gold and Rs. 206 per kilogram of silver. The corresponding rates a week ago were Rs. 125.75 and Rs. 206.20, respectively.

The *Margashir* (December) settlement in gold began the week at Rs. 126.40, as against the previous close of Rs. 126.35, and moved up to touch Rs. 126.65 on Friday, 29th September. After declining to Rs. 125.25 yesterday, the settlement finished at Rs. 125.50 today. The net loss over the week was 85 nP.

Ready gold continued to be quoted at a discount under the forward, the actual discount increasing from 35 nP last week-end to 75 nP today, when the closing quotation stood at Rs. 124.75, as against Rs. 126. The highest and lowest levels touched were Rs. 125.85 (28th September) and Rs. 124.50 (yesterday).

In silver, the *Margashir* settlement was well supported earlier in the week, the quotation rising from Rs. 207.30 to Rs. 207.45. After easing to Rs. 206.40 on Friday, the settlement recovered to Rs. 207.25 before finishing at Rs. 207.

Ready silver was quoted well below the forward throughout the week, the discount today being Re. 1.10, same as last week; it was higher at Re. 1.20 on the opening day. The ready rate improved from Rs. 206.20 to Rs. 206.25, but drifted down to Rs. 205.30 on the following day. After recovering to Rs. 206.15 yesterday, it declined again to Rs. 205.90 today before finishing at Rs. 206.

The world price of gold in the London bullion market was unaltered at $35.18⅛, but the sterling price of gold eased from 250s. 2½d. to 250s. Ready and forward silver continued unchanged at 79½d. and 80⅛d., respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of prices during the week under review:

	4-10-1961 (closing)	High	Low	27-9-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.995 fine)	124.75	125.85	124.50	126.00
Forward: Margashir* ..	125.50	126.65	125.25	126.35
Sovereign	97.00	—	—	96.75
SILVER				
Ready (.996 fine)	206.00	206.25	205.30	206.20
Forward: Margashir†	207.00	207.45	206.40	207.30
London—				
Silver Ready	79½d.	—	—	79⅛d.
Silver Forward	80⅛d.	—	—	80½d.
Gold	250s.	250s.2½d.	250s.	250s. 2½d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 26th December settlement. † 26th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES RALLY

(From Our Own Correspondent)

BOMBAY, 4*th October*

Distinctly firm conditions prevailed in the cotton futures market during the week under review. The mild recession in values witnessed towards the close of last week proved to be a temporary phenomenon. The market resumed its upward trend on the very first day of the week under review. Large-scale speculative buying and short covering induced by reports of heavy damage to the crop in many areas and the consequent reductions in crop estimate led to a smart rally in futures. The sustained mill demand for all available lots of cotton in the spot market imparted further strength to futures. Under pressure of local and upcountry buying orders the Jarilla March contract spurted from Rs. 621 last week-end to Rs. 629 yesterday, the highest level of the week. The recommendation of the Cotton Advisory Board, at its meeting held at Bombay yesterday, that the Government should plan for importing 1.2 million bales of cotton during the current season failed to produce any adverse effect on futures prices today. This is because the Board's suggestion is a sequel to the sharp reduction in crop estimate to 4.8 million bales, as compared with 5.2 million bales early in the season and last season's crop of 5.4 million bales. In fact, the futures market maintained a steady undertone, with the Jarilla March contract quoting only fractionally below the highest level touched during the week. The sharp rise in prices has given rise to fears that, if the trend were to gather momentum, the Government would take measures to curb the rise. The reintroduction of compulsory survey, which was abolished with effect from current season, was also thought to be likely if the crop situation were to deteriorate further.

Summing up the weather and crop conditions a leading firm of cotton traders makes the following observation:

"The weather has not been favourable in several cotton growing areas. Excessive and continuous rains, especially in Madhya Pradesh and parts of Berar and Marathawada, have stunted plant growth, with the result, that development has been below normal. Absence of rains in parts of Mysore and Andhra States has been causing anxiety; standing Mungari plants are withering and sowings of Laxmi are held up; immediate soaking rains are a necessity in these areas. Punjab, Saurashtra, Gujarat and Rajasthan report favourable weather and crop accounts are satisfactory. In the South, sowings of Cambodia and MUI have started in the irrigated areas; in other parts, the fields are getting ready for commencement of sowing operations and rains are awaited."

In the spot section, ready lots of all varieties of old crop cotton was in good demand, following reports of damage to the crop and the sharp reduction in crop estimate. Such varieties as Kalyan, Khandesh and Berar were well favoured. New crop varieties like 197/3 and L. 147 too was in demand. The former, in particular, was much sought after by spinners, thanks to fears of serious damage to the crop. As offerings of this cotton was limited, spinners turned to Kalyan as a substitute. Ahmedabad and Bombay mills were particularly interested in this variety.

Export demand was subdued. Only stray inquries for Bengal *Deshi* was reported by shippers.

Among foreign growth, Pakistan cotton was in the limelight on the opening day of the week following the clarification that AC 134 was eligible for import. It was, however, officially notified on Thursday, the 28th September, that the ceiling fixed for import of Pakistan cottons was reached and that no further application would be entertained. Among other foreign varieties, apart from the usual interest in Sudan cottons, new crop East African cotton too attracted attention. At the auctions held at Kampala on the 3rd inst., 15,000 bales of cotton were sold at the reserve prices. About 100,000 bales of new crop East African cotton are reported to have been sold to-date. Importers welcomed the recommendation of the Cotton Advisory Board that 1.2 million bales of foreign cotton should be permitted to be imported during the current season.

The latest available spot quotation—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 645; Hubli Laxmi 950; Kalyan 980; L.147 1,030; CO2 1,030; Sudan XG3L 1,472; XG2L 1,500; East African BP.52 1,250; BP (U.N.U.G.) 1,300.

Firm conditions prevailed in the Karachi cottons futures market during the week under review. Good demand from overseas buyers and usual domestic mill buying resulted in a rally in futures. The N.T.R.G. January improved from Rs. 76.90 last week-end to Rs. 78.15. The March position put on 90 nP to Rs. 76.15. Spot prices too hardened.

Trading in Alexandria cotton futures continued to be suspended during the week under review also. As regards new crop developments, latest advices from Alexandria state that insect infestation and adverse weather have affected both the quality and quantity of the crop, especially the Menoufi cotton. No precise idea of the extent of the damage is, however, available. The official prices continue to remain unchanged. But shippers are quoting higher prices for high grade Menoufi and Karnak cotton.

Cotton futures in Liverpool ruled subdued during the week under review. Values drifted downwards on selling induced by lower New York advices and slackness of local spinner demand. Both the American and American type contracts met with selling and declined as a consequence. Sudan cotton contracts ruled quietly steady. The following are the latest available quotations in pence per lb., from Liverpool:

American cotton—Low mid. staple contract: October 34.10; December 34.50; March 34.90; May 35.30.

American cotton mixed growth contract: October 24.50; December 24.95; March 25.35; May 25.80.

Sudan: November, January, March 32.00.

Cotton futures in New York receded in quiet trading during the week. Selling induced by reports of favourable weather for harvesting was only partially absorbed in buying based on expectation of accelerated movement of new crop into the loan programme. The recommendation of the Cotton Council that acreage allotment for 1962-63 season should be enhanced so as to increase production to 15.5 million bales imparted weakness to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	3-10-61	26-9-61	19-9-61
New York Spot	35.50	35.45	35.40
October	34.31	34.41	34.56
December	34.90	35.01	35.10
March	35.68	35.75	35.80

J. P. BEMBERG YARN ADVANCES

(From Our Own Correspondent)

BOMBAY, *4th October*

There was a sharp rise in the prices of J.P. Bemberg yarn (40 x 1) during the week under review. The rise followed excellent buying support induced by the absence of an upward revision in the import quota under the import policy for the current half-year (October 1961-March 1962). For the same reason, indigenous art silk yarn scored handsome gains. Cupressa Bemberg yarn (60 x 1) and some other foreign yarns, however, encountered selling due to rumours of a cut in incentives under the art silk fabrics export policy. Staple fibre yarns drifted downward, thanks to poor offtake by consuming centres. Cotton yarns continued to rule dull, as fresh buying inquiries from weavers and shippers were lacking.

J.P. Bemberg yarn (40 x 1) October delivery jumped up from Rs. 3,350 to Rs. 3,453. December contract forged ahead from Rs. 3,314 to Rs. 3,452. Spot National Rayons 120 Bt. cones 1st grade spurted by Re. 1.10 to Rs. 18.70. 150 Bt. cones hardened by 14 nP to Rs. 13.82. Cupressa Bemberg yarn (60 x 1) October settlement, however, fell by Rs. 50 to Rs. 2,850. December position dropped Rs. 30 to Rs. 2,850. Spot Cupressa declined by Rs. 21 to Rs. 2,900. 150 Japan receded from Rs. 2,150 to Rs. 2,095. 120 Japan and 120 Italy were both neglected at Rs. 1,875.

Staple fibre yarn (40 x 1) October settlement suffered a loss of Rs. 15, today's closing rate being Rs. 824. December contract eased by Rs. 18 to Rs. 831. Spot Hinds shed 6 nP to Rs. 9.77. Centurys were dull at Rs. 10.10.

In the cotton yarn section, ten counts Podars were unaltered at Rs. 17.37, as also Moderns at Rs. 19.75. Twenty counts Gokaks and thirty counts New Greats were done at Rs. 23 and Rs. 26.75, respectively, same as last week. Forty counts Maduras softened by 37 nP to Rs. 32.25. Minaxis were unchanged at Rs. 34. Sixty counts Finlays were dull at Rs. 81.62. Eighty counts Finlays were neglected at Rs. 81.62 and Mahendras at Rs. 69.37. But Moderns evoked special support and gathered 25 nP to Rs. 67.75.

