The world tea output this year is already 64.5 million lbs higher than last year, but where are the foreign consumers to be found to absorb this extra supply? India is in urgent need of earning foreign exchange and the advantage to her of a wide expansion of buyers' markets should be obvious to the Tea Board. After India, the most likely place for development is in the countries now forming the European Common Market. Whether or not the British negotiations bear fruit, there is a possibility of entering a new market estimated to contain 170 million to 200 million people of reasonable affluence. The Russians are already great tea drinkers, so much so that they appear to be growing a considerable proportion of their own requirements. Why should not other Europeans adopt the habit, provided tea is of good quality and cheaper than coffee?

Whereas the 50-odd million people in the U.K. import around 520 million lbs a year, the European Common Market countries take only about 35 million lbs for between 170 million and 200 million people. It is clearly in the interest of India and the U.K. that this potential market be cultivated. It is understood that the Indian Tea Association has already submitted a memorandum to the Central Ministry of Commerce and Industry. It is to be hoped that it is only a matter of time before the Tea Board turns its attention to these areas.

Duty-free Entry

At this stage, it is fruitless to discuss the matter of duty-free entry or otherwise. That must await the negotiations, although it does not seem probable that the European Common Market will agree to duty-free imports. But as the I.T.A. chairman points out, in the event of a tariff on tea being insisted upon by the E.C.M. countries if Britain joined their association, it would be reasonable to expect that the weightage of the present imports into the U.K. of 520 million lbs and of around 35 million lbs into the E.C.M. would be considered. If something on these lines can be arranged and if the Indian Tea Board also resumes work on increasing local consumption, the future for tea plantations would be bright. But, at the moment, overproduction is beginning to look dangerous. It is to be hoped that India will not be called upon to cut production during November or December in order to keep prices at a reasonable level.

Tea Prices Fall

There has been a sharp fall in tea prices at the Calcutta auctions. To some extent, the lower rates will be compensated for by larger crops which should be produced considerably cheaper than in the last season. But it is already clear that it is a fallacy to aim at production targets which are beyond the buyers' capacity to consume. It is, therefore, necessary to cultivate the internal market.

CALCUTTA TEA AUCTIONS IN AUGUST EASIER TREND IN PRICES

FOUR sales were held in August, at which 272,512 packages of tea were on offer, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. Although there was quite a useful and general demand at all the sales, prices showed a much easier tendency due partly to the decline in quality and heavy offerings and partly to the news of heavy cropping both in north-east India and other producing countries. Plain brokers met with good support at easier rates and declined by up to 50nP. There was restricted support for plain fannings, and prices for this type eased by up to 70nP during the month. Bright liquoring orthodox broken grades were well sup-

ported but at progressively easier rates. The demand for fannings grades was more restricted, and prices declined more sharply in consequence. C.T.C. Assams showed the sharpest decline and quotations fell by Rs. 1.50 to Rs. 2 a kilo. Non-wither leg-cut teas also eased in sympathy with the general trend. Whole leaf grades were the weakest feature of the auctions and where stalk was present, they were difficult to sell. Darjeelings met with fair support at easier rates. The enquiry for tippy teas was less than in the previous month, and they were easier throughout the month.

With the exception of a few flavoury Darjeeling invoices, which sold in the early sales of the month, quality continued to show a decline. Leaf appearance was of an average standard for the time of year with a fair quantity of tip present in the top grades. A number of lower grades were, however, loosely twisted or lacked style. In general the standard of both leaf and liquor of the orthodox teas was fully average. Early sales witnessed the selling of some attractive second-flush invoices which were late to the market, but in the second half of the month, quality declined noticeably. C.T.C. manufactured teas were about average but fibre was present in a number of invoices while the proportion of "off-grades" produced as a result of fast growing conditions, increased. The standard of both leaf and liquor of the offerings from Doars and Terai was about average for the time of year. In general, the standard of teas from Cachar and Tripura was about average, the majority of invoices being black with fair make and tip in the top grades. Several poor invoices were produced, however, and these were dull with stalk and fibre present.

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 13 totalled 480,629 chests at an average price of Rs. 5.76, compared with 379,432 chests at an average price of Rs. 6.04 for the same period of the previous season. Internal sales at 1,021 chests of leaf and 179,659 chests of dusts (average prices Rs. 4.61 and Rs. 5.25) go against 2,026 chests and 134,347 chests, respectively (against Rs. 4.26 and Rs. 5.08) of the corresponding period of the previous season.

The estimated north-Indian crop up to the end of July 1961, was 97 million kilograms (213.84 million lbs), compared with 78.78 million kilograms (173.67 million lbs) up to the same date of last year. The average figure at this date for the three years 1958-60 was 87.20 million kilograms (192.25 million lbs).

There was a good general demand at irregular rates for the 615 packages of leaf on offer in the five sales held during the month. Prices in the final auction registered a considerable fall. During the month, five dust sales were held, and offerings totalled 121,304 packages. Demand in the first three auctions was good and general, but in the closing sales prices declined. C.T.C. varieties opened on an irregular note, the bright liquoring types being firm and sometimes dearer. In the second and third auctions, they met with keen

Arrivals (in chests) in Calcutta warehouses during the period 1st July to 31st July, 1961, with the corresponding figures of the previous year in parentheses, were: by steamer 448,668 (362,459), by rail 150,716 (192,106), by road 44,281 (21,833) and by air 14,906 (16,826), making a total of 658,571 (593,224) chests. From the beginning of the season 1st April, 1961 to 31st August, 1961, arrivals have been: by steamer 902,900 (711,520), by rail 428,758 (400,550), by road 150,717 (79,513) and by air 44,809 (46,610), making a total of 1,527,182 (1,238,193) chests.

Rugged hands on the plough of steel—steel biting the earth in furrows straight and deep—steel is preparing the land for the seed. Primitive? Primitive his method may be, but it has the new touch of steel—steel which has replaced the old wooden plough and is helping him to get a better yield for a little less labour. Soon, he will have the surging power of tractor to work for him; soon his land will be yielding a harvest, more abundant than ever before. Soon all this will be his and ours, as there is a little more steel for each of us. Towards this end, IISCO is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

GOOD DEMAND AT TEA EXPORT SALE

IRREGULAR TREND IN DUSTS

AT Sale No. 16, held on 18th and 20th September, there was a good demand for the 66,307 chests on offer at the Export auction. Plain orthodox descriptions were irregular. Well-made teas, free from stalk and fibre, were firm but the remainder were generally a little easier. The B.D.P.s were well supported. Medium and better orthodox types were irregular, although the useful liquoring kinds and particularly O.F.s, met with good competition. C.T.C.s were irregular with the few selected clean teas with good liquors selling above the last rates. The remainder were, however, generally up to 20nP easier, the B.P.s receiving better support than similar Fannings. Off-grades were irregular but those with useful liquors sold well. Darjeelings received fair support at easier rates. Whole leaf grades were again a little easier with more demand for the cheaper varieties. The few tippy grades on offer met with a fair enquiry.

Quotations	1961
Clean Plain Pekoe	Rs. a kilo 4.20 to 4.40
Plain B.P.	4.10 to 4.30
Plain Fannings	3.90 to 4.10
Medium Assam C.T.C. B.P.	4.80 to 5.20
Medium Assam C.T.C. Fgs.	4.80 to 5.20
Best Assam C.T.C. B.P.	5.30 to 5.70
Best Assam C.T.C. Fgs.	5.30 to 5.90

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a good and general demand for the 25,380 packages of Dusts on offer. C.T.C. teas were irregular but generally dearer, particularly those with a clean leaf appearance. Orthodox descriptions eased further but there was a better demand than in the previous week. Better liquoring Legg-cut descriptions were fully firm to dearer, but the plainer and fibrous descriptions declined in value.

Quotations	1961
Plain Orthodox Dust	Rs. a kilo 3.90 to 4.20
Medium Assam Dust	4.20 to 4.60
Legg-cut Dust	4.30 to 5.00
Medium Assam C.T.C. Dust	5.65 to 5.90
Good Assam C.T.C. Dust	6.30 to 6.60

(Quotations are inclusive of excise duty.)

The 212 chests of Leaf on offer met with a fair general demand.

FREIGHT RATES STEADY

THE freight markets have remained steady over the past week with a few improvements in certain sections of the U.S. grain trade. The recent typhoon which passed over central Japan during last week has worsened the congestion in Japanese main ports. Some liners are returning from these ports without discharging parcels of scrap cargo due to the acute shortage of lighters. It is reported that the Indian Government has purchased a fresh lot of fertilisers from the Continental and Adriatic ports to be shipped shortly, but definite advice is awaited. After loading s.s. Jagradkhi, Krishnapatnam port is unlikely to accept any ore loader until July, 1962. Due to poor clearance from the transit sheds, berthing position in Madras remains unchanged. The Hooghly river draft forecast for end-September and October have now been reduced by 3in. to 6in.

HIDES AND SKINS STEADY

The market was steady and prices showed an upward tendency. Stocks of skins were higher, but those of hides were less than in the previous week.

Bazaar Sales

(Between 2nd September and 18th September, 1961)

Cowhides: Wet salted (Ord.) 25,000 pcs. on the basis of Rs. 8.62 and Rs. 13.50 to Rs. 15.25; Wet salted (Slaughtered) 21,000 pcs. on the basis of Rs. 7 to Rs. 16.50, Rs. 19 and Rs. 28 to Rs. 29.
Goatskins: Wet salted (Patna, Daissee, Kustia) 27,300 pcs. on the basis of Rs. 200 to Rs. 230 and Rs. 270 to Rs. 290 and Rs. 380 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 3.75 and (she-killed) on the basis of Rs. 2.25 to Rs. 2.40; Muzafferpore 11,400 pcs. on the basis of Rs. 310 to Rs. 330; Dinajpur 1,400 pcs. on the basis of Rs. 475 to Rs. 500.

Bazaar Stocks

(18th September, 1961)

Cowhides: Wet salted 75,800 pcs.
Goatskins: Wet salted (Daissee, Patna, Kustia, Killed) 41,600 pcs.; Assam-Dinajpur 77,000 pcs.; Muzafferpore-Patna - Pakur - Purneah-Kissanganj 167,500 pcs.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded by 0.4 percent to 125.5 during the week ended 2nd September, 1961, compared with 126 for the earlier week. The index was lower by 2.4 percent when compared with the corresponding week of the last month but was higher by 0.3 percent than that of a year ago.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

MYTH AND REALITY ABOUT THE SUGAR SURPLUS

SUGAR production in India has shown a striking increase in recent years. It has risen from 1.62 million tons in 1958-59 to 2.4 million tons in 1959-60 and 2.96 million tons in 1960-61. But, because sugar prices have been high, consumption has been stagnating around 2 million tons a year. As a result, the commodity, which only a few years ago was in very short supply, is now in surplus. Present stocks in the hands of the mills are estimated at over 1.6 million tons, and are thus enough to support domestic consumption at the current rate for nearly seven months. Barely five weeks from now, crushing operations for the 1961-62 season will begin. Preliminary indications are that, during the new season, the acreage and output of sugarcane will be higher, so more sugar will be produced. The surplus of the commodity, which the industry already considers too big, is thus likely to grow even more burdensome.

There are two ways in which the surplus can be reduced. One is to increase the domestic consumption of sugar. The other is to boost exports. In a poor country like India, consumption cannot be increased unless prices are brought down. This is something which neither the Government nor the industry seems keen to do. The Government, on the one hand, is reluctant to reduce the stiff taxes on the commodity. The industry, on the other, has done little to rationalise its operations and improve its efficiency. The general reluctance to let prices fall is supported by the manipulations of a notoriously unscrupulous trade, which periodically creates artificial shortages on the excuse that the railways do not allot enough wagons for transporting sugar. While the scope for improving domestic output is thus virtually ignored, concentration is now increasing on efforts to boost exports. The exports made so far have almost invariably been at a loss, and the losses are likely to continue on future exports as far ahead as can be foreseen. That does not, however, deter either the industry or the Government; amid much pretentious talk about the patriotic need to earn foreign exchange, ways of selling more sugar abroad continue to be devised, usually at the cost of the domestic consumer.

As long as the exports were small, the losses were small too, and could be recouped by mulching the Indian buyer. But now that exports are visualised on a much bigger scale, the losses in prospect are huge—so huge that the industry cannot bear them itself, nor recoup them from the domestic market, without risking disaster for both. An eager search is, therefore, going on for foreign markets which will take Indian sugar under preferential arrangements (that is, at prices higher than the present world levels). The arrangements which are being actively explored are mainly three in number. The first is that the United States is being asked to take a large part of the sugar she needs from India, now that she is not taking it from Cuba. The second is that India is asking for her export quota under the International Sugar Agreement to be raised, so that she can sell more not only to the United States but to other countries as well. The third is that this country is hoping to be admitted to membership of the Commonwealth Sugar Agreement, under which she would be able to sell her sugar to Britain at specially high prices.

As far as the Indian industry is concerned, the search for preferential arrangements is perfectly understandable. At a Press conference in Calcutta last Friday, Mr. S. S. Kanoria, of the Indian Sugar Mills Association, pointed out that most of the world's sugar is in fact either consumed within the producing countries themselves, or traded under such arrangements. "The so-called world market price," he declared, "is entirely artificial. It represents the price at which less than 10 per cent of the world production is sold." There is no reason, therefore, why India should not seek a share of the preferences which other producers

enjoy. The need to do so is the greater at present, since the world market price is exceptionally depressed with a sugar glut impending in western Europe and with Russia re-selling at cut rates much of the sugar she has bought from Cuba. This does not, however, imply that India will easily get the quotas and the prices she wants. The United States paid special rates for Cuban sugar mainly for political reasons; she will not readily do the same favour to India, in whose case those reasons do not apply. At the current talks in Geneva about renewing the International Sugar Agreement, Britain is opposing India's plea for a large export quota, partly because she wishes to protect the interests of her sugar-producing dependencies such as Fiji and Mauritius. Similar opposition is likely to be faced when the question of India joining the Commonwealth Sugar Agreement is taken up.

In all these discussions, India's main handicap is that while her case appears attractive on moral grounds, it is extremely weak on grounds of practical reality. Morally, for instance, there are many reasons why this country should be given a large export quota. She has accumulated an exportable surplus; she has development plans for which she desperately needs the foreign exchange she can earn from sugar exports; her competitors enjoy preferential advantages under bilateral and international commodity agreements in which India has not yet got a substantial share; and, finally, with Asia turning into a net importer, geographical considerations point to the need for this country being allowed to export more. In practical terms, however, serious objections can be raised, the most important of which is that India simply does not have the export potential which she claims to have. In previous years, her sugar production fluctuated sharply, sometimes by as much as 50 per cent from one year to the next. Only during the past three years has there been a steady increase, and only during the past two has an exportable surplus of any description existed. The surplus has been inflated by the Government's bungling and the industry's inefficiency. If the price and distribution controls had been worked

more conscientiously, and if the operating practices of the north Indian factories had been rationalised with a view to reducing production costs, the domestic consumer would have got his sugar cheaper, and would have taken more of it. In that case, the surplus would have been much smaller than it is.

In pressing its case for large export quotas, the Indian industry is getting into the habit of making tall claims which its past record does not justify. At the Press conference in Calcutta, for instance, Mr. Kanoria talked glibly of India being "already the greatest sugar-producing country of the world"; of her one day becoming "the hub of the world sugar economy in the eastern hemisphere"; of there being "scope for almost unlimited expansion of the sugar industry as well as for sugar exports"; and of the exportable surplus having emerged "as a permanent feature of the sugar economy of the nation." Boasts such as these do the industry little credit, especially when they are larded with falsehoods to the effect that, "in 1961, sugar would perhaps be, next only to jute goods, the nation's biggest foreign exchange earner." The unfortunate fact is that large sections of the Indian industry are extremely uncompetitive by world standards. Any sugar they export is sold at a heavy loss, which loss will only be marginally reduced, not eliminated, by the preferential arrangements now being sought. If exports at a loss became the order of the day, not only sugar but almost any commodity India now produces could be made into a major foreign exchange earner. Buyers abroad furthermore cannot afford to forget that any "exportable surplus" which is built by squeezing the home market is not a surplus at all; it is liable to vanish unpredictably with a change in circumstances. They may consider it unwise, therefore, to subsidise an undependable source of supply by paying specially high prices. The conclusion is inescapable that if the sugar export ambitions of the Indian Government and the industry are genuine, a long, hard road lies ahead. It is not enough merely to go on producing more sugar; the sugar has to be produced more efficiently and cheaply, especially by ensuring that better cane is grown and then offered to the industry at more economical prices. The price which the domestic consumer pays also has to be reduced, with the help of better distribution arrangements and a sharp cut in Central and State taxes. Only on the foundation of a better-supplied home market can a healthy export trade be built.

THE FUND-BANK IN VIENNA

At least for the International Monetary Fund partner in the Fund-Bank team, last week's meeting in Vienna was the most significant since the annual general meeting held in New Delhi three years ago. Then, the decision was made to increase the I.M.F.'s subscriptions and quotas in response to a somewhat vague feeling that its rôle was growing in importance and that steps should be taken to help it meet the heavier calls being made upon it. That decision was undoubtedly justified. The rôle of the I.M.F. has continued to expand since the New Delhi meeting, and there have been an additional three years in which to discuss the phenomenon and devise measures to meet it. The decision made last week in Vienna to strengthen the I.M.F. further, and to take the first step towards turning it into a true international bank—granting it permission to borrow—is partly the outcome of these discussions and partly a reaction against them. Conservative international economic opinion has been badly shaken by such imaginative proposals as the Triffin and the Bernstein plans; so for that matter have those political interests with most at stake in the present system. The moves decided on at Vienna for strengthening the I.M.F. can, therefore, be regarded as a compromise between what is obviously the minimum required and what might in fact have been done if sweetness and reason had any relevance in such matters. Whether they will be adequate to meet a fast-changing situation is something which the world will be in a better position to judge at next year's annual general

meeting. If experience during the past year is any guide, circumstances and modes of thinking will both have undergone a rapid change before then.

Following a year during which record calls have been made upon it to support sterling, and in face of the prospect of having to do the same for the dollar soon, nobody is going to dispute the need to strengthen the I.M.F. The opposition in Vienna seems to have been concentrated in two main groups: those powers, such as India, who cannot afford an increase in subscriptions, and others such as France, who oppose any strengthening of the present sterling-dollar exchange system on principle. The objections of the first group have been met over by the very sensible provision that the I.M.F. can in future borrow to supplement its resources, while that of the second appears to have been modified by timely realisation of the undoubted fact that there is at present no practical alternative to the existing system. The main criticism which can be made of the decisions arrived at in Vienna is that they will probably postpone more radical adjustments in the structure and purpose of the I.M.F. which may by now be overdue. It is always difficult to decide where in any historical process the normal course of evolution should be interrupted by revolution. Up to now, the I.M.F. has shown a remarkable capacity for adapting itself to changing circumstances. But the real test will arise if and when another threat to the American dollar develops. At the moment all the signs are that this can only be.

delayed another year or so. When the I.M.F. is called on to meet it, even the provision of borrowing rights may not be adequate for the resources required. At that stage, it might be necessary to preserve world liquidity by resort to one or other of the various suggestions which have recently been put forward for this purpose. In the meantime, to turn the I.M.F. into an institution more resembling a bank is an excellent contribution towards coping with such emergencies as occurred this year in the stability of the pound sterling. What it means, in effect, is that the reserves of surplus countries can be called on to support those of the countries whose currencies are international but whose internal economies are in temporary difficulty, to an extent surpassing such recent stop-gap devices as the "Bastle Agreement". What it should not be allowed to mean is that such support will be available to shield a country from making the necessary internal economic adjustments to strengthen its currency. If the outcome of this borrowing proposal is an I.M.F. at last able to issue its own international currency, on the lines originally suggested by Lord Keynes at the time of the Bretton Woods conference in 1945, then so much the better.

Comment on the activities of the World Bank seems this year to have centred on the inability of this institution to meet a certain class of call made upon it. This type of call is that which is likely to come from any under-developed country engaged in building up an industrial economy but unwilling or unable to burden its balance of payments for years ahead with large interest and repayment liabilities. To some extent this function is being performed by the much newer International Development Association, an associate of the World Bank. But it is clear from the speech made this year by the World Bank President, Mr. Eugene R. Black, that he at least regrets the fact that the Bank is unable to advance into this field also. To some extent this yearning may be merely an expression of the personality of Mr. Black himself. The World Bank has always been run on strictly commercial lines and there seems no reason why this should not continue; not all those who contribute to its lending resources see eye to eye with Mr. Black on political questions. It seems much better that if money is to be lent for political reasons—and any loan which cannot be financed on a purely commercial basis is practical-

ly by definition being made to secure political ends—it should come from an organisation created exclusively for that purpose. Whether or not such loans should be made at all in view of the fact that so many of the balance-of-payment problems facing under-developed countries today, including India, are the result of bad and mistaken planning, and could have been avoided if the necessary pressure and advice had been forthcoming, is not really the question at issue here, although it must have been in the minds of many delegates in Vienna. The point is that commercial and political issues should always be separated as far as humanly possible.

The World Bank continues to perform an indispensable function in helping under-developed countries, but it is often difficult to escape the impression that if it were to show some of the admittedly over-done anxiety of its sister organisation, the I.M.F., to follow up loaned resources with pressure and good advice as to what economic

policies could be adopted to accelerate development, it would be doing a much more useful job. The point about infringing national sovereignty is used too easily by governments which do not have the slightest intention of following sound policies.

No impartial observer at the Vienna meeting can fail to have been impressed by the importance which these two institutions, the I.M.F. and the World Bank, have come to assume in the world. Criticism of their working is bound to arise, and in coming years the I.M.F. especially seems destined for radical changes. But the work goes on and the scope increases. Instead of the original two organisations, there are now four; the International Development Association and the International Finance Corporation have been added in the past few years. These institutions are now vastly important in preserving the stability and promoting the development of the free world. To strengthen them and encourage them in their function is merely an exercise in sound common sense.

THE COMPETITION FOR MARKETS

WHEN Mr. Douglas Dillon, Secretary of the U.S. Treasury, outlined recently his Government's plan to improve the nation's balance of payments, he said that "most important of all, was to intensify efforts to increase U.S. exports. This is, of course, the same policy as Britain's. For most other countries the need is less urgent, but many other countries are in fact increasing their exports. Unless the world market becomes more receptive, the pressure of exports will become more intense. Between the U.S.A. and Britain there are similarities not only of policy but also of method. By every practicable means, Mr. Dillon said, the cost in foreign currencies of U.S. personnel and installations abroad must be reduced; Mr. Selwyn Lloyd, U.K. Chancellor of the Exchequer, has uttered the same idea in relation to Britain's spending. Similar is the case with cost-saving investment in industry, pricing of export goods, and terms of export credits.

One must recognise the possibility that policies will not harmonise. When somewhat more favourable export credit facilities were provided recently

for British exporters, the intention was to bring these facilities into line with competitors'. But Mr. Dillon said the U.S. Export-Import Bank was planning to provide for U.S. exporters insurance facilities equal to those available in other industrial countries. If U.S. facilities are improved, the British authorities will be urged to match the improvement. The "credit war" which the British Government has tried to avert may have begun. Mr. Dillon did not stress foreign aid as a factor in the balance of payments, because, he explained, U.S. policy required now that most of the money provided should be spent in the U.S.A. He did stress the need to carry goods in U.S. rather than in foreign ships. Both these policies are anathema to the British. In general, of course, strengthening the U.S. balance of payments by restricting expenditure of dollars makes it more difficult for other countries to buy U.S. goods. Similarly, restricting expenditure of sterling makes it more difficult for other countries to buy British goods. For many years, sterling has been comparatively plentiful. For many years, a scarcity of dollars was relieved by a liberal U.S. financial policy. Now both U.S. and British financial policies are comparatively illiberal; and, at the same time, both countries are urgently trying to expand their exports.

On the import side of the accounts, the trends are diverging. The revival of trade in the United States is tending to draw in more foreign goods; and the growth of trade there is vitally important to British exporters. In Britain, the trend of trade is hesitant, if not downward, and industrialists are inclined to reduce their stocks, and therefore their demand for imports. A distinct improvement this year in the balance of the U.K.'s visible trade is attributable to a fall in imports more than to a rise in exports. But in due time imports will expand, and it is necessary to prepare now for a corresponding expansion of exports. Britain must expand her exports for another reason, that the traditional surplus of receipts over disbursements in the invisible account has disappeared—and it may soon be replaced by a deficit. This radical change in the nation's finances demands a radical change in the nation's concept of export trade. Earnings from exports must henceforth be sufficient to pay for all imports, and to cover the net export of capital.

The annual rate of the U.K.'s exports (including re-exports of imported goods) was nearly £4,000 million in the first two-thirds of this year, about 5 percent above the corresponding figure for last year. The visible deficit, at an annual rate of £565 million, is not much more than half the corresponding figure for last year, and if the import total is adjusted to allow for British-earned freight and insurance included in the figure, the visible account seems to be approximately in balance. But to stabilise the overall account it is necessary to increase exports further by the equivalent of some hundreds of millions of pounds a year. British industry is certainly not lacking capacity to produce more goods for export, but the spare capacity, most obvious in the industries making motor-cars and lighter "consumer durables", is not mainly in the trade where exports can be most easily expanded. Working below their optimum rate, these industries are not working economically. Their unit costs are relatively high and their prices are not always competitive. They insist that they could export more—because they could reduce their unit costs—if their domestic market were allowed to expand. But it is arguable that if they reduced their export prices they would sell more, and so reduce their unit costs by means more beneficial to the nation.

Some companies' export trade is almost altruistic. Mr. Eric Pasold, chairman of a very successful textile firm, Pasolds, has said that his Company could considerably increase its profits if it ceased exporting. It could standardise production for the

home market—and save masses of paperwork. Companies should be rewarded, not penalised, for selling their products abroad. The Government has a duty at least to reduce the senseless paperwork; and it should ponder the fact that the U.S. Administration is inclining strongly towards tax concessions for exporters. More must be done to interest small British firms in the export trade. A committee of the Institute of Directors has recently investigated the performance and attitude of comparatively small firms. It has found that of

the firms surveyed only about a quarter are exporting vigorously, and nearly a quarter have never exported at all—nor seem much interested in doing so. No clear policy is possible until the broad lines of development are established. British industrialists must know whether Britain will join or she will stay out of the Common Market. Whatever the decision, they must bring the efficiency of their organisations to the highest practicable level. Inefficiency cannot be indulged when competitors are gaining strength.

Current News and Comment

More from Indian Steel and Wire

In their report for the year ended March 1961, the directors of Indian Steel and Wire Products Ltd say that investments in I. R. C. Weldmesh Ltd and Containers and Closures Ltd have proved profitable. The Metal Corporation of India, in which the Company has large investments, has taken steps to increase the mining of ores and set up a smelter. Indian Steel and Wire Products has earned a higher profit of Rs. 85.04 lakhs, compared with Rs. 61.22 lakhs in 1959-60 after reducing depreciation from Rs. 7.95 lakhs to Rs. 7.78 lakhs. The ordinary dividend has been increased from 23 percent, taxable, to 24 percent, taxable. It is covered more than three-and-a-half times and offers a yield of 5.3 percent at the current price of Rs. 45.25 a share. Taxation receives Rs. 45 lakhs (against Rs. 41 lakhs) and general reserve Rs. 20 lakhs. The carry-forward is Rs. 7.72 lakhs, against Rs. 10.91 lakhs brought in. The new wire rod will be being built, and the switch-over of production to the new unit might interrupt output.

East Indian Coal Doubles Dividend

The ordinary shares of the East Indian Coal Co. Ltd are being supported around Rs. 35.50 due to the satisfactory results for the year ended April 1961. Raisings have increased from 583,111 tons in 1959-60 to 1.09 million tons, and despatches from 519,824 tons to 1.02 million tons. As a result of the higher output, unit costs have declined. The profit is £122,352 after providing £27,219 (against £17,949) for depreciation and transferring £39,000 (against £2,251) to taxation. The previous year's loss was £3,196. The ordinary dividend has been doubled to Rs. 2 a share, taxable. It is covered four times, and offers a yield of 5.6 percent at the current price. Development rebate reserve is allocated £61,763 (against £13,600), and sand stowing and development reserve £20,000. The carry-forward is £16,220, against £7,006 brought in.

The expansion and reorganisation schemes of the Company are making progress. It is proposed to obtain Rs. 50 lakhs by issuing debentures bearing 6½ percent interest. The directors think that a further capital expenditure of Rs. 65 lakhs may be necessary during the next couple of years. Although the finance will be raised from bank overdrafts for the time being, the capital expenditure will have to be funded in due course. Meanwhile, resources will be ploughed back into the business for the amortisation of the debenture stock. Commenting on the prospects, the directors say that as underground development increases and the need for more depreciation is felt, profitability may be difficult to maintain, because large raisings have so far been obtained from open-cast workings. Production during the current year is expected to improve by 20 percent over that of 1960-61. But a disturbing factor is the large accumulation of pithead stocks due to transport shortages. Unless rail facilities are increased, working will be hampered. The suit concerning the Sutikdi colliery has been decided in favour of the Government of India. East Indian Coal has approached the Government for participation in the development of this colliery. The recent increases in the price of coal for meeting some specific rises in production costs have proved inadequate. It is, therefore, hoped that the Government will allow further adjustments to make the working remunerative.

Phillips Carbon Shows Loss

The report of Phillips Carbon Black Ltd for the year ended March 1961—this is the first year of working—shows a loss of Rs. 1.77 lakhs. The Company was incorporated on 31st March, 1960, and 499,999 ordinary shares of Rs. 10 each were substantially oversubscribed by the public. The Government of India originally permitted the Company to produce 22 million lbs of carbon black a year, but it has now been allowed to manufac-

ture up to 30 million lbs a year. Work on the installation of the factory in Durgapur, West Bengal, is making good progress, and production is expected to begin in the middle of 1962. Steps have been taken to build up raw material stocks for undertaking production.

Ashoka Cement Maintains

The ordinary shares of Ashoka Cement Ltd have become sluggish around Rs. 9.81 because it is feared that the increase in the ex-factory price of the commodity which is to be announced shortly, may fall below expectations. Although the results of Ashoka Cement during the year ended March 1961 show an improvement over the previous year's performance, the effect of the increased production has not been reflected fully due to a substantial rise in production costs. The existing ex-factory price of cement does not appear to cover the production costs adequately. The profit has increased from Rs. 7.04 lakhs to Rs. 7.71 lakhs, after increasing depreciation from Rs. 6.90 lakhs to Rs. 8.97 lakhs. The taxable ordinary dividend has been maintained at 7 percent. It is covered more than one-and-a-half times and the yield is 7.1 percent at the present price. Development rebate reserve is allocated Rs. 33,000 (against Rs. 32,500) and general reserve Rs. 3 lakhs (against Rs. 2.50 lakhs). The carry-forward is Rs. 21,768, against Rs. 4,434 brought in.

The production of cement rose from 164,206 tons to 173,733 tons. An electro-static precipitator is being installed at a cost of Rs. 11 lakhs. This equipment should eliminate the dust problem and help achieve economies in raw materials. The directors are optimistic about the future in view of the measures taken to improve the operational efficiency.

Paneegunge Coal Pays More

The Paneegunge Coal Association Ltd has increased its profit from Rs. 10.21 lakhs in 1959-60 to Rs. 15.46 lakhs during the year ended March 1961, after transferring Rs. 4.96 lakhs (against Rs. 5.02 lakhs) to depreciation. An ordinary dividend of 17 percent, taxable, has been declared. It is covered more than three-and-a-half times and offers a yield of 10.9 percent at the present price of Rs. 15.62 a share. The ordinary dividend was 15 percent, taxable, in the previous year. Taxation is allocated Rs. 7.30 lakhs (against Rs. 4.80 lakhs), machinery replacement and development reserve Rs. 2.50 lakhs (against Rs. 90,000) and development rebate reserve Rs. 1.39 lakhs (against Rs. 1.21 lakhs). The carry-forward is Rs. 50,804,

against Rs. 8,663 brought in. Raisings increased from 439,978 tons to 502,222 tons and despatches from 437,168 tons to 483,456 tons. The development schemes are making satisfactory progress.

Bird-Heilgers Jute Results

Commenting on the prospects for the Dalhousie Jute Co. Ltd, the Lansdowne Jute Co. Ltd and the Union Jute Co. Ltd—all in the Bird-Heilgers group—the directors say in their reports for the year ended March 1961 that although new crops are encouraging in both India and Pakistan, adequate supplies of fibre are not likely to be available until the end of 1961. The adverse results during the past year have been due to the raw jute shortage. The industry has had to cut production, so unit costs have risen considerably.

The profit of Union Jute has declined from Rs. 20.67 lakhs in 1959-60 to Rs. 6.41 lakhs in 1960-61, after providing Rs. 4.51 lakhs (against Rs. 4.08 lakhs) for depreciation. The taxable ordinary dividend has been cut from 25 percent to 6 percent. It is covered more than two-and-a-half times, and the yield is 4.2 percent at the present price of Rs. 144 a share. Taxation is allocated Rs. 26 lakhs (against Rs. 9.40 lakhs) and statutory development rebate reserve Rs. 65,630 (against Rs. 84,700). The carry-forward is Rs. 8,800, against Rs. 35,993 brought in. Gunny sales increased from Rs. 1.92 crores to Rs. 2.11 crores and stocks from Rs. 38.89 lakhs to Rs. 44.87 lakhs.

The ordinary dividend of Lansdowne Jute has again been passed, but the usual preference dividends have been paid. The Company has incurred a loss of Rs. 1.22 lakhs, after increasing depreciation from Rs. 4.29 lakhs to Rs. 4.39 lakhs. Statutory development rebate reserve has received Rs. 31,000 (against Rs. 23,000), and Rs. 84,000 has been transferred from general reserve. There is a debit balance of Rs. 3.54 lakhs, which is being carried forward.

The Dalhousie Jute Company has maintained the taxable ordinary dividend at 1 percent, absorbing Rs. 31,492. The dividend yield is 1 percent at the present price of Rs. 97 a share. The profit has declined from Rs. 10.47 lakhs to Rs. 3.99 lakhs, after providing Rs. 4.85 lakhs (against Rs. 4.71 lakhs) for depreciation. Debenture redemption reserve is allocated Rs. 1 lakh (same) and statutory development rebate reserve Rs. 56,340 (against Rs. 30,400). There is a carry-forward of Rs. 9,802, against Rs. 18,142 brought in. Gunny sales increased from Rs. 1.68 crores to Rs. 1.95 crores, while stocks declined from Rs. 36.45 lakhs to Rs. 31.70 lakhs.

Midnapore Zemindary Disappoints

The ordinary shares of the Midnapore Zemindary Co. Ltd have declined to Rs. 13.62 in the Calcutta stock market on the publication of the disappointing results for the year ended 13th April, 1961. The Company has incurred a loss of Rs. 1.45 lakhs. Bringing in a debit balance of Rs. 21.93 lakhs, a total debit balance of Rs. 23.39 lakhs has been carried forward. The directors state that little progress has been made by the estate acquisition authority towards the settlement of Midnapore Zemindary's compensation claims. The Government of West Bengal has not published the compensation assessment rolls within the period prescribed in the Estate Acquisition Act, so the date of publication has been further extended. No payments have been received from the Governments of Bihar and East Pakistan. Great difficulty is being experienced, it is stated, in obtaining

statements of collections made by the Government of West Bengal, and no statement has been received concerning collections in some districts. In view of these disturbing developments, the directors regret that further repayments of capital must be deferred until some payment of the compensation claims is received.

Mysore Paper to Raise Capital

The Mysore Paper Mills Ltd has received the Government's sanction to double its rated capacity to 18,000 tons of paper. The expansion programme is estimated to cost Rs. 3.50 crores, of which Rs. 1 crore is to be raised by issuing equity capital and the balance through loans. The Company has obtained the Government's permission to issue new equity share of Rs. 10 each at a premium of Rs. 2 each. These shares are being offered in the first instance to the existing shareholders in the ratio of four new shares for every one held. The directors state in their letter to the shareholders that the Government of Mysore has agreed to take up 10 percent of the new issue as its rights shares and the balance of 90 percent has been underwritten. Mysore Paper earned a net profit of Rs. 6.10 lakhs for the year ended March 1961, against Rs. 7.33 lakhs in 1959-60. The dividend has been maintained at 15 percent. The Company's Rs. 10-paid shares are quoted around Rs. 20. The new equity shares will rank proportionately for the payment of dividend with the existing shares to the extent of amounts paid-up and only for the proportionate period. Mysore Paper has made arrangements for raising Rs. 2.50 crores through loans. The Industrial Finance Corporation will provide Rs. 60 lakhs and a foreign exchange loan of Rs. 1.40 crores is being secured from the Commonwealth Development Fund and the Industrial Credit and Investment Corporation of India. The remaining Rs. 50 lakhs is to be borrowed from banks and other sources.

Tractors and Farm Equipment

The Chief Minister of Madras, Mr. K. Kamaraj, formally opened the plant for producing Massey-Ferguson 1035 tractors for Tractors and Farm Equipment Ltd, the Madras member of the Simpson group. The T.A.F.E. Ltd is closely associated with the Massey-Ferguson organisation. The tractor plant has been licensed by the Government of India to produce 7,000 Massey-Ferguson tractors a year on a two-shift basis. Over 16,000 Ferguson system tractors are already serving Indian farming. The Tractors and Farm Equipment Ltd, in addition to manufacturing Massey-Ferguson tractors and implements, is the sole distributor in India for all Massey-Ferguson products. The Company states that over 2,300 Indian farmers have placed orders with Massey-Ferguson main dealers for the new India-made tractors. It has received a licence from the Government for a programme which will result in over 85 percent of the Massey-Ferguson 1035 tractors being manufactured in India within three years. The scheme is matched with a programme for the progressive manufacture of Massey-Ferguson implements of many kinds. Massey-Ferguson trailers and tiller seeding attachments, and a number of important Massey-Ferguson accessories, are already being made in India.

Expansion of Mukand Iron

The Mukand Iron and Steel Works Ltd has reported encouraging results for the year ended March 1961. Its sales rose by 51 percent and the gross profit recorded an increase of 69.7 percent. The Company has made rapid strides over the past few years. Production has recorded an impressive rise and the productivity, too, has gone up. The steel-making capacity has been increased and the range of products expanded. The chairman, Mr. Kamalnayan Bajaj, said at the annual general meeting in Bombay, last week that the Company has a bright future because of its plans for further expansion. (A fuller version of the speech appears elsewhere in this week's issue of *Capital*.) Mukand Iron has put up a third furnace of 42-ton capacity in Kurla, and it is expected to go into production shortly. It has been largely fabricated at the Company's works. The foundry is being expanded along with the increase in melting capacity. The Company expects to reach an output of 750 tonnes a month by the end of 1962 and 1,000 tonnes a month by the end of 1963. In order to meet the demand for thinner sections, Mukand Iron's rolling mills are being fitted with additional equipment which has also been largely fabricated at its own works. This is expected to be commissioned soon. But the major expansion is to take place in Kalve where the Company is planning to put up a new wire rod mill along with a 20-ton electric furnace. The output of the furnace will meet about half of Mukand Iron's re-

quirements of billets for re-rolling. The delay in the acquisition of land in Kalve and the requirement of larger finance have necessitated a fresh application for a loan from the Industrial Credit and Investment Corporation of India. A preliminary project estimate has been submitted to the latter. The Commonwealth Development Finance Company of the U.K. has also evinced interest in the project and the management is optimistic about finalising arrangements in due course. Mr. Bajaj said that the expansion programme is estimated to cost Rs. 3.5 crores or Rs. 4 crores, but the management has not yet taken any decision on how to raise the finance. The directors will be able to get a clear picture of capital requirements only after ascertaining the amount of foreign assistance and loans the Company can secure. Mukand Iron has, however, plans to issue equity shares of the value of Rs. 10 lakhs in the near future to finance part of its expansion plans.

Mr. Bajaj said that the Government has underestimated the importance and potentialities of the re-rolling industry. With an investment of Rs. 25 crores, it employs about 30,000 people and rolls 900,000 tons of steel products which is about one-third of India's production of finished steel in 1960-61. The re-rolling industry, Mr. Bajaj said, is suffering from a shortage of billets and melting scrap. He urged that steps be taken to meet the current needs of the industry by larger allocations of billets from the main producers, supplemented by imports. He also pleaded that the Government should progressively ban the export of ferrous scrap which can be used within India. Replying to shareholders' questions, the chairman said that the supply of billets during the current year would be about 30 percent less than in the previous year. But Mukand Iron is taking steps to roll finer sections in order to achieve better results on the steel casting side. So sales and profit are unlikely to be affected by more than 5 percent to 10 percent in spite of the shortage of billets. Shareholders were critical of the disproportionate return on the deferred shares which are being held mainly by the directors and their associates. In 1960-61, 806,000 ordinary shares of Rs. 10 each will receive a dividend of Rs. 7.22 lakhs, whereas 12,483 deferred shares, also of Rs. 10 each, claim Rs. 2.72 lakhs. Referring to the shareholders' plea for the conversion of deferred shares into ordinary ones, Mr. Bajaj said that he would welcome the shareholders' representative to discuss this problem in its various aspects with the management. The shares of Mukand Iron, which were sold down to Rs. 24.24 in the last week of August, have now recovered to around Rs. 27.75 on renewed support induced by the growth potentialities.

Rights from Automobile Products

Reliable reports indicate that the Automobile Products of India Ltd, which recently raised its authorised capital from Rs. 1 crore to Rs. 5 crores, proposes to raise Rs. 25 lakhs of equity capital in order to finance its expansion plans. The shares will be offered to the existing shareholders in the proportion of three shares for every five held. The increasing demand for the Company's products—particularly Lambretta scooters—has encouraged it to seek the Government's permission for doubling its rated capacity to 24,000 units of scooters, scooterettes and three-wheelers. The tentative figures for Automobile Products' working suggest that it has fared well during the year ended July 1961. In spite of a temporary dislocation in normal production resulting from the delay in the arrival of some new machinery from abroad and the resetting of machinery in the new building, the output in 1960-61 is placed around 13,000 units, against the licensed and rated capacity of 12,000 units a year. Apart from scooters and scooterettes, the Company is also producing brake fluid, brake linings and allied components. The order-books are said to be full for nearly two years. The Company received and commissioned new machinery worth about Rs. 15 lakhs during the last two months. This brings the total cost of machinery installed at the Bhandup works to Rs. 60 lakhs. Sales in 1960-61 are reported to have increased to Rs. 4.15 crores from Rs. 3.13 crores in 1959-60. The profit, after depreciation, is placed around Rs. 15 lakhs, against Rs. 6.23 lakhs in the previous year. The previous year's accounts closed with a carry-forward loss of Rs. 9.18 lakhs. The arrears of development rebate reserve amount to Rs. 6 lakhs.

Gujarat Oxygen and Acetylene

The Gujarat Oxygen and Acetylene Co. Ltd is expected to start the production of oxygen towards the end of October. The factory will be the second unit in Gujarat, and it is located in Bhavnagar (Saurashtra). The plant which is being erected has an annual production capacity of 150 million cubic feet of oxygen and has been im-

ported from East Germany at a cost of about Rs. 4 lakhs. The project has been sponsored by Bhuta Brothers of Bombay who are engaged in the chemicals trade. The East German firm of Deutscher Innen und Aussenhandel Chemiewerk-rustungen, Berlin, is providing the technical know-how. The project is estimated to cost about Rs. 15 lakhs or Rs. 20 lakhs, but it does not involve any expenditure of foreign exchange since the plant, machinery and technical know-how are being obtained from East Germany against rupee payment. The promoters hope to meet the entire oxygen requirements of the Saurashtra region as well as of the neighbouring areas. Gujarat Oxygen will undertake the manufacture of acetylene at a later stage.

Maharashtra Minerals Corporation

The Maharashtra Minerals Corporation Ltd is a new enterprise which has been formed with the object of exploring the mineral areas in Maharashtra, particularly in the Konkan region. The Corporation is being set up in accordance with the State Government's policy of promoting joint-sector ventures for using the available talent and resources in both sectors in the best possible way. This venture is perhaps the first of its kind in the State. The extent of State participation in the capital has not yet been decided, but it is unlikely to exceed 49 percent. The Corporation will have an authorised capital of Rs. 50 lakhs in equity shares of Rs. 100 each. It is expected to enter the market with a public issue within a few months. The project proposes to incur an outlay of Rs. 50 lakhs, of which Rs. 24 lakhs will be spent on plant and machinery. The plant will be located in the coastal area of the Ratnagiri district. The 25-mile belt from Jaigarh to Purnagarh on the Ratnagiri coast is said to contain high-grade ilmenite. Topographically, the location of the factory is said to be ideal because of the port facilities and the prospects of power supply from Koyna. The Corporation will make a beginning with the beneficiation and processing of ilmenite and later take up the manufacture of titanium oxide, titanium chloride and titanium cabide.

Gujarat Paper Profit Down

The working of the Gujarat Paper Mills Ltd for the year ended March 1961, has been affected by the cut in paper prices. The sales are down from Rs. 58.91 lakhs to Rs. 55.48 lakhs. The closing stocks, however, show a rise of Rs. 3.28 lakhs from Rs. 5.18 lakhs to Rs. 8.41 lakhs. The gross profit of Rs. 3.80 lakhs is Rs. 1.34 lakhs less than in the previous year. The provision for depreciation has been reduced from Rs. 1.35 lakhs to Rs. 1.28 lakhs and an additional sum of Rs. 4,054 has been provided towards the arrears of depreciation for the previous year. The allocation to taxation is a little higher at Rs. 1.10 lakhs, against Rs. 1 lakh. Out of the net profit, the directors have set aside Rs. 25,000 (against Rs. 45,000) for development and rehabilitation reserve and development rebate reserve absorbs Rs. 1,586, against Rs. 12,943. The directors have recommended a taxable dividend of 11.5 percent on the increased capital. The dividend in the previous year was 15 percent, taxable. The preference dividend absorbs Rs. 29,250, against Rs. 32,150. After providing for the proposed dividends, Rs. 3,614 is being carried forward, against Rs. 4,459 brought in. Gujarat Paper has received a licence from the Government to increase the production capacity of its paper plant by 3,600 tons. Negotiations for the import licence are being carried on. The Company has been given permission to become one of the partners in the new pulp project to be set up by the Central Pulp Mills Ltd, near the Surat district.

Orissa Cement Expanding

Speaking at the annual general meeting of the Orissa Cement Ltd in Rajgangpur, Orissa, last week, Mr. J. Dalmia, chairman, referred to the Company's expansion programme. (A fuller version of the speech appears on a later page in this week's issue of *Capital*.) Cement supplies, Mr. Dalmia said, can be increased quickly, with smaller capital investment and with lesser outlay of foreign exchange by expanding the manufacture of slag cement. Orissa Cement was granted a licence in October 1957 for producing such cement. The chairman hoped that the difficulties in the way of slag granulation would be removed, and slag would become available soon in view of the importance given to the production of slag cement in the third five year plan. Orissa Cement has undertaken a substantial expansion of its basic brick manufacturing capacity, including the manufacture of chemically bonded refractories. Success has been achieved, Mr. Dalmia said, in producing high quality blast furnace and ladle bricks which, it is hoped, will be supplied in large quantities to

the steel industry. There is need for proper exploration, utilisation and conservation of the essential raw materials required by the refractory industry. Mr. Dalmia referred to refractory-grade chromite ore which is required in large quantities for certain types of basic bricks, and which is in short supply. "The position could be improved by a closer control on the quality of chrome ore which is being exported, by a more rational and broader-based exploitation and utilisation of known deposits and by a more intensive search for new deposits."

The cement industry, Mr. Dalmia said, is suffering from the uneconomic retention prices recommended by the Tariff Commission in 1958. In determining them, the Commission estimated costs on the assumption that production would equal the rated manufacturing capacity of the plants. But even in the major cement producing countries of Europe, the actual production is only around 90 percent of the rated capacity. The position in India is in no way better, as the use of the installed capacity last year was only 85 percent. The unrealistic estimates of production made by the Commission for the purpose of calculating costs has led to the fixing of low retention prices. Furthermore, there have been various increases in costs since the last price enquiry. The retention prices fixed in 1958 were to remain in force until 30th June, 1961. The chairman hoped that the Commission would adopt a more "considerate approach" this time and the industry would be given fair retention prices with retrospective effect from 1st July, 1961.

Black-Clawson Paper Project

The U.S. firm of Black-Clawson Company—an associate of Parsons and Whittemore—will soon be putting up a foundry and machine shop in Ennore, near Madras, for manufacturing pulp and paper-making machinery. The project is estimated to cost about Rs. 2.5 crores. The Company proposes to issue initially a capital of Rs. 1.5 crores for which the Government of India's sanction is awaited. The project does not involve any foreign exchange expenditure. The promoters expect to secure machinery and other equipment locally or import them from east European countries under rupee agreements. Import commitments in addition to these would be met from the firm's own capital funds. The industrial licence for the establishment of the factory has already been obtained, and work on the project is expected to start shortly. It is stated that as the phased production programme makes progress, it would be possible to manufacture locally all the components and other equipment for paper plants in India.

Kalpette Estates Maintain

The Kalpette Estates Ltd has reported improved working results for the year ended April 1961, although the dividend has been maintained at the previous year's level of 12½ percent. The net profit for the year amounted to Rs. 2.38 lakhs, against Rs. 1.39 lakhs for the previous year. With Rs. 1,329 brought in, the total surplus is Rs. 2.39 lakhs. Out of this, taxation provision amounts to Rs. 1.35 lakhs (against Rs. 40,000). The proposed dividend of 12½ percent, subject to deduction of tax, will absorb Rs. 1 lakh. The balance of Rs. 3,912 is carried forward.

The tea crop for the year amounted to 159,711 kilograms, at a cost of Rs. 2.77 a kilogram, against an estimate of 140,614 kilograms at a cost of Rs. 2.87 a kilogram. The average sale price realised amounted to Rs. 4.46 a kilogram, against Rs. 4.10 a kilogram. The rubber crop harvested amounted to 136,334 kilograms at a cost of Rs. 2.72 a kilogram, against an estimate of 120,201 kilograms at Rs. 2.52 a kilogram. The average sale price was Rs. 3.32 a kilogram, against Rs. 3.37 a kilogram in the previous year. The coffee crop amounted to 1,442 bushels of dried Cherry estimated to yield about 12,600 kilograms, against an estimate of 10,160 kilograms. The cardamom crop amounted to 5,024 kilograms. The 1961-62 tea crop is estimated at 154,222 kilograms at a cost of Rs. 2.99 a kilogram. The rubber crop is estimated at 136,078 kilograms at a cost of Rs. 2.73 a kilogram. The coffee crop is estimated at 15,240 kilograms at a cost of Rs. 2.42 a kilogram. The cardamom estimate is put at 6,804 kilograms. Since the close of the financial year, 56 acres of the old rubber area have been replanted with budded rubber of high-yielding clones and 51 acres of the reserve area have been cleared for new planting with rubber in 1962 on the Poonoor estate. About 130 acres of reserve land on Chulika have been planted with cardamom. Further areas are proposed to be planted with this crop before the close of the current season.

Acme Manufacturing Profit Doubled

The working of Acme Manufacturing Co. Ltd for the year ended June 1961, shows an impressive

improvement over the previous year's performance. The sales have increased by about 27 percent from Rs. 57.78 lakhs to Rs. 73.39 lakhs, while the gross profit shows a rise of 132 percent from Rs. 7.39 lakhs to Rs. 17.18 lakhs. The improved results reflect the satisfactory working of the oil engine division and the valves section. After providing Rs. 1.30 lakhs (against Rs. 1.45 lakhs) for depreciation, Rs. 80,000 (against Rs. 51,490) for development rebate and Rs. 5.85 lakhs (against Rs. 3.06 lakhs) for taxation, the net profit amounts to Rs. 7.87 lakhs, against Rs. 1.77 lakhs in 1959-60. The directors have provided Rs. 5.35 lakhs towards the arrears of depreciation and Rs. 1.08 lakhs has been set aside to pay the arrears of dividend on 6 percent cumulative preference shares for three years—1945-46 to 1947-48. The carry-forward is Rs. 1.71 lakhs, against Rs. 9,632 brought in. The directors state that the arrears of dividend on 4½ percent second cumulative preference shares will be paid after the claim of 6 percent preference shareholders is satisfied. The arrears of preference dividend up to the end of June 1961, total Rs. 7.51 lakhs.

Rane (Madras) Repeats

The working of the Rane (Madras) Ltd for the year ended March 1961, shows the net profit at Rs. 1.51 lakhs, after providing Rs. 1.05 lakhs for development rebate and Rs. 1.17 lakhs for taxation. The net profit for the previous year was Rs. 2.12 lakhs, after providing Rs. 2.18 lakhs for taxation. With Rs. 17,727 brought forward from the previous year and Rs. 34,101 transferred from general reserve, the total surplus is Rs. 2.02 lakhs. The dividend at 9.1 percent, subject to deduction of tax, on the 7 percent "A" class preference shares accounts for Rs. 15,925. A dividend of 7.8 percent, subject to deduction of tax, on the 6 percent preference shares accounts for Rs. 14,832. The ordinary dividend of 14 percent, subject to deduction of tax (against 14 percent in the previous year) will absorb Rs. 1.72 lakhs.

The Company was originally incorporated as a private limited enterprise in 1929. It was converted into a public limited Company in 1936. During these 25 years, it was carrying on business as the distributors of motor-car spare parts and as dealers in motor-cars and lorries. The year ended March 1961 is considered a very important one in the history of the Company, since it has switched over to the manufacture of motor-car ancillaries. The directors hope to take up certain more new lines of manufacture very shortly. The manufacture of tie-rod ends was started in August 1960, and their manufacture and sales are said to have been encouraging. From July 1961, the Company discontinued the agency of Bedford lorries and also closed the motor-car workshop. The directors state that the manufacture of clutch discs has been taken up on hand, and the factory is housed at the Company's own premises in Madras. Most of the machinery has been received and would be installed shortly. The necessary sanction for power has been received from the Madras State Electricity Board. As for increasing the share capital, the directors state that the programme has been deferred, since no final decision has yet been reached on the manufacture of certain other motor-car ancillaries. The sales of the year (which includes Rs. 11.5 lakhs being the excise duty on motor-vehicles) have increased to Rs. 1.46 crores, against Rs. 1.09 crores during the previous year.

Radio and Electricals to Expand

A marked improvement in the sales of the Radio and Electricals Manufacturing Co. Ltd, Bangalore and an ambitious expansion scheme highlight its working for the year ended March 1961. A total dividend of 18 percent, subject to tax, is declared for the year on the increased capital, against 23 percent for the previous year. The total outlay on the dividend this year is higher at Rs. 6.57 lakhs, against Rs. 5.65 lakhs in the previous year. The net profit for the year amounts to Rs. 30.98 lakhs, after providing Rs. 2.92 lakhs for depreciation. Adding to this profit Rs. 21,649 brought forward from the previous year and Rs. 9,041 being the excess provision made in the previous year written back, the total available for appropriation is Rs. 31,29 lakhs. Out of this, the directors have allocated Rs. 2 lakhs (against Rs. 1 lakh) to dividend equalisation reserve, Rs. 1.50 lakhs (against nil) to plant rehabilitation reserve and Rs. 6 lakhs (against Rs. 4,00,000) to general reserve. Taxation provision amounts to Rs. 14 lakhs (against Rs. 9.75 lakhs). Development rebate reserve gets Rs. 42,920 (against Rs. 7,825). The development expenses of previous years written off amount to Rs. 32,911. Short provisions made in previous years account for Rs. 945 and donations have absorbed Rs. 1,271. The Company paid an interim dividend of 9 percent, subject to deduction of tax, in June 1961. The directors have now recommended a final dividend of 9 percent, subject to deduction of tax. The total dividend of 18 per-

cent for the year accounts for Rs. 6.57 lakhs. The balance of Rs. 43,537 is carried forward.

The directors state that the figures given in the accounts for the year and those of the previous year furnished against each item are not proportionate in many cases because Radio and Electricals has taken over the Government plastics section with effect from 1st April, 1960. As such, the figures for the year 1960-61 would be inclusive of the transactions of this newly-acquired section whereas the figures for the previous year would be exclusive of the transactions of this section. The directors are trying to improve the Company's working. Dealing with the dividend, they refer to the suggestions made by the shareholders in previous years concerning the need for providing larger amounts to reserves each year, reducing, if necessary, the percentage of dividend. Keeping this in view and also for the reason that the Company's capital has been increased during the year by the issue of an additional share capital of Rs. 12.5 lakhs for cash at par, the directors have considered it advisable to declare a total of 18 percent, which they have now declared for the year. A notable achievement of Radio and Electricals was the turning out of the one millionth house service electricity meter during the year. Meanwhile, the directors have taken steps for a substantial expansion in the production of single-phase electricity meters. The report says that all the formalities in this connection have been completed and the orders of the Government of India are now awaited. The expansion of activities is not limited only to electricity meters. Steps have also been taken to equip the plastics section gradually with the latest type of machinery with a view to increasing productive efficiency, since the equipment now being used was purchased about 13 years ago. The manufacture of loud-speakers in technical collaboration with the Company's collaborators for manufacturing electricity meters is expected to be commenced in about a year's time. It is also stated that the manufacture of capacitors would be commenced in a few months' time. The production of switches for the electronic industry is gradually being raised. It is proposed to manufacture a new type of water meters, and negotiations concerning this with the Company's Swiss collaborators have reached a final stage.

These expansion schemes will necessarily require more funds. Since the issued capital of Radio and Electricals is only Rs. 37.5 lakhs, a loan up to the limit of Rs. 38.6 lakhs has been obtained from the Government of Mysore. In addition to this, the latter has stood guarantee for Rs. 31 lakhs for the purchase of equipment from Japan for the electricity meters expansion scheme. The directors state that they have received a consent order issued by the Government of India for the issue of an additional share capital of Rs. 25 lakhs. The shares of the Company are now quoted in the market at Rs. 21.62 c.d.

Malankara Rubber Earns Less

The working of the Malankara Rubber and Produce Co. Ltd for the year ended March 1961, shows a net profit of Rs. 1.79 lakhs, after providing for depreciation and taxation. The net profit for the previous year was Rs. 2.09 lakhs. With Rs. 9,941 brought forward from the previous year and Rs. 27,000 transferred from general reserve, the total available for appropriation is Rs. 2.16 lakhs. Out of this, the directors have recommended a dividend of 16 percent, subject to deduction of tax (against 15 percent in the previous year). The dividend will absorb Rs. 2.16 lakhs. The balance of Rs. 46 is carried forward. The dividend of 16 percent recommended includes 2 percent as the golden jubilee bonus.

The total rubber crop harvested during the year amounted to 320,254 kilograms at a cost of 151.97nP a kilogram, compared with 303,986 kilograms at a cost of 157.58nP a kilogram during the previous season. The coconut crop for the year amounted to 396,528 nuts, compared with 556,222 nuts for the previous year. The pepper crop amounted to 3,447 lbs. The 1961-62 rubber crop is estimated at 650,000 lbs (294,835 kilograms) at a cost of 84.87nP a lb. An area of 69.11 acres is being replanted with rubber under the Rubber Board's subsidy scheme during the current year. It is expected that the actual rubber crop during the year will exceed the estimate.

Satisfactory Results from T. Stanes

The working of the T. Stanes and Company Ltd for the six months ended March 1961, shows a net profit of Rs. 4.74 lakhs, before taxation. The previous year's net profit for one full year was Rs. 8.25 lakhs. With Rs. 40,519 brought forward from the previous year and Rs. 10,494 being the provision for taxation no longer required, the total comes to Rs. 5.25 lakhs. Out of this, provision for taxation amounts to Rs. 1.55 lakhs (against Rs. 3.25 lakhs). A sum of Rs. 1 lakh (against nil) is transferred to

general reserve and Rs. 384 to development rebate reserve. The dividend for six months on the preference shares at 3½ percent, subject to deduction of tax, amounts for Rs. 4,662. The dividend of 15 percent on the ordinary shares, subject to deduction of tax, amounts for Rs. 1,73 lakhs. The balance of Rs. 91,515 is carried forward. The Company and its subsidiaries have had satisfactory results for the period. In view of the change in the financial year of some of the Company's subsidiaries, the results are not exactly comparable to those of a full year's working.

Mysore Industrial Profit Down

During the year ended March 1961, the Mysore Industrial and Testing Laboratory Ltd has earned a net profit of Rs. 1.37 lakhs, after providing Rs. 61,111 for depreciation and Rs. 1.21 lakhs for taxation. The net profit for the previous year was Rs. 1.57 lakhs. With Rs. 4,987 brought in, the total amounts to Rs. 1.42 lakhs. The proposed dividend of 10 percent, taxable, against 16 percent, taxable, in the previous year, will absorb Rs. 1.35 lakhs. The balance of Rs. 6,665 is carried forward. The dividend of 10 percent declared for the year is on the increased capital, against 16 percent paid on the old capital in the previous year. During the year, a new issue of capital of Rs. 4.69 lakhs divided into 93,750 equity shares of Rs. 5 each, was offered to the shareholders. Out of this, 83,434 shares of Rs. 5 each, making a total of Rs. 4.17 lakhs, have been taken up by the shareholders. The Rs. 5 paid-up shares of the Company are now quoted in the market at Rs. 8.15 c.d.

Price Stamping on Cloth

Numerous complaints have been heard from the textile trade from time to time that the gentlemen's agreement between the Government and the textile industry leading to an agreed formula on price stamping is not being properly observed. Textile mills, it is stated, have ceased the production of old varieties and have replaced them by new ones by a manipulation of qualities as a result of a change in processing. The stamped prices of new varieties are said to be much higher than those of varieties whose production has been stopped by the mills. Not many weeks ago, Mr. Chandulal B. Satiya, president of the Maskati Kapad Market Mahajan, Ahmedabad, drew the attention of the Government as to how the mills were violating the price formula. He urged it to do away with price stamping since it had not benefited the consumer in any way. Replying to various questions on cloth prices, the Central Commerce Minister, Mr. Nityanand Kanungo, recently said in the Lok Sabha that the approval of the Textile Commissioner was to be taken before a mill produced a new variety and that its price had also to be got approved. It would not, therefore, be correct to say that the formula for fixing prices was being evaded. Mr. Kanungo conceded that representations from some associations about the difficulties in securing goods had been received but he added that the textile goods, by and large, were reported to be available at the stamped prices. He said that the Government was reviewing the situation.

The Indian Cotton Mills Federation reviewed the working of the industry's voluntary scheme relating to price stamping on cloth and yarn at its recent meeting and released a Press note which reads: "In order to ensure that the stamped prices were not frequently changed, it was felt that the introduction of new sorts should be restricted. To achieve this end, the production of new sorts by any mill would be restricted to one variety a month for every 200 looms installed." The fact that the Federation should have thought it necessary to restrict the production of new sorts implies that mills have been producing new varieties on a large scale. Surely, the change in the production pattern has not been prompted by the desire to cater to the tastes of consumers; its chief object has been to circumvent the price-fixing formula and avail itself of higher prices. Its decision also implies that it is not the Textile Commissioner but the Federation which is restricting the production of new varieties. But it runs counter to Mr. Kanungo's statement in the Lok Sabha that the production and prices of new sorts are having the prior approval of the Textile Commissioner. Probably, the most pertinent question is whether by asking the mills to restrict the production of new sorts to one variety a month for every 200 looms installed, the Federation is imposing any curb worth the name. There are 65 mills in Bombay having 63,407 looms, giving an average of 975 looms a mill. Ahmedabad has 71 mills with 41,997 looms which gives an average of 600 looms a mill. On the basis of one variety a month for every 200 looms, the mills in Bombay can introduce about 60 varieties a year while Ahmedabad mills can produce 36 new varieties. This means that the mills can change nearly all the varieties, if they so desire, thereby defeating the purpose of the price stamping scheme. While the Federation's directive—or

is it merely an advice?—is unlikely to have any important effect on restricting the new varieties the industry can introduce, the changing market conditions might force the mills to avoid the production of new sorts. Meanwhile, enquiries in the trade indicate that new varieties are becoming extremely difficult to sell because of their relatively higher prices.

Cotton Export Prospects

Raw cotton shipments from India during the 1960-61 season ended August totalled 288,806 bales (392 lbs each), against 198,433 bales during the same period in the previous season. The performance could have been still better if the Government heeded the trade's advice because there still exists a sizeable exportable surplus of Bengal Deshi from the previous season's crop which has been allowed to deteriorate in quality in spite of the prospects of a better crop in the new season. Japan continued to top the list of overseas buyers accounting for as much as 228,008 bales out of a total of 288,806 bales. She purchased 169,945 bales during the previous season. The Continent is second on the list with 23,524 bales followed by Hongkong 19,875 bales, the U.S.A. 10,238 bales, the U.K. 6,765 bales and others 396 bales. The export figures include shipments of zoda and yellow pickings. The total quantity for which export quotas were issued during the season amounted to 270,000 bales, made up of 190,000 bales of Bengal Deshi, 50,000 bales of cotton stapling 23/32 inch and below and 30,000 bales of cotton stapling 3/4 inch and below. Heavy and untimely rains in Punjab, Vidarbha and some other producing areas have led the market to revise its crop ideas from 5 million or 5.1 million bales to 4.7 million or 4.8 million bales, about 500,000 to 600,000 bales less than in 1959-61. Fortunately, the damage to the Deshi crop has not been heavy, and the new crop is expected to be 50,000 bales to 75,000 bales more than in the previous season. A smaller 1961-62 crop should not, therefore, adversely affect the export prospects. With weather reports continuing to be unfavourable, cotton futures have recorded an impressive rise since the beginning of the current month. Jarilla March, which was quoted around Rs. 594.50 on 6th September, was bid up to Rs. 612.25—a new high for the season—on 16th September.

Scrap Exports Rise

Scrap exports from India in August totalled 35,624 metric tons, against 41,094 metric tons in July and 24,229 metric tons in August 1960. The August figure raises the total for the first eight months of the current year to 274,873 metric tons which is 62,000 tons more than in January-August 1960. Larger shipments this year are due partly to the increased availability of scrap and partly to the exporters' anxiety to use as much of their January-June licences as possible because from October, shipments will be against new licences which would attract a heavy incidence of the export levy. Exporters say that scrap shipments could have easily exceeded 300,000 tons had the ocean freight been economic. Periodical changes in the scrap export policy are said to have given rise to some unhealthy fluctuations in the freight rates which have affected scrap shipments. Although the carrying capacity of the Bombay-Japan route has been increased during the year, the Japan-Persian Gulf-Japan Conference has continued to vary its freight rates. The average rate of freight for scrap which stood around 65s a ton in 1960 and was around 70s before June 1961 has risen to 75s. Against the current year's barge ceiling of 360,000 tons, the fulfilment so far is placed around 200,000 tons. The Government is expected to review the position this month to complete the allotment of unallotted portion of the ceiling as well as to re-allot quantities on the basis of individual performance. But in view of the severe export curbs and the heavy incidence of export levy imposed by the July-December scrap policy, exporters do not appear to be keen on new allotments. Meanwhile, the trade continues to await the outcome of the representation to the Government urging the withdrawal of the new export restrictions and levies.

Indo-U.K. Textile Pact Modified

The Indo-U.K. Textile Agreement, which came into effect on 1st January, 1960, has been modified to bring it into line with the new arrangements with Hongkong. The revised agreement with the latter provides for the extension of voluntary quota restriction for another 11 months till the end of 1962, in return for which Britain has agreed to raise the ceiling for Hongkong from the present 164 million square yards to 185 million square yards of cloth for retention in the British home market. The increased export quota assigned to

Hongkong has necessitated a similar upward revision of the quotas given to India and Pakistan under the current agreement which expires on 31st December, 1962. India's share for 1962 has been raised from 175 million square yards to 195 million square yards and the ceiling for Pakistan from 38 million to 42.4 million square yards. The supplementary quotas for 1961 are 11 million square yards for India and 2.3 million square yards for Pakistan. The revised arrangements raise the total quota for Hongkong, India and Pakistan—the three major Commonwealth suppliers—to 422.4 million square yards, which represents nearly half the current level of annual imports into Britain. Of Hongkong's 185 million yards quota, 100 million square yards will be for piecegoods and 65 million for made-up goods. The remaining 20 million square yards will be allocated at the Hongkong Government's discretion.

In addition to the increased quotas, reviews of the state of trade will be made every three months, starting in November, with a view to issuing supplementary quotas for the three countries to enable them to compete for their normal share of the market. A "target share" for imports from the three countries has been fixed at 15 percent of retained imports into the U.K. from all sources of grey cloth and of the cloth equivalent of made-up goods plus 20 percent of retained imports from all sources of cloth other than grey cloth. If the "target share" of the three countries for the latest three months for which figures are available exceeds the quarterly rate of the basic quotas for 1962, that is, 106 million square yards a quarter, a supplementary quota equal to the difference will be issued, provided that the state of weavers' order-books in the U.K. industry does not require a reduction in the supplement so calculated. The reduction in the supplementary quotas made because the order-books are less than 20 weeks may be carried forward and may be used when order-books reach 20 weeks, at a rate to be decided by the U.K. Government after consulting the Hongkong, Indian and Pakistani authorities. If there is evidence that these arrangements are producing results inconsistent with their objects, consultations will take place at the request of any of the authorities concerned. In 1962, the administration of the licensing control will be carried out in India and Pakistan and not in the U.K. as hitherto. The arrangements for the transfer are being worked out.

Industrial Activity

Corrected for seasonal fluctuations, Capital's Index of Industrial Activity increased by one point during January 1961. There were rises in sugar, coal, pig iron, finished steel and paper. But tea, jute, yarn, cloth, cement, tyres, motor-cars, bicycles, electricity and railway ton-miles declined.

TRIAL BY JURY

WE sincerely trust that, *The Pioneer* notwithstanding, the Government have no intention of tinkering further with the jury system in India. If any such intention has entered their minds, we would beg them to disabuse themselves of it at once. It will raise a hornet's nest about them and set all sections of the community in opposition to them. *The Pioneer* writes thus:—"There is reason to believe that the authorities are considering whether trial by jury should be ended or mended. As regards ending it, it is proposed that there should be a special tribunal of three judges, either as a substitute for judge and jury, or as an alternative tribunal for special cases, or in cases where a re-trial is ordered. We do not believe that any of these proposals could be carried out at present." Now, there is really nothing wrong whatever in the jury system; if any reform is needed, it is in the Judges. The fact is that a great deal of unnecessary fuss has been made by *The Pioneer* over the Hoff case, and that paper is under the delusion that the jury in that case did not return a proper verdict. We have no hesitation in saying that no intelligent person, who watched the course of that case, can be other than satisfied with the verdict of the jury. The dissatisfaction is with the conduct of Mr. Justice Aikman, who presided at the trial, and who, from a study of the proceedings, would lead one to believe that he was counsel for the prosecution, and a very virulent one too, instead of the Judge presiding over the trial, determined that the man should have a fair hearing. We must enter our emphatic protest against the proposal of *The Pioneer* that there should be a special class of jurors composed of Government officials for the trial of cases when apparently the ordinary jury has considered that the prisoner should be acquitted, and has consequently refused to convict. Such a jury would only lead to the impression that the policy of the criminal law in India was to assume a man was guilty until he was proved to be innocent. We have not yet descended to that depth of degradation.

26th September, 1961

A Ditcher's Diary

I DO NOT FOR ONE MOMENT BELIEVE THAT BRITISH policy towards the United Nations in Katanga, such as it was, brought Indo-British relations to a crisis remotely comparable to that produced by British action at Suez. Both Britain and India, I believe, are too mature to let an isolated broadcast rupture relations based on firmer foundations than the hurried phrasing of a reporter's despatch. Yet, many were obviously perturbed. Sir Paul Gore-Booth would not otherwise have called a Press conference; the B.B.C. would not otherwise have explained its policy; and the British Government would not otherwise have expressed regret to India House. I approve of none of these actions; and no party has come out of this ritual with credit. It is easy to imagine that there was pressure from India House. But why? I shall be sorry for the Government of India if it is ever held responsible for anything I write or my other colleagues in the profession do. India, like Britain, has a free Press; and that should be that. (When Dr. Nkrumah uses the same argument, the only sensible thing to do is to laugh and leave it there.) The B.B.C. was entirely right in standing by its man—if it was satisfied that Mr. Williams had reported no more than he had seen. Only, Mr. Williams needs to be reminded that in a scene as confused as Katanga must have been, a reporter sees only a little and should make that clear. I have no doubt in my mind that the Indian troops behaved exactly as any other country's would have in similar circumstances. As for Sir Paul's and Mr. Heath's efforts to have everyone believe that British support for the U.N. in the Congo is complete, I do not see why even that was necessary. New Delhi has disagreed with the U.N. often enough; and not on Kashmir alone. Why cannot London? I have no strong views on the territorial integrity of the Congo; I will not press the point that African nationalists contradict themselves when they declare all African boundaries to be arbitrary and then insist on maintaining what Belgium ordained. Those who value Indo-British accord, as I do with most Indians I know, must deplore the habit of some reporters of bringing the whole fabric of the relationship into question every time they have to report particular differences. I do not care for friends who do not frequently differ with me or will not let me differ from them.

THE FACT THAT CRACKS ARE REPORTED TO HAVE appeared in the Central Municipal Building on Surendranath Banerjee Road does not surprise me in the least. I have always been genuinely puzzled that the structure should continue to stand at all under its weight of accumulated filth. It is a building I enter only when I have to, but on no occasion have I left it without a profound feeling that one of the best contributions I could make to the efficiency and beauty of this city would be to put a light to it. Nobody who has lived in Calcutta any length of time is going to be startled by a bit of dirt or an unsavoury smell. But I defy anybody, except of course those who work in it, to walk through this municipal building and emerge without a queasy feeling under the pinny. The only thing that can be said for it is that it is a fitting symbol of the body it represents: nobody seeing it could mistake the character of the or-

ganisation he is dealing with. My only hope is that now the Town Hall has been abandoned by the State Government it will not be handed over to the Corporation to desecrate. Not that this fate cannot be expected of all public buildings in this city sooner or later. I am always mildly surprised how well Writers' Buildings are maintained, at least those parts of it I see. It is not a new structure and it must be a struggle keeping it in some kind of order. But the condition of the New Secretariat on Strand Road is deplorable considering that it has only been up for six years or so. The last time I was there it was almost impossible to admire the view from one of the upper-floor windows because they had obviously not been cleaned since the building was put up. The corridors were thick with dust, only one of the lifts was working and the betel stains were thick at every corner. What possible excuse there can be for such neglect in a State which complains of its unemployment problem is something which defeats me. I can only conclude that it is a symptom of something deeper—a lack of pride in the appearance and dignity of government, as well as in the details of its execution. But Calcutta is not necessarily alone in this. Nowhere is the dirt and chaos in public buildings quite so acute as here, but when I was in New Delhi last time I was appalled at the state of some of the new buildings which had only just been completed at vast public expense. There was the same indifference there to hygiene and appearance. So if the capital, then what price Calcutta? Although Calcutta always has to go one better when it comes to such matters as these. To return to Surendranath Banerjee Road, I can truthfully say that I have never seen a public structure which more amply typifies that adjective Kipling once used about Calcutta, "Pestilential".

THERE IS AN ADMIRABLE AMBIGUITY ABOUT Mr. Nehru's recent statement on the kind of money he wants to come into the coffers of the Congress Party. Hedging is not an exclusively economic operation; and those who recently made public their desire to donate to the Congress as well as to some other Parties will not get away with the plausible argument that since they believe in a multi-Party democracy their decision only shows how very democratic they are. Many will no doubt construe Mr. Nehru's remarks to mean that they must give the Congress all they want to give on this account—or not at all. There is something touching about this insistence on absolute loyalty; "faith" is the word Mr. Nehru used. Such single-minded devotion, such complete acceptance of another Party's policies or principles, such total identification of oneself with a political organisation, seem to belong to an age gone by; if indeed these things really obtained in any. It would be unfair to consider Mr. Nehru's remarks as a threat that poly-pointed donations will be culpable. In any event rewards for donations to political Parties are usually unpublicised; so must be their penalties too. To put the matter thus is to expose the whole hypocrisy of the relevance of faith to company donations to political Parties. It cannot be that Mr. Nehru does not know it; indeed, that may be the reason why, as far as I can remem-

ber, Mr. Nehru has never held the office of Treasurer in the Congress Party. These things are better left to other people, so that one can go on talking of faith and belief in ideals and principles. Not that these latter do not exist; but winning an election in a country the size of India needs a lot of money; and Mr. Nehru is too good a Congressman to do anything that might impede the flow of funds to his Party. The fact that the Congress is now in absolute control of the country makes it virtually certain that most of the money available will go to the Congress. The near-certainty that the Congress will be returned again is double insurance. If some throw a crumb or two to the Swatantra and some others, their idea, I imagine, is not to see those Parties win but only to influence Congress policies in particular respects. And Mr. Nehru knows well enough that his Party's policies are often a variable quantity. The rest is noise.

OF ALL THE MANY ACCUSATIONS I HAVE LEVELLED at me from time to time, the one I resent most is that I am "conservative." I protest most strongly that I am nothing of the kind. I may be moderate and cautious—as quoted by the Oxford English Dictionary in defining the word conservative—or at least I like to think I am. But I would have said that such virtues are to be expected of any sensible person whatever the label attached to him. What I am certainly not is "disposed towards maintaining things as they are", although again I share what I hope is the distrust of all intelligent people for change for change's sake. Most important, I do not possess that characteristic which I find identified with all true conservatives—a stubborn imperviousness to new ideas. It is odd that the people who accuse me in this way are usually those who call themselves "progressives", or "socialists" or "idealists", or who give themselves other fashionable but question-begging titles. I confess I am inclined to find the views of such people rather tedious, if only because one half of them are common to all men of goodwill, while the other half are usually pure humbug. In this respect perhaps I am conservative. I am inclined to respect facts while acknowledging that ideas are paramount; and I do contend with some stubbornness that human values are the only ones that are worth struggling for. What I do not accept is that those who call themselves by fancy titles have a monopoly of progressive thinking, good intentions and constructive ideas. In fact, in my experience it is usually quite the contrary. I know that politicians have to think up new labels and catch-phrases or be prepared to lose elections to those who can. But it is my contention that there are only two forms of thinking: the liberal and pragmatic, and the conservative and hide-bound. Into the first category I put myself. Into the second all those people who for some reason must hold on to a theory, an ideology, or a given set of circumstances instead of using the critical faculties which they ought to have been born with. It is the ideologists of this world who are the true conservatives, because it is they who reject all ideas except their own and any circumstances which do not give them their own way. But not all my accusers are as fanatical as this. Most of them are just people who disagree with me. That is why I am blamed for being red as often as I am for being blue. I shall have to think carefully why it is that I do not resent the former quite as much.

INDIA STEAMSHIP COMPANY LIMITED

CHAIRMAN, SIR A. RAMASWAMI MUDALIAR'S ADDRESS

Speech delivered by the Chairman, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L.(Oxon.), at the Annual General Meeting of the India Steamship Co., Ltd., held on the 26th September, 1961.

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March, 1961, has been in your possession for sometime and with your permission I shall take them as read.

The Directors' Report shows that the freight earned during the year was Rs. 8,63,00,355 as against Rs. 8,38,59,427 in the previous year. The total number of Liner voyages during the year was 49 compared to 47.5 in the previous year. Though the freight earned was higher than last year, owing to a variety of reasons, I regret to state that the net result is a substantial loss to the Company.

Naval Disasters

At the beginning of the year, the Company suffered a serious loss by the sinking of the s.s. 'Indian Navigator' after an explosion on board. All the crew except one seaman were rescued. A more serious and sadder calamity was the loss of the lives of some of the Officers and Crew of a sister ship s.s. 'Indian Success' in their effort to salvage the abandoned vessel, the s.s. 'Indian Navigator'. As both the disasters are subject of a formal enquiry, it would not be proper for me to comment on them, except to the extent that I share, and I am sure you also do, the tribute that has been paid in the Directors' Report to the gallant Officers and Crew.

Overseas Trade and Freight Rates

During the last two years, I referred to the decline in International trade and to its effect on international shipping. During the year under review the position was not any better than it was last year. In an effort to chase cargo and to keep up with the severe competition both of other shipping lines in the liner trade, and of the tramps, your ships have had to call at an even greater number of ports to secure the cargo, resulting in heavy expenses.

The rates of freight were generally at an uneconomic level—most of the rates remaining the same

as they were in 1957. Meanwhile, in the intervening period, costs in every direction have gone up. Wages of staff, both floating and on the land, have had to be increased. Concessions had to be made by way of longer leave periods for the floating staff, necessitating additional personnel for the purpose. Stevedoring charges in most ports had to be revised in accordance with the rules and regulations in these ports. Any freight increase required very careful consideration and could not be readily equated to the increased costs of running the service. Some of the countries in the trade were anxious to promote export of commodities and manufactured goods in a desire to earn foreign exchange and to preserve the balance of payment position of their Governments. Conflicting consideration such as these have to a large extent prevented the easier course which would otherwise have been adopted, of increasing freight rates to meet extra and heavy expenditure. The position is now being studied both objectively and scientifically and an effort is being made to see whether freights may be increased on commodities which can bear the increase and still maintain their competitive positions in world markets.

I referred to the keen competition that prevailed last year and the unhealthy and unfair means by which a few of the companies or their agents tried to obtain the cargo by undercutting freight rates and giving larger rates of rebate to the Shippers. These and other practices such as the manner in which some of the forwarding agents, particularly on the Continent of Europe, tried to corner the cargoes, were referred to by me in my last address and these practices continued during the greater part of the year under review.

A Partial Solution

In my speech last year I referred to a possible solution that was being attempted at by the two Indian Lines in the Conference, along with other Conference Lines, who faced the same problems and were equally anxious to find a solution to put an end to unhealthy competition and to the malpractices. I stated that the solution suggested was that the allocation of freight earnings of the Conference, in certain proportions over a term of years, providing at the same time, for the growth and development of the fleets of under-developed countries, through a defined and reasonable exaltation of the rate of allocation during the period. Negotiations for this purpose were started as early as 1959 at a Conference in Delhi, between the representatives of British and foreign lines and the representatives of Indian Lines, and they were continued in London and Hamburg in the early part of 1960. The result, however, was not promising at that stage. Meanwhile the evils enumerated above were on the increase. At last, at a meeting of the Representatives of these Lines and the two Indian Lines in Delhi, in November, 1960, an agreement was arrived at, defining the percentages of earnings which the lines under different flags would be allocated at the end of each year. It is a matter of some satisfaction that this arrangement has been arrived at and is considered beneficial by all the Lines concerned, particularly as it removes the unhealthy competition, various kinds of malpractices and ensures the better working of the Conference system, as much in the interests of Shippers as of the shipping lines. The Pool system in the India-U.K./North Continent Trade, has come into effect from 1st January, 1961, and in two other Conferences of the Continent, viz. the French Conference, and the Western Italy Conference, came into effect from 1st April, 1961. It has to be emphasised that by this arrangement Shippers will not be inconvenienced to the slightest extent and in fact the movement of cargo to and from Continental ports will be better facilitated. It is also hoped, provided that the international trade does not deteriorate, and there is no reason to expect it will, the earnings of the various companies will improve by this arrangement. I would only like to add that the results of this Pool System, owing to the date at which it came into effect, are not reflected in the Balance Sheet for the year under review.

Port Delays

But all attempts at improving the financial position of the companies will prove infructuous if the delays that are occurring at the ports both in India and abroad are not seriously checked and curtailed. One of the main reasons for the serious loss which your Company along with others has sustained, is the extraordinarily long hold up of the vessels at various ports during the year. The Directors' Report refers to the fact that 322 days were lost in the ports in the year under report as against 88 days in the previous year when vessels were idle without loading or unloading operations. The unofficial strikes in the U.K. and the delays in some of the Indian Ports have largely contributed to this unfortunate result. When it is remembered that on the company's new vessels, and they are in a majority in the composition of our fleet, Rs. 10,000 is lost every day the vessel is idle in port, it requires little calculation to assess the loss to the Company on this account alone. The tugmen's strike at Bombay which held up the port working for many days, is only an instance in point. The unofficial strikes in the U.K., particularly in London and Liverpool, which manifested themselves all too frequently during the year, contributed substantially to the loss incurred by companies.

Shipping—Public and Private

While the position is as I have stated, there has arisen recently a doubt as to the part that Shipping in the Public Sector, the Shipping Corporation of India, can or should play in relation to the Private Sector. Is it proper for the Public Sector to come in competition on routes which the Private Sector has been handling so far and if so to what extent is this desirable or justifiable? The question has come into prominence in connection with the recent entry of the Western Shipping Corporation into the

India—U.K./Continent Conference, and I should like to take this opportunity of clarifying the position. The Western Shipping Corporation applied for a limited number of ships being allowed to ply in the Conference route as ships of a member of the Conference. The Corporation with the full approval of Government agreed on the number of ships that would ply in this route and the period during which that fixed number of ships will operate. With the agreement and approval of the two Indian Lines on this route, the Conference admitted the Shipping Corporation to its membership. In this connection there has been some criticism that the Government owned Corporation should not have entered into competition with the Private shipping concerns, and the statement of Hon'ble Shri Lal Bahadur Shastri, when he was Minister of Transport, has been quoted which was as follows: "I must state it very clearly that it is not our intention that shipping in the Public Sector should run in competition on routes which private shipping companies have established themselves". I believe that this will still be the basic policy in the expansion of shipping, whether in the Public Sector or in the Private Sector. The vessels of the Indian Flag whatever route they may be engaged in, are facing worldwide competition in many ways. They do not have the protection of tariffs as inland industries have and it is therefore essential that no Line or Lines engaged in a particular route should have over competition from the same flag vessels, to the ultimate detriment of all the Lines of the Flag, whether it be the vessels of the Public Sector or of the Private Sector. The only principle on which either kind of vessels can enter a route which has been established by other Lines of the same Flag, should be as stated by the Chairman of the National Shipping Board "The new Line must be supplementary to and not in displacement of the existing shipping Lines".

Development Rebate

The question of expanding shipping tonnage whether for shipping companies already in operation or for new companies, presents a problem in view of the legislation regarding development rebate, which was passed some time back. The development rebate has been allowed generously at 40 per cent of the cost of the ship. But the onerous character of this allowance arises out of the fact that 75 per cent of this allowance has to be provided out of the profits before any dividend can be declared. Shipping companies have repeatedly represented to the Government that the provision of this amount out of the profits of the company may be extended over a period of years so that the prospect of payment of dividend to Shareholders may not be seriously affected. The National Shipping Board has considered this problem on more than one occasion and has unanimously adopted the recommendation that the development rebate to be provided for by the companies, may be spread over a period of years. These representations and recommendations have not so far helped in modifying the provisions regarding development rebate. I would only like to reiterate our request for the Government giving further consideration to this question.

Looking Ahead

I do not desire to strike an unduly pessimistic note as to the future of your Company. I have reiterated often that shipping is a peculiar industry, where the boom periods are few and the lean periods are many. While we are going through a lean period, I do venture to express the hope that we may turn the corner before long. There has been in many quarters a very reasonable and legitimate demand that Indian shipping should expand fast and that during the Third Plan period, a larger amount of tonnage should be added than is provided for at present. While I myself have advocated the expansion of tonnage and your Company has established its belief in such expansion, I would like to enter a caveat against hasty and illtimed expansion under the circumstances in which shipping, all over the world is today. Such expansion requires very deep thinking. The question how and on what routes such expanded tonnage should be used, whether the expansion in tonnage should take the form of tramps or liner cargo vessels, or tanker or passenger vessels—all these aspects of expansion require careful consideration. The National Shipping Board has paid some attention to these factors and its recommendations will, I hope, engage the serious attention of shipping companies and of Government. I am certain that the Ministry of Transport is giving careful thought to these questions. In Dr. P. Subbarayan, the Minister of Transport and Shri Raj Bahadur, the Minister of Shipping, we have gentlemen, enthusiastic and eager for the promotion of Indian Shipping, but who are also at the same time, realists and cautious in approaching these problems. To them, Indian shipping owes a deep debt of gratitude for the encouragement they have given and the support they have extended, particularly in the Pool negotiations. The Ministry of Transport, the Secretary to the Ministry of Transport, the Director General of Shipping, his deputies and assistants, have shown their concern in and anxiety to help Indian shipping, and to them we owe our thanks. They have helped us with advice and assistance at all times. The Shipping Coordination Committee has been reorganised and promises to be of real help to Indian shipping whatever the routes may be. I was rather critical of the Chartering activities of the State Trading Corporation in my speech last year and I am glad to note that this Charter Committee has now been reconstituted and my hope that it will be on a better, broader and firmer basis with more clear policies adopted is likely to be fulfilled.

Tribute

The financial results of the Company does not reflect the hard work and the devoted attention which officers, both ashore and afloat, and the staff of the Company have rendered during the year. In fact, owing to the conditions mentioned earlier, their responsibilities have been greater and their work heavier and I should like to express the Board's appreciation of their services. I should also like to convey the thanks of the Company to the Shippers who have extended their continued and firm support to us, and to the brokers and forwarding agents who have shown confidence in us and in the quality of our shipping service.

(This does not purport to be the record of Proceedings of the Annual General Meeting.)

ORISSA CEMENT LIMITED

CHAIRMAN, MR. J. DALMIA'S REVIEW

Summary of the Speech of the Chairman, Mr. J. Dalmia, delivered at the Eleventh Annual General Meeting of the Company held at Rajgangpur (Orissa State) on 21st September, 1961.

Friends:

I have great pleasure in welcoming you to the Eleventh Annual General Meeting of your Company.

You will be glad to know that a long term agreement has been reached with the Workers of your Company in regard to wages, bonus and other demands. As a result of this agreement which would remain in force for a period of 4 years, I expect that industrial peace would be maintained and with joint efforts, there would be all-round improvement in the production and the working results of your Company would be better than last year.

The Cement Industry is suffering a great deal on account of the uneconomic retention prices recommended by the Tariff Commission in 1958. In determining the retention prices the Tariff Commission made estimates of cost on the assumption that production would equal the rated manufacturing capacity of the plants. Even in the major cement producing countries of Europe, the actual production ranges around 90% of the rated capacity. The position in India is no way better. The utilisation of the installed capacity of the Industry last year was only 85%. The unrealistic estimates of production made by the Tariff Commission for the purpose of cost calculation led to fixation of very low retention prices. Moreover, there have been various increases in costs since the last Price Enquiry. The retention prices fixed in 1958 were to remain in force till 30th June, 1961. It is hoped that the Commission would adopt a more considerate approach this time and the Industry would be given fair retention prices with retrospective effect from the 1st of July, 1961. This would enable the industry to attract capital for new projects and to increase the installed capacity to the level of 15 million tonnes by 1965-66, the target set under the Third Five Year Plan.

Slag Cement

Cement supplies can be increased quickly and with relatively smaller capital investment and lesser outlay on foreign exchange by expanding the manufacture of slag cement. Your Company was granted a licence in October, 1957, for producing slag cement on the basis of supply of granulated slag from Hindustan Steel Limited and I hope that the difficulties in the way of slag granulation will be resolved and slag will now become available early in view of the very considerable importance that is being given to the production of slag cement in the Third Five Year Plan.

The scheme of granting subsidies for coal supplied by the sea-rail route to the Southern and Western Regions will, I am sure, encourage the dispersal of the industries all over the country in the larger interests of our nation. Coal and fuel oil should be delivered at all rail-heads at an equalised price based on the calorific value, irrespective of the mode and route of transport. All industries will thereby receive supplies from the nearest source either of coal or fuel oil as the case may be and this would increase the consumption of fuel oil which is available.

Consumption of Refractories

There is a very wide divergence of expert opinion in India on the consumption rate of refractories per ton of ingot steel produced. As the main consumer of refractories, the Steel Industry controls the pattern of the demand. Thus, with the present trend towards adoption of the basic roof in the open hearth furnaces instead of the silica roof, the overall consumption of fireclay and silica bricks would fall while that of the basic bricks would increase. This is illustrated by the estimates of demand and installed capacity for various kinds of refractories required by the end of the Third Plan as shown in the following table:—

Item	(In lakh tons)				
	Silica Roof System		Basic Roof System		Capacity existing & additional capacity licensed.
	Demand	Capacity required by 1965-66	Demand	Capacity required by 1965-66	
Fireclay Refractories	10.0	12.0	7.0	9.0	15.0
Silica Refractories	3.5	4.5	1.8	2.2	3.3
Basic Refractories	2.0	2.5	3.5	4.3	3.0
	15.5	19.0	12.3	15.5	21.3

The impact of this uncertainty regarding the pattern and quantum of the future demand of refractories has created a certain imbalance in the installed and licensed capacities of the different types of refractories vis-a-vis the potential requirements at the end of the Third Five Year Plan. For instance, the above figures will show that the total capacity existing and licensed for fireclay refractories is far in excess of what is required. With the increasing shift towards silica Refractories there, however, appears to be some scope for further expansion of the Basic Refractories capacity. The pattern and volume of future demand for refractories in our country should be determined as early as possible so that the Industry may develop on proper lines, unhealthy expansion may be avoided, and the country's limited foreign and internal resources of employed gainfully.

Basic Bricks Capacity

Your Company has undertaken a substantial expansion of its basic bricks capacity including the manufacture of chemically bonded refractories. Success has also been achieved in producing high quality blast furnace and ladle bricks, which it is hoped will be supplied in large quantities to the Steel Industry, thus meeting a very important item of refractories which have been mainly imported so far.

I had referred last year to the need for proper exploration, utilisation and conservation of the essential raw materials required by the Refractory Industry. I would like to mention particularly refractory grade chromite ore which is required in very large quantities for certain types of basic bricks, and which is in very short supply. The position could be improved by a closer control on the quality of chrome ore which is being exported, by a more rational and broader-based exploitation and utilisation of known deposits and by a more intensive search for new deposits. As the major actual consumer, the Refractory Industry should be given an over-riding preference over others in exploiting the deposits of these raw materials.

Before I conclude, I would like to express our sincere appreciation of the services rendered by the workers, staff and officers of the Company during the year under review.

HASTINGS STREET

A House of Memories

No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.

Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

MUKAND IRON & STEEL WORKS LTD.

CHAIRMAN, MR. KAMALNAYAN BAJAJ'S ADDRESS

At the 23rd Annual General Meeting of MUKAND IRON & STEEL WORKS LTD., held on Friday, the 22nd September, 1961 at Bombay, Mr. Kamalnayan Bajaj, the Chairman, made the following observations:

I have great pleasure in extending you a cordial welcome.

The Second Plan period is over. We have embarked on the Third. Apart from the objectives to be achieved during the Plan period, it outlines the development over the next fifteen years and more.

Industrial projects of the Central Government have been divided into three categories: (i) projects carried over from the Second Plan; (ii) new projects for which external credits are assured, wholly or partly; and (iii) other projects. Provision has been made for compensating the shortfalls of the Second Plan. This should ensure a more realistic approach to the fulfilment of objectives and avoid waste. I had made a somewhat similar suggestion last year to divide the programme of the Plan into two parts, the first consisting of essential projects depending mainly on internal resources and the second consisting of remaining schemes listed in order of priority to be taken up as and when external assistance is available.

Industrial expansion is proceeding at an accelerated tempo in the country. New companies are formed, existing companies expanded and foreign technical collaboration agreements concluded almost every day. The Second Plan with its emphasis on heavy industry has provided the mainspring for this phenomenal growth.

Industrial Production

The index of industrial production increased by about 39 per cent during the First Plan and nearly doubled during the Second. The Third Plan target of 329 per cent will probably be exceeded as a large number of new industries have been excluded from estimates.

The persistent upward trend in prices and the rising cost of living give cause for anxiety. Over the last five years the index of wholesale prices has gone up by about 30 per cent, industrial raw materials by 45 per cent, manufactures by 25 per cent and cost of living by 30 per cent. Part of this increase is corrective to the earlier decline towards the end of the First Plan. The successful implementation of the Third and future Plans and an equitable distribution of their benefits will require a close watch on prices and prompt remedial measures to prevent the imbalance likely to result from large fluctuations.

When the country is planning for comprehensive development, it is unfortunate that diversions are being created by certain interests who are exploiting parochial, communal and caste prejudices. We should refuse to be influenced by such narrow sectarian considerations and work for national integration, integrity and discipline without which no people or nation could ever dream of achieving greatness.

The success of our Plans will depend largely on the enthusiastic participation of the people. Panchayats will ensure such participation as they are entrusted with responsibility for development. The Panchayats are in keeping with our traditions. They are suited to our genius. But in recent years we have lost touch with the system. Elections to the Panchayats are influenced by party and group politics and communalism and casteism. This has often created bitterness. I am sure this is only a passing phase. As we get more education and experience in the working of democracy, we shall rise above petty considerations.

Shortage of Raw Materials

Shortage of industrial raw materials has been hampering development of many industries. Imports of even essential raw materials are restricted. Various steps are being taken to provide for more imports through barter deals, export incentives, rupee payments and foreign assistance. But the problem needs constant watching and corrective action, whenever necessary.

Ultimately we must strive for self-sufficiency. It is necessary to make a realistic appraisal of our needs and plan for their fulfilment. Ours is a mixed economy. The public and the private sectors are complementary and we must, therefore, plan for overall development on a national basis.

The Government seems to have underestimated the importance and potentialities of the rerolling industry, which looks small and unimposing in comparison with the huge integrated steel plants. That it is a necessary complement to the main iron and steel industry cannot be gainsaid. Over the last thirty years, rising from humble beginnings and despite heavy odds, the industry has achieved a position of national importance. Comparatively low

initial investment and higher employment potential, dispersal over widely scattered areas in proximity to consuming centres, adaptability to produce easily and economically a variety of sections in small quantities to meet regional and local demands, ability to create pools of technicians and skilled labour in many parts of the country are significant features which cannot be ignored. With an investment of Rs. 25 crores the industry employed about 35,000 people and rolled 9 lakh tons of steel products, which is about one-third of the total national production of finished steel, in 1960-61.

Installed Capacity

The rerolling industry has an installed capacity of nearly 2 million tons, which is greater than the projected output of Bhilai or Rourkela at the end of the Third Plan. It is a national waste to allow part of this capacity to remain unutilised, while at the same time planning to increase the rolling capacity of the main producers by installing new machinery at heavy cost.

The allocation of one million tons of billets to rollers for the main producers at the end of the Third Plan is far from adequate. It needs to be drastically revised. The prosperity of this industry essential to the national economy warrants that this is the least that should be done.

The rerolling industry is passing through a crisis of shortage of billets and melting scrap. The Government is apprised of the situation. Steps should be taken to meet the current needs of the industry by larger allocation of billets from the main producers, supplemented by imports. It is also essential that the Government should progressively ban the export of ferrous scrap which can be used within the country. We should utilise it to the fullest extent and export finished products instead.

The training of personnel at all levels, especially managerial and technological, needs special attention. In the absence of a pool of such trained personnel, avoidable wastage will increase and our industrial growth will be hampered. We shall not only have to institute special courses of study for existing personnel, but also go down to the roots by orienting our system of education to build up a vast cadre of scientists, technologists, engineers and managers.

New Wire Rod Mill

The Company is planning to put up a new wire rod mill along with a 20-ton electric furnace at Kalwa. The output of this furnace will provide about half of our requirements of billets for rerolling.

The delay in the acquisition of land at Kalwa and the larger requirement of finance have necessitated a fresh application for loan to the Industrial Credit & Investment Corporation of India Ltd. A preliminary project estimate has been submitted to the ICICI. The Commonwealth Development Finance Co. Ltd. of the United Kingdom has also evinced interest in our project. We are hopeful of finalising arrangements in due course.

We have put up a third furnace of 4-ton capacity at Kurla. This has been largely fabricated by us. Due to shortage of power there has been a slight delay, but it is expected to go into production shortly.

The foundry is being expanded along with the increase in melting capacity. We hope to reach an output of 750 tonnes per month by the end of 1962, and 1,000 tonnes by 1963.

In order to meet the demand for thinner sections our rolling mills are being upgraded with additional equipment, which has also been largely fabricated by us. We expect to commission it shortly.

The covered area at Kurla is being progressively enlarged and additional material-handling equipment has been acquired.

The Workers' Canteen has been renovated and the Employees are now provided with improved facilities.

We are thankful to Sardar Swaran Singh, Union Minister for Steel, Mines & Fuel, for visiting our factory in April this year on the occasion of the Annual Sports and Social Club Day. On the same day, we had the honour to receive the Delegates to the Convention of the Institute of Indian Foundrymen who held one of their sessions at our Works.

During the year we also had the pleasure of a visit from Mr. David Brown, Chairman of the David Brown Group of Industries of United Kingdom.

Improvements and Developments

In the last five years, the Company has been taking vigorous steps to increase production and productivity. The capital was increased and foreign technical collaborations entered into. Steel-making capacity was increased and range of products expanded. Technical personnel were sent for training abroad. The workers were encouraged to attend technical courses and provided with better training facilities within the Works. Considerable improvements were made in methods, plant layout and facilities. The Company and the workers have been reaping the cumulative benefits of these improvements and developments.

Management and Technicians are the brains and nerves of industry, and Labour its limbs. Shareholders provide it with sustenance. Their co-operation and co-ordination are essential for the successful working of any industry.

The Company has entered into a five-year agreement with labour relating to wage scales and other benefits. Our Chief Executive, Shri Viren J. Shah, has been mainly responsible for negotiating this settlement. The happy relations which subsist between Management and Employees are in a large measure due to his personality and human approach.

I would like to congratulate the Technical and Administrative Personnel, the Workers and the Management for last year's record annual production.

(This does not purport to be the record of the Proceedings of the Annual General Meeting).

Money

THE CALCUTTA MONEY MARKET

ADVANCES DECLINE

Wednesday, 27th September.

ADVANCES have fallen in the Calcutta money market during the past week. None of the main sources of demand shows any increase, although the requirements of the cotton industry are about the same. Demand from the jute and sugar mills is slightly down and the needs of the engineering and iron and steel industries, and call for accommodation against grains and seeds storage, both show substantial falls. In the interbank market, conditions are rather easier, but the call rate is unchanged at between 4 and 4½ percent.

In the exchange market, activity has been moderate. There have been a few tea bills, but the supply of gunny bills has been poor. Demand for remittance has been moderate. In the London money market, the pound showed variable and mixed losses, and at the closing fractional falls were recorded against most important currencies.

BULLION WAS STEADY IN THE PAST WEEK DUE TO good upcountry support. Silver rose from the previous week's level of Rs. 237.75 to Rs. 240.50, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 206.62. The London and New York prices were 80½d and 91.375 cents.

Gold was steady in sympathy with silver, and the price advanced from Rs. 147.50 to Rs. 148.75. The sovereign gained by 75nP to Rs. 96.50.

DURING THE WEEK ENDED 22ND SEPTEMBER, Government of India Treasury bills for Rs. 52,98,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 26th September. The total amount offered was Rs. 2 crores only. Tenders at Rs. 99.375 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.5 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to 11 a.m. on 3rd October.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 27th September to 30th September at Rs. 99.391 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 20th September to 23rd September amounted to Rs. 55 lakhs.

THERE WERE DECLINES OF RS. 18.07 CRORES TO RS. 1,890.68 crores in the total note issue and of Rs. 20.76 crores to Rs. 1,868.70 crores in active notes in the return of the Reserve Bank of India during the week ended 22nd September, 1961. The currency contraction was adjusted by reducing rupee securities of the paper currency reserve by Rs. 18.87 crores to Rs. 1,528.78 crores. Deposits of the Government of India declined by Rs. 18.48 crores to Rs. 55.05 crores and other Government accounts by Rs. 16.80 crores to Rs. 21.36 crores. Balances of commercial banks at Rs. 84.31 crores showed a rise of Rs. 5.65 crores. Balances held abroad increased by Rs. 66 lakhs to Rs. 18.42 crores. Investments declined by Rs. 55 lakhs to Rs. 260.61 crores. Loans and advances fell from Rs. 136.96 crores to Rs. 135.89 crores, of which advances to scheduled

CLEARING HOUSE RETURNS

Week ended	Calcutta	Bombay
15-9-61	1,02,00.68	...
8-9-61	94,36.00	83,51.62
1-9-61	81,93.00	1,01,54.45
	65,51.00	88,44.40

banks against usance bills amounted to Rs. 9.51 crores (Rs. 6.59 crores). Ways and means advances stood at Rs. 45.53 crores, against Rs. 49.45 crores.

1,244.66 crores show a rise of Rs. 1.39 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.2 percent and 63 percent, against 6 percent and 63 percent.</

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Index of Industrial Activity (Base: 1953) has now been brought up to January 1961. Compared with the preceding month, there were increases in sugar 50.55 points, coal 1.27 points,

pig iron 11.49 points, finished steel 19.11 points, and paper 1 point, while decreases occurred in tea 28 points, jute 6.22 points, yarn 3.83 points, cloth 3.56 points, cement 10.39 points, tyres 19.27 points,

motor-cars 1.63 points, bicycles 49.10 points, electricity 4.65 points and railway ton-miles 4.72 points. Combining all the factors, the Capital Index of Indian Industrial Activity rose by 1 point during January 1961.

made for a crop of 25,000 maunds of tea at a total cost of Rs. 32.57 lakhs.

Arrah-Sasaram Light Railway

The Arrah-Sasaram Light Railway Co. Ltd has earned a profit of Rs. 1.06 lakhs for the year ended March 1961, against Rs. 1.04 lakhs in the previous year. A dividend of 5 percent, subject to tax, has been maintained, absorbing Rs. 1.08 lakhs. After making all necessary adjustments, there is a carry-forward of Rs. 1.965, against Rs. 4.013 brought in.

Chaparmukh-Silghat Railway

A taxable dividend of Rs. 2.90 a share has been maintained by the Chaparmukh-Silghat Railway Co. Ltd for the year ended March 1961. The profit has amounted to Rs. 81,842, against Rs. 84,105. Bringing in Rs. 8,276 and making other adjustments, there is a carry-forward of Rs. 218.

Howrah-Sheakhalla Light Railway

There is a drop of Rs. 5,637 to Rs. 29,711 in the profit of the Howrah-Sheakhalla Light Railway Co. Ltd for the year ended March 1961. A dividend of 5 percent (against 6 percent) taxable, has been declared. There is a carry-forward of Rs. 1,676, against Rs. 1,965 brought in.

Bombay Market

EARLIER IMPROVEMENT NOT MAINTAINED

ENGINEERING ISSUES RISE

Wednesday Noon.

THE Bombay stock market started the new account in a cheerful mood. Turnover was large during the past week and share prices improved on a broad front due to the stimulus of good corporate news. Reports that some companies had taken steps to increase their installed capacity with foreign collaboration, induced support. At the close, a reaction set in and prices slipped back due to profit-taking. The committee which was appointed to investigate stock exchange reforms was

expected to submit an interim report early in October. Operators became cautious because the committee was expected to recommend new measures to restrain speculation.

Tata Steel closed lower at Rs. 142.50 and Indian Iron were quoted at Rs. 24.28. Engineering shares improved all round on prospects of expansion. Alcock Ashdown recovered to Rs. 305 and Mukand Iron placed at Rs. 27.25 on the decision to set up a new rolling mill. Premier Construction enjoyed institutional support at Rs. 190 and Larsen and Toubro improved to Rs. 38.85. Motor shares were quiet, and Hindustan Motors were sold at Rs. 19.24 on conflicting corporate rumours. Premier Automobiles were done at Rs. 156.

In the cotton mill section, Khatau were wanted up to Rs. 470 on hopes of a higher dividend. Morarji were bought at Rs. 406 on expectations of a bonus issue. Century rose to Rs. 556 on replacement buying. Bombay Dyeing came to hand at Rs. 68.10 and Kohinoor were transacted at Rs. 289. Simplex were placed at Rs. 165 and Finlay were done at Rs. 319. India United ordinaries made Rs. 15.16, but Apollo were freely sold down to Rs. 1.96.

In the miscellaneous section, sugar shares were quietly steady, and business passed in Belapur at Rs. 274. Walchandnagar Industries were transacted at Rs. 167 and Phalton came to hand at Rs. 136.75. Earlier gains in cement shares were pared at the close on the apprehension that the increase in the ex-factory price of the commodity might fall below expectations. Associated Cement were dealt in at Rs. 163.50 and Digvijay at Rs. 180. Steamship company shares recovered on short-covering, and Scindia Steam improved to Rs. 12.72. Great Eastern Shipping were quoted at Rs. 13.80. Mining shares were steady, and Shivrajpur Syndicate were in demand up to Rs. 98. Chemical shares were quietly steady, and Tata Chemical improved to Rs. 17.52 on dividend prospects. Business passed in Colour-Chem at Rs. 345 and Indian Dyestuff were transacted at Rs. 445. Rayon shares improved, and National Rayon moved higher to Rs. 544. Gwalior Rayon were quoted at Rs. 46.75 and Baroda Rayon were taken at Rs. 141. Bombay Burmah rose further to Rs. 607 on prospects of the diversification of activities. Voltas were higher at Rs. 292 on investment support and Tata Oil were taken up to Rs. 70.50. Ceat Tyre were done at Rs. 207.50 and Synthetics and Chemicals were quoted at Rs. 185.50. Anil Hardboard met with support at Rs. 253.75.

Bank shares were steady, but turnover was limited. Central Bank came to hand at Rs. 62.70 and Bank of India were done at Rs. 134. Insurance shares were quietly steady, and business was done in New India Assurance at Rs. 61.

There was scattered support for electric company shares, and Ahmedabad Electric were placed

at Rs. 90.70. Tata Power came to hand at Rs. 1,133 and Bombay Suburban were done at Rs. 101.

Madras Market

STEADY UNDERTONE AT THE CLOSE

COFFEE SHARES DECLINE

Tuesday Evening.

THE Madras stock market closed with a steady undertone. Good corporate news induced support for selected shares. There was also evidence of outside buying. Business in Government securities was restricted in the absence of sellers, especially for short and medium-dated stocks. Bank shares were selectively bought and public utilities were taken on yield considerations. Selected sugar shares improved on replacement buying. In the planting section, tea and rubber shares were fancied on hopes of a bigger output. Coffee shares were easier and sellers predominated on the apprehension that the price of the commodity would decline due to excessive supplies. Selected cotton mill shares attracted interest on prospects of improved cloth offtake. Miscellaneous shares were bought with discrimination due to reports of good corporate working.

In the banking group, Andhra were done at Rs. 100 and Canara Banking came to hand at Rs. 80.50. Indian Overseas were steady at Rs. 188 and Punjab National were transacted at Rs. 18.25 x.d., x.r. Among public utilities, Salem-Erode were steady at Rs. 13.50 and West Coast were in demand at Rs. 14. Vellore made Rs. 13.75 and Ellore Rs. 20.50.

In the sugar section, Deccan recovered to Rs. 13.50 and E.I.D. to Rs. 38.75 on replacement buying. United Breweries were steady at Rs. 106.50 and Travancore realised Rs. 10.55 on paying a taxable ordinary dividend of 7½ percent. India came to hand at Rs. 11.60 and K.C.P. were done at Rs. 24. Among planting shares, Blue Mountain were steady at Rs. 3.08, but Consolidated Coffee reacted to Rs. 20.65 on pressure. Cochín Malabar were taken at Rs. 7.40 and Ouchterlony at Rs. 3.78. Periakaramalai were transacted at Rs. 3.70 and United Nilgiri were wanted up to Rs. 25.75 on the payment of a final ordinary dividend of 12 percent, taxable. Cottanad were steady at Rs. 10.65 on declaring a taxable ordinary dividend of 10 percent. Business passed in Kalpetta at Rs. 12.70 on the payment of a taxable ordinary dividend of 12½ percent. Malankara came to hand at Rs. 18 on declaring a taxable ordinary dividend of 16 percent and Peermade were steady at Rs. 23.37 on declaring an interim ordinary dividend of 7½ percent, taxable. Chembra realised Rs. 3.61 and Kil Kotagiri Rs. 4.70. Nilgiri were transacted at Rs. 10 and Parkside at Rs. 29.70.

In textile shares, Buckingham were steady at Rs. 251 and Bangalore Woollen at Rs. 216.50. Adoni improved to Rs. 12.60 and Lakshmi to Rs. 159. Madura were supported up to Rs. 38.75 and Travancore Rayon gained at Rs. 39.40. South India Viscose were done at Rs. 186 and Vijayakumar were in demand up to Rs. 104. Mettur realised Rs. 387 and Rajalakshmi Rs. 94. Kothari were steady at Rs. 12.50 and Kadri were bought at Rs. 114.

In the miscellaneous section, Aluminium Industries recovered to Rs. 23.70 and Ashok Leyland gained at Rs. 9.16. Cement shares were supported on hopes of an early rise in the price of the commodity. India Cement improved to Rs. 6.62 and Madras Cement to Rs. 91. Enfield were quoted at Rs. 11.75 and F.A.C.T. were done at Rs. 9.60. Kirloskar Electric were taken at Rs. 14.75 and Madras Aluminium at Rs. 24.75. Seshasayee Paper hardened to Rs. 8.60 and Standard Motors to Rs. 16.15. T. Stanes were in demand up to Rs. 32.55 and Textool improved to Rs. 177. Tube Investment met with support at Rs. 260 and Mysore Paper were steady at Rs. 17.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

India's (and Asia's) LARGEST DAIRY ...air conditioned by BLUE STAR

The gigantic dairy plant of the Delhi Milk Scheme—the pride of the nation's Capital—will be handling over half a million pounds of milk per day when in full production. A major Second Plan project of the Union Government, it will help solve the Capital's milk supply problem.

Hygienic handling of such vast quantities of fresh milk and other dairy products daily has been made possible by WORTHINGTON air conditioning. Throughout the processing, bottling and storage of milk, a 350-ton WORTHINGTON air conditioning system helps provide absolutely sanitary conditions by eliminating dirt, dust and temperature variations which could cause adverse bacterial action in milk. It also provides cool comfort in offices, recreation rooms, auditorium.

This is yet another instance where high performance and economy in operation led logically to a BLUE STAR engineered WORTHINGTON installation. Whether your requirements are large or small—you will find that BLUE STAR can serve you best in 'climate control'.

Engineered and installed by BLUE STAR, the plant comprises

- Two Centrifugals, 175 TR each, with their respective induced draft cooling towers
- Six chilled-water Air Handling Units
- Two giant Air Washer Systems which cool and ventilate the engineering workshops and stores, machine rooms, bulk can and bottle washing areas, milk reception and despatch, dry storage, etc.

BLUE STAR ENGINEERING CO. (Calcutta) Private Ltd.,
7 HARE STREET, CALCUTTA 1

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange, together with full details of latest balance sheets.

The Research & Statistical Department undertakes research into industrial and financial problems and numbers among its clients. Government departments, railway administrations, chambers of commerce and industrial associations.

Published every Thursday.

London Market
STOCK MARKET WEAKER AT CLOSE
FORECASTS OF I.C.I. RESULTS DEPRESS INDUSTRIALS
London, 27th September.
THE stock market gave a fairly satisfactory performance prior to last week-end, but condition deteriorated afterwards and losses predominated in most sections on the week. Business through out was at a low level, and it was lack of buying power rather than increased selling which was responsible for the price decline. Interest and activity was restrained by the international situation the obscure economic outlook and the uncertain performance of Wall Street. In addition, considerable nervousness developed concerning the half-yearly profit statement of Imperial Chemical Industries which is expected on Thursday. Tall of much lower profits from this Company had depressing effect on industrials generally, particularly in view of the disappointing statements from Associated Electrical and Vickers last week. While leading industrials generally lost ground, a number of good features developed among smaller company shares. Activity in the gilt-edged market was on a small scale. The medium-dated issue attracted a steady demand and this sustained the whole market. Foreign bonds were in selective demand from time to time. There was some in vestment buying of banking and insurance shares. One of the best features of the week was the firmness of property shares which made headway on a steady but selective demand. Shipping shares were a better market on the brighter outlook for the industry. After drifting lower, gold shares recovered part of their losses on suggestions that South African capital restrictions may be relaxed. Coppers were dull, but tins recovered in response to the rise in the metal price. Shell advanced sharply in response to their interim statement, but other oils were quiet. Rubbers inclined easier, but Indian tea shares provided several firm spots under the influence of the struggle for Doom Dooma which are several shillings higher on the bid situation.

DISPERSAL OF NEW HEAVY INDUSTRIES TO PROMOTE REGIONAL PROGRESS

(FROM OUR NEW DELHI CORRESPONDENT)

A BRITISH firm of consultants, Messrs Atkins and Partners, has been invited to examine the project report on the expansion of the Durgapur steel works by 600,000 tons. On the basis of the firm's report, India will invite tenders. The present contractor, I.S.C.O.N. (Indian Steelworks Construction Company), is expected to tender, and it is likely that its experience will weigh with the authorities making the selection. Negotiations have started in Ranchi between Hindustan Steel Ltd and the Russians, for finalising the agreement on the basis of the Russian project report for the expansion of the Bhilai steel works by 1 million tons. The Government has also accepted the project report on the expansion of the Rourkela steel plant. Some tenders have already been invited. As far as the projected Bokaro steel plant is concerned, negotiations are still in progress between the Indian Government and the U.S. Ambassador.

The Project Report

The following are some details of the project report on the Durgapur plant's expansion. The most economical way of increasing the output from the Durgapur steel works is to use to the full the capacity of the existing equipment. The present capacity is to produce approximately 800,000 tons of finished products from one million ingot tons of steel a year, together with some 300,000 tons of pig iron for sale and for internal use at the works foundry when all the three furnaces are in operation. The primary mill system already installed is fully capable, when working 6,000 hours a year, of breaking down 1.5 million ingot tons a year into blooms. The logical first stage of expansion is, therefore, to use the inherent capacity of this mill to produce an additional 500,000 tons of blooms or billets and to install a further mill to provide finished products. An increase in output in the wheel and axle plant from 45,000 to 75,000 wheel sets of varying types and dimensions is intended, representing some 130,000 tons of wheel ingots a year, making a total of approximately 1.6 million tons a year. The consultants have explained in detail why a skelp mill should be installed to use some of the additional steel as billets or slabs for sale. This new mill will be situated to the west of the existing rolling mill system where provision is made for two finished mills.

Additional Machinery Needed

To produce the increased output from the steel works, it is necessary to install a further battery of coke-ovens together with its by-products plant. An additional blast furnace will be required and, prepared burden must be charged to the furnace together with sinter created from the natural fines from the ore mines. It is intended that the screening of the natural fines and subsequent beneficiation, if necessary, should be done at the mines and supplied as two separate materials into the works. It is intended to install only one additional 240-ton capacity open-hearth furnace in the steel plant and to use modern methods such as oxygen enrichment and refining time to a maximum of eight hours. The existing seven 200-ton furnaces will be increased to 240 tons' capacity in rotation as they come off for major repairs and will also be supplied with basic roofs and full oxygen equipment.

The existing 100-ton furnace installed to provide to 120 tons and will provide a maximum of 110,000 tons a year of wheel quality steel. Any additional requirements to this quantity for the wheel and axle plant can be achieved by using one of the larger capacity furnaces with a reduced charge. To maintain an eight hour tap-to-tap time at the open-hearth furnaces, it is essential to have an efficient organisation to make certain that scrap, hot metal and ancillary materials are available as and when required for any particular furnace. Additional soaking pits and a cold ingot stockyard, together with a cold ingot preheating furnace system, will be provided.

The existing primary mills and billet mill are competent to handle the increased tonnage, but an additional cooling bank beyond the billet mill will be required. The additional units intended to be installed at the coke-oven plant ensure that coke-making facilities are well in excess of the extended requirements under good conditions. Similarly, the additional blast furnace, with a fully repaired burden and also the use of sinter in the urden, will ensure that three blast furnaces on basic iron will be capable of producing more hot metal than is required. The primary mill system is able, with good operation and maintenance, to work more than 6,000 hours a year and, therefore, additional capacity is available, if required.

Producing More Ingots

The additional 240-ton open-hearth furnace, together with the existing seven furnaces, when

they are increased to 240 tons capacity, and the existing 100-ton furnace when increased to 120-ton capacity, will be capable of providing all the ingots required when full efficiency of operation, including the maximum use of oxygen and efficient organising of materials to be charged, is achieved. Should the alterations to the existing furnace and the training of operators in modern technique take more time to obtain full efficiency, space is available to install a further 240-ton open-hearth furnace. Should the primary mills be required to work consistently at full or extended production, it may be found necessary to install additional soaking pits and space is planned for the installation, if required in the future, of four more pits. Additional rolls and attendant facilities are required at the medium section mill to enable it to produce 60 lbs-a-yard rails. The material for the skelp mill, and slabs and billets for sale, will be transferred from the existing stock bay into two new bays: one located for the stocking of material for sale and one for the new skelp mill. The necessary additions to the equipment in the wheel and axle plant will be provided to produce the increased output of 75,000 wheel sets a year.

The Central Engineering Maintenance Department is competent to deal with the requirements of the additional plant. The foundry is capable, with small additions, of providing the additional ingot moulds, base plates and trumpets which will be required for the increased output, and also approximately 2,500 tons a year of ingot moulds and stools required for the alloy and special steels plant. An additional gas-fired boiler and blower will be installed as an extension to the existing power plant to meet the requirements of the fourth blast furnace. The maximum demand of electric power under the 1.6-million-ton expansion is estimated to be approximately 60,000 kW. The existing power station can give a firm power of 10,000 kW, and the balance of 50,000 kW power has to be arranged.

Power Demand and Supply

As the demand for power in the Durgapur area is increasing rapidly and the Damodar Valley Corporation is not likely to be in a position to meet the demand of the steel plant in time, it is recommended to construct a new power station in the steel works to generate its power demand with the steel works surplus fuel. The new power station can be equipped with either one 50,000 kW unit or two 30,000 kW units. If only one 50,000 kW unit is installed, there will be no stand-by capacity, and when the only unit is down for normal maintenance, the steel production will be severely limited. If two 30,000 kW sets are installed, only one set need be taken down at a time for maintenance and during this time the second set, together with the 15,000 kW possible from the existing power station, will give a total power of 45,000 kW. With this power and with suitable staggering of mill operations, steel production can be reasonably maintained. It is, therefore, recommended to install two 30,000 kW generating sets.

The existing power station cannot be enlarged to accommodate the two new 30,000 kW sets. It is, therefore, proposed to erect the 30,000 kW units in a new power station. A second primary sub-station will be built in Sajara, located between the two approach ramps to the blast furnace plant and the steel plant. This sub-station will be laid out to receive two 30 M.W. feeders at 33 kV from the new power station. All new load centres in the iron and steel making plants will be fed from the Sajara sub-station. Existing load centres in these areas now fed from Punabad sub-station will be transferred to Sajara sub-station, thereby leaving Punabad sub-station entirely free for the rolling mill loads. The existing feeder cables of the loads transferred to Sajara will be reconnected to form two ties between the two primary sub-stations. These ties will be strengthened by an additional feeder so that a total of 40 M.W. could be transmitted either way.

The two 30 M.W. generating sets in the new power station will be in operation for most of the year. Under this condition, the entire power requirement of the steel works can be met from the power generated in the steel works itself. At times, it would be possible for the steel works to export power after meeting the works demand. Therefore, the steel works will not require the 40 M.W. of power already reserved from the Damodar Valley Corporation Waria power-station under the one-million-ton programme. Since the alloy and special steels plant, under the management of Hindustan Steel Ltd, is being installed adjacent to the steel works in Durgapur, it would be possible to divert this power already reserved for the steel works to this new plant whose requirement also is approximately 40 M.W. This can be most economically done by feeding the purchased power through Punabad sub-station, using the

feeders already laid between Waria power-station and Punabad sub-station.

Energy for Special Steels Plant

With the above arrangement, it is possible to run the steel works' power-station at its optimum capacity and supply the surplus power, as available, to the alloy and special steels plant, thereby reducing the actual amount of power to be purchased from the public utility system. Also, this inter-connection of the power supply systems of the two plants will ensure practically all the power required for the steel works, even when one of the two 30 M.W. sets is down for normal maintenance, as the small additional power that may be required at this time by the steel works would be available out of the 40 M.W. reserved for the alloy and special steels plant since integration of both systems will allow greater diversity of loads. The above proposal of integrating the power supply systems of the steel works and the alloy and special steels plant will need careful investigation by Hindustan Steel Ltd jointly with the consultants for the alloy and special steels plant and the public utility authorities. All extensions to the existing services will be provided. It is intended to install a 100-ton capacity oxygen plant to meet the additional requirements of the steel plant and the blast furnaces. This will be installed in the existing building together with the necessary auxiliary equipment. Additional railways, roadways, rollings stock and mobile stock will be provided to handle the increased output of the works. Necessary new, or extensions to existing, administrative buildings will be provided.

The total estimated cost for the above 1.6 million ton expansion is approximately Rs. 59 crores, of which an equivalent of approximately Rs. 33.4 crores will be the expenditure in foreign exchange. The present 1.6 million ton extensions are so arranged that they allow for the continual expansion of the works up to its ultimate capacity of approximately 3 million tons, and will form an integral part of the ultimate plant arrangement.

Trade Experts from U.A.R.

A team of six experts from the U.A.R. Government is visiting India for trade talks with the Indian Government. A revision of the Indo-Egyptian trade agreement is also visualised as a result of this visit.

Burmese Industrial Delegation

A Burmese industrial delegation is arriving here shortly. It is expected that the opportunity will be taken by the Government to negotiate the Indo-Burmese trade agreement with this delegation. The agreement expired on 4th September last. The Indo-Afghan trade agreement also expired on 20th July this year. A delegation from Ceylon is expected to arrive in India shortly to discuss the outstanding trade problems between the two countries.

Heavy Industrial Projects

The Government of India has announced the location of the first seven major heavy industrial projects to be taken up in the public sector during the third five year plan. The sites are:

Name of the project

- (1) Precision instruments projects (for the manufacture of electrical and electro-magnetic instruments) with Russian assistance
- (2) Precision instruments project (for the manufacture of hydraulic pneumatic and mechanical instruments) with Russian assistance
- (3) Heavy electrical equipment project with Russian assistance
- (4) Heavy electrical equipment project with Czech assistance
- (5) High pressure boilers' plant with Czech assistance
- (6) Heavy plate and vessel works and heavy structural works
- (7) Machine tool project

Kerala

Ranipur
(Uttar Pradesh)

Near Hyderabad
(Andhra Pradesh)

Tiruchi area
(Madras State)

Near Wardha
(Maharashtra)

Pinjore near
Chandigarh (Punjab)

The seven projects, it is estimated, with cost about Rs. 125 crores, involving a foreign exchange expenditure of about Rs. 50 to Rs. 60 crores. Foreign exchange has already been arranged in all these cases. Preliminary project reports are also under way. The final decisions on the location of these projects have been taken, having regard to the need for a regional dispersal of Central heavy industries projects. The technical committees, which had been appointed to study the question of locations, had been advised to bear the objective of regional dispersal in mind and suggest a panel of positive sites from comparatively underdeveloped areas in the country.

The decisions announced indicate that a major step has been taken towards the dispersal of plan projects as widely as technically possible. The Government of India's policy has always been that preference should be given to the location of these projects in relatively backward areas, whenever this could be done without significant prejudice to technical and economic considerations and to avoid industrially congested areas.

Precision Instruments Plants

The precision instruments plant for the manufacture of electronic and electromagnetic instru-

As you need two hands to clap, so the country needs the combined efforts of man and machine to bring about industrial growth and prosperity.

Today, through the Five-Year Plans, the country is striving to create such a unity of effort where all will have enough.

It is our privilege to participate in this historic adventure of building a new India.

MAHINDRA & MAHINDRA LTD.
BOMBAY · CALCUTTA · DELHI · MADRAS

ments is to be located in the Kotah area of Rajasthan. This project is being built with Russian technical collaboration and long-term credit. The total cost is estimated at Rs. 8 crores. The value of the output of the plant will be approximately Rs. 10 crores to Rs. 15 crores a year, when in full production.

The precision instruments plant for the manufacture of mechanical, pneumatic and hydraulic instruments is to be located in Kerala State. Out of some sites already surveyed in Kerala, the technical experts will finalise the most suitable location in that State. This project is being built with Russian technical collaboration and long-term credit. The total cost of the project is estimated at Rs. 8 crores. The value of output is expected to be approximately Rs. 10 crores to Rs. 15 crores, when in full production. These two instruments projects will be among the biggest of their kind anywhere in the world. They will cover the manufacture of a wide range of the most modern high precision industrial instruments and will meet the growing needs of instrumentation in India. The second heavy electrical equipment plant will be located in Ramchandrapuram near Hyderabad in Andhra Pradesh. This plant will be built with the technical collaboration and long-term credit of Czechoslovakia. The total cost of this project is estimated at about Rs. 25 crores to Rs. 30 crores. The project will undertake the manufacture of steam turbines, alternators, generators and other heavy electrical equipment. The project will be managed and will be under the control of the Heavy Electricals Ltd. which has already established its first big heavy electrical equipment manufacturing project in Bhopal with British collaboration. The third heavy electrical equipment plant will be located in Ranipur in the Saharanpur district of Uttar Pradesh. This project is being established with Russian technical collaboration and long-term credit. The estimated cost of this project would be about Rs. 30 crores. The project will undertake the manufacture of turbines, A.C./D.C. motors, alternators, generators and will cover a wide range of heavy electrical equipment. This will also be established and managed by the Heavy Electricals Ltd.

With these three heavy electrical equipment plants—one in Bhopal with British collaboration, the second in Ramchandrapuram in Hyderabad with Czech collaboration and the third in Ranipur in the Saharanpur district of Uttar Pradesh with Russian collaboration—the Heavy Electricals Ltd. will produce Rs. 80 crores to Rs. 100 crores worth of heavy electrical equipment including hydroturbines, steam turbines, alternators, generators, A.C. and D.C. heavy motors, heavy transformers, heavy control gears, switch gears and other items. The programme has been so organised as to have a completely integrated pattern of production avoiding overlapping. The programme visualises the fulfilment of about 70 to 75 percent of India's requirements in heavy electrical equipment by the end of the fourth plan period. Along with this, the planning, designing and training and research will also be undertaken in a major way, so as to train up Indians in the designing work of heavy electrical and power equipment.

The high pressure boilers plant will be established in Tiruchi area of Madras State with technical collaboration and long-term credit from Czechoslovakia. It will be one of the biggest projects of its kind manufacturing high-pressure boilers and boiler equipment and high pressure vessels. The total investment is estimated at about Rs. 15 crores to Rs. 20 crores, and the annual production will be about Rs. 15 crores to Rs. 20 crores. The boilers will be built so as to suit the

Distribution of Yen Credit

The following cases have been approved for the third plan yen credit:

Name of party	Industry	Amount (Rs. lakhs)
Century Rayon, Bombay	Viscose rayon	60
New Era Paper Mills, Ludhiana	Paper	3.80
Rajaramka Paper Mills Limited, Tumsar	Paper	3.60
McLeod and Company Ltd.	Wire ropes	45.40
Jagdish Lal and Brothers, Delhi	Four denier wire cloth	10
Chandansinha Vijaysingh Bharkatya, Indore	Insulated power cables	80
The National Foundry and Rolling Mills Ltd., Cuttack	Steel re-rolled products	2.67
R. M. Karkaria and Company	Textile auxiliaries	2.48
East India Rubber Works (Private) Ltd., Calcutta	Conveyor belting	4
Harbans Lal Malhotra and Sons, Calcutta	Hand sewing needles	1.04
Shri Katta Nagabhushanam, Anantpur	Bolts and nuts	1.29
Shanker Bulb Industries Private Ltd., Dehra Dun	Miniature head lamps	0.54
Jagkumar and Company, Bombay	Hypodermic syringes	2.12
Hakim Rai Jai Chand, Bombay	Railway electrical signalling equipment	1.07
Sri S. Balasubramaniam, Sri Shakthi Kumaran Enterprises, Madurai	Fluorescent tubes and fittings	2.11
Shah Electrical Enterprise, Bombay	H. T. porcelain insulators, etcetera.	3.89
Das Hitachi (Private) Ltd., New Delhi	—	1.21
Eastend Paper Industries (Private) Ltd., Calcutta	Paper	2.60
	Total	227.82

major requirements of the thermal power plants to be established in the country during the successive plan periods. The project will also manufacture high-pressure chemical and other equipment.

The heavy plate and vessel works and heavy structural works will be located in the Wardha area of Maharashtra State. The project is being established with British technical collaboration and long-term credit. The plate and vessel shops, it is expected, will have an output of 12,500 tons of high quality plates and vessels required for chemical, fertiliser, petro-chemical and other allied industries, and the heavy structural shops will have an annual output of approximately 25,000 tons. The cost of the project, it is expected, will be Rs. 15 crores. A project for machine tools is being established by Hindustan Machine Tools in Pinjore, near Kalka, in Punjab State. It will have an output of 2,000 machines valued at Rs. 6 crores a year, when in full production. The capital cost of the project, it is estimated, will be Rs. 8 crores. This will be the third machine tool project in the public sector being built by Hindustan Machine Tools.

Raw Materials for Wool Exporters

The Government has decided that mills or factories exporting woollen textiles (including hosiery and yarn) and exporters of woollen shawls, woollen garments and carpets, rugs and druggets will be entitled to import raw materials, namely, raw wool, wool tops and shoddy wool, and permissible types of dyes and chemicals, under the export promotion scheme for woollen goods for 1961-62, provided they are registered under this scheme with the Textile Commissioner, Bombay. The scheme will cover only pure wool textiles, garments and shawls; for this purpose, only those goods would be considered as purely woollen which contain at least 90 percent wool by weight. Only those manufacturers of woollen textile hosiery and yarn and exporters of shawl garments and woollen carpets, rugs and druggets who fulfil the following qualifications, will be registered by the Textile Commissioner:

(a) He should have been enrolled as an exporter under the scheme of enrolment of exporters announced by the Government of India. (This condition will not be insisted on during the period July-September 1961. Registrations granted during the period July-September 1961 would be deemed to be provisional, and would be confirmed only after enrolment under the scheme. The provisional nature of the registration during July-September 1961 will not in any way affect entitlements under this scheme after 30th September, 1961, and no further benefits would be granted unless enrolment certificates are produced to the Textile Commissioner.)

(b) He should have past exports or internal turnover during any of the last three calendar years of such a magnitude as to indicate his capacity to export.

(c) He should produce evidence to the satisfaction of the Textile Commissioner that he is interested in export (either by past performance or by showing proof of action taken to conduct market surveys, appoint agents abroad, etcetera.)

(d) He should undertake to adhere to any code of conduct as and when evolved.

(e) He should undertake to adopt the standard contract form with suitable clauses for arbitration and settlement of disputes as and when evolved.

(f) He should undertake to abide by such quality control and pre-shipment inspection procedures as may be evolved.

(g) He should undertake to abide by the decision of the Textile Commissioner in the matter of dispute between him and his foreign customers in the export of the commodities in question.

(h) He should undertake to forward figures of exports of woollen goods made by him every month to the Textile Commissioner, Bombay, with effect from 1st July, 1961, onwards. Licence will be granted once a month or a quarter against payments, received on or after 1st July, 1961, for exports made on or after 1st July, 1961. Applications for licence will be made in the month or quarter following the month or quarter of receipt of payment for export. The licences will be sub-

ject to the conditions applicable to actual user licences, except in the case of merchant exporters who will be required to sell the imported raw materials to actual users of the materials imported. Any specific conditions or restrictions applicable to items allowed to be imported under the scheme as are detailed in Sections II and III of the "Red Book," will also be applicable to licences which may be issued under this scheme.

Raw Materials Allowed

The following materials will be allowed for import under this scheme: (a) raw materials, namely, raw wool, wool tops or shoddy wool, as the case may be, depending upon the raw material used in the particular item exported; (b) dyes and chemicals of the permissible types allowed to be imported, in the case of exports of woollen textiles, hosiery yarn and carpets; (c) embellishments such as zip fasteners, buttons, and sewing thread, in the case of exports of hosiery and garments, provided that the goods exported contained such embellishments, and provided further that there is no objection to the import of any such embellishment from the point of view of indigenous availability; (d) permissible items of machinery, consumable stores, spare parts and accessories for replacement purposes not involving expansion of the plant, in the case of exports of woollen textiles, hosiery and yarn only; (e) industrial sewing machines of the type and specifications approved by the Development Wing, against exports of woollen garments only.

