Vol. CXXXVII No. 3685

THE THREATS TO INDUSTRIAL EXPANSION

THE gradual rise in equity prices in the stock markets which began a fortnight ago has gathered considerable momentum during the past week. It is not only the speculative issues that have risen; a wide range of investment counters, especially in the miscellaneous industrials group, have moved up smartly too. The immediate reasons for the upward trend, however, are by no means clear. The condition of the economy is much the same as it was, say, two months ago, when the stock markets were stagnant and pessimistic. The outlook for a number of companies, taken individually, may have improved. But in no case does the improvement justify as widespread an increase in equity values as has taken place. The suspicion, therefore, arises that the movement may to a large degree be speculative in origin. To the extent that it represents the correction of the somewhat over-sold technical position which existed previously, it need not cause undue worry. But if the rise were to continue vigorously in spite of the many uncertainties for private industry which are lurking on the horizon, remedial action may be necessary. In this content, special interest attaches to the meeting of the committee of stock exchange presidents which is due to be held a few weeks hence. The last meeting of this committee, convened early in October, proved singularly unproductive. It was expected that positive measures for checking excessive speculation would be evolved as part of a general scheme of stock exchange reform. But in fact it seemed that the discussions had got bogged down in the expression of pious hopes and conflicting generalities. The present trend in the stock markets indicates that the members of the committee, before they go to their next meeting, might have to do some concrete thinking if the dangers now incipient are to be averted.

The biggest danger arises from the fact that far too complacent a view is being taken about the prospects for the economy. Statistics relating to the achievements of the past are being calmly projected into assumptions concerning the future. In the case of agriculture, for instance, satisfaction is justifiably expressed over the improvement in food supplies since 1959. But the major qualification is often forgotten that the improvement is due partly to the large grain imports from the United States, and partly to good luck with the weather. As the wide fluctuations in cotton, jute and oilseeds production show, Indian agriculture remains a gamble on the monsoon, and poor rains in a single year could nullify the recent advance. There is no reason why the stock markets should concentrate their mind always on the gloomier possibilities, but they at least do not need to be glibly and accept at face value official claims to the effect that "the food problem has been solved" and "the Food Minister is now unemployed." It cannot be forgotten that price stability, which has been a welcome consequence of the improvement in food supplies, has not yet yielded the one advantage which would have been most important from the investor's point of view—stability of costs in business and industry. Until it does, its contribution to the acceleration of industrial progress will be limited.

The growing complacency about the outlook for industry is even more disturbing than that about agriculture. It is true that the vigorous increase in industrial production has continued well into the current year, and that company reports indicate that turnover and profits have been rising. But in many ways the present mood resembles that of 1956—a pre-election year and one which proved to be a precursor to the sharp setbacks of 1957 and 1958. Then, it was the foreign exchange crisis and the agricultural failures which were mainly responsible for the troubles. Now, the same rôle may be played by the shortage of transport, power and raw materials.

With the help of the industrial production statistics, Government spokesmen have recently been criticising industry for its pessimism and for its constant complaints about these shortages. But even they cannot deny that a mere rise in production is not enough; the important point is whether industry is being provided with the wherewithal to use its installed capacity fully. By this criterion, the growth and diversification of industrial output looks far less reassuring than the statistics suggest. The priorities indicated by the third plan in relation to transport, power and the use of foreign exchange for raw material imports appear to be due for revision already. But the Government has shown no signs yet that it is prepared to make the changes. The railways have been asked to accelerate their expansion programmes but have not definitely been given any more money for the purpose (five years ago, the agricultural targets of the second plan were similarly raised, without any additional financial allocations being made). Following the report of the Sachdev Committee, it appears likely that a few more power projects may be sanctioned for the West Bengal-Bihar area. But none of these measures holds promise of early relief. And, as far as the use of foreign exchange for importing raw materials, components and spare parts is concerned, not even an effort is being made. The Government has merely taken cover under the excuse that most of the foreign aid now coming is "tied" to the capital equipment required for specific projects, so it cannot be diverted to "maintenance imports." It has not explained why, if the aid has to be "tied", more of it cannot be "tied" to raw material instead of capital goods imports; and why a number of projects outside the third plan, including those relating to baby cars and oil, are still being seriously considered.

For the investor, these are serious problems to consider, along with the fact that the outlook for some of the major industries is disturbing. The cotton textile mills are doing well at present, but may face an acute shortage of their main raw material later in the season unless bigger imports can be arranged. The jute mills are in a happier position than they have been at any time this year, but have yet to recoup the heavy losses totalling

TEACHING MACHINES

IN an article published in *Capital* on 22nd December last year, Mr. Neil McInnes expressed scepticism about the possibility of imparting universal literacy to the millions in this country quickly enough for it to have the beneficial economic results that education is supposed to bring. At all events, he argued, the work could not be done by the present disjointed educational system; the universities, which crown that system, have run into immense difficulties of their own and their conception of education is inapplicable to the task of giving elementary instruction to millions who will have to work on farms and in factories. From this argument, we might at least retain the assertion that any teaching method liable to succeed at the level of elementary instruction on a mass scale would be rejected as improper or "anti-liberal" by the products of Indo-British higher learning. An example given in that article will illustrate this point. The idea of letting young scholars go on to the next class, whether or not they have passed the examination at the end of the year, goes right against the examination-gear concept of education imported into India from Britain; and indeed this practice could not be introduced into colleges without disastrous results. Yet it is proven that, at the lower levels where it is a question of imparting literacy and simple skills, more instruction gets put about if alphabet youngsters are not discouraged by

about Rs. 6 crores which they suffered from April to September 1961; in their case, too, there is little hope that fibre prices will decline appreciably in the coming months. The sugar industry is burdened with a huge accumulation of stocks, which is forcing it to cut its production, and may be forced long also force it to cut its prices. For the tea gardens, too, the threat of overproduction is serious, and they may find that what they have gained by producing more has been lost by having to sell it at lower prices. For engineering concerns, the acute shortage of steel continues. It might have been relieved if the steel companies were working to full capacity, but they cannot do that since they cannot get all the coal and raw materials they want due to transport difficulties. The coal industry, meanwhile, remains in the doldrums not only because of the transport shortages but also because its expansion plans are getting delayed. When operators talk of rising turnover and profits, therefore, the main section of the stock markets they have in mind is the miscellaneous industrials group. The prospects for the older industries, which after all still represent most of the markets' investments, are by no means uniformly satisfactory.

It is arguable that they never are. After all, the difficulties which individual industries are complaining about today, strictly speaking, are not new; they have existed for the greater part of two years, if not longer, and yet expansion has continued. The difference, however, now lies in the intensity, for rarely before has the shortage of coal, power and transport facilities been as acute as it is at present. Previous plans have been jeopardised by such events as a food crisis (1950-51 and 1957-58) or a foreign exchange crisis (1957-58); it has been possible to deal with these crises fairly quickly by making special arrangements for getting wheat loans or financial assistance from abroad. But this time the weaknesses are in the infra-structure of the economy, and are such that easy palliatives of the sort which sufficed earlier simply will not do. The expansion of coal production, or of power and transport capacity, has to be planned years ahead if it is to materialise in time. Far from committing itself to more ambitious targets in these spheres, the Government seems content to stumble along in the present situation on the assumption that matters will right themselves in the end. As far as investors are concerned, however, they cannot afford to take so calm a view. The threat which arises from the growing shortage of the basic facilities essential to the normal working of industry cannot be ignored in the months ahead.

being made to "repeat" classes. Absenteeism, the major blight on educational programmes in rural areas, falls considerably if scholars are allowed to muddle through a full course. If you insist that they learn their first lessons perfectly, they give up and learn nothing.

This example serves to introduce another, that has come into prominence in the United States in the past year, the use of "teaching machines" and "programmed courses". The very idea of automation in education, and the systematic use of simple quiz methods in specially designed books, will horrify most cultivated people. Indeed, no defence will be offered here of their use in universities, where the Americans have begun applying them, not only to the teaching of grammar, algebra, trigonometry and logic, but also of poetry and creative writing. Our present point is to ask whether they might not have some application in India in simpler sorts of instruction, and specifically in industrial training for new recruits. "Automatic" teaching methods have this in common with the suggestion to promote scholars despite examination failure: in both cases it is a question of keeping alive interest and enthusiasm by giving the student an immediate reward.

Some readers will already have guessed that Pavlov is behind this; and indeed he is. Carrying

on Pavlov's work on conditioned reflexes, American psychologists showed years ago that pigeons can be taught to play the piano with their beaks by being rewarded with a seed of corn for each correct note. It is not surprising that the first "teaching machine", built at Ohio University in 1924, reproduced this principle by rewarding the student with a bar of chocolate after a certain number of correct answers. This approach indicates a pretty low view of human nature, but more modern versions credit students with more sense, by making the "reward" consist simply in the feeling of "success" at having mastered each small step. Immediately after each fact, or small group of facts, is imparted to the student, he is asked a question about it by the machine or by the special book, and is told at once whether he is right or wrong. Instead of waiting till the end of the year to be given a certificate, or patted on the back (or whatever it is that keeps reluctant students at their books), the student gets the tiny but regular satisfaction of an "o.k." from the book or a click from the machine. The machine, in reality, is nothing but a turner-of-pages between the various stages of a course of instruction that has been carefully broken up into its elements. If any graduate or professor should scorn this as pitiful and as a denial of Discursive Reason, we hasten to agree—but we would ask critics to examine the results achieved in the last few years on subjects who could never aspire to be graduates or professors—on juvenile delinquents, adult illiterates, recruits to the army and workers asked to learn a new job.

Naturally, we shall only worsen our case in the eyes of Indian intellectuals by quoting evidence from the United States, for the Indian literati made up their minds about American education years ago. However, we are not talking about the higher education; we leave the U.S. Office of Education the entire responsibility for its current experiments in automatic teaching and we have no opinion about whether this will be the answer to the American education crisis that began when the first *sputnik* went up. We are interested only in the 65,000 students now learning English grammar by these means; in their application to the training of assembly-line workers, salesmen, women assembling electronic parts; in the automatic kindergartens now being built; and in the 55 machines ordered by the U.S. Post Office Department to train hands for electronic letter-sorters. All these problems have their counterpart in India, and none is more important than on-the-job training for industrial workers, which is just the field where automatic teaching seems to be most successful and most profitable (in the literal sense of giving a return on capital invested).

The teaching machine business is less than three years old in the U.S.A. and has only really expanded this year. At present over 100 firms are engaged in it, including some of the biggest and most reputable: General Electric, Eastman Kodak, American Telephone and Telegraph, McGraw-Hill, Encyclopedia Britannica, etcetera; certain of them are supported by grants or allocations from the Carnegie Foundation, the American Management Association, the U.S. Army and various Federal departments. According to *Barron's*, the Wall Street weekly, no one is making any money out of it yet, but there are about 330 "programmed courses" on the market and the Stanford Research Institute forecasts that it will be a \$100 million business by 1970—rising to \$1,000

million when one \$75 teaching machine is provided for each three or four students among the 40 million learners now enrolled in U.S. schools and colleges.

Some of the reasons for American interest would not concern us in this country. There is a shortage of teachers in the U.S.A. (due largely to their poor pay, compared with earnings in industry) and so there is an advantage for them in the fact that automatic methods save on formal lectures, cut teaching time, eliminate homework (and hence the drudgery of marking papers) and, in favourable cases, get students through a year's course in a few months. Blessed (or cursed) with large numbers of unemployed graduates, India would have no use for machines or potted methods that did the same work, quite apart from the fact that it costs more to buy a machine than to keep teachers alive in their present miserable conditions. Yet even there, automatic, rapid teaching methods have a use. Most of the unemployed graduates do not know how to teach, and much of what they have learned in college simply unfits them for the very different task of imparting literacy and elementary skills to analphabets. Teaching the teachers is always a vast problem when a wrecked educational system has to be overhauled, as is the case in India today; and here the question of speed is as vital as for the Americans. Potted courses in a new pedagogy will have to be made available if the object of universal literacy is taken at all seriously, and any investment in machines or special books that made this quicker and more efficient would be well justified.

It is in industry that the justification for such investment would be most evident. One would like to know what sums various industries in this country spend each year on training their workers. American industry reckons it spends \$2,000 million a year, or \$100 for each production worker, and it is now finding that this can be done more effectively and economically with teaching machines. (The proportion of rejects falls by 80 percent when men are taught a job by a machine, rather than "picking it up".) There is no question

EFFICIENCY BEGINS AT THE TOP

THE correspondence columns of the London Times have recently been open to the opinions of many thinking people on the problems—and, particularly, the deficiencies—of management in Britain. The Federation of British Industries has presented to the Government-sponsored Committee on Higher Education its criticisms of the higher education system in relation to management. The annual conference of the British Junior Chamber of Commerce has received a report on a survey of the experiences and ideas of future senior executives. The magazine *Business* has conducted, and published the results of, a survey of senior executives' working time. One way and another, management has been prominently in the public eye in Britain in recent weeks. This interest in the subject may embarrass some executives, but it is healthy and necessary. There are many faults in the British economy, and management cannot be blamed for all of them, but faults are more serious at the higher levels of business than lower down, and they are often overlooked be-

cause the unhelpful activities of organised labour are more obvious. Education is one aspect of the matter. According to the memorandum of the F.B.I., the system "has not kept pace with the considerable changes that have occurred over the past 20 years in the demands made by manufacturing industry on its recruits". However, the universities are improving their facilities: as many as a dozen of them, Professor Hunt, of Edinburgh, observed in a letter to *The Times*, provide post-graduate courses in management. The survey on which the Junior Chamber of Commerce received a report showed that most high-salary executives had received no special training in management. It is possible that most of them needed no training and that by their natural abilities or self-application they rose above men who were specially trained. But it is natural to suspect either that the educational facilities are not entirely appropriate or that they are not being properly used.

The survey undertaken by *Business* showed that the executives were not themselves convinced that their activities were 100 percent efficient. There seems to be a feeling—it appeared in *The Times* as well as in *Business*—that many executives have not yet perfected an essential technique of management, delegating responsibilities and functions. "If you want a thing done well do it yourself" is not a good slogan for a complex modern business. Such practice overloads the top executives and stultifies initiative below. Some of the revelations of the *Business* survey are disturbing. It appears that 80 percent of the working time of a typical British managing director is uncreative, roughly that proportion of his time being spent in discussing or corresponding or otherwise communicating with other people. Dr. George Copeman, who undertook this survey, believes that a cut of 20 percent or 25 percent in the time an executive spends in communicating with people and reading reports "can mean doubling the time available for creative work and possibly doubling his effectiveness as an executive".

Some executives—some of the most eminent men in British business—solve this problem by working in peace, sometimes halfway through the night, at home. Some of them begin work in their offices much earlier than the average office-worker. Such dedication to the tasks—not at all in accord with the popular idea of high executives, spending more time in yachts or casinos than in offices or factories—is commendable but not unquestionably wise. Overwork is inefficient even at high-executive level. An organisation should not rely on one man, even though he be an "organising genius";

of sending off to the U.S.A. for a ready-made miracle-machine that will train workers; the machine will have to be designed in this country—there is nothing in it that is beyond the capacity of Indian engineers. Some assistance might be sought in the U.S.A. for technical advice on the general design of teaching machinery, and when this was made available to industrial associations in this country, many big firms and some modest ones could build their own. The principle is simple. Information about a work process is fed into a machine on paper rolls or microfilm; the apprentice-worker learns the next stage in the process only when he has proven, by pressing the right button (two buttons will do, for "yes" and "no" answers), that he has learned the previous stage. The machine, if it incorporates the technique or "branching", will send him back to revision if he gives the wrong answer, or it can send him off into a series of additional information normally short-circuited by the man who "catches on" straight away. If it includes a logic component, it can send him ahead quickly if he is learning fast. The information imparted may be conveyed on paper rolls; printing or pictures on microfilm; on sound tape; or even motion pictures; the learner may give his answers on paper (comparing them with the correct answers that come up next on the machine) or by pushing a button or lever on the machine. Thus the whole system could be adapted for illiterates who had to acquire, not abstract knowledge, but manual processes.

The Americans have not been slow to see the possibilities of these machines in developing countries where the mass of the population is ignorant. There has been talk of exporting them to combat the ignorance "on which communism preys". Indeed the fascination of a novel gadget could serve as a powerful means of putting about views that interested parties wanted to see propagated in such countries. However good the intentions behind the suggestion, one would prefer that the teaching machine made its first appearance in this country under national auspices and for purposes directly related to Indian educational and industrial problems.

e cannot last for ever. The London Stock Exchange is well aware of the importance of a name, and if that name becomes associated, or, in contact, with a company the price of the company's shares reacts accordingly. Some men will always be better organisers, better administrators, than their fellows. But some of the names that impress the Stock Exchange are more enterprising than efficient. An industrial genius may be peculiarly dependent on less imaginative but more practical colleagues.

In any case, revitalising British industry and trade requires more than a few exceptionally talented men, whether they be imaginative or administrative. At the managerial level it needs both competence and dynamic. A notable development of recent years, the promotion of accountants

to high executive positions, has aroused some adverse comment. Such men, it may be assumed, do not tolerate inefficiency and waste, and this negative merit is important. But British management needs more positive qualities as well. Some accountants possess them; but, in general, the promotion of accountants seems to imply more stability than dynamism—and stability in these times is an illusion. Anyway, it is encouraging to observe that management and its deficiencies are now actively discussed in Britain, and that managements, in general, are less self-satisfied than they were some years ago. The services of business-efficiency teams are in demand: boards of directors are not too proud to be told by experts from outside how the operation of their business ought to be reorganised.

started on 7th August, 1960, and finished on 9th October, 1960. It is stated that 56,559 tonnes of sugarcane were crushed and 5,527 tonnes of sugar produced and the recovery percentage was 9.77, the relative figures for the previous season being 54,195 tonnes, 5,036 tonnes and 9.29 percent, respectively. The 1960-61 main season started on 10th October, 1960, and finished on 16th May, 1961. A total of 195,851 tonnes of sugarcane was crushed and 19,268 tonnes of sugar produced at an average recovery of 9.84 percent, the relative figures for the previous season being 132,649 tonnes, 13,689 tonnes and 10.32 percent, respectively. In the aggregate, the percentage of recovery is lower than that achieved during the previous year, mainly because of the extra 67 days of crushing. As at 31st May, 1961, capital reserves and surplus, excluding taxation equalisation reserve, aggregated Rs. 44.9 lakhs, against Rs. 43.30 lakhs. The liquid resources of Deccan Sugar have improved, since the excess of current assets over current liabilities and provisions, etcetera, amounted to Rs. 30.16 lakhs, against Rs. 27.83 lakhs.

Current News and Comment

Prospects for Calcutta Electric

The statement of Sir Harry Burn, chairman, which has been circulated along with the report and accounts of the Calcutta Electric Supply Corporation Ltd, has created a great deal of interest because it outlines the prospect for power supplies in and around Calcutta. (A fuller version of the statement is printed on a later page in this issue of *Capital*.) There was an appreciable shortage of power during the early months of 1961 since Calcutta Electric did not receive all the power supply from the Damodar Valley Corporation that was expected. As a result, part of the equipment at the New Cossipore station broke down as it had to be worked incessantly without undergoing the required overhaul. Sir Harry forecasts that the power shortage is likely to continue during the next few years. On a longer view, the shortage is likely to be relieved when bulk supplies are available from the West Bengal State Electricity Board. The latter hopes to supply power from its Durgapur station and from the one which is proposed to be built in the Bandel area, near Calcutta. But this supply is not likely to be available during the next three years or so.

Meanwhile, Calcutta Electric has been permitted to increase the capacity of the New Cossipore station by installing another set of 50 megawatts. Active steps have already been taken to install it. The finance to meet the expenditure to be incurred in India has been arranged on reasonable terms. It is hoped to install the machine at an estimated cost of £3.5 million. It is likely to start working at the end of 1963.

Sir Harry thinks that provided the full contractual supply of 100 megawatts is available from the Damodar Valley Corporation (this supply is no more than 60 megawatts at present), combined with the present restrictions on the use of power by industrial consumers, there should be a considerable improvement in power supply. There has been a steady rise in the demand for power during the past few years, and indications are that the rise will continue in the future. Industrial consumption has increased substantially. The jute industry, rolling mills, engineering workshops, cotton mills, chemical works and paper mills have steadily raised their consumption. To meet the requirements, Calcutta Electric has invested considerable funds for increasing its generating capacity. A capital expenditure of £13.4 million has been made during the ten-year period ended March 1961.

During the year ended March 1961, the total energy sold rose by 138 million units to 1,955 million units, compared with 1959-60. The revenue from the sale of current increased by £1 million to £9.8 million. The gross revenue exceeded £10 million for the first time. A sum of £550,000 has been transferred to special appropriations for plant expansion, replacements and contingencies. The ordinary dividend has been increased from 7 percent to 7½ percent, including an interim of 3½ percent.

Khaddah Jute Pays Less

Presenting their report for the year ended March 1961, the directors of the Khaddah Co. Ltd say that trading losses have been incurred during the first half of the current year due to the raw jute shortage. But conditions have now improved, and it is hoped to make reasonable profits during the rest of the year. The first phase of the modernisation programme of the spinning and preparing sections is likely to be completed in March 1962. The profit has declined from Rs. 25.92 lakhs in 1959-60 to Rs. 5.40 lakhs in 1960-61, after increasing depreciation from Rs. 6 lakhs to Rs. 7.57 lakhs and transferring Rs. 36,044 (against

Rs. 49,890) to development rebate reserve. The taxable ordinary dividend has been reduced from 20 percent to 5 percent. It is covered more than one-and-a-half times and offers a yield of 2.8 percent at the present price of Rs. 17.56 a share. Taxation absorbs Rs. 2.71 lakhs (against Rs. 10.80 lakhs). The carry-forward is Rs. 300, against Rs. 74,405 brought in.

Deccan Sugar Cuts Dividend

Although the quantity of sugarcane crushed and the sugar produced are a record for the Deccan Sugar and Abkhari Co Ltd for the year ended May 1961, the profit showed a decline from the previous year's level. Sales of sugar were considerably reduced due to the restricted releases by the Government of India. The cut in the dividend from 25½ percent to 21 percent is in line with the profit for the year. The net profit, before providing for taxation, is Rs. 21.15 lakhs, against Rs. 29.62 lakhs. Out of this, taxation provision receives Rs. 10.50 lakhs against Rs. 13.15 lakhs. The net profit, after taxation, amounts to Rs. 10.64 lakhs. With Rs. 1.20 lakhs brought forward from the previous year, the total surplus available for appropriation is Rs. 11.94 lakhs. Development rebate reserve is allocated Rs. 45,000 (against Rs. 1.25 lakhs). A sum of Rs. 1 lakh (against Rs. 2.20 lakhs) has been transferred to general reserve. Under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the dividend on the 7 percent preference shares comes to 9.1 percent. The interim preference dividends totalling 8.05 percent (3.5 percent and 4.55 percent), subject to deduction of tax, have already been paid, and now the final dividend of 1.05 percent has been declared, absorbing Rs. 63,700. The interim dividend of 7.5 percent on ordinary shares absorbed Rs. 2.99 lakhs. The final dividend of 13.5 percent (making a total of 21 percent) absorbs Rs. 5.38 lakhs. The balance of Rs. 1.48 lakhs is carried forward.

For the Samalkot factory, the 1960-61 season started on 5th December, 1960, and finished on 8th June, 1961. During this period, 140,523 tonnes of sugarcane were crushed and 12,633 tonnes of sugar produced, respectively, with 119,578 tonnes and 11,358 tonnes, respectively, during the previous season. The average recovery was 8.99 percent—a decrease of 0.51 percent over the previous season. For the Pugalur factory, the 1960 special season

Megna and India Jute Prospects

Commenting on the current prospects for the Megna Mills Co. Ltd and the India Jute Co. Ltd in their reports for the year ended March 1961, the directors take an optimistic view. It is expected that larger supplies of raw jute may make "simultaneous business" reasonably profitable. The modernisation of the preparing and spinning departments of Megna Mills has made satisfactory progress. The first phase of the broad loom project consisting of 50 such looms and ancillary machinery has been completed. It is proposed to install another 50 broad looms to manufacture tufted-carpet backing. The National Industrial Development Corporation has agreed to offer it a loan of Rs. 10.98 lakhs to finance the expansion of the broad loom project. The directors say that the proposal to set up a paper and pulp mill in Assam has made progress. Negotiations with the State Government are likely to be finalised concerning the site and lease of bamboo forests.

The profit of Megna Mills has increased by Rs. 22.12 lakhs to Rs. 40.12 lakhs in 1960-61, compared with that in 1959-60, after providing Rs. 11.04 lakhs (against Rs. 9.90 lakhs) for depreciation. The taxable ordinary dividend has been increased from 12 percent to 12.50 percent. It is covered more than three-and-a-half times and offers a yield of 9.4 percent at the present price of Rs. 13.31 a share. Taxation is allocated Rs. 17 lakhs (against Rs. 3.79 lakhs), development rebate reserve Rs. 3.31 lakhs (against Rs. 6.51 lakhs) and contingency reserve Rs. 7 lakhs. A sum of Rs. 2.30 lakhs has been provided for possible losses on forward contracts. The carry-forward is Rs. 84,805, against Rs. 56,999 brought in. Gunny sales rose from Rs. 3.52 crores to Rs. 4.87 crores and jute goods stocks from Rs. 25.10 lakhs to Rs. 50.50 lakhs.

The directors of India Jute say that the sale of No. 3 mill with its land and building and electric installations to Madura Mills Co. Ltd for Rs. 10 lakhs is expected to be finalised soon, and the effect of the transaction will be reflected in the next account. The modernisation programme is going ahead and satisfactory progress has been made in the spinning and preparing departments. India Jute hopes to obtain a loan from the National Industrial Development Corporation soon. The cotton mill section has done well and 15,100 spindles have worked on a treble-shift basis. The profit of India Jute has declined from Rs. 29.56

lakhs in 1959-60 to Rs. 24.37 lakhs in 1960-61, after transferring Rs. 8.81 lakhs (against Rs. 6.99 lakhs) to depreciation. The taxable ordinary dividend has been reduced from 14 percent to 12 percent. It offers a yield of 9.1 percent at the present price of Rs. 16.44 a share and is covered more than twice. Taxation absorbs Rs. 8.25 lakhs (against Rs. 11.48 lakhs), development rebate reserve Rs. 1.35 lakhs (against Rs. 1.44 lakhs), contingency reserve Rs. 3.50 lakhs and provision for possible losses on forward contracts Rs. 5.20 lakhs. There is a carry-forward of Rs. 76,164, against Rs. 4.94 lakhs brought in. Gunny sales improved from Rs. 2.20 crores to Rs. 2.96 crores and gunny stocks from Rs. 6.72 lakhs to Rs. 25.04 lakhs.