The following table gives the prices of rayon staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	4-10-1961	27-9-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
October	2,850.00	2,900.00
December	2,850.00	2,880.00
Spot	2,900.00	2,921.00
60 x 1 2P		
October	3,453.00	3,350.00
December	3,452.00	3,314.00
120 Japan (per 100 kg.)	1,875.00	1,875.00
150 Japan (per 100 kg.)	2,095.00	2,150.00
120 Italy (per 100 kg.)	1,875.00	1,875.00
Nat. Ray. 150 Bt. I	13.82	13.68
Staple fibre yarn (40 x 2)—		
October (per 90.72 kg.)	824.00	830.00
December	831.00	849.00
Hind (per kg.)	9.77	9.83
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.37	17.37
20s Gokak	23.00	23.10
20s New Greats	26.75	26.75
40s Madura	32.25	32.62
60s Finlay	62.87	62.87
80s Modern	67.75	67.50

GROUNDNUTS AT NEW LOW

(From Our Own Correspondent)

BOMBAY, *4th October*

Oilseeds and oils continued to march downward during the week under review. In particular, groundnuts were subjected to heavy bull liquidation which followed expectations of a bumper crop this year. Government's reluctance to grant export quota for groundnut oil, large arrivals of new crop and growing intervention of the State Trading Corporation in the field of groundnut oil exports. In these conditions, the official announcement that exports of deoiled groundnut meal (solvent extraction variety having less than 1.5 per cent oil content) would continue to be licensed freely on shipping bill for another year failed to have any perceptible effect.

The steadily declining prices of groundnut oil and other edible oils in world markets, too, adversely affected the sentiment of operators. British West African groundnut oil has moved down from £137 per ton early this year to £101 (which compares with £106 a year ago). The fall must be attributed to the improvement in the world supply position of edible oilseeds and oils. The re-entry of Argentine in world groundnut oil market, following lower domestic consumption, has precipitated the present setback. Besides, as in India, the 1961-62 groundnut crop in West Africa is expected to be substantially higher than that in the previous season. South Africa, too, expects to have a larger exportable surplus this season. What is more, is respect of the main substitutes for groundnut oil, namely, soyabean and coconut oils, there is a sizable world surplus now. The U.S. soyabean crop in the current season is expected to touch a record of 700 million bushels, that is, one million bushels more than last year. A considerable part of this output will be released for export. In addition, the output of the other two important edible nuts, namely, almond and hazel, is expected to be higher. The almond crop in 1961 is expected to be double that of last year, the estimate being 151,000 tons. The production of hazelnuts is expected to go up by 13,500 tons to 136,500 tons.

The pronounced weakness of groundnuts touched off a steady decline in the values of other seeds. Castorseeds ruled distinctly easy. The export front in oil was dull owing to the persistent wide disparity between Indian and world prices. Linseed, too, suffered a marked setback. Cottonseeds, which picked up strength in the middle of the week, following lower cotton crop estimates, tended to look down towards the close. It may be noted here that the September contracts in castorseeds, linseed and cottonseeds went off the board at the close of last month.

Groundnut January 1962 contract fell by Rs. 7.88 to touch the new low of the season to Rs. 198.37. Nizam bold lost Rs. 2.50 to Rs. 42. Oil January 1962 contract eased by 80 nP to Rs. 16. Oil railway receipt declined by 65 nP to Rs. 18.25 and oil ex-mill by 50 nP to Rs. 18.50.

In the castorseed section, March 1962 contract receded from Rs. 157.75 to Rs. 156.62, though it improved slightly to Rs. 157.25 towards the close. Ready Madras dropped 25 nP to Rs. 32.25. Oil B.S.S. shed 40 nP to Rs. 14.10. Oil commercial declined from Rs. 13.20 to Rs. 13.10 before finishing at Rs. 13.30.

Linseed March 1962 contract gave way from Rs. 157.75 to Rs. 157.25. Bold ready fell by a rupee to Rs. 32.25. Linseed oil, however, evoked some demand from crushers and put on 10 nP to Rs. 16.30.

Cottonseed January 1962 contract was dull at Rs. 93.50. Whites were quiet at Rs. 19. But Berars and non-whites improved by 10 nP each to Rs. 19.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	4-10-1961	27-9-1961	20-9-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	198.37	206.25	205.00
Nizam bold	42.00	44.50	45.00
Coromandel ready	42.50	44.50	45.00
Khandesh quality	42.50	44.50	45.00
Oil ex-mill ready*	18.50	19.00	20.45
Railway receipts*	18.25	18.90	20.25
Oil January 1962	16.00	16.80	17.00
Castorseed			
March 1962	157.25	157.75	161.37
Ready Madras	32.25	32.50	33.25
Ready Kanpur	31.00	31.25	31.75
Oil B.S.S.†	14.10	14.50	14.80
Oil commercial†	13.30	13.20	13.35
Linseed			
March 1962	35.53	36.34	36.59
Bold ready	32.25	33.25	33.00
Oil ready†	16.30	16.20	16.90
Cottonseed			
January 1962	93.50	93.50	90.50
Niger seed	39.00	38.50	39.50
Kardi seed	22.00	22.00	23.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER IMPROVES

(Messrs. Parekh and Co.)

BOMBAY, *4th October*

After moving within a narrow range, Malabar black pepper showed improving tendency, though at slow pace, in view of the expected good inland demand from the Punjab following improved political situation. The end of panicky bull liquidation also proved to be a supporting factor. Ungarbled was quoted at Rs. 383 and garbled was in demand at about Rs. 394. October delivery, after declining to Rs. 392, climbed up to Rs. 404 with sellers reserved. December was quoted at Rs. 390. Calicut also improved from Rs. 382 to Rs. 385.

No worthwhile news is reported from Singapore where the market is said to be in the doldrums for want of export inquiries.

Spot in New York remained fairly steady at $0.44½. Grinders are reported to be anxious buyers at $0.44 ex-dock, but sellers are reserved, as the replacing parity is higher.

For want of new incentives, world pepper is void of any pep, as grinders and millers are buying hand to mouth. As there is no premium for spot over forward or for forward over spot, most of the dealers in New York are side-lining, showing sporadic interest and covering their sales only after testing all the markets at the origins. They seem to be waiting for a development in the tired long feelings in the main stockists of Lampong pepper. Their selling attitude will be an arbiter for the pepper market.

Bulls in India are also disheartened, as they failed in their endeavour to push up the market for want of a follow through. Bears, however, are cautious at the present limit and are awaiting new development when the Malabar crop begins to move.

Ready pepper in Bombay is nominally quoted at Rs. 209 per 50 kilos.

FAIR SUPPORT FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *26th September*

In sale No. 39 held today a total of 756,000 kilograms was on offer. Quality of the highgrowns on offer was irregular with one of two invoices maintaining the previous levels but others showing a slight deterioration. Quality from other districts was maintained and in some cases showed a slight improvement. There was useful general demand at the lower levels. Plain and low mediums sorts, although in good demand, were irregularly about 10 nP easier and sometimes more for similar B.O.P.F. Mediums and good mediums met with fair demand but showed a decline of up to 10 nP per kilo with B.O.P.F. sometimes more. Highgrowns met fair support and, although a few were slightly dearer, generally prices were easier especially for the B.O.P.F. Good clean black leaf types were in good demand at around last rates but poorer black leaf descriptions were up to 20 nP to 30 nP easier. Whole leaf grades met more demand at slightly easier rates. C.T.Cs were a weak feature and very much lower. C.T.C. types were a good deal lower although the few legg-cuts on offer were about steady.

The quotations (per kg.) were:

	1961 Rs.	1960 Rs.
Low mediums	3.95/4.10	4.35/4.60
Mediums	4.10/4.20	4.60/4.95
Good mediums	4.20/4.90	4.95/5.75
Nilgiri B.O.P.	5.00	7.40

The average price realised in sale No. 39 was Rs. 4.44 per kilo, as against Rs. 4.63 in the previous week and Rs. 5.35 in the corresponding sale last year.

Dust Sale No. 39: At dust sale No. 39 held on Thursday, the 28th inst., a total of 200,000 kilograms was offered. There was good general demand. Plain and low mediums met fair demand and commenced selling at rates above last week's close. Mediums met good support and were fully firm. C.T.Cs and C.T.C. types were a little easier.

The average price realised in dust sale No. 39 was Rs. 4.50 per kilo as compared with Rs. 4.46 a week ago and Rs. 4.57 in the corresponding sale last year.

Export Quota: Small business is being transacted at 1½ nP per kilo.

Colombo: The market opened to strong demand although Uvas were irregular and sometimes lower, whilst Dimbulas declined by 5/10 cents. Mediums and lowgrowns were firm and there was more demand for fannings at dearer rates.

London: North Indian and other growths: In Monday's sale there was good but rather irregular demand. Prices, however, were generally slightly dearer. In Wednesday's sale there was again good general demand with a dearer tendency for most teas. This was particularly evident in the case of Africans.

Ceylon and South Indians: In Tuesday's sale 24,718 packages were on offer of which 5,676 originated from South India. The market met with good demand at generally fully firm rates. Poorer sorts, however, were slightly easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No.* 40: 525,000 kilograms. Useful demand for liquoring and clear mediums and improved quality highgrowns. Others less demand, particularly plain and stalky descriptions which have declined 10 to 20 nP."