The total import entitlements under the scheme for all these items will be 85 percent of the f.o.b. value of goods exported in the case of woollen textiles, yarn and hosiery, and 50 percent of the f.o.b. value in the case of the export of woollen garments and woollen shawls.

The entitlement for machinery may be accumulated for a period of three years. The entitlement for machinery should be claimed at the time of each application, and request made for carry-over of the entitlement. The Textile Commissioner will issue a separate entitlement certificate for such carried-over entitlements. At the end of the year, when the application for the month or quarter ended 30th June, 1962, is made, all these entitlement certificates should be submitted to the Textile Commissioner who should issue a consolidated entitlement certificate for machinery for the year 1961-62. The applicant may obtain an import licence against this entitlement certificate, or carry over the entitlement to the next two years, that is, 1962-63 or 1963-64.

(A) Entitlements against the export of woollen garments:

(a) Raw material 50 percent of the f.o.b. value of export, less what is utilised under (B) below

(b) Embellishments Half percent of the f.o.b. value of garments exported, containing such embellishments

(c) Industrial sewing machines 10 percent of the f.o.b. value of export

(B) Entitlements against the export of woollen shawls:

Raw material 60 percent of the f.o.b. value of export

(C) Entitlements against the export of woollen carpets, rugs and druggets:

(a) Dyes and chemicals 5 percent of the f.o.b. value of export

(b) Raw materials (only in the case of carpets the f.o.b. value of which is not less than Rs. 20 a square yard)

(i) 10 percent of the f.o.b. value of export if the carpets contain 60 percent or less knots a square inch.

(ii) 20 percent of the f.o.b. value of export if the carpets contain 61 or more knots a square inch.

Manufacturers-cum-exporters of woollen

ties and yarn belonging to the "organised

sector", who are at present being given import licences for raw wool and wool tops as actual users would be eligible to get advance licences under the scheme up to a maximum of 20 percent of the value of their current actual users licences, for the import of raw wool or wool tops as the case may be, with a stipulation that if they so choose, they can use 10 percent of the face value of such licences for the import of dyes and chemicals.

Manufacturers-cum-exporters of hosiery, and exporters of garments, shawls and woollen carpets, rugs and druggets, even if they are not at present in receipt of actual licences, will be entitled to receive advance licences for the import of admissible raw materials under this scheme on production of the proof of firm export contracts. Whether any particular document produced for this purpose will be accepted or not as proof of an export contract will be decided by the Textile Commissioner whose decision will be final. The value of such advance licences would, however, be limited to two-thirds of the entitlement specified in this scheme based on the exports undertaken. In the case of licences against hosiery exports, the licensee will be permitted, if he so chooses, to use 10 percent of the face value of the licences for the import of dyes and chemicals.

Code of Discipline in Industry

The two-day seminar on the working of the code of discipline in industry jointly organised by the Employers Federation of India and the All India Organisation of Industrial Employers was held here last week. It was pointed out that as far as the employers are concerned, they have accepted the code in the belief that it would prepare the ground for better industrial relations. From the very beginning, it has been the general understanding that the code is a moral instrument and should not be looked on as a legal document. The future of the code and its potentialities will depend on the spirit in which the code is observed by all the parties. During the period of three years, the code, by and large, has created a sense of awareness in the parties of the need to follow certain principles to promote industrial peace. The working of the code over the past three years has, however, shown that the purpose of the code has been misconceived in certain quarters, and there are instances where parties have endeavoured to use the code for their own purposes by interpreting the wording of certain provisions to suit their convenience. Also the divergent interpretations given by State Governments have added to the confusion, and consequently, the working of the code has suffered. Not all State implementation officers are adequately aware of the principles and purpose of the code with the result that they either exceed their powers or create a situation not conducive to a proper functioning of industry. At the level of individual workers, the code is almost unknown. There is need for popularising the code among the ranks of the employers also. It is absolutely essential that the Central Government should make it widely known to all the parties including State Governments that where the provisions of the Code may seem to come in conflict with the provisions of any law, the latter will prevail. This will help strengthen the confidence in the code, as also make it more acceptable.

Recommendations of Seminar

The seminar made the following recommendations:

Recognition of unions: The purpose of recognising a union under the code is defeated if unrecognised unions have also the right to raise industrial disputes which are taken cognisance of by the industrial relations machinery of the Government. Both the employers and trade unions do not feel greatly enthused about recognition agreements. Convention should be set up that where employment is entered into between recognised unions and the employer, these agreements should not be disturbed by unrecognised unions.

Implementation machinery: This machinery is not functioning satisfactorily in a number of States. There is no clear conception of its functions, nor are there adequate and informed implementation personnel. The following measures are necessary to improve the situation: (1) The number of investigating officers should be increased, wherever necessary. (2) The tendency to widen the functions of the implementation machinery should be checked, and in no case, the Implementation Committee should deal with matters which normally come under the purview of the industrial relations machinery of the Government, or those involving interpretation of law. (3) The implementation machinery should not take upon itself the work which is entrusted to the authorities prescribed under the various enactments. (4) No reference made by a union which has not accepted the code should be entertained by the implementation machinery. (5) There must be immediate on-the-spot enquiries about the breaches of the code. At the same time, no enquiry or investigation by the implementation officer must be made without giving due notice to the parties concerned. (6) The Implementation Committee should not consider any reference made to it without informing the parties concerned, and (7) arbitration implies willingness on the part of both employers and workers to resort to arbitration. A demand for arbitration by one party and non-acceptance of it by the other should not be construed as violation of the code by the latter.

COMMONWEALTH COUNTRIES INSIST ON SPECIAL SAFEGUARDS IF U.K. JOINS E.C.M.

TARIFFS ON COMMODITIES BEING EXAMINED

(FROM OUR LONDON CORRESPONDENT)

DELEGATIONS from seven Commonwealth countries have started a conference to prepare a list of "minimum safeguards," designed to protect their interests when Britain's negotiations with the European Common Market countries get under way. This involves the detailed work of going through a thousand Commonwealth commodities, tariff by tariff. The experts of each Commonwealth country aim to produce by this means a list of specific requirements and to ask their British colleagues to place them on the conference table in Brussels or Paris. It is hoped that within a fortnight—and certainly no longer than three weeks—the British Government will have, in a precise form, the limit of concessions which each Commonwealth country feels it can afford, on all the items in their trade with the U.K. Britain will further make it clear to the delegates that when the negotiating team led by Mr. Heath returns from Brussels with the final terms of entry, there will be an opportunity for final consultation in any form thought desirable. If the general sentiment is that there should be a conference of Commonwealth Prime Ministers, the British Government is prepared to welcome the suggestion and to put the machinery in motion immediately.

Australia has sent the largest delegation to the conference—12 experts representing the Australian Treasury and other Ministries. Canada, New Zealand and the Rhodesian Federation have also sent strong teams. India, Pakistan and Ceylon are selecting their delegations from the staffs of their diplomatic missions in London. These seven countries have notified Britain—in response to the promise given by Mr. Macmillan in last month's Common Market debate in Parliament—that they prefer the detailed negotiations to be held in London. The others—Malaya, Ghana, Nigeria, Cyprus and Sierra Leone—have chosen to draw up their lists of minimum safeguards in consultation with British High Commission staffs in their own capitals. It is expected that the delegates in London, after the joint welcome accorded to them all initially, will split up on the basis of nationality or according to the types of trading problems involved for bilateral negotiations at various Ministries in Whitehall. The urgency of the discussions is obvious, since it is anticipated that the date of Britain's negotiations with the "Six" will be decided upon at the meeting of the E.E.C. Council of Ministers in Brussels this week.

The British Government has not been too shaken by the stormy oratory at the Accra conference. None of the anxieties tabulated there so publicly was news to the experts in the U.K. What was new, however, was the determination on the part of the Commonwealth Ministers of Finance—especially those of Canada and Australia—to get their objections into the formal communiqué in the strongest possible terms. Some four hours were taken to hammer out the wording of the statement. In its final form, it declared that all of them, except the delegate of the United Kingdom, had expressed "grave apprehension" on the possible British membership of the E.E.C. and feared this would mean that Britain's relationship with its Commonwealth partners might be fundamentally altered.

Industrial Output still Rising

The slight but perceptible rise in industrial production since the early spring continued in July. The Central Statistical Office puts the seasonally adjusted index of output at 125 in July, compared with 124 in June. In the first seven months of the current year, the adjusted index for all industries averaged 122, compared with 120 in the first seven months of last year. Thus even in the period before the Government brought in specific measures designed to curb the economy, output was restrained. This was due partly to the labour shortage.

The small rise in the index in July conceals variations in the performance of different industries.

benefited from the delay the dock strike caused. It is also true that last month's figures, in particular, were buoyed up by exports of ships. But from whatever angle the figures are viewed, they are better than they were.

Textile Import Quotas

As a result of the acceptance by the Hongkong cotton industry of the U.K. Government's proposals for arrangements to cover exports of cotton textiles to the U.K. up to the end of 1962, certain changes are to be introduced in the arrangements with India and Pakistan. The changes involve a supplementary quota for India for 1961 of 11 million square yards and for Pakistan of 2.5 million square yards. For 1962, the Indian ceiling figure will be increased from 175 million to 195 million square yards and the Pakistan ceiling from 38 million to 42.4 million square yards. Both countries will receive their proportionate share of any supplementary quotas which may become available in 1962. The U.K. Board of Trade has already put in hand arrangements to issue supplementary quotas for 1961 and has outlined, in a Press statement just issued, the formula which will be used for calculating any further supplementary quotas which may be issued in 1962.

Doom Dooma Developments

Brooke Bond made a further assault on the apparently impregnable position of the Doom Dooma board with a new bid of 55s a share—an improvement of 10s on the previous offer. In a letter to Doom Dooma shareholders, Lazard Brothers said that "Brooke Bond did not make its offer with a view to acquiring Doom Dooma and then breaking it up by sales of estates. It wishes to invest in Doom Dooma as a going concern." They add that the new offer is as high as Brooke Bond is prepared to go.

The board of Doom Dooma tea, headed by Mr. Kenneth Warren, lost little time in reacting to Brooke Bond's increased cash offer of 55s for the £1 ordinary units. The Doom Dooma board points out that the revised offer approximates to £165 an acre under tea. Already the Doom Dooma directors have received a firm offer by Indian interests for three of the estates, equivalent to £300 an acre. What is really significant is the additional information now given, that the two remaining estates—although of a smaller aggregate acreage—contributed more than 50 percent of Doom Dooma's 1960 trading profit. Since the offer for the three estates is equivalent to 35s a £1 Doom Dooma stock unit, it is evident that the two remaining estates similarly have a value far in excess of the book figures. Accordingly, the figure of 45s a £1 unit, quoted by the Doom Dooma directors as the value of the balance of the assets, looks fully justified.

The Doom Dooma board has stated that the offer from India for three tea estates has now been increased from the equivalent of £300 to £315 an acre under tea. Taking into account everything which would be taken over at an agreed valuation, the directors think that the amount which it would be possible to distribute on realisation would be nearer to 40s than to the 35s a £1 of stock previously indicated.

The problem now confronting Doom Dooma ordinary stockholders is whether to accept an immediate 55s in cash from Brooke Bond or to reject this offer and rely on the directors' assessment of the assets position. To some, 55s now may seem a tempting bid, especially in relation to the average level of market quotations ruling before the Brooke Bond offer came along. But this seems to be a case where the long view will pay off.

Outlook for the Aircraft Industry

The Farnborough Air Show is always a signal for a flood of material on current trends and future prospects of the U.K. aircraft industry. The consensus of opinion this year is that difficult times lie ahead. Intense foreign competition and the rising cost of production and development are the two main issues facing the industry, and it is this, coupled with a possible decline in military orders, which led the Government to press upon constructors the wisdom of combining into larger units.

Commenting on the reorganisation, the latest U.K. Treasury Bulletin for Industry says that the Government is helping aircraft companies to weather the present storms in a number of ways. Orders are normally concentrated on the five main Companies that have emerged from the regrouping: the two large airframe constructors (Hawker Siddeley and Vickers), two aero-engine firms (Rolls-Royce and Bristol Siddeley) and one helicopter Company (Westland). Every effort is being made to ensure that new aircraft are designed in such a way that they are suitable for both military and civil markets. But direct financial aid to meet part of the cost of development is the Government's most important contribution. The aircraft companies' pre-occupation with new models means that development charges are much higher relative to production than in any other industry.

Hire-purchase Debt

An analysis of the hire-purchase debt owed to members of the Finance Houses Association shows that of the £509.3 million total at the end of June, motor-vehicles and caravans accounted for £304.1 million, farm equipment (including tractors) £11.4 million, industrial and building plant and equipment £48.3 million, furniture, furnishings, radio, television, and domestic appliances £23.1 million, and all other goods £23.1 million.

Jute

FIBRE PRICES EASE AS PUJA HOLIDAYS APPROACH

LARGE ARRIVALS REPORTED IN COSSIPORE

THERE has been a general dullness in all sections of the jute market during the past week, and the volume of business has been small. The demand for hessians from abroad is reported to be still quite good, although the main interest lies in near delivery shipment, of which very little is available. Mills are not interested in forward shipment because of the large discount attached to it (Rs. 6 in hessians and Rs. 9 in sacking). On the other hand, many overseas interests would buy forward if they could find any sellers. The position of heavy goods is of course very different, demand being conspicuous by its absence. Mills are finding it increasingly difficult to sell heavy goods, and at the present moment there appears to be little prospect of any improvement in the offtake.

Raw jute prices have declined. This was generally anticipated, as many thought that prices had been steady for too long. With the approach of the Puja holidays, it was expected that some sellers would be prepared to discount in order to have money in hand for the festival. This has been the case, and has led to a general reduction in rates. It has not, however, led to a general increase in mill interest, and in Calcutta very little business has passed. There is a different story to tell in Cossipore and the mofussil, where mill agents have been very active and prices have tended to rule above Calcutta parity. Imports both in the mofussil districts and in Cossipore have been increasing. In fact, in Cossipore a new high level for some years was reached when 1,050 wagons arrived during the past week. This was about 250 wagons more than in the previous week.

It is gratifying to learn that the new directors of the East India Jute and Hessian Exchange seem to be more concerned about unofficial "kerb" gambling than their predecessors. A stern warning has just been issued to "kerb" speculators, who appear to have increased their activities since the official trading hours were reduced. The latter was only to be expected, but swift action may help eliminate the gamblers and produce more stable conditions.

Moisture in Jute

The problem of moisture in jute arises every year, and this year has been no exception. While some sellers make an attempt to supply dry jute, there are others who make a profitable business out of selling wet jute. In Pakistan, the authorities have prescribed very strict penalties for dealers found selling wet jute, and the practice has become much rarer. So much has been written about moisture in jute that it would be superfluous to go over the ground again, but this malpractice, apart from being a nuisance and a swindle, has attained such proportions in the last few seasons that it has become a menace to the future of the trade and the industry. This is particularly so this year, when in many cases mills were so short of jute that they were often unable to allow the fibre to go to arbitration due to the time factor, but had to settle with the seller as best as they could in order to enable them to use it up.

In the past, the blame was laid on the bepari and the mofussil baler. The grower was said to be innocent. But, whether or not this was true in the past, there is ample evidence that recently the grower has taken advantage of the shortage of jute by bringing his fibre to the market without drying it after the retting and washing process has been completed—unless he has intended to store it for marketing later. In the latter case too, before marketing he wets what he has stored. The bepari then adds more water and the baler has to buy this wet jute or get none at all. The result is that, at all stages of marketing, water has to be bought by anyone who wants to buy jute. Penalties are exacted when the jute reaches the mills, but these seldom fully compensate the buyers. The baler who is penalised is frequently also the loser, as he has no way of recovering anything from his sellers. One of the worst effects of excessive moisture is a deterioration in the quality of the fibre. Last season, the centre in many bales was reduced to dust before the jute reached the mills—a loss which could not be afforded during the prevailing scarcity. Obviously, the deterioration harms the quality of the jute goods manufactured in India. In these days when competition is keen, this is something which has to be avoided at all costs.

THE JUTE MARKETS

Manufactured Goods: There was not much change in the jute goods market, as business remained very slow. The demand for hessians made that section steadier than heavy goods, where there was little interest. It was difficult to induce mills to sell, particularly for forward shipment, due to the very large discounts attached to forward business. The market was quiet last Thursday, B Twills opening at Rs. 132.50 for September shipment and Rs. 123 for January-March. Hessians were also down, with 40in. 100z. standing at Rs. 50 for the near deliveries, and Rs. 44.85 for forward shipment. Price movements were small over the past two days, and continue business was slow.

ble, but scattered buying and selling in the speculative markets helped maintain rates. Conditions improved on Saturday when business was reported with the U.K. and the U.S.A. Local covering in September hessians also helped, and this was mainly instrumental in pushing 11-porter prices up by Rs. 1.40, so that 40in. 100z. was quoted at Rs. 51.25. Sacking was steady in sympathy and September B Twills moved up to Rs. 133. Quieter conditions prevailed over the week-end, but interest in hessians was kept alive by local covering and no alteration in prices was recorded. Sacking on the other hand, dropped by 40nP. The demand for ready hessians continued and the market ruled steady with no appreciable change in the quoted rates. On Tuesday, prices improved on rumours of a Government order, but lack of confirmation soon brought them down again.

On Wednesday morning, opening quotations were as follows:

	September	October	Oct.-Dec.	Jan.-March
40in. 110z.	39.00	37.75	36.25	34.50
40in. 80z.	41.50	40.75	38.75	36.75
40in. 100z.	53.00	50.00	47.85	45.60
B Twills	132.50	130.50	128.00	122.60
Heavy Cees (Plain)	133.50	131.25	129.00	123.50
A Twills	161.50	160.50	158.50	152.00
Liverpools	155.50	151.00	147.00	140.50
Corn sacks	135.50	134.50	131.50	126.25

Raw Jute: The fibre market was dull throughout the past week, with little or no business to report. For certain varieties, there were buyers but few or no sellers, and for other varieties, there were sellers but no buyers. Licences were issued for the import of Pakistani cuttings during the October-December period. The licences carried the option of being used for imports from Siam. Recently the price of Siamese cuttings has dropped considerably, and they are now attractive compared with Pakistani cuttings, but whether buyers consider the price low enough for the quality remains to be seen. So far, there has been no rush to take up the licences, although some are already covered against contracts that were made previously on a "subject to licence" basis. Opening quotations were based on Assam jute at Rs. 35 a maund for September-October shipment. In spite of the lack of interest, this price remained stable until Monday morning. Thereafter, there was a gradual decline, with sellers becoming more eager for business. Opening quotations on Wednesday morning were as follows:

	Landed at Mills		
	Basis Bottoms		
	Rs. a 100 kilos	Rs. a md.	Shipments
Assam	91.00	34.00	Sept.-Oct.
Northern	88.50	33.00	"
Purnea Desal	88.50	33.00	"
Daissee White	89.75	33.50	"
Assam Tossa	95.00	35.50	"
Selected Daissee	100.50	37.50	"
Mesta :			
Assam-Northern	88.50	33.00	"
Desal	88.50	33.00	"
Daissee	88.50	33.00	"
Jungli	81.75	30.50	"
Pakistani Cuttings	125.00	a bale	"

THE FOREIGN JUTE MARKETS

RIISING TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market is still something of an enigma to the industry here. Buyers of gunnies are unable to make up their minds whether or not they should operate in the market or leave it over in the hope that the present upward trend in raw jute prices will peter out. The E.P.C. prices in raw jute prices will peter out. The E.P.C. prices in Pakistan are up by £4 a ton, for marks above Grade Hearts, but shippers have not raised their terms to that extent to spinners. Nevertheless, there has been a fair rise in fibre prices.

Mill Firsts are mentioned at £162 and Mill Lightnings at £142. Mill Hearts are the lowest at £113 and Grade Hearts £96, while Grade Tossa-2/3 is quoted from £136 to £140, four from £128 and £129 from £115, all c.i.f. U.K. Continental Tossa-2/3 from £115, all c.i.f. U.K. These rates have all risen by anything from £3 to £11 a ton on the week. Spinners have been picking up a few small parcels, especially where the quality of fibre was suitable.

The Calcutta goods market did not change much last week. A slight weakness was noticeable when the Indian mills agreed to increase the working hours from 42½ to 45 a week.

Good business was done in jute yarns last week, particularly in hessian yarns. Most spinners are now well booked for a few weeks ahead, and they cannot now give delivery "off the shelf" as they could do formerly. Their position has definitely improved, as also has that of manufacturers. The volume of enquiry has increased, and the prices are firm on the basis of 15,000 a yard for 40in. 100z. and 13.21d for 80z. The prices of sacking, bagging and tarpauling have recently been boosted up, and

ECONOMIC RECOVERY IN THE U.S.A.

By Jan S. Prybyla

THE U.S. economy has in recent months shown a buoyancy which took not a few analysts by surprise. The 1960-61 recession has proved to have been one of the mildest on record. The trough of the recession had been reached in February and since that time signs of stabilisation were increasing rapidly. There was at first some question as to how long the economy would move along the bottom of the trough before moving up. It has, in fact, moved up quickly and steeply. The *Business Week* index of business activity (seasonally adjusted, 1947-49 equals 100) which stood at 149.3 in mid-July 1960, had climbed up to 155.5 in the corresponding period of this year, and continued on its upward journey ever since. The Federal Reserve's index of industrial production confirmed this encouraging trend; based on the 1957 average, it showed 112 for July, a level higher than the previous high of 111 reached in January 1960.

The upward movement was being sustained by steel and aluminium output. Steel ingot production in the second week of July (1.9 million tons) exceeded that of a year ago, but had not yet reached the 1953-55 average of 2 million tons weekly. Steel-makers were on the whole optimistic and talked in terms of a 100-million tons output in 1961, a goal which would imply roughly a 75 percent operating rate, which although still far from perfection, would be better than what the industry had seen in recent times. The piling up of defence orders coming hard upon the Berlin crisis tended to make the steel projections more realistic. On the other hand, there were some unfavourable winds blowing from the motor-vehicle industry quarter. The Detroit motor-car makers are still steel's single most important customer, and they were holding back on orders, locked as they were in contract negotiations with the unions. A relatively rapid conclusion of new contracts in the motor-vehicle industry was, therefore, eagerly looked forward to by the steel-makers, but this was not to be. The steel industry was also worried about the labour cost increase of about 14 cents, which as a result of the steel agreement following the strike, was to take effect on 1st October. There is strong governmental pressure on the industry to prevent steel price hikes after the employment cost adjustment comes into operation, and in view of the recent rises in the general price level, this pressure may be expected to mount. All in all, the steel-makers are not in as bad a shape as they would sometimes want one to believe. The industry's retained

earnings in the second quarter of 1961 were of the order of \$7.5 million and were expected to show further improvement in the remaining quarters. The steel-makers, however, claim that this is far from enough to finance their plant and equipment modernisation plans scheduled to run at an annual rate of something like \$1,000 million.

Inventory Situation Improves

The inventory situation which had been one of the principal factors in the 1960 recession has shown signs of distinct improvement. Some downward pressure on aluminum ingot output was still being exerted in July by stocks accumulated by producers, but shipments of aluminum sheet and plate were recovering nicely and had, in fact, reached levels higher than any in recent years with the exception of the spring and summer of 1959. There were signs that the downward pressure on recovery which early this year was being exerted by trailing furniture sales and a few home appliances as well as building materials was easing. Furniture and appliance stores (helped by a heat wave which stimulated customer interest in refrigerators and air conditioners), registered July sales which exceeded by about 3 percent the July 1960 figures. Motor-car sales, while showing greater vitality, were still lagging behind last year.

The overall improvement in the economic situation and the new problems which it suggests are shown in the behaviour of the components of the Morgan Guaranty Trust index of business activity. Out of the ten series making up that index, six showed advance in May and June of this year, three held approximately steady, and one declined in June. The trouble spots were concentrated in the employment and retail sales sectors. Although personal income, strong throughout the recession, had reached new highs (\$419,200 million in July at a seasonally adjusted annual rate), the boost in income was not translated into retail purchases at a fast enough rate. The rise in personal income was largely attributed to longer working hours, and to a lesser extent to increased employment. The unemployment problem was, indeed, causing some hard thinking among economists who are as yet far from agreeing on its basic causes. Total non-farm employment had in July reached a record level of over 62 million and unemployment dropped by about 400,000. At the same time, there were still about

1 million workers who had been out of jobs for six months or more, and seasonally adjusted unemployment rates were still in the region of 6 percent of the labour force. The way in which employment has been shaping up during the recovery is an indication that some at least of the factors involved are of a structural nature. The employment recovery has been more pronounced in the "white-collar" and supervisory branches than in the production sector. Unskilled workers, and more generally, the lower skills tend to be most seriously affected. There is little doubt that this situation is likely to continue in the future since it reflects the major technological transformations (including a relatively rapid pace of modernisation and automation) through which the economy is passing. Retraining programmes are an immediate and partial answer; a sustained educational effort involving a general raising of skills appears to be the ultimate answer.

Causes of Recession

A time of recovery is usually one during which stock is taken of the causes of the recession. There thus appears to be fairly general agreement among economists that three major factors had been at the origin of the 1960-61 recession: the rapid shift in the Federal cash budget from a 1959 deficit to a 1960 surplus, a tight-money policy by the Federal Reserve, and the disorganising effects of the steel strike which hit the economy just as it was beginning to pick up from the 1958 recession. Short of a legislative overhaul involving some very delicate political issues (such as the extent to which the Government can go to prevent work stoppages that deeply hurt the national economy), there was little that in the existing circumstances could have been done about the steel strike. The problem, however, is still on the agenda; it is not at all unlikely that it will come up again next July. Something could have been done, however, about the sudden drive for a budgetary surplus and the Federal Reserve Board's as sudden tightening-up of money and credit. It is also fairly generally admitted that one of the major achievements of economic science has been its contribution to the clarification of policies which since the war have successfully reduced business cycle swings and contained their nefarious effects. The experience of 1959-60 is not without relevance to present economic policies. Some economists argue that the increased governmental expenditures on education, public works, research and housing initiated in 1957-58 to fight the second post-war recession should have been continued through 1960 and not curbed, as has actually happened.

This reasoning is based on the assumption that the economy tends to suffer from a gap between potential and actual output of the order of about 8 percent in the present circumstances, the gap being generated by a weakness in the aggregate demand. Governmental spending such as the recently implemented accelerated tax refunds, aid to dependent children and unemployment compensation payments aim, it is argued, at stimulating consumer demand. The gap between the rate of increase in aggregate demand and the rate of increase in potential output is further complicated, so goes the argument, by the fact that the rate of growth in the economy's capacity to produce is itself insufficient. A reduction in the gap (which would imply a lowering of the unemployment rate to a reasonable 4 percent of the labour force) would tend to be accompanied by an acceleration in the growth of productive potential. Thus governmental expenditure programmes are at present justified on both the gap count, and the growth rate count. Expenditures for research, tax credits for investment, and reductions in interest rates for small business are advocated as contributing not only to the expansion of consumer markets, but also to the growth in productive potential.

Government Spending Programme

Those who are apprehensive of the Government's increasing encroachment on the economy argue that continued expenditure by the Government at the 1957-58 rates or more through 1960, would have done more harm than good since it would have imperilled the dollar's international standing, threatened as it was by a shrinking export surplus and gold outflow. An economy whose international responsibilities equal those of the United States, tends necessarily to be highly sensitive to foreign investors' feelings about the future of its currency. In such circumstances, a policy of restraint, it is argued, was not out of place although the enthusiasm and vigour with which it was applied (complicated by the steel strike) were probably mistaken. By extension, the proponents of this view look with suspicion on the Government's present spending programme. They fear the expansionary measures which are being taken bit by bit in addition to mounting defence expenditure, and argue that this spreading of expansionary measures over time will result in inflationary impacts on an economy which is already beginning to boom under its own steam. These economists question the gap theory as it stands at present and stress the difficulties involved in computing full employment output levels. All in all, the area of disagreement centres primarily on the evaluation of the speed of cyclical recovery with, however, some longer-term considerations involving the degree of permanence of the alleged gap between actual and potential output. Although the economist's life is never quite free of anxiety, his worries in mid-1961 are more academic and less immediately urgent than at the end of 1959.

INDIA AND THE EUROPEAN COMMON MARKET

By A. K. Mukherjee

THE U.K.'s decision to open talks for joining the European Common Market has stimulated India's interest in the subject. The decision of the U.K. should not, however, cause any surprise. As early as in July 1960, Mr. Selwyn Lloyd, in his capacity as British Secretary of State for Foreign Affairs, had welcomed "the formation of the Community of Six (E.E.C.) as a step towards European unity". The U.K. is a part and parcel of Europe, and she can ill afford to run the risk of being politically isolated and economically crippled by staying out of the Community. At the same time, her interests in the Commonwealth are deep and abiding.

The U.K. is thus between two conflicting pulls, but it is becoming increasingly obvious that the pull of the Common Market might prove stronger of the two. As a U.K. Minister once said: "We see today, in Europe, a powerfully developing group of nations in the European Economic Community. Its strength is shown by its size of over 170 million people, compared with 50 million in the U.K. and rather under 90 million in the E.F.T.A. as a whole. Their reserves of manpower are much greater. In ten years' time, the population under the age of 45 in France and Germany alone will be double that of the U.K. The gross national product of the Six is two and a half times that of the U.K. Their rate of industrial growth is much higher. The internal trade of the Six rose by 30 percent in 1960, compared with 16 percent for the internal trade of the Seven.

"The Six have a strong balance of payments position and large resources. Their prospects are already attracting increased investment, both from the U.S.A. and from the U.K. In the past, over 50 percent of the investments in Europe from the U.S.A. came to the U.K. In 1960, it was down to 41 percent and in 1961, over 50 percent of the U.S. investment in Europe is expected to go to the Six."

The European Common Market came into existence under the Treaty of Rome on 25th March, 1957, with Belgium, France, West Germany, Italy, the Netherlands and Luxembourg as the original signatories. It was a landmark in the economic integration of Europe initiated soon after the second World War by the Marshall Plan, and constitutes a major link in the long chain of efforts like the formation of the O.E.E.C., the European Payments Union and the Schuman Plan forming the European Coal and Steel Community. It is, therefore, much more than a mere Customs Union. Its functions permeate all the main fields of economic activity, and as the Economist Intelligence Unit has observed, is "likely to become a single Economic Community less centralised than the U.S.A., but much more cohesive than any group of sovereign National States".

Customs Tariffs

The European Economic Community stands committed to a reduction of the Customs tariff between its member nations and to a common external customs tariff applicable to third countries. It also aims at a progressive elimination of bilateral import quotas between members of the E.E.C. and their conversion into global quotas. These measures aim at eliminating the barriers of trade between the members of the E.E.C., and pave the way for economic solidarity of Europe which is the *sine qua non* of its political stability also. The British Prime Minister correctly stated the position when he observed that "although the Treaty of Rome is concerned with economic matters, it has an important objective, namely, to promote stability in Europe which is so essentially a factor in the struggle for freedom and progress throughout the world".

The Treaty of Rome visualises this and provides, among others, for the formulation of a common policy on agriculture to "replace the differing national policies" all of which subsidise agriculture at home to keep the food and raw material prices low. The European Commission which has been set up under the Treaty proposes to effect certain structural reforms in the system of agriculture in the Community and to organise marketing facilities for farm products. The Treaty also provides for the creation of the European Social Fund with the task of promoting employment in the Community through measures to increase the geographical and occupational mobility among the members. Besides, there is the Overseas Countries Development Fund which has received about \$58.1 million for the development of non-European areas under the control of the countries belonging to the E.E.C.

The European Economic Community, therefore, need not necessarily be looked on as an attempt to revive mercantilism in Europe. On the contrary, a proper assessment of its economic significance supports the view that on "the economic side, a Community comprising as members or in association, the countries of free Europe could have a very rapidly expanding economy supplying, as eventually it would, a single market of approaching 300 million people". This expanding economy is bound to create further demand for the

trade and improve the prospects of the less developed areas".

E.E.C. in Operation

Reduction in Customs tariffs between member nations of the E.E.C. began with a 10 percent cut in Customs tariff on 1st January, 1959, which has since been extended to non-members who are members of the G.A.T.T. This has been followed by a further cut of 10 percent on 1st July, 1960. On 1st January, 1961, again, tariffs on industrial products have been further reduced by 10 percent, effecting thus an overall cut of 30 percent in Customs tariffs on industrial products since the Treaty of Rome came into effect. As for agricultural products, the reduction on 1st January, 1961, was to the tune of 5 percent for those articles, tariffs concerning which have not been liberalised, making a total reduction of 25 percent for such items. In pursuance of the provisions of the Rome Treaty for the gradual elimination of bilateral import quotas between members of the E.E.C., it was decided on 1st January, 1959, to convert all the then existing bilateral quotas into global quotas with a 20 percent rise in most cases. On 1st January, 1960, again, further removal of quotas took place with an average increase of another 20 percent in most cases. Similar quotas have been increased to the level of 4 percent of national output of the goods concerned. These quota expansions may be extended to non-members also.

Expansion of Trade

The first step towards setting up of a common external tariff for imports of industrial products from non-members was taken on 1st January, 1961. The common tariff is based on the arithmetical averages of the tariffs of member countries on 1st January, 1957. It has been estimated that as a result of the introduction of the common tariff, there will be a rise in the levels of German and Benelux tariffs, whereas French and Italian tariffs will be somewhat lower on similar goods. The E.E.C. it will be thus seen, has so far shown adequate consideration for expanding trade in general and it is, therefore, not surprising that Greece has already become a member of the E.C.M., and negotiations with Turkey are in progress.

Although the U.K. could not agree with the Six to join the E.E.C. straightaway, she went with her own policy of economic unification of Europe by forming the European Free Trade Association with Austria, Denmark, Norway, Portugal, Switzerland, and herself. The instrument of ratification of the European Free Trade Association (E.F.T.A.) received the Royal Assent on 22nd March, 1960. Economic integration of Europe being an inevitability in the present political set-up of the world, the forces are more in favour of the U.K.'s joining the E.E.C. which, of course, will eventually mean the merger of the E.F.T.A. and E.E.C. into one economic unit. The U.K.'s concern for a closer association with Europe is borne out by the recent trends in her trade with the E.E.C. and E.F.T.A. With the E.E.C., her imports have increased from £533.2 million in 1958 to £662.2 million in 1960. The trend of the trade with individual members of the E.E.C. is given in the table I below:

TABLE I
U.K. IMPORTS FROM E.E.C. COUNTRIES

Imports from	1958	1959	1960
West Germany	136.0	144.9	181.7 (26.7%)
Netherlands	159.3	160.0	180.9 (+13%)
France	100.5	103.7	131.2 (+27%)
Italy	76.9	92.8	99.0 (+7%)
Belgium and Luxembourg	60.5	58.0	69.4 (+20%)
Total	533.2	588.7	662.2 (+19%)

U.K. exports to E.E.C. countries have equally recorded a large expansion from £418.9 million in 1958 to £514.3 million in 1960, the expansion of individual members of the E.E.C. being as in table II

TABLE II
U.K. EXPORTS TO E.E.C. COUNTRIES

Exports to	1958	1959	1960
West Germany	123.1	142.0	159.3 (+12%)
Netherlands	97.9	113.0	115.4 (+2%)
France	71.7	76.9	87.0 (+13%)
Italy	66.3	72.5	87.6 (+27%)
Belgium and Luxembourg	59.9	61.5	64.9 (+5%)
Total	418.9	465.8	514.3 (+10%)

U.K. Trade with the Seven

The U.K.'s trade with E.F.T.A. countries has also increased from \$2,107 million in 1959 to \$2.4 million in 1960. It will be thus seen that both E.F.T.A. and E.E.C. have come to occupy a prominent place in the trade pattern of the U.K., while the U.K. is a sponsor-member of the E.F.T.A. both in her own interest and in the interest of European integration, she may find it worthwhile trying to bring these two organisations together. A comprehensive arrangement in western Europe, "not highly protective, looking outwards and inwards, building up its own strength, but ready to help others", as the British Premier has recently said, "would be of real benefit to the whole world, both economically and politically. Economically, it would take us nearer to a still bigger area of free trade".

It is in the context of the economic expansion envisaged above that the significance of the U.K. joining the E.E.C. on the trade economy of India has to be studied. A comparative study of the direction of India's trade as in the table below during recent years shows how the E.E.C. countries have assumed greater and greater share of India's foreign trade.

	(In crores of rupees)			
	U.K. Imports from	U.K. Exports to	E.E.C. Countries Imports from	E.E.C. Countries Exports to
1952	152.04	126.54	71.63	46.81
1958-59	158.53	164.23	166.11	39.21
1959-60	188.16	178.77	188.04	50.01

It will be seen from this table that both India's imports from and exports to the E.E.C. countries have recorded a substantial rise during the last few years, although the rise in the case of imports is over 150 percent, compared with only about 10 percent in the case of exports. Similar expansion has also taken place in the trade with the U.S. The important point to remember is that India has an adverse trade balance with both the U.K. and the E.E.C. countries. The real issue involved is the U.K.'s joining the E.C.M. is, therefore, whether the U.K. and/or the E.C.M. countries will buy more or less from India in the event of the U.K. joining the E.C.M. To find an answer to this question one has to refer to the articles which India exports to the U.K. and the E.C.M. countries, and ask to find out how far the present volume of exports to the U.K. are due to the special preferences tariff which Indian exports receive in the U.K. under the so-called imperial preference system, being presumed that the common tariff system of the Rome Treaty will not allow the system of imperial preference to be retained.

Indian Exports to E.C.M.

India's major items of exports to the U.K. and the E.E.C. countries are coffee, tea, tobacco (unmanufactured), pepper, oilseeds, iron ore, manganese ore, raw wool, raw cotton, hides and skins, coir yarn, cotton textiles, jute manufactures etcetera. The trend of these exports to the U.K. and the E.E.C. countries during the last few years may be seen from table III.

The majority of the Indian exports to the U.K. and the E.E.C. are either raw materials, or tea and coffee. As far as the raw materials are concerned, they are most likely to continue to enter duty-free as they do now—because the levy of import duty on raw materials by the E.E.C. countries will increase their cost of manufactures and thus adversely affect their competitive strength. Not only this, the spurt in economic expansion which complex economic integration may engender, is likely to increase the overall demand for raw materials and drinks like tea and coffee. It has to be remembered that the termination of Commonwealth preference for tea and tobacco may not affect India's trade with the U.K. in these commodities, because there is a keen intra-Commonwealth competition in these commodities. But, as the Economist Intelligence Unit has pointed out, "a duty fixed at the

TABLE III

Steam...

Industry's greatest power

SINCE 1782, when the first Rotative Steam Engine enabled the use of steam power to motivate machinery, steam has played an ever increasing part in industry throughout the world.

Not only is steam today's most important source of power for the civilised world, but it must remain so for many years to come. Even atomic power is yet in its infancy and can only be applied as an alternative source of heat. Steam is indeed the real power of industry.

While this is but an outline of the extensive and continually growing part that steam plays in power generation and industry throughout the world, it indicates quite clearly the unparalleled importance of steam power in the industrial growth of India... and, therefore, the urgent need to manufacture vital steam-raising plant in this country to meet the demands of expanding industry.

This is one of the needs which has led to the formation of a new and powerful industrial group, ACC-Vickers-Babcock Limited (AVB). The vast technical knowledge and extensive practical experience available to it will enable the new company to make an important contribution to Indian industry—and help Indian engineers overcome some of the difficulties which have faced them for so long.

The new AVB plant is nearing completion on a 700-acre site at Durgapur. The workshops, designed on modern lines, will have built into the structure electric overhead travelling cranes with 70 tons lifting capacity.

All workshops have been designed to allow for progressive expansion so that it will be possible to lift 200 tons without making structural alterations. Up-to-date machine tools are being installed. When completed, they will include a 3000 ton hydraulic press capable of bending steel plates up to 5" thick for use in the manufacture of high pressure boiler drums, and pressure vessels required for the fertiliser, chemicals and oil refining industries. The new plant will make it possible to manufacture steam-raising equipment in the high pressure range—for the first time in India.

ACC-VICKERS-BABCOCK LTD. offers the industrialist his best chance to ensure a fully integrated installation comprising the boiler plant itself and a wide range of equipment from the fuel handling and preparation plant to the ash plant and dust disposal installation.

Besides, the industrialist has the confidence that he will get after-sales service of the highest quality from AVB!

...a Powerful Partnership for Progress

ACC-VICKERS-BABCOCK LTD.

E.E.C. level on tea imported into Britain would damage India's trade by raising the price of tea and so depressing consumption. In the event of the U.K. joining the E.E.C., India will have to seek safeguards for her tea exports to the U.K. by pressing for keeping the two markets separate.

Prospects for Tea

Tea may, however, record some increase in consumption in the E.E.C. countries if proper use is made of the modern marketing research facilities. Indian coffee is treated as a class by itself and has not much to fear from the competition of coffee from French possessions. The real danger, however, has to be faced by cotton textiles and jute manufactures. It is for these two commodities that adequate safeguards will have to be provided for in any agreement which the U.K. may sign with the E.E.C. Here, too, the cloud is not, however, without a silver lining. India is today a large customer of the Common Market's plants, machinery and other manufactures. If a proper approach is made, it may not be difficult to persuade them to take more of India's jute manufactures for the E.E.C. countries as a whole. An idea of this expansion can be had from the estimated expansion by 1970 in the population and gross national product of the U.K. and the E.E.C. countries, as calculated by the Economist Intelligence Unit.

	1955	1970		1955	1970
	Population	G.N.P.		Population	G.N.P.
	000's	(£ million)		000's	(£ million)
U.K.	51,325	19,155		54,210	26,435
E.E.C.	161,165	46,365		174,360	73,840
Whole of Western Europe	239,660	74,900		257,385	114,250

If the estimated expansion calculated above materialises, expansion of the G.N.P. in the whole of Europe by 1970 will far exceed the population expansion. The economic progress thus visualised holds out a bright prospect of trade expansion in western Europe including the U.K., the benefit of which may extend to India as well. The preference which exports from India enjoy in the U.K. has been of great consequence for long. But most of them being *ad valorem* preferences, their significance to the overall cost of Indian exports to the U.K. has considerably declined due to the rising price of the exported commodities as a whole. Besides, the Commonwealth itself today covers such a wide area that all or most of the major world exporters of a given commodity are numbered among Commonwealth countries and the intra-Commonwealth competition for some of India's major exports, like tea and jute, is as keen as that between any Commonwealth country and an outside one.

Pattern of Indian Trade

With the growth of industrialisation in India, the pattern of her foreign trade is bound to undergo important changes. At present, India is basically a raw-material exporting country and she gets her imports largely in the form of food, manufactured products, plant and machinery, etcetera. The following tables will illustrate the point:

MAJOR ITEMS OF INDIA'S IMPORTS

	1958-59	1959-60
(In crores of rupees)		
Food	189.07	153.55
Beverages and tobacco	2.21	1.34
Crude and inedible oils	78.74	104.88
Mineral fuels, etcetera	71.57	86.83
Chemicals	67.98	91.39
Manufactures	180.93	184.32
Machinery, etcetera	238.02	272.76
Animal and Vegetable Oil	3.91	5.10

MAJOR ITEMS OF INDIA'S EXPORTS

	1958-59	1959-60
(In crores of rupees)		
Beverages and tobacco	16.08	14.51
Crude mineral, etcetera	104.96	117.55
Mineral fuels	8.71	8.17
Animal oil	7.16	15.69
Manufactures, including jute and cotton	215.18	249.59
Machinery, etcetera	2.51	9.82
Tea	129.05	128.61
Coffee	7.89	6.33
Cashew	15.85	16.05
Pepper	2.46	8.17
Oilcakes	10.66	21.08
Miscellaneous	24.27	22.21

It will be seen from the export items that tea, jute and crude minerals constitute the major share of India's export trade. This pattern will, and should, undergo change after a few years when the gigantic industrial efforts put up by the country under the five-year plans start yielding results. Industrial production in India in almost every sector has recorded large expansion in recent years. This large expansion in industrial production has not yet been adequately reflected in India's export trade pattern because of the large margin of unsatisfied demand within the country and the expansion of internal demand due to the all-round developmental activities under the five year plans. But sooner or later, India will have to rank as one of the large industrial producers and from the long-term point of view, her interest lies in these regions of the world which will be interested to buy the products of her industries more than those of her agriculture and plantations. From this point of view, the European Economic Community even after the U.K. and the E.E.C. countries join it, is of less importance than, for instance, less developed regions of the world.

Plantation Topics

THIRD PLAN TEA TARGET CRITICISED

SURPLUS IN WORLD OUTPUT FORECAST

(FROM OUR SOUTH INDIAN CORRESPONDENT)

SPEECHES delivered at the recent U.P.A.S.I. annual conference indicated that the planters and the Central Government do not see eye to eye on some of the vital problems affecting the industry. They brought to limelight the basic differences between the planting community and the Government in their approaches to problems like the restriction of internal consumption of tea in favour of exports, the third plan targets for the tea industry and tax relief. Points from the speeches of Mr. H. C. Kothari, president of the United Planters Association of Southern India and Mr. S. K. Patil, the Central Food Minister, who inaugurated the conference, are given below to show the differing views of the industry and the Government on these problems.

It is believed by the Government, Mr. Kothari said, that internal propaganda is not necessary and, in fact, all promotional work should be given up for increasing exports. This decision is wrong because of the faulty understanding of the relevant facts of the case. The industry is convinced that it can meet the challenge of an expanding market both at home and abroad. "If we rely on the present policy of non-expansion of the internal market, we shall be landed with a major crisis which will rock the industry to its very foundations, in case we are able to raise production by 200 million lbs in five years and reach 900 million lbs by 1965-66 as laid down in the third plan."

Earning Foreign Exchange

Mr. Patil said that for the success of the third plan, the country needs a strong foreign exchange support. It is, in his view, the obligation of everyone to ensure that the industry makes the best contribution possible to earn as much foreign exchange as possible by tightening the belt in the domestic market. The need for such restrictions in the case of tea should be clear, since against an average increase in production of 17 million lbs a year, the average rise in internal consumption is 14 million or 15 million lbs. A situation in which most of the increase in production is absorbed by the internal market is not one which one can contemplate with any degree of equanimity.

Mr. Kothari said that the third plan tea target represents an increase of 24 percent in production and 18 percent in exports. While the planters appreciate the Government's anxiety to increase exports, they wonder whether the production target is not a little too high "having regard not only to the trend of past production but also certain important aspects of the economics of the tea industry itself." The all-India tea production has increased since 1954 at an average rate of only 12 million lbs a year, whereas to reach the target of 900 million lbs, an average increase of about 40 million lbs a year over the next five years will be necessary. Considering the relatively small rise in planted acreages which has occurred in recent years, Mr. Kothari feels that new planting offers little prospect of adding greatly to production. While India is truly the world's largest producer and exporter of tea, she does not enjoy a monopoly in the world tea trade. On the other hand, she has several powerful competitors in the world markets. It is a matter for serious concern that in spite of her best efforts, she has been steadily yielding ground to her rivals. Her share of the world market has progressively declined from 41 percent in 1958 to 39.8 percent in 1959 and 36 percent in 1960. In terms of earnings, the reduction is from Rs 136 crores to Rs 126 crores in 1959 and Rs 121 crores in 1960. "But the most disquieting feature is the decline in the amount of earnings. I can see no real advantage in planning for a high production when we are losing ground in the world market at the current production levels."

The F.A.O. Report

In this connection, Mr. Kothari referred to the latest F.A.O. report entitled *World Tea Trends and Prospects*. It contains a forecast that the world output will exceed world consumption by between 40,000 metric tons and 50,000 metric tons or approximately 100 million or 110 million lbs by 1965. Although this is only a forecast and is based upon the possible changes in the pattern of production and consumption in the different parts of the world, it is nevertheless a factor which should not be ignored when the country is planning for an increase in production. Considering the trend of India's production and exports during the past three years and the prospect of a world surplus forecast by the F.A.O., the fixing of a high production target in the next quinquennium looks rather unrealistic. Already, there is a strong resistance for Indian common teas in the world markets, and a mere increase in production—not accompanied by a systematic and intensive campaign for increased consumption—would force a crisis of overproduction on the industry. "My suggestion, therefore, is that while aiming at the official target, we should concentrate our energies and our efforts on the expansion of our markets both within and outside India. This requires, in the first place,

the provision of suitable incentives for export promotion and, secondly, an intensive and extensive campaign for increased consumption both within and outside India. Whatever I have said concerning the plan targets and the Government's anxiety to increase exportable surplus, should not be taken as a negative attitude on the part of the industry. On the contrary, we would like to help the Government to succeed in its purpose by practical and realistic assessment of the task involved." The world consumption is expanding only at less than 2 percent a year. An increase in the crop of 200 million lbs by India, a like quantity by China, increased self-sufficiency in Iran, Turkey and South America and the rising contribution by Ceylon, east Africa and Taiwan may spell disaster to the world tea market by 1965-66, Mr. Kothari said.

Rising Consumption

In almost every country in the world, Mr. Patil said, the consumption of tea and coffee is increasing. During the past ten years in India alone, the consumption of tea had increased by 20 percent. In Pakistan, it has increased by about four times and in Ceylon by more than 60 percent. In Japan, it has almost doubled and in the world, as a whole, the increase is easily 50 percent. "If you set against this consumption the increase in the world production of tea, it is only 25 percent. In the face of this, I doubt whether we can completely rely on the F.A.O. assessment of a surplus production of tea. In fact, it is a point worth considering whether having regard to the increase in consumption within the country and a rising population as against a very slight increase in our total production, the target that has been set before you could not be justified on the need of the country alone, even apart from the undoubted need of earning more foreign exchange through increased exports. I feel myself that not only do the hopes entertained by you under the third plan need to be matched by earnest efforts on your part but that the various measures which the Tea Board have devised for your assistance should enable you to do your best in realising the targets," Mr. Patil said.

There seems to be a complete lack of co-ordination, Mr. Kothari said, between the Centre and States concerning their taxation policies. "It should not be that the benefit of a concession given to the industry by one Government could be taken away by another Government in another form. It seems to me that the time has come for a thorough appraisal of taxation on the plantation industry by both the Central and State Governments." Mr. Kothari demanded relief in some Central and State taxes in order to enable the industry to make satisfactory progress.

World Coffee Agreement

The U.P.A.S.I. president said that the International Coffee Agreement signed by 15 countries came into being only in 1958, but proposals have now been made to widen its membership to cover the entire coffee growing countries of the world. "I think, we should consider whether it would not be to our advantage to participate in such an agreement," Mr. Kothari said. As long as India was only interested in producing enough to meet the local demand, there was no purpose in joining an international pact. But the picture has changed and the country now has a large exportable crop which has to be marketed under acute competitive conditions. Referring to this, Mr. Patil said that there is a lack of balance in the world production and consumption of coffee with the result that prices have been declining since 1959. So the world coffee producers under the international agreement have withheld their stocks to maintain the price line. "We have, however, an advantage in that we are not members of such an agreement and are not bound by the terms of that agreement. We can still try to obtain the best possible prices for our coffee in the world market, and the open sales of proper grades and types of coffee might offer a suitable medium for obtaining satisfactory results." India's exportable surplus so far is a fractional part of the world trade and she might at present lose rather than gain if she becomes a member of the International Coffee Agreement. It is only when her exportable surplus assumes a worthwhile proportion that the question would seem to require careful consideration, Mr. Patil said.

Threat of Direct Action

The plantation industry in Kerala is facing the threat of direct action including a general strike by its workers. The I.N.T.U.C. unions, which claim the support of the majority, have already served the strike notices on estate managements. They have started *satyagraha* on several estates as a first step towards a full-fledged agitation. The object of the agitation is to get an enhanced dearness allowance with reference to the cost of living. The Association of Planters of Kerala says that no dearness allowance is presently in existence and there is no provision for enhancing wages with reference to the cost of living. Last week, the Kerala Minister for Labour, Mr. K. T. Achuthan, made an abortive bid to bring about a settlement between the plantation owners and their workers. The State Plantation Labour Committee—a standing committee with representatives of the management, labour and the State Government constituted for the purpose of settling the labour problems in the plantation industry—met in the State capital and discussed the demands of the workers, the sum total of which was an interim relief in the form of an enhancement of the existing wages pending the report of

the National Wage Board constituted by the Central Government. The employer and labour representatives on the committee could not come to terms. After the meeting, the A.I.T.U.C. and other labour union leaders said that they would extend support to the I.N.T.U.C.-led agitation if an agreement was not reached at the next meeting of the Plantation Labour Committee scheduled to meet on 27th September.

Improper Agitation

The Central Tripartite Committee on Plantations decided in October 1959 that wage boards should be set up and that until their recommendations became effective, the current wage agreements should not be disturbed by agitations of any kind. The recent meeting of the committee in Delhi has confirmed this. The Central Minister for Labour has told the committee that the proposed agitation in south Indian plantations is improper and that no dispute should be raised about wages now as the National Wage Boards are investigating the issues. He added that under the circumstances, the issue of wages could not be referred to adjudication either. A Kerala Government spokesman said that it would be improper for the State Government to interfere in this matter, according to an A.P.K. Press note. The Association thinks that the effort of some trade union officials to push plantation workers into direct action is "most improper". The A.P.K. Secretary in a Press statement said: "It is high time that plantation workers did some independent thinking. They should consider whether it is wise, whatever union officials may say, to plunge into an agitation which clearly and unmistakably offends against tripartite agreements made at the highest levels. They should consider whether they should thus expose themselves to hardships and even loss of employment at the behest of misguided union officials in a programme of direct action which clearly is not smiled upon by authority either at the Centre or in the States".

Pepper Exports Rise

There was a marked improvement in Indian pepper exports during July 1961 when 840 tons were shipped from the Indian ports to foreign countries. This compares with 773 tons in the previous month and 594 tons in July 1960. Total exports from the beginning of the current season in November 1960 to the end of July 1961, are estimated by the trade at 14,444 tons, against 16,977 tons in the corresponding period of the previous season. Futures trading in pepper has been presenting an erratic trend for the past few days. The October delivery, for instance, has fluctuated between Rs. 382 and Rs. 398 in the Cochin market. The uncertainty is attributed mainly to the divergent trade estimates of the possible quantity of tenders against the last contract of the 1960-61 season. A section of the trade feels that the current stocks in India are larger than estimated, and, therefore, the maturing contract will attract a fairly large delivery since it offers the only opportunity to the stockists to reduce their holdings. The recent weakness in the U.S. market, where the prices have eased by one cent a lb, has also aggravated the selling pressure. The larger section of the trade in Kerala is, however, inclined to stand firm on its conviction that the uncommitted stock in India is limited, so its liquidation offers no problem to the trade.

Cashewnut Prices Fall

It is stated that the Central Government is reluctant to accept the demand for restricting raw cashewnut imports temporarily to arrest the fall in the prices of processed kernels. This demand of the factory owners was recently endorsed by the Cashew Export Promotion Council and a recommendation was made to the Central Government to this effect. The kernel prices have receded to 43 cents, after steadily rising to 56 U.S. cents a lb. There is no guarantee that prices will not decline further because of the uncertainty in demand for the commodity.

TEA OUTPUT IN PAKISTAN INCREASES

GOVERNMENT MEASURES TO ENCOURAGE CULTIVATION

(FROM A CORRESPONDENT IN PAKISTAN)

THE Pakistani tea industry, which was hit by a severe drought in 1960-61, has staged a recovery. According to reliable sources, the crop during the current year is likely to touch the 58 million lbs mark—almost an increase of over 15 million lbs over that of last year. With the bright prospects, the Government has liberalised the restrictive measures adopted last year. Although the price control continues, the buyers' quota fixed last year has been abolished, and registered bidders at Chittagong auctions can now buy as much as they like. With the production of more tea than can be domestically absorbed, the Government has fixed a quota of 10 million lbs for exports, and at the same time, has reduced the export duty on tea from 38 paise to 25 paise a lb. This reduction of export duty would make Pakistani tea more competitive in the world market. Some definite steps have been taken by the Government to increase tea production. An extra area of 8,500 acres has been released for tea cultivation in Sylhet, and this area is being offered to prospective investors. Steps are also being taken to take over some of the derelict gardens and to introduce tea cultivation in the Dinajpur district.

where soil conditions are considered to be favourable.

Tax Holiday for New Gardens

To make tea cultivation attractive to investors, a tax holiday for eight years has been made available to all new tea gardens in East Pakistan, starting from the year when the garden goes into commercial production. On the expiry of the holiday, new gardens will be entitled to receive the benefit of depreciation at substantial rates for the next five years. Although not yet announced, the provincial Government is also likely to allow a similar tax holiday in agricultural income tax. As far as the existing gardens are concerned, all expenditure on maintenance including expenditure on fresh areas brought under cultivation is allowed as an admissible expense under the income tax law; similarly, any expenditure incurred on the maintenance and upkeep of the additional areas during the subsequent years will be carried forward as a loss for a period of six years and set off against future income when commercial production starts. In order to encourage the further cultivation of tea, the Government is considering the question of granting a subsidy on fertilisers used by the tea growers.

Auctions Resumed

After a lapse of about 18 months, the first export tea auction under the Government's revised tea policy was held on 6th September, 1961. There was a fair demand of leaf, but prices generally failed to realise brokers' valuations. Better liquoring sorts were a strong feature, especially clean, black fannings.

	(Rs. a lb)
B.O.P. ...	1.50 to 1.60
B.P. ...	1.30 to 1.35
O.F. ...	1.60 to 1.70
P.F. ...	1.35 to 1.40

The internal Sale No. 8, held on 13th September 1961, showed rather depressed features with prices falling by 15 paise a lb, on an average, and the demand was moderate. In leaf, in spite of a fair demand, even the best liquoring sort had to pull up to realise brokers' valuations. Demand generally was not very bad, but prices were offered at a discount. Following were the quotations excluding 62 paise a lb of excise duty:

	(Rs. a lb)
B.O.P. ...	2.10
B.P. ...	1.85
B.P.S. ...	2.00 to 2.10
O.F. ...	2.10 to 2.15
P.F. ...	2.00
Dust ...	2.20

TIMBER CONSERVATION IN TEA ESTATES

A PROFITABLE SOURCE OF REVENUE INDICATED

(BY A SPECIAL CORRESPONDENT)

ALTHOUGH the Forest Department under British rule put in much good work for the conservation of timber, most private owners have wasted valuable trees for years past. Until a few years ago, the felling of valuable timber was a common sight in the Darjeeling district. In the past, Assam and Cachar tea planters cut their timber for factory purposes, such as for engine-room requirements. But it is doubtful if any company undertook proper afforestation before 1920. With the increase in India's population as well as her industrial development, the demand for wood continues to grow. Meanwhile, the Food and Agriculture Organisation is reported to be anxious to

help improve the supply. It is stated that an attempt is to be made to double the productivity by 1975. But this programme sounds ambitious, for hard woods grow slowly, and although some soft species are known to mature rapidly, their uses may be limited.

Afforestation Programme

This matter should, however, be of interest to tea estates, for it is a well-known fact that many old-established rupee and sterling tea companies control large areas of land in addition to their acreage under tea. From the writer's experience, which goes back many years, much useful afforestation could be undertaken to the benefit of the companies concerned. This might become a useful and profitable diversification of tea interests to which might be added market gardening. Practically every estate now employs a labour force of 500 or upwards for whom vegetables, fruit and milk are a necessity. Some of the larger estates have thousands of workers on their payrolls. With these markets on the spot, some managements have undertaken to provide this essential service, but not many have done this so far. The redundant labour could be usefully employed and, presumably, if timber is wanted as it must be, it will command a fair price. This might be a useful extra source of supply for implementing the F.A.O. programme. Mal and Buxa Doars have magnificent forests; Assam and Cachar have also some beautiful reserves. If the F.A.O. proposes to plant 150,000 acres a year over the next ten years, there is no reason why private companies should not co-operate with the scheme. The demand for soft wood for paper pulp alone is expected to increase from 500,000 tons to over 2 million tons during the period. More wood will also be required for fuel, so here is an alternative source of revenue for agricultural producers. In view of the increase in the output of manufactured tea and the consequent fall in prices, an alternative means of earning revenue will be welcome to many planters.

Internal Consumption: A Comparison

In recent weeks, the importance of developing the home market for tea has been stressed in these columns, and it is interesting to compare the internal consumption in some neighbouring countries. For example, Iraq heads the list at 2.35 kilograms a head, Ceylon at 1.34 kilograms a head but India figures at 28 kilogram only. Pakistan is given at 22 kilogram a head. This is difficult to follow because that country expects to manufacture 60 million lbs this year, of which only 10 million lbs has been passed for export.

Auction Mart in Pandu

The Government of Assam is reported to be working on its proposal to open an auction mart in Pandu for the sale of teas for internal consumption. This would be useful for Assam and would result in saving some freight costs to other States as well as eliminating tax on tea passed through Calcutta. Presumably, teas for export will continue to be shipped via Calcutta for some years.

Tea Exports to E.C.M.

As for tea exports to the Continental markets, it has been reported privately from France that tea from the plantations of certain African-associated countries should be admitted free of duty to the European Common Market nations if Britain joins that association. At present, tea is costly in those areas because of high duty charges and the high cost of handling small quantities. But if Britain joins the E.C.M., the big U.K. blenders are expected to take a lead in developing these new markets.

The Scots are already organising a trade exhibition to tour the E.E.C. from October. It is planned to visit Brussels, Paris, Rome, Milan, Munich, Frankfurt, Dusseldorf, Amsterdam and Hamburg.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953 100) declined by 0.6 percent to 124.5 during the week ended 9th September, 1961, compared with 125.2 (revised) for the previous week. The index was lower by 2.7 percent and 0.6 percent, respectively, when compared with the corresponding week of the earlier month and that of a year ago.

BAISAKHI LAC CROP DECLINES

The final estimates of the 1961 Baisakhi lac crop, issued by the Indian Lac Cess Committee, have been placed at 550,000 maunds, against the revised estimate of 605,000 maunds and 1,100,000 maunds last year. The normal production, based on the average production in the ten years preceding 1960, is 736,000 maunds. The crop this year is poor because, firstly, there was scarcity of brood at the time of infection and, secondly, there were no rains in April and May. Furthermore, the sticklac prices have been low affecting the arrivals, particularly in Madhya Pradesh and Maharashtra States. A quantity of 31,000 maunds of Jethwi (Kusmi) crop has also arrived this year. The average of ten years' production preceding 1960 is 26,500 maunds for the crop.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to August 1961. As compared with July, the August Indices for Food and Clothing show increases of 12 points and 3 points, while those for Fuel and Lighting and

Miscellaneous remain unchanged at 294 and 308 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 7 points during August 1961.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100

STRONG GENERAL DEMAND AT TEA EXPORT SALE

IRREGULAR TREND IN DUSTS

AT Sale No. 17, held on 25th and 27th September, there was a strong general demand at the Export auction for the 72,310 chests on offer. Clean plain brokeners were firm to dearer, but similar Fannings were up to 10nP easier. Less interest was shown in any teas containing stalk and fibre. Medium and better liquoring sorts sold readily with the best descriptions often a little dearer, although prices were generally irregular. C.T.C.s were well supported at generally firm to dearer rates, particularly the better descriptions and larger B.P. types. Off-grades came in for more competition, but prices were irregular. Darjeelings received good support, but were generally easier while prices for tippy teas were irregular. There was more interest in whole leaf grades, particularly the cheaper varieties, and prices were generally dearer.

Quotations	1961	
	Rs. a kilo	Rs. a kilo
Clean Plain Pekoe	4.30 to 4.50	
Plain B.P.	4.15 to 4.35	
Plain Fannings	3.85 to 4.10	
Medium Assam C.T.C. B.P.	5.00 to 5.40	
Medium Assam C.T.C. Fgs.	4.90 to 5.30	
Best Assam C.T.C. B.P.	5.40 to 6.00	
Best Assam C.T.C. Fgs.	5.40 to 6.20	

(Quotations are inclusive of excise duty.)
At the Internal Sale, there was once again a good general demand for the 25,322 packages of Dusts on offer. Medium C.T.C.s were irregular with the clean bright teas being generally firm and sometimes dearer. The small powdery types sold well, but the good C.T.C.s were slightly easier. Plain orthodox Dusts were taken up at prices which were 5nP to 10nP below last rates, while the Assam varieties met with good support at a small discount. Legg-cut Dusts were readily absorbed at generally firm rates, but the prices of fibrous teas declined.

Quotations	1961	
	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	3.90 to 4.20	
Medium Assam Dust	4.10 to 4.50	
Legg-cut Dust	4.40 to 4.90	
Medium Assam C.T.C. Dust	5.65 to 5.90	
Good Assam C.T.C. Dust	6.20 to 6.40	

(Quotations are inclusive of excise duty.)
The 325 packages of internal Leaf teas on offer met with a good market, the few green teas selling extremely well.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 19th September and 25th September, 1961)
Cowhides: Wet salted (Ord.) 9,500 pcs. on the basis of Rs. 8.25 to Rs. 12.25 and Rs. 13.50; wet salted (Slaughtered) 16,700 pcs. on the basis of Rs. 8.50 to Rs. 16.50, Rs. 19 and Rs. 28 to Rs. 29.
Goatskins: Wet salted (Patna, Daissee, Kustia) 39,900 pcs. on the basis of Rs. 200 to Rs. 240, Rs. 280 to Rs. 300 and Rs. 375 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 3.75 and (she-killed) on the basis of Rs. 3.50; Assam-Dinajpur 24,300 pcs. on the basis of Rs. 250 and Rs. 280 to Rs. 320; Purneah-Kissanganj 3,400 pcs. on the basis of Rs. 290 to Rs. 325; Muzaffarpore 800 pcs. on the basis of Rs. 305 to Rs. 320; Dinajpur 500 pcs. on the basis of Rs. 480 to Rs. 490.

SHELLAC QUIET

During the week ended 26th September, the market was quiet. The range of quotations was as follows:

Shellac and butonlac —hand-made	Rupees a package of 74.48 kilos	
	Buyers Rs.	Sellers Rs.
Superior Kusmi	188, 187.33, 189.	129, 191.50, 192
Light Pure Butonlac	178, 177.33, 179	182, 181.50, 182
Pure One Butonlac	162.50, 163.33, 162	166.50 to 164

Golden Bysack	129, 130	128.50, 127, 129
Seedlac		127.33
Manthum Fine	114.50, 114	131.50 to 135
Bysack Seedlac	107.33 to 106.66	118.50 to 117
Genuine Bysack	99.33, 98.66	110 to 108.67
Grade One Class A	144, 143	101 to 99.33
Grade One Class B	125.33, 126, 125	146, 145
Grade Two Class A	127, 126	128 to 126.67
Grade Two Class B	109, 108	130.66, 129
Seedlac		110.25, 109.33

Shipments during September until the 22nd were 29,796 packages.

COMPANY AND PUBLIC NOTICES

THE NATIONAL ROLLING & STEEL ROPES LIMITED NOTICE

NOTICE is hereby given that the Nineteenth Annual General Meeting of the Shareholders of The National Rolling & Steel Ropes Limited, will be held at the Registered Office of the Company, NICCO HOUSE, Hare Street, Calcutta, on Monday, the 30th October, 1961, at 3-30 P.M. to transact the following business:—

- To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit & Loss Account for the year ended 30th June, 1961.
- To declare Dividend.
- To appoint a Director in place of Sir B. P. Singh Roy, Kt., K.C.I.E., who retires by rotation and is eligible for re-appointment subject to compliance with the provisions of Section 281 of the Companies Act, 1956 and to consider and if thought fit to pass the following Resolution of which a Special Notice as required under Section 281 of the Companies Act, 1956 has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir B. P. Singh Roy, Kt., K.C.I.E., who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act, shall not apply to him".

- To appoint a Director in place of Shri R. K. Deb, who retires by rotation and is eligible for re-appointment.
- To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will remain closed from 13th October to 30th October, 1961, both days inclusive.

By Order of the Board,
FOR THE NATIONAL ROLLING & STEEL ROPES LIMITED,
S. C. ROY,
Director,
Managing Agents.

NICCO HOUSE,

Hare Street,

Calcutta-1.

The 8th September, 1961.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and that a proxy need not be a Member.

The Dividend, if declared, will be paid to those Shareholders whose names appear in the Register of the Company on 13th October, 1961 or their mandatories and the dividend warrants will be posted from 14th November, 1961 onwards.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 in respect of Item No. 3 has been appended to the Notice of the Meeting which is being forwarded to the Shareholders.

To All Shareholders:

And in particular to:
R. R. Bhandary Esq., Lt.-Genl. Shanker Shum Shere J. B. R., M/s. Mahendra Prasad and Hrishikesh Prasad and M/s. Gouri Nath Rimal and Durga Nath Rimal, Sm. Durga Kumari Rimal and Sri Siddhi Nath Rimal.

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LIMITED

NOTICE

Payment of Dividend on Preference Shares

IN connection with the payment of the above dividend for the half-year ending 30th September, 1961, the Preference Registers of the Company will be closed from the 4th October, 1961 to the 11th October, 1961, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LIMITED,
Secretaries.

Calcutta,
21st September, 1961.

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

Final Dividend for the year ended 31st May 1961

AT a Meeting of the Directors held on the 26th September, 1961, the following Final Dividend was recommended for the year ended 31st May, 1961 subject to deduction of Tax under Section 18 (3D) of the Indian Income Tax Act:

Rs. 585 per share on the 100 original shares of Rs. 2,500 each
Rs. 29.25 per share on the 71,400 Old shares of Rs. 125 each
Rs. 11.70 per share on the 84,000 New shares of Rs. 125 each (Rs. 50 paid up)
Rs. 825 per share on the 100 original shares of Rs. 2,500 each
Rs. 41.25 per share on the 71,400 Old shares of Rs. 125 each
Rs. 16.50 per share on the 84,000 New shares of Rs. 125 each (Rs. 50 paid up).

By Order of the Board,
WALLACE & COMPANY,
Secretaries and Treasurers.

Registered Office:
9 Wallace Street,
Bombay 1.
26th September, 1961.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TRANSPORT CHAOS A THREAT TO COAL EXPANSION

THE Indian coal industry seems to be heading for one of the worst crises in its recent history. The elements of this crisis are mainly three. One is that not enough coal is being produced. The second is that even the little which is being is not all being moved to the places where it is required. And the third is that procedural delays along with financial difficulties are threatening the projected expansion of the industry. In this late day and age, no one can say that these problems are in any sense new, sudden or unpredictable. They have been developing steadily in intensity ever since the second plan was launched. By this time last year, a stage had been reached where, because of the shortage of coal, many manufacturing units had to shut down temporarily, while others had to reduce production after running down their fuel stocks to dangerously low levels. The flood of talks, conferences and controversies which that crisis produced led to the introduction of make-shift arrangements to ease the countrywide shortage of coal. It would in due course lead, many had hoped, to the introduction of more rational policies for the production and distribution of the fuel resource most crucial to the country's entire industrialisation programme. But the events of the past few months have belied this optimism. The Steel, Mines and Fuel Ministry has with characteristic bravado been talking about a coal target of 200 million tons under the fourth plan and 300 million tons under the fifth, forgetting that coal production at the moment is falling. The Railway Ministry, with equal brashness, has taken to issuing statistics showing that more wagons are leaving the coalfields, and more are getting past Moghulsarai, forgetting that some of the most important industrial units in the country are still struggling along with less than two days' coal stock in hand. Finally, amid all the talk about future expansion, the fact remains that resources for financing even the relatively limited expansion plans of the present are proving extremely difficult to find.

for wagon manufacture went awry at least partly because they did not order the steel in time. Furthermore, if they felt that their own expansion would be inadequate for the needs of the economy, the least they could have done was to withdraw their objections to developing other forms of transport. The growth of road transport was hamstringing as much by the railways' dog-in-the-manger attitude as by anything else. To a lesser extent, the growth of coastal shipping too was hampered by the same factor. Rather late in the day, the railways have now woken up to the fact that their own inadequacies and their former jealousies have done serious harm to the economy. They have adopted the casual attitude where they simply shrug their shoulders and say that since they cannot carry the coal themselves, it may now be dumped into lorries and ships and carried wherever the Government wants it to go. This might have sounded a brilliant idea, but for the unfortunate fact that lorries, roads and ships do not suddenly materialise out of thin air; expansion in these spheres too has to be planned years ahead if it is to meet trade and industrial requirements efficiently. Because no such planning has been done, mountains of bogus schemes are now being invented to move coal in "black rakes" and "box" wagons to coal dumps throughout the country—from which dumps, it is suggested, consumers will make their own arrangements for drawing supplies as best they can. Similar airy schemes are being evolved for moving coal in coastal ships, though the ships cannot be found and the port handling facilities do not exist.

Even to the extent that the schemes can be implemented, there are three serious dangers implicit in them. One is that they will lead to a substantial increase in the cost of coal for almost all consumers except the railways themselves, which are, of course, comfortably installed in the top priority category. The second danger is that even if consumers are prepared to bear the increase in coal costs, they are not sure of getting the supplies they need; facilities for moving coal from the proposed dumps to consumption centres are lacking, and no assurance is available about whether consumers can get from the dumps the grades of coal to which they are accustomed. The third, and perhaps most serious, danger is that the whole basis for the rational location of industry is being undermined. Industries which, for reasons of economy, have deliberately chosen to be near the coalfields are finding the sudden switch to road transport ex-

IMPORTS FOR EXPORTERS

THERE are no surprises in the import policy for the next six months as announced last week-end. It was not to be expected there would be. The present foreign exchange situation offers little scope for manoeuvre, while the general pattern of import restriction is by now a well-established feature of planned development. The general aims of the policy—to conserve foreign exchange, encourage local industry and promote exports—remain intact; only the last one has been somewhat elaborated. A welcome feature of the policy is that it does not appear to have carried any further the possibility hinted at by an official spokesman at the recent meeting of the Import Advisory Council in New Delhi, that maintenance imports could not expect automatic priority over development ones. It now seems most likely that this was meant purely as a threat to exporters. The word used in the policy to describe the relationship between these two types of imports is "balance". In practice, it is doubtful whether the Government would be so misguided as to give development imports priority; but a word like balance is non-committal enough for practical purposes. The inevitable cuts imposed on the import

treremely expensive ; the cost of their coal is, therefore, rising much more rapidly than in the case of industries located far away. As much as Rs. 30 a ton has to be paid for moving coal by road over a distance of 150 miles, and the sum is large enough to make a serious difference to the profitability and competitive efficiency of the units affected. Many of these units, especially in the West Bengal-Bihar region, play a major rôle in the export trade or supply essential domestic needs. Their difficulties are certain to affect their sales abroad or push up prices in the internal market.

The evidence indicates that the transport shortage has reached a stage where simple expedients will no longer suffice; the entire basis of planning has to be reviewed in order to ensure that the development of the railways and of road transport get much higher priority. While consumers on the one hand are starving for coal, it is estimated that 300,000 tons or 400,000 tons of the commodity are simply not being produced each month because there is no way of moving them from the mines. In the immediate future, therefore, better and more economical transport is probably the surest way of increasing coal production. Looking further ahead, a greater sense of urgency is required in dealing with the difficulties of the coal industry if the third plan target of 97 million tons is to be achieved. The private collieries have been preparing their individual expansion projects, and the World Bank has sanctioned a preliminary loan of \$35 million for the first two years to cover the foreign exchange costs. But this is not really a loan to the collieries at all; it is a loan to the Government of India, since the collieries still have to find the rupees to buy the foreign exchange given through the loan. Six months have gone by, and not a single import licence is yet in sight even for the equipment necessary for maintaining production. The detailed nature of the technical and financial screening of individual projects for expansion promises further long delays, yet little progress has been made in dealing with the preliminary problem of the coal companies' financial capacity. Years of uneconomic working under an irrational pricing system have depleted their reserves seriously, as a result of which it is doubtful whether any but the best of them can find all the money they will need. For political reasons, the Government has set its face against any further increase in coal prices, although the ultimate cost of coal to the consumer is otherwise being allowed to continue rising sharply. The Steel, Mines and Fuel Ministry, having been criticised for juggling with coal production figures towards the end of the second plan, is now going round promising that 8.1 million tons of coal will be produced monthly by April 1965. But the way things are moving, it would be surprising if anywhere near that target is achieved.

EXPORTERS

programme are this time small enough to emphasise the fact that very little scope now exists for saving foreign exchange by this method. In future, imports can be expected to show a determined tendency to rise in line with the development of the economy. It is little wonder, therefore, that one of the main features of import policy these days, rather oddly, has become the encouragement of exports.

The tone of the policy statement showed rather more confidence in the adequacy of raw material imports than the facts of the situation would seem to indicate. It is possibly true that no industrial unit is at present cutting production due to a shortage of such raw materials, but many units must be soft-pedalling on plans to increase output for fear that an adequate supply will not be available. As the Red Book points out, maintenance imports are these days governed by foreign exchange earnings, and there is, therefore, little scope for increasing them to meet growing needs. But every effort must be made to keep up a satisfactory supply of raw materials, and on no account should priority be given to any other kind of imports. So do this

At root, it is the railways themselves that are largely to blame for the coal crisis. Their plans

would be the equivalent of building industrial units without providing for their working. Private industry is particularly anxious that its raw material supplies be guaranteed, and that is understandable considering the expense and frustration in which it can be involved when shortage occurs.

The other side of the maintenance import problem is, of course, that of exports. The policy of linking the two has been extended now to development imports as well. Such a policy has many superficial attractions. It underlines the urgency of exporting; it earmarks a proportion of production for export markets immaterial of what happens in the home market; and it does permit a company which considers its chances of exporting to be good, to obtain priority for the import of the necessary equipment. But it is by no means the answer to the export problem as a whole, and should on no account be regarded as such. To dedicate a new plant entirely to export production is to introduce an unwelcome rigidity into the manufacturing pattern and to leave the company concerned vulnerable to an uncomfortable extent. In this connection the provision that a company can unload unwanted exports on the home market after paying a surcharge on the goods, is an indispensable safety-valve, although it will certainly be open to abuse. The policy is, however, no substitute for a progressive system of export incentives. At the recent meeting of the Export Advisory Council in New Delhi, it was made quite clear that the Government's thinking has not progressed far along the road towards providing adequate incentives and towards controlling that most important of all factors in the export situation, the internal price level. Such schemes as linking exports and imports are useful in themselves, but under present circumstances there is too much temptation to regard them as a substitute for the hard thinking which is really necessary to cope with the export situation. In the meantime, industry appears to have welcomed the steps the Government has taken so far.

It seems to have escaped official attention that at least as much benefit to exports might be obtained by permitting a small proportion of competitive imports to enter the country. If the key to the export problem is prices, and at the moment one of the main reasons for a high internal price level

is the lack of competition in industry, then the licensing of a careful selection of imports specifically chosen to offer competition to certain high-cost industries, would have a most salutary effect on prices. Such imports would also help to keep Indian manufacturers abreast of the latest developments in quality and design; at the moment there is too much inbreeding going on in production ideas in this country. The outcry such an adjustment to policy would raise could be relied upon to be loud and long; but the benefit to the export drive, at least in the case of the newer industries, would probably outweigh the effect of current measures connecting it with the import programme, and might not cost as much in foreign exchange.

The continued determination to sidetrack established importers is now a feature of success-

sive import policies which has come to be taken for granted. It is not, however, any more commendable for that. A good deal of waste has resulted from the system of user licensing, whereas there is no evidence that it has helped to avoid the black market in raw materials which can be expected in conditions of shortage. The Government would do well to revise this aspect of its policy so as to improve the efficiency of the raw material distribution system. At all costs, the tendency to think in terms of the State Trading Corporation in this respect should be avoided. At present the system of distribution is too rigid and does not take sufficient advantage of the accumulated experience of those who have had many years in the importing trade. And this is only one of the many ways in which the official import policy could be improved without any further expenditure of foreign exchange.

SHARE PRICES IN LONDON

THE behaviour of the London Stock Exchange since the middle of July seems to have restored, approximately, the pattern of last year; but the average level of ordinary share prices is lower, and the average daily turnover of shares is less. Last year prices fluctuated showing no clear trend either way, although they were weak in October and November. From early-December 1960 to mid-May 1961 they rose steeply; from mid-May to mid-July they fell more steeply; they have since been more or less steady, at an average level slightly above that of mid-July. The recent behaviour of ordinary shares on the bourses of the European Economic Community has been remarkably similar; but the main influences affecting shares have not been the same in Britain and the E.E.C. Britain has suffered economic anxiety, culminating in the "little Budget" of July. Political factors, particularly the German crisis, have affected the Continental centres much more than London, while the Continental centres have no reason to worry about the economic trend.

It is at first glance surprising that industrial ordinary shares in the London market (as measured by the *Financial Times* index) reached

the lowest point of this year a little before the Chancellor of the Exchequer announced his restrictive plan. But the market knew that some such plan was being prepared; the announcement ended a period of uncertainty; and when the world demonstrated renewed confidence in sterling the market felt that the position was being stabilised. However, one major uncertainty remains. Will Britain enter the Common Market or not? It is impossible to formulate a rational investment policy until that question is answered, and ignorance of the basic trend of the nation's external trade inhibits both buying and selling of shares. Even when the answer is known the market will not easily establish a trend of share prices, for the implications of the decision, whichever it may be, will not be immediately obvious. Particularly difficult would be calculating the implications of joining the Common Market, for only experience could show which industries and companies would prosper and which would languish in the new situation.

Dealers in the London market have a special interest in this matter. They believe that if Britain were in the Common Market much more European—and, indeed, American—money would be invested in British shares. From the viewpoint of the foreign investor, however, the London market has some disadvantages. The Government's stamp duty and the market's commissions are high; and dividends are paid net, after deduction of income-tax which is not, of course, applicable to foreigners. Current yields on British shares are comparatively generous; but foreigners would be no more able than nationals to reassess the growth-potential of individual industries and companies. Some dealers believe that the British investment that will attract most foreign interest is 3½ percent War Loan, the biggest Government issue. Its interest is paid in full, no tax deducted, and recently its yield (allowing accrued interest in the price) reached 7 percent—it has since come back below 6½ percent. War Loan is still out of favour at home, because it has no fixed date for redemption; but dated Government stocks are not quite so friendless now as they have been in recent years.

The question that many investors—financial institutions as well as private savers—are asking themselves now is whether a yield of, say, 7 percent on a fixed-interest stock is preferable to a yield of, say, 5 percent on an ordinary share. It is significant that this question is asked now, when yields on ordinary shares are comparatively high, whereas until early-1960—or, indeed, more recently—it was argued that no reasonable yield on a fixed-income stock could compensate for the static character of the income and the lack of "growth-quality" in the investment itself. It would be gratifying to feel that the slight shift of opinion (it is no more than a slight shift and should not be exaggerated) was motivated by confidence in the stability of the general price-level. Regrettably, there is no evidence that prices have yet been stabilised; and it is difficult to imagine that confidence in fixed-income stocks, other than those that are redeemable within a few years, will ever be restored while the value of money is persistently diminishing.

The shift of opinion is, in fact, motivated by doubts concerning ordinary shares. These doubts are partly short-term: it is known that the profits of many British companies are no longer expanding and that the profits of some are contracting. But the doubts are also long-term: the growth-potential of the market for manufactured goods seems smaller now than it seemed some years ago. The stock market is credited with a special intuitive perception of the economic trend, but its perceptions are unreliable. The market is more emotional than rational, and in retrospect some of its ideas seem foolish. The visions of endless growth, in a society where people would buy more and more goods (with more and more hire-purchase

credit), were quite unrealistic. We are now in a competitive era, in which many industries are capable of producing more goods than the market is capable of absorbing. Investors are now aware that automatic growth, as envisaged a few years ago, is an illusion. Consumption will, of course, increase; but not always in predictable directions. So will production; but productive capacity may

be permanently in excess of needs. Companies that are exceptionally well managed will continue to grow exceptionally fast. But it is unlikely that the average growth of profits and dividends in British industry will support any general rise in share prices such as was witnessed in 1952-55, in 1958-60, and even in the first few months of 1961.

Current News and Comment

Khatau Makanji Halves Dividend

The shares of the Khatau Makanji Spinning and Weaving Co. Ltd, which were quoted around Rs. 500 on 25th September, were sold down to Rs. 405 two days later. The steep fall reflects the market's disappointment over the Company's announcement of a sharp cut in the dividend for the year ended June 1961 from Rs. 32 to Rs. 16 a share, both taxable. The cut in the dividend follows an equally sharp setback in earnings. The preliminary figures about the working of Khatau Makanji, released along with the dividend announcement, show a gross profit of Rs. 49.05 lakhs, against Rs. 1 crore in 1959-60 and Rs. 63 lakhs in 1958-59. Taxation provision has been reduced from Rs. 34.20 lakhs to Rs. 13 lakhs. Depreciation provision has, however, been raised from Rs. 14.74 lakhs to Rs. 16.77 lakhs. Development rebate reserve accounts for Rs. 4.30 lakhs, against Rs. 4.14 lakhs. No allocation has been made to the reserve fund which received Rs. 17.52 lakhs in the previous year. After meeting the preference dividend liability amounting to Rs. 1.56 lakhs, the balance of Rs. 10.17 lakhs is just sufficient to cover the proposed dividend on the ordinary shares which absorbs Rs. 9.58 lakhs.

Market circles are critical of the management's dividend policy. They are intrigued by the drastic fall in Khatau Makanji's earnings in a year when the textile industry is known to have fared better than in the previous year. It is said that the decline in the profit is to be attributed to the marked rise in raw material costs, particularly of Egyptian cotton which the Company uses for manufacturing fine and superfine varieties. But companies producing like varieties of cloth with imported cotton have shown a marked rise in profits in 1960-61. The directors' report for 1959-60 and the chairman's speech last year contained hardly any hint that 1960-61 would be a difficult year for the Company, although by then it had completed more than three months of the year under review. The directors' report for 1960-61 will be awaited with interest to find an explanation for the disappointing performance. It is worth noting that the dividend which was raised from 10 percent to 16 percent in 1958-59 was further increased to 32 percent in 1959-60. This has now been reduced to 16 percent. Dividends do fluctuate with profits, particularly in the case of companies which fall under Section 23A of the Income Tax Act. Khatau Makanji is a Section 23A Company. But drastic changes are scarcely calculated to promote shareholders' confidence.

Prospects for Mysore Paper

In his speech at the annual general meeting of the Mysore Paper Mills Ltd in Bangalore last week, the chairman, Mr. M. D. Shivananjappa, appeared to be optimistic about the Company's future because of its Rs. 3.5-crore expansion programme, but his observations about the immediate outlook are less reassuring. (A fuller version appears on a later page in this week's issue of *Capital*.) The chairman said that manufacturing costs are mounting on account of the increase in prices of raw materials, power, coal and chemicals. The Government has recently levied an excise duty of Rs. 40 a tonne on caustic soda. Considering the rates of excise duty on writing and printing paper, Mr. Shivananjappa said, the rates of excise duty on packing and wrapping paper are disproportionately high. In addition, there has been an increase in railway freight-rates. All these have greatly added to Mysore Paper's manufacturing costs. So the only hope lies in increasing production, improving efficiency and securing maximum economies calculated to reduce costs. With this in view—pending the implementation of the expansion scheme—action was taken to secure a recausticising unit. The equipment has been installed and put into service. It is expected to achieve substantial economies which will reduce production costs. The chairman said that the production of 18,000 tons of marketable paper under the proposed expansion scheme will increase the Company's earnings ensuring a fair return on the capital.

The implementation of the expansion scheme will set right the lack of balance between pulp-making and paper-making capacity. It is proposed

to use only bamboo for manufacturing pulp under the expansion scheme. Rags and waste paper which are also being used at present will be discarded. The Mysore Government has assured the Company of 50,000 tons of bamboo a year for the expanded plant. After expansion, the pulp plant will have the capacity to produce sufficient pulp to feed the existing two paper machines of 15 tons each and also the new paper machine of 30 tons to 35 tons capacity. The increased capacity will enable Mysore Paper to install a modern soda recovery plant. The latter will help achieve considerable economies and reduce production costs. The foreign exchange required for purchasing plant and machinery from abroad has been arranged from the Commonwealth Development Finance Company and the Industrial Credit and Investment Corporation of India. Arrangements have also been made for purchasing pulp plant and paper machines from Germany. Boilers and the modern soda recovery plant and cross cutters are to be secured from the U.K. The Rs. 10-paid shares of the Company, which were marked up to Rs. 27.25 earlier in the year, are currently quoted around Rs. 17.50.

Anil Hardboards Pays More

The Anil Hardboards Ltd has earned a gross profit of Rs. 13.82 lakhs during the year ended March 1961—a decline of Rs. 8.36 lakhs from the previous year's figure of Rs. 22.18 lakhs, although the sales had increased substantially from Rs. 37.96 lakhs to Rs. 52.96 lakhs. The dividend has, however, been raised from 6 percent to 9 percent, both free of tax. The directors' report attributed the fall in profits to the reduction in hardboard prices. But at the annual general meeting last week, Mr. Chunilal B. Mehta, chairman, said that a fall of Rs. 6 lakhs to Rs. 7 lakhs has occurred as a result of the change in the mode of stock valuation. The previous year's closing stocks were valued at market price while those at the end of March 1961 were valued at cost. Mr. Mehta said that the change was effected on the insistence of the World Bank. Anil Hardboards had to accept the suggestion of the World Bank from whom it borrowed Rs. 52 lakhs, irrespective of the fact whether the income tax authorities would allow the change in the valuation of stocks. The Company is stated to have used about Rs. 30 lakhs out of the World Bank loan so far. The loan carries an interest of 7½ percent.

The chairman said that the Company is facing competition only from plywoods. In order to meet this competition, it had to reduce the prices of hardboards twice. No further cut is, however, contemplated in the foreseeable future. Anil Hardboard's working during the current year is reported to be good with the output during the first six months mentioned around 3,000 tons and the sales around Rs. 25 lakhs to Rs. 30 lakhs. Mr. Mehta

said that there is every reason to expect better working results in the current year and in the future because of the rising demand for hardboards and the starting of manufacture of insulation boards. The Indian Railways were using more and more hardboard in coach-building, and the Company has received substantial orders from the Director General of Supplies and Disposals. The demand from the Government and other consumers is expected to increase in the near future. The Company's new insulation board mill, which is claimed to be the first of its kind in India, has already started production and is working to full capacity. Besides, Anil Hardboards hopes to undertake the manufacture of acoustic tiles, lacquered and printed hardboards within a short time. All these developments are expected to improve the Company's working results in future. The Rs. 100-paid shares of Anil Hardboards are currently quoted around Rs. 250.

Ahmedabad Electricity Prospects

The shares of the Ahmedabad Electricity Co. Ltd have staged a substantial recovery from Rs. 81.50 to Rs. 95.50 over the past few months. Mr. Kasturbhai Lalbahai, chairman, said at the annual general meeting last week that the shareholders can confidently look forward to further appreciation in the value of their investments. Replying to the shareholders' questions, Mr. Lalbahai expressed the view that the Company's shares are unlikely to remain below par for long. He also held out the hope of a higher dividend next year. The chairman told the shareholders that the new board of directors is functioning in perfect harmony. The sub-committee of the board is screening the buying and selling operations to ensure that there is no avoidable waste. Referring to rationalisation of the power capacity, the chairman said that it would be achieved in the current year as soon as the 30 MW plant in C2 extensions was commissioned in March 1962. Answering questions, Mr. Lalbahai said that Ahmedabad Electricity has no plans to make an issue of debentures; nor has it any proposal to build up a debenture redemption fund.

Imperial Tobacco Cautious

The Imperial Tobacco Co. of India Ltd has produced satisfactory results for the year ended March 1961. Sales increased from Rs. 37 crores in 1959-60 to Rs. 42 crores in 1960-61 and the net profit from Rs. 1.42 crores to Rs. 1.88 crores. The taxable ordinary dividend has been increased from 8 percent to 9 percent. Commenting on the prospects in his chairman's statement at the annual general meeting in Calcutta last week, Mr. F. A. Collett took a cautious view. (The full text of the speech is printed on a later page of this week's *Capital*.) The per capita consumption of cigarettes is low in India. It is, therefore, expected that the consumption will increase steadily with the rise in the standard of living. Under the circumstances, the directors think that there is considerable scope for further expansion, so they have transferred substantial sums out of the Company's assets and stock replacement reserve. The ploughing back of resources into business is likely to be of help in financing larger stocks of raw materials, the prices of which have increased. Mr. Collett said that Imperial Tobacco has had to absorb the impact of increased excise duties and rising production costs, "but it will be obvious to you that we cannot continue to do this if the increases in various items of cost outstrip the gain we are able to make from

increased productivity". If the tobacco duties are not increased further, the Company may be able to increase its business substantially. Imperial Tobacco has encouraged the use of indigenous raw materials and machinery, but the deterioration in the quality of Indian tobacco has caused much concern. Unless the quality is improved, not only will the industry suffer but India's export trade in tobacco will be harmed.

Better Results from I. F. C.

The trading profit of the Industrial Finance Corporation of India has increased from Rs. 2.51 crores in 1959-60 to Rs. 2.99 crores during the year ended June 1961. A sum of Rs. 10 lakhs has been paid to the Central Government for reducing the Corporation's liability on account of the subvention drawn in earlier years to pay the guaranteed dividend. General reserve received Rs. 63.50 lakhs, leaving Rs. 11.25 lakhs to be used for paying the guaranteed dividend of 2½ percent on the paid-up capital of Rs. 5 crores. The amount of bonds issued and outstanding is Rs. 22.24 crores, but there was no occasion to issue fresh bonds during the year because the resources obtained from P.L. 480 funds and repayments received from borrowers were more than adequate to meet all commitments of the Corporation. The U.S. Development Loan Fund sanctioned a loan of \$10 million to the Corporation for lending to industrial concerns applying for foreign exchange. The Corporation's underwriting business has made good progress. It sanctioned 12 proposals for underwriting facilities during the year amounting to Rs. 90 lakhs in ordinary shares and Rs. 1.42 crores in preference shares. The proposals covered a wide range of industries, such as cement, glass and glass products, pottery, china, earthenware and basic metals. With the underwriting agreements, the Corporation had to take up shares worth Rs. 1.07 crores. It has also done good business in the form of guaranteeing deferred payments concerning the import of capital goods.

During the year, loans worth Rs. 21.21 crores have been approved for various industries. The payment of interest on loans and repayments of capital have improved. This indicates the discriminating manner in which the loans are being given. The amount of defaults in the form of interest constitutes only 0.25 percent of total amounts due, against 1.2 percent in the previous year. The amount of defaults in the form of capital repayments is only 2.3 percent of the amounts due, against 4.3 percent in 1959-60. The rate of interest charged by the Corporation on the rupee loans has been maintained at 7 percent, with the usual rebate of ½ percent if the payment of interest and repayments of capital are made on due dates.

Bad Year for India Steamship

The freight earnings of the India Steamship Co. Ltd during the year ended March 1961 amounted to Rs. 8.63 crores, against Rs. 8.39 crores in the previous year. The total number of liner voyages was 49, compared with 47.5. But although more freight was earned, the Company suffered a substantial loss for a variety of reasons. Speaking at the annual general meeting in Calcutta last week, Sir A. Ramaswami Mudaliar, chairman, discussed the fall in world trade and its effect on international shipping. (A fuller version of the speech appeared in last week's issue of *Capital*). Freight rates were generally uneconomic—most of them remaining around the 1957 level. Meanwhile, costs have gone up. Wages of staff, both floating and on the land, have had to be increased. Longer leave has had to be granted to the floating staff, necessitating additional personnel for the purpose. Stevedoring charges in most ports have had to be revised. But "any freight increase required very careful consideration and could not be readily equated to the increased costs of running the service. Some of the countries in the trade were anxious to promote exports of commodities and manufactured goods in a desire to earn foreign exchange and to preserve the balance of payments position of their Governments." The chairman said that these conflicting considerations have prevented the raising of freight rates to meet the heavy expenditure. An effort is now being made to see whether freights may be increased on commodities which can bear the rise and still maintain their competitive position in world markets.

Since there is keen competition in world freight markets, some companies or their agents have tried to obtain cargo by under-cutting rates and by giving larger rebates to shippers. Sir Ramaswami referred to his speech last year where in he discussed the possible solution that was being explored by the two Indian lines in the Conference, along with other Conference lines which faced the same problems and were equally anxious to put an end to unhealthy competition and malprac-

tices. The solution suggested was "the allocation of freight earnings of the Conference in certain proportions over a term of years, providing at the same time for the growth and development of the fleets of under-developed countries through a defined and reasonable escalation of the rate of allocation for the period." Negotiations for this purpose, Sir Ramaswami said, were started in 1959 at a conference in Delhi, and they were continued in London and Hamburg in the early part of 1960. The result was not, however, promising at that stage. At last, in November 1960, at a meeting of the representatives of these lines and the two Indian lines in Delhi, an agreement was arrived at, defining the percentages of earnings which the lines under different flags would be allocated at the end of each year. The pool system in the India-U.K./north Continent trade came into effect from 1st January, 1961. In two other Conferences of the Continent, namely, the French Conference and the Western Italy Conference, it came into effect from 1st April, 1961. By this arrangement, Sir Ramaswami said, shippers will not be inconvenienced and, in fact, the movement of cargo to and from Continental ports will be "better facilitated."

Referring to the development rebate, the chairman said that it is generous, being 40 percent of the cost of a ship. But the onerous character of the allowance arises from the fact that 75 percent of it has to be provided out of the profits before any dividend can be declared. Shipping companies have repeatedly told the Government that the provision of this amount out of the profits should be extended over a period of years so that the prospect of paying dividends to shareholders may not be seriously affected. Sir Ramaswami urged the Government to give further consideration to the question.

Shipping Corporations Merge

The Western Shipping Corporation Ltd and the Eastern Shipping Corporation Ltd have been merged into a new body called the Shipping Corporation of India Ltd with effect from 2nd October, 1961. Speaking at the annual general meeting of the former two Corporations in Bombay last week, Dr. Nagendra Singh, chairman, recalled that the Estimates Committee of Parliament had recommended the amalgamation in 1959. The purpose is to achieve better co-ordination and economy in their working. Dr. Singh said that the Corporations have made progress in all directions. They have recently secured admission to new Conferences. An expansion programme has been drawn up for the Shipping Corporation of India Ltd for 1961-62. Apart from the gross registered tonnage of 138,593 owned by the Corporation on the day of the merger, it will have five fast cargo vessels in an advanced stage of construction at the Hindustan Shipyard in Visakhapatnam. These five vessels are expected to be delivered during 1962-63. In addition, Dr. Singh said, orders have recently been placed with Hindustan Shipyard for a second series of six fast cargo liners. Each of these vessels would be of about 9,200 gross registered tons "as closed shelter dockers." They are expected to be delivered within the third plan period. "When these vessels have been delivered, our tonnage would go up to about 240,000 g.r.t.," Dr. Singh said. The Corporation might then divert some of the existing slower units to tramp. The chairman felt that, apart from the liner services in which the Corporations and other shipping companies had done reasonably well, there is good scope for the expansion of tramp shipping. The new Corporation will, therefore, keep this in mind when it plans its activities for the coming years. Meanwhile, it intends to purchase at least one ocean-going super-tanker for transporting crude oil.

Jay Engineering Expanding

Speaking from the chair at the annual general meeting of the Jay Engineering Works Ltd in Calcutta last week, Mr. Charat Ram said that the Company's working results for 1960-61 are "gratifying." (A fuller version of the speech appears on a later page in this week's issue of *Capital*.) The profit for the year amounted to Rs. 58.4 lakhs, against Rs. 52 lakhs in the previous year. The rise in profit, Mr. Charat Ram said, has been affected by higher exports and by the reduction in fan prices. Because of the bigger provision for income tax, the disposable profit is only slightly more than in the previous year. The directors have, therefore, recommended maintaining the dividend at last year's level. Jay Engineering reduced the prices of ceiling fans by Rs. 58.4 each and of table fans by Rs. 2.50 each during the year. This step was in keeping with the policy of continuously sharing the economy of operations with the consumer. The demand for durable goods in India is highly elastic, and with every reduction in price, the manufacturer gets a larger market.

"Voluntary price reductions", Mr. Charat Ram said, "enable the Company to move further towards economies of large-scale operation, with consequential benefit to consumers, employees, shareholders and to the national economy." Jay Engineering applied for an industrial licence for setting up a new unit to produce 300,000 sewing machines a year. The Government of India has granted the licence, and plans for establishing the new unit in Hyderabad are in hand.

Mr. Charat Ram said that Jay Engineering's exports in 1960-61 exceeded Rs. 1 crore. Although some have gone to advanced countries like Britain, the U.S.A., West Germany, France and Australia, most of the exports are still confined to underdeveloped countries. Jay Engineering proposes to increase exports by re-orienting its policy in three ways. Firstly, it plans to increase sales to developed countries by making its products more attractive in terms of quality and price. Secondly, it proposes to start the assembly and progressive manufacture of its products in export markets which are seeking to establish industries of their own. Jay Engineering has already received a licence for putting up a unit in Ceylon, and is registering a Company under the name of Usha Industries Ltd as its subsidiary. It is proposed to make similar arrangements in Burma, Pakistan, Thailand, etcetera. Thirdly, the Company plans to help industrial concerns in other countries "to set up assemblies" with a phased programme of progressive manufacture by giving them technical know-how, equipment, personnel and the supply of component parts. Such an arrangement has been made in South Vietnam, and negotiations are going on in Iraq, Egypt and Yugoslavia.

Amalgamated, Pench Valley Coals

The reports of the Amalgamated Coalfields Ltd and the Pench Valley Coal Co. Ltd (both under the managing agency of Shaw Wallace and Co. Ltd) for the year ended March 1961, show that considerable capital expenditure is being incurred for developing the collieries. Amalgamated Coalfields Ltd has made a capital expenditure of Rs. 16.49 lakhs, against Rs. 14.71 lakhs in 1959-60. This includes Rs. 7.41 lakhs paid towards the purchase price of the Junnordeo colliery. This new property is being developed and is expected to compensate for the loss of production from the Datala East colliery which has been closed. The capital expenditure of Pench Valley has amounted to Rs. 7.09 lakhs (against Rs. 8.86 lakhs). Both Companies have big expansion schemes during the third plan period. The directors think that the World Bank loan sanctioned recently will be of great help. Although production is likely to increase substantially, the larger part of the output will henceforth be obtained from thinner seams at increased costs.

The profit of Amalgamated Coalfields has increased from Rs. 4.66 lakhs in 1959-60 to Rs. 13.87 lakhs in 1960-61, after providing Rs. 5.35 lakhs (against Rs. 3.61 lakhs) for depreciation. The taxable ordinary dividend has been increased from 10 percent to 12½ percent. It is covered more than four times and offers a yield of 5.7 percent at the present price of Rs. 22.12 a share. Taxation is allocated Rs. 5.82 lakhs (against Rs. 1.86 lakhs), development rebate reserve Rs. 1.26 lakhs (against Rs. 2.24 lakhs) and general reserve Rs. 3.75 lakhs (against Rs. 85,000). The carry-forward is Rs. 28,149, against Rs. 11,999 brought in. Raisings increased from 914,754 tons to 1 million tons and despatches from 920,244 tons to 1 million tons.

Pench Valley has maintained the ordinary dividend at 10 percent, taxable. It is covered about one-and-a-half times and offers a yield of 5.9 percent at the present price of Rs. 17 a share. The profit has declined from Rs. 4.16 lakhs to Rs. 3.88 lakhs, after transferring Rs. 3.83 lakhs (against Rs. 3.25 lakhs) to depreciation. Taxation is allocated Rs. 1.65 lakhs (against Rs. 2.11 lakhs) and development rebate reserve Rs. 1.11 lakhs (against Rs. 1.09 lakhs). The carry-forward is Rs. 52,139, against Rs. 14,547 brought in. Raisings increased from 504,046 tons to 529,153 tons and despatches from 505,386 tons to 523,464 tons. The directors say that despatches were affected by the shortage of wagons. The position has deteriorated further since the close of the year.

Nil from Bararee Coke

The Bararee Coke Co. Ltd has again passed the dividend for the year ended March 1961, although its working has improved considerably. The profit has amounted to Rs. 3.13 lakhs, against a loss of Rs. 2.73 lakhs in 1959-60. Bringing in a debit balance of Rs. 5.54 lakhs, there is a debit balance of Rs. 2.59 lakhs which is carried forward. The reconstruction of most batteries of coke-ovens has been completed and maximum production is being obtained. The sulphate of ammonia and the

sulphuric acid plants have been overhauled. They are now producing more, and the output has been sold at a profit. Although the prices of hard coke have been increased, they still do not compensate for the rise in production costs. Considering the age of the equipment, it is difficult to achieve further economies by raising production. The directors, therefore, think that the future of Bararee Coke is affected by many uncertainties.

Aluminium Corporation Expanding

Commenting on the expansion schemes of the Aluminium Corporation of India Ltd in his chairman's address at the annual general meeting in Calcutta last Thursday, Sir Padampat Singhania said that the first phase of metal production has made considerable progress, and output may begin early in 1962. (The full text of the speech is printed on another page in this week's *Capital*.) The Company's fabrication facilities are being expanded according to schedule. The chairman took an optimistic view of the industry's growth prospects. Although it has been set a target of 87,500 tons during the third plan period, Sir Padampat thought that the demand would exceed this figure. He, therefore, urged the authorities to increase the production target to at least 150,000 tons. There is scope for replacing other non-ferrous metals, such as copper, zinc and lead, by aluminium. The Government has already asked cable-makers to replace copper by aluminium as quickly as possible. In view of the prospects for the industry, it is time attention was given to ensuring adequate supplies of raw materials. Bauxite is the most important, so steps should be taken to reserve bauxite resources for the industry's use. Sir Padampat also stressed the need for ensuring adequate supplies of electric power at reasonable prices.

Aluminium Corporation has produced satisfactory results for the year ended March 1961. Production has increased all-round, and the ratio of gross profit to turnover has been maintained in spite of the rise in production costs. The ordinary dividend has been maintained at 12 percent, taxable.

New Kaiser-i-Hind Spinning Results

The working of the New Kaiser-i-Hind Spinning and Weaving Co. Ltd for the year ended March 1961 are not unsatisfactory. Its profit shows an increase from Rs. 8.50 lakhs to Rs. 9.81 lakhs in spite of a setback in sales from Rs. 2.90 crores to Rs. 2.47 crores. Closing stocks are substantially higher at Rs. 1.46 crores, against Rs. 1.04 crores on 31st March, 1960. But the profit margin—the ratio of gross profit to sales—is still meagre around 4 percent. The shareholders who have gone without a dividend since 1958 can hardly expect one in the next few years because the Company has still to wipe out a loss of Rs. 14.34 lakhs and clear arrears of the preference dividend for four years which amount to Rs. 3 lakhs. As in the previous year, the profit figure for 1960-61 has been arrived at without providing for either depreciation or taxation. The directors say that having regard to the losses sustained by the Company during the previous years, there should be no tax liability for 1959-60 and 1960-61, although it is assessed that New Kaiser-i-Hind is liable to pay Rs. 4.90 lakhs over and above the amount already paid. The Company has filed an appeal against the assessment. No provision has been made for depreciation since the directors think that the provision made so far is adequate. Of the disposable profit, Rs. 1.71 lakhs has been used for writing off sundry expenses. The balance of Rs. 8.22 lakhs has been set off against the prior losses, reducing them to Rs. 14.34 lakhs.

The directors say that there has been considerable improvement in exports of the Company's products, total exports being up by Rs. 13.34 lakhs in 1960-61. New Kaiser-i-Hind earned Rs. 4.75 lakhs under the export incentive scheme during the year. It has made several additions to its plant and machinery, including one Kovo automatic pirn winding machine, 24 Kovo automatic looms, 29 Cimco looms, one Farmatex hot air stentering machine, one slack rope washing machine, one chemicking machine and two variable speed motors. It has received another 24 automatic looms and a mercerising machine which are being erected. These are expected to improve the Company's working during the current year. The Rs. 100-paid ordinary shares of New Kaiser-i-Hind are currently quoted around Rs. 54.

Bajaj Electricals to Expand

The speech of the chairman, Mr. Kamalnayan Bajaj, at the annual general meeting of Bajaj Electricals Ltd indicates that the Company has fair growth potentialities. Bajaj Electricals is engaged in manufacturing electric transformers, fans, lamps,

fluorescent tubes and other items which are generally required for domestic lighting. In addition, it is also producing items like rotaxef shades, anodised aluminium hardware fittings, electrical appliances and accessories. With the anticipated increase in power generation and rural electrification in the third plan, the demand for its products is expected to increase appreciably. Mr. Bajaj seems satisfied with the third plan targets for transformers, fans, fluorescent tubes and precision instruments, but he considers the target of 68 million pieces for G.L.S. and similar lamps to be far too low in relation to the prospective demand. On the basis of the proposed target of 45,000 million kWh of electricity generation and at the rate of 2½ lamps a thousand kWh, Mr. Bajaj says, India needs over 100 million G.L.S. and similar lamps in 1965-66. Even allowing for some shortfall in generation and a somewhat greater proportion for industrial uses and traction, the annual demand for lamps is unlikely to be less than 90 million pieces by 1965-66. In view of the anticipated increase in the demand for lamps, Hind Lamps Ltd, which is jointly owned by Bajaj Electricals and N. V. Philips of Holland, is planning to implement a further expansion programme during the third plan period. Mr. Bajaj informed the shareholders that N. V. Philips is also floating a Company in India for manufacturing tungsten filaments and molybdenum wires and allied products. Bajaj Electricals proposes to collaborate in the venture. Besides, in view of the anticipated four-fold increase in production of precision instruments in the third plan, Bajaj Electricals is planning to raise substantially both the volume and range of its own production. The Company's activities, the chairman said, have considerably increased and there is scope for further expansion. It is, therefore, proposed to increase the authorised capital from Rs. 50 lakhs to Rs. 2 crores so that further capital can be issued as and when required. The Rs. 100-paid shares of the Company are quoted around Rs. 115.

New Project from Westerwork

The Westerwork Engineers (Private) Ltd of Bombay will soon manufacture foundry-moulding machines and industrial furnaces with foreign collaboration. The British Moulding Machine Company Ltd, Kent, is providing technical collaboration on a 5 percent royalty for manufacturing foundry-moulding machines. The agreement also provides for exports. Two West German firms—Matthias Ludwig Industrieofenbau and Ofag Ofenbau—have signed a technical and financial collaboration agreement with the Bombay firm for manufacturing industrial furnaces. The industrial licences, which have already been obtained, provide for a single-shift capacity of 1.1 million moulding machines and 6 million industrial furnaces a year. The factory is located in Bhandup—an industrial suburb of Bombay. Part of the construction has been completed and the production of foundry-moulding machines is expected to start soon. The licensed capacity for moulding machines is proposed to be reached in the first year of production. Within six months of the start of production, it is proposed to extend the range of manufacture to four other types of heavier and more automatic machines. An application for the import licence will be made in the near future. The furnaces plant will be designed to produce complete "turn key" jobs with the use of indigenous and imported components. The project is estimated to cost about Rs. 25 lakhs.

Progress of Rohit Paper Mills

Like many new issues, the shares of the Rohit Pulp and Paper Mills Ltd are quoted at a substantial discount. The Rs. 100-paid share of the Company is available around Rs. 85, but the shareholders can derive considerable satisfaction from the chairman's speech at the annual general meeting last week that Rohit Paper's 10-ton plant in Pardi, near Surat, will commence trial production in January 1962—three months ahead of schedule. The construction of the factory building has been completed, and the foundation for installing machinery is nearing completion. The erection of machinery is in progress and the work of installation of pipelines, electrical lines and boilers will soon be undertaken. In the absence of the chairman, his speech was read out by Mr. Himatlal V. Gandhi, a director. Mr. Gandhi said that the licences for spares and other equipment had been received. Orders for their imports had also been placed. The Company had applied for a licence to double its production capacity to 20 tons of pulp and 20 tons of paper a day. Mr. Gandhi pointed out that Rohit Paper intended to manufacture high-grade paper which enjoys good demand. The Company will, therefore, be able to show better results. Referring to the prospects for the industry, Mr. Gandhi said that the third plan envisages the doubling of pulp and paper production to 700,000 tons. An adequate number of units had been licensed

to achieve the target. But not all the units are likely to commence production during the plan period. For instance, only six out of the 32 units licensed under yen credit have finalised their schemes so far. On the other hand, the demand for paper will continue to rise with the spread of literacy. The per capita consumption of paper in India is still very low around 2.2 lbs, against 400 lbs in some of the advanced countries.

Dissolving Pulp Plant for S.I. Viscose

The South India Viscose Ltd proposes to set up a plant for manufacturing dissolving pulp from hardwoods, such as eucalyptus and wattle in collaboration with the Italian firm of Italiviscosa Eastern Trading, S.P.A. The plant will have an annual production capacity of 21,000 tons. It will be located in Coimbatore whereas the Company's viscose, rayon and staple fibre yarn plant is located in Mettupalayam. Only actual users are at present allowed to import dissolving pulp. The annual imports are placed around 50,000 tons. The demand is expected to rise to around 88,000 tons when the capacity for rayon yarn, already licensed, is used. The requirements of viscose yarn, staple fibre, cellulose fibre, etcetera, are estimated around 360 million lbs by 1966. This would require about 198,000 tons of rayon grade pulp. Total requirements of dissolving pulp are estimated to increase to 204,000 tons by 1966. The capacity licensed so far is 277,800 tons, including 17,400 tons for consumption by the integrated units.

Vidarbha Iron and Steel

The Bombay firm of Hind Traders has been granted a licence to set up a plant for manufacturing 96,000 tons of pig iron a year and a by-product recovery coking plant. Both plants will be located in the Vidarbha region which is rich in iron and manganese ores, coal and limestone. The firm is surveying the area with the help of British technicians to select a suitable site. The promoters of the venture are floating a new Company to be known as Vidarbha Iron and Steel Company to operate the project. The latter will involve an outlay of Rs. 8 crores up to the stage of pig iron production. This outlay is expected to increase to around Rs. 15 crores when the Company will also undertake the manufacture of steel items and chemicals. It is stated that pig iron will be manufactured by a new process of smelting iron ore by using non-coking coal. The process has been successfully developed in East Germany. The Company has secured the technical collaboration of the East German firm of Dia Investa Export which is said to have agreed to supply the plant and machinery and technical know-how on deferred payment terms. The plants are expected to go into production by the end of 1964. The authorised capital of Vidarbha Iron and Steel will be Rs. 10 crores, consisting of Rs. 7.5 crores in equity shares and Rs. 2.5 crores in preference shares, both of Rs. 100 each.

Digvijay Asbestos Sheet Project

The impressive rise in the shares of Shree Digvijay Cement Co. Ltd from Rs. 162 to Rs. 182 since the beginning of September reflects only partly the optimism concerning a substantial increase in the price of cement. The sustained support for these shares has been based mainly on the Company's growth prospects. The Digvijay clinker-grinder plant in Bombay has already started trial operation and is expected to have normal working in the near future. In order to complete the expansion programme, the Company has already decided to install another kiln and other accessories for increasing the installed capacity of the cement plant from 420,000 tonnes to 620,000 tonnes. An import licence for the plant and machinery required for the project is expected to be available shortly under the D.L.F. programme. Digvijay Cement has also finalised technical and financial collaboration agreements with Johns Manville International Corporation of the U.S.A. for its asbestos sheet and high pressure pipe making project. The American collaborators have agreed to provide the technical know-how on the basis of royalty on internal and export sales. The terms of royalty have been approved by the Government of India with some modifications, but the Company is carrying on further negotiations with the latter. The collaborators have also agreed to invest 10 percent in the equity capital equivalent to 13,500 shares of the Company at Rs. 125 a share, Rs. 25 being the premium on each share. The board of directors has approved this investment, subject to the sanction of the Government and shareholders. Digvijay Cement has applied to the Controller of Capital Issues for increasing the share capital by the issue of 13,500 equity shares of Rs. 100 each, which are to be offered to the U.S. collaborating firm at a premium of Rs. 25 each. The asbestos cement factory will be located in

Ahmedabad. Land has been purchased. One-third of the plant and machinery has been received, and the shipment of the remaining machinery is expected to be completed by the end of the current year. The plant is expected to go into production by about the middle of 1962. Digvijay Cement is assured of a regular supply of asbestos fibre, which is the essential raw material for the project, from Johns Manville. So the collaboration with Johns Manville will be of considerable advantage to Digvijay Cement in fostering export sales because of the collaborating firm's worldwide connections.

Hind Rectifier to Raise Capital

The Hind Rectifier Ltd, Bombay, which was converted into a public limited Company in April, is likely to enter the market before the end of the current year to raise Rs. 12 lakhs by public subscription. Additional funds are required to finance the Company's expansion schemes for which it has secured the collaboration of Westinghouse Electric Corporation of the U.S.A. and Westinghouse, Brake and Signal Co. Ltd of London. The Company is engaged in manufacturing rectifiers for the conversion of A.C. currents into D.C., and its present annual output is valued around Rs. 18 lakhs. The annual output is expected to rise to around Rs. 50 lakhs in about three years when the expansion scheme involving a capital outlay of Rs. 20 lakhs is completed. Hind Rectifier is also producing the selenium rectifier apparatus. It now proposes to undertake the manufacture of silicon rectifier apparatus and silicon diodes. The Company has an authorised capital of Rs. 30 lakhs in equity shares of Rs. 100 each. Of this, shares worth Rs. 5 lakhs have already been issued and subscribed. Out of the proposed new issue of Rs. 20 lakhs, the existing shareholders will take up Rs. 5 lakhs, and shares of the value of Rs. 3 lakhs are being taken up by the foreign collaborators, subject to the Government's sanction. The balance of Rs. 12 lakhs is to be offered for public subscription.

Orissa Textile Earns More

The working of the Orissa Textile Mills Ltd has improved considerably during the year ended March 1961. Sales increased from Rs. 2.86 crores to Rs. 3.31 crores. The profit has also risen from Rs. 2.94 lakhs to Rs. 12.35 lakhs, after providing Rs. 9.33 lakhs (against Rs. 9.71 lakhs) for depreciation. The dividends have been passed, and a credit balance of Rs. 12.35 lakhs has been carried forward. The directors say that the quality of the products has improved and they hope to export the mills' products. Steps have been taken to improve the quality further by installing new equipment.

Travancore Chemical Rights Issue

The shares of the Travancore Chemical and Manufacturing Co. Ltd are quoted at Rs. 18.25 c.r., x.d. It has now announced its proposal to issue 50,000 shares of Rs. 10 each at par to the equity shareholders as on 1st December, 1961. A sum of Rs. 5 a share is payable on or before 15th January, 1962. These are entitled to dividend for three months from 1st January, 1962 to 31st March, 1962. The balance of Rs. 5 a share is payable on or before 15th April, 1962. The new shares rank for dividend along with the old shares from 1st April, 1962.

Textool Pays the Same

The maintenance of the dividend of 15 percent by the Textool Co. Ltd for the year ended April 1961, has been well received in market circles, since the dividend is on the increased capital. The Company proposes to increase the authorised capital from Rs. 50 lakhs to Rs. 1 crore. The balance-sheet has not yet been published. According to advance information, the Company has earned a higher profit of Rs. 12.22 lakhs for the year ended April 1961, against Rs. 8.35 lakhs for the previous year. Taxation provision is Rs. 5.50 lakhs while development rebate reserve gets Rs. 84.136. The outlay on the dividend is Rs. 5.74 lakhs. The carry-forward amounts to Rs. 17.127. The shares of the Company are not dealt with in the market. At the present market price of Rs. 178, the yield on the shares works out to about 8.3 percent.

Rajendra Coffee Makes Profit

The net profit of the Rajendra Coffee Ltd for the year ended March 1961, amounts to Rs. 1.79 lakhs, after meeting all expenses and after providing for depreciation. The Company incurred a net loss of Rs. 26,750 in the previous year. With

Rs. 774 brought in, the total available is Rs. 1.80 lakhs. Out of this, taxation provision amounts to Rs. 50,000 (against nil) while general reserve gets Rs. 50,000. The dividend on the 6 percent tax-free preference shares accounts for Rs. 6,650. The dividend on 5½ percent, tax-free, redeemable preference shares absorbs Rs. 6,100. The balance of Rs. 16,875 is carried forward.

The crop for the year amounted to 194 tons, against the estimate of 126 tons. The 1961-62 coffee crop is estimated at 155 tons of Robusta and 10 tons of Arabica. The ordinary dividend is maintained at the previous year's level of 25 percent, and this accounts for Rs. 50,000. At the current market rate of about Rs. 12, the yield works out to Rs. 10.4 percent.

Amalgamated Coffee Maintains

During the year ended March 1961, the Amalgamated Coffee Estates Ltd has earned a net profit of Rs. 1.7 lakhs, after providing Rs. 1.92 lakhs for taxation. The net profit for the previous year was Rs. 1.20 lakhs, after providing Rs. 1.4 lakhs for taxation. With Rs. 23,571 brought in, the total amounts to Rs. 1.93 lakhs. Out of this, the 6 percent dividend, subject to deduction of tax, on the preference shares absorbs Rs. 36,000. A sum of Rs. 75,000 is transferred to debenture redemption reserve. The ordinary dividend of 10 percent, subject to deduction of tax (against 10 percent) accounts for Rs. 67,500. The balance of Rs. 14,796 is carried forward.

The total coffee crop for the year amounted to 896,282 litres, which gave an outturn of 227 tonnes and 464 kilograms of cured coffee. The cardamom crop amounted to 149,337 lbs. The coffee crop for the year ended March 1962, is estimated at 100 tonnes and the cardamom crop at 150,000 lbs.

Central Scientific Profit Up

The working of the Central Scientific Supplies Co. Ltd for the year ended March 1961, shows a net profit of Rs. 1.28 lakhs, after providing for depreciation and all other charges, except taxation. The previous year's net profit was Rs. 1.27 lakhs. With Rs. 8,968 brought in, the total available is Rs. 1.37 lakhs. Out of this, taxation provision amounts to Rs. 60,000, general reserve Rs. 15,000, dividend equalisation reserve Rs. 10,000 and development rebate reserve Rs. 3,070. A dividend of 8 percent, free of income tax (equivalent to 10.40 percent, subject to tax) on the preference shares accounts for Rs. 15,600. The dividend of 15 percent, taxable, on the old equity shares (against 15 percent), absorbs Rs. 22,500. The dividend of 15 percent, taxable, on the new equity shares (for a period of one-and-a-half months in 1960-61) accounts for Rs. 2,250. The balance of Rs. 8,201 is carried forward. Against the ordinary paid-up capital of Rs. 2.70 lakhs, general reserve stands at Rs. 1.95 lakhs and dividend equalisation reserve at Rs. 90,000. At the present market price of Rs. 6.95, the shares of the Company offer a yield of about 10.7 percent.

More from Asher Textiles

The Asher Textiles Ltd has announced a dividend of 30 percent, subject to deduction of tax, for the year ended June 1961. The increase in the dividend from last year's 12½ percent reflects the higher profit for the year. The accounts for the year are not yet published, but according to advance information, the net profit is reported at Rs. 11.65 lakhs, against the previous year's Rs. 7.13 lakhs. Tax liability on the profit of the year is estimated at Rs. 5.25 lakhs and a provision for this has been made. The dividend of 30 percent now proposed by the directors will be paid after 17th November, 1961.

Alageswar Estates Earn More

The Alageswar Estates Ltd has reported a higher profit for the year ended March 1961. After providing for depreciation and taxation, the net profit amounts to Rs. 1.12 lakhs, against Rs. 46,295 in the previous year. With Rs. 8,854 brought forward from the previous year, the total available for appropriation is Rs. 1.20 lakhs. The dividend of 15 percent, subject to tax (against 7½ percent) absorbs Rs. 90,000. The balance of Rs. 30,365 is carried forward. General reserve in the balance-sheet stands at Rs. 5.30 lakhs, against the paid-up capital of Rs. 6 lakhs. The shares of this Company, which are now quoted at Rs. 2.94, give an yield of over 10 percent.

The tea crop during the year amounted to 191,533 kilograms at a cost of 318.26 cents a kilogram, against an estimate of 182,095 kilograms at a cost of 337.13 a kilogram. The coffee crop

exceeded 116 tons, against an estimate of 67 tons. The tea crop for the current year is estimated at 182,625 kilograms at a cost of 361.58 cents. The coffee crop is estimated at 90 tons.

Praga Tools Recovers

The working of the Praga Tools Corporation Ltd has improved considerably since the management was taken over by the board of directors more than two years ago. Formerly, the Company was under the managing agency of the Hyderabad Government. During the period of 23 years from July 1958 to March 1961, the gross profit has amounted to Rs. 17.36 lakhs, but almost all of it has been used for writing off the past losses and unsalable goods. During the year ended March 1961 a credit balance of Rs. 23,631 has been carried forward. In his address at the annual general meeting of the Company held last Thursday, Mr. S. Ranganathan, Secretary to the Central Ministry of Commerce and Industry and chairman of the board of directors, said that the Company's financial position has now improved to such an extent that a reasonable share of the future profits can be used for paying dividends and financing the expansion programmes. (A fuller version of the speech is published on a later page.) The capital of the Company was reconstituted in 1958 by writing down the value of the shares from Rs. 50 to Rs. 35 each. Considerable improvements have been made in the lay-out of the factory. The equipment has been reconditioned and efficiency has increased. During the current year, production is expected to reach Rs. 70 lakhs.

Mr. Ranganathan referred to the substantial expansion the Company proposes to undertake. Technical collaboration agreements have been signed with three British firms for the manufacture of drill chucks, lathe chucks, and tool and cutter grinders. Negotiations are proceeding with a fourth British firm for the production of milling machines. When these expansion schemes are completed, the factory will produce tools and accessories worth Rs. 2 crores a year, in addition to the other products which are being made now. The Company has signed an agreement with Cekop of Poland for preparing a project report concerning a unit for producing machine tools of various types. The Government of India has already earmarked Rs. 1 crore for this project out of the Polish credit.

Caustic Soda Tariff Enquiry

The caustic soda industry has been enjoying protection for over six years, and it has made considerable progress during the period. In 1955, there were 12 units manufacturing it, of which seven produced for sale and the remaining five for self-consumption. At present, there are 18 units, of which 11 produce for sale and seven for self-consumption. Of the 18 units, only one unit employs the chemical process, 16 the electrolytic process and one both processes. The industry's rated capacity, which stood at 39,946 metric tons in 1954, has now risen to 131,630 metric tons. The present capacity of the self-consuming units amounts to 25,630 tonnes. Between 1958 and 1960, the production of caustic soda rose from 58,311 tonnes to 97,402 tonnes. It is estimated to exceed 100,000 tonnes in 1961, the figure for January-June 1961 being 57,873 tonnes. Ten of the existing units have plans for substantial expansion while 14 new units have been licensed to establish caustic soda plants in various parts of India. When all the schemes sanctioned so far are implemented, the production capacity of the industry will increase to around 366,500 tonnes which is fairly close to the third plan target of 400,000 tonnes. Although there have been some complaints about the purity of caustic soda, consumers and their associations are, by and large, well satisfied with the quality of the indigenous product. The estimates of the country's total requirements made by the Development Wing and other interests range from 140,000 tonnes to 195,000 tonnes for 1961 to 260,000 tonnes to 300,000 tonnes for 1964. Manufacturers, however, place the requirements for 1961 at 210,000 tonnes, and the figure for 1964 is estimated at 350,000 tonnes.

Apart from protection for over six years, the industry has received effective assistance through a strict regulation of imports which has practically eliminated foreign competition. Import restriction is likely to persist because of the shortage of foreign exchange. In spite of these favourable conditions, the producers have pleaded for the continuance of protection for a period of three to five years beyond 31st December, 1961. They have also asked for measures of assistance, such as the continuance of regulated imports, higher ceiling prices for caustic soda, facilities for transporting raw materials and finished products and the exemption from the payment of electricity duty. Opening the public enquiry into the question of

CAPITAL, 5th October, 1961.

the continuance of protection beyond 31st December, 1961, the chairman of the Tariff Commission, Mr. K. R. P. Aiyangar, emphasised the vital rôle of the alkali industry in India's growing industrialisation. He reminded the manufacturers of their heavy responsibility to ensure the development of the industry as expeditiously as possible. This cannot be achieved by protection alone. Mr. Aiyangar said that protection only created a favourable climate for industrial growth. It is for manufacturers themselves to make sustained efforts to achieve expansion and diversification. The chairman visualised a great opportunity for the expansion of the industry provided it showed initiative for raising its productive efficiency, creating avenues for a fuller use of chlorine, improving the quality of its products and ensuring that its products reach consumers readily and at reasonable prices. Referring to chlorine—a joint-product in the manufacture of electrolytic caustic soda—Mr. Aiyangar said that its offtake had a direct bearing on the development of the industry as well as on the prices of caustic soda. The Commission estimated the demand for 1961 at 95,000 tonnes and various estimates of the future demand suggested a figure of 130,000 tonnes for 1964. He added that the use of chlorine had declined from 78 percent of the aggregate theoretical capacity of 11 manufacturing units in 1958 to 68 percent in 1959 and further to 57 percent in 1960. The use of chlorine has thus been lagging far behind the production of caustic soda.

The industry estimates the demand to rise to 350,000 tonnes in 1965-66. The production at this level will be attained if the annual installed capacity reaches 400,000 tonnes. The installed capacity in June 1960 was 121,000 tonnes which means that new capacity to the extent of 280,000 tonnes will need to be added if the production target is to be achieved. The additional capacity, according to the industry, will cost about Rs. 39 crores. A sizeable portion of this investment will have to be undertaken by the industry in the form of equity capital. But this is possible only if shareholders are given a reasonable return. The industry has, therefore, requested the Commission to consider a fair return to the shareholders at a minimum of 7 percent net after taxation, and a return on the ploughed-back capital at 6 percent net before taxation in working out a fair selling price for caustic soda. It wants the Commission to fix selling prices after taking into consideration an element of rehabilitation and development, higher depreciation allowance consistent with the actual cost of replacement of machinery at current prices and also higher raw material costs and wages. Manufacturers have pleaded before the Commission to evolve a dual price structure for caustic soda taking into account the difference in purity between the I.S.I. commercial and rayon grades. They have urged that the selling prices should be worked out after giving due weightage to the size of the producing units and that revised selling prices should make allowance for the likely losses resulting from an unsalable surplus of liquid chlorine which, according to the industry, is estimated to reach 90,000 tonnes by 1965. Alternatively, the manufacturers would like to be assured of sufficient quantities of liquid ammonia at a reasonable price for producing chlorine-based chemicals.

Raw Wool Output and Exports

Raw wool exports, which rose from 33.9 million lbs in 1958 to 42.1 million lbs in 1959, declined by about 27 percent in 1960 to 30.5 million lbs. Shipments to the U.K. and the European Common Market countries fell by 17 percent and 48 percent, respectively. Exports to Russia rose by 23 percent while those to the U.S.A. were less than half of the 1959 figure. The fall in exports in 1960 is attributable to high internal prices and the shortage of good quality wool. The domestic consumption has gone up appreciably following the cut in imports. With the home industry concentrating its purchases on the best wool only, good quality wools have become scarce, and they are beyond the parity of the export market price. Besides, due to the difference in price, it is uneconomical to blend the superior wools with the average wools which are not salable in large quantities. The bulk purchases by Russia have not only upset the local prices, but their buying has also affected the supply position of the traditional buyers who have diverted their purchases to other countries like Pakistan and New Zealand. In his presidential address at the recent annual conference of the All India Wool Trade Federation in Bombay, Mr. Jayantilal K. Anjaria said that the wool trade is facing serious problems on account of the increased consumption of finer qualities of wool within India, increasing competition from countries like Pakistan, which has raised its wool exports from 23.6 million lbs in 1958 to 31.2 million lbs in 1960, and the unhealthy competition created by bulk buying from certain countries. He regretted that the home industry is confining its purchases to fine qualities and is

paying handsome prices making it uneconomical to export them.

It is high time, he said, that the Government appointed a working group to study how best it could employ the home produce so that not only more foreign exchange could be earned but also exports raised. In order to arrest the declining trend in exports, the president suggested that the economics of the price structure of imported wools like 46/50's should be carefully examined and, if found economical, the import of these wools might be liberalised so that exports of the superior varieties could be increased. He also favoured the granting of incentives in the form of import licences for raw wool and tops against wool exports. He pleaded for wider publicity in the countries which have considerably increased production of woollen textiles over the past few years with a view to pushing wool exports to those countries. Mr. Anjaria referred to the various difficulties of the trade resulting from new grading rules. As every country has its individual tastes, a uniform quality grading proves detrimental to the interests of the trade. Unfortunately, the Grading Department's attempts to standardise wool qualities overlook this essential feature of the export trade. Mr. Anjaria urged that the new grading rules be abolished. He also pressed for the setting up of a carbonising plant in Bikaner for the removal of burrs and thorns.

Inaugurating the conference, the Central Minister for Agriculture, Dr. Panjabrao Deshmukh, emphasised the need for improving the quality of Indian wool as consumers are becoming more and more quality conscious. He said that the wool trade has been gradually gaining in importance and, among the livestock products, wool ranks second only to hides and skins as an earner of foreign exchange. In the recent past, numerous schemes were launched with a view to overcoming the basic obstacles in improving the quality and raising production. Dr. Deshmukh said that both the Centre and States are devoting serious attention to these problems. The cross-breeding schemes in certain States, the selective breeding scheme for the improvement of Bikaner sheep and the recent Rajasthan scheme for the pooling and grading of wool in the shearing yards go quite a long way towards the attainment of this objective. Referring to the trade's complaint about the differing results obtained by the wool testing laboratories in Bombay and Jamnagar, Dr. Deshmukh said that the detailed examination of the matter has shown that the methods of analysis differ from one another and the result is not, therefore, directly comparable. He said that the Government is considering the desirability of adopting the Bradford system which is likely to be conducive to better trading facilities. Dr. Deshmukh emphasised that while the raw wool industry is now coming into its own, the Indian breeder, unlike his counterpart in other advanced wool producing countries, is a victim of illiteracy and poverty. The acute shortage of pastures or grazing lands in the wool producing tracts has turned him into a nomad. So in order to improve the quality of wool, it is necessary to provide adequate pasture lands and fixed habitation to the breeders and improve their living standards. It is only then that Indian breeders can be expected to adopt modern techniques of sheep breeding, shearing and grading and thus make a positive contribution towards rationalising the wool trade in India.

Raw Materials for Art Silk

In a memorandum to the Import and Export Policy Committee, the Silk and Art Silk Mills Association, Bombay, says that there is acute under-utilisation of installed capacity in the art silk weaving industry. It is estimated that not more than one-third of the installed looms are working for more than one-and-a-half shifts. This under-utilisation of capacity is attributed to financial stringency among the weavers and the short supply of artificial silk yarn. The annual requirements of the latter for one-and-a-half-shift working of 61,000 authorised looms is 62.26 million kilograms. The indigenous production of filament artificial silk yarn is 20.72 million kilograms. If this wide gap is to be bridged through imports, it would cost about Rs. 15.60 crores of foreign exchange. Against this, imports allowed to the industry last year totalled only Rs. 3 crores which also included the share of doublers, twistors, hosiery manufacturers and producers of lace, gas mantles and saree borders, etcetera. The Association says that the problem of short supply can be tackled in the short-term by allowing the industry to use whatever yarns are available within the country, as for example, cotton, woollen and silk. The long-term approach would involve increasing the indigenous capacity for production of rayon and synthetic fibres in the required deniers and qualities. This, in turn, would mean a considerable amount of foreign exchange expenditure not only for plant and machinery but for the basic raw material for

manufacturing yarn, which is rayon-grade wood pulp. Since last year, there has been a tendency in spinning circles to set up plants for the manufacture of pulp. But even if all the plans materialise, India will become self-sufficient to the extent of 80 percent of her requirements. In any case, there will be need for importing artificial silk yarn. If foreign exchange allocations to the extent required cannot be made available, it will be necessary to import the yarn from countries with which India has rupee payment arrangements. But this does not mean that such imports should be made through the State Trading Corporation.