Waverley Jute Repeats

The Waverley Jute Mills Ltd has maintained the taxable ordinary dividend at 30 percent for the year ended May 1961. It is covered more than three-and-a-half times and offers a yield 6.9 percent at the present price of Rs. 4.37 a share. After increasing depreciation from Rs. 1.05 lakhs in 1959-60 to Rs. 1.19 lakhs in 1960-61, the profit has improved from Rs. 2.52 lakhs to Rs. 2.64 lakhs. The profit has been made by selling loom-hours and renting the godowns. The jute mills have been closed and the loom-hours sold to other mills within the McLeod group. The godowns and the main mill building have been leased to the Food Department of the Government of India. General reserve is allocated Rs. 2 lakhs, leaving a carry-forward of Rs. 96,614, against Rs. 1.94 lakhs brought in.

More from Modi Spinning

The Modi Spinning and Weaving Mills Co. Ltd has done well during the year ended April 1961. Its taxable ordinary dividend has been increased from 13 percent to 17 percent. The profit has improved from Rs. 16.01 lakhs to Rs. 21.73 lakhs due to a rise in production from Rs. 5.44 crores to Rs. 6.54 crores. In his chairman's address at the annual general meeting held recently in Modinagar, Rai Bahadur Seth Gujar Mal Modi said that there has been a substantial improvement in the quantity and quality of production due to the extensive modernisation and renovation of the mills. (A fuller version of the speech was printed in last week's issue of *Capital*.) It is proposed to raise production further by installing a sanforising machine and 6,400 spindles. Modi Spinning proposes to diversify its activities by setting up a synthetic fibre plant at an estimated cost of Rs. 10 crores. It is expected that the foreign collaborators will finance the scheme to a considerable extent. Mr. Modi thought that there are good prospects for synthetic fibre in India, as the demand is likely to increase. Commenting on raw cotton supplies, Mr. Modi stressed the importance of increasing the domestic output which has fallen far behind requirements. The high price of both domestic and imported cotton has inflated the production costs of Indian cotton mills, so their competitive capacity has suffered. The chairman hoped that more vigorous efforts would be made to increase the output of domestic cotton by adopting scientific methods of production.

Nepa Mills Profit Down

The working of the National Newsprint and Paper Mills Ltd for the year ended March 1961 does not justify the statement in the directors' report for 1959-60 that the Company had turned the corner. The production of newsprint is up by 618 tons at 23,029 tons. Sales, too, have risen by Rs. 11.49 lakhs from Rs. 2.35 crores to Rs. 2.47 crores. But the gross profit is down from Rs. 37.76 lakhs to Rs. 32.94 lakhs. The profit margins have been squeezed by the all-round increase in costs. Paper prices are also known to be not quite remunerative which is why the results of most paper mills have been far from satisfactory. The cost of stores, chemicals and sundry materials rose by Rs. 11.23 lakhs to Rs. 69.74 lakhs. The wage bill was up by Rs. 4.66 lakhs at Rs. 24.89 lakhs and the power cost by Rs. 8.65 lakhs at Rs. 51.60 lakhs. The increase in expenses under these three items works out to Rs. 24.54 lakhs while sales are up by only Rs. 11.49 lakhs in spite of increased production. After providing Rs. 29.02 lakhs (against Rs. 31.25 lakhs) for depreciation and Rs. 9,000 (against Rs. 1.93 lakhs) for development rebate, the net profit amounts to Rs. 32.94 lakhs, against Rs. 37.76 lakhs in 1959-60. This reduces the debit balance of Rs. 98.61 lakhs brought forward from the previous year to Rs. 65.67 lakhs. The directors have made it clear that they are unable to state whether the amount provided for depreciation is adequate or not since the life of fixed assets has not been assessed by technical experts. But total depreciation provided to-date against fixed assets valued at Rs. 5.29 crores amounts to Rs. 1.71 crores.

This suggests that the depreciation is rather on the low side.

Nepa Mills has repaid the entire outstanding interest-bearing loan from the Central Government amounting to Rs. 25 lakhs which has provided considerable relief to the Company concerning interest charges which have been reduced from Rs. 17.15 lakhs in 1958-59 to only Rs. 26,979 in 1960-61. The interest-free loan payable to the Government of Madhya Pradesh has also been reduced by Rs. 11 lakhs to Rs. 88 lakhs. Nepa Mills' share capital stands at Rs. 4.95 crores of which equity shares of the value of Rs. 65.47 lakhs are held by the public and the rest by the Centre and the Madhya Pradesh Government. Its reserves and surplus amount to Rs. 4.11 lakhs. Building, plant and machinery under construction are estimated at Rs. 26.66 lakhs. Secured loans amount to Rs. 91.80 lakhs. Cash and bank balances are shown at Rs. 68.36 lakhs. The directors state that Nepa Mills commissioned during the year a dyno-pulper unit for processing imported pulp to improve the strength and the quality of the newsprint. The Rs. 10-paid share of the Company is nominally quoted around Rs. 8.50.

West Coast Paper Pays More

The shareholders of the West Coast Paper Mills Ltd have every reason to feel happy over the directors' decision to raise the dividend from a maiden 6 percent to 7.5 percent, both taxable, for the year ended June 1961. The dividend has been raised in spite of a slight setback in the gross profit from Rs. 1.12 crores to Rs. 1.06 crores. But the decline in the profit is due entirely to the cut in paper prices since January 1960. Incidentally, the previous year's accounts had borne the impact of reduced prices only for six months. West Coast Paper would have fared much better but for the uneconomic paper prices, and the production of paper in 1960-61 at 25,771 metric tons is about 14.7 percent higher than the previous year's output of 22,461 metric tons. The increased production is attributed to the improved working of the plant. Provisions for development rebate and depreciation have been raised from Rs. 83.26 lakhs to Rs. 87.33 lakhs, leaving Rs. 18.44 lakhs, against Rs. 29.04 lakhs in the previous year. With Rs. 53,000 brought forward from the previous year, the disposable surplus amounts to Rs. 18.98 lakhs, against Rs. 28.74 lakhs. Although the ordinary dividend has been raised from Rs. 6 to Rs. 7.50 a share, the total distribution by way of ordinary and preference dividends amounts to Rs. 18.27 lakhs, against Rs. 28.21 lakhs because the previous year's amount included a sum of Rs. 12.70 lakhs representing the arrears of preference dividends for four years ended June 1959. The carry-forward amounts to Rs. 70,544. The Rs. 100-paid shares of the Company, which were sold down to Rs. 167.50 in August, are currently quoted around Rs. 182. The shares touched a high of Rs. 228 in March.

Nil from Malabar Steamship

The working of the Malabar Steamship Co. Ltd for the year ended March 1961 reflects the difficulties of the shipping industry in general. The cargo lifted by the Company showed a rise of 18,152 metric tons at 379,908 metric tons and the freight earnings were up by Rs. 14.21 lakhs from Rs. 1.24 crores to Rs. 1.38 crores. But the gross profit is down from Rs. 19.68 lakhs to Rs. 14.92 lakhs. The profit, before providing for depreciation on the fleet and on other assets, amounts to Rs. 5.45 lakhs. After providing Rs. 23.31 lakhs for normal depreciation on the fleet and other assets, there is a net loss of Rs. 17.89 lakhs. Adding the previous year's deficit of Rs. 12.67 lakhs, the total deficit at the end of the year amounts to Rs. 30.57 lakhs. The deficit is being adjusted against general reserve of Rs. 16.05 lakhs as well as against capital reserve to the extent of Rs. 14.59 lakhs. After making minor adjustments for deferred taxation, a net surplus of Rs. 5,121 is carried forward. The dividend has again been passed. The directors regret that in spite of higher freight earnings, it is not feasible to distribute even a moderate dividend to the shareholders and that the Company's reserves are being seriously depleted. They attribute this distressing state of affairs to the mounting operational costs and wages, undue delays to cargo vessels at ports and uneconomic coastal freights. They have expressed the hope that the Government of India will concede to the shipowners' request for a revision of coastal freights.

Cooper Engineering Expanding

The Cooper Engineering Ltd did well during the year ended June 1961. Its various expansion schemes—some of them have already begun to bear fruit—hold out the promise of a brighter

future. In 1960-61, the production of engines rose from 5,751 to 7,280 and that of looms from 638 to 709. The production of machine tools declined by about 32 percent on account of the dislocation caused by the transfer of the machine tool division to Chinchwad. The foundry registered an increase in output from the total melt of 7,440,000 kilograms to 7,976,000 kilograms. Castings also recorded a satisfactory improvement. The chairman, Mr. Lalchand Hirachand, told the annual general meeting last week that the production of diesel engines is to be raised to 500 a month. Besides, the production capacity of the foundry is to be increased. The import licences have already been received. Cooper Engineering will be establishing a pattern shop in collaboration with a British firm and part of the equipment has arrived. It will also undertake the manufacture of vertical turret lathes in collaboration with a West German firm by the end of 1962 or early 1963. A licence has been secured for manufacturing 600 automatic looms a year and negotiations for foreign collaboration are in progress. The chairman said that by the end of the third plan, the Company would raise its production of engines to over 15,000 and that of machine tools to the value of Rs. 1.50 crores a year. Mr. Lalchand anticipated good prospects for increased exports of Cooper Engineering's products in coming years. Barring unforeseen circumstances, the chairman hopes to maintain the dividend on the increased capital. Replying to shareholders' question, he said that debentures worth Rs. 50 lakhs would be offered to the existing shareholders shortly. These would carry interest not exceeding 7 percent and will be redeemable after 30 years. Cooper Engineering, Mr. Lalchand said, had no intention of making a fresh capital issue at present.

Bharat Bijlee Profit Up

The impressive rise in the shares of Bharat Bijlee Co. Ltd from Rs. 145 to Rs. 189—the latest quotation is around Rs. 182—since about the middle of October, reflects the investors' confidence in the Company's growth potential. In their report for the year ended June 1961, the directors state that Bharat Bijlee has received a licence for increasing the installed capacity of the transformer department from 72,000 kVA to a little over 200,000 kVA. The Company has applied to the Industrial Credit and Investment Corporation of India for a foreign exchange loan for importing the equipment for the transport department. It has marketed flame-proof motors and has applied for a licence for manufacturing various types of special motors. A start in this direction has already been made as the Company has contracted to purchase 95,000 square yards of land in the vicinity of Trombay. The directors state that Bharat Bijlee will need to raise fresh capital in order to finance its expansion programme.

The working of Bharat Bijlee for 1960-61 shows an improvement over the previous year's performance. Sales are up by 27 percent from Rs. 44.81 lakhs to Rs. 56.67 lakhs. The gross profit has risen by about 65 percent from Rs. 3.12 lakhs to Rs. 5.15 lakhs. After providing Rs. 1.55 lakhs (against Rs. 80,000) for taxation and Rs. 1.85 lakhs (against Rs. 1.52 lakhs) for depreciation, the net profit amounts to Rs. 1.75 lakhs, against Rs. 80,000 in the previous year. With Rs. 43,000 brought in, the disposable surplus amounts to Rs. 2.18 lakhs. From this, the directors have set aside Rs. 75,000 for rehabilitation reserve and used another Rs. 9,000 for writing off the capital issue expenses incurred during the year. The dividend of Rs. 7.50 on old shares and Rs. 5 on new shares absorbs Rs. 1.25 lakhs, leaving Rs. 9,000 to be carried forward.

Nil from Mysore Tobacco

The Mysore Tobacco Co. Ltd has passed the dividend for the year ended March 1961 due to the sharp fall in profits. The dividends were paid during the past two years by drawing on the dividend equalisation fund. The directors feel that to draw once again from the fund would not be in the interests of the Company. So there is no dividend for the year, although 10 percent was declared for the previous year. The working of Mysore Tobacco shows a net profit of Rs. 10,631, after providing Rs. 69,796 for depreciation, Rs. 6,196 for development rebate, Rs. 2,000 for reserve for loss on investments and Rs. 11,000 for taxation. The net profit for the previous year was Rs. 75,422, after providing Rs. 68,087 for depreciation and Rs. 61,790 for taxation. Including Rs. 622 brought in from the previous year, the total surplus amounting to Rs. 11,453 is carried forward.

The directors say in their report that the successive failures of monsoon for the past four years and the continuous spell of drought for six months of the year resulted in inadequate supply of water which hampered the cultivation of tobacco in Gowribidnur. Tobacco cultivation in the Mandya and Mysore districts also suffered due to the failure

of rains during the period of curing. Furthermore, the spot disease continued to reduce the value of tobacco in the Mandya and Hunsur areas. While the operational expenditure, particularly the labour cost, has been increasing due to the rise in prices, with the decrease in the quantitative output, the profit margins of Mysore Tobacco have decreased. In addition, the Company had to give effect to the decision of the Industrial Tribunal revising the pay scales of the employees with effect from 1st April, 1958. This resulted in an extra payment of Rs. 68,500, apart from the increase in the dearness allowance. During the year, Mysore Tobacco acquired 9,731,590 lbs of green leaf from a planted acreage of 2,582, against 10.14 million lbs obtained from 3,083 acres in the previous year. The quantity of cured leaf acquired during the year was 630,741 lbs, against 599,368 lbs in the previous year. The directors think that the prospects for the next financial year ending March 1962 are encouraging on the strength of the present indications.

Wrist Watches from Hindustan Equipment

The Hindustan Equipment Suppliers Ltd, Bombay—a concern of the Patel group of industries—has secured an industrial licence for manufacturing wrist watches. The plant is proposed to be set up in Baroda. It will have an initial production capacity of 80,000 wrist watches which will subsequently be raised to 300,000 pieces a year. Hindustan Equipment is negotiating with a foreign firm for technical and financial collaboration. Arrangements are also being made for foreign exchange for importing plant and machinery and certain components of watches. The Company is already manufacturing 15,000 wall clocks a year. On 7th November, it commissioned its plant in Jogeshri, Bombay, for manufacturing alarm clocks and lever movements. Chrono Techna of Czechoslovakia, the manufacturers of P.R.I.M. alarm clocks and watches, has provided the technical know-how and also supplied part of the equipment for the manufacture of alarm clocks. In the initial stages, Hindustan Equipment will produce 80,000 alarm clocks and 20,000 lever movements a year. The production of the former is expected to be raised to 150,000 pieces a year in due course.

Panchura Estates Profit Down

During the year ended June 1961, the Panchura Estates Ltd has earned a net profit of Rs. 21,790, against Rs. 62,679 in the previous year. The dividend has been reduced to 25 percent from 40 percent. The Company maintained the dividend at 40 percent for 1959 and 1960. Adding to the profit of Rs. 21,790 the amount of Rs. 67,650 brought forward from the previous year, the total surplus comes to Rs. 89,440. Out of this, the proposed dividend of 25 percent, subject to deduction of tax, absorbs Rs. 37,500. The balance of Rs. 51,940 is carried forward. No provision has been made for taxation as the directors think that the balance remaining in the reserve will be sufficient to meet the taxation needs for the current year.

During the year, Panchura Estates harvested a total coffee crop of 9,756 bushels of dry cherry and this has been valued at Rs. 15 a bushel. The crop, it is stated, fell short of the estimate. A total tea crop of 155,974 lbs was harvested during the year. The present acreage of Panchura Estates is 415 in coffee, 55 in tea and 30 in fruit and waste. Although there was a shortfall in the crop during the year, the directors feel that the 1961-62 season's output will be a fair one. The coffee crop for 1961-62 is estimated at 11,000 bushels and the tea crop at 140,000 lbs.

Activities of Burmah-Shell

The activities of the Burmah-Shell Oil Storage and Distributing Company of India Ltd during the past year have been surveyed in an attractive brochure, which also incorporates the balance-sheet for the year ended December 1960. Sales during the year totalled 3.7 million metric tons and were valued at Rs. 172.06 crores. The Company's net profit came to only Rs. 2.11 crores. The net capital employed in the business increased by over Rs. 3 crores in 1960, and the net return worked out to only 3.97 percent. There was also an increase in distribution costs. Due to the pressure of traffic on the railways, the Company had to use the more expensive road transport which cost Rs. 42 lakhs in terms of uncovered charges. (The freight element in upcountry prices represents only railway freight.) The Company increased its bulk storage facilities to 1,054,370 tons—a rise of 27,000 tons over the previous year. There were cuts in the posted prices of certain petroleum products at Abadan during the year highlighting the competitive conditions in the oil industry, but the benefit of these reductions was not passed on to the Indian consumer, the Government having retained it through

additional duties. There were further increases in Central as well as State taxes on petroleum products, their contribution to Central revenues increasing from 10 percent in 1955-56 to 16 percent in 1960-61. The share of excise and import duties on these products rose from 13 percent to 21 percent over the same period, and the contribution in absolute terms to Central revenues amounted to Rs. 119 crores in 1960-61.

Discussing the consumption pattern of oil in India, the brochure says that while India remains the largest market in the world for kerosine as an illuminant, its share in the total demand is gradually declining. Kerosine now accounts for 27 percent of the total consumption, but by 1966, it is expected to fall to 22 percent, giving way to furnace oil of 600 in. grade as the product in highest demand. This does not, however, mean that the consumption of kerosine in absolute terms is falling; in fact, it is likely to increase further. The demand for high-speed diesel oil is also expected to rise due to the rapid growth of commercial road traffic. Its contribution to the product-mix is likely to move up from 17 percent now to about 20 percent by 1966. Out of every ten commercial road vehicles at present manufactured in the country, nine are powered by diesel engines, it is pointed out. With industrial progress, furnace oils as an industrial fuel are growing more important, and particularly in areas inadequately served by coal, their offtake is expected to rise. A salient feature in demand trends during 1960 was the revival in the offtake of motor spirit, which is expected to continue as the domestic production of motor-vehicles increases. There is also likely to be a greater demand for turbine fuel with the development and use of pure jet and turbo-propeller aircraft. Turbine fuel already accounts for more than two-thirds of the aviation fuels "uplifted" in India.

Mysore Plantations Skip Again

The Mysore Plantations Ltd has again passed the dividend for the year ended March 1961. The last dividend paid by the Company was 6 percent for the year ended March 1959. During the year, Mysore Plantations harvested practically double the coffee crop compared with the previous year, but the net profit was lower due to the fall in prices. The net profit amounted to Rs. 50,322, against the net loss of Rs. 19,542 in the previous year. Out of the net profit, Rs. 15,000 is transferred to taxation reserve and Rs. 25,000 to reserve for bad and doubtful debts. The balance of Rs. 10,322 is carried forward. The total crop for the year amounted to 110,500 kilograms, against 52,051 kilograms in the previous year. The tea crop was 49,726 kilograms, against 55,556 kilograms in the previous year. The directors expect that the current year's crop will be maintained at the same level as that of the year ended March 1961.

Madras Machine Tool Issue Soon

The subscription list of the Madras Machine Tool Manufacturers Ltd for the capital issue of Rs. 22 lakhs will open shortly. The Company was incorporated in November 1958 as a private limited enterprise with a paid-up capital of about Rs. 2.76 lakhs. It was engaged in manufacturing machine tools and was known as the Abbot Machine Tools Private Ltd. In view of the growing demand for its products, the directors have decided to expand its activities by inviting public capital through its conversion into a public limited Company. They have, therefore, decided to issue Rs. 24.90 lakhs in 24,900 equity shares of Rs. 100 each. The directors and shareholders of the original private Company have agreed to subscribe for 2,900 shares out of the proposed issue. The balance of Rs. 22 lakhs is now to be offered for public subscription.

Processing of Textiles: A New Venture

Reliable reports indicate that the Government of India has approved, subject to certain conditions, the proposal submitted by Mr. D. N. Shroff, chairman of Silk and Art Silk Mills Association, for setting up a new industrial undertaking in Bombay for the processing of textile fabrics of rayon, silk and handloom. The applicant is reported to have entered into an agreement with the Japanese firm of C. Itoh and Co. Ltd. Tokyo. The total outlay on capital equipment for the project is estimated around Rs. 1.35 crores, of which Rs. 85 lakhs will be required for plant and machinery to be imported from the dollar and hard currency areas. The Japanese collaborators will invest a sum equivalent to 20 percent of the cost of the imported plant and equipment. For the balance, the applicant proposes to import plant and machinery under yen credit, if available, or alternatively on deferred payment terms. The firm will pay royalty not exceeding 6 percent according to the various types of processes to be employed on export pro-

ducts. The collaborators will not impose any restrictions on exports. The period of agreement will be ten years, subject to renewal, after the prior approval of the Government. The latter thinks that there is ample scope for up-to-date and modern processing plants in view of the export potentialities of finished fabrics. In addition, a very large number of unauthorised powerlooms do not have processing facilities. When these looms are regularised, the processing capacity will need to be expanded considerably. The details about the implementation of the project are expected to be finalised shortly.

Wool Exports Rise

Raw wool exports from India during the April-June quarter totalled 8.12 million lbs, which is 57 percent more than the figure of 5.18 million lbs in the previous quarter. But compared with the corresponding figure for the previous year, exports in the second quarter of the current year are down by about 9 percent. The marked increase in exports during the April-June quarter is due mainly to the resumption of exports to Russia, with shipments to that market up from nil to 2.16 million lbs. Exports to the U.K. and the U.S.A. increased by 15 percent and 4 percent, compared with the January-March quarter, to 3 million and 1.8 million lbs, respectively. Shipments to the European Common Market countries rose from 698,000 lbs to 932,000 lbs which was accounted for mainly by the sharp rise in shipments to France from 274,000 lbs to 434,000 lbs. Exports to West Germany increased from 41,000 lbs to 92,000 lbs and those to Netherlands were up by 24,000 lbs at 144,000 lbs. Out of total exports of 8.12 million lbs in the April-June quarter, greasy wool accounted for 7.03 million lbs and scoured wool 1.09 million lbs. The corresponding figures for the January-March quarter were 4.78 million lbs and 390,000 lbs. In 1963, the best performance was achieved in the first quarter when shipments totalled 9.19 million lbs, consisting of 8.71 million lbs of greasy wool and 480,000 lbs of scoured wool. The countrywise break-up figures for the first quarter of 1960 were: the U.K. 3.65 million lbs, the U.S.A. 2.24 million lbs, Russia 1.60 million lbs and the Common Market countries 1.33 million lbs.

Annual Tax on Unearned Increments

It is reliably understood that the Central Regional and Urban Planning Organisation (C.R.U.P.O.), which had been examining for quite some time the question of land prices in cities and towns in order to evolve a long-term policy for the use of land in urban areas, has submitted its report recommending an annual tax on unearned increments with the periodic revaluation of real estates every five years. The fact that prices of land and properties continue to rise sharply and the disparities in wealth go on widening is taken to indicate the inadequacy of existing tax measures as instruments of the urban land price policy. None of the existing Central taxes is said to cast the net wide to make a substantial impact on unearned increments from land and properties. Capital gains tax and estate duty tap only part of unearned increments and that too after long intervals. The C.R.U.P.O. emphasises the need for a more effective method of taxing unearned increments and says that only that method can be effective which does not wait for the realisation of unearned increments but begins to operate as and when they accrue. It points out that the best way to make an impact on the rising urban land prices and also to mop up unearned increments is to levy an annual tax on the latter. For determining the annual tax liability, periodical assessment of land and properties will have to be undertaken and tax liability determined for the period intervening between two assessments. Initial valuation will form the datum line from which subsequent increases will be measured. A degree of progressiveness in the rate schedule would be necessary to spread the burden suitably over various income groups. But these are matters of detail which can be considered after the principle of an annual tax on unearned increments has been accepted.

The C.R.U.P.O. points out that its suggestion about an annual tax on unearned increments is by no means novel. Denmark is reported to be levying a tax on the increase in the value of land at the rate of 4 percent and another at the rate of 25 percent where the increase in the value of land is due to rail-road development. West Germany also had a tax on unearned increments in land values many years ago and the tax was later converted into a general property increment tax. As far back as 1910, the increment value duty on increases in site values was collected in the U.K. In India also, betterment levy is being imposed, although not quite effectively, in some States. The principle behind this is not dissimilar to that of annual tax on unearned increments suggested by the C.R.U.P.O. Admittedly, betterment levy

is a narrower concept. It confines itself to the value of property after particular work is executed under the planning scheme. At another place, the C.R.U.P.O. says that the concentration of land ownership is not so acute a problem in urban as in the rural sector. Nevertheless, there are numerous instances of land speculators cornering land. The scarcity of land is thus artificially created to raise land values to a high level. More often than not black money finds a safe outlet in real estate investments.

U. S. Business Hesitancy

The hesitant tone that developed in the U.S. economy during September persisted in October, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Hurt by strikes in motor-vehicle companies, industrial production, as measured by the Federal Reserve index, slipped off a point in September to 111.6 (1957 equals 100). Evidently, there was little gain in October. Motor-vehicle assemblies got back into high gear towards the end of the month, but steel mills, which had raised production to an annual rate of 111 million tons in late September, cut back operations moderately in October when a stronger flow of orders failed to materialise. Retail sales improved in October, as evidenced in better volume at department stores and good buyer response to the 1962 motor-car models, though merchants continue to express disappointment over the conservatism of consumer spending. The hard line of Russian policy, threatening thermo-nuclear war, has taken away some of the optimism and confident forward planning that naturally emerge in a period of rising employment and income flow. Business men are asking how long the "lull" will last and there is a widening tendency to question at least some of the more optimistic appraisals of the prospects for 1962. The U.S. Secretary of Commerce, Mr. Luther Hodges, has offered an estimate of \$575 billion for the 1962 gross national product, which would be an increase of 11 percent over the apparent \$520 billion level for 1961. Projections of business economists centre around \$560 billion for 1962 but even this figure has come into question as perhaps too high.

Public sentiment often is governed more by present conditions than by appraisals of prospective forces at work. Economists in Government and business alike retain the conviction that business expansion will proceed under the impetus of the steeply rising curve of Government expenditures and the enlarged capacity of people to spend. As a result of the increase of payrolls and build-up of liquid savings, there is no doubt that the public, if so minded, could go on quite a buying spree. Discouraged by pressures on profit margins, business men are keeping close control on their budgets. Inventory accumulation has been limited by ease of obtaining additional supplies and absence of fears of price increases. Caution is apparent in scheduling new outlays for plant and equipment. Slack capacity exists in many lines. Even though there are always projects which could be undertaken if the money were there, profit levels are neither providing the wherewithal nor justifying borrowings or stock issues.

There is deep concern in the business community about the difficulties of meeting constantly increasing employment costs at a time when competitive conditions deny opportunities for price adjustments to cover the costs. Profit tabulations bear out the recent comment of Mr. Hodges that corporate earnings are "too low" and in percentage terms "are not moving with the trend in the economy." Since profits drop faster than economic activity in a recession, they need to rise more rapidly in periods of expansion. During recent cycles, the recovery of profits has been incomplete. As a percentage of gross national product, corporate profits after taxes have declined from 5.8 percent in 1955 to 4.5 percent in 1960. The latest figures confirm that the profits squeeze is on with a vengeance and may not only disappoint Treasury expectations of revenues from corporations but also dampen the recovery in capital spending by business. Estimates that plant and equipment outlays might reach or surpass \$40 billion in 1962, up 15 percent or more from the apparent 1961 total, are being shaved. The Administration is recognising that the burden of taxes and wage-push must be relieved if the economy is to enjoy balanced growth. Within the past month, the Treasury took constructive action in inaugurating a programme permitting more rapid tax write-offs for capital equipment. Initially affecting the textile industry, the plan is to broaden the application of these reforms to industry generally.