TEA EASY

(From Our Own Correspondent)

CALCUTTA, *3rd October*

Easier conditions were in evidence in the internal sale held here on Wednesday last. Such a trend was attributed to the impact of continued reports of increased crop of teas fit for domestic consumption. In the meanwhile, export bookings of tea continued to rise, and the feature during the week was that liners loading for the United Kingdom were declared full up to 15th October. Reflecting increased offtake, U.K. tea stocks jumped by 5 million lbs. to 127.5 million lbs. in the weekended 22nd September. Irregular conditions in last week's Mincing Lane sale of North India tea should be attributed to increased offerings, and following lesser competition best quality teas met with a loss of up to 6d. per lb. However, good plain and orthodox Dooars teas recorded small advance in prices.

At last week's internal sale, dusts on offer totalled 25,532 packages. Conditions were easy. Plain orthodox teas eased by 5 nP to 10 nP, and Assams of this category met with with good support at lower rates. Legg-cut teas were about firm, while the fibrous teas eased. C.T.Cs were irregular. The good C.T.Cs eased, but the small powdery teas met with good demand. The clean bright teas were occasionally dearer. The quotations per 1 kg. inclusive of excise duty were: medium Assam C.T.C. dust Rs. 5.65 to Rs. 5.90, legg-cut dust Rs. 4.40 to Rs. 4.90, medium Assam dust Rs. 4.10 to Rs. 4.50, and plain orthodox dust Rs. 3.90 to Rs. 4.20.

Green teas among total leaf offerings of 325 packages were fully firm.

The substantial gains in prices at the internal tea auctions held in Chittagong (Pakistan) in the last week should be taken as resulting from recent official measures to encourage greater exports and increased internal buying. The export quota was recently doubled to 10 million lbs. and the export duty reduced. The buyers' quota for bidding at auctions was abolished. In other words, bidders are now at liberty to take as much tea as they desire. The Tea Board has also invited new bidders to join the auctions.

Bidding was strong at the auctions, and offerings totalled 15,317 chests of leaf and 4,304 chests of dust, in addition to 155 chests subsequently made available. Although gains were reduced towards the close of the sale, earlier gains of 10 nP to 15 nP were reported. The quotations per lb. were: O.F. Rs. 2.30 to Rs. 2.40, B.O.P. Rs. 2.25. P.F. Rs. 2.10 to Rs. 2.15, and B.P. Re. 1.20. Quotations for polished grades were: hyson Rs. 3.65 to Rs. 3.75, young hyson Rs. 3.60 to Rs. 3.65, and fine young hyson Rs. 3.40 to Rs. 3.55.

Tippy teas met with keen competition. Best liquoring orange fannings gained up to 25 nP. Green teas on offer amounted to 540 chests, which met with strong demand.

Pakistan has addressed itself earnestly to increasing the acreage under tea. Healthy incentives have been offered to investors to bring new land under tea. Accordingly, new gardens will be free from taxation for a period of eight years, after which they will be at liberty to claim substantial depreciation before taxation. There is now a proposal under the consideration of Government to distribute fertilisers to cultivators at subsidised rates. The Provincial Agricultural income-tax is likely to be suspended for a period of eight years in respect of new gardens. In Sylhet, which is a substantial contributor to Pakistan's tea crop, it is proposed to bring as much as 8,500 acres under tea.

JUTES WELL MAINTAINED

(From Our Own Correspondent)

CALCUTTA, *3rd October*

The volume of business that was done in goods during the week under review was good and prices of both hessian and sacking constructions were well maintained. Buyers were interested in ready delivery goods and in hessian 10 oz., there was a squeeze on more than one occasion. On the other hand, fibre registered an insignificant decline. Mills were interested to cover for immediate requirements only. However, there were reports of increased arrivals from most agencies, and cultivators in need of cash for the forthcoming *Pooja* festivals offered increasing quantities. This is a usual feature for this time of the year, and it should be emphasised that there is no need for officials to read too much into this week's decline, which, as already stated, was very insignificant. The bufferstock authority has not yet been constituted, but it should be presumed that nothing tangible would take shape until after the imminent holidays.

Meanwhile, heavy rains were reported from several jute districts during the week, and there is now sufficient water for retting. At the same time, complaints of moisture in fibre have increased, and it was apprehended that water was intentionally being added at all stages before the fibre reached the balers. There had been evidence to show that the recent scarcity provided the cultivators to pay inadequate attention for drying after retting. The baler was, of course, at liberty to reject such fibre; however, being unable to get anything better and at the same time being anxious to keep his presses working, he had to accept the wet fibre. There had also been instances in recent weeks where mills, in desperate need of fibre, preferred to buy the wet fibre offered. Mills were, of course, free to utilise the arbitration clause, but, since their need was so great, there had been instances when in the shortage caused mills preferred to accept the moist fibre in the interest of keeping machines working. Jute circles emphasised that, in view of the need to increase exports, Indian jute goods would be able to face stiff competition in world markets if quality could be improved. And this could be done if only the quality of fibre was raised, and wanton attempts to add water to fibre were detected and punished.

The new Directors of the East India Jute and Hessian Exchange are to be admired for the seriousness with which they have addressed themselves to curb kerb dealings. It would be remembered that the Exchange recently reduced official trading hours. This led to greater activities outside the official trading hours, and the Exchange has now issued a severe warning against all sorts of kerb speculation. It is expected that, if an improvement does not follow, the Directors would run down heavily with suitable action on offenders. During the week, market conditions in Pakistan, although steady, revealed a quiet trend. This was due to increased arrivals in the Narayanganj market. Support from overseas buyers recorded a fall during the week, since after their recent heavy purchases they preferred to watch the price trend before entering into fresh commitments. Pakistan mills continued to prefer to purchase smaller quantities for meeting immediate requirements only. There were reports of heavy rains. Arrivals in Narayanganj were estimated at 50,000 maunds a day.

There were rumours of Government orders for sacking on Tuesday last, when prices of heavy goods tended to harden. However, since these were lacking in confirmation, ready B. twills eased from Rs. 132.60 to Rs. 132.50. However, ready hessian 40" 10 oz. hardened to Rs. 53.00. Demand soon followed in hessian and, on Wednesday, the feature was a squeeze in the 10 oz. hessian, as a result of which the price hardened to Rs. 54.00. B. twills were also better at Rs. 133.00. On Thursday, hessian 40" 10 oz. jumped to Rs. 55 and B. twills to Rs. 134. Ready supplies being tight, the 10 oz. hessian continued to rise and on Friday touched Rs. 55 50. B. twills were firm at Rs. 133.50. Over the week-end, there was good covering demand for ready goods, as a result of which hessian 10 oz. gained further to Rs. 57.00 and B. twills to Rs. 134 50. The market was closed yesterday.

Fibre arrivals registered an increase, and prices recorded a small fall. Mills showed interest to cover against day-to-day requirements only. But, with the programme of increasing production, they were expected to accord greater support. Daissee bottoms ready delivery eased from Rs. 38.50 to Rs. 37.50, Assam bottoms from Rs. 34.50 to Rs. 34.00 and northern bottoms from Rs. 34.50 to Rs. 34.00.

IMPORT POLICY FOR METALS

(From Our Own Correspondent)

CALCUTTA, *3rd October*

To trade and industry circles which, despite the Commerce Minister's assurance at the recent meeting of the Import Advisory Council that there would be no liberalisation, had looked forward for increased imports of non-ferrous metals and semis, the October-March import policy just announced, more or less a continuation of the old one, has come as a cold surprise. Shortages of non-ferrous metals had in the past been complained by entrepreneurs as the cause responsible for the under-utilisation of capacity. The trade questions the wisdom of further industrialisation without allowing established industries to raise production up to capacity. A balance between maintenance and development imports has become a favourite and oft-repeated phrase among Government spokesmen, but the foolish expediency of allowing machinery, installed and imported against foreign exchange, to remain idle or partly idle for want of raw material remains to be explained.

The Government of India has often appealed to established industries to set apart at least a portion of their production for export. Government spokesmen have, in fact, now threatened statutory provision in this regard. However, the fact is that the cost of production is so high in India that Indian products, just as sugar, have to be sold in foreign markets at below cost of production. The industry's protest at the imposition in February last of excise duties on non-ferrous pipes and tubes, brass and copper sheets, circles, flats, square rods and strips have so far fallen on deaf ears. The arbitrary interpretation of the Calcutta Excise authorities that copper and brass square rods and straight-length flats come within the scope of the definition of strips and thereby attract excise duty has amused industry, and representations in this regard to the Central Board of Revenue have not yet met with success. Meanwhile, the industry continues to pay duty on these items under protest, thereby blocking funds which can better be utilised on further development of the industry. Duty on pipes and tubes is levied on an *ad valorem* basis and, in an attempt to reduce avoidable labour, industry had represented to the authorities to transform this, if at all the duty should be continued to be levied, to one based on weight, just as the levy on brass strip which is Rs. 300 per long tonne. Unless cost of production is reduced, and Government considers the representation of industries in this regard and cries a halt to the expanding excise levies, all talk of export drive would be meaningless. Increasing quality, decreasing cost of production and intensified publicity in foreign markets have been rightly suggested by the trade here as some of the measures which India should adopt to meet the changed situation that would be caused in India's foreign trade if and when the United Kingdom joined the E.C.M.

Quiet conditions prevailed in the metal market in Calcutta and prices were maintained at previous rates. On the London Metal Exchange, electrolytic copper continued to fall, and closed £2¼ lower at £222½ a ton. Hedge selling was one of the factors for the decline. Tin opened at £961 a ton and eased to close at £952. At 73¼ a ton, electrolytic zinc eased by £2¼ a ton. Lead eased from £63¼ to £62½.

LINSEED EASIER

(Messrs. A. Bradley and Co.)