Large-scale imports of art silk yarn have been made by the S.T.C. from rupee payment countries or countries with which there is a barter or link arrangement. The Association says that the industry has no objection to imports being made by the S.T.C. from rupee payment countries provided the numerous varieties of yarn required by the industry are imported by the Corporation. But by the very nature of the transactions, the S.T.C.'s imports are limited to some countries. These countries sometimes do not have sufficient production of art silk yarn or do not manufacture all the varieties required. Even when the country concerned has the required production capacity and variety within its manufactures, limited varieties, qualities and deniers of yarn are made available to India since they face no competition. The S.T.C. having made a commitment to purchase, they fully exploit the situation. The prices are 15 percent to 20 percent higher than those at which direct imports could be made. Supplies are irregular and inadequate. It is doubtful whether in the ultimate analysis, any foreign exchange is saved by India by getting art silk yarn against barter or link deals or from rupee payment countries. It is necessary to verify whether the price paid for imported items is normal. It is equally necessary to see whether Indian exports fetch competitive prices. The Government should also find out whether there is a net increase in the volume of India's exports and if so, to what extent, and whether the goods have been resold to a third country, coming in the way of promoting direct exports to that country.

The Association says that before directing industries to obtain their raw materials from rupee payment countries, the Government should ascertain whether these countries are in a position to supply the required raw materials and make all data available to industries to prevent the industrialists from making individual enquiries with these countries at the risk of considerable lapse of time and the expiry of the validity period of licences. The Central Government had decided that against the exports of rayon fabrics to countries with which India had rupee payment arrangements, incentive licences for imports of art silk yarn would be valid only for rupee payment account countries. On receiving many enquiries about the availability of art silk yarn from these countries, the Association recently wrote to the Consuls of 12 countries with which India have rupee payment arrangements. But satisfactory replies had been received only from Hungary, Czechoslovakia and East Germany. The Association says that it is also its experience that certain types of machines are not manufactured or at least not supplied to India by these countries, as for example, comptometers. It has made a strong plea for the maintenance of buffer stocks of art silk yarn. But it does not consider it feasible to place bulk orders for art silk yarn because of the limitations concerning the variety, quality, supply and price. The total requirements of machinery for the art silk weaving industry during the third plan period are estimated around Rs. 12.33 crores, of which imported machinery is estimated to cost Rs. 8.58 crores.

Compulsory Savings

One of the items to be discussed at the Indian Labour Conference in Bangalore on 9th and 10th October is the proposal made by the Central Government that it should arm itself with powers to enforce compulsory deductions from wages with a view to ensuring adequate savings in the national interest. Although the Government does not propose to enforce such compulsory deductions in the immediate future, it wishes to have the power to do so when it deems it expedient. Details of the proposal have still to be worked out. But it is intended to exempt employees covered already by the Employees Provident Fund Act, temporary employees who have not completed six months' service, employees in establishments with less than 20 persons on their rolls, and those drawing a pay of less than Rs. 75 a month. Rates of deductions, it is suggested, might be notified from time to time with certain ceilings, varying from about 10 percent for employees drawing less than Rs. 300 a month, to about 20 percent for those drawing over Rs. 1,000. The deductions would be inclusive of payments now made to provident funds or life insurance.

In fact, the proposal is to bring within the Government net those not so far covered by the

Employees Provident Fund scheme. But as the deductions will in fact be compulsory savings, without contributions from the employers, the workers concerned are likely to complain. Employers too are likely to object to legislation which compels one employer to contribute to the Employees Provident Fund scheme while another makes no contribution at all. It will be remembered with what difficulty deductions from pay were made for the Employees State Insurance scheme in the early stages, although employers were also contributing and workers were to receive obvious benefits. There is likely to be even stronger resistance to deductions which are for savings only, without any contribution from the employer and without any obvious or immediate benefit. The habit of thrift has yet to be inculcated among the majority of employees, who prefer to take a loan and repay it over a long period rather than save the money beforehand for an emergency. It is worth noting that for the first time a proposal has been made to include the higher-income groups. Large numbers in these groups must already be covered by voluntary contributory provident fund or pension schemes, or by life insurance. The administration of the latest proposal would become difficult considering the number of cases where adjustment would have to be made for existing contributions.

Incidence of Indirect Taxation

The tax research unit of the Central Finance Ministry has recently completed a study of the incidence of indirect taxation in 1953-54 and 1958-59. It covers all indirect taxes levied and collected by the Centre and States in 1953-54 and 1958-59 with the exception of export duties, registration and stamp duties, electricity duties and a few minor taxes. In terms of yield, the coverage amounts to 81 percent of the total yield of Rs. 433 crores from indirect taxes in 1953-54 and 88 percent of the total yield of Rs. 748 crores in 1958-59. Rural and urban households have been classified into five monthly expenditure groups of Rs. 1 to Rs. 50, Rs. 51 to Rs. 100, Rs. 101 to Rs. 150, Rs. 151 to Rs. 300 and Rs. 301 and over. The aggregate consumer expenditure in India for 1953-54 and 1958-59 has been derived from the national income estimates. This aggregate has been apportioned between the rural and urban households and among household expenditure groups on the basis of the proportions revealed by the fourth round and the thirteenth round of the National Sample Survey of household consumer expenditure. Rural and urban population has been distributed among household expenditure groups on the basis of the population distribution indicated in the above-mentioned rounds of the National Sample Survey of household expenditure.

The study shows that in 1953-54, 3.4 percent of consumer expenditure in India went to the payment of indirect taxes; the proportion rose to 5.3 percent by 1958-59 due to the increase in Central excise duties, sales taxes, sales tax on motor spirits and motor-vehicle taxes. The incidence of indirect taxes levied by the Centre rose from 2 percent to 3.6 percent and that of the States recorded a smaller increase from 1.4 percent to 1.7 percent. In 1953-54, indirect taxes constituted 2.8 percent of consumer expenditure of rural households and 5.6 percent of consumer expenditure of urban households. By 1958-59, the incidence on rural households went up to 4.1 percent and on urban households to 8.7 percent. The increase in the incidence on rural households is explained mainly by the rise in the incidence of Central excise duties and in the case of urban households by the increase in the incidence of both Central excise duties and sales taxes. The ratio of urban to rural incidence was 2:1 in 1953-54. It rose to 2:1.21 by 1958-59. This suggests that a slightly larger share of the extra burden of indirect taxes imposed during the five years ended 1958-59 was borne by urban households. This is largely accounted for by sales taxes. The total revenue from sales taxes doubled from

Rs. 63.6 crores in 1953-54 to Rs. 127.3 crores in 1958-59, and these taxes fall, by and large, on the urban households. The incidence of indirect taxes was progressive both in 1953-54 and 1958-59 in the sense that rural and urban households in higher spending groups paid higher proportions of consumer expenditure in indirect taxes and thus bore a greater burden. Over the five years ended 1958-59, the incidence of indirect taxes has become more progressive, that is, the burden has risen more steeply with the increase in the level of household spending in 1958-59 than in 1953-54.

Plea on Income Tax Distribution

The U. P. Government, in its memorandum to the third Finance Commission, has pleaded for the distribution of the entire divisible pool of income tax on a population basis. As one of the most populous States of the Union, this has always been the demand of Uttar Pradesh in contrast to the stand taken by West Bengal and Bombay that the criterion of collection should be given more weight. The first Finance Commission recommended that 20 percent of the divisible pool should be distributed on the basis of collection and the remaining 80 percent on the basis of population. The second Finance Commission emphasised this trend further by recommending only 10 percent for distribution on a collection basis and allocating the remaining 90 percent for distribution on a population basis. As a result of this, U. P.'s share in the divisible pool rose from 15.75 percent to 16.36 percent. The State Government has now pointed out that unless a radical revision of the principles governing distribution from the divisible pool is undertaken, it would not be possible for the State to fulfil some of the ambitious third plan projects. Increased salaries to primary school teachers and the proposed enlargement of the police force will be difficult to implement if the Commission's recommendations do not yield a substantial addition to the State's existing resources. Reiterating its objections against any percentage of income tax being earmarked on the basis of collection, the memorandum says that the practice is calculated to perpetuate the existing disparities between States. While agrarian States with large populations consumed the products of industries situated in States with sea coasts, they did not share in the latter's prosperity. U. P. also wants that 80 percent of the income tax revenue should go to the divisible pool, instead of the 60 percent fixed by the second Finance Commission.

U. P. further wants that the Central excise revenue from all the 30 commodities be pooled for distribution to the States. Under the second Finance Commission's report, the States are entitled to only 25 percent of the Central excise revenue from seven of the 30 articles. One argument in favour of this demand is that even as early as 1930 when one-half of the income tax paid by residents of a province was assigned to the province concerned in accordance with the recommendations of Sir Walter Layton, he had proposed the distribution of excise duty on a per capita basis, but this was not done. If it had been so distributed, there might have been some mitigation of regional disparities. U. P. is also against the States' share of the revenue from the tax on railway fares remaining fixed at Rs. 12.5 crores. It says that the States' share should increase according to the rise in revenue.

Electricity Rates in U.P.

Power consumers in the four major cities of U. P.—Lucknow, Allahabad, Agra and Varanasi—will have to pay more from next month. The U. P. Electric Supply Company, which generates and distributes electricity in these cities, has already notified the State Government about it. Electricity for lighting and fans will be supplied at the rate of 26nP a unit, against 20nP hitherto. To consumers in the A.C. areas, the rate will be 23nP a unit. Electricity charges supplied in bulk are proposed to be increased by 10 percent. The rates of power supplied for certain other purposes are also to be revised. The Resident Engineer of the Company has said in a Press statement that during the past two years the undertaking was not getting reasonable returns. The cost of coal has gone up by Rs. 8 a ton. Similarly labour charges have also increased by about 50 percent. There is a 25 percent Government duty on electricity, but this is paid by consumers. Criticism of the proposal has naturally been both prompt and widespread. It has been said that an increase in the rates may not be allowed by the Government unless the Company takes the public into confidence about its cost structure. Another criticism is that no other electricity undertaking in the State has yet raised the rates, particularly the nationalised electricity undertaking in Kanpur. If, however, the Company's costs are found to justify an increase in the rates, it is said that the Government should forgo a part of its electricity duty. Indus-

trial consumers, who will have to pay more under the new rates, will naturally be tempted to pass on the incidence to consumers of goods and this will not be in the interests of holding the price line.

Sales Tax on Commission Agents

Holding that the levy of a sales tax on commission agents was valid and constitutional, the Allahabad High Court has dismissed 21 writ petitions filed by various parties. It was contended on behalf of the petitioners that they only brought together the buyers and sellers at their place of business. Some of the petitioners professedly collected sales tax, but this, they said, was only by way of caution in case they were held liable to sales tax. In other cases, they made certain collections under various names. In dismissing the petitions, the High Court said that in law as well as in the commercial world, a seller could not only be the owner but also any other person who had authority to transfer property in the goods. A mercantile agent having such authority was as much a seller as the owner of the goods himself. All that was necessary to make a person a seller was authority to transfer property in the goods. "Trade and commerce in civilised societies," the judgment said, "would be greatly handicapped, if not come to an end, if the word 'seller' was confined to the owner of the goods. Wheels of modern trade and industry which tended more and more to become worldwide could not run without the intervention of a large number of mercantile agents acting on behalf of owners and of ultimate consumers." Sales tax, in the opinion of the court, was not a tax on the owner of goods. This occasion for the levy of sales tax was the sale of goods, but the question of incidence of sales tax was a matter of legislative policy. It was within the powers of the Legislature to impose the levy on whomsoever it chose, even if he may not be the owner of the goods.

In another case, the Allahabad High Court has held that for the purpose of substitution of value in terms of new coins, one anna is equal to 6.25nP. The case arose out of a sales tax assessment at the rate of 6.25nP instead of 6nP. Obviously, where large amounts are involved, it makes a big difference. The judgment said that when the value expressed as one anna in terms of the old coins was expressed as equivalent to 6.25nP, it was still value expressed in terms of new coins which "need not have to be in whole coins but could be in fractions thereof." When the total amount of a sales tax calculated at the rate of 6.25nP a rupee has to be tendered in payment, the rounding off operations would begin—but not till then. Before then, and for the purpose of substitution of value in terms of new coins, only the rate was relevant and there was no necessity for rounding off into whole coins, the court said.

A MAGISTRATE DISMISSED

WE notice that the Secretary of State has accepted the recommendation of the Government of India and in a short and dignified letter to Mr. Pennell has communicated his decision to remove that officer's name from the list of Civil Servants. We think that this decision will commend itself to all intelligent persons, because a perusal of the extraordinary proceedings in the Noakhali case must lead to the conviction that Mr. Pennell is wholly unfit to sit upon the judgment seat, or, indeed, to exercise any magisterial functions. At the same time we wish we could really believe that the Government, in dismissing Mr. Pennell, were actuated solely by a desire to purge the public service of all undesirable occupants, and that no feeling of resentment at his insubordinate conduct has governed their decision. There is no doubt that the impression prevails in a great many quarters that Mr. Pennell has been punished, not for his malicious attacks upon innocent and unofficial persons, but because he has dared to criticise the actions of his superior officers and others in the Civil Service. As regards the Chupra case, our sympathies and those of all honest persons must be with Mr. Pennell, yet he was severely condemned by the Government for simply doing his duty. In the Noakhali case, he permitted himself to travel considerably out of the record and showed then most unmistakably that, however just his judgment was in the Chupra case, his mind was not sufficiently balanced to enable him to exercise judicial functions, and for this reason we unhesitatingly recommended his removal from the service. The popular feeling will, we fear, be that this was not the real reason for his dismissal, that his diatribes on unofficial persons might have passed as unpunished as the lawless conduct of Messrs. Twissell, Simpkins, Corbett and Bradley did. But that his rank offence was in having torn down the veil which hid the wicked actions of certain officers from the public and left them only the rags of their respectability to cover their deformities.

A Ditcher's Diary

THE SIGNIFICANT THING ABOUT NATIONAL INTEGRATION is that it should be thought necessary to discuss it at all. For necessary it is, and I do not mean simply because an election is on its way and some of the things said at the hustings are going to be disruptive of unity. Reading the deliberations of the conference held in New Delhi, I was struck with the level of awareness of the problem. All the various factors, language, caste, communalism and so on, are familiar enough and were trotted out and discussed with admirable frankness—Mr. Nehru's contribution, I thought, was alarmingly complacent; but I suppose that is only to be expected so near to an election. What nobody seemed to question, however, was India's will to unity—it seemed to be taken for granted by everybody present that in the absence of the various factors mentioned integration would be complete and unquestioned. Personally I doubt that. It was quite true what Dr. Radhakrishnan had to say about unity in diversity, and that is a feature of the Indian scene that nobody is going to discount. But is that enough in the context of the kind of tight nationhood which is being strived for today? Again, I have my doubts. It seems to me that it is possible India no more wants to be a nation State than, say, Europe does. This is a point of view I tried out the other day on a particularly eminent Indian educationalist and I was surprised when it was not, as the R.A.F. might once have put it, shot down in flames. I further suggested that one of the answers to the problem of Indian unity might have been to use the threat of communist China, and I blamed Mr. Nehru for not taking advantage of what seemed to be an admirable opportunity of uniting the nation behind him. But, to my surprise, my confidant said no: not even an attempt to stir up the national conscience over the Chinese invasion—and it is nothing less—would be successful. When I look back on the number of occasions in history when unity has been fostered by outside pressure and interference, I could not help but feel that he was wrong. If in fact India has no will to unity, then what examples there have been of it in this country deserve careful study. So they do; when India has regarded herself as one it has always been because some strong central power has found it convenient to designate her as such. Perhaps India is too old and mature a civilisation to take easily to what is, after all, the brash modern conception of the nation State. If that is so, then there is some consolation in the knowledge that outside Asia and Africa, nationalism is not the force it used to be.

EVERYBODY (MOST OF ALL, I SUSPECT, MASTER Tara Singh) must be happy that the fast in the Golden Temple at Amritsar came to an end before tragedy could supervene. This is not the time to revive controversies such as the one aroused by Mr. Nehru's somewhat ambiguous reference to fasts that go on indefinitely; and if you refuse to recognise fasting as a political weapon, as I certainly do, there seems little point in discussing how particular fasts may or may not have been conducted. The trouble is that neither the Congress in general nor Mr. Nehru in particular can dismiss the demand for a Punjabi Suba, or the technique for its achievement, without reservations

imbedded in their past. Mr. Nehru will have to say in public that his surrender to the death of Potti Sriramulu was a blunder, that the whole idea of reorganising States on the basis of language was pernicious. The Prime Minister probably knows it; but the majority of his Party think otherwise. Congressmen clearly see the immediate rewards of parochial, caste and linguistic appeals to the electorate; and they are chary of throwing those prizes away. I do not in the circumstances think that the Congress has much of a moral right to condemn Master Tara Singh and his followers (or perhaps his goaders) but Master Tara Singh has certainly not scored a political victory. I have indeed seen references to "private assurances". What they may be I do not have a clue; but it seems unlikely that Mr. Nehru made any substantial concessions. Whether Master Tara Singh's face was eventually saved is another question to which I do not know the answer. There were indications once that Masterji had ambitious rivals; they must still be around. It seems to me a pity that rivalry should be on who can fast longest. I once went without food for about 48 hours and found it a distinctly unpleasant experience; I would not care to repeat it. Forty-eight days is 48 too many, especially if the dish after the ordeal is only an enquiry commission. And had not a commission been promised long ago? The recent conference on national integration discussed whether fasting for political ends should or should not be banned. The only way to abolish it is to demonstrate that fasting does not pay; and I am glad it has at last been done.

WHATEVER THE EVENTUAL OUTCOME OF THE Syrian revolution, it is rather interesting to hear the break-away described as "an assertion of national independence from Egyptian imperialism." It seems that adjective "imperialist" gets attached to us all sooner or later. There is also the point that socialism is not necessarily a panacea everywhere it is tried, especially when it means harsh government and monumental corruption. But these factors apart, the return to nationalism in Syria may not be quite the bright hope it seems. For instance, it will not help the Syrian people if they have merely exchanged President Nasser's despotism for a reactionary and retrogressive régime which will take even less interest in their aspirations than he did. These days, I suppose, there are worse things in this world than the loss of national freedom. But from the outsider's point of view the most intriguing feature of the Syrian "revolution" is the blow to Mr. Nasser's prestige. And let me say right now that I do not necessarily regard this as an unmixed blessing. I have never been an admirer of the President or his methods; and I have always found his pretensions to neutralism and Arab leadership both ludicrous and dangerous. But it would be useless to deny that he has many things to his credit, and one of them is that he has managed to keep his own country, and its unwilling appendage, away from the throat of Israel. If now the dream of Arab hegemony under Egypt is over, it is not necessarily a guarantee of peace in west Asia. Furthermore, if Mr. Nasser has failed as an imperialist, he can boast a number of achievements

as a social reformer, and few things are more important in India today. It is always tempting in such situations to draw lessons, and I think the one appropriate for India—whose west Asian policy must now be facing radical adjustment—is that not too much faith should be placed in rabble-rousers of the Nasser type, whatever the apparent support they can command. For what it is worth, the parallel with Castro is perhaps useful here. The way African politics are shaping up, India is going to be under recurring pressure to put her faith in local "leaders" of one kind or another. I suppose it is inevitable that she should, and anyway there is always the consolation that she will never be alone. But if one must back a despot it is always a good idea to have some reservations in hand. The important thing is never to be identified with any particular system or personality. This is the mistake the West has always made in the Middle East. It would be a pity if India were to make it as well.

THE COMMUNISTS ALWAYS GET ON BETTER WITH kings and conservatives than with social democrats and other "progressive" folk; and it will not surprise me one bit if King Mahendra of Nepal is given the right royal treatment in China. The king plays with democracy as he pleases; and this should please a People's Democracy. Another reason for being polite to the Nepalese monarch is that if there is some sort of accord between China and Nepal it will be possible for the former to proclaim again that it is only Mr. Nehru who stands between China and its friendship with India. But Mount Everest may yet pose some knotty problems. They could, of course, cut the thing up and say that it is jointly owned by Nepal and China. Prospective climbers would then have to apply to both Governments for permission; and there might be some additional revenue for both. I cannot see, however, that the increased earnings would make a big difference either to Nepal's primitive economy or to China's difficulties created by even more primitive ideology. But how will Nepal or China assert any ownership? When the Indian Everest team came back from very near the peak, the weather beat them back—not, as far as I know, Chinese policemen. About the same time the Chinese claimed to have conquered Everest; again, no permission appears to have been sought from Kathmandu. In any event, mountains are an odd sort of real estate; especially when they are as high as the Himalayas. Once perhaps they afforded protection; certainly not much today. If this is what the King of Nepal is seeking in Peking, presumably with less than full Indian support, well, the Indian experience surely had a lesson for Nepal. No country in recent years has done so much to win China's friendship as India; and it is this country which is now one of the chief targets of Chinese propaganda of hatred accompanied by actual aggression. It would be stupid to suggest that Nepal adopt a militant stance in its relations with China; even India cannot afford to do that. But there should be no illusions about China's long-term ambitions as I am sorry to have to say, there were in India until about two years ago. Mr. Khrushchev is perhaps fully conscious of the potential danger that is China; but in London and Washington there is sadly little evidence of a similar awareness; and when interminable talk goes on about peace and disarmament as a matter between east and west, I can almost hear the Chinese chuckle.

THE MYSORE PAPER MILLS, LIMITED

CHAIRMAN, MR. M. D. SHIVANANJAPPA'S ADDRESS

Speech delivered by Mr. M. D. Shivananjappa, I.A.S., Chairman and Managing Director, The Mysore Paper Mills Limited, at the Twenty-sixth Ordinary General Meeting of the Company held at Bangalore on Friday the 29th September, 1961.

Ladies and Gentlemen,

It gives me very great pleasure to welcome you to this the 26th Ordinary General Meeting of the Shareholders and to place before you the Report of the Directors and the Audited Balance Sheet for the year ended 31st March, 1961. These have been circulated already and with your permission, I shall take them as read and would proceed to review the main features of the year's operations.

Production during the year under review is quite satisfactory. Sales realisation during the year amounted to Rs. 123.22 lakhs as against Rs. 141.31 lakhs in the previous year. The reduction in turnover is largely due to the revised prices fixed by the Government of India in accordance with the recommendations of the Tariff Commission from 1-1-1960, the effects of which were felt for the full year under review as against only one quarter during the previous year. The efforts of the Paper Industry to move the Government of India for a suitable revision of prices in the interest of existing units, particularly to minimise the adverse effects on smaller units like ours and in the interest of expansion of existing units and starting of new ones have not borne fruit and repeated requests are being made to Government of India by the Industry for a suitable revision and I hope that the Government of India would view this question with sympathy.

Accumulation of Stocks

In regard to despatch of papers, I would like to keep you informed that during some months in the year, there were continuous railway booking restrictions and this led to accumulation of stocks which caused strain on our liquid resources—common to Companies which finance capital projects by current resources—which necessitated draws from the Cash Credit Account. This year, we had also to meet tax liability to the extent of Rs. 9,32,700/- and also to deposit advance tax under Sec. 18A of the Income-tax Act to the extent of Rs. 7,44,775/-. To prepare for adequate working capital, your Directors have taken steps to raise the limit of cash credit account with the State Bank of Mysore to Rs. 25 lakhs. I should hasten to state that conditions have improved now and our products are moving quickly and there is no cause for anxiety.

I must bring to your notice that manufacturing costs are mounting on account of increase in prices of raw materials, power cost and chemicals and there are no signs of decline. Recently, Government of India have levied an excise duty of Rs. 40 per tonne on Caustic Soda. Having regard to the rates of excise duty for writing and printings, it must be said that the rates of excise duty levied on packing and wrapping paper are disproportionately high and in addition there has also been an increase in Railway freight and all these have added considerably to our expenses. The only hope, as it appears to my mind, lies in increasing production and improving efficiency and securing maximum economies calculated to reduce costs. It is with this view—pending implementation of the expansion scheme—action was taken to secure Dore Oliver's Recausitising Unit, and I am glad to inform you that the equipments have been installed and taken to service and it is expected that appreciable economies would be secured which would go to reduce production costs.

Depreciation on Fixed Assets

Coming to the consideration of the Balance Sheet, I have to mention that provision has been made for depreciation on fixed assets calculated in accordance with the rates allowed for normal depreciation and extra shift allowances as per Income-tax Act, amounting to Rs. 6.89 lakhs; Rs. 1,69,700/- towards Development Rebate and a further sum of Rs. 55,000/- towards Retirement Gratuity. A provision of Rs. 6.5 lakhs has been made towards taxation. I am glad to inform you that the only one instalment of Rs. 4 lakhs that was due to the Industrial Finance Corporation of India has been paid during the year under review and the loan of Rs. 50 lakhs obtained from

them for financing the First Expansion Scheme has now been fully repaid, about a decade ahead of due date. A sum of Rs. 12,50,000/- remaining in the Industrial Finance Corporation of India Loan Redemption Fund has been transferred to General Reserves. As the loan has been completely repaid, the Industrial Finance Corporation of India have withdrawn their nominee, Sri T. Bhaskara Rao, from our Board of Directors. I am glad to acknowledge that the Board received valuable assistance and advice from Sri T. Bhaskara Rao and your Board have placed on record their appreciation of his services to the Company.

In regard to disposal of surplus, namely Rs. 6,61,663/- including carry over of last year, which stood at Rs. 51,968/- your Directors have decided to transfer Rs. 2,50,000/- to Dividend Equalisation Fund, Rs. 62,500/- having been provided for in 1954. Further your Directors, having regard to the satisfactory working during the year under review have proposed to maintain the rate of dividend at the level of previous year and to recommend declaration of a dividend of 15 per cent, subject to tax, absorbing Rs. 3,75,000/- the balance being carried forward, and I am confident that these proposals will meet with your approval.

I am happy to inform you that the labour-management relations continue to be very cordial. Your Directors have been pleased to sanction a bonus of four months' salary or wages to the employees for the year ended 31-3-1961 and the same has been disbursed.

Silver Jubilee

In regard to the celebrations of the Silver Jubilee of our Mills you will remember that I had said on the last occasion that your Directors would fix a suitable date and I am glad to announce that it has been proposed to celebrate the Silver Jubilee in a befitting manner during the last week of March or 1st week of April, 1962, and invitations will be sent to the Shareholders and I do hope that a very good number of shareholders will participate in the function.

I now come to the important subject of the Developmental activities of our Mills in which you are deeply interested. When I had the privilege of addressing you for the first time in August, 1959, having regard to the tightness of the foreign exchange position obtaining two years preceding, I cautiously expressed the hope that our application for increasing the production capacity of our Mills from the present level of 8,000 tons to 18,000 tons would receive sympathetic consideration at the hands of the Government of India and that I would be able to formulate specific proposals for expansion. Last year about this time I informed you that the necessary Industrial Licence had been received from the Government of India and that discussions with the Commonwealth Development Finance Co., Ltd. and Industrial Credit and Investment Corporation of India for exchange loans had been encouraging, the only difficulty that had delayed implementation of our scheme of expansion. I should also like to recall that I informed you that having availed myself of the opportunity of studying at close range the conditions and trends obtaining in Capital Goods Market in foreign countries I was confident of formulating a scheme of expansion which would be both sound and economical. It is indeed time matter of gratification to me and I have no doubt it will be to you—that we have been able to secure loans to cover the value of Plant and Machinery to be imported from abroad and I shall come to the details presently.

Expansion Scheme

Though I do not wish to burden you with technical details relative to the scheme of expansion, yet I should like to state a few details of fundamental importance. You are aware that our existing unit is an integrated pulp and paper unit with a capacity of manufacture 8,000 tons, the primary raw material being bamboo, supplemented by rags, waste paper and wood pulp. The paper making capacity exceeds the pulp making capacity; if only the primary raw material, bamboo is used. It has also explained in previous years that it is this imbalance between pulp

making and paper making capacity that stood in the way of achieving the target production earlier.

The current capacity of the Mills does not permit installation of a Modern Soda Recovery Plant, which alone secures higher percentage of chemical recovery, procuring considerable economies. The present scheme of expansion contemplates use of only bamboo for manufacture of pulp, discarding rags and waste paper used at present. In this connection, I am glad to inform you that the Government of Mysore have agreed to supply annually 30,000 tons of bamboo required for the expanded plant. The Pulp Plant after expansion will have a capacity to produce sufficient quantity of pulp to feed the existing two Paper Machines of 15 tons each and also the New Paper Machine of 30 to 35 tons capacity. This increased capacity will enable us to install a Modern Soda Recovery Plant which secures considerable economies and reduce cost of production to a great extent and the production of 18,000 tons of marketable paper will greatly help to reduce costs by way of overheads, labour charges, etc., and also help to serve the needs of the community better. I have heard it said that with the going into production of new units and additional units of the existing unit, production may exceed demand by 1965, yet I feel that with the progress of educational and developmental activities of the Government of India and State Governments under the five year plans, entailing expenditure of crores of rupees, there will be created a demand for paper in the ensuing years which will be positively favourable to the indigenous paper manufacturers. Speaking of ourselves, I should like to say that production of 18,000 tons of marketable paper will undoubtedly increase the earnings of our Company and will place the Company on a firm and sound basis ensuring a fair return on capital and in so far as marketability is concerned, I wish to add that our steady and sustained supplies during good years and bad have established for our products a regular and an assured market.

The scheme of expansion is estimated to entail a total expenditure of about Rs. 350 lakhs which is proposed to be financed as under:—

	Rs. in lakhs
Share Capital by Rights Issue	100
Rupee Loan from I.C.I.	60
Foreign exchange loans from CDFC and ICICI	140
Bank Borrowings and other resource	50
	350

Increase of Authorised Capital

As you are aware, the Shareholders at their meeting held on 7-10-1960 accorded approval to the increase of authorised capital from Rs. 25 lakhs to Rs. 150 lakhs. In pursuance of that resolution, application had been made to the Controller of Capital Issues and his sanction obtained for raise of Rs. 100 lakhs by issue of 10 lakhs of Equity Shares of Rs. 10/- per Share attaching a premium of Rs. 2/- per Share. I do not wish to go into great details regarding the issue as you have all been in possession of the Letters of Offer issued in terms of the Controller of Capital Issues sanction order. I am glad to inform you that the Government of Mysore have agreed to take 10% of the Shares which are their quota of Right Shares and the balance of 90% has been underwritten in compliance with the condition laid down by lending Institutions, underwriting commission being 1½% without brokerage.

I am happy to inform you that the response from our Shareholders has been encouraging and there have been numerous enquiries from non-members regarding the availability of the Shares and I am hopeful that the issue would be a success.

Reverting to the question of loans, I am very happy to inform you that the signed the Subscription Agreement with Commonwealth Development Finance Co., Ltd., on 18th August, 1961, when I happened to be in London in connection with the expansion scheme of the Mysore Iron and Steel Works. According to the agreement, the Commonwealth Development Finance Co., Ltd., would give us a loan of Rs. 25,00,000 or Rs. 70 lakhs carrying an interest of 7½% repayable in 7 equal annual instalments, the 1st instalment to be paid on 31st March 1970. This amount will suffice to finance 50% of our purchases of equipment in U.K. and Europe. Further, I am glad to inform you that the agreement between Industrial Credit and Investment Corporation of India Ltd. and ourselves has also been signed on 1-9-1961 and according to the terms and conditions of Industrial Credit and Investment Corporation of India Ltd., will give us a loan of United States \$1,470,000 or Rs. 70 lakhs carrying interest at the rate of 7½% repayable in 13 half-yearly instalments, the first instalment to be paid on 1st May, 1965. This loan will

finance the purchases abroad to the extent of 50% and the two loans referred to above will fully cover our foreign exchange requirements. I am very happy to keep you informed that all the necessary permissions, consents and licences have been received from the Government of India. The terms and the conditions governing the loan from Industrial Finance Corporation of India have been settled, and the agreement is being signed. According to the terms and conditions the Industrial Finance Corporation of India have agreed to give us a loan of Rs. 60 lakhs carrying an interest at the rate of 7½% subject to a rebate of ¼% repayable in 15 instalments, the first instalment to be paid on 1st July, 1965. I should like to add that the Industrial Finance Corporation of India and Industrial Credit and Investment Corporation of India Ltd. have each sought representation on our Board of Directors and we have agreed to it. In compliance of a Statutory requirement, the Industrial Finance Corporation of India have stipulated a condition that the repayment of their loan should be guaranteed by a scheduled Bank and I am glad to inform you that the Canara Banking Corporation Ltd., one of our Bankers has agreed to stand guarantee on a nominal guaranteeing commission of ½% on the day to day balances due to the Industrial Finance Corporation of India.

Legal Formalities

As you know, certain legal formalities have to be observed for execution of loan document referred to above. To simplify the procedure and to avoid somewhat heavy expenditure it has been agreed to appoint a common trustee and to execute a common Trust Deed for the purpose, and I am happy to inform you that the State Bank of Mysore has accepted our offer to be appointed trustee, who will look after the interests of the three lending Institutions and on a nominal commission of 6 NP. per cent on the amount of the loans. You have before you Resolution No. 5 relating to the borrowing powers of the Directors and as stated in the explanatory note you are requested to pass the resolution to comply with the Statutory requirement.

Having dealt with the question of finances you will naturally expect me to say a word or two regarding the Plant and Machinery to be imported from abroad. We have had full discussions and consultations with well known manufacturers and suppliers of Plant and Machinery in U.K. and Europe and it is important to bear in mind that we are free to select and buy equipment from well known firms in U.K. or the Continent as ours is not a package deal, and funds are available for the necessary purchases in U.K. and Europe. As a result of extensive survey and study, we have formulated a scheme and a schedule of purchases and in accordance with it arrangements have been made to secure best equipments at economic prices. We have concluded arrangements to secure Pulp Plant and Paper Machine from Germany and Boilers and Modern Soda Recovery Plant and Cross Cutters from U.K. I should mention here that agreeably with the policy of the Government of India provision has been made in our scheme for the purchase of balance of equipment necessary from indigenous sources.

I feel it a pleasant duty particularly to bring to your notice that the chief merit of our scheme lies in the fact that the work of erection assisted by two or three foreign erectors, installation and supervision and undertaken by a devoted team of our own technical and administrative officers and operatives, who have acquired and accumulated over years and I am glad to acknowledge that it is these human resources that I am quite hopeful that the scheme will be implemented successfully and expeditiously.

Articles of Association

I have now to refer to Resolution No. 6 regarding amendments to our Articles of Association. As has been stated in the explanatory note that our Articles of Association were framed and incorporated in 1956 at the time of inception of the Company. The Indian Companies Act 1956 and the subsequent Amendment Act 1960 have introduced considerable changes. As exchanges of Bombay, Calcutta and Madras and certain amendments to our Articles are called for to be in conformity with their regulations and all these amendments have been made and I seek your approval to the same.

I am happy to say that as mentioned in your Directors' Report, your Directors have contributed a sum of Rs. 5,000/- towards the Centenary Celebrations of Bharata Ratna Dr. Sir M. Visvesvaraya, Engineer-Statesman of Mysore who has rendered meritorious services to the State and I hope you will appreciate and approve of contribution made.

I am obliged to you all for the whole hearted support you have been extending and look forward with confidence for a full measure of support and encouragement in the implementation of the scheme of expansion.

On behalf of the Company, I should express my grateful thanks to the Government of India and the Government of Mysore for their abiding interest in the progress of the Company and for having granted the necessary permissions and consents and concessions in connection with our scheme of expansion. Grateful thanks to the Board of Directors of the Commonwealth Development Finance Co., Ltd., London; Industrial Credit and Investment Corporation of India Ltd., Bombay; and the Industrial Finance Corporation of India, New Delhi; the State Bank of Mysore and the Canara Banking Corporation Ltd., for their valuable assistance in securing funds for the expansion scheme.

I am grateful to my colleagues on the Board for the uniform courtesy, consideration and valuable press on behalf of the Directors and myself our warm appreciation of the willing and efficient co-operation of all our employees.

Ladies and Gentlemen, I now move that the Directors' Report and the Audited Balance Sheet and the Profit and Loss Account for the year ended 31st March, 1961, be "APPROVED AND ADOPTED."

N.B.—This does not purport to be a report of the Proceedings of the Shareholders' Meeting, a copy of which shall be sent to the Shareholders separately.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

CHAIRMAN, MR. F. A. COLLETT'S REVIEW

Speech by the Chairman, Mr. F. A. Collett, at the Fiftieth Annual General Meeting of the Company on 26th September, 1961.

Board of Directors

On the 31st of May this year Mr. N. Shiva Rao retired from the Board after serving as a Director of the Company since the 1st of April, 1956. Mr. Shiva Rao has had a very long association with the Company, having first joined in February, 1935, and I am sure I am expressing the sentiments of all of us when I say that we wish him very much happiness and all success in the future.

In October, 1960, Mr. S. D. Gupta was appointed to the Board. Since he joined the Company in 1940, Mr. Gupta has concentrated on the production side of the business and he brings to his increased responsibilities an extensive experience and expert knowledge which has already made, and I am sure will continue to make, a substantial contribution to the progress of your Company.

Accounts

When I addressed you a year ago, I told you that during the first five months of the financial year Sales showed a welcome improvement over the previous year. I am happy to be able to tell you that the improvement then referred to was maintained throughout the year and both the volume and the value of Sales showed a very marked increase over the previous year. The measure of this increase is reflected in the Profit & Loss Account, from which you will see that Sales have increased from just under Rs. 37 crores last year to a figure of more than Rs. 42 crores in the current year.

In a large measure I attribute this improvement to the fact that in the Central Budget presented to the Lok Sabha in February, 1960 no changes were made in Excise Duties on your Company's products. This was a very welcome respite from the frequent changes which had occurred in earlier years and because selling prices in the various categories remained undisturbed the consumer knew exactly where he stood. You will see from the Accounts that, nevertheless, Customs and Excise Duties have increased from Rs. 15½ crores to Rs. 18 crores.

As a result of the increased business the Accounts show an increase in net profits from Rs. 142 lakhs to Rs. 188 lakhs, with the result that your Board has recommended raising the total dividend from 8% to 9%. Your Board believes that there is still considerable scope for expansion and has considered it necessary to make a larger than usual transfer to Fixed Asset and Stock Replacement Reserve, for the purpose not only of making good past deficiencies in providing for the increasing cost of replacing fixed assets in due course, but also of financing the larger stocks of leaf and other material at prices which show a constant tendency to rise.

Golden Jubilee

You will have seen from the Notice convening this meeting that this is our Fiftieth Annual General Meeting and on an occasion such as this I think you will agree that I am justified in indulging in a little reminiscence.

Fifty years ago your Company was only a selling organisation and for the limited scope of its business it required a capital of only Rs. 25 lakhs; today your Company owns five cigarette making factories and two printing factories, and its capital is now in excess of Rs. 15 crores. In 1911 your Company's turnover was just over Rs. 40 lakhs; in the current year it is well over Rs. 40 crores, and even though Rs. 18 crores of the present turnover represents a collection of revenue on behalf of the Government in the form of Customs and Excise Duties, I think you will agree with me that the expansion of the business is no mean achievement.

At the time of our First Annual General Meeting, the management staff was recruited entirely from overseas; of the present staff only about one-fifth was so recruited, the remainder being Indian Nationals.

Over the same period there has been an even more comprehensive change in the source of our raw materials. Apart from one or two specialised items, all our raw materials are now produced in India. This fact, of course, reflects the rapid development of industry in this country but I can safely say that your Company has always extended a welcome, and often a helping hand, to potential suppliers, both of raw materials and, more recently, of machinery.

However, we certainly have no intention of resting on our past achievements. The per capita consumption of cigarettes in India is still very low and, with the successful implementation of the Five Year Plans and the resultant increase in the standard of living of the population, one must expect further increases in the consumption of tobacco goods in the years to come. I believe that your Company will not be found wanting in the task of supplying this anticipated demand.

Marketing

Although a most valuable contribution has been made by the Company's employees this year on all sides of the business, not least on the production side, it is perhaps in the field of marketing that most progress has been made. Marketing may be roughly divided into two functions, the distributive function and the creative side; both of these functions are highly technical.

The basic requirement of distribution of a con-

ettes is to make supplies available to people who want to buy them, at all times and in the freshest possible condition. This task, in a country the size of India, is of exceptional complexity. Apart from the constant activities of the Company's field staff, a most important part is played by all the links in the distributory chain. At one end we have the distributors, merchants of high standing in all the main cities and towns, most of whom have been associated with the Company for many years and have a profound knowledge both of our business and of conditions in their distributory areas. Their contribution to the Company's increased business has been most valuable. At the other end of the chain we have the tens of thousands of retailers, who are the final contact with the consumer. I am confident that your Company's distributory system is now geared to service our existing volume and indeed to meet the expanding demand of the future; incidentally it is worth noting that the cigarette business provides a livelihood to a great multitude of people.

On what I have referred to as the creative function, our marketing staff are constantly investigating and endeavouring to anticipate the changing needs and preferences of the consumer and endeavouring to meet his wishes. They have had some success this year but there is more to be done and there is no feeling of complacency.

Leaf Tobacco

In my speech last year I drew attention to the very serious problem of the growing of fluecured tobacco on unsuitable soil. I am sorry to say that I have seen nothing in the current year to relieve my apprehensions, and we have been much concerned about the quality of some of the tobacco which has been offered to this Company for sale. I might take this opportunity of remarking that the problem is a wider one than the immediate interests of this Company in as much as while Indian tobacco deteriorating, tobacco grown in other countries of the world continues to improve, and this situation cannot long continue without jeopardising India's extremely valuable export trade in this commodity.

Labour Relations

In the majority of our branches and in our Head Office relations with the Trade Unions and with our employees have been generally good. During the past year we have been successful in concluding mutually negotiated long-term settlements with most of our branches and this has had the desirable effect of stabilising the employment contract with a large percentage of our work people for a three-year period. It has also had the effect of further cementing the mutual trust and confidence between management and labour which is so necessary for productive efficiency.

At one time there was a threat of large scale redundancy at our branch in Manghyr, but with requirements of increased production the economic operation of our factory there continues to improve, to the extent that redundancy has now been replaced by recruitment of new labour—an indication of what might well be expected elsewhere with increased business.

In its relations with its work people it is your Company's policy to provide emoluments and other benefits fully comparable with those of similar industries, while at the same time making further financial improvement in the terms of service dependent upon greater productivity both of men and machines. In this we are working in conformity with the labour policy announced for the Third Five Year Plan, with which we are in full agreement.

Central Excise

In presenting the Central Budget for 1961-62, the Finance Minister announced that tobacco had been one of Government's stable revenue earners, but said that experience had shown the need for some simplification and rationalisation. In practice, however, he anticipated with his changes in the tax structure an increased revenue of something over Rs. 2 crores from unmanufactured tobacco. At the same time, the Finance Minister announced large increases in the Import Duty on unmanufactured tobacco, which he expected would realise Rs. 89 lakhs.

This increase in Import Duty made an increase in the prices of the higher categories of cigarettes inevitable. The upward adjustment in Excise Duty was relatively small, and did not fully justify an increase in the unit price of a packet of cigarettes in the more popular price classes, so your Board decided, on this occasion, to absorb most of the additional duty.

Prospects

In addition to absorbing most of the increased Excise Duties, your Company is having to meet steadily increasing costs of labour, raw materials and freight, but it will be obvious to you that we cannot continue to do this if the increases in various items of cost outstrip the gain we are able to make from increased productivity.

Nevertheless, as I have said earlier, I am confident that given freedom from further increases in tobacco duties there is considerable potential for additional business accruing to your Company and, provided rising costs do not outpace increase in turnover, we can look forward to the future with moderate optimism.

THE ALUMINIUM CORPORATION OF INDIA LIMITED

CHAIRMAN, SIR PADAMPAT SINGHANIA'S REVIEW

The address of Sir Padampat Singhania, Kt., Chairman, Board of Directors, to the Twenty-third Annual General Meeting held on the 28th September, 1961, was read by Mr. Hari Shankar Singhania, Director, who presided over the Meeting in the absence of Sir Padampat Singhania.

Gentlemen,

I have great pleasure in welcoming you to the 23rd Annual General Meeting of the Corporation. From the audited account and Directors' Report, already circulated, you will observe that the operations during the year have been normal with improvements in coal mining, alumina and paste production. In spite of increased wages and increases in cost of raw materials, transport, etc. the cost of production has been maintained within reasonable limits. On the other hand the prices of aluminium products have remained steady and in fact the basic prices have remained unchanged for the last four years. The main increase in prices to the consumer has been of excise duty as levied by the Government. Last year all accumulated metal of earlier years was disposed off with the result that sales during the current year, excluding excise duty realised, have been lower than the profit. You will be pleased to observe the Corporation has still maintained the ratio of gross profit to turnover. You will also notice from the Directors' Report and accounts that adequate provisions have been made towards depreciation and General Reserve and the Directors have recommended the same rates of dividend to the shareholders as in last year.

Third Plan Target

In the previous year's statement before you, opinion had been voiced that the consumption of metal in 1955-56 would become much higher than the target of 87,500 tons of metal production as adopted by the Planning Commission in the Third Five Year Plan. I am pleased to report that the Planning Commission is now actively considering to increase the target to 1,15,000 tons which, I feel, is still low and it would be advisable to increase this target to at least 1,50,000 tons. Without any risk of contradiction it is possible for me to say that next to steel and power the entire development of basic industries of our country is dependent on the availability of non-ferrous metals in the country. Unfortunately, our country is not blessed with natural resources for most of the non-ferrous metals with the exception of aluminium and our only hope of expanding non-ferrous metal production in the coming future which will enable the country to be self-sufficient is the expansion of Aluminium Industry. Hon'ble Sri Manu Bhaj Shah, Central Minister for Industries has indicated recently that in 1965 India will need at a very modest estimate at least Rs. 100 crores worth of non-ferrous metals. This is a modest estimate indeed and perhaps by that time we would require much higher quantity of metals than provided in this estimate. Aluminium metal is indeed a very versatile metal with possibility of application in all industrial fields and it is possible to substitute important non-ferrous metals like copper, zinc, lead, etc. in many fields and spheres with aluminium. According to the present situation, therefore, we are left with the development of aluminium metal alone in the country to achieve self-sufficiency in non-ferrous metal as far as possible. Bauxite, the mother ore, is available all over the country and our power development schemes can help a rapid development of this important metal. I would do no better than quote from a recent speech of Hon'ble Minister, Sri Manu Bhaj Shah to emphasise this point—

"It is inevitable to the country that aluminium has to be developed to the maximum extent possible from day to day, year to year, from plan to plan until we make the country self-sufficient in aluminium with a positive surplus for export"

Almost all important big aluminium producers of the World have displayed interest in setting up aluminium plants in India in collaboration with Private Sector and the Government has already under consideration such several schemes. Government has also recently announced their intention to set up an Aluminium Plant under Public Sector with Hungarian Collaboration. I do hope that the Government will give careful consideration before giving any preference to the setting up of this plant in Public Sector

over the proposals from Private Sector already in hand.

Bauxite-bearing Areas

Now that India is on the threshold of increasing immediate aluminium production capacity about five times the capacity at the end of 1960 as per schemes already licenced, it has, therefore, become imperative to give special attention to completing survey of bauxite bearing areas in various parts of the country. Sizeable quantity of bauxite is at present being exported and also some of the bauxite is utilised in chemical industry. However, the consumption of bauxite for the aluminium industry stands on a different footing as this industry will require large quantity of bauxite regularly for number of years to come. As such the aluminium producers have to have contiguous areas having maximum workable deposit of bauxite enough to last for at least 25-30 years and wherever such areas are found the Government should take steps to reserve such areas for the aluminium producers. Furthermore, careful consideration should also be given to other physical raw materials like caustic soda, fluoride, and cryolite to ensure that these important raw materials are also available adequately in the country as far as possible.

An important question is the rate at which the electricity will be supplied to various new plants, since this is the most important raw material affecting the cost of production of aluminium metal. The generation and development of power production is in the hands of Central Government and at the same time it is now clear that the production of this metal must be developed in all parts of the country and the future economy of the country has to be based on increased production of this important metal. Therefore, it is my humble suggestion that the Government should immediately set up a high powered committee thoroughly represented by Government officials and representatives of the industry to consider the question of supplying electric power at uniform rates to all aluminium producing companies. This is a question of utmost importance and it should be settled at the earliest.

Labour problems are becoming more and more complicated day by day in our country. In a growing economy certain amount of inflation is inevitable but by watchful steps this must be kept within reasonable limits. Unfortunately, the trends in India have not been encouraging and the industry is faced with ever increasing demands by the labour union but at the same time they do not show any responsibility towards increasing efficiency or productivity to minimise inflationary trends. Therefore, the usual leniency shown in the country to the Trade Union movement has to come to a halt. This movement is no more in infancy and it has come of age. The Union must be made to realise and develop responsible attitude for development of the country and it is high time that the Trade Union movement behaves in an adult manner.

Expansion Programme

I am glad to inform you that expansion programme of our company already in hand is progressing at fast pace. The first phase of metal production is under way and the production can be expected early next year. Several shipments of equipments have arrived and are on way to our plant in Jaykaynagar. The building and foundation work for the machinery is almost ready and erection work will start soon. The construction and building programme for other phases of expansion has been taken in hand. The production from expanded fabrication facilities is expected to follow as per schedule. The programme of training technical personnel both in India and abroad is going according to a schedule.

Gentlemen in conclusion I would again emphasise that a new history is in the making of the existence of the Corporation in the coming years. The Corporation's growth is fast under way from its humble start. I will be falling in my duty if I do not express my gratitude to the Managing Agents for having managed the affairs of the Corporation in the most economical and efficient manner. I will also express my appreciation to the conscientious working of our staff and technicians who have made the working of the Corporation a success.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

BAJAJ AUTO LIMITED

CHAIRMAN, MR. KAMALNAYAN BAJAJ'S ADDRESS

At the 16th Annual General Meeting of BAJAJ AUTO LIMITED held on 30th September, 1961, Mr. Kamalnayan Bajaj, the Chairman, made the following observations:—

Ladies and Gentlemen:

I have great pleasure in welcoming you all, and particularly the new Shareholders.

The Company was the pioneer in introducing Scooters and Three-wheelers in the country. In 1947, the Bombay Government announced that they intended to ban cycle-rikshaws in the State. A motorised riksha was designed by us and a scheme for their manufacture was submitted to the Government. The word "Autoriksha" was coined by us. The autoriksha was introduced in Poona in 1949. The first consignment of scooters and autorikshas have become very popular in the country as speedy and comfortable, yet cheap, means of transport.

In 1952, we submitted to the Tariff Commission a plan for phased manufacture of scooters and autorikshas in technical collaboration with Messrs. Piaggio & Co. of Italy who were the very first to design the scooter and foremost among its manufacturers in the world. The Tariff Commission found that the conditions were not favourable for manufacture at that stage, and recommended that licensing of imports should be continued.

In 1958, after repeated representations, the Central Government granted us a manufacturing licence for 6,000 scooters and autorikshas per annum. We commenced production of scooters in June, 1960 and autorikshas from last month.

Expansion of Production Capacity

We have applied for expansion of our annual production capacity to 15,000 on single shift and 24,000 on double shift working on the basis that we shall be able to commence production for the expanded capacity by early 1962 with 45 per cent indigenous content.

With the accelerated industrialisation of the country the demand for scooters from technicians, artisans, foremen, service personnel, salesmen, insurance agents, office staff and even students is fast growing. As distances in city areas are increasing, scooters are replacing cycles.

The demand for scooters and three-wheelers has always outstripped production. A buyer for a scooter at present has to wait for months. We could appoint dealers for scooters only in 15 towns so far on account of limited production and inadequate import licences for spare parts to maintain efficient servicing. Last month when we commenced booking orders for autorikshas at Delhi, Ahmedabad, Poona and Bangalore almost one year's production was booked in a few days.

The figures of production of scooters, motor-cycles and three-wheelers during the last few years are:—

	1955	1956	1957	1958	1959	1960	1961 (January/June)
Scooters	533	4,735	6,528	4,391	7,000	12,880	11,146
Motor Cycles	419	1,022	1,827	2,113	3,000	3,998	1,861
Three-wheelers	3	529	852	683	1,500	1,403	1,037
	955	6,286	9,207	7,187	11,500	18,281	14,044

The Third Plan has fixed the targets of installed capacity at 60,000 and production at 50,000 units per annum at the end of the Plan period.

Production Target

The demand for these vehicles would be easily about 100,000 per annum at the end of the Third Plan. The Planning Commission has placed the target of production at 50,000, probably on account of stringency of foreign exchange.

The difficulties in the way of increasing the production to meet the likely demand, though formidable, are not beyond the resources of the country. Foreign exchange could be conserved by increasing the installed capacity of the existing manufacturers instead of licensing more units of smaller capacity. Ancillary and auxiliary industries should be set up and encouraged to increase the production of components.

The Company has taken enough land in Pimpri-Chinchwad industrial area, near Poona, to provide for future expansion. The new factory building would be ready within the next few months. We hope to shift to the new premises by the end of the current financial year.

I am happy to inform you that the Company has received very good co-operation and assistance from the collaborators, Messrs. Piaggio & Co. They have lent us the services of their technical personnel from time to time for improving our production and service-after-sales.

I express my appreciation of the excellent work done by the Technicians, Staff and Workers for bringing the output of scooters to 500 per month within a few months of commencement of production and keeping it up in spite of many handicaps.

(This does not purport to be a record of the proceedings of the Annual General Meeting).

JAY ENGINEERING WORKS LTD.

CHAIRMAN, MR. CHARAT RAM'S REVIEW

The following is the speech delivered by Mr. Charat Ram as Chairman of 24th Annual General Meeting of the shareholders of the Jay Engineering Works Ltd., Calcutta, on September 28, 1961:

Ladies and Gentlemen,

It is a matter of pleasure for me to welcome you at the 24th Annual General Meeting of shareholders of the Company. I am however saddened by the fact that, due to illness, our Chairman, Sir Shri Ramji, has been unable to preside personally at this year's meeting. Sir Shri Ramji is now well on the way to recovery, and all of us fervently hope that he will soon be in a position to resume his active interest in the Company.

I am very much touched by the feeling reference of Lala Kishenlal Poddar to Sir Shri Ramji, and though, as a son, it is somewhat embarrassing for me, I must say that he has echoed the feelings of all those who have watched with interest and appreciation the progress of Jay Engineering Works Ltd. I shall convey these sentiments to Sir Shri Ramji who will be greatly cheered by the expression of affection by the Directors and shareholders of the Company, for him.

The Directors' Report and the Balance Sheet and Profit and Loss Account for the year 1960-61, have been with you for some time, and with your permission, I shall take them as read.

As you will have seen, the Company's profit, after providing Employees' share of profit amounted to Rs. 58.4 lakhs in the year under review against Rs. 52 lakhs in the previous year. The increase in profit is comparatively lower because of higher exports and reduction in fan prices to the consumer. Due to higher provision for income tax, the disposable profit is only slightly more than last year, and the Directors have therefore recommended to maintain the dividend at last year's level.

An idea of the progress made by the Company during the last 5-year period can be had from the following figures:—

	Unit	1955-56	1959-60	1960-61
Net sale value	Crore Rs.	3.1	7.2	8.9
Profit (after providing employees' share of profit)	Lakh Rs.	28.4	52.0	58.4
Production				
— Sewing Machines	Lakh Nos.	1.1	2.4	2.6
— Electric Fans	"	0.8	3.5	5.1
No. of retail points	Number	1,115	1,800	2,000
" " Schools	"	150	700	800
" " Students	"	11,000	50,000	55,000
Value of Exports	Lakh Rs.	21.0	82.5	113.0

It is interesting to see that while the All-India index number of industrial production for all manufacturing industries with 1956 as base, has gone up to 126 in 1960, the corresponding figures of our Company are, 207 for sewing machines and 440 for fans.

Working results for the year are quite gratifying, and you will no doubt join with me in congratulating the officers, staff and workers of the Company for results in the hard work which has produced these figures. Our special thanks are due to Shri Bishan Sarup Agarwal and Shri R. Gupta for fine performance of our splendid team of personnel at all levels.

Fan Prices Reduced

During the year, we reduced the prices of ceiling fans by Rs. 5 and of table fans by Rs. 2.50 each. This step was in keeping with the Company's policy of continuously sharing the fruits of economy of operation with the consumers. We have found that for durable consumer goods tends to be highly elastic, and with every reduction in price, a larger and numerous class of consumers opens up to the manufacturer. Voluntary price reductions therefore enable the Company to move farther towards economies of large scale operation, with consequential benefit to consumers, employees, shareholders and to the national economy.

The Chairman mentioned in his speech last year that we had applied for industrial licence for setting up a new unit for producing 3 lakhs sewing machines per year. The Government of India has since then granted the licence, and plans for establishing the new unit at Hyderabad are in hand.

As I mentioned earlier, our exports during the year under review exceeded Rs. 1 crore. This has been possible because of vigorous selling effort put in by the Company and its Selling Agents, at considerable sacrifice of immediate profits. It is a matter of pride for us that we have been in the fore-front of export promotion of engineering items like sewing machines and fans, and have been able to get foot-hold even in industrially advanced countries like the U.K., U.S.A., West Germany, France, Australia, etc. However, the bulk of our export is still to underdeveloped countries, and as is natural, these countries, like our own, are anxious to build up indigenous manufacturing industries. Again, just like us, they have the foreign exchange problem. These factors put a limitation on the size of foreign markets, and the severe international competition for them makes the promotion—or even maintenance—of exports, a function of the efficiency and quality standards that we can command.

Our country's need for foreign exchange for developmental purposes makes exports a matter of vital importance. The achievement of highest standards of productivity, efficiency, and quality thus calls for dedicated effort on the part of managers as well as workers, and no consideration of doctrinaire regard for vested "rights" of employers or employees, should be permitted to interfere with this national effort.

Challenge of Exports

We have proposed to meet the challenge of exports by reorientation of our policy in free markets. Firstly, we intend to develop further our exports to

developed countries by making our products continuously more attractive to them on the basis of quality and prices; this will release us somewhat from dependence on under-developed markets which, by their very nature, will shrink as they develop. Secondly, we propose to start assembly and progressive manufacture of our products in those of our present export markets which are seeking to establish industries of their own. We have already got a licence for putting up a unit in Ceylon, and are registering a Company under the name "Usha Industries Ltd." as a subsidiary of our Company. It is proposed to

Mr. Charat Ram

have similar arrangements in other countries like Burma, Pakistan, Thailand, etc. Thirdly, we plan to help the industrial concerns in other countries to set up assemblies with a phased programme of progressive manufacture by giving them technical know-how, equipment, personnel and the supply of component parts. Such an arrangement has come in operation in South Vietnam and negotiations are going on in Iraq, Egypt and Yugoslavia.

You are probably aware that the Government of India is proposing a programme of compulsory exports. A pre-requisite for the success of such a programme is an efficient system of rigid quality control so that sub-standard goods do not get exported. Otherwise there is the danger of export markets being spoiled for Indian goods, and goodwill built over long periods will be lost. Means must, therefore, be devised for checking such a situation.

We believe that in the existing circumstances there is no alternative to a programme of enforced exports. At the same time it is necessary to create favourable conditions for those who are themselves willing to export. Our economy is tending to be a

high-cost economy; for this reason, the need for matching the incentives which exporters of other competing countries enjoy, becomes all the more emphasized. Amongst export promotion measures awaiting Government action are, reduction in steel prices for engineering goods, and the availability of long-term credit at low rates of interest. Early decision on these will considerably stimulate exports.

Mechanics of Relief

It is a matter of gratification that the Government has realized the need for offering income tax relief to exporting industries. While we are happy that the proposition has been accepted in principle, I would like to submit to the Government that the mechanics of granting the relief should be designed to avoid self-defeating delays and complications. I am moved to make this observation by our experience of existing incentives, with which it has unfortunately been the rule, rather than the exception, that mechanics of obtaining the promised reliefs have been far from simple and speedy.

I would reiterate the suggestion made by our Chairman last year that a High Power Committee should go into the matter of export incentives and should devise ways of weeding out causes which defeat or delay the inducements available to exporters.

In internal market, USHA has become a by-word for the highest value in manufactured goods, and to a very large extent, consumer preference for foreign sewing machines and fans has been displaced. It appears clear from the progress of our Company and from that of other large and small-scale manufacturers, that in our field there is absolutely no need for foreign know-how or capital, and indigenous resources are adequate for meeting the country's requirement of sewing machines and fans.

Trade Names

In this connexion I refer with some distress to what our Company considers to be a situation not conforming with rules of fair trade practice. My reference is to the exploitation of internationally established trade-names by applying them to goods which are produced neither by the owner of those names, nor in conditions under which it is customary to permit such use. To the extent that such a practice conveys to the consumer an assurance which is not founded on facts, it needs to be discouraged in the interest of business ethics. There appear to have been only isolated instances of this type so far, particularly one in sewing machine industry, but the industry and the Government have to safeguard against the continuance and spreading of this practice.

This leads us to the need for building up the intrinsic strength of our industry. I referred a little while back to the pressing demand for high standards of productivity, efficiency and quality. Our Company is committed to a policy of "High wages—low unit costs", and has been practising it for the past many years. By and large our experience with this concept has been encouraging, but the realization that the monetary impact of this policy must be reciprocated in ever-increasing measure by higher performance standards, requires more to be driven home. Employee relations in our Company are a worthy example to industries anywhere. I am therefore mentioning this not in a spirit of dissatisfaction but as a live fact which must be increasingly realized and translated into practice if progressive employment policies are to survive the forces of competition in internal and foreign markets.

Ladies and Gentlemen, I am very proud of this opportunity of addressing you today, and I hope that operations of the Company in the year have been a matter of satisfaction to you. Thank you.

N.B.: This does not purport to be a record of the proceedings of the above Annual General Meeting.

4½% PER CENT MADRAS STATE ELECTRICITY BOARD BONDS, 1971. For Rs. 200 lakhs.

(Payment of Interest and Repayment of Principal, Guaranteed by the Government of Madras).

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

Issue Price Rs. 99.50 Per Cent.

REDEEMABLE AT PAR ON THE 16th OCTOBER, 1971.

Subscriptions will be received in cash or cheques from the 16th October, 1961. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 200 lakhs and in any case not later than the close of business on the 23rd October, 1961.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Calcutta, Delhi, Bangalore and Bangalore city.

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all Offices of the State Electricity Board and its undertakings.

RISAN ENGINEERING CO., PRIVATE LTD.

MADE IN INDIA

THE PRAGA TOOLS CORPORATION LIMITED

CHAIRMAN, MR. S. RANGANATHAN'S REVIEW

Speech of Mr. S. Ranganathan, Secretary, Ministry of Commerce & Industry, Government of India and Chairman of the Board of Directors at the Seventeenth Annual General Meeting of the Shareholders held on September 28, 1961.

Gentlemen,
We met last on March 27, 1961 for the Sixteenth Annual General Meeting of the Company and I am happy to welcome you to the Seventeenth Meeting in six months' time. This is possible because we have been able to close the accounts for the year ended March 31, 1961 and present the same to you within the period of six months stipulated in the Companies Act.

The audited statement of accounts and the Directors' Report thereon have already been sent to all shareholders. You would have also received, as on the last occasion, a simplified Balance Sheet and Profit and Loss Account. These would give at a glance the working results of the Company. With your permission, I shall take them as read.

As you are aware, the Government of India started taking an interest in the affairs of our Company in 1956 and appointed some of their officers to serve on the Board, even when the Industrial Trust Fund of the erstwhile Hyderabad Government acted as the Managing Agents. Later, the Managing Agents resigned as from July 1, 1958, from which date the management of the affairs of the Company has been the direct responsibility of your Board of Directors assisted by a General Manager.

Gross Profit

I propose, with your permission, to review briefly the progress achieved by the Company since your Board assumed direct charge of its affairs. At the outset I am glad to report that during the period of 2 years 9 months from July 1, 1958 to March 31, 1961 the Company earned a gross profit of Rs. 17.36 lacs, after providing for full depreciation. Almost all this profit, however, has had to be utilised in writing off past losses, value of intangible assets and unsaleable finished goods, developmental expenses, etc. so that the final carry over of profit on March 31, 1961 is only Rs. 23.631. Your Directors can take justifiable pride in the fact that today the Company has been placed on a comparatively sound footing and its financial position is such that a reasonable share of the surpluses accruing in succeeding years could go to the payment of dividends, and the balance ploughed back for expansion programmes.

The capital of the Company was reconstituted in 1958 by writing down the share value from Rs. 50 to Rs. 35 per share. Even so the loss carried forward was Rs. 9.99 lacs. Another important step was the decision of the Central Government to invest Rs. 70 lacs in the Company. At the same time the Andhra Pradesh Government agreed that the loan granted by them to the Company of Rs. 17.75 lacs could be converted into share capital. They also agreed to forgo the outstanding interest of Rs. 5.29 lacs due to them. These steps put the Company in ready funds to meet its various commitments and its business could thereafter be conducted without the nightmare of constant financial difficulties to which it had been subject in the preceding years.

One of the handicaps this Company suffered from was the lack of adequately experienced personnel at

the middle-management levels. This deficiency has been remedied by the appointment as heads of departments of persons with considerable experience in their respective lines. The post of Works Manager, however, continues to be vacant since November 1959 and attempts to recruit a suitable person have not yet succeeded owing to the paucity of persons with requisite technical experience.

Considerable Improvements

In the factory itself, considerable improvements have been effected. The drainage was improved to prevent storm water entering the machine shop and causing damage to machinery as has happened in past years. The machines were re-laid out to form productwise sections to the maximum extent. Considerable re-wiring of the plant was undertaken in order to minimise electrical losses and breakdowns which were occurring frequently. Over sixty machines have been reconditioned. In order to minimise running repairs and sudden breakdowns a preventive Maintenance Unit has been formed. A systematic lubrication procedure has been introduced. A new and hygienic canteen has been built. All these steps have already yielded results in the greater utilisation of machines.

With the available plant and machinery the factory had reached a production level of Rs. 60 lacs per annum in 1959 itself, but during 1960, due to unsettled labour conditions, production came down to Rs. 48 lacs in 1960-61. In the current year 1961-62 we have every hope of reaching the Rs. 70 lacs target provided labour continues to cooperate, and if this figure is reached the shareholders could not reasonably complain.

As at the time of my last report to you, labour situation has been continuing to cause us concern; but I am glad to report that on the 1st July, 1961 the management and the Employees' Union signed a settlement which gave the workers an additional dearness allowance of Rs. 10/- per month and certain other benefits in the form of a night shift allowance and supply of uniforms. In its turn the Union has entered into a truce agreement for three years and has also agreed to the revision of work-norms and work standards by mutual negotiation. This settlement if implemented in the spirit, will be a landmark in the labour-management relations in this Company, and we may look forward to peace in the industry and to a climate for better working and productivity in the coming years. The General Manager who has conducted these delicate negotiations deserves our congratulations.

Expansion Programme

Thus, we have so far, with some measure of success, consolidated the position of the Company and ordinarily there should be no fear of its sliding back. With this assurance, we have now taken in hand a substantial expansion programme. As you are all aware our Company has signed technical collaboration agreements with three British firms for the manufacture of drill chucks, lathe chucks and tool and cutter grinders respectively. Negotiations, are currently under way with a fourth British firm for the manufacture of milling machines under licence. The Government of India have already assigned to this Company a definite role in the machine tool industry. Three hundred acres of land on the outskirts of Hyderabad near Maula Ali Railway Station are being acquired. When these expansion schemes are completed the factory would produce about Rs. 2 crores worth of machine tools and accessories annually besides the other products the Company is currently manufacturing.

Since we last met here, there has been another significant development. The Company has negotiated and signed an agreement with CEKOP of Poland for the preparation and supply of a Project Report for a unit manufacturing machine tools of various types. This Project Report is expected to reach us in a month or two. The Government of India have already earmarked Rs. 1 crore for the use of our Company out of the Polish Credit. A second agreement with CEKOP for the supply of machinery under this credit arrangement is under negotiations.

Keen Competition

You will expect me to say something about the future. All I would say is that I am optimistic, even though some of our products are in the competitive field. Already there is keen competition from other entrepreneurs in some lines; this competition could be expected to increase rather than decrease. But quality is our hall mark and if we maintain our standards, I am not unduly pessimistic about sales. There may however be need to reduce prices. Greater productivity is the answer and our management is fully alive to this need.

Our General Manager Shri B. Venkataraman who has been with us since July, 1958 is due to retire shortly from the Company on October 18th next. I am sure you will wish to express our sincere appreciation of his services to the Company and to wish him a happy retirement. Shri A. M. Kelkar, an Officer of the Industrial Management Pool who joined the Company as Officer on Special Duty on July 21, 1961 will be taking over from him and we propose, with your permission, to designate him as Managing Director.

This will be the last occasion I shall attend your meeting as Chairman of the Board of Directors. The President has decided to appoint Shri P. S. Rau as Chairman and I am confident that the Company's affairs will register under his able and experienced stewardship greater and greater success.

N.B.—The above does not purport to be the report of the proceedings of the seventeenth annual general meeting of the Company held on September 28, 1961.

Money

THE CALCUTTA MONEY MARKET SLIGHT INCREASE IN ADVANCES

Wednesday, 4th October.
DURING the past week there has been a slight increase in the advances outstanding in the Calcutta money market. This appears to have been accounted for chiefly by the larger requirements of the engineering and iron and steel industries, and of the jute mills. There has been no change in demand from the cotton textile industry and on account of call for accommodation against grains and seeds storage. The requirements of the sugar mills show a slight decline. Conditions have turned rather easier in the interbank market and the call rate has fallen to between 3½ and 4 percent.

Turnover of bills in the exchange market has been limited during the past week due to shortage of sizeable tea and gunny bills. Remittance demand has, however, been keen. In the London money market, the pound has advanced against the U.S. dollar. Closing quotations for sterling showed gains against all important Continental currencies with the exception of the French franc.

BULLION WAS STEADY IN THE PAST WEEK DUE TO good upcountry demand. Silver rose from the previous week's level of Rs. 240.50 to Rs. 241.50, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 206.60. The London and New York prices were 80½d and 91.375 cents.

Gold was steady in sympathy with silver and the price rose to Rs. 147.50. The sovereign was quoted at Rs. 96.75.

DURING THE WEEK ENDED 29TH SEPTEMBER. Government of India Treasury bills for Rs. 100,16,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 3rd October. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were allotted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Bombay, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 9th October, and in Bangalore and Calcutta up to 11 a.m. on 10th October.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 4th October to 7th October at Rs. 99.391 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 27th September to 30th September amounted to Rs. 70 lakhs.

THE RETURN OF THE RESERVE BANK OF INDIA FOR the week ended 29th September, 1961, showed a decline of Rs. 11.46 crores to Rs. 1,857.24 crores in active notes, but the total note issue rose by Rs. 1.36 crores to Rs. 1,892.04 crores. Notes held in the Banking Department consequently increased by Rs. 12.81 crores to Rs. 34.80 crores. Deposits of the Government of India rose by Rs. 4.41 crores to Rs. 59.46 crores and other Government accounts by Rs. 1.13 crores to Rs. 22.49 crores. Balances of commercial banks at Rs. 78.47 crores showed a decline of Rs. 5.84 crores. Balances held abroad fell by Rs. 5.55 crores to Rs. 12.87 crores. Investments declined by Rs. 29.37 crores to Rs. 231.24 crores. Other loans and advances dropped from Rs. 135.89 crores to Rs. 133.93 crores, of which advances to scheduled banks against usance bills amounted to Rs. 5.35 crores (Rs. 9.51 crores). Ways and means advances stood at Rs. 49.36 crores, against Rs. 45.53 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 22nd September, shows a rise of Rs. 58 lakhs to Rs. 524.47 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 92 lakhs and Rs. 1 lakh to Rs. 250.27 crores and Rs. 9.29 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 5.15 crores to Rs. 242.69 crores. Cash and balances are, in consequence, shown at Rs. 29.24 crores, or Rs. 21 lakhs higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 22nd September, shows Demand and Time liabilities at Rs. 834.38 crores (Rs. 16.00 crores on account of borrowings from banks) and Rs. 1,141.22 crores (Rs. 19.32 crores) and Rs. 1,135.54 crores (Rs. 19.14 crores), respectively, in the previous week. Cash has fallen by Rs. 1.65 crores to Rs. 44.49 crores, while balances with the Reserve Bank have risen by Rs. 32 lakhs to Rs. 607.28 crores in investments. Advances and bills discounted at Rs. 1,235.01 crores show a drop of Rs. 9.65 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, in consequence, shown at 6.2 percent and 62.5 percent, against 6.2 percent and 63.0 percent.

IT HAS
THE
MARK
OF
QUALITY!

If you can say so about all the purchases you make, you will be saying good-bye to the uncertainty of material, quality, durability of product etc.

are you a victim of executive fatigue?

at the end of a working day
are you tired, listless,
completely done-in?

If so, you are possibly a victim of executive fatigue and you need Smiths **SUPER FORTE**—the tonic that fights executive fatigue. An exhausting day's work uses up more vitamins than your daily food intake can restore. **SUPER FORTE's 10 vitamins and 9 minerals** adjust this deficiency.

What results can you expect of **SUPER FORTE**? Nothing dramatic. It wouldn't be fair to suggest that **SUPER FORTE** works wonders overnight. But take two tablets daily for 30 days and you'll get results—added vitality, strength, staying power—all the additional physical reserves you need to cope with the stress and strain of modern business.

Stocks and Shares

EQUITIES STEADY BUT TURNOVER REMAINS POOR

OPERATORS WORRIED ABOUT EFFECTS OF NEW IMPORT POLICY

Wednesday Evening.

THE stock market has closed in a steady mood today, the day of the last settlement before the Puja holidays. This clearing has taken place after an interval of three weeks instead of two, and the next clearing will be on 25th October. The steadiness has been promoted by hopes of an early increase in the retention price of steel. Operators are, nevertheless, unwilling to extend their commitments because the holidays are approaching. As a result, business has been restricted mainly to squaring-up transactions. The trend remains uncertain because the news has been mixed in character. Selling pressure is being restrained by good corporate reports. The decision of Bisra Stone Lime, Dehri Rohtas Railway, Hasimara Industries and Huldibari Tea Association to issue bonus shares by capitalising reserves has been welcomed. Escorts has decided to issue rights shares to finance its expansion programme. Sirsilk has taken steps to modernise the equipment and to diversify its activities with foreign collaboration.

Among the unfavourable factors, one is the latest import policy. It does not cut imports as severely as was feared earlier, but the decision to continue development imports even at the cost of maintenance imports has caused a great deal of concern. Unless the installed capacity of various industries is fully used by ensuring adequate supplies of raw materials and spare parts, the economy will suffer. Since export promotion measures have so far yielded poor results, the idea of linking maintenance imports largely to exports is discouraging. More generous financial assistance from abroad could improve the working of Indian industry, but it is difficult to ascertain how much of the foreign aid can be used for maintenance imports. The inauguration of the New York branch of the Indian Investment Centre has, however, created modest optimism concerning the flow of U.S. capital into Indian industry.

Reports of widespread rain and floods in various parts of the country have induced caution. The dislocation of rail traffic means that the transport shortage is likely to be accentuated further, especially since many lines may not be repaired for some days. The speculative fraternity in Lyons Range is also worried about the possibility of a strike in Hindustan Motors. Reports indicate that unless a last-minute settlement is reached between management and workers, the strike may start soon. Meanwhile, the production and despatch figures of the Indian Iron and Steel Co. Ltd for September have not been very inspiring. The production of pig iron has declined from 101,000 tons in August to 97,760 tons. The output of steel ingots has risen from 76,053 tons to 76,888 tons but that of salable steel has declined from 62,609 tons to 60,138 tons. Despatches are lower at 58,138 tons, against 62,156 tons. The management says that 3,200 tons could not be despatched as B.R.T.s were not available on the last day due to destination restrictions.

Indian Iron have closed at Rs. 24.30 and the carry-forward charges have been moderate. Business in engineering shares has been limited. Texmaco have fluctuated on speculative manipulation. Scattered support has lifted Guest, Keen, Williams, Jessop and Britannia Engineering. Jay Engineering are steady on a good report and J. K. Steel have been taken by informed quarters.

The miscellaneous section has shown mixed trends. Support has been forthcoming for Orissa Mineral, Associated Battery and British Paint. British India Corporation have risen smartly on influential buying. Rohtas and Indian Copper have reacted on profit-taking. Indian Cable and National Insulated Cable are steady but Indian Aluminium have become sluggish. Dunlop Rubber, newly listed, have attracted support. Cement shares are quiet on fears that the price of the commodity may not be increased much. Bisra Stone Lime are firm on the decision to issue bonus shares in the proportion of three new shares for every one held. Dehri Rohtas Railway has decided to issue 100,000 ordinary bonus shares. Paper shares have become steadier. Orient, Sirpur and Shree Gopal have improved on replacement buying. Seshasayee and Titagur are in demand.

Cotton mill shares have reacted on profit-taking, but there is little evidence of pressure. Quiet buying has taken place in Bharat Commerce, J. K. Rayon, Elgin and Dunbar.

Although coal shares have been steady, business is very limited. Attention has been concentrated on Burrakur, Central India and New Beerboom. Pench Valley have declined on pressure.

Jute shares have been neglected and fluctuations are narrow. Interest is being taken in Howrah, New Central, Birla, Anglo-India and Kinnison.

Tea shares have been quiet and prices have declined in the absence of buyers. The uncertain outlook for the commodity has disturbed sentiment.

Hasimara and Huldibari have decided to issue bonus shares in the ratio of one new share for every one held subject to the approval of the Controller of Capital Issues. The prices of these scrip have, nevertheless, declined on profit-taking.

Scattered support has been forthcoming for selected preference shares which offer attractive yields at current prices. In spite of good institutional demand for medium and short-dated Government securities, business is restricted by the absence of declared sellers. Long-dated loans have been steady and the 3 percent Conversion loan 1986 has closed around Rs. 72.80.

Sone Valley Cement

After providing Rs. 4.61 lakhs (against Rs. 59,167) for depreciation, the profit of Sone Valley Portland Cement Co. Ltd has risen from Rs. 34,337 to Rs. 6.35 lakhs for the year ended December 1960. The directors have recommended the payment of dividend at 4 percent, subject to tax, amounting to Rs. 3 lakhs out of general reserve No. 1. Allocations include Rs. 1.55 lakhs (against nil) for reserve for development rebate and Rs. 5 lakhs (against nil) for general reserve No. 2. Transferring Rs. 3 lakhs from general reserve No. 1 and making other adjustments, there is a carry-forward of Rs. 31,640, against Rs. 62,049 brought in. Sales amounted to Rs. 2.10 crores, against Rs. 1.44 crores.

East India Tea

There is a loss of Rs. 3.46 lakhs in the working of the East India Tea Co. Ltd for the year ended December 1960. The dividend has been passed. After transferring the loss and making various adjustments, the profit and loss account shows a debit

BIRDS

are it stepping

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

BIRD & COMPANY (PRIVATE) LIMITED

balance Rs. 70,453, which is carried forward. The crop amounted to 366,144 kilograms (against 540,451 kilograms). The average sale price was Rs. 5.68 (against Rs. 5.64) a kilogram. Estimates for the current year provide for a tea crop of 520,560 kilograms at a cost of Rs. 4.88 a kilogram.

Bor Pukhuri Tea

The Bor Pukhuri Tea Co. Ltd has incurred a loss of Rs. 1.54 lakhs for the year ended December 1960. The dividend has been passed. Making various adjustments, there is a debit balance of Rs. 21,947 to be carried forward. The tea crop manufactured was 210,026 kilograms (against 263,220 kilograms) and the average sale price realised was Rs. 5.30 (against Rs. 5.60) a kilogram. The estimates for 1961 provide for a tea crop of 238,080 kilograms at a cost of Rs. 4.61 a kilogram.

Bombay Market

LATE RECOVERY ON HOPES OF STEEL PRICE RISE

KHATAU MAKANJI DIVIDEND DISAPPOINTS

Wednesday Noon.

THE Bombay stock market closed in a cheerful mood after an easier spell earlier in the past week. Sentiment was subdued at the beginning by disappointing corporate news. Khatau Makanji decided to halve the ordinary dividend, and there was no mention about either bonus or rights shares. The international political situation was interpreted bearishly. Reports of flood damage to crops restrained enthusiasm. At the close, sentiment improved in the wake of fresh support, combined with short-covering, due to rumours of an early rise in the retention price of steel. Reports that some companies had decided to expand their activities with foreign collaboration also induced support. The removal of making-up prices in Century helped inspire confidence.

Tata Steel improved to Rs. 146, but Indian Iron were subdued at Rs. 24.40 on pressure from Lyons

Range. In the engineering section, Tata Locomotive rose to Rs. 340 on replacement buying and Premier Construction were bought at Rs. 194 on talk of institutional support. Alcock Ashdown recovered to Rs. 307 and Mukand Iron to Rs. 27.25 on expansion prospects. Larsen and Toubro gained fractionally at Rs. 38.50, but Mahindra and Mahindra were offered freely around Rs. 18.56. Motor shares were quiet, and Hindustan Motors declined to Rs. 19 on the threat of a strike. Premier Automobiles came to hand at Rs. 155.50.

Cotton mill shares closed at higher levels, and Century were bought up to Rs. 566.50. Bombay Dyeing recovered to Rs. 69.20 and Svadeshi were wanted up to Rs. 270. Kohinoor rose to Rs. 295 and Khatau recovered to Rs. 437.50 on short-covering. Morarji were in demand at Rs. 394 and Finlay were taken at Rs. 321. Standard came to hand at Rs. 1,250 and Gokak were done at Rs. 107.50. India United Ordinaries rose to Rs. 15.08 and business passed in Apollo around Rs. 1.98.

Cement shares were quiet in the miscellaneous section due to fears that the Government might not increase the price of the commodity as much as the Tariff Commission had recommended. At the close, Associated Cement recovered to Rs. 166.50. Digvijay were supported up to Rs. 178.50 on talk of foreign collaboration for a new project. Sugar shares were quiet on the decision to cut production during the next crushing season. Belapur were sold at Rs. 263 and Phalton at Rs. 132. Maharashtra Sugar were available at Rs. 187 and Walchandnagar Industries were indicated at Rs. 164. Steamship company shares were quietly steady, and business was done in Scindia Steam at Rs. 12.60. Bharat Lines came to hand at Rs. 4.96 and Great Eastern Shipping were sold down to Rs. 13.72. Mining shares were steady, and Shivrampur Syndicate were supported up to Rs. 98. Dyes and Chemical shares were quietly steady. Synthetics and Chemicals improved to Rs. 196 on replacement buying. Tata Chemical rose to Rs. 16.52 on the decision to pay a higher dividend and to issue rights ordinary shares in the proportion of one new share for every five held, at a premium of Rs. 2.50 a share. Colour-Chem came to hand at Rs. 350 and Indian Dye stuff were transacted at Rs. 476.25. Rayon shares were steady and prices improved. National Rayon were taken at Rs. 544.50 on talk of a rights issue. Baroda Rayon were bought at Rs. 145 and Gwalior Rayon improved to Rs. 46. Bombay Burma hardened to Rs. 610 on fresh support. Voltas gained at Rs. 295 on investment buying, but Wimco declined to Rs. 292 on profit-taking. West Coast Paper hard-

ened to Rs. 182 on knowledgeable support and Ceat Tyre gained fractionally at Rs. 208.75. Hindustan Lever were steady at Rs. 50 and Kirlskar Oil gained at Rs. 34.50 on talk of a rights issue. Permanent Magnets were wanted up to Rs. 86.

Bank shares were steady, and Bank of Baroda improved to Rs. 104. Business was done in Bank of India at Rs. 133.50 and in Central Bank at Rs. 63. Insurance shares were steady, and New India Assurance were placed at Rs. 60.30. British India General came to hand at Rs. 14.48.

Selected electric company shares met with support, and Ahmedabad were taken up to Rs. 96.50. Tata Hydro were placed at Rs. 110.75 and Bombay Suburban were done at Rs. 102.50.

Madras Market

QUIET CLOSE FOLLOWS EARLIER STEADINESS

SUGARS FAIRLY WELL MAINTAINED

Tuesday Evening.

THE Madras stock market closed in a quiet mood after being steady throughout the past week. Support was extended to selected shares due to good corporate news. Operators were encouraged by the fact that the import policy for the period from October 1961 to March 1962 did not ordain drastic cuts. Business in Government securities was small, although some of the State loans were being offered at a discount. Selected bank shares attracted attention on the view that the banks' working might show an improvement during the current half-year. Contrary to the trends in the Calcutta and Bombay stock markets, sugar shares were relatively steadier on good corporate news. Andhra decided to issue rights shares. Among planting shares, good rubber and tea issues were in demand due to an improvement in auction prices, but coffee shares were generally neglected. Textile shares improved on reports of increased production and turnover. Selected miscellaneous shares met with support on good corporate news.

In the banking group, Punjab National improved to Rs. 18.35 and Indian Overseas to Rs. 196. Business passed in Indian at Rs. 176 and in Andhra at Rs. 100. Among public utilities, attention was concentrated on South Madras at Rs. 9.80 and on Vellore at Rs. 12.97. West Coast were taken at Rs. 14 and Ellore at Rs. 20.50.

In the sugar group, Deccan were steady at Rs. 13.30 and E.I.D. recovered to Rs. 38.87 on replacement buying. United Breweries were steady at Rs. 106.50 and Travancore were bought up to Rs. 10.22. Mysore were supported up to Rs. 57.75 and K.C.P. came to hand at Rs. 24. Cauvery were taken at Rs. 124 and Jeypore at Rs. 16.25.

In the planting group, Blue Mountain were transacted at Rs. 3.09 and Cochin Malabar were steady at Rs. 3.35. Consolidated Coffee were placed at Rs. 20.50 and Ouchterlony were done at Rs. 3.75. Peermade came to hand at Rs. 23.37 and Periakaramalai were transacted at Rs. 3.67. Be Be made Rs. 2.75 on paying a taxable ordinary dividend of 5 percent and Amalgamated were transacted at Rs. 11.55 on declaring a taxable ordinary dividend of 10 percent. Athimattam were taken at 90p on paying a taxable ordinary dividend of 5 percent. Kalpetta were steady at Rs. 12.70 on the payment of a taxable ordinary dividend of 12 1/2 percent and Kurchermal were bought up to Rs. 5.25 on paying a taxable ordinary dividend of 4 percent. Midland were steady at Rs. 12 on declaring a taxable ordinary dividend of 12 1/2 percent and Mysore Amalgamated came to hand at Rs. 5.90 on paying a taxable ordinary dividend of 10 percent. Business passed in Mysore Coffee at Rs. 5.45 on the payment of a taxable ordinary dividend of 15 percent. Support was extended to Kil Kotagiri at Rs. 4.75 and to Lucky Valley at Rs. 11.65. Swinton were sold down to Rs. 3, but Vayitri were bought up to Rs. 1.49 on the payment of a taxable ordinary dividend of 9 percent.

Among textile shares, Asher were firm at Rs. 204.05 on the payment of a taxable ordinary dividend of 30 percent. Business was done in Buckingham at Rs. 249.80 and in Bangalore Woolen at Rs. 212.80. Lakshmi recovered to Rs. 153, a did Madura to Rs. 38.70. Mettur were steady at Rs. 387 and Kothari were in demand up to Rs. 12.50. Radhakrishna were quoted at Rs. 36.1 and Ramakrishna at Rs. 207.90. South India Viscose were wanted up to Rs. 185 and Travancore Rayon hardened to Rs. 39.15. Vijayalakshmi were transacted at Rs. 93.50 and Premier at Rs. 272.20.

In the miscellaneous section, Aluminium Industries were firm at Rs. 23.85 and Ashok Leyland improved to Rs. 9. India Cement were steady at Rs. 6.65 and Binny were done at Rs. 251.40. Enfield were quoted at Rs. 11.75, but F.A.C.T. were sold down to Rs. 9.50. Kirlskar Electric came to hand at Rs. 14.75 and Madras Aluminium were bought up to Rs. 24.75. Business was done in Mettur Chemical at Rs. 14.30 and in Mysore I.T.L. at Rs. 8.15 on the payment of a taxable ordinary dividend of 10 percent. Parry's Confectionery were in demand at Rs. 4.66 and Seshasayee Paper rose to 8.40. Spencer were steady at Rs. 23.75 and Standard Motors were steady at Rs. 16.14.

tool were bought up to Rs. 178 and Tube Investment were steady at Rs. 260. Rane were taken at 6.90 on declaring a taxable ordinary dividend of 14 percent.

INVEST 5A

The mighty roll of the drums seethes to the climax of a wild rhythm... and the dancing Wapis have danced their traditional Fish Dance, cleansing themselves of the anger of the Great Fish of the river.

BINNY'S fabrics are shipped to this exciting land of New Guinea to help the people discover the wonderful new world of modern clothes.

BINNY'S fabrics are exported to 49 other countries, too. Superb materials made only from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control ensures maximum durability and perfect finish.

Quality Control:
Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

From palm leaves to TUSSORES

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:
Shirting, Khaki Drill, Bleached & Dyed Drill, Towels, Anticrease Suitings, Tussores, Union Fabric, Silk Saris etc., etc.

**OUTMODED,
OUTWORN...**
has it **OUTLIVED**
its purpose?

This is the time to invest in a
BLUE STAR-WORTHINGTON
Packaged Air Conditioner.
CUT COSTS on tonnage.
Single units range from 5 to 10 tons, operate independently.
CUT COSTS on installation. Units can operate without ductwork.
CUT COSTS on subsequent expansion. Single units connect up into multiple systems with minimum alterations.
CUT operating, maintenance and repair costs. Every unit is built and individually performance-tested in BLUE STAR's own plant to rigid WORTHINGTON specifications.

For a better air conditioning job,
call in **BLUE STAR.**

London Market

STOCK MARKET DEPRESSED

POOR DEMAND FOR INDUSTRIALS

London, 3rd October.

THERE was a marked deterioration in the tone of the stock market during the past week. There was nothing to stimulate interest or activity, and although selling was only on a modest scale, little or no support developed. Equity prices consequently drifted lower on a broad front to record widespread and appreciable losses on the week. The international situation, the doubtful economic outlook, the growing effects of the Chancellor's credit squeeze, the constant flow of new issues and further discouraging company news, were all factors contributing to the general depression in the market. The half-yearly results of Imperial Chemicals showing a sharp fall in profits and heavy pressure on profit margins, had a particularly adverse effect on sentiment, although the actual figures were little worse than expected in market quarters. I.C.I. lost several shillings under the influence of these results. The general fall in prices was sufficient to bring all the leading industrials down to new low points for the year. With industrial equities out of favour, medium and short-dated gilt-edged securities continued in demand and prices of these issues made further headway. Greek bonds scored a sharp advance on hopes that a debt settlement will follow the general election, but part of the gains were lost on profit-taking. Banking, hire-purchase finance and insurance shares tended lower, and most property shares lost ground. Gold and copper shares attracted very little interest and prices drifted lower on most days. Base metal shares also lost ground. Oils held up very well despite the Syrian news. Rubbers were dull, but selected tea shares were in demand following the satisfactory outcome of Brook Bond's bid for Doom Dooms.

New Delhi

GOVERNMENT ACCEPTS DAMLE PROPOSALS FOR CUTTING OIL PRICES

BUT CONSUMERS GET NO RELIEF

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India has announced its decisions on the Damle Committee's report, accepting the latter's major recommendations. It is explained that the selling prices of petroleum products have so far been determined by *ad hoc* agreements reached from time to time between the Government and the oil companies. In August 1960, the Government set up the Oil Price Enquiry Committee to examine "the principles and elements" according to which the selling prices of various petroleum products in India should be determined. The Committee has evolved a pricing basis after allowing for an adequate return for the oil companies. Its recommendations imply, on the basis of the estimated sales of 1962, a reduction of about Rs. 15 crores a year in the selling prices of the major petroleum products and bitumen. This is composed of about Rs. 5 crores due to a drop in landed costs, Rs. 7 crores towards the discounts the Committee considers reasonable in the posted prices of bulk refined products, and about Rs. 3 crores for distribution charges and profit margins. Apart from this, the ceilings in the marketing and distribution charges and the profit margin, on an average, for the groups of lubricants and greases and specialties have also been recommended. The Government has decided to accept the recommendations of the Committee and "intends to mop up the reductions." The consumer prices of these products will remain unchanged. The announcement, which comes into effect from 1st October, will remain in force for a period not exceeding two years. The following is a summary of the Damle Committee's report:

"All the three coastal refineries obtained their requirements of crude oil from their overseas suppliers, who are themselves not original producers and suppliers of crude oil. The companies are unable to disclose the names of their original suppliers. We fail to see why the companies could not deal with the original producers or suppliers of crude oil or furnish information on the names of such original producers or suppliers. The oil companies with their worldwide connections should normally be capable of dealing directly with the consortium operating in Iran, in which their principals have interest, for supplies through that source, and also with the original producers or suppliers at other places.

Crude Oil Prices

"The prices of crude oil are based on the posted prices obtaining in the Persian Gulf, subject to a discount on the c.i.f. cost. With effect from 1st June, 1960, Burmah-Shell obtained a discount of about 8 percent and from July 1960, Standard-Vacuum Oil Company obtained almost the same discount and Caltex, too, obtained almost the same discount with effect from August 1960. No discount was available on crude oil obtained from Indonesia. Caltex should press its suppliers for equivalent discount on 'Minas' crude oil obtained from Indonesia or consider the discontinuance of the use of this oil in favour of a discounted crude oil from the Persian Gulf, unless the Government is satisfied that the continued use of 'Minas' crude oil is advantageous to the overall economy and conducive to saving in foreign exchange where finished products are concerned.

"The oil companies should recognise the advent of a new set of circumstances in a long-term commitment of the nature of their refinery agreements and not insist on the import of crude oil from sources of their choice only, as long as the profitability of the refinery is not affected, and at least, they should press on their suppliers for equivalent discount as available to India on a long-term continuous basis on the imports of the same quality of crude oil from sources other than traditional. It is difficult to appreciate how the intermediary firms, through whom supplies are obtained, assist without charging anything extra on transactions passing through their hands.

"It should normally have been possible for the oil companies successfully to bargain for discounts on posted prices for their requirements of crude oil, long before discounts were conceded at the current rates. They should not only press on their suppliers for the continuance of discounts in future, but also for increase in the amount consistent with the market trends prevailing from time to time. The discounts on the posted prices of crude oil should, in more or less equivalent measure, be reflected in the pricing of end-products. The recent discounts on crude oil are not reflected in the prices of end-products and the benefit is absorbed by the refiners or consignors. To this extent, the margins have been enhanced above the expectation visualised at the time of the conclusion of the refinery agreements.

Discounts on Crude

"The availability of discounts on crude oil should be taken into account for the allocation of foreign exchange. For the import of deficit refined products, the procedure followed by the three major oil companies is almost similar to that

for crude oil and our observations concerning the latter are equally applicable for bulk refined products for Burmah-Shell and Caltex.

"The statement of the oil companies which the suppliers of bulk refined products do not charge any fee or commission for the services rendered, apart from charging out-of-pocket expenses, does not stand to reason, particularly when the services rendered include even arrangement for financing. As discounts are admittedly available in crude oil, there is every reason to believe that the discounts should also be available on refined products.

"Two oil companies admitted that they obtain their imports at discounted prices. The products imported by them are not identical and the rates of discount vary for the different products. This shows that the availability of discounts depends on the bargaining capacity of the individual marketing company. The major oil companies, with their worldwide connections and long experience in the oil business, should be able to exert sufficient pressure on the suppliers on bulk refined products in obtaining discounts on their supplies. The stipulation in the refinery agreements for the determination of the prices of products on 'import parity' is not intended to preclude the availability of supplies in the Indian market of products from sources other than those of the major oil companies. Therefore, it would be quite appropriate to base the landed cost of the products on imports at cheaper rates, if available, from sources other than those which have been normally used by the major oil companies provided a continuous supply of equivalent quality is guaranteed. The inability of the oil companies to obtain discounts for the import of products from their suppliers is no proof of the position sought to be established that discounts are not available in the Middle East.

Rates of Oil Companies

"The major oil companies have been quoting for supplies, particularly h.s.d., rates lower than the landed cost of imports from Russia. Such under-quoting would only be possible if substantial discounts are available to them on f.o.b. postings. Discounts at the following rates have been taken in the determination of parity prices and the same should also be adopted for the calculation of foreign exchange requirements of importing deficit products:

"kerosene (superior and inferior)	10 percent on f.o.b.
"aviation turbine fuel	10 percent on f.o.b.
"high-speed diesel oil	10 percent on f.o.b.
"motor spirit	5 percent on f.o.b.
"light diesel oil	9.3 percent on f.o.b.
"furnace oil	3 percent on f.o.b.

"Standard-Vacuum should endeavour to reduce (and eventually eliminate altogether) the payment of charges to Standard-Vacuum, London and its New York office. A pricing formula is evolved only for bulk refined products and bitumen. 'Lubricants and greases' and 'specialties' have been grouped for the purpose of control of distribution costs and profits. Hot heavy stock, low sulphur fuel oil, liquefied petroleum gas, boiler fuel and chemicals have been excluded from the purview of the proposed pricing formula.

"The f.o.b. cost of bulk refined products shall be determined at the lowest posted prices of any company regularly posting in Abadan, as reported by Platt's Oilgram Daily Reporting Service. In the prices evolved, f.o.b. quotations as applicable on 24th May, 1961 (and reported in Platt's Oilgram Price Service No. 102, dated 25th May, 1961) have been adopted, subject to certain discounts. Ocean freight has been calculated at the A.F.R.A. rate ex-Abadan as applicable in the second quarter of 1961. Bombay has been taken on a single port discharge, Madras-Visakhapatnam-Calcutta on a double port discharge at the Calcutta rate and Kandla-Cochin on a double port discharge at the Cochin rate.

Insurance and Ocean Freight

"Marine insurance, excluding war risk insurance, has been included. War risk insurance will be added separately in the case of emergency. The Ministry of Finance (Department of Economic Affairs) should take up with the Indian Insurance Companies Association, the question of undertaking marine insurance of petroleum products at the rates available to the oil companies from other sources. The risks covered should also be comparable to the risks covered under the agreement at present followed by the oil companies.

"Ocean loss has been included in the pricing formula as a percentage on c.i.f. cost on the basis of the past experience of the oil companies. The factors adopted for the conversion of f.o.b. prices have also been indicated. The rate of exchange has been adopted at \$(U.S.) 2.80—£1 (within a range of \$2.78 to \$2.72). The current rate of exchange of pound sterling at Rs. 13.3565 has been adopted. Basic duties and surcharges have been

included in the prices as applicable for the imported counterpart, as in the case of the rate of the landing port of Bombay. The rate taken at 29.4°C or 85°C at the standard conversion factors. In the event of variations in the level of Customs duty and surcharges resulting from discussions by the Oil Industry Metric Committee with the Ministry of Commerce and Industry, suitable adjustments should be made. Rates of wharfage included in the prices are as applicable during January 1961. Other compulsory landing charges are based on the past experience of the oil companies. In the absence of posted prices for bitumen, f.o.b. cost is determined on the basis of the suppliers' invoices. For this, Bombay port landed cost is based on bulk parity, while for other ports, it is determined on packed parity. Marine freight for bulk bitumen is included at the rates for premium rated vessels as applicable in the second quarter of 1961. The marine freight for packed supplies has been included at the rates indicated by the London Freight Brokers Association on 12th January, 1961.

"Insurance and ocean losses have been provided on the same lines as for bulk refined products. Customs duty has been calculated at the rate of 27 percent on a provisional tariff value of Rs. 231 a metric ton for straight grades and Rs. 280 a metric ton for cutbacks, both packed in drums. In case bitumen straight grade is supplied in bulk, the relevant Customs duty at 27 percent on a provisional tariff value of Rs. 138 a metric ton will have to be substituted. In case of bitumen ex-A.O.C., the Customs duty at 27 percent on the respective tariff value will be substituted. In the event of the tariff valuation being different, suitable adjustment should be made in Customs duty.

Rationalising Distribution

"To rationalise the distribution system for motor spirit and h.s.d., a free delivery zone has been created for h.s.d., as for motor spirit. The oil companies should be issued specific instructions, under advice to the Government, that the dealers should not make a further charge on account of delivery of h.s.d., within the free delivery zone. The expenses against which specific recoveries are made at present have been included in the prices. Delivery ex-airfield pump will, therefore, no longer involve payment of extra charges. The oil companies should bring this fact prominently to notice at the airfields. The charges for delivery beyond the companies' storage points of kerosene, vaporising oil, furnace oil, light diesel oil and bitumen have been excluded from the basic ceiling selling prices.

"A differential between the selling prices at international airfields and other internal airfields has been maintained. The three major oil companies handle approximately 89 percent of the entire trade in lubricants and greases and the balance is handled by smaller companies numbering about 175. The bulk of the sales of lubricants and greases is made from the main installations and only about one-third of the sales are made at the upcountry depots. For 'lubricants and greases' and 'specialties', control should be imposed by fixing an overall ceiling limit for marketing charges and the profit margin, on an average, for all the products coming under these groups. The ceiling limit will be Rs. 123.02 a kilolitre for lubricants and greases and Rs. 31.28 a kilolitre for specialties.

"The oil companies shall be permitted to recover the cost of materials, blending charges and the packing and filling-in charges at actual rates. In case recovery towards marketing and distribution charges and profit margins a unit during a financial period exceeds the ceiling proposed, the oil companies should suitably revise the price structure of the various products within the respective group.

"The prices for the A.O.C. products have been determined on parity with the prices ex-f.o.b. Calcutta, subject to the differential being maintained for a lower diesel index of h.s.d. There has been a progressive increase over the past years in the consumption of petroleum products and the demand will continue to increase considerably during the third plan period. The average increase in volume for each of the three years 1962-64 is estimated at about 25 percent for the three major oil companies. The overall unit incidence in 1959 showed a decrease specially for bulk refined products as a group in all the companies. This is largely attributable to an increase in the volume of sales in 1959 over 1958.

Major Distributors of Oil

"Burmah-Shell and Standard-Vacuum handle about 80 percent of the total sales of petroleum products and would, therefore, represent the cross-section of the industry. In each of the three years 1962-64, the estimate of sales will be about 22 percent over 1959 for Burmah-Shell and about 25 percent over 1959 for Standard-Vacuum. In estimating the future marketing and distribution charges, suitable provision has been made for (i) increase in expenditure for the higher anticipated volume of sales, (ii) for effecting free deliveries or aviation spirit or gasoline and aviation turbine fuel from the companies' storage points to the airfield outlets. Aircraft and motor spirit and gasoline and h.s.d. at the retail pump outlets within the free delivery zone in port and municipal towns and (iii) for unrecovered freight and bridging costs. The weighted average of the marketing and distribution charges of Burmah-Shell and Standard-Vacuum has been adopted as the fair incidence for the industry. The packed-bulk differential for 18.18-litre tins is assessed at Rs. 1.88 a container, based on the price of Rs. 1407.4 a metric ton.

SISTA'S

"The LIC pays
Rs 30 crores
in claims
every year."

"It's good
to know that my
policy money
is guaranteed."

PEOPLE ARE TALKING ABOUT LIC

Every year, about Rs 30 crores is received by people who own life insurance policies (or by their dependents). And it is interesting that more than 70% of this money is paid to policyholders on maturity of their policies.

This fact clearly demonstrates that the benefits of Life Insurance are being largely enjoyed during the life-time of the policyholder himself.

Millions of people are today realizing that Life Insurance is a unique investment of security—both for themselves and for their families. And millions of people are placing their trust in the soundness of the LIC to safeguard their interests.

Life Insurance Corporation of India

ASPLUC-523

tinplate. Introduction of uniform port charges in the price structure is not considered advisable.

"Introduction of a railway freight pooling system is also not considered advisable and the maintenance of the status quo is recommended. B.O.C. (I.T.) Ltd. which has been operating a freight pool system in its area, may, however, continue to do so. The present classification of products into dangerous and non-dangerous categories in railway freight should continue. Based on the capital employed in 1959 of Burmah-Shell and Standard-Vacuum, the requirements of capital employed for both the Companies for their future sales have been estimated. A return of 12 percent on capital employed has been allowed. The basic ceiling selling prices for bulk refined products as evolved should be applicable for delivery as follows:

"Aviation spirit-aviation gasoline and aviation turbine fuel	Ex-oil company's storage point and ex-airfields or aircraft
"Motor spirit and h.s.d.	Ex-oil company's storage point and retail pump outlets within the free-delivery zone
"Kerosene, vaporising oil, light diesel oil, furnace oil and bitumen	Ex-oil company's storage points

"Further charges will be payable, whenever applicable, on account of railway freight, local duties or taxes, specific delivery and supplies in return-able packages. Railway freight from companies' storage points to upcountry points will apply at the bulk rate for bulk despatches and at the packed rate for supplies in packages.

Date for New Prices

"The prices evolved should come into effect from 1st September, 1961, and remain in force until 31st March, 1962, subject to fluctuations as suggested. The control on lubricants and greases and specialties should be valid for the same period. The employment of the price mechanism for the correction of the unbalance is not favoured and the solution should be sought in technological adjustments in the production pattern and in finding alternative uses for surplus products. The oil companies do the loading or unloading through a system of contractors appointed as a result of tenders or by negotiations. The rates paid are not unreasonable. If service co-operatives are capable of undertaking distribution of kerosene and other petroleum products, preference should be given to them."

New Policy on Sugar

The Food and Agriculture Minister, Mr. S. K. Patil, made the following statement at a Press conference during last week: "As compared with the year 1956-57, when the sugar production was just about adequate to meet the internal demand, there was a drop in production in 1957-58 and a further drop in 1958-59. There was a rise in prices and difficulties about the availability of supplies also developed in different areas. In order to ensure equitable distribution of available supplies at reasonable prices, certain measures of control were introduced from time to time on distribution and prices. At the beginning of the 1959-60 working season, it was decided to take some positive measures to step up the production of sugar. The minimum price of sugarcane was raised and a tax concession was promised to the industry for production in excess of the average production in the preceding two seasons. As a result of these measures, the production increased from about 1.9 million tons in 1958-59 to about 2.4 million tons in 1959-60 and about 3 million tons in 1960-61. Against a normal carryover of about 500,000 tons, the carry-over at the beginning of the next season, which is due to start on 1st November, 1961, is expected to be as much as 1.1 million to 1.2 million tons. After considering all the aspects of the complex sugar situation, the Government has come to the conclusion that the controls on distribution and prices, which were introduced as temporary expedients in scarcity conditions, should now be removed. The system of controlled releases will, however, be retained as it is the most important control mechanism for regulating the prices, in the interest of the cane-growers on the one hand, and the consumers, on the other. The restrictions on inter-State movement of sugar are being withdrawn. The system of allotment of sugar to

specified dealers is being discontinued. The factories will be able to sell sugar freely to all dealers. There will be no statutory prices for the sale of sugar. It is expected that these measures will lead to an increased offtake from the factories and will thus lighten the burden of excessive stocks in the factories.

"In the present situation, there is no need to continue the tax concession which was granted to the industry for stepping up sugar production. In view of the increased cane production, however, the discontinuance of the tax concession alone may not ensure that the production during the next season will be to the desired level. There were considerable stresses and strains even during the last working season. The Government has come to the conclusion that it is desirable, in the interest of the cane-growers, to set a production target or quota for each factory so that the cane-growers may have the opportunity of diverting the surplus cane, if any, in time to other uses. It is proposed to set the target of production for each factory at 10 percent below the quantity produced in 1960-61. There will be some special provisions for new factories which had not achieved full production by 1960-61. If a factory produces sugar in excess of the fixed target, it will have to pay an additional excise duty. An ordinance will be issued to give effect to these decisions."

Projects Selected for Swiss Credit

The following projects, it is proposed, will be financed from the Swiss credit granted to India:

Upper Sileru project: It is proposed to build a dam at Guntavada (Andhra Pradesh), as a weir, to a height of 40 feet. This will provide a power draft of 400 cusecs. This together with the regulated discharge of about 1,400 cusecs from the Machkund power-station would yield a potential of about 38,000 kW continuous at the main 315 feet head power-station of the Upper Sileru scheme. Two units of 60,000 kW each are proposed to be installed. Besides the generating station, about 135 miles of double circuit and 80 miles of single circuit 132 kV transmission lines will be constructed. The major equipment to be imported would be as follows: 2 Nos. 95,000 h.p. water turbines, 2 Nos. 60,000 kW alternators, hydraulic buffer fly valves, generator transformers and some sub-station transformers, 132 kV switchgear, switch boards, switchgear cables, circuit breakers, carrier equipment, etcetera.

The power developed will be transmitted to the coastal districts of Andhra State and be fed into the existing grid to supply a variety of industrial loads such as ferro-manganese, shipbuilding, oil refining, fertiliser, cements, etcetera. Besides, there is a growing demand for irrigation pumping and small cottage industries.

Circuit breakers and switchgear for power transmission schemes: It is proposed to purchase about 50 220 kV blast circuit breakers. The rupturing capacity of the circuit breakers will vary from 7,500 mVA to 10,000 mVA. The exact number for each rupturing capacity will be estimated in due course when the tenders are invited.

Machinery for expansion and modernisation of the textile industry: For modernisation of the textile industry the import of blow-room machinery, combers and pirn winders, components for automatic looms and finished automatic looms is required for replacement purposes. National Machinery Manufacturers Ltd. is collaborating with Messrs Ruti of Switzerland for the manufacture of automatic looms and the components will be required for this purpose.

Printing machinery: The normal items of printing machinery such as stop cylinder machines, two revolution machines, lithographic machines, book-binding, stitching and sewing machines, etcetera, will be required.

Turbo-alternators for the sugar industry: The general specifications of the turbo sets used in sugar factories and also the names of the reputed manufacturers of the same in Switzerland are: (i) turbo-alternators designed for power generation, capacity—1,250 kW, 400 to 440 volts, A.C., three-phase, 50 cycles, 0.8 power factor, back pressure type exhausting at 0.7 KG to 1.0 KG-Cm2. Turbine to be of multi-stage complete with all accessories coupled with an enclosed high-speed reduction gear box with couplings and accessories. The alternator is of enclosed type—exciter mounted on alternator shaft-coupled to high speed gear box outlet side. Steam conditions and steam ratings will be provided separately in individual cases. (ii) The names of the manufacturers are: Messrs Brown Boveri, and Messrs Escherwyss, Switzerland.

Capital goods and equipment required for private sector industries—Industries for which capital goods and equipment would be required are: caustic soda, drugs and pharmaceutical dyestuffs, miscellaneous chemical industries like optical bleaching agents and equipment for the manufacture of industrial machinery, machine tools and other processing industries, etcetera. It is pointed out that the spinning machinery will be imported by the Voltas for distribution in India. The first order placed is for expansion and modernisation of eight spinning mills. Another order is for one complete plant for the manufacture of sodium sulphate. The third order is for the equipment for dyestuff and optical bleaching agents, drugs and pharmaceuticals, the suppliers being Suhrid Geigy Limited. Another order is for the complete electrical cell plant and ancillary equipment for Kanoria Chemicals and Industries Ltd. There are

three orders for turbo alternative sets for suga mills. Lastly, there is an order for the expansion of ammonium chloride plant of Fertiliser and Chemicals Ltd.

Shipping Corporation of India

The Shipping Corporation of India, through the amalgamation of the State-owned Eastern and Western Shipping Corporations, has been inaugurated. The new Corporation will have an authorised capital of Rs. 35 crores, and a paid-up capital of Rs. 23 crores. At the moment of the amalgamation, both the Corporations together own 19 ships of a total tonnage of 138,593 g.r.t. The cargo lifted by the two Corporations in 1960-61 was 517,619 revenue tons and the freight and passenger earnings, including charter hire, during the same period were Rs. 5,63,45,721. During 1960, the two Corporations, now being amalgamated, ran these cargo services: India-Australia; India-Japan; India-Black Sea; India-Poland; India-Persian Gulf; and passenger-cum-cargo services to Bombay-East Africa; Madras-Singapore; and India-Malindang-Andamans. Two more routes have been added this year. They are: West Coast India-West Pakistan-Far East-Japan and India-Pakistan-U.K.-Continent service.

Plans have been approved for entering the Tuticorin-Colombo service, and it has been decided to purchase one small ship for this run. The possibility of the Corporation entering the tramp-trade field is also being considered. Besides the gross registered tonnage of 138,593 owned by the Corporation on 2nd October, 1961, it will have five fast cargo vessels under advanced stages of construction at the Hindustan Shipyard, Visakhapatnam. These five vessels are expected to be delivered during 1962-63. The g.r.t. of these five vessels would be about 9,200 each. In addition to these vessels, orders have recently been placed with the Hindustan Shipyard Ltd. for a second series of six fast cargo liners of the Mitsubishi type. Each of these vessels would be of about 9,200 g.r.t. as closed shelter dockers. These six vessels also are expected to be delivered within the third plan period. When these vessels have been delivered, the tonnage would go up to about 240,000 g.r.t. The Shipping Corporation of India intends to purchase at least one ocean-going super-tanker for transporting crude oil reasonably soon. An additional tonnage of this type might be considered for acquisition later.

The Corporation is a member of U.K.-Continent Shipping Conference. At the instance of the Central Government, the Conference has postponed the proposed additional freight charges of 10 percent on the homeward trade of India. The Conference has also elicited opinions whether a 10 percent additional surcharge on the import trade of India, which was to come into force from 1st October, should be postponed until the next meeting of the Conference. The Indian Shipping Corporation has supported this suggestion. The views of the other Indian shipping members of the Conference are not yet known.

While on this subject, it may be added that there has been some criticism of the Transport Ministry about the carriage of two million tons of coal by sea to south and western India. About one million tons of coal has always been transported by sea. The Transport Ministry, it is learnt, would have implemented its undertaking but for the emergency requirements of the Food Ministry to carry rice from Calcutta to Kerala. It is not explained, in this connection, why Rangoon rice was stored in Calcutta at all. It would have saved transport, had it been carried from Rangoon to Kerala. Three lakh tons of rice are to be carried from Rangoon to Kerala for which eight ships are required. This demand will remain in 1962, and explains why coal is not being carried to Gujarat by sea. The Government has also turned down an offer to purchase five ships for £650,000, but is paying £75,000 a ship a year in charter charges. The five ships were guaranteed seaworthy for three years after which they could have been sold as scrap.

NORWEGIAN SHIPPING FIRM CELEBRATES CENTENARY

The well-known Norwegian shipowners, Wilh. Wilhelmsen, celebrated their centenary on 2nd October this year. The firm was founded in Tonsberg, the oldest city of Norway, in 1861 by Morten Wilhelm Wilhelmsen who first worked as a ship broker until the first ship, the bark *Mathilde*, 504 tons deadweight, was acquired in 1865. The firm operated a number of subsequent sailing ships; but went in for steam ships very early on and the first one, s.s. *Talbot* of 1,800 tons deadweight, was bought in 1887. Today, the firm has a modern and fast fleet, consisting of 63 cargo liners and nine tankers with a total deadweight capacity of 834,414 tons. The new building programme up to and including 1964 involves three liners of 7,000 to 10,000 tons, four tankers of about 40,550 tons each, also two bulk carriers of about 17,000 tons each. The new ten-storied head office building in Oslo was completed just in time for the centenary. Wilh. Wilhelmsen's have been interested in the shipping trade to and from India, the Continent and Scandinavia since 1914. At present the firm operates a joint service with the Swedish East Asia Company of Gothenburg and the East Asiatic Company of Copenhagen, to the Continent and Scandinavia from India and vice versa. The joint service is represented in all the main Indian ports by United Liner Agencies of India (Private) Ltd.

London

U.K. CHANCELLOR PROPOSES TO ESTABLISH NATIONAL ECONOMIC COUNCIL

INDUSTRY AND LABOUR URGED TO CO-OPERATE

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Chancellor of the Exchequer, Mr. Selwyn Lloyd, has set out for the first time specific proposals for a National Economic Council. They are made in a letter to the Trades Union Congress and the employers' organisations, which the U.K. Treasury will publish in a few days. Mr. Lloyd would be the chairman of the Council, on which the U.K. Minister of Labour and the President of the Board of Trade may also sit. Unions and employers—including the nationalised industries—would be represented, with "perhaps" some additional independent members, making a total membership of about 20. The present Economic Planning Board would be abolished and the National Production Advisory Council for Industry, which meets every three months, would be convened less frequently. Mr. Lloyd's letter follows separate and preliminary meetings which he had with the unions and employers in August. It ends with an invitation to meet him again jointly in October. The Chancellor's proposals were considered by the U.K.'s economic committee and were given a lukewarm reception. The committee agreed to accept his invitation, but reserved its position on whether it will take part in the new Council.

Mr. Lloyd introduces his proposals by saying: "The time has come to establish new and more effective machinery for the co-ordination of plans and forecasts for the main sectors of our economy. There is a need to study centrally the plans and programmes of the main industries. I am anxious that both sides of industry, on whose co-operation fulfilment of our objectives must significantly depend, should participate fully with the Government in all stages of the process." The U.K. Chancellor then sets out the kind of machinery he has in mind, prefacing it with the following words: "I envisage that it might take the following form: 'The Economic Development Council's functions as 'to examine and, if necessary, commission studies relative to the economic objectives indicated earlier in this letter, and consider how best they can be secured. The responsibility for final decisions on matters of Government policy must remain with the Government, but the views expressed by the Council would carry great weight with the Government and with industry. Its staff would make the fullest use of existing channels of information and consultation in Government and industry, and, in studies of particular industries, would work in association with Government departments, and other public bodies, for example, the Iron and Steel Board and the Cotton Board.'"

Balance of Payments

A modest but welcome improvement is indicated in the latest quarterly figures of Britain's balance of payments. For the second quarter of the current year, there is still a payments deficit, but the reduction from £68 million to £15 million by comparison with the first quarter is encouraging. Most of the improvement is attributable to the fall of £29 million in the import bill. An increase from £85 million to £111 million in receipts from "other invisibles (net)" is described as mainly seasonal.

In spite of the smaller deficit, the implication of the latest figures is plain. No current surplus is being earned to cover private investment abroad, which in the second quarter was running at an unusually high level. Whereas in the first quarter there was a net inflow, reflecting the payment for Ford Motor shares, in the second quarter the net outflow amounted to £83 million. These figures cover a period before the U.K. Chancellor's "little Budget" and underline the need for remedial measures. They contain some evidence, however,

that, although the position was bad, the trends were beginning to move slowly in the right direction.

August Overseas Trade

From the fuller information now available of Britain's overseas trade in August, it is reasonable to infer that a mild improvement, but not yet a convincing recovery, is taking place in the underlying trends. It becomes clear that the rise in exports on a seasonally adjusted basis from £307 million in July to £324 million was influenced by exceptionally large exports of ships. But it is reassuring that, excluding ships, the export improvement for the first eight months of this year, compared with the corresponding period of 1960, was 3 percent. Analysing the export situation, the U.K. Board of Trade says that there has been no evidence of any upward or downward movement in the underlying trends since the beginning of the current year, a conclusion which affords no basis for complacency.

On the import side, there has been a decline, with the reduction mainly in industrial materials; this is a reflection of a much reduced rate of stock-building. The U.K. Board of Trade makes the point that the dock strike in April and May had the effect of reducing the import figures. Thus a comparison between the last four months (May-August) with the previous three months, showing a seasonally adjusted fall of 2 percent, under-estimates the underlying rate of fall in the import bill.

On a regional basis, the best showing on the export side has recently been in sales to western Europe. Seasonally adjusted, the increase in the past four months compared with the preceding three months, has been 11 percent, while the rise on a year earlier is as much as 20 percent. Exports to Russia and eastern Europe have also continued to expand, and there has been a modest improvement in sales to Latin America. Exports to the overseas sterling area, on the other hand, have fallen by 3 percent with sales to Australia down by 20 percent. The sales to the U.S. markets have risen by 15 percent, but exports to Canada have shown no material change since the improvement in the early months of the current year.

Terms of Trade Better

Once again, the terms of trade, reflecting the relation between import and export prices, moved in favour of Britain in August. The U.K. Board of Trade's import price index fell from 97 in July to 95 in August, the lowest level touched for several years. The export price index at 112 was unchanged, with the result that the index of the terms of trade (1954=100) was down from 86 to 85.

On the import side, the drop in the index reflected decreases in each class of imports, with the price falls most marked in the food, beverages and tobacco group. Basic material and fuel prices were also down compared with July. On the export side, prices were higher in the textile and engineering groups, but not sufficient to alter the overall export index.

Engineering Production Up

The engineering and electrical goods industries produced 16 percent more in July of this year than in the same month of 1960, according to the provisional estimates made by the U.K. Board of Trade. This trend was in keeping with the results achieved during the two previous months, when increases of 9 percent, compared with the same two months in 1960, were recorded. The first four months of the year showed a rise in production of 3 percent.

The volume of net new orders received by the two industries (including locomotives and railway track-equipment, carriages and wagons, besides heavy commercial vehicles and wheeled tractors) rose by 11 percent in July of this year, compared with a year earlier. Much of this increase was the result of a sharp rise in overseas orders. During the second quarter of 1961, net new orders were, however, much reduced, compared with the figures for the first quarter of this year and stood at about the same level as a year earlier. The fall was "partly seasonal" and partly the result of a specially large order for a new power-station placed in March. Deliveries by the engineering industries show a continued rise. There has been "little change" in the volume of orders on hand since the end of April.

Fall in Motor-car Output

The production of motor-cars and commercial motor-vehicles showed an unusually sharp fall in August to the lowest since August 1958. Exports also fell abruptly. Only 45,976 passenger cars were made in August, compared with 98,334 in July. In 1960, August production was 85,788, against 94,052 in July. The commercial vehicle production suffered less severely, the output being 20,630 vehicles, against 27,619 a year earlier. These figures compare with the July output of 36,043 vehicles this year and 26,592 in 1960.

August was the main holiday month this year but in 1959 and 1960 the date of the bank holiday caused part of the effect of works' close-downs to be felt in July. This may mean that August figures for this year are not strictly comparable with those for August 1960. Passenger car exports in August fell to only 27,988 from 41,024 in August 1960. In July this year, 31,497 motor-cars were exported, compared with 44,817 motor-cars a year earlier.

Increase in Unemployment

Unemployment has increased for the second successive month, but the number of unfilled vacancies still exceeds the number of people out of work. On 11th September, there were 317,094 registered unemployed—a rise of 11,851 since 14th August. Unfilled vacancies on 6th September were 328,125, which is 31,394 fewer than in August. The normal seasonal decrease between August and September is about 27,000. The unemployment rate on 11th September was 1.4 percent, the same as in August and as in September 1960. It reached its lowest level this year in July, when it was 1.2 percent. The increase in unemployment was largely due to short-time working in the motor-car industry, and in firms producing household goods such as refrigerators and washing machines. There was a fall of 6,328 in the number of wholly unemployed, but a rise of 18,179 in the temporarily stopped. The British Employers Confederation is appealing to members not to undermine the wages "pause" by trying to out-bid each other for scarce labour. It has perceived that the Government's policy can be weakened almost as much by special inducements as by all-round increases in basic rates.

Regulating Textile Imports

Among traders in the cotton industry nobody has had a good word to say about the new arrangements for regulating imports from the three Commonwealth Asian countries. Both the principle and the details—especially those relating to supplementary quotas—came in for a great deal of adverse criticism. The provisions under which the quotas for India, Hongkong, and Pakistan may be increased, if there are larger imports from other sources, have had a particularly unfavourable reception. Many of the criticisms seem to be soundly based. In the first place, the new arrangements are undoubtedly highly complex, and this must always be regarded as a fault in any method of regulating trade. Secondly, they do not, in fact, relieve domestic producers and distributors of their uncertainty about how much imported cloth they will have to compete with in their home market. The possibility that the quotas will be altered every three months will cause great difficulty for traders who are trying to make their plans for the future. Furthermore, it has been pointed out that the provisions for supplementary quotas appear to be based on the assumption that any one country has a right to retain its traditional or normal share of any other country's import trade.

NORTH INDIAN TEA OUTPUT
MAINTAINS RECENT GAINS
LARGER EXPORTS TO THE
U.S.A. NEEDED

(BY A SPECIAL CORRESPONDENT)

THE production of tea in north India up to 15th September, 1961, maintains the recent gains with a surplus of 26 million kilograms. According to latest available figures, the world output is estimated at 383 million kilograms, compared with 346.5 million kilograms a year ago. In terms of lbs, the increase is said to have been around 80 million. Meanwhile, teas for export continue to meet with a fair general demand but at lower rates. In spite of the increase in supplies, the good liquoring sorts with clean leaf found ready buyers, but the fibrous types were subject to a heavy discount. The average price of teas sold a year ago, the fall is over Re. 1 a kilogram. To what extent greater production at lower costs will compensate for this fall cannot be predicted with certainty.

Satisfactory Increase

Exports of north Indian tea show a satisfactory increase compared with the 1960-61 season, but little improvement if taken over the past three years, as the following figures indicate:

(In million lbs)			
This season	Last season	1959-60	
53.5	304	52	
Exports to U.K.			
Total exports from 1st July to 7th September			
81	43	78	

It will be noted that exports are up by barely 3 million lbs over a three-year period whereas production has increased by no less than 74.5 million lbs since 1959. The above statistics relate to tea made in 1961, but the despatches between January and August make no better showing:

(In million lbs)			
1961	1960	1959	
174-4/5	127	179-4/5	

In view of India's need of earning foreign exchange, it is necessary to take steps for expanding exports, particularly to the U.S.A. A member of the U.S. Tea Council recently visited India and Ceylon. Referring to the rise in tea exports from Ceylon to the U.S.A. at India's expense, he is reported to have said that other growths have been consistently available on a lower price basis. Blenders find that they can use these with Indian manufacture and still maintain a blend suited to the American taste. The U.S. buyers favour Orthodox teas, and the increase of C.T.C. production has not helped matters. So the turnover is on a lower scale than in the U.K. If the exports from India to the U.S.A. are to increase, tea suitable to their requirements and on a price level competitive with other countries should have to be shipped. It is clear that Indian teas are being priced out of the world markets because of numerous levies.

The International Tea Agreement is no longer operative. But in any case, it only applied to India, Pakistan, Ceylon and Indonesia. However, something in the way of world control may become necessary unless the producing countries, both in Asia and Africa, adopt tea as a popular beverage. The slump in 1951-52 was set in motion because the 1951 world supply exceeded absorption by 35 million lbs. The decision of the British Government to end the rationing of tea at that time threw much surplus stock on to a fully supplied market, and the worst slump since the early years of the century followed. The European population in the Common Market may help save a situation of this nature if sound propaganda is undertaken in those areas as well as throughout the producing countries.

Prospects for Hasimara

Over the years, tea has proved to be a sound medium of investment, and the present enquiry for Hasimara and Huldibari shares on the prospect of bonus issues brings to mind that the original capital of the former was only Rs. 4 lakhs. A bonus issue of one share for one held was made after the first World War. Later the capital was again doubled by bonus shares of the value of Rs. 16 lakhs. In 1948, a further 16 lakhs was capitalised, making the ordinary capital Rs. 32 lakhs (plus Rs. 3 lakhs of 7 percent old tax-free cumulative preference shares now paying 7.88 percent). The market now awaits still another bonus announcement. The current dividend is only 17 percent and funds appear to have been retained in order to maintain a steady dividend in future years. The Company has also acquired a Bombay cotton mill which is said to be working at a good profit. It made a profit of Rs. 26.44 lakhs in 1960. Its Dooars gardens are the main source of revenue. For 1961, the official estimate is for a crop of 77,370 maunds.

CASHEW FACTORIES FACE BIG
CRISISPROCESSORS WORRIED OVER FALL
IN FOREIGN DEMAND

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE cashew processing industry is facing a major crisis. A fall in foreign demand and a fairly large volume of unsold stocks have brought about this crisis. A group of processors in Quilon have announced their intention of closing their factories unless the Government comes to their rescue. They have demanded that the import of raw nuts from Africa should be suspended immediately in view of the large stocks of processed kernels in India. But there is no agreement among the processors over this proposal. It is reported that a section of processors, which claims to be the majority, favours the free flow of nuts from Africa. The restriction of imports, according to this group, is no solution to the present difficulties which had their origin in speculative excesses of some processors earlier this year. A conference was held in Cochin the other day. It was convened by the State Government to discuss the demand for the restriction of raw nut imports. It

is understood that the rival sections among the processors were uncompromising, so they could not suggest an agreed solution for the present difficulties. Meanwhile, it is reported that the majority of processors have deserted the South Indian Cashew Manufacturers Association and the Kerala Cashewnut Manufacturers Association—the two established organisations of the cashew manufacturers in Kerala. They are forming another organisation called the Indian Cashew Exporters Association.

Kernel Prices Fall

The kernel prices have come down to 45 U.S. cents a lb due to the lack of foreign demand. Earlier this year, cashew kernel was commanding a price of 55 cents to 56 cents. The United States—the largest buyer of the commodity—is very inactive now. Russia, another important buyer, has not entered the market at all. The New York quotation of 45 cents is only nominal. Some prominent processors in Quilon, however, say that this is the normal price for the commodity. The prices which were obtained earlier this year were "fancy prices" caused by scarcity conditions. Cashew is not the only edible nut in the world market. There are other nuts like almonds which are equally popular, and their prices have some correlation. As far as cashew is concerned, the raw nut output in Africa was bigger than normal. Imports to India so far amount to 130,000 tons. The Indian crop amounted to 60,000 tons. Together, they would give a kernel yield of about 2 million cases of 50 lbs each. This is more than the normal output of the processing industry in India. The latter has exported about 1.2 million cases so far this year. Under such circumstances, cashew kernel cannot fetch a handsome price as it did previously, according to some prominent processors in Quilon.

Token Strike Planned

Plantation workers in Kerala are planning a token strike after 8th October to begin their struggle for the revision of interim wages pending the decisions of the National Wage Boards for the industry. The date for the token strike will be fixed after the results of the talk which the State Labour Minister, Mr. K. T. Achuthan, will have with his counterpart at the Centre, Mr. Gulzarilal Nanda, in Bangalore on 7th October are known. Labour leaders announced the decision after the failure of the second meeting of the Kerala Plantation Labour Committee to settle the dispute between the plantation workers and their employers on the wage rates. Meanwhile, the I.N.T.U.C. led unions are carrying on satyagraha in several Kerala plantations demanding wage increases. The secretary of the Association of Planters of Kerala notified last week that the High Range Workers Union, Munnar, said to be affiliated to the I.N.T.U.C., has withdrawn its direct action programme.

RAISING TEA ACREAGE IN
PAKISTANCONTROL ON STOCKS
REMOVED

(FROM A CORRESPONDENT IN PAKISTAN)

THE second export sale was held on 20th September, 1961, at which 5,227 chests of tea were offered. Due to the reduction of 13 paise in export duty, the prices generally advanced by 10 paise to 15 paise a lb. The good liquoring types as well as teas with some tip were the strongest feature of the sale, and fetched up to 20 paise above valuation. The quotations for various grades were as follows:

	(Rs. a lb)
B.O.P.	1.75
B.P.	1.50
O.F.	1.75
P.F.	1.50

Liberalisation of Controls

As a further measure to liberalise the stringent controls on tea imposed by the Pakistani Government last year due to a short crop, restrictions on the possession of maximum quantities of tea at any one time by blenders and registered dealers have been removed. The Government will, however, keep a close watch on the stocks held by the latter, and will take remedial measures, if the situation demands, under the Tea Control of Price, Distribution and Movement Ordinance, 1960.

Acreage and Production

During his recent visit to Chittagong, the Minister for Commerce expressed his satisfaction over the expansion of tea acreage. He said that the expansion programme would be completed on schedule, but doubted if the production target could be achieved in time. About 79,000 acres of land is at present under tea cultivation. Under the five year plan, the total area under tea should be 100,000 acres, that is, an expansion of cultivation over additional 21,000 acres. A production target of 80 million lbs has been fixed for 1970.

COCHIN TEA SALES

At Sale No. 40, 525,000 kilograms of tea were on offer. There was a useful demand for plain liquoring, clean mediums and improved quality high-grown. Others, particularly plain and stalky descriptions, met with less demand and declined by

Jute

STRONG SPECULATIVE DEMAND FOR READY
HESSIANSFIBRE ARRIVALS STILL LARGE BUT PURCHASES
DECREASE

THE jute market has been featureless during the past week. There is still an almost daily demand for fibre, but recently the demand has decreased, as even those who confess to having small stocks are waiting confidently for lower prices. Small transactions continue to be put through for early deliveries, but it is obvious that mills intend to wait as long as possible before purchasing in quantity. Meanwhile, large supplies of raw jute are coming forward, and are likely to continue doing so until the Pujia holidays commence. The future trend of the market appears, therefore, to depend on whether any appreciable imports will have their effect before the mills are forced to buy. Some people think that the farmers will rush their jute into the market over the next two weeks—immediately prior to the holidays—to make sure of getting higher prices, but others think that they will feed the market slowly. In the meantime, the mills which had to buy urgently have relieved only their near-term position and will have to come in again fairly soon. It is probable that, by then, those who were better off and could wait will be thinking of buying. In other words, the longer the mills delay, the greater will be the amount of buying to be done, and the less chance there will be of prices showing any appreciable fall in the immediate future.

A point has now been reached when it is necessary to consider whether it is possible, or desirable, to maintain the present level of prices. No one will deny that the higher level is desirable from the point of view of improving the standard of living of the cultivators. Some people will say that this is not necessary as they have already reaped the benefit during the recent period of high prices. It must not be forgotten, however, that the rise in prices often occurred after the jute was out of the hands of the cultivators, and the profit went to the middlemen. Desirable though the maintenance of the standard of living of the cultivator may be, it is obvious that the present level of prices of manufactured goods will not only hamper the expansion of the trade but will tend to reduce existing demand. In spite of the high prices of manufactured goods, mills are unable to work profitably. It follows that, in order to restore healthy conditions in the trade, lower levels would be desirable.

Fall in Prices

Since the current crop is a large one, there seems to be nothing to prevent a fall in prices later in the season. Lower prices, of course, do not necessarily mean a reduced income for the farmers, as they will have larger quantities to sell; and it does not seem likely, while jute stocks in the hands of consumers are so small, that prices will fall to the very low levels of a few years ago. Before that happens, the Government might step in by fixing a floor price for jute. Unfortunately, the quantity of fibre grown by an average cultivator is so small that the total profit he makes is very little. Nevertheless, it is clear from his willingness to sow jute that, even at levels considerably below those prevailing at present, this is his most remunerative cash crop.

The gunny market has been dull and the volume of business transacted is exceedingly small. The only exception is the 11-porter hessians section. A strong demand for ready 10oz. hessians developed a week ago, and prices advanced rapidly with the approach of due date. Ready quotations forged ahead of other deliveries, until on Tuesday 40in. 10oz. soared to Rs. 62, which not only showed a premium of Rs. 15 over the January-March position but also was Rs. 8 above the October price. For a long time now, the difference between forward and ready hessians has not been more than Rs. 5. As usual, speculators in Calcutta were not slow to reap a benefit, and they pushed prices up, taking their profit at successive stages. That there is an acute shortage of ready 11-porter hessians, particularly P.D.O. goods, is not doubted. But the heavy speculative activity in this commodity has created a false impression, and the demand has been made to look twice as great as it really is. Although there has been some reaction towards the close with mills coming out as sellers, the market is being sustained mainly by a diet of rumours and over-speculation rather than anything substantial by way of new business. It is obvious from the rush to pay almost any price for ready hessians that this activity is not fresh business at higher rates, but represents covering against recent-priced contracts, even though during the recent boom, rates never reached Rs. 62 for hessians. Meanwhile, the Calcutta mills continue to increase production. It is estimated that all the voluntary cuts in output necessitated by the shortage of jute have now been restored, and the industry is back to normal working with 12 percent looms sealed.

Production in Pakistan

The news from Pakistan indicates that while some mills which have been working 24 shifts

shortages tended to revive a flagging market very quickly, and this was the case in near delivery hessians which, after the week-end and the closure on Monday, soared to exceptional levels. At one stage, business was done at Rs. 62. Other deliveries of hessians firmed up in sympathy, and January-March shipment moved up to Rs. 47, which was only Re. 1 above the week's opening, as against the rise of Rs. 8 in ready shipment. While this was going on, heavy goods were comparatively neglected, but took on a steadier undertone in sympathy with hessians. Movements were slow before the week-end, but on Tuesday ready B Twills moved up to Rs. 135.75 and January-March shipment advanced to Rs. 125.75. When several mills came out as sellers at the higher levels, this eased the situation and towards the close the market became quiet.