Indo-British Trade Expands

The latest statistics on Indo-British trade for January-September 1961, compiled from the U.K. Trade and Navigation Accounts, show that U.K.

exports to India rose to £123.3 million during the first nine months of the current year from £116 million during the same period of last year. As U.K. imports rose less, from £101 million to £106 million, India's trade deficit increased from £14.8 million to £17.2 million. Britain exported more of chemicals, scientific instruments, photographic and optical goods, and watches and clocks. But sharp falls occurred in her exports of railway vehicles, road vehicles and aircraft. Other items which show a decline are machinery, other than electric, electric machinery, apparatus and appliances, petroleum and petroleum products, iron and steel, non-ferrous base metals and metal manufactures. A break-down of the items classified under the head machinery, however, shows sizeable increases in some and declines in others. Boilers and boiler-house plant shows the largest increase, while gains were also recorded by textile machinery, converting machinery, transformers, switchgears and switchboards. U.K. imports from India showed rises in some items and falls in others, but there was a net rise of £4.9 million. Of all the principal items, tea provided the largest increase, from £34.7 million to £41.2 million. Sharp declines were suffered by leather, leather manufactures and dressed furs, wool and other animal hair and tops, as well as animal and vegetable oils, fats, greases and derivatives.

Validity of Municipal Taxes

The Allahabad High Court has held that the tax levied by the Agra Municipal Board on the export of leather manufactures carried by rail is valid. Rejecting 40 writ petitions filed, the Court observed that although the Municipal Board could impose no new taxes under Article 277 of the Constitution, modification of an existing tax was permissible. The tax also did not contravene Article 14 which did not prohibit reasonable classification. The Municipal Board thought it would be easier to levy the tax on leather manufactures sent out by rail, but it was open to the petitioners to send the goods by road if they thought it was more economical. The Court also rejected the contention that the leather industry being under the control of the Central Government, a local authority could not levy any tax on it.

Another case challenging the right of the Kanpur Municipal Corporation to levy terminal tax on exported and imported goods, was heard by a single judge of this High Court, but he has referred it to a division bench. The terminal tax has been in force for many years, and import and export taxes were levied on a number of commodities which were scheduled. In 1960, the schedule was amended by the Corporation, including more commodities subject to tax and also raising the rate of the levy. According to the petitioners' counsel, the word "levied" used in Article 277 meant either "assessed" or "collected", whereas counsel for the Corporation submitted that it meant "imposed". Different high courts have given varying decisions on this question. Frequently, municipalities alter the schedules of their terminal tax, and the point is likely to arise in future also. Hence, said Mr. Justice Oak, the case required an authoritative decision by a division bench. Article 277 says that if any taxes were being lawfully levied by a municipality, the local body might continue to levy them.

Price Policy for Third Plan

Speaking from the chair at the quarterly general meeting of the Indian Chamber of Commerce in Calcutta last week, Mr. S. P. Jain said that although the third plan lays great emphasis on the desirability of holding the price line, it has not given any indication about the levels at which it is to be held. In spite of the shortfall of 4 million tons in the production of foodgrains last year, food prices have remained more or less stable. Mr. Jain said that with buffer stocks built out of the P.L. 480 programme of the U.S. Government and the third plan agricultural target showing an increase of 31 percent over the present level, it is expected that food and agricultural prices will not be disturbed. But from recent statements of Mr. Patil and other Ministers, it appears that the Government does not want food prices to decline. As for the prices of raw materials and manufactured goods, the upward trend is due in great measure to the Government's fiscal measures, rising wages as well as the wrong emphasis on the implementation of the official industrial policy. "If the wage structure is linked with productivity and economic size units are allowed to be established, the price structure will gradually adjust itself to a downward trend." This will also improve India's competitive capacity in export markets. The president said that uneconomic units are often encouraged in accordance with the Government's policy of diffusion of economic power irrespective of the cost it involves to society in terms of a larger

capital expenditure, including foreign exchange, and also in terms of the price at which the goods would be made available to the consumer. This is happening not only in the private sector but also in the public sector.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

- Rs. 240**
Managing Directors and Directors of Bird and Co. (Private) Ltd and F. W. Heilgers and Co. (Private) Ltd.
- Rs. 151.50**
Staff of the Associated Electrical Industries (India) Private Ltd.
- Rs. 150**
Staff of Jessop and Co. Ltd.
- Rs. 100 each**
Lipton Ltd, Miss Manjushree Birla, Miss Jay-shree Birla, E. C. Benthall Charitable Trust.
- Rs. 90**
Covenanted staff of National and Grindlays Bank Ltd, Lloyds Branch, Calcutta.
- Rs. 50 each**
Carritt Moran and Co. Private Ltd, Indian Copper Corporation Ltd, National and Grindlays Bank Ltd, Calcutta.
- Rs. 45**
W. S. Cresswell and Co. Private Ltd.
- Rs. 31**
Dhaniram Gupta and Co.
- Rs. 25 each**
M. J. Marshall, Anonymous, M. W. Hinchliffe, J. H. Fenner and Co. (I) Ltd.
- Rs. 21**
R. S. Shah.
- Rs. 20 each**
Anonymous, Hercules Insurance Co. Ltd, G. W. Hogg.
- Rs. 15**
R.J.E.W.
- Rs. 10 each**
P.A.L.P. P.
- Rs. 5 each**
Chandra J. Parikh, A. B. and Co.

Total Rs. 1,483.50

Previously acknowledged Rs. 969

Grand Total Rs. 2,452.50.

ADMINISTRATOR-GENERAL

WE are extremely glad to learn that Mr. Broughton will vacate his appointment of Administrator-General of Bengal on 1st January next. This, no doubt, is the result of the enquiry into the conduct of his office, which we were instrumental in bringing about, and we think that the Indian public owe a debt of gratitude to Capital for taking up this matter and bringing it to a successful issue. The opportunity will be taken to reconstitute the appointment. The office will eventually be held in conjunction with that of the Official Trustee as an appointment under Government, and will carry a salary of Rs. 2,000, rising by annual increment of Rs. 100 to Rs. 2,500 a month, and exchange compensation allowance, but no commission. The appointment will ordinarily be held by a barrister or solicitor, but the holder will be debarred from private legal practice and from taking up any executorship or trusteeship, except in his official capacity. He will be eligible for a pension of £750 a year after 11½ years service in the appointment, the minimum period of service for an invalid pension being 6½ years, and retirement will be compulsory on his attaining the age of sixty years. On the amalgamation of the Administrator-Generalship with Official Trusteeship, no addition will be made to the pay of the appointment, but a Deputy will then be appointed to assist in the discharge of the combined duties. The Government of India are now prepared to consider applications from candidates for the appointment. We trust that the Government of India will select the very best man available for this post. To our mind, it is not an essential that the officer chosen should be either a barrister or a solicitor, though an ordinary knowledge of law is desirable. But the absolute essentials for this office are, that the holder should be thoroughly honest, conscientious, courteous, capable and with a thorough knowledge of business methods, one of the most important of which is promptitude. In a word, the gentleman selected to discharge the duties of this office should be a thorough business man. His time should also not be taken up with Directors' meetings, but he should be in his office during office hours and readily accessible to the public. We must congratulate Lord Curzon on this attempt to cleanse an Augean stable.

A Ditcher's Diary

DIPLOMACY WAS ONCE A CONTINUOUS PROCESS, conducted in a sort of soft, unseen twilight; and few spoke of outright successes or downright failures. Not so now. Reporters insist that every mission must be a whopping success or a nasty flop. Mr. Nehru's latest mission to Washington has been adjudged a bit of both; and I am inclined to believe that is the truth. But Mr. Nehru has in the past few weeks introduced subtler refinements on the theme of success and failure, of right and wrong; and this unobtrusive mind of mine was left gasping. In New Delhi before leaving on his trip Mr. Nehru said that India's—his—China policy had failed, but he was in no doubt at all that it was the correct policy. Got that one? In the United States there was a variation: he told the Americans that India's China policy had been consistently correct—it was China's policy that was all wrong. So, you see, a policy can fail and yet be right and correct: it is only the materialistic western mind that measures the correctness of a policy by the success it does or does not achieve. I see, though, what Mr. Nehru means. There is no alternative to India's present China policy; and it irritates Mr. Nehru when anyone applies to it the criteria of right or wrong, success or failure. I will not remind him on this occasion that other countries are sometimes confronted with as little choice. All reports suggest that Mr. Menon was a hard cross for the Prime Minister to bear during his American visit. Whether this will in any way affect Mr. Nehru's attitude to his beloved Defence Minister, I cannot say. In Mr. Nehru's shoes, I would not have bothered too much about whether Mr. Menon is right or wrong; I would simply have noted—and nobody can miss it—that, so far as the American people are concerned, Mr. Menon is no arling; and India needs to be loved by them. Of course, I would have noticed years ago that Mr. Menon is a most unpopular man in India too. The answer is obvious—alas, not to Mr. Nehru.

ONE OF THE LESS ATTRACTIVE FEATURES OF SUCH visits, I always feel, is the amount of sudden, and apparently spontaneous, discovery which seems to take place of points of view which have not previously been suspected, or even flatly denied. For example, in Los Angeles the other day Mr. Nehru reported as saying that communist colonialism in eastern Europe is "sometimes even worse" than the western colonialism still practised in Asia and Africa. Now I am hoping this discovery will survive his return to New Delhi. For a few days previously Mr. Nehru had again condemned Portugal as the world's largest and most inhuman colonial power, despite the fact that the area and population over which the Portuguese rule is nowhere near the size of eastern Europe and Russia's Asian possessions; and only a few weeks before that he was in Tashkent openly admiring the undoubted achievements of Russian colonialism in Uzbekistan. A few years ago I distinctly remember his pointing out to the Chinese, rightly, that their claim on Tibet was based on former imperialist expansion. Yet I have never heard him describe China as a colonial power, despite the fact that the war in Tibet has been going on longer, and has been fought with greater destruction and casualties on both sides, than the one in Angola. What I appreciated most about the stand Mr. Nehru took in Belgrade was the importance he gave to the world's

primary problem, the preservation of peace, to the neglect of that favourite Russian red herring western colonialism. I hope India extends this attitude to resisting the latest Soviet attempt to distract attention from its own misdeeds, the U.N. debate on colonialism—the western variety of course. Colonialism these days is becoming the favourite lurking ground for the "double standard" in diplomacy, which if, as Mr. Nehru says, does not exist in India, certainly does among other "neutrals".

THE STUDENT OF POLITICS WILL DOUBTLESS TAKE note of the number of Burmese who have graduated to public life via schoolmastering. U Nu is one and now U Thant, who has become acting Secretary-General of the United Nations, is another. As the final choice for a post which has claimed the attention of the world's Press for a period of weeks, Mr. Thant has received remarkably little personal publicity. It is after all something of a triumph to be equally acceptable to the communist and free worlds and to have achieved the unanimous support of 103 countries in the United Nations, to which incidentally Mr. Thant was first accredited in 1952 as a member of the Burmese delegation. Since 1957 he has been head of Burma's mission to the U.N. But what sort of a man is he? In a recent issue of *The Listener* Mr. Alistair Cooke gives the following description of him:

"Mr. Thant is a very light-coffee-coloured man, small and compact, with large almond eyes, greying hair, glasses worn firmly against his eyebrows and cheekbones. He keeps his temper, if he has one, as a matter of religious principle—a big point, this, with the Russians. They did not exactly announce that they must have a man who would not answer back like Hammarskjöld, but the finest appeal of Buddhism, its determined pacifism, its vow to retain at all times emotional serenity, must have had a special, and I must say secular, attraction for the Russian. Mr. Thant is, of course, a Buddhist. He was born 52 years ago, the son of a rich rice merchant and landowner. After graduating from Rangoon University, he became a high school teacher of English and modern history. These specialists massaged his itch to become a political writer, and he did a spell as an education adviser to the Japanese Government of occupation. After the war he quit teaching and became an information officer with an anti-fascist league, and when Burma achieved her independence he became the Government's press officer—a James Hagerty or Pierre Salinger."

POLITICAL MANIFESTOS ARE NOT MY IDEA OF LIGHT reading. Usually I leave them well alone, because very few I have ever read have been worth the paper they were written on. I have made an exception, though, with the Swatantra Party's; at least it promised a change from the monotonous more-socialist-than-thou theme which is all we have had in India for years. The only trouble was that even that feature did not prevent it from being a disappointment. It was uncommonly well written and thought out, but I was still left with the impression that all the skill that had gone into it had been directed towards avoiding offering any-

thing really positive. Perhaps I am falling into the mistake of believing that a Party which knows it cannot be anything but in opposition, for the time being at least, should propound the kind of policy required of one which expects to be called on to form a government. I have heard this said before about the British Liberal Party, and certainly there is often more to be gained by pointing out what the other fellow has done wrong than emphasising what you propose to do right. But it always strikes me that a Party stands a better chance of winning an election if it starts out by acting as if it is going to do so; and that calls for a clear and positive programme, not the collection of negative suggestions put forward by the Swatantra. If it is ever to live down Mr. Nehru's slighting reference to its "reactionary" character, it will have to do better than this. What has always disappointed me about the Swatantra is its concentration on the rural sector. I know it has to think of its votes. But its appeal would be wider if it said precisely how it intends to implement the industrialisation it also professes to stand for. Even for a right-wing Party this is not as difficult as it sounds. There is an alternative—no matter what Mr. Nehru says—to the Congress's outdated, soviet-style planning, with its inflation, controls and slow rate of economic growth. The Swatantra manifesto admits there is, but omits to describe it at all precisely.

NO, THANK YOU. I HAVE NOT SEEN ANY OF THE FILMS recently shown in Delhi and Calcutta during the International Film Festival. I did not have the time; but that is hardly the whole reason. From what I hear, the whole affair was a first-rate muddle—as only the Ministry of Information and Broadcasting could make it. Exhibitors did not know until the last minute who was going to show which film and when. Intending patrons could hardly be told less. I know too much about private enterprise to claim for it absolute purity or efficiency; and the failings of the public sector do not need to be pointed out. If the film festival was any guide, a combination of the two is hard to beat for ineptitude and a total lack of direction. Dr. Keskar has more than once frankly stated that he believes in control, more control and still more control. It does not seem to be realised that the involvement of a government in such things as film festivals only complicates matters. I understand that several countries' very poor offerings had to be included in the already too-long list for fear of offending the entrants' *amour propre*. An entirely independent festival committee could have insisted on cinematic merit being the decisive criterion of selection. Interesting experiments are being made in some of the communist countries; and I would be the last man to recommend their exclusion for political reasons. But can it be denied that communist films are now being included mostly on political grounds? I do not much mind the temporary propaganda advantage gained by the communist countries. Whenever people have a choice, they go to the cinema for entertainment, not instruction; and in this department it will be a long time before the communists catch up with the free world. In any event, why cannot the cinema, an adult art form, take politics in its stride? But it is only one kind of political cinema that is seen at these festivals; and for that western producers are partly to blame. The Indian censors are another restrictive factor. That British film on the wonders of trade unionism, *I'm All Right, Jack*, has not been shown in India. Why? A very amusing film it was.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

CHAIRMAN, SIR HARRY BURN'S REVIEW

The Sixty-fourth Annual General Meeting of The Calcutta Electric Supply Corporation Limited was held on November 9 in London.

Sir Harry Burn, K.B.E., F.C.A., the chairman, presided.

The following is his review which had been circulated with the report and accounts:—

There were increased sales to all classes of consumers during the year ended March 31, 1961. The total energy sold of 1,955 million units shows an increase of 138 million units over the previous year. Sales of energy have increased each year for the last 14 years and over that period sales have increased more than threefold, thus reflecting the ever-increasing need of electrical energy, particularly for industrial purposes. It is indicative of the great expansion that has been happening in India and our forecasts show that this expansion will continue. Later on in this Review I refer to the grave shortage of power in the industrial areas of West Bengal and Bihar and to the extensions to your Company's plant that are being put in hand.

Industrial demand accounts for 90 per cent of the energy sold for power purposes. The balance is divided equally between sales to public waterworks and for domestic power, the latter being used principally for air-conditioning and refrigeration. There was a small increase in sales to the jute industry, our largest consumer and responsible for 34 per cent of our total industrial demand. An acute shortage of raw jute made trading conditions very difficult for the jute mills. Once again rolling mills and engineering workshops showed a large increase; their consumption rose by 37 million units, equivalent to an increase of 15 per cent. Next in importance are cotton mills, chemical works and paper mills; in each case their consumption rose by 10 per cent. The five classes of industry mentioned above were responsible for 80

per cent of the Company's sales of high tension energy for industrial purposes.

Demand for low tension industrial power expanded further with sales increasing by 9 million units to 123 million units; the number of consumers rose by over 1,200 to more than 16,700. Consumption by public waterworks increased to the extent of 4 per cent and was solely due to larger demands from the Calcutta Corporation. Sales of domestic power again showed a substantial rise, mostly due to the growing popularity of small air-conditioning units suitable for residences and small offices.

Sales of energy for lights and fans increased by 16½ million units to 259 million units. Housing development continues, but is mostly confined to the outskirts of the Calcutta suburbs.

Public lighting sales have increased by approximately one million units in each of the last two years. Expansion of electric street lighting by the Calcutta Corporation has not been as extensive as hitherto.

The Calcutta Tramways Co. Ltd. is the sole consumer for traction purposes. Improvement in their operating conditions is reflected in the increase in consumption of 2½ million units.

Bulk supplies are given to some nine distributing undertakings, seven of which are owned by the State Electricity Board and the remaining two by the Riverside (Bhatpara) Electricity Supply Co. Ltd. and the Chandernagore Electric Supply Co. Ltd. The State Board was responsible for 94 per cent of the total sales of 89½ million units and for almost all of the increase of 23 million units over the previous year. The largest State undertaking is the North Calcutta Grid which distributes energy entirely outside the Company's licensed area.

Sales under special contracts increased by nearly 8 million units to more than 100 million units. The

bulk of those sales, and of the increase in consumption, were at our special tariff to owners of large office and residential buildings, public institutions, cinemas, and hotels. That tariff is particularly designed to give relief to our low tension distribution. The remaining consumers under special contract are the Central and State Governments, the Calcutta Corporation and the Calcutta Port Commissioners; their consumption showed little change from that of the previous year.

Revenue Account

I have already referred to increased sales to all classes of consumers. Despite the restrictions I refer to below sales of energy for the current year continue to improve. The revenue account shows that the revenue from the sale of current rose by nearly £1 million to £9,800,000. The gross revenue exceeded for the first time £10 million. Interest received amounts to £38,305, an increase of £44,578 over the previous year and is attributable to the return on treasury bill investments and interest on bank deposits. Commensurate with higher revenues is heavier expenditure. The cost of generation and distribution rose by £530,000 to £5,088,000. Coal accounts for £414,000 of this increase. Expenditure on coal including handling and ash disposal charges amounted to £3,240,000, an increase of £200,000, and accounts for 80 per cent of the total operating cost of generation. Power purchased from the Damodar Valley Corporation cost £288,000 more than the previous year. 390,406,000 units were imported, an increase of 87,850,000 over the previous year, but the power made available was insufficient to give the relief necessary to allow essential and urgent plant overhauls to be taken in hand; will revert later to the present power position. Increases in wages include adjustments of dearness allowances and overtime rates. Cost increases in respect of materials for no special commend and are commensurate with expansion of the Company's system. By comparison with the previous year administration and general establishment charges show a considerable increase. This is mainly due to expenditure in the previous year having been reduced by the writing back of a provision created during other years and no longer required. Nevertheless there was a moderate increase in expenditure during the year under review and it was mainly due to higher salaries and wages costs. The wealth tax, for which there was a charge of £99,723 in the previous year, was abolished with effect from April 1, 1960. The depreciation charge has risen by £31,500 to the figure of £960,600. The balance on revenue after taking into account the depreciation charge has increased by £218,000.

I will now deal with the net revenue account. The Indian tax charge is £1,164,387 as compared with a charge of £595,923 for the previous year which was materially eased by the adjustment of provisions set free on settlement of appeals relating to assessments of previous years. It will be noted from the directors' report that the sum of £356,541 has been transferred to net revenue account in order to equate the Company's clear profits with its reasonable return. This transfer has been made from reserves created in the past specifically for this purpose, and leaves a balance at the end of the year of £187,816 all of which it is expected will be utilised during the current year. When these reserves are exhausted it is essential that the Company's tariff structure should be able by itself to earn the reasonable return and thus ensure the provision of the internal finance that will be required during the next three or four years in connexion with the major extensions at New Cossipore to which I refer below. Initial allowances for depreciation eased the burden of taxation during the period these were operative. This acceleration of the depreciation charge as permissible for tax purposes connoted higher assessments and therefore higher taxation in future years and as stated above the Company has now entered this period. Our rates have been held unaltered for the last 15 years, but now with the steadily rising costs of generation, distribution, repairs and maintenance and an increased tax charge it has become necessary to place the structure of the Company's tariffs under close examination with the object of ensuring that, when required, rates are so adjusted as to earn the reasonable return permitted by the Electricity (Supply) Act, 1948. An investigation into the Company's rate structure is, therefore, now being carried out.

The allocation for the contingency reserve fund has been made as required by the Act and it is proposed to make the customary contribution to the retiring gratuity fund. Provision has been made for the debenture interest and sinking fund charges. The continued expansion of the Company's operations makes it essential to conserve our finances to meet the consequent capital expenditure. The board have, therefore, deemed it advisable to appropriate a sum of £550,000 to special appropriations for plant expansion, replacements and contingencies. Dividends on the preference stock amounting to £63,650 have been paid and it is proposed to pay a final dividend of 4 per cent (actual) for the year. The balance left to be carried forward on net revenue account is £124,585.

Balance-sheet

The balance-sheet shows an increased holding in Treasury bills, £979,300 as against £771,700 at March 31, 1960. Thus funds are available to meet current commitments in respect of plant and other payments falling to be made in the United Kingdom. Payments of Indian tax falling due during the concluding months of the year, to which reference was made in last year's review, have reduced the deposits with bankers to £55,000. At the end of the previous year these deposits stood at £531,000.

Capital expenditure during the year amounted to £1,332,000, and was almost entirely for our transmission and distribution system. By far the greater part of the expenditure was on mains and service connections. As a provision for capital expenditure during the year there was available the sum set aside for depreciation of £960,000 and the allocation to special appropriations for plant expansion, replacements, and contingencies amounting to £550,000, thus making a total provision of £1,510,000. During the period January 1, 1951, to March 31, 1961, the outlay on capital expenditure was £13,400,000, which was met from depreciation reserves and appropriations for plant expansion and replacements.

In July of 1960 Mr. Macpherson and Mr. Hobson visited Calcutta and met the Chief Minister

of the Government and of the State Electricity Board and representatives of the Damodar Valley Corporation. The company's assessment of the supply position and the impending shortage of power it revealed was conveyed at a conference convened for the purpose and permission was requested to install a fourth set at the New Cossipore generating station as providing a further contribution to the generating capacity available in the state as a whole. Permission for this project, to which reference was made in last year's review was not then forthcoming.

I was in Calcutta this year throughout the month of February and discussed the matter with the Chief Minister when he informed me that we were then at liberty to go ahead with the project. During my visit I also met the chairman of the State Electricity Board, the chairman and the general manager of the Damodar Valley Corporation and leaders of commerce and industry in Calcutta and West Bengal with whom I had talks on the power situation. I went over all sections of our organization and was afforded ample evidence of our organization and was afforded ample evidence of their work. Dr. Roy, the Chief Minister, and his officials take a keen interest in the Company's activities. They are fully aware of our problems and the service we render to the industrial and residential communities. I desire to say how much the board appreciate the assistance given by Dr. Roy over the issue of import licences and supplies of the necessary indigenous materials.

Our Secretary, Mr. Colley, who was commercial manager in Calcutta for a number of years, accompanied me during my visit and carried out an inspection of the various sections with which he is concerned.

Special attention continues to be given to the training of Indian engineers. Quite a number of our permanent staff were originally appointed under our

technical training scheme which was started in 1946 for young Indian graduates chosen by a selection committee in Calcutta for training in the United Kingdom. In addition short refresher periods of training in the United Kingdom are given to selected members of our permanent staff. We are grateful to the Electricity Council, the Area Boards, and various manufacturing companies who provide facilities for this training.

Power Situation

In last year's review I referred at length to the question of the future supply within the Company's licensed area and recounted the steps which had been taken over the decade and a half that had elapsed since the end of the war to meet the growth of demand on the system. I also related the circumstances which brought the Damodar Valley Corporation into the picture and how our expectations for an adequate supply of power from this source—as provided for by agreements entered into in April, 1954, and January, 1959, had not been fulfilled. We anticipated, however, that by the end of 1960 the Damodar Valley Corporation would have commissioned sufficient new generating plant to have enabled them to honour their commitment to us of 95 mw. for the year 1960-61. Unfortunately our hopes were not realized and despite our most persistent requests throughout 1960 and early 1961 to the Damodar Valley Corporation to afford us power up to their full contractual obligation they never found it possible to afford us a supply of more than 60 mw. at the time of our daily system peak. As a result we were unable to take out of service for routine maintenance the turbo-alternators at our New Cossipore Station all of which were long overdue for overhaul. I regret to have to report that all three failed on load the 50 mw. Machine on the 9th February this year followed by the two 30 mw. Machines on the 1st and the 11th April. All three

turbines failed by a breakdown of blading and this can be directly attributed to the necessity to keep the machines in commission beyond the time when they were due for normal overhaul. The Company took the view that they would be failing in their duty to consumers had they not accepted the considered risk of keeping these machines in service at a time when they were entitled to expect an early augmentation of the import from the Damodar Valley Corporation. The 50 mw. Machine was re-commissioned on the 7th May and the 30mw. Machine No. 2 on the 25th May, thus restoring the Company's total effective generating capacity to about 275 mw. The remaining machine required extensive overhaul which was not completed until the 21st August on which date the machine was again on full load. I wish now to express the board's high appreciation of the work carried out by the agent, Dr. Bowker, and the chief engineer, Mr. Kanga, and the station engineers and those members of their staff concerned in getting the station on load again and in dealing with the allocation of power during this period of emergency—their hours were long and the work arduous. I also desire to pay a warm tribute to the turbine manufacturers and the craftsmen they so promptly sent out to remedy matters and get the machines into commission with the minimum of delay.