CALCUTTA, *2nd October*

The linseed market was rather lifeless during the week under review, owing to poor demand for seeds and oil. An easier tone prevailed, availability was still scarce and, with only limited enquiries from local crushers, business was negligible.

With no appreciable stocks held by millers, linseed oil was somewhat easier in sympathy with other oil markets. Sellers, however, were not interested to do business for forward deliveries at these rates.

The oilcake market remained steady, owing to small stocks and good local demand.

October delivery was quoted at Rs. 29.50 per maund.

SUGAR RECEDES

(From Our Own Correspondent)

HAPUR, *2nd October*

Sugar drifted lower by about Re. 1.25 to Rs. 105.25 per bag in wholesale and in retail, it was quoted at 94 nP to 97 nP per *seer*. The fall in prices was due to the removal of all controls on movement, distribution and prices of sugar announced by the Union Government. Trading was fairly brisk and this would ensure increase in internal consumption and thereby reduce the burden of stocks with factories. The system of controlled releases, however, will continue. As regards sugar production, the target this year will be 10 per cent less than last year's actual output and the tax concession given to the industry for increased production at the time of sugar shortage has been withdrawn. This change in sugar policy follows a record production last season and heavy stocks lying with factories. The new season sugar production would begin a little later, as factories have no incentive left to begin crushing operations earlier.

Selling pressure following removal of controls and release of monthly quota accounted for the easy trend of sugar at Muzaffarnagar. Huge business was done to various destinations of Gujarat, Saurashtra and Punjab. The week-end prices were:—Deoband C-29 Rs. 38.22; Khatauli B-29 Rs. 38.97; Iqbalpur A-29 Rs. 39.60; Rampur A-29 Rs. 39.60 a maund. Damaged sugar was quoted at Rs. 99 to Rs. 101 per bag.

Following decontrol sugar, *khandsari* ruled weak. Stocks were declining and at Muzaffarnagar were about 10,000 maunds, as against the corresponding figure of 35,000 maunds last year. The week-end prices were:—*khandsari* non-crystal Rs. 31 to Rs. 34.50; crystal Rs. 33 to Rs. 35 per maund.

Gur ruled easy, as demand was slack following decontrol of sugar towards the week-end and the Government's decision that the sugar production target would be reduced by 10 per cent over last year and this would increase *khandsari* and *gur* production. New crushing season would start soon and some new *gur* arrivals were reported during the week to be lifted by consumers at Rs. 18 per maund. Local *gur* stock was put at 10,000 maunds which would soon be lifted and week-end prices were: dry selected Rs. 16.50; wet *kotha* Rs. 14 to Rs. 15.50; wet Rs. 11.75; *shakker* Rs. 17.50 per maund.

Gur also sought lower levels in week-end in the Muzaffarnagar market, as traders feared that *khandsari* and *gur* production would certainly mount, as cane supplies to factories would be reduced. New crushing season is due to begin in mid-October.

Gur future ran down sharply during the week on continued bear pressure. *Fagun* opened at Rs. 12.83 and, after touching the highest of the week the same day at Rs. 12.95, declined in successive sessions and was quoted today at the worst level of the session, at Rs. 12.24.

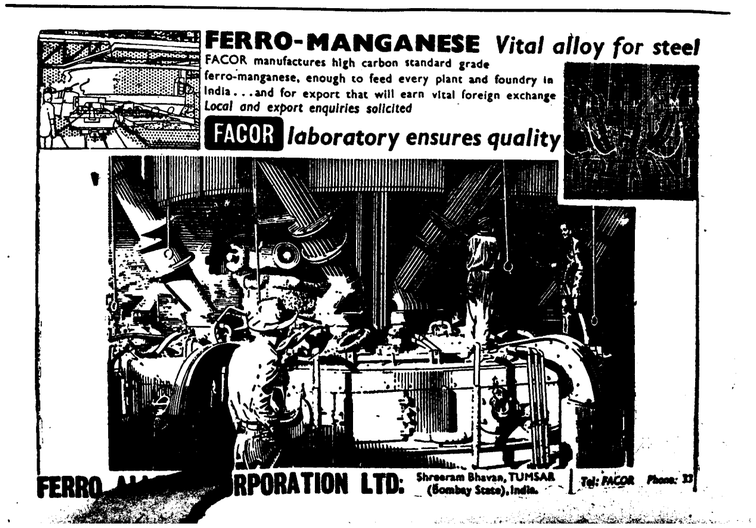
SLOW CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, *2nd October*

Arrivals of cowhides were moderate volume and clearance from the market was slow, because inquiries from U.K. were selective. There was more demand for lower grades cow hides for shipments and some call for 21½ lbs. buff calf. Buffalo hides and cowcalf were easy.

Export trading in tanned goat skins was small, on account of the high prices noted by E.I. tanners. Importers kept out of the market for prices to settle down. Tanned sheep market was unchanged.



MISCELLANEOUS STATISTICAL INFORMATION

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings at the end of May 1961, amount to 16.03 crores of rupees.

CODE OF EFFICIENCY AND WELFARE

IF, in a democratic society, strikes by labour and lock-outs by employers are to operate only as a weapon of last resort, and that too, very sparingly, the understanding between management and workers must be deep and abiding. In order to reach this ideal state of affairs, mutual trust and respect for each other are prerequisites. Viewed from this angle, the draft code of efficiency and welfare, which was discussed at the two-day session of the Indian Labour Conference held at Bangalore this week, is a step in the right direction and those who welcomed it—they included the representatives of employers and the leaders

of living of workers through improvement, *inter alia*, in the working conditions, environment and welfare measures, including housing, and thus bring about conditions which will enable the workers to give of their best;

(ii) They shall make positive efforts to generate an atmosphere of mutual trust and co-operation and take the initiative to dispel misapprehensions among workers in regard to productivity techniques and measures;

(iii) They shall ensure that workers receive their due share of the gains resulting from increased productivity.

Although these conditions sound simple and general, they will prove onerous in actual practice, for many of the efforts of managements in this direction may be a case of unrequited love. With inter-union rivalry and with trade unions dominated by selfish or power-hungry leaders, quite a number of whom owe their loyalty to foreign powers, it will be a tough job for managements to implement the aforesaid part of the code. And yet they have to accept the challenge and try to win the confidence and trust of their workers. In this egalitarian era, the 'haves' have to woo the 'have-nots.' An employer who is not enlightened and tactful enough to carry the workers with him has little future. This does not mean that he should follow a policy of appeasement and compromise with inefficiency and indiscipline, or try to win peace by buying up the trade union leaders. These tactics, if adopted, would soon put him out of business. What is meant here is that he should master the art of establishing perfect human relations. He must take his workers into confidence by giving them full information about the working of their companies, the problems confronting them and the prospects, as well as by attending to their comforts to the extent economically feasible. It is interesting to learn from Mr. Nanda's speech at Bangalore that, out of 18 units which have been trying out the scheme of workers' participation in management, all but one have had no work stoppage, and their earnings have appreciably increased, with workers getting more as a result of incentive schemes. Here is something for employers to ponder.

Fortunately for managements, the powers-that-be are tending to be a little more realistic than they used to be till recently. The imperative need for expanding exports and the short-lived strike by Government employees last year seem to have compelled them not to countenance extravagant demands by workers. There are many passages in Mr. Nanda's speech which reflect the Government's anxiety to avoid not only industrial strife but also wage inflation. His observations on sharing the gains arising from increase in productivity constitute a typical example of this new approach. Declaring that, out of the gains of productivity, other claims had also to be met, besides an improvement in the standard of living of the worker, he defined the "other claims" thus:

"(1) Formation of additional capital for enlarging productive activity and consequent volume of employment; (2) reduction in the price of the products, so that the community in general is able to share in the benefits of industrial progress; and (3) improvement in the competing capacity of products in the export market to maintain increased production as well as employment inside the country and to keep up a sound balance of payments position."

This is undoubtedly a fair and equitable principle for distributing the gains arising from productivity, though its translation into actual practice will require a lot of wisdom, patience and courage of conviction. It is obvious that this principle will be useless, if, in determining the exact share of each of the claimants, workers are allowed to walk away with the bulk of the cream. If, therefore, this new code is to succeed, it will be necessary to work out the implications of some of the nice-sounding principles in detail and evolve them into formulas in advance, carrying the consent and support of the parties concerned.

ROAD TRANSPORT IN E.C.A.F.E. REGION

THE United Nations Economic Commission for Asia and the Far East, which has been actively guiding the development of an Asian highway network, is increasingly concerning itself with road transport problems in the countries of the region. This concern is right now reflected in a seminar that has been organised under its auspices at Madras. Inaugurated by Prime Minister Nehru early this week, the E.C.A.F.E. Seminar has confined its discussions to road passenger transport. According to a study report, on which the discussions have been based, road passenger transport has a large share in the total passenger traffic in the E.C.A.F.E. region, in spite of the inadequacy of roads, high cost of operation, inadequate and expensive repair facilities and the lack of proper organisation. Despite these handicaps, it is stated to be still the cheapest form of transport available in the region. But its development seems to be highly uneven among the various countries, as will be seen from the table in this article. The two sets of figures worked out by us from the basic statistics contained in the E.C.A.F.E.'s Economic Survey (1960)—one presenting the number of passenger cars per million people and the other pertaining to the number of commercial vehicles per million persons—bring out the wide disparities in automobile transport development among the countries of the region.