Opening quotations on Wednesday morning were as follows:

	Ready	October	Oct.-Dec.	Jan.-March
40in. 7½oz.	39.25	38.50	36.75	34.35
40in. 8oz.	42.25	41.25	39.25	36.85
40in. 10oz.	55.00	51.00	49.00	45.75
B Twills	133.25	132.25	129.00	123.50
Heavy Cees				
(Plain)	134.00	133.25	130.00	123.50
A Twills	163.50	163.00	160.00	152.50
Liverpools	156.00	152.50	149.00	141.50
Cornsacks	137.50	137.50	132.50	126.50

Raw Jute: Fibre displayed a weakness which could be explained only by the fact that mills refrained from operating to any large extent, with the result that stockholders became nervous. Raw jute arrivals both upcountry and in Cossipore remained large and this helped the bearish tendency. Mill agents were fairly active but prices, with one or two exceptions, remained on the basis of Rs. 34 a maund for Assam Bottoms. The statistical position of raw jute looked sound as mill stocks were still low. Jute prices were also lower than they had been for a year, so it was considered possible that mills might begin to build up stocks again. Weather conditions in the growing areas have not been favourable over the past few weeks for drying the jute. Continuous heavy rain has been reported from many districts, and particularly from the Daissee agencies, where imports are increasing. During the past ten days, it has been almost impossible to dry any Daissee imports, and many balers have stopped work completely. Wagon arrivals were lower than the previous week's record. Arrivals in Cossipore last week were reported

BROKEN—BUT CERTAINLY NOT USELESS

Do you throw away a broken
SCREWGRILL FALLER BAR
as useless and buy a new one?
Well now you needn't!
Because we at LAGAN, have
installed a new FALLER BAR
repair plant which does a mar-
vellous job of repairing—
MACKIE FALLERS—so good
in fact, that your once broken
FALLER BAR, can be made to
look like new and serve as
well too.

THE PAKISTANI JUTE MARKETS

FIBRE WEAKER AS BUYING DECREASES

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE jute market has been quieter with more sellers and less buyers. In the loose jute section, arrivals continue to be heavy, but the quieter market is caused by less buying than by the heavy imports. Balers have either covered their end-month requirements or have given up attempts for the time being. This may lead to a reduction in arrivals. Rains have been fairly widespread, and the cutting of the highland crop has increased. Arrivals in some areas show a slight improvement in the quality of white jute. This is mainly the midland jute which was retted during the period when there was a reasonable amount of water. It could also be the racky jute which had been held back by some growers. The heavy spack in the jat areas and the weak fibre in other areas is still there. Tossa in a very small part of the jat areas and in a small proportion of the district areas has turned out to be better than expected. The majority, however, namely, the jat and northern areas, continue to be not only poor in quality, but also very late. It is probably this lateness, coupled with the expectation of early arrivals of tossa and, therefore, sales for early shipment, which created the firm market in tossa. White prices have now fallen off, but tossa prices are still steady.

In the Narayanganj pucca bale market, after a period of great activity at prices well above the E.P.C. rates for all grades, interest has slackened and there are far more sellers than buyers. Cuttings which a few days ago stood at Rs. 120 a bale f.o.b. Narayanganj ready have gone down to Rs. 102 a bale. There has since been a temporary rise because of the end-month covering which is expected to fall off. After a period of hectic activity the overseas market has considerably fallen off, and what little interest there is apart from tossa is at E.P.C. levels for early shipment. After a further adjustment to the E.P.C.s, these now stand at £116 a ton f.o.b. for Export Firsts, £103 for Export Lightnings, £85 for Export Hearts, £116 for Dundee Tossa 4, £104 for Outport Tossa 2/3 and £89 for Outport Tossa-4. N.C.s quoted at £51 f.o.b. are rather higher in the overseas market. These prices include a 2 percent commission for buyers' agents. Prices are now being quoted by the Pakistan Jute Association net without a commission and it is expected that before the new Committee takes over the P. J. A. prices will be adjusted downwards to allow for this before the trade accepts the net price, which would otherwise be automatically 2 percent higher. The general tendency of the market, therefore, is downwards.

and although in view of the size of the crop this should be the tendency for the rest of the season, it has to be borne in mind that there is heavy covering to be done for October shipment, both by balers and mills. It is not likely, therefore, that the drop in prices will be very steep or that it will last long.

There is also a fair amount of speculation as to the amount of jute smuggled into India. Some sources indicate that there has been as much as 800,000 bales. While it is unlikely that the figure is so large, there was probably some smuggling when raw jute prices in Pakistan were rather low about a month ago. Again, reports have it that for the above reasons, the crop available in Pakistan will be only 5.5 million bales. One is inclined to doubt this figure, however, when one considers that in May and June, the crop was accepted as being something between 7.2 million and 8 million bales. The true figure is probably somewhere in the region of between 6.5 million bales and 7 million bales, since production has been affected by adverse weather conditions.

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL: BUYERS POSTPONE PURCHASES

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market showed signs of weakness during the past week. So the buyers postponed purchasing for the time being. Reports from both East Pakistan and West Bengal are now less informative than they were, and it looks as if dealers there are holding off news which might lead to a substantial fall in values. It is reported that the growers are being urged to hold off supplies because of the drastic effects which might follow once the market is flooded with jute. There is obviously no shortage of fibre now, but the lack of good quality jute is still a mystery. An occasional seller of Mill Firsts comes out at a cheap rate, such as an offer made last week at £161 a ton. This was £6 a ton cheaper than those quoted previously.

Mill Lightnings declined from £139 to £136 last week, with Mill Hearts down to £111 and Grade Hearts £94, while Tossa-2/3 reverted from £144 quoted early last week to £136, with four down only by £1 or £2 to £127, and Continental Tossa-2/3 fell to £113 from £116, October-November, c.i.f. U.K.-Continent. For earlier shipments, sellers are now wanting 10s more a ton.

The Dundee spinners are reported to have been buying quietly but steadily for grades whose prices have been most reasonable. Some business is reported to have been done with Continental spinners in afloat material.

The Calcutta goods market is maintaining a firm front, and there is a definite squeeze for September delivery. The price for that month has risen from 3s 3d a 100 yards for 40in, 10oz. hessians and 6d for 74oz., to 85s and 59s 9d, respectively, with October at 76s 9d and 58s 3d, and November-December at 73s 9d and 55s 6d and January-March at 70s and 52s 9d. B Twills have risen to 20s 3d, 20s, 19s 6d and 19s 6d for the respective positions of shipment, all f.o.b., Calcutta.

The prices of Dundee yarns were raised by £5 a ton from 22nd September to 18.87d a lb for 8 lbs C.H.W. cops and 20.02d for 8 lbs J.C.H. warp, from 18.30d and 19.45d a lb, respectively. The rate for sacking 24 lbs weft was raised from 14.25d to 14.83d a lb, but rove remained unchanged. Cloth values were advanced from 15.63d a yard for 40in, 10oz. hessians and 13.21d for 8oz. to 16.01d and 13.51d, respectively.

Commodity Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

AT Sale No. 18, held on 3rd and 4th October, the offerings at the Export auction, which comprised 67,726 packages, met with a strong general demand. There was an active enquiry for plain broken which sold up to 15nP above last rates. Plain Fannings also met with a good support and were often dearer. Medium and good liquoring orthodox descriptions came in for keen competition and mostly sold at dearer rates. C.T.C. teas were well supported, and although medium and poorer types were irregular, the best grades were fully firm to dearer. Off-grades, too, said readily at often above the last rates. There was improved demand for non-wither teas and the better kinds were firm and often dearer. Darjeelings also were well supported and although irregular, they were often sold above the last rates. Whole leaf grades were mostly dearer, although the better descriptions were irregular. The prices for the tippy varieties were irregular.

Quotations	1961
Clean Plain Pekoe	Rs. a kilo 4.40 to 4.60
Plain B. P.	4.20 to 4.40
Plain Fannings	4.00 to 4.20
Medium Assam C.T.C. B. P.	5.00 to 5.40
Medium Assam C.T.C. Fgs.	4.90 to 5.30
Best Assam C.T.C. B. P.	5.40 to 6.00
Best Assam C.T.C. Fgs.	5.40 to 6.20

(Quotations are inclusive of excise duty.)

FAR EASTERN TRADES ACTIVE IN FREIGHT MARKETS

CHARTERING has been dominated by the Far Eastern market over the past week, where Australian shippers in particular accepted a number of vessels for foodgrains, coal and sugar in bulk. It is believed that charterers paid 97s 6d which is 5s above the last fixture for sugar in bulk, from Queensland to the U.K. Australia is to sell communist China an extra 250,000 tons of wheat which will bring the total sales to 1 million tons. The next busiest trading area in the Far East was the west coast of India where three more vessels were accepted for iron ore to Japan. Another rice fixture from two ports Burma to Ceylon has been concluded at the unchanged rate of 42s f.i.o. and stowed 500/500. The time charter section remained steady. The Shipping Corporation of India has accepted two vessels for nine to 11 months for coastal coal trade at 19s.

HIDES AND SKINS STEADY

The market continued steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 26th September and 2nd October, 1961)
Cowhides: Wet salted (ord.) 5,000 pcs. on the basis of Rs. 9.12 to Rs. 12.25 and Rs. 15; wet salted (slaughtered) 15,600 pcs. on the basis of Rs. 7 to Rs. 16.50, Rs. 19 and Rs. 28 to Rs. 29; wet salted (ord.) 1,900 pcs. on the basis of 78nP a lb.

Goatskins: Wet salted (Daissee, Kustia) 48,000 pcs. on the basis of Rs. 275 to Rs. 300 and Rs. 380 to Rs. 400; wet salted (he-killed) on the basis of Rs. 3.87 and (she-killed) on the basis of Rs. 3.62 a piece; Assam-Dinajpur 14,000 pcs. on the basis of Rs. 260 to Rs. 280 and Rs. 300 to Rs. 340; Purneah-Kissanganj 5,600 pcs. on the basis of Rs. 290 to Rs. 330; Muzafferpore 5,800 pcs. on the basis of Rs. 300 to Rs. 325; Purneah (heavy) 600 pcs. on the basis of Rs. 460 to Rs. 470.

COMPANY AND PUBLIC NOTICES

THE CHAMPDANY JUTE COMPANY, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held at its Registered Office at 2, Netaji Subhas Road, Calcutta, 1 at 3-30 p.m. on 26th October 1961 to consider and if thought fit to pass the following resolution as an Ordinary Resolution:—

"That the Directors be and they are hereby authorised to sell the land and premises comprising the Company's Champdany Mill and the appurtenances thereto together with the plant, machinery, equipment and installations situated thereat to Kothari & Company Private Limited for the sum of Rs. 48,20,000 upon and subject to the terms comprised in an Agreement entered into between the Company and the said Kothari & Company Private Limited, and that the said Agreement submitted to this Meeting be and the same is hereby approved."

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

Dated Calcutta,
30th September, 1961.

EXPLANATORY STATEMENT

As your Directors indicated in their Report to the Shareholders for the year ended 31st March, 1961, it has been decided to concentrate the manufacturing operations of the Company at Wellington Mill and to close down Champdany Mill in order to reduce manufacturing costs. In pursuance of this policy, negotiations have taken place between your Directors and Kothari & Co. Private Ltd. for the sale of the Company's Champdany Mill and subject to your consent under Sec. 293(1) (a) of the Companies Act, 1956, it is your Directors' intention to proceed with the sale to Kothari & Co. Private Ltd. on the terms indicated in the resolution and in the Agreement referred to therein. The Agreement contains the usual stipulations that the sale is subject to the Company making out a good and marketable title to the property to be sold and to the property being free from encumbrances, and also to a provision that it is subject to your consent under the above Resolution.

Inspection
A copy of the said Agreement is available for inspection at the registered office of the Company, No. 2, Netaji Subhas Road, Calcutta-1 during the usual office hours and will also be available at the meeting.

Interest of Directors and Managing Agents
Your Directors and Managing Agents are or may be deemed to be interested in the resolution as follows:—

Mr. A. I. Murison, Mr. N. S. Coldwell, Mr. R. G. Edwards, Mr. K. P. Goenka and Mr. B. Gill as members and directors and James Finlay & Co. Limited as Managing Agents and members of the Company.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

THE ORISSA MINERALS DEVELOPMENT CO. LTD.

Notice of Interim Dividend
THE Board of Directors has sanctioned payment of an Interim Dividend on the Ordinary Shares @ 10% in respect of the year ended 30th June, 1961, subject to deduction of Tax. This dividend will be paid on or after 3rd November, 1961, to those Shareholders (or their mandatories) whose names appear in the Company's books on the 26th October, 1961, as the registered holders of these shares.

The Share Transfer Register of the Company will be closed from 13th October, 1961 to 26th October, 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

73rd YEAR OF ISSUE

CALCUTTA, 12th OCTOBER, 1961.

Vol. CXXXXVII No. 3681

TRENDS IN THE NEW ISSUE MARKET

THE buoyancy of new capital issues has been a striking and satisfactory feature of the Indian investment scene during the past couple of years. An equally satisfactory feature is that the promotion of public companies has so far proceeded on normal, orthodox lines. The Research and Statistics Division of the Department of Company Law Administration has just prepared a study of capital issues on the basis of the prospectuses registered by 43 big companies during the year ended March 1961. The study shows that new public companies have financed projects, incurred formation expenses and made payments to brokers, underwriters and foreign collaborators in an orderly fashion. Out of the 43 companies, eight are managed by directors, 15 by managing directors, 18 by managing agents and two by secretaries and treasurers. The total share capital of the companies amounts to Rs. 31.12 crores, of which Rs. 28.10 crores has been issued in the form of ordinary shares and Rs. 3.02 crores in the form of preference shares. Although the uncertainty concerning the payment of preference dividends has been removed by the Preference Shares (Regulation of Dividends) Act, 1960, investors' bias in favour of ordinary shares continues. Even the offer of high preference dividends ranging from 9 percent to 9½ percent, taxable, has failed to broaden interest in fixed-yield shares. Under the present circumstances, investors seem to care more for growth prospects than for fixed returns. When companies have a growth potential, their shares are likely to show capital appreciation in course of time. The attraction of such shares is particularly strong during a period of inflation. As there is a distinct prospect of further price rises during the third plan period, investors cannot be blamed if they wish to hedge against inflation by buying equities rather than preference shares.

Over the past year, the index for ordinary shares has increased from 169.7 to 177.9 (1952-53 equals 100), while that for preference shares has declined from 88.3 to 83.1. The trend is not expected to change much, firstly, because preference shares lack growth prospects, and secondly, because fixed dividends are not fancied at a time when there is a drift towards dearer credit. As interest rates start edging upwards due to the increased pressure of monetary demand in coming months, the existing yields on preference shares will become more and more unattractive. Now that company managements have to pay preference dividends in accordance with the Preference Shares (Regulation of Dividends) Act, the scope for increasing these dividends in line with interest rates is virtually negligible. This factor is perhaps the most important bearish influence for preference shares. That is why most of the recent preference issues have had to be taken up either by interested parties or by financial institutions such as the Life Insurance Corporation and the Industrial Finance Corporation, which want a steady return with fewer risks.

The Company Law Administration Department's study will do much to dispel earlier fears about the debt-equity ratio of public companies and the high cost of raising capital. Barring a few exceptions, borrowing by public companies has been in reasonable proportion to the share capital. The debt-equity ratio has been very close to the expected pattern of one to one. The total project costs of the 43 companies amount to Rs. 60.53 crores, to which the share capital has contributed nearly Rs. 32.33 crores. Apart from the fact that borrowing has not been excessive, the reasons for the borrowing represents foreign loans which have had to be taken for buying equipment from abroad. Funds from institutions such as the Industrial Credit and Investment Corporation and the Industrial Finance Corporation have been obtained largely in the form of foreign exchange loans.

Bank credit has contributed only a small proportion of the total borrowing; banks have provided working capital rather than financed fixed assets. Indeed, it seems that the rôle of banks in financing fixed assets has been exaggerated. This implies that the pressure on banking resources is due largely to the increase in current working requirements. The demand for credit is likely to grow as the economy expands, so ways of reinforcing the resources of the banking system have to be devised before the busy season gets in its stride in a few weeks' time.

The cost of raising capital, including preliminary expenses, brokerage, underwriting commission, remuneration to promoters and miscellaneous expenses, has been kept down to a reasonable level. It works out to 1.8 percent of project costs and 3.5 percent of the total capital issued. This favourable trend is no doubt due partly to the sterilisation of the rates of underwriting commission and brokerage and the prohibition of payments to managing brokers. But the restrictions have probably encouraged staging by influential parties who wish to profit from the capital appreciation of new shares.

Subscriptions to new issues show divergent but interesting trends. The promoters, directors and their friends have shown overwhelming interest in companies enjoying foreign collaboration and growth prospects. They have generally subscribed for even 50 percent of the total shares. The interest has been lacking in the case of new issues which do not involve foreign collaboration. Even in new issues made by existing companies, the directors and their friends do not seem to have evinced great interest. When foreign collaborators have associated themselves with the Indian companies, they have made a significant contribution to the share capital. The interest shown by financial institutions has not been widespread. The Life Insurance Corporation, the Industrial Credit and Investment Corporation and the Industrial

Finance Corporation have generally participated in the share capital of only big companies. There has been a noticeable increase in the subscriptions of the investing public during recent months, because more shares have had to be offered for public subscription under

SOUTH INDIA TEA COMPANIES

P, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

allow itself to become a helpless victim to the bias of political Parties.

The L.I.C.'s new business, according to the report, amounted to Rs. 495.72 crores in 1960, against Rs. 427.16 crores in 1959. The completed business has thus increased by 16.1 percent. But the increase falls short of the target which the L.I.C. set itself under its five year plan. Despite the fact that closings were carried forward until February-March 1961, the target of Rs. 525 crores for 1960 could not be reached. It is to be hoped that the L.I.C. will drop the deplorable practice of carrying its closings far into the following year. This year, it should close as at 31st December, 1961, even if there is a shortfall. The L.I.C. will improve its reputation by being orthodox in this sphere; to inflate the figures for completed business by carrying forward the closings is pointless, since the business secured so late is often forced business which ultimately proves worthless.

The L.I.C.'s lapse ratio was higher in 1959 than in 1958. Unfortunately, the lapse ratio in 1960 has again risen to 6.6 percent, from 6 percent in 1959. The chairman, in a recent speech, offered the excuse that the rise in the lapse ratio is due mainly to the inflationary trends in the economy. As inflationary pressures increase in the third plan period, it will be difficult for people to maintain their policies by saving enough for investment in life insurance. The overall expense ratio (the ratio of expenses to premium income) was 28.4 percent in 1960, against 28.7 percent in 1959. The

renewal expense ratio, which is a more reliable indicator, is 12.90 percent, against 12.92 percent. The report explains that the Corporation granted an *ad hoc* increase of Rs. 15 a month in the dearness allowance to all class I officers drawing a basic salary of Rs. 500 or less, and to field officers and supervisory and clerical and sub-staff with effect from 1st April, 1960. The total amount paid under this head for the nine months was Rs. 46.44 lakhs and this works out to 0.61 percent of the renewal premium income during 1960. The Corporation is of the view that, but for this and some

other increases in expenditure, the renewal expense ratio for 1960 would have been much less. The L.I.C. is going ahead with its plans for developing rural insurance and public relations. Insurance in India has hitherto been confined primarily to the urban sector. But a new class of insurable people is emerging, and realising that urban insurance alone is not enough, the Corporation is exploring new fields. If its publicity, propaganda and administration are efficient, it should be possible to reach the target of Rs. 1,000 crores which it has set itself by the end of 1963.

THE REVIVAL OF SHIPPING

LONDON'S Baltic Exchange, which negotiates the purchase, sale and hire of ships, has been depressed for years. Now it is comparatively active and doing business at satisfactory rates. Shipping shares on the London Stock Exchange, depressed for years even when other sections of the market have been rising, are now moving cautiously upward, although the market generally is subdued. The long-awaited recovery of shipping has begun; and investors have perceived the change. The upturn in freight rates is not a very recent development; as it occurred soon after the middle of last year. But for some months shipbrokers and shipowners, who had seen false starts

before, were cautious. When the U.K. Chamber of Shipping published (in the latter part of September this year) its indices for August, the market was convinced that the recovery was soundly based. Against the seasonal trend, the index of current freight rates rose by 1.4 to 107.2 and the index of time-charter rates rose by as much as 8.9 to 117.9. (The base year for both indices is 1960.) The sharp rise in charter rates is particularly significant, for it indicates that users of ships foresee a rising trend for some time ahead. Indeed, the demand for cargo space, on Far East and Atlantic routes particularly, has strengthened further since August.

The increase in demand for shipping is simply a reflection of the increase in world trade, which, Lord Piercy says in his recent statement as chairman of the Ship Mortgage Finance Company, has brought some 8 million tons of additional shipping into active service in the last two years. Particular stimulants have been the increase in Japanese imports of industrial materials and the rise in Chinese imports of grain. Until comparatively recently, the growth of international trade has not had much perceptible effect on freight rates, because a huge surplus of shipping accumulated when ships ordered about the time of the Suez crisis were delivered. Shipowners' over-estimation of requirements—or under-estimation of the plans of their competitors—is one of the classic miscalculations of our time. Most obviously wrong was the assessment of the need for tankers; the oil trade has not expanded as much as the optimists imagined, and an increasing proportion of the trade moves through pipelines instead of ships.

Tankers are designed to carry fluid, but they can be converted to carry dry cargo, and in fact many of them have been used for that purpose. A large modern tanker, converted, is often more successful than a smaller aging tramp ship in competition for cargo, and the dry-cargo tankers have driven many of the older tramp ships to the breakers' yards; many of the older tankers have, of course, suffered the same fate. The importance of old ships as a source of steel-making materials is not always duly appreciated. In Britain, the Metal Industries group is a major shipbreaking and metal-trading organisation. One of its members, Hughes Bolckow, is commemorating its 50th anniversary; and for the occasion a book on shipbreaking—*Battleship Wharf*, by Horace White—has recently been published. It gives much interesting information on one of the main sources of the scrap metal that makes about half the world's steel. About 80 percent of the weight of an average ship is steel, and as the world's steel industry expands, competition for the output of the breakers' yards increases. This is an important factor in the economics of shipwrecking.

Recently, however, the incentive to sell ships for scrap has been reduced by the new opportunities for employing them profitably, and by the consequent sharp increase in their value as carriers. The standard of value is still the wartime *Liberty* ship, mass-produced and utilitarian. A year ago a *Liberty* ship could be bought for £100,000; its current price may be as high as £150,000. Even at that price, it is not unattractive by comparison with a modern ship that may cost £1 million for a ship costing £1 million depreciates much more than a ship costing £150,000, and it may be necessary to set aside so much for depreciation that no operating profit remains. The increase in freight rates has brought back into service many of the ships that were laid up in the depression, and shipowners have commented very favourably on the reduction of the unwanted reserve. At the same time, the world's shipyards have built many new ships. The supply of ships available is reduced by casualties as well as by scrapping. Lloyd's Register of Shipping has shown, in statistics published in September, that total losses last year, aggregating some 358,000 gross tons, were the biggest since the war, but they represented only 0.28 percent of the world's fleet, in terms of tonnage. Ships sent to the breakers' yards aggregate, of course, a much larger tonnage, and last year's total of some 3,285,000 gross tons was more than any previous year's.

Even so, the total of tonnage immediately available to carry goods must have increased consider-

ably in the current year, so the rise in freight rates does not fully reflect the increase in demand for shipping space. This immense and growing demand is the fundamental fact in the position. Whereas in the slump of the 1930s, the troubles of shipping were caused by a decline in the volume of trade, the troubles of recent years have been caused solely by injudicious ordering of ships. (More goods, as well as passengers, have been carried by air, but the total of airborne trade is still proportionally small.) The huge investment in new tankers was the root of the trouble. The big oil companies have continued to order big

tankers, and to arrange long-term charters of big tankers—a notable feature of the shipping business this year. But there is still a disproportionately large number of small tankers laid up. Other orders for ships are likewise mostly for special types—for instance, ore-carriers and others suitable for bulk transport. It is too soon to visualise large-scale ordering of ships, but the trend of ordering, after a long decline, has turned upward. However, British yards, as Lord Piercy has observed, cannot get their normal share of orders, because they cannot offer the same financial facilities as their competitors.

interest of 6 percent and repayable in ten years. In addition, the Austrian firm will also receive a royalty of £13,000 a year, subject to Indian tax. The foreign firm has been given the option to convert both loan and royalty into equity shares of the new Company.

Khatau Makanji Disappoints

The preliminary figures about the working of Khatau Makanji Spinning and Weaving Company for the year ended June 1961, which had been released along with the announcement of a 50 percent cut in the dividend, showed that the Company's gross profit had declined from Rs. 1 crore to Rs. 48.06 lakhs. The directors' report shows that the gross profit is down by over 50 percent, although sales are up by 2.4 percent from Rs. 5.13 crores to Rs. 5.24 crores. The profit margin—the ratio of gross profit to sales—is down from 19.5 percent to 9 percent. The directors attribute the fall to the voluntary agreement on cloth and yarn prices followed by the price cut early this year in spite of higher costs of foreign cotton, colours and chemicals. The operating expenses have risen by 14.4 percent from Rs. 2.56 crores to Rs. 2.93 crores and the cost of raw materials, excluding colours and chemicals, is up by Rs. 33.9 lakhs at Rs. 1.83 crores. The directors' explanation about Khatau Makanji's disappointing results cannot convince the shareholders, since most of the other mills producing like varieties of cloth with imported cotton have shown considerable improvement over their previous year's performance. The report adds to the shareholders' disappointment by stating that there has been no material change in the Company's working since the end of the financial year. After providing Rs. 16.78 lakhs (against Rs. 14.74 lakhs) for depreciation, Rs. 4.3 lakhs (against Rs. 4.14 lakhs) for development rebate and Rs. 13 lakhs (against Rs. 34.20 lakhs) for taxation, the net profit amounts to Rs. 11.73 lakhs, against Rs. 38.53 lakhs in 1959-60. No allocation has been made to general reserve which received Rs. 17.52 lakhs in the previous year. New machinery worth Rs. 17.61 lakhs was received during the year. Further orders have been placed for new machinery of the value of Rs. 7.83 lakhs for replacement and renovation. Khatau Makanji's financial position is sound. It has a paid-up capital of Rs. 89.77 lakhs, of which the ordinary capital consists of Rs. 59.85 lakhs. The reserves and surplus total Rs. 88.07 lakhs. The gross block of about Rs. 4 crores has been written down to Rs. 1.15 crores. The Rs. 100-paid equity share is currently quoted around Rs. 430.

After reducing depreciation from Rs. 8.86 lakhs to Rs. 6.99 lakhs, the profit has increased from Rs. 22.44 lakhs in 1959-60 to Rs. 24.65 lakhs in 1960-61. The taxable ordinary dividend has been increased from 13 percent to 15 percent. It is covered more than four times and offers a yield of 6.9 percent at the present price of Rs. 21.75 a share. Taxation is allocated Rs. 13 lakhs (against Rs. 12.50 lakhs), development rebate reserve Rs. 7.100 (against Rs. 4.175), general reserve Rs. 5 lakhs (against Rs. 3 lakhs) and dividend equalisation reserve Rs. 1.50 lakhs. There is a carry-forward of Rs. 39,258, against Rs. 1.31 lakhs brought in.

future, there is little likelihood of an improvement. The wire mill and ropery sections have worked up to their normal production capacities. The Company has decided to import some balancing plants to improve the working of these sections. The Industrial Credit and Investment Corporation has sanctioned the foreign exchange loan. Orders for the equipment will be placed as soon as the import licence is obtained from the Government of India. The products of the rope section will, it is feared, meet with increased competition in the near future due to the establishment of some new factories.

Anti-Friction Bearings Offer Soon

The Anti-Friction Bearings Corporation Ltd is a new enterprise which has been formed to undertake the manufacture of ball bearings, roller bearings, tape-roller bearings and steel balls. The Company has been licensed to manufacture 316,000 pieces of bearings and 240 tons of steel balls a year on a two-shift basis. The Austrian firm of Steyr-Daimler-Puch A.G. is collaborating in the venture which is estimated to cost about Rs. 1.22 crores. The Company's authorised capital is Rs. 1 crore, all in equity shares of Rs. 100 each. The issued capital will be Rs. 60 lakhs, of which the promoters, directors and their friends will take up Rs. 27.5 lakhs. The Austrian collaborators will subscribe Rs. 5 lakhs and the balance of Rs. 27.5 lakhs will be offered shortly to the public. The new Company is expected to take over the partnership firm of Dhirajlal and Company, the sponsor of the project, which owns a factory in Lonavla manufacturing crushed bearings and steel bearings. The present production of the factory is valued around Rs. 60 lakhs a month and it is expected to be raised to Rs. 90,000 a month within the next two months. Negotiations are said to be in progress for securing a foreign exchange loan of Rs. 30 lakhs. The foreign collaborators have agreed to grant a loan of Rs. 8 lakhs carrying an

Canara Workshops Profit Up

The Canara Workshops Ltd has reported satisfactory results for the year ended March 1961. The proceeds from sales of springs, jobs and repair work are up by 29.7 percent from Rs. 47.11 lakhs to Rs. 60.93 lakhs, and the gross profit at Rs. 20.40 lakhs shows an increase of about 17.7 percent over the previous year's Rs. 17.29 lakhs. The profit margin around 34.4 percent is quite high, although it was still better at 36.7 percent in the previous year. After providing Rs. 8.50 lakhs (against Rs. 6.85 lakhs) for taxation and Rs. 1.93 lakhs (against Rs. 2.16 lakhs) for depreciation and development rebate, the net profit works out to Rs. 9.97 lakhs, against Rs. 8.28 lakhs in 1959-60. With Rs. 25,988 brought in from the previous year, the disposable profit amounts to Rs. 10.23 lakhs. Out of this, Rs. 4.75 lakhs have been transferred to various reserves. The dividend on equity shares absorbs Rs. 4.51 lakhs and the preference dividends

Current News and Comment

Hastings and Fort William Fare Well

The Hastings Mill Ltd and the Fort William Co. Ltd have made reasonable profits during the year ended March 1961, because their raw jute stocks were built at a time when prices were favourable. The directors, however, point out that the competitive strength of the Indian jute industry as a whole has been affected due to the high and fluctuating jute goods prices. The Pakistani mills enjoy some advantages over their Indian counterparts as they obtain their raw jute supplies at cheaper rates. Pakistan also produces better quality fibre, and her mills are being encouraged by the Government's export-incentive measures. In the circumstances, adequate supplies of fibre need to be ensured for the Indian mills at reasonable prices.

The carpet-backing cloth plant of Hastings Mill has worked satisfactorily, and it has been decided to install a further 20 looms. The silk department of the Company has fared well. Fort William has decided to diversify its activities by launching a steel wire rope project. To obtain the necessary foreign exchange, a loan of Rs. 40 lakhs has been arranged with the Industrial Credit and Investment Corporation of India. The shareholders of Fort William may also be asked to contribute funds for the project in the form of rights shares.

The profit of Hastings Mill has improved from Rs. 6.95 lakhs in 1959-60 to Rs. 12.77 lakhs in 1960-61, after providing Rs. 8.30 lakhs (against Rs. 6.25 lakhs) for taxation and Rs. 8.14 lakhs (against Rs. 7.69 lakhs) for depreciation. The taxable ordinary dividend has been maintained at 6 percent. It is covered more than eight times, and works out to a yield of 5.3 percent at the present price of Rs. 113 a share. General reserve receives Rs. 6 lakhs (against Rs. 2.50 lakhs) and development rebate reserve Rs. 2.71 lakhs (against Rs. 1.11 lakhs). The carry-forward is Rs. 3.76 lakhs, against Rs. 2.86 lakhs brought in.

Fort William has maintained the taxable ordinary dividend at 22.50 percent. It is covered more than three times and offers a yield of 8.4 percent at the present price of Rs. 26.81 a share. The profit has increased from Rs. 6.60 lakhs in 1959-60 to Rs. 7.30 lakhs in 1960-61, after increasing taxation from Rs. 6.95 lakhs to Rs. 8.20 lakhs and reducing depreciation from Rs. 7.37 lakhs to Rs. 6.83 lakhs. Development rebate reserve is allocated Rs. 31,052 (against Rs. 59,000), and general reserve gets Rs. 1 lakh. The carry-forward is Rs. 2.48 lakhs, against Rs. 1.95 lakhs brought in.

Agarpara Dividend Cut

The Agarpara Co. Ltd has reduced the taxable ordinary dividend from 10 percent to 2.50 percent for the year ended March 1961. It is covered more than five times, and offers a yield of 2.5 percent at the present price of Rs. 9.82 a share. The profit has declined from Rs. 17.01 lakhs in 1959-60 to Rs. 2.81 lakhs in 1960-61, after providing Rs. 6 lakhs (against Rs. 5.10 lakhs) for taxation and Rs. 6.92 lakhs (against Rs. 6 lakhs) for depreciation. Development rebate receives Rs. 84,196 (against Rs. 5.50 lakhs). There is a carry-forward of Rs. 20,726, against Rs. 36,065 brought in. Gunny sales increased from Rs. 1.97 crores to Rs. 2.88 crores and jute goods stocks fell from Rs. 37.05 lakhs to Rs. 35.57 lakhs. Automatic weaving machines have been installed. The directors hope that trading conditions will improve during the current year due to the prospects of better raw jute supplies.

More from National Rolling

In their report for the year ended June 1961, the directors of the National Rolling and Steel Ropes Ltd say that the working of the rolling mill section has been hampered by the shortage of billets. Unless the supplies are increased in the

4½% PER CENT MADRAS STATE ELECTRICITY BOARD BONDS, 1971.

For Rs. 200 lakhs.

(Payment of Interest and Repayment of Principal, Guaranteed by the Government of Madras).

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

Issue Price Rs. 99.50 Per Cent.

REDEEMABLE AT PAR ON THE 16th OCTOBER, 1971.

Subscriptions will be received in cash or cheques from the 16th October, 1961. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 200 lakhs and in any case not later than the close of business on the 23rd October, 1961.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Calcutta, Delhi, Bangalore and Bangalore city

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all Offices of the State Electricity Board and its undertakings.

Millions of hands like this are reaching eagerly every day for a glass of cool water. ACCOOLER water cooler has the proud privilege of supplying them plenty of cool water—as a matter of fact, as much as they need.

ACCOOLER WATER COOLER

★ Storage and instantaneous type ★ Hygienic and convenient
★ 6 to 40 gallons cooling capacity per hour ★ 10 to 300 gallons storage ★ One year guarantee

AIR CONDITIONING CORPORATION LIMITED.
CALCUTTA BOMBAY NEW DELHI

DISTRIBUTORS:

CALCUTTA: N. B. Sen & Bros., 11, Esplanade East, Calcutta-1. Tele: 23-5978
No. 811 Furniture Co., 57, Park Street Calcutta-16, Tele: 23-6716 & 23-6717

account for Rs. 80,471. The total distribution amounts to Rs. 5.31 lakhs, against Rs. 3.25 lakhs in the previous year.

Last year, Canara Workshops issued 200,000 ordinary shares of Rs. 10 each and 140,000 6½ per cent cumulative preference shares of Rs. 10 each in order to finance its development schemes. The directors regret that the Nagpur spring factory, which went into production in June 1961, could not work to full capacity due to inadequate steel supply. The Mangalore factory meant for the production of hubs, break drums and cylinder liners is expected to be commissioned by the end of the year. The work on the factory building for the alloy steel equipment is expected to start in about a month's time. The continuous casting plant has been designed to double the capacity or even treble it with a small additional investment.

Tata Chemicals Pays More

The directors of Tata Chemicals Ltd have raised the dividend on old and new equity shares by 5nP from 60nP to 65nP a share, both taxable, for the year ended June 1961. The distribution on new shares is made up of a dividend of 25nP and an interest of 40nP payable out of the capital at 4 percent. The proposed increase in dividends restores only partially the cut effected in 1959-60 from 75nP to 60nP on old shares and from 71.875nP to 60nP on new shares. A dividend of Rs. 7.14, subject to tax, has been recommended on the preference shares for 1960-61. The directors have also proposed an additional dividend of 8nP a share on the preference shares for 1959-60. The proposed dividends on the preference shares have been so computed as to provide the preference shareholders with the original stipulated dividend of 5 percent after deducting tax at 30 percent. The preliminary figures about the Company's working in 1960-61 show a small improvement over the previous year's results. Sales are up from Rs. 3.41 crores to Rs. 4.15 crores and the profit, after providing for depreciation, is shown at Rs. 34 lakhs, against Rs. 27.36 lakhs in the previous year. Out of this, Rs. 17.40 lakhs (against Rs. 14.38 lakhs) has been allocated to development rebate reserve. No provision has been made for taxation which accounted for Rs. 1.05 lakhs in the previous year. The profit available for distribution, including Rs. 14,509 brought forward from the previous year, is Rs. 16.75 lakhs (against Rs. 12.05 lakhs), of which the proposed dividends absorb Rs. 16.71 lakhs (against Rs. 14.38 lakhs), leaving Rs. 3,571 to be carried forward. The directors have not transferred any amount from general reserve while they had to draw Rs. 2.50 lakhs in the previous year to supplement the profit available for distribution.

The directors of Tata Chemicals have also announced their decision to raise funds by issuing equity shares and debentures. Subject to the consent of the Controller of Capital Issues, the Company proposes to issue new ordinary shares of Rs. 10 each at a premium of Rs. 2.50 a share. These new shares are to be offered to the existing equity shareholders in the ratio of one share for every five held. The present ordinary capital of Tata Chemicals is Rs. 2.52 crores. The proposed rights issue will, therefore, bring in additional funds amounting to Rs. 63 lakhs, inclusive of the premium. The Company has also decided to issue 6½ per cent taxable debentures worth Rs. 50 lakhs, repayable in 1970-75. The issue is subject to the sanction of the Controller of Capital Issues. The shareholders' approval will be asked for after obtaining the Government's sanction. Additional funds are being raised in order to finance the expansion programme and to provide working capital. According to reliable reports, the shareholders have represented to the chairman against the issue of equity shares at a premium. They have contended that the management should have resorted to a premium only if the Government was not agreeable to the issue being made at par. They think that it is unreasonable to charge a premium of Rs. 2.50 a share when the book value of the Rs. 10-paid share works out to below Rs. 12.

Gaskets from Victor India

Anand Automobiles of Bombay has promoted a new Company called Victor India Ltd to undertake the manufacture of gaskets in collaboration with the U.S. firm of Victor Manufacturing and Gasket Company (Chicago). The factory which will be located in Mulund (Bombay) will be the second unit in India to manufacture gaskets, the other one being that of Payen Talbros of New Delhi. Victor India will have a capital of Rs. 15 lakhs which will be shared between Anand Automobiles and the foreign collaborating firm, the latter contributing 60 percent. It has obtained import licences for machine tools for the project, and arrangements are being made for early shipment. The construction of the factory has been started and production is likely to commence by about the middle of next year. The Company is applying for import licences for raw materials.

The indigenous sources of supply for various raw materials are also being tapped. Victor India is undertaking development work in conjunction with the American firm for the preparation of gasket prototypes for automotive and stationary engines manufactured in India. The principals in the U.S.A. are developing the prototypes for the gasket requirements of the Indian motor-car manufacturers.

Pulverising Sulphur from Shah Pratap

Shah Pratap and Company of Bombay has obtained an industrial licence for setting up a rolling mill for pulverising sulphur, insecticides and other chemicals. The plant which is to be located in the north of Bombay will have a production capacity to process 10,000 tons of sulphur powder a year. The Lepic Corporation of Philadelphia, U.S.A., is collaborating in the venture. Apart from providing the technical know-how, the U.S. firm will participate in the capital and assist in arranging foreign exchange. Machinery is likely to be imported from West Germany. The plant is expected to go into production by about the middle of next year.

Tungsten Carbide from Saka Industries

Reliable reports indicate that the Government of India has approved the scheme submitted by Saka Industries, Delhi, for manufacturing tungsten carbide products in collaboration with the West German firm of Fried Krupp Widia Fabrik. The factory will be located in Bangalore, and the plant will have an annual production capacity of 24 tons. Only two units have been licensed to manufacture tungsten carbide products up to now. These are India Hard Metal Corporation in collaboration with Wickman Ltd of the U.K. and Sandvik Asia Ltd, Poona, in collaboration with Sandvik of Sweden. The sanctioned capacity of the two units is 40 tons a year. The demand for tungsten carbide products is expected to rise to 80 tons to 90 tons a year by the end of the third plan period. Accordingly, the Licensing Committee has approved the scheme submitted by Saka Industries of Delhi. The project is estimated to cost about Rs. 1 crore, of which Rs. 50 lakhs are likely to be spent on plant and machinery. Imported machinery is valued around Rs. 40 lakhs. The foreign exchange required for importing capital goods would be fully met by foreign investment and long-term loans. The latter would not be repayable before 1966 by which time exports would have been established. The raw materials required during the first two stages of the phased programme would be financed by the foreign collaborator to be repaid by the export of tungsten ore from India to West Germany and by the export of finished goods. Krupps are guaranteeing the export of 50 percent of the production. This will leave a substantial net foreign exchange earning after the repayment of the loans. At the prevailing international prices, the export of 12 tons of tungsten carbide can fetch foreign exchange worth about 7.5 million Deutschmarks. The new Company, which will undertake the project sponsored by Saka Industries, will have an authorised capital of Rs. 1.2 crores, of which Rs. 35 lakhs is expected to be issued in the first instance. Krupps will take up 60 percent of the Company's paid-up capital with a know-how and research fee of Rs. 1.23 lakhs a year for the first four years and at Rs. 2.5 lakhs a year for the next six years with provision for royalty on exports at 5 percent, taxable.

I.F.C. Expands Activities

In his address from the chair at the annual general meeting of the Industrial Finance Corporation a few days ago, Mr. K. P. Mathrani presented a picture of steady progress during the year ended June 1961. (A fuller version of the speech appears on another page of this week's Capital.) Not only have the trading result improved substantially, but there has also been an appreciable diversification of the I.F.C.'s activities. Consequently, its income is derived from several sources, although interest on loan continues to be the main one. This has gone up by 13.3 percent, from Rs. 2.25 crores to Rs. 2.60 crores. Income from commission on the underwriting of shares and guaranteeing of deferred payments has increased at a much faster rate—by over 120 percent from Rs. 4.60 lakhs to Rs. 10 lakhs. The Corporation has earned a handsome profit by the sale of some of its investments, and for the first time, it has received a dividend on the shares it holds.

Loans approved during the year totalled Rs. 21.21 crores, a record in the 13 years of the Corporation's life. It is Rs. 3.29 crores more than the previous year's figure. Loans sanctioned during the past 13 years totalled Rs. 105.82 crores, out of which a sum of Rs. 57.35 crores has been disbursed. In December last year, Parliament amended the Industrial Financial Corporation Act,

enabling the Corporation to guarantee (a) deferred payments to machinery suppliers both within and outside India; (b) loans raised by industrial concerns from scheduled banks or State co-operative banks; and (c) loans raised and credit arrangements made in foreign currency by industrial concerns with any bank or financial institution outside India. The amended Act has authorised the Corporation directly to subscribe to the stocks and shares of industrial concerns as also to convert at its option loans granted or debentures subscribed to, into stocks or shares. "These are useful facilities which have been eagerly sought for by industrial concerns," Mr. Mathrani said.

Discussing the Corporation's investments, the chairman said that the sugar industry continues to top the list of borrowers. This is mainly due to the high priority given to the establishment of sugar factories in the co-operative sector. Paper and textiles occupy second and third places. A loan of Rs. 20 lakhs has been sanctioned to a coal concern for the first time. Twelve underwriting proposals were approved during the past year for preference and equity shares totalling Rs. 2.32 crores, compared with Rs. 1.87 crores in the previous year. These came from a variety of industries including cement, glass, pottery, basic metals, basic industrial chemicals, fertilisers, textiles and rubber. Requests for guaranteeing deferred payments to the suppliers of foreign machinery also showed a significant increase. Of the 14 proposals received, the Corporation approved nine for a sum of Rs. 13.29 crores, bringing the total so far to 20, and the amount to Rs. 25.47 crores. The Corporation also participated in a few joint ventures in India including one with the Commonwealth Development Finance Company of the U.K. and the Industrial Credit and Investment Corporation of India, and another with the I.C.I.C.I. only. "It is our intention progressively to broaden the fields of co-operation between ourselves and other financial institutions, both at home and abroad," the chairman said. In order to expand its operations in providing foreign currency credit, negotiations for a new loan of \$20 million from the U.S. Development Loan Fund are in progress, the first one of \$10 million having already been exhausted.

Alloy Steel Plant from Vummidiars

The Madras firm of Vummidiars (Manufacturers) Private Ltd proposes to set up a sponge steel plant as a base for the alloy steel plant in collaboration with Jessop Steel Corporation of Washington. The plant, which will be located in south India, will have an annual production capacity of 7,000 tons to 10,000 tons of finished alloy steel. The industrial licence has already been obtained, and the promoters hope to secure all their requirements of scraps locally. The factory will produce super alloys containing high percentage of allowing elements such as tungsten, nickel, chromium and cobalt. The value of the super steels ranges from Rs. 3,000 to Rs. 10,000 a ton. The present installed capacity for manufacturing alloy steels is around 4,000 tons while 30,000 tons are being imported to meet the most urgent needs. The requirements of alloy steel by 1965 are expected to increase to around 200,000 tons. The phased programme of the south Indian plant will be spread over a period of five years and production is likely to start in about two years' time. The Company will have an authorised capital of Rs. 5 crores, of which Rs. 2 crores will be issued initially. The promoters, directors and their friends will subscribe Rs. 25 lakhs. The Madras Government is reported to have expressed its willingness to subscribe Rs. 25 lakhs. The foreign collaborators are expected to contribute sufficient equity capital for meeting the cost of imported machinery, and the balance will be offered or public subscription. The Industrial Finance Corporation is to be approached for a sizeable loan capital.

Teekoy Rubbers Pays Again

The dividend from the Teekoy Rubbers (India) Ltd is lower at 4 percent for the year ended March 1961, against 6 percent for 1959. But the fact that the dividend is being paid after passing the one for 1960, has created mild satisfaction among investors. The net profit amounts to Rs. 1.38 lakhs, against Rs. 45,706 in the previous year. With Rs. 4,534 brought forward and with Rs. 16,192 transferred from replacement reserve towards the replanting expenses incurred during the year, the available surplus is Rs. 1.59 lakhs. Out of this, taxation provision amounts to Rs. 65,000 (against Rs. 43,000). The dividend on the preference shares at 6 percent, subject to deduction of tax, including the short provision for income tax on the preference dividend in the previous year, amounts for Rs. 36,750. The ordinary dividend of 4 percent, subject to deduction of tax, amounts for Rs. 40,000. The balance of Rs. 16,925 is carried forward.

The rubber crop for the year amounted to 182,393 kilograms, against 178,701 kilograms during

the previous year. The estate cost was Rs. 2,043 kilogram, compared with Rs. 2,144 a kilogram in the previous year. The average price realised was maintained at about the previous year's rate. During the year, replanting was carried out on a further area of 85 acres. The total area so far planted is 255 acres. The Government of India has fixed from 1st April, 1961, the cess on rubber at 30nP a kilogram to be collected from the manufacturers, instead of 13.80nP a kilogram collected from the producers previously. The controlled price of rubber remains reduced to that extent from Rs. 171.63 to Rs. 164.80 a 50 kilograms. The enhanced cess does not, however, affect the net price to the producer.

Rights from Aluminium Industries

The chairman of the Aluminium Industries Ltd said at the recent annual general meeting that the Company, in tackling the resources problem, will keep in mind the interests of shareholders no less than the exigencies of company finance. He added that a fresh capital issue might prove inevitable in the future. The fact that a rights issue may become inevitable has caused some satisfaction in the market. Meanwhile, the renewed firmness of the shares of Aluminium Industries was due to better enquiry on the prospects of a capital issue. The production during the year was quite impressive. There has been an interesting revival in the demand for tools and accessories, the chairman said. Total sales amounted to Rs. 4.35 crores, against Rs. 3.41 crores in the previous year. This is mainly due to the Company's Hirakud unit being in fuller commercial production than in the previous year. The net profit is, however, slightly lower than in the previous year due to competition in the market.

The growing demand for covered conductors has encouraged the Company to increase the installed capacity of the Kundara unit. This has also provided the incentive to Aluminium Industries for establishing one more unit in Hyderabad. The latter will be commissioned before the end of the current financial year. The high-tensile-steel-core-wire factory is in the final stages of erection in Kundara, and this will be commissioned before the end of the present calendar year. The Company already holds an industrial licence for manufacturing "Solidal" underground cable, and the import licence for the equipment is now awaited. The chairman emphasised the need for ploughing back the resources, which Aluminium Industries has been doing by practising restraints on dividends. The enlarged production of bare conductors since the Hirakud unit went into production, the raising of rod-rolling and covered conductor capacity and the erection of high-tensile-wire plant in Kundara, have cumulatively imposed considerable strain on the Company's finances.

Athimattam Rubber Earns More

The working of the Athimattam Rubber Co Ltd for the year ended February 1961, shows a net profit of Rs. 21,147, against Rs. 3,501 in the previous year. With Rs. 2,359 brought forward from the previous year, the total amounts to Rs. 23,506. Out of this, Rs. 2,487 has been written off being the debenture issues (1959) expenses. A sum of Rs. 2,000 is transferred to reserve for doubtful debts. The dividend of 5 percent (against nil) accounts for Rs. 16,250. The balance of Rs. 2,769 is carried forward.

During the year, the Company sold 33.77 acres of coconut and pepper plantations for Rs. 43,660. The total crop for the year amounted to 157,853 lbs. The directors have decided to redeem the debentures in 1961 at a premium. Meanwhile, the Company has entered into an agreement for the sale of 200 acres consisting of the coconut and pepper-planted area and the less yielding rubber and rocky area of the Little Flower Estate for Rs. 1.60 lakhs.

Forest Industries Cuts Dividend

During the year ended March 1961, the Forest Industries (Travancore) Ltd has earned a net profit of Rs. 6.98 lakhs, against Rs. 3.87 lakhs in the previous year. With Rs. 2,458 brought in, the total available for appropriation is Rs. 7 lakhs. Out of this, income tax provision, including the additional provisions for 1957-58, 1958-59 and 1959-60, amounts to Rs. 3.38 lakhs. The dividend at 12 percent, subject to deduction of tax (against 20 percent), amounts for Rs. 1.20 lakhs. The balance of Rs. 2.43 lakhs is transferred to general reserve.

During the year, 72,273 tons of firewood were delivered to the Fertilisers and Chemicals (Travancore) Ltd. The latter has informed Forest

Industries that it may require firewood only up to the end of June 1962. The Government of Kerala appointed a special committee to explore new avenues of business for the continued working of the Company and to prepare a scheme for expansion and diversification of its activities. The committee had submitted a detailed report to the State Government, recommending the establishment of a particle board factory and a well-equipped timber workshop. The director state that the Kerala Government has approved the schemes. The two schemes will involve an investment of about Rs. 50 lakhs. The directors feel that these schemes will not only compensate the Company for the loss in revenue arising out of the eventual stoppage of firewood supplies to the Fertilisers and Chemicals (Travancore) Ltd, but will also open new lines of profitable activities. Under the circumstances, they have decided to go ahead with the schemes. The committee had also urged that about Rs. 2.5 lakhs be reserved from the trading profits of the Company for 1960-61 and 1961-62 towards development activities, and the Government has accepted the proposal. As Forest Industries has transferred a substantial amount to general reserve from the profits of this year, the dividend of 12 percent should be considered satisfactory, although it is lower than that of the previous year. The shares of the Company are now quoted in the market at Rs. 2.86 c.d. The current yield is over 8 percent. The outlook for the future depends to a large extent on the prospects of the proposed expansion and diversification schemes.

Bajaj Auto to Expand

Speaking from the chair at the annual general meeting of Bajaj Auto Ltd in Bombay a few days ago, Mr. Kamalnayan Bajaj outlined the Company's expansion programme. (A fuller version of the speech appeared in last week's issue of Capital.) Bajaj Auto has applied for the expansion of its annual production capacity to 15,000 scooters and auto-rikshas on a single shift and 24,000 on a double-shift basis. The idea is to commence production from the expanded capacity by early 1962 with 45 percent indigenous content. Enough land has been acquired in the Pimpri-Chinchwad industrial area, near Poona, to provide for future expansion. The new factory building will be ready within the next few months. With the progress of industrialisation in India, Mr. Bajaj said, the demand for scooters is growing fast. As distances in city areas are increasing, they are replacing bicycles. The demand for scooters and three-wheelers has always outstripped production, so the buyers have to wait for months. Bajaj Auto has appointed dealers for scooters in only 15 towns so far on account of the limited production and inadequate import licences for spare parts. When it recently commenced booking orders for auto-rikshas in Delhi, Ahmedabad, Poona and Bangalore, almost one year's production was booked in a few days. Mr. Bajaj said that the third plan has fixed the targets for installed capacity at 60,000 and for production at 50,000 a year for scooters, motor-cycles and three-wheelers. But the demand for these vehicles will be easily about 100,000 a year at the end of the plan period. The Planning Commission has fixed a production target of 50,000 probably because of the shortage of foreign exchange. But the difficulties in increasing production could be eased if foreign exchange is conserved by raising the installed capacity of the existing manufacturers, instead of licensing more units of smaller capacity. Mr. Bajaj urged the establishment of ancillary and auxiliary industries to increase the production of components.

Cloth Output and Stocks

The production of cotton textiles by the mills in August is provisionally placed at 439 million yards, against 446 million yards in July and 435 million yards in August 1960. The August figure brings the total production in the first eight months of the current year to 3,434 million yards, which is 97 million yards more than in the corresponding period of 1960. While the cloth output has suffered a slight setback in August, the production of yarn at 167 million lbs shows a rise of 8 million lbs over the previous month's output and of 17 million lbs over that in August 1960. The production of yarn in the first eight months of 1961 amounts to 1,238 million lbs, against 1,140 million lbs in January-August 1960. Cloth stocks held by mills have been gradually mounting since the end of April. The August-end figure of 367,300 bales (1,600 yards each) shows a rise of 28,000 bales over the July-end figure. The unsold stocks recorded an increase of 7,600 bales in August from 154,800 bales to 162,400 bales. The increase is marked in the case of stocks "sold but delivery not taken", the figure being up from 184,500 bales to 204,900 bales. Total stocks with the mills have increased by 127,500 bales since the end of April from 249,800 bales to 367,300 bales. The accumulation of stocks

with the mills cannot be explained in terms of larger production and unsatisfactory export performance. The main reason is the somewhat slack off-take of cloth both by consumers and the trade, for which the industry itself is largely to blame. The latter has introduced innumerable new varieties of cloth in order to secure higher stamped prices. According to the trade, mills have been able to secure an increase of 5 percent to 10 percent in prices by resorting to the manufacture of new varieties. Their introduction is said to have created a situation akin to a glut in most of the new varieties which are not in demand, and a shortage in old varieties which continue to enjoy good demand. Consumers are said to be resisting higher prices of new varieties. This, in turn, has made the wholesale and semi-wholesale traders cautious in negotiating fresh business with the mills. The trade is inclined to the view that mills will have to reduce their prices if they wish to encourage the sale of cloth.

Raw Materials for Re-rollers

In spite of the increase in steel production, many large consumers are still facing shortages. The re-rolling industry is one of them, and the supply of its raw material—steel billets—is much below requirements. Speaking from the chair at the annual general meeting of the Steel Re-rolling Mills Association of India in Calcutta recently, Mr. B. P. Khaitan said that taking the output of billets at the existing ratio of 15 percent of the total ingot production, the supply at the end of the third plan would be 1.5 million tons. There would thus still be a deficit of 1 million tons, as the re-rolling industry's requirements alone would have risen to over 2 million tons by then. The chairman felt that the country's integrated steel plants should "take a greater share of the responsibility in sustaining and developing the re-rolling sector." They can do this by allocating their billets more equitably between their finishing mills and the re-rollers. In each of the integrated plants excepting Rourkela, modern high-performance continuous billet mills have been installed. "They can perhaps be used with advantage to roll additional tonnages of billets for our industry by further intensification of production in their blast furnaces and steel melting shops," Mr. Khaitan suggested. As Bokaro has been designed to produce mostly flat products, the fifth plant in the public sector, for which Neyveli is being considered as a site, should produce more billets. Referring to the charge that the industry's production costs are higher than those of the integrated plants, Mr. Khaitan said that given the same volume of raw materials as the merchant mills of the main producers, the costs of the re-rollers would compare very favourably. The re-rollers produced 910,000 tons of finished steel last year, mostly bars and rods, but member mills with suitable equipment have plans to roll more of special sections.

Export Quota for Bengal Deshi

The cotton trade has every reason to feel happy over the Government's decision to allow 150,000 bales of Bengal Deshi cotton for export on a first-come-first-served basis, subject to an individual ceiling of 5 percent of the quantity available for export after deducting the quantity reserved for co-operative societies. The share of the latter situated in areas growing Deshi cotton is fixed at 6,250 bales. The quota provides an opportunity for a greater number of shippers to participate in the business as the clause relating to the eligibility for export on the basis of performance has been extended to cover a period up to 31st August, 1961, against 31st August, 1958. Another significant feature of the new policy is the provision to issue allotment letters on registration of sales by exporters, instead of on the presentation of shipping bills as was the practice hitherto. This will ensure greater facilities for exporters to adjust their shipments according to the needs of foreign buyers. The export quota is valid for shipment up to the end of March 1962. Since the size of the present quota is large, overseas buyers are assured of adequate supplies, and the lengthy shipment period will enable them to adjust purchases according to their requirements. Besides, foreign buyers have been given a wider choice, since there is no restriction on the quality of Deshi cotton to be exported. While the official announcement mentions the export quota at 150,000 bales, the trade notices refers to a quantity of 125,000 bales. It appears that the balance of 25,000 bales has been set aside to get over the difficulty arising from the partial allotment of quotas on the last day when the ceiling is reached. In view of the large size of the export quota and the lengthy shipment period, overseas buyers do not appear to be in a hurry to enter into large commitments. But enquiries with the trade indicate that business for 30,000 bales to 40,000 bales has already been concluded with Japan. Exporters seem fairly optimistic about using the

Presiding over the recent meeting of the Indian Central Cotton Committee in Bombay last week, Mr. V. Shankar, vice-President of the Indian Council of Agricultural Research and Special Secretary to the Central Ministry of Food and Agriculture, discussed the developments in the 1960-61 cotton season. The cotton crop had been officially estimated around 5,395,000 bales—a record since the partition of India. The production of long-staple cotton reached a peak of 2,440,000 bales, against

In his address from the chair at the annual general meeting of the Maharashtra State Co-operative Bank in Bombay recently, Professor D. R. Gadgil remarked that the Reserve Bank is delaying the implementation of the recommendation of the Vaikuntbhaji Mehta Committee for a more liberal supply of agricultural credit by the central bank, although it had accepted that recommendation in principle. As co-operative banks can make rapid progress only if more credit is provided by the Reserve Bank on the lines recommended by the Committee, the former should introduce new standards of lending without further delay. It is equally necessary that there should be greater co-ordination in the operations of the co-operative financial institutions and the departments of the Government concerned. In Maharashtra, this co-ordination is now more evident

Accident premiums are growing faster than fire or marine and now give nearly 60 percent of total non-life premium—in 1952 they still gave less than half (49.2 percent); fire 38.4 percent, marine 12.45 percent; in 1953 they gave rather more than half (51.5 percent, fire 37.6 percent, marine 10.9 percent), in 1959 they gave 58.65 percent, fire 32.6 percent, marine 8.74 percent, and last year, the figures were 59.6 percent, 31.8 percent, 8.7 percent, respectively. In spite of these changes in relative weight, all three accounts have achieved some increase in premiums, accident an increase of 7.85 percent last year, compared with a rise of 6.5 percent in 1959, and an average annual increase of 10.3 percent over the six years before that (the five-year increase to date is 62.6 percent, the eight-year 106.4 percent), fire, an increase of 3.4 percent last year, compared with an increase of 5 percent in 1959 and an

Bright idea!

"—We'll go to Kalyani?" —"But is it really a nice place?" —"go there and have a look at the open roads, green parks, and clean, quiet surroundings. Just the things we love."

"—But what about the other things we love no less?" "—you mean electricity, filtered water, underground sewerage, school and hospital and things like that? Surely, Kalyani has them all." "—And transport to Calcutta?" "—Oh, don't worry. 19 trains a day and what's more, these are soon to be electrified. And the way industries are growing up at Kalyani very soon people will have prospects of employment right there. And then, do you think, we would care any more about this dirty, noisy, suffocating Calcutta? It'll be simply glorious to live at Kalyani."

KALYANI
FOR A PEACEFUL FUTURE

Contact: Public Relations Officer, Kalyani, District Nadia or Development Department, Rajbhowan, Calcutta, or Kalyani Sales Office, 188A Rashbehari Avenue, Calcutta 29.

Issued by the Government of West Bengal

1,860,000 bales in 1959-60. The yield an acre of lint cotton around 111 lbs was yet another record. It was significant, Mr. Shankar said, that the year in which these records were established was the final year of the second plan. But it is even more significant that the 1959-60 crop was only 3,750,000 bales and that the output in the 1961-62 season—the first year of the third plan—is currently estimated around 4.8 million or 4.9 million bales. These figures should serve as strong reminders to the Committee that in spite of the increased irrigation facilities, improved supply of better seeds and fertilisers and pest control measures, the production of cotton continues to be dependent mainly on the vagaries of the monsoon. Mr. Shankar's assurance that in future the Government would declare the cotton price policy early in the season is welcome because there is little sense in announcing a price policy when sowings have been completed. But the announcement of the price policy alone cannot help bring about increased production. The need for sustained efforts to increase the yield an acre cannot be over-emphasised, but the steady decline in the cotton acreage over the past few years suggests that cultivators consider cotton growing less remunerative than other crops. Until the production of cotton becomes as profitable as other commercial crops, one cannot expect any material improvement in the cotton output.

Policy on Vanaspati Industry

The Tungabhadra Industries Ltd, Kurnool (Andhra Pradesh), Berar Oil Industries, Akola, (Maharashtra State) and Shri Jagdish Oil Industries Private Ltd, Bombay, have recently applied to the Central Government for permission to expand their production capacity for manufacturing vanaspati. Tungabhadra Industries wanted to raise its capacity from 58 tons to 110 tons a day, Berar Oil Industries from 54 tons to 115 tons a day and Jagdish Oil Industries from 20 tons to 30 tons a day. All the applicants claimed that they have sufficient neutralising and bleaching capacity for the expanded output, so they asked for permission to install additional hardening and deodorising equipment. The expansion schemes do not involve any foreign exchange expenditure. But all of them have been rejected by the Government on the ground that the expansion by installing additional hardening plant to balance the surplus refining capacity is not in line with the Government's policy on the vanaspati industry. The overall installed capacity of the industry (including idle factories) amounted to 556,000 tonnes on 1st June, 1961. The effective installed capacity is estimated at 487,000 tonnes. The demand in 1960-61 is placed around 387,000 tonnes. The 1965-66 target for the industry has been set at 559,000 tonnes. Since the installed capacity is considerably higher than the actual production, further expansion of the overall capacity is not allowed by the Government. However, the official policy aims at a fuller utilisation of the existing capacity. So the expansion of existing factories or the putting up of new plants is allowed if it is done by using the machinery lying idle, subject to certain conditions.

Oilseeds Exports Fall

The export of oilseeds, vegetable oils and oilcakes totalled 650,766 tons in 1959 and earned Rs. 36.06 crores of foreign exchange. In 1960, exports declined to 579,476 tons, and they were valued at Rs. 31.19 crores. Shipments from Bombay for the first nine months of the year indicate that exports are likely to show a further decline in 1961. Only cottonseed cake has fared better at 20,703 tons, against 2,187 tons in the corresponding period of last year. Groundnut extractions are down from 90,829 tons to 86,693 tons and expellers from 17,239 tons to 11,076 tons. But the shortfall in groundnut oilcake exports from Bombay might be offset by increased shipments from other ports, particularly from Saurashtra. Linseed cake has suffered a sharp decline from 37,142 tons to 8,863 tons. Oils have fared the worst, with castor oil shipments down from 42,590 tons to 20,400 tons, groundnut oil from 2,002 tons to 158 tons and linseed oil from 5,161 tons to 714 tons. Shipments of groundnut H.P.S. are also lower at 10,130 tons, against 12,480 tons. At a time when India is facing a foreign exchange shortage, the decline in exports must be viewed with concern.

In his speech at the recent annual general meeting of the Indian Oil and Produce Exporters Association, Mr. Ratilal M. Gandhi, president, referred to the shippers' complaint about the deferred rebate system. He offered a concrete suggestion that the shipping Conference should keep in abeyance the deferred freight rebate system only for one year. Thereafter, the position should be examined by the Government in consultation with the shipping companies and exporters. Shippers are not satisfied with the system of pooling freight by the shipping companies, for

sailing opportunities have been reduced one to lesser frequencies. There have been instances when shippers have not been provided with adequate freight space in good time. Sometimes, even cargo is shut out with the result that shippers are put to considerable hardship. Mr. Gandhi's plea for the removal of shipping and freight difficulties will be widely endorsed. His other suggestions about the extensive banking and bulk storage facilities at the ports at nominal charges, special ocean freight rates, railway freight concessions for movement of goods meant for export, refund of local and other taxes, retention of currency in some selected cases and encouragement to export de-oiled rice bran merit careful consideration. But they cannot solve the basic problem of continued wide disparity between Indian and world prices. The position is complicated by the fact that the rival exporters of oilseeds and oilcakes continue to sell their goods in international markets without much consideration for their internal prices. In the changed pattern of world trade, it is doubtful whether individual effort can bring about the desired increase in exports. So the Government needs to adopt a bold and imaginative export policy.

Mr. Gandhi welcomed the Government's decision to adopt a longer-term policy up to June 1962 for exporting H.P.S. groundnut kernels, although he suggested an upward revision of the ceiling. The ceiling of 10,000 tons announced recently is too small in view of the keen foreign demand and comfortable supply. A further quota will enable the trade to maintain the continuity of export business on a longer-term basis and also earn valuable foreign exchange. Mr. Gandhi also urged the Government to finalise the export policy for groundnut oil without further delay. With a substantially larger groundnut crop this year, India will be in a position to spare a sizeable quantity for export. While pleading for an early announcement of the export policy, the president said that the trade which has years of experience, should not be by-passed in the export trade of groundnut oil. The fact that the Government has decided to canalise groundnut oil exports through the

PUJA HOLIDAYS

On account of the Puja holidays, there will be no issue of CAPITAL on 19th October, 1961. The first issue to be published after the holidays will be dated 26th October, 1961.

State Trading Corporation has been widely talked about in the market circles. Reliable reports indicate that the Corporation has already made arrangements with the co-operative societies in Saurashtra which are engaged in crushing groundnut.

Sulphuric Acid from Tata Chemicals

The Tata Chemicals Ltd proposes to set up a plant in Mithapur for manufacturing 9,000 tons of sulphuric acid a year. It will use both sulphur and gypsum for manufacturing it. While gypsum will be available from the Company's salt works, 2,500 tons of sulphur will have to be imported every year to feed the plant involving a recurring annual expenditure of Rs. 6 lakhs. The machinery will be procured from the indigenous sources, but certain components, which are not available within India, will have to be imported. These are estimated to cost only Rs. 5 lakhs. "The entire project is to be financed from Tata Chemical's internal resources. Of the production of 9,000 tons a year, the Company's own requirements are estimated around 6,800 tons, leaving 2,200 tons to be sold in the market. At present, the manufacture of sulphuric acid is being licensed where the acid is mainly required for internal use because the existing installed capacity and the capacity licensed and under implementation add up to 1,340,214 tons. This is considered to be sufficient for the present and is not much below the third plan target of 1,500,000 tons. However, the project of Tata Chemicals has been approved by the Government. The Government feels that the implementation of the scheme would help in the development of a new process for manufacturing sulphuric acid by using indigenous available gypsum and thus pave the way for its production on a large scale. Besides, the factory being situated near one of the richest deposits of bauxite in India and being near to the port of Okha, will offer scope for exporting alumina and aluminium sulphate produced out of local bauxite and sulphuric acid.

Antibiotic Plant for U.P.

Mr. Nakul Sen, chairman and managing director of the Indian Drugs and Pharmaceuticals, recently inaugurated the project office of the Rs. 16-crore antibiotic plant in Rishikesh. The Central Government is establishing four factories at a cost of Rs. 40 crores to achieve self-sufficiency in pharma-

ceuticals. The Rishikesh project is the biggest of all and will manufacture many kinds of pharmaceuticals, specially antibiotics. A factory in Hyderabad will manufacture sulphur drugs, vitamins, medicines for T.B. and some surgical instruments. The Rishikesh plant which will go into production in 1964 is expected to have an annual turnover of Rs. 25 crores. The project will employ 4,000 workers. Rishikesh has been selected as the site because of the availability of cold, clean and dust-free water from the Ganga, power from the Yamuna hydel scheme and other facilities, including air of low bacterial count and dust. The raw materials and solvents required for the industry are also mostly of agricultural origin such as milk sugar, glucose, starch, corn-steep liquor, oil and oilcakes, acetic acid, butyl alcohol and butyl acetate in addition to the inorganic acids, salts and alkalies which are already available in sufficient quantities. While the antibiotics plant is a Central Government project undertaken with Russian collaboration, the U.P. Government has its own scheme for establishing a factory for the production of plant drugs or phyto-chemicals in Rishikesh. The soil and climatic conditions of U.P. are suited for the cultivation of a large variety of medicinal plants in the plains, the Tarai regions and the Himalayan hills. Technical problems could be handled by the Central Drug Research Factory in Lucknow or the National Botanical Gardens in Allahabad. A working group on this project has estimated the cost of the factory at a little over Rs. 6 crores.

Conserving Forest Resources

Delivering the convocation address at the Forest Research Institute, Dehra Dun, Mr. S. K. Patil, Union Minister for Food and Agriculture, made a plea for the inclusion of forests, like education, in the concurrent list of subjects. In spite of the enunciation of a national forest policy in 1952, he said, no appreciable progress has been made in the conservation or improvement of forest resources. The policy statement of 1952 laid down that one third of the land area should be under forests, but the actual proportion today is less than 22 percent. Mr. Patil said that far from there being any scope for extensive agriculture, there is a strong case for taking away more land from agriculture for forests. On the contrary, numerous applications for release of forest land for agriculture were being considered, and if this situation continued the incidence of floods and soil erosion would increase to alarming proportions. The third plan provides an outlay of Rs. 51 crores for forest development programmes. According to Mr. Sagreya, president of the Forest Research Institute, there is also a scheme for the establishment of a national history museum of animals, birds and reptiles. A project has been drawn up for pre-investment surveys to assess forest resources for augmenting supplies to existing industries. It is estimated that the requirements of industrial wood amount to 4.5 million tons at present, and would increase to 9.5 million tons in 1975. As new plantations take 25 to 30 years to develop, in the ordinary course, production may not increase beyond 5.5 million tons by 1975, thus leaving a gap of 4 million tons. The pre-investment surveys are intended to secure a comprehensive appraisal of existing forest resources. The survey will take into account the requirements of various industries over the next 15 years or more.

COMMERCIAL SELF-GOVERNMENT

CONSIDERING how strongly and effusively the establishment of local self-government for principal affairs has been heralded throughout the length and breadth of India, although it was at its initiation and still is in practice little better than a tentative, but we hope, successful experiment, it is curious that neither the Government nor those immediately interested, viz., the commercial community, should have taken heed of a very much wider question involving similar principles. We refer, as the above heading shows, to Commercial Self-Government. Under the laws which at present govern commerce in India, it is no exaggeration to assert that they are a constant source of complexity, delay and needless expense. By their complexity, which results generally from the legal interpretation of disputes, no one can say what is the value or meaning of the most ordinary contract; by the law's delay, the protraction of the most ordinary suit may be indefinitely prolonged; by the expense, disputants are urged into dishonest compromise, and not infrequently into losses far exceeding their means. The law in fact, or the interpretation of it in the hands of astute lawyers, tends to vitiate and demoralise commerce to an extent which is detrimental to progress and enterprise. But let it be understood that this is not the fault of the law or the lawyers, but of those engaged in commerce.

A Ditcher's Diary

OVER THE YEARS, I HAVE WATCHED THE STEADY decline in popular enthusiasm over the proceedings of the Indian National Congress. Let alone sessions of the All India Congress Committee, even the annual jamborees are now tepid affairs. The Press still goes through the ritual of sending special representatives—or correspondents. I am still not familiar with the new caste hierarchy in my profession—but there is a certain weariness about it all that can no more be concealed. I am prepared to take a small bet that if for some reason Mr. Nehru is unable to attend an A.I.C.C. meeting, very few will care to turn up and the public galleries will be just about empty. I had expected that the imminence of the general election might put some urgency in the Madurai session. A friend more familiar with Party goings-on tells me that it is the electoral obsession of every Congressman that robs all public occasions of all interest. The list of Party candidates is being hammered out in private parleys. Then why waste your time making public speeches at Congress sessions, especially if these are held outside your constituency? Your own beat will demand all the resources of your larynx. But Madurai suffered from other factors also. Everything on every subject had been said earlier—national integration, the election manifesto, the Congo and what have you. Yet, a friend just back from Madurai tells me that he has returned with a new admiration for Mr. Nehru. The Prime Minister, he tells me, said nothing new. (That I knew.) But Mr. Nehru seemed the only man in the congregation who believed in what he was saying. When he was speaking of national unity as something that has always been there, despite frequent stresses, he seemed sincerely to believe that there was in fact something transcending strident differences. He spoke of socialism with a passion that has not been seen in Britain or Germany since perhaps the 'twenties. A facile comment on this would be that Mr. Nehru has not grown since the 'twenties; but I am inclined to agree with my informant that Mr. Nehru retains a degree of idealism one would not expect in a man of his age and, more important, much frustrating experience. Whether idealism alone can solve India's many problems is another matter.

IF THERE HAD BEEN A MUSLIM CONVENTION, THERE had to be, I suppose, a Hindu Convention, whether one likes it or not. With one sentiment expressed at the Hindu Convention I am in full agreement. Somebody said that nobody need be ashamed of calling himself a Hindu; and nobody indeed need. It seems to me somewhat remarkable still that such a proclamation was considered necessary. Necessary it may yet have been for Mr. Nehru has often described himself as all sorts of things, including a pagan, but I cannot remember that, except in his Autobiography, he has called himself a Hindu. This is easily explained. His temperament is not essentially religious; he is, I imagine, something of an agnostic. Secondly, he remembers how his family had more than once been under attack from orthodox Hindus for its western ways; in *A Bunch of Old Letters* there is a superb piece from Pandit Motilal Nehru in which the old man writes in bitter agony of an election

campaign against him. Thirdly, Mr. Nehru is painfully conscious that any access of religiosity in the majority community frightens the minorities. The fact is that the Hindus are in an overwhelming majority; and they do not need to be afraid of anybody at all. The Congress hates to be called a Hindu body; and it isn't one; but so popular an organisation cannot help drawing the bulk of its membership from among the Hindus. Indian demography makes that inescapable. Secular the Congress must try to be; in the nature of things its policies cannot be inimical to Hindu interests, if such a distinct category be admissible at all. I can think of periods in Indian history when assertion of the Hindu entity was necessary. India is perhaps the only country in the world to remain predominantly Hindu after 900 years of Muslim rule. It seems to me quite possible that there would have been more Christians in India if the progressive leaders of the time had not given Hinduism a "new look" in the last century when western education was luring some towards Christianity. I see no comparable threat today. While in logic Mr. Nehru cannot question the right of the Hindus to have their own convention, it is not Hinduism that asserted itself in Delhi the other day. It is a certain aspect of Hinduism—orthodox and militant—that showed the flag, and the modern, liberal Hindu is wise to take timely note.

MR. LALBAHADUR SHASTRI'S SUGGESTION IN BOMBAY that the Indian Press should evolve a code of conduct for itself strikes me as somewhat irrelevant to the main problems of the Fourth Estate in this country. Compared with much of what passes for "popular" journalism in the West, the Indian Press is sober—and perhaps for that reason unbelievably dull. That a few journals here do from time to time violate the norms of decency in comment and coverage, I would not deny; but the Press as a whole errs, if at all, on the side of excessive timidity. Of codes of conduct, we already have too many, and they are often honoured more in the breach than in the observance; there is no evidence that multiplication would improve their effectiveness. And of the framers of these codes, the less said the better; they have at times been the incarnations of hypocrisy. The idea of a code of conduct has been tried in Britain, and a Press Council sits there as a guardian of newspapers' morals; but as far as I am aware its efforts have not been an outstanding success. It is hard to see what advantages the Indian journalistic climate offers which would ensure for a comparable code a better fate here. My experience is that the interpretation of codes and rules must necessarily be so loose and elastic that editors who so wish can always excuse their lapses on the ground that their primary duty is to keep their readers informed. From this point of view, in the newspaper world there is ultimately no real substitute for the editorial conscience. Mr. Shastri's idea seems to be that the Indian code should aim mainly at preventing the publication of reports which are likely to create division and disunity in the country. The proposal seems worthy enough, but may prove rather vague when translated into practice. Many newspapers, for instance, already subscribe to some sort of an

agreement that when they report on communal disturbances, they will not identify the communities involved. Yet, during the recent riots in U.P., how many of even the "responsible" newspapers managed to conform to this ideal in letter and spirit; from most of those I read, it did not take long to infer which community took the initiative to kill and burn in a particular town. But the most breath-taking of Mr. Shastri's suggestions—assuming that he has been reported correctly—is that journalists should not make alliances with groups or individuals. It may be a long time before anybody finds out what this means. If the idea is that journalists should be independent, I suppose one should not grudge the Home Minister the chance of airing once again a well-worn platitude. But if the alliances that are deployed include those which many newspapers have with the Congress Party, the words come oddly from one who has long been adept at organising journalistic support in electioneering strategy.

SINCE THE SCIENTISTS CANNOT AGREE ON THE amount of strontium-90 required in my system to kill me or maim me, I have decided not to spend sleepless nights worrying about radioactive fall-out in Calcutta. (According to an old crack, employees of All India Radio are perfectly safe from any dangers of radioactivity.) But fancy, for a second, the conservancy department of the Calcutta Corporation manfully coping with radioactive fall-out. The man in charge of the department, about whom the Deputy Mayor had some amazing things to say in print lately, sits down with his register, calls out the names—and then there is only a small crowd, demanding a day off every week, preferably on Sunday. One worker says to another: "Fall-out, fall-out, what is fall-out?" The superintendent is no wiser. And, of course, the State Government is still busy actively considering whether or not to supersede the Corporation. The chairman of the Congress Municipal Association, electioneering in Burdwan, hurries back to Calcutta, has a huddle with the Mayor, whereupon the latter decides to draft a letter of protest against some silly remarks by Sir Bernard Waley-Cohen. (It has not been brought to the Mayor's notice yet that Sir Bernard is no longer the Lord Mayor of London.) Somebody mentions to Mr. Atulya Ghosh that radioactive fall-out is around; and Mr. Ghosh promptly books a trunk call to Delhi. He can sort it all out with Dr. B. V. Keskar. Raillery apart, no enemy need bother much about setting life in Calcutta in complete disarray in a matter of minutes. He can leave it to Calcutta itself to do it quite effectively. Those who remember the exodus from Calcutta after a puny Japanese air raid can hardly forget the chaos into which the city was plunged. Conditions have since deteriorated to an extent that makes even a childish air raid redundant. Almost everything is on the verge of a breakdown; and I am exaggerating nothing. Professor Galbraith's continuing interest in the affairs of this city is the only hopeful sign; but points recently made in a leading article in *Capital* were confirmed by the U.S. Ambassador when he said in Calcutta on Monday: "We wish to be sympathetic; but the initiative should come from the Government of India." There was no plainer way of saying that there is more sympathy for Calcutta in Washington than in New Delhi.

INDUSTRIAL FINANCE CORPORATION OF INDIA

CHAIRMAN, MR. K. P. MATHRANI'S REVIEW

Speech delivered by Mr. K. P. Mathrani, I.C.S., Chairman, Industrial Finance Corporation of India, at the Thirtieth Annual General Meeting of the Corporation held on the 28th September, 1961.

Gentlemen, Owing to the fortuitous circumstance that I assumed my duties immediately on the expiry of the year 1960-61, it is my pleasure and privilege, soon after my taking over, to present to you the Annual Accounts of the Corporation and the Report of the Board of Directors for the year ending the 30th June, 1961. The printed copies of the Accounts and of the Report have been circulated to all the shareholders and I shall, with your permission, take them as read.

The year under report marks another stage in the economic development of the country—the completion of the Second Five Year Plan and the beginning of the Third. Your Corporation has played not an insignificant role in the achievement of one of the major objectives of the Plan, namely the establishment of a sound and progressive industrial economy. During this five year period, we sanctioned loans of the value of Rs. 62 crores and 61 lakhs and disbursed funds to the extent of Rs. 40 crores and 62 lakhs. Over the thirteen years of the existence of the Corporation loans aggregating Rs. 165 crores and 82 lakhs have been approved, a sum of Rs. 57 crores and 35 lakhs having been disbursed during the period. It shall be our aim to ensure that the Corporation makes a further useful contribution to the economic growth of India with the specific object of reducing our dependence on the import of manufactured goods as well as plant and machinery.

The year under review has been a particularly successful one for the Corporation. Our gross income reached the record figure of Rs. 2 crores and 99 lakhs as against Rs. 2 crores and 50 lakhs during the preceding year and our net profits, after making provision for income tax and corporation tax, came to Rs. 84.75 lakhs, showing an increase of near 42% over the previous year. It has, therefore, been possible for us to add substantially to our reserves which now stand at Rs. 1 crore and 69 lakhs, an increase of 69% on the balance at the end of the last year. We have, in addition, as a reserve for doubtful debts, a sum of Rs. 14.61 lakhs, which is considered to be more than adequate. In fact, a review of the reserve has shown a distinct improvement in the position of our bad and doubtful debts. As in the previous two years, we have provided a sum of Rs. 10 lakhs towards progressive liquidation of the subscription of Rs. 53.45 lakhs received by us from the Central Government for the purpose of paying the guaranteed minimum dividend on our share capital in the early stages of the establishment of the Corporation. This leaves a balance of Rs. 18 lakhs only which we plan to repay in the course of the next two years. In view

of the statutory restriction contained in the second proviso to Section 31 (2) of the I.F.C. Act the dividend for the year is being limited to the minimum guaranteed by the Central Government, namely 2½%.

Diversification of Activities

As will be evident from the Statement of Profit & Loss Account, there has been an appreciable diversification of our activities during the year, even though the interest on loans continues to be the major source of our income. While the income from this source has gone up by 13.37% from Rs. 2 crores and 25 lakhs during the previous year to Rs. 2 crores and 60 lakhs, that from commission on underwriting of shares and on guarantee of deferred payments has increased by over 120% from Rs. 4.60 lakhs to Rs. 10 lakhs; in addition, we have earned a handsome profit by sale of some of our investments. Moreover, during the year we also received, for the first time, a dividend on the shares held by us.

The total amount of loans approved by your Board of Directors during the year aggregated Rs. 21.21 crores, which is an all time record for the last 13 years of the Corporation's activities, and shows an advance of Rs. 3 crores and 29 lakhs over the figures for the last year of Rs. 17 crores and 92 lakhs. The Corporation received 76 loan applications during the year under review for an aggregate amount of Rs. 36.86 crores as compared to 38 applications for an aggregate amount of Rs. 17.54 crores received during the year 1959-60, indicating an increase in the volume of business handled by the Corporation of almost 100% over the previous year. The aggregate amount of loans sanctioned by the Corporation has now exceeded rupees one hundred crores, which may be considered as a landmark in the life of the Corporation. These noteworthy achievements have been facilitated by the fact that the Corporation has widened the scope of its activities by granting loans in foreign currency, guaranteeing deferred payments, underwriting equity and preference issues, and financing industrial projects jointly with other institutions, etc.

Joint Ventures

It may not be out of place to refer briefly here to some of the joint ventures with other financial institutions in which the Corporation has participated in recent months. The Corporation has for the first time sanctioned a loan of Rs. 60 lakhs to a concern engaged in the manufacture of paper jointly with the Commonwealth Development Finance Company Ltd., of the United Kingdom (CDFC) and the Industrial Credit and Investment Corporation of India Ltd. (I.C.I.C.I.). These two institutions have agreed to grant loans of \$525,000 (approximately Rs. 70 lakhs) and 1.47 million dollars (approximately Rs. 70 lakhs) respectively to meet the cost of the imported plant and

machinery while the loan of the Corporation is to be utilised for the rupee expenditure. In another case, the Corporation has agreed to grant a loan of Rs. 18 lakhs to a concern engaged in the manufacture of camphor and its allied products jointly with the I.C.I.C.I. which has granted to it a loan of Rs. 39 lakhs in foreign currency. In two other cases the Corporation has agreed to finance industrial projects jointly with two State Financial Corporations. I am sure you will agree with me that these are steps in the right direction. It is our intention progressively to broaden the fields of co-operation between ourselves and other financial institutions, both at home and abroad. This policy would also help to diversify the risks of investment and thereby render it possible to finance large requirements with a view to making a further contribution to the rapid industrialisation of the country.

At the last Annual General Meeting, mention was made of the efforts of the Corporation in obtaining credits in foreign currency and of the sanction by the Development Loan Fund of the United States Government of a loan of 10 million U.S. dollars to the Corporation for giving sub-loans to industrial concerns in the private sector in the country. How the fact that during the few months of the year after signing of the agreement the Corporation approved dollar sub-loans aggregating 9,023 million dollars (Rs. 4.23 crores) along with rupee loans of the order of Rs. 1.37 crores to 14 concerns engaged in the manufacture of a variety of products such as glass, paper, chemicals including fertilisers and electrical machinery, etc. Shareholders will be glad to note that our relations with D. L. F. in the matter of these loan operations have been very satisfactory and the Fund have agreed to raise the limit up to which the Corporation can grant sub-loans without their prior approval from \$250,000 to \$500,000. The Corporation for the close of the year, pending with it application for the dollar sub-loans equivalent to Rs. 5.62 crores. As we stand almost fully committed in respect of this first loan, negotiations for an additional loan of U.S. \$20 million from the D. L. F. are in progress and it is hoped that a further tranche of dollar loan will soon be available to us. Apart from the credit in dollars, possibilities of securing loans in other foreign currencies are also being explored.

Loan Operations

In regard to our loan operations, the sugar industry continues to lead the list of loans approved by the Corporation for the last three years consecutively. This is mainly due to the high priority given by the Corporation to the establishment of sugar factories in the Co-operative sector. The Corporation has so far sanctioned loans aggregating over Rs. 23.20 crores to 37 sugar co-operatives distributed all over the country and I am glad to say that the working of most of the factories which have gone into production, has been satisfactory. The success achieved in the establishment of sugar co-operatives has led to the promotion by the Corporation of co-operative projects in other lines of production as well. The Corporation has sanctioned loans amounting to Rs. 49.70 lakhs for the establishment of two co-operative spinning units. The loans approved by the Corporation for co-operative societies represent 22.4% of the total loans approved by it, which is indicative of the important role played by the Corporation in the promotion of this sector of the economy.

Next to sugar, paper and textiles occupied the second and third places in the quantum of loans approved by us during the year. For the first time since its inception, the Corporation has sanctioned a loan of Rs. 20 lakhs to a concern engaged in coal mining. It is also a matter for satisfaction that concerns from the less developed parts of the country are now utilising the facilities offered by the Corporation on an increasing scale. In this context you may be interested to note that 17 loans aggregating in amount to Rs. 5 crores and 93 lakhs were sanctioned to concerns located in the States of Andhra Pradesh, Assam, Kerala, Orissa, Rajasthan and Uttar Pradesh.

Progress in Underwriting

In the field of underwriting too, we have made much progress though our approach in this line has been somewhat cautious. The Corporation approved twelve proposals for underwriting of preference and equity issues of Rs. 2.32 crores (as compared to five proposals for Rs. 1.87 crores in the previous year), thereby bringing the total amount of underwriting approved by the Corporation to Rs. 4.30 crores. The applications for underwriting came from a variety of industries such as cement, glass, pottery, basic metals, basic industrial chemicals, fertilisers, textiles, rubber, etc.

As in the case of applications for underwriting, requests for guaranteeing deferred payments to the suppliers of foreign machinery also showed a significant increase over the figures for the previous year. The Corporation received 14 applications for an aggregate amount of Rs. 18.61 crores against 5 applications for Rs. 3.72 crores in the year 1959-60 and approved 9 such proposals to the extent of Rs. 13.29 crores. This brings the total number of proposals approved to 20 and the total amount to Rs. 25.47 crores.

It has been our practice to carry out regular inspections of the concerns financed by us and to obtain periodical progress reports from them. These inspections and reports I am glad to say, show that most of the concerns have done well in the quantum of production as well as sales during the year. Many of them earned sizable profits and were, with our prior approval, able to declare dividends in excess of 8% (subject to tax), which is our standard limit. An overwhelming majority of our borrower concerns met their obligations to us promptly in the course of the year. There has been a further improvement in the position regarding defaults in the repayment of principal and in the payment of interest. The percentage of defaults in the repayment of principal has declined from 4.3% in 1960 to 2.34% in 1961, while that in regard to interest has come down from 1.2% to 0.25%. The industrial review which I have given in an appendix to our Annual Report will give an idea of the progress made by the various industries to which we have advanced loans and it is a matter of satisfaction to us that they have contributed significantly in the rapid industrial progress made by the country.

Rupee Finance

The resources position of the Corporation the year in regard to rupee finance was quite

portable and we were able to meet the commitments for disbursement of sanctioned loans largely from our own resources supplemented by a net additional loan of Rs. 2 crores from the Central Government. In view of this we did not have to enter the market during the year for fresh issue of Bonds; but, as and when money market conditions justify our doing so, we shall go in for fresh issues of Bonds in order that we may be able to meet the demands likely to be made on us during the Third Five Year Plan period. We are also assured of further loans from the Central Government for meeting a part of our requirements during this period. In addition your Board of Directors have under their active consideration the issue of further share capital of Rs. 2 crores by the Corporation carrying a minimum guaranteed dividend of 4% per annum for which the approval of the Central Government has been obtained. This will enable the Corporation to broaden its capital structure and increase its borrowing powers in terms of Section 21 of the Industrial Finance Corporation Act, in order to meet the growing demands of industry for capital. Having regard to the progress achieved by the Corporation during the last 13 years of its working, I have no doubt that we can count upon your generous support when the issue comes in the market. While we have tried to ensure that the shareholders get an adequate return by way of dividend on the new issue, the question of enhancing the existing rate of dividend on the present paid-up capital will need an amendment to the I. F. C. Act. The Corporation is in correspondence on this subject with the Central Government.

In December last, Parliament enacted a bill incorporating certain amendments to the Industrial Finance Corporation Act, for which there was a pressing need in view of the changed conditions including the growing activities of the Corporation. These amendments enable the Corporation to guarantee (a) deferred payments to machinery suppliers both within and outside India, (b) loans raised by industrial concerns from scheduled banks or State Co-operative Banks, and (c) loans raised and credit arrangements made in foreign currency by industrial concerns with any bank or financial institution outside India. The Corporation has also been empowered to subscribe directly to the stocks and shares of industrial concerns as also to convert at its option the loans granted or debentures subscribed to by it into stocks or shares. These are useful facilities which have been eagerly sought for by industrial concerns and we have already, in one case, agreed to guarantee a loan of Rs. 1.47 crores in foreign currency. Another amendment of which I might make a specific mention is the deletion of the provision in Section 24 of the Act which required a guarantee of the Central Government in respect of accommodation by the Corporation exceeding rupees one crore to an individual concern. Since in all such cases the Corporation carefully examines the profitability of the project and the security available, the guarantee of the Central Government was hardly necessary. After the amendment, the Corporation is, however, required to obtain the prior approval of the Central Government before sanctioning the accommodation. This gives adequate opportunity to Government to scrutinise the merits of the proposal before any commitment is entered into by the Corporation.

Welcome Relief

As you are probably aware the Finance Bill introduced in the last Budget included an amendment to the Income Tax Act which gives us a welcome relief. The new clause (xiva) of Section 10 (2) of the Indian Income Tax Act provides that financial corporations which are engaged in providing long-term finance for the Central Government and have been approved by the Central Government can claim rebate in Income-tax in respect of amounts not exceeding 10% of the total income of each year which are transferred to a special reserve fund, so long as the aggregate of the amounts so transferred does not exceed the paid-up share capital of the institutions concerned. I am glad to say that this Corporation has been approved by the Central Government for the purpose of this concession, and we have been permitted this rebate in respect of our accounting year ended the 30th June, 1960, the assessment in regard to which has been very recently completed. We have, as a result, got a relief of nearly Rs. 5 lakhs in our assessment and we expect to be able to get a somewhat larger relief in respect of the assessment for the accounting year 1960-61.

Our relations with the various Chambers of Commerce and with our loanee concerns continue to be cordial. We have, during the year, nominated more non-officials on the Boards of our loanee concerns and I wish to thank them on behalf of our Board of Directors for the keen interest they have taken in the work.

Shri K. R. K. Menon who held the office of the Chairman of the Corporation since 18th September, 1955 with distinction and was largely responsible for the great strides made by the Corporation in the last six years proceeded on leave with effect from the 1st July, 1961 preparatory to the expiry of his tenure of office. On behalf of the Board of Directors, I should like to express our high appreciation of the valuable services rendered by him to the Corporation.

Before I conclude, you will, I am sure, wish to join me in expressing our warm appreciation of the co-operation and assistance made available to us by the Development Loan Fund and its officials. You would also like me to convey our sincere thanks to the members of our five Advisory Committees—non-officials and officials—for the very able effective assistance they have rendered to the Corporation. I should also like to thank my colleagues on the Board for their very valuable co-operation and wise counsels, and their generous response to the many calls made on their time. In this connection I should like to make a special reference to our two directors, Shri S. V. Ramamurthy and Shri S. C. Roy, who have been on the Board of Directors for two full consecutive terms and are due to retire this year. Finally, I have great pleasure in conveying the thanks of the Board of Directors, as well as my own, to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part. (This does not purport to be a record of the proceedings of the Annual General Meeting.)

MALAYALAM PLANTATIONS LIMITED

ISSUED CAPITAL £2,718,032 IN 2s. SHARES

DIRECTORS: John Sands, C. A. (Chairman), J. A. Clubb, M. M., M. S. M., F. W. Harper, F. C. A., Sir Charles Miles, O. B. E. Secretaries & Agents: Harrisons & Crosfield, Limited.

Summary of the Directors' report and circulated statement of the Chairman for year ended 31st March, 1961.

CROPS AND PRICES: Crops and net average prices realised were:

	CROPS		NET AVERAGE PRICES	
	1960/61	1959/60	1960/61	1959/60
Tea	20,883,228 lb.	18,134,200 lb.	34.52d. per lb.	32.00d. per lb.
Rubber	8,835,700 lb.	7,280,600 lb.	26.78d. per lb.	27.43d. per lb.

PROFIT AND DIVIDEND: The profit before tax (after providing £100,000 for additional depreciation arising from recent legislation) was £1,264,463 compared with £782,245 for 1959/60. A final dividend of 12 per cent. (making a total of 18 per cent. for the year) is recommended on the Issued Capital increased to £2,718,032 by the one-for-two capitalisation issue approved in April, 1960.

CURRENT FINANCIAL YEAR: Owing to adverse weather, the tea crop to end August is some 13 million pounds short of last year. The rubber crop, however, is about 135,000 lb. ahead and it is hoped that the estimate of 8,438,000 lb. will be exceeded.

The Fortieth Annual General Meeting will be held at 12 noon on Thursday, the 26th October, 1961, at the Registered Office of the Company, 1/4, Great Tower Street, London, E.C.3.

(The Company's shares are quoted in Stock Exchange lists under "Rubber").

THE CALCUTTA MONEY MARKET

MODERATE INCREASE IN ADVANCES

Wednesday, 11th October.

THE general level of advances in the Calcutta money market has shown a moderate increase during the past week. The requirements of the jute and engineering industries are higher, and the demand for credit for grains and seeds storage has also risen. But cotton advances have decreased, and sugar credit remains around the previous levels. In the interbank market, conditions have been tighter and the call rate has risen to 44 percent.

A fair amount of tea and gunny bills have been seen in the exchange market, the former being more numerous. But remittance has been on a moderate scale. Sterling hesitated a little when the U.K. Bank rate was reduced, but is closing with a strong undertone.

BULLION WAS STEADY IN THE PAST WEEK DUE TO THE Puja and Diwali demand. Silver advanced from the previous week's level of Rs. 241.50 to Rs. 242, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 206.80. The London and New York prices were 80½d and 91.375 cents.

Gold was steady in sympathy with silver and the price rose from Rs. 147.50 to Rs. 148. The sovereign gained 25nP at Rs. 97.

DURING THE WEEK ENDED 6TH OCTOBER, GOVERNMENT of India Treasury bills for Rs. 3,35,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 10th October. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were allotted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Calcutta up to the close of business on 21st October, and in Bangalore, Bombay, Kanpur, Madras, Nagpur and New Delhi up to the close of business on 23rd October.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 11th October to 21st October at Rs. 99.391 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 4th October to 5th October.

THERE WERE RISES OF RS. 34.25 CRORES TO RS. 1,891.49 crores in active notes and of Rs. 17.54 crores to Rs. 1,909.58 crores in the total note issue, in the return of the Reserve Bank of India for the week ended 6th October. The currency expansion was adjusted by increasing rupee securities of the paper currency reserve by Rs. 20 crores to Rs. 1,548.80 crores, and by reducing the rupee coin holding from Rs. 128.61 crores to Rs. 126.15 crores. This was presumably done by transferring securities from the Banking Department, in which investments declined by Rs. 39.65 crores to Rs. 191.59 crores. Deposits of the Government of India rose by Rs. 5.69 crores to Rs. 65.15 crores, while other Government accounts fell by Rs. 17.81 crores to Rs. 4.68 crores. Balances of commercial banks at Rs. 72.47 crores showed a decline of Rs. 6 crores. Balances held abroad rose by Rs. 73 lakhs to Rs. 13.60 crores. Other loans and advances increased from Rs. 133.33 crores to Rs. 139.14 crores, of which advances to scheduled banks against usance bills amounted to Rs. 7.83 crores (Rs. 5.35 crores). Ways and means advances stood at Rs. 57.04 crores, against Rs. 49.36 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 29th September, 1961, shows a rise of Rs. 8.16 crores to Rs. 532.62 crores in total deposits. Investments in Government securities are up by Rs. 11.02 crores to Rs. 261.29 crores, while other authorised investments are down by Rs. 5 lakhs to Rs. 9.24 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 22 lakhs to Rs. 242.47 crores. Cash and balances are, in consequence, shown at Rs. 28.02 crores, or Rs. 1.22 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 29th September, shows Demand and Time liabilities at Rs. 842.30 crores (Rs. 20.95 crores on account of borrowings from banks) and Rs. 1,143.40 crores (Rs. 19.50 crores) compared with Rs. 834.38 crores (Rs. 16.00 crores) and Rs. 1,141.22 crores (Rs. 19.32 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.01 crores and Rs. 4.21 crores to Rs. 43.48 crores and Rs. 73.50 crores, respectively. There is a rise of Rs. 10.56 crores to Rs. 617.84 crores in investments. Advances and bills discounted at Rs. 1,232.41 crores show a drop of Rs. 2.60 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 62.1 percent, against 6.2 percent and 62.5 percent.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 13-10-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
13-10-61	14-1-62	2,00.00	Rs. 2,500%
6-10-61	7-1-62	2,00.00	Rs. 2,500%

Whatever
your furnace
needs for control...

There's good reason why more heat-treating furnaces everywhere are controlled by Brown instruments. First, of course, is performance...sensitive, precise control, And equally important is versatility, In this varied line of instrumentation you'll find just about everything a furnace could possibly need in the way of control.

CHOOSE Electronic STRIP CHART CONTROLLERS for detailed, long-term records... and a complete selection of control forms.

CHOOSE Electronic CIRCULAR CHART CONTROLLERS for ease of scale reading...convenient daily charts: In a full range of electric and pneumatic control forms.

CHOOSE Electronic CIRCULAR SCALE CONTROLLERS where you want readability and control check at extreme distance...without need for a record.

CHOOSE THE PROTECT-O-VANE SAFETY CUT-OFF for simple dependable excess temperature protection...can be used with any temperature control to prevent furnace shut down and loss of production.

CHOOSE PYRO-VANE CONTROLLERS where you don't need a record but do need precise vane type snap action electric control by a millivoltmeter instrument...also available with pulse-type time proportioning action, In both vertical and horizontal models.

Stocks and Shares

MARKET WELCOMES SANCTION FOR DUNLOP RUBBER BONUS PROPOSAL

UNDERTONE STEADIER BUT PRE-PUJA CAUTION CONTINUES

TRADING in the stock market has been affected by holidays during the past week. Business has increased a little due to good corporate news. But operators are not inclined to extend their commitments because the Puja holidays start next week. Sentiment has been helped by news of bonus or rights issues. Dunlop Rubber has been allowed to issue bonus shares in the proportion of one new share for every two held. The New Manbhoon Coal Company proposes to issue ordinary rights shares in the ratio of two new shares for every three held at a premium of Rs. 2.50 a share; the money thus raised will be used for expansion. Sirsilk intends to reorganise and modernise its equipment with foreign collaboration.

Lyons Range has been relieved to read reports that the Government does not propose to introduce a scheme for compulsory exports without consulting the industries concerned. In fact, business interests are likely to be taken into confidence while formulating measures to promote exports. Although the urgent need for an export drive is admitted, measures to force exports will not produce results. The prices of Indian goods have to be made more competitive in foreign markets. So investigations are necessary for finding out how many industries have not bothered to improve their operational efficiency because the protection they enjoy in the home market is bringing them large profits. Cotton mill shares are being supported following a report that the State Trading Corporation will start a new venture along with the private trade in order to promote exports of yarn and piecegoods. If exports can be increased in this manner without interfering with the existing channels of trade, the move is to be welcomed.

There have been divergent trends in speculative shares. Steels are steady for two reasons. The first is that the Government might announce the new steel retention prices soon. The industry hopes that these will be more realistic and will offset the rise in production costs. The second reason is that the Government has decided to issue licences to produce 120,000 tons of tool and alloy steel in the private sector. At the close, speculators have become cautious on reports of labour disturbances at the Hindustan Motor works. It is feared that the work of the factory may be interrupted by a strike or by a lock-out.

Indian Iron has closed around Rs. 24.40. Selected engineering shares have been supported and attention has been largely concentrated on Texmaco, Guest, Keen, Williams, Kumardhubi and Britannia Engineering. J. K. Steel are being bought by informed quarters and Jay Engineering have improved on a good report. Escorts are steady on issuing ordinary rights shares.

Selected miscellaneous shares have improved, although closing levels are below the best. Dunlop Rubber have gained with the news of an early issue of bonus shares. Indian Cable have recovered on the report that the strike has ended. Rohtas are steady due to replacement buying. Hindustan Motor have fluctuated on conflicting rumours concerning the strike. British India Corporation have reacted on profit-taking but Sirsilk are being bought on hopes of reorganisation. Hindustan Twyford have improved on renewed support. Interest is being taken in Martin Burn, Rallis, Union Carbide and Metal Box. Calcutta Electric have gained on investment support. National Tobacco and Imperial Tobacco have weakened on pressure. Cement shares have become hesitant due to the uncertainty concerning the rise in the price of the commodity. Jaipur Udyog and Ashoka Cement have declined. Paper shares have become steadier. Support has been forthcoming for Orient, Titagarh, Seshasayee and Ballarpur.

Routine business has been transacted in coal shares and fluctuations are narrow. Investors are worried about the growing transport shortages. Burrakur, Bengal and New Beerbhoon have met with scattered support, but Panch Valley have declined on a predominance of sellers. Kameengunge have improved at the close on influential buying.

The decision of the jute industry to increase the working hours of mills to 48 a week from 16th October has had little effect on jute shares. Investors are disturbed because the prospect for increased foreign enquiries for gunnies have not yet broadened. Buying has been concentrated on only a few scrip. Fort William, Birla, New Central, Bally and Northbrook have been taken.

Cotton mill shares have been cheerful and gains have been scored by Bowreah, Dunbar, Bharat Commerce and ...

Sugar shares have declined on a predominance of sellers. The decision to cut production during the coming season is being interpreted bearishly. Carew, Cawnpore and S.K.G. have lost.

Tea Shares have become steadier at the close due to better auction advices. Although the north Indian crop has increased further during September, it is thought that the rise in foreign demand will help maintain steady prices. The crop has amounted to 430.5 million lbs up to the end of September 1961. It is, therefore, 70 million lbs higher than in the corresponding period of 1960, and 32.4 million lbs higher than in the corresponding period of 1959. Interest is being taken mainly in good Assam and Dooars gardens. Hasmara, Huldbari, Tezpur, Betjan and Dibrugarh have met with support.

Business in preference shares has been limited and buying has been confined mainly to high-yielding issues. Government securities have been steady and there is evidence of good institutional demand. Business has, nevertheless, been difficult to negotiate, especially in short and medium-dated stocks, due to the absence of offers. Long-dated loans have been maintained. The 3 percent Conversion loan 1986 quotes Rs. 72.80. There has been scattered support for State Government loans, but some of those which were recently subscribed are being offered at a discount.

Tycoon Tea

The profit earned by Tycoon Tea Co. Ltd has fallen from Rs. 5.30 lakhs to Rs. 2.47 lakhs for the year ended December 1960, after allocating Rs. 2.08 lakhs (against Rs. 1.90 lakhs) for depreciation. The dividend has been reduced from 30 percent to 10 percent, subject to tax, and it absorbs

Rs. 52,000. Allocations include Rs. 69,000 (against Rs. 1.40 lakhs) for taxation and Rs. 1.50 lakhs (against nil) for general reserve. With other adjustments, there remains a carry-forward of Rs. 71,413, against Rs. 1,05,020 brought in. The salable crop was 480,745 kilograms, against 562,818 kilograms, and the average sale price worked out at Rs. 5.90 (against Rs. 5.97) a kilogram. The estimates for the 1961 season provides for a salable crop of 616,896 kilograms, at a total revenue expenditure of Rs. 25.18 lakhs.

Sapoi Tea

A dividend of 22½ percent (against 20 percent), subject to tax, has been declared by Sapoi Tea Co. Ltd for the year ended December 1960. The profit has increased from Rs. 3.09 lakhs to Rs. 5.03 lakhs. Depreciation absorbs Rs. 1.29 lakhs (against Rs. 1.27 lakhs). Taxation is allocated Rs. 2.05 lakhs (against Rs. 1.27 lakhs). After making all necessary adjustments, there remains a balance of Rs. 15,956, which is to be carried forward, compared with Rs. 20,383 brought in. The crop produced was 531,473 kilograms, against 633,067 kilograms.

Gillapukri Tea

After providing Rs. 62,914 (against Rs. 60,091) for depreciation, the Gillapukri Tea and Seed Co. Ltd has made a profit of Rs. 2.23 lakhs for the year ended December 1960, against Rs. 2.60 lakhs in the previous year. A dividend of 25 percent, subject to tax, has been maintained, absorbing Rs. 1.26 lakhs. Taxation is allocated Rs. 90,000, against Rs. 1.05 lakhs. With other adjustments, there is a carry-forward of Rs. 15,535, against Rs. 8,855 brought in. The crop amounted to 344,520 kilograms (against 312,111 kilograms).

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during September was: iron 123,900 tons; steel ingots 128,300 tons; semi-finished steel for sale 28,400 tons and finished steel 78,600 tons.

Bombay Market

REPLACEMENT BUYING LIFTS EQUITIES

HOPES OF EARLY RISE IN STEEL RETENTION PRICES

Wednesday Noon.

THE Bombay stock market closed the past week in a cheerful mood and share prices improved on replacement buying, combined with short-

covering. Selling pressure was restrained by the lower carry-forward charges at the last settlement. Support was induced by good corporate news. The decision of Standard Mills to close the transfer books for issuing bonus shares was interpreted bullishly. Although the decision of Tata Chemicals to pay a higher ordinary dividend of 65nP a share, taxable, fell below market expectations, the Company's announcement about issuing ordinary rights shares at a small premium to finance the expansion programme had a good effect.

Steel shares were supported on talk that the Government might increase the retention prices of steel soon. The decision of the Government to permit the production of tool and alloy steel in the private sector helped sentiment. Some welcomed the move to promote exports of manufactured goods by giving further incentives.

Tata Steel soared to Rs. 147.50, but Indian Iron were sluggish around Rs. 24.36 on pressure from Lyons Range. Engineering shares were supported, and Tata Locomotive improved to Rs. 355 on replacement buying. Premier Construction gained at Rs. 199 and Alcock Ashdown at Rs. 331 on short-covering. Interest was taken in Mukand Iron at Rs. 27.75 and in Larsen and Toubro at Rs. 39. Motor shares showed divergent trends. After an earlier rise, Hindustan Motor reacted to Rs. 19.20 at the close. Premier Automobiles were offered at Rs. 162.

Cotton mill shares improved on renewed support. Century were lifted to Rs. 575 by speculative interests and Bombay Dyeing rose to Rs. 68.50. Kohinoor were taken at Rs. 302 and Simplex at Rs. 170. Standard improved to Rs. 1,320 on the prospect of a bonus issue. Morarjee were steady at Rs. 398 and Finlay at Rs. 327. Khatua were quiet at Rs. 441.25 on uncertainties concerning current working. India United Ordinaries came to hand at Rs. 15.20 and Apollo were transacted at Rs. 1.92. Gokak were wanted up to Rs. 204 and Shree Nivas improved to Rs. 278 on expansion plans.

In the miscellaneous section, cement shares were steady, and Associated Cement improved to Rs. 168. Digvijay came to hand at Rs. 183. Sugar shares were quietly steady, and business passed in Belapur at Rs. 254. Phalton were dealt in at Rs. 135 and Walchandnagar Industries were done at Rs. 171. Steamship company shares recovered on short-covering. Scindia gained at Rs. 13.20 and Great Eastern Shipping were transacted at Rs. 13.76. Mining shares were steady, and business was done in Shivrajpur Syndicate at Rs. 54. Bombay Burmah were supported up to Rs. 632. Rayon shares were firm, and National Rayon improved to Rs. 551. Gwalior were in demand up to Rs. 46.75 and Baroda Rayon were done at Rs. 158.50. Chemical shares were steady, and Tata Chemical recovered to Rs. 17.20 on replacement buying. Colour-Chem were steady at Rs. 387.50 as were Alenbic Chemical at Rs. 241.25. Indian Dyestuff came to hand at Rs. 496.25. Voltas were firm at Rs. 304 and Tata Oil met with support up to Rs. 78.50. Coat Tyre improved to Rs. 211.25 and Synthetics and Chemicals were quoted higher at Rs. 198. West Coast Paper gained at Rs. 188.50 on expansion plans. Hindustan Lever were in demand up to Rs. 53.

Bank shares were steady, and Central Bank came to hand at Rs. 63. Business was done in

Bank of India at Rs. 134 and in Bank of Baroda at Rs. 103.50. Dena Bank were taken at Rs. 63.50. Insurance shares were quietly steady, and New India were transacted at Rs. 59.70. British India General were quoted at Rs. 12.40 and Vulcan came to hand at Rs. 16.40.

There was scattered support for electric company shares, and Andhra Valley were wanted up to Rs. 104.75. Ahmedabad were done at Rs. 95.50 and Bombay Suburban were placed at Rs. 104.

Madras Market

STEADY UNDERTONE WITH FAIR TURNOVER

GOOD CORPORATE NEWS HELPS

Tuesday Evening.

THE Madras stock market was steady during the past week and a fair amount of business was transacted. Good corporate news helped broaden interest in selected shares. There was also evidence of support from outside centres. Government securities were steady, and interest was taken in some selected State loans. Bank shares were bought in view of the improved working during the current half-year. In the planting section, selected tea shares were in demand due to improved auction prices. Rubber shares were fancied due to the shortage of the commodity. Good coffee shares met with scattered interest. Cotton mill shares were bought on the prospect of increased production. Some of the units propose to install more spindles. Selected miscellaneous shares were wanted on reports of further expansion.

In the banking group, Punjab National were done at Rs. 19.15 and Indian Overseas at Rs. 199. Indian were dealt in at Rs. 176 and Canara Banking came to hand at Rs. 80.50. Among public utilities, West Coast were bought at Rs. 14 and Vellore at Rs. 13. South Madras came to hand at Rs. 9.80 and Negapatnam at Rs. 10.

Among sugar shares, Deccan were steady at Rs. 13.05 and E.I.D. were dealt in at Rs. 38.87. United Breweries were steady at Rs. 106.50 and Mysore at Rs. 57.75. Travancore came to hand at Rs. 10.25, but Kothari weakened to Rs. 8.40 on passing the dividend. Andhra were in demand at Rs. 27 and Cauvery were done at Rs. 122.50.

Among planting shares, Blue Mountain were done at the higher price of 3.10 and Cochin Malabar were taken at Rs. 7.38. Consolidated Coffee were steady at Rs. 20.25 and Devon were transacted at Rs. 13.76. Kil Kotagiri were placed at Rs. 4.70 and Lucky Valley were indicated at Rs. 11.65. Mysore Coffee were bought up to Rs. 5.40 and Mysore Plantation were transacted at Rs. 1.95. Business was done in Ouchterlony at Rs. 3.72 and in Parkside at Rs. 29.70. Swinton came to hand at Rs. 3.30 and Teekoy were placed at Rs. 5.10. United Nilgiri

were offered at Rs. 24.50 and Woodland came to hand at Rs. 7.30.

In the textile section, Asher were steady at Rs. 225 and Anglo-French were done at Rs. 137. Business was done in Bangalore Woollen at Rs. 214.50 and in Buckingham at Rs. 248.80. Bhalgora—Rs. 4/75—4/75—4/75—4/75—(5/37). Coimbatore Spinning were transacted at Rs. 68 and Kothari were bought up to Rs. 13.25. Lakshmi improved to Rs. 158.50 and Madura to Rs. 38.55. Mettur were in demand at Rs. 387 and Radhakrishna at Rs. 37.50. Royalasema were placed at Rs. 157 and Sarada were bought at Rs. 67. South India Viscose gained at Rs. 189 and Travancore Rayon were firm at Rs. 39.30.

Among miscellaneous shares, Aluminium Industries improved to Rs. 23.57 on an encouraging speech from the chairman of the Company. Ashok Leyland were steady at Rs. 9 and Indian Cement rose to Rs. 6.49. F.A.C.T. were done at Rs. 9.35 and Enfield were taken at Rs. 11.75. Andhra Scientific were in demand up to Rs. 11.50 on the decision to issue rights ordinary shares in the proportion of one new share for every three held. Madras Aluminium were steady at Rs. 24.40 and Binny rose to Rs. 275. Madras Rubber were in demand at Rs. 15.50, but Mandya National Paper weakened to Rs. 8.80. Parry's Confectionery were placed at Rs. 4.66 and Seshasayee Paper were quoted at Rs. 8.45. Business was done in Spencer at Rs. 23.75 and in Standard Motors at Rs. 16.15. Textool were steady at Rs. 183 and Tube Investments were bought up to Rs. 261. Thakur Paper were sold freely down to Rs. 10, but Mysore Paper improved to Rs. 17.50 c.r.

THE WEEK'S TRANSACTIONS

In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.

London Market

SETBACK FOLLOWS EARLIER RISE IN STOCKS INDUSTRIALS HIT BY ECONOMIC POLICY STATEMENT

London, 11th October.

THE cut of $\frac{1}{2}$ percent to $\frac{6}{8}$ percent in British Bank rate brought a distinct improvement in the stock market, but this proved to be short-lived, at least in industrial equities. For a time, the market tended to ignore the Chancellor's speech at the bankers' dinner, which followed the

Bank rate cut, but further consideration of his statement turned the industrial market downwards again. The Chancellor made it quite clear that the modest reduction in Bank rate was made to discourage the flow of "hot" money, and that there was no chance of any relaxation in the current economic restrictions. Yet with equities out of favour, the gilt-edged market continued its recent advance on renewed and substantial buying of the medium-dated stocks. Prior to the Bank rate announcement, the industrial market had moved away from the lowest levels of the year in response to the end-September gold reserve figures and the National Institute's *Economic Review* forecasting a balance of payments surplus in the first half of 1962. Despite the reaction which followed the Chancellor's speech, prices as a whole recorded modest gains on the week, although they are, of course, below their best levels. Foreign bonds were irregular, but dollar stocks were mainly higher under Wall Street's influence. The mining market was quiet, but golds improved, helped to some extent by the report that a new mutual fund in South African gold shares is to be established in New York, with the shares to be bought on the London market. Coppers also improved helped by satisfactory dividend statements. Tin in contrast receded on eastern selling. Oil shares attracted modest support, but best prices were not maintained. There has been a persistent selective demand for tea shares with some investment enquiry for Indian issues. Rubber shares were dull.

New Delhi

OPPOSITION TO LOW-COST MOTOR-CAR PROJECT GROWS

INDIA SEEKING U.K. HELP FOR RAISING SUGAR EXPORTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE low-cost car project is facing heavy weather. The Planning Commission has not included it in the third five year plan. The officials are divided, and so is the Central Cabinet. According to reports, the Finance Minister, before he left India, had given his "conditional" approval to the project. While he was away, the Defence Minister came in with his proposal to manufacture another "economy car" with Japanese collaboration. The issue was referred back to the Planning Commission, which has shelved the project until the return of the Finance Minister. Apart from other considerations, the project hinges on two basic issues. First, is it consistent with the Congress ideal of a socialistic pattern of society? The Government should produce cheap bicycles first, before it thinks of manufacturing a small car for the "people". Secondly, will not this project adversely affect savings? Meanwhile, the Federation of Indian Chambers of Commerce and Industry has voiced its opposition in strong terms. It says that it was hoping that on a balance of considerations, the authorities themselves would abandon the proposal because the arguments against it would be so apparent and convincing. "However, according to the latest report, the scheme has been almost finalised, and it seems that it is now only a question of choosing the foreign collaborator and the type of the motor-car. At the outset, the Committee wishes to recall the record and potentialities of the motor-vehicle manufacturing units, which are currently in operation in the country. These units have been set up in collaboration with foreign enterprises and in consultation with and approval of the Government of India. The industry had to pass through difficult times in its early years. The volume of demand particularly at that time was very low. The future was uncertain. The inadequate foreign exchange allocation to the industry added to its difficulties and has been primarily responsible for curbing the further growth of the industry. Nevertheless, the industry gradually consolidated its position. The indigenous content of the motor-cars has steadily increased. The assembly line is already there, and the line manufacturing method can also be adopted, to meet larger demands. Some of the manufacturers also have indicated their willingness and capacity to undertake the production of the type of car as visualised by the authorities.

Effect on Business Sentiment

"In view of these factors and also in terms of the Government's declared policy that it will not enter lines of manufacture which private enterprise is capable of handling, the Committee is disturbed at the reported decision of the Government. In this connection, the Committee must frankly bring it to the notice of the Government that if it proceeds to implement this decision, it will have far-reaching repercussions on business sentiment, especially in the minds of foreign collaborators. As far as the Committee is aware, the proposed project has not been provided for in the third five year plan. It is not clear, therefore, as to how the Government proposes to secure foreign exchange. It is said that foreign exchange will be taken out of what has been earmarked for the motor-vehicle industry. If this report is correct, it is a serious matter, in that, as already explained, inadequate foreign exchange allocation has already had an adverse impact on the growth of the motor-vehicle industry. On the other hand, if the report is not true, the Committee has to point out that the allotment must obviously be made out of the total foreign exchange pool which will be available during the third plan period. It is also not known whether the extra foreign exchange will be made available by the World Bank or members of the Aid-India Club to finance this specific project. On this analysis, foreign exchange will be spent on the project at the expense of other projects which have already been included in the third five year plan. And, obviously, those that have been included must be deemed to be of greater urgency.

"The Committee, therefore, sincerely trusts that the Government will not proceed with the project as it is not in keeping with the principles of Industrial Policy enunciated by it, will disturb the accepted allocation of resources, and above all will prevent the natural growth of industrial capacity."

Report of Official Committee

The recommendations of the committee appointed to study the question of making a "people's car" may be summarised as follows: "It is possible, at present levels of material costs, labour rates, and various taxes, to produce a motor-car at an ex-factory price of Rs. 5,100 on an annual production rate of 50,000 motor-cars, exclusive of excise duty. When the production rate is 20,000 motor-cars a year, the ex-factory price is estimated

to be around Rs. 6,150, exclusive of excise duty. Motor-car production, with an initial indigenous content of 50 percent, can be commenced in 24 months from the date on which land is made available to the project authorities and an agreement with the collaborator signed. It is possible to build up production with a more or less wholly indigenous content within a period of three years from the start of production. Of all the proposals received, that of Regie Nationale des Usines Renault of France, for the production of the Renault 'Dauphine' motor-car is the most acceptable on the basis of technical suitability, satisfactory collaboration terms and experience and the background of this State-owned firm. The offer made by Regie Nationale des Usines Renault of France for the production of the Renault 'Dauphine' motor-car furnishes a promising basis for further negotiations.

"In the limited time available, it has not been possible to undertake the detailed studies of prospective sites. However, on broad technical considerations, the most appropriate location for the proposed plant should be found within the area bounded by Agra in the north, Raipur in the east, Hyderabad in the south and Nasik in the west."

Certain other recommendations relating to production build-up, training, sales, etcetera must in the Committee's report, include the following:

Marketing in Two Versions

(i) The motor-car should be marketed in two versions—standard and *de luxe*—of the basic model. The latter will have additional fittings, particularly for export.

(ii) Production of other types of vehicles such as pick-ups, station wagons and delivery vans using the same power equipment and other fittings as the motor-car should be taken up as demand develops.

(iii) The same engine as in the motor-car can be used for small generating and pumping sets required in an increasing scale in community development areas.

(iv) Land and factory buildings should be constructed as required for the final rate of production even though the requirements in the earlier stages may be somewhat less.

(v) The plant should be located in an area where the cost of construction would be within the figures estimated.

(vi) Surplus capacities likely to be available in other factories in the country for various processes such as body pressings, forgings and castings should be taken advantage of to reduce the capital cost of the production machinery.

(vii) Consideration should be given to the possibility of procuring machinery and plant from U.S. defence surpluses.

(viii) Expenditure on the residential colony to be provided should be limited to Rs. 1.5 crores for an annual production rate of 20,000 motor-cars and Rs. 2.5 crores for an annual production rate of 50,000 motor-cars.

(ix) Every endeavour should be made to obtain experienced management and supervisory personnel from existing Government plants.

(x) Training facilities available on the Indian railways and in other public sector plants should be made use of for speedy training of the staff.

(xi) If Renault is appointed as the collaborator, advantage should be taken of the Indo-French technical aid agreement for the training of Indian personnel abroad.

(xii) Plant erection and staff strength must be accurately matched to production build-up, to keep costs down to a minimum in the initial stages.

(xiii) It will be expeditious and advantageous for the plant authorities to work abroad in close liaison with the collaborators for the early procurement of plant and machinery.

(xiv) It may be possible to obtain some parts from alternative sources such as railway workshops, motor-vehicle manufacturers and other engineering plants. This will help reduce capital expenditure and also increase the indigenous content in the initial stages.

(xv) The range of manufacture in the main plant should be reduced to the minimum and the ancillary industry encouraged to produce a larger range of components.

(xvi) Proprietary ancillary fittings already being produced in India should be used in the proposed motor-car to the maximum extent permissible by design.

(xvii) It should be possible to procure ancillary components manufactured in India at a level of around 50 percent above the foreign prices and, in

fact, to further reduce the costs of production in the country.

(xviii) Long-term contracts should be arranged with ancillary equipment manufacturers to ensure satisfactory prices.

(xix) A development suspense fund should be operated to absorb the differential between the cost of production and ex-factory price in the initial stages.

(xx) Dealers' commission should be fixed at $\frac{7}{8}$ percent of ex-factory price, or Rs. 400 whichever is less.

(xxi) An equated transport charge should be levied on all motor-cars sold within the country, irrespective of distances of haulage.

(xxii) Consideration should be given to the possibility of reviewing and revising the present rates of excise duty and to correlate these either to horse-power or cost of production.

(xxiii) Profits from the sale of spare parts and overhauling of power packs—which have been left out of the estimates of the cost of production—will have a material effect on the ex-factory price as sales build up.

(xxiv) Regional distribution of motor-cars should be arranged by the plant organisation itself.

(xxv) Sales of motor-cars to individual customers should be through private agencies.

(xxvi) The export of motor-cars should be undertaken by the sales organisation of the plant itself.

Sugar Exports to U.K.

The Government of India has asked the British Government to allocate a quota for the export of sugar to the U.K. under the Commonwealth Sugar Agreement. The Government has also requested the British Government to use its good offices in getting India a quota under the International Sugar Agreement. *Prima facie*, there seems to be no difficulty in India being allotted a quota under the Commonwealth Sugar Agreement. Broadly speaking, 30 percent of the demand in the U.K. is reserved for the local producers, 60 percent for the Commonwealth, Australia, South Africa, West Indies, Fiji, Mauritius, the remaining 10 percent of imports is allocated to countries which are members of the International Sugar Agreement. India can easily step into the vacancy created by South Africa leaving the Commonwealth. The real difficulty, apart from the price factor, arises from the fact that the U.K. like the U.S.A. is used to specially refined sugar. In fact, the intake into the U.K. of the kind of sugar produced in India is practically nil. Great Britain, like the United States imports raw sugar and refines it itself. It has a considerable export market in east Africa, Singapore, Malaya and even the U.S.A. It will be thus seen that if India wishes to enter the export market for sugar, it will have to change the pattern of her own production. What the U.S.A. and the U.K. demand is raw sugar and not the so called Indian refined sugar.

While on this subject, it looks strange that in the third plan period, the Government is planning to reduce mill sugar production by 10 percent. All the three plans have produced impressive figures indicating targets of production, without suggesting any method to prevent the diversion of acreage under foodcrops to cash crops. The result has been a paradox. While crores of rupees were being spent on the grow more food campaign, the acreage under sugarcane was rising year by year. In other words, it is the price factor which determines the kind of crop a cultivator would sow. The Planning Commission should, therefore, have either suggested a price policy, which would have prevented the unhealthy diversion of acreage under

Cottons labelled 'Sanforized'

will not shrink out of fit

Our technical experts keep a constant check on all mills licensed to use the internationally-known label 'Sanforized'. Such vigilance ensures that material bearing this label is up to specifications laid down by us, and that it will not shrink even after many, many washings.

Month after month and throughout the year, these experts visit the licences, carefully examining fabrics both from the warehouses as well as off the processing machine

From each mill, they take an extensive random sampling of various fabrics. Each must be a quality fabric before it can be stamped with the label 'Sanforized'

These samples are catalogued, measured and submitted to rigorous wash and minimum shrinkage tests both here and in the U.S.A. in fully equipped technical laboratories

The catalogued samples are then re-examined and re-measured. The results of our experts' findings are recorded, each mill having its own dossier

A copy of these reports, together with their samples, are sent to the home office in New York. This multiple checking ensures that all cottons marked 'Sanforized' will not shrink out of fit

Make certain you get the full measure of value of the material you buy—

Look for **'SANFORIZED'** on the label and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95 Marine Drive, Bombay 2

oderops to each crop, or should have recommended measures for preventing such a divergence.

While on this subject, it may be pointed out that almost all the sugarcane-growing States levy cess on the crops, the avowed object of which is to improve the yield of juice. Crores of rupees are being realised through this source, but the reality of cane remains much the same as before.

More German Technicians for Rourkela

A first group of 34 West German engineers arrived in India last week to assist in the operation of the Rourkela steel works. During the next few weeks, up to a total of approximately 10 experts from several leading firms will be released by the West German industry to take up work in India. Top members of the team who have arrived so far include Dr. Fritz Peters, chief superintendent, iron and steel; Hans Niess, chief superintendent, engineering services; Mr. Guenther Vogt, manager, production planning; Dr. Klaus Voss, assistant traffic manager; and Dr. Gerhard Schuermann, manager, repair shop. They are all headed by Dr. Robert Mintrop, general superintendent, who arrived last month. Eighty technicians, mainly for the maintenance, who were retained by Hindustan Steel from the supplier companies, were engaged in erection work. Of these, 20 technicians were on operation jobs. A minimum of about 100 more men, mainly for operation jobs, are still required. Similar are the state of affairs in Durgapur and Bhilai. As reported earlier, the Minister for Steel himself has admitted that training is no substitute for experience. Notwithstanding this large-scale employment of foreign technicians, the Government is going ahead with its negotiations with the U.S. authorities for launching another steel plant in Bokaro.

U.S. Interest in Bokaro

With the Russians in Ranchi and Barauni, the Americans are looking for a chance in countering communist propaganda in the industrial belt of India. By 1966, the Russians will have a 5 million-ton steel plant in Bhilai, the West Germans will have a 1.8-million-ton plant in Rourkela and the British a 1.6-million-ton plant in Durgapur. The Americans would like to build a plant for their own prestige also. The question of their consideration is whether they would have a "C-3" plant compared with the three others, and particularly with the Russians. The Americans obviously would like to be sure that their plant would also be of the very best kind. This is the main hurdle in the negotiations which are in progress between the Government of India and the U.S. Embassy here. Some developments are expected by the end of this month.

Enhancement of Excise and Customs on Oil

The rates of additional excise duties and Customs on mineral oils have been enhanced with

effect from 28th September, 1961, with a view to quickening the recovery of the amounts standing in the cost and freight adjustment account of the oil companies. As a result of the recommendations of the Oil Price Enquiry Committee, which have been accepted by the Government, certain reductions in the prices charged by the oil companies are being made with effect from 15th October, 1961. Since the price reductions are generally small, the Government of India has decided that the benefits of the price reduction should accrue to the Government. It is accordingly proposed to continue to levy the additional duties of excise and Customs at the increased rates introduced from 28th September even after the amounts outstanding in the cost and freight adjustment account have been fully recovered.

Stabilising Lac Prices

The Central Government has formulated a four-point programme for stabilising the purchase and export prices of lac. The main features of the scheme are the fixing of minimum purchase prices, operation of the buffer stock programme by the State Trading Corporation and the levy of an export duty. It is also proposed to reduce the minimum export prices from Rs. 70 to Rs. 64 a maund for B-II quality seedlac with corresponding changes for other grades. The minimum prices at which the State Trading Corporation will purchase certain types of lac from growers and manufacturers have been fixed at Rs. 56 a maund for B-II seedlac and corresponding prices for other types. The export duty will be Rs. 160 a 1,000 kilograms of seedlac and shellac (including button lac and garnet lac) and Rs. 125 a 1,000 kilograms on other types of lac. The present scheme, which will take effect immediately, has been drawn up with the twin objectives of encouraging overseas traders to purchase lac in preference to synthetic substitutes and also ensure fair prices to the growers and manufacturers. The low price level at which lac purchases were being made recently from the growers and manufacturers, it is apprehended, would lead to a curtailment of production in future. The Government hopes that the scheme now formulated will ensure reasonable prices to the growers, the optimum production of lac, and help stabilise the export trade in lac.

Consent to Capital Issues

Two new companies and three existing companies have been granted consent by the Controller of Capital Issues for the issue of a total capital of Rs. 5 crores. The consent is valid for 12 months in each case. The following are the details:

Lucas-TVS: Lucas-TVS Private Ltd, a Company proposed to be incorporated in Madras State for the manufacture of motor-vehicle electrical equipment in collaboration with Messrs Joseph Lucas (Industries) Limited, U.K., have been ac-

corded consent to issue capital of Rs. 2 crores, divided into 200,000 equity shares of Rs. 100 each, for cash at par. Of the said capital, 60 percent will be subscribed by the foreign collaborators.

India Refrigeration Industries: India Refrigeration Industries Ltd, Delhi, has been granted consent to the issue of capital of Rs. 50 lakhs, consisting of equity shares of Rs. 10 each of the value of Rs. 36 lakhs and the balance in 9 percent free of company tax but subject to deduction of taxes at source, cumulative, redeemable preference shares of Rs. 100 each. The new Company will manufacture sealed units for refrigerators and air-conditioners.

Dunlop Rubber Company: The Dunlop Rubber Company (India) Ltd. has been granted consent to the issue of 1,500,000 equity shares of Rs. 10 each credited as fully paid-up bonus shares on capitalisation of the Company reserves to the extent of Rs. 11 crores. The Company's existing paid-up capital is Rs. 3 crores and the bonus shares will be issued at the rate of one bonus share for every two held.

Kerala State Industrial Development Corporation: Kerala State Industrial Development Corporation Ltd, Trivandrum, has been granted consent to the issue of capital of Rs. 1 crore, for cash at par, divided into 10,000 equity shares of Rs. 1,000 each. The entire capital will be subscribed by the Kerala Government and the proceeds will be used for promoting, establishing and executing industries for the manufacture of various types of plant and machinery, etcetera.

Oldham and Son: Oldham and Son (India) Ltd, Madras, an existing public Company, has been accorded consent to issue bonus shares of the value of Rs. 2.5 lakhs on capitalisation of the Company's reserves to a like extent. The Company's paid-up capital is Rs. 7.5 lakhs.

Fuel and Transport Studies

The Ministry of Steel, Mines and Fuel has undertaken a series of studies, which should be useful in appraising the correct demand, say, for coal, oil, power and transport. The study is based on the following data: (1) The total productive capacity, say, of coal on 31st March, 1961, or the last day of the second plan; (2) what was the rate of production in the last quarter of the plan? (3) the total production in the last year of the second five year plan; (4) the total production planned for the third five year plan. Speaking of coal, opinion is hardening here that the Planning Commission has underestimated the demand in 1966, and in any case, in order to achieve even the third five year plan target of coal, planning should be on the basis of 120 million tons by 1966. It is equally becoming evident that planning for transport has been far from accurate. A reappraisal has become essential and urgent.

London

SIGNIFICANCE OF THE RISE IN U.K. GOLD RESERVES

NO BASIC IMPROVEMENT IN THE BALANCE OF PAYMENTS

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Treasury statement that the gold reserves rose £24 million in September does little more than record the receipt of the remaining £18 million of the "drawing" from the I.M.F. The real gain of foreign exchange in September must have been very large indeed, as a "substantial" repayment was made to the European central banks under the Basle agreement of last March. As explained below, figures disclosed for the first time by the Bank of England indicate that at least £100 million of this debt was repaid in September, leaving probably only a minor balance outstanding in Switzerland which is to be funded by a Swiss Government loan. But the large size of the September inflow, following a real gain of £61 million in August, does not indicate any basic improvement in the balance of payments. Nor, happily, does it reflect any massive inflow of hot money. As the Bank of England confirms, the net demand for sterling which followed the "little Budget" of 25th July was mainly due to the closing of short positions and the restoring of sterling cash balances to a normal working level. This situation is not expected to change much. "The uncertainties of the international situation," states the Bank of England, "and the demand for credit in the fast reviving U.S. economy, make it unlikely that overseas funds will now flow to London at a rate similar to that of the second half of 1960." A heavy inflow of short-term funds would not be welcome. It is a measure of the immense short position in sterling built up from March onwards that sterling still remains in strong demand. In spite of the big day-to-day market operations over the last two months, the exchange rate has continued to rise. At \$2.81, it reached the highest point of the year, and this at a time when seasonal factors tend to work against sterling. In the past week or two, a slight weakness of the dollar may have been helpful to the pound. In the longer run, the outflow of sterling will, of course, depend on the way the balance of payments develops and this in turn hangs largely on the trend of exports.

Balance of Payments Position

A cautiously favourable gloss is put on current indicators by the latest *Economic Review* issued by the National Institute of Economic and Social Research. The Institute thinks that by early next year, the balance of payments might again be in surplus on both current and long-term capital account. Exports should be a little higher in the second half of the year than in the first, and next year they should rise further. Imports will probably remain much the same for some months, "but could start rising slowly if output goes up again in the early part of next year." The Institute estimates that by the second quarter of 1962, output will be 1.14 percent higher than in the second quarter of this year. It argues that even before the Chancellor's restrictive measures of July, fixed investment was levelling out and consumers' spending was slowing down. The "little Budget" is likely to reinforce both tendencies. It may even halt the rise in consumer spending for a while, but the next round of wage increases, again, much of the current *Review* is devoted to the long-term prospects for the British motor-car industry. Taking expansion plans into account, the *Review* estimates that the industry would be working at about 70 percent of maximum capacity between now and 1965.