The maximum demand on the Company's system at the time of these failures was approximately 385 mw. sent out and although the Damodar Valley Corporation were able at times to increase their export to 85 mw. (and for a short period to 103 mw) the outage of the New Cossipore plant totalling 110 mw entailed load shedding on an extensive scale. In shedding this load the Company endeavoured at all times to maintain its low tension supplies, particularly to hospitals, pumping stations and other essential services, the restrictions falling mainly on high tension consumers, including unfortunately those

Burning the midnight oil

The light from the oil lamp burned low as A.P. Stockwell sat working into the middle of the night to complete his report of 1961 on the possibilities of a typewriter market in India. It was this report which prompted the opening of the first Remington office in Asia at Calcutta.

In 1952, after an extensive survey of India's industrial sites and prolonged discussions in Delhi with the Government, the Indian Company—Remington Rand of India Limited—was born. Its objectives, to manufacture and sell Remington Rand office equipment in India.

Now at the Howrah factory about 1,300 of Remington's staff of over 2,300 personnel still burn the

midnight oil as they work overtime to catch up with India's typewriter needs. Production of typewriters was doubled in the last few years and negotiations are now under way for further expansion which will again double production. This move will not only save valuable foreign exchange, but will offer employment to hundreds of skilled and unskilled workers throughout the country.

The policy of the Company is Indianisation and the task of recruiting and training Indian personnel at all levels is constantly under way. We are proud of the contribution we are making to the prosperity of this fast growing country.

Remington Rand of India Limited

8 COUNCIL HOUSE STREET CALCUTTA-8

prestressed concrete for clear space construction

Durgapur Thermal Power Station

Prestressed Concrete Plank Roofing was adopted for the Durgapur Thermal Power Station because of its lightness thus reducing the cost of the foundation and superstructure. It also made rapid construction possible.

A conventional cast-in-situ roof was ruled

out because of the unusual height between roof and floor.

The roof area covered was 50,000 sq. ft. The job was completed in about twelve months.

An additional feature is thermal insulation with foam concrete blocks.

taking high tension supply for domestic purposes. The board desire to express their very great appreciation of the voluntary acceptance by its large industrial consumers particularly the constituents of the Indian Jute Mills Association and the Indian Engineering Association of restrictions on their demands on the Company at the time of its peak loads during this crisis. These restrictions which were devised to spread the burden on the most equitable basis over all sections of industry, mitigated to a very considerable degree the hardships imposed on other sections of the community.

Although the breakdowns to which I have referred greatly increased for the time being the impact on the public of a shortage of power in the city, a shortage is bound to continue to a lesser extent for the next few years, since the demand in the area is already outstripping the Company's maximum generating capacity augmented by the off-take available from the Damodar Valley Corporation. As I explained in my review of last year the Company has been assured by Government that they will provide the ultimate solution of the problem in the shape of a bulk supply through the West Bengal State Electricity Board, first some 60 mw (not now expected to be available until January, 1964) from Government's Durgapore Station and thereafter increasing supplies from the station they intend to build in the Bandel area near Calcutta which will increase their supply to some 120 mw by January, 1966. The Company now anxiously await these additional supplies and our best wishes are with the State Board in the speedy accomplishment of the various power projects they are now engaged on. We trust that the construction and commissioning of the plant will proceed smoothly as planned.

In the meantime I am glad to be able to report that Government, reversing the decision communicated to us a year ago, have now agreed that we should, with the utmost dispatch, proceed with our plan to increase the capacity of our New Cossipore Station by the installation of a further machine of 50 mw. Finance in respect of expenditure to be incurred in India has been arranged on reasonable terms and advised by our consultants, Messrs. Merz & McLellan, we are now engaged in negotiating the necessary contracts. It is hoped to commission this machine, at an all-in cost of some £3,500,000, towards the end of 1963, some 12 months before the State Board anticipate having their new Bandel Station in operation.

Even before the recent crisis, it was apparent that the growing load on the Company's system was bound over the next few years to exceed the total power resources available and we accordingly requested Government to arrange for the control of the distribution and consumption of electricity under Section 22B of the Indian Electricity Act. Government accordingly appointed an Electricity Supply Control Advisory Committee on whose advice they issued orders that no new or additional supply of electrical energy for a connected load of 100 kw or above shall be given to any impending or existing consumer as the case may be without the prior sanction of Government. Provided the full contractual supply of 100 mw is available from the Damodar Valley Corporation this restriction, taken in conjunction with the continued voluntary agreement by certain large industrial Company's evening peak loads, should, as far as can be seen, enable the Company without further substantial maintenance of its plant and thus alleviate the position until our new plant is commissioned two years hence.

Following the recent breakdowns at New Cossipore to which I have referred, there has been a certain amount of ill-informed criticism in the press and in particular it has been suggested that the Company's generating plant is largely worn out. This is far from true as in fact the plant at New Cossipore (now completely repaired) and that at Mulajore are in first class condition and capable of many years of useful service, while the Southern Station, though old and not so efficient, has been well maintained and will continue to provide a satisfactory source of power especially during peak load periods.

Mr. W. H. Thompson, C.S.I., has intimated his intention to retire from the board after the annual general meeting and I, therefore, take this opportunity of stating how much we appreciate his services to the Company and the keen interest he has taken in its affairs. He was secretary from 1936 to 1945 and became a member of the board in the latter year. Mr. Thompson had a distinguished career in the Indian Civil Service and on retirement in 1922 he became general manager of the Bengal Telephone Corporation Ltd. He also represented the Bengal Chamber of Commerce on the Bengal Legislative Council until he was returned to the United Kingdom in 1936. During the war he was assistant secretary, Ministry of Home Security in charge of the Air Raid Warning System. Mr. Thompson has our best wishes for pleasant years of retirement which he contemplates in the country-side of his choice.

Tribute to Staff

It affords me much pleasure to express our thanks to the staff and employees in Calcutta. The expansion of the Company's operations and their devoted efforts in meeting the calls on their services bear witness to the interest and zeal they take in the affairs of the Company.

Mr. Henderson demitted his charge as agent on March 31, 1961, having carried out his responsible duties with care and competence. Mr. Canning, the acting chief engineer, also retired after many years of yeoman service particularly at the generating stations. We wish them both happy years of retirement.

Dr. Bowker, our chief engineer took over the post of agent as from March 31, 1961. He has a wide experience of the Company's affairs, having been with us since 1936, is well qualified to carry out the duties of agent and has amply illustrated this during recent months. I also desire to record the board's appreciation of the able manner in which Mr. Colley has carried out his duties as secretary.

The report and accounts were adopted.

Note :-

"The above statement is not a report of the proceedings of the Annual General Meeting referred to".

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS TIGHTER

Wednesday, 15th November.

THERE has been another fairly sharp rise in demand for advances in the Calcutta money market during the past week. Most of the increase appears to be on account of the expanded requirements of the jute industry. Other increases in demand are recorded in the case of the engineering and iron and steel industries, and foodstuffs and seeds storage. The requirements of the cotton mills are about the same, while those of the sugar industry show a slight decline. In the interbank market, conditions have become extremely tight due to the continuance of Diwali withdrawals. The official call rate has increased to between 4½ and 5 percent.

There has been moderate activity in the exchange market during the past week with fair improvement in the supply of tea bills and a substantially fair showing of gunny bills. Remittance demand has been fair. In the London money market, the pound showed a firm tendency throughout. Closing quotations recorded gains against almost all important currencies except the French franc.

BULLION WAS STEADY DURING THE PAST WEEK. Silver rose from the previous week's level of Rs. 242.75 to Rs. 243.75, quoted today for ready delivery, and the rate for forward delivery was Rs. 209.50. The London and New York prices were 80d and 91.75 cents.

Gold was also steady on upcountry demand, and the price was quoted at Rs. 147.50. The sovereign declined from Rs. 99.75 to Rs. 99.25.

DURING THE WEEK ENDED 10TH NOVEMBER, Government of India Treasury bills for Rs. 65,47,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 14th November. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.370 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.520 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 20th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 15th November to 18th November at Rs. 99.386 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 8th November to 11th November amounted to Rs. 35 lakhs.

RISES OF RS. 47.25 CRORES TO RS. 1,965.38 CRORES in the total note issue and of Rs. 42.27 crores to Rs. 1,946.53 crores in active notes, were outstanding features of the return of the Reserve Bank for the week ended 10th November, 1961. The currency expansion was covered by increasing rupee securities of the paper currency reserve by Rs. 49.98 crores to Rs. 1,608.84 crores. This was done by transferring securities from the Banking Department, in which investments fell by Rs. 49.84 crores to Rs. 151 crores. Deposits of the Government of India in the Banking Department rose by Rs. 2.54 crores to Rs. 65.40 crores, but other Government accounts declined by Rs. 7.44 crores to Rs. 10.22 crores. Balances of commercial banks at Rs. 77.65 crores showed a rise of Rs. 3.43 crores. Balances held abroad improved by Rs. 5.21 crores to Rs. 25.74 crores. Other loans and advances rose from Rs. 141.82 crores to Rs. 154.70 crores, of which advances to scheduled banks against usance bills amounted to Rs. 12.69 crores (Rs. 7.77 crores). Ways and means advances stood at Rs. 65.85 crores, against Rs. 63.97 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 3rd November, 1961, shows a rise of Rs. 1.04 crores to Rs. 532.13 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 5.09 crores and Rs. 5 lakhs to Rs. 271.44 crores and Rs. 9.29 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 1.58 crores to Rs. 240.42 crores. Cash and balances are, in consequence, shown at Rs. 23.23 crores or Rs. 7.44 crores less.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of July 1961.

	Rs.
(1) At the Reserve Bank of India	78,55,22,000
(2) In India	31,39,000
(3) In England (sterling converted at 18d the rupee)	59,31,000
Total	79,45,92,000

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 17-11-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
17-11-61	18-2-62	2,00,00	Rs. 2.520%

a full meal, twice a day

Just a dream for the hungry millions amongst us, but the most vital target of all our national planning.

Great irrigation projects, new methods of cultivation and improved tools promise bumper harvests and fulfilment of this dream.

Mysore Kirloskar Lathes — machines which make other machines — play a key role in the factories producing tools for the tiller and in the project workshops. Mysore Kirloskar Lathes turn our dreams into reality.

Time brimful with
laughter and
tears, time gay
with romps on the
sea shore, time
of careless days that
must be left behind.
But what sort of
'times' will they
inherit, these
youngsters, what
world awaits
them? A good
world, we hope, a
better one than
we live in. More
food, more clothes,
better medicines
and greater oppor-
tunities to travel
and make friends.
It is towards this
end that industry
and commerce
are working and
we are glad to be
a part of it.

Stocks and Shares

MISCELLANEOUS INDUSTRIALS LEAD RISE IN EQUITIES

BEAR-COVERING LIFTS SPECULATIVE ISSUES

Wednesday Evening.

THE stock market has closed in a buoyant mood. Sentiment has improved considerably during the past week and selected shares have touched new highs for the year. Speculative issues have risen on technical considerations. During the past couple of months, a substantial short position had been built up. Now that the sentiment has improved, bears have been forced to cover. Bulls have also increased their support due to a number of favourable developments. Selected miscellaneous industrials have been the star performers in the market. The improvement in their case has been greatly helped by the shortage of scrip. Many of these shares have passed into the hands of the Life Insurance Corporation. Other holders too are reluctant to book their profits lest they find it difficult to replenish their portfolios later on.

The substantial rise of Rs. 42.27 crores to Rs. 1,946.53 crores in active notes during the week ended 10th November has cheered Lyons Range. It thinks that inflationary pressures will increase now that the busy season demand has started rising. Operators feel that shares will be a useful hedge against inflation. In their bullish frame of mind, they are not bothering about the damage which inflation will do to the economy in the long run. The stock market has also welcomed the Press report that the Government of India is thinking of promoting exports by giving tax concessions to exporters.

At the same time, investors would be well advised not to ignore the many difficulties facing industry at present. Coal supplies have long been inadequate, but there has recently been a serious deterioration in Calcutta. No substantial relief is likely, at least in the near future. The production of many collieries has had to be reduced due to the shortage of transport, power and explosives. The decision to establish coal dumps, it is feared, will do serious harm. Consumers will not be able to get the quality of the coal they want, and will have to pay more for it since they will have to use road transport for drawing coal from the dumps. The recent statement made by the chairman of the Calcutta Electric Supply Corporation indicates that industries in and around Calcutta will have to suffer the power shortage for some time to come. As far as transport is concerned, the railways do not hope to achieve any marked improvement in the near future.

Indian Iron have closed higher at Rs. 25.92. Selected engineering shares, such as Indian Standard Wagon, Guest, Keen, Williams, Kumardhubi, Burn, Braithwaite and Britannia Engineering, have improved. Binani Metal are steady. Texmaco have gained on speculative support.

The miscellaneous section has been highlighted by many substantial improvements. Alkali Chemical, Metal Box, Dunlop Rubber, Goodyear India and Britannia Biscuit have gained considerably. Support has been extended to Indian Cable and Rohtas. Indian Copper have recovered on replacement buying. Indian Aluminium have slipped back on rumours that the Company may not issue rights shares for some time yet. Hindustan out has been lifted. Interest has been taken in Dr. Paul Lohmann, Isaac Holdens and Hindustan improved. Rallis have become steadier. Interest in support has helped Hindustan Aluminium, Sirdik and Universal Cable. Tobacco shares have become steadier and Imperial Tobacco have gained. Paper shares have recovered. Orient, Sirpur, Seshasayee and Titagur have risen. Cement shares have reacted on profit-taking. Jaipur Udyog and Ashoka Cement have lost on balance. Philips India and Indian Oxygen have improved.

Cotton mill shares have met with increased support. Jay Shree Textiles have risen on the decision to issue rights ordinary shares in the proportion of one new share for every two held at par. Elgin, J. K. Rayon, Bowreah and Dunbar have been bought.

Selected jute shares have been in demand because the industry has unsealed a further 24 per cent looms since Monday. The notable gains have been in India, Megna, Birla, New Central, Howrah and Northbrook. Barnagore have become quiet on reducing the ordinary dividend.

Coal shares have gained fractionally in sympathy with the general trend. Business has been confined to Burrakur, Bengal, East Indian, New Beerboom, Central India and Western Bengal.

Except for Dyer Meakin Breweries which have gained on increasing the ordinary dividend, sugar shares are being sold at lower prices. Carew, S.K.G. and Champaran have weakened.

Interest has declined in tea shares with a further fall in auction prices this week. Tezpur, Kantapara, Hasimara and Baghmari have been offered freely.

Bank shares have been transacted on a small scale. Scattered support has been extended to Punjab Bank, Punjab National and United Com-

mercial. Scattered interest is being taken in high-yielding preference shares.

Government securities have become dull due to the lack of institutional support. Prices of dated loans have declined. The 3 per cent loan 1985 is neglected around Rs. 71.75. Prices of State loans have declined on balance.

New Chumta Tea

The working of the New Chumta Tea Co. Ltd. has resulted in a profit of Rs. 1.39 lakhs (same) for the year ended December 1960, after providing Rs. 76.143 (against Rs. 78.516) for depreciation. A dividend of 15 percent, subject to tax, has been maintained, and it absorbs Rs. 45,000. Taxation is allocated Rs. 67.742 (against Rs. 63.243), and development rebate reserve gets Rs. 1,500 (against Rs. 2,800). General reserve claims Rs. 25,000 (same). After making other adjustments, there is a carry-forward of Rs. 62,349, against Rs. 62,299 brought in. A total crop of 253,883 kilograms was made and the average sale price was Rs. 4.72 (against Rs. 4.55) a kilogram. Estimates for 1961 have been based on a crop of 261,269 kilograms of tea at a total cost of Rs. 9.23 lakhs.

was evidence of fresh support, the improvement was due mainly to nervous short-covering. In spite of higher carry-forward charges, operators were inclined to take an optimistic view of the near-term outlook. The absence of restrictions, such as Havalas rates, helped the bullishness. Good corporate news continued to flow. Operators were inclined to think that the visit of the Prime Minister, Mr. Nehru, had made a good impression in the U.S.A., so it was hoped that that country would show greater interest in India's economic development. The higher production figures of the private steel companies for October were interpreted bullishly. Reports of encouraging cloth off-take after Diwali caused cheerfulness. The decision of the Government not to take over the investment functions of the Life Insurance Corporation had a good effect.

Tata Steel rose to Rs. 149 and Indian Iron were boosted up to Rs. 25.70 on firm advices from Lyons Range. Engineering shares showed an all-round improvement. Tata Locomotive soared to Rs. 378. Premier Construction were dealt in at Rs. 204 and Mukand Iron increased to Rs. 30. Support was extended to New Standard Engineering at Rs. 210 and Larsen and Toubro realised Rs. 39.75. Motor shares were steady, and Hindustan Motors rose to Rs. 21.00 on short-covering induced by a report that the lock-out had ended. Premier Automobiles attracted buyers up to Rs. 165.

Prices of selected cotton mill shares showed an appreciable improvement. Century were bought up to Rs. 613.50 and Bombay Dyeing rose to Rs. 69.40. After an earlier improvement, Khatau reacted to Rs. 510 on adverse corporate rumours. Standard were boosted up to Rs. 1.175 and Svadeshi increased to Rs. 285. Morarjee were in demand at Rs. 398 and India United ordinary were dealt in at Rs. 15.23. Apollo were done at Rs. 2.22 and Kohinoor were bought up to Rs. 323. Tata Mills were wanted up to Rs. 75 and Finlay were transacted at Rs. 335.

Cement shares were buoyant in the miscellaneous section. Associated Cement were done at Rs. 170. Sugar shares were quiet, and Belapur were sold at Rs. 285. Business passed in Phalton at Rs. 127 and Walchandnagar Industries were quoted at Rs. 168. Steamship company shares were quietly steady, and Scindia Steam were placed at Rs. 13.24. Great Eastern were available at Rs. 13.04. Mining shares were steady, and Shivrajpur Syndicate were bought at Rs. 54. Rayon shares were firm, and National Rayon improved to Rs. 580 on support from outside interests. Baroda Rayon were transacted at Rs. 166 and Gwalior Rayon improved to Rs. 51 on replacement buying. Chemical shares were firm, and Tata Chemical rose to Rs. 20.48 on the decision to issue rights shares at par. Business passed in Synthetics and Chemicals at the higher level of Rs. 234. Polychem were indicated at Rs. 208.75 and Colour-Chem came to hand at Rs. 390. Indian Dyestuff improved to Rs. 490. Ceat Tyre were quoted higher at Rs. 227.50 and Voltas increased to Rs. 311. There was scattered support for electric company shares, and Tata Power came to hand at Rs. 1,105. Bombay Suburban were done at Rs. 104 and Ahmedabad Electric were dealt in at Rs. 92.30.

Madras Market

FAIR TURNOVER AT RISING PRICES

TEXTILE SHARES BUOYANT

Tuesday Evening.

THE Madras stock market was steady during the past week and there was a fair turnover at rising prices. Support from outside interests increased due to good corporate news. The decision of some companies to issue rights shares or bonus shares had a beneficial effect. Government securities were quiet in the absence of institutional support. Central and State Government loans declined on balance. Interest was taken in selected bank shares. Sugar shares were sold freely at lower prices due to the uncertain outlook for the commodity. In the planting section, support was extended to selected tea, rubber and coffee issues. Textile shares were buoyant and prices improved on hectic support. Selected miscellaneous industrials met with interest due to the prospects for the diversification and expansion of activities in many companies.

In the banking group, Canara Industrial and Banking Syndicate were transacted at Rs. 205 on the decision to issue rights shares at a modest premium. Business was done in India at Rs. 182 and in Indian Overseas at Rs. 193. State Bank of Travancore came to hand at Rs. 125. Among public utilities, South Madras were taken at Rs. 10.22 and West Coast were placed at Rs. 14. Negapatnam were transacted at Rs. 10.60 and Salem-Erode were indicated at Rs. 14.

In the sugar section, Deccan declined to Rs. 12.40 on reducing the dividend and E.I.D. were available at Rs. 38.50. United Breweries were quietly steady at Rs. 101.55 as were Mysore at Rs. 57.75. Cauvery were dealt in at Rs. 130 and K.C.P. came to hand at Rs. 24.

Among planting shares, Blue Mountain reacted to Rs. 2.97 on reducing the taxable ordinary dividend to 10 percent. Cochin Malabar were transacted at Rs. 7.60 and Consolidated Coffee were bought at Rs. 21.90. Coffee Lands were steady at Rs. 18.25 and Balmadies were bought at Rs. 2. Business passed in Ochterlony at Rs. 3.65 and Periakaramalai were steady at Rs. 3.70. Rajagiri were wanted at Rs. 20.85 on declaring a taxable final ordinary dividend of 10 percent. Waterfall were dealt in at Rs. 3 on paying a taxable ordinary dividend of 12½ percent. Business was done in Kil Kotagiri at Rs. 5.15 and in Mysore Amalgamated at Rs. 5.55. Mysore Coffee were placed at Rs. 5.19 and Nonsuch were steady at Rs. 27.55. Parkside were in demand at Rs. 29.45 and Peermade were taken at Rs. 22.84. Thirumbadi were steady at Rs. 1.59 and Travancore Rubber were in demand at Rs. 12.25.

In the textile group, Travancore Rayon shot up to Rs. 47.50 on strong buying. The authorities, therefore, imposed a margin on transactions in these shares. Bangalore Woollen rose to Rs. 240 and Buckingham to Rs. 253.50. Anglo-French rose to Rs. 145 and Cauvery Spinning were wanted at Rs. 16. Lakshmi increased to Rs. 172 and Madura to Rs. 43. Mettur were bought up to Rs. 390 and Kothari were steady at Rs. 13.60. Ramakrishna improved to Rs. 207.90 and South India Viscose were done at Rs. 193. Rajapalayam were dealt in at Rs. 160 and Sarada were in demand at Rs. 90.

Among miscellaneous shares, Aluminium Industries rose to Rs. 23.95 and Ashok Leyland to 9.70. India Cement were bought at Rs. 6.72 and Binny were done at Rs. 303. Enfield were steady at Rs. 11.65 and F.A.C.T. were indicated at Rs. 9.30.

Kirloskar Electric were fancied at Rs. 15.75 and Madras Aluminium were dealt in at Rs. 24. Mettur Chemical were transacted at Rs. 15.12 and Mysore Paper were quoted at Rs. 14.50. Travancore Chemical and Manufacturing were bought at Rs. 21.85 on the decision to issue ordinary rights shares in the proportion of one new share for every three held, at par. Standard Motor were taken at Rs. 16.35 and Spencer were placed at Rs. 24.40. Seshasayer Paper hardened to Rs. 8.40 and Parry's Confectionery were wanted at Rs. 4.76. Tube Investment were placed at Rs. 285 and Textol were done at Rs. 180. United India Fire reacted to Rs. 7.60, but Madras Rubber rose to Rs. 20.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

London Market

INDUSTRIALS RISE IN STOCK MARKET

SUPPORT FOR DOLLAR ISSUES

London, 15th November.

THE feature of the stock market over the past week was a marked revival of interest in industrials in spite of some particularly disappointing company statements. Buying was not all of a speculative character as both the institutions and trustees were taking an active part. Many of the leading stocks returned to favour and even motor shares staged a good recovery which was touched off by the maintenance of the British Motor Corporation dividend. Another section to revive was electrical equipments where favourable Press comment has helped recently. While equities have returned to favour, gilt-edged securities have again encountered scattered sales, some of which was said to be through trustee switching operations. With Wall Street going ahead again, and, in fact, reaching a new all-time peak on Monday, dollar stocks have been wanted. The business revival in the U.S.A. is attracting London money into leading U.S. stocks. More interest is being taken in gold shares, and given relief from the South African currency restrictions, dealers here are confident that a demand for the leading counters would not be lacking. Coppers have moved narrowly and tins have been an erratic market. With the outlook for the oil industry still obscure and with competition for the U.K. petroleum market growing, oil shares have lacked support. Rubbers continue a lifeless existence, but teas have held steady. Buying was stimulated by some very encouraging statements from leading politicians including the Chancellor of the Exchequer who appears confident that in 1962 the U.K. economic picture will have brightened considerably. On Monday, industrials had their best day since August.

New Delhi

REACTIONS OF OIL COMPANIES TO DAMLE COMMITTEE REPORT

REDUCTION IN PRICES OF PETROLEUM PRODUCTS OPPOSED

(FROM OUR NEW DELHI CORRESPONDENT)

THE three western oil companies have conveyed to the Government of India the final decision of their suppliers not to reduce the prices of petroleum products as recommended by the Oil Price Enquiry Committee. In the case of crude, the companies have expressed their willingness to pay the equivalent of 8 percent, as recommended by the Oil Price Enquiry Committee, in rupees to the Government of India. The Committee, it will be recalled, recommended discounts at the following rates for the determination of parity prices and the calculation of foreign exchange requirements for the import of deficit products: namely, kerosene, both superior and inferior, aviation turbine fuel and H.S.D. 10 percent; motor spirit 5 percent; light diesel oil 9.3 percent and furnace oil 3 percent. These reductions in the discounts of the posted bulk refined products, it was expected, would save India \$14.7 million a year. The oil companies' decision follows their discussions in London last month.

Standard-Vacuum Oil Company is being bifurcated into Esso and Socony Mobil with effect from 1st January, 1962. Esso has been allocated the Indian market. Socony Mobil will opt out of this country from 1962. Its representative was here last month to attend the session of the U.S. Business International, but was also investigating whether it could retain a footing in India.

Foreign Exchange for Oil Refineries

The Government of India has readjusted its policy concerning the allocation of foreign exchange for the import of crude by the three private refineries operating in the country. It will be recalled that the Government had informed the oil companies that they would be allocated foreign exchange to import crude on the basis of the 1960 level. As the latter had been refining crude according to an earlier directive under which they could expand capacity without incurring any expenditure in foreign exchange, there would have been very little crude available for them during the last three months, they having exhausted their import quota on the basis of their 1960 production. The Government saw the reasonableness of the oil companies' demand for the allocation of adequate foreign exchange to keep the refineries running during the October-December quarter and has decided to allocate the necessary foreign exchange to enable the companies to import as much crude as they imported during October-December 1960. In other words, crude, imported and refined oil products during the nine months ended September will not be taken into account. The Central Government has allocated Rs. 41 crores (\$861,000,000) for the import of petroleum products, including crude, during the six months, October 1961 to March 1962. Of this, Rs. 37.50 crores (\$797,500,000) will be in free foreign exchange and Rs. 3.50 crores (\$735,000,000) from D.L.F. aid. In addition, Rs. 3 crores (\$630,000,000) have been allocated for rupee payment imports. The Central Government has reached a tentative agreement with the U.S.A. to import certain petroleum products from that country, to be financed from a D.L.F. loan. These products will largely include lubricants. Broadly speaking, 30 percent of the allocation is earmarked for the import of crude.