The Federation of Malaya and India, for instance, are poles apart in the field of automobile transport. The former country has an area which is just one-twenty-fifth of the area of the latter; in respect of railway mileage both countries are comparable, for India has 51,340 kilometres of railways for its larger area and Malaya 2,090 kilometres for its smaller area. But this comparable proportion is not to be found in automobile transport, for India has only 641 passenger cars (including taxis and station wagons) and 545 commercial vehicles (buses and lorries) per million people and Malaya has as many as 12,642 passenger cars and 4,299 commercial vehicles per million persons. Ceylon, supposed to be an underdeveloped country like India, provides another telling contrast. That country has an area which is one-fiftieth of the area of the latter; its total length of railways is one-thirty-fifth of that of India's. But it is far ahead of this country in the matter of automobile transport, for it has 7,781 passenger cars and 3,146 commercial vehicles per million persons. A comparison with a fully developed country like Japan is found to be even more unfavourable to India, particularly in respect of commercial vehicles. Japan has an area which is one-ninth of India's, but its railway mileage is two-fifths of that of the latter. And its automobile transport has developed to such an extent that it has 12,818 commercial vehicles and 3,433 passenger cars per million people. It is noteworthy that, in all the E.C.A.F.E. countries other than Burma, Taiwan, India, Indonesia, Republic of Korea and Pakistan, automobile transport has developed to a level at which there are more than 2,000 passenger cars and commercial vehicles per million population.

There is, however, a relative shortage of passenger vehicles in most parts of the region. This is indicated by the fact that there is only one bus seat for every 160 of the population, whereas in the Western countries it is roughly one seat for every 50 persons. Moreover, vehicle utilisation in the E.C.A.F.E. region, measured in terms of daily miles ran by each bus, is rather low, whereas the number of passengers per bus is high; this means a lot of overcrowding in the buses. Apart from the insufficiency of vehicles, there is the lack of trained personnel for their operation and maintenance; this lack is due to the fact that operational organisation in most cases is small, for most operators are small operators, each owning a few vehicles. Poor road conditions aggravate the difficulties of the transport industry; according to the E.C.A.F.E. study report, almost all countries of the region are faced with the need for rapid expansion and improvement of their highway networks. The situation could be remedied only by a more vigorous transport policy. The main elements of such a policy have been suggested in the E.C.A.F.E.'s study report. Although these are confined to road passenger transport, they are equally applicable, *mutatis mutandis*, to lorry transport and, as such, relevant to conditions in India. The main elements are:

Road Transport: Motor Vehicles* in use in E.C.A.F.E. Countries

(For the year 1959, unless otherwise stated)

* Two or three-wheeled cycles and motor cycles, trams, trolley buses, ambulances, hearses, military vehicles, vehicles operated by police and special purpose vehicles excluded.

† 'Passenger cars' are motor cars seating less than eight persons, including taxis, jeeps and station wagons.

‡ 'Commercial vehicles' include lorries (trucks), buses, tractor and semi-trailer combinations but exclude trailers and farm tractors.

(1) Road passenger transport has certain inherent advantages like flexibility, cheapness and small capital requirement; it has its direct and indirect employment potentialities. The ratio of employment between railways and road transport is calculated to be 1:7. Since the industry, with such characteristics, meets the economic and social conditions and requirements of the region, the Governments should take necessary measures to promote and encourage its development.

(2) A transport policy, in general, and a road passenger transport policy, in particular, should be framed as a prerequisite to the balanced development of the industry, so as to remove any feeling of uncertainty or insecurity in the minds of operators.

(3) The policy should create conditions which will ensure the provision of adequate services at a reasonable price to the public, and give the operator a measure of protection from uneconomic competition and an assurance of a fair return for his services. This would bring about financial stability and, at the same time, encourage the expansion of the industry.

(4) Although the most suitable size of a passenger transport undertaking may be a mater of judgment, depending on many local considerations, for almost all countries of the region large undertakings, particularly in the field of short-distance stage carriage services, would be more suitable.

(5) Where it is not possible to integrate small undertakings, they should be encouraged and assisted to organise themselves into associations or co-operatives, so as to ensure a better utilisation of available facilities. This would guarantee an efficient and regular service and financial stability to the industry.

(6) Since so much of road passenger operation in the region is by individual operators, difficulty is experienced in obtaining finance for expansion and betterment. The Governments should, therefore, consider measures to ensure credit facilities at reasonable rates of interest through financial institutions.

(7) To facilitate the integration of owner-operated bus undertakings into efficient working units, with a certain degree of financial stability, the Governments might consider framing statutory regulations regarding the minimum number of buses. These regulations should be observed in the operation of road passenger services, in return for financial facilities and assistance granted to bus operators.

(8) In big cities, where traffic congestion is acute and technical conditions are suitable, double-deck buses might be preferable to large-size single-deck buses.

(9) As many of the vehicles in the region are old and in a bad state of repair, the immediate need is for an increased flow of new vehicles into the industry. Operators must, therefore, be encouraged to plan replacement schemes and be allowed to earmark a certain portion of their revenues as replacement funds, for which tax exemption should be given.

(10) The generally poor condition of vehicles, which is responsible for high operating costs and low vehicle utilisation in the region, can also be greatly improved by the relaxation of import restrictions and by a more generous allocation of foreign exchange for vehicles and spare parts.

The foregoing suggestions, contained in the E.C.A.F.E.'s study report, are relevant to conditions in India too, in spite of the circumstance that nationalised road transport undertakings, operating largely passenger services, constitute a substantial segment of its road transport industry. Although about 7,500 vehicles will be added to the fleets of these State undertakings during the third Plan period, as compared with 5,000 vehicles added during the second Plan period, the share of such nationalised undertakings in the total passenger services by road is expected to remain unchanged at the existing level of about 30 per cent. The suggestions could, therefore, be very well applied to the private sector which accounts for 70 per cent of road passenger transport. If, at the same time, a policy declaration is made to the effect that there will be no further nationalisation of road passenger services, it will go a long way in promoting stability and progress in the industry. The Planning Commission's advice that the State Governments should set up road transport corporations to manage the road transport they have taken over—corporations in which the railways and, if possible, private operators could participate—would also need to be implemented by all the States at an early date. If, as a rule, private operators come to participate in these corporations, they can not only restrain the craze for nationalisation but also bring about a fair division of routes and traffic between the public sector and the private sector. Relations between the two sectors will then become happy and a more congenial climate for expansion in the road transport industry will emerge.

Many of the suggestions contained in the E.C.A.F.E.'s study report are also applicable, with due alterations in details, to goods transport by road. Here, again, the need for imparting a sense of security and stability to the industry is apparent. It is patently not enough to state, as Mr. Raj Bahadur, Minister of State in the Union Ministry of Transport and Communications, did in his recent inaugural address at the thirty-third annual meeting of the Indian Roads and Transport Development Association, that the Government has no intention to nationalise goods transport during the third Plan period. Why this promise should be limited to the third Plan period alone passes one's comprehension. After all, no entrepreneur will think of investing further in the industry if he is not sure of his position after five years. If, as Prime Minister Nehru himself admitted in his inaugural speech at the E.C.A.F.E. Seminar, the growth of road transport will not affect the railways much, it would be reasonable to expect that this recognition will be reflected in greater freedom for and less burdensome taxation on the road transport industry and in the removal of the threat of nationalisation once and for all. But the Railway Ministry cannot be expected to make things that easy for road transport, for Mr. Jagjivan Ram's recent offer to give a monopoly to motor transport for short distances, say 50 miles, on the condition that the railways might perform the task of moving goods traffic over longer distances has a snag in it. It reflects an approach of rivalry between the railways and road transport, although the Deputy Minister for Railways has denied the existence of any such rivalry.

The future of road transport, which will have to expand at a phenomenal rate, will depend not only on the helpful attitude of the railways but even more on the willingness of the State Governments to reduce the incidence of taxes on motor vehicles. It is the latter aspect of heavy tax incidence that constitutes a serious disincentive to the private sector of road transport. Readers of *Commerce* may recall, in this connection, an article published in its issue of 23rd September 1961, wherein it is conclusively shown that high taxes stifle the growth of automobile transport in the developing countries. That the Union Ministry of Transport has been consistently emphasising the need for abolishing vexatious levies like octroi duty and terminal taxes, for placing a ceiling on taxes on motor vehicles and for giving up the system of double taxation, is the only silver lining to the cloud as far as India is concerned.

MARKET GOSSIP

Corporate Finances

ONE of the most valuable research studies periodically published by the Reserve Bank of India pertains to the finances of non-Government public limited companies in the industrial sector. The latest study, the main findings of which are published elsewhere in this issue, covers, as the previous ones did, the financial results of 1,001 joint stock companies representing the major industries. With this study, the data for the four years (1956, 1957, 1958 and 1959), broadly representing the first four years of the second Plan, are now available. They provide a consolidated picture of the growth of corporate enterprise, as compared with the pre-second Plan year, namely, 1955. It will be seen from the main indicators of this growth, which have been brought together in the table on page 761, that, at the end of 1959, the relevant 1,001 companies together had total net assets of the order of Rs. 2,072 crores, as compared with Rs. 1,434 crores at the end of 1955, and that their profit-making capacity in 1959 had recovered from the setback registered particularly in the years 1957 and 1958, following the damage caused to market confidence by the T.T. Krishnamachari budget and the Suez crisis. Profits before tax of the 1,001 companies, it is noteworthy, were Rs. 161 crores in 1959, as compared with Rs. 121 crores in 1958 and Rs. 108 crores in 1957; all the important industries, except shipping, coal, construction and coffee and rubber plantations, shared in that increase in profits. With profits after tax working out to 10.5 per cent of net worth (paid-up capital *plus* all reserves, other than taxation and depreciation reserves, and balance of profit) in 1959, as compared with 9.1 per cent in 1955, it was a picture of relative buoyancy in corporate performance. The very fact that retained profits in 1959 were Rs. 38 crores, as compared with Rs. 18 crores in 1958 and Rs. 14 crores in 1957, would appear to suggest that the corporate sector had turned the corner.