Bank Advances Drop

Following the reduction in bank advances of £98 million disclosed in the August monthly statements of the London clearing banks, the fresh drop of £139.8 million now shown to have taken place between 16th August and 20th September brings striking and conclusive proof that the credit squeeze is tightening. The latest fall, of which £13.3 million is attributable to reduced bank borrowings by the nationalised industries, is the heaviest in any single month so far recorded. It reduces the total of bank advances to £3,437.7 million, which is still £124 million above the level of September 1960. The latest reduction is partly seasonal. But it clearly reflects the stiffer attitude towards new loans and loan renewals, which the call. The 20th September statements also show that, in spite of a further £35.8 million having been placed with the Bank of England to complete the third call for special deposits, the average liquidity ratio of the 11 clearing banks has again improved. On 20th September, it stood at 34.27 percent, compared with 32.94 percent on 16th August and with 31.57 percent in September of last year. The banks' holdings of investments show a slight increase at £1,048 million. It now begins to look as if the pressure to realise investments has definitely subsided.

Changes in Consumer Spending

After responding to an artificial stimulus in July, sales of consumer durables flopped again in

August. The Board of Trade has now analysed retail trade in August. This in aggregate was at the same high level as in July (the index was 117 in both months), but whereas sales of durable goods were significantly higher in July, they declined sharply in August. In August all the running was made by sales of clothing, footwear and food. Further, although the value of sales in August was the same as in July, the volume was less due to an increase in prices. Compared with 12 months earlier, sales in August were up 6 percent (5 percent in July) and prices of goods sold were 4 percent up (2½ percent in July). The switch of buying away from heavy-priced consumer durables towards clothing and food is likely to go on while incomes are high, and there is an awareness that if the Chancellor has his way, the family budget may not look quite so healthy later on. The may not look quite so healthy later on. The domestic appliance manufacturers are not helped at this stage by the knowledge that the market for washing machines, television sets and refrigerators is already dangerously oversold. The seasonally adjusted index for sales in August by durable goods shops was 115 compared with 130.8 in July and 121 in June. Radio and electrical shops were most affected by the August reaction, furniture shops much less so. The index for clothing and footwear sales, which had been steady around 114-115 since April, shot up to 120 in August, thus regaining the high level they had reached at the start of the year. The food index was a point higher at 114.

Big Fall in Hire-purchase

The changed pattern of retail trading in August is confirmed by the hire-purchase figures for the month. Sales on credit by household goods shops dropped by about a fifth, although they were still about one-tenth higher than in August last year. New credit given by finance houses (mainly for motor-cars) fell by about one quarter to a level much the same as a year earlier. The amount of hire-purchase debt outstanding at the end of August was £3 billion higher at £971 million—the net result of a rise of £4 million in debt owed to finance houses (£666 million in all) and a fall of £1 million to £305 million in debt owed direct to shops. August usually sees a falling off in hire-purchase motor-car and motor-cycle business (and in almost all forms of h.p. trading). Compared with August last year, business in new private cars was up 20 percent, but for used vehicles, the figures were down on a year before.

Motor-car Sales Continue to Drop

There was a further sharp fall in the number of motor-vehicles bought on hire-purchase in September. The total of contracts in the month was 92,548, compared with 118,330 in August, 28,895 less than the 121,343 contracts for September 1960. Figures released by *Hire Purchase Information* show that the main fall has been in the number of contracts arranged for buyers of second-hand vehicles. For private motor-cars and commercial categories together, contracts for second-hand vehicles fell by 23,350, compared with business done in September last year. Contracts for used private cars were down to 44,592 in September, against 55,657 in August and 59,822 in September 1960. For used commercial vehicles, the figures were 11,627, compared with 17,577 in August and 19,953 a year earlier. Hire-purchase sales of new private cars totalled 10,217 in September. Although this is seasonally down on the 12,192 sales made in August, it compares quite favourably with the 10,737 total for September 1960. Sales of new commercial vehicles on hire-purchase were 5,652, against 6,152 in August and 4,978 in September 1960. Motor-cycles also showed sharp falls. Hire-purchase sales were arranged for 7,734 new motor-cycles and 11,627 used vehicles. A year earlier, the totals were 8,843 and 19,953. Tractor and farm equipment contracts were also running at a lower level and sales on hire-purchase of both new and used caravans suffered a fall of between 17 percent and 20 percent.

Machine Tool Activity

Both home and export deliveries of machine tools continued at a high rate in July, according to the latest figures from the Machine Tool Trades Association. Home deliveries in the month were worth £7.4 million, against £6.2 million in July 1960, and export deliveries rose from £2,336,000 to £2,559,000. There was a considerable difference in experience of new orders on home and export accounts. Export orders rose from £3,158,000 to £4,272,000 on the month, but new home orders fell in value from £10.7 million to just under £8 million in July. This 26 percent decline in home demand follows the trend of previous months of this year, over which there has been a fall of 20 percent on new orders in the first seven months of 1960. The Association thinks that the further downturn in July reflects the first impact of the Chancellor's "little Budget". Total order book at the end of July was worth £115½ million, of which

£30 million was for export. On present deliveries, this gives more than 15 months' work in hand for the industry. West Germany has provided a "substantial flow of orders" and has displaced Australia as the industry's second most important market. Japan is also stated to be providing "ample rewards" for British manufacturers.

Doom Dooma Accord

Brooke Bond's bid contest for Doom Dooma ended with agreement all round. Following the meeting with the board, Brook Bond raised their bid by another 5s to 60s—they had already increased it from 45s to 55s—and secured the support of the Doom Dooma directors. The extra 5s was extended to holders of the 40 percent of Doom Dooma equity who had already accepted Brooke Bond's terms. All three groups involved Doom Dooma shareholders, their directors and Brooke Bond, were all satisfied. For shareholders, 60s represents a reasonable valuation compared with underlying assets and with the offer of 40s a share from Indian interests for three of the five estates. Doom Dooma directors avoided any disturbance in the running of the Company and secured fair terms for the 40 percent of shareholders who supported them by ignoring Brooke Bond's 55s offer. Brooke Bond have avoided any break-up of the Company and yet have secured tea estates for less than £200 an acre. This contrasts with the partial Indian bid of £315, with Doom Dooma's balance sheet valuation of £278 and with the £600 an acre which a new estate would cost. Lazard Brothers now say that acceptances or intimations of acceptance of its offer on behalf of Brooke Bond have been received from holders of over 90 percent of the stock units of Doom Dooma Tea. Acceptances will continue to be taken until further notice.

Brevities

Sales from the Board of Trade's stock of natural rubber in September totalled 25 tons, for delivery in November. A total of 26,510 tons remained available for sale on 1st October.

Plans for the possible construction of a refinery and fertiliser plant in Ceylon by the Italian State oil concern, E.N.I., were discussed in Rome during the recent visit of Mr. M. Senanayake, Ceylon Minister of Industry.

The clearing banks' credit transfer service has become fully operative. The uniform charge for non-bank customers of 6d a credit will now be extended to remissions to gas and electricity boards, building societies and other similar bodies. Under the credit transfer scheme, any member of the public can pay in cash at any branch of the clearing banks for transmission to a banking account anywhere in Britain.

Figures compiled by the Midland Bank show that the amount of new money raised in Britain in September was £48.5 million. This compares with £36 million in August 1961, and with £41.9 million in September of last year. For the first nine months of this year, the amount of new money raised is £533.1 million, which compares with £393.5 million in the corresponding period of 1960 and with £371.1 million in the first nine months of 1959.

GROWTH OF INSURANCE IN INDIA

By G. C. Bhattacharjya

THE insurance industry once attracted a large number of people by the allurements of its profit. But subsequently, uneconomic competition and unscrupulous management have lowered the reputation of insurance and led the public to wonder whether the security offered is worth the expenses involved. Even legislation has had to be enacted to protect the interests of the insured community. Meanwhile, although the allurements of the earlier days has disappeared, the number of concerns transacting general insurance business in India was still 166 on 31st December, 1960, of which 88 were Indian and 78 foreign. The total gross insurance premiums written in India from 1954 to 1959 were:

(Premium in crores of rupees)					
1954	1955	1956	1957	1958	1959
21.35	23.10	26.07	27.84	29.72	33.19

The figures show a gradually increasing trend in the gross premium income. The grievance of insurers generally about the uneconomic competition in the non-tariff sectors may have some force, but that is no reason why the development of these sectors should be arrested. In India, except fire, the other two portfolios contain a substantial proportion of the non-tariff premium. But the record of an increase of approximately 36 percent in fire, the revision in premia rates having been effective only at the end of the 1954-59 period, 45 percent in marine, 97 percent in miscellaneous, against an overall increase of 55 percent in gross premiums in India during the six years (1954-59), show the growing popularity of the non-tariff business.

Figures concerning the development of insurance business are given along with those of industrial production in India in the following table:

	1953	1954	1955	1956	1957	1958	1959
Index number of general insurance business in India	104.7	112.2	125.3	139.9	140.4	146.8	157.3
General index number of industrial production	105.6	112.9	122.4	132.6	137.3	139.7	151.9

Source: Insurance Year Book, 1960.

A critical evaluation of these figures would show that (a) insurance business rose to 157.3 com-

pared with 150.6, which would be expected against 151.9, on the basis of the ratio between industrial production (105.6) and insurance business (104.7) in 1953 — $\frac{105.6}{104.7} \times 151.9 = 150.6$. This clearly shows that insurance business has been growing quite independent of industrial production. (b) On the other hand, taking both the figures at 100 in 1953, insurance business rose to 140.68 and industrial production to 143.84 in 1959, thereby showing a lag in the development of insurance business, as against industrial production.

The conclusion is unmistakable that the rate of increase in general insurance business should be accelerated. Apart from intensive work in the traditional sectors, it is necessary to concentrate on the less common varieties, namely, engineering, consequential loss, third party liability, etcetera, in the industrial field and combined fire and burglary, personal accident with or without sickness, hospitalisation schemes, baggage insurance, etcetera, in the non-industrial sectors. These could lead to a substantial overall increase.

The Expense Ratio

As for expenses, the enthusiasm of managements in the development of business is to a great extent handicapped by their constant concern over the statutory expense ratio limits. There is thus a vicious circle, in that while the business must expand to improve the expense ratios expenses have to be incurred for the procurement and servicing of the growing business. All expenses may be placed in three broad categories: (a) management (b) administrative and (c) developmental. Management expenses, being almost fixed, would go down per rupee of premium written with every increase in the volume of business. Administrative expenses, although more or less of a semi-fixed nature, that is, remaining fixed for a range of volume of business, also grow with time (annual increments in the salaries of staff) and in sympathy with the rising price index (cost of dearness and other allowances, cost of stationery, office equipment, etcetera). Developmental expenses, on the other hand, are essentially of a variable nature, that is, growing with increases in the volume procured, although going a little in advance of the latter, but maintaining an almost uniform relationship with it over a period of, say, five years. Again, while developmental expenses have to be considered only in relation to the volume of new business, the expenses in the other two categories have the added advantage of being pro-rated over the entire existing business to-date, including the procurement of the current year. Finally, the overlapping expenses in the developmental sector have to be financed by the growing margin between the allowed and actual expenses in the other two sectors, engendered by the development itself.

These emphasise the need for development. There is also the need for a rational outlook on expenses. First, accounts should be so organised that the developmental portion is clearly separated from all expenses. Secondly, expenses on training, both theoretical and practical, of new entrants in the field service up to two years from the date of their appointment should be separated from general current developmental expenses and viewed over a greater span of time (say ten years). Thirdly, exceptionally heavy amounts of initial expenses on training of developmental staff, consequent on the formation or reorganisation, should be allowed to be deferred and spread over a number of years. Fourthly, commission rates for various types and classes of business should be varied, keeping in view the consumer resistance involved and the effort required in each case. Fifthly, serious thought should be given to the question of pooling expenses in advertisement for popularising all classes of general insurance busi-

ness, under the aegis of the Insurance Association of India.

Streamlining Organisation

As for organisational aspects of a streamlined, progressive set-up to promote development, it is necessary to remember that while development through career agents might find favour with certain circles, the planned building up of a permanent development staff for handling the procurement of business would, for reasons explained later, seem to be a more desirable policy. The member of a permanent staff would have better training, theoretical and practical, than the career agent. He will have a secured employment on a fixed monthly income with annual increments, provident fund and gratuity, coupled with suitable incentives based on performance, and consequently, would have a more real stake in his career. Naturally, he would be expected to be a more devoted worker. While the career agent would be solely interested in the "spot money" on current business with less thought for the servicing aspect, the permanent man would view both the procurement and servicing of business with the same zeal. But these personnel should be, from the start, trained and inducted into the employment on the basis of stable and standardised service conditions. Instead of the existing practice of regular employment coming after qualifying in a prescribed test within a period of nine months after a meagre, more or less theoretically-biased training, it is desirable to put trainees on a regular probation for more or less a year in normal procurement and servicing work apart from occasional sample exercises in actual business conditions during the pre-examination training period. The service conditions of these people should be on a two-part-tariff remuneration basis that is, over and above the basic foundation of a suitable time-scale of pay, they should be rewarded by an appropriate incentive scheme based on procurement. Thus, standardisation in salary scales and incentive payment on merit-rating, will provide the desired impetus.

In speaking about the organisational structure, it is necessary to consider from the branch manager downwards, that is, where primarily the business of a company is actually done. The organisational set-up of a branch may consist of a number of self-contained cells, each provided with adequate office staff, headed by competent and well-trained leaders responsible in their turn to the deputy branch manager (in charge of development) through a category of assistant branch managers. The branch manager would have one or two deputy managers (development) in charge of specific classes of insurance, and other deputy managers in charge of specialist service functions such as administration and finance, technical etcetera. A suggested organisational chart is given below:

Merits of Compactness

Experience in actual field work and in branch office affairs would readily see the merit of the suggested set-up. In place of the usual proliferation through various categories of developmental officials, it provides for certain broad and stout pillars. Authority does not have to come filtered through the proliferate hierarchy; instead, instant authority is provided. In place of the diffusion arising from the divorce of the administrative function from development, the provision of adequate office staff in every cell conduces to its independence and compactness and, therefore, its efficiency. Team work and group pride, responsibility and leadership fight out and eliminate difference and escapism. Procurement goes ahead assured of a competent camp of service personnel and, prompt servicing makes for successful procurement. While on the one hand, top management is relieved of routine affairs, the mere addition of the adequate number of cells to meet the growth-needs of the branch would obviate the defects of a large-scale organisation. Being in control of the activities, cell leaders would be able to forge and maintain direct links of relationship with the clients, independent of inspectors. It is suggested that a suitable scheme of profit commission should be extended not only to branch managers, but to the cell leaders as well. This would lend status, prestige and commercial meaning to our "miniature manager"—the cell leader.

Spreading Risks

Contrary to the traditional conservatism of insurers to concentrate only on first-class risks, the invaluable merit of spreading the risks over a large area should be weighed in view of its being the fundamental principle of insurance. Spreading of risks would be most facilitated by the amalgamation of smaller companies and extension of reinsurance, particularly by way of better treaty arrangements.

Jute

MILLS TO WORK 48 HOURS A WEEK FROM MONDAY

SHARP FALL IN GUNNY STOCKS DURING SEPTEMBER

A PRESS note issued by the Indian Jute Mills Association on 7th October says: "It has been decided that the current rate of jute imports and the prospects for this year's crop justify an early resumption of 48 hours' working in the mills. This increase in working hours will be effective from 16th October, which is the earliest practicable date in the light of the procedural and technical work involved. The Association is most gratified that it is in this manner able to benefit both the jute mill workers and overseas buyers, while the reduction in overhead costs will be most welcome to the mills themselves. At the same time, it must be borne in mind that with the industry's losses in the April-September period estimated to be over Rs. 6 crores, jute mill companies cannot face up to a recurrence of severely adverse trading conditions. If this should occur, which it is sincerely hoped will not be the case, prompt action will be essential for the good of the industry as a whole and in the interests of the national economy. In connection with the raw jute situation, the Association would reiterate the importance it attaches to long-term self-sufficiency which is at least in part dependent on the cultivator receiving an economic price for his jute. The articles and rules of the Jute Buffer Stock Association are now being finalised, although it is not expected that any surplus of jute will occur this season which would require buffer stock purchases to be made. Although hampered in some cases by shortage of finance, members of the Association have agreed that current purchases by the mills should approximate to the rate of imports during the pre-Puja period."

I.J.M.A. Stock Figures

The Press note was issued soon after the I.J.M.A. gunny stock figures for September 1961 were published. The figures show that total being 12,500 metric tons, constitute a new low, month. Hessian stocks fell by 4,600 metric tons to 15,800 metric tons (30.1 percent), which is the lowest figure since February 1959; and sacking tons (55.6 percent), which is the lowest since December 1959. Stocks of other goods dropped to 7,500 metric tons (14.3 percent), which is the lowest since September 1957.

The low stock figures give rise to the thought that the mills will be able to dispose of their increased output later this month as at present there appears to be no appreciable fall in the demand for jute goods. On the contrary, some say that the demand is likely to increase in the near future as higher levels, will need to buy now or risk the danger of running their stocks too low. It is generally believed that the prices of neither raw jute level, and so there is little advantage in waiting.

As pointed out last week, the squeeze for hessians has already developed, and throughout the past few days the premium for ready hessians, particularly 11-porter fabrics, over November shipment has remained at about Rs. 4 a 100 yards. Ready sacking is also at a premium, although the Mills are not interested in selling very far forward at these levels, and naturally prefer to wait until nearer the delivery date to take advantage of the higher prices. The fact that there has been such a big increase in business for hessians, and a practically negligible increase in that for sacking, demands some explanation. It appears that in the past Calcutta met nearly all the world demand for sacking, so any increase in the demand now must wait for a general trade improvement. In the case of hessians, however, Calcutta had strong competitors who secured a footing in world markets. Recently the quality of the competitors' goods has shown a marked deterioration, so Calcutta is now getting back much of that trade.

U.S. Burlap Consumption

Furthermore, U.S. burlap consumption for the period from January to August has been lower in 1961 than in any other year since 1954. In August 1961, consumption showed an increase over the previous month of 11 million yards to 67 million yards and it is expected that the September figure will show a further increase. The stock figures for August at 217 million yards, in spite of an increase of 10 million yards over the previous month, are still the lowest since October 1954; i.e., for seven years. At the present average rate of consumption, the stocks will last for nearly 3½ months, and it is very rarely that the U.S.A. allows her stocks to fall below this level. In view of these facts, the market expects that the United States may try to increase her stocks commensurate with her consumption. The U.S. consumption and stock figures for September are awaited eagerly.

Whatever happens, the outlook for the jute industry is still very obscure and many are in a difficult position as to how to act. The position is very

possible to foretell. The consumption of jute will increase from Monday next when the mills revert to a 48-hour working week with 12 percent of the looms sealed. Over the past few weeks, most mills were back to a 45-hour week, but in view of the better fibre supplies it was deemed advisable to increase production. As a result, fibre prices have tended to firm up, and goods prices remained steady in sympathy. Producers have got into the habit of complaining that little business is passing, but they are always able to keep going. Present prices are not particularly remunerative, but there are many manufacturers who are quite comfortably placed for the next few months as a result of the recent activity in the markets. The entry of the mills in the fibre market may occur more frequently this season, now that consumption will increase. The statistical position of raw jute is, therefore, quite strong and there is a general belief that prices will not fall much below their present levels.

THE JUTE MARKETS

Manufactured Goods: A moderate amount of business was transacted in hessians throughout the week for near deliveries. This resulted in a steady increase in rates for October shipment, with 40in. 10oz. advancing by Rs. 3.25 from Rs. 50.75 last Thursday to Rs. 53 on Tuesday. It was significant that, over the same period, forward shipment prices for January-March moved up by only 75nP from Rs. 45.25 to Rs. 46. Heavy goods were steadier with a considerable amount of covering and speculative activity for near positions, but there was not much interest forward, and price movements were mainly in sympathy with the ready position. B Twills improved from Rs. 131.25 to Rs. 133.75 in the October position, and January-March shipment moved up from Rs. 122.25 to Rs. 124.

Opening quotations on Wednesday morning were as follows:

	October	November	December	Jan.-March
40in. 7½oz.	30.25	37.25	35.75	34.75
40in. 8oz.	42.00	30.75	38.25	37.25
40in. 10oz.	53.75	49.50	47.40	46.25
B Twills	133.75	129.75	126.50	124.00

I.J.M.A. STOCK FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports total stocks of jute goods at the end of September as follows:

Description	30th September, 1961 (000 Metric Tons)		31st August, 1961 (000 Metric Tons)		Increase over (+) or decrease from (-) last month (000 Metric Tons)		30th September, 1960 (000 Metric Tons)	
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian cloth and bag	5,13.56	15.8	6,32.64	20.4	-1,19.08	-4.6	9,89.57	30.0
	(5.62)	(15.5)	(6.92)	(20.0)	(-1.30)	(-4.5)	(10.82)	(29.5)
Sacking cloth and bag	6,25.06	29.2	7,47.03	34.9	-1,21.97	-5.7	8,70.56	40.1
	(6.84)	(28.7)	(8.17)	(34.4)	(-1.33)	(-5.7)	(9.52)	(39.5)
Others		7.5		9.7		-2.2		8.9
		(7.4)		(9.6)		(-2.2)		(8.8)
Grand Total		52.5		65.0		-12.5		79.0
(000 Metric Tons/Tons)		(51.6)		(64.0)		(-12.4)		(77.8)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhal with estimates for two non-member mills. The figures in brackets are in British measures.

INDO-WEST GERMAN NEGOTIATIONS FOR AIR AGREEMENT START

I.C.A.O. AID FOR AERONAUTICAL RESEARCH AND TRAINING IN INDIA

(FROM OUR NEW DELHI CORRESPONDENT)

A WEST GERMAN delegation has arrived in New Delhi to negotiate an air agreement with India. This country has so far no regular air agreement with West Germany, and the present arrangement is purely *ad hoc*, under which India operates several services through West Germany, and Lufthansa operates its services through Calcutta. The German delegation, it is expected, will like to have an additional entry through Bombay or Delhi. Enquiries show that a good deal of progress in the negotiations has already been made by an exchange of letters between the two Governments.

Copenhagen, Zürich, Linz or Vienna and some German stations will remain unchanged.

Air Traffic within Europe

Scheduled passenger traffic on air services within Europe increased by 15.1 percent during the first quarter of 1961, compared with the same quarter of last year, the International Air Transport Association reports. During the three-month period, the intra-European airlines carried 1,970,000 sector passengers, or 258,500 more than during the same period in 1960. The report is based on the statistics of traffic on international routes originating and terminating within the European Continent and countries bordering the Mediterranean, operated by 13 I.A.T.A. member airlines who are also members of the Air Research Bureau in Brussels. The total scheduled cargo traffic during this year's first quarter came to 37,218 metric tonnes, up 12.1 percent over the same quarter in 1960, according to the Air Research Bureau statistics. Mail carryings increased 2.6 percent during the period to 6,955 metric tonnes. Of the total number of intra-European sector passengers carried during the first three months this year, 163,700 or 8.3 percent travelled first-class, and 1,807,000 or 91.7 percent flew in tourist accommodation. The 3,972,800 sector seats offered by the airlines during the first quarter represented an increase of 15.9 percent over the offerings during the same quarter of last year. (A sector passenger is one passenger carried over one flight stage. For example, a traveller going from London to Rome on a flight transiting at Paris will be counted twice: once for the London-Paris sector and once for the Paris-Rome sector.) There was a slight increase in the number of seats used. The overall load factor for the quarter stood at 50 percent. These intra-European traffic statistics are compiled from figures submitted by Aer Lingus, Air France, Alitalia, British European Airways, British Overseas Airways Corporation, Lufthansa, Finnair, Iberia, Icelandair, K.L.M., Royal Dutch Airlines, Scandinavian Airlines System, Sabena and Swissair. The figures do not reflect the domestic carryings of these airlines, or the intra-European traffic of other airlines, but they are considered as indicators of the development of traffic in the area.

U.A.R.-U.K. Air Agreement

The bilateral air agreement between the U.A.R. and the U.K. signed recently authorises United Arab Airlines to operate to New York or any other U.S. city through London, to Entebbe, Dar-Es-Salaam, Nairobi, Aden, Hongkong, Singapore and all British colonies. British airlines may extend their services from the U.K. and British colonies to the U.A.R. through Cairo and Damascus to Pakistan, Afghanistan, Java, Tripoli, Port Sudan and Basra.

B.O.A.C. Cold Weather Services

Under the winter schedules which come into force on 29th October, B.O.A.C. will have a daily jet service from Delhi westbound and daily jet service eastbound. Westbound departures will be in the evening at 10 p.m. every day. This is the first time that a standard departure time has been promulgated by an international airline for all its services from the capital. These westbound services will serve the Middle East, Europe and the U.K. Eastbound departures in the morning will be five times a week to Hongkong, of which four will go on to Tokyo, and twice a week to Australia. From Calcutta, there will be eight B.O.A.C. jet services each week eastbound and eight jet services westbound. On the eastern run, four services will go to Australia and four to the Far East. Of these, two will link India with the Philippines for the first time. Comet-4 jetliners will leave Calcutta on Wednesday and Saturday nights, arriving in Manila the following morning after a flight of 9½ hours. Return services will leave Manila on Thursdays and Saturdays. Both the new services will fly by way of Singapore to Manila, later continuing to Tokyo, some four hours' flying time by Comet from the Philippines. Like all other B.O.A.C. services, they will carry both first and economy-class passengers. From Bombay, there will be five Comet jetliner services westbound each week to Europe and the U.K., with departures in the evening for four of the services. The fifth Bombay service is by daylight all the way to London. Eastwards from Bombay, there will be two services to Australia and two services to Hongkong, all operated by Comets via Colombo and Singapore. The B.O.A.C. Comet services will be supplemented by Qantas Boeing 707s thrice a week through Calcutta and once a week through Delhi in each direction. In addition, all-cargo services will be operated through Delhi eastbound twice a week and westbound thrice a week. From Calcutta, there will be a weekly all-cargo flight on the London-Sydney route and vice versa.

K.L.M. Winter Schedules

With the introduction of the winter schedules on 1st November this year, K.L.M. will put the DC-8 into operation on all its Far Eastern services. The two Electra-II services to Kuala Lumpur and Saigon will be replaced by a single DC-8 service, which will be extended via Saigon to Manila. Teheran will also be included in this service; hitherto, the Persian capital has only had terminal services flown with the Electra II. The flights to Kuala Lumpur (Malaya) and Colombo (Ceylon) are to be temporarily discontinued, as the airports there are not yet suitable for use by jet airliners. Altogether K.L.M. will operate seven DC-8 services a week to the Far East this winter, terminating at Singapore, Tokyo, Biak, Manila and Sydney. Two of these services go via the North Pole to Tokyo and Biak. In consequence of the seasonal adaptation during the winter, the 16 services to the Near East will be reduced to 13 a week, with the result that the flight schedules have been slightly modified concerning travel times and routes. Two of these services have also been extended to Basra and to Doha, since these cities are no longer served by the Far Eastern flights.

On the European route network, too, there will be a few reductions of frequencies due to seasonal adjustments. On the Amsterdam-London route, for example, the number of services will be cut down to eight a day, compared with the summer frequency of 14 a day, while the number of services to southern Germany will likewise be decreased. As is customary during the winter, the services to Warsaw and Moscow will be combined. On the Amsterdam-Copenhagen-Stockholm route, the DC-7C is to be replaced by the Electra II. The number of all-cargo flights from Amsterdam to New York is to be raised to six a week, these being flown with DC-7Fs and L-1049H's. In Europe the cargo services to London, Paris,

not happening this year and that sellers are still strong enough to withhold their jute at the first sign of weakness. A lot has been written about the tremendous help given to sellers by the Government in the form of low interest loans available in the most remote places. Reports, however, indicate that sellers are so strong financially that they have not had any need to take advantage of these loans and are continuing to resist any bearish pressure with their own financial resources.

If this decrease in raw jute arrivals at baling centres is maintained, it follows that prices should improve not only locally but also overseas. Certainly, the tossa position remains precarious, and if there is any improvement in prices, tossa would probably be the first to move upwards. The E.P.C. registrations for the second half of September have been almost as large as the first half at 406,875 bales. The U.K. was the biggest buyer with 86,500 bales. West Germany bought 82,465 bales, Belgium 66,205, India 45,207, Spain 33,880, the U.S.A. 23,160, France 21,045, Italy 16,021, Egypt 13,720 and Czechoslovakia 8,760 bales. These very large purchases have been made mostly at the level of £112 for Export Lightnings, which is certainly high, compared with what was expected for this season's price. Early reports of purchases by overseas buyers indicate that the first half of October may show equally large registrations. In the pucca bale market, there has been a certain keenness to sell, and some activity has been reported. Cuttings dropped considerably even for the ready position. This market, however, reflects mainly Indian purchases, and it is not a true barometer of the world's raw jute prices.

Except for the jute which has been left for seed, the crop has by now been completely harvested, and there is little doubt that the quality is very bad. There has been heavy spack, heavy roots, hard-centred jute, but the greatest fault this season both in white and tossa will be the weakness of the fibre. Of interest to the Pakistani mills only is the much larger crop of mesta. This will probably just about satisfy the increased production of the Pakistani mills, but reports indicate that the increased working hours are not permanent but only very temporary. E.P.C. prices are now net with no commission to be deducted. These have been adjusted and as the adjustments are rather varied, the full range of the rates f.o.b. East Pakistani ports, are quoted below: Dundee Firsts £163; Dundee Lightnings £153; Dundee Hearts £143; Mill Reds £138; Mill Firsts £134; Export Firsts £121; Export Lightnings £100; Export Hearts £80; Dacca Tossa 2/3 £153; Dacca Tossa 4 £143; Dacca Tossa 5 £128; Dacca Tossa 6 £116; Crack Tossa 2/3 £139; Crack Tossa 4 £129; Dundee Tossa 2/3 £128; Dundee Tossa 4 £116; Dundee Tossa 213 £101; Outport Tossa 4 £83; Crack Daisee 2/3 £114; Grade Daisee 2/3 £100; Superior N.C. £70; S. N. C. £60; N. C. £43; M. C. £43; Cut Ropas £60; Habi Jabi £60; S. M. Rejections £60; T. C. £44, and D. T. C. £38.

THE FOREIGN JUTE MARKETS

FIBRE RISES ON SHORTAGE OF SUPPLIES

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute shippers are still reluctant to allow fibre prices to fall. A month ago, they were cheaper than they are today, but the rates are going up again, for what reason nobody knows. The prices recently rose to £140 a ton for Mill Lightnings, and many shippers were demanding more. The scarcity of good quality jute is still causing a major worry to the industry, but there has been a setback lately in the quotations for Mill Lightnings. The latest rate is down to £134, with Mill Hearts £109, and Grade Hearts £91, October-November shipment. The difference in the prices for these grades is much bigger than usual.

The prices of Mill Firsts are nominal, while Tossa-2/3 is offered at from £137 for Grade assortment, £127 for fours and £112 for Continental Tossa-2/3, all October-November shipment, c.i.f. U.K.-Continent. Spinners in Dundee are buying little yet, but Continental spinners are showing some interest, especially in the lower grades. It is difficult to understand why shippers are so reluctant to make fibre offers when supplies have increased. There may be a shortage of good quality fibre, but sellers are reluctant to part with jute of any description.

The Calcutta goods market showed signs of weakness last week for both hessians and sacking. The squeeze for the early positions has apparently eased, since there is no longer the wide difference of about 5s a 100 yards in the quotations for October and November. The latest quotations are 77s for 40in. 100z. hessians are 57s 9d for 74oz. October, 73s and 54s 9d November, 70s and 52s 9d December and 68s 6d and 51s 3d January-March, with B Twills at 200s 6d, 195s 3d, 190s 3d and 186s 9d for the respective positions of shipment, all f.o.b., Calcutta.

The prices of jute yarns and cloth in Dundee have been allowed to remain unchanged. Spinners are fairly well placed with orders for delivery over the next three months, and there are many advertisements for employees. Manufacturers are also in need of weavers to enable them to cope with the increase in business.

SCHLOEMANN

14,000-ton Extrusion Press

It pays to know more about SCHLOEMANN

Sales targets are difficult to achieve when production is hampered by obsolescent equipment. SCHLOEMANN is prepared to modernize your plant with highly efficient machinery, for either light or heavy work.

The two 14,000-ton extrusion presses installed at Alcoa's Lafayette Works - the largest units of their kind in the States - are fine examples of SCHLOEMANN skill. Capable of extruding profiles up to 40" wide and seamless pipes up to 20" o. d. from aluminum billets weighing 5,000 lbs., these presses provide cost-conscious designers with new possibilities in many branches of engineering.

If you are concerned with the plastic forming of non-ferrous metals and steel, it will pay you to consult our engineers.

INCREASING TAXATION OF THE
TEA INDUSTRYPROFIT MARGINS DECREASE DESPITE
RISING OUTPUT

(BY A SPECIAL CORRESPONDENT)

THE prices and production costs of tea are points of interest today. The Assam Government has by a recent notification increased wages of adults and minors by 16p and 8p, respectively, in Cachar. This will hit gardens in that area. The Assam road and inland waterways taxes on tea have been reimposed, although the Supreme Court declared them void and, in south India similar complaints have been heard. In central Travancore, production, it is reported, is higher by 164 percent of the output ten years ago, but the producers, it is said, have paid no less than Rs. 585 an acre in taxes to the State and Central Governments. The break-up of this figure is as follows:

Before profit:	
To the State Government	Rs. 124
To the Central Government	Rs. 101

After profit:	
To the State Government (agricultural income tax)	Rs. 202
To the Central Government (Central income tax)	Rs. 155
Total to the State Government	Rs. 326
Total to the Central Government	Rs. 256

Labour benefits and bonus paid by the Company under reference during the past year amounted to Rs. 211 an acre. This was exclusive of wages, medical expenses, value of rent, free accommodation and the cost of education and recreational facilities. The balance available to the investor, after meeting taxes, setting apart a reasonable amount for development purposes, rehabilitation of existing assets and after meeting capital liabilities under the Plantations Labour Act, is only Rs. 58 an acre. The net return to a producer whose output has gone up by 164 percent during a decade, was only Rs. 58 an acre, while the Governments received Rs. 582, and labour Rs. 211 an acre. Ten years ago, the total cost of production an acre of tea in an average Assam garden was around Rs. 700 to Rs. 800 and for the Dooars, rates varied from Rs. 600 to Rs. 1,000. The present taxation figures will deter new capital investment in tea, yet the Government is anxious to increase production.

Propaganda for Tea

The pros and cons of this question of over-production balance out as there are definite grounds for expecting developments in many new markets. It will be interesting to learn how the Indian Tea House recently opened in Cairo is faring. This new cafeteria is reported to be ideally situated in the heart of that city. It is spacious, comfortable, well-decorated and air-conditioned. Attention has been given to creating a cool and pleasant atmosphere for the full enjoyment of "the cup that cheers". There are two entrances to the house—one leading to a tea bar section for standing service; another giving access to the lounge on the ground floor where people can sit comfortably and relax. Visitors will have the choice of enjoying various kinds of tea grown in India, namely, Darjeeling, Nilgiri, Travancore, Assam, Dooars or Dohra Dun (green tea). Iced tea will be served. The kitchen and the tea bar counter are fitted with modern tea-making equipment. A few selected Indian and local snacks (to go with tea) will be served. These will be prepared in a new, clean, hygienic and modern kitchen. There is also an information and demonstration counter, from which details about Indian tea and the industry will be available, while demonstrations on the correct method of tea

preparation will be given. Interesting and useful literature on this subject will also be made available free. A special lounge on the mezzanine floor will be reserved for parties and dancing and an auditorium with a 35 millimeter projector to show films will be included. This sounds like good business provided the service is kept up efficiently and well. It is understood that mobile tea vans will soon be introduced to take tea into the surrounding villages. Such promotional measures should produce results in Europe, especially in Hamburg, where demand for tea is said to be increasing.

Tea Company Shares Fall

The average price a kilogram of teas sold in Calcutta to the end of September was Rs. 5.39. Last year, it was Rs. 5.96 a kilogram, but today's prices continue well below the rates ruling a year ago. Nevertheless, buyers absorb offerings at the lower level. The break in tea prices has affected some share prices—from Rs. 35.62 cum-dividend Hasimara fell to Rs. 32.44 ex-dividend and now quote Rs. 31.12; Huldibari are now at Rs. 29.20 x.d. from Rs. 35.06; Rydak are no better than Rs. 25.50. Last year, they were Rs. 37.50. Bishnauth are also down at Rs. 19.56 x.d. after transactions round Rs. 27 c.d. Other sound shares such as Brooke Bond quote Rs. 15.62; Dhelakhat Rs. 19.44; Tezpur Rs. 15.44; Banarhat Rs. 300 and Hantapara Rs. 121.

Better Exports to U.S.A.

In the U.S.A., the local Tea Council states that 1960 was "a dynamic year" for tea in that country and Indian tea exports have been better. From 1st July, 1961, shipments to the U.S.A. are given at 54 million lbs, compared with 24 million lbs and 4.8 million lbs in the past two years. Shipments to the U.A.R. were also considerably higher and it is to be hoped that the latest political developments there will not affect that growing market. Exports compare 6½ million lbs, 1½ million lbs and 34 million lbs, respectively.

The trend of consumption looks moderately hopeful while production figures from north India indicate that the marked increase in output compared with the last season, is no longer so pronounced as in the May-August period. At the end of August, north India was ahead by 65½ million lbs, but at 375½ million lbs this year and 319 million lbs in 1960, the surplus is down to 56½ million lbs. Pakistan continues to make more tea and latest world figures from the major producing countries work out at 891.4 million lbs, compared with 814.2 million lbs, showing an increase of 77.2 million lbs. The comparative output in 1959-60 was 819.7 million lbs.

Increasing Home Consumption

Shipments, while well ahead of last year, record no improvement over the 1959-60 season except for the U.S.A., to which country India has exported about 3 million lbs more tea than last year. The U.A.R. is also well ahead. Cannot something on the lines of tea propaganda in Cairo be done in Indian cities? The cafeterias run by private enterprise seem to be overcrowded as well as rather expensive. Why do not the big blenders take a hand, jointly or separately? Last year's Calcutta tea sales figures for internal consumption, in spite of a serious fall in production, were over 919,000 packages, compared with 938,000 packages in the more normal 1959-60 season. This year, sales to-date are better. Most of these were Dust teas, which give a useful infusion. It confirms the view that tea consumption is increasing locally. With plenty of cheap tea on offer, another increase should be registered this season.

COCHIN TEA SALES

At Sale No. 41, 529,000 kilograms of tea were on offer. There was a good general demand. Plain and low mediums were barely steady. Mediums were fully firm while good mediums were irregularly 10p to 20p dearer. High-grown were irregular following quality.

Books

PLANNING: PROBLEMS AND
PITFALLS

Technique of Planning. By S. S. Wagle. (Published by Vora and Co. Publishers Private Ltd, 3 Round Building, Bombay 2. Price Rs. 12, pages 296.)

In the introduction to his book, Dr. Wagle says that "the interlinked structure of the economy needs a correlated approach to foster corporate growth of its constituent elements". But partial analyses and separate conclusions cannot supply this, so he has attempted in this monograph—originally a doctoral dissertation for Bombay University—"a comprehensive integration of economic thought with a view to deriving the technique of planning for accelerated economic growth of the under-developed countries". This is an excellent objective, but it is not too ambitious, to be reached perhaps by only a mathematical treatment of a fairly high order, tempered in its flights by a sure knowledge of the working of economic forces, for which few are qualified, in India at least? Otherwise, one gets involved in a wordy jungle and clichés and all-too-self-evident conclusions. This is largely the fate of Dr. Wagle's efforts. Unfortunately, he has rendered his labours even less fruitful by adopting distressing jargons which very few would understand. One turns in vain, as for example to such an alluring section as "sectoral investment pattern and accelerated economic growth," only to confront utterances like "within limits, locational concentration of an inter-industrial structure can take advantage of agglomeration economies and thus minimise the resource requirements of the entire industrial complex situated in a regional node" or "inter-nodal distances and spatial dispersion of intra-industrial activities would generally govern the fresh requirements of the transport sector in relation to the growth of the industrial sector". These presumably mean something—but what? Would it be too much to request Dr. Wagle to rewrite his book in simple English and supply an index and a bibliography which are essential to a work of this nature?

FOOD PROBLEM

The Food Problem of India. By N. C. Agrawal. (Published by Vora and Co. Publishers Private Ltd, 3 Round Building, Bombay 2. Price Rs. 8, pages 175.)

This book is a substantial adaptation of the author's doctoral thesis submitted to Lucknow University. Agriculture in India accounts for about half the national income, and 70 percent of the total population depends on it. Foodgrains alone constitute more than two-thirds of the Indian agricultural production and a quarter of India's wholesale trade in all commodities. More than two-thirds of the income of the majority of people is spent on different items of food, so the Indian economy can rightly be described as a food economy. The author discusses the basic agricultural resources, the requirement and availability of foodgrains. He gives an analysis of the dietary standards of the people as well as what constitutes a balanced diet. He also discusses the trend of output and land utilisation since 1891. The balance between population and food resources and a brief narrative of the various committees appointed by the Government are other interesting features. The growth rate of population is now 2 percent a year. This raises the question of increasing the supply of foodgrains. Can production be increased adequately through scientific farming and better irrigation facilities? An attempt has been made in this book to study such questions objectively.

GUIDE TO INVESTORS

C. J. D. Investor's Guide. Edited by Waman P. Kabadi. (Published by Chimanlal J. Dalal and Company, Agakhan Building, 9 Dalal Street, Bombay. Price Rs. 15.)

The second revised and enlarged edition of *C. J. D. Investor's Guide*, published by the Bombay stockbroker's firm of Chimanlal J. Dalal and Company, contains up-to-date information about over 600 companies whose scrip are active on the various Stock Exchanges in India. The detailed analysis of financial statements of the companies should help investors assess the relative merits of different shares. The Guide will prove useful not only to investors and stockbrokers, but it will also serve as a good reference work for industrial and business houses because of the wealth of information it contains. Apart from the analysis of balance-sheets, it contains a summary of the salient features of the third plan, a brief review of every important industry and some informative articles on taxation and investment. While the bulk of the publication has grown considerably from 750 pages to 1,150 pages because of a much larger coverage, its price has been kept unchanged at Rs. 15.

Calcutta Markets

STRONG GENERAL DEMAND AT
TEA EXPORT SALE

AT Sale No. 19, held on 10th and 11th October, there was a strong general demand for the 73,308 chests on offer at the Export sale. Prices for plain broken and the better Fannings in this category were fully firm, but poorer Fannings containing fibre were up to 15p easier. Medium and better orthodox descriptions met with useful competition at firm to dearer rates. C.T.C.s were irregular. Prices were generally around last rates but, as in previous weeks, demand weakened considerably towards the close of the sale. Off-grades were in demand, but prices were generally easier. Leg-cut descriptions were up to 15p easier. Darjeelings met with good support and were generally dearer. Whole leaf varieties sold well around last rates, while tippy teas were generally dearer.

Quotations	1961		1960	
	Rs. a kilo	Rs. a kilo	Rs. a kilo	Rs. a kilo
Clean Plain Pekoe	4.40 to 4.60	5.40 to 5.65		
Plain B.P.	4.20 to 4.40	4.50 to 4.65		
Plain Fannings	4.00 to 4.20	4.65 to 4.90		
Medium Assam C.T.C. B.P.	5.00 to 5.40	5.00 to 5.40		
Medium Assam C.T.C. Fgs.	4.70 to 5.10	5.10 to 5.40		
Best Assam C.T.C. B.P.	5.40 to 5.80	6.60 to 7.20		
Best Assam C.T.C. Fgs.	5.40 to 5.80	7.20 to 7.80		

(Quotations are inclusive of excise duty.)

FREIGHT MARKETS STEADY

THE freight rates in all the markets remained somewhat steady during the past week. The Baltic Chartering Committee has completed its November bookings from both Atlantic and Pacific coasts. A fixture from the Atlantic coast to west coast of India paid 77s 6d which is 2s 6d above the last paid. The Far East was still the busiest area. In the scrap trades, there was a little activity from the Great Lakes for Japan where the Liberty rate was raised. Burma rice exporters accepted two vessels to Ceylon at the reduced rate of 41s, last paid 42s. A fixture of 10,000 tons of iron ore from Cuddalore to west Italy has been concluded at 42s 6d f.i.o. and trimmed, when Bombay to Italy paid 42s. Due to the clearance of the transit shed, berthing position in Madras has considerably improved. Some of the leading iron ore shippers are endeavouring to resume iron ore loading at Krishnapatnam after the north east monsoon period. Subject to weather permitting foodgrain vessels will start lightening at Haldia anchorage with effect from early November. Iron ore vessels will be loading at Paradip (Orissa). With the end of the monsoon, all minor ports in the west coast will also accept vessels to load mainly ore.

LINSEED QUIET

The market was quiet in the past week due to the absence of enquiries. Local crushers greatly reduced their output because of lack of parity; oil prices declined with little corresponding fall in the prices of seeds. Arrivals from upcountry were very small. Due to the weakness of other vegetable oils, the linseed oil market was dull and the local demand poor. The oilcake market was firm. There was a good local demand at higher prices, but stocks were very small and business was restricted. The latest quotation is as follows: October delivery Rs. 28.50 a maund.

SHELLAC UNCHANGED

During the week ended 10th October, the market was unchanged. The range of quotations was as follows:

	Rupees a package of 74.40 kilos	
	Buyers Rs.	Sellers Rs.
Shellac and buttonlac—hand-made		
Superior Kusmi Buttonlac	187.33	192
Light Pure Buttonlac	177.33	182
Pure I Buttonlac	162.67	166.67
Special Kusmi Lemon Shellac	188.67	190.50
Superior Kusmi Lemon Shellac	177.33	179
Lemon I Shellac	161.50	165.50

COMPANY AND PUBLIC NOTICES

PHILLIPS CARBON BLACK LIMITED

Regd. Office: 31, Netaji Subhas Road, Calcutta.

NOTICE

NOTICE is hereby given that at the meeting of the Board of Directors of the Company held on 30th September, 1961, the Directors have resolved that the Second and Final Call of Rs. 2.50 per share be made on the 1250000 shares of the Company and that the amount of the Call be payable to The First National City Bank of New York at Calcutta and Bombay on or before 15th November, 1961. Any amount unpaid on 15th November, 1961 will bear interest at 12% per annum from the above date till the date of payment.

The Call Notices have been posted to the respective shareholders. Those shareholders who have not received the Call Notice may contact the Company. Cheques accompanied by Call Notices should be sent to the Bankers and not to the Company.

By Order of the Board,
DUNCAN BROTHERS & CO., LD.,
Secretaries & Treasurers.

Calcutta, 12th October, 1960.

MACNEILL & BARRY LIMITED

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company for the half-year ended 30th September, 1961, at the rate of Rs. 2.442 per share. Payment will be made on or after 1st November, 1961, to those Preference Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions.

The Preference Share Transfer Books of the Company will be closed from the 30th October to 1st November, 1961, both days inclusive.

By Order of the Board,
A. N. MITRA,
Secretary.

2, Fairlie Place,
Calcutta-1, 6th October, 1961.

BURN AND COMPANY LIMITED

NOTICE is hereby given that the Registers of Members and Share Transfer Books for 6% and 7% Preference Shares in the Company will remain closed from the 26th October to the 31st October, 1961, both days inclusive for the purpose of payment of Preference Dividends for the half year ending 31st October, 1961, on or after the 10th November, 1961, to those Preference Shareholders whose names appear on the Company's Registers of Members for 6% and 7% Preference Shares on the 31st October, 1961 or to their mandatories.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office:
12, Mission Row,
Calcutta.
12th October, 1961.

434. R

during the past couple of years considering the warm response they have got.

The average rate of ordinary dividends increased from 9.0 percent in 1958 to 11.8 percent in 1959. The rise does not necessarily mean that shareholders got more, since the system of prior tax deduction from dividends was introduced by the Finance Act, 1959. Taking into account the tax deducted from dividends at source, it is doubtful whether net payments to shareholders increased. The disappointing trend in net dividends has done much to divert the attention of investors to the growth prospects of shares rather than the yields. This is unfortunate, since investors ought normally to consider both dividends and growth prospects when choosing shares. The profitability of companies, as measured by the ratio of gross profits to sales and by the ratio of gross profits to total capital employed, rose considerably in 1959. The improvement was particularly noteworthy in the case of textiles, chemicals, tea plantations and matches. But coal, shipping, coffee and rubber plantations showed a striking decline in profitability. The iron, steel, textile and engineering industries contributed greatly to the increase in sales. As far as the coal, shipping and coffee industries are concerned, the prospects remain far from encouraging. The coal industry is suffering because transport shortages have led to a large accumulation of stocks at pitheads. The working of the shipping companies has been adversely affected by the keen competition in freight markets, and by the

steep rise in operating costs. The coffee industry faces over-production and the price of the commodity has become unremunerative.

The decline in gross capital formation during 1959, compared with 1958, is not surprising, considering that industrial growth slackened partly in response to the drastic import cuts and partly because the investment programmes of various industries under the second plan were completed. The iron and steel industry, for instance, had by then completed a major portion of its expansion programme. Gross capital formation in the entire public limited companies sector is estimated at Rs. 159 crores in 1959, with gross fixed assets amounting to Rs. 139 crores and inventories to Rs. 20 crores. On the same basis, during the four years from 1956 to 1959, gross capital formation in the public limited company sector is estimated at Rs. 952 crores, of which gross fixed assets may have been around Rs. 739 crores. An interesting feature is that the number of companies managed by managing agents declined further during 1959. Of the 1,001 companies, 621 were managed by managing agents, against 657 in 1958. But the number of companies managed by secretaries and treasurers almost doubled from 25 in 1958 to 49 in 1959. The trend is due mainly to the various restrictions concerning the number of companies which managing agents are legally allowed to manage and the remuneration they are entitled to receive.

THE LABOUR CONFERENCE

THE 19th session of the tripartite Labour Conference in Bangalore on 9th and 10th October was the last one to be held before the general elections, so it naturally provided the Central Labour Minister with a platform for restating his philosophy on labour relations. Mr. G. L. Nanda did not mince his words. India, according to him, was in need of economic and social change. While vast masses were without the means for satisfying the basic needs of life, "the manner in which the income and the wealth of the country is being shared reflects an order of inequality which appears to be excessive, untenable and lacking justification, in relation to any social or economic criteria." But he maintained that the right way to bring about change was not by compulsion, but by a process of voluntary transformation, responsibility for which must be assumed by groups of individuals in free association. Nevertheless, one of the proposals before the Conference was to give the Government power to enforce compulsory deductions from pay for investment in Government securities in a kind of non-contributory provident fund. The Conference, taking its cue from the Minister's speech, looked askance at such a proposal. It contented itself with declaring that there is still scope for mopping up savings on a voluntary basis, and that employers and employees should give more active support to the National Savings drive.

Discussing what he called a "vital process of decentralisation" in industry, Mr. Nanda advocated a sharing of responsibility by management and labour within each industrial unit in such matters as health, safety and discipline, and also in increasing efficiency. Workers' participation in management would provide a crucial test for the zeal and capacity of the workers and the sincerity and understanding of the employers. He gave an optimistic report on the 18 units so far studied which have been experimenting with workers' participation; a closer understanding between labour and management has developed and in only one has there been any stoppage of work since the introduction of the scheme. According to Mr. Nanda, the Code of Discipline is no longer on trial, but has established its worth in one direction at least by bringing about a steady drop in the number of working days lost through disputes since it was introduced in 1958. For more effective implementation, greater internal sanctions are needed in the various organisations. Both workers' and employers' associations need strengthening, since the strength of these bodies constitutes the true support of the various codes and agreements.

For the first time at an Indian Labour Conference, the accent was on the need for increased productivity. Much of Mr. Nanda's speech was devoted to the subject. Quoting the third five year plan that "surpluses are a social product, to which neither the employer nor the working class can lay an exclusive claim", he underlined the other claims to be met from increased productivity—formation of additional capital, reduction in the prices of products and improvement in competitive capacity in export markets. He added that there could be no satisfactory growth in employment opportunities without a corresponding increase in productivity a worker, and he admitted it as a weakness that the workers were not yet aware of this. Although he gave the need-based minimum wage first priority, Mr. Nanda made it clear that at each stage in development there is a "limit to

the amount that can be spent for the satisfaction of the workers' needs." What was available, he said, should be spent in ways which help to improve efficiency, such as canteens, co-operative stores, co-operative banks and workers' education. This seems to suggest a principle which the Bonus Commission would do well to ponder when it considers the question of an upper limit for bonus. Turning to public sector undertakings, the Central Labour Minister was firm that they must abide by the labour policy laid down for industry in general, and that the "only privilege they could expect to get was the facility for doing better than the private sector." They should be model employers, providing the leadership for others. His political theory made no sharp distinction between the public and the private sectors. India was already committed to a socialistic pattern of society and the private sector should "bear the essence of a socialist economy." Mr. Nanda did not, however, elaborate this point. One would like to know whether he wishes to make the public sector more like the private sector, or vice versa.

The Code of Efficiency and Welfare was the most important item on the Conference programme. The idea of a further convention on these lines was first raised by the Labour Minister at the 17th session of the Conference and then referred to a special committee under the chairmanship of Mr. V. K. R. Menon, Director of the I.L.O.'s Indian Branch. The report of this committee, strongly favouring an elaborate draft code, was before the Conference, but delegates' reactions were not too favourable. Only the I.N.T.U.C. has urged its immediate implementation. The A.I.T.U.C. has taken the view that it is not concerned with productivity since the workers do not benefit thereby. Employers' associations on the whole seem to think that they have enough on their plate at present with the Code of Discipline, but Mr. Naval Tata has supported the new Code in principle, although he feels that more time is required to consider it. After protracted discussion, the draft was referred to a tripartite committee, which is to meet within three months after workers' and employers' organisations have had time to study the draft in detail. The fate of the new Code is thus still very doubtful. A study of the draft, the preamble to which characterises the Code as a concerted effort towards increasing efficiency in industry, suggests that, after all, what it sets out are mainly the principles of good management, which have been aptly described as "getting results through people". Thus, management and workers under the Code are to promise to avoid waste and inefficiency, to make better use of available resources, to investigate absenteeism and labour turnover, and so on. Management will try to improve working conditions and welfare and "bring about conditions which will enable workers to give of their best," to associate workers in the implementation of laws and regulations on health and safety, to make positive efforts to generate an atmosphere of mutual trust and co-operation. This is but a statement of the principles embodied in good personnel management, whose objective has been defined as maintaining relationships which enable all those engaged in an undertaking to make their maximum contribution to effective working.

While the principles are on the whole sound and unobjectionable, the draft Code is surely too detailed. The more detail in a general convention of this kind, the more scope there will be for argu-

ment as to whether or not there has been a breach of a particular clause. Thus, how is one to interpret the clause that management is to ensure that workers receive their due share of the gains from increased productivity? What the workers' due share is, no expert on productivity has yet been able to say. Finally, the question arises whether tripartite proceedings of this kind are all mere talk. It is easy to be cynical about them, but at least they have an important catalytic function in forming opinion in industry. Through regular meetings of the Indian Labour Conference, the Government has been able not only to test out reactions to proposed labour policy, but to encourage both sides of industry to see the value of the voluntary principle in labour relations. In spite of doubts in the first instance about the efficacy of tripartite conventions, the Code of Discipline is beginning to bear fruit in improved relations.

COMMONWEALTH AND THE COMMON MARKET

SERIOUS negotiations are commencing between the U.K. and the European Economic Community, better known as the Common Market or the Six, and it is generally believed that the deadlock reached in 1955 and again at the end of 1958 will be broken. The question whether agreement will be reached has, however, become almost academic. Nobody can doubt that a large volume will have to be added to the Treaty of Rome (which already runs to several hundred pages) if the U.K. signs; much the same volume will be required if some form of association is worked out. What matter are the terms of the agreement. The U.K. Government has made it clear that it intends to safeguard the interests of the Commonwealth in any agreement that is reached. This will, however, be a formidable task since Commonwealth interests are complex and in many ways divergent. The Commonwealth is not a homogeneous unit economically. The economic threat of the E.E.C. to the Commonwealth lies in the fact that it involves a system of tariffs towards the outside world combined with almost free trade within the bloc. It does not in general erect more or higher barriers against the outside world. The effect of the common external tariff system will be a lowering of duties in France and Italy, little change in West Germany, and some increases in the Benelux countries. In view of this, and of clauses allowing for some tariff-free quotas, the overall effect is a slight lowering of barriers. The abolition of all tariffs between the Six and the Associated Territories, however, means that the preferential effect will be strong and must, at least to some extent and for some time, have an adverse effect on the trade with the Common Market of all those outside it.

The E.E.C. contains some 170 million people with a standard of living that is high compared with that of the world in general. What is perhaps even more important, production has been rising in these countries for the last decade much faster than in the U.K., the United States or any other area at least in the western world. This progress is confidently expected to continue and even be accelerated as the Common Market comes into being. Commonwealth exporters to a market of this importance naturally are alarmed at the prospect of preference in favour of other suppliers. The main divergence of Commonwealth interests stems from the degree of importance to different countries of this market. From the narrow U.K. point of view (that is, disregarding the general Commonwealth aspect), it is significant that some 15 percent of U.K. exports go to the Six. Many of these are highly competitive lines, so that tariff discrimination against them might reduce the share. On the other hand, the domestic market would have to be thrown open if the United Kingdom joined the Common Market. The view appears to be prevailing that the chilly wind of competition might prove stimulating in some sections of British industry and that this might therefore be a minor sacrifice to set off against the threat to U.K. exports. The dangers to British agriculture could probably be averted by a special agreement, particularly in view of the fact that the Six have not yet worked out their agricultural policy in detail.

The overseas Commonwealth also finds the E.E.C. countries a valuable market, although the importance varies greatly from country to country in the Commonwealth. For many of these countries, according to the *Overseas Review* of Barclays Bank D.C.O., the exports are mainly industrial raw materials such as minerals, cotton, wool and jute, for which the E.E.C. is heavily reliant on external sources and which it is therefore admitting free of duty. Other than the U.K., only Canada exports manufactured goods on any appreciable scale from the Commonwealth to Continental Europe. This leaves foodstuffs as the third main

* This is the first of a series of three articles.

category of exports from overseas Commonwealth countries to the Six and these are divisible, roughly, into temperate and tropical foodstuffs. In the case of temperate foodstuffs, it comes as a surprise to find how near to self-supporting the E.E.C. already is. Imports of temperate foodstuffs by the E.E.C. countries are usually relatively small and largely from non-Commonwealth sources. For tropical foodstuffs, however, the position is very different. These will be admitted free of duty from the Associated Territories, which are the former colonial and trust territories of the members of the E.E.C. Of greatest importance from this aspect are the countries which formerly constituted French Africa, which already receive preferential treatment in the French market and supply it with a large proportion of its requirements and in some cases have a surplus for other markets. The Commonwealth producers of these products—that is, those in West and (to a lesser degree) East Africa—are naturally alarmed at the prospect of their competitors receiving new preferences in five European countries for which the Commonwealth cannot possibly be compensated by some lowering of barriers in the sixth, France.

Current News and Comment

Calcutta Tramways Pays More

The Calcutta Tramways Co. Ltd has increased the ordinary dividend from 3½ percent to 5 percent, tax-free, for the year ended December 1960 due to the fact that a sum of £59,919 has been transferred to the shareholders' account, against £41,123 in 1959. Under the agreement with the Government, a maximum amount of £87,457 can be transferred to the shareholders' account, if possible. In his chairman's address (a fuller version of the speech is printed on a later page in this issue of *Capital*) at the annual general meeting in London recently, Mr. David E. Webb said that the balance on revenue account is unlikely to be sufficient for several years to come to allow for the maximum transfer to the shareholders' account. The outlook for dividends has, therefore, to be viewed carefully. Mr. Webb said that the impact of increased fares has been reflected in the accounts for 1960. Although traffic receipts have increased, they have largely been used to finance maintenance and repairs. Substantial funds are being diverted towards renewals and replacements in view of the rising costs of materials and labour. The increased earnings have been used to improve the permanent way and roads to a considerable extent.

Fort Gloster Pays Less

Fort Gloster Industries Ltd has reduced the taxable ordinary dividend from 25 percent to 10 percent for the year ended March 1961. It is covered more than twice and offers a yield of 3.4 percent at the present price of Rs. 297 a share. After increasing depreciation from Rs. 10.29 lakhs to Rs. 21.79 lakhs, the profit has declined from Rs. 24.67 lakhs to Rs. 12.98 lakhs. Development rebate reserve receives Rs. 77,000 (against Rs. 13 lakhs), debenture sinking fund Rs. 1.75 lakhs (same) and taxation Rs. 7.10 lakhs (against Rs. 4.25 lakhs). There is a carry-forward of Rs. 72,385, against Rs. 72,060 brought in.

Commenting on the prospects for the jute section, the directors say that in view of abundant fibre supplies during the current year, the mills should be able to do "simultaneous business" at a small margin of profit. The modernisation of the sacking web spinning section is likely to be completed soon. Orders have been placed for importing silver spinning frames. The cable factory of Fort Gloster has done well. In spite of increased competition, the directors hope that the demand for cables will rise due to the expansion of power generation capacity. Steps have been taken to expand and diversify the activities of the cable section. Fort Gloster has obtained an industrial licence for producing paper insulated underground cables and various other cables of special sizes.

Assam Sillimanite Expanding

The ordinary shares of Assam Sillimanite Ltd have been steady around Rs. 10.19 for some time. The confidence is likely to be reinforced by the encouraging speech of Mr. S. M. Wahi, chairman, delivered at the annual general meeting of the Company held recently in Gauhati. Mr. Wahi was optimistic about the expansion programmes. (A fuller version of the speech is printed on a later page in this week's issue of *Capital*.) The refractory factory has started producing sillimanite blocks

A more detailed study, commodity by commodity, is required to decide how far the alarm is well-founded. For some of these products, such as tea and bananas, the E.E.C. provides only a very small share of the market for Commonwealth exporters. The situation is more uncertain for vegetable oils and oilseeds, about which expert opinion seems to vary. As for coffee, the producers of the higher grades hope actually to benefit as duties in West Germany will be lowered and the consumption should be stimulated, but the producers of Robusta may find still greater competitors. The most serious difficulty is likely to be for Ghana and (to a lesser extent) Nigeria as cocoa exporters; West Germany and Holland are both larger consumers of cocoa than the U.K. and the 9 percent preferential tariff may enable the ex-French territories to dispose of their cocoa crops, leaving Ghana and Nigeria with unsold surpluses or even more depressed prices.

Commonwealth preferences have been neglected in surveying the position above. They are important enough to call for separate consideration later.

(To be continued)

and shapes and has at present an installed capacity of 5,500 tons. It is proposed to undertake further expansion when the loan of Rs. 65 lakhs is obtained from the International Finance Corporation. The demand for fireclay bricks and shapes is excellent, and enquiries have been received for 3,076 tons valued at Rs. 22 lakhs. Mr. Wahi said that in order to provide the factory with fireclays, steps have been taken to develop mines around the factory. It is intended to meet the requirements of fireclays from Assam Sillimanite's own mines. When the latter are fully developed, fireclay may be sold to other factories.

During the year ended March 1961, the production of sillimanite amounted to 7,540 tons, against 6,957 tons in 1959-60. An output of 9,000 tons may be obtained during the current year. Total sales rose from Rs. 22.71 lakhs in 1959-60 to Rs. 25.76 lakhs in 1960-61. The profit improved from Rs. 2.35 lakhs to Rs. 2.94 lakhs. The taxable ordinary dividend of 6 percent has been maintained. It is covered more than one-and-a-half times, and offers a yield of 5.8 percent at the present price. The diamond saw plant in Paharpur, near Calcutta, has done well. It is intended to double the capacity of the factory for producing sillimanite blocks and shapes which are largely used in the glass and ceramic industries. The expansion scheme may be completed by early 1962. Commenting on the move to restrict sillimanite exports, Mr. Wahi said that foreign customers should be permitted to buy as much as they want because these exports help earn foreign exchange.

Rights from New Manbhoon

The ordinary shares of the New Manbhoon Coal Co. Ltd have been steady around Rs. 15.62 during the past month or so due to two factors. Firstly, the Company has increased the taxable ordinary dividend from 7½ percent to 9 percent for the year ended March 1961; the dividend is covered more than two-and-a-half times and offers a yield of 5.8 percent at the present price.

Secondly, it proposes to issue ordinary rights shares in the proportion of two new shares for every three held at a premium of Rs. 2.50 a share. During the year ended March 1961, raisings increased from 142,220 tons to 147,702 tons and despatches from 118,432 tons to 124,954 tons. After providing Rs. 59,567 (against Rs. 60,919) for depreciation and Rs. 1,561 (against Rs. 9,792) for development rebate reserve, the profit has declined to Rs. 1.47 lakhs from Rs. 1.73 lakhs. General reserve is allocated Rs. 1 lakh (against Rs. 1.50 lakhs). The carry-forward is Rs. 51,230, against Rs. 56,603 brought in. The directors point out that the working has been hampered by wagon shortages. The second stowing and crushing plant may start operating by the end of 1961.

A Maiden from Kalinga Industries

Kalinga Industries Ltd has produced satisfactory results for the year ended March 1961. It has earned a profit of Rs. 9.58 lakhs, after reducing depreciation from Rs. 4.87 lakhs to Rs. 4.16 lakhs and providing Rs. 27.14 lakhs (against Rs. 13.55 lakhs) for taxation. Bringing in a loss of Rs. 4.05 lakhs and paying the arrears of preference dividends, there is a credit balance of Rs. 3.68 lakhs. A maiden ordinary dividend of 5 percent, taxable, has been declared to absorb Rs. 1.94 lakhs. The carry-forward is Rs. 1.38 lakhs.

The directors say in their report that the low-shaft furnace factory has worked satisfactorily. Its present production capacity is for 30,000 tons of foundry pig iron a year. During the year, pig iron exports amounted to Rs. 30 lakhs. In exchange for the foreign exchange earned, Kalinga Industries has been permitted to import 600 tons of galvanised plain sheets for free sale. The profit from the imports may be reflected in the current year's accounts. The Company has approached the Government of India for permission to extend the production capacity of the factory to 100,000 tons a year. It is also proposed to set up a spun pipe plant. The directors say that the light engineering factory has increased the output of refrigerators. The production of fluorescent lighting fittings has also increased. The new factory in Chowdwar, Orissa, is expected to start assembling refrigerators soon. Electrolux India Ltd, it is stated, will soon start producing cooling units. The capacity of the tubular structures factory has been expanded. Besides, it is intended to diversify the activities further by producing agricultural implements, concrete spun pipes, paper and boards.

Triveni Engineering Share Offer

The Triveni Engineering Works Ltd proposes to set up a factory in Naini, near Allahabad, for manufacturing sugar machinery, steam turbine and other heavy industrial plant and machinery. The British firm of Booker Brothers McConnell and Co. Ltd, which is collaborating in the venture through its subsidiaries—the Bookers Sugar Machinery Group Ltd, George Fletcher and Company and Duncan Stewart and Company—is taking up for cash 50 percent of the equity and preference shares to be issued by Triveni Engineering. (Fuller details appear on a later page in this week's issue of *Capital*.) Under the collaboration agreement, the subsidiary firms will act as technical consultants and sell technical know-how to Triveni Engineering at a consideration of £50,000. They will also advance a loan of £50,000, free of interest, repayable within ten years. For manufacturing turbines and air compressors, Triveni Engi-

neering has secured the technical collaboration of the Peter Brotherhood and Co. Ltd. England, whose products are well known throughout the world. The latter will charge a lump-sum of £40,000 for the technical know-how and it has also agreed to advance an interest-free loan of £40,000, repayable within ten years. Land for the Naini factory has been acquired and a major portion of the plant and machinery, both imported and indigenous, has reached the site and is being erected. Production is expected to start early next year. Machinery worth Rs. 30 lakhs is being imported from the U.K. and Italy. Capital equipment worth Rs. 12 lakhs is being imported from the U.S.A. against a D.L.F. loan. The annual production on the basis of a single-shift working is estimated around Rs. 1 crore. It is expected to rise to between Rs. 2 crores and Rs. 2.5 crores on a three-shift working which is likely to be attained in two or three years. The promoters are optimistic about a satisfactory return on investment once the factory begins to have normal production. Triveni Engineering has an authorised capital of Rs. 1 crore, made up of 800,000 equity shares and 200,000 9.3 percent cumulative redeemable preference shares of Rs. 10 each. The issued capital will be Rs. 60 lakhs, consisting of 425,000 equity shares and 175,000 preference shares. The promoters, directors and their associates are taking up 108,375 equity shares. The foreign collaborating firm will take up half of the equity and preference capital issued by the Company. The balance of 104,125 equity shares and 87,500 preference shares are being offered to the public. The capital outlay on the project is estimated around Rs. 82.5 lakhs, of which Rs. 69 lakhs is being raised through share capital and Rs. 22.5 lakhs is to be raised through debentures.

Bombay Burmah Earns More

The improvement in the shares of Bombay Burmah Trading Corporation Ltd from Rs. 571 to Rs. 635 since the end of August seems more than a mere correction of the preceding steep decline from the June high of Rs. 666.50. It reflects optimism about the Company's outlook based on a higher dividend and the encouraging working results for the year ended May 1961. The increase in the dividend from 30 percent to 33 percent follows a substantial improvement in the earnings. The preliminary figures about the working results show an increase of Rs. 16.57 lakhs in the gross profit from Rs. 1.32 crores to Rs. 1.49 crores. After providing Rs. 26.58 lakhs (against Rs. 26.67 lakhs) for depreciation and Rs. 59 lakhs (against Rs. 48.20 lakhs) for taxation, the net profit amounts to Rs. 62.91 lakhs, against Rs. 57.04 lakhs in 1959-60. To this has been added Rs. 1.47 lakhs being the amount brought forward from the previous year. Credit has been taken for Rs. 4.35 lakhs, being the income attributable to previous years. In addition, Rs. 2.81 lakhs has been transferred from reserves, against Rs. 1.83 lakhs in the preceding year. From the disposable profit, Rs. 3.18 lakhs (against Rs. 2.44 lakhs) has been set aside for development rebate reserve. The allocation to other reserve and accounts amounts to Rs. 22.62 lakhs, against Rs. 15.75 lakhs. The proposed dividends absorb Rs. 44.13 lakhs, against Rs. 40.12 lakhs, leaving Rs. 1.60 lakhs to be carried forward. Against its subscribed capital of Rs. 1.33 crores, Bombay Burmah has reserves and surplus amounting to a little over Rs. 4 crores. The management is said to have assured a deputation of the Bombay Shareholders Association that it will consider the question of bonus issue soon. Informed sources believe that the Company is likely to issue bonus shares in the ratio of one share for every four held. Reliable reports indicate that Bombay Burmah is considering new expansion schemes. Negotiations with an Italian firm for setting up a plastic lamination plant are said to be in an advanced stage.

Delhi Cloth Shows Good Results

The impressive rise in the shares of Delhi Cloth General Mills Ltd (Rs. 25-paid) from Rs. 48.50 to Rs. 54 within a few days of the release of the directors' report for the year ended June 1961 seems well justified. It is mainly because the Company has done exceedingly well in 1960-61. The sales rose by 12.9 percent from Rs. 31.78 crores to Rs. 35.88 crores while the gross profit shot up by 33.5 percent from Rs. 2.88 crores to Rs. 4.33 crores. The ratio of gross profit to sales shows a considerable improvement from 9 percent to 12 percent. After providing Rs. 77.80 lakhs (against Rs. 70.16 lakhs) for depreciation, Rs. 15 lakhs (against Rs. 16.50 lakhs) for development rebate and Rs. 1.71 crores (against Rs. 1 crore) for taxation, the net profit at Rs. 1.49 crores shows an increase of about 80 percent over the previous year's figure of Rs. 82.79 lakhs. With the carry-over of Rs. 2.72 lakhs from the previous year, the disposable profit amounts to Rs. 1.52 crores. From this, the directors have set aside Rs. 50 lakhs (against Rs. 18 lakhs) for development rebate re-

serve, and another Rs. 50 lakhs (against Rs. 10 lakhs) have been allocated to the reserve for fall in prices. The dividend has been raised by only 1 percent from 12 percent to 13 percent as the directors considered it advisable to plough back profits in order to finance the Company's modernisation and expansion programmes. The dividends, both preference and ordinary, absorb Rs. 48.38 lakhs, against Rs. 44.99 lakhs in 1959-60, leaving Rs. 3.72 lakhs to be carried forward.

The directors state that the textile units in India and Pakistan continued to show good results. The working of the chemical division and the *ronaspoti* section continued to be satisfactory. The results of the sugar section were normal. Delhi Cloth has undertaken to set up two new plants in Kotah in order to diversify its activities. The P.V.C. plant will have a production capacity of 20 tons a day, and it will have ancillary units of calcium carbide and chlorine and caustic soda. The rayon tyre cord plant will have a capacity of 10 tons a day. The Company has made arrangements with reputed firms of Japan and the U.S.A. for the supply of technical know-how and machinery. The foreign exchange requirements are proposed to be met from deferred payments and long-term loans from foreign financing institutions. The rupee requirements are proposed to be met partly by issuing ordinary and preference shares and partly by securing loans and advances from banks and other sources and the issue of debentures. The sanction of the Controller of Capital Issues has already been received for the issue of 400,000 equity shares of Rs. 25 each at a premium of Rs. 5 a share and 200,000 redeemable cumulative preference shares of Rs. 25 each at par. The directors also propose to issue 6½ percent debentures of the value of Rs. 2.50 crores. The existing 5½ percent debentures can now be redeemed earlier than 15th December, 1962. The company has a paid-up capital of Rs. 4.11 crores and its reserves and surplus amount to Rs. 6.04 crores. The gross block of Rs. 15.69 crores has been written down to Rs. 6.81 crores.

Rights Issue from Premier Automobiles

The directors of the Premier Automobiles Co. Ltd have recommended a dividend of Rs. 9 a share (Rs. 100-paid), subject to deduction of tax, for the year ended June 1961. This is the same as that paid in 1959-60, but it is on the increased capital and is likely to cost the Company an additional Rs. 15 lakhs or so. The capital was increased last year by issuing 184,600 additional equity shares of Rs. 100 each and by the conversion of debentures. The ordinary paid-up capital now stands around Rs. 5.46 crores. Premier Automobiles has not released the preliminary figures about its working along with the dividend announcement, but reliable reports indicate that it has fared better than in the previous year. Both production and sales are said to have recorded a satisfactory improvement. Realisations from the sales of motor-cars and lorries are placed around Rs. 22.72 crores, against Rs. 20.95 crores in 1959-60 and Rs. 17.43 crores in 1958-59. Apart from the fact that the Company will have to distribute some Rs. 15 lakhs more due to the increased capital, the directors' decision to maintain the dividend at 9 percent, taxable, might have been influenced by the impending rights issue which will increase the Company's paid-up equity capital by another Rs. 2 crores. The Company has applied to the Controller of Capital Issues for permission to issue rights shares at par in the ratio of one share for every three held. Additional funds are needed to finance the expansion schemes. The Company has already obtained a D.L.F. loan of Rs. 3.4 crores. It is negotiating a fresh loan for about Rs. 1.42 crores from the D.L.F. Premier Automobiles expansion plans include a body building project apart from substantial expansion in the tool-room facilities and the replacement of some old machinery. Under the proposed expansion scheme, the production capacity for motor-cars is expected to be increased from 15,000 to 20,000 and that of lorries from 15,000 to 18,000 a year. This is nearly three times the present annual production.

Morarjee Goculdas Profit Up

The working of the Morarjee Goculdas Spinning and Weaving Co. Ltd for the year ended June 1961 shows an impressive improvement over the previous year's performance. Sales have risen by about 26.4 percent from Rs. 3.94 crores to Rs. 4.98 crores and the gross profit of Rs. 61.34 lakhs shows an increase of about 50 percent over the previous year's figure of Rs. 41.09 lakhs. Costs of raw materials have increased by only 11.8 percent from Rs. 1.58 crores to Rs. 1.77 crores and manufacturing and sales expenses have risen by 21.9 percent from Rs. 83.89 lakhs to Rs. 1.02 crores. The ratio of gross profit to sales shows considerable improvement from 10.43 percent to 12.32 percent. This improvement is attributed to the favourable trading conditions in internal and export markets which have enabled Morarjee

Goculdas to reduce its stocks of finished goods from Rs. 67.47 lakhs to Rs. 14.60 lakhs. After providing Rs. 15.91 lakhs (against Rs. 11.91 lakhs) for depreciation and Rs. 16.50 lakhs (against Rs. 10 lakhs) for taxation, the net profit amounts to Rs. 24.55 lakhs, against Rs. 15.93 lakhs in 1959-60. It gives an earning of Rs. 45.5 a share, against the proposed dividend of Rs. 24, taxable. The dividend in the previous year was Rs. 21.5 a share, taxable. The allocation to general reserve has been raised from Rs. 2.5 lakhs to Rs. 5.5 lakhs. The provision of development rebate is also higher at Rs. 4.50 lakhs, against Rs. 3.15 lakhs. The ordinary dividend absorbs Rs. 12.42 lakhs and the preference dividend Rs. 1 lakh. The carry-forward amounts to Rs. 1.54 lakhs, against Rs. 42,000 brought in.

The directors state that the Company made additions to plant and machinery of the value of Rs. 22.01 lakhs during the year. It placed further orders for machinery worth Rs. 27.50 lakhs. Plant and machinery of the value of Rs. 4.50 lakhs have been ordered since the close of the Company's financial year. The modernisation and expansion programme should enable Morarjee Goculdas to show better results in the future. Its financial position is sound. It has a paid-up capital of Rs. 69 lakhs, of which Rs. 51.75 lakhs have been raised through the capitalisation of reserves from time to time. The reserves and surplus amount to Rs. 62.15 lakhs. The gross block of Rs. 3.25 crores has been written down to Rs. 94.38 lakhs. The Company's borrowings have been reduced substantially from Rs. 65.83 lakhs to Rs. 2.50 lakhs. The Rs. 100-paid shares of the Company, which could be bought around Rs. 310 early in the year, are now quoted around Rs. 396. In 1960, the shares had recorded a low of Rs. 250.

Hindustan Electric Expanding

The Hindustan Electric Co. Ltd is going ahead with a huge expansion programme in technical and financial collaboration with the Swiss firm of Brown Boveri and Company. The total capital outlay on the expansion project is estimated between Rs. 2 crores and Rs. 3 crores. The foreign exchange expenditure is placed around half of the total capital outlay, but it is likely to be fully met by the foreign firm's share in the venture. The Company does not intend to raise all the additional capital at present because the expansion programme will be spread over a period of three years or so. For the present, it proposes to raise only Rs. 80 lakhs in equity shares, of which Rs. 60 lakhs are being taken up by Brown and Boveri. The present paid-up capital of Hindustan Electric consists of Rs. 40 lakhs in equity shares and Rs. 20 lakhs in preference shares, both of Rs. 100 each. The proposed issue will raise the paid-up capital to Rs. 1.40 crores, of which Rs. 1.20 crores will be in equity shares. The Company has works in Faridabad, Howrah and Baroda. In Faridabad, it manufactures electric motors up to 500 horse-power, all sizes of overhead transmission and distribution lines cables, overhead lines accessories and iron-lad switches. The Faridabad works has also a non-ferrous rolling mill and ferrous and non-ferrous foundry. The Howrah works make transformers up to 10,000 kVA. The Baroda works manufacture transformers and control gears up to 500 horse-power. The Company's fourth factory for manufacturing A.C.S.R. and all-aluminium cables is being erected near the Rihand dam in Uttar Pradesh. It has now secured a licence for substantial expansion of its works in Faridabad, Howrah and Baroda. The Government of India has approved the technical and financial arrangements which the Company has made with Brown and Boveri and Company for collaborating in the proposed expansion project. Under the expansion programme, Hindustan Electric's Faridabad works will undertake the manufacture of A.C. and D.C. generators, A.C. and D.C. motors of special types and welding sets. The Baroda factory will produce high tension and medium tension air blast circuit breakers up to 220,000 volts, high tension and low tension switchboards and electric furnaces of all types. The Howrah works will be expanded to take up the manufacture of transformers of all types up to 25,000 kVA and 220 kV.

The Rs. 100-paid shares of Hindustan Electric, which could be bought below par, around Rs. 91, early in the year, touched a high of Rs. 185 early in October. The spectacular rise from Rs. 100 to Rs. 185, which occurred in a matter of weeks, was caused by sustained influential investment support based on optimism about the outcome of the Company's negotiations with Brown and Boveri to collaborate in the implementation of the expansion schemes. The shares were quoted around Rs. 175 on 10th October when the company announced that it had finalised technical and financial collaboration arrangements with the Swiss firm and that these had been approved by the Government. But the shares declined sharply from Rs. 175 to Rs. 151 within a few days of the official announcement. The decline followed the report that the additional equity capital—excluding the foreign collaborator's share—would be offered not only to

the existing shareholders but also to the public. This, it was stated, was being done at the instance of the Government. In order to meet the Government's wishes that new shares should be offered to the public, the directors, who hold nearly 50 percent of the present equity shares, were reported to have agreed to give up their rights. The shares again shot up to Rs. 180 within a day after the chairman, Mr. Dharmsinh D. Desai, clarified the position concerning the new issue at the annual general meeting on 17th October. There had been some misunderstanding about the issue of 20,000 equity shares of Rs. 100 each to be issued for cash at par to shareholders, Mr. Desai said. Clarifying the position, he said that the new shares will be offered to the existing shareholders in accordance with the provisions of Section 81 of the Companies Act. The offer of additional shares would also be invited from them. Only if the shareholders renounce their rights in whole or in part will be unallotted shares be disposed of at the ruling market price. One might ask whether the "misunderstanding" could not have been avoided. The chairman has not confirmed his earlier statement to the Press that the directors are relinquishing their rights to participate in the new capital the Company proposes to issue. Mr. Desai confirmed in his annual speech that under the agreement with Brown and Boveri, the present managing agency will be terminated. He also stated that with a view to centralising production and control of the A.C.S.R. and all-aluminium cable works, the factory will be located in Ghaziabad instead of Rihand. The rolling mill attached to the A.C.S.R. and all-aluminium cable works in Faridabad will be able to roll aluminium rods for both Faridabad and Ghaziabad works.

Outlook for Cooper Engineering

The working of the Cooper Engineering Co. Ltd for the year ended June 1961 does not show any material changes from the previous year's results, but the outlook for the Company seems promising because of the various expansion schemes. Sales are up by only Rs. 6.60 lakhs at Rs. 2.09 crores, but closing stocks are substantially higher at Rs. 20.90 lakhs, against Rs. 6.79 lakhs a year ago. The gross profit shows a small increase of Rs. 3.21 lakhs at Rs. 32.63 lakhs. After providing Rs. 9.35 lakhs (against Rs. 4.82 lakhs) for depreciation, Rs. 5.92 lakhs (against Rs. 2.99 lakhs) for development rebate and Rs. 7.50 lakhs (against Rs. 11.50 lakhs) for taxation, the net profit amounts to Rs. 7.68 lakhs, against Rs. 7.65 lakhs in 1959-60. The allocation to general reserve has been maintained at Rs. 1 lakh, but contingency reserve gets Rs. 1.47 lakhs, against Rs. 1 lakh. The taxable dividend has been maintained at Rs. 13 a share (inclusive of a bonus of Rs. 3), and it absorbs Rs. 5.87 lakhs.

The directors state that the Company continued to make good progress in the manufacture of its existing lines as well as new lines, namely, planing and slotting machines. Cooper Engineering's new machine tool factory in Chinchwad has gone into regular production. It has received licences for manufacturing single column vertical turret lathes and horizontal boring machines at the Chinchwad factory. The collaboration agreement with a German firm has been approved by the Government. The Government has also permitted the Company to set up a new pattern shop in collaboration with the British firm of G. Perry and Sons. Cooper Engineering holds two more licences, one for manufacturing 600 automatic looms a year and another for the production of 500 high-speed diesel-engines a month. Diesel-engines are to be manufactured in collaboration with Ricardo and Company of the U.K. and arrangements are being made for securing foreign collaboration for manufacturing automatic looms. In order to finance the various expansion schemes, the Company issued during the year 45,200 equity shares of Rs. 100 each at a premium of Rs. 25 a share. These were fully subscribed. It proposes to issue debentures of the value of Rs. 50 lakhs carrying interest not exceeding 7 percent and redeemable after 30 years, for which the Government's sanction has already been secured. The Rs. 100-paid shares of the Company are currently quoted around Rs. 188.

Jam Mills Earn More

The working of the Jam Shri Ranjitsinghji Spinning and Weaving Mills Co. Ltd for the year ended June 1961, shows an impressive improvement over the previous year's performance which was far from encouraging. While sales have risen by 39 percent from Rs. 1.06 crores to Rs. 1.46 crores, the gross profit has shot up from Rs. 3.07 lakhs to Rs. 11.72 lakhs. The profit margin is, however, still low around 8 percent. After providing Rs. 6.43 lakhs (against Rs. 2.34 lakhs) for depreciation and development rebate, the net profit amounts to Rs. 5.29 lakhs, against Rs. 73,180. The dividend has been maintained at Rs. 60 a share, subject to tax, which absorbs Rs. 82,000. The balance of Rs. 4,180

lakhs has been set off against the arrears of depreciation and development rebate. The directors state that capital expenditure during the year amounted to Rs. 14.25 lakhs, of which machinery accounted for Rs. 11.50 lakhs. The Company has made an agreement with the Maharashtra State Electricity Board for the supply of power. The change-over to electrification is expected to lead to a substantial saving in power costs.

Usha Spinning Share Offer

The Usha Spinning and Weaving Mills Ltd, which proposes to set up an up-to-date and automatic spinning plant in Badarpur, near Delhi, will enter the market shortly to raise through public subscription Rs. 22.25 lakhs, made up of Rs. 12.25 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in 9.3 percent taxable redeemable cumulative preference shares of Rs. 100 each. The entire amount which is being offered to the public has been underwritten. The underwriters include the Punjab Government, Industrial Finance Corporation, the L.I.C., Punjab National Bank, Dena Bank and certain prominent stockbrokers' firms. The Company has an authorised capital of Rs. 1 crore, consisting of Rs. 80 lakhs in equity shares and Rs. 20 lakhs in preference shares. The issued capital is made up of Rs. 25 lakhs in equity shares and Rs. 10 lakhs in preference shares. Out of this, equity shares of the value of Rs. 12.75 lakhs have been taken up by the directors and their friends. The Industrial Finance Corporation has granted the Company a loan of Rs. 30 lakhs and a deferred payment guarantee for Rs. 10.2 lakhs for importing plant and machinery. Usha Spinning has already acquired 40,000 square yards of land for setting up the factory and office buildings. Orders for plant and machinery have also been placed. Production is expected to start by about the middle of next year. The output will be of medium yarn which has a good demand in the handloom, powerloom and hosiery industries.

Nonsuch Tea Profit Down

The Nonsuch Tea Estates Ltd has earned a gross profit of Rs. 15.60 lakhs during the year ended 1961. This is Rs. 83,000 less than in 1959-60, although the crop at 1,382,000 lbs is 106,000 lbs more than in the previous year. The cost of production of tea declined from 133.27 cents a lb to 127.32 cents a lb, but the average price realised declined more sharply from 275.90 cents to 259.94 cents a lb, thereby nullifying all the advantage from the increased production and lower costs. After providing Rs. 77,000 (against nil) for depreciation and Rs. 5.94 lakhs (against Rs. 6.25 lakhs) for taxation, the net profit amounts to Rs. 8.16 lakhs, against Rs. 9.49 lakhs in 1959-60. The allocations include taxation relating to previous years Rs. 37,419, development rebate Rs. 9,294, contingency reserve Rs. 50,000 and development reserve Rs. 2.25 lakhs. The dividend, which has been maintained at 20 percent, taxable, absorbs Rs. 4.62 lakhs, leaving Rs. 22,735 to be carried forward. The estimates for the 1961-62 year provide for a crop of 1,157,000 lbs at a cost of 144.29 cents a lb. These compare unfavourably with the 1960-61 figures. The Rs. 10-paid shares of the Company are currently quoted around Rs. 28.60.

Good Results from Asher Textiles

The Asher Textiles Co. Ltd, Tirupur, has done well during the year ended June 1961. While sales are up by 10.2 percent from Rs. 80.80 lakhs to Rs. 90.08 lakhs, the gross profit has shot up by 50 percent from Rs. 10.46 lakhs to Rs. 15.69 lakhs. The ratio of gross profit to sales works out to 17.4 percent, against 12.9 percent in 1959-60. In view of the two successive cuts in yarn prices during the year and the higher prices of imported cotton, the marked increase in the profit margin is creditable. The Company has apparently begun to reap the benefit of modernisation and expansion. After providing Rs. 2.82 lakhs (against Rs. 2.49 lakhs) for depreciation and Rs. 5.25 lakhs (against Rs. 2 lakhs) for taxation, the net profit amounts to Rs. 6.40 lakhs, against Rs. 5.11 lakhs. From this, the directors have set apart Rs. 23,484 towards the bonus for the previous year. The transfer to gratuity reserve has been maintained at Rs. 50,000, but the allocation to general reserve has been raised from Rs. 50,000 to Rs. 1 lakh. The provision for development rebate reserve has, however, been reduced from Rs. 2.50 lakhs to Rs. 90,000. The ordinary dividend, which has been increased from 12½ percent, taxable to 30 percent, taxable, absorbs Rs. 3.60 lakhs, against Rs. 1.50 lakhs, leaving only Rs. 386 to be carried forward, against Rs. 3,044 brought in.

The directors have reported satisfactory progress concerning modernisation, expansion and additions to machinery. An American combing plant (Whitins) costing Rs. 4.38 lakhs was erected during the year and put into commission in June this year.

One Japanese double winder (Kamitsu) has been erected and will be commissioned soon. Orders have been placed for four doubling frames of 400 spindles of indigenous make. These are estimated to cost Rs. 1.15 lakhs. The delivery of two frames is expected shortly and the remaining two frames are likely to be received in December. Humidification and ventilation plants for the combor department have already arrived. Orders have been placed for a German hank yarn mercerising machine which will cost about Rs. 1.15 lakhs. The present installed capacity of the mill is 24,800 ring spindles. In addition, Asher Textiles has 824 doubling spindles, three cone winders of 120 spindles each and four combors. The Company has applied for permission to install 6,000 additional ring spindles for balancing the preparatory equipment of the mills. The Rs. 100-paid shares of the Company are currently quoted around Rs. 225 cum dividend, offering a gross yield of 15.4 percent.

Hindustan National Glass Earns Less

The working of the Hindustan National Glass Manufacturing Co. Ltd for the year ended March 1961 shows a substantial setback. Both sales and the gross profit are down: sales by 4.4 percent from Rs. 95.28 lakhs to Rs. 91.09 lakhs and the gross profit by 26.6 percent from Rs. 28.05 lakhs to Rs. 20.57 lakhs. The directors attribute this to the closure of both furnaces for repairs and relining. Besides, the movement of raw materials and coal was at a standstill during July 1960 due to the Central Government employees' strike. After providing Rs. 5.98 lakhs (against Rs. 5.70 lakhs) for depreciation, Rs. 2.25 lakhs (against Rs. 19,859) for development rebate and Rs. 5.50 lakhs (against Rs. 10.25 lakhs) for taxation, the net profit amounts to Rs. 6.84 lakhs, against Rs. 11.90 lakhs in 1959-60. With Rs. 2.16 lakhs brought forward from the previous year, the disposable surplus amounts to Rs. 9 lakhs. From this, the directors have allocated Rs. 5 lakhs to general reserve. The ordinary taxable dividend of Rs. 2 a share (Rs. 10-paid) absorbs Rs. 2.5 lakhs. The preference dividends amount to Rs. 89,600. After making these appropriations, there remains Rs. 53,101 to be carried forward.

The directors have decided to increase the Company's capital by issuing 100,000 equity shares of Rs. 10 each. The Industrial Finance Corporation of India has approved a loan of Rs. 32.50 lakhs in foreign exchange for importing capital equipment. Orders will be placed when the import licence is received.

Panyam Cements Does Well

The Panyam Cements and Mineral Industries Ltd has reported satisfactory results for the year ended August 1961. This has enabled the Company not only to wipe out all the outstanding loss but clear arrears of the preference dividend up to 31st August, 1960. After providing Rs. 10.19 lakhs (against Rs. 9.33 lakhs) for depreciation, the Company has earned a profit of Rs. 11.79 lakhs in 1960-61, against Rs. 8.08 lakhs in 1959-60. Sales of cement increased from Rs. 62.72 lakhs to Rs. 65.08 lakhs. The production of clinkers rose from 60,808 tonnes to 65,297 tonnes. The production of cement, however, declined from 78,242 tonnes to 71,385 tonnes because the backlog of clinker available for cement grinding at the beginning of the year was less than that available at the commencement of the previous year. The directors state that the production of cement also suffered due to the acute coal shortage. The supplies have since improved considerably, it is stated. The demand for cement continued to be high throughout the year.

After adding to the year's net profit the excess development rebate reserve of Rs. 13,865 written back, the disposable surplus amounts to Rs. 11.93 lakhs, against which is set off a loss of Rs. 7.51 lakhs brought forward from previous years, leaving Rs. 4.42 lakhs. Out of this, the directors have written off other items of expenditure—preliminary expenses, commission and brokerage on the issue of shares and the value of land for constructing houses under subsidised industrial housing scheme—totalling Rs. 52,346. Development rebate reserve gets Rs. 7,253. The arrears on the 6 percent tax-free cumulative preference shares up to 31st August, 1960, absorb Rs. 3.73 lakhs, leaving Rs. 9,694 to be carried forward. No provision has been made for income tax and super tax, as there would be no assessable income for income tax purposes. The directors state that Panyam Cements' expansion project has shown steady progress. Orders have been placed for the supply of the main mechanical equipment for the 300-tonne-a-day cement plant with Messrs A. C. C. Vickers, Babcock Ltd. The new plant is expected to go into commercial production during the second quarter of 1963. The total capital outlay on the project is estimated around Rs. 1.20 crores, which will be financed by an issue of further shares.

Steps have now been taken to manufacture the capital, long-term borrowings and internal resources. The Company has received the Government's permission to issue further share capital amounting to Rs. 46.36 lakhs.

New Ventures of Montecatini

Montecatini of Milan, a powerful group of Italian industries with world-wide interests, proposes to collaborate with Indian entrepreneurs in setting up four projects involving a capital outlay of about Rs. 30 crores. The projects relate to the manufacture of polypropylene plastics, industrial and mining explosives, methanol and formaldehyde and polystyrene resin. The Indian collaborators are said to have approached the Government for industrial licences. The Italian firm is not new to this country; it is already collaborating with Indian Dyestuff Industries, Amar Dye-Chem and Madras Aluminium. The urea plant in Neyveli has also been designed by Montecatini. So far, its investments in Indian ventures are said to be worth Rs. 3 crores. With the implementation of the contemplated projects, its investments are likely to increase to Rs. 12 crores to Rs. 15 crores. Montecatini is expected to participate in the equity capital of the new Indian companies to be formed to undertake the implementation of the new projects. Besides, the firm will arrange for the provision of credit facilities by Italian banks to cover the foreign exchange requirements of the projects. The plant for manufacturing polypropylene plastics will be located in Bombay. Propylene gas, which is the main raw material for this project, is to be obtained from the oil refineries. The initial capital outlay on the project is estimated around Rs. 10 crores. This will be increased to around Rs. 15 crores in the second stage. The capacity of the plant is mentioned around 7,000 tons a year. The third plan has fixed a target of 90,000 tons of thermo-plastics, of which 15,000 tons will be accounted for by polypropylene plastics. The location of the plant for manufacturing industrial and mining explosives has yet to be decided, but the capital outlay on the project is estimated around Rs. 8 crores in the first stage. This will rise to Rs. 11 crores in the second stage. The methanol and formaldehyde plant is proposed to be located in Gujarat. The project which will involve an outlay of about Rs. 6 crores will have a production capacity of 100 tons of methanol a day from which 40 tons of urea formaldehyde will be obtained. The polystyrene resin plant, which is also likely to be set up in Gujarat, is estimated to cost about Rs. 5 crores. The plant will have a capacity of 5 tons a day.

Bombay Steam Discontinues Services

The Bombay Steam Navigation Co. Ltd, a subsidiary of the Scindia Steam Navigation Co. Ltd, has decided to discontinue its passenger service between Bombay and Konkan as well as the services at the harbour from 1st December. About a million people travel every year between Bombay and Konkan by the Company's steamers—last year's figure being 911,000. Although Bombay Steam Navigation has a monopoly on this run, the fares are controlled by the Government. Announcing the management's decision to discontinue these services at a Press conference in Bombay last week, Mr. D. M. Khatau, chairman of Scindia Steam, and Mr. J. P. Patel, chairman of Bombay Steam Navigation, stated that these services could not be operated without an increase in fares to match the rising operational costs. But the Government is not agreeable to an increase in fares. Uneconomic operations have led to the accumulation of huge losses amounting to Rs. 31.62 lakhs on 30th June, 1961, which exceeded the Company's subscribed capital.

Five years ago, the Government permitted the Company to raise the fares by 10 percent, against its demand of 33 1/2 percent. Since the 10 percent increase was found quite inadequate, Bombay Steam continued to press its claim for a further increase. Last year, the Rau Committee, after enquiring into all aspects of the Konkan services, made recommendations to help the Company meet the shortfall in revenue over expenditure as well as enable it to earn a 4 1/2 percent return on the share capital. The recommendations were (1) an increase of 8 percent in fares with immediate effect, (2) an interest-free loan by the Government of India yielding a concession of Rs. 1.89 lakhs a year on an average, (3) an equal amount of annual subsidy by the Government of Maharashtra and (4) a further increase of 7 percent in fares after the acquisition of three ships to replace the old vessels. The Central Government accepted the Rau Committee's recommendations, since it agreed to give the Company an interest-free loan of Rs. 1.20 crores to meet the cost of construction of the three ships. The Maharashtra Government agreed in principle to grant a matching subsidy equivalent to the Central Government's interest-

free loan, but it did not favour any immediate increase in the fares. Mr. Khatau said that the Bombay Steam Navigation Company fully accepted the Committee's recommendations, although they did not go far enough to enable the Company to earn 4 1/2 percent return on the capital. But since the Government is unwilling to implement the Committee's recommendations, there is no prospect of making good the shortfall in revenue in the foreseeable future. Referring to the interest-free loan, Mr. Khatau said that it would not be enough to meet the cost of construction of the three ships which was estimated around Rs. 1.60 crores. Besides, there have also been an increase in wages of shore and floating staff since the submission of the Committee's report which the Government had not taken into account. In view of the above considerations and having due regard to shareholders' interest, the Company has no other option but to discontinue its Konkan sailings, Mr. Khatau said.

Deccan Sugar Cuts Dividend

The announcement of a lower final dividend of 13.5 percent by Deccan Sugar for the year ended May 1961, making a total of 21 percent (against 25 1/2 percent last year), led to a drop in the quotation to Rs. 12.55 c.d. According to the preliminary statement, the net profit for the year amounts to Rs. 21.15 lakhs, against Rs. 29.62 lakhs in the previous year. Taxation provision is allocated Rs. 10.50 lakhs, after transferring Rs. 45,000 (against Rs. 13,14,848) from taxation equalisation reserve. This leaves a balance of Rs. 10.64 lakhs, after taxation. With Rs. 1.29 lakhs brought forward, the total available surplus for appropriation is Rs. 11.94 lakhs. Out of this, development reserve gets Rs. 45,000 (against Rs. 1.25 lakhs). A sum of Rs. 1 lakh (against Rs. 2.20 lakhs) is transferred to general reserve. The 7 percent tax-free preference dividend accounts for Rs. 63,700. The interim dividend of 7.5 percent on the ordinary shares absorbed Rs. 2.99 lakhs. The proposed final dividend of 13.5 percent on the ordinary shares will absorb Rs. 5.38 lakhs. The balance of Rs. 1.48 lakhs is carried forward.

Seshasayee Industries Share Offer

The Seshasayee Industries Ltd has announced its proposal to issue fresh capital of Rs. 40 lakhs in the form of equity shares to the existing shareholders. This issue is to meet the financial requirements of the Company's expansion programme. Seshasayee Industries has already obtained a licence to increase the installed capacity for manufacturing high-tension and low-tension insulators from the present level of 1,200 tons to 3,000 tons a year. It also proposes to install a tunnel kiln and augment the production facilities in the foundry. The entire expansion is estimated to cost about Rs. 55 lakhs. The foreign exchange content of the programme is estimated just over 50 percent of the total cost. Although the proposed capital of Rs. 40 lakhs will be offered in the first instance to the existing shareholders, arrangements have also been made to issue to the public any portion of the capital which may remain unsubscribed by the existing shareholders. The present paid-up capital of the Company is Rs. 40 lakhs, consisting of Rs. 31.60 lakhs in equity capital and Rs. 8.40 lakhs in preference shares. The proposed issue of equity capital of Rs. 40 lakhs is expected to be offered to both preference and equity shareholders at the rate of one share for every one held, at par.

Canara Bank Rights Offer

In relation to the issue of 50,000 equity shares of Rs. 50 each at a premium of Rs. 15 a share, the Canara Bank has revised its original proposal to issue the shares to holders as on 15th November, 1961. Instead, the shares are offered to the shareholders as on 3rd October, 1961, at two shares for every five held. The consent of the Government has been obtained for this issue.

Madras Vanaspathi Shows Loss

During the year ended April 1961, the Madras Vanaspathi Ltd has incurred a loss of Rs. 1.44 lakhs. No depreciation has been provided on the assets, as the plant has not gone into production yet. It will be recalled that the Company's factory in Villupuram has not been able to begin production so far due to financial impediments. The directors, after negotiations with the Government of Madras, took possession of the factory in July 1960. The State Government granted valuable concessions consisting of an extension of the period of repayment of the loan and arrears of interest and a waiver of a portion of the interest of Rs. 1.64 lakhs charged on the State Aid loan. Encouraged

by this help, the directors put through a reorganisation scheme. According to this scheme, the preference shareholders waived and relinquished all their rights to the arrears of dividends up to the year ended April 1961. All the members of the Company also agreed, subject to the confirmation of the court, for the reduction of the ordinary paid-up capital by Rs. 11.90 lakhs, representing capital which has been lost or is unrepresented by available assets at the rate of Rs. 70 a share each of the 15,000 equity shares of Rs. 100 each and at Rs. 7 a share for each of the 20,000 equity shares of Rs. 10 each and also for reducing the nominal amount of the equity shares in the Company's capital from Rs. 100 and Rs. 10 to Rs. 30 and Rs. 3 each, respectively. According to the scheme, the unsecured creditors agreed to forgo the entire interest due to them up to the year ended April 1961. The court has now confirmed the reduction of capital. The Company will in due course notify to the shareholders for the submission of the share certificates for the purpose of making the endorsement of the reduction of capital. The results of the reorganisation scheme are expected to be reflected in the next year's accounts. The directors are now making efforts to start the factory as early as possible. They feel that the preliminary arrangements, as may be required for starting the factory, can be completed in due time.

Travancore Sugars Pays Less

A fall in sugar sales due to the restricted releases by the Government and lower profits highlight the working of the Travancore Sugars and Chemicals Ltd during the year ended April 1961. The net profit amounts to Rs. 5.78 lakhs, against Rs. 9.49 lakhs in the previous year. Out of this, taxation provision, less a transfer of Rs. 90,000 from taxation equalisation reserve, amounts to Rs. 2.82 lakhs (against Rs. 4.60 lakhs). This leaves a net profit of Rs. 2.95 lakhs after taxation. With Rs. 1.24 lakhs brought forward, the profit available for appropriation amounts to Rs. 4.20 lakhs. Out of this, Rs. 29,000 (against Rs. 24,000) is transferred to capital reserve. The preference dividend, subject to deduction of tax (6.5 percent, subject to tax), amounts for Rs. 97,500. The proposed dividend of 7.5 percent (against 10 percent), subject to deduction of tax on the ordinary shares, will absorb Rs. 2.25 lakhs. The balance of Rs. 68,170 is carried forward.

During the year, the crushing season lasted for 157 days. During this period, 118,281 tonnes of sugarcane were crushed and 10,502 tonnes of sugar produced. The recovery percentage was 3.88. It was 0.59 percent higher than in the previous year, but the tonnage crushed was slightly lower. Sales of sugar were considerably reduced due to restricted releases. Total sales amounted to Rs. 1.18 crores, against Rs. 1.64 crores. The sales of spirit continued at a satisfactory level although the profit margins were narrower due to increased competition. In the pharmaceuticals division, sales were satisfactory, but the profit margins were affected by the increased cost of raw materials and labour. As on 30th April, 1961, capital and revenue reserves, excluding taxation equalisation reserve, amounted to Rs. 12.38 lakhs, against Rs. 12.88 lakhs. The excess of current assets over current liabilities and provisions amounted to Rs. 30.04 lakhs, against 31.05 lakhs.

Higher Profit for Textool

The Textool Co. Ltd shows a substantial increase in the net profit for the year ended April 1961. The directors' report has stimulated fresh optimism about the future. The equity shares of the Company have been receiving good support since the publication of the preliminary figures. The net profit for the year amounts to Rs. 12.22 lakhs, after providing Rs. 4.05 lakhs for depreciation. The net profit for the previous year was Rs. 8.35 lakhs, after providing Rs. 3.97 lakhs for depreciation. With Rs. 4,566 brought forward from the previous year and with Rs. 5,891 being the refund of sales tax, the available surplus for appreciation amounts to Rs. 12.32 lakhs. Out of this, taxation provision in allocated Rs. 5.50 lakhs (against Rs. 2.60 lakhs) and development rebate reserve Rs. 84,166 (against Rs. 60,000). The proposed dividend of 15 percent, subject to deduction of tax, will absorb Rs. 5.74 lakhs. The outlay on the dividend in the previous year at 15 percent on the old capital amounted to Rs. 3.29 lakhs. After making the above appropriations, the balance of Rs. 17,127 is carried forward.

The turnover of finished products during the year showed some improvement over that of the previous year. Their sales amounted to Rs. 1.73 crores, against Rs. 1.66 crores. The profit margin is also better than that of the previous year. But the production of ring frame and fly frame was affected due to the shortage of imported items.

items in India, so the directors are anticipating regular and increased supply of these items in future. Good demand is reported for all items of textile machinery manufactured by the Company, and it has booked orders to full capacity for about 20 months. As far the future pattern of demand, the directors anticipate an increasing demand for the Company's products, with the issue of licences for additional spindleage.

Textool has also substantially increased the production of diesel-engines. Another important aspect of the Company's manufacturing programme is the new line of railway signalling equipment. The report says that the sales of these will appreciably increase during the current year. The production of alloy steel has also increased considerably. This has enabled the Company to market some special steels to selected engineering industries, besides meeting its own requirements of these items. A resolution to increase the authorised capital from Rs. 50 lakhs to Rs. 1 crore is proposed to be passed at the annual general meeting. The Company will also apply for the Central Government's sanction for issuing further shares worth Rs. 20 lakhs.

Bonus Commission

It was at the end of 1960 that the Central Labour Minister announced his intention of setting up a special commission to enquire into the problem of bonus, but controversy arose over the personnel of the commission, and then its terms of reference were referred to a sub-committee of the Standing Labour Committee. Now the revised terms, as drafted by the committee, have been published, and they set the Bonus Commission a very wide task. First it has to define the concept of bonus, and then to consider the question of payment of bonus based on profits in relation to "industrial employments"—a new term which has been defined to include not only employment in the private sector, but also in establishments in the public sector not departmentally run, which compete directly with the private sector.

The Commission has to recommend the principles for computing bonus and also methods of payment. In doing so, it has to consider the extent to which the quantum of bonus should be influenced by the prevailing level of remuneration and the need to improve productivity—the latter being an addition which did not appear in the original Government draft. The Commission also has to determine how prior charges should be calculated and whether bonus should be considered unit-wise, industry-wise or (as at present favoured in adjudication) industry-cum-region-wise. All these various aspects of the bonus problem have been tackled at one time or another by the Supreme Court, and one wonders whether the Commission can break away from principles already so firmly established through industrial adjudication. The Commission should, however, consider the practical problems with which industry is faced in applying these principles. That there can be a single golden rule laid down for payment of bonus does not seem possible, for in addition to the many court awards, there are also many variants of the bonus formula worked out in negotiations and established through collective agreements.

The Government is apparently still hankering after payment of part of bonus in National Savings, and this is a further point the Commission is to consider. It has been tried in certain cases, but not always with success, for a bonus in cash is worth more than one in the form of National Savings to most workers. Another new suggestion for the consideration of the Commission is a lower and upper limit for bonus, with some arrangement for carrying forward profits and losses over a prescribed period to allow for levelling out between prosperous and lean years. There is no reference, however, to consideration of the minimum ratio of profits to be ploughed back into the business. There has always been uncertainty about how much of the "available surplus", when calculated, industrial tribunals would award as bonus, and some direction on this point would be useful.

Producing Tetra Ethyl Lead

The Bombay firm of Ind. Com. Corporation has secured a licence for manufacturing 3,000 tons of tetra ethyl lead a year. It has also been permitted to manufacture ethyl chloride, ethylene dibromide and ethylene dichloride which constitute three of the five raw materials needed for manufacturing tetra ethyl lead. The other two raw materials, namely, lead and sodium, will have to be imported. Tetra ethyl lead is an anti-knock compound which is an essential requirement of oil refineries. Its annual imports are at present valued at a little over Rs. 1 crore. The proposed plant, which will be located in Bombay, is said to be first of its kind

in India and is the sixth plant in the world to manufacture this petro-chemical. The manufacture of tetra ethyl lead requires high technical skill, and the Company has obtained the technical and financial collaboration of Societe Lavorazioni Organiche Inorganiche di Italy. The capital outlay on the project is estimated around Rs. 2 crores, of which Rs. 1.25 crores are likely to be spent on plant and machinery. Machinery worth Rs. 40 lakhs will have to be imported. The foreign exchange requirements of the project are likely to be covered by the Italian firm's share in the capital of the Company. A new enterprise is being formed to undertake the implementation of the project. It will have an authorised capital of Rs. 2 crores. The details of the capital issue are being worked out. The collaborating firm is likely to take up shares worth Rs. 40 lakhs. The plant is expected to go into production in 1963. According to the phased programme of production, the Company will initially produce 1,500 tons of tetra ethyl lead a year. The licensed capacity will be reached by 1965.

Scrap Export Policy Criticised

The scrap trade in Bombay is passing through a difficult time. The owners of scrap processing yards have decided to close their factories on every Saturday, and it is feared that factories may soon have to be closed indefinitely if the trade's legitimate grievances are not redressed. According to the Scrap Traders and Exporters Association, exporters have been compelled to cancel their freight bookings because of official inaction. In spite of repeated appeals to the Iron and Steel Control authorities not to withhold inspection of scrap shipments on the technical ground of the failure of furnace owners to lift the levy against the shipments, no steps have been taken so far to remedy the situation. Apart from the disappointing foreign demand for inferior scrap and low export prices, the trade has been seriously handicapped by severe restrictions and penal levies on exports. Besides, the trade has also to put up with the further increase of 5s a metric ton in the freight rate. The situation has been complicated by the directive of the Iron and Steel Controller that the trade should extend credit facilities to Mysore Iron and Steel Works in relation to supplies to be made by the trade under the existing export policy. Exporters of No. 2, 2a and 3 bables and turnings and borings have got to offer a levy of heavy melting scrap to the domestic furnace owners in the ratio of 2 tons, against every 10 tons of the former and 1 ton, against every 10 tons of the latter. Mr. Sultan A. Nathani, president of the Association, stated at a recent Press conference in Bombay that the latest directive of the Iron and Steel Controller constituted a direct interference in the financial affairs of the export trade and that the credit facility demanded from the trade was beyond its capacity. He added that in order to pay the levy on their shipments of unwanted trade scrap, exporters were forced to make spot purchases of heavy melting scrap from the open market at Rs. 180 a metric ton but were reimbursed only at a rate of Rs. 113 a metric ton by furnace owners. Mr. Nathani warned that if the authorities did not change their present policy, not only would the foreign exchange earned from scrap exports be lost, but there would be a stoppage of scrap collection, causing widespread unemployment.

Dissolving Pulp from Cotton Linters

Reliable reports indicate that the Government of India has decided not to consider for some time any further proposals for manufacturing dissolving pulp from cotton linters because of the inadequate supplies of the latter. Already, nine schemes have been licensed for manufacturing dissolving pulp from cotton linters with a total capacity of 35,100 tons. Of these, three schemes with a capacity of 14,400 tons a year are for commercial sale and the other six schemes are for manufacturing linter pulp for own consumption by the rayon and other cellulose products manufacturing units. The total annual requirements of cotton linters for these licensed schemes are of the order of 44,000 tons. The fuzzy type of cotton seeds derived from long-staple cotton is only suitable for delinting. The total availability of fuzzy cottonseeds is estimated around 923,000 tons a year. If the entire quantity of fuzzy cottonseeds available in India could be harnessed, the maximum possible output of linters would be 46,000 tons, out of which 15,000 tons will be first-cut linters and the balance of 30,500 tons will be second-cut ones. Only second-cut linters are considered suitable for manufacturing dissolving pulp while the first-cut ones will be useful for manufacturing specialty papers. Therefore, against the requirements of 44,000 tons of licensed schemes, the maximum possible quantity that could become available indigenously is only 30,500 tons. The excess licensing is said to have been

done in order to give an incentive for better collection of linters and because of the likelihood of some of the schemes failing to materialise. The recovery of linters at present is poor, barely around 1,400 tons a year, and it is doubtful whether linters to the extent of 40,000 tons would become available by the third plan period. The Cellulose Products Ltd, Ahmedabad, who had been granted licence for manufacturing linter pulp for commercial sale on the condition that the import of raw materials would not be allowed, has recently requested the Government to allow it to import linters since sufficient quantities are not available within the country. The Government thinks that it will be essential for any new scheme for dissolving pulp based on linters to depend on imported linters.

The rayon manufacturers are at present being allotted foreign exchange for importing pulp. If they were to make dissolving pulp from cotton linters and these linters were to be imported, there will be a saving of about 45 percent in the foreign exchange at present allowed to them for importing pulp as linters cost only about Rs. 600 a ton, against the price of Rs. 1,000 a ton of wood pulp. In the case of the schemes for manufacturing linter pulp for commercial sale, additional foreign exchange will have to be found for the import of linters. Besides, the cost of production of linter pulp for commercial sale will be much higher than in an integrated unit manufacturing rayon pulp and yarn because of the need for drying, baling, handling, freight and manufacturers' profit, which commercial manufacture will involve. The Government thinks that it is not desirable to encourage the manufacture of dissolving pulp from cotton linters for commercial sale. But it considers it advantageous to encourage the existing manufacturers of rayon yarn and cellulose film to manufacture rayon grade pulp in their own units. Seven schemes have so far been licensed for manufacturing dissolving pulp from bamboo or hardwoods with a total production capacity of 276,600 tons a year. In addition, nine schemes for manufacturing dissolving pulp from linters with a capacity of 35,100 tons have been licensed. This brings the total licensed capacity for rayon grade pulp to 311,700 tons. Out of these, one bamboo-based scheme with an annual production capacity of 54,000 tons and two linter-based schemes with a capacity of 7,200 tons have been granted import licences. The schemes are now being implemented. Another linter-based pulp scheme for commercial sale with a capacity of 7,200 tons had been cleared by the C.G. Committee but the party has not pursued the matter further. At its recent meeting, the Licensing Committee is reported to have recommended the rejection of all the pending applications. No further schemes for manufacturing pulp from cotton linters will be considered by the Government for a year or so.

Making Furnace Type Carbon Black

Messrs Kamani Brothers, Bombay, Hind Traders, Bombay, Carbon Black Industries, Calcutta, and Mr. C. H. Bhabha had recently applied to the Government of India for licences for manufacturing furnace type carbon black. It is reliably understood that of the four schemes, only Mr. C. H. Bhabha's project has been approved by the Government. Kamani Brothers had proposed to set up a plant in Baroda for manufacturing 6,000 tons of furnace type carbon black by using the natural gases available from Cambay and Ankleshwar oilfields. Institute Za Naftu, Zagreb, Yugoslavia was to collaborate in the venture. The scheme has been rejected by the Government on the ground that the availability of the chief raw material, that is, natural gas, is still uncertain, and the purpose for which this gas should be used has yet to be decided. Besides, the firm did not work out the economic feasibility of the project. Hind Traders had a scheme for the setting up of a capacity of 3,000 tons of carbon black a year in Chanda in Maharashtra. It proposed technical collaboration with the East German firm of Dia Invest Export, Berlin. The firm holds an industrial licence for manufacturing 96,000 tons of pig iron a year by using non-cooking coal. It had proposed to use the tar from its coke-oven plant for manufacturing furnace type carbon black. The Government is reported to have rejected the proposal on the ground that the capacity proposed would not be economical. One of the existing carbon black units in Durgapur, that is, Phillips Carbon Black, is said to be finding it difficult to get adequate quantities of tar required for manufacturing carbon black. The Government is of the view that it would be better if the tar from Hind Traders' coke-oven plant is made available to Phillips Carbon Black rather than permitting Hind Traders to set up a small unit, for carbon black of uneconomic size. Carbon Black Industries of Calcutta wanted to set up a plant with an annual production capacity of 12,000 tons somewhere in western India depending on the availability of suitable raw materials required

by it. The scheme proposed collaboration with Continental Carbon Company of the U.S.A. which was to participate up to 35 percent in the equity capital with a provision for the payment of royalty of 5 percent. The Government has already approved the collaboration of Continental Carbon Company with P.J.B. Industries of Calcutta for the setting up of the furnace type carbon black plant in Assam based on the use of natural gas available there. Carbon Black Industries' project has been rejected on the ground that the firm has yet to locate an indigenous source of raw material supply.

Mr. C. H. Bhabha's scheme, which has been approved by the Government, proposes technical and financial collaboration with the United Carbon Company of the U.S.A. for manufacturing 13,600 tons of furnace type carbon black a year near Bombay. The cost of the plant is estimated at Rs. 1.35 crores, of which the foreign exchange component is valued at Rs. 50 lakhs. The issued capital would be about Rs. 1.62 crores. Shares worth Rs. 50 lakhs would be issued to the foreign collaborating firm for U.S. dollars. This amount would be adequate to cover the cost of the imported plant and machinery. Free shares of the value of Rs. 15 lakhs are to be given to the foreign collaborator for supplying the necessary manufacturing and technical know-how, patent rights, marketing assistance and trade marks. No royalty, research, engineering or any other fee are to be paid. Exports are to be freely permitted and the overseas firm undertakes to export 5 million lbs of carbon black a year to the neighbouring countries. The financing arrangements are on the basis of majority equity participation of 40 percent by the United Carbon Company and 60 percent by the Indian Company. The project proposes to manufacture furnace type carbon black from petroleum feed stock. Although the feed stocks currently available are of low quality, these will be used till those of satisfactory quality become available from the lubricating oil plant which is to be set up near Bombay by Stanvac. It is proposed to synchronise the commissioning of the carbon black plant with the availability of feed stocks from the lubricating oil plant. An additional attraction of United Carbon's scheme is that it is prepared to make an additional investment of Rs. 2 crores for manufacturing about 100 tons of ammonia a day from the waste gases from the carbon black plant. The Indian rubber pro-

ducts industry is familiar with the grade of carbon which is proposed to be manufactured by the United Carbon Company. Nearly 50 percent of the requirements of carbon black in India are being supplied by United Carbon. The demand for various grades of carbon black by 1965-66 is estimated around 90 million lbs. On the basis of an operational efficiency of 80 percent, the capacity which would be required to achieve a production of 90 million lbs would be 113 million lbs. Against this, the capacity which has already been licensed or approved amounts to 80 million lbs. Therefore, there is scope for the creation of additional capacity of 30 million lbs. Mr. C. H. Bhabha's project is expected to fill this gap.

Textile Rationalisation in Kanpur

Both textile employers and workmen have submitted their memoranda to Dr. Sampurnanand, the former U.P. Chief Minister, who has been entrusted with the task of evolving an agreed scheme of rationalisation for the Kanpur mills. The Employers Association of Northern India has stated that five mills in Kanpur are already rationalised and, therefore, the wages paid in those mills should be taken as the standard for the rest. The Association's memorandum further states that the personal wages of the workers should be adjusted against the increase awarded by the Wage Board. The employers have expressed themselves in favour of Sunday working on the ground that it would not only absorb all labour rendered surplus by rationalisation, but that it would also increase the earnings of workers. They have also asked for three-shift working without any loss of working hours. Not all the temporary or substitute workmen can possibly be absorbed in permanent vacancies as these are likely to be reduced after rationalisation. The employers have recommended the B.I.C. scheme of gratuity to all those who are retrenched or who retire voluntarily. And finally, they have stipulated that any agreement reached by a mill with its workers would supersede the award of the arbitrator. The Suti Mill Mazdoor Sabha, on the other hand, has demanded the "Bombay wages for the Bombay workload", which works out to Rs. 105 a month as the basic wage, exclusive of the dearness allowance. It has also opposed the scheme of Sunday working. It has rejected the B.I.C. scheme of gratuity and demanded that workers who are

retrenched should be given both gratuity and retrenchment relief. On the question of the mechanical, physical and operational conditions, the Sabha has accepted the proposals of the Bind Basni Prasad Rationalisation Enquiry Committee, but has opposed the increased workload of doffers at 3,000 doffs which, according to it, is the highest in the world. The memoranda submitted by the Textile Labour Association and the Rashtriya Textile Mazdoor Union generally support the stand taken by the Suti Mill Mazdoor Sabha.

U.K. Textile Machinery Exports Rise

One section of the British capital goods industries, which is maintaining an excellent export record, is that which produces textile machinery. Over recent years, the expansion of its overseas trade has been almost continuous, and in the six months ended June the value of its exports was £32,169 million, compared with £26,344 million in the first half of last year. The volume of the trade rose to 39,000 tons, compared with 34,700 tons. In the first half of the current year, as in that of 1960, Russia was the industry's largest overseas market. It took exports valued at £5,039,000, compared with £3,371,000 a year previously, while India remained the second largest market with £2,375,000, compared with £2,386,000. West Germany dropped from third to fourth place, although it reached a higher figure, with £1,946,000, compared with £1,820,000. Australia moving up into third place, with £1,970,000, compared with £1,170,000. Exports to New Zealand also rose sharply to £805,978, compared with £430,000. In the trade with dollar markets, exports to the United States—now the fifth largest overseas outlet—increased a little further to £1,704,000, against £1,627,000, but those to Canada were slightly smaller at £799,000, against £800,000. Of the other Dominions, the Union of South Africa did a somewhat larger trade with £812,000, against £752,000, but there was a fall to £770,000, against £907,000 in exports to Pakistan. Several European countries took larger quantities. Exports to Italy, now the sixth on the list, rose to £1,445,000, compared with £947,000, and those to France, the seventh, rose to £1,306,000, against £844,000 in the first half of last year. A striking increase brought out in the returns is the rise to 60,851 cwts., compared with 10,708 cwts., in the export of machinery for extruding man-made fibres. This may help explain the increase in the value of total shipments to Russia. Spinning machinery for cotton and staple fibre increased to 62,436 cwts., compared with 29,863 cwts., and machinery for processes preparatory to spinning for those fibres increased to 70,508 cwts., compared with 60,804 cwts. Another big increase was that to 47,998 cwts., compared with 36,880 cwts., in automatic looms.

A CENTRAL BANK FOR INDIA

WE publish in another column some official correspondence regarding the proposed establishment of a Central Bank, which, we see, has for the moment been relegated to limbo. We think that in this matter Lord Curzon has acted most wisely, not only in submitting the question to public discussion and for the other steps taken by interviews between the financial authorities, the Treasury, Banks and the mercantile community, but also in deferring to public opinion, when it was found that three independent banking reserves were preferred to one. We notice that it is in contemplation to revive the scheme when opportunity offers; but we cannot but think that it will be a serious drawback to have a threat of this kind hanging over the heads of the Indian money markets. As it seems to us the better course for the Government to take would be to strengthen the three Banks in the manner that they were disposed to strengthen the Central Bank, namely, by granting these Banks a share in the Government Note circulation; by increasing the Government deposits with them; and by allowing them to borrow in the London money markets on the rare occasions when the supply of money in the Presidency Banks and in the Treasuries or Paper Currency Reserve is insufficient for local requirements. If the Government market would be improved, as the Government believe, by the grant of these facilities through the medium of a Central Bank, why deny them to the three existing institutions, which the public prefer to a Central Bank? It must not be forgotten that India's trade is a seasonal one, and, therefore, the demand for monetary accommodation varies at different seasons. The resources of the Presidency Banks instead of being inelastic as at present, should be made capable of being expanded and contracted in accordance with the varying demands of the money market, and we do trust that His Excellency the Viceroy will see that the facilities which he contemplated bestowing on the proposed Central Bank will give elasticity to its resources are not withheld from the three Presidency Banks.

A Ditcher's Diary

ASPECTS OF THE RECENT ROW BETWEEN CHINA AND Albania on the one hand, and Russia on the other, are distinctly amusing. The more-marxist-han-thou attitude adopted by everyone involved must make Karl Marx turn in his grave. While I appreciate Mr. Chou En-lai's discomfort at the fact that he thoughtless Mr. Khrushchev should have brought the whole dispute out into the open to the great enjoyment of the non-communist world, I do not see what else the Kremlin could do—short of going to war with China and Albania. All private efforts to resolve the very real differences, which I am sure have very little to do with ideology or interpretation, must have failed before Mr. Khrushchev decided on public rebuke, because the affair must be no less embarrassing for Russia, and I cannot see the embarrassment coming to an early end. China seems altogether too proud to bend; and although Mr. Khrushchev has on occasion shown great flexibility, on the proposed German peace treaty for instance, anything that may appear as a surrender to Peking would have incalculable consequences. Mr. Chou can be trusted to turn every single concession to advantage; and Mr. Khrushchev knows his uncomradely adversary. Not enough recognition has been accorded Mr. Khrushchev's service to the free world. Stalin had quarrelled with Tito; but the whole process of what I have called the inner contradictions of communism has been laid bare only now, and by Mr. Khrushchev himself. The Chinese leader's coy protest that it is only a family difference which has been exhibited is unlikely to reverse the trend; we will hear of many more disputes. And why not? If General de Gaulle's failure to smile broadly at the sight of Mr. Macmillan at Orly airport can be paraded round the world as evidence of serious Anglo-French hostility, why should we not know of the total lack of cordiality between Mr. Khrushchev and Mr. Chou at the Kremlin? But Mr. Chou would be unwise to go beyond talking and start overplaying his hand. If nothing else, Monday's "big blast" was intended for him as much as for Mr. Kennedy and others. As that between East and West, the "cold war" between Moscow and Peking is likely to be a protracted and many-blundered thing.

THE UNITED NATIONS WAS 16 YEARS OLD THIS WEEK and I wish I could say it is fast attaining its majority. I wish, too, that I could honestly wish on the U.N. the distinction of becoming a really powerful body. At 16, it sometimes seems an immature child of six; in terms of consolidation, it looks 61 and in some ways already obsolescent. I am not forgetting its considerable achievements, nor Mr. Hammarskjöld's dedication, nor the good work of W.H.O., U.N.I.C.E.F. and such other agencies, nor the excruciating but inherent difficulties it must work under. But, looking at the debris of delusions still piling up in the Congo, I recommend a closer and harder look at the United Nations, bearing in mind what it never can hope to be in a world such as we live in. When the U.N. moved its motley force into Belgium's former

colony, some saw the nucleus of a world government. If everybody were frank, we would know that nobody—and I exclude nobody—wants a world government. A world body can be useful; I would even say that if there were no United Nations it would be necessary to invent one. But only by limiting its purpose can it fulfil that purpose. And in the Congo affair the U.N. went beyond the limit of its powers. I do not mean the powers given it by the Charter. It simply does not have equipment; it simply will not be given the funds and the backing needed. The Russians, who want a bigger say in the U.N. but refuse to contribute generously to its expenses, have already brought the world body virtually to a standstill; brought the world body to a crisis which had been created by the Soviet Union as long ago as September last year. I am not suggesting that the West has always fully co-operated with the U.N. The point to note is that one side's refusal to back the world body is enough to wreck it altogether. Yet it is unlikely that the United Nations will soon cease to be, for both East and West still find it useful in a limited way. The moment this condition vanishes, so will the U.N.—its existence is that precarious. The nations in the middle of the road need the U.N. most; but for those who sustain it, that is a consideration of only secondary importance.

PERHAPS IT WAS NOT A MATTER OF ANY GREAT moment. Perhaps no fundamental principle was involved. But the brief, singularly unrevealing reports in the newspapers, followed by some cyclo-styled documents of unknown origin on my desk, did make me reflect on the uproar that would have been caused had an Indian journalist been deported from the United States in comparable circumstances. As far as I can see, the Indian Government gave no reasons at all for refusing to renew the visa of the journalist concerned. She, I find, was working for a journal called *Mankind*, of which I cannot remember having seen a copy. I understand Dr. Ram Manohar Lohia is also associated with the publication. I have never been able to take Dr. Lohia seriously; but it had not on that account occurred to me that he or his few followers constituted a threat to the security of India. At their worst they are a nuisance. But I am not really concerned with the particular instance of Miss Margo Skinner's somewhat summary expulsion from a country as ostensibly free as India, if only because I do not know what is involved. That is precisely the point: why do I not know? I find it distinctly odd that the Government should not have thought it necessary to explain its apparently illiberal action; odder still that the Press, as far as I have seen, should have asked the Government so few questions. Oddest of all, the United States embassy does not appear to have lodged any protest with the Government of India, although it was an American citizen who was involved. From New Delhi, unofficially, comes the story that the United States Government does not much like this particular journalist, as I am sure there are lots of

Indian journalists abroad whom the Government here does not exactly love. Miss Skinner was probably disliked by both Governments. This, in a journalist, I would usually regard as a positive virtue, an enviable qualification. In my profession those the Governments like lie young, and I mean lie. What is unpleasantly significant is that in Miss Skinner's particular instance official disfavour, if that is what it was, has been translated into successful action, presumably as a result of dangerously friendly co-operation between two national authorities. I do not usually care for such speculative comment. But again, why do I have to speculate?

ONE OF THE FIRST NEWSPAPER HEADLINES I SAW ON returning to Calcutta after the Puja holidays announced the welcome news that winter had arrived in the city. Now I am inclined to be sceptical about the incidence of cooler weather in Calcutta: as with the English summer, the prospects of a rebate on one's income tax, and the possibility of negotiating with the Russians, this is an all-too-fruitful field for disappointment. However, the year has to be marked off somehow whether the prevailing conditions warrant it or not; and officially, if I am not mistaken, winter begins on 1st November, which seems as convenient a date as any. One of the things it brings with it is, of course, the annual series of concerts presented by the Calcutta School of Music. I am glad to see that these still continue, despite the financial problems which I know have to be faced year after year in a city which seems to be progressively less interested in western classical music with every one that passes. I can only hope that this year's concerts will be better patronised than last year's, if only because this link with western culture has now become such a tenuous one. The list of soloists who will be appearing with the Calcutta Symphony Orchestra contains many celebrated names, with a preponderance this year, I note, of pianists. In fact, the only instrument featured other than the piano is the harmonica, or mouth organ as it is no doubt known in strictly "U" parlance. And who plays the harmonica at concert standard other than our old friend Larry Adler? Mr. Adler has visited Calcutta twice before, and I distinctly remember commenting in this diary on the excellent performance he gave here some time in 1955 I think it was. This is one concert I shall make a point of not missing; its date is 6th December and it is the second in the series. The others, in order, feature Mr. Wilhelm Kempff, of international fame, on 15th November; Miss Moura Lyman, of no less world renown, on 13th December; Miss Daphne Spottiswoode, who is already familiar to Calcutta music lovers, on some date in January 1962; Miss Liesl Stary, Calcutta's own pianist, in February; and also in that month, for the last concert of the series, Mr. Eric Harrison. In addition to the programme of concerts, another date on the season's musical calendar will be 2nd March, 1962, when the London Philharmonic Orchestra, under its conductor, Sir Malcolm Sargent, will be playing here, an event for which the British Council shares responsibility. The Calcutta Symphony Orchestra will once again be under the baton of Mr. Bernard Jacob.

C.I. PRESSURE PIPES BY IISCO

IISCO-STANTON Cast Iron Spun Pipes
Made to BSS 1211 of 1958
and Vertically Cast Pipes
to BSS 78 of 1938

Our pipes are being utilised all over the country from Kashmir to Kerala and from Assam to Gujarat. A few of the largest schemes being supplied today from Kulti at the present moment are—

Ernakulam—Mattanchery and other Schemes under the Third Five-Year Plan, Kerala		
3" dia. to 24" dia. Spun Pipes	—	8,62,000 Rft.
Trivandrum Water Supply Augmentation Scheme		
48" dia. Vertically Cast Pipes	—	42,240 Rft.
Madras State Third Five-Year Plan		
Water Supply and Drainage Scheme, Madras		
3" dia. to 24" dia. Spun Pipes	—	48,02,000 Rft.
Thippegonnahalli Water Supply Scheme, Bangalore		
36" dia. Vertically Cast Pipes	—	89,760 Rft.
Ajmer Water Supply Scheme, Rajasthan		
21" dia. Spun Pipes	—	3,69,000 Rft.
Manjira Water Supply Scheme, Hyderabad		
16" dia. to 24" dia. Spun Pipes	—	8,760 Rft.
36", 40", 42" & 45" dia. Vertically Cast Pipes	—	53,585 Rft.

THIS IS ONLY AN ANNOUNCEMENT—NOT A PROSPECTUS

Consent of the Government of India has been obtained to this issue by an order of which a complete copy is open to public inspection at the registered office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of the Prospectus, having attached thereto the documents specified in Section 60 of the Companies Act, 1956, has been delivered to the Registrar of Companies, Delhi, for registration.

A licence under the Industries (Development & Regulation) Act, 1951, has been obtained from the Government of India for the establishment of this new industrial undertaking at Naini, District Allahabad, of which a copy is open to public inspection at the registered office of the Company. It must be distinctly understood that in granting this licence the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Applications have been made to the Delhi, Bombay and Calcutta Stock Exchanges for permission to deal in and for an official quotation of the shares of the Company. The subscription list will open at the commencement of banking hours on 30th October, 1961 and will close at the close of banking hours on 31st November, 1961, or earlier at the discretion of the Directors, but not before the close of banking hours on 31st November, 1961.

THE TRIVENI ENGINEERING WORKS LTD.

(Incorporated under the Companies Act, 1956, on 7th January, 1961)

SHARE CAPITAL

AUTHORISED:

Rs. 1,00,00,000/- divided into 8,09,000 Equity Shares and 2,00,000 9.3% Cumulative Redeemable Preference Shares of Rs. 10/- each.

ISSUED:

Rs. 60,00,000/- divided into 4,25,000 Equity Shares and 1,75,000—9.3% Cumulative Redeemable Preference Shares of Rs. 10/- each.

The issued capital is payable as follows:—

- Along with application at the rate of Rs. 2/- per share—whether Equity or Preference.
- The balance Rs. 8/- per share—whether Equity or Preference, on allotment.

PREFERENTIAL ALLOTMENTS AND RESERVATIONS

Out of the above issue of Rs. 42,50,000/- worth Equity Shares and Rs. 17,50,000/- worth 9.3% Cumulative Redeemable Preference Shares of Rs. 10/- each at par amounting to Rs. 60,00,000/-

1,08,375 Equity Shares of Rs. 10/- each at par are reserved for issue to the Indian Promoters, the Directors, the companies with which they are associated, and the employees of the company Rs. 10,83,750

2,12,500 Equity Shares and 87,500—9.3% Cumulative Redeemable Preference Shares of Rs. 10/- each have been issued and subscribed for cash at par by the collaborator concern to be utilized for import of plant and machinery required for the Project Rs. 30,01,000

The balance 1,04,125 Equity Shares and 87,500—9.3% Cumulative Redeemable Preference Shares of Rs. 10/- each will be issued to the public at par.