Some comments are called for. In allocating foreign exchange, the Government specifies the quantities of crude and petroleum products which are in short supply in this country. This calculation is based on the pattern of demand and the pattern of production of the three refineries. It is suggested that "without prejudice" to the future allocations of foreign exchange, if the Government of India asks the oil companies to meet the country's requirements of petroleum products within a specified limit of foreign exchange in this case, Rs. 41 crores (\$861,000,000), without specifying category-wise quantities of crude and petroleum products, the country will save more foreign exchange, or conversely, increase the supply of petroleum products more than is contemplated under the latest decision. The oil companies realise the Government's anxiety to safeguard the interests of the Indian Oil Company or of the refineries in the public sector. But until the Indian Oil Company is able to handle all the Russian imports in petroleum products and the refineries in the public sector go on stream, the Government can make allocations on an ad hoc basis. Such allocations will enable the oil companies to refine larger quantities of crude within the given allocation, thereby save foreign exchange on petroleum product imports, or be able to supply larger quantities of petroleum products.

Economic Policy Clarified

An authentic and interesting statement of India's basic policy on economic development is available from the report of the discussions between the Prime Minister of India and members

of the U.S. Business International, at the round table conference held here last month. The Prime Minister made some introductory remarks, after which he answered some questions about India's economic policies and goals. Mr. W. H. Cousins of Schering Corporation of the United States asked: "Mr. Prime Minister, we should be most grateful if you could share with us your vision of India's future—perhaps ten years ahead." The Prime Minister replied that "we want every Indian citizen to have enough food, clothing, housing, education and health. These are the basic things. We realise that the population of India is growing at a very fast rate. This is due to improved health conditions, but it presents a big problem. In the United States, this problem is not so difficult because they have basic necessities of life and so they could think about other things. Further, we should find enough work for the vast masses of people. In the sphere of agriculture, there is tremendous scope for increase in production. There is a good demand for fertilisers, better seeds and water, but we have still to change the mind of the peasant and we hope that the political autonomy given through the panchayats in the villages will help this process. In the field of industry we attach the greatest importance to its rapid development. Our broad policy is that the basic and strategic industries should be controlled by the State. At the same time, we encourage the growth of medium and small-scale industries and traditional and home industries are also given facilities for expansion. Still, there are vast numbers of people who remain without employment. There is not enough room for absorbing them on land. We, therefore, look forward to a technologically more mature society in which work would be done more efficiently. But this will have to be a gradual process. Even in agriculture, we would not mind having tractors and we do have them but we have to see that by employing labour saving devices, we do not create more unemployment, for it may upset our social balance."

Scope for Private Enterprise

Mr. John Wilson of the Chase Manhattan Bank asked: "Mr. Prime Minister, could you describe for us the contribution you expect private enterprise to make towards furthering your vision?" The Prime Minister replied that the field for development was so vast and the market in India was so great that we wanted to utilise every method of economic growth, for we want to stimulate our economy through planned development. He, however, added that it would not be helpful to measure economic development in India by the standards of industrially advanced societies. "We have to evolve policies that would fit in the special conditions in India, for we have to meet a specific situation. For instance, we have now fixed ceilings of holdings in land and, naturally, people ask why the same kind of ceiling is not applied in the sphere of industrial property. Though we have, by and large, produced a sense of satisfaction among people we have to remember that in the Indian society there is at one extreme riches, and at the other extreme, poverty. In an independent society the gap between riches and poverty should be reduced and eliminated as quickly as possible. If the process takes too long, the social balance may be upset."

Mr. Sherwood Egbert of Studebaker-Packard Corporation asked: "India's foreign capital requirements for setting up large basic industries are of such a magnitude that it is unlikely that enough private foreign capital will be forthcoming to meet them. In these cases there are two ways in which the United States can solve the problem. The United States Government aid money might be enlisted; or, secondly, a combination of aid money and U.S. private investment might be mobilised. An example is the new Indian steel mill, we have been told, is to be built. Do you feel, Mr. Prime Minister, that India's needs would be well served by the U.S. Government and private investors joining to furnish the needed foreign capital, thus releasing some of the Government's aid money for other needed projects while at the same time enlisting the skills and experience of private industry?"

The Need for Foreign Aid

The Prime Minister replied that "obviously foreign aid was necessary, but the manner of assistance would depend upon various factors. In individual projects of industrial development private foreign capital was allowed to flow in and we do not distinguish between indigenous capital and foreign capital. We have followed the practice of keeping the majority control and ownership in Indian hands. Apart from the psychological reasons, the historical background has created a strong resistance among people to any kind of economic domination and this resistance always

gives rise to a feeling that 'this is my danger'. This, however, is not a reason for allowing foreign private capital to come in."

Dr. A. T. Knoppers of Merck and Company asked: "All of us now have a much better idea of the gigantic problems confronting you in developing this great country. We understand that India's foreign exchange resources must be used with utmost care and that it was an absolute necessity to have planned economy, when India obtained its independence. In the intervening years the private sector has proven to be more useful and effective than expected and its growth has been gratifying. We know from similar cases, in other countries, that industrial take-off accelerates when freedom for growth exists. Does the Prime Minister look favourably on simplifications and some relaxation of controls, on the speeding up of procedures, and on a less rigid limitation of capacities—especially in those cases where no foreign exchange is involved or where foreign exchange savings can be achieved and thus to speed growth and attract even a greater inflow of foreign capital?"

The Prime Minister replied that there was no argument about the need for speeding up procedures, for he added humorously, they were struggling against their own procedures. He explained that they had inherited a system of administration which was adequate for the then Government as it was not essentially a Government which interested itself in the social progress of the people. There were many checks and balances. He agreed that the procedures should be simplified. The Prime Minister added that the boards of directors of public undertakings would now be given complete autonomy. As for controls, the Prime Minister stated that nobody fancied controls as such. However, they come in when the Government thinks that something will happen if controls are not enforced. He referred to the situation after the war when textile controls were removed in 1948 and had to be reimposed after about eight months because there was an acute shortage of cloth and prices went up.

Role of Communism

Mr. A. R. Gale, of Ampex Corporation, asked the views of the Prime Minister about the role that communism may play in south-east Asia. The Prime Minister stated that there were many political problems which were put under the head "communism". Referring to China, he said that her aggressive nationalism was a historic fact and was not peculiar to the Chinese communist régime. There was a tendency for simplification of complex questions. Communism was an upsetting force and it generally thrived in countries which were under-developed and backward. If you, however, refer to a situation in any particular country, you should analyse the conditions in that country. He referred to Indo-China and stated that in Geneva in 1954 it was unanimously agreed that Indo-China must be kept out of ideological conflicts of the major power blocs. There was, however, a tendency, specially in the United States of America, to pick up people who have no influence on their own people and are not capable of delivering the goods. This led to all kinds of complications.

Before leaving the conference, the Prime Minister added that this was an exciting experience. "In India we have some of the finest things and some of the worst. It would depend upon how you approach it. If you approach it in a friendly way you see the finer things in India, but you can also see the bad things." He said he was passionately fond of India and the Indian people, but he was not unaware of the bad things in the country. For instance, Banaras, which was a great city and a centre of learning in the ancient days, now had dirty streets. When one went there, the first thing one saw was the dirt and squalor in Banaras. When he went there he saw them too, but he had the historic vision of the Buddha and the succession of centuries and the variegated scenes passed before his eyes. It depended, therefore, on the way one looked at things in India.

Shape of the Fourth Plan

How big will the fourth plan be and what will be its highest priority industries, was an important question the U.S. Business International asked the Planning Commission.

QUESTION: Assuming successful completion of all the targets of the third plan, how big will the fourth plan be and what will be its highest priority industries?

ANSWER: (i) It is tentatively envisaged that the net investment in the fourth plan should be of the order of Rs. 17,000 crores, as against

DUNLOP SAHAGANJ

25 years of progress: 1936-1961

a commonwealth of industry

Brought together on their pages are reports of important developments at various Dunlop factories. What has Kobe done to reduce tyre abrasion? How is Hanau strengthening tyre casings? Or an idea from Sahaganj to reduce cord friction in tyres.

Every item of information is given careful attention at Sahaganj, every suggestion is considered worth studying, for it is not known which will spark off a train of new ideas, start a new chain of developments that will result in a better Dunlop product.

There are also frequent training and refresher courses arranged by Dunlop companies in other parts of the world, where participating Sahaganj technicians come across fresh ideas which they can put into use in their own factory. It is this constant international exchange of ideas which makes the Dunlop organisation truly a "Commonwealth of Industry".

The publications lying on this official's table at the Dunlop factory at Sahaganj are marked "PRIVATE & CONFIDENTIAL". Published by Dunlop, U.K., they represent a medium for the continuous exchange of technological ideas that goes on between Dunlop factories the world over.

Rs. 10,500 crores postulated for the third plan. (ii) The matter is still under study. But tentatively it may be said that a high priority is likely to be given to the following industries:

		Actual	Target	Perspec- tive
		1960-61	1965-66	1970-71
Steel ingots	Million tons	6.0	10.2	18.19
Pig iron	Million tons	0.9	1.5	3.4
Aluminium	000 tons	18.2	87.5	230-250
Coal	Million tons	60.0	97.9	170-180
Oil refining	Million tons of crude throughput	6.62	10.77	18.20
Nitrogenous fertilisers	Million tons of nitrogen	0.248	1.0	20.22
Cement	Million tons	9.0	15.0	24.26
Machine building	(Rs. crores of output)	100	500	1,600
Electric power (installed capacity)	Million kW	5.7	12.7	21.23

QUESTION: If a foreign investor wishes to invest in a product not included in the plan or one in which plan targets have already been fully licensed, will it be possible for him to do so? What authorities must he convince that his product is needed by India, and on what grounds would this be possible?

ANSWER: (i) It is the general policy of the Government to ensure that investment takes place more or less in accordance with the provisions made in the plan, as otherwise there may be maldistribution of resources, financial as well as real, giving rise to shortages and difficulties at various points.

(ii) But the Indian plan is of a flexible character and the situation is reviewed from time to time, especially through the annual plans. Hence if a foreign investor comes up with an important proposal, the Government of India is always prepared to examine it sympathetically even if it may not be included in the plan or may be one in which plan targets have already been fully licensed, provided a convincing case can be made out in favour of it from the standpoint of the overall needs of the economy.

(iii) The main grounds on which such a non-plan project may be permitted are:

- It is likely to augment the growth potential of the economy;
- It meets a critical shortage;
- It will not draw on resources, including power and transport, to such an extent that it may jeopardise the success of some other high priority project;
- The full foreign exchange cost will be met by the foreign investor.

Surplus from Public Enterprises

QUESTION: The financial resources outlined in the third plan specify what some observers consider to be an unrealistic amount of profits from State-owned enterprises. Could we be given some idea of how the figure was arrived at?

ANSWER: (i) The estimate of resources that public sector enterprises are expected to make available for financing the third five year plan is Rs. 450 crores—Rs. 300 crores from Central Government enterprises and Rs. 150 crores from State Government enterprises. An important point that needs clarification in this context is that the estimate of Rs. 450 crores does not refer to net profits as such. It really refers to such resources as will be left over with the enterprises either by way of retained profits or by way of accumulations in depreciation and other reserve funds, the assumption being that these funds will be available for financing

expansion programmes of these enterprises. The concept of surpluses from public enterprises is thus much wider than the concept of net profits. As such, the estimate cannot be regarded as high. The observers referred to in the question do not seem to have taken account of the distinction between surplus and net profits.

(ii) The estimate of Rs. 300 crores from Central Government enterprises is made up of the following:

(1) Steel projects	140
(2) Fertiliser projects	40
(3) National Coal Development Corporation	80
(4) Oil organisations	13
(5) Posts and Telegraphs	22
(6) Other enterprises	50

The internal resources of public enterprises available for investment have been calculated on the basis of specific levels of production in each year of the third plan, the current levels of price and taxation and provisions for current depreciation outlays. The works cost of the different products has been estimated after providing fully for the various elements which go into its build-up. During the second plan, substantial investments have been made in industrial enterprises. These are going to be augmented in the third plan period. Considering the order of investment which would have taken place by the end of the third plan, the estimate of Rs. 300 crores from public enterprises under the control of Central Ministries does not appear to be high; in fact, it may turn out to be low.

(iii) Details of the estimate of Rs. 150 crores from enterprises owned by State Governments are as follows:

	(Rs. crores)
(1) Electricity boards	110
(2) Road transport corporations including departmentally run undertakings	20
(3) Industrial enterprises and other departmental schemes	20
	150

The above estimates have been worked out after detailed discussions with the State Governments concerned.

Investment in Private Sector

QUESTION: The third plan draft does not specify in any great detail where the financial resources needed by the private sector in India to fulfil its target are to come from. Would our guests care to comment on this question?

ANSWER: (i) For the third plan, the estimate of net investment in the private sector has been placed at Rs. 4,300 crores, compared with Rs. 3,300 crores in the second plan and Rs. 1,900 crores in the first one. The table below gives the sector-wise details:

	INVESTMENT IN THE PRIVATE SECTOR		
	First plan total	Second plan total	Third plan total
(1) Agriculture, including irrigation	500	675	850
(2) Power	20	40	50
(3) Transport	70	135	250
(4) Large and medium industries and minerals	230	725	1,100
(5) Village and small industries	140	225	325
(6) Housing, other construction and inventories	940	1,500	1,725
Total	1,900	3,300	4,300

(ii) In considering the problem of resources for the private sector, it will be useful to divide the aggregate investment into the following two broad categories:

- Fields in which the investments and savings activities are inter-linked; the act of investment itself leads to act of saving;
- Fields in which investment takes place on the basis of resources mobilised from other fields.

The bulk of the investment in fields like agriculture, housing, particularly that in rural areas, and small-scale industries falls in category (a). The saver and the investor is the one and the same entity in these cases. In the act of investment, savings are generated. What is needed in these fields is to provide proper incentives for stepping up investments. This is being done through such schemes as low and middle income group housing schemes, supply of tools and implements to cultivators at reasonable prices, etcetera. Given the increase in incomes and opportunities for investment, more savings would automatically be generated. (iii) In the second category falls such investment as is in the field of power, organised transport and organised larger and medium industries including minerals. In the plan document, sources of finance for organised industries and minerals have been indicated. Gross investment in these fields (corresponding to net investment of Rs. 1,100 crores) is estimated at Rs. 1,250 crores. Sources of supply of funds for financing this investment are indicated below:

	Third plan period (Rs. crores)
(1) Institutional agencies	130
(2) Direct loan participation by Central and State Governments and other assistance	220

(3) New issues	200
(4) Internal resources (net of repayment liabilities)	600
(5) Direct foreign credit participation in capital	300
Total	1,250

It will be seen from the above that direct foreign credit participation in capital is expected to provide Rs. 300 crores. (iv) In the light of the experience of the last few years, it should not be difficult for the private sector to secure the resources of the order mentioned above.

External Resources

QUESTION: The foreign exchange reserves of India have been seriously drained during the second plan. Do our guests feel that the third plan solves this problem? Could the Ministry tell us what is being done to increase the exports of Indian manufactured goods, or at least to prevent the Indian economy from becoming even less competitive in world markets than it is today?

ANSWER: (i) The problem of external resources is a difficult one for a country in the early stages of industrialisation. With the best effort it can make to enlarge foreign exchange earnings, it cannot for a number of years cope with the increasing import requirements of the economy.

(ii) The total receipts from exports during the third plan period are now estimated at Rs. 3,700 crores, compared with the actual receipts of Rs. 3,053 crores during the second plan period. The trends in export will be, however, kept under review at the highest level during the period of the plan and all necessary steps will be taken to ensure that the export earnings are maximised.

(iii) Two points are being emphasised in this context. Firstly, while increased production will help in enlarging the surpluses available for export, foreign exchange earnings have at the present juncture to be increased even by the sacrifice of domestic consumption. Secondly, exports will grow to the extent that the prices of Indian products are competitive. Efforts will be made not only to restrain consumption in the interest of exports, but also to increase productivity and to keep down costs.

(iv) Even with the export earnings of the order of Rs. 3,700 crores, the external account will barely balance. On the other hand, for an investment plan of the order of Rs. 10,400 crores, the direct foreign exchange requirement is estimated at Rs. 2,030 crores, but due to the shortage of external resources, provision has been made for plan imports of Rs. 1,900 crores. The total drawings on external assistance during the third plan, including imports of Rs. 200 crores for special capital goods and intermediate products, and Rs. 550 crores for the repayment of maturing liabilities and other capital payments, are visualised at Rs. 2,600 crores apart from P.L. 480 assistance. Together with an estimated utilisation of Rs. 600 crores of P.L. 480 assistance, the aggregate utilisation of external assistance in various forms during the third plan period is placed at Rs. 3,200 crores. Dependence on external assistance will thus be heavy during the third plan period; and indications are that the position will continue to be similar during the fourth plan also. It is only during the fifth plan period that the foreign exchange position is likely to ease to some extent.

(v) Thanks to the assistance given or promised by friendly countries, specially members of the Aid India Club, the bulk of the foreign exchange requirements for the first two years of the third plan has already been covered. There is a reasonable basis for thinking that the full requirement of foreign exchange during the third plan period will be ultimately met.

(vi) The Government of India is, however, taking special measures for promoting exports. By far the most important condition for fulfilling the programme for exports is obviously the realisation of the agricultural and industrial targets of the third plan. If these were to fall short, measures which might otherwise be feasible would become much less so.

Exports and Inflationary Pressures

(vii) Restraints on the growth of internal consumption are an essential condition for a successful export drive. For achieving the export objectives it is necessary not only to create the surpluses for exports, but also to ensure that the surpluses become available at prices competitive with those of other suppliers in markets abroad. Competitive export capacity depends largely on internal prices. From this point of view, it is vital that inflationary pressures associated with development should be held in check.

(viii) Study groups have been set up to consider the ways for reducing the cost in certain selected industries such as cement, jute, bicycles, electric motors, transformers and rayon. It is visualised that in industries which are significant for developing exports, licensing policies should take due account of the economy scale.

(ix) It is also proposed to take suitable measures (including fiscal measures) designed to make sales in the domestic markets less attractive than those in foreign markets.

(x) Apart from State trading which has played an important rôle in developing exports in the

years, it is also proposed to support the efforts of the private export houses.

U.K.-E.C.M. Talks

The Lord Privy Seal, Mr. Edward Heath, met the Commonwealth High Commissioners on 10th November in London and gave them a report of the first round of the talks between Britain and the countries of the European Economic Community (the Common Market) which ended on 9th November in Brussels. This is part of Britain's policy of keeping other Commonwealth Governments closely informed about the course of her negotiations with the Common Market. The meeting lasted one and a quarter hours. The Secretary of State for Commonwealth Relations, Mr. Duncan Sandys, was also present. Meanwhile, India's Minister-designate to the European Common Market, Mr. K. B. Lal, has returned to New Delhi for a consultation visit. He expects to return to London via Brussels by Christmas. His study on the spot has dispelled a great deal of pessimism. In his view, with proper safeguards and genuine efforts, India's export trade should get a further stimulus, after the U.K. has joined the European Common Market. This is in contrast to the general feeling that Britain is no longer interested and is turning her back on the Commonwealth, which has prevailed especially since the Commonwealth Finance Ministers' conference in Accra. There is a much greater awareness of what is involved in the main issue, namely, who would benefit if Commonwealth trade suffers by Britain's entry into the Common Market. The obvious answer is the communist bloc. There, therefore, appears to be greater awareness in Britain and even in the Common Market countries to consider various ways and means of fitting Commonwealth pattern of trade into the new U.K.-Common Market treaty, which is now being negotiated.

U.S.-Japanese Joint Trade Moves

There are two other developments worth mentioning. According to New Delhi reports, Japan and the U.S.A. are to start work in several areas for the elimination of conflict in their international trade and for the establishment of closer economic relations. A declaration of this intention is contained in a joint statement issued at the end of the first meeting of the joint United States-Japan Cabinet Committee on trade and economic affairs, established in June this year.

The statement pledged the two countries to intensify joint consultations and studies at all levels, to make future meetings of the committee more fruitful. Both nations have agreed to work together and with other countries to improve export opportunities on a reciprocal basis. The U.S.A. agreed to support Japan in her efforts to reduce or eliminate trade discrimination against Japanese goods, particularly under Article 35 of the General Agreement on Tariffs and Trade. The two countries have further agreed to co-operate on more economic and technical aid programmes in the developing countries and to exchange economic and financial information of various kinds, to enable each side to anticipate significant changes better in their trade relationships and to avoid misconceptions, particularly on labour standards. Secondly, the United States is considering whether to join or be closely associated with Common Market. A report prepared by the Joint Economic Committee draws the following conclusion. "We believe that the United States must form a trade partnership with the European Common Market and take the leadership in further expanding a free world economic community.... More than any broadening or reshaping of the existing law, however, we believe that the most hopeful vehicle for strengthening the West and for defeating Khrushchev in the cold war is to be found in the example of the Common Market."

Mr. George Ball, the United States Under-Secretary of State for Economic Affairs, has clarified the position as follows: "What we may well see emerge is the concentration of nearly 90 per cent of the total free world exports in industrial products in two great common markets—the Common Market of Europe consisting of over 300 million people and an as yet undetermined number of States, and the Common Market of the United States consisting of 180 million people and 50 States. In each of these areas, goods, labour, capital and services will be surrounded by a common external tariff."

Plan Projects under Negotiation

Five public sector projects are under discussion. Some of them have sufficiently advanced towards finalisation while others are still in the talking stage. The two projects for heavy structurals and heavy plates and vessels come in the first category, an agreement for which, it is expected, will shortly be signed with Davy Ashmore of the U.K. There are three parties in the field for setting up a diesel engine project. They are B.N.M. of Denmark, Fiat of Italy and M.A.N. of West Germany. The project will be located in the vicinity of a shipyard, either in Visakhapatnam or near the proposed shipyard in Cochin. The second precision instruments plant to be located in Kerala will be in collaboration with the Russians. Data on the heavy compressors and pumps project are being compiled to enable the Russians to prepare a techno-economic report. This report will enable the Government to decide whether the requirements of this country could be met by the expansion of existing capacity or whether it would be more economical to set up a new plant for it. The Russians, it is learnt, have intimated to the Indian Government that, for the time being, their hands are full to take up the ball and roller bearing project. They might be interested a year later.

In the private sector, a West German firm has shown interest in the Koyana aluminium project and is sending out a team to negotiate its terms of collaboration.

Consulting Firms

At least three consulting firms have been approved by the Government of India to operate in this country. They are Simon Carves (British), Koppers (German), and Hydrotherm (American). Another Indian Company, Industrial Consultants, hopes to operate by the end of March 1962, when it will start bidding and executing projects. In the initial stages, the Indian Company will undertake the supervision of construction of plants and heavy civil construction, but eventually, it hopes to give an integrated service to its clients either by strengthening its construction division or by creating a separate subsidiary organisation.

Another Wrist Watch Factory

Permission was recently given to Hindustan Equipment Suppliers of Bombay to set up a wrist watch factory in Baroda. The proposed factory will have an annual capacity, on a single-shift basis, of 300,000 watches to be reached over a three-year period. First year 82,000 watches; second year 130,000 watches; and third year and onwards 300,000 watches.

The c.i.f. value of imported components a watch in each phase will be as follows: first phase (one year) Rs. 13.31; second phase up to Rs. 12.35; third phase up to Rs. 8.92; fourth phase up to Rs. 6.87; and fifth phase up to Rs. 4. From the sixth year onwards, no imports of any part will be permitted. The foreign collaborators are the French firm of L.I.F., which will not participate in the capital of the Company.

Shipping Company Orders Japanese Vessels

Jayanti Shipping Company has signed an agreement with the Japanese firm of Mitsubishi Shipbuilding and Engineering Company for the construction of eight 32,250 d.w.t. bulk cargo carriers at a cost of over Rs. 17 crores. The Indian Company already has a tanker of 30,000 tons capacity and proposes to acquire five more second-hand vessels for the carriage of coal between Calcutta and Rangoon. It has purchased two more tankers of 40,000 tons each.

Fresh Indo-U.K. Credit Agreement

An agreement for a credit of Rs. 6.67 crores from the British Government to the Government of India was signed here last week. The loan is not attached to any particular project and can be used with immediate effect by India to pay for a broad range of imports from the U.K. It is the third in the British series of loans for the third plan towards which the British Government has so far promised Rs. 120 crores under the "Aid India" consortium arrangements. It follows that the loan agreements for £30 million (for mixed projects and development goods) and £10 million (for general balance-of-payments support) signed in May last year was in fulfilment of this third plan commitment. During the second plan, Britain's assistance amounted to just over Rs. 107 crores.

This latest £5 million credit is repayable over 25 years with a grace period of seven years—the first instalment will fall due on 31st May, 1968. The rate of interest will be the same as that applied by the British Treasury to a loan for a com-

parable period from its domestic Consolidated Fund, plus 1 per cent as management charge. The loan has been given under the Export Guarantees Act of 1949 and 1957.

The total of disbursed and committed U.K. assistance to India so far is as follows:

	£170.5 million
Second plan	
Project aid for Durgapur, 1958	£ 15 million
General balance of payments aid, 1958	£ 28½ million
General balance of payments aid, 1958	£ 19 million
Project aid for Assam pipeline, 1958	£ 3 million
General balance of payments aid, 1960	£ 10 million
General balance of payments aid, 1960	£ 5 million
Total	£ 80.5 million

Th'd plan

Commitment to date ... £ 90 million

Loans signed

Mixed project and development goods loan, May 1961	£ 30 million
General balance of payments loan, May 1961	£ 10 million
General balance of payments loan, November 1961	£ 5 million
Total	£ 45 million

Indo-Afghan Trade

Letters incorporating a new trade arrangement were exchanged last week between the delegation of the Afghan Government and the Government of India. The present arrangement which is effective from 1st October, 1961, will remain in force for one year, and thereafter, unless either contracting party gives notice to the contrary, will automatically be extended by a further period of one year. Schedules A and B attached to the letters specify commodities for export from Afghanistan and India, respectively. Exports from Afghanistan comprise mainly dry fruits and fresh fruits, asafoetida, etcetera, and exports from India consist of traditional items like tea and textiles and non-traditional items like engineering goods, etcetera.

Indo-Indonesian Trade Talks

Talks for promoting trade and economic relations between India and Indonesia opened here last week. The Indonesian mission is led by Mr. Haroon Al Rashid Saleh, director, Division of Economic Affairs, Department of Foreign Affairs of Indonesia. There has been a preliminary exchange of views on improving trade between the two countries. Further talks will be held after the return of the mission from its tour of important industrial and commercial centres in India. It will visit Sonepat to see a bicycle factory there. It will also visit Agra on Sunday, and later go to Banaras. After visiting Calcutta, Madras, Bangalore and Bombay, the mission is scheduled to arrive in Delhi on 25th November.

Indian Wool Exports Rise

Exports of home-grown wool from India during the April-June quarter this year rose by 57 per cent. (Continued on page 730)

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research.