What was more, it utilised the improvement in profit to enhance its financial strength. Consequently, the companies concerned were able to add to their liquid assets and to reduce recourse to borrowings during the year. "The improvement in the financial results of the companies," to quote from the study under reference, "was reflected in the pattern of financing also; during 1959, the bulk of the funds for financing assets formation was met from internal sources (that is, free reserves and surplus and depreciation and taxation reserves) which accounted for 63 per cent of the total sources of funds, as compared with 48 per cent in 1958 and only 28 per cent in 1957." Another significant trend witnessed during the year was that, among external sources, fresh capital (Rs. 27 crores) accounted for 17.2 per cent of total funds (required for financing the total assets formation amounting to Rs. 157 crores), as compared with 12.3 per cent in 1958. Although, during the four years 1956-59, external sources had accounted for about 59 per cent of the aggregate financing amounting to Rs. 830 crores, it is noteworthy that such external financing had come down from 63 per cent in 1956 to 37 per cent in 1959. It thus happened that, during the latter year, the bulk of the finance for most of the industries was provided from internal sources. This larger role played by internal sources in financing corporate assets formation was, of course, a salutary trend, inasmuch as it meant reduced dependence on bank credit and other secured loans. But the further beneficial effect of this trend by way of attracting fresh capital could have been substantial only in the following year, namely, 1960. If the next review, that for 1960, happens to reveal that substantially more fresh capital from the market has been attracted to the public limited companies, it will be hardly surprising, especially in the context of the 1959 dividends working out to 11.8 per cent of paid-up capital (ordinary shares), as compared with 8.9 per cent in 1955. And that will represent an even more encouraging trend in the corporate sector. The credit for either trend should go in large measure to the Finance Minister, Mr. Morarji Desai, who has helped to revive the confidence of investors in corporate enterprise and restored to them the climate and self-confidence they had lost following the socialist *blitzkrieg* towards the close of 1956 and in the first half of 1957.

World Silver

The world silver market continues to rule distinctly firm. The spot rate in London now stands at 79¾d. per ounce or equivalent to 93.500 U.S. cents, which is 3.125 cents higher than the New York price of 90.375 cents. The firmness of silver is expected to persist in the coming months also. In fact, some bullion dealers predict a significant rise in price. This assessment may appear surprising, in view of the anticipated sale of about 40 million ounces of silver by Communist China. But, even if this expectation were to materialise, the gap between the current rate of world output and actual consumption is likely to be wider than at present. The gap last year, it may be noted, was as much as 116.8 million oz., as against only 79.5 million oz. in 1956. This widening of the gap must be attributed to an appreciable increase in world consumption of silver —from 272.5 million oz. in 1956 to 319.3 million oz. in 1960—while the actual output has risen from 193.0 million oz. to just 202.5 million oz. This year, quite a large part of the increase in consumption is being met from out of the U.S. Treasury's free stocks, unlike in previous years when the gap was filled mostly by demonetising coinage and sales of Russian silver. The total of the U.S. free stocks is currently placed at no more than 63 million oz., as against 124 million oz. at the end of December 1960 and 176 million oz. towards the close of 1959. The free stocks, it may be noted, represent the non-monetised silver which the U.S. Treasury can sell at a price not less than 90½ cents a troy oz. but only to American users.

If the present pace of withdrawals from the U.S. free silver stocks were to persist, the entire holdings would soon be exhausted. How then will the U.S. Treasury be in a position to peg the silver price at the current level? It is true that the U.S. holds 1,800 million oz. of silver as a part of its monetary reserve, but indications are that the U.S. Government may not succeed in obtaining Congressional sanction for releasing a portion of this holding. It is clear, therefore, that the odds are in favour of a marked rise in the price of silver. Such a development is bound to have a bullish effect on the silver market in India, notwithstanding its isolation from the world markets through the continued restrictions on imports and exports. As it is, silver is quoted pretty high—Rs. 205.85 per kilograme (85.7 tolas), as against Rs. 191.10 a year ago.

Britain Ready To Accept Rome Treaty

It looks as though Britain has surrendered to the Common Market. This is the impression that one gets after reading the U.K. Lord Privy Seal's exposition of the British approach to membership of the European Common Market at the E.C.M. Ministerial Conference held in Paris on the 10th and 11th inst. Mr. Edward Heath who is reported to have spoken for full two hours, expressed in clear terms his country's acceptance of the Rome Treaty and its aspirations, but, at the same time, urged solutions for the difficulties of British agriculture, Commonwealth and the European Free Trade Area (E.F.T.A.). Briefly summed up, Britain's approach to the different issues involved is as follows:

Membership of E.C.M.: Britain fully subscribes to the Rome Treaty's clauses and institutions and accepts the developments in the Common Market since then. It will also seek membership of the six-nation Coal and Steel Pool and the Euratom. It is ready to accept the Common Market's agricultural policy.

C.M.'s external tariff: Britain is ready to accept the structure of the present tariff as the basis of the common tariff on the enlarged community. While some adjustments will no doubt be necessary; there is no need to ask for a re-negotiation item by item.

British agriculture: Some time is necessary to enable Britain to make the necessary changes in its own agriculture.

Commonwealth: The British and Commonwealth contributions to the strength and stability of the world are important. Many Commonwealth countries depend on their exports to the U.K. For some of them, associate membership of the Common Market may be a solution.

E.F.T.A.: Britain is eager to end the division of Europe into the rival Common Market and the E.F.T.A. trade blocs.

Protocols: The problems pertaining to the last three subjects may be solved by means of protocols to the Treaty of Rome; there is no need to modify the Treaty as such.

Only one inference is possible from the foregoing account. It is no use depending upon Britain for safeguarding the vital interests of the Commonwealth. Each country will have to take care of its interests. The idea of associate membership has been strongly opposed by the Government of India and yet the British Minister has not hesitated to advance it as a possible solution. As Mr. Morarji Desai has rightly argued, safeguards should be commodity-wise and not country-wise, because the latter course will put one Commonwealth country in a more advantageous position than the other. The fact that the British Minister has quietly ignored this point is a disturbing development.

Now that the prospects of an expanded European Common Market are distinctly better, the U.S., too, seems to be concerned over a possible threat to its exports of farm products. The U.S. Secretary of Agriculture, Mr. Orville L. Freeman, has warned that "the booming market" may take $250 million out of the pockets of American farmers by closing Europe to them. The U.S., according to him, will consider this "inequitable" and will view it with "concern and apprehensions." Speaking to newsmen at Paris just after Mr. Heath made his speech at the E.C.M. Ministerial conference, Mr. Freeman said: "The United States has supported the Market idea as necessary for developing Western Europe both economically and politically. But I have warned European officials that the United States will consider exclusion of American wheat, corn, tobacco, foodgrains, poultry, soya-bean oil and vegetable oil from the Continental markets as a step backward. If the Common Market gives preference to agricultural products from Commonwealth countries, it will be acting contrary to the Common Market's own principles and to our interests."

The implication of the aforesaid statement is that the U.S. will seek to prevent an expanded E.C.M. from squeezing American farm exports out of Western Europe. Whatever measures the U.S. takes to prevent this from happening will have its due impact not merely on the trend of U.S.-European trade but on world trade as a whole. May be, the G.A.T.T. will have a trying time to enforce its principles effectively in the coming year.

MODEST RALLY IN EQUITIES

CLOSING, HOWEVER, EASY

(From Our Own Correspondents)

BOMBAY, 12*th October*

THE share market ruled firm during the major part of the week under review. There was, of course, some setback to values yesterday and towards the close today, but this was due to profit-taking at high levels and not to any other bearish factors. Despite this setback, the closing rates of the majority of scrips in both cash and forward lists were well above those prevailing a week ago.

The market moved narrowly on the last day of the previous settlement (that is, Friday the 6th inst.) and began the new account period (on Monday) on a buoyant tone. The buoyancy was engendered by normal *badla* rates at the last settlement and the removal of Khatau and Standard Mills shares from the special deposit list. There was active bull support besides covering purchases by some parties. Consequently, a number of scrips scored handsome gains in values. The gains were consolidated in the subsequent two sessions. Yesterday, however, the market turned distinctly easy. In the absence of any fresh stimulating development, bulls did not consider it prudent to enlarge commitments and they preferred to book profits. The news about the lockout in the Hindustan Motors factory at Calcutta following strike by workers and the report that the T.I.S.Co. factory was experiencing shortage of good quality coke also acted as dampers. The easy trend abated early today, when there was a recovery in values, though towards the close a sagging tendency prevailed with values drifting lower.

The market received good corporate news. The working results of the Bombay Burmah Trading Corporation for the year ended 31st March 1961 are quite encouraging. The profit before taxation (Rs. 59.00 lakhs, as against Rs. 48.20 lakhs in 1959-60) but after providing for depreciation (Rs. 26.59 lakhs, as against Rs. 26.68 lakhs) is higher at Rs. 121.91 lakhs. that for the previous year being Rs. 105.25 lakhs. To this is added Rs. 1.48 lakh brought in from 1959-60, Rs. 2.81 lakhs transferred from reserve, and Rs. 4.35 lakhs being income attributable to previous years, making a total of Rs. 130.55 lakhs. Against this amount, there is a provision of Rs. 59.00 lakhs for taxation and Rs. 3.18 lakhs in respect of development rebate reserve (Rs. 2.44 lakhs in 1959-60) and a total of Rs. 22.63 lakhs (Rs. 15.76 lakhs) has been allocated to other reserves and accounts leaving a balance of Rs. 45.75 lakhs (Rs. 41.10 lakhs). Appropriations for interim and proposed final dividends absorb Rs. 44.14 lakhs, leaving a balance of Rs. 1.61 lakh to be carried forward to 1961-62. The rate of dividend for 1960-61 is 33 per cent, as against 30 per cent distributed in 1959-60. The Directors of the Company are said to be overcoming some technical difficulty in regard to issue of bonus shares.