RIGHTS OF PREFERENCE SHARES

The Preference Shareholders will be entitled to a fixed dividend of 9.3% per annum payable in priority to the Equity Shares, free of company's income-tax but subject to deduction of tax at source at the prescribed rates. In the event of winding up Preference Shareholders will be entitled in priority to Equity Shareholders, to repayment of the capital paid-up at par plus all accrued dividends whether earned, declared or not declared and also declared but not paid.

The Preference Shares are redeemable at par on expiry of seven years at the option of the Company on giving three months' notice but shall definitely be redeemed on or before expiry of ten years from the date of issue.

The voting rights of the Preference Shares will be as per Section 87 of the Companies Act.

VOTING RIGHTS

On a show of hands every member present in person has one vote and every person present either as a general proxy, as defined in the Articles of Association or a duly authorised representative of a body corporate has one vote. On a poll the voting rights of a member are in proportion to his share of the paid-up equity capital of the Company. A member holding Preference Shares is entitled to vote in respect of such shares only when the dividend due on such shares or any part thereof is two years in arrear or on a resolution which directly affects the rights attached to the Preference Shares.

PRESENT ISSUE

The balance capital will be issued at par to the public as follows:—

1,04,125 Equity Shares of Rs. 10/- each;
87,500—9.3% Cumulative Redeemable Preference Shares of Rs. 10/- each

The entire issue of 87,500 Preference Shares has been underwritten by (1) Life Insurance Corporation of India, 60,000 shares (subject to firm allotment of 40,000 shares to them) and (2) M/s. Harbans Singh Mehta & Co., New Delhi 27,500 shares

PROSPECTUS, APPLICATION FORM AND ALLOTMENT OF SHARES

Copies of the Prospectus, on the basis of which alone applications will be considered and Application Forms may be obtained from the Registered Office of the Company or offices of the Company's Bankers and their branches mentioned in the Application Form or Brokers and Underwriters.

Applications have to be made for a minimum of 50 shares, or multiple thereof in the case of Equity Shares and 100 shares or multiple thereof in the case of Preference Shares, and in all cases these must be accompanied by remittance of the amount payable on application.

Applications must be completed in accordance with the directions contained therein and delivered before the closing of the subscription list to the bankers or brokers, but not to the registered office of the Company.

If no allotment will be made the application money will be returned in full, and where the number of shares allotted is less than the number applied for the balance amount, if any, left after adjustment of allotment money on the shares allotted will be returned to the applicants by cheques either through the post or otherwise within two months from the date of allotment.

The Share Certificates will be ready for issue by the Company within four months from the date of allotment of shares.

LOAN CAPITAL

The Company has no Loan Capital at present but intends to raise at an early date Rs. 22½ lacs by means of a debenture loan.

FINANCIAL REQUIREMENTS

The financial requirements of the Company are comprised of:

Cost of land and factory and office buildings	Rs. 12,00,000
Cost of imported plant and machinery	Rs. 39,75,000
Cost of indigenous machinery and Drawing Office equipment etc.	Rs. 13,00,000
Freight, insurance, custom duty, transport charges erection and technical service, etc.	Rs. 8,60,000
Motor Cars, furniture, Administrative contingent and miscellaneous expenses	Rs. 7,50,000
Preliminary Expenses	Rs. 1,65,000
Total	Rs. 82,50,000

FINANCIAL RESOURCES

By capital subscription from Equity Shares	Rs. 42,50,000
By capital subscription from Preference Shares	Rs. 17,50,000
By Debentures Loan	Rs. 22,50,000
Total	Rs. 82,50,000

DIRECTORS

CONSENTS

The consents in writing of the directors, auditors, managing brokers, bankers, brokers, and solicitors to the issue of the Prospectus and the Application Forms have been obtained and filed with the Registrar of Companies, New Delhi, and none of them has withdrawn the consent so given.

MINIMUM SUBSCRIPTION

The directors will not proceed to allotment until the whole of the present issue has been subscribed.

HISTORY AND OBJECTS

The Company was incorporated on 7th January, 1961, for the purposes stated in its Memorandum of Association. The immediate object in particular is to carry on the business of Engineering and to that end to erect and establish at Naini, District Allahabad, U.P., a plant for the purposes of manufacture and other heavy industrial plant and machinery.

Amongst the main objects of the Company, as contained in its Memorandum of Association, are:—

- To carry on the business of general manufacturing engineers, manufacturers and repairers of heavy machinery of all kinds and component parts thereof as well as complete factories and plants and in particular for the following industries:—
Sugar, paper, ice-making, flour, steel rolling, rubber processing, textiles, power plants.
- To carry on the business of iron-founders, millwrights, boiler makers, electricians, machinists, copper-smiths, makers of motors, accumulators, generators, builders of all kinds of property, ships, shipowners, brokers and general merchants in all the branches thereof, and
- To carry on the business or businesses of manufacture of agriculture, and other implements of all kinds and other machinery, bridge builders, brass foundries, metal works, iron and steel converters, smiths, wood workers, builders, metallurgists, etc. and water work engineers, tool makers, water carriers and to buy, sell, manufacture, repair, components, rolling stock and hardware of all kinds or otherwise) which may seem to the Company capable of being conveniently carried on in connection with the above or otherwise calculated directly or indirectly to enhance the value of the Company's property and rights for the time being.

SCOPE AND PROSPECTS

As the Second Five Year Plan could be called a Steel Plan so might the Third Five Year Plan which operates from early 1961, well be called India's Machinery Plan, since under it the production of machinery in the country is designed to rise nearly three-fold.

The Sugar Industry is the second largest and one of the first to be established in the country. With a rapidly rising population and with the improvement of living standards this industry has expanded from a production of 10 lakh tons in 1953-54 to 28 lakh tons for the season 1960-61 and this production is scheduled to rise to 35 lakh tons at the end of the Third Five Year Plan.

To take full advantage of the experience and know-how in the Sugar Industry of the Indian and United Kingdom promoters the production programme of the Triveni Engineering Works Ltd. will be based on the manufacture of sugar machinery. However, to avoid to select the most profitable business available the heavy engineering lines including industrial process licensed in the Private Sector.

SITE FOR THE WORKS

The site for the Works has been chosen at Naini, on the outskirts of Allahabad, near the physical centre of India. The location is in the middle of Uttar Pradesh-Bihar Sugar belt and six railway systems meet at or converge on Allahabad. Moreover it is

ASSAM SILLIMANITE LIMITED

GROWING DEMAND FOR SILLIMANITE ESPECIALLY FOR GLASS AND CERAMIC INDUSTRIES

CHAIRMAN, MR. S. M. WAHI'S STATEMENT

The Tenth Annual General Meeting of Assam Sillimanite Ltd. was held on October 14, 1961 at the Registered Office at Gauhati, Assam.

Mr. S. M. Wahi, the chairman in the course of his statement said:

Gentlemen,
This year has been a period of great stress and strain—stress, because, while our production even though increased from the previous years, was not found to be enough to meet the growing demand for Sillimanite the World over as also the increased requirement from within the country; and strain, since our valued clients in Europe—most of the large Refractory Works—got a shock to find the Government of India's policy announced early in 1961 restricting exports to one third of the best year's export. These Works had switched over their production to Sillimanite products on account of the good quality as well as continuity of supplies being maintained by your Company during the last couple of years. Thanks to the efforts of your Managing Agents, export market for Sillimanite had been well established in Europe, Japan and several other countries.

With certain adjustments we had to make for meeting the immediate but reasonable needs of the indigenous industries, the Government of India was good enough to approve of the export of the quantities for which we had entered into a firm commitment for export during 1961. So, while some of our customers abroad had some difficulties in receiving supplies expected by them, the position of meeting their orders for 1961 has been resolved. To frame the programme for 1962, the Ministry of Commerce & Industry, Government of India, has issued circulars to all indigenous Refractory Works to submit to us their requirements for 1962. We had also asked our overseas buyers to place their firm requirements in our hands at an early date so that we may be able to finalise arrangements for 1962. As in 1961, we expect some sort of satisfactory formula for export would be worked out on the basis of firm commitments after keeping a reasonable quantity for indigenous industries. It would be a pity to lose the World Market and the foreign exchange so earned out of the export of Sillimanite. To restrict indiscriminate buying we had to ask for one-third advance with orders, so that our old and genuine buyers continue to get their genuine needs met.

Rise in Production

The gradual increase in production as anticipated is working out despite heavy odds under which the mine has to be operated. Larger sums of money had

to be expended in the maintenance and improvement of the Company's 22 miles of hill section road. New approach roads and bridges had to be made to reach new deposits. The transport and excavation machinery has had rough beating, resulting in heavy depreciation.

The production however, was 7540.01 tons in 1960-61 as against 6957.80 tons in 1959-60. In 1962 we expect to reach a production of 9000 tons. The sales had also increased to Rs. 25,26,344.09 in the year under review. Presently orders in hand are for 9374 tons valued at Rs. 33.75 lakhs. This does not include the 4366 tons already supplied upto August 1961.

Emphasis has been laid on increasing production of sawn blocks and additional capital expenditure was incurred for developing the facilities for Diamond Saw Plant at Paharpur in Calcutta to meet the growing demand of Sillimanite blocks and shapes for the Glass and Ceramic industries. While quite a number of back log orders have been completed during the year, we have received fresh orders valuing Rs. 7.40 lakhs which with the present installed capacity could only be completed by 1964. It has, therefore, been decided to double the capacity of the existing plant so that the orders in hand could be completely executed by the end of 1962 or early 1963 and we may be in a position to satisfy the growing demand of the industry by accepting fresh orders for sawn blocks, cut to size and shape, from the individual clients. It is expected that the import licence which has been recommended by the Industry Ministry for this additional plant, would be in our hands and additional capacity set up early in 1962.

Refractory Plant

I am glad to report that the progress of work on the initial Refractory Plant at Ramgarh has been quite satisfactory. The Plant has gone into production and is producing Sillimanite blocks and shapes, fireclay bricks and shapes, crucibles and some quantities of Thermocouple sheaths have also been successfully experimented. The present Plant has been erected entirely from machinery indigenously procured and has an installed capacity of 5,500 tons. We have in hand firm enquiries awaiting confirmation by us for 3076 tons valuing Rs. 22.00 lakhs. It is proposed to concentrate on the production of Sillimanite shapes and tank blocks by adding a couple of our existing customers, by adding a couple of other technical obstacles to International Finance Corporation's investment of Rs. 65.00 lakhs in the Company for the import of the 46,000 tons Main

Plant have been resolved. According to the Companies Act, certain resolutions have to be passed by the Shareholders to implement the Investment Agreement. These are being placed before you at the Extraordinary General Meeting for approval.

Last year I had mentioned to you about the developing of the mines of fireclays, both plastic and non-plastic, near Ramgarh. For the manufacture of Refractories, both plastic and non-plastic fireclays, kyanite, chrome and magnesite are essential raw materials. Excellent deposits of fireclays have been located near about our Ramgarh Refractory Plant. Lease and other formalities for some of these deposits have been completed with the Government of Bihar, while for certain others the formalities are still to be completed. Operations on one of these plastic fireclay deposits have commenced. A prospecting licence and the relative lease agreement have also been signed with the Bihar Government for some Kyanite deposits in Chybassa District. Work on these mines would be started soon after the rains are over. With the mines of some of these raw materials gradually developed, the Refractory Plant would have largely its own sources of raw material supplies. It is intended to develop sufficient production of these mines so that some of the existing Plants and other Refractory Works could also get supplies and avail themselves of our services.

Liquid Resources

It may be of interest to the shareholders to know that it has been your Company's general policy to continually expand and invest in developing the properties and assets of the Company. This continuous process during the past few years has taken away some of your liquid resources, which otherwise could have built general Reserves. This has resulted in greatly increasing the value of your property and assets. Furthermore, this diversification of the activity to cover the Refractory field, from out of the existing resources of the Company, has opened the vast potential for your mining Company to serve the Refractory needs of the country and obtain its fair share of business.

Once again, this year, I would like to thank our workers for the devotion to duty and service rendered especially at the mines in Assam, where working conditions have been extremely difficult and, during the rains, even hazardous. Major MacLeod has kept up the team spirit of the personnel and maintained good relations with the people of the area, which is an important aspect of any business operation in the present day. The Company has also to recognise the endeavours of Mr. N. C. Whiter, Project Manager, who along with Mr. K. G. R. Nayar, our Refractory Engineer, have been responsible for erecting and putting the present Ramgarh Plant in operation. A good team of technicians and workers at Ramgarh is being built up and trained and their experience would greatly assist in the successful and economical operation of the Main Plant. This promises an excellent future for the Company in its service to the Refractory Industry in India, which is the basis of the Industrial and the relative Economic development of a country.

(The above statement is not a report of the proceedings of the Annual General Meeting referred to.)

THE TRIVENI ENGINEERING WORKS LTD.—Cont'd.

well placed for the supply of raw materials from India's Steel Industry and the Government Foundry Forge Development at Ranchi.

Approximately 26 Acres of almost level land for the Company's Works has been acquired by the Uttar Pradesh Government and possession given to the Company. This is near the Naini Station, adjacent to the proposed Rihand Power Sub-station and bordered by two roads, one of which is the Grand Trunk Road.

POWER, MACHINERY AND EQUIPMENT

Government of U.P. have promised the utmost help for the early supply of Government "Hydro Electric Power." In the meantime arrangements have been made for generation by the company of electricity by Diesel Engines at site.

Major portion of the plant and machinery—both imported and indigenous, has reached the site and is under installation. It is hoped that the production will commence early in 1962.

TECHNICAL COLLABORATION

As many as one-quarter of the sugar plants in operation in India today have been manufactured either by George Fletcher & Co. Ltd., of Derby, England, and/or by Duncan Stewart & Co. Ltd., of Glasgow, Scotland and there is hardly a sugar factory in India which does not contain some items of equipment supplied by one or other of these companies. Both companies are subsidiaries of Booker Brothers McConnell & Co. Ltd. which company has taken up for cash 50% of the Equity and Preference Shares to be issued by the Triveni Engineering Works Ltd.

COLLABORATION FEE

Under an agreement, Bookers Sugar Machinery Group Ltd., George Fletcher & Co. Ltd., and Duncan Stewart & Co. Ltd. agreed to act as the Technical Consultants and sell outright in London to the Company at a consideration of £50,000 sterling the technical know-how to be in the exclusive use of the Company in India and they have also agreed to advance to the Company a loan of £50,000 sterling free of interest and repayable by the Company within a period of ten years and tax liability thereon, if any, would be borne by the Company.

For Turbines and Air Compressors, Peter Brotherhood & Co. Ltd., of Peterborough, England, whose products are well-known throughout the world, has entered into an agreement to give full and continuing technical collaboration and assistance to sell in India at a consideration of £40,000 sterling the technical know-how to be in the exclusive use of the Company in India. They have also similarly agreed to advance to the Company a loan of £40,000 sterling free of interest and repayable by the Company within a period of ten years and tax liability thereon, if any, would be borne by the Company.

IMPORT LICENCES

Import Licences No. 997663/60/HQ/CE/I dated 1-2-61 and 997664/60/HQ/CE/II dated 1-2-61 have been

received from Government of India for import of nearly Rs. 30 lacs worth of capital equipment from the U.K. and Italy, against the foreign investment. In addition Rs. 12 lacs worth of capital equipment will be imported from U.S.A. against a D.L.F. Loan sanctioned vide Government of India Letter No. 41(43)/61-DLF dated 21st February, 1961.

PROFITABILITY

Annual production on one shift working is estimated at about Rs. 1 crore. It is expected to rise to between Rs. 2 and 2.5 crores on three shift working, which it is hoped to attain in two to three years. The experience of similar engineering concerns in India catering to specialised markets for industrial plant, shows that the Company's estimated rates of production should return a satisfactory profit.

SPECIAL BENEFITS

The Company will enjoy the special benefits under the "Indian Income-Tax Act" inasmuch as:—

- Development Rebate equal to 20% of the cost of machinery installed will be allowed.
- Under Sec. 15C the profits upto 6% of the employed capital will be exempt from tax for the first five years of production. The shareholders will also enjoy relief on the dividends received by them in accordance with this section of the Income-Tax Act in respect of any dividend paid as is attributable to that part of the profits of the Company, which obtained the foregoing exemption and
- Under Sec. 56A of the Income-Tax Act, Super-Tax will not be payable on dividends received by the Company holding shares in this company.

BROKERAGE

Brokerage will be paid to the brokers, banks and underwriters at 10 nP per Equity and Preference Share of Rs. 10 each offered to the public in respect of shares allotted on applications bearing their stamps. In addition brokerage at 7 nP per share will be paid to the Managing Brokers only in respect of 1,04,125 Equity Shares being offered to the public.

UNDERWRITING COMMISSION

Underwriting commission of 2½% will be paid to the Life Insurance Corporation of India and Messrs. Harbans Singh Mehta & Co.—the underwriters, in respect of Cumulative Redeemable Preference Shares of Rs. 8,75,000/- underwritten by them.

PRELIMINARY EXPENSES

The Preliminary Expenses and the expenses of the Issue including Underwriting Commission and Brokerage are estimated at Rs. 1,65,000/- and are payable by the Company.

INTEREST OF PROMOTERS

The Promoters of the Company are Booker Brothers McConnell & Co. Ltd. and R. B. L. Tirath Ram

Shah (India) Ltd. The Promoters are receiving no remuneration for their services as such but the latter company is entitled to be reimbursed for expenses borne by them. Bookers Sugar Machinery Group Ltd., George Fletcher & Co. Ltd. and Duncan Stewart & Co. Ltd. are subsidiaries of Booker Brothers McConnell & Co. Ltd. The Promoters are interested to the extent of the shares allotted to them.

DIRECTORS' INTEREST

All the Directors will be interested in the remuneration payable to them as fee for the meetings attended and travelling expenses, if any, for the purpose.

Shri Balmokand Shah Sawhney, Shri Kanhaya Lal Sawhney, Shri Fural Chand Sawhney and Shri Devi Chand Sawhney are Directors or Members of R. B. L. Tirath Ram Shah (India) Ltd., promoters of the Company. Each of them is also a director or member of The Ganga Sugar Corporation Ltd., The Upper India Sugar Mills Ltd., The Mahalakshmi Sugar Mills Co. Ltd., and The Ramkula Sugar Mills Co. Ltd., and are interested to the extent of the shares to be allotted to each of these companies and to themselves.

Shri C. W. Tyrrell is a director and member and Shri C. W. Murray is a member of Booker Brothers McConnell & Co. Ltd., one of the promoters of the Company. Shri C. W. Murray is Chairman and Shri T. P. Houghton a Director of Bookers Sugar Machinery Group Ltd. and Shri Murray is also Chairman of George Fletcher & Co. Ltd. and of Duncan Stewart & Co. Ltd.

BORROWING POWERS

The Directors may from time to time raise or borrow and secure the payment of any sums of money for the purposes of the Company provided that the amount borrowed and outstanding (apart from temporary bank loans obtained in the ordinary course of trading) shall not at any time exceed the aggregate of the paid-up capital of the Company and its free reserves, except with the consent of the Company in general meeting.

POWERS OF THE DIRECTORS

No restrictions are imposed by the Articles of Association on the Board's powers of the management and the control of the Company's affairs is vested in the Board and save in so far as provided by the Companies Act, 1956.

AUDITORS' REPORT

In accordance with Clause 24 of Para II of Schedule II of the Companies Act, 1956, we report that the Triveni Engineering Works Ltd. have not made up accounts for the period from the incorporation of the Company (7th January, 1961) to three months before the issue of the Prospectus.

THE CALCUTTA TRAMWAYS COMPANY LIMITED

BENEFIT FROM FARES INCREASE

CHAIRMAN, MR. DAVID WEBB'S SPEECH

The Annual General Meeting of The Calcutta Tramways Company Limited was held on October 11 at 30, Curator Street, Chancery Lane, London, E.C.

Mr. David E. Webb, F.C.A., chairman of the company, presided.

Mr. B. H. Clark, representing the secretaries, Messrs. Hays, Alkers & Hays, read the notice convening the meeting and the report of the auditors.

The Chairman said:

It is with great regret that I have to record the death on July 30 of Sri Anandi Lal Poddar. He joined our board on January 1, 1957, and, as the first Indian representative, became a most enthusiastic and helpful member. I know I speak for my fellow directors when I say that we have lost not only a wise and farseeing colleague but a personal friend. His brother, Sri Badri Prasad Poddar, was invited and he agreed to fill the vacancy, and we extend to him a hearty welcome. He is well-known to us as he has acted as alternate to his brother in the past and already has a grasp of some of the problems with which we are faced. Mr. Poddar now retires and later you will be asked to consider a resolution for his reappointment.

Considerable Strides

The accounts before you reflect the first full year's benefit from the increase in fares implemented in November, 1959. Traffic receipts increased by some £255,000 and this result, whilst falling short of what was considered to be necessary to remove the backlog of maintenance and renewals in a reasonable time,

has nevertheless enabled us to make considerable strides in improving the condition of the permanent way and roads.

You will notice that in the revenue account expenditure on maintenance and repairs has increased from £452,950 to £575,406, whilst in the balance-sheet expenditure charged against renewals and replacements account totals £102,801 against £71,877 in the preceding year. These figures are impressive but there is still a great deal to be done. As I mentioned last year, overtaking a great backlog of maintenance is a formidable task and it will take a considerable time to achieve. As will be seen from the accounts, expenditure under all other headings increased. This was due in large measure to the rise in the rates of wages paid to our employees in India amounting in total to over £100,000. The surplus on revenue account showed an increase of £60,000, but this was reduced to £40,000 in the general revenue account by an increase of £20,000 in the allocation to renewals and replacements account making £100,000. This is very necessary in view of the rising costs of materials and labour.

Finally, after reserving almost £74,000 for Indian taxation and crediting £8,000 tax deducted from debenture interest, the balance transferred to shareholders' account amounted to £59,919 compared with £41,123 in the preceding year. This figure still falls far short of the sum of £87,457 allowed under the agreement with Government, but it was felt that no effort or expenditure should be spared at the present time in bringing back the undertaking to the high

standard of efficiency which it enjoyed not long ago. Your board do not, therefore, anticipate that the balance on revenue account will be sufficient for several years to come to allow for the maximum transfer to shareholders' account. From the outstanding balance on this account it is recommended that a dividend of 5 per cent free of tax should be paid.

Staff Relations

Relations with our staff in India were on the whole good throughout the year. Receipts lost through unofficial strikes and demonstrations were reduced very considerably and the efforts made by our employees to help the travelling public were appreciated. In the current year, however, the receipts have been affected by a wave of absenteeism. This is no new worry but its incidence has increased very considerably. We are actively pursuing talks with the unions at the present time in an endeavour to reach a solution which will at the same time reduce absenteeism and produce an incentive to our workers whereby they can earn higher wages. These talks emphasize once more what has been explained to the staff so many times, that if they will not produce the extra effort necessary to ensure higher receipts there are no funds out of which to pay them increased wages. The only alternative measure is an increase in fares, but this is only justifiable after every endeavour to augment funds from other sources has been made. So often we are faced with the spectacle of union leaders seeking higher wages for the men and staging demonstrations which in themselves, through loss of receipts, remove any hope of a surplus of funds out of which those wages could be paid. I hope to be in Calcutta myself later this year and to have talks with the unions and Government.

I would like once more to pass on the appreciation of you all to our agent and senior staff in Calcutta. They have all had a hard year and the results of their efforts are demonstrably clear in every department of the Company. The full brunt fell on the Maintenance and Traffic Departments, but they could not have functioned efficiently without the cooperation of our workshops and the assistance of our head office staff with all their wide ramifications.

The report and accounts were adopted and the other formal business duly transacted.

Money

THE CALCUTTA MONEY MARKET

CALL RATE REMAINS HIGH

Wednesday, 25th October.

THERE has been very little movement of funds in the Calcutta money market during the past fortnight due to the incidence of holidays. On the whole, however, the trend of demand has been upward and the total shows a slight increase chiefly on account of improved demand from the engineering industries and against grains and seeds storage. The jute industry has also shown a significant increase in offtake. On the other hand, the requirements of the sugar mills are slightly down and those of the cotton industry remain about the same. In the interbank market, the tightness continues and the call rate is unchanged at 4½ percent.

Turnover in the exchange market has been restricted due to the holidays, but some tea and gunny bills have come to hand. Remittance demand has remained moderate. In the London money market, the pound has maintained its firm trend and closing quotations show gains against all Continental currencies, with the exception of the French franc.

BULLION WAS QUIET WHEN THE MARKET REOPENED after the Puja holidays. Silver declined from Rs. 242 quoted a fortnight ago, to Rs. 241.25 for ready and the rate for forward delivery was quoted at Rs. 206.40. The London and New York prices were 80½d and 91.375 cents.

Gold was soft in sympathy with silver and the price fell from Rs. 148 to Rs. 147.25. But the sovereign at Rs. 98.50 showed a rise of Rs. 1.50.

DURING THE WEEK ENDED 13TH OCTOBER, Government of India Treasury bills for Rs. 165,70,50,000 were sold in favour of the Reserve Bank.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills, sold from 11th October to 14th October, amounted to Rs. 10,00,000.

DURING THE WEEK ENDED 20TH OCTOBER, GOVERNMENT of India Treasury bills for Rs. 1,67,77,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 24th October. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 30th October.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 25th October to 28th October at Rs. 99.391 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 16th October to 21st October amounted to Rs. 1,85,00,000.

ACTIVE NOTES DECLINED BY Rs. 2.23 CRORES TO Rs. 1,903.90 crores, according to the return of the Reserve Bank of India for the week ended 20th October, 1961, but the total note issue rose by Rs. 38 lakhs to Rs. 1,919.42 crores. Notes held in the Banking Department consequently increased by Rs. 2.61 crores to Rs. 15.52 crores. Deposits of the Government of India declined by Rs. 11.15 crores to Rs. 49.92 crores, while other Government accounts rose by Rs. 24.62 crores to Rs. 28.60 crores. Balances of commercial banks at Rs. 84.49 crores showed an increase of Rs. 2.39 crores. Balances held abroad increased by Rs. 18.25 crores to Rs. 28.27 crores. Investments were Rs. 19.37 crores higher at Rs. 201.08 crores. Other loans and advances declined from Rs. 136.18 crores to Rs. 135.93 crores, of which advances to scheduled banks against usance bills amounted to Rs. 7.20 crores (Rs. 6.91 crores). Ways and means advances stood at Rs. 59.45 crores, against Rs. 63.37 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 13th October, 1961, shows a rise of Rs. 99 lakhs to Rs. 531.30 crores in total deposits. Investments in Government securities are down by Rs. 6.97 lakhs to Rs. 249.31 crores, while other authorized investments are up by Rs. 2 lakhs to Rs. 9.26 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 32 lakhs to Rs. 244.88 crores. Cash and balances are, in consequence, shown at Rs. 31.11 crores, or Rs. 6.13 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 13th October, 1961, shows Demand and Time liabilities at Rs. 841.43 crores (Rs. 21.82 crores on account of borrowings from banks) and Rs. 1,135.60 crores (Rs. 18.42 crores), compared with Rs. 838.16 crores (Rs. 20.95 crores) and Rs. 1,138.74 crores (Rs. 18.81 crores), respectively, in the previous week. Cash has declined by Rs. 24 lakhs to Rs. 45.38 crores, while balances with the Reserve Bank have increased by Rs. 2.25 crores to Rs. 77.17 crores. There is a drop of Rs. 2 lakhs to Rs. 611.63 crores in invest-

The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.2 percent and 63 percent, against 6.1 percent and 63 percent.

L.I.C. BONUS ANNOUNCEMENT 1959 VALUATION RESULTS

WHOLE LIFE ASSURANCES

Rs. 16.00

per thousand per annum

ENDOWMENT ASSURANCES

Rs. 12.80

per thousand per annum

The Life Insurance Corporation has pleasure in declaring the above rates of bonus as a result of the second Valuation of its liabilities and assets as at 31st December 1959. These bonus rates are applicable to with-profits policies issued by the Corporation and in force as at the date of Valuation.

As regards the bonuses on with-profits policies issued by former insurers, these have been declared proportionately in accordance with the Scheme of Differential Bonuses approved by the Central Government and published in the Gazette of India dated 14th October, 1961.

The bonus rates applicable to all the policies are the same as those declared on the basis of the preceding Valuation as at 31st December 1957.

As at the date of the present Valuation the total sum assured under the policies was Rs. 1,997 crores, including bonuses, and Rs. 105 lakhs per annum under Annuities. Out of the gross profits disclosed by the Valuation, a sum of Rs. 24.47 crores has been utilised for allotting bonuses at the above rates to policy-holders, after providing for income-tax liability amounting to Rs. 4.58 crores and Government's share of Surplus amounting to Rs. 1.28 crores.

As already announced, bonus intimations in respect of both the first and second Valuations will be sent out to the policy-holders as soon as possible.

WHY TAKE CHANCES?

In what you do every day, you are taking many chances. For example, take the things that you buy in the market. Are you always sure of their quality? Do you get good value for the money you spend?

And yet, you can be sure if you know that the goods you buy have been made to a given standard. Standardization benefits not only you, the consumer, but also the producer, the distributor and indeed, the country as a whole.

The Indian Standards Institution has prescribed standards for industrial as well as consumer goods. To manufacturers producing to relevant standards, ISI grants licences to apply on their goods its certification mark which is the guarantee of quality. The next time you buy anything, don't take a chance; look for the ISI mark.

Stocks and Shares

EQUITY PRICES REMAIN AROUND PRE-PUJA LEVELS

TECHNICAL POSITION HEALTHY BUT OPERATORS MOVE CAUTIOUSLY

Wednesday Evening.

THE stock market has reopened quietly after the Puja holidays, and today's settlement has been uneventful. The moderate carry-forward charges appear to indicate a fairly healthy technical position, but trading has been slow and cautious. The trend has become indecisive because the news has been mixed in character. In the circumstances, bulls are not inclined to extend their commitments and bears lack the courage to sell. The closing prices are about the same as those prevailing before the holidays. Selling pressure is being restrained by good corporate news. Many companies propose to extend and diversify their activities by issuing rights shares. As the domestic market is growing with the help of import restrictions, it is thought that industry will not find it difficult to sell its products profitably. The prospect of an increase in the ex-factory price of cement and the retention price of steel is being interpreted bullishly.

Lyons Range has been impressed by the deliberations of the Business International round table conference held in New Delhi. At this conference, U.S. business men appear to have taken a more constructive view of the Indian Government's economic policy. Official spokesmen have explained the scope for investment by pointing out that in spite of the expansion of the public sector, there is a large field for private enterprise. The Government has no intention of discouraging private industry in spheres where the State does not intend to operate.

But there are a number of factors which are likely to promote caution. The effect of the widespread floods remains to be assessed carefully. The election campaign will soon gather momentum. Although the Madurai session of the A.I.C.C. gave the impression that the Congress Party's economic policy will not contain any major shocks for the stock market, it would be optimistic to think that election speeches would be free of socialist fire. A few days ago, Dalal Street was disturbed by a rumour that the margins for share advances would be increased beyond the existing level of 50 percent. But such a move is now considered highly improbable because the margin of 50 percent is already large enough. Still, there are indications that the stock market might face a growing shortage of funds in the near future. The busy season demand will increase soon, and large resources are likely to be siphoned off into new issues. A long queue of such issues is expected during the next few weeks.

Indian Iron have closed at Rs. 24.15. Engineering shares have been bought selectively. Texmaco are steady on speculative support. Interest has been taken in Guest, Keen, Williams, Burn, Jessop and Britannia Engineering.

In the miscellaneous section, Dunlop have been prominent on the prospect of an early issue of bonus shares. The high carry-forward charges for these shares are due to the closure of books for the purpose of issuing bonus shares. Indian Copper have improved on favourable corporate rumours. Hindustan Motors are subdued because the lock-out is continuing. Routine business has been transacted in Rohtas, Indian Aluminium and Hindustan Cable. Support has been forthcoming for Sullat Cable. Martin Burn have attracted interest on the prospect of dividends. Electric company shares are steady and institutional support has been extended to Calcutta Electric. Tobacco shares have weakened. National Tobacco and Imperial Tobacco have been sold at lower prices. Paper shares are quietly steady. Orient have improved on replacement buying. Seshasayee Paper, Titagur and Ballarpur have met with support. Sirsik have been neglected, although the company has been permitted by the Controller of Capital Issues to issue rights ordinary shares. Cement shares have improved on the belief that the ex-factory prices of the commodity will be fixed at a fairly satisfactory level.

Interest has broadened in jute shares due to the decision of the industry to increase production. Fort William, Fort Gloster, Kinnison, New Central and Howrah have been bought. The trend is likely to be cautious considering that many mills are believed to have incurred substantial losses during the first six months of the current year.

Coal shares have become sluggish due to reports that the working of many collieries has been hampered by transport shortages. Burrahar have fluctuated narrowly. Scattered support has been forthcoming for Bengal, Amalgamated, New Beerbhoom and East Indian. Central India and Mangunge are freely available at the present

prices. Pench Valley have weakened on a predominance of sellers.

Cotton textile shares have become steadier on the hope that the working of mills during the current year will show a considerable improvement. Dunbar, Bowreah, Elgin, Bharat Commerce and J. K. Rayon have been maintained.

Except for selective support for Assam and Doonars gardens, tea shares have generally become softer due to the uncertain outlook for the marketing of the commodity. Reports of increased production in north India have disturbed investors. Hasimara, Basmatia, Betjan and Bishnauth are in demand, but Hantapara have weakened.

Sugar shares have declined and buyers are difficult to locate. The report that exports of Indian sugar to the U.S.A. may be slashed has caused concern. The decision to cut production during the coming season has induced some selling. Carew, Belsund, S.K.G. and Cawnpore have lost on balance.

Government securities are steady in restricted turnover. Sellers of short and medium-dated issues are fewer. The 3 percent Conversion loan 1986 has closed at Rs. 72.75.

Nagri Farm Tea

A dividend of 30 percent, subject to tax, has been declared by the Nagri Farm Tea Co. Ltd for the year ended December 1960, against 20 percent, taxable, in the previous year. The profit has amounted to Rs. 2.78 lakhs, against Rs. 85,000. Taxation is allocated Rs. 1 lakh (against Rs. 1.88 lakhs, and general reserve absorbs Rs. 46,250 (against a balance of Rs. 1,25,071, which is to be carried forward, against Rs. 1,29,955 brought in. The crop manufactured was 216,638 kilograms, against

Bombay Markets

UNCERTAIN TREND IN THIN TRADING COTTON TEXTILE SHARES STEADY

Tuesday Evening.

TRADING in the Bombay stock market was interrupted by holidays during the past fortnight. Business was thin and the trend uncertain. At first, sentiment was disturbed by a rumour that the margin on share advances would be increased further. Later, the undertone improved and the new account started on a steady note. The higher carry-forward charges were considered understandable since the next clearing would take place after three weeks. Good corporate news, combined with the absence of any *hazala* rates for shares, induced support. At the close, there was a reaction due to profit-taking and activity declined considerably.

Tata Steel closed at Rs. 144.25 and Indian Iron were subbed at Rs. 24.24 on easier advices from Lyons Range. Engineering shares were steady, and Tata Locomotive improved to Rs. 355 on replacement buying. Premier Construction were taken at Rs. 192.50 and Alcock Ashdown were placed at Rs. 331. Larsen and Toubro came to hand at Rs. 38.75 and Mukand Iron were dealt in at Rs. 28. Hindustan Motors were quiet at Rs. 19.20 on continuation of the lock-out, but Premier Automobiles attracted support at Rs. 157 on prospects of expansion.

Cotton mill shares were steady on the belief that the working of the mills would be satisfactory during the current year. Reports of further modernisation and expansion by many units helped broaden support. Century met with hectic support at Rs. 582 and Bombay Dyeing were taken at Rs. 67.60. Kohinoor were bought at Rs. 314.50 and Simplex were done at Rs. 168.50. Svadeshi were in demand at Rs. 274 and Morarjee were dealt in at Rs. 392. Shree Niwas were bought at Rs. 282 and Finlay were placed at Rs. 324. India United ordinary were steady at Rs. 15.16, but Apollo were offered freely down to Rs. 1.96. Tata Mills met with support at Rs. 69.50.

Miscellaneous shares moved in line with the general trend. Cement shares met with replace-

average sale price was Rs. 6.24, against Rs. 5.84 a kilogram. The estimate for 1961 provides for a crop of 196,600 kilograms of tea at a cost of Rs. 5.29 a kilogram.

ment buying on the hope that the ex-factory price of the commodity would be raised. Associated Cement improved to Rs. 169.50 and Digvijay to Rs. 182.25. Sugar shares were quiet, and Belapur lost at Rs. 271.50. Phalton were sold down to Rs. 133 and Walchandnagar Industries were available at Rs. 165.50. Mining shares were steady, and Shivrajpur Syndicate were bought up to Rs. 55. Steamship company shares produced mixed trends. Scindia Steam declined to Rs. 12.52 after an earlier rise. It was rumoured that the company might cut the dividend. Great Eastern Shipping were bought at Rs. 13.80. Bombay Burmah were steady at Rs. 633 on talk of a bonus issue. National Rayon improved to Rs. 541 and Gwalior Rayon were transacted at Rs. 48.75. Baroda Rayon were placed at Rs. 157. Voltas were supported up to Rs. 300 and Tata Oil met with interest at Rs. 77. Cent Tyre rose to Rs. 211.25 and Synthetics and Chemicals were done at Rs. 198. Chemical shares were steady, and Tata Chemical were in demand up to Rs. 16.80. Alembic were transacted at Rs. 242.50 and Indian Dyestuff came to hand at Rs. 461.25. Polychem were indicated at Rs. 190, and Colourchem were bought at Rs. 375.

Bank shares were steady, but turnover was limited. Bank of India were placed at Rs. 133 and Central Bank were taken at Rs. 61.70. Bank of Baroda were done at Rs. 104 and Dena Bank met with support up to Rs. 63.80. Insurance shares were quietly steady, and business was done in New India Assurance at Rs. 62.

There was scattered support for electric company shares, and Ahmedabad were done at Rs. 91. Tata Power came to hand at Rs. 1,107.50 and Bombay Suburban were placed at Rs. 102.

Madras Market

EQUITIES STEADY DESPITE SMALL TURNOVER BANK SHARES IMPROVE BUT SUGARS SUBDUED

Tuesday Evening.

THE Madras stock market was quietly steady during the past fortnight and business was done on a small scale. Outside support was negligible because of the holidays. Business in Government securities was largely confined to selected State loans. Miscellaneous shares showed mixed trends. Reports of rights issues by some companies helped broaden interest in various industries, but cement shares were sold freely on the fear that the Government might not increase the price of the commodity much. Bank shares were supported on the belief that the working during the current half-year would show considerable improvement. Sugar shares were subbed following a report that exports of the commodity to the U.S.A. have been cut. In the planting section, selected tea shares met with support, but rubber and coffee shares were not fancied. Cotton mill shares were cheerful on expectations of increased earnings during the current year.

Among banks, Punjab National were transacted at Rs. 19.90 and Indian Overseas at Rs. 196. Canara came to hand at Rs. 90.50 and business passed in Indian at Rs. 177. Among public utilities, Karaikal were wanted at Rs. 9.20 on paying a taxable ordinary dividend of 10 percent. South Madras were steady at Rs. 9.80 and Vellore were bought at Rs. 13.75.

Sellers predominated in sugar shares at lower prices. Deccan declined to Rs. 12.65 in spite of declaring a final ordinary dividend of 13.15 percent, taxable. Business was done in E.I.D. at the higher price of Rs. 39, but Kothari were sold down to Rs. 8.40 on passing the dividend. United Breweries declined to Rs. 104 on profit-taking, but Mysore were steady at Rs. 57.75. Travancore came to hand at Rs. 10.22 and K.C.P. were placed at Rs. 24.

In the planting section, Blue Mountain improved to Rs. 3.11 on replacement buying, but Cochin Malabar weakened to Rs. 7.37. Consolidated Coffee were sold freely at Rs. 20.10 and Devan were dealt in at Rs. 13.76. Sellers predominated in Nellithanam at Rs. 11 because of the decision to pass the dividend. Nonsuch were ordinary dividend of 10 percent. Panchura were supported up to Rs. 5.50 on paying a taxable ordinary dividend of 25 percent. Kil Kotagiri were steady at Rs. 4.90, but Oucherlony were easier at Rs. 3.66 and Business passed in Periakaramalai at Rs. 3.66 and Parkside were done at Rs. 29.70. Peermade were dealt in at Rs. 23.37 and Mysore Coffee were bought at Rs. 5.40. Nilgiri were steady at Rs. 8.75, as were Swinton at Rs. 2.92. Twyford were placed at Rs. 12 and United Nilgiri were done at Rs. 24.

In the textile section, Bangalore Woollen hardened to Rs. 218 and Buckingham to Rs. 252. Lakshmi were bought at Rs. 160 and Madura were firm at Rs. 39.10. Travancore Rayon were dealt in at Rs. 39.90 and South India Viscose were transacted at Rs. 182. Cauvery Spinning were bought at Rs. 14.80 and Kothari were steady at Rs. 13.10. Mettur were supported at Rs. 3.88 and Radhakrishna were dealt in at Rs. 40.25. Ramakrishna came to hand at Rs. 207.90 and Rangavilas were done at Rs. 45.

Among miscellaneous shares, Aluminium Industries were steady at Rs. 23.50 and Ashok Leyland were wanted up to Rs. 9. India Cement were weaker at Rs. 6.33 and F.A.C.T. lost at Rs. 9.37.

Madras Vanaspathi were sold down to Rs. 16.10 because the ordinary shareholders have agreed to reduce the paid-up value of their shares by 70 percent. Travancore Chemical and Manufacturing were wanted at Rs. 21 on the decision to issue ordinary rights shares at par in the proportion of one new share for every three held. Enfield were dealt in at Rs. 11.50 and Binny were bought at Rs. 297. Madras Rubber improved to Rs. 18.85 and Madras Aluminium were steady at Rs. 24.65. Maricar were bought at Rs. 69.25 on paying a taxable ordinary dividend of 25 percent, but Mysore Tobacco weakened to Rs. 9.40 on passing the dividend. Sellers predominated in Panyam Cement at Rs. 99 because the dividend has been passed. Tube Investment met with support up to Rs. 267 on the payment of a taxable ordinary dividend of 10 percent. Textool came to hand at Rs. 193 and Standard Motor were done at Rs. 16.25. Spencer were firm at Rs. 24.25 and Seshasayee Paper improved to Rs. 8.45. Parry's Confectionery were indicated at Rs. 4.73 and Kirloskar Electric were dealt in at Rs. 15.50.

Glass makes a distinct difference

Any home can be modernised—with glass. And not in appearance alone. Glass seals out moisture, noise and irritating dust and, fitted cleverly, filters through healthy, natural light. Glass is easily cleaned, too!

Versatile—glass has numerous other uses in the office, factory, school, hospital and store.

The finest and most durable in India, HPG sheet glass is tested for unvarying quality at every stage of manufacture.

Available in a wide variety of sizes and thicknesses.

London Market

GILT-EDGED RISE IN STOCK MARKET

INDUSTRIAL EQUITIES LOSE

London, 25th October.

A FURTHER and substantial advance in gilt-edged securities provided the outstanding feature of the stock market during the past fortnight. Elsewhere, gold shares recorded a useful rise, although prices came back from their best levels. But otherwise, the market gave an unhappy performance. Industrial equities staged a modest rally at one time, but this proved to be short-lived and prices fell back again. With equities friendless, gilt-edged securities advanced strongly under the influence of the rate and confident expectations that it will not be long before there is another reduction in the rate. These hopes were raised even higher by the persistent strength of sterling in the foreign exchange market and the continuous fall in the Treasury bill rate. Medium-dated stocks were the chief beneficiaries and gains among these issues ranged to about 2 points, while other dated stocks were up to a point or so higher. There was virtually nothing to stimulate interest in industrials but plenty of adverse news. This included the disappointing September overseas trade figures, the F.B.I. survey, poor company news, labour troubles and the constant stream of new issues. Although there were one or two good spots, industrials as a whole fell back and prices were at or near the year's lowest levels. Among the biggest falls were in Cunard and P. and O. on their profit warnings. Coppers were subdued, but tin shares steadily lost ground. Oils also tended lower. Teas attracted a selective demand.

New Delhi

TECHNICAL TEAM REPORTS ON PHOSPHORUS PROJECT

LESS FOREIGN EXCHANGE AVAILABLE FOR MAINTENANCE IMPORTS

(FROM OUR NEW DELHI CORRESPONDENT)

AN Indian technical team was recently sent abroad to prepare a project report for a 6,000-ton-a-year capacity yellow phosphorus plant in India. Phosphorus is imported as yellow phosphorus for conversion to other chemicals, or as red phosphorus, or as other phosphorus chemicals. The requirements for products such as red phosphorus, phosphorus trichloride, phosphorus pentachloride, phosphorus oxychloride and phosphorus pentoxide for 1960, taken from actual import figures, were as follows:

Product	Import or manufacture in the country (in tons)	Equivalent yellow phosphorus required (in tons)
Red phosphorus	214	235.4
Phosphorus pentoxide	431	187.5
Phosphorus trichloride		
Phosphorus oxychloride	250	77.6
Phosphorus pentachloride		
Total		500.5

It will be thus seen that even the present consumption of phosphorus is not very much lower than the Planning Commission's estimate for 1965-66. Its advance estimated consumption of red phosphorus by the match industry, for example, is presumably based on a *pro rata* increase in the population. The consumption figures for cigarettes given below, however, show that the increase would be much more rapid.

Year	Production of cigarettes	Production of match boxes (60 sticks each)
1950	24,000 million	3,100 million boxes
1960	48,000 million	5,400 million boxes

If the likely increase in matches consumption from the greater use of town gas as well as L.P.G. increase in the demand for phosphorus would be much greater. Further, some consumers who use phosphorus compounds derived from the wet process phosphoric acid have indicated their preference for similar compounds derived from electrothermal phosphoric acid because of its greater purity. This would appear to be so in the case of phosphates used in bonderising compounds. The use of bonderisers is increasing rapidly with the greater availability of steel for engineering industries.

A Second Plan Project

The phosphorus project has been under active consideration since the early stages of the second plan and has figured in the publications of the Planning Commission as "a N.I.D.C. project included in the second plan period." Due to the complicated nature of the project and the difficulty of obtaining technical collaboration, it has not been possible to formulate a definite proposal, until after the report by the technical team was received in December 1960. Thus, the phosphorus project is really a spillover from the second plan.

Within the financial ceiling of Rs. 1,526 crores fixed for industries and minerals, a sum of Rs. 20 crores is likely to be provided for the National Industrial Development Corporation. While the greater portion of the allocation will be devoted to the modernisation of cotton and jute textile industries, the Corporation, it is suggested, should spend a portion of the allocation on projects considered essential to the country's economy. The phosphorus project is one of them. The 6,000 tons a year plan will require Rs. 10.5 million in foreign exchange. The foreign exchange saving will amount to Rs. 4.28 million, even on the assumption of conservative demands for phosphorus of about 1,200 tons a year by 1965-66.

It has been proposed to locate this project in Mangalore in Mysore State, because the rates offered by the Government of Mysore for power from the Sharavati project are about Rs. 125 a kW. If power is not available in the Sharavati area, other locations such as the Koyana area, the Trombay fertiliser project or the F.A.C.T. Alway, may also be considered. The Estimates Committee has recently expressed its concern at the appearance of a material just when a public sector project for the same becomes ripe for consideration. In this case, the same criticism might be made concerning the three applications received recently for the production of phosphorus from: (a) Messrs Star Chemicals, Bombay, for 1,500 tons a year of yellow phosphorus; (b) Messrs Bharat Phosphorus Works, Calcutta, for 300 tons a year of yellow phosphorus; (c) Messrs Kanoria General Dealers Private Ltd., Calcutta, for 1,500 tons a year of yellow phosphorus. It is suggested that these applications should be rejected and the proposed plant be placed in the public sector.

Industrial Advisory Council Meeting

The Central Advisory Council of Industries, meeting here on 28th October, will consider the

problems relating to industrial development and export promotion. The maintenance of the present tempo of industrial development in the country is closely linked with the foreign exchange resources available. In this matter, the position deteriorated considerably in 1960-61, and during the first six months of 1961-62. In 1960-61, the foreign exchange reserves declined by Rs. 59 crores. The rate of decline has increased in the following months, the loss by 8th September, 1961, being Rs. 59 crores. In spite of India's borrowing of Rs. 58 crores from the International Monetary Fund, the foreign exchange assets as on 8th September, 1961, amounted to only Rs. 136 crores, which is less than the value of imports for two months. In these circumstances, it has been found necessary to adopt a cautious policy in the matter of foreign exchange for imports as for other purposes. The broad policy is that the import of capital goods for establishing new units of substantial expansion is approved only against suitable methods of financing such as foreign investment, loans from foreign governments and financial institutions to the Government of India, long-term foreign exchange loans secured by private parties from financial institutions, imports financed by the National Small Industries Corporation under its hire-purchase scheme and trade and payment agreements between the Government of India and foreign countries. Applications for importing plant and equipment, which will build up the country's exports, are dealt with on the basis of a special priority. The import of raw materials, components and spare parts is financed primarily from export earnings. It has, however, been possible now to find some funds even from the various tied loans secured by the Government for the import of components and raw materials. This, however, is only on a limited scale, as the bulk of foreign credits is being used for capital goods.

World Bank Loan for Railways

The World Bank has made a loan equivalent to \$50 million to India, to assist the development programme of the railways. The loan will help meet the cost of equipment and materials to be imported over the coming year. Five commercial banks are participating in the loan, without the Bank's guarantee, for a total of \$1,075,000, covering the entire first maturity, due 15th February, 1965, and part of the second maturity, due 15th August, 1965. The banks are: the Bank of America N.T. and S.A., San Francisco; the First National City Bank of New York; the Manufacturers Hanover Trust Company, New York; the Fidelity-Philadelphia Trust Company, Philadelphia; and the First Pennsylvania Banking and Trust Company, Philadelphia. The Bank's loan is for a term of 20 years, and bears interest at 5 1/2 percent, including the 1 percent commission which is allocated to the Bank's special reserve. Repayment of the loan will begin in February 1965.

Cotton Textile Exports to U.K.

With effect from 1st January, 1962, all cotton textiles exported to Britain will require an export licence issued by the Joint Chief Controller of Imports and Exports, Bombay. In order to ensure that exports arriving in Britain on or after 1st January, 1962, will be covered by a valid licence, it has been decided that shipments leaving India after 1st December, 1961, should be under a licence. The Exports (Control) Order, 1958, is being suitably amended.

Trade Missions

A number of trade missions are expected here either to negotiate new agreements or negotiate trade plans for 1962. The Ceylonese trade mission is already in the capital, having discussions with the Government of India. The Indonesian trade mission and one from Poland are expected during this week. Other missions expected are from East Germany on 4th November, from Uganda on 11th November, from Nigeria on 15th November, from Czechoslovakia on 20th November, from Yugoslavia on 4th December, from Rumania on 15th December and from Bulgaria on 4th January, 1962. An Indian trade mission already left for Burma and another will leave for Pakistan on 26th November. An India-Hungary trade plan for 1962 will be negotiated in New Delhi, but will be signed in Budapest.

Visit of U.S. Business Men

More than 50 leading U.S. industrialists and bankers have arrived in New Delhi for a week's informal discussions with their Indian counterparts and with the officials of the Central Government. The discussions, which will last from 22nd October to 27th October, will centre on Indian economic development and the contribution which the United States and Europe can make to it. The members of the group represent a variety of industries, from transistors and foodstuffs to roller

bearings, generators, steel and motor-vehicles. A spokesman for the group said that private foreign investors are becoming increasingly interested in India for many reasons, including India's potentially vast market, her stable, democratic government, her desire for increasingly better climate for such investment, the dedication of the government officials to economic development and their growing understanding of the practical problems of business, India's economic stability and the active stock market, the profit record of private industry in India and the freedom to remit profits permitted by the Central Government, and the prospects for long-term profitability assured by India's continued drive for overall economic growth.

Raw Materials for Cement

The Indian Government has set up a nine-member panel under the chairmanship of Dr. G. P. Kane, Senior Industrial Adviser in the Ministry of Commerce and Industry, to examine the various matters relating to the cement industry and make suitable recommendations. The panel will consider the availability of limestone and other calcareous minerals suitable for making cement, the possible use of alternate raw materials, the availability of suitable quantities and quality of fuels like coal and furnace oil, requirements of spares, balancing equipment and capital machinery for industry, diversification of production to manufacture special cement like slag cement, pozzolan cement, low heat and high early strength cements, etcetera, the bulk transport of cement, training programme for the industry and research and development. Besides Dr. Kane, the members of the panel will be: Mr. K. N. Sinha of the State Trading Corporation of India; Dr. R. R. Hattiangadi, technical director, Associated Cement Companies Ltd., Bombay; Mr. V. Ramakrishna, chairman, Messrs K. C. P. Ltd., Madras; Mr. T. S. Narayanaswami, director, India Cements Ltd., Madras; Mr. N. C. Roy, director, Messrs Orissa Cement Ltd., Calcutta; Mr. V. Podder, works director, Messrs Rohtas Industries Ltd., Dalmianagar; Mr. G. R. Tongaonkar, deputy managing director, A.C.C. Vickers-Babcock Ltd., Bombay, and Dr. S. P. Verma, development officer, Ministry of Commerce and Industry, New Delhi.

Equipment for Rourkela

Work under the third plan expansion programme for the Rourkela steel works has already started and international tenders for the following installations and equipment have been issued: five stand tandem cold rolling mills; twin stand tandem skin pass mill; continuous electrolytic degreasing line; coil annealing furnace; continuous strip annealing line; ingot buggy No. 2; sub-floor coiler No. 3; soaking pit plant; 1,040 m.m. (40in.) electrolytic tinning line; and power distribution equipment. All these comprise the major portion of the supply of machinery and equipment for Rourkela's expansion from 1 million tons to 1.8 million tons capacity annually.

New Metallurgical Coal Deposit

Rich deposits of metallurgical coal in the vicinity of North Karanpura coalfields in Bihar have recently been discovered by the Indian Bureau of Mines. Exposed in a nala cutting in Chano-Rikba area, the seams are of 10 feet to 12 feet thickness. The continuity of the seams has been proved to extend over a large area in the Chano-Rikba and contiguous areas. More than 50 million tons of such strongly coking coal with a high ash content have already been proved. The ash content, however, is likely to be less in depth.

Welfare of Village Community

A guarantee of employment in a programme of public works, widespread rural industrialisation and extensive educational assistance, are the principal recommendations made in the report of the study group on the welfare of the weaker sections of the village community. The group is emphatic that the uplift, welfare and emancipation of the weaker sections cannot be accomplished without "a comprehensive non-violent social revolution encompassing all facets of Indian society" and "the destruction, root and branch, of the caste system." The weaker sections are defined in the report as those families whose annual income is less than Rs. 1,000. They constitute 80 percent of the rural households. Next priority assistance is recommended to those families whose income is less than Rs. 500 a year and which form 50 percent of the rural households. Families whose income is less than Rs. 250 a year are classified as "destitute". It has been urged that they should be taken care of in the first instance by suitable welfare measures which should be the responsibility of the *panchayati raj* institutions. No "means test" is applied to the scheduled castes and scheduled tribes, the entire community of which has been regarded as forming part of the weaker sections and deserving assistance. Analysing the causes of economic backwardness of the weaker sections, the report concludes that "the basic cause is the social order resulting from the caste system, the feudal type of economic structure and the continued unbalance between population and resources." The study group has, therefore, made a series of recommendations of a far-reaching character relating to agricultural development, guaranteed employment in public works, rural industrialisation, co-operative land use, extensive educational assistance and full use of community development funds for the weaker sections.

Petty holdings which are far greater in number are responsible for keeping both agriculture and the majority of cultivators in "a chronically depressed condition". This socio-economic disease

requires a radical remedy, which, according to the study group, lies in village ownership and management of land. The report says that this is "the only complete answer to the problems of agriculture at once from the point of view of social justice and development of agriculture and preparing favourable conditions for rural industrialisation." It has been urged that encouragement and promotion of common ownership of land should be taken up as a prominent part of the educative and reorientation work of the community development organisation and its ancillary bodies.

Developing Heavy Electrical Industries

The Development Council for Heavy Electrical Industries recently devoted considerable time in studying various problems faced by the industries, such as the supply of raw materials, licensing of capital goods, transport problems, development of ancillary industries, etcetera. The Council noted that the difficulties mostly experienced by the industries relate to foreign exchange for the import of necessary capital goods, replacement plant and machinery, etcetera. Shortages of some of the essential raw materials, it was noted, continue to handicap the electrical industries. On the availability of steel, etcetera, it has been noted that the supply position is still not satisfactory and that certain special sections are not available freely. In so far as electric sheet steel and high tensile galvanised steel wire are concerned, the supply position continues to be bad, and even though licences are granted somewhat freely for the import of these, as most of these are to be imported under the U.S. Development Loan Fund grants, where prices are very high, compared with the prices quoted by other sources, it is feared that the cost of the finished products might increase substantially. A recommendation has been made that where possible, licences may be granted for the import of these items from sources other than the D.I.F. On the supply position of non-ferrous sections and extruded sections, it has been expressed that indigenous capacity not being adequate, licences should be granted for the import of such of those sections which are not available indigenously. For other raw materials such as ball bearings, insulating materials, small and semi-finished components, etcetera, it has been recommended by the Council that these basic ancillary industries should develop quickly in order that the electrical industries may become self-sufficient in these and that imports may be substantially reduced. In so far as ball bearings are concerned, the Council was of the opinion that early efforts should be made to establish more capacity. It has been felt that there is not enough tool-making capacity in

the country and in this connection, the Council has made the following suggestions:

(a) An adequate supply of tool steel in a large quantity should be made available and steps should be taken for proper distribution at reasonable prices.

(b) It is necessary to train a very large number of tool makers. A special and intensive course in tool-making at the technical high school level is required to be encouraged with adequate facilities and scholarships.

(c) The present tool-making establishments should be encouraged to expand and further steps should be taken to encourage the formation of new tool making shops.

(d) The import of equipment required for tool-making should be liberalised. Special machine tools, heat treatment plants, testing equipment, etcetera, should be licensed freely.

(e) Various training schemes in different countries abroad are formulated for the training of Indian engineers. In all such schemes, special arrangements should be made for training engineers in tool-making techniques.

Production and Requirement of Machine Tools

The Development Council for the Machine Tool Industry feels that it might not be possible for the country to be self-sufficient in machine tools even towards the end of third five year plan period and that substantial imports may have to be allowed. It has, therefore, recommended that a target of Rs. 35 crores production may be indicated for this industry by 1965-66. The Council also has submitted a detailed memorandum to the Planning Commission concerning the foreign exchange requirements to achieve the above production target. The Council recently discussed the question of export of machine tools. All the members agreed that the export of machine tools is absolutely necessary and more so in view of the foreign exchange shortage. On behalf of the Government, it has been pointed out that it cannot directly engage itself in the export trade. Every incentive, however, will be given and steps taken to remove the difficulties faced by the units in promoting the export trade. It will be thus seen that on the one side the Council wants foreign exchange to expand the industry on the plea that it may not be possible to become self-sufficient in machine tools even in 1966, and on the other side, it pledges itself to launch an export drive in machine tools.

Increasing Basic Chemicals Output

With progressive industrial development, it should be the aim to produce the basic chemicals

at competitive rates comparable to the international prices; in order to achieve this, the minimum economic size of the plant for the principal basic chemical, namely, sulphuric acid, may preferably be set at 50 tons a day capacity. Licence for new units to be installed in the third plan may be for not less than the unit size of 50 tons a day, except under special circumstances. The estimated requirements of sulphuric acid for the various consuming industries (in thousands of tons) are as follows:

Name of the item	Estimated sulphuric acid requirements in 1960-61	Estimated requirements of sulphuric acid in 1965-66
Superphosphate /ammonium phosphate (in terms of P ₂ O ₅)	180	580
Ammonium sulphate (acid process)	115	147
Pickling of iron and finished steel	47	83
Rayon yarn and staple fibre	93	190
Aluminium sulphate	20	40
Petroleum refining	8	20
Titanium dioxide	9	27
Bichromates	3.2	6.5
Phosphoric Acid	2.0	8.0
Alum	2.5	7.5
Hydrochloric acid/ sodium sulphate	2.0	4.0
Nitric Acid	2.1	4.2
Magnesium sulphate	1.7	2.0
Copper sulphate and ferrous sulphate	2.0	4.0
Miscellaneous (tanning dye-stuffs and intermediates, dyeing, chromic acid, drying of chlorine, industrial explosives)	110.0	120.0
Total	597.5	1243.2
or, say,	600.0	1250.0

In order to achieve a production of 1.25 million tons of acid, a capacity of 1.5 million tons has been recommended. The additional capacity may be reached by:

(a) the expansion of existing units; and	225,000 tons
(b) setting up new units (mostly with capacity of 50 tons of acid a day)	495,000 tons
Total	720,000 tons

The investment requirements are likely to be as follows:

	Total investment	(Rs. in million) Machinery component	Foreign exchange component
30 new units (each of 50 tons a day)	54.4	39.6	19.8
Expansions	18.0	13.5	6.8
Total	72.4	53.1	26.6

The current consumption of sulphur is of the order of 200,000 tons, and this is estimated to exceed 500,000 tons by 1965-66. If the sulphuric acid production target is raised to 1.65 million tons, the requirements of sulphur will be stepped up to 677,500 tons.

Indian Wool Exports

The exports of home-grown wool from India fell appreciably in the first quarter of 1961, when they amounted to 5.2 million lbs actual weight; this was 34 percent lower than in the previous quarter and 44 percent down on a year earlier. Compared with October-December shipments to Russia, the decline from 2 million lbs to nil and those to the U.K. and the Common Market fell by 12 percent and 37 percent, respectively, to 2.6 million lbs and 700,000 lbs. By contrast, exports to the United States rose by 72 percent between the two latest quarters to 1.7 million lbs.

EXPORTS OF RAW WOOL FROM INDIA IN 1,000 LBS ACTUAL WEIGHT						
	1959 Fourth quarter	1960 First quarter	1960 Second quarter	1960 Third quarter	1960 Fourth quarter	1961 First quarter
Belgium	1,235	585	105	82	201	263
France	760	537	305	206	648	274
West Germany	1,444	143	272	135	121	41
Netherlands	128	24	120	150	116	120
Italy	47	49	47	1	17	—
Total Common Market	3,614	1,338	849	574	1,103	698
Russia	3,718	1,606	3,099	841	2,000	—
U.S.A.	4,339	3,652	2,780	1,884	2,935	2,574
U.S.A. A.	1,696	2,244	1,704	711	1,018	1,746
Other countries	403	356	542	555	760	163
Total	13,170	8,974	4,565	7,816	5,183	—
of which:						
Greasy	12,628	8,716	8,336	4,240	7,193	4,780
Scoured	1,144	479	638	325	623	397

Rise in Imports

Seaborne imports of raw wool rose almost five-fold between the final quarter of 1960 and the first three months of this year to 2 million lbs which was also 43 percent up on the first quarter of 1960; marked increases occurred in receipts from all sources. Tops imports during the first quarter of 1961 at 3.4 million lbs were 3 percent greater than a quarter earlier although 5 percent down on the comparable quarter of 1960. Compared with October-December, the main reduction occurred in receipts from Australia which fell by 49 percent to 800,000 lbs and offset increases from Japan and Britain.

London

MR. LLOYD TO ANNOUNCE DECISION TO SET UP NEW PLANNING BODY

EMPLOYERS WORRIED OVER COERCION FROM U.K. TREASURY

(FROM OUR LONDON CORRESPONDENT)

SWIFT action is likely to follow the second meeting between the U.K. Chancellor of the Exchequer and the employers' organisations on Mr. Selwyn Lloyd's "planning" proposals. The U.K. Treasury stated after the meeting that Mr. Lloyd would have further discussions with the Trades Union Congress this week. It is likely that the Chancellor will then call a joint meeting of employers and unions—provided the unions agree to take part—at which he will announce his decision to set up a National Development Council and announce the name of an independent director appointed to take charge of a permanent "planning office."

The recent meeting arose out of the letter which the Chancellor sent to all the organisations concerned on 23rd September. In this, he set out his ideas about "a new approach to economic planning on a national scale." He suggested a "two-tier system"—a council under the chairmanship of the Chancellor and a full-time staff drawn partly from the Civil Service and partly from outside, with an independent director. This letter caused great uneasiness in industrial quarters. It was feared that the planning staff, as defined in the U.K. Chancellor's letter might become merely a working party for the council and that any plans, targets, or directives might then come down to industry with the authority of the Government. This is certainly not the kind of planning the management organisations have been expecting. They asked for a further meeting with Mr. Lloyd as they wanted to stress again that, in their view, a planning body which was to assess future national growth and to indicate targets would have to have a high degree of independence from the Government machinery. No doubt they urged this view when they saw him. They feel strongly that everything depends on the man selected to take charge of the planning staff. Both the director and the "office" should be clearly seen to be reasonably independent of the U.K. Treasury.

This is important because industrial opinion, while strongly in favour of the experiment in co-ordinating the plans of individual industries with an independent estimate of potential national growth, would refuse to go along with any scheme that might lead to compulsion or direction from the centre. Another reason why so much emphasis is being laid on independence is that industry fears the risk of placing into the hands of a possible future Labour Government a ready-made instrument of "coercive planning." The representatives of the employers' organisations found that the U.K. Chancellor shared their basic view on these matters. That is what Mr. Cyril Harrison, president of the Federation of British Industries, meant when he said, on leaving the Treasury: "We are in tune with the U.K. Chancellor on this."

Business Outlook Less Hopeful

Industry is becoming less hopeful about the business outlook as the U.K. Chancellor's squeeze tightens. This is the upshot of the latest F. B. I. enquiry into industrial trends. Returns made recently by 686 firms show that the industrial output is still rising slightly and may go on rising for some time. But the inflow of new orders has slowed down and order-books have shortened. Fifty-one percent of the firms said that they are working below capacity. The shortage of labour has not increased since June, when the previous survey was made. Plans for capital expenditure show a clear downward trend.

By contrast, industrial views on export prospects are fairly confident. About one quarter of the firms have reported increasing export orders level. The preliminary views on export trade in the next few months indicate that only a few firms still expect foreign orders to fall off. But prices are still an important obstacle to expanding export trade. The F.B.I. comments that the continuing growth of output reflects the fulfilment of orders booked earlier. For industry in general, the main brake on production is now the lack of orders rather than the shortage of skilled labour as it was in June. The rising industrial costs are again reported by many, and this has brought more pressure on profit margins.

Details of Paris Talks

The Lord Privy Seal, Mr. Heath, met the Commonwealth High Commissioners in London last week to explain the proceedings at his meeting with the Council of Ministers of the European Common Market in Paris. While in Paris, he saw High Commissioners Ambassadors, but later gave the talks. He explained that, in view of the great importance of maintaining the confidential character of the negotiations, the actual texts of the Paris

million. Figures issued by the U.K. Treasury in a balance of payments White Paper show that comparison on a longer term basis also shows an improving trend. In the first half of 1960, the payments deficit was £91 million and in the second half of last year £245 million. Most of the improvement has been in Britain's visible trade. The import bill has stopped rising and the export picture has also begun to look a little brighter.

Investment Abroad Rises

The United Kingdom's investment abroad is now known to have risen last year at a faster rate than had been thought. Figures published in the *Board of Trade Journal* show that direct investment overseas (other than in oil and insurance) amounted to £249 million, compared with an earlier estimate of £185 million. This was 27 percent more than in the year before and nearly 75 percent above the 1958 level. The volume of investment—particularly outside the sterling area—is known to have continued to rise this year. On 25th July, the U.K. Chancellor had announced stricter exchange control tests and measures to increase the proportion of earnings brought home.

The United Kingdom's investment in other sterling countries accounted for 64 percent of the total sum placed abroad last year, and the rate of increase seems to have been greater in these countries than in western Europe. Among Commonwealth nations, there was a marked increase in British investment in Australia, while within Europe, increasing amounts went to the European Common Market area. Chiefly because of a falling-off in the profits made and retained by enterprises in Canada, British investment in North America as a whole last year was only 17 percent of the total invested abroad, against 26 percent in 1959.

New overseas investment in the United Kingdom last year was £141 million—little changed from the previous year. U.S. interests accounted for 65 percent of this, compared with 68 percent in 1959. Two-thirds of the 1960 earnings from British industry's overseas investment came from sterling countries, among which Australia contributed the most and South Africa only a little less. American ventures earned more than three-quarters of last year's total earnings here by overseas companies.

Steel Production Falls

Steel production in September was 17 percent lower than in the same period of last year. The industry was operating during the month at about 77 percent of its production capacity. The industry, although it is finding it more difficult to export, is keeping overseas shipments up at a rate higher than in 1960. Imports of steel are continuing to fall as contracts run out and as a result of this scissors movement, net exports of steel are better than ever before. In January to August, net exports were 223,000 tons, more than in the whole of 1959, the previous best year. In a comment on the motor industry's demand for steel (the largest single demand the industry has to meet), the U.K. Iron and Steel Board says that although it predicted motor-car production of about 1.56 million in 1965 (an estimate close to the National Institute's 1.6 million), it assessed the future steel capacity needs on a substantially higher figure for car production. "The Board's calculations," it is stated, "were carried out over a year ago, before the impact of the present recession in the motor-car industry and before consideration of the entry of the United Kingdom into the Common Market had reached its present active stage."

Payments Deficit

In the first half of the current year, Britain incurred a deficit of £83 million in her current transactions with the rest of the world. But of this total, £68 million arose in the first quarter, the deficit in the second quarter falling to only £15

Capital Authorised ... Rs. 5,50,00,000

Where on earth is

Mogadiscio?

Frankly, till somebody in Mogadiscio ordered BINNY's cloth, we too didn't know that it was the capital of Somalia in East Africa.

Today BINNY's cloth is imported by 50 countries—superb fabrics made from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved.

Rigid Quality Control* ensures maximum durability and perfect finish.

Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

BINNY's manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:
Shirts . . . Khaki Drills . . . Bleached & Dyed Drills . . . Towels . . . Anticrease Suits . . . Tussorees . . . Union Fabrics . . . Silk Sarees etc. etc.

BINNY—a great name in textiles

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited
Subsidiaries of Binny & Co. (Madras) Ltd.

Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

MINIMUM WAGES AND CAPACITY TO PAY

By Mary Sur

For removing heavy scale from large metal surfaces, such as rust, old paint, and incrustations giving the metal renewed surface for painting, etc. These cup brushes are used on high speed flexible shafts electric or pneumatic tools and can be driven at higher speeds being of sturdier construction than the lighter crimped wire types. A good friend for Foundry men.

India Brushware

72, CANNING STREET,
CALCUTTA-1.
Phone : 34-1985

IN 1958 in the case of the Crown Aluminium Works* the Supreme Court declared that "no industry has a right to exist unless it is able to pay its workmen at least a bare minimum wage." This is one of the fundamental tenets of the "social justice" theory which has quite ousted the so-called "law of master and servant" in the last decade. But it is still being challenged in the courts. The Supreme Court had occasion to repeat its dictum in a recent case** which arose over the notification of minimum wages in the tile industry in Kerala, and it went on to declare that, in fixing minimum wage rates for an industry as contemplated by the Minimum Wages Act, "the hardship caused to individual employers or their inability to meet the burden has no relevance. . . . What is being prescribed is minimum wage rates which a Welfare State assumes every employer must pay before he employs labour."

Six tile factories had filed a case under Article 32 of the Constitution against the Government of Kerala, challenging both the validity of the Minimum Wages Act and of the Government notification, and alleging that the minimum wages fixed were much above the proper level of minimum wages, and that the notification was invalidated because the employers' capacity to pay had not been taken into account. They illustrated their case by citing the fact that 62 factories in

Trichur had closed down following the notification through inability to pay the new rates.

The case illustrates the confusions that can arise in discussions on minimum wages. The petitioners sought to draw a distinction between minimum wages fixed by industrial adjudication and the statutory minimum fixed under the Minimum Wages Act. It was argued that, whereas the "bare minimum" or "subsistence wage" could be fixed irrespective of the capacity of the employers to pay, the minimum wage under the Minimum Wages Act, which contemplates not merely ensuring the bare subsistence of the worker and his family, but also his efficiency as a worker, lies somewhere between the "bare subsistence" wage and the "fair wage", and could not be fixed without reference to the capacity of the industry to pay. The Supreme Court did not accept this distinction, remarking that it would be illogical to say that, whereas a minimum wage could be laid down by an industrial court without reference to an employer's capacity to pay, the same could not be fixed by statute. It rejected entirely the argument that in prescribing minimum wage rates under the Minimum Wages Act, the State Government should consider the capacity of the employers to bear the burden of the notified wage.

The Supreme Court then set itself to consider the wage structure notified by the Kerala Government for the tile industry and whether it was in fact above the level of the minimum wage properly so called, and came to the conclusion that it was not so, particularly as regional differences had been recognised by the introduction of five different regional grades.

Social Justice Theory

The Supreme Court, by declaring that capacity to pay does not come into the picture at all in the fixing of minimum wages, does seem to have given a rather extreme interpretation of the "social justice" theory. In fact capacity to pay is often argued before industrial courts, although it is admittedly only one of the factors that they take into consideration in adjudicating a minimum wage dispute. Even the Minimum Wages Act, although its object is to prevent the exploitation of labour in "sweated" or unorganised industries, provides for the setting up of an advisory committee to assist the State Government in fixing minimum wages, and such a committee usually represents both employers and employees in the particular industry. It did so in the Kerala case. The advisory committee not only had two employers on it, but it issued a questionnaire to all the tile factories in the State, considered their replies and personally visited a number of them. It can hardly, therefore, be said not to have taken account of the financial position of the industry. Indeed it was the advisory committee which recommended five regional grades and hoped that this would enable the backward areas, by improving their efficiency, to come up to the level of the more advanced areas. The committee was unanimous in its main recommendations, and the Government notification substantially followed the lines laid down by the committee.

An odd side issue arose in this case over the closure of the 62 tile factories in Trichur. These closures threatened unemployment to nearly 6,000 workmen, and the State Labour Minister felt bound to intervene. As a result, a compromise settlement was reached allowing for a lower minimum wage than that fixed by the notification. But this was a contravention of the Act, and the Labour Minister's action was ultra vires. If the Government felt that a settlement was necessary in respect of the Trichur factories, the Supreme Court observed, they should have withdrawn the notification in respect of that area, and in fairness should also reconsider the problem in respect of other areas and decide whether any modification in the notification is required.

The situation that arose in Kerala highlights the problem that is created when "social justice" has to draw a balance between exploitation and unemployment. Most people would subscribe to the general theory that no industry has a right to exist if it cannot pay at least a bare minimum wage to its employees, but where the practical application of this principle leads to closure and unemployment, the results are equally deplorable in the eyes of the Welfare State. If the employers themselves have to choose, there is no doubt trade unions would take. Whatever the Supreme Court may say, capacity to pay cannot be entirely ignored in practice, even at the lowest level.

It should be added that for awards of wages above the minimum the Supreme Court is equally definite that capacity to pay must be considered. In the appeal of Jaswant Sugar Mills Ltd., Meerut,† for instance, the Supreme Court set aside the award of an Industrial Court, declaring that "there can be no question that before any increase could be ordered by any industrial adjudicator the adjudicator had to be satisfied positively that the financial condition of the employer is such as will enable it to bear the additional burden imposed."

Peals Nos. 239 & 240 of 1958.

Jute

SPECULATIVE DEMAND LIFTS GUNNIES FOR EARLY DELIVERY

MILLS ACCELERATE FIBRE PURCHASES

THE numerous holidays during the past fortnight have affected business in the jute and gunny markets, and there have been no outstanding developments to record. As usual, some trading was done even during the Pujā closure, and a struggle developed between jute operators and the consumers of manufactured goods. The latter have been holding off in the hope of lower prices for jute goods, encouraged by the prospect of a large crop. On the other hand, cultivators and ryots have been led to believe that the consumption of raw jute will be at least equal to the crop output, so that if they delay sales, they will get higher prices. Since farmers and middlemen have secured a certain amount of relief from debt payments and have had a good rice crop, they have been able to sell their jute more slowly than usual. As a result, they have got better prices than expected considering the size of the crop. The consequence is that there is a firmness emanating from the mofussil which, combined with the sudden surge of foreign interest in jute goods, has made itself felt throughout the market. Jute sellers in Calcutta are afraid to "bear" the market or to discount the firmness of the mofussil, and this has had its effect on speculators in gunnies.

Mills have restricted their purchases for a long time, but they were very active over the Pujā holidays and bought at rates rather above those at which they indicated that they would enter the market. This was principally because in the goods market, foreign interest, combined with local shipper and speculative covering against previous commitments, forced up gunny prices. B Twills, for instance, showed a rise of nearly Rs. 10 in the near position since the break, but it was obvious that this was mainly due to speculative activity, as other constructions showed a smaller increase. The demand for B Twills did not justify such a spurt in prices. Raw jute naturally followed the rising trend, and this kept mills from being cheap sellers of manufactured goods. Although there is considerable keenness to secure orders, and mills have met the demand willingly, there has been no cutting of prices in order to force sales. There has not been so much interest in the forward positions, but quotations have improved in sympathy with the near deliveries. In the earlier part of the past fortnight, consacks also came in for attention. The necessary stimulus was provided by reports of favourable weather conditions in Australia, including good rains, which improved prospects of a large crop. The demand for October shipment was not fully satisfied, and at one stage October consacks stood at a premium of Rs. 10 over B Twills. This gap was considerably narrowed before the close, but the general undertone was very firm.

International Situation

The latest rise in the prices of manufactured goods makes one wonder whether it is justified in the circumstances. It is true that conditions outside the industry have had a psychological effect on speculators. One of the chief factors in the bullishness is the international situation. Nowadays no statesman makes a public pronouncement without referring to his country's desire for peace, but also the imperative need to be ready for war and to prepare for it. Such speeches have created a feeling in some quarters that a conflict is inevitable. Those who believe this are also quite sure that jute goods, being essential to modern warfare, will meet with greater demand. This is a cause outside the industry. Are there any grounds within the industry for optimism? One recalls that the development of the jute industry has not been steady. It has been marked by periods of prosperity, when the means of production expanded beyond immediate requirements, alternating with periods of depression until the increasing demand for jute goods created an outlet for the additional productive capacity of the mills. A difficult period has just ended when the industry was threatened by a jute crop failure, and it is now gradually recovering. It has been suggested that another period of expansion might now be starting without everybody recognising it.

The recent curtailment of production allowed Calcutta's stocks of jute goods to fall to dangerously low levels. The general recovery in world trade has increased the demand for jute goods. There is no evidence, however, that the low level of stocks in Calcutta is offset by increasing stocks abroad, for the stocks in the United States bear an even lower ratio to the monthly consumption than they have done for many years past. Even with the reported recovery of world trade, finding consumers for jute goods is still a problem with the growth of substitutes. But this is not the only problem. At present prices, very few fabrics show a reasonable manufacturing profit. It may be, of course, that the price of finished goods will advance further or that the price of raw jute will fall, but in either event someone will suffer. If goods rise, it will speed the turn to substitutes.

the industry in general, the current situation is thus fraught with difficulties, and although optimism exists, it is tempered with the knowledge that the unforeseen often happens, especially in the jute trade.

THE JUTE MARKETS

Manufactured Goods: Between 12th and 25th October, there were only six official working days. This did not prevent business being carried on during the holiday period, but it is generally believed that much of it was covering, either against previous sales, or in anticipation of foreign buyers entering the market. Both hessians and sacking were covered for shipment up to the end of the year, but mainly the ready position came in for interest and prices were well maintained. Good business was transacted in heavy goods and mills were able to place large quantities of Cees, B Twills and consacks. Hessians came in for less interest and only moderate business passed, but prices were maintained in sympathy with sacking. The market opened steady with B Twills at Rs. 136.50 for October shipment and 40in 100z. hessians at Rs. 56. At this stage, consacks were Rs. 10 higher than B Twills. During the day, prices moved up slowly, but with the approach of the holidays conditions eased, and both sections recorded losses. Over the holidays, heavy activity, both speculative and real goods, caused sacking prices to fluctuate by about Rs. 3. By the morning of 20th October, B Twills had risen to Rs. 139. In the absence of foreign interest in hessians, however, 11-porter fell back to Rs. 53.50. Speculative activity continued after the holidays. B Twills rose to Rs. 143 but the interest was confined to the near deliveries, as was proved by the fact that the premium over forward shipment rose to Rs. 14, against Rs. 10 at the beginning of the period.

Opening quotations on Wednesday morning were as follows:

	October	November	December	Jan.-March
40in. 71oz.	40.25	38.50	36.75	35.75
40in. 80z.	43.00	41.00	39.25	38.25
40in 100z.	54.50	51.00	48.75	47.50
B Twills	144.00	140.50	134.25	129.50
Heavy Cees				
(Plain)	144.00	141.50	135.25	129.50
A Twills	171.00	168.50	163.00	158.00
Liverpools	163.00	160.50	154.00	146.50
Consacks	146.00	145.50	136.50	132.50

Raw Jute: Mills showed only limited interest before the holidays, and nominal quotations were Rs. 33 to Rs. 33.50 for Assam Bottoms. Immediately the holidays commenced, however, mills became buyers, and over the next four days substantial business was conducted. This caused prices to firm up, and by the time the market opened, sellers were reserved and asking up to Re. 1 higher. Buyers lost interest at the higher rates, however, and prices gradually fell back to the opening levels. Imports upcountry naturally declined over the holidays. Arrivals in Cossipore were also small, and during the period from 12th to 24th October, a total of 650 wagons were reported.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills	Shipment
	Rs. a 100 kilos	Rs. a md.
Assam	89.75	33.50
Northern	89.75	33.50
Purnea Desal	85.75	32.00

I.J.M.A. PRODUCTION FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total production of jute goods for September as follows:

	Description	Quantity
1. Gunny Bags		
(a) Hessian	5,341 metric tons (5,257 tons)	
	1,53,54 thousand metres (1,67,9 lakh yds.)	
	98.1 lakh nos.	
(b) Sacking	35,108 metric tons (34,553 tons)	
	7,50,48 thousand metres (8,20,8 lakh yds.)	
	3,65.0 lakh nos.	
2. Gunny Cloth		
(a) Hessian	25,170 metric tons (24,772 tons)	
	8,55,90 thousand metres (9,36,0 lakh yds.)	
(b) Sacking	1,156 metric tons (1,138 tons)	
	22,07 thousand metres (24.1 lakh yds.)	
3. Other Manufactures	9,336 metric tons (9,189 tons)	
4. Total Production		
(All kinds)	76,111 metric tons (74,909 tons)	

	Summary					
	(000 metres and 00,000 yds.)			(000 metric tons and tons)		
	Sept. 1961	August 1961	Sept. 1960	Sept. 1961	Aug. 1961	Sept. 1960
Hessian	10,09.44 (11.64)	9,44.48 (10.33)	11,19.33 (12.24)	30.5 (30.0)	28.6 (28.1)	33.0 (32.5)
Sacking	7,72.56 (8.45)	7,43.76 (8.13)	10,28.79 (11.25)	36.3 (35.7)	34.9 (34.3)	48.7 (47.9)
Others				9.3 (9.2)	14.8 (14.6)	8.1 (8.0)
Grand total				76.1 (74.9)	78.3 (77.0)	90.8 (89.4)
Hours worked				181.0	187.0*	192.0

* Based on 42½ hours a week and does not take into account the hours lost by mills which worked lesser number of hours.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

THE FOREIGN JUTE MARKETS

FIRM TREND IN FIBRE AND GOODS

(FROM OUR DUNDEE CORRESPONDENT)

THE Pujā holidays have had little or no effect on the Calcutta goods market, and even the fact that the mills have started working 48 hours a week, has not created any weakness in prices. Time was when there used to be no news of the Indian markets over the Pujās, but this time there have been offers of goods quite freely each day. Pakistani shippers of raw jute have also plenty of offers forward at very firm prices from most shippers, but there has been an occasional seller willing to accept less than the general quotations. It is suspected that these parcels are held by speculators who wish to take their profit. As much as £2 to £3 a ton less is quoted for these lots. For example, Mill Lightnings can be bought at £133, Mill Hearts at £109 and Grade Hearts at £90, but many shippers are asking more. Indeed, business has been done at higher rates than

MHM-31/61

these. Grade Tossa-2/3 is offered at £140 a ton, four at £127 and Continental Tossa-2/3 from £112, which rates have ruled unchanged for the past few weeks. Only white jute has shown weakness, as have Cuttings. Since the last change in the local values of yarns and cloth, which was on 22nd September, Mill Lightnings have fallen £7 a ton, Mill Hearts £4 a ton, and Grade Hearts £6 a ton, but so far no change has been made. It used to be that a change was effected if prices for the fibre went up or down £5 a ton. Changes have been very frequent this year, and many complaints have been heard. Perhaps the authorities wish to give the trade a "break".

Offers of Calcutta goods have not been so freely made here, due to the holidays. Hessians have gone down a little at 79s 9d for 40in. 10oz. and 59s 3d for 7½oz., October, 74s 9d and 57s November, 71s 9d and 54s December and 70s 3d and 52s 9d January-March, with B Twills at 207s 9d, 202s, 197s 6d and 193s for the respective positions of shipment, i.e., Calcutta.

Good business has been done in jute yarns and there has also been further trade in jute cloth and bags at firm and unchanged rates. For 8 lbs C.H.W. cops 18.87d is still the price, and 20.02d for 8 lbs warp, with 40in. 10oz. hessians at 16.01d and 8oz. at 13.51d a yard, less the usual 3 percent discount for prompt cash.

THE PAKISTANI JUTE MARKETS

UNCERTAIN TREND IN FIBRE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE market conditions during the past fortnight may best be described as hesitant and uncertain. The upcountry markets, the baling centres as well as the pucca bale market have

throughout shown a quieter undertone giving every indication of prices to fall, but this has happened only in some transactions in the pucca bale market while Cuttings have steadied. There has been sporadic business at about the same levels in overseas markets, but more recently, there seem to be more sellers of white jute. Buyers have taken advantage of this to force down prices.

Loose jute arrivals throughout the country continue to be normal for this time of year, with the usual increase in the tossa quantity. The quality, however, both in white and tossa, has shown a marked deterioration. Yet the sellers are not inclined to reduce prices, so that in spite of a slackening of interests on the part of buyers and even perhaps a reduction in the prices paid for unsorted lots, the gradewise prices remain unchanged and in one large baling centre, the prices have, in fact, risen. The deterioration in quality is becoming more and more serious, and already sales of Export Hearts are being made at very low prices. Reports indicate that except for Export Firsts and probably Cuttings, Pakistani balers have a long position in white jute mainly in the lower grades, but also in Export Lightnings. A noticeable feature of the recent jat arrivals is first-class fibre for Export Lightnings spoiled by heavy spack. Such fibre cannot possibly be put in to an Export Heart. The tossa quality, although not so full of spack, has more than one would normally expect in this fibre. The small amount of Dacca Tossa-5 and Dundee Tossa 3 has now disappeared.

In the Narayanganj pucca bale market, activity has been restricted to purchases of Cuttings at an average price of Rs. 90 a bale for most positions, which is roughly the equivalent of £57 slightly better than the overseas market. After the Pujas, three of the larger operators came in to the market doing business of Export Lightnings and Export Hearts as a combined business at prices averaging slightly below the overseas market. One

of the mills also bought large quantities for forward delivery at discount prices.

The general feeling in the Narayanganj market is one of bullishness. It is thought that a 6.5-million to 7-million-bale crop will produce a supply of 500,000 bales less, which will barely suffice to meet a 3.6 million bales or so requirement of overseas buyers, and one of 2 million bales of the local mills. They take into account a purchase of at least 500,000 bales by India and some 300,000 bales to 400,000 bales smuggled, leaving little or no carryover. Although statistics can be made to prove almost anything, this season there is no doubt that these are corroborated by the strength of the primary seller. Furthermore, the low quality outturn of the crop will maintain steady prices in the yarn grades, even if the market as a whole goes down. If the quality continues to be worse, one may even begin to regard Export Lightnings as a rare grade. Against this has to be offset the fact that continental buyers have now got aloft and in stock sufficient jute to enable them to resist steadier price trends. They have got accustomed to buying hand-to-mouth and have managed to increase their purchases and stocks, if not to a normal level at least to a healthier level. Furthermore, there has been a very heavy buying of white jute by local balers, which suggests that at least some of the larger balers are running into a long position. The high prices of this season combined with the losses of the last season and credit restrictions may easily produce a financial squeeze, if balers are indeed long, especially when almost all balers are short of tossa and will have to concentrate on this grade rather than white.

The overseas buyers, contrary to expectations, purchased only 197,404 bales during the first half of the month. The U.S.A. was the largest buyer at 25,404 bales. India bought 23,566 bales, the U.K. 17,406 bales, South Africa 14,420 bales, Japan 14,125 bales, Belgium 12,650 bales, Spain 12,264 bales, France 11,850 bales, Egypt 11,760 bales and Poland 9,800 bales. West Germany bought only 3,000 bales. The fact that registrations are so small after reports of heavy buying, may be due to the fact that E.P.C. figures generally, except for the higher grades, are above the overseas market prices.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption was disappointing in September, being 12 million yards lower than a year ago and 3 million yards less than in August this year. Last month's bag cut-out was 46.5 million yards and piecegoods deliveries 17.1 million yards, compared with 57.8 million and 18.5 million yards, respectively, in 1960. U.S. burlap stocks at the end of last month declined by 14 million yards, being at the lowest level since October 1954. At 203 million yards, 96 million yards were spots and 107 million yards afloats. Appearing below are the two tables which include the September figures — (1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE DOCTRINE OF BUSINESS CONNECTION

By K. C. Khanna

THE way of taxpayers is hard and the legislature does not go out of its way to make it any easier, observed Lord Sumner. By enacting the provisions of Section 9(1) (i) of the Income Tax Act, 1961, the Indian Parliament has given practical proof of Lord Sumner's observations. To those who had earnestly hoped that the legislators would rise to the occasion and resolve forever the enigma of "business connection", the recommendations of the Select Committee appointed to consider the Income Tax Bill, 1961, and their subsequent adoption by the Lok Sabha, without further clarification and amendment, came as a sad disappointment. Mr. M. R. Masani's lone but valiant attempt to have the "vague and nebulous concept of business connection" substituted by something more precise and definite was thwarted by the Finance Minister's somewhat bumptious statement: "The term business connection is now well understood in all commercial circles."

Section 9(1) (i) of the Income Tax Act, 1961, corresponds to some of the notorious provisions of Section 42 of the 1922 Act, and lays down that all income accruing or arising, whether directly or indirectly, through or from any business connection in India, shall be deemed to accrue or arise in India. The effect of this provision is to relate some income to an Indian origin regardless of its actual origin, and thus to tax income which would not otherwise be taxable. The extent of taxability of the income is, however, limited to such portion as is reasonably attributable to operations carried out in India. Thus, if a non-resident manufactures goods abroad and sells them in India, his total profit is apportioned between the manufacturing profit and selling profit and only the latter is taxed. Similarly, where a non-resident sets up a purchasing agency in India, only that fraction of the profits which can be reasonably attributed to the operations of the purchasing agency is deemed to accrue or arise in India. However, the existence of a business connection in India does not, of itself, render liable to tax the income from all transactions entered into with India; it is only income derived "through or from" the business connection which is charged to tax. The business connection doctrine will not apply where the income of the non-resident is in no way connected with the activities of the resident as, for example, commission earned by a foreign purchasing agent of a resident in India.

Complaints of Harassment

The term "business connection" has, unfortunately, not been defined in either of the Income Tax Acts. According to the Tyagi Committee, "the absence of such definition has caused considerable uncertainty as to its precise meaning and application. There have, consequently, been several complaints of harassment as well as a good deal of litigation on this issue." (Page 61 of Report). The vexed question of what constitutes "business connection" has been considered by Indian courts from time to time in cases arising under the 1922 Act, and it would appear from the rulings given that a "business connection" in India arises if there is a business in India, there is a connection between a non-resident and that business, and the non-resident has earned some income through that connection. But there must be some continuity of the relationship between the non-resident and the Indian connection; the business connection doctrine is inapplicable where there is merely an isolated transaction or several discontinuous transactions. Decided cases on the meaning of "business connection" are merely illustrative and based on these decisions the following instances may be cited as established examples of what constitutes a "business connection":

- (a) maintenance in India of a branch office, or appointment of an agent in India, for the purchase of goods,
- (b) maintenance of a factory in India for processing raw materials for export,
- (c) establishment of an Indian subsidiary company to purchase products of the foreign parent and resell them in India,
- (d) maintenance of close financial association between a resident company and a non-resident company, and
- (e) the grant to a resident of a continuing licence to exploit in India an asset of a non-resident.

Although the Indian courts have suggested tests and criteria for the determination of "business connection", the legal concept still remains wide enough to embrace almost any combination of trading circumstances. Non-residents selling to India or buying from India through any kind of business connection, no matter how remote, are technically liable to Indian taxation. Their position is always uncertain. In its publication, *An Outline of Direct Taxes in India*, the Ministry of Finance admitted that the expression "business connection" was not conducive to any precise

legal connotation. The Central Board of Revenue has tried to clarify the position and restrict the scope of a "business connection" assessment by the issue, from time to time, of executive instructions some of which are summarised below:

Non-resident Exporter

(a) *Non-resident exporter selling goods from abroad to Indian importer:* No liability will arise on accrual basis to the non-resident on the profits made by him where the transactions of sale between the two parties are as principal to principal. A question may arise whether there is any liability of the non-resident on the basis of receipt of the sale proceeds including the profit in India. If the non-resident makes over the shipping documents and sends them for collection to the bankers in India, who present the sight or usance draft to the resident importer and deliver the documents to him against payment, no attempt should be made to assess the non-resident on the receipt basis. Even if the shipping documents are not discounted in the foreign country but are handed over in India against payment or acceptance, no assessment should be made on any portion of the profit if no other operation is carried on in India on behalf of the non-resident.

(b) *Non-resident company selling goods from abroad to its Indian subsidiary:* In such a case, if the transactions are actually on a principal-to-principal basis and are at arm's length, and the subsidiary company functions and carries on its business on its own instead of functioning as an agent of the parent company, the mere fact that the Indian company is a subsidiary of the non-resident company will not be a valid ground for assessing the non-resident.

Selling Goods to Indian Importers

(c) *Sale of goods to an Indian importer on instalment basis:* Where the transaction of sale and purchase is as between principal and principal and the exporter and the importer have no other business connection, the fact that the exporter allows the importer to pay for the same in instalments will not, by itself, render the exporter liable to tax on the ground that the income is deemed to arise to him in India. The Indian importer will not, in such a case, be treated as an agent of the exporter for the purpose of assessment.

(d) *Foreign agents of Indian exporters:* A foreign agent of an Indian exporter operates in his own country and no part of his income arises in India. His commission is usually remitted directly to him and is, therefore, not received by or on his behalf in India. Such an agent is not liable to Indian income tax on the commission.

(e) *Non-resident person purchasing goods in India:* Where a resident person acts in the normal course of his business in making purchases for non-residents, the resident commission agent should not normally be regarded as an agent of the non-resident except, where the non-resident sets up a purchasing agency in India, or the agent is closely connected with the non-resident.

Assessable Profit

(f) *Extent of the profit assessable:* In a case where a commission agent in India obtains orders for a non-resident and the sales are made directly by the non-resident to the resident customers, the profit deemed to accrue or arise to the non-resident will be taken to be the difference (excess) of the actual sale proceeds from the Indian transactions and the amount which would have been realised if the goods had been sold directly without the mediation of the Indian agent subject to a deduction for the expenses incurred for the sales operations in India, for example, commission paid to the agent. If the amount of commission paid is substantial, the amount of net profit attributable to the operations in India may conceivably be reduced to even nil. Even where an overriding commission is paid on all sales, there will be no assessment for direct sales provided the agent does not perform any services for those direct sales and such sales are effected on a principal-to-principal basis, with the contracts of the sale being made outside India. The above instructions do constitute an improvement on the position as established by law, but the fact remains that these instructions lack the authority of law; chronic uncertainties about liability to taxation, therefore, still persist. Would a non-resident be assured of his liability under the Indian taxation statutes merely because of the existence of executive instructions? What guarantee is there that Indian revenue authorities will never have recourse to court decisions and enforce rigidly the narrow legal concept of "business connection"? As stated by Mr. Masani in his minute of dissent, at a time when India needs to boost her exports and is equally keen to import capital goods and invite foreign collaboration, it is essential that appropriate amendment is made in the law which will restrict the non-resident's liability within reasonable limits.

Profit Outside India

The Taxation Enquiry Commission recommended that a suitable provision should be inserted

in the law itself stating that profits from transactions on a principal-to-principal basis should not be deemed to accrue in India (Report—paragraph 32, Page 24, Vol. II). The Tyagi Committee recommended that the Government should consider the feasibility of adding an explanation to Section 42(1) of the 1922 Act (corresponding to Section 9(1) (i) of the 1961 Act) so as to incorporate the spirit of the various circulars and instructions issued by the Central Board of Revenue concerning the term "business connection". It is true that an explanation has been added to Section 9(1) (i) of the Income Tax Act, 1961, but to what purpose? The said explanation is an unimaginative imitation of the law of a highly developed country and is directly opposed to the recommendation of the Taxation Enquiry Commission and the Tyagi Committee. Both the Commission and the Committee had recommended that, having regard to the changed economic conditions in India and the necessity of developing her export trade, it should be laid down in the Act that when goods are purchased in the country, whether through a regular agency or otherwise, and are not subjected to any manufacturing or other process before export, no profit should be attributed to such purchasing operations. (Page 34 Vol. II, The Taxation Enquiry Commission's Report). But the explanation referred to above provides quite the contrary! It adds a proviso to clause (b) stating that if the non-resident has an office or agency in India, income from purchasing operations shall be deemed to accrue or arise in India. Why appoint high-powered commissions and expert committees if their considered views have to be ignored and brushed aside without any rhyme or reason? Why invite representations and memoranda if these are not to be heeded to? It is obvious that the said proviso is ill-advised, ill-conceived and ill-suited to the economic conditions of the country and should, therefore, be deleted.

Executive Instructions

It may be argued that the incorporation of the executive instructions summarised above in the form of an explanation to the relevant section will constitute an unwieldy or cumbersome piece of legislation. If so, would it not be feasible to add a sixth schedule to the 1961 Act incorporating therein the instructions issued by the Central Board of Revenue? This will be in conformity with the recommendations of the Taxation Enquiry Commission as well as those of the Tyagi Committee, as also in accordance with the numerous representations made to the Ministry of Finance by trading bodies and individuals both within and outside the country. The existence of authentic clarification in the body of the statute itself will allay the fears, howsoever unfounded, of non-residents wishing to trade or collaborate in India and will go a long way in meeting the demand for a clearer tax policy voiced by foreign business. It is regrettable that the Select Committee did not recommend the inclusion of the executive instructions in the body of the Act; perhaps the promptness, for which it was complimented by the Finance Minister, stood in its way. Lord Herschell is said to have remarked that the law would be imperfect even if it were made by a committee of archangels; it would therefore, be too much to expect that the imperfections of law would be removed by a select committee "rushing in where a committee of archangels would fear to tread". Improvements in law must, however, continue to be made and one can only hope that, at the time of the presentation of the next Finance Act, suitable amendments will be moved to add a sixth schedule to the Income Tax Act, 1961, incorporating in it the executive instructions outlined earlier in this article.

Calcutta Markets

TRAMP RATES RISE IN FREIGHT MARKETS

CHARTERING in the freight markets recently has been extremely slow, but tramp freights stand at appreciably higher levels than those ruling a year ago. The feature from the Gulf was the fixture of a 30,000-ton tanker to the Continent for eight consecutive voyages at a flat rate of \$(U.S.) 4. This covers 250,000 tons of grain to be shipped in one vessel. Better rates were noted in the Australian wheat trade. The Chinese remained somewhat inoperative but the Russians are keenly seeking vessels on both a time charter and a voyage basis. A fixture for bagged rice from Burma to Ceylon, it is reported, has been concluded at 42s 6d f.i.o. and stowed, and tonnage is required for the movement of up to 40,000 tons of bagged rice one or two ports Burma to one or two ports Ceylon. A Liberty size vessel has accepted 53s f.i.o. and trimmed for the movement of 6,000 tons 10 percent coals Calcutta-Japan. Some 9,500 tons of 10 percent iron ore has been fixed Bombay-Rotterdam at 44s f.i.o. and trimmed. Berthing position in Madras has improved, and at present, foodgrain vessels for lightening are unlikely to wait more than two to three days. Liner vessels are obtaining berths after waiting one or two days only. The first foodgrains vessel at Haldia anchorage is expected to arrive on or about 10th November. Draft in the river Hooghly is still causing anxiety to shipping interests.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 17th October and 23rd October, 1961)

Cowhides: Wet salted (slaughtered) 13,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 29.

Goatskins: Wet salted (Patna, Daissee, Kustia) 35,700 pcs. on the basis of Rs. 240 to Rs. 260, Rs. 300 to Rs. 325 and Rs. 430 to Rs. 450; Wet salted (he-killed) on the basis of Rs. 4.37 and (she-killed) on the basis of Rs. 4.12 a piece; Assam-Dinajpur-Murshidabad 6,100 pcs. on the basis of Rs. 250 to Rs. 280, Rs. 280 to Rs. 300 and Rs. 330 to Rs. 350; Purneah-Kissenganj 17,700 pcs. on the basis of Rs. 290 to Rs. 315 and Rs. 330; Patna 2,000 pcs. on the basis of Rs. 250 to Rs. 260; Malda (heavy) 5,500 pcs. on the basis of Rs. 650 to Rs. 680.

Bazaar Stocks

(23rd October, 1961)

Cowhides: Wet salted 92,800 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 23,000 pcs.; Assam-Dinajpur 65,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 151,000 pcs.

SHELLAC UNCHANGED

During the week ended 20th October, the market was unchanged. The range of quotations was as follows:

Shellac and Buttolac hand-made	Rupees a package of 74.40 kilos	Buyers	Sellers
Superior Kusmi			
Buttolac	187.33	192	
Light Pure Buttolac	177.33, 175.50	182	
Pure I Buttolac	162.67, 160.50	166.67	
Special Kusmi Lemon Shellac			
Special Kusmi Lemon Shellac	188.67, 186.50	190.50, 194	
Lemon I Shellac	177.33, 175.50	179, 182	
Lemon II Shellac	161.50, 162	165.50, 167.33	
Superfine Shellac	151.50	153.50, 157.33	
Standard I Shellac	142.50, 142	146, 145.50, 146	
Pure TN Shellac	137.50, 137	141.50, 141, 142	
Pure ITN Shellac 3%	121, 121.50	125, 126.67	
Pure ITN Shellac 4%	105	109, 110.67	
Seedlac	96, 95.50	99, 98.67	
Golden Kusmi	149, 154	154.67	
Kusmi I	135, 134.67	140.67	
Golden Bysack	125, 124.67	130.67	
Manbhumi Fine Bysack	129.33, 130	133.33, 132.50	
Fine Bysack	115.33, 114	120, 118.50	
Genuine Bysack	106.67, 106	111.50, 110.50	
Grade I Class A	98.67, 98	101.50, 101	
Grade II Class B	144	145.50, 145	
Grade II Class A	125.33, 124	127, 126.67	
Grade II Class B	127	130	
Grade II Class B	108	109.50	

Shipments during October until the 11th were 9,491 packages.

BOOKS RECEIVED

Company Administration under the New Company Law as Amended by Companies (Amendment) Act, 1960. By Tanubhai D. Desai and Indulal H. Shah. (Published by A. S. Pandya for N. M. Tripathi Private Ltd, Princess Street, Bombay 2. Price Rs. 6, pages 105.)

Survey of Engineering Industry in India (1958-59). (Published by V. S. Sarma, Research Officer, Engineering Association of India, India Exchange, Calcutta 1. Price Rs. 10, pages 160.)

Provisions Relating to Balance-sheet and Profit and Loss Account under the Companies Act. By M. C. Bhandari. (Published by the Association of the Company Secretaries and Executives, 134/1 Mahatma Gandhi Road, Calcutta 7. Price Rs. 2, pages 20 + 26.)

ADVERSE EFFECTS OF THE COFFEE SALES POLICY

NO INCENTIVES FOR QUALITY PRODUCTION

(FROM OUR SOUTH INDIAN CORRESPONDENT)

PLANTING opinion has been for a minimum of controls in the marketing of coffee in India. The present regulated system was introduced when coffee production in India was barely sufficient to meet the home demand. Since then, the output has increased from 20,000 tons to 67,000 tons, while the domestic market has failed to show any appreciable growth. The country is now faced with the problem of finding out a market abroad for well over 30,000 tons, and this exportable surplus is sure to expand almost every year. But there is no well planned export drive. The return to the grower has progressively fallen to a figure well below the cost of production as estimated by the Coffee Board. In short, the existence of the coffee industry itself is in jeopardy and unless remedial measures are taken immediately, it will be ruined. A reorientation of the marketing policy is essential under the changed circumstances.

It is argued by leading planters that the running of the coffee industry should be done strictly on commercial lines. At present under the pool system of marketing, a grower's coffee loses its identity and becomes merged in a common bulk which is sold at approximately flat rates for each particular grade, and the grower gets very little premium for quality production and at the same time very little discount for poor preparation. Consequently, the best is not always obtained from the producer of what can admittedly be very fine coffees, nor does the consumer receive coffees in a wide price range so that he can exercise his choice as to the qualities and price he prefers. Therefore, Mr. R. Radcliffe, chairman of the Mysore State Planters Association, recommends that the return to the grower should be based more on the market performance of his coffee, coupled with a strict classification to certain recognised standards, and that a greater attempt should be made to sell coffees on an individual basis. This was possible in the past and just because bulking is easier and dictation to the domestic market is possible by reason of the Coffee Board's monopoly in the field of marketing, it should not mean that improvements cannot or should not be made at once. Mr. Radcliffe said while addressing the annual meeting of his Association recently. In his opinion, coffee produced must be sold under the same rules that apply to all other commercial articles. To aid better sales and to introduce well-known commercial forces, a system of open auctions should be introduced for the sale of coffee on both the export and domestic markets. At these sales, individual coffees should, as far as possible, be exposed and sold on their own merits and a return based on this sale price be made to the producer in a manner which will reflect the care he has taken in production and processing, he suggested.

The Present System

This does not mean that the present regulated co-operative system of marketing should be done away with. Mr. Radcliffe admits that the regulated system is essential for the well-being of the industry and there is no doubt that such regulation has assisted the growth of the Indian coffee industry and put it on a far sounder footing than it was before 1940. "But regulation does not mean protection carried to undesirable limits. It is a fact that if protection and support of an industry is carried too far, then that industry will assuredly suffer and become weak and unable to cope with the ordinary stress and strains of commercial life," he added. There are signs of this in the coffee industry today, for far too often the grower is heard to say that he wants a guaranteed return, and types he requires at fixed or decreased prices and the dealer that the coffee must be sold to him near his area of operations in the types and quantities he demands. The producer is not always ready enough to tackle his own difficult economic problem of reducing costs and neither is the dealer prepared to expand his trade and seek from farther afield the coffees of the quality and types he requires. The consumer is not willing to accept fluctuations in price or a shortage of particular grade at any time of the year whatever the reasons. Mr. Radcliffe says that these "fundamental weaknesses" must be removed and can be quite easily modified by a system of sales and price-return to the grower.

Under the present system, huge quantities of coffee are stockpiled by the Coffee Board, and the whole responsibility of storing this coffee is on its shoulders. There are approximately 30,000 tons of coffee in stock today and within two months, the next harvest begins. When the total consumption in India is approximately 30,000 tons to 32,000 tons a year, this figure is staggering. Coffee is a perishable article and due to the geographical situation of nearly all the curing works of the industry, long storage of this coffee is undesirable by them if quality is to be maintained. Mr. Radcliffe wonders why the trade should not be asked to share some of the burden of storage, as it does with other articles it sells. When production

reaches 80,000 tons, a target aimed in the national plan, then it is quite possible that the storage in October under the present system could reach a figure of 40,000 tons or more.

Payment to Producers

By the present system of sales, the producer is not paid fully for his crop until about 20 months after he commenced his harvest, and he is thereby put to considerable financial difficulties if his crop has been a short one. According to Mr. Radcliffe, to enable such a payment this year a sum of Rs. 10 crores was borrowed by the Coffee Board on which interest has to be paid. Even then, only approximately 60 percent of the estimated value of the 1960-61 crop has been disbursed. It is more than probable, in his opinion, that there will be no further payments on the present crop to be actually received until December this year. The total value of this year's crop may be as little as Rs. 190 a point and certainly not in excess of Rs. 2 a point and with such a low return, the tardy payments are causing great financial hardship to many growers, even to the extent of fertilisers not having been bought and in some cases spraying not done. It is, therefore, apparent that whatever virtues the present regulated system of marketing may have, it should now be subjected to an economic scrutiny and because it has been useful in the past it should not be blindly accepted that the same system is desirable today.

Open Export Auctions

The Union Industry Minister, Mr. K. C. Reddy's recent announcement that open auctions for export coffee will be introduced from early 1962 is welcomed in planting circles. They have been wanting this for quite some time now. They want open auctions for internal sales as well. The Coffee Board has sold up to the end of September 24,798 tons of coffee for export, out of the 1960-61 crop. The Board's pool has already received well over 67,000 tons from this crop. The export sale figure for the corresponding period of the previous season was 9,798 tons. A delegation of the Coffee Board led by its chairman, Mr. Sitarama Reddy, is now in Europe to explore the possibilities of selling more Indian coffee there. Its programme abroad includes visits to the U.K. and important coffee centres in Holland, West Germany, Switzerland, France and Italy.

Cashew Crisis

The crisis that has been hanging over the cashew processing industry of Kerala has been temporarily averted by a recent agreement among the processors reached at the instance of the State Government. The terms of this agreement stipulate that raw nut imports will be suspended temporarily and those who have excess stocks will give them to those processors who are in need of raw nuts at reasonable prices. Prior to this agreement, one section of the processors was demanding immediate restriction of raw nut imports from Africa in view of the accumulated stocks of both raw nuts and processed kernels in the country and lack of buying support for the finished products from abroad. Another section was opposing this demand and asking for the free import of nuts. Several factories in the Quilon area issued closure notice and the State Government was confronted with a serious labour problem. It was with considerable effort that the quarrelling cashew factory owners were brought to terms as to the remedial measures to be taken for the deteriorating cashew situation. A committee with the representatives of the Government and the factory owners has been constituted to implement the agreement. The State Government has asked the Central Government to suspend raw nut imports from Africa until the situation improves.

The State Trading Corporation of India also has been approached for its assistance in the disposal of huge stocks of processed kernels which, according to reports, will amount to at least 500,000 cases of 50 lbs each. These factories which have issued closure notices have agreed to withdraw them. However, the main problem of the industry still remains unchanged and that is that the foreign demand is very poor and the present offer of 45 cents a lb is not a remunerative price.

Kerala Plantation Workers not to Strike

The plantation workers of Kerala have withdrawn their direct action threat in the light of an understanding reached at the last meeting of the State Plantation Labour Committee, which was held recently in Bangalore in the presence of the Central Labour Minister, Mr. Nanda, and the Kerala Labour Minister, Mr. Achuthan. According to this agreement, the State Government will convene a conference of the plantation owners and the workers soon to discuss the report of the Wage Revision Committee appointed some time ago by the Kerala Government and explore the possibilities of bringing about an agreement on the basis of the recommendations of this committee. The Central Labour Minister, it is reported, has made it clear that there is no objection to some interim adjustments in wages with mutual consent being made before the completion of the national wage board's work. The workers have been asking for an interim relief in view of the increase in the cost of living, but the employers have been opposing this demand. They are not prepared to commit themselves before knowing the recommendations of the recently constituted national wage board for plantations.

NORTH INDIAN TEA OUTPUT INCREASES

THE NEED TO EXPLORE NEW MARKETS FOR EXPORTS

(BY A SPECIAL CORRESPONDENT)

WITH the producing season in north India more than half way through, the time is ripe for a review of the possible results this year of the working of Calcutta rupee companies. Taking production first, it will be remembered that last year the north Indian crop was short by 34 million lbs because of the drought. Therefore, in comparing last year's output with the current figure, it is necessary to take the figures for the past three plucking seasons in order to arrive at what should be accepted as a normal increase in production over three years. The 1959-60 north Indian crop was 561 million lbs. If one allows for an annual increase of, say, 3 percent, this year's production should work out around 590 million lbs. Actual figures to the end-September are 405 million lbs, and adding to this the possible figures for October, November and December at 170 million lbs, one gets a total of 575 million lbs. On this reasoning, the higher yield from north India is not excessive when considered with the production in other areas, but the situation is actually different. Pakistan intends to move ahead and has planting programmes not only in Sylhet, but in parts of west Pakistan. Ceylon is out to increase her exports. Fortunately, this year developments in east Africa show no great advance. One must, however, take into account Mozambique, Mauritius and some Latin American territories which have output plans of their own.

Chinese Exports

China and Russia are tea-drinking countries, but the first-named is compelled to step up her exports in order to earn foreign currency, and from such information as occasionally becomes available, Russia is already producing tea to meet her own internal demand. With all these new sources of supply added to the steadily increasing output from the main producers, it becomes evident that the search for expanding markets is now a must. The Food and Agricultural Organisation has already stated that world production will exceed consumption by 15 percent in a few years. Should that situation be allowed to develop, a number of marginal estates in India will have to close. But the outlook is by no means so bleak.

What is an encouraging development is that producing countries are steadily increasing internal consumption. For example, Pakistan with an estimated crop this year of 60 million lbs, proposes to export 10 million lbs only. The Indian home offtake may now be running around 300 million lbs a year, and needs to be stepped up to 400 million lbs. There is scope for expanding exports to some countries of south-east Asia. In Africa, too, new markets can be found.

Possibilities in Common Market

The U.S.A., Egypt as well as Russia are all taking more tea from the Calcutta auctions, but shipments to the Sudan have been falling and that is a matter for investigation. The same is the case with exports to west European countries. Last year, western Europe took less than 1 million lbs from Calcutta, whereas the U.K. alone imported 230 million lbs, that is, nearly half the tea consumed in the U.K. came from north India. In Britain, the per capita consumption is between 9 lbs and 10 lbs a year, whereas western Europe takes from India less than 1oz a head. The Common Market holds possibilities of one of the greatest developments for an affluent consumers' market. Western Europe alone could take care of any excess in Indian production, provided the situation is skillfully exploited. Hamburg is a likely place for another tea house on the lines of the Indian Tea Board's venture in Cairo, and why not take advantage of the German troops now stationed in Wales? They could help to spread the tea habit through West Germany. If one adds up these potential markets—another 100 million lbs within India itself, another 200 million for Africa, and within five years, a new European demand of 100 million to 200 million lbs—the whole situation becomes bullish. Some financiers are already reasoning on these lines, for in spite of the world increase in production, tea prices have steadied in Calcutta and London, and of equal importance is the fact that Indian financiers are in the market for established tea gardens in Assam and the Doors.

Outlook for Tea Companies

Reverting to production, this season's crop from north India will probably be around 570 million lbs. The last normal year, 1959, gave 561 million lbs. On this reckoning, the local surplus shows only a small and natural increase. Hence the renewal of buying interest in the Calcutta tea auctions. Higher output and the lower cost of production should help sound tea companies to work to a fairly profitable result. Quality producers should have a normal year.

COCHIN TEA SALES

At Sale No. 43, 511,000 kilograms of tea were on offer. There was a useful demand, particularly for broken and whole leaf grades. Low mediums and mediums were firm while good mediums were easier. High-grown were irregular with quality. Plain and stalky descriptions were easier.

ORIENT EXPRESS
Travel Service

Through its 4 offices in India and 350 correspondents in all principal cities throughout the world, Orient Express Travel Service places at the disposal of its clients a complete Travel Service.

Air, Rail and Steamer tickets issued at tariff rates. Hotel reservations made anywhere. Advice and assistance given in securing Passports, Visas, Health Certificates and Travellers Cheques.

Commodity Markets

**BRITISH TEXTILE REVIEW
GROUPING FOR EXPANSION**

A NEW textile group, comprising familiar components, came into formal existence at the beginning of October. Its name is Viyella International, and its principal members are William Hollins, Gainsborough Cornard, and Seedhill Finishing Company. Discussing the new group last month, Mr. J. Hyman, chairman of William Hollins and vice-chairman of Viyella International, disclaimed any intention to become an industrial holding company or to acquire other companies for the sake of financial growth. "Spinning is the basis of our business," he said, "and above all we shall be spinners." But he revealed a plan for "tremendous development" of the group's clothing business, with a new factory employing about 1,000 operatives; and he said that research would be emphasised even more strongly than in the past. Another progressive British textile business, Cyril Lord, plans to develop with the aid of American money. Burlington Industries, of North Carolina, reputedly the biggest textile manufacturer in the world, is providing \$2.8 million in the form of a convertible loan, whereby it will eventually gain a substantial share of the ordinary capital of the British Company. The two groups, both of which are widely diversified, will exchange technical information and services, and they will explore together the potentialities of the U.K. and continental-European markets. The U.K.'s intention to apply for membership of the Common Market must have interested Burlington Industries.

More Thoughts on the Market

October is, for better or for worse, an important month in the U.K.'s relations with the Common Market, and the textile industry has further clarified its ideas on the subject. Even if it were known whether Britain would eventually be in or out of the Market Community, no detailed assessment of the implications would be possible. Present thinking inclines to the view that if the U.K. participated, the only section of the industry that could be sure of benefiting from the move would be the worsted section. The position of the U.K. man-made fibre industry is difficult to visualise. For the cotton industry continental competition might be painful—unless it were counteracted by an arrangement whereby the pressure of Commonwealth supplies of cotton goods on the U.K. market were eased. It is necessary to emphasise, however, that individual firms in the various sections of the textile industry would succeed or fail according to their management and organisation. And it is wise to allow for the possible loss of Commonwealth markets. Until the Commonwealth Finance Ministers met in Accra in September, U.K. companies were inclined to underestimate the damage to this part of their export trade that could result from a move by the U.K. "into Europe".

It is pointed out, however, that the present rate of exports is far from satisfactory. Even the wool industry, whose record of export sales is excellent, is experiencing more than usual difficulty in securing orders abroad—and it is not much consolation to that last year's principal exporter of wool goods to the U.S.A., Italy, is faring even worse in view-market. The question is whether, from the viewpoint of the U.K. wool industry, it would be better to "trade" a reduction of Commonwealth tariffs against an increase in Commonwealth tariffs—bearing in mind that countries such as Australia are tending anyway to satisfy from their own production a larger proportion of their requirements. It is natural, but from the Government's viewpoint nonetheless disturbing, that the U.K. textile industry is inclined to emphasise more than usually the importance of its home market. The chairman of an old-established textile firm whose opinions were published recently in *The Director* said that the uncertainties of export trade made a substantial home market the more necessary, and that the "erosion" of the home market by imports (his particular problem was the higher-price trade) compelled firms to fight more vigorously to maintain their share of the market, so that their effort on the export side was weakened.

Qualified Optimism

The outlook for trade at home is at present regarded rather more hopefully, after the recent period of doubt. Retailers' caution, which caused them to reduce their orders and consume stocks, should be modified by the generally healthy state of final demand. A credit squeeze (at any level of Bank rate) makes most traders cautious, but it should not be forgotten that lack of credit has in the past turned consumers' attention from "durables" to "soft" goods. The cotton industry has not appreciably reduced its output. The International Wool Secretariat's latest assessment of the position of raw wool has helped sustain the wool industry's confidence. But the man-made fibre industry is experiencing one of its phases of uncertainty. Overall sales of such fibres as Terylene have increased, but not by virtue of the home trade: in the case of Terylene the cut in prices in mid-year has considerably increased sales abroad, where competition is very keen. Last month, Imperial Chemical Industries started production of a new high-tenacity polypropylene filament yarn, called Ulstron. At present, it is coming only from a pilot plant, but by the year-

end, the first commercial-scale plant, with a capacity of 5 million lbs a year, will begin producing, and, of course, extensions to it are visualised. Ulstron is regarded as potentially one of the most important industrial yarns. D. Byford has introduced a new stretch sock that it claims to be the first of its kind. The sock is made of wool, reinforced with nylon at the toe and the heel and above the heel. A loop-formation knitting technique imparts additional "stretch". It is not particularly cheap, but the public knows these days that good quality socks have long lives.

**TIN PRICE STABILISATION DECISION
DEFERRED**

The long-postponed meeting of the International Tin Council ended inconclusively when a plan to raise the stabilisation price range from £730-£880 to £800-£1,000 failed to command the required degree of consumer support. This was recently announced by the Council. It added that members had agreed that the present floor and ceiling prices were "not appropriate for the attainment of the objectives of the agreement." The subject is to be resumed at the next meeting on 14th February, 1962. The existing price limits for the Tin Council's buffer stock have been ineffective since June, when tin supply was exhausted in an effort to hold the price at £880 a ton. The Council said in its statement that the producer countries jointly proposed the higher price range but that only 121 of the 1,000 consumer country votes were cast for it, since "a majority of consumer countries considered that this was not the time to modify the price range." To pass, the proposal would have needed a majority of both producer and consumer country votes. Voting strength varies with the size of trade, and it is clear that the United Kingdom, France and Japan, among others, opposed the producers' plan. The Council had nothing to say about the progress of its approach to the U.S. Administration for releases from the strategic stockpile to ease the world tin shortage. There may, however, be significance in the choice of mid-February as the date of the next meeting, for in January the U.S. Congress will take up the Administration's project for an early release of 10,000 tons. Developments then may help consumer countries to decide on an acceptable new price range. Meanwhile, prices in the London metal market hardened on the news, for the Council has at least made it likely that the price range will rise, and the present supply shortage of perhaps 20,000 tons a year has not changed.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) declined by 0.7 per cent to 123.5 during the week ended 7th October, 1961, compared with 124.1 for the earlier week. The index was also lower by 0.9 per cent and 1.8 per cent, respectively, when compared with the corresponding week of the previous month and that of a year ago.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September 1961. As compared with August, the September Index for Food shows a decline of 8 points, while that for Clothing rose by 4 points. The indices for Fuel and Lighting and Miscellaneous remain unchanged at 294 and 308 points, respectively. Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 4 points during September 1961.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100

Groups	Weights	Group Indices

Aluminium Cable Sheathing Press sheathing a power cable. 22 presses of this type have been sold within a few years.

Small unit: Big capacity:

SCHLOEMANN

ALUMINIUM CABLE SHEATHING PRESS

for the extrusion of cable sheaths, tubes, sections and wire rod... in any desired length

This revolutionary double-acting, horizontal, 1600-ton installation meets a long-felt requirement of the cable industry for a press unit that is compact...easy to operate... and capable of manufacturing high quality products on a large scale.

SCHLOEMANN ALUMINIUM CABLE SHEATHING PRESS

- The wall thickness of the cable sheath is automatically kept constant over the whole cable length, also in case of unforeseen press stoppages, by a simple operation of the die adjuster
- Each operating cycle is fully automatic. Operation can also be controlled manually
- Production capacity stands in favourable ratio to size and power consumption of the press

SCHLOEMANN, the well-known German engineering company, supplies Rolling Mills, Counterblow Hammers and Hydraulic Presses for Ferrous and Non-ferrous metals. Among the many nationally important undertakings that have chosen SCHLOEMANN machinery are TISCO, Hindustan Steel at Rourkela, TELCO, The Mysore Iron & Steel Works and the Indian Steel & Wire Products Ltd.

SCHLOEMANN—26 years of co-operation with India

COMPANY AND PUBLIC NOTICES

NEW CENTRAL JUTE MILLS COMPANY, LIMITED

Regd. Office: 11, Clive Row, Calcutta-1
NOTICE

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held on Thursday, the 9th November, 1961, at 11-30 A.M. at the Registered Office of the Company at 11, Clive Row, Calcutta to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st March, 1961.
2. To declare dividends.
3. To appoint a Director in place of Shri M. L. Shah who retires by rotation and has attained the age of 65 years on 19.10.1959 and, in this connection, to consider and if thought fit to pass the following resolution of which a special notice as required by Sections 281 and 190 of the Companies Act, 1956, has been received by the Company, and is hereby given by the Company to its members:—
"Resolved that pursuant to the provisions of Section 281 and other applicable provisions, if any, of the Companies Act, 1956, Shri M. L. Shah, who has attained the age of 65 years and retires by rotation, be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. N. C. Jain & Co., Chartered Accountants, being eligible, offer themselves for reappointment.

As special business:—

5. To consider and if thought fit, to pass with or without modification the following resolution which will be proposed as a special Resolution:—

"Resolved that pursuant to sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, and subject to the provisions of Article 100 and other provisions of Articles of Association of the Company, the members of the Company hereby authorise continuance of payment to the Directors of the Company and each of the Directors be and is hereby authorised to continue to receive in respect of each of the five financial years of the Company upto and including the financial year ending on 31st March, 1966 a share of commission of 1% of the net profits of the Company computed in the manner referred to in sub-section 198 of the said Act."

Notice to Share-holders

NOTICE is hereby given that the next Annual General Meeting of the Share-holders will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Friday the 17th November, 1961 at 4 P.M. for the following purposes:—

1. To receive and pass the Directors' Report and Audited Accounts for the year ended 31st March, 1961.
2. To declare Dividends.
3. To elect Directors in place of those retiring.
4. To appoint Auditors.
5. As special business to consider and if thought fit to pass with or without modifications the following resolutions:—

(i) As Ordinary Resolution:

RESOLVED that Rai Bahadur Moongtural Tapuria, a Director of the Company, retiring by rotation, who has attained the age of 74 years, be and is hereby re-appointed a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him.

(ii) As Ordinary Resolution:

RESOLVED that M/s. The Bhagwati Trading Co. Ltd., associates of the Managing Agents, be and are hereby authorised to retain any commission which they receive or are entitled to receive as Agents of the insurers of the Company.

(iii) As Ordinary Resolution:

RESOLVED that the Board of Directors be and are hereby authorised to contribute to charitable and other funds, not directly relating to the business of the Company or the welfare of the employees, such amounts upto a total of Rupees Three Lacs only in any financial year notwithstanding that such amounts in any financial year will exceed Rs. 25,000/- or 5% of the Company's average net profits as determined in accordance with the provisions of the Companies Act 1956 during the three financial years immediately preceding, whichever is greater.

(iv) As Ordinary Resolution:

RESOLVED that the sanction of this Annual General Meeting be accorded to the expenditure amounting Rs. 2,75,422/-, already incurred by the Board of Directors under the head of donations and subscriptions, during the financial year ended 31st March, 1961.

(v) As Special Resolution:—

RESOLVED that the Company do hereby approve of the Contracts entered into or to be entered into separately with each of the undernoted parties who are or may be deemed to be the associates of the Managing Agents of the Company providing for the purchase, sale and/or supplies of jute goods, machinery, machinery parts, stores, spare parts and materials which the Company and/or the said associates manufacture, stock and/or can deal in, by or to the said associates provided that:—

- (1) for any property supplied or sold by the Company the said Associates shall make payment to the Company within one month from the date of supply or sale of goods.
- (2) The prices or amounts charged to or received by the Company shall be at rates which shall not be less favourable to the Company than the market rates or which shall be otherwise reasonable.

- (i) Octavius Steel & Co., Ltd.,
- (ii) Duncan Brothers & Co., Ltd.,
- (iii) Central Cotton Mills Ltd.,
- (iv) Bhagwati Trading Co., Ltd.

Dividends, if declared, will be paid to Registered Share-holders only.

BROOKE BOND ESTATES INDIA LIMITED

Notice of the Fourteenth Annual General Meeting

NOTICE is hereby given that the Fourteenth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Brooke House, 2, Metcalfe Street, (Ganesh Chandra Avenue), Calcutta, on Wednesday the 29th November, 1961 at 11-30 a.m. for the following purposes:—

1. To consider and to adopt the Profit and Loss Account for the year ended 30th June, 1961, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare dividends on Ordinary and Preference shares.
3. To appoint Directors in the places of those retiring.
4. To re-appoint the Auditors and to fix their remuneration.

Notice is also hereby given that the Register of Members of the Company will be closed from the 3rd November, 1961 to the 29th November, 1961, both days inclusive.

SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following resolution as a Special Resolution:

"That Article 94 of the Articles of Association of the Company be amended by deleting the first sentence thereof and substituting the following sentence therefor:

"With effect from the 29th November, 1960 and unless otherwise determined by the Company in General Meeting, each Director shall be entitled to receive out of the funds of the Company for his services, a fee of rupees two hundred and fifty for each meeting of the Board or Committee of the Board attended by him."

By Order of the Board,

BROOKE BOND ESTATES INDIA LIMITED,
C. A. BROWN,
Director.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

Calcutta, 25th October, 1961.

EXPLANATORY STATEMENT

Relating to the Special Business
At the Thirteenth Annual General Meeting of the Company held on 29th November, 1960 a special resolution was passed amending Article 94 of the Articles of Association by altering the sum of Rs. 200/- per mensem payable to each Director to a fee of Rs. 400/- per Director for each meeting of the Board or Committee of the Board attended by him. An application was made to the Central Government to approve this alteration in the remuneration of Directors under Section 310 of the Companies Act, 1956 and the Central Government by its letter No. 1(495)-C.I/60 dated 28th January, 1961 approved a fee of Rs. 250/- per Director for each meeting of the Board or Committee of the Board attended by him instead of Rs. 400/- mentioned in the resolution. It is, therefore, necessary to alter Article 94 again to bring it into line with the fee approved by the Central Government and the resolution set out in the Notice which will be proposed as a Special Resolution is intended for this purpose. All the Directors of the Company are interested in this resolution.

MUNICIPAL LOANS

These notes refer to the Debentures on the next page.

(a) Option to repay at par on 6 months' notice—

(b) Option to extend the redemption period for further 10 years.

(c) At any time after.

(d) On or after 1-1-61.

(e) Option to redeem at 2 1/2% Prem. after 14-5-64 and before 15-5-69.

(f) Option to repay on 6 months' notice—

(g) At any time after 30-6-61 at 101%.

(h) At 101% between 1-1-60 & 31-12-64.

(i) At 102 1/2% after 30-6-59 but before 30-6-64.

(j) At any time after 30-6-65 at 101%.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O., Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

15,00,000	60,42,752	17,88,648	Shahdara (Delhi) Saharanpur	3 32	3,65,653	2,874	4.50	3.50	6	100	68/00	68/00	60/00

seems little point in holding such meetings at all. As it is, this tiresome pushing of blame from one set of shoulders to another is neither useful nor edifying. Industry's anxiety and the Government's intractable complacency, or worst still its stubborn lack of sympathy, are not such as to inspire confidence among the informed public. Everybody is aware that Mr. K. C. Reddy believes the country's performance on the industrial front has been "very heartening"; as one with responsibilities in the matter, it would be surprising if he did not. Similarly, there is not much doubt as to what Mr. Shah thinks about the present state of economic activity; once again, there are good reasons why he should be so predictable. But does this expression of official optimism really help the industrialist tackle an array of problems which threaten sooner or later to bring his activities to a standstill, or at least impose on them a series of costly interruptions? Official spokesmen might usefully ask themselves whether this attitude that all is for best in the best of all possible worlds is the one which is most likely to produce results in the end.

A certain amount of exasperation on the part of Government spokesmen is, perhaps, understandable, because most of the difficulties brought up at the meeting can be directly attributed to the defects in present planning policies. For that reason, it is not so much adjustment which industrialists are calling for, as radical changes in the third five year plan itself. And as everybody knows, especially this close to a general election, that is something the Government is highly unlikely to concede. How it is proposed to avoid the threatened breakdowns without a drastic revision of plan priorities is, however, a point generally avoided. For this, industry itself may be partly to blame. Sir Ramaswamy Mudaliar's apologetic reference to the fact that the old controversy about the public and private sectors is now dead does not suggest that industry is really aware of the true issues. If this controversy is in fact as dead as Sir Ramaswamy says it is, then it merely shows that the Government has cowed industry into conniving at its own discomfiture, because it is in this issue that the real cause of the present difficulties lies. If, for instance, the plans did not insist that public sector heavy industry be given priority of resources over private industry and what has come to be known as the "infrastruc-

ture" of the economy, then the present problems would scarcely have come about.

There was little to suggest in what was said at the Advisory Council meeting, that the Government is prepared to make the changes in the plan which will solve the transport and power problems—the two are, of course, closely related. Yet without them, the dismal prophecy of Mr. N. Stenhouse, President of the Associated Chambers of Commerce, that the power shortage will persist for years to come, is bound to be proved correct. It is inconceivable to the impartial observer that a plan which is directed, ostensibly, to increasing the progress of industry in the country, should fail to make adequate provision for a factor which more than any other except possibly foreign exchange, will govern industrial growth in the future. It is to be hoped that the Government's lack of concern in this matter is not due to an understanding that whatever shortages of transport and power arise, they will not be allowed to interfere with the public sector. It would not be altogether surprising if this were so; during the past few years of foreign exchange shortage it is the private sector which has had to stand the weight of all the cuts.

The Government is making a grave mistake by under-rating the effect these threatened shortages will have on industrial growth. Together they comprise an inevitable brake on the progress of the third plan. Industry has every right to feel apprehensive about the future and it is in the interests of the economy that this feeling be assuaged. But the attitude which many of the Government's spokesmen showed at the meeting were not calculated to do this. It may be reassuring to learn of progress achieved, and there may be consolation in finding that Government Ministers are sufficiently strong-willed to stick to their guns when challenged. But far better than these would be some unmistakable evidence of the fact that the difficulties of industry's present position are sympathetically appreciated and that the necessary changes will be made in the plan to ensure that they are reduced to the minimum. The only spokesman who showed the least sign of approaching this ideal was, perhaps, Mr. T. N. Singh. Planning Commission Member for Industry and Transport. Among the rest, the degree of complacency, or worse, was frightening, to say the least.

OUTLOOK FOR STERLING

THE recent placid state of the world's currency markets is unusual, and the financial community is wondering how long it will last. Seemingly suggest that it will be disturbed next year by the external payments deficit of either the U.S.A. or the U.K., but there is no basis yet for speculating against either the dollar or the pound. The world was not entirely convinced by the optimistic assessment of the dollar's position made by Mr. Douglas Dillon, U.S. Treasury Secretary, at the meeting of the International Monetary Fund in September. But persistently confident statements, reinforced by some statistical evidence, are gradually strengthening morale. Answering questions in London recently, Senator Paul Douglas said that neither the external payments account nor the budgetary deficit of his country should cause alarm, and the Chase Manhattan Bank foresees an overall surplus in the external account within a few years.

Estimates of the future of sterling do not usually look so far ahead. For the present, however, and presumably through most of next year at least, the currency is safeguarded by the credits

from the I.M.F. and the British Government's stringent policy, whatever its practical effects may be, has impressed opinion abroad. An important result of the world's regained confidence is a readjustment of the timing of payments. The accelerations and delays—the so-called "leads and lags"—caused serious disturbance between March and July, but in the process of readjustment they have strengthened the currency. The flow of short-term funds, which caused disturbances last year and again this year, is likewise much diminished. The idea that persisted for months after the revaluation of the West German mark last March that the value of that currency would soon be raised again is not convincing in the light of the recent diminution of West Germany's reserves; so that country is no longer attracting speculators. In any case, "the German problem" is not yet solved, and short-term money is never comfortable where a political crisis may erupt.