Excellent progress being made around the world on General Electric boiling water reactor projects

North of Naples, Italy, on the Garigliano River, construction of the 150,000 kw nuclear power plant for SENN recently passed the halfway point. The General Electric design was selected by SENN for the nuclear power reactor after a seven man international team of nuclear experts analyzed the reactor proposals made by nine groups. The evaluation showed that the G-E boiling water reactor, using enriched uranium fuel, would provide the lowest power costs of all reactor concepts, and the simplicity of the G-E BWR design would require the lowest possible capital investment. The plant allows for an increase of 50% in kw output without major construction changes.

On the other side of the globe, General Electric Japan, Ltd. is building a direct-cycle boiling water reactor for the 12,500 kwe plant at Tokai Mura, Japan, for the Japanese Atomic Energy Research Institute (JAERI). This plant, designated JPDR, is expected to be the first nuclear power generating plant in the Far East and is presently on schedule.

In the U.S.A. two more nuclear power stations, using the G-E BWR, are under construction and on schedule. One is located at Big Rock Point on Lake Michigan and the other at the Humboldt Bay Power Plant site near Eureka, California.

Long identified as a leader in atomic development, G.E. is engaged in a widely diversified program of nuclear application. BWR plants are now being offered up to 500 megawatts, incorporating such advanced concepts as high-power density cores, pressure suppression containment and internal steam separation. Other atomic products and services include reactor sub-systems, components, fuel, control and instrumentation, engineering studies, computer services, research, development and irradiation services. *For further information write to International General Electric Company, Dept. 30-20 R, 159 Madison Avenue, New York 16, N. Y., U.S.A.*

◀ ***The giant 160-foot containment sphere*** of the Garigliano Nuclear Power Station in Italy. The sphere, twice the size of St. Peter's dome, will house the G-E dual-cycle boiling water reactor.

Progress Is Our Most Important Product

GENERAL  ELECTRIC

cent, compared with the previous quarter, to 8.1 million lbs actual weight. This was, however, 9 percent less than in the second quarter of 1960. The rise between the two latest quarters was due mainly to the resumption of exports to Russia; shipments to that market rose from nil in January-March to 2.2 million lbs a quarter later. Exports to the U.K. and the U.S.A. increased by 15 percent and 4 percent, compared with January-March, to 3 million lbs and 1.8 million lbs, respectively.

West German Industries at Indian Fair

The participation of West German industry in Indian Industries Fair, 1961, has been organised by the Committee for Fairs and Exhibitions of the German Industry in collaboration with the Committee for Agricultural Exports. The former exhibits the products of German industry in two halls with a display area of 23,140 square feet and an outdoor area, while the latter gives an account of West Germany's agricultural products and working systems in a separate pavilion. The execution of the programme of German participation in the Indian Industries Fair has been the work of I.M.A.G. GmbH, Munich. Sixty German firms are participating under one and the same roof; these include A.E.G. Demag, Mannesmann, Siemens and Germany's chemical and motor-vehicle manufacturing concerns. Krupp have erected a pavilion of their own. The goods exhibited are classified in groups as follows: mining, iron and steel, non-ferrous metals, constructional steelwork, shipbuilding, mechanical engineering, metal goods industry, motor-cars and lorries, locomotives, machine tools, tools, textile machines, hoisting and conveying equipment, agricultural machinery and equipment, woodworking machines, electrical industry, precision engineering, optical instruments, medical equipment and instruments, chemicals and plastics, pharmaceuticals, office machines and equipment, food and beverages, textile and apparel industry, building machinery and installations, printing, paper, graphic arts, jewellery, watches, toys and shipping and transport.

British Coal Experts to Work Indian Mines

As a result of discussions between the Central Government and the British team of experts, it

has now been decided that not only the Jarangdih deep pit but also Kathara and Swang deep pits should be entrusted to the British team. The intention is that these deep mines should be developed by these experts up to the stage of full production, after which they will be handed over to the National Coal Development Corporation as running mines. The position concerning the development of these mines is as follows:

(1) No production can be expected from deep-shaft mines either in Jarangdih or in Swang or in Kathara before the next seven years, as further geological data have to be collected and as in any case, the commissioning of a deep-shaft mine normally takes about seven years.

(2) Open-cast mines should be developed at both Jarangdih and Swang for the initial production of about 1 million tons, which will subsequently be replaced by the deep-shaft mines, when these are commissioned some seven to eight years later. Additional drilling will be necessary; it should be possible to take up the planning of these mines within the next six months.

(3) As the life of the Kathara mine was estimated at between 20 years and 30 years on its present productive capacity of 1.5 million tons a year, the priority for planning deep shaft mines would be for (i) Jarangdih, (ii) Swang, and (iii) Kathara.

(4) Additional drilling should be undertaken immediately for the further geological data required for the planning of the Jarangdih deep-shaft mine.

(5) The British expert who is staying on here would mainly be concerned, initially, with completing the preliminary work necessary, including co-ordinating the collection of additional geological data for planning a deep-shaft mine in Jarangdih.

As a result of the discussion held with the French experts, the various stages for developing the steeply inclined thick seams of Karanpura are: (1) some senior mining engineers of the National Coal Development Corporation should go to France to see for themselves the techniques of depillaring the steeply inclined thick seams being employed there; (2) deputation of three or four National Coal Development Corporation mining engineers to France for training the sub-level caving work and pneumatic stowing; and (3) a team of French experts should come over to India and undertake the preparation of the project report for the depillaring of the mines in Karanpura.

Development of Singrauli

The Technical Co-operation Mission authorities have agreed to undertake the development of the Singrauli coalfield, in addition to Ramgarh, provided a formal request is made to them. This request has now been made.

More Coal Washeries

It is now proposed to set up the following coking coal washeries during the third five year plan:

East Bokaro field:	Import in million tons
(a) Kathara	2.0
(b) Swang	0.5
(c) Jarangdih	0.5
(d) Kargan	0.5
(ii) Ramgarh	1.5
(iii) Jhilmun-Korba	1.0
(iv) West Bokaro	0.5
(v) Karanpura	2.8
Total	9.3

A washery in Sudamdih will go into production towards the end of the third five year plan, contributing about 500,000 tons of washed coal. The Russians have finally expressed their inability to set up and complete the Karanpura non-coking coal washery by 1960. Preliminary negotiations with other parties are now in progress. A team of National Coal Development Corporation is leaving shortly for Moscow to discuss the Kathara washery project.

Global Tenders for Alloy Steel Plant

The Government of India has decided to invite global tenders for setting up its alloy steel plant in Durgapur. A representative of a Japanese firm, Kishi Moto Shote, who came here to negotiate for a package deal to supply the plant and equipment, has returned to his country.

Watching Operations of Public Sector Concerns

The Central Ministry of Finance is shortly creating a cell to watch over the working of public sector undertakings and make its report to the Secretary for Expenditure. Public sector undertakings are required to make three-monthly reports to the Ministry of Finance, but as matters stand, there is no effective machinery to act as a watch dog over their working. The proposed cell, it is claimed, would watch over their income and special expenditure. The profitability of these concerns needs to be stepped up to reach the target which has been set in the third five year plan.

U.K. Unable to Import Indian Sugar

The British Government has expressed its inability to allocate a quota to India under the Commonwealth Sugar Agreement. As already reported, India had asked for a quota in anticipation of replacing South Africa, which has opted out of the Commonwealth.

Shipping Lines to Appoint Liaison Man

U.K. Shipping Conference lines propose to station in New Delhi a high-powered representative

to maintain liaison with the Central Government generally and, regulate shipping freight rates by mutual consultations, in particular. As already reported, the Shipping Conference Lines have increased freight rates by 10 percent on Indiadward cargo, with effect from 1st October. A similar proposal for the outward cargo is being stoutly opposed by both India and Pakistan. A German shipping company, which has offered to carry jute at much lower rates, has provided a bargaining counter to Pakistan. India has threatened to charter tramp ships and undertake legislation, on the U.S. pattern, in case rates are increased by 10 percent on the outward cargo. It is contended that such an increase in rates would adversely affect India's export trade, at a time when India is making special efforts to step up her exports.

Legislation will largely make it obligatory on the exporters to carry their goods in Indian bottoms. This threat, *prima facie*, will not be effective, as long as there is no adequate tonnage on the Indian Register to meet India's requirements. Secondly, how will the legislation be effective if the Indian shipping companies are not prepared to stand by the Government in the latter's resistance to an increase by 10 percent in rates.

The long-standing dispute between the Bombay Steam Navigation Company, a subsidiary of the Scindia Steam Company, and the Government further illustrates the point. The former had recently decided to discontinue its Bombay-Konkan steamer service with effect from 1st December, unless it was allowed to increase its passenger fares. It was contended that the Company had been suffering losses since 1954. The question of Bombay-Konkan fares was examined by the P.S. Rau Committee, which made its report in 1959, recommending an immediate increase in fares by 8 percent, (2) an interest-free loan by the Central Government, yielding, on an average, an annual concession of Rs. 1.89 lakhs to purchase three new ships and (3) a further increase of 7 percent in fares after the acquisition of new ships. The Government has already decided to subsidise the movement of coal. It means that the consumers will have to pay for an increase in the rates of coal. The Indian shipping companies, it will be recalled, refused to move rice from Calcutta to Kerala, unless their rates were stepped up. The Conference Lines similarly hope to convince the Government by producing documents and books that they, too, have been incurring losses and that their demand for an increase in freight rates is justified.

Foreign Collaboration

Some 92 cases of foreign collaboration with Indian firms for setting up industrial undertakings were approved during the quarter July-September 1961, consisting of 29 British, 19 Americans, 15 West Germans, five each Dutch and Japanese, four French, three each Austrians and Swiss, two Italians, one Canadian and one Australian. The British collaborators and their line of production is as follows:

Name of the foreign firm	Items of manufacture
(1) Messrs Parsons Engineering Co. Ltd	Marine gear boxes
(2) Messrs Monsanto Chemicals Ltd	Salicylic acid and aspirin
(3) Messrs Crosland and Pickstone Ltd	Aniline black dyeing process
(4) Messrs Geo Salter and Co. Ltd	Springs, weighing appliances and machines, etcetera.
(5) Messrs Wadkin Ltd	Wood working machines and lathes
(6) Messrs Paterson Hughes Engineering Co. Ltd	R.O.T. cranes
(7) Messrs A. Reyrolle and Co.	Switchgear
(8) Messrs Doulton and Co. Ltd	Sanitaryware
(9) Messrs William Gardner and Sons Ltd	Miners, sifters, Grinders, etcetera.
(10) Messrs British Insulated Cables Ltd	Cables
(11) Messrs C. J. Hampton Ltd	Stillson wrenches
(12) Messrs Samuel Dracup and Sons Ltd	Jacquard machines
(13) Messrs Lifting Equipment Ltd	Cranes
(14) The Mond Nickel Co. Ltd	S.G. iron castings and special steel castings
(15) Messrs Stone-Wallwork Ltd	P.T.V. gears
(16) Messrs James Howder and Co. Ltd	Boiler auxiliary equipment
(17) Messrs Gilbert Gilkes and Gordan Ltd	Hydro-electric generating units
(18) Messrs W. A. Tysack and Co. Ltd	Chaff-cutter knives
(19) Messrs D. Leonardt and Co. (Highley Pens) Ltd	Steel pens
(20) 1. Bryce Electric Construction Co. Ltd 2. Messrs Wego Condensers Co. Ltd	(1) Power factor capacitors (2) Paper capacitors
(21) Messrs Hard Capsules Ltd	Hard gelatine capsules
(22) Messrs Temperature Ltd	Industrial and commercial refrigeration equipment

(23) Messrs Ruston and Hornsby Ltd	Ruston diesel-engines
(24) The Mond Nickel Co. Ltd	S.G. iron castings
(25) Messrs B. and S. Massey Ltd	Drop forge dies
(26) Messrs Ampins Ltd	Ampins
(27) Messrs P. Y. E. Ltd	Radio frequency, electric heaters and r.f. induction heaters
(28) Messrs Fractional H. P. Motors	Fractional horsepower motors
(29) Messrs McCall's Macalloy Ltd	Square twisted steel bars

Annual State Plans

Discussions between the Planning Commission and the representatives of State Governments on the annual State plans for 1962-63, will start here from 15th November. They will be preceded by discussions on the annual plans of Union territories. The discussions with each State will be spread over three days when the progress of plan schemes during the current year will be reviewed and the programmes and outlays for 1962-63 examined, from the point of view of continuous and integrated development. The importance of drawing up annual plans carefully and keeping in view proper phasing and synchronisation with related

sectors, has been stressed by the Planning Commission, both for the States' plans and Central plans.

Programmes for accelerating progress in agricultural production, including intensification of minor irrigation, soil conservation and extension activities, fuller utilisation of irrigation and implementation of programmes of co-operative movement, speedy development of training programmes, power, primary education and employment-generating and labour-intensive programmes specially in areas suffering from considerable under-employment, have been given a special place in the drawing up of the States' annual plans for 1962-63.

The discussions on the States' plans are intended to provide a concrete idea as possible of the States' resources and programmes with a view to arriving at a realistic estimate of the outlay for 1962-63 and make suitable arrangements for implementation. The discussions with the States will begin with an examination of their financial resources for the year. According to third five year plan, the States' resources for the entire period have been estimated at Rs. 1,462 crores, of which Rs. 619 crores will be by way of additional taxation including measures to increase the surpluses of public enterprises. Some 18 working groups—each dealing with a major specific development aspect—will then study in detail the continuing and new programmes for the State for 1962-63. The annual

plan of the State will be finalised in the light of these studies.

Development of Postal Services

The Director-General of Posts and Telegraphs, Mr. V. Nanjappa, stated here last week that besides the resources made available by the Planning Commission, the Posts and Telegraphs Department might be able to raise about Rs. 50 crores from its own renewals reserve fund and revenue sources. This would mean that the Posts and Telegraphs Department would have to spend 70 percent, 80 percent more than it did during the second plan. This would be possible only if the shortage of equipment and stores is eliminated. In this connection, he pointed out that the Planning Commission had agreed to the preparation of a project report for another unit for the production of cables. The establishment of a second automatic switching equipment factory is also being contemplated. A proposal is also being considered to set up a factory for manufacturing telegraph poles. The Department is also considering the opening of two more workshops, one in the north and another in the south. Mr. Nanjappa emphasised the need for greater co-ordination between the users and the manufacturers of the equipment and said that the Government might consider the setting up of a development council for the telecommunications industry.

AVB CEMENT-MAKING MACHINERY

equal to the World's Best

TREMENDOUS BOOST TO CEMENT AND ALLIED INDUSTRIES

ACC-VICKERS-BABCOCK LTD., the powerful new engineering enterprise, will 'tailor-make' for industry the very latest cement-making machinery.

The AVB Plant at Durgapur is in the final stages of construction. It is equipped with some of the world's most up-to-date machine tools and staffed by highly skilled technicians and experienced design engineers. AVB are now ready to accept orders for cement-making machinery which will be 'tailor-made' to specific requirements.

Now in a position to make a major contribution to the cement industry, AVB will help the nation achieve the Third Five Year Plan target of 15,000,000 tons of cement every year.

AVB will be able to draw on the vast technical knowledge and rich experience of three famous engineering concerns:

THE ASSOCIATED CEMENT COMPANIES LTD.,
INDIA'S PIONEERS IN THE MANUFACTURE OF CEMENT AND CEMENT-MAKING MACHINERY AND

VICKERS LTD., London, WORLD-RENOUNDED MANUFACTURERS OF HEAVY EQUIPMENT FOR MANY LEADING INDUSTRIES

IN CLOSE COLLABORATION WITH
FULLER COMPANY, CATASAUQUA, PA., U.S.A.,
THE WORLD-FAMOUS MANUFACTURERS OF FULLER COOLERS AND OTHER FULLER EQUIPMENT WHO HAVE UNRIVALLED ENGINEERING AND RESEARCH FACILITIES

... a powerful partnership for progress

ACC-VICKERS-BABCOCK LTD.,

London

U.K. CHANCELLOR ALLAYS FEARS ABOUT A RECESSION NEXT YEAR

HOME DEMAND TO BE CHECKED: NO SPECIAL INCENTIVES FOR EXPORTERS

(FROM OUR LONDON CORRESPONDENT)

THE six-day debate on the address in the House of Commons ended with a discussion of the economic situation which, once again, produced little that was new. The speeches generally were below standard, and it was the interpretations rather than any designed development of a theme which were responsible for the only information that was forthcoming. Most surprising, perhaps, was Mr. Selwyn Lloyd's forecast for 1962. Many people have recently been saying that the economic indicators are beginning to point to some recession in trade and employment next year unless the restrictive policy of the U.K. Government is relaxed. The latest F.B.I. survey, the surplus capacity in steel, the difficulties in the textile and durable goods industries, and the moderate, but steady, rise in unemployment, all these suggest that the total demand may be declining not only to the extent of easing excessive strain but in the direction of a real recession. By contrast, this is what the U.K. Chancellor of the Exchequer had to say: "I do not accept that the danger at the moment is that we are moving into a deflationary phase. The advice given to me is that early next year there will be strong expansionist forces at work again." Unfortunately, he did not enlarge on this prediction.

Three other points of the Chancellor's speech indicate the lines along which the British Government is thinking. One is that he is still determined to persist in the "harsh doctrine" of restraining home demand in the hope that growing exports will take up the slack. Secondly, Mr. Lloyd once again rejected all suggestions for special incentives to exporters. Thirdly, he confirmed that legislation to tax short-term capital gains is not meant to introduce a separate tax but to bring certain transactions "within the existing tax system." It would be "an exceedingly complicated matter," and Mr. Lloyd could not yet say whether it would be possible to have a separate Bill before the Budget.

Finally, he informed the House that he is going to look at the pay pause situation early next year. He made it clear that he was not promising to end the pause then, or at any particular time, but he relieved some backbench fears that it is intended to last for ever.

Doubts about Economic Council

During the course of his speech, Mr. Lloyd reported that he had been talking to both sides of industry with a view to forming a joint body which could "influence policy at the formative stage," and was now awaiting a final answer from the T.U.C. Meantime, the latter appears to be moving towards the acceptance of the U.K. Chancellor's invitation to have six representatives on his National Economic Development Council, but it is obvious that the decision will not be taken without conflict and doubt. The Economic Committee of the T.U.C. discussed the planning proposals for an hour and a half the other day, and subsequently maintained that no definite recommendation would be made to the General Council when it meets on 22nd November. Before then, however, the office is to draw up a report for consideration by the full Council, and if this follows, as it should, the trend of the Economic Committee's discussion, it will be weighted towards joining.

The majority of the Committee, in spite of all its reservations about the reality of the Chancellor's conversion to planning as an economic necessity, argued that the T.U.C. could not forget its years of advocacy of planning now that the invitation had come. There were outright opponents of co-operation, as was inevitable, both for political reasons and because of the wage pause policy, while others took leave to doubt whether the proposed Council would not turn out to be another debating society which would prove quite ineffectual in guiding policy. On the other hand, the only way to make sure is to participate, and the probability is that the T.U.C. majority will commit itself to what one member called "an act of faith."

Steel Output Falls Again

Steel production in October declined by 4½ percent to a weekly average of 382,200 tons, compared with the September output. Against the output in October 1960, the drop amounted to 23 percent. The U.K. Iron and Steel Board states that the labour dispute in South Wales was to blame for the difference in production in October and September. This "temporary loss" in deliveries of finished steel products was expected to be made good before the end of the current year.

A similar drop of 4½ percent or 210,000 tons was recorded in the stocks of finished steel estimated to be held by users and merchants during the third quarter, representing a quicker rate of stock reduction than that which took place in the second quarter of this year and being about equal to the rise during the third quarter of 1960. Shifts have been cut and some plants closed for short periods to curtail production. Steel producers are now saying they will be quite pleased if the position gets no worse. Few of them are expecting any recovery before next year.

October Gold Reserves

The October gold figures showing a reduction in the reserves of £8 million to £1,261 million were about in line with most City estimates. Allowing for the £100 million I.M.F. loan repayment, other specified once-for-all payments of £15 million and an unspecified small repayment of debt under the Basle Agreement, it appears that there was a true surplus of more than £110 million. On the face of it, this is the best month for the reserves for about ten years, but it is the quality and not the size of the credit which really counts. While last month's good figures undoubtedly reflect the growing confidence in the pound leading to the closing of "short" positions, they also owe something to the continued inflow of "hot" money to London. To what extent they may have reflected a genuine improvement in the underlying payments position of the sterling area can only be surmised. The monthly figures are far from being a reliable guide.

Hire-purchase Debt Falls

The amount of money owing under hire-purchase agreements fell by £2 million in September to a total of £953 million. According to figures issued by the U.K. Board of Trade the amount owed directly to finance houses fell from £660 million in August to £650 million at the end of September. The amount owed to household goods shops fell from £305 million to £303 million. With the inclusion of the high figure for July, which arose from the spending spree that preceded the "Little Budget," credit extended in the third quarter amounted to £194 million—somewhat higher than for the comparable quarter of last year. Repayments on outstanding contracts during the quarter totalled £198 million.

Jute

GUNNY MARKET DOMINATED BY LOCAL SPECULATIVE ACTIVITY

EAST INDIA EXCHANGE CONSIDERING REINTRODUCTION OF MARGINS

GENUINE business has been poor in the jute goods market during the past week, although there has been considerable bazaar activity in the near positions. Mills have not been showing much interest as far as contract jute is concerned, but those with agencies have been active, and a fair amount of jute purchases have been made now that Daissee and mesta are becoming plentiful. On the whole, however, it is estimated that purchases fall short of the current consumption of fibre. One would not expect Calcutta mills to consume large quantities of jute before thinking of buying any more. They cannot easily forget the previous experience of allowing their stocks to fall to a very low level and being left with no weapon to fight the forcing up of values. But circumstances today are different. A bumper crop is in the offing and that alone should stop fibre prices from rising. Indeed, much thought is being given to ways of preventing prices from falling too low and proving unremunerative to the grower, since that would start off again the chain of events resulting in less sowing and another short crop. The building up of a buffer stock, which has been suggested on many previous occasions but never officially put into practice, is the obvious answer to prevent prices from falling too low, and conversely to prevent them from soaring too high. Government circles at present appear to be anxious to support this project, but some wonder whether the keenness will continue after the first half of next year, when the general elections are over and there is no longer any need to "woo" the cultivators for votes. It is then that the work of a buffer stock agency will be most important, as during the current season it is unlikely that there will be a large surplus to take up. Estimates indicate that stocks, will account for most of the current crop. However, the machinery must be there to be put into action should the occasion arise.

Official Crop Forecasts

So far, no official crop forecasts or estimates have been issued by the Government. Many in the trade consider this to be a good thing, as in previous years Government estimates have been notoriously inaccurate, and have usually been followed by wild fluctuations in the market. It appears that, over the past year, the authorities have not been willing to admit that there was a short crop, and are prepared to issue figures only when it suits their purpose. Whether the Government issues forecasts or estimates in the future does not seem to be serious under-estimates or over-estimates? Is the Department of Agriculture so inept that, with all the means at its disposal, it cannot get as near to the probable return as private firms can? The question arises whether, if the Department cannot arrive at an estimate more in accordance with the facts, it would be better to abandon the attempt altogether. One cannot help wondering whether operators abroad derive any benefit from being presented with figures which have proved to be so utterly unreliable. It is to be hoped that if estimates and forecasts are prepared in the future, they will be more accurate than hitherto.

At present, the jute goods market seems to be passing through one of those periods of dullness when there is no indication anywhere, metaphorically speaking, of a breeze to carry the ship along. In the early part of the season, the whole of the market was bullish, there was hardly a bear, and if one showed himself, he was promptly scorned. The end of the period of a short crop, the prospect of a bumper crop in the coming season and the movement of prices. The infection soon spread. Consumers do not buy in a falling market if they can hold off; hence the cessation of demand from consuming centres, and the reduction of stocks, particularly in the U.S.A. The position now appears to have changed, with the market more bearish than bullish. It would probably not need very much in such a market to make the sentiment bullish again. The bears will then start covering and the contrary movement will be under way before one has recognised the situation.

Reintroduction of Margins

For this reason, it is gratifying to record that the East India Jute and Hessian Exchange is again considering the reintroduction of margins on purchases, both of pucca goods and in futures, for November delivery. This, it is hoped, will curb the fresh wave of speculation which, whether coincidental or not, has begun with the return of a prominent speculator to Calcutta. The genuine demand for goods in Calcutta has been small and the tendency has been towards lower prices. The market for manufactured goods has been listless, lacking support from overseas. Bear speculators, who previously satisfied every enquiry which came from abroad while refraining from covering,

are active now at the lower prices. Others are still holding out for the best prices they can get. The raw jute market has shown little change over the past week, although it advanced after the week-end in sympathy with jute goods. There has been some demand, and the particularly keen sellers are prepared to reduce their prices by 50nP. Buyers, however, do not seem to be satisfied, as there are still many sellers at the current rates or less. This is the result of mofussil prices being in greater parity with Calcutta rates.

I.J.M.A. Production Figures

The production of mills reporting to the I.J.M.A. was 77,700 tonnes in October, made up of 31,500 tonnes of hessians (40.5 percent), 37,600 tonnes of sacking (48.7 percent) and 8,600 tonnes of other goods (10.8 percent). The total was 1,600 tonnes more than in the previous month and was achieved in 17½ working hours, which was 2½ hours less than during September. Total production for the period from July to October 1961 is now 295,500 tonnes, made up of 113,100 tonnes of hessians, 138,900 tonnes of sacking and 44,500 tonnes of other goods. This total was achieved in 682½ working hours.

THE JUTE MARKETS

Manufactured Goods: The market was quiet at the opening with no overseas interest and speculators pausing. B Twills dropped by 50nP to Rs. 138.50 and 40in. 10oz. hessians by 25nP to Rs. 50.25. Prices fell further after the publication of the I.J.M.A. stock figures, which showed an in-

crease at the end of October. With the prospect of stocks showing a further increase at the end of the current month, in view of the increase in production and the lack of interest from abroad, sacking rates fell further by Rs. 2.50 and hessians by 25nP. Covering in the near positions at the lower levels, and speculative buying, caused prices to recover, so B Twills rose by Rs. 1.75 in the near position, but the January-March position dropped by 50nP. Heavy speculative activity over the week-end caused wide fluctuations. B Twills on Monday morning rose by Rs. 5 to Rs. 143, while 40in. 10oz. moved up by Rs. 1.35 to Rs. 51.85. Holders came out to sell at the higher rates, and by Tuesday, sacking prices were Rs. 2 lower. The transactions were confined to local bazaar operators and speculators, while foreign buyers continued to sit out of the market.