The Standard Mills have sought the approval of shareholders to capitalise Rs. 43.90 lakhs from the share premium account for issuing 43,900 bonus shares in the ratio of two shares for every five held.

The investors in the shares of Asian Cables have noted with satisfaction the report that the machinery has been installed and trial operations would start next week. Commercial production is expected to commence next month. The Company has finalised its collaboration agreement with Enfield Cables and Phelps Dodge Corporation.

Cooper Engineering has decided to maintain the gross dividend for the year ended 30th June 1961 at the previous year's level of 13 per cent (inclusive of a bonus of 3 per cent). The Company's new machine tool factory has gone into regular production. The Company also intends to manufacture automatic looms in collaboration with well-known foreign firms.

In the steel section, Tata Steels opened firm at Rs. 146.25 on Friday as against the previous close of Rs. 146, and rallied in subsequent sessions to touch a high of Rs. 148.25 on Tuesday. At this level profit-taking set in and the scrip receded to Rs. 146.25 today. Indian Irons opened at Rs. 24.32 and improved to Rs. 24.48 on Tuesday. Yesterday liquidation by tired bulls brought down the value to Rs. 24.32 today. Mukand Irons received good support and rose from Rs. 27.25 to Rs. 28.15, before finishing at Rs. 27.50 today.

Among textiles, Kohinoors, Standards, Podars and Mafatlals were the bright features. Kohinoors jumped up from Rs. 297 to Rs. 309.50 today before finishing at Rs. 306.75. Podars spurted by Rs. 13.50 to Rs. 151. Standards were keenly bid Rs. 80 higher at Rs. 1,334. Mafatlals were marked up by Rs. 17.50 to Rs. 925. Swans advanced by Rs. 16 to Rs. 625. Malays gained Rs. 8 to Rs. 327. Shree Niwas put on an equal amount to Rs. 282. Elphinstones gathered Rs. 6 to Rs. 94. Morarjees and Gokaks hardened by Rs. 4 each to Rs. 295 and Rs. 203 respectively. Mahalaxmys however shed a rupee to Rs. 575 though they had gone earlier from Rs. 576 to Rs. 583. At one time today they were lower still at Rs. 572. Indores receded by Rs. 11 to Rs. 165. Mysores lost Rs. 5.30 to Rs. 61.50. Bombay Dyeings eased by a rupee to Rs. 68.10 *ex*-interim dividend.

In contrast to the trend noted in the past few weeks, cement shares displayed a firm trend this week. Associated Cements opened steady at Rs. 165.75 on Friday and gradually moved up to Rs. 169.75 on Tuesday. After declining to Rs. 168 yesterday, they rose again to Rs. 169 today. Over the week, the net gain was Rs. 3.25. Digvijays moved in sympathy and gathered Rs. 2.50 to Rs. 182. Orissas were done at Rs. 14.72, same as last week.

Shipping shares evoked good support. Scindias opened at Rs. 12.72 as against the previous close of Rs. 12.64, and advanced to Rs. 13.28 yesterday. Today, they closed at Rs. 13.04, showing a gain of 40 nP over the week. Great Easterns put on 8 nP to Rs. 13.60. In the automobile section, Premier Automobiles gathered Rs. 3.50 to Rs. 159.50. But Hindustan Motors, for reasons already explained, eased by 16 nP to Rs. 19.12.

Sugar shares staged an impressive rally during the week. Belapurs forged ahead on substantial bull support and fresh investment buying from Rs. 263.50 to Rs. 288 on Tuesday. At this level, profit-taking ensued and the scrip declined to Rs. 280 today. The net rise over the week was Rs. 16.50. Walchandnagars gathered Rs. 7 to Rs. 169. Phaltans picked up Re. 1.50 to Rs. 136. In the cash list, Maharashtras increased by Rs. 2 to Rs. 189.

Rayon shares showed a mixed trend. National Rayons opened firm at Rs. 552 on Friday, as against the previous close of Rs. 546.50 and spurted to touch a peak of Rs. 555 on Monday. Subsequently, they drifted downward, today's closing rate being Rs. 544. South India Viscoses shed Rs. 3 to Rs. 184. But Indian Rayons met with good support and hardened by Rs. 3 to Rs. 73. Gwaliors gathered Re. 1.50 to Rs. 47.50 and Baroda Rayons 50 nP to Rs. 154.50.

A sharp rise of Rs. 14 to Rs. 325 in the quotation for Alcock Ashdowns was the feature of trading in the engineering section. T.E.L.Cos opened slightly easy at Rs. 351.50, as against the previous close of Rs. 352, and, after advancing to Rs. 360.50, finished at Rs. 355 today. Over the week, the gain was of Rs. 3. Texmacos put on Re. 1.16 to Rs. 18.52. Cooper Engineerings gained a rupee to Rs. 188. Larsen and Toubros picked up 25 nP to Rs. 39. In the cash section, T. Maneklals (old) hardened by Rs. 25 to Rs. 660. New Standards were keenly bid and moved up by Rs. 11.20 to Rs. 202. National Electricals rose by Rs. 9 to Rs. 85. Kirloskar Brothers advanced by Rs. 5 to Rs. 54. Asian Cables improved by Rs. 6.25 to Rs. 110. Brady Engineerings firmed up by Rs. 3.50 to Rs. 89.50. Kamanis gathered 48 nP to Rs. 15.80.

Chemicals were on the whole firm. Colour Chems jumped up by Rs. 25 to Rs. 385. Alembics were well favoured and spurted from Rs. 240 to Rs. 247.50. Synthetics rose by Rs. 5.50 to Rs. 199. Adarshs gained by Rs. 4.50 to Rs. 90.50. Dharamsis by Rs. 3.75 to Rs. 186.25, Polychems by Re. 1.25 to Rs. 198.75 and Citrics by 50 nP to Rs. 69. Tata Chemicals hardened by 16 nP to Rs. 17.28. United Dyestuffs were firm at Rs. 475 and Amar Dyes at Rs. 315. But Dhrangadhras new shares dropped a rupee to Rs. 106.

In the miscellaneous section, Bombay Burmahs advanced from Rs. 616 on Friday to Rs. 635 on Tuesday, on consistent bull support, following reports that the Company was shortly issuing bonus shares. Higher levels, however, attracted profit-taking and the quotation receded to Rs. 627 before closing at Rs. 628 today, showing a net gain of Rs. 16.50 over the week. Voltas attracted good support and advanced by Rs. 7 to Rs. 302.50. Wimcos were keenly bid and improved by Rs. 4 to Rs. 294. Anil Hardboards picked up Rs. 6.25 to Rs. 252.50. Hindustan Levers put on Re. 1.50 to Rs. 53.

• • • •

Madras Stock Exchange

MADRAS, 11*th October*

Barring sugars and coffees which were subjected to stale liquidation, the Stock Exchange ruled distinctly steady during the week under review. The reduction of ¼ per cent to 6½ per cent in the British Bank rate was welcomed by the trade. Britain's announcement of its readiness to subscribe to the Rome Treaty did not have any perceptible effect. Nor were the decision of the Committee of Stock Exchange Presidents to enforce uniform margins on carry-over business and the discussions on economic policy at the A.I.C.C. session at Madurai of any avail. Textiles attracted good attention of investors and professional operators. Teas were cheerful on reports that the plantation labour unions in Kerala had decided to call off their proposed agitation in response to the appeal by the Union Labour Minister. Rubbers ruled fully steady. Operators noted with interest the stress laid by Dr. Rama Varma, Chairman of the Rubber Board, in his speech at the meeting of the Board at Kottayam on Monday, on the need for proper replanting, new planting and research in the development of natural rubber. The easiness in coffees was due to reports suggesting the possibility of the world coffee crop touching 76 million bags in 1961-62, thereby providing a surplus of as much as 32 million bags. Engineerings, chemicals and cements were well maintained in the miscellaneous section.

Among textiles, South India Viscose were in the limelight and spurted by Rs. 3 to Rs. 188. Bangalore Woollens advanced by Re. 1.70 to Rs. 214.50. Radhakrishnas rose by 65 nP to Rs. 37.65 and Kotharis by 60 nP to Rs. 13.10. Lakshmis strengthened by 50 nP to Rs. 158.50. Loyals hardened by 45 nP to Rs. 49.25. Travancore Rayons put on 15 nP to Rs. 39.40. Buckinghams were firm at Rs. 248.80, Coimbatore Cottons at Rs. 191 and Coimbatore Pioneers at Rs. 282.

In the tea group, Devasholas picked up 50 nP to Rs. 31. Nonsuch Teas gathered 25 nP to Rs. 28.87, following the announcement of a final dividend of 10 per cent (taxable), making a total of 20 per cent (taxable) for the year ended June 1961, same as that distributed in the previous year. Periakaramalais rose from Rs. 3.66 to Rs. 3.73. Peemades were fully maintained at Rs. 23.37, Parksides at Rs. 29.70 and Chembras at Rs. 3.65.

Among rubbers, Malankaras spurted by 35 nP to Rs. 18.35. Travancore Rubbers scored a gain of 13 nP to Rs. 12.25. T.R. & Ts were steady at Rs. 10.06.

Coffees, however, ruled depressed. Balanoors declined by 25 nP to Rs. 14.50. Anaparais shed 15 nP to Rs. 3.70. Consolidated Coffees eased by 12 nP to Rs. 20.25 and Coffee Lands by 10 nP to Rs. 16.40. Ouchterlony Valleys softened from Rs. 3.75 to Rs. 3.72.