There is, then, no obvious reason why the serenity of the exchange markets should be disturbed by short-term movements or by economic developments. But economic developments are in progress all the time. They do not often erupt in crises, but they tend gradually to strain currencies. The mechanism of international agreements and co-operation and aid can relieve the short-term stresses, but long-term problems are beyond their power. The most serious doubts about the long-term situation must be in regard to sterling until it is demonstrated that the British Government has a plan to develop the nation's export trade and that the plan is effective. The problem is inseparable from the discussion of Britain's trading relations, particularly with Europe. Many people believe that if the negotiations to participate in the Common Market reach a positive conclusion Britain will enter that trading community with a devalued currency, because her industries are not fully competitive on the present monetary basis. Others believe that if the negotiations reach a negative conclusion, the currency will have to be devalued, because Britain will be "isolated". In this connection, a remark by Senator Douglas is worth quoting. If the Common Market's external tariff were not considerably reduced, he said, it might be necessary to raise the U.S. tariff, both to provide a bargaining weapon and to safeguard the U.S. balance of payments. For Britain particularly, this thought is significant. Britain outside the

from the U.S. market—which, despite the U.S. tariff, has recently been the principal buyer of Britain's exports. If the U.S. tariff discriminated against the Common Market (as Senator Douglas seemed to imply it might), Britain would be favourably placed in the U.S. trade if she were independent. It may yet be necessary to rely on the developing countries for long-term growth of the manufacturing countries', particularly Britain's exports. If so, it will be necessary to reconsider the benefits of favourable terms of trade. In the last decade, Britain's average export prices have risen by about 12 percent and her import prices have fallen by about 15 percent. The effect is an improvement of the terms of trade of some 25 percent, and it is certainly an important factor in Britain's balance of payments. But the change in relative prices has caused disharmonies that have hindered the growth of trade with the developing countries; they have not been able to finance development on the scale that was visualised. It cannot be supposed that the manufacturing countries will continue in harmony among themselves, even if they are so at present. Relative prices are always changing, and cumulative changes over a period of years can cause the stresses that demand adjustment of currencies.

COMMONWEALTH AND THE COMMON MARKET

IN last week's article* on the European Common Market and how U.K. participation in it might affect the Commonwealth, as seen by Barclays Bank's *Overseas Review*, it was suggested that the question of whether the United Kingdom should, or should not, join the Common Market is becoming of academic interest. At first sight, the great majority of politicians, business men, trade unionists, economists and journalists who have spoken or written on the subject recently, agree only to differ, to join or not to join, that is the question engaging their attention. Yet the most fervent advocates of the Common Market are united on the need for special terms to safeguard the interests of the overseas Commonwealth, while the strongest opponents of joining usually concede that some form of negotiations should be undertaken with the same end in view. Special agreements between the Commonwealth and the E.E.C. are required and what matter are the terms of those agreements. The first article attempted to summarise the economic effects of the E.E.C.—if and when fully implemented as visualised in the 1957 Treaty of Rome—upon the Commonwealth. It was shown that the preferential system of tariffs constituted a threat to two groups within the Commonwealth. The first is the U.K. as an exporter of manufactured goods and the second is that portion of the overseas Commonwealth which exports tropical foodstuffs. The questions to be decided are, therefore, how can the interests of these two groups be safeguarded, and, of even more importance, what price should be paid to achieve these ends?

Judging by the record of previous negotiations, the biggest part of the price demanded would be the liquidation of all Commonwealth preferences. The Six of the E.E.C. argue that if the U.K. is to have the privilege of being inside their preferential system, they must have equal privileges within the U.K. Up to a point, the argument seems logical, and it is clear that the U.K. manufacturer must face the competition of the Six in the domestic market in return for competing freely within their markets. The U.K. did, in fact, accept this principle and the European Free Trade Area could be considered as the outcome. It is probably also true that the U.K. could face increased competition to domestic agriculture as readily as any of the Six, but that means very little as there is great reluctance on the part of the Six to go very far in this direction. The full logic of the E.E.C. argument breaks down, however, when applied to the overseas Commonwealth. The Six are proposing to retain a preferential system in favour of their Associated Territories, but are requiring the U.K. to abolish its preferences in favour of the Commonwealth. At the time at which the Treaty of Rome was negotiated, the Associated Territories were colonies or trust territories of the Six, mainly of France, and no doubt it seemed right that the metropolitan powers should do their best to look after their *proteges'* interests in trade and the supply of investment capital. Now, however, these overseas countries are, in the main, politically independent territories to at least the same degree as the countries of the Commonwealth. Logically, if there are associated territories of the Six within the E.E.C., then the whole of the overseas Commonwealth should have the same status if the U.K. were to join.

Such a status would suit the economic interests of those Commonwealth producers of tropical foodstuffs that are endangered by the implementing of the external tariff of E.E.C. But this is a case

taking a sledge-hammer to crack a nut. The position of the Associated Territories is still being discussed within the E.E.C. and it is by no means certain that the relevant provisions of the Treaty of Rome will be fully implemented. The dangers of a split in Africa are becoming more obvious and the needs of the countries of tropical Africa for improved terms of trade, as well as for technical aid and development capital, have all the important features in common. Above all, their hopes of rising prosperity depend greatly on the consumption of their cash crops, particularly cocoa and coffee, being stimulated so that increasing harvests may still be marketed at remunerative prices. Agreements are required—and Britain might well take the initiative—to lower and gradually to abolish altogether tariffs on these products, including excise duties and other impediments to lower prices to the consumers. With the lowering of world prices, the U.K. specific tariffs of 14s a cwt. on both cocoa and coffee from foreign sources are more significant barriers than a few years ago: Commonwealth preference is only 2s 4d a cwt. for cocoa, but 9s 4d a cwt. for coffee. These are still a good deal lower than the proposed Common Market tariffs of 9 percent and 16 percent, respectively. It should not be impossible, however, to come to some agreement towards abolishing these tariffs altogether, if the United States agreed (as she probably would) to an arrangement which gave the Latin American producers equally favourable treatment, but prevented them dumping surpluses in Europe.

As far as the overseas Commonwealth is concerned, an agreement on tropical foodstuffs is the most pressing and vital need. For the U.K., the problem is quite different, although also urgent in

that if anything is to be done, it should be done soon. The one point on which there should be unanimity is that the U.K. should not attempt to gain advantage for her exports to the E.E.C. at the expense of the overseas Commonwealth. In other words, the U.K. has the right to offer to give up such preferential treatment as she receives in the overseas Commonwealth by agreeing to most favoured nation treatment for the Six if this is considered a price worth paying for free access to the Common Market. She has no moral right, however, to abolish Commonwealth preference in favour of overseas Commonwealth countries without their consent. It is quite clear that the producers of temperate foodstuffs, most of all New Zealand, depend for their prosperity on the U.K. market and cannot be expected to agree to yield a further share of that market in return for free entry into the Six who are almost self-supporting in such produce. It is also true that Canada is finding the U.K. an increasingly important market for manufactured goods thanks to preferential entry, but here it is possible that she has something to gain from obtaining more favourable treatment from the Six. To mention such points, however, does not finally preclude the U.K. from joining the E.E.C. The Treaty of Rome has numerous "escape" clauses designed to prevent upsetting existing trade arrangements. For instance, West Germany will be permitted to continue to import her whole banana requirements from Latin America. It may be that the Six will not agree to similar escape clauses in favour of dairy produce, for example, from New Zealand. But it does seem that the time is coming, or has come, for Britain to take the lead in approaching the E.E.C. on such matters.

(To be continued)

Current News and Comment

Bharat Reynolds Aluminium Project

The Bharat Reynolds Aluminium Corporation Ltd will be the name of a new enterprise which is being promoted by Mr. Murarji J. Vaidya to implement India's biggest aluminium smelter project. The proposed plant will be located in the Hubli-Karwar area in Mysore which is known to have ample deposits of high grade bauxite. The Mysore Government has assured the Company about the availability of cheap electric power from the Sharavathi hydro-electric scheme. The project proposes to have an initial production capacity of 30,000 tons of aluminium ingots, 60,000 tons of alumina and 15,000 tons of aluminium fabrications a year. The ingot capacity is proposed to be raised to 90,000 tons in ten years. The Company has secured the technical and financial collaboration of the Reynolds Metal Company of the U.S.A. Apart from the technical know-how, the foreign collaborator will provide sufficient foreign exchange to cover the cost of plant and machinery by sharing 40 percent of the equity capital of the new Company. The Governments of Mysore and Maharashtra are also expected to participate in the capital. Bharat Reynolds, it is stated, is likely to have an authorised capital of Rs. 50 crores. The project has been approved by the Licensing Committee. If all goes well, Bharat Reynolds will approach the capital market early next year.

Sirpur Paper Raises Dividend

The directors of the Sirpur Paper Mills Ltd have raised the dividend on ordinary shares (Rs. 10-paid) for the year ended June 1961 by 20nP from 65nP to 85nP a share, both taxable. Although the Company is known to have increased its production to 30,000 tons a year, the announcement of a higher dividend has come as a pleasant surprise, because the paper industry has not been faring well since the paper industry has not been faring well because of the uneconomic prices fixed by the Government. Besides, the increase in the dividend is quite substantial. Even so, the dividend for Sirpur Paper which rose from Rs. 16.44 to Rs. 18.60 after the dividend announcement, eased the market's dislike for paper shares. Meanwhile, a higher dividend is being proposed because of a marked increase in profits as a result of a larger output. So the working results of Sirpur Paper are awaited with interest. It is not unlikely that the dividend has been increased to facilitate the raising of additional capital. The latter is required to finance the expansion programme for producing special varieties of light-weight paper, including tissue paper. Sirpur Paper has already received the Government's permission to issue 7,62,762 equity shares of Rs. 10 each at par, of which shares worth Rs. 54.64 lakhs are being

allotted to the foreign collaborator, Kimberly Clark Corporation of the U.S.A., which will assist the Company in its expansion programme. The remaining shares are to be offered to the existing shareholders in the ratio of one share for every four held. With the proposed issue, the total ordinary capital of Sirpur Paper will be around Rs. 4 crores. The maintenance of the dividend at 85nP a share on the increased capital will require an additional Rs. 10.5 lakhs. The share of the Company, which is now quoted around Rs. 16.48, touched a high of Rs. 19.12 in March, after which it gradually declined to a low of Rs. 13.56 in the last week of August.

Good Results from Bombay Burmah

The preliminary figures about the working results of Bombay Burmah Trading Corporation Ltd for the year ended May 1961, released along with the dividend announcement, indicated that the increase in the total dividend for 1960-61 from Rs. 37.50 to Rs. 41.25 a share (Rs. 125 paid) was well justified. The directors' report, which is now available, shows an all-round improvement in the Company's activities which cover a wide field, ranging from tapoca to timber and extend from north Borneo to Tanganyika. The gross profit has increased from Rs. 1.41 crores to Rs. 1.59 crores. The gross trading receipts are up from Rs. 4.93 crores to Rs. 5.59 crores and "other income" shows a substantial improvement from Rs. 24.81 lakhs to

Rs. 41.74 lakhs. Receipts from timber, manufactured goods and coffee show an all-round increase, but the income from tea is slightly lower. The marked increase in the "other income" is in conformity with the expansion of activities through subsidiaries and associate Companies. While the gross profit for 1960-61 shows an improvement, the increase in manufacturing expenses has affected the profit margin, which has come down from 26.6 percent to 25.3 percent. The directors have provided Rs. 26.58 lakhs (against Rs. 26.67 lakhs) for depreciation and Rs. 59 lakhs (against Rs. 48.20 lakhs) for taxation. Transfers to reserves and other accounts amount to Rs. 25.80 lakhs (against Rs. 18.20 lakhs). The dividends absorb Rs. 44.13 lakhs (against Rs. 40.12 lakhs).

Bombay Burmah's south Indian estates produced 7,541,000 lbs of tea in 1960-61, against 7,536,000 lbs in 1959-60. But the unit cost of tea was up from Rs. 1.324 a lb to Rs. 1.359 a lb while the average gross return rose to a lesser extent from Rs. 2.336 a lb to Rs. 2.360 a lb. The production of coffee recorded a substantial increase from 907 tonnes to 1,368 tonnes, but the crop in 1961-62 is expected to be much smaller due to adverse weather conditions during the season. The acreage under cardamoms has been brought down considerably but increased attention given to selected areas has resulted in a larger crop of 18,354 lbs. against 9,812 lbs. In Burma, the proceeds from boat-building recorded a useful increase. The directors, however, report the lack of new orders. Receipts from repair work were a little better. There was a marked improvement in production and sales at the asbestos cement plant, but business at the concrete products plant declined, so production had to be restricted. In Namshan the production and purchase of tea amounted to 602,000 lbs (against 540,000 lbs). Sales totalled 315,000 lbs (against 641,000 lbs) and the closing stocks increased sharply from 162,000 lbs to 447,000 lbs. In Thailand, the Company has a 26-percent interest in the Joint Timber Co. Ltd, but it was unsuccessful in getting forest working permits renewed. So the activities of the Joint Timber Company were largely confined to the clearance of remaining log stocks. The production of starch by Thai Tapioca Ltd in 1960-61 totalled 7,712 tonnes (against 6,786 tonnes) and costs were further reduced. The sale prices improved slightly, but the general level remained depressed and a loss was again incurred.

In Tanganyika, Bombay Burmah had planted 919 acres under tea by the end of May 1961, and a further planting programme on the Company's Usambaras group continues. Development during the year was hampered by the shortage of rain. The group's first factory on the Herkulu estate has now been completed and trial runs are in progress. In north Borneo, the production and purchases of hardwood logs totalled 161,284 tonnes, against 125,131 tonnes in 1959-60. Mill production of sawn timber totalled 6,663 tonnes, against 7,161 tonnes. The market demand remained fairly satisfactory, resulting once again in a satisfactory year of working. The North Borneo Timber Ltd showed a further improvement in results. The opening up of the Quoin cocoa estate continued, and a total of 710 acres was planted by May 1961. The development of the Mostyn estates in which North Borneo Timbers has a 50 percent interest, progressed during the year. There was a sharp drop in the turnover of A.F.C.O. Ltd during 1960-61, so a loss was incurred. Regrouping of this Company's activities at the new Erangal yard was largely completed by the end of the year, and the trading position has since improved. The Rs. 125-paid shares of the Bombay Burmah Trading Corporation have been holding distinctly steady

around Rs. 635 for some time. Market circles are optimistic about a bonus issue in the near future. The financial position of Bombay Burmah is strong. Its share capital of Rs. 1.35 crores is supplemented by reserves and surplus which total Rs. 3.74 crores. The fixed assets valued at Rs. 5.97 crores have been written down to Rs. 3.08 crores.

Delhi Cloth to Raise Capital

The Delhi Cloth and General Mills Co. Ltd proposes to issue 400,000 ordinary shares of Rs. 25 each at a premium of Rs. 5 a share and 260,000 redeemable cumulative preference shares of Rs. 25 each at par to finance its expansion schemes. It proposes to build two new factories in Kotah, Rajasthan. The first is a P.V.C. plant with a production capacity of 20 tons a day and with ancillary units of calcium carbide, chlorine and caustic soda. The second is a rayon tyre cord plant with a production capacity of 10 tons a day. Foreign collaboration has been arranged with reputed U.S. and Japanese firms. The foreign exchange requirements will be met partly from deferred payments and partly from foreign financial institutions. The directors also propose to issue 6½ per cent debentures for Rs. 2.50 crores.

Delhi Cloth has increased the taxable ordinary dividend from 12 percent to 13 percent for the year ended June 1961. It is covered more than seven times and offers a yield of 6.1 percent at the present price of Rs. 53.25 a share. The profit has risen from Rs. 2 crores to Rs. 3.35 crores, after increasing depreciation from Rs. 70.17 lakhs to Rs. 77.80 lakhs. Taxation absorbs Rs. 1.71 crores (against Rs. 1 crore) and development rebate reserve Rs. 15 lakhs (against Rs. 16.50 lakhs). Development reserve receives Rs. 50 lakhs (against Rs. 18 lakhs) and fall-in-prices reserve Rs. 48.39 lakhs (against Rs. 45 lakhs). The carry-forward is Rs. 3.72 lakhs, against Rs. 2.72 lakhs brought in. The textile units have worked satisfactorily and their renovation and modernisation have made good progress. The silk department has done well. The outlook for the sugar section has become uncertain due to excessive supplies.

Hukumchand Jute Maintains

The Hukumchand Jute Mills Ltd has maintained the taxable ordinary dividend at 23½ percent for the year ended March 1961, although its working has been adversely affected by the fibre shortage. The production cuts, combined with the increase in wages following the recommendations of the Wage Board, have raised unit costs. The profit, has, therefore, declined by Rs. 5.82 lakhs to Rs. 39.86 lakhs. The ordinary dividend is covered more than two-and-a-half times and offers a yield of 11.9 percent at the present price of Rs. 18.12 a share. Depreciation is allocated Rs. 11.42 lakhs (against Rs. 10.26 lakhs). This allocation was made before the profit figure was arrived at. A sum of Rs. 20.40 lakhs (against Rs. 20 lakhs) has been transferred to taxation. Development rebate reserve gets Rs. 45,000 (against Rs. 3,90 lakhs). The carry-forward is Rs. 1.62 lakhs, against Rs. 1.63 lakhs brought in. Sales rose from Rs. 4.47 crores to Rs. 5.81 crores. The directors predict an increase in raw jute supplies and think that the working during the rest of the current year should show fair profits.

Alexandra Jute Pays More

The Alexandra Jute Mills Ltd has shown satisfactory results for the year ended December 1960, in spite of the fibre shortage. The outlook for the current year is not considered encouraging, because adequate supplies of raw jute may not be available until the end of 1961. During the first six months of the current year, the mills' profitability has been affected by increased unit costs. After providing Rs. 3.25 lakhs (against Rs. 3.23 lakhs) for depreciation and Rs. 6 lakhs (against Rs. 2.05 lakhs) for taxation, the profit has increased from Rs. 5.15 lakhs in 1959 to Rs. 12.79 lakhs in 1960. The taxable ordinary dividend has been increased from 15 percent to 44 percent. It is covered more than three-and-a-half times at the present price. General reserve receives Rs. 2.50 lakhs (against Rs. 50,000) and development rebate reserve Rs. 13,600 (against Rs. 1.54 lakhs). There is a carry-forward of Rs. 2.22 lakhs, against Rs. 1.71 lakhs brought in. Sales rose from Rs. 1.56 crores to Rs. 1.89 crores and stocks of gummies increased from Rs. 11 lakhs to Rs. 19.16 lakhs.

Higher Profit for A.I.I.

There has been considerable improvement in the working of Air-India International during the year ended March 1961. The total capacity offered rose by 72.7 percent, compared with 1959-60. The

operating revenue has increased by Rs. 6.59 crores to Rs. 19.17 crores. The profit has amounted to Rs. 1.17 crores, against Rs. 18.26 lakhs. Insurance fund is allocated Rs. 32.90 lakhs, equipment renewals reserve Rs. 4.25 lakhs and reserve fund Rs. 6.50 lakhs. The carry-forward is Rs. 6.55 lakhs, against Rs. 15.03 lakhs brought in. The various partnerships formed with different airlines have proved beneficial for the Corporation. Although the long-term prospects are considered good, various difficulties might affect the current year's results. The partnership arrangements with B.O.A.C. and Qantas are expected to produce good results because through their joint efforts the three partners will obtain the maximum share of the total traffic available.

Hindustan Shipyard Fares Well

The working results of the Hindustan Shipyard Ltd for the year ended March 1961 show a general improvement. The value of production was higher than at any time before, and there was an increase of about 900 tons in the quantity of steel fabricated. The man-days spent on the construction of repeat vessels fell appreciably, but the problem of high costs remained, since the working of the Yard depended heavily on raw material imports. Explaining the improvement, the chairman, Mr. G. L. Mehta, said at the annual general meeting held in New Delhi last week that at one time there was a dearth of orders, but the order-book is now fairly full, although it would be necessary to secure more orders to keep the Yard engaged beyond the middle of 1964. The new orders which have been obtained are basically for repeats of the same series, and this provides the advantages of standardisation. In order to cope with the increased activities, the Shipyard has made arrangements with Mitsubishi Heavy Industries Reorganised Ltd, Japan, to train Indian draughtsmen during the next three years. It has accepted for the first time the principle of penalty for delay in executing new contracts. The dry dock project, the chairman said, is being indefinitely postponed. Although its importance is recognised, it does not find a place in the third plan. "May I say that, whatever be the considerations which weigh with the Government in determining priorities, the absence of docking facilities at Visakhapatnam is a serious impediment to the progress of Indian shipbuilding and this project must be taken in hand without further delay," Mr. Mehta suggested.

Discussing finances, the chairman said that the Company earned a small profit of Rs. 63,783 in 1960-61. Meanwhile, the working capital has been increased by Rs. 14.93 lakhs, representing the sum advanced by the Government to finance development works. The total of such advances so far is Rs. 2.65 crores, of which Rs. 3.98 lakhs is awaiting conversion into share capital. The share of Scindias, amounting to Rs. 1,04,25,000 in a total capital of Rs. 4,55,42,000, has been acquired at an accepted valuation of Rs. 20.38 lakhs. It has been agreed that this sum will be adjusted against instalments of the price payable by Scindias for the vessels, recently ordered from the Shipyard.

Shama Engine Valves Share Offer

The Shama Engine Valves Ltd proposes to set up a plant in Bhopal for manufacturing valves of all types for heat engines and internal combustion engines. The plant will have a licensed capacity of 600,000 valves a year. The Company has secured the technical collaboration of the West German firm of Bayerisches Leichtmetallwerk K.G., Munich. Apart from providing the technical know-how, the foreign collaborator will help Shama Engine Valves in the lay-out of the plant, the erection of the factory and the training of Indian personnel. The West German firm will receive a lump-sum of 30,000 deutschmarks after all the planning details are delivered to the Indian Company and also a royalty of 1 percent on the net sales. The project is estimated to involve a capital outlay of Rs. 26 lakhs which will be met by a capital issue of Rs. 15 lakhs, a long-term loan of Rs. 10 lakhs from the Madhya Pradesh Financial Corporation and bank borrowings totalling Rs. 1 lakh. Shama Engine Valves has an authorised capital of Rs. 30 lakhs, comprising 225,000 equity shares of Rs. 10 each and 7,500 9.3 percent taxable redeemable preference shares of Rs. 100 each. The issued capital will be Rs. 15 lakhs comprising Rs. 11.25 lakhs in equity shares and Rs. 3.75 lakhs in preference shares. Of the issued capital, the promoters, directors and their friends have agreed to take up equity shares worth Rs. 3 lakhs. The Madhya Pradesh Government is expected to take up Rs. 1 lakh worth of equity shares and the Life Insurance Corporation Rs. 1.25 lakhs of equity shares and Rs. 75,000 of the preference capital. The balance of the issue, consisting of Rs. 6 lakhs of equity shares and Rs. 3 lakhs of preference shares, is likely to be offered for public subscription within a month or so. The entire preference

capital offered to the public is being underwritten by the Madhya Pradesh Government, and arrangements are being made to get the equity issue underwritten by a few firms of stockbrokers.

Elecon Engineering to Raise Capital

The Elecon Engineering Co. Ltd, which is at present manufacturing various types of mechanical handling equipment at its factory in Goregaon, Bombay, proposes to expand the production of existing lines as well as to diversify its activities by undertaking the manufacture of other allied products, such as reduction gears and troughing idlers. New lines of production are to be undertaken at its new factory in Anand, Gujarat, which is already under construction. The Alfred Wiseman and Co. Ltd, Birmingham, is collaborating in the manufacture of worm reduction gear units up to 10½ inches in size. It is to be paid a lumpsum of £14,000 for supplying the technical know-how. The British firm is also participating in the capital of the Indian Company. The production of reduction gears is expected to start after June 1962. Another British firm, the Spencer (Melksham) Ltd, is collaborating in the manufacture of troughing (conveyor) idlers. Production is expected to be commenced in the second half of 1962. Negotiations are in progress for securing the technical collaboration of a well-known British firm for manufacturing portable belt conveyors, conveyor chains, etcetera. The turnover is expected to increase to over Rs. 1 crore after the implementation of the proposed expansion schemes. The entire expansion programme is estimated to cost about Rs. 1.03 crores. Elecon Engineering proposes to raise Rs. 50 lakhs by issuing equity shares of Rs. 100 each. It is negotiating with the Industrial Credit and Investment Corporation of India Ltd for a loan of Rs. 20 lakhs. The Refinance Corporation for Industry is being approached for a loan of Rs. 15 lakhs. The Company has an authorised capital of Rs. 1 crore, of which only Rs. 10 lakhs has been issued so far. It now proposes to issue 50,000 equity shares, of which 2,500 equity shares are being taken up by Alfred Wiseman and Company. The directors, their friends and the existing shareholders are said to have agreed to subscribe 18,000 shares. The remaining 29,500 equity shares are likely to be offered for public subscription early next year.

R.K. Chipboards Issue Soon

The Bombay firm of Arthur Import Export Company has obtained an industrial licence for manufacturing chipboards. The factory will be located in an industrial suburb of Bombay. The project, which will be operated by a new Company known as the R. K. Chipboards Ltd, proposes to manufacture 7,200 tons (about 8.10 million square feet) a year of chipboards of various thicknesses and sizes out of cheap wood which is available in plenty in Maharashtra. The only raw material which will need to be imported is urea of a special type, and this has been agreed to by the Government. The project involves an initial outlay of Rs. 50 lakhs, of which nearly half is likely to be spent on the imported plant and machinery. The latter are to be imported from Hungary on a rupee-payment basis. The required import licence has been obtained and equipment is expected to be delivered by about the middle of next year. Production is expected to start before the end of 1962. The Company will have an authorised capital of Rs. 1 crore, made up of Rs. 80 lakhs in equity shares and Rs. 20 lakhs in preference shares, both of Rs. 100 each. Of this, capital worth Rs. 50 lakhs is proposed to be issued in the beginning. The Company is likely to approach the market for raising capital before the end of the current year.

Castings from Industrial Steel Melting

Nigo's Corporation, Bombay, has promoted a new Company known as Industrial Steel Melting and Extruding Co. Ltd to undertake the manufacture of steel castings and extruded steel products. The Company has obtained an industrial licence to manufacture 3,000 tons of steel castings a year. The other licence for manufacturing 24,000 tons of extruded steel tubes a year is expected soon. In the steel extrusion plant, the Company proposes to manufacture seamless steel tubes for bi-cycles and furniture as well as boiler tubes and steam pipes. Both plants will be located near Ahmedabad, and arrangements have been made to acquire 250,000 square yards of land. Industrial Steel Melting is assured of adequate supplies of power and water. The production of steel castings is expected to start within a year of the capital issue while the steel extrusion plant will take a little longer time. The project is said to have considerable export possibilities. The Company has completed negotiations for importing a steel furnace from Demag-Hamburg. The steel extrusion plant is being secured from Scholeman of Hamburg. The steel

extrusion plant, it is claimed, will be the first of its kind in India. The promoters of the venture are negotiating with financial institutions in India and abroad for securing foreign exchange for the project which is estimated to be of the order of Rs. 50 lakhs. The total capital outlay on the project is estimated around Rs. 1 crore. The Company will have an authorised capital of Rs. 1.25 crores, of which Rs. 50 lakhs is to be issued in the beginning. The promoters, directors and their friends are likely to take up about 51 percent of the issued capital and the balance is likely to be offered for public subscription early next year.

Synthetic Cryolite from Gagalbhai

Reliable reports indicate that the Government of India has approved the application submitted by Gagalbhai Jute Mills Private Ltd, Bombay, seeking permission to set up a new undertaking for manufacturing 3,000 tons of synthetic cryolite, 1,200 tons of aluminium fluoride and 400 tons of sodium fluoride a year. The plant is proposed to be located near Surat in Gujarat State. The Company will need annually 9,000 tons of acid grade flourspar, 4,000 tons of sulphur, 2,500 tons of aluminium hydroxide, 1,700 tons of caustic soda, 2,000 tons of fuel oil and 540 tons of soda ash for manufacturing the required quantities of synthetic cryolite, aluminium fluoride and sodium fluoride. Excepting sulphur, which will have to be imported at an estimated cost of Rs. 6.40 lakhs, all the other raw materials are available from indigenous sources within a radius of 300 kilometres from the site of the proposed plant. The total outlay on capital equipment is estimated at about Rs. 85 lakhs and the foreign exchange component of plant and equipment at Rs. 55 lakhs, of which Rs. 54 lakhs will be from the sterling area and Rs. 1 lakh from the dollar and hard currency areas. The sponsors of the project propose to meet their requirements of foreign exchange by way of loan from the Industrial Credit and Investment Corporation of India. The firm does not propose to have any foreign collaboration, but it will engage for some time the services of three foreign experts on a salary basis. The project is claimed to be the first of its kind in India. At present, synthetic cryolite and aluminium fluoride are not indigenously manufactured, so they have to be imported from abroad. The total requirements of aluminium fluoride and cryolite in 1961 are estimated around 720 tons and 900 tons, respectively. These are expected to increase to 2,000 tons and 2,500 tons, respectively, in 1962 and further to 6,000 tons and 7,500 tons in 1965-66. When the proposed plant goes into full production, the factory will have an annual turnover of Rs. 50 lakhs and that would be the saving in foreign exchange. Since India's demand for cryolite and aluminium fluoride in 1965-66 will far exceed the capacity applied for by Gagalbhai Jute Mills Private Ltd, the Development Wing thinks that there is scope for setting up three more economic units in other parts of the country.

Industrial Furnaces from Khandelwal

The Khandelwal Udyog Ltd, Bombay, belonging to the Khandelwal group, is likely to enter the market shortly to raise Rs. 25 lakhs through the issue of equity shares to finance its project for manufacturing industrial furnaces. The Company has concluded a technical collaboration agreement with Ing. F. Ferre and Company, S.p.A. of Milan. The Italian firm, which is collaborating in the venture, is said to be one of the leading furnace manufacturers, and its equipment is being manufactured in other European countries under licence. The manufacturing programme of Khandelwal Udyog includes both electric and combustion furnaces designed to serve the growing requirements of the engineering, metallurgical, glass and ceramic industries. The range of production will cover various types of furnaces, including the bell-type furnaces for the bright annealing of wires and treatment of continuous automatic lines for heat It is expected that the major portion of the furnaces will be manufactured indigenously with the exception of the automatic controls and instrumentation. When in full production, the annual turnover of furnaces will be worth about Rs. 25 lakhs a year.

Cochin Plantations Profit Up

The working of the Cochin Plantations Ltd for the year ended April 1961, shows a net profit of Rs. 63,913, against Rs. 689 in the previous year. With Rs. 1,480 brought forward from the previous year, the total comes to Rs. 65,393. Out of this, taxation provision is allocated Rs. 45,000 (against Rs. 18,000). The proposed dividend of 6 percent will be carried forward. During the year, Cochin Plantations harvested a coffee crop of 2,348 bushels and

a cardamom crop of 16,936 lbs. The 1961-62 coffee crop is estimated at 2,500 bushels and the cardamom crop at 12,500 lbs.

Cloth Stocks with Mills Rise

Conditions in the cotton piecegoods market in Bombay continue to be extremely dull. The pre-Diwali demand for cloth is reported to have been unusually poor this year. Apart from the heavy damage caused by floods in several parts of India, the continued slackness in cloth offtake over the past many months is attributed largely to consumer resistance to higher prices and the production of numerous unwanted varieties by the mills in order to circumvent the price stamping scheme. Enquiries with the wholesale trade indicate that mills have been gradually reducing their prices with a view to stimulating offtake. Recently, mills are said to have offered certain varieties of cloth at 5 percent to 8 percent below the stamped prices, but offtake continues to be poor. Meanwhile, cloth stocks with the mills continue to rise and the September-end figure of 441,700 bales (1,500 yards each) shows a sharp increase of 74,400 bales over the previous month-end figure of 367,300 bales. The unsold stocks are up from 162,460 bales to 222,700 bales, and there is an increase of 14,100 bales from 204,900 bales to 219,000 bales under the "sold but not lifted" category. The September stocks are the highest for two years, and they are up by 30,200 bales over the 1960 highest level of 411,500 bales in December. The mounting stocks appear to have affected production. The provisional figure of the mill cloth output in September is placed at 421 million yards, against 440 million yards in August. The September figure raises the total production for the January-September period to 3,854 million yards, against 3,762 million yards in the corresponding period of 1960.

Oilseed Prices Rise

Mustardseed futures (November contract) in Delhi, which were quoted around Rs. 31.80 on 11th October, rose to Rs. 35 a 40 kilograms by 24th October when the Forward Markets Commission directed the recognised associations trading in mustardseed to impose special margins and abolish the free limits in order to check the rising trend in prices. In Delhi, members holding the "long" position up to 100 units (4,000 kilograms each) were asked to deposit a margin of Rs. 2,500 a unit when the November contract closed at Rs. 33 a 40 kilograms. The rate of deposit was to be Rs. 3,360 if the "long" position exceeded 100 units, and during the delivery period the deposit was to be Rs. 3,300 a unit irrespective of the position held. Announcing the imposition of the margin, the Commission said that the rise in prices was due to the deliberate attempt of some operators to rig up the rates. It apprehended that this movement, if left unchecked, might well result in a squeeze in the November delivery in rapeseed and mustardseed and might also upset the overall stability in oilseeds in general and groundnut in particular. The Commission also warned the trade against unhealthy speculation in groundnut.

While mustardseed futures reacted on considerable nervous bull liquidation after the announcement of penal margins—the November contract in Delhi touched a low of Rs. 29.80 on 28th October—groundnut futures recorded an impressive rise, thereby indicating that bulls in mustardseeds had turned their attention to groundnut. In Bombay, groundnut futures (January contract) which were marked down to a low of Rs. 195.37 on 17th October were bid up to Rs. 211 a 250 kilograms in kerb dealings on 27th October. Anticipating official intervention in the market, the board of the Bombay Oilseeds and Oils Exchange met on 27th October to devise measures to check the runaway movement in prices. The board suggested to the Commission that a maximum limit of Rs. 2 a 250 kilograms be placed on the daily rise in groundnut futures if the price rose above Rs. 210. Meanwhile, the Commission declared an "emergency" and ordered all the recognised markets in the country trading in groundnut and groundnut oil to suspend trading for two days, namely, on 28th and 30th October—29th October being a Sunday. On 30th October, the Commission ordered the associations to suspend futures trading for another three days up to 2nd November "to enable the Commission to take such steps as may be necessary in the public interest."

But what is really wrong with the oilseeds market about which the Forward Markets Commission seems very much perturbed? True, groundnut futures have recorded an impressive rise from Rs. 195.37 to Rs. 211 since 17th October, the latest quotation being around Rs. 207.50. But this very contract was quoted at Rs. 225 on 7th July when the Commission permitted futures trading in new crop contracts. Technical considerations alone could produce a recovery of the order which the market had experienced recently.

Speculators had gambled too heavily on the prospects of a bumper crop, completely ignoring the record high prices of groundnut which prevailed during the earlier half of the current year. There is little doubt that the new crop groundnut is a bumper one, probably 500,000 tons to 700,000 tons more than the previous crop. But that is precisely why ready groundnut prices have come down by nearly Rs. 70 a 250 kilograms. Surely, the Commission cannot be unaware that even the inferior quality of groundnut had fetched a price of Rs. 280 a 250 kilograms by about the middle of this year. The spot quotation had recently been marked down to around Rs. 210 and it has now recovered to around Rs. 220. The authorities might have been perturbed by the rise in groundnut and groundnut oil prices in spite of the official decision not to release any export quotas for groundnut oil, H.P.S. groundnut and expellers. But groundnut prices are governed essentially by domestic influences, which is why Indian groundnut oil continues to be quoted substantially above the world parity. Besides, the delay in the announcement of export policy can only be a question of official strategy. There can be no doubt about the Government's genuine desire to export groundnut oil and H.P.S. groundnut in order to earn foreign exchange, particularly when the new groundnut crop is known to be substantially larger than in the previous season. To check unhealthy speculation is one thing but to associate every rise in prices with excessive and unhealthy speculation is quite another. It is unfortunate that the Commission should still need to be reminded that markets cannot be made to fluctuate to order.

Recovery in Shipbuilding

Figures published by Lloyd's Register of Shipping for the quarter ended September 1961 indicate that the world shipbuilding industry is gradually recovering from the prolonged slump. Shipyards outside Britain, as a whole, have done better than those in Britain. The vessels under construction in the former were 53,057 tons more than in the previous quarter. After falling steadily from a peak of 7.9 million tons in the quarter ended September 1958, to just under 7 million tons at the end of last year, the total has again been rising this year. According to Lloyd's Register, Japan occupied first place in terms of tonnage under construction, followed by West Germany and Britain. In Japan, the work in hand is at its highest level since the start of 1960. The countries whose tonnage under construction increased during the quarter are West Germany, Italy, France, Poland, Yugoslavia, Denmark, Spain, Finland and Australia. The figures for Poland and Yugoslavia are the highest they have ever recorded. Contrasted with the recovery of the world shipbuilding industry, the prospects for U.K. shipyards are bleaker than ever before. The tonnage under construction in the latter totalled 237 ships of 1,550,857 gross tons. This is 63,205 gross tons less than in the previous quarter and the lowest figure since September 1945. It represents a fall of 34 percent from the highest postwar figure of 2,345,408 gross tons at the beginning of 1958. In contrast, the total of all other countries, which rose during the past quarter, shows a fall of only 9 percent from the peak figure of 7,906,658 tons in September 1958. At the end of September 1961, the tonnage launched in Britain was the lowest since March 1948. Explaining this, Lloyd's Register says that it is partly due to the incidence of a high figure in the previous quarter and partly to the low level of tonnage commenced last year. But the most depressing news is that the tonnage being built abroad for registration in Britain rose during the quarter from 693,471 tons to a record figure of 762,719 tons, thereby making her the world's largest importer of ships. Uncompetitive prices and slower deliveries are undoubtedly responsible for Britain's unenviable position.

Making Optical Glass

The optical glass industry is not yet well developed, and India still has to obtain a large part of her requirements from abroad. Explaining the slowness of the growth, Dr. Atma Ram, director of the Central Glass and Ceramic Research Institute, in his Shanti Swarup Bhatnagar Memorial Lecture delivered recently at the National Institute of Sciences of India, New Delhi, said that two factors have affected the industry's development. Firstly, the local demand is too small to undertake the manufacture on a commercial scale of a product which is technically very complex. Secondly, foreign technical collaboration in this field is usually difficult to obtain. Realising the strategic value of the industry, the Indian Government has wanted to develop local manufacture for a long time, but its negotiations for technical collaboration with almost all optical glass-manufacturing firms, particularly in the U.K., East and West Germany, France and Japan, have not succeeded. Only, recently, Russia has offered

assistance for putting up a factory for optical and ophthalmic glass.

Meanwhile, the Central Glass and Ceramic Research Institute has been asked to produce such glass, using one of the less expensive processes. The Institute had to undertake a survey of the raw materials used. It discovered that except for some items, such as soda ash, potassium carbonate, borax, boric acid and barium carbonate, the other chemicals and raw materials required are available in the country. The Institute also had to design and manufacture all the equipment, such as the stirring machine, pot-lifting carriage and various other gadgets. Experience during the last few months of actual production of some major types of glass shows that with the methods adopted and the equipment used, the yield and quality are satisfactory. But it is difficult to say whether the Institute's venture is profitable by commercial standards, Dr. Atma Ram said. Optical glass is a strategic material, and not an item of mass production. The Institute's plant has an annual capacity of 15 tons to 20 tons of various types of glass, but the demand it is required to meet amounts to only about 3 tons a year. The cost of production, however, is not higher than that estimated in the various project reports prepared by expert teams. "It is not generally appreciated that optical glass manufacture by itself is not a fortune-making business, and without reflecting on the business acumen of optical glass-makers, it would not be far from the truth to say that they earn their profits from other items of manufacture and not from optical glass. Some of them are also consumers of optical glass as instrument-makers, while some produce the glass as one of several other items because it bestows a special and enviable prestige on the manufacturer."

Concessions to Khandasari Producers

A number of restrictions it imposed on the khandasari industry when sugarcane was in short supply have been lifted by the U.P. Government. Some fresh concessions have also been announced. The licence fee for khandasari units has been reduced to one-third of the prevailing rates, which are Rs. 300 for a power-crusher, Rs. 200 for a belt crusher, Rs. 100 for a power-driven centrifugal crusher and Rs. 10 for a hand-driven centrifugal crusher. The purchase tax of 6nP a maund has been abolished, as also the commission payable by licensed units to the cane development councils. It is hoped that as a result of these measures, sugarcane rendered surplus by the 10 percent cut imposed on mill production, would be fully used. The quantity of cane crushed by the U.P. factories last year was 400 million maunds. This has now been reduced to 360 million maunds, while the quantity available is estimated at 440 million maunds.

The problems of the khandasari industry were discussed at a seminar convened by the Planning and Action Research Institute in Lucknow, when its president, Mr. S. M. Bashir, made a number of suggestions to stabilise the industry. At present, the National Small Scale Industries Corporation has included only the cane crusher and a few other items in its scheme of hire-purchase. Mr. Bashir wanted the entire khandasari plant to be covered by the scheme. The existing excise duty on the industry should be lifted, he said. At the moment, the Factory Act is applicable to the industry. This places the rural units in an anomalous position, so the applicability of the Act needs to be suitably restricted. Mr. S. N. Gundu Rao, director of the National Sugar Institute, Kanpur, pointed out that in spite of many improvements made in khandasari production, only 60 percent of the sugar present in the cane is recovered, and 40 percent is wasted. Of this 40 percent, about 18 percent is lost in bagasse, 9 percent in molasses and the rest in other ways such as inversion, caramelisation, and filtration. Although the khandasari industry was formerly confined to Uttar Pradesh, 45 units have now been established in other States.

Another Cement Factory in U.P.

While declaring open the new Regional Office of the Geological Survey of India in Lucknow, the U.P. Governor, Dr. B. Ramakrishna Rao, declared that a second cement factory would be established in western U.P. in addition to the one in Churk, because of the discovery of large limestone reserves in Garhwal and Dehra Dun. The Central Minister for Mines and Oil, Mr. K. D. Malaviya, said that the work done by the Oil and Natural Gas Commission in Bareilly, Badaun and Shahjahanpur areas indicated structures which had to be tested by more drilling. The Commission, operating in collaboration with a West German team, had met with some success in certain areas of eastern U.P. According to him, the search for oil in the Himalayan foothills, although not en-

couraging so far, was not without hope. With a little luck, he said, the survey teams operating on the land surface and in the air with aero-nanometer should be able to strike oil in U.P. by 1963. He was distressed by the poor response from post-graduates to the Government's training scheme in geological mining. At present, the Government offered a scholarship of Rs. 150 a month for post-graduate students, but very few candidates were forthcoming. Even the few who did, left after a few months, presumably because the training camps were located in jungles, far away from cinemas and other attractions of city life. The Minister said that if the position did not improve, the Government would have to recruit undergraduates.

Wages and Productivity

Speaking at the annual general meeting of the Cochin Chamber of Commerce in Cochin on Friday, Mr. W. H. Nicoll, president, said that the most disconcerting feature of the past year in Kerala was the rise in the cost of living index. There are many reasons for this increase, but the main one is that money is being pumped into the economy by wage increases and bonus payments which are entirely unrelated to productivity. Labour in Kerala frequently obtains wage increases through an escalator clause based on the cost of living index figures which are issued from month to month. In many industries, bonus is fixed on an ad hoc basis without reference to productivity or profits. Mr. Nicoll said that where labour costs form a high percentage of prime costs, they are a major problem for employers who "cannot keep pace without increasing their selling prices to the public." Employers are constantly exhorted to produce and export more. But they are impeded by labour legislation which would be regarded as advanced even in a more developed economy than India's. The chapter on labour policy in the third plan admits that no real advance in the standard of living of workers is possible without a steady increase in productivity. Workers should not, therefore, resist the progress of rationalisation.

CORRESPONDENCE GROWTH OF INSURANCE IN INDIA

(To THE EDITOR OF "CAPITAL")

Sir,

In the article published in *Capital* of 12th October, Mr. G. C. Bhattacharjya compares the general index of insurance business with the index of industrial production, indicating again that most insurance executives, while advocating the popularising of general insurance with the masses and in the countryside, continue to be dominated in their thinking by the contributions of medium and large-sized industry and trade to premiums. Indeed Indian business, apart from motor insurance, is based on premiums from this source; premiums from small industry and personal insurance are negligible.

I feel, therefore, that a proper comparison could only be made with the gross national income, and, again, only if the index of insurance business expands more rapidly than gross national income would it be true to say that general insurance is serving new fields. It is a paradox that the greater the degree of industrialisation in a country, the higher the proportion of general insurance business drawn from personal insurance of one sort or another, such as householders, motor-car liability, personal accident and negligence insurance. The whole field of negligence insurance is virtually untapped in India. Mr. Bhattacharjya's conclusions and suggestions about the introduction and selling of newer types of cover are indisputable and will have the support of the entire industry. I agree with him that the Insurance Association of India should conduct an advertisement campaign for popularising general insurance, and this campaign should be directed at the small industrialist or trader and the individual.

The method suggested by Mr. Bhattacharjya for amending the expense ratio calculations is impracticable. For, if a company is developing, the development expenditure would continue to rise annually, and the spreading of this expenditure over a 10-year period will not have any effect whatever on the quantum of expenses once the 10-year cycle is established. The general consensus of opinion in insurance circles is that the expense ratio provisions of the Insurance (Amendment) Act, 1938, have failed to attain their implicit objective, but the industry has so far been unable to find an agreed and practicable formula to replace these provisions. The best solution is, as is very often the case, the simplest, i.e., a test of solvency. Instead of this, the industry is burdened with layer upon layer of common administrative costs allegedly to police itself. In my view, one of

the elementary steps that should be taken is to transfer the Controller's office from Simla to Bombay and to post Assistant Controllers in Calcutta and Madras. These simple steps will have a much more salutary effect on the behaviour of the recalcitrant companies than any Codes of Conduct or rules of behaviour or other schemes.

The branch structure suggested by Mr. Bhattacharjya is typical of the empty theoretical ideas so prevalent today. Apart from the fact that the Cell leaders, Assistant Managers (2) Deputy Managers (3) and Manager (1) would all have to be trained personnel, a commodity in short supply, the proposed branch organisation could only be afforded by the very largest units operating in the country and again only the cities of Calcutta and Bombay could provide sufficient business to support such an office. The real problem—one which neither the industry nor the Government has yet faced squarely—is that there are far too many companies for the volume of business available. The type of streamlined organisation which Mr. Bhattacharjya has in mind can only come about and the benefits of general insurance become available to the general mass of people if there are no more than about 30 groups of companies operating in the country. I do not necessarily advocate that the small companies should be wound up, but it should be possible for the Government and for sensible leaders of the general insurance industry to persuade themselves and the smaller companies to work in groups. In this way, the overseas companies have already, by force of circumstance, been reduced to less than 15 distinct working groups. The Government companies too have taken the practical step of operating as a unit. They have the advantage, however, of not having a diffused ownership. The take-overs and mergers lately common in the U.K. are not practicable here as nearly every Indian insurance company can be identified with one or other of the large industrial groups. The take-over of such a company may be the acquisition of nothing as the original owners would merely put their business on the market.

Historically, Indian insurance has been dominated by one company and the recent emergence of the Government units has led to a situation where the medium-sized companies are being rubbed out between them. These medium-sized companies should take stock of the position and rapidly come to mutual arrangements including the smaller companies, so that from among them three or four large units emerge. A half-dozen Indian companies with assets of over Rs. 5 crores each and net premium incomes of Rs. 2 crores or Rs. 2.5 crores will have a stabilising influence and contribute to ending the present unseemly competition.

Yours etcetera,
R. K. SETH

Calcutta, 21st October.

AN AGRICULTURAL BUREAU

WE are glad to see that the Viceroy has acted on the suggestion, which has been persistently put forward in *Capital* for the establishment of an Imperial Agricultural Bureau. Hitherto the so-called Imperial Department of Agriculture have been little better than a farce, being only statistical machines of doubtful value. Of course, everything depends upon the man who is selected to control the department, and we think, we may rely upon Lord Curzon to select the best man available. If no one in the ranks of the Civil Service comes up to the requirements, why not go further afield. Europe and America are bristling with a necessary corollary to the above is a Commercial Department and the superintendent of a common-sense, tactful, and fairly young official.

Now, however, that the Imperial Agricultural Bureau, for which we have so long pleaded, is about to be called into existence by Lord Curzon, one of the first things that will be taken in hand in Assam, will be the introduction of the best species of reha plants, and the instructing of the ryots how to treat them. I get the best results. Mr. Hamilton, in his experiments in cultivation, with the best plan he could obtain, got four crops per annum, and this would be the normal yield in ordinary seasons. He is now in possession of the results obtained by a planter friend who put six acres under reha by way of experiment, at Mr. Hamilton's suggestion. An acre yielded ten hundredweight of fibre in the second year and the estimated cost per ton (inclusive of the merchant's profit) of the reha fibre, decorticated, degummed, bleached and ready for the spinner, is not more than £10 per ton, which is considerably less than the price of fine jute. And considering the beauty, the quality, and the strength of the reha fibre, there is no comparison between it and jute on these points. But before reha can become an article of commerce and in regular supply, we are a considerable way off from this state of matters yet, but the reha manufacture will be one of the important industries of India in the near future, does not admit of the slightest doubt.

A Ditcher's Diary

NOT WISHING TO EMULATE THE EMPLOYER WHO pointed out to his secretary that although he admitted to having many faults, being wrong was not one of them, I shall content myself with saying that I have been known to be right when I have made the occasional prediction. Not that this is always gratifying; there are times when I would have enjoyed being wrong, as, for example, when I prophesied round about this time last year that the 1960 Capital Christmas Toy Fund collection would be down on that of 1959. I gave my reasons; they were all economic ones. I also asked my readers not to let such considerations weigh too heavily with them because the calls on the Fund increase year by year with stubborn persistence. In fact, last year's total came to Rs. 3,548.50, compared with 1959's Rs. 3,809.57. For some reason 1958 was our best year; Rs. 4,511.50 was subscribed then. The 1960 collection was higher than the 1957 one of Rs. 3,215.63, but otherwise, as will be seen from these figures, it was the lowest for some years. The balance held over from the previous year was only Rs. 385.05, and the grand total of Rs. 3,933.55 was divided between 10,008 children. So far we have been able to offset smaller collections by spreading the money more thinly. But clearly this sort of thing has its limits, and these cannot be far off now. That is why I am particularly asking all readers this year to make a special effort to reverse this trend of dwindling contributions. I know all about the other calls on one's charity these days, and I can sympathise with the sentiments once expressed in Mr. Bob Hope's immortal words: "How can you expect money from me when I have a wife and government to support?" But this is a small charity of long standing and serving a cause which has special relevance to the spirit of Christmas. If those who gave last time will raise their cheques by just a small amount, and those who missed, or forgot, will make a point of sending us something this year, we shall be able to increase our total collection and the number of happy children on Christmas morning. I know I have no need to remind readers that we make no distinction of colour, race or creed. The only qualification we ask of our children is that they should be poor and needy. As you can imagine, we do not run short of candidates on that account. Please send your cheques, postal orders, or cash, to Capital Christmas Toy Fund, 5 Mission Row, Calcutta.

LIKE MOST PEOPLE, I HAVE MY OWN IDEAS OF WHAT hotels ought to be; and I am just as prepared as any other reasonable mortal to face the fact that either I accept something which falls well short of them, or else stay at home. Usually that is what I do anyway at holiday times, because in my profession days off are about as easy to come by as honest politicians. But the Puja holiday week found me visiting some of northern India's better-known tourist centres, and I can truthfully say that the experience will be as memorable for keeping nowadays as it will for the unrivalled beauty of some of the things I saw. I am well aware that the camera-slung, fat-walleted phenomenon which is now the accepted caricature of the tourist, is regarded throughout the world as fair game for anybody, governments included, but I had

no idea that the attitude towards him in India was in some cases fast sinking to the level of pure brigandage. The first thing which struck me was that to be a carefree tourist in this country it is necessary to be at least a millionaire. The second was that one has to be extraordinarily tenacious in the sight-seeing game to find the time and enthusiasm it calls for during the meagre intervals allowed in the otherwise continual process of dipping one's hand in one's pocket. Especially does this seem so in the hotels. In one I stayed I paid no less than eight separate bills, excluding the bill for the room, in the 12 hours I was there; and five of those hours were spent sleeping. By the time I left I had footed a combined account which would have raised eyebrows in the west end of London, and which covered nothing like the service one gets there. In all, I had three rooms in this hotel before I could get one in which it was possible to sleep. The attitude of the management to my complaints was one of procrastination and indifference; it would have been more honest of them to have relieved me of my money at the door instead of putting up such an unconvincing show of trying to earn it. It now seems to be an accepted custom to put 12½ percent on the bill for service, while at the same time encouraging staffs to expect full tips on all occasions. I am beginning to wonder if some hotel staffs ever get their 12½ percent. Or is this just another tax which the tourist must reconcile himself to paying for the privilege of seeing India? Anyway, it is an irritating nuisance and should be stopped.

TALKING OF TAXES: WHY ARE ROOM RATES QUOTED exclusive of them? This is the practice in Delhi, I noted. And any comment on the fact just evokes that hopeless, slightly contemptuous smile which seems standard nowadays among hotel clerks and receptionists. Outside Delhi, conditions are uniformly worse. For an astronomical fee one is allowed to enjoy the depressing effect of tatty room decorations, electrical appliances which either do not work or else make so much noise it is impossible to sleep, badly cooked food, the constant importuning of shopkeepers, fortune-tellers, and would-be guides, and a deplorable lack of hygiene at all strategic points. In one hotel I stayed I spent my breakfast time dislodging a family of rats which had taken up residence in an old radio-gram in the dining room. In that same establishment it was impossible to get a hot bath without first warning the receptionist; the manager, a civil servant, did not appear the whole three days I was in residence; and the bell pushes in the bedrooms had apparently been put there for decoration because the only way to raise any service was to put one's head out into the corridor and bawl loudly for it. In fact, the only things in that establishment which were readily forthcoming on demand were the bills, and these were presented with a lack of shame and self-consciousness which made one despair of human nature. It was a Government-run hotel; I never did find out whether Central or State. Apart from this one lapse, I gained the impression that the Union Government at least was trying hard to encourage tourism. I was told that import licences are fairly readily available for motor-cars and essential hotel fittings. Films are in good supply, although not always at fixed prices or

of assured quality, and Prohibition regulations are usually intelligently applied—meaning not applied at all. But on the one occasion I required the services of a Government tourist office I found it abandoned at 11-30 in the morning, except for a child of nine years dressed in a sweaty vest and dirty dhoti, whose command of English was surprisingly good and whose intelligence left me wondering why the Government went to the expense of employing a tourist officer at all. I left the place satisfied, but baffled; why does nobody seem to be interested in what hours junior civil servants keep?

THE GOVERNMENT'S EFFORTS AT PRESERVING ancient monuments I decided were sincere, but lacked thoroughness. Repairs, in places, were tastefully and imaginatively done, but in temples, where foreign tourists unused to walking in bare feet are always asked to remove their shoes, and sometimes, unnecessarily, their socks, the floors were usually dirty and unswept. Obviously not sufficient official control is exercised over their custodians. Labelling tended to be inadequate, and the general layout of museums was comic rather than efficient. The juxtaposition of priceless historical relics with the most appalling Victorian bric-à-brac may have been stimulating for the sense of humour, but was frustrating for anybody who takes his museums seriously. I myself was reminded of how urgently India requires an efficient school of museum management. Official guides I found irritating. They rarely told me what I did not know already, and they seemed as addicted to the pat answer as they were to the acquisition of *baksheesh*. I never found one of these gentlemen who would admit there was something he did not know, or that there was some figure in local history who might have had even faintly human attributes. On one who knew less Indian history than I do, the impact of white lies would undoubtedly have created an altogether incorrect impression of the country's past and those who lived in it. Otherwise, these guides were friendly, obliging, polite, sometimes too energetic and always excessively loquacious. But then, I suppose my ideal guide is the one who answers my questions and nothing more. On the attitude of the local people it is difficult not to bestow excessive praise. Almost without exception they seem to be polite and obliging towards tourists, although one has to accept their addition to *baksheesh* or their love of a favourable bargain as something over which they have little personal control. My chief complaint was their curiosity; the tendency to throng round a stationary car or a sight-seeing tourist, and peer at both with a total absence of hostility, criticism or self-consciousness, can be unnerving for those not used to it. On the roads, of course, one has to start by attributing to them neither common road sense nor any instinct for their own self-preservation. And that applies to their animals as well. It strikes one as a great pity that touring in India should be both expensive and frustrating because few countries in the world have the tourist potential this one has. I finished my tour with the impression that a little imagination, and considerable official discouragement of the idea that the tourist is a willing milch cow to be plundered whenever the opportunity arises, could make India a tourist's paradise. How the country would benefit from a little of the spirit which has put, say, the Swiss at the head of this international industry!

MAKE
COLD
CASH...

India today is caught up in the feverish activity of industrial advancement. Projects are planned... dams are being built... all through the night we hear the ceaseless hum of men and machines at work. In the world of today, the economic development of a nation is gauged by her machines... and the STEEL consumed by them. In dams and bridges, in the railway and automobile industry, in the manufacture of the thousands of consumer goods, STEEL is necessary—absolutely necessary! And so steel has come to be indicative of the economic development of a country, indicative of what a country is worth in cold hard cash.

THE LAW ON INSTIGATING STRIKES

By Mary Sur

A RECENT High Court decision has caused consternation in British trade union ranks, for it has made clear that a trade union member or official is not entirely immune from possible penalty for instigating strikes. In the case of *Rookes v Barnard* and others, three officials of the Association of Engineering and Shipbuilding Draughtsmen have had damages amounting to £7,500 awarded against them for threatening to call a strike in breach of the contractual negotiating procedure at London Airport. The circumstances which led to the case are not unusual in Britain today. A non-unionist had been engaged in the drawing office at London Airport, and certain union officials had threatened to call a "closed shop" strike. As a result, the Airport management had second thoughts and dismissed the objectionable draughtsman, who then brought a claim for damages against the union officials for the loss resulting from his dismissal, and eventually won his case in the High Court.

According to the British Trades Dispute Act of 1906, no action can lie against the funds of a trade union for strike action, and it was generally assumed that this Act gave complete immunity also to officials and members acting on behalf of the union, but the High Court ruling makes it clear that, while the Act prevents officials and members from being sued so as to render the trade union and its funds liable, it affords no defence for individual liability for those who instigate strikes in breach of agreements. Unofficial strikes are the bane of industrial relations in the U.K. these days. There can be no illegal strike there in the sense that a strike may be illegal in India under the Industrial Disputes Act, but a strike in breach of an agreement breaks a contractual obligation, and is, in this sense, illegal. Unofficial strikes are usually also a breach of the union rules which lay down the procedure to be followed before declaring a strike. The High Court decision may make British trade unionists think twice before calling out unofficial strikes, for employers as well as aggrieved workers might sue them for damages in future. In most other countries, unofficial strikes in deliberate breach of a contract between union and employer lay the instigators open to action for damages.

The Indian Position

How does the position compare in India? The Trade Union Act of 1926 declares that no legal proceedings are maintainable in a civil court against a registered trade union, or any of its officers or members, for acts in furtherance of a trade dispute "on the ground only that such act induces some other person to break a contract of employment or that it is in interference with the trade, business or employment of some other person or with the right of some other person to dispose of his capital or his labour as he wills." The operative words seem to be "on the ground only",

for neither officials nor members of a trade union are immune from prosecution for criminal offences such as violence, assault or libel in the furtherance of a trade dispute.

Trade union officials and members in India, therefore, are in a more favourable position in this matter than their counterparts in Britain, but in certain other directions, under the Industrial Disputes Act, certain strikes are illegal, and those instigating them lay themselves open to penalties laid down in the Act. For instigating a strike during the pendency of proceedings before a Labour Court, Tribunal or National Tribunal, or during a period of up to two months after its conclusion, the penalty is imprisonment up to six months or fine up to Rs. 1,000, or both; while for taking part in such an illegal strike, the workmen lay themselves open to a penalty of imprisonment up to one month or fine up to Rs. 50, or both. And special protection is given to persons refusing to take part in an illegal strike. Penalties are similar for a strike during the period when a settlement or award is in operation in any matter covered by the award or settlement. Settlement here means a settlement arrived at during conciliation proceedings. The Bombay Industrial Relations Act goes further and makes a strike illegal if it is in contravention of the terms of a registered agreement.

Peaceful Picketing

While British law specifically allows for peaceful picketing in furtherance of a trade dispute, this is not so in India. The Madras High Court has recently underlined this point in a case preferred by the State against Mr. S. C. Anthony Pillai for instigating a strike among harbour workers. Mr. Pillai was acquitted upon merits, but the Court pointed out that peaceful picketing went beyond the scope of fundamental rights. Section 7 of the Criminal Law (Amendment) Act of 1932 lays down that whoever molests a person to the prejudice of employment or business is punishable with imprisonment up to six months or fine up to Rs. 500, or both. All these penalties, however, are seldom invoked, and it has become common for illegal strikes to be instigated with impunity. State Governments generally take the view that it is not for them to prosecute for illegal strike—the Madras case quoted is rather exceptional—but that the employer may do so if he wishes. Few employers wish to incur the odium of prosecuting their own employees, and so the case usually goes by default. The difference between the British and Indian position is that in the U.K., the law appeared to give immunity to the instigator of unofficial strikes, but in fact does not, while in India the law lays down specific penalties for illegal strikes but non-enforcement, in effect, gives immunity to the instigator.

Money

THE CALCUTTA MONEY MARKET

CALL FUNDS EASIER

Wednesday, 1st November.

THERE has been a fall in the quantity of funds outstanding in the Calcutta money market during the past week. Most of the main sources of demand have reduced their offtake, although only slightly. These include the jute and sugar mills, the engineering and iron and steel industries, and call for accommodation against grains and seeds storage. Only the cotton industry has registered a slight increase in demand. In the inter-bank market, conditions have turned slightly easier and the call rate has been reduced to between 3½ and 4 percent.

In the exchange market, conditions have been active and there has been a fair supply of both tea and gunny bills. Remittance demand has been keener. In the London money market the pound is weak. Closing quotations show losses against all major currencies, with the exception of the Canadian dollar.

BULLION WAS STEADY IN THE PAST WEEK DUE TO the coming Diwali festival. Silver advanced from the previous week's level of Rs. 241.25 to Rs. 242, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 206.42. The London and New York prices were 807/8d and 91.375 cents.

Gold rose in sympathy with silver and the price increased from Rs. 144 to Rs. 145½. The sovereign at Rs. 98.87 showed a gain of 3½p.

DURING THE WEEK ENDED 27TH OCTOBER, GOVERNMENT of India Treasury bills for Rs. 25,76,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 31st October. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 6th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 1st November to 4th November at Rs. 99.391 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 25th October to 28th October amounted to Rs. 35 lakhs.

ACTIVE NOTES DECLINED BY Rs. 21.65 CRORES TO Rs. 1,882.25 crores, according to the return of the Reserve Bank of India for the week ended 27th October, 1961, but the total note issue rose by Rs. 1.31 crores to Rs. 1,919.42 crores. Notes held in the Banking Department consequently increased by Rs. 22.96 crores to Rs. 38.48 crores. Deposits of the Government of India rose by Rs. 14.86 crores to Rs. 64.78 crores while other Government accounts fell by Rs. 8.27 crores to Rs. 20.33 crores. Balances of commercial banks at Rs. 66.37 crores showed a rise of Rs. 1.88 crores. Balances held abroad improved fractionally by Rs. 6 lakhs to Rs. 28.33 crores. Investments declined by Rs. 28 lakhs to Rs. 200.81 crores. Other loans and advances fell from Rs. 135.93 crores to Rs. 129.53 crores, of which advances to scheduled banks against usance bills amounted to Rs. 2.51 crores (Rs. 7.20 crores). Ways and means advances stood at Rs. 62.38 crores, against Rs. 59.45 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 20th October, 1961, shows a drop of Rs. 1.36 crores to Rs. 529.94 crores in total deposits. Investments in Government securities are up by Rs. 8.03 crores to Rs. 257.34 crores, while other authorised investments are down by Rs. 2 lakhs to Rs. 9.24 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 18 lakhs to Rs. 244.70 crores. Cash and balances are, in consequence, shown at Rs. 32.61 crores, or Rs. 1.50 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 20th October, 1961, shows Demand and Time liabilities at Rs. 846.53 crores (Rs. 21.90 crores on account of borrowings from banks) and Rs. 1,136.88 crores (Rs. 18.31 crores), compared with Rs. 841.43 crores (Rs. 21.82 crores) and Rs. 1,135.60 crores (Rs. 18.42 crores) respectively, in the previous week. Cash has risen by Rs. 7.24 crores to Rs. 52.62 crores, while balances with the Reserve Bank have fallen by Rs. 71 lakhs to Rs. 76.46 crores. There is a rise of Rs. 1.26 crores to Rs. 612.89 crores in investments. Advances and bills discounted at Rs. 1,243.19 crores show a drop of Rs. 2.83 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.5 percent and 63.2 percent, against 6.2 percent and 63 percent.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 3-11-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
3-11-61	4-2-62	2,00.00	Rs. 2,500%
27-10-61	28-1-62	2,00.00	Rs. 2,500%
13-10-61	14-1-62	2,00.00	Rs. 2,500%
6-10-61	7-1-62	2,00.00	Rs. 2,500%
29-9-61	30-12-61	2,00.00	Rs. 2,500%
22-9-61	23-12-61	2,00.00	Rs. 2,500%
15-9-61	16-12-61	2,00.00	Rs. 2,400%
31-8-61	1-12-61	2,00.00	Rs. 2,400%
23-8-61	26-11-61	2,00.00	Rs. 2,400%
18-8-61	19-1-61	2,00.00	Rs. 2,400%
11-8-61	12-11-61	2,00.00	Rs. 2,398%

(Monthly Maturities 000's omitted)

November 1961	6,00.00
December 1961	8,00.00
January 1962	6,00.00
February 1962	2,00.00
Total	22,00.00

CLEARING HOUSE RETURNS

Week ended	Calcutta Rs (thousands)	Bombay Rs (thousands)
20-10-61	39,99.00	81,89.69
13-10-61	90,80.00	88,01.13
6-10-61	80,76.00	79,58.16

INDIAN INDUSTRIES FAIR (INTERNATIONAL) 1961 NEW DELHI

To be Inaugurated
on Tuesday, November 14, 1961
(open to public from
November 15, 1961 to January 1, 1962)

ORGANISED BY
THE FEDERATION OF
INDIAN CHAMBERS OF COMMERCE & INDUSTRY
WITH THE ACTIVE SUPPORT OF
THE GOVERNMENT OF INDIA

THE LARGEST INDUSTRY AND TRADE FAIR OF ASIA

INDIAN  STEEL

Calcutta Steel—Rs. 16/56—16/41—16/36—16/62—(16/37).
Dalmia Iron—Rs. 19/13—19/31—19/12—19/19—(19/56).
Escorts—Rs. 24/00—24/00—24/00—24/00—(24/00).
Guest, Keen, Williams—Rs. 40/50—40/50—40/12—40/37—(50/00).
Indian Standard Wagon—Rs. 98/00—101/00—97/50—101/00—(97/00).
Indian Iron & Steel (Pref.)—Rs. 87/50—87/50—86/50—87/50—(87/00).
Indian Malleable Castings (Deid.)—Rs. 2/47—2/50—2/47—2/50—(3/62).
Jay Eng.—Rs. 27/62—28/00—27/56—27/87—(28/25).
Jessop & Co.—Rs. 21/06—21/19—20/84—21/06—(20/69).
J. K. Steel—Rs. 21/75—22/94—21/44—22/50—(17/62).
Do. (New)—Rs. 19/69—20/31—19/50—20/31—(19/69).
Kumardhubi—Rs. 6/75—6/87—6/75—6/81—(6/87).
Marshall's—Rs. 3/94—4/00—3/87—4/00—(4/94).
National Iron & Steel—Rs. 6/12—6/12—6/12—6/12—(6/75).
Textile Machinery (6% Pref.)—Rs. 93/00—93/00—93/00—93/00—(93/00).

INSURANCES

New Asiatic—Rs. 7/06—7/31—6/75—6/94—(4/94).
Ruby General—Rs. 8/41—8/50—8/31—8/50—(8/15).

MISCELLANEOUS

Albion Plywood—Rs. 10/44—10/50—10/31—10/37—(11/81).
Aluminium Corpn.—Rs. 15/44—15/94—15/44—15/94—(18/37).
Angelo Brothers—Rs. 23/25—23/37—23/25—23/37—(19/69).
Associated Battery—Rs. 36/75—36/75—35/87—36/25—(38/00).
Britannia Biscuit—Rs. 60/50—60/50—60/25—60/25—(38/17).
Bharat Nidhi—Rs. 8/37—8/94—8/87—8/94—(10/37).
B. I. Corpn.—Rs. 9/39—9/44—9/75—9/47—(7/25).
Do. (Pref.)—Rs. 108/00—109/00—108/00—109/00—(110/00).
British Paints—Rs. 27/25—27/62—27/25—27/62—(12/81).
Bhartia Sons—Rs. 2/90—2/90—2/90—2/90—(12/81).
Calcutta Tramways—Rs. 11/25—11/25—11/25—11/25—(12/81).
Clive Row Investment—Rs. 8/19—8/19—8/06—8/19—(8/62).
Calcutta Credit Corpn.—Rs. 13/75—13/75—13/75—13/75—(104/00).
Duncan Brothers—Rs. 153/00—153/00—152/00—152/00—(104/00).
Do. (Pref.)—Rs. 53/00—53/00—53/00—53/00—(53/00).
Dr. Paul Lehmann—Rs. 7/50—7/81—7/31—7/81—(15/50).
Electric Construction—Rs. 13/75—14/06—13/75—14/06—(13/75).
Eastern Investment—Rs. 141/00—143/00—141/00—142/00—(134/00).
General Tyres—Rs. 6/31—6/75—6/12—6/40—(12/37).
Goodyear India—Rs. 37/87—39/06—37/87—39/06—(14/31).
Gillanders Arbuthnot—Rs. 14/12—14/31—14/00—14/31—(12/37).
Gwalior Rayon—Rs. 47/75—47/75—47/75—47/75—(41/75).
Hindustan Aluminium—Rs. 13/56—14/06—13/56—13/78—(8/12).

Hindustan Development—Rs. 6/79—6/75—6/50—6/72—(15/69).
Hindustan Gas—Rs. 20/00—20/25—20/00—20/25—(15/69).
Hindustan Lever—Rs. 52/75—53/25—52/75—53/25—(44/75).
Hindustan Wire Products—Rs. 5/75—5/75—5/75—5/75—(25/37).
Hindustan Pilkington Glass—Rs. 25/37—25/37—25/37—25/37—(27/00).
Hindustan Twines—Rs. 18/12—18/12—18/12—18/37—(11/41).
Honor Miller—Rs. 6/15—6/31—6/15—6/19—(7/00).
Imperial Tobacco—Rs. 11/87—12/06—11/75—11/87—(11/41).
Isaac Holdens—Rs. 19/19—19/25—19/00—19/12—(20/68).
Ivan Jones—Rs. 1/16—1/16—1/16—1/16—(2/00).
Indian Plastics—Rs. 8/75—8/87—8/75—8/87—(10/81).
Indian Wood Products—Rs. 31/50—31/62—31/50—31/62—(27/35).
Jardine Henderson—Rs. 61/00—66/00—60/50—65/00—(68/50).
Jay Shree Industries—Rs. 18/37—19/00—18/00—18/87—(17/25).
J. K. Synthetics—Rs. 12/97—14/00—12/94—13/90—(28/08).
Kesoram Industries—Rs. 31/25—32/12—30/94—31/81—(28/08).

Do. (7% Pref.)—Rs. 98/00—100/50—98/00—99/50—(89/00).
Macfarlane & Co.—Rs. 7/50—7/50—7/50—7/50—(3/75).
Martin Burn—Rs. 28/12—28/94—28/12—28/75—(26/50).
Metal Box—Rs. 56/75—65/00—56/75—65/00—(45/12).
McLeod (2nd Pref.)—Rs. 60/00—60/00—60/00—60/00—(62/50).
National Insulated Cable—Rs. 37/56—38/00—37/44—38/00—(31/62).
National Tobacco—Rs. 16/00—16/37—16/00—16/31—(20/44).
National Rubber Manfg.—Rs. 14/81—15/00—14/75—14/87—(16/31).
National Pipes & Tubes—Rs. 27/81—28/00—27/81—27/94—(18/81).
National Rolling & Steel Ropes—Rs. 21/81—21/81—21/81—21/81—(17/94).
Phillips Carbon Black—Rs. 20/00—20/00—19/75—19/87—(18/12).
Phillips India—Rs. 32/31—32/62—32/12—32/50—(28/00).
Rallis India—Rs. 152/00—154/00—151/00—152/50—(121/50).
Rohtas Industries ("B" Pref.)—Rs. 53/00—53/00—52/50—52/50—(58/00).
Sen-Raleigh Industries (Pref.)—Rs. 148/00—149/00—145/00—145/00—(70/25).
Shaw Wallace—Rs. 22/56—22/62—22/25—22/25—(24/81).
Do. (Pref.)—Rs. 64/00—64/50—64/00—64/50—(70/25).

Sirsilk—Rs. 11/00—11/06—10/25—10/37—(9/31).
Union Carbide—Rs. 51/12—51/12—50/87—50/87—(50/87).
Universal Cables—Rs. 10/31—10/44—10/12—10/31—(12/37).
Do. (New)—Rs. 5/33—5/53—5/34—5/50—(12/37).
Usha Martin Black—Rs. 6/50—8/31—6/50—8/31—(12/37).
Walford Transport—Rs. 3/31—3/31—3/31—3/31—(2/75).

OILS

Indo-Burma Petroleum—Rs. 27/50—27/75—27/50—27/50—(24/06).
Do. (Pref.)—Rs. 82/00—82/00—82/00—82/00—(87/09).

Tide Water—Rs. 20/31—20/31—20/19—20/25—(16/35).

PAPERS

Ashok—Rs. 3/75—3/75—3/50—3/50—(95/00).
Bengal—Rs. 96/50—97/00—96/50—97/00—(95/00).
Bullapur—Rs. 42/25—42/37—41/87—41/87—(19/44).
India Paper Mills—Rs. 18/12—18/12—18/00—18/00—(19/44).
Orient (1st Pref.)—Rs. 79/00—79/00—79/00—79/00—(97/00).
Seshasayee—Rs. 8/31—8/50—8/25—8/50—(18/56).
Sipur—Rs. 16/50—16/87—16/37—16/56—(18/56).
Shree Gopal (2nd Pref.)—Rs. 97/00—97/00—97/00—97/00—(97/00).
Star—Rs. 10/75—11/25—10/75—11/06—(13/12).
Straw Products—Rs. 9/00—9/06—8/94—8/94—(36/94).
Titagur—Rs. 35/50—35/87—34/62—34/87—(36/94).

REAL PROPERTIES

Bengal Bonded Warehouse ("C" share)—Rs. 87/00—87/00—87/00—87/00—(99/00).
Midnapore Zemindary—Rs. 10/75—11/00—10/75—11/00—(12/50).
Sahu Properties—Rs. 2/62—2/62—2/56—2/56—(2/59).

61% Bengal Coal—Rs. 105/00—105/00—105/00—105/00—(105/00).

London Market

STOCK MARKET ERRATIC INDUSTRIALS AND GOLD SHARES IMPROVE

London, 1st November.

THE stock market gave a rather erratic performance during the past week, but in spite of a long string of adverse news, the general undertone has not been unsatisfactory. Gilt-edged securities recorded further gains, although the recent sustained advance was brought to a halt at the end of the week, while industrials developed a better trend and gold shares scored further improvements. Gilt-edged securities scored a further sharp advance early in the week following renewed and heavy buying, some of it reported to be on behalf of overseas investors. The demand eased off later, however, and in very much quieter conditions, prices came back from their best levels. Dollar stocks moved within narrow limits in line with fluctuations on Wall Street, while the feature of foreign bonds was an advance in Greeks, following the result of the Greek general election. Banking and insurance shares attracted some buyers, but hire-purchase finance shares were out of the picture, and property shares moved irregularly. Business in the industrial market remained at a low level. However, the recent selling appeared to have dried up and prices responded to a small selective demand. Among good features, Unilever moved up on the formal application for a New York quotation and the sub-division of the £1 shares into 5s shares. Gold shares responded to favourable comment and the recent rise in South Africa's foreign exchange reserves, and showed useful gains. Coppers also moved up. Tin shares advanced after their recent setback. Oils rallied after earlier dullness. The further fall in the rubber commodity price which followed the news that the U.K. is to make unrestricted releases from the stockpile depressed rubber shares which recorded widespread and appreciable falls. Tea shares were quiet and narrowly irregular.

NAMES AND DATES

Admiral Sir Matthew Slattery, chairman of British Overseas Airways Corporation, arrived in Calcutta on 31st October on a two-week fact-finding tour of India.

New Delhi

U.S. BUSINESS MEN DISCUSS INVESTMENT OPPORTUNITIES IN INDIA

OFFICIAL EXPLANATIONS CONSIDERED LIKELY TO HELP ALLAY DOUBTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE round table conference of Business International held here last week has been described as an unqualified success. It is claimed that it was a triumph of persuasive reasoning over the loose talk generally indulged in to explain away India's policies and programmes. The Government representatives made no new announcement. Nor did they promise to amend the existing laws governing trade, industrialisation, fiscal policies or labour. But the fact that the U.S. business men were in a critical mood could be judged from the questions they asked.

The Prime Minister, for instance, was asked:

"(i) Could the Government give us some guidance as to what is meant when a Government of India official states that business men should make decisions in the national interest or for the social good? Are not most decisions that would increase manufacturing efficiency (and, therefore, increase profits) in the national interest?"

"(ii) You defined a capitalist society the other day as an acquisitive society interested solely in 'grab'. Would you put enlightened industrial countries, such as the U.S.A. and the U.K., in this category? In your view, does the profit motive make a private industrial corporation incapable of voluntarily acting with a social conscience in the national (or international) interest?"

"(iii) In your view, is it possible that the profit motive could cause long-established, reputable companies to operate in the best interests of society in order to advance their own, long-range, selfish interest? Are profits per se immoral?"

"(iv) India is beset with tremendous problems, one of which is the rapid increase in productive efficiency. At the same time, it has a huge, underemployed population. Do you believe that inefficient industry, such as the cottage industry, should be given incentives while the development of highly efficient, mass-producing industries are not?"

"(v) Would you care to comment on the vitality shown by the private sector during the second plan, in spite of all the controls maintained by the Government of India and the fact that the second plan called originally for a much greater public investment than private investment? Does this suggest that more reliance should be placed on the private sector in the future than has so far been placed on it?"

"(vi) Could the Prime Minister describe the kind of society he hopes India will evolve, and indicate what position the private sector will have in that society?"

Joint Ventures

The Ministry of Finance was asked the following questions:

"(i) The present policy of the Government of India is to limit foreign investors in most cases to a minority equity position in joint ventures in India. Would the Government comment on the possibility of permitting higher foreign equity positions as a method of increasing the country's foreign exchange reserves?"

"(ii) What can be done to increase taxes on the overwhelming mass of the Indian people in order to hold consumption at present levels and increase the resources available for investment? Is it true that land taxes must be established by the States rather than the Centre?"

"(iii) What policy will the Government of India pursue in the development of its mineral resources, i.e., iron ore, manganese, coal, etcetera? Will the trend be towards increasing nationalism or greater freedom for international co-operation in the development of these resources?"

"(iv) How does India propose to handle the problem of its Middle Eastern rupee accumulations in the light of Kuwait's recent decision to make its currency freely convertible?"

"(v) In what ways will the new income tax law, taking effect from 1st April, 1962, change the incidence of taxation on (a) Indian companies, (b) inter-corporate dividends, (c) royalties and free remittances to foreign firms, and (d) personal income?"

"(vi) Could the Government enlighten us as to the philosophy underlying India's corporate tax rates, including taxes on dividends remitted, which makes them so much higher than those of other developing nations?"

"(vii) Is it possible or desirable to collect income tax from the vast proportion of the population that now pays no income tax at all?"

"(viii) It is commonly stated that the extremely high personal income tax rates have led to widespread tax evasion and to the refusal of many people to use bank accounts and receive payment

by cheques. To the extent that these observations are true, what can be done about this problem?"

"(ix) A common complaint among investors is that India discourages the use of technical assistance in India by the heavy taxation of technical assistance fees and royalties. Would the Government care to comment on this complaint and its implications for Indian development?"

"(x) If a foreign firm contributes know-how for equity, is there any Indian tax on the equity payment to the foreign investor?"

Official Delays

The Ministry of Commerce and Industry was asked:

"(i) Could the Government let us know its views concerning the sale of part or all of the equity of State-owned plants to foreign investors, assuming a workable arrangement can be negotiated as to the price?"

"(ii) Some firms have felt that whenever they refuse to accept 'suggestions' by the Government of India, they are harassed until they do. These executives say that 'the Government of India sits on its hands', i.e., it does not act speedily on any of the applications that a firm submits if it has not adopted these suggestions. Could the Ministry give us the benefit of their thoughts on this subject?"

"(iii) The most common complaint of business men in India is that 'practically everything' needs to be approved by the Government of India, that because of the overload of work on key officials, decisions are delayed and business planning suffers. What can be done to speed up decisions and to reduce the number of matters on which Government approval is required?"

"(iv) A major reason why foreign investors have only trickled into India is the fact that growth is an inherent law of industrial corporations and in India freedom to grow is restricted. A firm that must expand to meet new competition or meet new consumer demand may be denied the right to do so—or receive it after such a delay that it does no good. Would the Government let us know its views about this basic barrier to the inflow of direct, foreign investment?"

"(v) There is a feeling among many private firms that too much time and money is wasted by both private investors and Government officials in the examination of details of a new investment project. They also feel that some points are examined several times. Could the Government comment on why the matter of capital imports for a new project must be approved by three different groups: the Licensing Committee, the Capital Goods Committee and the Controller of Imports and Exports?"

"(vi) Another triple check is maintained on the foreign financing aspect of a new project: by the Licensing Committee, the Controller of Capital Issues and the Reserve Bank. Could not this aspect be ruled upon only once?"

"(vii) There are rumours that amendments to the patent law will extend the law's compulsory licensing aspect to all products. Are there any plans to make such amendments?"

"(viii) Is it true that a number of wholly-owned foreign firms are now being pressured by the Government of India to sell at least 26 percent of their equity to Indian nationals? Is this not a mild form of expropriation?"

"(ix) Will the private sector be permitted to undertake development of the chemical industry based on petroleum and natural gas raw materials and refinery wastes from the new Government-owned refineries?"

"(x) Does the Government feel that the wording of the Industries (Development and Regulation) Act creates too much fear in the minds of prospective investors in India? If so, would it not be advisable to eliminate Section 18-G of this law?"

"(xi) What assurance can an investor secure from the Government of India that he will be permitted to import a minimum quantity of semi-manufactured components and raw materials if he helps establish a new plant in India?"

"(xii) Could the Government give us their present thinking on linking import licences for a company to that company's exports?"

"(xiii) Are compulsory, firm-by-firm export targets to be established? What penalties will be applied if a firm fails to meet its export target?"

"(xiv) Are the activities of the State Trading Corporation likely to increase in the future, particularly with reference to internal and international marketing fields now handled by the private sector?"

"(xv) Does the Government think that barter transactions are good for the Indian economy?"

"(xvi) If a firm has a choice between more efficient production that would reduce its labour force and less efficient production with a larger labour force, which alternative in your opinion should be taken?"

"(xvii) Would the Government of India prefer that a firm attempt to reduce its costs of production but at the same time increase the amount of imported raw materials in the product, or would it prefer that the firm increase the indigenous raw material content and raise costs of production? How is India to increase her export potential for manufactured goods if Indian products cost more to produce than do those of competing countries?"

The Transport Problem

The Ministry of Transport and the Ministry of Railways were asked the following questions:

"(i) Many observers have expressed the opinion that the weakest link on the third plan is in transport, that the growing demands on the transport system might possibly lead to a breakdown in the transport system as a whole. Would the Government care to comment on this opinion?"

"(ii) Could the Government give us the benefit of its thinking concerning the effort by the Government of India to keep prices of many products the same throughout the country? Does not this lead to decentralisation of industry that adds strains to the railway system, and if so, what can be done to mitigate this problem?"

"(iii) Trains in India are now running more slowly than they did a decade ago. It would be helpful to know why this is so and what can be done to speed up the movement of freight?"

"(iv) It is generally believed by many analysts of Indian transport problems that the Indian railways have exerted considerable pressure to slow the development of highway construction and the development of road transport. Would the Government care to comment on the pros and cons of competition between rail and road traffic, and on the possibility that demands on the overall transport system are so great that neither rail nor road will suffer from insufficient use for many years to come?"

Potentialities of Indian Market

U.S. business men were fully posted with the potentialities of the Indian market. India offers a protected market, which is expanding as the standard of living rises with industrialisation. The Government feels that controls are necessary in a protected market, because only through controls can development be balanced and the consumer protected. As for the problem of joint enterprises, it was made clear that the Government is opposed to wholly foreign-owned undertakings. India, it was pointed out, could not be expected to help foreign companies launch their subsidiaries in order to escape taxation in their own countries. No questions about nationalisation were asked. Fears were, however, expressed that Government undertakings would work without profit and thereby compete unfavourably with the private sector. A reference to the third plan, which had laid down definite targets of profits from the public sector undertakings, allayed such fears. Joint enterprises, it was pointed out, meant foreign and Indian capital, whether in the private or public sector. But the Government wants equity capital to be very widely spread. For instance, new joint enterprises, which would offer equity participation to Indian partners, should be offered to the public also for investment.

Climate for U.S. Investment

The general view here is that the talks will help create a healthier climate for U.S. investment in India. U.S. capital, by and large, has traditionally been flowing to South America. This is no longer regarded as a comparatively safe investment area. On the contrary, to quote the U.S. Ambassador, Professor Galbraith, the U.S. business man has been favourably impressed by India's stability, the continuity of her public policies, expanding economy and stable and honest Government.

Side by side, the organisers of the conference had a rude shock, because New Delhi has no place for holding conferences of the type they came to organise here. In fact, so many national and international conferences are to be held this cold weather that it is becoming almost impossible for a foreign business man to find a roof over his head and a bed to sleep in.

As indicated by the questionnaire of the Business International, the recent trend to tie up the expansion of existing units or setting up of new units of industrial undertaking to exports is likely to prove a damper to the rising tide of foreign investment in India. Firstly, exports largely depend on the prices, quality and durability of goods. Indian goods can find a foreign market only if their prices and quality are competitive. India is not only a protected market but closed to competition. Secondly, many a foreign firm already has a chain of selling agreements for its products and is not in a position to commit itself to exports. The policy, it will thus be seen, requires rethinking.

Commodity Disposal under P.L. 480

The U.S. Ambassador has told his latest Press conference that the United States is being asked to produce commodities, in which it is itself in short supply, to meet the requirements of underdeveloped countries under P.L. 480; the commodities in question are cotton and oilseeds. In other words, the United States will have to produce certain commodities in order to meet the require-

ments of the certain beneficiaries of P. L. 480. Public Law 480 was enacted to remove the overburden of surplus agricultural commodities on the U.S. market. Prior to the enactment of the law, wheat and other foodgrains had to be destroyed, because there was not adequate storage capacity in that country. The operations under P.L. 480, however, were so regulated as not to disturb the normal trade of the other producing countries. The U.S.-India agreement makes it obligatory for India to purchase such quantities of wheat, say, from Australia and Canada, as it has been normally buying from those countries prior to the agreement. What the U.S. Ambassador has indicated is a new orientation of the very conception underlying P.L. 480. The law is designed to dispose of the surpluses in certain agricultural produce. It is now proposed to create surpluses to meet the demands of certain countries.

New Aluminium Concern

An industrial licence has been granted to Mr. Murarji J. Vaidya of Bharat Aluminium Corporation, Ltd, Hubli, to set up a plant to manufacture 60,000 metric tons of alumina, 30,000 metric tons of aluminium ingots (60 percent electrolytic grade) and 15,000 metric tons of aluminium fabrications. The licence is subject to the condition that the issue of the industrial licence does not involve any commitment on the part of the Government concerning electric power, availability of bauxite, release of foreign exchange, import of capital goods and machinery, etcetera, and that, before the Government accords its approval to the other important aspects of the project, such as the issue of capital, foreign exchange financing, terms of foreign collaboration, etcetera, the project will have to be fully investigated and satisfaction given on all relevant matters, such as adequate availability of power and raw materials, availability of external finance, technical collaboration arrangements and a firm plan for exports as proposed by the party in its application.

Bauxite Exports

The Central Government has decided to allow the export of 350,000 tons of bauxite annually for the next two years from now. Of this quantity, 150,000 tons of bauxite will be allowed for export from the ports of Saurashtra and 100,000 tons each from Bombay and Calcutta. Exports will be allowed irrespective of the origin of the bauxite. For some time past, the Government has been reviewing the export policy of bauxite in view of the rapid development of the aluminium industry in India on a massive scale. Having regard to the export commitments already made by Indian exporters with the overseas buyers, the present policy of allowing exports up to 350,000 tons annually has been decided as a short-term policy for the next two years. Exporters are advised not to enter into any commitments beyond this period.

U.S. Loan for Non-ferrous Metal Imports

The Governments of India and the United States signed an agreement covering an American loan of \$20 million (Rs. 9.5 crores) to India for the import of non-ferrous metals. The loan will be channelled through the U.S. Development Loan Fund. Like all other credits granted by the D. L. F., it is repayable in rupees. The loan will help in making the full use of the additional industrial capacities created in India in recent years and will be used in the United States for the procurement of aluminium, copper and zinc. Much of the metal will be processed into the final form at plants in India. Resulting products will be used mainly on projects in the fields of power, transport and communications. The non-ferrous metals to be procured are needed to meet the objectives in the first year of the third five year plan. The major part of the imports will be used in the fabrication of electrical equipment, such as transformers, motors, generators, switchgear and overhead lines for railway electrification and also in the manufacture of machinery components for chemical, sugar, tea, paper, motor-vehicle and storage battery industries.

U.K. Cotton Textile Imports

Following the recently announced undertaking by Hongkong for restricting the export of cotton textiles from the colony to Britain throughout 1962, adjustments have been made to the current cotton textile agreements with the Indian and Pakistan cotton industries for 1962 to bring them into line with the new Hongkong arrangements. Details of the 1962 arrangements for all three countries are as follows:

Basic quotas:

Hongkong: The total basic quota will be increased to 185 million square yards (annual rate) from the present 164 million square yards. Of this, 100 million square yards are for made-up goods. The remaining 20 million square yards will be allocated, at the Hongkong Government's discretion, between these categories.

India: The total basic quota will be increased to 195 million square yards from the present 175 million square yards.

Pakistan: The total basic quota will be increased to 42.4 million square yards from the present 38 million square yards.

Supplementary quotas: In addition to the above increased quotas, reviews of the state of trade will be made every three months, starting in November 1961, with a view to issuing supplementary quotas for the three Commonwealth countries. The supplementary quotas will be intended to enable the three Commonwealth countries to compete for their normal share of the market. The supplementary quotas will be related

to the rate of imports from other countries and account will also be taken of conditions in the U.K. industry. The system provides that supplementary quotas calculated according to an agreed formula will be issued in full if the average length of order-books in the U.K. cotton weaving industry, according to the Cotton Boards' return, is 20 weeks or more; when order-books are less than 20 weeks, deductions will be made according to an agreed scale; when order-books are 15 weeks for less, no supplementary quota will be issued. The supplementary quotas so calculated will be divided between India, Pakistan and Hongkong in proportion to their basic quotas.

Independently of the review arrangements described above, supplementary quotas are being issued forthwith for 1961 as follows: 10 million square yards for Hongkong, 11 million square yards for India and 2.5 million square yards for Pakistan. A target share for imports from the three Commonwealth countries has been set at 85 percent of retained imports into the U. K. from all sources of grey cloth and of the cloth equivalent of made-up goods plus 20 percent of the retained imports from all sources of cloth other than grey cloth. The import figures will be examined every three months, starting in November 1961, and if the "target share" of the three Commonwealth countries for the latest three months for which figures are available exceeds the quarterly rate of the basic quotas for 1962, i.e., 106 million square yards a quarter, a supplementary quota equal to the difference will be issued, provided that the state of weavers' order-books in the U.K. industry does not require a reduction in the supplement so calculated. The rate of reduction of the supplement when order-books are between 15 weeks and 20 weeks is as follows:

Order-books	Abatement
20 weeks	Nil
19 weeks	5 percent
18 weeks	15 percent
17 weeks	25 percent
16 weeks	50 percent
15 weeks	100 percent

Reduction in the supplementary quotas made because order-books are less than 20 weeks may be carried forward, and may be used when order-books reach 20 weeks, at a rate to be decided by the U. K. Government after consultation with the Hongkong, Indian and Pakistani authorities. If there is evidence that the foregoing arrangements are producing results inconsistent with their objects, consultation will take place at the request of any of the authorities concerned. The differing percentages for grey cloth and other cloth, used in calculating the "target share", do not mean that the quotas are being divided between grey cloth and finished cloth.

Indo-Ceylonese Trade Agreement

The Indo-Ceylonese trade agreement, which was signed here last week, comes into force with immediate effect and will remain in force until it was modified or terminated by either contracting party on giving three months' notice to the other party. The two Governments have undertaken on the basis of mutual advantage to maintain as far as is practicable the traditional pattern of trade hitherto existing and to explore all possibilities, through consultations from time to time, of expanding trade and of trading in new goods. They have further undertaken to give full consideration to the suggestion made by the either party for facilitating the export and import of specific commodities. The agreement is expected to alleviate the difficulties currently encountered concerning the exports of coconut oil, copra and rubber from Ceylon to India and the exports of dried fish, birds, jaggery, tamarind and handloom textiles from India to Ceylon.

Indo-Polish Trade Talks

Trade talks between the Indian Government and an official trade delegation from Poland began here last week. The three-member official delegation from Poland, which arrived here, is led by Mr. E. Leszczynski, director of the Trade Department, Ministry of Foreign Trade, Poland. The development of trade between the two countries was reviewed and there was also an exchange of views on the prospects of increasing the trade between the two countries in future. The two delegations are expected to discuss and finalise the trade arrangements for 1962. The trade between India and Poland is governed by the three-year agreement, which came into force on 1st January 1960. Under its terms, trade will be on a balanced basis and payments will be regulated through non-convertible Indian rupees. In the past three years, trade between the two countries has been increasing at a significant pace and is expected to be of the order of about Rs. 5 crores either way, during the current year.

Collection of Road Transport Taxes

The Transport Development Council, at its two-day session here, recommended that there should be only one agency for the collection of the motor-vehicle tax and the taxes on passengers and goods. The octroi duties imposed by various local bodies have been found to be a great impediment to the smooth flow of motor-vehicle traffic. The Council, therefore, called on the State Governments to find out ways and means to ensure the early abolition of octroi duties. There was a complaint from the States that the heavy incidence of income tax hampered further expansion of State transport corporations. In this connection, the Council recommended to the Transport Ministry the appointment of a committee to study the

difficulties of transport corporations and to suggest incentives for their expansion including tax relief. It was disclosed at the meeting that necessary action is being taken for the early abolition of double taxation on inter-State transport. The Council has urged State Governments to implement the principle of single-point taxation without delay. The Council discussed the proposal to popularise bullock carts fitted with pneumatic tyres. It was recommended that, for popularising the use of bullock-carts fitted with pneumatic tyres, steps should be taken to import 10,000 second-hand wheel and axle assemblies complete with rubber tyres and tubes from the U.S.A. at about Rs. 200 a set, that these should be sold at cost price and that no subsidy should be given either by the Central or the State Government to the buyers. The sets should be distributed among the different States on an equitable basis. It was also recommended that steps should be taken to increase the availability of iron-wheel carts fitted with ball-bearings.

The India Supply Mission sent two samples in January 1961. After tests here, however, it was found that they did not meet Indian requirements. The India Supply Mission was, therefore, requested to make enquiries from prospective suppliers whether second-hand axle assemblies could be supplied and, if so, at which cost a set. The Mission has intimated recently that arrangements can be made for the supply of the proposed equipment with 2in-square axle at \$26.75 (about Rs. 120) a set, f.o.b. U.S.A. It has, however, advised that the cost can be considerably reduced if the axle bar could be manufactured in India which, in its opinion, accounted for 40 percent of the total cost. Efforts are accordingly being made to get the axle bar manufactured indigenously, and as soon as this materialises, steps will be taken to place orders for the procurement of 10,000 sets of the requisite equipment (excluding the axle bar) from the U.S.A. The Council agreed to the principle of creating a Rural Road Fund for the development of roads in rural areas, but left it to the State Governments and the development bodies of the Central Government to work out details of the proposed fund.

Countryboat Disasters

It discussed the question of countryboat disasters and suggested measures to avoid them. These include such measures as to ensure complete riverworthiness of the vessels, employment of qualified crew, control of crowds and the provision of adequate number of boats by the State Governments at the time of fairs and festivals. It was stated that the State Finance Corporations Act was being amended so that the Corporations could directly finance the industry and also guarantee loans advanced to the industry by scheduled banks. As for the suggestion that motor-vehicles might be allowed to display registration numbers in the Devnagari script, the Council felt that as the Constitution has adopted Roman numerals for official use, it would be obligatory to continue the use of Roman numerals on registration plates. As for the use of Devnagari letters on registration plates, the Council expressed the view that Devnagari script could be used along with English, which is compulsory. It was suggested that the deliberations of the Council should not be confined, in future, to road and water transport only, but should also include the development of air transport within the country. It was suggested that there was need for the location of airfields nearer towns and cities and for the introduction of smaller aircraft to meet the increasing traffic demands.

U.S. Grant for Cheese-making

India will receive a research grant in rupees equal to \$73,228 from the U.S. Department of agriculture to explore the possibilities of adding non-fat dry milk to local buffalo milk to make hard cheese. In an announcement, the U.S. Agriculture Department has said the grant will finance a five-year study by the Kaira District Co-operative Milk Producers Union Ltd. in Anand. Buffalo milk does not have enough solids in relation to its high fat content to be satisfactory for cheese. If high quality cheese could be made by adding non-fat dry milk solids from cow's milk, it would prove a nutritious and stable dairy food, the U.S. Department said.

I.A.C. to Buy More Friendships

An agreement was reached for the purchase by the Indian Airlines Corporation of five additional Fokker-Friendship aircraft. Deliveries are expected to be spread over five months beginning from November 1962. When the last aircraft is delivered, the I.A.C. will become the world's largest civilian user of the Friendship with a fleet of ten. The sale has also raised the total of Friendships ordered to 202. Fokkers have already sold 111 aircraft, whereas the Fairchild Aircraft Company, now manufacturing the Friendship under licence in the United States, have sold another 86. With the exception of the seats to be installed, the aircraft will be similar to the first five ordered early last year and delivered in April-May 1961. Eight of the 40 seats will be foldable to allow for the extension of the front freight hold at short notice. Power plants will be two used on I.A.C. Viscounts. The aircraft will be pressurised and air-conditioned, and equipped with storm-warning radar and transistorised radio units. The purchase was made on a barter basis and each aircraft has cost a little over Rs. 40 lakhs. It is hoped that these Friendships will be placed on routes along the west coast and in south India.

London

CHANCELLOR HOLDS TALKS WITH T.U.C. ON FORMING PLANNING BODY

U.K. EXPORTS LOSING GROUND IN STERLING AREA MARKETS

(FROM OUR LONDON CORRESPONDENT)

THE difficulties of establishing an effective National Economic Development Council were by no means solved by the Chancellor's meeting with the representatives of the Trades Union Congress, but the prospects of the body coming into being were at least carried a few steps forward. Sir Alan Birch, chairman of the T.U.C. Economic Committee, said after the meeting that he and his colleagues had now got as much clarification as they could expect of Mr. Selwyn Lloyd's ideas, and would, therefore, have enough material to discuss the question of participation when they meet again on 8th November. The General Council of the T.U.C. would have to endorse the final decision. Details of the discussions have not been released, but it seems that a Council of about 18 members, consisting of himself, the Minister of Labour and the President of the Board of Trade; six representatives from the T.U.C.; five from the employers; two from the nationalised industries and two independents. Under pressure, he agreed that he was not rigid about the independents, objected to by some unions. While pointing out that the final responsibility lay with the Government, the Chancellor appears to have given the trade unionists some assurance that the views of the Council would receive the closest attention. He apparently also gave an undertaking that incomes of every description embracing profits, dividends and rents, as well as wages, would come within the Council's scope. This reassured the T.U.C. on two counts: that wages would not be singled out for special treatment, and that, since the new body is to be purely advisory, no interference with free collective bargaining is implied. The meeting inevitably began with complaints about the wages "pause", and of the lack of consultation with the unions before it was introduced. But as one member of the committee said later: "If this Council had been in being, the 'pause' would never have been launched without consultation."

Tackled after the meeting, both Sir Edward Boyle, Financial Secretary to the Treasury, and Sir Alan Birch refused to comment on the substance of the exchanges which had taken place. The former, however, admitted that there had been "some degree of controversy, and no papering over the cracks." He thought that it had been a useful discussion, but he declined to predict when the Council might "come into existence." Sir Alan Birch repeated that "the T.U.C. won't go into a body unless it is reasonably satisfied that somebody is going to take some notice of it, and furthermore that there are no restrictions at the outset on what it discusses or has power to do." Sir Alan made it clear that the T.U.C. would not stand for the exclusion of any subject from the Council's consideration, and in this context, he added that the employers' reactions would be very important to the T.U.C. He almost certainly was referring to the Federation of British Industry's disclosure of its determination to have nothing at all to do with controls.

Chancellor Forecasts Expansion

Assuming that there is no deterioration economically, world trade is in for a period of expansion again, Mr. Lloyd said at a dinner in London of the British National Committee of the International Chamber of Trade. Britain could only take proper advantage of this improved prospect if internal policies were right and properly carried out. This meant that home demand had to be kept in check until the right proportion between demand at home and exports had been established. As soon as measures were taken to discipline the economy, there were gloomy forecasts about a slump. Mr. Lloyd said: "I am sure it is quite wrong to talk in these terms at the present time." The steel industry was not working to full capacity, some consumer durable industries had capacity to spare, and fewer new factory buildings had been approved. But it did not follow that the economy as a whole was moving downwards. "In fact, consumption and investment as a whole are still rising, and are likely to stay high next year," he said. "If exports rise as they should, there should be considerable expansion in the economy in the months ahead." The latest figures suggested that Britain's shipments in the first half of this year were increasing faster than those of the U.S.A., but more slowly than those of the European Economic Community. There had been some encouraging success in markets where competition was exceptionally keen. Exports to the United States were running at a higher level. Exports to western Europe exceeded £100 million in September for the fourth month running, compared with a monthly average of £85 million in 1960. These increases were offset by poorer figures for sterling area markets.

Engineering Output

New orders received by the engineering industries in July and August remained at a high level.

But there was evidence of a falling trend. This is the Board of Trade's inference from its latest figures, which show the index of net new orders (by volume) at 95 in August after 133 in July (100=1958 deliveries). Corresponding levels in 1960 were 110 and 126. The decline can be traced to orders from the home markets, for bookings from overseas were still rising slightly. The August index of home orders fell to 94 after 133 in July, which compare with 113 and 124 in August and July last year and a peak of 164 in March this year. The latest drop may be a significant reflection of company decisions to review investment plans. On the export side, the very high estimate of 164 for July has been revised sharply downward to 143 and the August figure is put at 98. Taken together, these indices still suggest, however, that the upward trend of overseas orders is not yet exhausted. The index of total orders on hand showed a small fall, from 113 to 111, in the three months to the end of August, although it remained well above the August 1960 level of 103. A noticeable decline in the outstanding volume of business for home customers was partly offset by an increase in export commissions. The production of engineering and electrical goods continues to expand and in July and August together was 9 percent higher than a year earlier. A substantial increase in deliveries of engineering consumer goods was recorded in June and July.

Industrial Building

There was a further sharp fall in the numbers and size of industrial building projects approved by the Board of Trade during the third quarter of this year. Industrial development certificates were issued for 596 schemes, involving a total area of 11.6 million square feet. The weight of applications has been steadily declining since the second quarter of 1960, when 1,024 schemes for a total area of 23.8 million square feet was approved. At that time, the figures were swollen by a few very large projects, mainly concerning the motor-car industry's expansion plans. But the falling-off in industrial building schemes clearly reflects a much wider field than the motor-car industry. No doubt the building industry still has plenty of industrial work in hand for projects approved up to the spring of this year; in the first quarter of 1961, the approved area was still fairly high at 17.3 million square feet.

Fall in Manufacturing Output

A slight fall in manufacturing output is shown in the official index of industrial production for August. While the seasonally adjusted index number for all industries (including mining, construction and utilities, as well as manufacturing) remained unchanged at 125 in August, the adjusted index for manufacturing industries alone fell off one point from 127 to 126. It is only six months since manufacturing output started to creep upwards after the long "pause". The adjusted manufacturing index showed the first rise in March and now it looks as if "growth" has already been stunted again. The average index number for all industries, seasonally adjusted, was 2 percent higher in the first three months of June, July and August, than in the previous three months, and it was about 3 percent higher than a year earlier. In the first eight months of 1961, the index averaged 123, against 120 in the same period of 1960, a rise of 2½ percent. On that basis, the gross national product can hardly have increased more than 1 percent or 2 percent.

Trade Analysis

From the full details now available of Britain's overseas trade in September, some small consolation can be drawn on the export side from the incidence of sales of ships. In September, exports of ships, which had been at an unusually high level, fell to £1½ million from £26½ million in August. It thus appears that of the increase in the trade gap from £40.2 million to £70.2 million last month, £25 million can be explained by lower ship sales. Reviewing the export position during the first three quarters of this year, the Board of Trade points out that in the third quarter, export sales were 1 percent higher than in the second and at the same level as in the first quarter. Then the figures had the help of goods delayed by the dock strike last autumn. The official summing-up is that there has been little change this year in the underlying trend of exports, even though so far they have been about 4 percent above the average level of last year.

Performance on the import side does not look particularly impressive for the third quarter, when there was a fall of only 1 percent from the second quarter level following the sharp reduction of 6 percent between the first and second quarters. In spite of a fall in prices, purchases of food, beverages and tobacco were unchanged. As expected, the main reduction in the import bill has been in industrial materials, a reflection of the destocking movement in British industry. The heaviest

fall, amounting to 6½ percent, has been in the imports of basic materials, chiefly timber and pulp, textile materials, metal ores and scrap. Taking the first three quarters of this year, total imports have fallen 3 percent below the average 1960 rate, which suggests that the crux of the balance of payments problem is really on exports. On a seasonally adjusted basis, the monthly deficit has been brought down for the third quarter by £24 million, on an average. For the third quarter of last year, the corresponding figure was the alarming one of £82 million.

An Export Target

Britain sells £10 million worth of goods a day at present. Once exports had reached £11 million a day, "our troubles will be over," Sir Keith Joseph, the new Minister of State on the Board of Trade, told the Institute of Export in London. The Government was grateful for the existence of the Institute of Export, he said. Some people called the Government "wreckers" but it was in the national interest that Government should not have allowed over-consumption at home. A target of exports to the value of £11 million a day "should not be intimidating," he said. Sir Donald Anderson, president of the Institute and chairman of P. & O. made three rules for exporters. The first principle should be to make it "a long-term job," the second was that exporters "must build up a reputation," and the third, "visit their customers."

Steady Terms of Trade

Britain's terms of trade were unchanged last month. The Board of Trade's index (1954 equals 100) remained at 85, the level to which it had fallen from 86 in August. On the import side, a rise in fuel prices were offset by cheaper imports of basic materials. On the export side, the overall index was also unchanged, higher prices for engineering products and other manufactured goods being counter-balanced by lower export prices in the metals group and in textiles.

Motor-car Output Drops

Motor-vehicles output fell sharply in September, the largest fall being in passenger cars where production was 100,907 vehicles. This was 23 percent below the total of 131,772 vehicles produced in September 1960. September's output brings the total of passenger cars to 746,886 for the first three quarters of 1961. By the end of September last year, passenger car output had reached 1,109,624 vehicles. Production for the whole of 1960 was 1,352,728. Commercial-vehicle output continues to compare reasonably favourably with production last year. In September, 43,165 goods vehicles were made against 44,729 in September 1960. Output of buses and similar vehicles totalled 1,818, against 1,904. Exports of passenger vehicles at 28,180 in September were only about 54 percent down on the 29,795 vehicles exported in the corresponding month of last year. Goods vehicle exports improved from 8,886 to 10,456. In the five weeks of September, output was at an average rate of 20,181 passenger cars a week, compared with a weekly average of 26,354 a year earlier. Labour disputes in the industry must be reflected by a further fall in the output in October.

Trade Mission to Japan

The first official British trade delegation to visit Japan since the war will leave for Tokyo in April. The mission, which has the full support of both the Board of Trade and the Japanese Government, will be sponsored by the London and Birmingham Chambers of Commerce. The 20-man mission will represent a wide cross-section of British industrial, commercial and banking interests. The delegation will spend almost three weeks in Japan and will be led by Lord Kilmarnock.

ORIENT EXPRESS

Travel Service

Through its 4 offices in India and 350 correspondents in all principal cities throughout the world, Orient Express Travel Service places at the disposal of its clients a complete Travel Service.

Air, Rail and Steamer tickets issued at tariff rates. Hotel reservations made anywhere. Advice and assistance given in securing Passports, Visas, Health Certificates and Travellers Cheques.

TEA EXPORTS FROM PAKISTAN
AND CEYLONREVISION OF INDIAN SALES
POLICY URGED

(BY A SPECIAL CORRESPONDENT)

INDIA'S competitors continue with programmes for further expansion. Pakistan is already on the way to a record tea production this year with an expected output of 60 million lbs while it is reported that the Government plans for 80 million lbs by 1965. But from available statistics, a further increase of 20 million lbs in four years looks unlikely. Meanwhile, the Pakistani Government's plan to lease out fresh plots of unclassified forest lands for increasing the tea output is meeting with many applications from new as well as old-established interests. But it takes up to five years to make new tea lands productive. It is true that

there must be several thousand old, abandoned tea acreages in Sylhet, some of which could be brought back into cultivation, given time and money. In 1950, Pakistan had 73,201 acres under tea. By 1959-60, the area was probably around 77,000 acres. During the same period, the output actually fell from 52 million lbs to 41.2 million lbs last year. But 1960 was not a normal season. The best results to-date were shown in 1959 at 57.2 million lbs. Assuming an output of 60 million lbs this year, it would show an increase of 15.4 percent in past ten years. What is surprising about Pakistan's programme is that she seems to be indifferent in earning foreign exchange from exports. So far, from an estimated yield of 60 million lbs, only 10 million lbs have been earmarked for export.

Sales Propaganda of Ceylon

Ceylon appears to be actively aggressive with her sales propaganda. She was, in fact, first in the field with her tea lounges. The latter demonstrate with fine quality teas and seem to be getting good results by pushing quality blends. The producers in Ceylon have an advantage over their Indian counterparts since their cheaper types of production do not have to pay export duties.

North Indian Output

The latest crop figures show that the north Indian output may be around 570 million lbs, compared with 561 million lbs in 1959-60. The total world production from the major producing areas is estimated at 997 million lbs to-date, against 906 million lbs last year. Meanwhile, buyers in Ceylon, Colombo and Calcutta are bidding fairly freely at the lower price level, but the important question is: with the north Indian crops showing only a normal gain over the past three seasons, will there be a recovery in the price of the commodity before the end of the current season? The opening sales showed prices steady up to the end of July. From then, the prices fell until mid-September. But there has been a small recovery recently.

On past occasions, this correspondent has drawn attention to successful salesmanship by other ex-

porting countries, particularly Ceylon. It is, therefore, interesting to learn that the Central Government may give early consideration to an adjustment or abolition of export duties. These imposts add to the cost of India's produce and have clearly been causing foreign buyers to switch over to purchases from India's competitors.

Internal Propaganda

India's internal propaganda policy has again been under fire from the U.K. The chairman of Empire and Holdings suggested recently that to withdraw propaganda to increase internal consumption would prove to be a short-sighted policy. This criticism is justified since the authorities are now trying to raise the output to 900 million lbs during the third plan. The following figures have recently been published relating to consumption in the producing countries during the past ten years: India up by 20 percent, Pakistan 80 percent, Ceylon 60 percent, and Japan nearly 100 percent. From these figures, it is clear that India still comes last. These figures, however, indicate the importance of internal consumption. If 400 million people in India can bring the demand up by 50 percent or more, there is no doubt that the over-production bogey will be buried.

Raising Export Target

The Tea Board is apparently determined to raise the export target figure. Everybody will approve of this laudable object provided exports are made profitable to this country. But it should be remembered that the low-priced Ceylon teas are free from export duty. Besides east African teas are duty-free while Indonesia subsidises her production, leaving India to get hit all along the line.

It will be necessary to launch further internal and external propaganda. The U.S.A., Australia and Canada are already purchasing Ceylonese teas. But what are the authorities doing to get into the European Common Market? After all, that is the place for selling India's teas. So it is time that the propaganda campaign was transferred from the U.K. to the Continental markets. Good teas at competitive rates would surely appeal to the thrifty Continentals.

FINANCING TEA ESTATES IN
PAKISTANGARDENS TO GET LOANS FROM
AGRICULTURAL BANK

(FROM A CORRESPONDENT IN PAKISTAN)

THE fourth export tea auction was held in Chittagong on 25th October, 1961, at which 9,441 chests were offered for sale. There was a good general demand to begin with, but it slackened as the sale progressed. The best liquoring types were the strongest feature, and these were bid 15 paise to 20 paise over the previous rates. The plain grades were easier. Legg-cut fannings sold readily between Rs. 1.50 and Rs. 1.60 a lb.

Quotations
(Rs. a lb)

Prices in Sale No. 3	Prices in Sale No. 4
B.O.P. Rs. 1.70	Rs. 1.80
B.P. Rs. 1.40 (nominal)	Rs. 1.40 (nominal)
O.P. Rs. 1.70 to Rs. 1.75	Rs. 1.75 to Rs. 1.80
P.F. Rs. 1.45 to Rs. 1.50	Rs. 1.45 to Rs. 1.50

Seasonal Loans

The chairman of the Pakistani Tea Board has announced that the Agricultural Development Bank will continue to advance short-term seasonal loans to the industry—as it is doing at present—from its own funds at the current rate of interest. The financing of the existing gardens through medium and long-term loans, whether for the extension of cultivation and/or for the purchase of machinery, construction of factory buildings, new labour quarters, etcetera, will be done out of the Tea Development Committee's funds to be made available to the Agricultural Development Bank. A sum of Rs. 50 lakhs is being placed at the disposal of the Bank during the current financial year. No loans will be advanced from such funds for the purchase of land, for the renovation of the existing labour quarters or for the construction of the residential buildings for the staff of the tea estates other than those for the additional labour force. These funds are to be used exclusively for the tea industry.

New and Derelict Gardens

The development and rehabilitation of the derelict gardens and the establishment of new gardens will also be financed by the Pakistani Agricultural Development Bank out of the funds offered by the Tea Development Committee. The interest on loans out of such funds will be charged at the rate of 4 percent a year. The normal rules for furnishing security, as laid down by the Bank for loans, will apply for advances made by the Bank out of the Tea Development Committee's funds.

COCHIN TEA SALES

At Sale No. 44, 577,000 kilograms of tea were on offer. There was a good demand for broken and whole leaf grades. Low mediums and mediums were irregularly 10p lower. Good mediums were steady while high-grown broken were fully firm to dearer. Fannings were the weakest feature of the sale.

Jute

READY GOODS MAINTAINED, BUT FORWARD
GUNNIES EASEDIFFICULTIES IN TRANSPORTING JUTE FROM
UPCOUNTRY CENTRES

THE current condition of the gunny trade has many discouraging aspects. The present is normally a season when stocks in Calcutta should fall because of heavy shipments to North and South America. This has happened, but the U.S. burlap stock and consumption trends remain disappointing. During September 1961, U.S. burlap consumption reached a new low for the month, and recent information gives little hope that the October consumption will make up the deficit. On top of this, U.S. stocks during September dropped by 14 million yards, at a time when one could reasonably expect a rise. Spot stocks for the first time this year fell below those afloat, and could be reckoned to last only six weeks even at the current very low rate of consumption. In the circumstances, the publication of the October stock and consumption figures is awaited with more than usual interest.

Lack of Demand

During the past week, in spite of the lack of demand, the gunny market has remained fairly steady, at least as far as the near position is concerned. A peculiarity is that while prices for ready delivery have risen, nearly all forward rates have declined. In sacking, the discount for January-March shipment has widened to about Rs. 16.50, and in hessians to about Rs. 8. It is not clear yet whether this reflects the nervous feeling among some operators or is due to some other factor. One source of nervousness is the lack of demand from the United States. She is India's biggest customer for jute goods, so it is possible that the fear of a recession there has made buyers cautious for the time being. In spite of this, however, there are persistent buyers in the Calcutta futures market with no fresh sellers. A false impression of stability has thus been created, but in reality there is an undercurrent of nervousness. A large disparity exists between futures and real goods rates, and while such conditions persist, there is little chance of the market returning to normal. Either goods rates must fall, or futures prices must be raised. There is little likelihood of the former happening, particularly since there is not much room left for a commensurate fall in fibre prices, so presumably futures rates will be raised. It is understood that the directors of the East India Jute and Hessian Exchange are studying the situation, and a solution may be announced soon.

Mills Sell Little

Calcutta mills are showing no interest in the market. Although many of them are in a position to sell, they have stayed out. One reason is that they prefer to wait until they are near the delivery dates so as to catch the higher prices available for ready goods. To sell for January-March, for instance, would mean a reduction of about Rs. 15 from the ready price. Doing simultaneous business in raw jute for this period would be impossible, since even if a seller could be found who was prepared to sell so far forward, there is little chance at this stage of there being much of a discount. Forward sales thus amount to putting a loss on the books at the outset. Throughout this period of uncertainty in the goods market, sellers have strongly resisted any attempts to force down raw jute prices. It is recognised that the lack of genuine business in goods (as opposed to speculative transactions) will tend to keep buyers out of the market for raw material. But the fact remains that under present working conditions—and with the possibility of an increase in production to replenish goods stocks, which are lower than they have been for a decade—the requirements of jute are likely to be at least as great as the yield of the crop. Mills could refrain from buying fibre now, but in that case they might have to pay higher prices later. Although the average holding of raw jute by the mills would enable them to remain out of the market for a considerable time, all stocks are not evenly distributed, and some mills must keep buying in order to secure the qualities of which they are short.

There are, however, weaknesses in the market. It is known that some prominent sellers are holding large stocks, and would welcome the opportunity to sell, even though they might not be able to replace the stocks at a profit since their holding prices in most cases are above those ruling today. Another weak feature is the accumulation of stocks in the bazaar and upcountry receiving centres. Shipments from Assam by flat have been delayed and a bottleneck appears to have developed in Dhubri. Rail transport from the Purnea and Murshidabad side has been restricted in recent weeks, partly because of flood conditions, and the allotment of wagons has been made only spasmodically. Reports on recent arrivals of jute at the mills indicate that there has been a rapid deterioration in quality, although it appears that the mois-

ture content of many parcels is not nearly as bad as in some other seasons.

Raw Jute Arrivals

Arrivals of raw jute at Calcutta and mill stations during September 1961 showed a welcome rise. They were not only 140,300 bales more than in September 1960, but compared favourably with normal seasons, being the highest for at least 10 years. Total arrivals during the month were 529,100 bales, 45,250 bales being from Pakistan and 483,850 bales from India. This brings the total arrivals so far this season to 1,039,600 bales, of which 76,900 bales came from Pakistan and 962,700 bales from India.

THE JUTE MARKETS

Manufactured Goods: There was very little activity in the goods market during the past week, but prices remained fairly stable. Overseas buyers showed little interest, and it was mainly from speculative activities that the market derived its strength. B Twills opened at Rs. 144.50 for ready shipment, which represented a premium of Rs. 14.75 over the January-March position. In hessians, 40in. 10oz. was quoted at Rs. 54.50 in the near position and Rs. 47.60 for forward shipment. After the opening, all prices recorded losses, sacking falling by Rs. 2.25 and hessians by Rs. 1.25. Continued speculative activity in the futures market, however, induced a recovery over the next few days. By the last day of October, prices were

Cotsecacks	142.50	143.00	134.50	129.00

Raw Jute: The fibre market has been extremely dull, and only scattered business has been reported. At the opening, sellers' ideas were steady, and Assam quotations remained at Rs. 33.59 until the week-end even though mills showed no interest in purchasing jute. The steady goods market helped, but there was little else to support prices. After the week-end, conditions eased considerably. With sellers keen to liquidate their stocks before prices started falling, and with mills still looking for lower levels, rates eased by about 50nP a day. Some sellers were prepared to discount even at the lower levels, and small business was reported at cut prices, but this was mostly by "distress sellers". Wagon arrivals at Cossipore totalled 710, being about 100 more than in the previous week. Arrivals were a little below the average for the time of year.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills	Basis Bottoms	Shipment
	Rs. a 100 kilos	Rs. a md.	
Assam	85.75	32.00	Nov.-Dec.
Northern	85.75	32.00	"

Pakistani Cuttings	110	a bale	"

THE FOREIGN JUTE MARKETS

STEADY UNDERTONE IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

AN under-current of steadiness has prevailed over the past week in the raw jute market which has also been the general state of the other sections, in spite of the small movement which has been taking place at most producing centres. It is said that the Indian jute mills are being encouraged to increase their output of jute goods by the Government now that there is plenty of fibre available and that any application to extend the working hours beyond the present 48 a week is likely to be welcomed. It might not be possible for the mills, however, to secure better terms for their manufactures if they had more to sell. Indeed, the goods' values are considerably higher than they ought to be and it is thought that it is about time that raw jute prices were reduced in order that the consumers may purchase jute goods, instead of the substitutes. Reports state that the Pakistani jute mills are cutting their prices of jute cloth and bags and competing successfully with India. It is, however, said that the Pakistani cloth is not as good as the Indian manufacture is, but even so, price will be the main consideration with many buyers. Pakistan is building more and more mills and this is bound to affect other producers sooner or later, as that country has the best jute, and it could rectify technical deficiencies by employing some experts in spinning and weaving.

Raw jute is quiet and occasionally there is a seller quoting a low price, yet some grades are very firm. Mill Lightnings, for instance, are firmly held at £133 lowest, but more often £135 is quoted. Mill Hearts are now at £108 to £110, and Grade Hearts £88 a ton, with Grade Tossa-2/3 being quoted from £142. Fours £128 and Continental Tossa-2/3 £113 to £116, November shipment, c.i.f. U.K.-Continent. Little business is passing here. Calcutta goods are very irregular at around 77s 6d for 40in. 10oz. and 59s 3d for 7/2oz., November, 74s 6d and 55s 9d December and 72s 3d and 54s January-March, with B Twills at 215s 9d, 205s, and 197s 6d for the respective positions of shipment, all f.o.b. Calcutta. Jute cloth is very quiet, and scarcely any enquiry is being made. This reflects on the yarn end of the trade too, yet, although business is quiet, spinners are still quite busy and transacting a fair amount.

Commodity Markets

WORLD OUTPUT OF COTTON YARN DECLINES

TRADE IN PIECEGOODS FALLS SLIGHTLY

THE U.K. Cotton Board's latest *Quarterly Statistical Review* shows that in the second quarter of the current year, the cotton yarn output in those non-communist countries for which regular figures are available—including all the major cotton textile exporting countries—was about 1 percent less than in the second quarter of 1960. In the first quarter, the corresponding reduction, compared with a year earlier, was about 2 percent; the apparent slight improvement is entirely due to the partial recovery in the yarn output in the U.S.A. It appears that the U.S. cotton industry began to recover from its recession while almost all other cotton industries were still producing at boom levels. The cotton yarn output in India, Japan and Canada was greater in the second quarter than in the corresponding period of last year. The yarn output in the U.K., on the other hand, was slightly less than a year earlier, while there was little change in the total output of the continental west European cotton spinning industries.

World trade in cotton piecegoods seems to have declined slightly so far this year following its great expansion in 1959 and 1960. Shipments from the main non-communist exporting countries in the first quarter were about the same as a year earlier, while in the second quarter they were about 5 percent less than in the second quarter of 1960. The contraction in imports into the U.S.A. seems to have been the main cause. Exports from Japan, Hongkong and the U.S.A. were greater in the second quarter than in the corresponding period of last year, but exports from the U.K., India, Pakistan, Spain, Portugal, the Netherlands and Switzerland were considerably reduced in comparison with a year earlier. World trade in man-made fibre fabrics in the second quarter was maintained approximately at the level of the same period of last year, an increase in Japanese shipments more or less counter-balancing reductions in exports from other countries.

Idle Machinery in the U.K.

The U.K. cotton industry is currently facing a serious situation. The doubling section has, of course, been in difficulties for a considerable time, but the prolonged shortage of new business has shortened order-books in the other sections to such an extent that activity is now having to be curtailed. An increasing proportion of machinery is standing idle, shift-working is being curtailed, particularly part-time evening shifts, extended holidays are being taken and there have been isolated reports of mills closing completely. The spinning section has been harder hit so far than the weaving section. The rate of yarn output a working day has been falling since April, the decline between that month and August amounting to 6.7 percent. Most of the fall has been in pure cotton yarns as opposed to spun man-made fibre and blended yarns. The rate of cloth output a working day—measured in linear yards—seems to have continued to increase slightly up to July. However, the expansion seems to have been largely confined to continuous filament rayon cloth on the one hand and surgical dressing fabrics on the other. These outlets provide virtually no support for the spinning section, and the latter provides little loom activity for the weaving section. In fact, the number of looms actually running has been drifting downwards since April. The familiar but disturbing situation of a drift of labour from the industry has re-appeared, the decline in the labour force between the end of January and the end of July amounting to 10,000 or 4½ percent.

Basically, the industry's difficulties are the result of the familiar stock cycle, as in 1952, 1955 and 1958. There is a significant difference this time, however, in that the stockbuilding preceding the onset of the recession was brought about not by an increase in the U.K.'s production but by a vast increase in imports. The credit restrictions imposed by the Government in the summer will no doubt accentuate the trend towards stock reductions. Furthermore, retail sales, for long a source of strength to the industry, appear to be faltering, since consumer expenditure on clothing, corrected for price changes and seasonal variations, declined slightly in the first half of the year. If there are any major strikes later this year, retail sales may well fall even further.

There is perhaps some slight consolation to be drawn from the fact that imports of cotton piecegoods fell from the record level of 225 million square yards in the first quarter to 196 million square yards in the second, moderate increases in arrivals from Hongkong and Japan failing to outweigh substantial decreases in imports from India, Spain, Portugal, Yugoslavia, Formosa and the U.S.A. Imports of cotton piecegoods in July and August amounted to 119 million square yards, which represents a further slight reduction in the rate of arrival. Imports of made-up cotton goods from Commonwealth countries were also sharply down in the second quarter, when there was also some reduction in imports of man-made fibre fabrics. Imports of cotton yarn, however, remained at a high level; India has superseded Spain as

the chief supplier of imported cotton yarn this year.

Exports of cotton yarn, cotton piecegoods and man-made fibre piecegoods in the second quarter were all less than in the first quarter and the second quarter of last year. Exports to Australia have been particularly hard hit so far this year; one of the few relatively bright spots has been the partial revival in shipments of cotton piecegoods to the Congo.

Recovery in the U.S.A.

Statistics relating to the U.S. textile industry for the first half of this year indicate an unmistakable but so far only partial recovery from the recession. Mill consumption of cotton in the second quarter was still about 6 percent less than in the corresponding period of last year but the trend has been markedly upwards since March. Moreover, mill consumption of rayon and synthetic staple was greater in the second quarter than a year earlier. In the first quarter, the production of cotton cloth was still about 9 percent less than a year earlier, and the output of rayon and synthetic fibre fabrics was also down. However, an upward trend in cotton cloth production is indicated by an increase in average weekly loom hours up to June. There was a slight lengthening of order-books in the first half of the year and some reduction in mills' stocks, but these remained high by historical standards. The hesitant nature of the recovery from the recession is also evident from the fact that the margin between the average price of grey cotton cloth and that of raw cotton narrowed in July for the eleventh month in succession. However, reports speak of greater buying activity in August and September.

One effect of the textile recession has been sharply to reduce the volume of imports of cotton cloth. In the first half of 1961, imports totalled roughly 130 million square yards, compared with 256 million square yards in the first half of 1960 and 208 million square yards in the second half. With the exception of Japan, all the countries who were prominent exporters to the U.S.A. in 1960 have lost ground, the losses being particularly heavy in the case of Hongkong, Egypt, India, France, Spain and Portugal. The import figures show how relatively favourably the U.S. cotton industry has been treated by the choice of the July 1930 to June 1961 period as the "base period" for the purpose of the Geneva Agreement. It is reported that the U.S. Government is to make a fresh attempt to persuade Hongkong to cut back its exports of cotton goods to the U.S.A.

Exports of cotton piecegoods in the second quarter totalled about 112 million square yards, less than the 127 million square yards exported in the first quarter but greater than 106 million square yards shipped in the second quarter of 1960. Compared with a year earlier, exports to the U.K., Canada, the Philippines and Indonesia showed increases but exports to South Africa and Australia were down. Exports of both rayon and synthetic fibre fabrics were almost certainly less in the second quarter of the current year than in the second quarter of 1960.

Japan Continues to Improve

The Japanese cotton and allied textile industries were continuing to operate at a high level of activity up to the middle of the current year. In the second quarter, cotton yarn and cloth production were appreciably greater than in the corresponding period of last year, but there has been some decline in the spun rayon yarn and cloth output. Filament rayon fabric production was greater than a year earlier and the rapid expansion in the use of synthetic fibres, both in spinning and in weaving, shows no sign of coming to a halt. Stocks of cotton yarn and textiles were reported to be rising in the early months of the year.

On the export side, negotiations have been proceeding about the extension of the voluntary

restrictions on exports of Japanese cotton textiles to the U.S.A. Exports of cotton piecegoods in the second quarter totalled 331 million square yards, about the same as in the first quarter but appreciably greater than the 229 million square yards shipped in the second quarter of 1960. Compared with a year ago, there were big increases in exports to Indonesia and the Netherlands and smaller increases in shipments to British West Africa, the Sudan, Indo-China and Thailand. Exports to Hongkong and Australia, on the other hand, were sharply reduced. Since the beginning of 1960, Japan has been doing considerable trade in cotton yarn with Indonesia. Exports of rayon piecegoods—after declining steadily from 1957 to 1960—were slightly greater in the first half of this year than in the same period of 1960. Exports of synthetic fibre fabrics continue their rapid expansion; they totalled 42 million square yards in the first half of 1961, compared with 26 million square yards in the first half of 1960. The chief markets appear to be South Korea and South Africa.

Indian Output Rises

The trend of output in the Indian cotton mill industry continues to rise. In the first seven months of this year, the production of cotton yarn was about 8 percent greater than in the same period of 1960, while mill production of cotton cloth showed an increase of about 3 percent over the same period. Under the third five year plan, the target for yarn production is 2,250 million lbs. compared with a realised total of 1,737 million lbs. in 1960. The target for cloth production is 9,399 million yards, of which 5,800 million yards is planned to come from the mill sector, compared with a figure of 5,048 million yards in 1960. It is reported that the Government of India is to license the installation of an additional 3 million spindles.

The "cotton textile export incentive scheme" has been extended to cover knitted fabrics and made-up garments as from July this year. Meanwhile, exports of cotton piecegoods, which were substantially smaller in 1960 than in 1959, have suffered a further sharp setback this year. The first quarter total was only 160 million yards, compared with a quarterly average of 181 million yards in 1960, and the second quarter figure is expected to show a further contraction. Sharp decreases in shipments to the U.K., the U.S.A. and Australia seem to have been the main features.

West European Mills Active

The cotton industries of continental western Europe were continuing to operate at a high level of activity in the second quarter of this year, when the cotton yarn output in these countries taken together was probably much the same as in the corresponding period of 1960. In none of the countries does it appear that the cotton yard output was much different from what it had been a year earlier. Many of the industries, however, report shortening order-books, rising stocks and the increased pressure on margins.

The rapid expansion in exports of cotton piecegoods from the continental west European countries, which was a feature of 1959 and 1960, has been reversed so far this year. In the first quarter, total exports from these countries were about the same as in the first quarter of 1960 while in the second quarter there was a decline of the order of 10 percent in comparison with a year ago, were in Spanish, Portuguese, Dutch and Swiss exports. Spain and Portugal have lost heavily in shipments to the U.S.A., while in addition Portuguese exports to Angola and Mozambique have fallen. West Germany seems to have provided a less buoyant market for cotton cloth exports from the Netherlands and Switzerland in the second quarter. West European exports of man-made fibre piecegoods in the first half of this year appear to have been about the same as in the corresponding period of last year.

at
a
place
called
sahaganj

The Sahaganj of 25 years ago, however, was a different story; having achieved a brief eminence in the later Moghul period, it lapsed into obscurity and remained unknown to the world outside.

It was here that Dunlop bought a derelict jute mill and set up in 1936, India's first large-scale tyre factory which is today Asia's largest rubber manufacturing enterprise.

To the community at Sahaganj the Dunlop factory has meant, among other things, better health conditions such as the control of malaria. Above all, it has meant a rapid absorption of modern values which come in the wake of a progressive industry.

Residents of a town some thirty miles north of Calcutta, coming to work at the Dunlop factory—a typical, week-day, morning scene. Indeed, there is scarcely a household in Sahaganj today where the main breadwinner does not work at the Dunlop factory.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to August 1961. As compared with July, the August indices for Government securities and preference shares show increases of 0.1 point each.

There were decreases in cottons 4.1 points, coals 11.7 points, jutes 7.6 points, minings and oils 22.5 points, cements 3.8 points, engineering 11.1 points, teas 13.6 points, papers 31.8 points and miscellane-

ous 17.5 points. Banks and sugars increased by 2.9 points and 4.0 points.

Combining all the factors, the Capital variable yield securities index declined by 10.7 points during August 1961.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

BETTER BUYING IN DUSTS

AT Sale No. 21, held on 30th October and 1st November, there was a good general demand for the 73,019 packages on offer at the Export auction. Although medium and best orthodox descriptions were well supported, prices were irregular, while plain broken and Fannings were up to 10nP easier. Best C.T.C. descriptions were up to 30nP easier, while there was an improved enquiry for the poorer and fibrous kinds, which were generally firm to dearer. Legg-cut descriptions were up to 20nP easier. Darjeelings were irregular; cheaper whole leaf varieties sold well, but the more stylish kinds were easier. There was less demand for tips and there were some withdrawals.

At the Internal Sale, there was an improved demand for the 27,098 packages of Dust on offer. Better liquoring C.T.C. dusts came in for keen competition, but the plainer sorts were easier by up to 20nP. Fibrous C.T.C.'s were again difficult of sale. Orthodox Dusts were well supported, although prices were lower by 10nP and sometimes 15nP, but towards the close, the demand for this category strengthened. Legg-cut descriptions found ready buyers at irregular but generally easier rates except for the few selective lines which sold well.

The 179 packages of Leaf on offer sold at irregular rates.

TIME CHARTERING ACTIVE IN FREIGHT MARKETS

APART from American and Canadian grain fixtures, the chartering market remained quiet during the past week. A number of tankers were engaged on Polish account to carry foodgrains from St. Lawrence. Fixtures for grain from Gulf to India have been reported at 77s 6d and St. Lawrence to Karachi at 72s, while St. Lawrence to west coast India accepted 65s gross discharge. Two fixtures of ore from Visakhapatnam to Baltimore have been concluded at \$ (U.S.) 8.50 with liner discharge. The time charter market remained active and vessels were accepted at reasonably higher rates.

LINSEED FIRM

The market was firm in the past week due to reports of damage by rains and floods. Arrivals were small and mills found it difficult to carry on. The oil market improved in sympathy with seeds and other oil markets. Stocks held by millers were limited, and they were not interested in forward business at current prices. The oilcake market was very firm, and prices were marked higher by Re. 1 to Rs. 2 a maund. The latest quotation is as follows: Ready November delivery Rs. 30.50 a maund.

HIDES AND SKINS UNCHANGED

The market showed little change. Stocks were less than in the previous week.

Bazaar Sales

(Between 24th October and 30th October, 1961)
Cowhides: Wet salted (ord.) 15,000 pcs. on the basis of Rs. 8 to Rs. 15.50; wet salted (slaughtered) 16,600 pcs. on the basis of Rs. 10 to Rs. 17 and Rs. 19.50 to Rs. 29; wet salted (ord.) 11,000 pcs. on the basis of 94nP to Rs. 1.06 a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 54,400 pcs. on the basis of Rs. 250 to Rs. 275, Rs. 300 to Rs. 325 and Rs. 430 to Rs. 450; wet salted (he-killed) on the basis of Rs. 4.37 and (she-killed) on the basis of Rs. 4.12 a piece; Assam-Dinajpur-Murshidabad 9,000 pcs. on the basis of Rs. 250 to Rs. 270, Rs. 290 to Rs. 320 and Rs. 350; Purneah-Kissenganj 9,000 pcs. on the basis of Rs. 290 to Rs. 310 and Rs. 315 to Rs. 325; Patna-Muzafferpore 15,100 pcs. on the basis of Rs. 250 to Rs. 265 and Rs. 300 to Rs. 330.