Opening quotations on Wednesday morning were as follows:

	November	December	Jan.-March
40in. 7oz.	39.00	37.00	34.85
40in. 8oz.	42.00	39.50	37.35
40in. 10oz.	51.25	48.75	46.50
B Twills	140.50	132.00	126.00
Heavy Cees (Plain)	138.50	132.00	126.00
A Twills	166.00	158.00	153.00
Liverpools	158.00	150.00	143.00
Cornsacks	140.50	134.50	128.00

Raw Jute: There was very little interest in the fibre market at the opening, and Assam quotations were unchanged at Rs. 32. Small business was recorded at these rates, and at 50nP higher for ready bills of lading. Upcountry markets were inclined to be easier and there was greater parity between Calcutta and mofussil prices. These conditions prevailed until the week-end, when, in response to heavy speculative activity in the futures market and small genuine buying, rates were advanced by 50nP. This was only a temporary rise, as on Tuesday business was again conducted at Rs. 32. Most of the business transacted was for near delivery or November-December shipment. Arrivals in the Daissee and mesta markets improved, and there were keen sellers from these agencies. Arrivals in Cossipore last week showed an increase of about 100 wagons, a total of 450 wagons being logged. Mill agents, both in Cossipore and upcountry, were very active, and this was one of the main reasons why prices showed no signs of falling further. Flats have been taking longer to come to Calcutta in recent

SCHLOEMANN

14,000-ton Extrusion Press

It pays to know more about SCHLOEMANN

Sales targets are difficult to achieve when production is hampered by obsolete equipment. SCHLOEMANN is prepared to modernize your plant with highly efficient machinery, for either light or heavy work.

The two 14,000-ton extrusion presses installed at Alcoa's Lafayette Works — the largest units of their kind in the States — are fine examples of SCHLOEMANN skill. Capable of extruding profiles up to 40" wide and seamless pipes up to 20" o. d. from aluminum billets weighing 5,000 lbs., these presses provide cost-conscious designers with new possibilities in many branches of engineering.

If you are concerned with the plastic forming of non-ferrous metals and steel, it will pay you to consult our engineers.

THE PAKISTANI JUTE MARKETS SELLERS WITHDRAW AS FIBRE FAILS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

ARRIVALS have fallen off considerably, and the market, if not firm, has been at least steady during the past week. The intermediary seller between the grower and the baler has during the last few days lost a considerable amount of money. The grower has each day found prices lower and buyers less keen. The result has been that sellers at most stages have withdrawn and less jute is available. The balers' position, however, remains financially weak, and prices have not increased in spite of the fall in arrivals. While there are various reasons for the balers' shortage of finance, one most certainly is the chaos which exists in the port, thanks to the new scheme introduced by the U.K.-Continental Conference, which ironically they call rationalisation or pooling. In brief, this means that each line may carry only a specific number of bales to certain ports. To work this ill-chosen scheme at all efficiently, it is essential that an accurate estimate should be made of the jute which will be offered for shipment during the current month. During October, the Conference under-

estimated by some 30 percent with the result that although there were vessels in port with ample space to carry more cargo, they had to refuse it since they had already carried their quota for the month. This resulted in a heavy congestion in ports, and although the Conference eventually made vessels available, the delay in shipment means delay in negotiating documents and obtaining money. There is every indication that the same thing will happen at the end of November.

The shortage of finance is also being felt in the markets of Daulatpur and Narayanganj, but the steadier undertone has resulted in the cuttings improving in prices by some Rs. 5 a bale and even Hearts, which were unsalable, are now available at Rs. 6 or Rs. 7 a bale higher. It would not be fair to say that the market is firm either in loose or in the pucca bale market. There is no doubt, however, that the fall in prices has stopped and there may well be an improvement of some significance, if arrivals continue to fall and the financial position improves.

The overseas market, which was reported to have been waiting for a further drop of £5 to £10 a ton in prices, has reacted fairly quickly to the steadier undertone in East Pakistan, and although prices have not risen very much, there is no doubt that there is more buying interest at prices which are closer to E.P.C.s. There is also a certain amount of resistance from balers. There has been an appreciable reduction in E.P.C. figures, which brings them closer to the slightly improved overseas market. Since the changes are rather extensive, the new E.P.C. prices are quoted below, excluding the higher grades which are no longer available. These prices are f.o.b. net a ton. Export Firsts £118; Export Lightnings £92; Export Hearts £73; Dacca Tossa 5 £128; Dacca Tossa 6 £115; Crack Tossa 2/3 £139; Crack Tossa 4 £129; Dundee Tossa 2/3 £128; Dundee Tossa 4 £113; Outport Tossa 2/3 £97; Outport Tossa 4 £76; Crack Daisee 2/3 £113; Grade Daisee 2/3 £97; Superior N.C. £68; S. N. C. £55; N. C. £43; M. C. £43; Cut Ropes £51; Habi jahi £55; S. M. Rejections £57; T. C. £44; and D. T. C. £55.

THE FOREIGN JUTE MARKETS STEADIER TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute sellers are most reluctant to allow prices to fall. Last week, after a spell of easier tendency, prices were steadier again and most sellers quoting cheaper rates withdrew from the market. Bids were made at slightly less than the quotations, but these were turned down—much to the disappointment of the spinners who were prepared to make the bids. The latter apparently consider that the values are much too high. It is reported that the better quality jute is being held up for higher prices, but spinners in Dundee as well as those on the Continent are just as determined to stay out of the market until the prices become more reasonable. Anyone wishing to buy really good jute would require to pay around £200 a ton, but the spinners would not get buyers to pay the rates which would have to be charged for the yarns or cloth made from such expensive material. Meanwhile, reports continue to circulate that the quality of the crop this season is poor. Harvesting has been finished, and it is believed that the total yield is something over 5 million bales in Pakistan, which should be ample to meet all requirements, with a balance left over.

Offers are being quite freely made. Mill Firsts are more frequently mentioned at £151 a ton, with Mill Lightnings at from £127, Mill Hearts £102, and Grade Hearts £83, while Grade Tossa-2/3 is lowest at £138, fours £122 and Continental Tossa-2/3 £106 for November-December shipment, c.i.f. U.K.-Continent.

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total production of jute goods for October as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	2,832 metric tons (2,787 tons)
	94.65 thousand metres (1,02.5 lakh yds.)
(b) Sacking	36,916 metric tons (36,333 tons)
	7,802.21 thousand metres (8,63.1 lakh yds.)
2. Gunny Cloth	
(a) Hessian	28,667 metric tons (28,214 tons)
	9,84.67 thousand metres (10,76.9 lakh yds.)
(b) Sacking	645 metric tons (635 tons)
	12.12 thousand metres (13.3 lakh yds.)
3. Other Manufactures	8,616 metric tons (8,490 tons)
4. Total Production (All kinds)	77,676 metric tons (76,449 tons)

Summary		(000 metric tons and 10,000 yds.)		(000 metric tons and tons)	
Oct. 1961	Sept. 1961	Oct. 1960	Sept. 1960	Oct. 1961	Sept. 1960
Hessian	10,79.32 (11.80)	10,09.44 (11.04)	11,33.99 (12.40)	31.5 (31.0)	30.5 (33.6)
Sacking	8,02.33 (8.77)	7,72.56 (8.45)	9,66.12 (10.57)	37.6 (37.0)	36.3 (35.7)
Others				8.6 (8.5)	9.3 (9.2)
Grand Total				77.7 (76.5)	76.1 (74.9)
Hours worked				178.5	181.0
				208.0	

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-members mills. The figures in brackets are in British units.

KERALA TO REVISE MINIMUM WAGES ON PLANTATIONS STRIKE CALL BY UNIONS WITHDRAWN

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Kerala Government has notified its intention of revising the existing minimum wages for plantation workers. According to a recent official announcement, the State Government would place its "concrete proposals" before the State Minimum Wages Advisory Board. For this purpose, an urgent meeting of the Board has been summoned. After the new rates are considered, they will be published in the Gazette. Employers and workers will be given an opportunity to present their views before the revised rates are finalised. The State Government has appealed to employers and labour to desist from taking any step which might endanger industrial peace on plantations in view of its preparedness to revise the existing wage rates on the basis of the recommendations of the Wage Revision Committee appointed in 1953.

In response to this request, the plantation labour unions, which issued a strike call on 13th November, withdrew the call. There would not be any strike in Kerala plantations on this issue until the results of the Government's fresh move are known. The I.N.T.U.C. did not join other labour unions in issuing the strike call since it felt that a strike was unnecessary in view of the Government's willingness to take action under the Minimum Wages Act. The minimum wages now in force on Kerala plantations were fixed in 1953. The workers' case is that the rates have outlived their usefulness. The cost of living had gone up to such an extent that they had become "starvation wages" and not minimum wages, they argue.

Tripartite Conferences

Employers have clarified their views in the tripartite conferences convened by the State Government to explore the possibilities of a settlement between the employers and employees on the latter's demand for an increase in the wage rates. They said that they had no objection in revising the existing wage rates before the recommendations of the National Wage Board were available provided the workers were willing for a long-term settlement. The wage rates so fixed should be accepted by workers irrespective of the National Wage Board's recommendations. They were not willing to consider the workers' demand for an interim wage increase. Workers, on their part, were unwilling to commit themselves to a position under which they could not claim the benefits, if any, under the Wage Board's report. So the negotiations failed.

RAISING TEA CONSUMPTION IN U.S.A.

GOOD RESULTS ACHIEVED BY AMERICAN COUNCIL

(BY A SPECIAL CORRESPONDENT)

THE American Tea Council appears to be making great efforts to popularise the habit of tea drinking. There is much competition in North America not only between tea and coffee and other beverages but actually in methods of making tea. A favourable point for tea is that grocers say it costs no more to handle it than coffee, but the return is four times higher. Iced tea from instant tea is popular in hot seasons since there is no need to boil the water and steep the tea in preparation. Experts say that is alright as far as refreshment goes, but instant tea has no real tea flavour, and the demand falls away in the winter. But this product is constantly being improved. Nevertheless, the cost question is still important. At the time of writing this report, sales of tea bags topped the demand in America followed by leaf teas and then instant tea; but it is expected that the consumption of instant tea will increase faster than that of leaf tea.

Interesting Advertisements

The Tea Council of the U.S.A. has printed many interesting advertisements. The advertisers have drawn attention to the fact that, even with sugar, tea is refreshing but not fattening. The Council says hot tea sales should be pushed up from \$2 million to \$18 million and iced tea sales to \$35 million a year, so one may hope for continued expansion of tea sales in the U.S. market. But it is necessary to point out that while the expenditure on tea promotion has risen from \$14 million in 1959 to \$18 million in 1960, the advertising costs of competing beverages were reported around \$651 million last year.

Propaganda by Tea Board

It is understood that the Indian Tea Board has already approached the Government of India about the desirability of starting special propaganda in the U.S.A. independently of the American Tea Council. Cannot something on these lines be arranged for the E.C.M.? Meantime, the Indian Tea Association has submitted a memorandum asking for the reduction of taxation. At present, the E.C.M. countries impose fairly heavy taxes on tea;

but if Britain secures membership, more favourable conditions can be expected.

Tea Sales in E.C.M.

As for Britain joining the European Common Market, one has to remember that "self-preservation is the first law of nature" and both on economic and political considerations, the U.K. must join the E.C.M., for, as Mr. Duncan Sandys has pointed out, if excluded from Europe, Britain will be an economic "backwater" and politically weak, but a united Europe with a population around 250 million will be a far better challenge to communism. India and other Commonwealth countries are generally expected to benefit in the long run from this association because developing countries need capital and a financially strong Britain will help provide it.

Reducing Production Costs

As far as India's tea exports are concerned, the primary need is to reduce production costs. The Government of India should remember that east African estates secure the bulk of their cultivation and manufacturing requirements free of import duties. It should see that this country's exportable commodities are not priced out of world markets. There appears to be no doubt that India is gradually losing her export markets in tea to cheaper producers. This matter would appear to require immediate attention because a vast new field for consumption may soon become available in western Europe.

COCHIN TEA SALES

At Sale No. 46, 518,000 kilograms of tea were on offer. There was a fair demand. Prices were 20nP to 30nP lower for everything, except best liquoring Nilgiris which were irregularly dearer.

PRODUCTION COST

Ease out of that profit squeeze...

Decentralisation and lower profit margins make the profit-and-loss statement the real measure of each plant's efficiency. That's why it is increasingly important for management to study methods to ease out of the profit squeeze. Planned Lubrication gives management such an opportunity for savings.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned Lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

CALTEX (INDIA) LIMITED Bombay · New Delhi · Calcutta · Madras

THE DISPUTE OVER OIL PRICES

It would seem from the Press reports that the attitude adopted by Mr. K. D. Malaviya, Union Minister of Mines and Oil, in the Lok Sabha last Monday, towards the recent decisions announced by the private-sector oil companies, was remarkably reasonable and balanced. The Minister apparently showed none of the panicky indignation which, so earlier reports suggested, was the first reaction from official circles to the companies' statements. But then, Mr. Malaviya has been playing his game with the companies for a long time and perhaps anticipated some such development. The commendable fact is that he has not yet taken advantage of the lamentable lack of public knowledge of the real issues at stake to turn opinion against those all-too-handy whipping boys, the international oil companies. It is to be hoped that all subsequent developments in this difficult matter will be handled with the same discretion. Talk of a "Cuban" situation arising in India is not only premature, it is unnecessarily and expensively damaging to India's image abroad, and especially—*as might have been noticed during Mr. Nehru's recent visit to the U.S.A.*—in those countries on whom the growth of her economy is now entirely dependent.

The decision announced by Mr. Malaviya to relax temporarily the provisions of the Damle Report concerning discounts on imported products, although it does not go far enough, is also a reasonable gesture. When the six-month period has elapsed, market conditions will almost certainly be able to import their products at suitable discounts, or the isolated examples of such importing in countries abroad, on which the Minister is no doubt laying great store, will have disappeared. Furthermore, with the election out of the way, it may be possible to relax attitudes all round without arousing too much public attention. It is even possible that Mr. Malaviya, whose policy has often been stigmatised as primarily a personal one, perhaps unfairly, will have moved on to another portfolio. At any rate, the flexibility shown by the Minister should help avoid any sudden cut in petroleum supplies such as might result from the companies being forbidden to buy their products at posted rates. It is clear that the fate of the Damle Report now depends on the future movement of world market prices for products, especially those posted in the Persian Gulf. It might have been better had the portion of it referring to products been withdrawn altogether. India is in no better position to dictate world oil prices than any other country. Mr. Malaviya's point that the Middle Eastern refiners get their crude at a discount, so should be able to reduce the prices of their products, is irrelevant to the fact that product prices are determined by the supply and demand for them at any one time or place, and not by the costs of refining. To concede special rates for India would be to invite applications from everybody. And those in the Ministry who rightly point out that India urgently needs to save foreign exchange would do well to take the matter up with the Governments of those countries who share the refinery companies' profits, and who are apt to consider their need to be at least as great as India's.

This point about the saving of foreign exchange is perhaps the most difficult of all to understand, at least from the Government's point of view. When so much of the justification for the present attitude towards the private-sector oil companies is ostensibly based on the need to conserve foreign exchange, it is surprising to learn that the companies' installed capacity is not being used to the utmost. If this surplus capacity is part of the Government's intention, at the same time as considerable foreign aid resources are being expended on building new capacity in the public sector, then the unbiased observer cannot be expected to believe that the saving of foreign exchange is a fac-

tor of any great importance in formulating current oil policy. The companies have underlined this doubt by offering to increase their throughput of crude as an alternative to the discounts they are unable to get on imported products. The fact that the Government has not jumped at this can mean only one thing: that it is more important in the context of its oil policy to discomfort the companies than to save foreign exchange. If this is so, then it is time the question was asked quite frankly whether or not India can afford to spend valuable resources on such a questionable venture, especially when the long-term political advantages are likely to be as illusory as the immediate economic disadvantages will be inescapable.

Why Mr. Malaviya should wish to regard the companies' suggestion for increasing imports of crude as being entirely separate from the subject of the Damle Report—if this is in fact the correct interpretation of his words—is quite impossible to fathom. Presumably neither the Report itself nor the companies' suggestion is entirely irrelevant to the problem of foreign exchange. Indeed, the companies would have been justified in going further and pointing out to the Minister, which they have no doubt already done privately long ago, that if India is really serious in wishing to save foreign exchange there is no reason for refusing earlier offers to expand refinery capacity, especially when it was proposed this should be done entirely at the companies' expense. This is still, of course, the most sensible alternative facing the oil policy in its present difficulties. But there need be no mistake made about its prospects. Mr. Malaviya has already declared himself on this subject, for reasons which even he would blush to classify as economic, and his stubbornness is now assured. If such action gives rise to doubts abroad as to the real factors on which India's oil policy is based, then the Government has only itself to blame. The impact this kind of thing can have on the attitude of prospective foreign investors is something which also has to be taken into the foreign exchange account. But the regrettable fact has to be recognised that when it comes to oil policy nowadays foreign exchange is simply no object.

If Mr. Malaviya's words are to be taken at their face value, the attitude of the companies is a form of blackmail based on the threat of eventual stoppage of the imports of all products. If this is so,

CALCUTTA PORT IN TROUBLE

THE serious difficulties which have been developing at Calcutta port during the past few weeks are now reaching the stage where prompt and energetic action will be necessary if a major crisis is to be averted before the hot weather sets in. From the point of view of shipping operations, the port has long held the dubious distinction of being among the world's worst. Situated 120 miles up the Hooghly, it has suffered from the fact that the flow of water in the river has been decreasing and the rate of silting has thus steadily risen. To this basic problem have from time to time been added such factors as neglect, mismanagement and recurring labour troubles. The complacency with which the problems have been tackled is surprising, considering that Calcutta port handles well over 40 percent of India's exports and a very large proportion of her imports. On its efficient working depends to a large extent the economic progress of its rapidly industrialising hinterland. Yet hardly a year passes without the threat of a major crisis which could sharply reduce the port's already inadequate handling capacity.

The latest troubles arise from one main circumstance. It is that there has been an unusual accumulation of cargo at the port.

then their guilt must obviously be viewed against Mr. Malaviya's own threats of replacing their supplies by oil from the Soviet Union. It is unfortunate that India's oil policy should now have been pitchforked into the cold war, and if attitudes such as these are allowed to harden on both sides, then a "Cuban" situation cannot be entirely ruled out. Apart from the patent fact that India cannot afford to take the risk of becoming another Cuba, which is now completely at the mercy of the Soviet Union, both politically and economically, it is useful to investigate whether Russian oil is a practicable alternative. Without disputing India's right to import oil from any source which is prepared to supply it at favourable prices, it must be remembered that Russian oil policy has two important motives which are not necessarily subsidiary to that of earning foreign exchange for the Soviet Union. These are the pursuit of economic penetration and the opportunistic discomfiting of the West. To base any bargaining policy on artificial Russian oil prices, therefore, is not only politically dangerous, it is apt to lead to serious economic repercussions as well. The lesson of Cuban sugar cannot have been lost on India; she after all has attempted to be one of the chief beneficiaries. Furthermore, there is no guarantee that the prices of Soviet oil will remain anything like as favourable when Russia has a monopoly of imports. It would be no consolation for India to get rid of the private-sector companies, and incur the political and economic consequences involved, only to find that the prices of her imports were no better than those at which she had been buying previously. There is no doubt that the Russians would be delighted to provide India with all the cheap oil needed to gain a monopoly of her imports, but there is no guarantee that the price paid in the long run would not be considerably higher than it would have been had India bought her oil for hard currencies in the open market.

The alternative is for the Government to meet the growing internal demand from its own refining capacity. This can be dismissed immediately as impossible for many years to come. No Government refinery has yet been completed, and sited as they all are to deal only with indigenous crude, none is in any case conveniently situated for using imported supplies. No doubt Mr. Malaviya regards the public-sector refineries as the ultimate answer to his difficulties with the private-sector companies, but this is a long-term one indeed, is quite unnecessarily wasteful of foreign exchange, and will retard the growth of India's oil consumption even more than the present policy of high consumer prices, a virtual standstill on private exploration, and the restriction of private refining activities and capacity. The cost of socialism in oil policy is fast becoming a very prohibitive one indeed.

Diamond Harbour. Balari is a difficult stretch to negotiate at the best of times, since it is the location of one of the Hooghly's most treacherous sandbars. By the middle of October this year, the silting had reached the point where the Balari channel simply had to be closed to traffic. It is fortunate that a few weeks earlier, towards the beginning of September, an alternative had been opened; this was the Rangafalla channel, which lies a little to the east of Balari. Had Rangafalla not been brought into operation, it is conceivable that all seagoing traffic to and from Calcutta port would have stopped. The difficulty now is that the Rangafalla channel is suitable only for emergency use, and cannot be a permanent alternative to Balari. The drafts available in the former are highly unpredictable, and have in fact decreased since the middle of October. Since its depth depends on the ebb flow of water, the Rangafalla channel is certain to show a sharp deterioration of drafts by about March next year, when the flood becomes stronger. It appears, therefore, that the only solution is to cut a new channel through Balari before Rangafalla becomes unserviceable.

This is, in fact, being tried. Experiments have been going on at the research station in Poona to see if it would be feasible to cut a new alignment

in the Balari area. Meanwhile, a dredger has been put to work there already, and it is reported that the results have been promising, in that the depth at low water has increased from nil to three feet. On this basis, it is thought that a channel nine feet deep will be available through Balari by March 1962, although the success of the new alignment depends on the experiments which are being conducted in Pooma. Yet the basic difficulty remains, which is that Calcutta port does not have enough dredgers. The six it does have are not all always available for use. One or two are frequently out of commission because of breakdowns, maintenance requirements and annual surveys. The four or five dredgers which are normally available are far too inadequate for a river which has well over a dozen sandbars. At the present time particularly, intensive dredging has to be done in the Ninan-Nurpur area in connection with the Fulia Point scheme. Thus it is rarely possible to spare more than one dredger for the Balari channel.

The immediate problem, therefore, is to get another dredger working on Balari. It is reported that the port authorities have been discussing the possibility of using a Dutch-owned dredger now lying in Calcutta for this purpose. Formerly, the idea was that this dredger could be used with a 500-metre pipeline, which would be long enough to throw the dredged Balari silt right out of the river. But now, it is believed, the use of only a 200-metre pipeline is considered feasible. This is less satisfactory, since it would mean that the silt would merely be moved from one part of the river to another, and might flow back again. The suitability of the Dutch dredger in other ways also remains to be proven, and that can be done only when it is actually used. But, in view of the emergency, it is essential that it be put to work immediately, so it is to be hoped that the negotiations on the subject with the Dutch owners will not be unnecessarily delayed. Another possibility which is said to have been discussed is the use of a relatively new type of dredger from the United States. This type has never been used in India before, but is claimed to be particularly suitable for conditions such as those obtaining on the Hooghly river. It will not, in any case, be available before March 1962, whereas intensive work on Balari has to begin well before that time. It does, however, seem advisable that the U.S. dredger be hired as soon as it can be, and that meanwhile the port authorities' dredging capacity be supplemented by the use of the Dutch vessel. The authorities could later offer an explanation why they have not followed the advice believed to have been given by the World Bank that they should order two suction dredgers immediately. Instead, it appears that they propose to order only one for the time being from the World Bank's money, reserving the second order for perhaps a U.S. dredger whose suitability is yet to be proved. An effort could also be made to borrow a dredger from another Indian port before the situation in Calcutta becomes desperate.

That it could become desperate, need not be in doubt. It is believed that a preliminary warning has already been given that drafts next January are likely to be at least a foot less than in December. The possibility of a further deterioration in later months cannot be ruled out. There is reason for anxiety in the circumstance that much of the success or failure of dredging depends on natural factors which appear to be largely unpredictable. These factors, it is believed, were mainly responsible for the Balari channel being only six feet deep towards the beginning of September, when the intensive dredging should have made it well over 14 feet deep. Conversely, similar factors have contributed to the relative success of the recent dredging operations at Balari. But while the powerful influence of nature cannot be denied, it would be strange if the port were to base its continued existence on the prospect of heavenly bounty. Natural adversities have to be anticipated and fought; the main way that can be done is to get more dredgers as fast as possible, and to use them intensively.

The serious harm which the silting of the Hooghly, and the consequent decrease in drafts at Calcutta port, has done, has never been properly appreciated by the authorities, especially in New Delhi. The harm done to the shipping industry is direct and obvious enough. Vessels are delayed, and considering that the modern ones cost Rs. 5,000 to Rs. 10,000 a day to run, the delays mean so much spent and nothing earned. Furthermore, with poor drafts, ships have to go in and out of Calcutta with much less than their full loads; a decrease of one inch in the draft means that the ship has to carry 50 or 60 deadweight tons less of cargo. In busy periods, because each vessel carries less, more vessels are required to carry the same total of cargo, which adds to the already deplorable congestion in the port. But it would be an error to suppose that the adverse consequences are confined to the shipping industry alone. Ultimately they affect trade and the economy as a whole. When exports are delayed, foreign exchange earnings

suffer. When imports are delayed, industrialisation plans are held up, and so also are essential supplies like foodgrains. It is surprising that the future of a port such as Calcutta, which handles hundreds of crores of rupees worth of traffic each year, is constantly jeopardised by tardiness in securing dredgers which would perhaps cost about a crore each. The delay is the more surprising considering that the inadequacy of dredging capacity has existed for at least a decade. The one sure thing

INDIAN EXPORTS TO NORTH AMERICA

INDIA'S exports to the U.S.A. and Canada have been falling, both relatively and absolutely, over the past several years. A study of the recent trends by the World Trade Department of the Indian Chamber of Commerce shows that this country's share in total U.S. imports, which have been averaging Rs. 7,125 crores a year, amounts to only 1.5 percent. As a proportion of her own exports, Indian sales to the United States have fallen from 14 percent in 1955-56 to 16 percent in 1960-61, while her American imports have been rising sharply. Exports to Canada have fared even worse, although that country's foreign trade has been expanding; her imports, especially, had gone up to \$5,492 million in 1960 from \$4,712 million in 1955. Her purchases of Indian goods have declined from \$35.1 million in 1955 to \$29.4 million over the same period. India had an adverse trade balance with Canada of Rs. 13 crores and Rs. 2 crores in 1959 and 1960, respectively.

This can scarcely be satisfactory from India's point of view, especially when she needs to increase her exports to these countries which are now her major suppliers of foodgrains and capital goods. These two countries, the study emphasises, comprise the most prosperous markets in the world, and as their populations increase, their potential grows. The U.S.A. has at present a population of over 170 million with an average family income of \$6,130 a year, and Canada has a population of 18 million with a per capita income of \$5,100 (Rs. 7,140). There should, therefore, be scope for increasing India's exports of finished goods, particularly to the U.S.A., and not only of raw materials and primary commodities. It is pointed out that in spite of her highly developed industrial economy, the U.S.A. has been importing finished goods on an increasing scale. Between 1953 and 1960, these imports have more than doubled, from \$2,190 million to \$5,260 million. The authors do not subscribe to the "common belief" that the U.S.A. is likely to restrict her imports to reduce her balance of payments deficit. They even believe that where these interests conflict with her broad objectives of strengthening the free world's defence and of maintaining a multi-lateral world trade and payments system, the latter will be the overriding consideration in the formulation of her policy. This view, to say the least, is unconvincing, and Indian exporters are unlikely to receive much encouragement because they belong to the free world. If they are not more successful, it is because the prices of their products are less competitive and the quality less desirable. In fact, as the authors themselves point out, the U.S. buyer has been importing more of his finished goods requirements solely on account of superior quality and competitive prices and not due to any desire to honour the world political and economic commitments of his Government.