Among sugars, Cauverys suffered a loss of Rs. 2 to Rs. 122.50. Deccans sagged by 15 nP to Rs. 13.05, following the announcement of a final dividend of 13.5 per cent, making a total of 21 per cent (taxable), for the year ended May 1961, which compares unfavourably with 25.75 per cent distributed in the previous year. Indias dropped 10 nP to Rs. 11.50.

Among miscellaneous industrials, Textools jumped up by Rs. 6 to Rs. 186. Western India Plywoods spurted by Rs. 3.50 to Rs. 208.50. Tube Investments advanced by a rupee to Rs. 261. Indian Steel Rollings rose by 60 nP to Rs. 11.40. Ashok Leylands were higher by 2 nP at Rs. 9.02. Among chemicals, Travancores strengthened by 50 nP to Rs. 19 and Metturs by 25 nP to Rs. 14.55. F.A.C.Ts were fully steady at Rs. 9.35, Mysore Chemicals at Rs. 14.55 and Mysore Fertilisers at Rs. 11.60. In the cement group, Dalmias improved by 8 nP to Rs. 11.58 and Orissas by 5 nP to Rs. 14.80. Andhra Cements were maintained at Rs. 9.35.

Calcutta Stock Exchange

CALCUTTA, 11*th October*

With operators in a holiday mood and unwilling to extend commitments, transactions put through on the Stock Exchange during the week under review were mostly of a squaring-up nature. The import policy was received with mixed feelings. While the further reduction of quotas and banning of certain industrial products manufactured in the country in abundant quantities would benefit the industries concerned, the lack of provision for increased imports of raw materials and the official bias to continue development imports even at the cost of maintenance imports was discouragingly noted inasmuch as installed capacity would not be reached. The earlier pessimism on the report that the Committee of Stock Exchange Presidents going into the question of reforms would meet in Bombay was short-lived, as it was learnt that the Committee discussed a non-controversial formula which would not be objected to by speculators but which at the same time put a check on excessive speculation. However, as the week progressed, reports of floods reached and breaches in railway lines and damages to roads were said to have worsened the already none-too-satisfactory transport situation. The official sanction to issue bonus shares by Dunlop Rubbers was noted with satisfaction, though the news had been fully discounted earlier. The disappointing production figures of I.I.S.Co. for September had a depressing effect, but its severity was lessened by hopes of an early increase in retention prices. The announcement by mills of their decision to resume a full working week did not cut any ice with operators in the jute section, as fibre prices were still considered to be higher to admit of profitability.

TRIVENI ENGINEERING WORKS LTD.

The Triveni Engineering Works Ltd. has announced the public issue of 87,500 9.3 per cent cumulative redeemable preference shares of Rs. 10 each and 104,125 equity shares of Rs. 10 each. The subscription list will open on the 30th inst. Fifty per cent of the issued capital of Rs. 60 lakhs has already been subscribed by the Company's foreign collaborators, Bookers McConnell Brothers of the U.K. Of the balance of Rs. 30 lakhs, the promoters and the companies with which the promoters are associated have agreed to subscribe for equity shares worth Rs. 10,62,500, and equity shares of the value of Rs. 21,250 have been reserved for the employees of the Company. The Company is setting up a plant for the manufacture of sugar machinery, steam turbines and other heavy industrial machinery at Naini near Allahabad.

NEWS IN BRIEF

The Planning Commission has agreed to a proposal for the establishment of a port at Neendakara, near Quilon, in Kerala at an estimated cost of Rs. 110 lakhs.

The Coal Development Corporation earned a net profit of over Rs. 1 crore during 1960-61, as against only Rs. 20 lakhs in 1959-60.

A ten-member technical committee has been set up by the Government of India to formulate a scheme for compulsory pre-shipment inspection of woollen goods, including hosiery, exported under the export promotion scheme.

The new clock manufacturing unit of Messrs. Roy Brothers and Co. of Calcutta has been inaugurated by Dr. B. C. Roy, State Chief Minister. The firm has secured financial and technical collaboration with the French firm, Messrs. Reveils Bayard.

The Government of India has released an export quota of 12,000 tons of rice bran for the period October 1961-March 1962. Of this quota, 6,000 tons will be allowed from Andhra Pradesh, 3,000 tons from West Bengal, 2,000 tons from Gujarat and 1,000 tons from Madras.

The question of introducing legislation for compulsory exports is under the active consideration of the Government of India, according to an official spokesman who has denied reports appearing in a section of the Press that the scheme has been given up.

The Central Government is currently negotiating with Egypt and Libya for exports of sugar manufacturing plants to those countries. This was disclosed by Mr. Manubhai Shah, Union Minister for Industry, at a meeting of the Gujarat Chamber of Commerce at Ahmedabad on Tuesday this week.

The Government of Maharashtra is considering the question of revising the base year for the computation of the working class cost of living index in industrial centres in the State. The current index is based on a firmly budget enquiry held in 1932-33.

The Fertiliser Corporation of India has signed an agreement with the Burmah-Shell Oil Company for the purchase of 50,000 tons of gas from the Company's Trombay refinery every year. The gas will be utilised by the 80,000-ton State-owned fertiliser factory to be established at Trombay.

Under an agreement entered into between the Mysore Government and the State Trading Corporation, the State Government will receive two-thirds of the profits earned from export of iron ore. The agreement, which takes retrospective effect from April 1960, will be in force for the next five years and extended later by mutual agreement.

An export incentive scheme has been announced for *agarbathies*. Under the scheme, import licences will be issued for ten per cent of the f.o.b. value of exports, and will be valid for the import of natural essential oils, resinoids, aromatic chemicals, etc. The benefits under the scheme will be given only to co-operative societies of *agarbathi* producers.

The Government of India has decided to liberalise the import entitlement for embellishments, such as zip fasteners, special kind of buttons and snap fasteners, etc., for use in the manufacture of hosiery items against exports of woollen hosiery. The entitlement for import of these items will now be five per cent of the f.o.b. value of exported woollen hosiery, as against one per cent hitherto.

The view that there are good prospects for increasing industrial and commercial co-operation with Japan and other countries in Asia and the Far East has been expressed by Mr. S. P. Godrej, who has just returned from a tour of several countries in this region. He has suggested strengthening trade representation and organising attractive displays of Indian products in selected cities in a bid to expand Indian exports to those countries.

An experiment made at the Punalur Paper Mills in Kerala State for the manufacture of paper with eucalyptus timber has proved successful and the paper manufactured found satisfactory. It is learnt that even good quality newsprint could be manufactured with eucalyptus with the addition of some reeds. During the third Plan, the State Forest Department proposes to plant 15,000 acres of forest land with eucalyptus and start a newsprint factory during the fourth Plan period.

A symposium on "mechanisation of mines in India" will be held at Dhanbad from 9th to 12th December 1961. Organised jointly by the Central Mining Research Station, the Indian Branch of the Association of Mining, Electrical and Mechanical Engineers and the *Journal of Mines, Metals and Fuels*, the symposium will be attended by experts from the U.S., the U.K., Soviet Russia, West Germany and other countries.

The Tea Association of India, Calcutta, in a communication addressed to the Chairman, Tea Board, has drawn attention to the difficulties faced by the tea industry as a result of inadequate supply of cement. The Association points out that, under the Plantations Labour Act, the tea gardens are required to construct a prescribed percentage of labour houses every year. Since there is no sufficient supply of cement, the gardens are not able to construct labour houses as required under the Act.

Waters of the Bhakra canal system were released for the first time into the Rajasthan canal by Dr. Radhakrishnan, Vice-President, on Wednesday this week. The progress of works for the Rajasthan Canal Project, which will ultimately convert India's dust bowl into a rich granary, has been satisfactory. By the end of September, about half the total excavation and compaction works for the 134-mile long Rajasthan feeder, a part of the project, in the Punjab and Rajasthan territories had been completed. About 42 miles of the Rajasthan feeder in the Punjab had also been completed in all respects, while about 70 per cent of excavation and compaction work had been done in the remaining length of the feeder in the Punjab. The project will ultimately irrigate over 3.6 million acres. The total cost of the project is estimated at about Rs. 200 crores.

During the half-year ended 30th September 1961, the Import Trade Control Organisation received 214,204 applications for import licences, as compared with 189,509 during October 1960-March 1961 period. Despite the increase in applications, their disposal kept pace with the intake and at the close of the licensing period, only 2,006 applications (0.9 per cent) were pending. In addition to applications for import licences, the Organisation also dealt with a very considerable volume of correspondence on questions of policy, interpretation of rules and regulations, appeals, etc., from the trade and various chambers of commerce and trade associations. The number of such communications during the period reached the figure of 757,000. A close watch was kept in order to prevent malpractices. Thirty-three firms were black-listed during the period for contravention of the import and export trade control regulations.

The Government of India has decided to reorganise the Geological Survey of India in order to enable the Department to function more efficiently. Under the reorganisation, three regional offices—Eastern, Northern and Southern—will be set up with their headquarters at Calcutta, Lucknow and Hyderabad, respectively. Circle offices under the three regions will be set up in almost all the States. The Centrally administered areas will be dealt with under the circle offices of the neighbouring States. The decentralisation of the functions of the Geological Survey of India as a field organisation and separating administration from technical work will enable the scientific personnel to devote maximum attention to their specialised fields of activity. The new pattern also aims at a strengthening at headquarters of the set up dealing with planning, research and co-ordination. The regional headquarters will, in due course, have workshops, laboratories and libraries which at present form part of the set up at headquarters in Calcutta.