Bazaar Stocks

(30th October, 1961)
Cowhides: Wet salted 72,800 pcs.
Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 435,000 pcs.; Assam-Dinajpur 50,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 156,000 pcs.

8, CLIVE ROW, CALCUTTA-1.

If you can say so about all the purchases you make, you will be saying good-bye to the uncertainty of material, quality, durability of product etc.

Unfortunately, there are many articles produced in India which do not conform to any standard—although they should. For, standards ensure quality products, fair competition, consumer goodwill, increased profits. To manufacturers producing goods according to Indian standards, the Indian Standards Institution grants licences for applying on their goods the ISI mark which is a third-party guarantee of quality.

Write to ISI for a list of products which are manufactured to prescribed standards and carry the ISI mark. Make sure that the next time you buy anything, it is a quality product carrying the ISI mark.

THE MEGNA MILLS COMPANY, LIMITED NOTICE

NOTICE is hereby given that an Annual General Meeting of the Members of The Megna Mills Co. Ltd. will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Thursday, the 30th day of November, 1961 at 3 O'clock in the afternoon for the following purposes:—

Agenda

- To consider the Profit and Loss Account of the Company for the year ended 31st March, 1961, the Balance Sheet as at that date and the Report of the Directors and Auditors.
- To declare a Dividend.
- To elect a Director.
- To appoint Auditors and fix their remuneration.
- As **Special Business** to consider and if thought fit to pass the following ordinary Resolutions:—
 - That pursuant to Clause 95 of the Articles of Association of the Company each Director shall with effect from 1st June, 1961, be paid out of the funds of the Company by way of remuneration for his services the sum of Rs 200/- for each Meeting of the Board attended by him subject to a maximum of Rs. 2,400/- in respect of each financial year of the Company provided that in respect of the financial year ending 31st March, 1962, the aggregate of the monthly fees of Rs. 200/- payable to the Directors pursuant to Article 95 upto 31st May, 1961 and the said fees of Rs. 200/- per Meeting of the Board payable in pursuance of this Resolution shall not exceed Rs 2,400/- for that financial year.
 - That the powers given to the Directors to borrow moneys on behalf of the Company by the Resolution passed at a General Meeting of the Company held on 30th November, 1956, be limited to a sum of 1 crore.
 - That Mr. B. P. Ray be and is hereby appointed a Director of the Company.

The Share Transfer Books of the Company will be closed from 20th November, 1961 to 30th November, 1961, both days inclusive.

By Order of the Board,
A. MUKHERJEE,
Secretary.

16, Strand Road,
Calcutta, 1st November, 1961.

Note: (1) A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(2) The Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been sent to all the Shareholders along with the Notice convening the Meeting.

THE KARANPURA COLLIERIES LIMITED NOTICE

THE Directors have resolved to recommend that each of the 60,000 Ordinary shares of Rs. 100/- each in the Authorised Capital of the Company be subdivided into 10 ordinary shares of Rs. 10/- each and a general meeting has been convened on November 30, 1961 for the purpose.

The Register of members of Ordinary shares will be closed from November 24, 1961 to November 30, 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Secretaries & Treasurers.

31st October, 1961.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

74th YEAR OF ISSUE

CALCUTTA, 9th NOVEMBER, 1961.

Vol. CXXXVII No. 3684

MORE CAPACITY FOR THE JUTE MILLS

THE announcement from the Indian Jute Mills Association that member mills have been recommended to unseal $2\frac{1}{2}$ percent of their loomage as from 13th November was an encouraging sign that conditions in the industry are now more or less back to normal. Normal is, of course, a relative word for an industry whose fortunes are apt to fluctuate wildly from year to year, and at the moment it takes no account of the fact that the mills' resources have been depleted during the six months from April to September this year by no less than Rs. 6 crores. All that it means, in fact, is that the mills are now probably all showing a small profit margin on current working, that goods prices are down to the levels at which foreign buyers may be encouraged to replenish their depleted stocks, and that supplies of raw jute at reasonable prices are assured for the rest of the season. Otherwise, the position of the industry is still relatively precarious, and this may be the reason why the decision was for a $2\frac{1}{2}$ percent unsealing and not 5 percent as rumoured in the market. It would not be wise to take too many risks with the mills' profitable working at this stage; further losses would just about cripple the industry if allowed to go on unchecked. Even the $2\frac{1}{2}$ percent unsealing is for a limited period, until 31st December. By then, it is hoped, the position will be clearer and the need of overseas buyers to rebuild their stocks will be sufficient to outweigh the normal falling off in demand which usually occurs early in the New Year. It is vitally important for the future of the industry that goods prices should not fall below the level at which, given the fairly rigid minimum for raw jute prices, the mills are able to make profits. Provided this profitability is maintained, it will be easy enough to expand production later if demand justifies it. In the meantime, caution is obviously imperative.

This latest unsealing decision will leave the mills with only 94 percent of their looms sealed compared with the 124 percent with which they began the year, and the maximum of about 20 percent which had to be resorted to in the individual moves made last August to restrict capacity in line with the availability of raw jute. With the average working week back at 48 hours, the industry will be producing at round about its normal working capacity taken over recent years. For this it will require an extra 60,000 maunds or so of raw jute a month, on top of the current consumption of about 500,000 bales a month, and this amount should provide a useful support to prices which have lately shown signs of sagging and can be expected to weaken further as the season advances. The addition to current production should exceed 2,000 tons a month under full working conditions. On the basis of recent stock figures this is clearly no great amount; at the moment stocks of all goods, and especially hessians, are uncomfortably low. But there is no doubt that the mills can be relied upon to increase capacity further provided future demand conditions justify the move and profitability can be assured. It is in their financial interests to do so.

The main factor limiting capacity increases at the moment is, of course, the prevailing price of raw jute. This is at a more reasonable level than it has been all year. At present it is round about Rs. 32 a maund for Assam Bottoms compared with Rs. 58.50 six months ago and Rs. 52 at the beginning of January. It is still above the level which the mills would regard as ideal given the dismal facts of mounting foreign competition; but a compromise has been willingly accepted so as to provide cultivators with the incentive required to sow at least the same acreage to jute again next year and eventually, it is hoped, to ensure permanent self-sufficiency. This self-sufficiency has so far proved elusive, but there now seems reasonable hope that it will be attained in future provided cultivators' incomes can be held at reasonable levels. Now is the time for some hard thinking on this problem. The outlines of it are already

familiar enough, but it is depressing what little progress has so far been made in solving it. The temptation now that more comfortable conditions have returned will be to shelve it until next time. It would be unfortunate if this were to happen because the next time could prove disastrous for the mills. The proposed buffer-stock scheme, plans for which are now reported to be in their final stage, cannot in itself provide the whole answer. The one thing that can is a concerted policy for improving the yield of jute per acre sown by increasing supplies of fertilisers and better seeds. This is not a short-term matter and progress on it should be started right away.

The Governments, both Central and State, are to be congratulated on so far successfully resisting the political pressure for higher prices for the growers. This shows a reassuring grasp of the facts of the competitive situation which the industry is likely to face during the next few years. The pressure has not, however, abated, and it promises to become even more severe as the election approaches. Provided it can continue to be resisted at least until such time as raw jute prices fall well below their current levels, then this is probably as much as the industry can expect under the circumstances. But if exports of jute goods are to be expanded in the face of growing competition, and the country is to avoid another situation analogous to that of sugarcane, then a cool official head and a reluctance to give way to political pressure will remain a necessary feature of raw jute policy for many years to come. If the buffer stock scheme can only be run at a thumping loss to the Government then it will amount to subsidising the export of jute goods, a move which will almost inevitably produce reprisals across the border in East Bengal. The present policy of maintaining raw jute prices artificially bristles with difficulties; it is going to require very careful handling indeed if these are not eventually to create more problems than they solve.

The prospects for demand during the next few months appear reasonably favourable. Most of the main sources are expected to increase their offtake, although so far the largest of them, the United States, has shown only hesitant signs of doing so. It may be that some buyers are con-

ing, as when some buyers are con-

INVESTING L.I.C. FUNDS

THE Government of India is to be complimented on its decision not to usurp the investment functions of the Life Insurance Corporation. The proposal that it should take over the L.I.C.'s funds, and invest them itself, was originally made by the Estimates Committee of the Lok Sabha in a report presented nearly seven months ago. The immediate reaction to the report was sharp and adverse. The Estimates Committee's recommendation was not only found to be based on faulty reasoning; it was suspected to be a surreptitious move aimed at shutting off the flow of L.I.C. funds into private industry. Since the Corporation is believed to be the biggest single investor in the stock markets, the Estimates Committee's report has inevitably cast a shadow over the markets ever since it was published. The Finance Ministry's opposition to the change has long been known; it is regrettable, therefore, that the announcement of the official decision should have been so greatly and unnecessarily delayed. From a long-term point of view, reports such as these can do incalculable harm to the investment outlook for industry. In the short term, too, the Estimates Committee's recommendation might well have restrained the L.I.C. from investing as much in the private sector as it would otherwise have done. The delay in announcing the Government's decision is perhaps meant to give the impression that the recommendation has been honoured with

tinuing to hold off in the hope that lower raw jute prices later in the season will result in reduced quotations for goods as well. If this is so then there is a considerable chance of their being disappointed because it is unlikely raw jute prices will go much lower than at present even if the Government were disposed to let them. The big question mark which overshadows the future is the extent to which those foreign users who changed over to substitutes when prices were high, will be enticed back to jute goods now that they are quoting more reasonably. The answer is difficult to give; much depends, for instance, on the capital expenditure incurred in changing to substitutes. But it is unlikely that all the ground lost will be retrieved. Demand prospects, therefore, depend on the extent to which world trade has been, and still is, increasing, and on the growth of competition. This is the other point on which attention should mainly be concentrated now that the immediate problem of unprofitability is over. To some extent a solution will depend on the willingness of the Central and State Governments to support modernisation schemes both morally and financially. So far the prospects seem fairly good, but the admittedly limited enthusiasm which government has shown up to now may evaporate altogether if the fortunes of the industry mend substantially during the next few months. This is a danger to be guarded against; modernisation of the weaving process requires to be put in hand right away if the growing threat of competition from Pakistan is to be countered. It is not generally realised to what extent the East Bengal mills are able to make inroads into India's sacking markets given their present cost advantages. Unless these are whittled down without delay the time may arrive when India is unable to sell any sacking in foreign markets at all.

So, the two problems for the future, now that the more immediate ones have been solved, are to maintain the incomes of cultivators while reducing the price of raw jute, and to expedite the modernisation of the mills' weaving process together with any other aspect of mill working which has fallen behind the times. The industry is, in fact, merely over the first stage in the process of rehabilitating itself to the realities of world demand and competition which the recent problems of immediate survival have tended to obscure. There is no evidence to suggest that these facts are not fully appreciated by both the industry and government; the difficulty will be to get something done about them in time to avoid the next crisis, which this time may be considerably more difficult to survive than the one which the mills now, at last, seem to be leaving behind them.

L.I.C. FUNDS

The Committee made one fundamental error. It started with the implicit assumption that the funds of the L.I.C. belong neither to the Corporation, nor to its policyholders, but to the Government. From this, the Committee moved to its second major error. This was the assumption that the funds are meant to be used directly in support of the Government's broader socio-economic policies, for promoting social progress and the diversification of investment and for helping check speculation. In fact, the principles governing the investment of life insurance funds have long been known and have been tested by experience. The basic principle is that the investible funds belong to the policyholders and are held in trust by the insurer. To qualify for the trust, the latter is required to invest the funds as safely and as profitably as he can. If the Government were to take over the L.I.C.'s funds, the condition concerning safety might be met, but that concerning profitability would not be. To be remunerative, a substantial portion of the investments have to be made in industrial stocks and shares, which usually offer better returns in terms of yield and capital appreciation than Government securities can. In

any case, safety is adequately ensured by the legal stipulation that the L.I.C. has to invest a certain minimum proportion of its money in Government and semi-Government loans. Thereafter, in order to improve the overall profitability of its total investments, the Corporation has to be left free to buy industrial shares judiciously. Policyholders have a direct interest in seeing to it that the L.I.C.'s investments are not only safe but also offer attractive yields. This is because unless the Corporation's profits and surpluses increase, valuation bonuses cannot be improved and premium rates cannot be reduced. A proper investment policy is, therefore, essential for the long-term growth of life insurance in India.

Strong doubts have been expressed about the Estimates Committee's view that the Government would be in a better position than the L.I.C. to invest life insurance funds in accordance with the broad socio-economic objectives the country has set itself. The Government has now given the short answer to this argument by confessing honestly that it would probably be more open to political pressures than the L.I.C. while deciding the size, type and location of the investments. It is easy to see what this means. Ministries would get busy churning out projects which have little economic justification, and would then insist on the Government giving the L.I.C.'s money for implementing them. State Chief Ministers would go rushing to New Delhi even oftener than they do now, and demand that the new money be used for building industries in their particular States in the interests of "regional balance", regardless of whether the wrongly located industries would ever be economic. It is quite probable that pressures of this sort are already exerted on the L.I.C. to some extent. But the institution at least is in a better position to resist them by pointing out that it would be violating its charge if it allowed political considerations to influence its investment decisions. And it would, in fact, be a gross misuse of L.I.C. funds if they were used for financing projects and policies which could not be justified on strictly economic grounds. It is no answer to say that, to avoid political pressures, the L.I.C.'s funds could in that case be entrusted not to the Government directly, but to institutions like the Industrial Finance Corporation. For one thing, there is nothing to show that the I.F.C., as an investor, is superior to the L.I.C. The investment objectives of the two bodies are valuable in their own way, but are quite different. Furthermore, in order to cope with a sudden flood of life insurance funds, the I.F.C. would have to set up a large new investment organisation which would ultimately be doing much the same work as the L.I.C.'s investment staff is at present doing. Finally, there is a real danger that if the L.I.C. is deprived of the right to invest its funds, the incentive for securing more business will diminish.

The Estimates Committee has done a serious injustice to the L.I.C. by spreading the notion that the latter has contributed little to the diversification of industry. The Committee's report, in fact, is written in terms suggesting almost that the L.I.C. is a casual and fumbling investor, which occasionally, though not deliberately, joins the fraternity of *fakka* speculators. The truth is that, within limits which are both necessary and desirable, the L.I.C. has done much to promote the growth of industry. Admittedly, it has invested relatively little in new private ventures; it has also been rather slow in offering its services as an underwriter. But industrial growth is not promoted merely by investing in new enterprises; it can be promoted equally well by buying the shares of established industries. The purchase of the latter by the L.I.C. has released resources, a large proportion of which have undoubtedly gone into new ventures in recent years. It has also helped sustain the stock markets, and thus brought about an improvement in the general climate for investment, without which private capital would have been difficult to mobilise. In the process, mistakes have sometimes been made, the most serious of which came to light during the Mundhra scandal. But, at the same time, large gains have also been secured through the capital appreciation of the shares bought.

Much of the Estimates Committee's report, it appears, was inspired by alarmist memories of the Mundhra scandal. This was clearly the episode it had in mind when it suggested that the Corporation should be divested of the "controversial and distracting work of investment". But those who followed the Chagla and Bose enquiries closely at the time might have felt that the Mundhra affair represents perhaps the strongest single argument against the Government taking over the investment of L.I.C. funds. The political pressures which led to the mistake of the L.I.C. investing heavily in the Mundhra concerns were never clearly specified during the enquiries, but their important rôle was in abundant evidence during the proceedings. The Finance Ministry seems to remember them well enough—so well, indeed, that it quotes the "existence of these political pressures as a reason for not wanting to

land in the soup again. It is hard to see why, in the light of the Mundhra episode, the Estimates Committee should think that the Government could invest life insurance funds more judiciously than the L.I.C.

The final argument against the Estimates Committee's plea is that the L.I.C. in any case does not invest so much in the private sector as to make the change worth while. It is admittedly the biggest single investor in the stock markets (where it buys not only companies' shares but also Government and semi-Government securities). It is also estimated that the proportion of life insurance funds invested in the private sector have increased from around 17.2 percent in pre-nationalisation days to 21.3 percent at the end of 1960. But the actual sums invested in recent years have been much smaller than is supposed in some quarters. Attention is at times drawn to the fact that the Corporation's "stock exchange investments in

U.K. INTEREST RATES AND EXPORTS

THE downturn of short-term interest rates in London has not solved the problem of the high cost of financing British exports. Various ideas for lowering this cost have been discussed in the City of London and between the City and the British Government, but exporters, labouring under a disadvantage, are impatient of talk and demand changes in financial arrangements that will enable them to trade abroad on equal terms with their competitors. The disparity between Britain's and other countries' bank overdraft rates is not as wide as the differences in Bank rates, but charges for overdrafts in Britain, 7 percent or more, are considerably above the world's average. It has been suggested, therefore, that rates charged for bank credit should discriminate between domestic and export trade, with a special low rate for exporters, and that, while domestic rates should (as now) be governed by Bank rate (above a specified minimum overdraft rate), the export rate should be independent of Bank rate.

Bankers do not like this idea. It is often impossible to distinguish precisely between a credit for domestic purposes and a credit that will assist exporting. Bankers have enough problems in deciding to which applicants they should grant credit, and they are reluctant to assume additional responsibilities. It would presumably be necessary to distinguish various categories of export credit, and the complexities of such a scheme would be the more troublesome. Another idea is that paper representing export business should be freely marketed at discounts much smaller than the ordinary bill market's. The main problem is long-term export paper. The facilities provided by the Government-sponsored Export Credits Guarantee Department have been elaborated so that the security of export paper of five to ten-year terms is almost beyond doubt, but its terms are too long for the normal requirements of the banks and it has not yet aroused much enthusiasm among insurance companies. Differential rates imply some kind of subsidy, and, although in some other countries exports are subsidised by some such means, a differential-rate scheme in Britain would doubtless arouse hostile criticism abroad.

Another objection to differential rates, as far as London is concerned, is that a system out of accord with the principles of a free financial market would diminish London's status in Europe. If Britain joins the European Economic Community London's financial institutions will try to establish London as the financial centre of the Community. They are not well disposed towards arrangements that would make this task more difficult. The City is, anyway, traditionally biased towards the methods of a free market, and it feels, therefore, that the high cost of export-finance should be adjusted not by distorting the market but by lowering the cost of finance in general. In the recent remarks of Lord Cromer, Governor of the Bank of England, at the annual bankers' dinner, there was evidence of a change in official thinking on this matter. Lord Cromer hinted that the level of interest rates in Britain in recent years might be "inappropriate".

If such thoughts are translated into actions the authorities will, presumably, reverse the upward trend of Bank rate (over the years it has tended upward, because the authorities have been unwilling to reduce the rate as much as they had previously raised it); but manipulation of longer-term rates (if such a policy is contemplated) will be more difficult. That high rates are needed to restrain inflation is true enough when the authorities rely on monetary instruments, but they could use other means—particularly the Budget Reduction of long-term rates as an act of policy is not easy, however. These rates are established by the forces of supply and demand (subject to some extraneous influences), and their average has been high for

India" have risen by Rs. 37 crores (to Rs. 369 crores) in 1958, by Rs. 29 crores (to Rs. 398 crores) in 1959, and by Rs. 59 crores (to Rs. 457 crores) in 1960. But it is not always mentioned that most of these new investments have gone into the public sector. The increase in private sector investments through the stock exchanges has been only Rs. 6 crores in 1958, Rs. 6 crores in 1959 and Rs. 11 crores in 1960 (the figures exclude investments in approved securities in the private sector). The statistics indicate that the sums involved are too small to deserve the radical change in investment procedures suggested by the Estimates Committee. The change itself is so far-reaching in its implications that it could do serious harm to the whole climate for investment in private industry. The interests, both of life insurance and of the economy, demand that the funds be invested by the L.I.C., and be invested on strictly business considerations in accordance with the trust policy-holders have placed in the institution.

years past because the demand for capital has been strong. So no solution of the exporters' problem is easy, and sceptical exporters, familiar with this kind of discussion, are doubtful that any action will be taken to make finance cheaper. Some bankers feel that the cost of finance is not so important as exporters pretend, and that it is a convenient excuse for failure in export markets. But some big orders have unquestionably been lost as a consequence of the marginal difference in cost, and Mr. Reginald Maudling, former President of the Board of Trade, said at the recent annual conference of the Conservative Party that the Government was anxious about export-finance—both the available supply and the cost of it.

The City does not believe that the supply of export-finance is generally inadequate. The Export Credits Guarantee Department has certainly facilitated financing; and its report on business done in the third quarter of this year shows that exporters are using its facilities increasingly. The City feels that the cost of export-finance, on the other hand, requires not merely periodical discussion but serious practical attention. The essential facts of the matter are that the U.K.'s interest rates have risen above other countries' and that the U.K.'s exporters have in the past been and are now impeded by high rates just when it is most necessary to sell more abroad. Even if it is too difficult to adjust the U.K.'s rates so that exporters can get finance on the same terms, approximately, as their competitors, some method ought to be devised to avoid the absurd situation where financing export trade becomes more costly whenever the financial situation causes a rise in money rates for internal reasons. This is one reason why Bank rate should not be used indiscriminately whenever the situation is developing towards a crisis.

COMMONWEALTH AND THE COMMON MARKET

IN the two previous articles*, Barclays Banks' Overseas Review dealt with a few of the trees in a vast wood. One sector worth a closer look is the Commonwealth as an economic body. The Commonwealth is not fundamentally an economic organisation, but a loose and flexible political unit. The political concept is nebulous and not easily recognised, but it is nevertheless the essential basis. Sentiment and tradition are intangible elements which also play a vital part in Commonwealth affairs. But a close and flourishing economic relationship, particularly one of mutual trade, is required to raise such a body from the level of a social club and debating society to that of a dynamic force in world affairs. All those who believe in the Commonwealth as an influence for good in the world must hope that such a relationship will be maintained.

The U.K. has always been the economic centre of the Commonwealth. One side of the picture shows her deriving half of her food and an even greater proportion of her raw materials from overseas, largely the Commonwealth, and depending for her livelihood on exporting manufactured goods to pay for these imports. On the other side of the canvas, one sees the value to the Commonwealth countries overseas of the U.K. as an assured destination for a large proportion of their exports and their dependence on the U.K. as an economic leader and as a source of development capital. Although this picture remains broadly true, in some aspects it has altered in recent years. Britain still looks overseas for markets for manufactured goods, but has recently found the Commonwealth

aking a smaller share. At the same time, for various reasons, the U.K.'s invisible exports have been declining while invisible imports have been increasing, so that the net figure of "invisibles," which was about £250 million in 1938, fell to a mere £22 million in 1960. The U.K.'s dependence on exports for her survival is accordingly greater than ever before. Until these are substantially increased, she can only provide overseas investment capital by "borrowing short and lending long," as she did in 1960. Already the overseas countries of the Commonwealth have had to look more frequently elsewhere for development capital.

A fact not commonly realised is the danger that the U.K. will cease to provide an assured and expanding market because she will not be able to pay for her imports on their present scale unless she increases her exports. Britain may well cease altogether to fulfil her economic function in the Commonwealth unless she rapidly expands her sales overseas. The implementation of the Common Market is a direct threat to some 15 percent of U.K. exports. There is also a very real danger that producers inside the Six will benefit from the economies they will derive from large-scale production for the greatly increased domestic market so that they will provide even greater competition than at present to the U.K. exporter in the rest of the world. Britain might face a falling away of her exports to the Six with equanimity if she believed that there were other expanding markets in which she might increase her share, but this does not seem likely in the near future. The overseas Commonwealth remains far the most important market for the U.K. It seems at first sight, however, not only that her competitors have been encroaching on her share but also that the market as a whole is growing more slowly than others elsewhere. Widely quoted lately is the fact that in the 1950s U.K. sales in the overseas sterling area fell from 50 percent to 40 percent of the total; exports to North America, Europe and the rest of the non-sterling world were all increasing much more rapidly than those to the sterling area. It should be remembered that the sterling area is not the same as the Common-

wealth, and the fall is somewhat less drastic when Canada is included with sterling area figures.

A longer-term perspective may give a rather different impression than a short view. In the first place, it is possible that the share of the U.K. in the markets of the Commonwealth is returning to normal rather than fading away. The present share is still rather more than that of the 1920s. The figures of those years were given one boost by the Commonwealth preferences of the Ottawa agreements of 1932 and another by the exceptional conditions of the immediate postwar years. The 1950s saw the return as competitors of the west European countries, followed by Japan and finally by the United States. The much maligned and constantly exhorted British exporter naturally lost ground as and when he lost the various exceptional advantages which he had previously enjoyed. There is certainly no reason for complacency and the need for flexibility and competitiveness has become greater than ever, but at least the trend of the 1950s need not be considered as the inevitable pattern for the future. Similarly, it is misleading to pay too much attention to the recent trend of Commonwealth trade to expand more slowly than that of the rest of the world. Most countries of the Commonwealth still depend predominantly on the export of primary commodities and the terms of trade were moving against them. This trend may easily be reversed at any time. Moreover, the Commonwealth countries overseas are diversifying their economies and becoming less vulnerable to such factors. The great economic advance of the 1950s was made on the Continent of Europe; this was a relatively unsatisfactory period for the Commonwealth, where economic progress continued but at a slower pace. These trends seem to be persisting in the 1960s: looking further ahead, however, it does not seem a rash prophecy to suggest that the biggest economic expansion may be in countries such as Canada and Australia. Moreover, there is good reason to hope that progress in many of the under-developed countries of the Commonwealth is gathering momentum and that before long they will provide some of the most valuable markets in the world.

(Concluded)

Current News and Comment

New Central Jute Repeats

Commenting on the prospects for the current year in their report for the year ended March 1961, the directors of the New Central Jute Mills Co. Ltd say that raw jute supplies are likely to increase substantially. If the parity between the prices of fibre and those of jute goods is maintained, the working should improve. In 1960-61, the trading profit has amounted to Rs. 71.22 lakhs, against Rs. 75.33 lakhs in 1959-60. Depreciation absorbs Rs. 36.23 lakhs (against Rs. 8.99 lakhs) and development rebate reserve Rs. 23.46 lakhs (against Rs. 66.36 lakhs). General reserve receives Rs. 11.53 lakhs. After transferring Rs. 28.65 lakhs from general reserve, the ordinary dividend has been maintained at 15 percent, taxable, absorbing Rs. 25.65 lakhs. The dividend offers a yield of 8 percent at the present price of Rs. 18.69 a share. The ordinary share capital has been increased from Rs. 1.71 crores to Rs. 2.54 crores during the year. But the new share capital has not participated in the dividends just announced. The new shares were issued at a premium of Rs. 3.75 a share. The directors say that there has been an increase in the demand for jute carpet backing cloth. The working of the broad-loom has been satisfactory. Steps have been taken to install more of the broad looms, which now total 121. The new sliver spinning frames have been installed. As for the chemical section, the equipment has been further improved. The production of fertiliser and soda ash has started. The working of the section has been hampered by the coke shortage.

Outlook for Delhi Cloth

In his address from the chair at the annual general meeting of the Delhi Cloth and General Mills Company last week in New Delhi, Lala Bharat Ram said that the cotton textile industry had a good year in 1960-61 "as far as profits are concerned", but the cost aspects have been causing anxiety. (A fuller version appears on a later page of this week's *Capital*). Raw material and labour expenditure has been rising. As domestic cotton supplies have been inadequate, the industry has had to use expensive American cotton in place of local growths for the same counts of yarn. This has raised production costs. Cotton consumption will increase, especially since in the third

gradually lost. Consequently, textile exports are falling. In 1959-60, they were valued at Rs. 69 crores; in 1960-61, they fell to Rs. 62 crores, and the present tendency is towards a further decline. Labour costs in the industry have been rising too, "sometimes because of increases in dearness allowances, which comprise between one-half and two-thirds of the total emoluments of the workers, and sometimes due to other wage increases as happened after the Wage Board recommendations in 1960". The industry has given the wage increases recommended by the Board, but labour has not fulfilled its part by helping rationalisation. "The net result, of course, is to add to the general pressure on the wage cost", Lala Bharat Ram said.

Discussing the activities of the Company, the chairman pointed out that although it has earned better profits during the past year mainly on account of cotton textiles, the sugar and vanaspati sections have not fared as well. The sugar industry faces a burdensome surplus, which is hard to export. The Government has taken measures to restrict production during the 1961-62 season, but the problem of exports will still persist. In Lala Bharat Ram's opinion it is necessary to improve the quality of sugarcane and fix its minimum price realistically. It will then be possible to supply sugar to the consumer at lower prices. As for the vanaspati industry, its profitability has been "highly erratic" due to the increasing element of speculation in the oil and oilseed trade, leading to violent fluctuations in prices. "There is definitely a need for the Government and the industry to take stock of this situation and to take such steps as are possible for minimising the impact of these unhealthy trends," the chairman suggested. Speaking about the diversification of the Company's activities, Lala Bharat Ram said that it has been decided to put up a P.V.C. plant which will also yield ancillary products like chlorine, calcium carbide and caustic soda. A plant will be built for the manufacture of rayon tyre cord, both yarn and fabric. In addition to these large projects, renovation, modernisation and (in certain fields) expansion continues.

Champaran Sugar Pays Less

The working of the Champaran Sugar Co. Ltd for the year ended June 1961 reflects the difficulties of the industry arising from overproduction. The profit has declined from Rs. 10.17 lakhs in 1959-60 to Rs. 8.18 lakhs in 1960-61, after transferring Rs. 1.78 lakhs (against Rs. 1.75 lakhs) to depreciation. The taxable ordinary dividend has been reduced from 15 percent to 12 percent. It is covered more than three-and-a-half times and offers a yield of 7.1 percent at the present price of Rs. 16.87 a share. Taxation absorbs Rs. 3.75 lakhs (against Rs. 4 lakhs). Development rebate reserve is allocated Rs. 84,644, rehabilitation reserve Rs. 1.54 lakhs (against Rs. 3 lakhs) and general reserve Rs. 60,000. The carry-forward is Rs. 18,674 against Rs. 27,968 brought in.

The Company achieved a record production of the Barrah factory having crushed 4 million maunds and the Champatia factory 3.9 million maunds. The recovery of the former declined from 9.49 percent to 9.12 percent due to a deterioration in the quality of sugarcane supplies while that of the latter rose from 9.28 percent to 9.40 percent. Although the Company has made further progress in modernising the equipment by using Rs. 4.80 lakhs out of rehabilitation reserve and cane supplies from its own estates are likely

to be bigger, the Government has directed the factory to restrict production during the current year.

Prospects for Kothari Sugars

The first annual report of Kothari Sugars and Chemicals Ltd for the period from 7th November, 1960, to 30th June, 1961, has now been submitted to the shareholders. Its working shows a loss of Rs. 8,756 which has been carried forward. Total expenses incurred on various items, such as land, buildings, machinery and plant and other expenses, amount to Rs. 55 lakhs. The report says that the acquisition of 117 acres of land through the Government has been finalised and Rs. 3.55 lakhs has been paid. The civil engineering work, excavations and foundations of the factory buildings are in progress. The stores and workshop buildings are expected to be ready for occupation shortly. The erection of the factory building is expected to be completed by November 1961. The machinery and plant, which are being supplied by Binny's Engineering Works Ltd, have started arriving. The boilers for the factory are being supplied by the Textile Machinery Corporation Ltd. The erection of the machinery, it is stated, is expected to be completed by April-May 1962. The directors hope to start trial crushing before the middle of 1962. As for sugarcane supplies, the Company has started registering the cane-growers for the special season from July to September 1962.

A copy of the chairman's speech has been sent to the shareholders along with the report and accounts. The chairman, Mr. A. D. Shroff, discusses at length the present position of the sugar industry and its future prospects. He also suggests some measures for enabling it to get out of the present difficult situation arising out of the rising stocks. It is stated that a record production of about 3 million tons was achieved during the last season while internal consumption has been estimated around 2,050,000 tons. After allowing for a possible export of about 300,000 tons, the industry will be faced with a carryover of about 700,000 tons. The present problem is one of disposing of the surplus sugar. It is obvious that the industry is not able to capture the world market, as the world price is Rs. 400 a ton while the cost of production in India is about Rs. 700 a ton. The high price of sugar keeps the expansion of internal consumption under check. Mr. Shroff says that the solution, therefore, lies in rationalising the working of plantations, so that the cane-grower can get a higher return from his investment, even if the statutory minimum price of cane is reduced. This, he says, can be achieved by increasing the yield an acre and improving the quality of sugarcane by adopting improved methods of cultivation. It will help reduce the price of sugarcane without affecting the income of cultivators. The chairman also pleads for a reduction in Government levies which now amount to 30 percent of the price of sugar. Mr. Shroff hopes that by the time Kothari Sugars starts production, the existing surplus will be reduced appreciably.

More from Marikar (Motors)

The substantial rise in the profit of the Marikar (Motors) Ltd for the year ended March 1961, has enabled the directors to raise the dividend to 25 percent from 18 percent. The gross trading profit amounts to Rs. 11.12 lakhs, compared with Rs. 7.96 lakhs in the previous year. After meeting all expenses as well as depreciation and bonus to staff, the net profit amounts to Rs. 5.54 lakhs, against Rs. 3.45 lakhs in the previous year. With Rs. 13,567 brought forward from the previous year, the total available for appropriation is Rs. 5.67 lakhs. Out of this, taxation provision gets Rs. 2.60 lakhs (against Rs. 1.60 lakhs). A sum of Rs. 1.25 lakhs (against Rs. 50,000) has been transferred to general reserve. The short provision for the dividend on preference shares for 1959-60 amounts to Rs. 321. The dividend at 8-4/7 percent on the cumulative preference shares for 1960-61, subject to deduction of tax, amounts for Rs. 26,030. The proposed dividend of 25 percent on equity shares, subject to deduction of tax, will absorb Rs. 1.44 lakhs. The balance of Rs. 11,542 is carried forward.

The turnover for the year improved to Rs. 1.68 crores from Rs. 1.03 crores. Considering the increased turnover, the directors think that the present paid-up capital of the Company is insufficient for its working, so they have decided to issue further shares. As a preliminary measure, it is proposed to raise the authorised share capital from Rs. 15 lakhs to Rs. 20 lakhs. It is stated that the preference shareholders are entitled to a cumulative dividend of 6 percent a year. The Company has been declaring preference dividends without deduction of tax. Under the Preference Shares (Regulation of Dividends) Act, the preference shareholders will be entitled to a dividend of 7.8

percent, subject to deduction of tax. The fixed dividend, subject to deduction of tax, was paid at 8-4/7 percent for the year ended March 1960, with the consent of the shareholders. The same dividend is now recommended for the year ended March 1961. Considering the present position of preference shares, the directors recommend that they be paid a fixed dividend of 8 percent, subject to deduction of tax. A separate meeting of the equity shareholders has been convened for this purpose.

Indian Hume Pipe Fares Well

The Indian Hume Pipe Co. Ltd has reported very encouraging results for the year ended June 1961. While sales are up by nearly 11.85 percent from Rs. 232.48 lakhs to Rs. 259.99 lakhs, the gross profit shows an increase of over 50 percent from Rs. 37.88 lakhs to Rs. 57.11 lakhs. What is more, the profit figure has been deflated by Rs. 18.10 lakhs, following a change in the method of valuing opening stocks of raw materials, stores and spares. This amount of Rs. 18.10 lakhs has been transferred to stock reserve. Although the gross profit is substantially higher, the dividend has been maintained at 13 percent, less tax. But being on increased capital, it absorbs Rs. 7.80 lakhs (against Rs. 5.63 lakhs). After providing Rs. 13.95 lakhs (against Rs. 8.46 lakhs) for depreciation and Rs. 21.75 lakhs (against Rs. 12 lakhs) for taxation, the net profit amounts to Rs. 17.57 lakhs, against Rs. 14.54 lakhs in 1959-60. Writing back Rs. 74,459 being the excess provision no longer required, the directors have allocated Rs. 2.33 lakhs (against Rs. 3.43 lakhs) to development rebate reserve, Rs. 3 lakhs (against Rs. 2 lakhs) to debenture redemption reserve and Rs. 3 lakhs (against Rs. 50,000) to additional tax provision. No provision has been made for rehabilitation reserve, which received Rs. 1 lakh in the previous year. Dividends, preference and ordinary, absorb Rs. 10.30 lakhs (against Rs. 8.12 lakhs), leaving a sum of Rs. 39,000 to be carried forward, against Rs. 70,000 brought in.

The Company continues to expand its activities. Last year, two new factories were opened, one in Dhanduka in Gujarat and the other in Pattancheru in Maharashtra. The total number of factories is now 60. The directors state that work for the fabrication, supply and erection of steel penstocks for the first stage of Koyana hydro-electric project, and for the manufacture and supply of prestressed concrete poles for the transmission of Koyana power, is progressing satisfactorily. The steel penstock division is making satisfactory progress. The Company has entered into a further technical collaboration agreement with the Swiss firm of Giovanola Brothers Ltd for the execution of the contract with the Government of Mysore for the fabrication, supply and erection of over 5,500 tons of steel penstocks for the first stage of the Sharawathi hydro-electric project. An order has been secured from the Maharashtra Government for the supply and erection of steel liners for the second stage of the Koyana project; this will be executed almost in continuation with the contract for the first stage, which is now nearing completion. The Company has made good progress in the prestressed concrete pipe division and these pipes are becoming increasingly popular with public health authorities. Contracts have been secured for supplying and laying prestressed concrete pipes for city water supply schemes in Jamnagar, Rajkot, Bhavnagar, Hyderabad and Secunderabad. In view of the expanding activities, the Company needs more finance. The directors have, therefore, decided to increase the authorised capital from Rs. 1.10 crores to Rs. 5 crores by the creation of 390,000 unclassified shares of Rs. 100 each. In addition, the Company has asked for permission from the Controller of Capital Issues to issue debentures of the value of Rs. 50 lakhs carrying interest not exceeding 7 percent. Against a paid-up equity capital of Rs. 60 lakhs, reserves total Rs. 109.38 lakhs.

Rights from Tata Chemicals

The Rs. 10-paid share of the Tata Chemicals Ltd, which were sold down to Rs. 16.24 around the end of August and could be bought at below Rs. 17 by about the end of October, shot up to Rs. 20.08 on 4th November. This brings it fairly close to the year's high of Rs. 21.12 recorded in March. The preliminary figures about the Company's working for the year ended June 1961, released along with the dividend announcement, showed that the Tata Chemicals had done better than in the previous year. The turnover had crossed the Rs. 4-crore mark—22 percent up over the year—and the gross profit had risen by 15 percent from Rs. 48.11 lakhs to Rs. 57 lakhs. The dividend had been raised by 5nP to 65nP a share. But all this had failed to please the market which had every reason to feel disappointed over the

Company's announcement of a rights issue at a premium of Rs. 2.50 a share. That is perhaps why the shares continued to be out of favour with the bulls and were available around Rs. 16.72 near October-end. Last week's spectacular rise was caused by sustained influential buying which also induced considerable nervous short-covering. The optimistic note which runs through the chairman, Mr. J. R. D. Tata's statement, which was released along with the directors' report on 3rd November, suggests that the recent buying in the Company's shares was of an "informed" character. The chairman states that the 503,920 equity shares which Tata Chemicals proposed to issue in the ratio of one share for every five held, will now be offered at par instead of at a premium of Rs. 2.50 a share. The management is said to have changed its mind "in view of the sacrifices incurred in the past by the ordinary shareholders who waited 16 years for their first dividend and in view also of the relatively low dividend paid up to now." It is surprising that the management should not have thought of these points carefully when it voted in favour of a premium. Apparently it is the shareholders' strong protest against the issue being made at a premium which has obliged the management to revise its earlier decision. Of course, the issue is subject to the Government's approval.

Mr. Tata describes the progress made in the previous year as "fairly solid". The results of the previous year have not yet permitted the full restoration of the dividends paid two years ago, but they show that Tata Chemicals has recovered from the setback in 1959-60 and is well on its way towards reaching the much-improved position expected from the expansion programme which is nearing completion. But the supply of salt at the Company's works, on which depends the economic manufacture of soda ash and caustic soda, continues to be dependent on the unpredictable weather. Exceptionally heavy rains have continued to plague the salt raisings almost every year. Tata Chemicals is now seeking the Gujarat Government's permission to put an additional 700 acres under salt in order to ensure adequate supply of the essential raw material.

The chairman says that most of the remaining major units planned for the soda ash plant were commissioned or completed during the year. Barring the intervention of unforeseen incidents, the main project for the expansion of the Company's productive capacity in soda ash and sodium bicarbonate should be completed by June 1962. Some time must elapse thereafter before the output reaches its capacity. This means that the full results of expansion should be reflected in the accounts for 1962-63. The expansion programme includes in the final stages a provision for doubling the capacity of the chemical caustic soda plant. The final decision on this will be taken after the Government's decision on the Tariff Commission's enquiry into caustic soda prices. The chairman seems optimistic about the outcome of the enquiry. Tata Chemicals has great growth potentialities. It has concluded an agreement with Mr. Prabhulal Shah and Bombay Mineral Supply Co. Private Ltd for the acquisition of the undertaking of the mineral Company which owns bauxite deposits under leases from the Government in Bhatia, Saurashtra. At present, these deposits are being worked and sold as ore. The purpose of the merger is to develop the deposits for industrial uses for which an application is to be made to the Government of India. The mineral Company's undertaking will pass to Tata Chemicals from 9th November and the latter will also be entitled to the profits for the Samvat Year 2017 which ends on 8th November. In consideration for the acquisition of the mineral Company, Tata Chemicals will allot 520,000 equity shares of Rs. 10 each fully paid. This arrangement is subject to the Government's sanction.

In addition to acquiring these bauxite mines, Tata Chemicals has various other new projects on hand which are already licensed by the Government. These include (1) the caustic soda plant with a production capacity up to 1,200 tonnes a year, (2) the expansion of the capacity of the electrolytic caustic soda plant from 3,300 tonnes to 6,500 tonnes a year, (3) the expansion of capacity of the copper sulphate plant from 150 tonnes to 500 tonnes a year and (4) the lindane plant for producing up to 100 tonnes a year. Together with the existing commitments, the capital expenditure of the Company over the next three years is estimated around Rs. 2.20 crores. The gross block is expected to increase to Rs. 10.20 crores by 1963-64. The Company expects to provide part of this expenditure from internal saving and part from temporary loans. This will still leave a gap of about Rs. 1 crore which is proposed to be covered partly through the issue of fresh equity capital and partly through additional debentures. The total capital outlay on the expansion and other schemes from their inception in 1957-58 is estimated at Rs. 6 crores, of which Rs. 4.15 crores has been spent up to 30th June, 1961. This expenditure was financed to the extent of Rs. 1.86 crores from borrowings, Rs. 1.17 crores from internal resources

and Rs. 1.12 crores from additional share capital. Mr. Tata says that apart from the fact that the Company may be short of funds for meeting its commitments, the ratio of borrowings to the capital is on the high side, and too large a proportion of these borrowings is of a short-term nature. Against an equity capital of Rs. 2.52 crores, the Company's borrowings from banks on 30th June, 1961, stood at Rs. 4 crores. Although Tata Chemicals is now in reasonably good shape, which should improve further year by year, it needs additional funds and also an improved financial structure. This explains the proposed issue of equity capital and of debentures.

Tube Investments Results Impress

The Tube Investments of India Ltd, Madras, has reported excellent results for the year ended July 1961. Sales have risen by over 51 percent from Rs. 3.79 crores to Rs. 5.73 crores and the gross profit of Rs. 1.40 crores shows a still bigger increase of 61.8 percent over the previous year's figure of Rs. 86.77 lakhs. After providing Rs. 27.74 lakhs (against Rs. 19.50 lakhs) for depreciation, Rs. 9.46 lakhs (against Rs. 16.84 lakhs) for development rebate and Rs. 48 lakhs (against Rs. 22.79 lakhs) for taxation, the net profit amounts to Rs. 55.24 lakhs, against Rs. 27.63 lakhs in the previous year. In spite of the 100 percent increase in the net profit, the directors have maintained the dividend at 10 percent in order to conserve resources for financing the expansion schemes. The dividend absorbs Rs. 25 lakhs, and Rs. 21.25 lakhs (against nil) has been transferred to various reserves—general reserve Rs. 17 lakhs, dividend equalisation reserve Rs. 3 lakhs, development, replacement and research reserves Rs. 1.25 lakhs. A sum of Rs. 12.03 lakhs is being carried forward, against Rs. 3.04 lakhs brought in.

The directors say that the production of bicycles was satisfactory in spite of the power cut and the shortage of water for a brief period and that there was a noticeable increase in the production of components. Trial production of wright saddles has been found satisfactory. The bicycle saddles are expected to reach the market soon. Production is said to have been delayed because of delay in the arrival of the plant. The cold rolling mill of Tube Products of India, which was expected to be installed and put into commission during the year, is likely to go into production in December due to delay in the arrival of plant and machinery. The tube mill could not work to full capacity for some time on account of the raw material shortage. The setting up of the cold rolling mill should help overcome this difficulty provided the cold rolling mill is fed with adequate supplies of steel strips from indigenous sources. The Company has been able to increase the range of tubing by bringing into use the draw benches and ancillary equipment. Due to these additional facilities, it is establishing a "manipulation department" for manipulating tubes for various industries. The production of electrical conduit tubes was started in 1960-61. Tube Investments has received an industrial licence for manufacturing metal sections. Orders for plant and machinery will be placed as soon as the import licence is obtained. The Company expects that the unit will start production in the second half of 1962. Both subsidiaries of Tube Investments—the T.I. Diamond Chain Ltd and the T.I. Miller Ltd—have become public limited companies. T.I. Diamond Chain has already started manufacturing bicycle chains at its temporary factory in Avdi while the permanent factory in Ambattur is being constructed. When the Ambattur factory is completed—some time early next year—the Company will increase the bicycle chain output and also produce industrial chains. T.I. Millers has received a licence for importing plant and machinery for the manufacture of lamps. Production is expected to start during the current financial year. The Rs. 100-paid share of Tube Investments, which could be bought around Rs. 257 earlier in the year, is currently quoted around Rs. 287, against the year's high of Rs. 294. The gross yield at the current price is small around 3.6 percent, but the share is rated high as a growth equity because of the Company's various expansion schemes.

Trade Unions in Kerala

In his speech from the chair at the annual general meeting of the Calicut Chamber of Commerce in Calicut last week, Mr. A. D. Bolland said that since trade unions in Kerala are largely controlled by political parties, the Government's decisions on labour problems are inevitably influenced by political factors. This does serious harm, Mr. Bolland hoped that some day Kerala would have a Government which would maintain fair wages and good working conditions for labour, but would at the same time ensure an improvement in discipline and productivity. Even the most unscrupulous labour leaders know that most employers recognise the right of the worker to receive the

best possible remuneration and working conditions. But in return the employer has a right to expect from the worker a far higher standard of discipline and productivity than is at present found in many industries in Kerala. Fortunately, industrial strife is lessening, Mr. Bolland said. The Industrial Disputes Act has now been in force for 14 years and, on the whole, is working well. But the main source of contention is still the bonus; it involves employers in a vast amount of work which is out of all proportion to any possible benefit which can be derived by employers or employees. "We can only hope that this canker in industrial relations will be removed by the wisdom of the Bonus Commission, and once that Commission's findings are published and accepted, management will once more be able to return to the function for which it is primarily intended, and a source of almost perpetual industrial unrest will be eliminated." Mr. Bolland declared that the proposed State gratuity scheme, if implemented, would impose an intolerable burden on industries in Kerala. Referring to wage boards, he said that their main purpose is to avoid industrial unrest over the question of wages. But it is a sad reflection on the state of affairs in Kerala that as soon as the wage boards were constituted, the unions, which had themselves asked for the boards, launched an agitation on the issue of wages.

Great Eastern Shipping Pays Less

The directors of the Great Eastern Shipping Co. Ltd have recommended a dividend of 78nP on the Rs. 10 fully paid-up share and 39nP on the Rs. 5 partly paid-up share for the year ended June 1961, against Re. 1 and 50nP, respectively, paid in the previous year. While last year, the entire dividend was tax-free, having been paid out of Section 15C profits, this year, a dividend of 58nP and 29nP on the fully-paid and partly-paid shares, respectively, is being paid out of Section 15C profits and the balance of 20nP and 10nP a share, respectively, will attract tax. The net dividend for 1960-61 works out to 72nP (against 100nP) on the fully-paid share and 36nP (against 50nP) on the partly-paid share. The proposed cut in the dividend, however, comes as no surprise; if anything, the shareholders are happy that the cut is not much bigger. In his annual speech last year, the chairman of Great Eastern Shipping indicated that he was not optimistic about the prospects for 1960-61, unless there was an improvement in the trading conditions and freight rates. But the shipping industry is still passing through a difficult time.

The gross profit of Great Eastern Shipping for the year ended June 1961 amounts to Rs. 69.48 lakhs, which is Rs. 14.09 lakhs less than in the previous year. After providing Rs. 58.26 lakhs (against Rs. 61.76 lakhs) for fleet depreciation and writing off a loss of Rs. 13.91 lakhs on account of the scrapping of one of the vessels which met with an accident in the Hooghly river, the Company has suffered a net loss of Rs. 3.19 lakhs. The directors have deemed it prudent to debit Rs. 9 lakhs to the profit and loss account as development rebate reserve towards unabsorbed development rebate. This provision and the exclusion of the Burma income tax refund, which relates to previous years, make in all a deficit of Rs. 12.18 lakhs, compared with one of Rs. 12.98 lakhs in the previous year. Great Eastern Shipping will be getting two vessels from a Japanese shipyard in February and March 1962, respectively, at a cost of Rs. 2.27 crores. With the addition of these two ships, the Company's fleet will comprise nine modern ships, which have been built after 1950, and six older ships. The directors have made some reallocations and transfers to the various reserves with a view to classifying them into taxed and untaxed reserves. As a result of this, the aggregate general reserve of Rs. 77.05 lakhs has been bifurcated into general reserve No. 1 representing the taxed profits amounting to Rs. 11.21 lakhs and general reserve No. 2 representing untaxed profit amounting to Rs. 65.84 lakhs. The Company's fleet value at cost as on 30th June, 1961, was Rs. 8.09 crores, against which depreciation of Rs. 2.53 crores has been provided so far. Cash and bank balances are shown at Rs. 1.43 crores. Loans taken from the Government and outstanding on 30th June amounted to Rs. 3.47 crores. Great Eastern Shipping's paid-up capital of Rs. 1.15 crores is supplemented by reserves totalling Rs. 2.40 crores. The Rs. 10-paid share of the Company, which recorded a high of Rs. 16.28 in March, was marked down to Rs. 12.84 in August. After improving to Rs. 13.92, the share is currently quoted around Rs. 13.44. The book value of the share works out substantially higher around Rs. 29, which only underlines investors' lack of faith in shipping shares.

Cotton Import Quota

The Government of India has decided to permit the import of 175,000 bales of 400 lbs each of raw

cotton stapling 1½ inches and above from any area. Of this quantity, 45,000 bales are being allocated to mills against their retention quotas under the export incentive scheme. The balance of 130,000 bales will be distributed to consumers of foreign cotton stapling 1½ inches and above. Out of these, 50,000 bales stapling 1½ inches and above but below 1½ inches will be distributed to consumers of foreign cotton of the same staple on the basis of their consumption of such cotton during 1960. The balance of 80,000 bales will be distributed to consumers of foreign cotton of 1½ inches and above on the basis of their consumption of such cotton in 1960. Mills applying for a licence to import cotton of 1½ inches and above are required to pay a premium of Rs. 170 a bale. The premium for cotton stapling 1½ inches and above but below 1½ inches will be Rs. 130 a bale. The premium is to be paid to the Indian Cotton Mills Federation or the Southern India Millowners Association, as the case may be. The entire quantity of 175,000 bales will be available for shipment only after 31st December, 1961, but not later than 31st May, 1962. The announcement of the import quota last Saturday did not have any noticeable effect on the market and cotton prices continued to display marked strength. In fact, cotton futures (March contract) in Bombay rose to Rs. 643 for three quintals—a new high for the season—on 4th November. This, however, is scarcely surprising because the quantity which has been permitted for import falls far short of the general expectations. It was almost taken for granted that the Government would release an import quota of 300,000 or 400,000 bales in the first instance.

The Indian Cotton Mills Federation, which discussed the cotton supply position at its meeting on 1st November, has endorsed the recommendations of the Cotton Advisory Board that the Government should allow imports of 1.35 million bales of foreign cotton if the shortage experienced in 1959-60 is to be avoided. The Indian crop in 1961-62 is estimated at around 4.8 million bales and mill consumption at 5.6 million or 5.75 million bales. So the Federation says that imports 1.35 million bales should be the barest minimum, even if no addition is to be made to the already low carryover stocks. The Federation also favours the revival of the scheme of compulsory surveys through regional committees. In view of the smaller crop, the introduction of compulsory surveys is considered essential so as to avoid the admixture of cotton and to ensure that proper prices are charged according to the cotton price schedule. Most varieties of cotton are already quoted around the ceiling rates.

Import allocations issued during the 1960-61 season consisted of 400,000 bales of cotton stapling 1½ inches and above from any area and 712,500 bales of U.S. cotton, of which 575,000 bales were of 1 inch and below. Actual arrivals were made up of 359,997 bales of sterling area cotton and 641,675 bales from the U.S.A. The break-up figures of sterling area cotton were: East African 147,492 bales, Egyptian 85,901 bales, Sudan 84,316 bales and others 42,495 bales. Of the U.S. cotton, only a small quantity came under barter, the rest being under P.L. 480. The total quantity of cotton licensed for import from the U.S.A. was 834,170 bales, of which cotton under P.L. 480 accounted for as much as 773,972 bales.

Progress of Zenith Steel

In their first annual report, which covers the period from 5th August, 1960, to 30th June, 1961, the directors of Zenith Steel Pipes Ltd express the hope that the factory will come into operation in the second quarter of 1962. The Company has entered into an agreement with the well-known West German firm of Mannesmann Export G.m.b.H. for the supply of plant and machinery, the shipment of which is expected to be completed before the end of November. The factory and other buildings in Khopoli, which is about 65 miles from Bombay, are under construction. In selecting the site, the directors have also taken into account the needs of future development. The Company has already applied for permission to raise its capacity from 24,000 tonnes to 54,000 tonnes a year, and the Government's sanction is awaited. The Government has approved the technical collaboration agreement with Mannesmann Meer A.G. of West Germany.

The Company has concluded an agreement with the Industrial Credit and Investment Corporation of India for a foreign exchange loan of the value of Rs. 40 lakhs, and also for a rupee loan of Rs. 15 lakhs to meet the capital expenditure. An arrangement has been made with the I.C.I.C.I. for borrowing additional foreign exchange to the tune of Rs. 2.44 lakhs to meet the enhanced requirements following the revaluation of the Deutschmark. The Company has secured an industrial licence for making pipe sockets. The directors hope that with the additional foreign exchange of Rs. 3.50 lakhs which the I.C.I.C.I. has agreed to provide, it will be possible to undertake this ac-

tional line of manufacture. Since the end of the past accounting year, further orders have been placed for machinery and equipment worth about Rs. 8 lakhs. During the period covered by the report, the Company has earned a surplus of Rs. 23,584, after transferring Rs. 1,13,915 to the "expenditure for construction account" and after providing Rs. 21,350 for taxation. This surplus is proposed to be carried forward. The Rs. 10-paid shares of the Company are currently quoted around Rs. 13.

Motor Accessories from T.V.S.-Lucas

Joseph Lucas of London has joined hands with T. V. Sundaram and Sons of Madras for setting up a factory in Avadi, near Madras, for the manufacture of motor-vehicle accessories. The products it is proposed to manufacture include starter motors, dynamos, voltage regulators, horns, wind-screen wipers and flasher units. Most of these are being imported at present. When the factory goes into full production, the country is expected to achieve self-sufficiency in motor-vehicle electrical equipment and thus save a considerable amount of foreign exchange. Lucas-T.V.S. (Private) Ltd has been formed to implement the project. The Company will have an authorised and paid-up capital of Rs. 2 crores, and the share of Joseph Lucas in it will fully cover the foreign exchange requirements for importing plant and machinery. Production is to be carried out in three stages.

Khatau Mills to Diversify

Last week, the shares of the Khatau Makanji Spinning and Weaving Co. recorded an impressive rise from Rs. 432.50 to Rs. 485, before easing a little to around Rs. 475. The support was inspired mainly by the encouraging observations made by the chairman, Mr. D. M. Khatau, at the Company's annual meeting. Khatau Mills has fared very badly during the year ended June 1961, with both the gross profit and the dividend down by 50 per cent from the previous year's figures. The chairman was at pains to explain that the disappointing results are due mainly to the high prices of the Egyptian cotton used by the Company. But his explanation could convince only a few. However, shareholders were able to find some comfort in Mr. Khatau's statement that working during the first three months of the current year has been slightly better.

What has really pleased them is the news that the Company is planning to diversify its activities, and has already taken up the matter with the Government of India. The Government has been asked to sanction a chemical project. Although it is known to be opposed to diversification, permission has been granted in certain cases. The Company is, therefore, trying to persuade the authorities that, because of its big resources, Khatau Mills can implement the project more expeditiously than a new concern. The official decision on the Company's proposal is eagerly awaited. Mr. Khatau said that only if the Government sanctions the project for Khatau Mills will the management think of issuing bonus shares, to be followed later by a rights issue. Otherwise, there is no point in issuing bonus shares as the dividend would have to be correspondingly reduced. The chairman welcomed a shareholder's suggestion that the Company should give a standard dividend, and add bonus dividends to it if the profit allows it in a particular year. What is important is that the Company should follow a reasonably stable dividend policy in order to promote investors' confidence. Khatau Mills' past record from this aspect has not been encouraging.

U.K. Investments Overseas

A major cause of the last run on sterling was the fall in the U.K.'s invisible earnings which used to come from shipping, shipbuilding, insurance and overseas investments. Some of these receipts, such as a part of the shipping profits as well as life insurance from India, have gone for ever. Another item which caused concern was the cost of servicing the continually increasing hold of U.K. stocks and shares passing under the control of U.S. interests, such as the acquisition of the Ford factories in Britain. It is, therefore, comforting to note that the U.S. Department of Commerce has recently estimated the current value of British industry's direct investment in the United States at \$2,248 million. This is the result of the U.S. census of foreign business. Details released in Washington show that Britain accounts for a third of the total foreign investment in the United States, and for more than half of the foreign financial and insurance investment. Britain's insurance stake is estimated at nearly \$1,000 million. Her investments across the Atlantic have trebled since 1941. In spite of fears of a U.S. invasion of British industry, the U.K. total of \$2,248 million is

only a little short of the corresponding U.S. investment of \$2,475 million in Britain.

However one looks at it, this is a remarkable achievement for British companies. In 1941, when the last U.S. enquiry was undertaken, the British stake there was only \$712 million, and had just been reduced by the forced sale of the British-owned American Viscose Corporation to help pay for the war. By the end of the war, and even up to 1950, Britain's direct investment in both Canada and the United States was small due to the dollar shortage. But in the past decade much has been accomplished. The Bowater Paper Corporation has built a completely new plant in Tennessee and another in South Carolina, at a cost of some £150 million. Courtauld has recovered strength by establishing the second largest rayon staple plant in the United States. Electrical and Musical Industries has acquired virtually the whole of the ordinary capital of Capital Records, the large U.S. recording Company in Los Angeles, for over \$18 million. The interests of other leading companies have also grown. The rôle of the insurance companies, in particular, has continued to be dominant among foreign companies operating in New York and elsewhere. According to the latest census, the total British financial and insurance stake in the United States is put at \$953 million, compared with \$722 million in manufacturing industries, \$339 million in the petroleum industry and \$234 million in other industries. Thus the losses of the war years and of the immediate postwar period have been made good. These estimates, it should be added, are based on book values and do not, therefore, fully reflect the market value of British industry's direct investment in the United States.

In some cases, the real value could be double that shown. Moreover, the figure of \$2,248 million excludes between \$3,750 million and \$4,000 million worth of dollar stocks held by the British Government and by private British investors. It also, of course, excludes industry's direct investment in Canada of close on \$1,400 million—a figure that has doubled in little more than seven years. In all, this is a formidable second line of defence for Britain's reserves. It is reasonable to infer that the total value of British holdings, taken at the market value, is higher than the equivalent figure of U.S. holdings in the U.K. because the U.S. acquisitions were generally made near the top of the market. When one remembers that British interests have also been active in co-operating for development in India and the other Commonwealth nations, it looks reasonably safe to assume that there remain substantial supports for sterling in these many, varied but useful assets. The move to join the European Common Market by certain countries, together with the plans to strengthen the important world currencies, should help. Furthermore, a marked expansion of trade with the Common Market will tend to increase the demand for shipping to the benefit, among others, of India's infant mercantile marine.

Standard Mills Petro-chemical Project

Shareholders of the Standard Mills Co. Ltd have returned quite happy from the extraordinary general meeting of the Company last Friday. The meeting was called to seek their approval for increasing the authorised capital of the Company from Rs. 121.75 lakhs to Rs. 165.65 lakhs by the creation of new equity and preference shares; and for capitalising a sum of Rs. 43.93 lakhs out of the share premium account to issue bonus shares in the ratio of two new shares for every five held. Both the resolutions were carried unanimously. But the shareholders' interest in the meeting centred chiefly on getting information from the chairman, Mr. Arvind Mafatlal, about the progress of the new petro-chemical project and how exactly they are likely to benefit from it. Mr. Mafatlal declared that the promoters are trying to work out a scheme for the capital structure of National Organic Chemical Industries Ltd, a new Company which will implement the project. The aim is that the scheme should satisfy all the parties concerned—the Government, the foreign collaborators and shareholders of Standard Mills. Definite proposals are likely to be finalised by the end of the year. Shareholders of Standard Mills will benefit in any case since their Company is bound to have a sizeable investment in the new venture. The chairman added: "We are considering, however, in what way the shareholders of Standard Mills can be helped to get a direct participation in the new Company."

The project is estimated to cost nearly Rs. 15 crores. National Organic Chemical Industries will have an issued capital of Rs. 9 crores or Rs. 10 crores. The foreign exchange component of the outlay on the project is estimated at Rs. 4 crores or Rs. 5 crores. Farbwerke Hoechst A.G. of West Germany, which is collaborating in the venture, will participate substantially in the capital of the new Company. Even so, arrangements will have to be made for securing more foreign exchange. Mr. Mafatlal stated that

negotiations for foreign exchange loans are in progress with two or three parties in Europe and the U.S.A., and they are expected to be finalised within a few months. If all goes well, the new Company will be in the market to raise capital from the public some time in April or May. Besides giving various details about the petro-chemical project, Mr. Mafatlal told shareholders that Standard Mills' working results for the current year are likely to show an improvement over those for the previous year. He was optimistic about the outlook for the textile industry in the years ahead because the demand for cloth is increasing. The shares of Standard Mills recorded an impressive rise from Rs. 1,420 to Rs. 1,480 between 3rd and 4th November, reflecting the market's satisfaction with the chairman's observations at the extraordinary general meeting.

Air Control: Refrigeration Equipment

Mr. Surendra M. Mehta, a Bombay industrialist, has secured an industrial licence for manufacturing air-handling and refrigeration equipment. The project is estimated to cost nearly Rs. 2 crores. The factory, which it is proposed to locate near Ahmedabad, is expected to go into production by the end of 1962. Air Control and Chemical Engineering Co. Ltd is mentioned as the name of the new Company to be registered in Gujarat, which will implement the project. The foreign exchange requirements are estimated at around Rs. 60 lakhs. The promoters are negotiating with some leading Canadian and U.S. Companies for technical and financial collaboration, and the collaboration agreement is expected to be finalised soon. The Company will have an authorised capital of Rs. 2 crores, of which Rs. 1 crore in equity shares of Rs. 100 each is proposed to be issued in the first instance. Funds may be raised from the market early next year.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following for the 1961 Fund:

Rs. 100 each
Vickers India Private Ltd., the Gramophone Co. Ltd.

Rs. 75
J. Vyoral

Rs. 70
Staff of W. S. Cresswell and Co. Private Ltd.

Rs. 60
Staff of International Computers and Tabulators (India) Private Ltd.

Rs. 50 each
J. M. Gibson, Assistants, Coal Dept., Bird and Co (Private) Ltd.

Rs. 30 each
C.D.W., T.I. and Sales Ltd.

Rs. 25
W.J.W.

Rs. 20 each
Anonymous, J. M. Wallace, I. R., Donald C. Ide, Herbert and Co. Private Ltd, R. H. Wright.

Rs. 10 each
C. J. Dawson, P. B. McLaren, R.B.A.

The Fund now totals Rs. 969, including a carry-forward of Rs. 229.

AGRICULTURAL CREDIT

THE problem of successfully establishing agricultural banks in India is one which is likely to engage the attention of the economist for some time to come. Despite all that has been written on the subject, things remain to all intents and purposes in precisely the same conditions they have been for generations. Nor is this to be wondered at. It is too often assumed, judging by views which find their way into print, that India is a kind of virgin field for financial and economic experiment, whereas just the reverse is the case. The financial and economic conditions of a country are not to be found in books at all, but in the practices, customs and institutions of the community. A single moment's reflection should be sufficient to show that a civilization, which has existed for thousands of years, has naturally evolved and developed its own ideals and standards in the science of economics as in other things. The ideals and standards may, it is true, be sometimes quite opposed to certain other basis of much the greater our difficulty in replacing them with something else. It was only the other day that we find Mr. H. Dunning Macleod, in considering the best system of banking to be found in India, laying down the astounding proposition that the Indian Government has a *tabula rasa* upon which to go to work so far as this question is concerned. Certainly, the functions of banking and the methods of creating credits and rights of action which the native of India has evolved differ widely from the methods of Lombard Street and the Bank of England. But the functions exist and are in active operation. To talk about a *tabula rasa* is consequently absurd.

A Ditcher's Diary

THE DISTINGUISHED DELEGATES TO THE COMMON-wealth Press Union's quinquennial conference will have seen a great deal of India and Pakistan by the time they leave this sub-continent. Whether the state of the Press in the Commonwealth will noticeably be different and better in consequence of the proceedings is, however, a question I would not care to push too hard. If I am not mistaken, the Empire Press Union used generally to concern itself mainly with technical matters: cable rates, newsprint, tele-communications and such like. These have again been discussed; and the real work will no doubt begin when office-bearers of the C.P.U. take these matters up with individual governments. The question of freedom of the Press was inevitably raised; and Mr. Astor was refreshingly forthright on South Africa, which did not need to be named. Equal frankness about Ceylon and Pakistan would perhaps not have been popular; in any event, matters of professional freedom are no doubt better handled by the International Press Institute. I must congratulate the organisers of the conference in India and Pakistan, which is being attended by almost everybody who is anybody in Fleet Street; and the two Governments have been wise to take this opportunity of showing the delegates as much of their respective countries as possible. The Indian missions abroad work hard, I suppose, at Press relations. But there is no substitute for seeing things for oneself; and journalists, generally a sceptical lot, view P.R. handouts with a very healthy suspicion. What impressions will the Fleet Street boys carry back with them? Those who had not been to India before must have been repeatedly surprised by the vastness of the country as they travelled across it in that air-conditioned special train. Time and again I have found that it is not enough to read about bigness; you have to experience it for yourself. This is true also of a people's poverty; it has to be seen to be believed. Will the proud development projects shown make a more lasting impression? Maybe; maybe not. All in all, the trip will have done the visitors a tremendous amount of good. Indirectly and in the long run, India may profit too.

MY GUIDE AT THE LENIN-STALIN MAUSOLEUM seemed shocked when, in answer to his question what I thought of the spectacle of those two old cut-throats lying side by side in their glass coffins, I told him, in what I now realise to have been a moment of inexcusable frankness, that it was the most grizzly and barbaric sight I had ever seen. The only thing he could think of to say when I in turn asked him why they were not given a decent christian burial right away, was that neither of them were christians. And there he hit the nail on the head. Politics having been the only god they ever served in their lifetimes, it was only simple justice that they should go on serving it for the rest of time. Now, I see, like a soul released from purgatory, Stalin has been decently interred, and only a communist could regard this as a form of denigration. I wonder whether Mr. Khrushchev ever reflects that it may some day be his fate to be pumped full of embalming fluid and exhibited to generations of gaping tourists for all the world like one of those monstrous wax models found in circus side shows. That is, of course, if Mr. Khrushchev leaves any tourists behind him to

gape. The same kind of political compulsion which has evicted Stalin from his place of honour is now quite obviously what is forcing Mr. K to carry on with his nuclear tests; the recent threat to the U.S.A. has flatly contradicted his earlier claim that he was acting solely on security considerations. Once again it is internal politics that are forcing the pace, and now seem to be in real danger of pushing Mr. K into the war Mr. Nehru says he does not want. For those who take comfort from Mr. Nehru's words it might be as well to reflect on the fact that Hitler did not want war either; he simply wanted his own way without it. All this must be putting a great strain on the courage, patience and diplomatic skill of the West, and that cannot be made any easier to bear by the fact that it appears to be evoking neither sympathy nor understanding in some quarters.

NOT HAVING READ THE NEW BRITISH COMMON-wealth Immigrants Bill puts me at a disadvantage among its many critics. On the face of it, nobody could say it seeks either to infringe human rights or discriminate on grounds of colour. It puts in legal form no more in fact than the normal precautions which many other countries, both inside and outside the Commonwealth, are already taking to protect themselves against the criminally undesirable or those likely to become a burden on public funds. India, for instance, is not particularly eager to accept more Tibetan refugees for very similar reasons. Having said all that, I now feel more justified in deploring what is, after all, an unwelcome departure from established liberal practice, and the political background to which, is, to put it no more strongly, unfortunate. What has startled me, however, is the eagerness in some circles in this country, not yet openly supported by the Government I am glad to note to threaten reprisals against British citizens here. The word they use is "reciprocity"; but if this means what it ought to mean I cannot see what it is intended should be done. British nationals rarely come here as immigrants these days, except perhaps in such cases as Professor Haldane's, which presumably nobody would want to quibble over. They come only when there are jobs waiting for them, and when these jobs are over they retire home again having contributed to India in taxes and expertise considerably more than they have taken out in unemployment pay, public health benefit and State retirement pensions, none of which are available here, but which are the common right of anybody living in Britain. There is scarcely any chance whatever of their becoming a charge on public funds, even if there were such things, and nobody would say that the prisons are exactly full of them. Indeed, India already exercises a very practical form of control over their entry through the pressure which is constantly being exerted on British firms to replace their own nationals by Indians. We here appreciate the need for this, but I often wonder how it would be interpreted by the British public in the light of some of the criticisms now being heard in India of the present Bill.

JAMES THURBER WAS, OF COURSE, CLOSELY associated with the *New Yorker* for many

years; and on its pages appeared his very amusing essays, stories and sketches. I suggest, still, that Thurber's reputation is quite independent of the creamy pages of the *New Yorker*. He belonged to a school of American comic writers whose baptism into writing took place during the years of the Great Depression, which gave all sensitive Americans a very acute social conscience—something the affluent society does not much care for. I have heard it suggested that H. L. Mencken was never at his best after Roosevelt became President; that Dorothy Parker lost her sting after a happy marriage, that Robert Benchley forgot his bite in Hollywood. James Thurber belonged to the same period, but his approach to his craft was rather different. He was never bitter. A gentle irony, tinged with usually polite sarcasm, was his subtle weapon in the fight against society; and right to the last he used it with superb skill. If in the later years some noticed a certain obesity in his style, the tail still was agile; and I remember "fables" ending with such devastating lines as "It is better to be headbush than cocksure". American writing is not noted for its understatement, which the British perhaps sometimes overdo. But Thurber could use litotes with great effect. I have just remembered his comment on a play of his, a flop on Broadway: "There's only one thing wrong with it; it's kinda lousy". Some years ago on this page I did a pen-picture of the sort of man I imagined the writer of the fourth leaders in *The Times* to be; middle-aged, unassertive, always using "one wondered" instead of "I think", profoundly inept at handling any gadget and hating it, and almost everything happening to him. Perhaps there is a certain likeness here to Thurber who, incidentally, knew and loved Europe, including England. His Walter Mitty, I think, is every bit as real as Colonel Blimp, the St. Trinian girls, Mr. Micawber, Great Gatsby and others and will perhaps live as long. In the cinema Charlie Chaplin created a lovable type, the victim of tycoons and tyrants. It is not too much to say that Thurber's Walter Mitty had the same touch of dream, pathos and innocence. I have started re-reading Thurber and am enjoying him as much as I did on first acquaintance.

SRINIVASA SINGAM (IYENGAR) RETIRED FROM THE editorial staff of *Capital* in March 1947; and it was just like him that he should seldom have written to us since. Now a letter from his son says that he died in his sleep in the early hours of 28th October. Those who knew and worked with him will remember him with the utmost affection. One of his friends tells me that Singam was quite incapable of malice, which I think is high praise for anybody in the profession of journalism. He read widely, rarely anything that might help him in his profession. He was, in fact, anti-success. Remarkable was his sense of humour, often exercised at his own expense. Like all honest men, he hated hard work. He loved good talk; and a good talker he was—full of anecdotes. The same friend of his tells me that Singam could at a pinch tell you a hundred Cockney stories, all with the right accent; and he had never seen London. Travel doubtless teaches us something; but it is amazing how many Indians a couple of generations ago knew England and English literature very closely, how these things were a part of their personality. Singam was a gentleman; a fine blend of Vaishnavite Vadagalaite Brahmin breeding and true absorption of 19th-century European culture.

SPEECH OF THE CHAIRMAN, RAI BAHADUR SETH GUJAR MAL MODI

The following is the speech delivered by Rai Bahadur Seth Gujar Mal Modi, Chairman, Modi Spinning & Weaving Mills Co., Ltd., Modinagar, at the 15th Annual General Meeting of the Shareholders of the Company on 31st October, 1961.

Ladies & Gentlemen,

It is a matter of great pleasure for me to welcome you at this 15th Annual General Meeting of the Shareholders of the Company. The Directors' Report and the Audited Accounts have been with you for some time now and with your permission I shall take them as read.

I have to report with immense pleasure that the results of the Company for the year ended 30th April, 1961, have enabled your Board to recommend 17% dividend (inclusive of 8% interim dividend already paid) subject to Tax. This compares most favourably with last year's results as only 13% dividend subject to tax, was declared. It is gratifying to note when we compare the results of production, earnings and turnover of the Company for this year with that of last year. The production during the year is worth Rs. 654.21 lakhs against last year's production of Rs. 543.96 lakhs, showing an increase of about 20%. Similarly the sales have also increased to the extent of Rs. 647.12 lakhs against the last year's figures of Rs. 581.09 lakhs showing an increase of 11.4%. The net revenue earnings have also increased from Rs. 584.39 lakhs to Rs. 651.35 lakhs this year, and the net surplus has increased from Rs. 16.00 to Rs. 21.73 lakhs showing a net increase in the profits to the extent of 35.7%.

I am glad to record that on account of the additions, alterations and extensive renovation we have made during the year under review by installing one Hot Pin and Clip Stenter, one Mercerising machine and 2 Sets of High productive Combing equipments consisting of combers with requisite preparatory machine, on which we have spent about Rs. 20.55 lakhs, the quality of our yarn and cotton cloth has immensely improved. We are further adding one Sanforizing machine in cloth section and high drafting plant and 6,400 spindles in yarn section, which will further improve the quality and production.

Production of Cotton

The Cotton year of 1960 was a most difficult one and the production of cotton which was estimated at 48 lakh bales crop was reduced to 38 lakh bales resulting in a short production of 21% in comparison to the estimates. Due to the acute scarcity of cotton it resulted in a sharp increase in prices and non-availability of good quality of cotton. Every year nearly Rs. 70 crores are drained out from the country by way of import of cotton after adjusting the export of short staple cotton to other countries. The cost of Indian cotton is very high and thus it hampers the export trade of cotton fabrics to the Eastern countries

where it has an established trade. More attention is required to be given to produce improved quality of cotton in the country, otherwise the Indian cotton fabrics are bound to diminish gradually as the importing countries are becoming self-sufficient in the matter of cotton textiles.

Agricultural improvement in the country is not such a process which may bring immediate effective results but it will be a matter of satisfaction if due attention is paid to it. Adequate drainage of the

R. B. Seth Gujar Mal Modi.

fields is as important as irrigation. I believe it has not yet been realised that the immense loss as caused by the floods due to the defective drainage system. In some cases irrigation facilities have caused floods even in such areas where there were deserts. Construction of canals, culverts and roads without providing drainage has affected the natural flow. Thus due attention should be paid to the drainage.

In olden days only natural fibres—cotton, wool and silk were available for making fabrics. The

natural silk fibre has now become so costly that it is not within the reach of common man. Therefore, various new synthetic fibres have come within the living memory. Their coming has made a considerable difference to us not only Industrially and Economically but also Socially. The introduction of synthetic fibre alongwith the natural fibres were very popular in Twenties. It is one of the main reasons that the fabrics produced by foreign countries are more attractive than that of ours because they have got the facilities of having blended yarn.

Wool Imports

Similarly, wool is also very expensive and is sometimes scarce. India spends rupees ten crores per year for the import of wool from foreign countries. The blending of wool with the synthetic fibre enabled fabrics and garments to look like all wool to enter the market at a lower price range. Furthermore, most of the natural fibres have defects of one kind or another and the man-made fibre when properly applied in blends helped to correct these deficiencies and increase the strength and durability. Another factor which is advantageous in blending of man-made fibres is that the price of man-made fibres is much more stable than that of natural fibres which varies from year to year according to the harvest and consequently the price of blend is more stable than that of the natural fibres alone. Low moisture regain, high strength, chemical resistance, biological resistance are few of the qualities which have made it possible for synthetic fabrics to find quite new uses, such as, for productive clothing, out-door furnishing, industrial filters, etc.

Most of the man-made fibres are made from timber and chemicals. To grow timber is much more easier than to grow cotton and our country is very well favourably placed to grow timber suitable for producing synthetic fibres. In the World man-made fibres are leading the way to cheaper products and forcing the natural fibres which are sold at soaring prices, down to a reasonable price. The production of man-made fibres is increasing in multiples throughout the World.

The total reported area of India is 72.10 crore acres out of which the cropped area is 36.85 crore acres and the non-agricultural land is 11.62 crore acres. Out of the cropped area 1.98 crore acres is already under the cotton sowing and every year near about Rs. 70 crores are spent by importing the foreign cotton. India's population is 44 crores and it is increasing at the rate of 2 per cent. per annum. It imports its food cereals to the value of Rs. 140 crores. Food always comes first. Thus it is desirable to supplement the need of fabrics. More attention be paid to its forestry. India's forests cover 2.69 lakh square miles, being about 21.3 per cent. of the total geographical area of the country. The productivity per acre per annum is 3.0 cft. which is substantially below the yield of forests in other countries, such as, France 56.8 cft., Japan 37.0 cft. and the U.S.A. 18.0 cft. 5 acres of forests can give a ton of synthetic yarn per annum while to get one ton of cotton, it requires 11 acres of land. When we are already in short of cereals attention for growing more pine trees be given for producing synthetic fibres.

Cotton Linters

Another method of making synthetic fibre is to utilise cotton linters. In India it is not a practice to delint the cotton seed. Generally cotton seed is fed to cattle without removing such cotton linters. It is one of the major reasons that the feeding of cotton harms cattle and their milk is reduced. If the cotton lint is removed and cotton cakes are used for animal feeding then out of 18 lakh tons of cotton seed produced in India, it is expected that 90,000 tons of cotton lint, being 5 per cent. of the total cotton seed, and 2,16,000 tons cotton seed oil being 12% of the seed, may be obtained. Cotton seed oil is used throughout the world as best edible oil. A simple change in habit of using the cotton seed cake instead of cotton seed will bring a saving of Rs. 42 crores in the shape of oil and Rs. 4 crores in the shape of cotton lint for which already there is an acute shortage in the country.

It is not easy to change the minds of villagers who have been accustomed to use seed but the Government could take steps to educate them.

India is the biggest sugar producing country of the world and molasses is one of the important by-products of the sugar factories. By distillation of the same and with chemical treatment the alcohol produced is mixed with the cotton lint to produce the synthetic fibre called Acetate Yarn which is much superior than any other synthetic fibre. Its use is increasing very rapidly throughout the world.

Two months back I alongwith your Managing Director went for World Tour to study the methods of production of various new fabrics in different parts of the world and we are fortunate to have succeeded in studying the various Textile and Synthetic factories there. In collaboration with some important foreign firm we propose to instal shortly one synthetic fibre producing Plant, which will involve about Rs. 10 crores, but it is expected that more than half of the total investment will be available to us from foreign collaboration.

Artificial Silk

I must mention herein that synthetic fibre commonly known as "Artificial Silk" does not command the support for its expansion which it should deserve. Though it has not got the remotest relation with silk it is more near to cotton fabrics. It is, therefore, expected that the false prejudice against artificial silk would go.

You will be glad to know that various other expansion schemes are under Government consideration and we hope that we shall be able to achieve substantial expansion.

The relations between the labour and the Management in our Factory have been very cordial for which I congratulate all concerned.

I am glad to inform you that the results of 6 months current year working are encouraging and very satisfactory.

Before I conclude I sincerely thank all of you and record a high appreciation for the services rendered by the staff and workers of the Company who are mainly responsible for the results which are before you.

(This does not purport to be a record of the proceeds of the meeting).

THE DELHI CLOTH & GENERAL MILLS CO., LTD. DELHI

CHAIRMAN, MR. BHARAT RAM'S ADDRESS

Speech delivered by Mr. Bharat Ram, Chairman, Delhi Cloth & General Mills Co., Ltd., Delhi, at the Annual General Meeting of shareholders held on 3rd November, 1961 in the office of the Company at Bara Hindu Rao, Delhi.

Ladies & Gentlemen,

With your permission I will take the Accounts and Directors' Report as read.

As you will observe from the Balance Sheet, the financial results of the Company have been better than in the last year, which naturally is a matter of satisfaction for all of us.

The cotton mill industry this year also has had a good year as far as profits are concerned. However, I would like to mention certain aspects of the cotton textile industry.

Last year due to the heavy imports of American cotton, the cotton situation quantitatively was easier than in the year before last, but the industry had to use a much more expensive cotton than the local cotton for the same counts of yarn, which added to the cost of production. With the increased consumption of cotton in the existing industry and also in the Third Plan period when, it is visualised, nearly 4 million spindles would be added, I feel the cotton situation is going to be very difficult in the years to come. On the basis of 9,300 million yards of cloth production and 2,250 million lbs. of yarn, as visualised in the Third Plan, 1450 lakh more bales of cotton would be required. The planners have, of course, expressed the hope that our cotton production will keep pace with the demand, but I cannot but feel rather pessimistic about our attaining this increased production of cotton. In the Second Plan period it was planned that cotton production would go up to 55 lakh bales. But it has remained stagnant around 45/48 lakh bales and, in fact, in the year 1959-60 production went down to as low as 37 lakh bales. We will, in case of shortfall, thus have to import large quantities of cotton. This stringency in cotton is bound to increase the cotton prices in India, which in turn will affect the cost of production and our export trade. One of the main advantages India had in the export of textiles was its cheap cotton, but today this position does not hold good. Even today the exports of textiles from India are falling. The exports in 1959-60 were worth about 69 crores of rupees, and in 1960-61 had dropped to only 62 crores. The tendency even now for the exports of textiles is on the decline.

Labour Cost

What I said earlier about the disquieting trend in raw material cost applies, with equal force, to labour cost, the other main element in textile costs. Labour costs in the textile industry are continuously moving up, sometimes because of increase in dearness allowances, which comprise between one-half to two-thirds of the total emoluments of the worker, and sometimes due to other wage increases as happened after the Wage Board recommendations in 1960. While according to the Wage Board recommendations the industry has given the wage increases, labour, on the other hand, has not played its part in helping rationalisation which was visualised by the Wage Board. The net result, of course, is to add to the general upward pressure on wage cost.

Only if these two main items of costs, i.e., cotton and labour are kept down, we may be in a position to become competitive in the world markets. Nevertheless it is a matter of satisfaction to us that the textile exports of the D.C.M. have not been allowed to go down in spite of the general set-back.

Excise Duty on Powerlooms

Another very serious problem, which is threatening the whole of the cotton textile industry, is the menace of the powerlooms. The powerlooms pay a very small excise duty. And apart from the fact that they pay a very small amount of excise duty, thousands of unauthorised powerlooms have come into production. This situation with regard to powerlooms is not only hurting the mills but also the handloom sector without increasing the employment potential, which is one of the basic arguments of our economy. Policies were designed by the Government to protect the handloom sector such as restrictions on new loomage in the mills and reservation of varieties of cloth. But the experience of the last few years has been that instead of helping the handlooms, the powerlooms are becoming a problem for both the handlooms and the mills. While the mill industry places the incidence of unauthorised looms at a much higher level, even a recent Government survey has shown that these unauthorised looms are at least 66% as numerous as the looms registered with the Government, making a mockery of the statutory provisions for registration.

In the context of this unsatisfactory situation I feel that the Government must take active steps to see that the powerloom industry is not allowed to run counter to the Government's own policies.

Surplus Stocks of Sugar

Coming next to the sugar industry in which your Company is again interested, it is unfortunate that it continues to suffer from one problem after another. Today there is a great problem of very large surplus stocks of sugar for which there is no market. Although the Government is putting a restriction on output in the year 1961-62, and also imposing a stiff

penal excise duty on production beyond the restricted level, I am still not sure that the sugar industry will not be facing a near crisis in the next year unless it is possible to export a sizable quantity from India or unless cane prices are so adjusted as to materially bring down the costs, and therefore prices of sugar whereby internal consumption would increase.

In fact, whether it is the question of the prices of sugarcane or cotton, the main point, to which I also made a reference last year, is that unless and until the productivity in agricultural fields is going to be increased, we shall continue to face high costs and high prices, which, in my view, would have an adverse effect on the whole of our economy.

Production of Edible Fats

As you know, one of the major activities of your Company is the production of edible fats, i.e. Vanaspati, and in this field, we are one of the largest manufacturers in the country. The prices of the finished product, and the profitability of the industry continue

to be highly erratic on account of the increasing element of speculation in the oilseeds and oils trade. The fluctuation in prices of oils between one part of the year and another have been of an order exceeding 30% at times. It will be appreciated that such violent fluctuations in raw material prices must inevitably lead to similar fluctuations in the prices of the end-product. This situation has been causing considerable worry to the edible fats industry, as these violent fluctuations are not in the interests of either the consumer, or the farmer, or even of the normal trader, but only of the speculator. There is definitely a need for the Government and the industry to take stock of this situation and to take such steps as are possible for minimising the impact of these unhealthy trends.

Before I close, I am sure, you would be pleased to know that in keeping with the past policy of diversification and expansion of the enterprises in your Company, it has been decided by your Board to put up a P.V.C. Plant with its ancillary products like chlorine, calcium carbide and caustic soda, as also a Plant for the manufacture of Rayon Tyre Cord, both yarn and fabric. Both these are large projects involving very large investment. In addition to these two large projects, renovation, modernisation and, in certain fields, expansion are continually going on.

Before I close, I am sure you will join me in conveying my thanks to all my colleagues who have been responsible for the satisfactory results and also express confidence in their ability to shoulder responsibilities in the future development of the Company.

With these words, Ladies and Gentlemen, I move that the Directors' Report and Accounts be adopted.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

CLOSER
CONTROL OF
FLOW AND
LIQUID LEVEL

...with Honeywell's Differential Converter

USE THIS mercuryless remote transmitter for practically any application requiring precise high-speed measurement of flow or liquid level.

Accurate to within 1%, it's equally fast in response up the scale or down. Range is continually adjustable in the field.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Honeywell
First in Control

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings. Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry. Precision electronic instruments and control systems for aircraft and missiles.

NEPAL BANK LIMITED

[Incorporated under Nepal Bank Act of 1994 (Sambat)],

Central Office, Kathmandu, Nepal.

Authorised Capital N. C. Rs. 1 crore
Paid-up Capital N. C. Rs. 25 lacs
Reserves and Exchange
Fluctuation Fund N. C. Rs. 73 lacs
(N. C. Rs. 160 = L. C. Rs. 100).

23 Branches and Sub-Offices in Nepal.

Enquiries are invited from Banks, Commercial Concerns and Tourists for information regarding Prospects, Procedure and Regulations in Nepal.

version of dollars into gold through official channels is, of course, permitted, but the inhibition that prevented central banks from thus declaring their distrust of the dollar last year is still effective. Last year, the U.S. authorities were persuaded to release gold (through the Bank of England) to the London market to satisfy private demands, for the disparity between the official price and the market price was evidently doing more damage to the dollar than could be caused by a moderated loss of gold from the official stock; but it is not certain that the new Administration is equally convinced that the official price and the market price must be harmonised.

Gold Buying by Central Banks

The London bullion market believes that the central banks will maintain their informal agreement to buy no gold in the market at prices above \$35.25 an ounce; but any such arrangement for orderly dealing could fail if central banks felt it necessary to increase the gold proportion of their reserves, as some of them have done recently. The key to an orderly gold market is confidence in the currencies, particularly the U.S. dollar, weakening the incentive to keep reserves in the form of gold rather than of currencies. That the U.S. authorities have themselves regained confidence in their currency can be seen in the I.M.F.'s arrangement with Britain. Whereas it seemed a few months ago that the U.S.A. itself would need assistance from the I.M.F. the authorities can now allow \$450 million of the Fund's dollars to be released for use by another country. It is, however, notable that this figure is less than a third of the \$1,500 million made immediately available from the Fund to the U.K. The possible pressure on the dollar resulting from the transaction is much less than was generally visualised when the U.K.'s application for assistance was known to be imminent.

It must be recognised however, that the recovery of the dollar this year was partly a reflection of the deterioration of sterling. As the world's confidence in sterling has been (more or less) restored and high short-term interest rates in London have reversed the outflow of "hot money" that was a major cause of the mid-year crisis, a psychological and a material support for the dollar have recently been withdrawn. At the same time, the U.S. balance of payments, though no cause for anxiety as it was last year and previously, is not assured of consistent improvement. On the contrary, the increase in U.S. spending on defence and on projects in space, coinciding with a rapid acceleration in the nation's economic activity, have revived in some minds the old fear of inflation. It may be assumed that the U.S. authorities will watch carefully the gold currency proportions in other countries' reserves. The release of gold from the I.M.F. as part of the transaction with the U.K. suggests that some at least of the countries whose currencies are involved in this transaction are decidedly gold-conscious, and any idea that gold might be revalued in terms of currencies would naturally strengthen their preference for gold as a medium of reserves. As usual before the annual meeting of the I.M.F. the idea of revaluation has recently circulated again. It is an idea that would have to be seriously considered if the dollar showed symptoms of weakness.

The Unsettling Influence

This is a familiar story, but it cannot continue for ever. The anomaly of a gold price fixed some three decades ago, when war and inflation have changed all other values, is a recurrently unsettling influence. If the value of this medium of reserve cannot be adjusted, gold will ultimately be replaced by some arrangement of currencies. (Some people believe that the Americans are holding the price with that idea in mind, that gold will ultimately be replaced by the dollar.) In the meantime, the recurring expectation of a rise in the price of gold is a chronic threat to the stability of currencies. One of the most constructive suggestions for solving the problem came recently from the U.S.A. itself. The First National City Bank's Monthly Letter declared that an international conference should be convened to discuss the whole question of the precious metals in relation to the monetary system. All interested countries would then have the opportunity to express their ideas, and they would no longer feel that the U.S. authorities were dictating policy on gold.

Stocks and Shares

SHARE PRICES IMPROVE IN MORE ACTIVE TRADING

OPERATORS WELCOME DECISION NOT TO CHANGE L.I.C. INVESTMENT PROCEDURE

Wednesday Evening.

IN spite of the holidays during the past week, a fair amount of business has been transacted in the stock market and the prices of selected shares have improved. During the Moorat session on Tuesday evening, sentiment was maintained, but activity was restricted because business was mainly of a squaring-up nature. The market was closed on Wednesday.

Lyons Range has been cheered by the decision of the Government not to take over the investment functions of the Life Insurance Corporation. (The implications of the move are discussed in a leading article in this issue of Capital). Operators are pleased that the prolonged uncertainty over this question has now been removed. Sentiment was badly disturbed when the Estimates Committee of Parliament recommended that the Government should take over the investment functions of the L.I.C. some months ago. Operators believe that the Corporation will now support the stock market more freely. The reduction in the U.K. Bank rate from 6½ percent to 6 percent also appears to have had a favourable effect. The move might benefit India in a small way, to the extent that this country can now obtain cheaper financial facilities from the U.K. for exports and imports. But the cut cannot be taken as pointing to any change in India's monetary policy. In spite of the need for more credit to promote economic development, the authorities in this country appear to be determined to have tighter and dearer credit.

Speculators have been encouraged by the higher production figures of the Indian Iron and Steel Company for October. Despatches have also improved, but they would have risen more if the wagon shortage had not been so severe. The management says that 3,000 tons of finished materials could not be despatched due to the short supply of 75 bogie-type wagons. The production of pig iron has increased from 97,760 tons in September to 105,823 tons in October and that of steel ingots from 76,888 tons to 81,969 tons. The output of salable steel has improved from 60,138 tons to 61,921 tons. Despatches have risen from 58,138 tons to 60,257 tons.

At the close, operators have become cautious due to the absence of follow-up support. The settlement, which is due to be held on Thursday, is a restraining factor. Some investors are worried about the statement made by the Central Finance Minister, Mr. Morarji Desai, in Bombay over the week-end. He pointed to the prospect for an increase in taxation and is believed to have asked for dividend restraint. The market feels that dividends have risen more slowly than corporate profits during the past few years, so a call for dividend restraint is not justified. Current dividends do not look high when compared with the prevailing level of interest rates.

Indian Iron have closed at Rs. 25.10. Selected engineering shares have been supported. Indian Standard Wagon have improved. Texmaco have gained due to increased speculative interest. Guest, Keen, Williams, Britannia Engineering, J. K. Steel, Jay Engineering and Braithwaite have been steady.

The improvement in the prices of some miscellaneous industrials has been striking. Dunlop Rubber have gained. Goodyear India have improved in sympathy. Metal Box have risen due to a shortage of scrip. Britannia Biscuits have become firmer on the news that the Company has been permitted to issue bonus shares in the proportion of one new share for every two held. Other notable rises include Indian Aluminium, Indian Cable and National Insulated Cable. Martin Bura are steady on dividend prospects. Kesoram Industries and Jay Shree Industries have enjoyed influential buying. Alkali Chemical and Angelo Brothers have become steadier. Cement shares have been bought selectively. Jaipur Udyog have been supported but Ashoka Cement have become weaker. Among tobacco shares, Imperial Tobacco and National Tobacco have fallen. Electricity company shares are steady and business has passed in Calcutta Electric. Hindustan Twyford's, Isaac Holdens and Dr. Paul Lohmann have been steady. Hindustan Motors have recovered on short-covering, although the lock-out has not yet ended. Rohtas are steady. Paper shares have recovered on replacement buying. Orient, Titagarh and Seshasayee have met with support. Sirpur have become sluggish in spite of an increase in the ordinary dividend.

Turnover has increased in jute shares on the belief that many mills have started making profits on simultaneous business. Prominent scrip are Birla, Northbrook, Fort Gloster, New Central, India and Megna. Although the last two Companies have reduced their ordinary dividends, the cuts are considered reasonable in view of the difficulties facing the industry.

Coal shares have become steadier in sympathy with the general trend but turnover is restricted.

Burrakur have gained fractionally. Scattered interest has been taken in Bengal, New Beerbroom and Central India.

Cotton mill shares have been buoyant on the view that the mills will make bigger profits in the current year. Elgin have risen on replacement buying. Other steady features include Bowreah, Dunbar, Bharat Commerce and Cawnpore Textiles. Except for Dyer Meakin Breweries which have been firm on hopes of a bonus issue, sellers predominate in sugar shares. Carew, S.K.G. and Ramnugger have declined. Champaran have been sold on reducing the dividend.

Reports of a further decline in auction prices have induced selling in tea shares. Hantapara, Hasimara, Bishnauth and Tezpor have fallen.

There is evidence of selective support for bank shares on hopes that bank profits will show an improvement during the current year. United Commercial and Punjab National have been steady.

Interest has been taken in selected preference shares in view of the satisfactory yields.

Government securities have become quiet. Institutional buying has declined with the onset of the busy season. The prices of all dated securities have eased on balance. The 3 percent Conversion loan 1986 is quoted lower at Rs. 71.85. Sellers predominate in State loans and their prices have fallen.

Gielle Tea

The profit made by Gielle Tea Co. Ltd has risen from Rs. 38,995 to Rs. 1.28 lakhs for the year ended December 1960, after allocating Rs. 55,508 (against Rs. 25,815) for depreciation. With other adjustments, there is a carry-forward of Rs. 1,654, against a debit balance of Rs. 82,998 brought in. The crop amounted to 135,248 kilograms, against an estimate of 119,748 kilograms. The net average sale price was Rs. 6.85 (against Rs. 6.59) a kilogram. Estimates for 1961 have been based on a crop of 3,400 maunds of tea at a total cost of Rs. 7.21 lakhs.

Roopacherra Tea

The profit earned by Roopacherra Tea Co. Ltd has increased from Rs. 14,458 to Rs. 72,724 for the year ended December 1960, after providing Rs. 69,587 (against Rs. 52,518) for depreciation. Dividend has been passed. Taxation absorbs Rs. 1,200 (against nil). With other adjustments, there is a debit balance of Rs. 6,139 to be carried forward. The crop amounted to 257,822 kilograms, against 246,573 kilograms. The average sale price was Rs. 4.28 (against Rs. 4.03) a kilogram. The estimate for the 1961 season provides for a salable crop of 301,933 kilograms, at a total revenue expenditure of Rs. 11.06 lakhs.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during October was: iron 130,100 tons; steel ingots 137,600 tons; semi-finished for sale 33,700 tons and finished steel 79,000 tons.

Bombay Market

CHEERFUL CONDITIONS PREVAIL

RISE IN TATA STEEL OUTPUT WELCOMED

Tuesday Evening.

THE Bombay stock market closed the week in a cheerful mood. Sentiment was maintained during the Moorat trading on Tuesday. The broadening enquiry for cash scrip at rising prices was a striking feature. The trend in clearing shares was mixed. At the close, prices reacted moderately due to profit-taking. The decision of the Government not to take over the investment functions of the Life Insurance Corporation, as recommended by the Estimates Committee of Parliament, had a good effect. The higher production figures of the Tata Iron and Steel Company for October helped improve sentiment.

Branches and Pay

Steadiness was inspired by good corporate news. Although the increase in the ex-factory price of cement was expected to benefit the various companies differently, it was generally welcomed.

Tata Steel closed at Rs. 146.25 and Indian Iron at Rs. 25.15 on fair support from Lyons Range. There was also a great deal of short-covering. Engineering shares slipped back at the close on profit-taking, but Tata Locomotive were boosted to Rs. 368 on replacement buying. Alcock Ash-down declined to Rs. 323 and Premier Construction to Rs. 196. Mukand Iron were available at Rs. 28.65 and Larsen and Toubro were indicated at Rs. 38.50. Motor shares were quietly steady, and business was done in Premier Automobiles at Rs. 156.50. Hindustan Motors recovered to Rs. 20.36 on short-covering.

The earlier improvement in cotton textile shares was not maintained at the close due to reports of a decline in exports and in the internal offtake. Century closed at Rs. 602 and Bombay Dyeing at Rs. 69. Standard were fancied up to Rs. 1,518 on prospects of the diversification of activities. Kohinoor were placed at Rs. 313.50 and Morarjee at Rs. 399. Simplex came to hand at Rs. 166.50 and Gokak at Rs. 204. India United ordinary were done at Rs. 15.08 and Apollo were sold down to Rs. 2.08.

Cement shares were steady in the miscellaneous section. Associated Cement were transacted at Rs. 170 and Digvijay at Rs. 191. Mining shares were steady, and business was done in Shivrajpur Syndicate at Rs. 54. Sugar shares were quiet on fears of overproduction. Belapur reacted to Rs. 270 and Phaltan were sold down to Rs. 128. Walchand-nagar Industries declined to Rs. 168 and Maharashtra Sugar were available at Rs. 188. Steamship company shares declined on balance. Scindia Steam were lower at Rs. 13.04 and Great Eastern were sold down to Rs. 13.40 on reducing the dividend. Chemical shares were steady, and Tata Chemical improved to Rs. 19.84 on rumours that the Company might issue ordinary rights shares at a small premium. Synthetics and Chemicals improved to Rs. 238 on influential support. Colour-Chem were done at Rs. 382.50 and Polychem were transacted at Rs. 203.75. Bombay Burmah reacted to Rs. 651.50 on profit-taking. Rayon shares were steady, and National Rayon were bought up to Rs. 559.50. Gwalior Rayon rose to Rs. 50 and Indian Rayon were done at Rs. 35.50. Voltas were bought at Rs. 306 and Tata Oil were in demand up to Rs. 78. Ceat Tyre were transacted at Rs. 222.50 and West Coast Paper rose to Rs. 182.

Bank shares were occasionally higher, although turnover was limited. Central Bank were placed at Rs. 62.80 and Bank of India were done at Rs. 131.50. Bank of Baroda came to hand at Rs. 104.50. Among insurance shares, New India Assurance were maintained at Rs. 61.

There was scattered interest in electric company shares, and Ahmedabad were supported up to Rs. 91.50. Tata Hydro were taken at Rs. 111 and Bombay Suburban were placed at Rs. 104.

Madras Market

MORE DEMAND FOR COTTON TEXTILE ISSUES

MISCELLANEOUS INDUSTRIALS IMPROVE

Tuesday Evening.

BUOYANT conditions prevailed in the Madras stock market during the past week. Sentiment improved further during the Moorat trading on Tuesday. Share prices rose due to optimism concerning the flow of foreign financial assistance to this country. There was evidence of increased support, especially for textile and selected miscellaneous industrials.

Business in Government securities was quiet due to the absence of institutional support. Prices of some State loans were shaded on balance. Selected bank shares met with interest on dividend prospects. Sugar shares were not fancied, because the outlook for the current season has become uncertain with the decision to cut production. In the planting section, interest was taken in good tea shares as the auction prices were fairly satisfactory. Rubber shares reacted because of the decline in the international price of the commodity. Selected coffee shares were bought on the view that good grades may not be difficult to sell in foreign markets. Interest increased appreciably in textile shares on hopes of higher production. Selected miscellaneous industrials were taken on good corporate news.

In the banking section, State Bank of Mysore were done at Rs. 170 and Punjab National were transacted at Rs. 20. Indian were supported up to Rs. 181 and Indian Overseas were done at Rs. 193.50. Among public utilities, South Madras were steady at Rs. 10.10 on paying an interim dividend of 4½ percent, taxable. Vellore came to hand at Rs. 14 and Negapatnam were done at Rs. 10.50.

Among sugar shares, Deccan were dealt in at Rs. 12.35 on paying a final ordinary dividend of 13½ percent, taxable. E.I.D. reacted to Rs. 38.60 and United Breweries were lower at Rs. 104. Mysore were maintained at Rs. 57.75, but Kothari

were easier at Rs. 8.30. India came to hand at Rs. 11.15 and K.C.P. were placed at Rs. 24.

London

U.K. INDUSTRY AND EXPORTERS WELCOME NEW BANK RATE CUT

POLICY OF ECONOMIC RESTRAINTS WILL CONTINUE, SAYS CHANCELLOR

(FROM OUR LONDON CORRESPONDENT)

IT was more or less certain that Bank rate would be cut last week, for the Treasury bill rate, which normally keeps less than 1 percent below Bank rate, had been pushed down to below 5½ percent, and the 6½ percent Bank rate was, therefore, unrealistic. Last Thursday's cut of 1 percent to 6 percent had been anticipated in the City, but no less welcome for that. The flow of hot money promoted the earlier reduction to 6½ percent, but it was not large enough to halt the flow which has continued over the past few weeks. In its September bulletin, the Bank of England said that "a heavy flow of short-term funds would not be welcome". The latest cut will reinforce that made on 5th October, and has a twin purpose. It will help stem the flow of short-term funds from abroad, attracted by the temptingly high interest rates. Both U.S. dollars and West German marks have been switched into sterling in recent weeks. The Government is not anxious to embarrass the U.S.A. where the gold outflow has been fairly heavy in the past few weeks. On the home front, the lower rate will help industry, which has been hampered by having to pay very high interest rates on its bank and other loans. Now bank interest charges will be reduced on overdrafts for both business and private borrowers. Exporters, in particular, will welcome a return to slightly cheaper money. Many of their efforts have been frustrated through too high interest rates on credit.

The cut, following so closely on the news of Britain's repayment of £100 million to the International Monetary Fund, makes it clear that the Chancellor now regards the gold and dollar reserves as satisfactory. In the past month, these fell by £8 million, but had it not been for the I.M.F. repayment, there would, of course, have been another substantial increase of £92 million. Lightening the debt burden does not, of course, mean that the underlying balance of payments has changed from red to black. The Treasury hastens to warn that the action "provides no justification for any relaxation of the measures designed to bring about a lasting solution of the external unbalance." Resolute application of the Chancellor's restrictive policies is still essential, the statement concludes, to bring about a lasting improvement and allow Britain to repay the whole of the I.M.F. drawing in the prescribed time. While the warning is right and proper, the prompt repayment of part of the August credit has undoubtedly made a good impression in the international financial markets and sterling has continued strong. As far as Bank rate is concerned, a Bank of England spokesman said: "A further stepdown from the very high level to which Bank rate was raised in July can now be justified by the continued strength of sterling in the exchange markets and can be made without detracting from the force of the credit restrictions which it is still necessary to maintain in full".

Chancellor on Progress

The Chancellor of the Exchequer the other day spoke of "an improvement without any doubt at all" in Britain's economic position; but he also said that it would be "absolutely disastrous" to think of relaxing. Addressing a Conservative Association dinner in Nottingham, Mr. Selwyn Lloyd replied to criticism that his policy of restrictions was aimed at lower wage earners. It was an attempt to "try to get what is really economic common sense generally accepted". The Chancellor said that the Conservatives had thought—and they might possibly be subject to criticism—that if they could only get prices stable it would answer the problem of inflation. For more than two years they had had steady consumer prices, but it did not answer the problem, because the increase in personal incomes went on. The people who suffered most from the diminishing purchasing power of the pound were those with small fixed incomes, people living on their savings. Mr. Lloyd went on: "What we have to try and get home to the ordinary wage earner and the wife of the wage earner is that this exercise, unpleasant and disagreeable though it may be, is really an attempt to defend their living standards. That is why one has to take unpleasant measures: one has to try and hold sterling, to hold down the demand here at home to make available resources for increasing exports".

National Income and Expenditure

A rise of 9½ percent in the wage and salary bill was the main cause of an increase in the "gross domestic product" between the second quarters of 1960 and 1961. This is one of the facts that emerge from the latest figures on national income and expenditure published in the October issue of *Economic Trends*. The gross domestic product rose between the two quarters by 4½ percent at current prices and by 2 percent valued at 1954

prices. While income from employment increased sharply, company profits in the second quarter of this year were lower than a year earlier; indeed it is now shown that gross trading profits of companies reached their peak in the fourth quarter of 1959, almost regained it in the second quarter of 1960 and have since slowly declined. In spite of a rise in personal disposable income between the second quarters of 1960 and 1961—to a record figure of just over £5,000 million—consumer expenditure at current prices only rose 3½ percent and there was a large corresponding rise in savings—from 9 percent to 12½ percent of personal net income. The increase in wages and salaries was strikingly greater than the rise in the value of all the goods and services produced in the period. Perhaps the contrast is overstressed by using percentages to show a gap between 9½ percent and 4½ percent, but even in absolute figures, it stands out: only £250 million was added to the value of the gross domestic product, while £350 million was added to the income from employment. These are clearly the kind of figures that have moved the Chancellor to his rather desperate efforts to produce a "pause".

The period between the second quarters of 1960 and 1961, covers the dramatic rise in capital investment by manufacturing industry which rose by no less than 24½ percent. Although investment by the distributing and service industries fell off slightly—due to a large fall in expenditure by the shipping industry—total fixed investment at home rose throughout the period. None of the rise was in expenditure on new dwellings. Expressed in constant prices and seasonally adjusted, total fixed investment in the second quarter of 1961 was 9 percent higher than a year earlier. On the other hand, expenditure on building up stocks declined. Much less was spent on additions to stocks this year than last, but even so, the lower rate of stock building represents a growth of just over 3 percent a year, slightly more than the average annual increase in domestic production in the last few years.

Banks May Relax Squeeze on New Loans

The credit squeeze led to a further shrinkage in bank advances in the four weeks ended mid-October, according to the combined statement of the clearing banks issued last week. The latest drop of £69 million includes a book-keeping change which accounts for £40 million, so that the real cut was less than £30 million. This follows the record fall of £232 million in August and September. The total outstanding bank advances now amount to £3,372 million, and the heavy contraction in the past three months has almost wiped out the big rise in advances during the previous nine months. Since the end of July, when the Chancellor decided to call for further "special deposits" from the banks and asked them to see that the impact of this shift would fall entirely on advances and overdrafts, these have fallen a great deal faster than either the banks or the authorities expected. As a result, the clearing banks now enjoy an unseasonal wealth of liquid funds, the "liquidity ratio" having risen to nearly 35 percent, compared with 31½ percent at this time last year. Although the banks have already used some of these liquid resources to buy £50 million worth of Government securities and may buy some more, they are also in a position to relax their lending policies a little if they are allowed to do so.

Manpower Gap Closed

The crucial question now is whether the Government thinks that the restrictive policies have done their work and can—in spite of public protestations to the contrary—safely be relaxed a little. There is no doubt that the brakes applied three months ago have begun to grip. The most striking evidence is the news from the Ministry of Labour that the manpower gap has been closed. In mid-October, the number of people out of work was 76,000 more than the number of unfilled vacancies. Unemployment rose more than seasonally from September to October (by 48,574 to 365,607) and the number of unfilled vacancies fell by three times the seasonal norm (38,939 to 289,210). From April to September, there had been more jobs on offer than men out of work, and this condition has usually proved to be a signal of financial crisis. Will the Government now decide that the restrictions must be slowly relaxed because they might otherwise cause a real recession? It would be easy enough. The clearing bank figures suggest that bank credit at any rate would soon start expanding again if things are just left as they are. Against this background, a cut of 1 percent in Bank rate, which has become desirable for external reasons, might easily be taken as an encouragement to relaxation. But it would be a disastrous decision to relax now. All hopes of saving the pound at its

present rate would vanish. The real gains in industrial discipline which have begun to emerge would be thrown away. It is hard to imagine that the Government would give up the struggle so easily. The alternative is to keep a sharp eye on bank credit.

Wage Policy

Barring an economic catastrophe in the next few months, the wages pause will end no later than 2nd April next year. This is the only reasonable interpretation of a Government decision, announced last week, on the application of a wages council award. In itself, the award is relatively unimportant. It will give increases of 6s 4½d for men and 4s 6½d for women to about 6,000 workers in the sack and bag manufacturing industry. The significant point is that Mr. Hare, Minister of Labour, has made an order giving it effect on 2nd April. Since he had an entirely free choice of dates, his decision can only be regarded as a pointer to the Government's thinking on when the "pause" might end. Mr. Hare has accepted the recommendations of three other wages councils in the last few weeks, and has made orders which become effective from 1st January. A fourth was added last week when he agreed to increases on New Year's Day for 160,000 workers in licensed hotels and licensed restaurants. But the common feature of these four cases is that the councils had agreed on their recommendations before the pause was announced, and the Government, therefore, viewed them as "prior commitments". This factor was absent in the case of the sack and bag council.

Machine Tool Exports Up

The machine tool industry is having some difficulty in keeping pace with a growing volume of orders. In the first eight months of this year, responding period of 1960, and still the order-books are growing. The result is an increasing export business. Figures published by the Machine Tool Trades Association show that the value of overseas deliveries in August was £2,094,000, against £1,462,000 in August last year. Outstanding export orders at the end of the month totalled £31,813,000, compared with £22,482,000 in 1960, showing net new orders of £3,632,000, against £2,713,000 last year. Deliveries to the home market totalled £5,215,000 in August, against £5,333,000 last year, and the value of orders outstanding at the end of the month was £86,986,000 (£74,573,000 last year), leaving net new orders of £6,935,000 (£8,077,000). The chief problem for the industry is the lack of skilled labour to employ the existing production capacity to the full. By reducing home demand, the credit squeeze has, in some degree, given the industry a "breathing spell", and the industry is concerned that, when demand again expands, it should not be satisfied at the expense of the export business.

Cotton Board Overseas Trade Department

Mr. John H. P. Hadden, Director of the Cotton Board Overseas Trade Department, left Manchester on 26th October, for a visit to Australia and New Zealand, where he will represent the interests of both cotton and man-made fibres. As head of the Joint Tariff Department of the Cotton Board and the British Man-made Fibres Federation, Mr. Hadden will attend the Tariff Board enquiry into protection for the Australian man-made fibre weaving industry, and will discuss with interested parties the implications of the New Zealand tariff on U.K. cotton and man-made fibre exports. He will also visit merchants and trade organisations to discuss with them the Cotton Board's trade promotional activities in these countries. Mr. Hadden was due to arrive in Melbourne on 30th October and will later visit Canberra and Sydney. He will fly to New Zealand later, calling at Auckland and Wellington, returning to the U.K. by about 9th December.

Brevities

The index of retail prices for September was 115, compared with 116 in August. Calculated to one decimal place, the September index was slightly under 115.5, compared with 115.7 in August.

Holders of 3 percent Defence Bonds maturing on 1st March and 15th March, 1962, are offered a conversion into 5 percent Defence Bonds (Conversion Issue). These are the same as the current 5 percent Defence Bonds (Second Issue), except that interest dates are 1st April and 1st October.

The chairman of Moabund Tea said in September that some areas were marginal as far as the earning of profits was concerned, and that the directors were considering the possibility of selling such areas. Shareholders are now informed that the board has accepted an offer of Rs. 30½ lakhs for the major portion of the Gatoonga Division of the Company comprising 1,172 acres of tea with its surrounding grant area. This is equivalent to £228,750 of £195 an acre under tea. A deposit has been received, but the sale agreement has not yet been signed. The board considers this to be a satisfactory sale, and will expedite its completion as quickly as circumstances permit. It will be some time before any part of the proceeds becomes available in the U.K.

Statistics compiled by the Midland Bank show that the amount of "new money" raised in Britain in October was £26.5 million. This brings the total for the first ten months of 1961 to £559.6 million, compared with £470.9 million in the same period of 1960.

Jute

MORE VARIETIES FOR TENDER UNDER GUNNY HEDGE CONTRACTS

EFFORTS TO RELIEVE THE READY GOODS SQUEEZE CONTINUE

DURING the past week, the East India Jute and Hessian Exchange has declared an emergency in the standard hedge contracts for hessian cloth and sacking bags for November 1961 delivery. With the concurrence of the Forward Markets Commission, operators within the Exchange have been advised that due to a shortage of jute goods tenderable under hedge contracts in hessians and sacking, a squeeze has developed, so alternative tenderable varieties of jute goods are to be added to the contracts. In hessians, these are 36in 7½oz, 36in 10oz and 45in 11oz; while in sacking they are A Twills, Liverpool Twills, plain heavy Cees (40in by 28in) and green heavy Cees (43in by 29in). The emergency has been brought about by the acute shortage of ready goods, and by the disparity between futures and real goods prices. It is indeed heartening to report that the directors of the Exchange are alive to the situation, and that the present system is a great improvement on the old *futka* market which went its own way, irrespective of trade conditions and often in accordance with the whim of some powerful speculator. In these columns, reforms have often been advocated. So one may be pardoned for parodying Sir W. S. Gilbert in saying that the day appears to be approaching when "Our object, all sublime, We shall achieve in time, To make the *futka* fit the trade, The *futka* fit the trade."

A futures market, to serve an industry which has proved to be as flexible as the jute industry, must be flexible itself. The East India Jute and Hessian Exchange comes in for a lot of criticism, but the present set-up, in spite of its deficiencies, seems to be working well. The futures market has to serve every section of the trade and undue prominence should not be given to any particular section.

There have been considerable fluctuations in the market during the past week, particularly in the goods section. The general tendency has been towards lower levels, but manufactured goods are now at substantially the same rates as they were a week ago. Raw jute prices have shown little variation, being influenced by the fact that up-country rates in nearly all agencies are about Re. 1 above the parity of Calcutta prices. There appears to be little justification at the present time for any weakness in fibre, since stocks are down to levels at which early replenishment is necessary. Even with a normal crop, which now seems more likely, the demand for actual consumption, together with buying to build an adequate reserve, will be sufficient to absorb all that is available. Stocks in Cossipore are well below normal as mill buying there has increased greatly, and all arrivals are eagerly snapped up. It is estimated that current unsold stocks are about 250,000 maunds. In a normal season, stocks are usually more than double the figure at this time of year. Over the Kali Puja, most Indian mills indulged in "lucky day" purchases and a fair amount of business was reported. Normal prices were paid, but some lots were available at a discount, mainly from stockists whose average holding price was above the current rates. There is a great deal of nervousness among stockists now and many of them are prepared to cut their losses and sell. Bills of lading for flats nearing Calcutta can also be easily obtained, as demurrage or storing charges would take away any profit there might be. This month, imports of mesta should have some effect on the market. Very little business has been conducted so far in this fibre, but the situation should improve with the increase in arrivals. Daissee purchases are also expected to rise, but prices are not expected to fall in the first-class agencies due to the continued demand. This has led to an increase of inferior agency jute being packed under superior agency marks, and unfortunately much of it is being passed due to lack of knowledge of high-grade Daissee. Mills normally dealing in Sheoraphuli Daissee, for instance, would detect the difference, but the casual buyer of jute from this district, picking up what appears to be an attractive offer, is very often misled by the ticket. This brings us back to the old story of the "book of marks". Many feel that it should be reintroduced, as with sellers changing their names so rapidly it is difficult to keep track. It is known that many mills keep their own "book of marks" which in many ways are superior to the official one. But the mere fact of sellers having to register their marks, and prove that they have agencies in the districts whose jute they are trying to sell, would deter them from passing off one type of jute for another.

THE JUTE MARKETS

Manufactured Goods: Demand from overseas was poor, although there was a steady enquiry for specialties at good premiums, particularly for the near positions. Business was mainly confined to bazaar covering for early shipment and the volume of fresh orders was small. Mills were inclined

here the premium was about Rs. 4, against Rs. 8 a week ago.

Opening quotations on Wednesday morning were nominal due to the market being closed, and were as follows:

	November	December	Jan.-March
46in. 7½oz.	38.50	36.50	35.00
40in. 8oz.	41.25	36.00	37.50
40in. 10oz.	50.50	41.25	46.50
B Twills	139.00	132.00	127.00
Heavy Cees (Plain)	138.00	132.00	127.00
A Twills	167.50	160.50	154.50
Liverpools	157.50	150.00	143.50
Cornsacks	142.00	134.50	129.00

Raw Jute: There was a little more interest in the fibre market during the past week, and mills bought fair quantities, mainly for early delivery. Prices for Assam jute varied between Rs. 32 and Rs. 32.50 for Bottoms, but some small business was reported at lower rates. Sellers holding bills of lading were keen to sell before their goods arrived in Calcutta, and in some cases discounts were offered. Upcountry markets generally ruled

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports total stocks of jute goods at the end of October as follows:

Description	31st October, 1961		30th September, 1961		Increase over (+) or decrease from (-) last month		31st October, 1960	
	(000 Metres)	(000 Metric Tons)	(000 Metres)	(000 Metric Tons)	(000 Metres)	(000 Metric Tons)	(000 Metres)	(000 Metric Tons)
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian cloth and bag	5,63.44 (6.16)	17.0 (16.8)	5,07.32 (5.35)	15.6 (15.4)	+55.92 (+61)	+1.4 (+1.4)	10,24.84 (11.21)	30.9 (30.5)
Sacking cloth and bag	6,34.21 (6.94)	29.9 (29.1)	6,35.34 (6.95)	29.6 (29.1)	-1.33 (-1)	+0.3 (+0.3)	8,54.64 (9.35)	40.1 (39.5)
Others	8.5 (8.3)	7.2 (7.1)	7.2 (7.1)	7.1 (7.1)	+1.3 (+1.2)	8.6 (8.4)	8.6 (8.4)	8.6 (8.4)
Grand Total (000 Metric Tons/Tons)	55.4 (54.5)	52.4 (51.6)	52.4 (51.6)	51.3 (51.6)	+3.0 (+2.9)	79.6 (78.4)	79.6 (78.4)	79.6 (78.4)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measures.

Do you throw away a broken SCREWGRILL FALLER BAR as useless and buy a new one? Well now you needn't! Because we at LAGAN, have installed a new FALLER BAR repair plant which does a marvellous job of repairing—MACKIE FALLERS—so good in fact, that your once broken FALLER BAR, can be made to look like new and serve as well too.

THE LAGAN JUTE MACHINERY CO. PRIVATE LIMITED

24-B, Park Street, Calcutta-16. Phone: 44-5833 (3 lines)

above the parity of Calcutta rates due to mill buying in the agencies. Interest in Cossipore was well sustained, where only 350 wagons arrived during the past week. This was well below the normal for the time of year. Towards the close, a fair amount of "lucky day" business was reported at market rates.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills	Rs. a 100 kilos	Rs. a md.	Shipment
Assam	85.75	32.00	Nov. Dec.	
Northern	85.75	32.00	"	
Purnea Desal	83.50	31.00	"	
Assam Tossa	88.50	33.00	"	
Selected Daissee	92.50	34.50	"	
Old Crop Mesta:				
Assam-Northern	81.75	30.50	"	
Desal	81.75	30.50	"	
Daissee	80.25	30.00	"	
Pakistani Cuttings	110.00	a bale	"	

THE FOREIGN JUTE MARKETS

FIBRE FALLS: NO CHANGE IN YARN AND CLOTH RATES

(FROM OUR DUNDEE CORRESPONDENT)

ALTHOUGH raw jute prices have displayed an easier tendency and manufacturers have been looking for a reduction in yarn and cloth rates, no change has been announced by the authorities so far. Quotation for the various grades of fibre have been reduced as follows: Mill Lightnings from £132 to £127, Mill Hearts from £107 to £104 and Grade Hearts from £88 to £84. Grade Tossa-3 from £140 to £138, fours from £128 to £124 and Continental Tossa-3 from £113 to £108 for November shipment, c.i.f. U.K.-Continent.

Spinners in Dundee have been showing little or no interest, so sales have been restricted. It is reported that some bids which were made earlier in the past week at a few pounds under the quoted rates were refused, but no doubt they would be accepted now. Spinners think that the prices for raw jute will come down further, and they ought to because of the large supply and the quality of the crop this season being poor.

Business in jute cloth and bags is at a low ebb, and manufacturers may have to cut down production if there is no improvement shortly. There are still no signs that there will be more business,

and consumers are likely to continue their hand-to-mouth buying until fibre prices decline. It is generally conceded that jute is too dear at over £100 a ton for Mill Lightnings, or L.J.A. Firsts, as they are known in other places. That would mean a reduction of £27 a ton from the present levels. The prices for jute yarns have remained at 18.87d a lb for 8 lbs C.H.W. cops and 20.02d for 8 lbs J.C.H. warp, on spools, 19.23d for 14 lbs carpet twist and 14.83d for 24 lbs sacking weft. Rove is being quoted at £125 10s a ton for 48 lbs and £93 10s for 200 lbs since 1st September, although most other yarns were reduced by £5 a ton from 22nd September. Cloth prices are still at 16.01d a yard for 40in. 10oz. hessians and 13.51d for 8oz.

Calcutta goods have also shown weakness, after a strong start, when B Twills were pushed up to 220s 3d for November shipment, falling to 211s 3d later. The prices are now at 199s December and 191s 6d January-March, with 40in. 10oz. at 76s, 71s 9d and 59s 3d and 8oz. at 57s 9d, 54s 9d and 52s for November, December and January-March, respectively.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES DECLINE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

A SERIOUS shortage of finance among the local buyers and balers has been the cause of a fall in prices during the past week. The rates might have fallen more but for mill buying which has supported the market to some extent. This support however is purely psychological, since buying has been almost entirely for the forward position. Arrivals in most centres remain more or less the same; in some, there has been a slight improvement. As the number of buyers is small, prices have been forced down. Upcountry sellers still have a strong financial position, and there the jute, including most of the seed cut jute, has been harvested. But if they cannot find buyers for a sufficiently long time, their resistance to price fall may decline. They have for the last few months been tempted by the higher prices which credit buyers have paid. The credit buyer is one who is short of finance and is, therefore, prepared to pay a rupee or two more a maund than the market price. He pays a small percentage of the price down and the balance of the purchase price at an unspecified later date. These buyers have suffered, probably more than others, due to the recent drop in prices, are not buying further, and, therefore, primary sellers' financial position has weakened, and this has frightened them into thinking that perhaps it is not wise to wait for higher prices when the market is going down.

In the Narayanganj and Daulatpur markets, pucca bales of most qualities are being offered at a discount. The reason for this is partly the lack of overseas business and partly, a long position with most balers who have been bullish for some time. This applies not only to white jute, but also to some extent to tossa, particularly outport tossa in which balers were at one time heavily oversold. After the tossa crop began to come in, it appeared that the percentage of outport tossa was remarkably low. Balers bought heavily at high prices to cover their short positions, but more recently, the quality has deteriorated so much that the outport tossa percentage has considerably increased, and once again balers are long of this mark. Prices being quoted for white and tossa in the Narayanganj market, are below overseas rates, which only emphasises the fact that these attempted sales are distress sales. Export Lightnings are being offered at about £103 and Export Hearts at the equivalent of £82. Outport Tossa is available at £107 and even Dundee Tossa 4s are being offered at about £121. In most cases, there are many sellers, but few buyers.

The most interesting feature is that even Export Firsts are being offered fairly freely at £134. While this is undoubtedly above overseas parities, it is still remarkably low considering its serious shortage. It is interesting how much over-toss. While no figures are available at present, a fair estimate is that the U.K. and the Continent may have reduced their Export Firsts purchases by something like 50 percent from the normal. Fortunately for them, Export Hearts and Outport Tossa are of considerably better standard this year, although the same cannot be said for the more recent deliveries of Lightnings which are either areas, or very specky from the jute areas. There is no doubt that the best buy this season is the Export Heart and Outport Tossa.

The mills which seem to feel that this is the bottom of the market, have been buying cautiously but mainly for the forward position. With the present very bearish outlook in the local market, they have had no trouble in buying kutcha bales in large quantities for delivery from December to February at discount prices. One of the largest counts prices for January-February in large quantities, which has already weakened the cuttings position even though this mark has not moved down so much as other marks. There is still the danger, however, that India finding the cuttings prices low may come in to buy. Cuttings can react very quickly. The E.P.C. prices have been reduced for Export Lightnings and Export Hearts by £3, and they are likely to be reduced further.

Commodity Markets

COPPER PRICES RISE ON REDUCTION OF STOCKS

LEAD AND ZINC WEAKEN

A STARTLING rise in the price of copper in the past month was sustained more firmly than dealers expected. Statistics may show that the position of the metal is still weak, but the major producer that set off the rise by substantial purchases seemed to have judged the market's psychology correctly. "Genuine" buyers responded, and news of considerable—and, for these times, quite unusual—reductions in London Metal Exchange warehouses' stocks assisted the rise in prices. However, much of the recent buying in London was from China and Japan, and these countries are easily deterred by a rise in prices. Anyway, the realities cannot be ignored. The reductions in the output, which were announced as having been planned, have been enforced in no major producing country other than Rhodesia, and the anticipated increase in consumption has been disappointing (where it has occurred at all) in nearly every country except the U.S.A. The increase in consumption there has offset a rise in production, but in the non-American world, the relation between the output and consumption has, from the producers' point of view, deteriorated.

Lead Supplies Excessive

Lead is another metal which has suffered from a curious failure of producers to put into effect their intentions to cut production; and the result is a chronic excess of supplies. Near the end of October, the price of lead fell to the lowest point recorded in 15 years, and a subsequent slight recovery looked insecure.

Zinc Surplus Grows

The approximate equilibrium of zinc foreseen by the Lead and Zinc Study Group in March has been upset by a shortfall of demand. At its meeting in October, the Group was confronted with a surplus of zinc outside the U.S.A. whereas the local surplus inside that country had been reduced. The Group has been unable to take firm action in relation to either metal, and its latest meeting has rather weakened than strengthened their prices.

Tin Attracts Less Attention

Tin has attracted less attention than recently, but the market has certainly not been listless. A recent substantial rise in the price is mainly a reversal of the fall which occurred when releases from the U.S. stockpile were being discussed. With Congress in recess, having made no decision on releases, the matter is in abeyance until next year.

No Recovery for Wolfram

Hopes of an appreciable recovery in the price of wolfram have for the present been abandoned. Offers from communist sources—particularly, it seems, China—have been pressed more forcefully on the market, and the steel industry of Europe (including the U.K.) is unable to provide support. The demand for wolfram cannot recover while its principal customer, the steel industry, is lethargic.

Plantation Topics

TALKS ON INTERIM WAGE RISE FAIL

WORKERS THREATEN STRIKE IN KERALA PLANTATIONS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Kerala Government may exercise its powers under the Minimum Wages Act to avert the threatened industrywide strike in the plantation industry. The State Labour Minister, Mr. K. T. Achuthan, hinted this after the failure of the third tripartite conference on 2nd November. It was convened by the Kerala Government to explore the possibilities of bringing about a settlement between the plantation owners and their workers concerning the latter's demand for an interim wage increase to compensate for the rise in the cost of living. The State Labour Minister said that the Government could keep quiet no more and was contemplating some action under the Minimum Wages Act to secure some benefit for workers. It is understood that the State Government will take up the matter with the Central Government after examining the legal position. Meanwhile, the labour unions, except the I.N.T.U.C., have decided to go on a token strike on 13th November, following their failure to secure an immediate wage rise. The I.N.T.U.C. unions have decided not to strike now but to request the Government to take action under the Minimum Wages Act. The total strength of the organised plantation workers of Kerala is estimated at about 130,000.

Minimum Wages

The latest conference was convened on the advice of the Central Labour Minister, Mr. Gulzarilal Nanda. The discussion at the conference was confined to the minimum wages and allowances based on the recommendations of the Wage Revision Committee which was presided over by Mr. Mammen Tharakan. According to the Labour Minister of Kerala, the employers' representatives argued that any decision taken now should be final or a decision should be deferred till the recommendations of the National Wage Board for the Plantation Industry were available. They were not prepared for any revision of the interim settlement in the light of the Wage Board's report. They also made it clear that they were not opposed to the rise in wages, but it could be done only on the specific condition that there should not be any further demand after the Wage Board's report is published. The representatives of labour, however, wanted only an interim settlement which they said should not stand in the way of implementing the National Wage Board's recommendations. The State Labour Minister is understood to have warned the conference that in the event of a failure, the Government would be forced to take stern action on the basis of the Minimum Wages Act. But neither the warning of the Minister nor the spate of arguments advanced from the two sides had any effect.

Rise in Cost of Living

It will be recalled that it was only a couple of weeks ago that the I.N.T.U.C. unions withdrew their direct action programme (*satyagraha*) which was launched for the purpose of obtaining an enhancement in wages. Their case is that the existing rates were fixed in 1953 and since then, the cost of living has risen sharply, making the wage rates unrealistic in the existing conditions. There is provision even in the Minimum Wages Act for the periodic revision of wages to bring them in line with any increase in the cost of living. A revision was due in 1958 but it has not been done so far. The conditions have changed so much that the workers can no more maintain themselves with the minimum wages they are now getting. They cannot wait until the recommendations of the National Wage Board are available. So they want interim relief immediately. If the employers are not prepared for it, they have no alternative but to resort to direct action, the unions say.

Direct Action Threat

The employers, on the other hand, say that they are not prepared for any haphazard revision of the wage rates. The National Wage Board was appointed on the basis of a joint request, so it is only fair to await its recommendations. There is a specific understanding that during the pendency of the Wage Board, there should not be any direct action for obtaining a wage increase. So the present direct action threat by labour unions is highly improper.

Cashew Trading Corporation

The Central Government is in favour of establishing a cashew trading corporation, according to the Kerala Industries Minister, Mr. Damodara Menon. To be formed by cashew exporters as a limited company, the corporation will be given the exclusive right of importing raw cashewnuts from Africa and distributing it among the cashew factories.

COCHIN TEA SALES

At Sale No. 45, 575,000 kilograms of tea were on offer. There was a useful demand. Plain and stalky sorts were weaker while low mediums and mediums were about steady. Good mediums and best liquorings were firm to dearer.

Calcutta Markets

LESS DEMAND AT TEA EXPORT SALE

PRICES GENERALLY EASIER

AT Sale No. 22, held on 6th November, there was less demand than in recent weeks for the 73,975 chests on offer at the Export auction, and prices were generally easier. Plain broken and Fannings declined by 15nP and sometimes more while the medium and best orthodox Assam broken were an irregular feature and were often much easier with a number of withdrawals, mainly plain and medium B.O.P.s. Similar Fannings also declined in price. Clean leaf C.T.C.s were generally 20nP to 30nP easier with some withdrawals in this category. Cheaper and off-grade varieties were irregular, but were taken up readily at prices up to 20nP below last rates. Legg-cut Doosars were 10nP easier. Darjeelings met with less support and were easier. Whole leaf, except for the cheaper descriptions, was a weak feature. The demand for tip was also limited.

Quotations	1961	1961
	Rs. a kilo	Rs. a kilo
Clean Plain Pekoe	4.10 to 4.30	5.30 to 5.70
Plain B.P.	4.00 to 4.15	4.50 to 4.65
Plain Fannings	3.80 to 4.00	4.80 to 5.10
Medium Assam C.T.C. B.P.	4.60 to 5.00	4.65 to 4.95
Medium Assam C.T.C. Fgs.	4.60 to 5.00	5.00 to 5.50
Best Assam C.T.C. B.P.	5.10 to 5.40	6.10 to 6.50
Best Assam C.T.C. Fgs.	5.10 to 5.50	6.50 to 7.00

(Quotations are inclusive of excise duty.)

HIDES AND SKINS QUIET

The market was quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 31st October, 1961, and 6th November, 1961)

Cowhides: Wet salted (Ord.) 8,000 pcs. on the basis of Rs. 8.50, Rs. 12.25 to Rs. 12.75 and Rs. 13.50 to Rs. 15.50; wet salted (slaughtered) 23,900 pcs. on the basis of Rs. 8.50 to Rs. 16.50 and Rs. 19 to Rs. 28; wet salted (ord.) 6,000 pcs. on the basis of 73nP to 84nP and Rs. 1 a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 47,400 pcs. on the basis of Rs. 240 to Rs. 270, Rs. 300 to Rs. 325 and Rs. 430 to Rs. 450; wet salted (he-killed) on the basis of Rs. 4.37 and (she-killed) on the basis of Rs. 4.12 a piece; Assam-Dinaipur 21,000 pcs. on the basis of Rs. 260 to Rs. 325; Patna-Muzaffarpore 3,000 pcs. on the basis of Rs. 250 to Rs. 270 and Rs. 300 to Rs. 330.

Bazaar Stocks

(6th November, 1961)

Cowhides: Wet salted 74,300 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia and Killed) 39,000 pcs.; Assam-Dinaipur 63,000 pcs.; Muzaffarpore-Patna-Pakur-Purneah-Kissenganj 143,000 pcs.

LINSEED FIRM

The market was firm in the past week. Arrivals from upcountry were very small and sellers were reserved. Few crushers were working on linseed. Supplies, it is expected, will increase after Diwali. The oil market was fairly steady, but business was on a very small scale due to limited stocks in the hands of millers who were not interested in discounting their prices for forward deliveries. The oilcake market was firm and local demand was good, but stocks were limited. The latest quotation is as follows: ready November delivery Rs. 30 a maund.