India's main traditional exports to the U.S.A. are jute goods, cashewnuts, tea, pepper, castor oil and manganese ore. She is also a major supplier (the largest for burlap) of these commodities. But competition from old rivals is increasing, and new ones are coming up. So the problem now is how to maintain the existing footing. The study, which has made a useful item-by-item analysis of these exports, shows that burlap consumption in the U.S.A. declined sharply to 243,000 metric tons in 1960 from 260,000 metric tons in the previous year, but the prospects for a revival in demand are encouraging. Competent U.S. sources have been quoted as forecasting a rising trend in the consumption of hessian over the 1960-65 period. The Indian industry can take advantage of the situation only if it is helped by self-sufficiency in the raw material supplies and stability in prices, it is stressed. India's tea exports to the U.S.A. have also been declining, while the latter's total imports of this beverage have been steadily going up. The main reason is the high price of Indian tea, which includes an element of fluctuating, and therefore irritating, export duty. As for the other items such as coffee, manganese ore, shellac, castor oil and pepper, the authors have expressed the view that in spite of certain upsetting factors which have affected these exports, with a proper and imaginative drive the lost position can not only be regained but might even be improved. This is much too general; some detailed suggestions might have added to the value of the survey. The same applies to the suggestion that as more and more

about the otherwise unpredictable Hooghly river is that it will go on silting for many years yet. This is because its water is being diverted in the upper reaches by the D.V.C. irrigation system; because the construction of river training works has until recently been largely neglected; and because the Farakka barrage has not been built. Calcutta urgently needs to supplement its dredgers with new ones if it is to survive as a major port in the years to come.

items are entering the export trade, especially engineering goods, of which the U.S.A. has increased her purchases over the past few years, all avenues should be explored to increase their sales.

India's adverse balance of trade with Canada is largely attributed to increasing competition and her own inability to supply goods of the right price and grade. This country continues to enjoy preferential rates of duty in the Canadian market, yet she has been losing ground to her competitors. This shows that not only are her prices not competitive, but quality also is not what it ought to be. The study emphasises that not until Indian exporters are able to improve the quality of their goods and bring down prices adequately will they be able to make much headway with the discriminating Canadian buyer. There is also a need for diversifying the exports, which it is suggested should be attempted right away. The scope for expanding the traditional items such as jute goods, tea, pepper, cashew and printed cotton textile does not appear to be very great in the near future. That makes the exploration of new lines unavoidable if the export trade with Canada is to be expanded.

TARIFF PROBE INTO WOOLLEN GOODS

THE woollen industry in India has grown without protection or planning. The total number of factories as on 1st January, 1961, was 257, out of which only 43 units—comprising 21 composite mills and 18 purely spinning and four purely weaving units—were registered under the Industries (Development and Regulation) Act. The rest is in the small-scale sector. It is difficult to estimate the number of woollen hosiery units, but they are said to be over 900. The installed capacity of the industry at the beginning of the year was 195,315 spindles, out of which 126,284 were worsted, 53,504 woollen and 15,527 shoddy spindles. The productive capacity of the spinning and weaving sectors has been estimated at 89.7 million lbs of yarn and 71.7 million yards of fabrics on a three-shift basis. With the installation of additional capacity already sanctioned, the spinning and weaving capacity is expected to rise to 96 million lbs of yarn and about 72 million yards of fabrics a year. According to the Federation of Woollen Manufacturers in India, the industry is running one-and-a-half shifts on average. The All-India Woollen Mills Association points out that the worsted spinning sector is working a little less than 50 percent of the installed capacity. The Hosiery Industry Federation says that only 33 percent to 40 percent of the capacity is being used at present. The under-utilisation of the production capacity is said to be due to the acute shortage of raw material.

Although India is a large wool producing country, due to lack of progress in sheep rearing, wool clipping and grading, the country has to export the greater part of the coarse wool which is best suited for carpet weaving, manufacture of blankets, etcetera, and to import fine grades of merino and cross-bred wool for the production of yarn and fabrics. This dependence on imports exposes the country to the impact of fluctuations in wool prices abroad. Besides, the growing foreign exchange difficulties have affected imports of wool, wool tops and shoddy wool. Apart from the material shortage, the industry's other big problem is that of renovation of its outdated plant and machinery. The Working Group has estimated the total rehabilitation requirements at Rs. 11.25 crores, consisting of Rs. 10.25 crores for plant and machinery and Rs. 1 crore for land and buildings. The under-utilisation of capacity resulting from the raw material shortage increases production costs and overhead expenses while outdated plant affects productivity as well as quality. No wonder poor quality and high prices have affected the industry's performance in export markets.

The industry is subjected to some measure of statutory and voluntary control on production, distribution and prices. But these have failed to

yield satisfactory results. It is stated that the distribution of hosiery, weaving and shoddy yarns is not equitable and that the prices for hand-knitting yarns are kept artificially high. Composite mills have complained that the compulsory supply of yarn has affected their pattern of production. The yarn made available to small-scale weavers and hosiery manufacturers, it is alleged, does not reach them at the fixed prices and is not of the required quality and grade. Certain wool processors say that they are unable to get grey hand-knitting wool. In spite of the control over prices, consumers are said to be getting their supply at much higher rates. Producers are alleged to have made use of the loopholes in the control order and the improper assessment of price differentials. In view of numerous complaints that woollen and worsted manufacturers are selling at high prices not justified by their production costs and the manufacturers of hosiery goods, in particular, are experiencing great difficulty in obtaining their yarn requirements, the Government has referred the matter to the Tariff Commission.

Opening the public enquiry into the fixing of fair prices of woollen yarn, fabrics and hosiery goods last week, Mr. K. R. P. Aiyangar, chairman of the Tariff Commission, explained at length the circumstances leading to the enquiry. He stated that under its terms of reference, the Commission is required to examine the entire cost structure of all types of yarn, woollen, shoddy and worsted (including hosiery yarn) and woollen fabrics and to determine their fair ex-mill prices, wholesale and retail prices as well as prices payable by consumers in different regions of the country. The Commission proposes to undertake, firstly, the costing of different types and counts of yarn, secondly, of representative fabrics of popular types and thirdly, of a few standard varieties and sizes of hosiery goods. The Commission's estimates of fair prices will be based on the costs of a representative cross-section of the industry as a whole. The chairman assured the industry that the Commission would take into account all factors, such as the cost of raw materials, power, wages and other overheads as well as any other factors which might be considered relevant to the fixing of such prices. He appealed to both trade and industry to check unhealthy practices, effect economies in production and bring down the prices of woollen goods for the benefit of consumers and for raising exports.

The existence of unused capacity and foreign exchange difficulties are the two major problems facing woollen yarn and fabric manufacturers.

Current News and Comment

Panyam Cements Expanding

In his address from the chair at the annual general meeting of the Panyam Cements and Mineral Industries Ltd in Cementnagar, Kurnool (Andhra Pradesh) last week, Mr. T. S. Sundaram discussed the progress of the expansion schemes. (Fuller details of the speech are printed on a later page in this issue of Capital.) Orders have been placed for a 300-ton unit with A.C.C., Vickers, Babcock Ltd. The new plant is expected to start production in the second quarter of 1963. The cost of the expansion project is estimated at Rs. 1.20 crores. A sum of Rs. 46.36 lakhs will be raised by issuing new shares and by borrowing. Panyam Cements proposes to double the authorised capital to Rs. 2 crores. The directors have been successful in obtaining a loan of Rs. 40 lakhs from the Industrial Credit and Investment Corporation of India and Rs. 20 lakhs from the Refinance Corporation.

Mr. Sundaram welcomed the recent increase in the price of cement permitted to the Company, but he pointed out how production costs have been inflated by various factors such as the rising coal prices, increased freight and higher wages. He urged that cement factories be permitted to expand their production capacities in order to become economic units. In a capital-intensive industry like cement, every unit needs to have a reasonable production capacity to run on a profitable basis. Panyam Cements has produced satisfactory results for the year ended August 1961. The net profit has increased to Rs. 11.79 lakhs, after providing Rs. 10.20 lakhs for depreciation. The arrears of preference dividends up to 31st August, 1960, have been paid.

Dyer Meakin Pays More

The ordinary shares of the Dyer Meakin Breweries Ltd have improved from Rs. 35.12 to Rs. 42 during the past couple of months. The investors' confidence appears to be justified by the excellent results achieved for the year ended March 1961.

But the representations made by different sections of the industry indicate marked differences in their approach to the question of prices. Since there is no standardisation of quality for woollen fabrics produced in India, the Federation of Woollen Manufacturers contends that the fixing of uniform prices is not practicable or desirable. A section of the industry, however, appears to favour uniform prices as being simpler to determine and easier to administer than varying regional prices. An extreme section of the industry has advocated the removal of price control. It thinks that if Rs. 4 crores of additional foreign exchange is made available for importing raw materials, production would be adequate, so control would be superfluous. Mr. G. K. Singhanian, chairman of the F.W.M.I., said before the Commission that the Federation is preparing a scheme for distribution of weaving yarn to help make controls more effective. He added that the scheme would soon be submitted to the Government for approval. No sector of the industry is prepared to accept the Government's contention that it is technically possible to use indigenous carpet wool for the manufacture of fabrics. Mr. Singhanian said. If the industry is forced to use carpet wool for clothing purposes it would soon be ruined. The alternative is to export indigenous wool and mechanise the indigenous carpet industry to enable it to compete successfully in world markets for earning foreign exchange for importing the proper type of clothing wool. The shortage apart, the representatives of the industry expressed great dissatisfaction on the allocation of quota for importing raw wool, wool tops and shoddy wool. The industry also urged that a correct assessment of the foreign exchange requirement for importing dyes and chemicals be immediately made and licences issued to actual users.

The industry seems generally agreed on "employed capital" being taken as a proper base for determining the return but it has suggested that average borrowings should be computed backwards from the interest paid during the year. Both F.W.M.I. and A.I.W.M.A. have stated that the fair rate of return should be 20 percent of capital employed. The F.W.M.I. has also urged that the provision for replacement, rehabilitation and modernisation be made separately in the prices. The All-India Woollen Mills Association has requested the Commission to consider the possibility of allowing a return on the cost a unit of production at 10 percent of its fair price. The Hosiery Industry Federation has pleaded for a return of 25 percent on the output cost of hosiery goods.

ordinary shares of Rs. 5 each. In view of the impressive reserves of more than Rs. 1.76 crores, against an ordinary share capital of Rs. 27.56 lakhs only, it is thought that the Company might issue bonus shares in the not-too-distant future. Considering that fixed assets are more than Rs. 1.32 crores and that further capital expenditure is being incurred for diversifying the activities, Dyer Meakin may have to increase the share capital to bring it in greater balance with fixed assets.

The directors report satisfactory progress in the diversification schemes. The brewery will start working soon. The malt extract plant will begin production in the near future. The distillery and the ice and yeast factories are almost complete. The diversification is likely to be of great help considering that the long-term outlook is being assessed cautiously due to the possibility that the Prohibition programme may be pushed further ahead.

India Carbon Issue Soon

India Carbon Ltd, a new enterprise, proposes to set up a factory in Gauhati, Assam, for manufacturing calcined petroleum coke and calcined anthracite coal with an initial annual production capacity of 50,000 tons. To finance the project, India Carbon will shortly offer 118,000 ordinary shares of Rs. 10 each for public subscription at par (the details are printed on a later page in this week's Capital). The issued capital is already Rs. 5 lakhs, divided into ordinary shares of Rs. 10 each. The present issue consists of 10,000 redeemable cumulative preference shares of Rs. 100 each, carrying a taxable interest of 9.3 percent, and 350,000 ordinary shares of Rs. 10 each. The Government of Assam has agreed to subscribe for all the preference shares. The directors and their friends will take up 71,700 ordinary shares. The foreign collaborator—the Great Lakes Carbon Corporation of the U.S.A.—has agreed to subscribe for 160,000 ordinary shares.

India Carbon's factory will be the first to produce calcined petroleum coke and calcined anthracite coal in India. The prospects are being considered optimistically because the domestic demand for these products is likely to exceed 70,000 tons at the end of 1966, while indigenous supplies will be much less. The location of the factory is likely to confer many advantages. A large part of the raw materials will be supplied by the Gauhati and Digboi refineries. Adequate supplies of anthracite coal will be obtained from Jammu and Kashmir mines. Production is expected to begin before the end of 1962. The cost of the project is estimated at Rs. 80 lakhs. The Industrial Credit and Investment Corporation of India and the U.S. Export-Import Bank may contribute a loan of Rs. 30 lakhs. The directors are confident that the Company will earn good profits soon and pay reasonable dividends. India Carbon will enjoy the usual tax benefits available to new industrial enterprises. The entire public issue has been underwritten.

Chrestien Mica Repeats

The Chrestien Mica Industries Ltd has maintained the taxable ordinary dividend at 15 percent for the year ended December 1960. The dividend is covered four times and offers a yield of 13.4 percent at the present price of Rs. 11.19 a share. The profit has declined from Rs. 30.66 lakhs in 1959 to Rs. 28.06 lakhs in 1960, after providing

Rs. 1.39 lakhs (against Rs. 1.31 lakhs) for depreciation. Taxation absorbs Rs. 12.48 lakhs (against Rs. 13.01 lakhs), contingencies Rs. 6 lakhs (against Rs. 8 lakhs) and development rebate reserve Rs. 4,500 (against Rs. 20,000). There is a carry-forward of Rs. 85,897, against Rs. 1.58 lakhs brought in. Sales declined from Rs. 1.64 crores to Rs. 1.52 crores.

Premier Automobile Results Impress

The Premier Automobiles Ltd has reported encouraging results for the year ended June 1961. Sales are up from Rs. 20.94 crores to Rs. 22.73 crores, and the gross profit shows an increase of Rs. 39.98 lakhs at Rs. 1.94 crores. The profit has been arrived at after paying Rs. 15 lakhs to the Automobile Products of India Ltd for the transfer of the licence for manufacturing Meadows engines. Although the dividend has been maintained at Rs. 9 a share, subject to tax, it has cost Premier Automobiles an additional Rs. 18.85 lakhs because of the increase in capital effected during the year through the issue of additional equity shares and the conversion of debentures. After providing Rs. 56.44 lakhs (against Rs. 44.23 lakhs) for depreciation and Rs. 55 lakhs (against Rs. 34 lakhs) for taxation, the net profit amounts to Rs. 73.59 lakhs, against Rs. 64.69 lakhs in 1959-60. The allocations to general reserve and dividend equalisation reserve, which claimed Rs. 15.27 lakhs and Rs. 5 lakhs, respectively, in the previous year, have been skipped, but contingency reserve receives Rs. 10 lakhs, against nil in 1959-60. The proposed dividend absorbs Rs. 49.82 lakhs, against Rs. 30.97 lakhs. After making some minor adjustments, Rs. 4.75 lakhs is being carried forward, against Rs. 3.24 lakhs brought in.

The directors report good progress in increasing the indigenous content in the vehicles. All the components of the Fiat transmission—including gears, sliding sleeves and hubs—are now being produced in the factory. Premier Automobiles hopes to mount locally-made transmissions on Fiat cars before long. As for axles, the machining of the major items like brake drums, hubs and axle shaft have been completed. The assembly of axles is due to begin shortly. The Company has started the regular production of lorry axles. The production of Meadows engines has begun, but it will take some more time to reach the full production capacity, since a number of machine tools are still to be imported. Premier Automobiles' application to the Government for the expansion programme is still being considered. It has also asked for the Government's permission to issue further equity capital of Rs. 2 crores in shares of Rs. 100 each in order to finance the sheet metal project for which a site has already been selected near Kalyan in Bombay State. Meanwhile, arrangements are in progress for placing orders for the purchase of machinery for the production of sheet metal components for lorries and motor-cars under the D.L.F. loan agreement for \$7.2 million. A further loan of \$3 million from the D.L.F. for purchasing dies for sheet metal components for the Fiat car is awaited. Premier Automobiles' financial position is satisfactory. It has a paid-up capital of Rs. 5.57 crores which is supplemented by reserves and surplus amounting to Rs. 1.45 crores. The gross block of the value of Rs. 6.53 crores has been written down to Rs. 3.33 crores. The Rs. 100-paid share of the Company, which touched a high of Rs. 186.50 in March, was marked down to Rs. 151.50 in September. Last week, it was bid up to Rs. 169.25 to ease later to around Rs. 164.

Forklift Trucks from Carter Pooler

Three firms, namely, Carter Pooler and Co. (Private) Ltd., Calcutta, Kilburn and Co. Ltd., Calcutta, and Mckenzie's Ltd., Bombay, recently applied to the Government of India for licences for manufacturing different types of material-handling equipment, both riding and non-riding types, battery and engine operated. Of these, only Carter Pooler's application for effecting substantial expansion from 72 units to 300 units a year is understood to have been approved by the Government. The consideration of the other two applications has been deferred for further examination. Carter Pooler proposes to expand the manufacture of diesel and petrol-powered forklift trucks, capacity 1,000 kilograms to 6,000 kilograms, from 72 units to 300 units. It also wishes to undertake the manufacture of 150 electric-powered stackers and pallet platform type forklift trucks, capacity 1,000 kilograms to 8,000 kilograms, and to expand the production of spare parts and accessories of such trucks from Rs. 3.60 lakhs to Rs. 10 lakhs a year. The project proposes to incur an outlay of Rs. 14.58 lakhs on machinery, of which the imported component is valued around Rs. 3.54 lakhs. Clark of the U.S.A., which is already collaborating with the firm in manufacturing diesel forklift trucks, has also agreed to collaborate in the manufacture of electrical power-worked forklifts.

The Kilburn and Co. Ltd. had submitted a scheme for making pedestrian pallet trucks, stillage

trucks, reach fork trucks and rapide fork trucks. The phased programme has to be spread over a period of five years with production rising from 50 units to 300 units a year and the indigenous content of trucks placed around 82.3 percent. The cost of machinery had been estimated around Rs. 9.6 lakhs, of which machinery of the value of Rs. 5.87 lakhs was to be imported from the U.K. The Lansing Bengall Ltd of Basingstoke, U.K., is mentioned as the name of the collaborating firm. The Mckenzie's Ltd had asked for the Government's permission to manufacture on a monthly basis 300 H.Y. drivers, 75 H.Y. caddy stackers, 50 hydropneumatic forklift trucks and 100 portable pallet trucks. The phased programme was to be spread over five years with the indigenous content rising from 83 percent to 98 percent. The U.K. firm of R. H. Corbett and Company was to collaborate in the venture. At present, in addition to the Carter Pooler and Company, the Godrej Boyce Manufacturing Company has been issued a licence for manufacturing similar machinery in collaboration with Clark of the U.K. Besides these two firms, the case of the Western Mechanical Engineering Company has also been favourably considered by the licensing Committees, subject to the condition that the party would provide a satisfactory manufacturing programme.

New Venture of General Electric

A new enterprise to be known as the International General Electric (India) Manufacturing Co. Ltd is being formed to undertake the manufacture of a wide range of light electrical goods, the important items of which will be X-ray equipment and lightning arresters. The Company takes its name after the General Electric Company of the U.S.A. which is collaborating in the venture. The proposed factory will be located in Poona, and arrangements have been made for acquiring 50 acres of land. Talking to newsmen in Bombay last week, Mr. James H. Goss, vice-president of the General Electric Company of the U.S.A., stated that an integrated scheme of capital outlay on the project and the terms of collaboration had already been submitted to the Government of India. The latter's approval is expected soon. Most of the plant and machinery for the project will be imported from the U.S.A., although an attempt will be made to use indigenous machinery. The plant is expected to go into production by about the middle of 1962 and will soon be producing equipment worth about Rs. 5 crores a year. In the beginning, about 80 percent of the components will be imported but these will be progressively reduced to around 20 percent. Tatas are said to be the major participants in the new venture and the Company may enter the market for raising funds for the project. Mr. Goss said that his Company hopes to participate in many other projects in the private as well as in the public sectors.

Asian Cables Rights Issue

The Rs. 100-paid shares of the Asian Cables Corporation Ltd touched a high of Rs. 126 by about the middle of October following the announcement of a rights issue, in the ratio of two shares at par for each one held, for financing the Company's expansion programme. But they declined sharply to Rs. 104 in a few days when the management revealed that it had been advised to offer part of the fresh capital to the public with the result that the rights issue would be in the ratio of one for one only. Shareholders protested and pressed their claim to participate in the entire additional issue, so the directors have changed their mind once again. The entire issue is now being offered to the shareholders as originally proposed. The shares shot up to a new high of Rs. 130 after the extraordinary general meeting last week which was convened to approve the new issue. The latest quotation is, however, lower around Rs. 125. Asian Cables has already obtained the Government's sanction for issuing fresh equity capital of Rs. 1.55 crores, consisting of 155,000 ordinary shares of Rs. 100 each, of which 55,000 shares are to be offered to the Phelps Dodge Copper Products of the U.S.A. and Enfield Cables of the U.K. which are collaborating with Asian Cables. The additional capital is required for financing the Company's second project for manufacturing high-tension power cables and enamelled copper wires. The project No. 1 has just been commissioned and the products are expected to reach the market shortly.

Investment Corporation Maintains

The directors of the Investment Corporation of India Ltd have decided to maintain the dividend at Rs. 8.50 a share, subject to tax, for the year ended June 1961. The net dividend works out to Rs. 5.95 a share. The preliminary figures about the working results, released along with the dividend announcement, indicate an improvement over the previous year's performance. The income from

net dividends on shares and the interest on securities is up by about 34.3 percent from Rs. 20.15 lakhs to Rs. 27.07 lakhs. The net profit, before taxation, shows only a modest increase of about 5.5 percent from Rs. 22.14 lakhs to Rs. 23.36 lakhs. Provision for taxation has been reduced slightly from Rs. 5.20 lakhs to Rs. 5 lakhs. The preference dividend absorbs Rs. 2.77 lakhs, against Rs. 2.82 lakhs and the ordinary dividend accounts for Rs. 14.87 lakhs (the same). A sum of Rs. 59,000 (against nil) has been transferred to general reserve, leaving Rs. 70,631 to be carried forward, against Rs. 16,810 brought in. The Rs. 100-paid share of the Corporation, which has been fluctuating between Rs. 105 and Rs. 119 this year, is currently quoted around Rs. 115, offering a gross yield of about 7.7 percent.

Jubilee Mills to Release Shares

Reliable reports indicate that the Jubilee Mills Ltd of Bombay will soon release some 20,000 shares privately through a stockbroker's firm. The Rs. 10-paid shares are likely to be offered at Rs. 80. The diversification of shareholding is being effected with a view to seeking an official quotation for the shares. At present, the shares of Jubilee Mills are not listed on any Stock Exchange in India. The Company is likely to apply to the Bombay Stock Exchange for getting the shares listed after the proposed issue has been put through. The working of Jubilee Mills for the year ended June 1961, shows an impressive improvement over the previous year's performance. The income is up from Rs. 38.07 lakhs to Rs. 56.36 lakhs and the gross profit has risen from Rs. 12.59 lakhs to Rs. 19.74 lakhs. After providing Rs. 7.25 lakhs (against Rs. 4.80 lakhs) for taxation, Rs. 1.82 lakhs (against Rs. 1.28 lakhs) for depreciation, Rs. 28,954 (against Rs. 8,200) for development rebate and Rs. 80,882 (against Rs. 24,548) for statutory development rebate, the net profit amounts to Rs. 7.36 lakhs, against Rs. 5.69 lakhs in 1959-60. The dividend, which has been raised from Rs. 3.50 to Rs. 7 a share, taxable, inclusive of a bonus of Rs. 2, absorbs Rs. 7 lakhs. The directors state that new machinery worth Rs. 14 lakhs is being installed to modernise the mills. The Government has directed Jubilee Mills to do only processing work. The balance-sheet reveals a strong financial position. The Company has a subscribed capital of Rs. 19.25 lakhs, of which equity capital accounts for Rs. 10 lakhs, which is supported by reserves and surplus amounting to Rs. 65.58 lakhs.

Steel Strips from Firth Cleveland

It is reliably understood that the Firth Cleveland Steel Ltd, Yorkshire (England), has applied to the Government of India for a licence to set up a new industrial undertaking for manufacturing 7,200 tons a year of hardened and tempered steel strips. The Company will need 8,000 tons a year of cold-rolled high carbon and alloy steel for producing 7,200 tons of hardened and tempered steel strips required by the various units engaged in the manufacture of hand saws, cutting and hand knives, etcetera. The raw material will be secured from the Indian steel mills to the extent available. The factory is proposed to be set up in Calcutta. The project is estimated to cost Rs. 25 lakhs, of which Rs. 20 lakhs will be spent on plant and equipment. Machinery worth Rs. 15 lakhs is to be imported. The U.K. firm will contribute substantially in foreign exchange as part of the collaboration arrangement. The Iron and Steel Controller is said to have recommended the firm's application for a licence as hardened and tempered steel produced by the new undertaking will meet the requirements of units manufacturing saws, hand saws, cut knives, etcetera, and as the Rourkela steel plant will mostly produce mild steel strips. In case there is any difficulty in obtaining the raw materials indigenously, the firm has a proposal to manufacture cold-rolled strips at a later stage after four or five years. Alloy steel strips are at present being allowed to be imported by actual users to the extent of 10 percent of their basic quotas.

More Wagons from Mckenzie's

Mckenzie's Ltd of Bombay had asked for the Government's permission to expand the production of railway wagons from 1,200 to 2,000 a year. This application has not been approved by the Government. In view of the increased requirements during the third plan period and also to create some capacity for export to the neighbouring countries, the Railway Board has decided to allow the existing small wagon builders whose licensed capacity is below 2,000 wagons a year to raise it up to 2,000 wagons in terms of four wheelers or 16,000 tons. This capacity is considered to be the minimum for any economic unit. Steel the main raw material, is available from indigenous producers against valid quota certificates and priority

is being given to the Railway Board in meeting its individual wagon orders. No difficulty is foreseen in meeting the entire steel requirements. Funds needed for implementing the expansion scheme will be raised through the further issue of capital which has already been approved by the Controller of Capital Issues. The requirements of imported capital equipment are estimated around Rs. 7.24 lakhs. The demand for wagons is estimated around 33,000 a year by 1965-66. The capacity which has already been booked is placed around 27,000 a year.

Malayalam Plantations Profit Up

The working of Malayalam Plantations Ltd for the year ended March 1961, shows a profit of £1,264,463, against £782,245 for the previous year. After providing £235,682 (against £455,978) for taxation, the net profit comes to £428,781. With £98,982 brought forward from the previous year and £12,529 being the surplus from the disposal of fixed assets, the total available for appropriation is £540,292. Out of this, capital general reserve gets £31,084, development rebate £5,500 and re-planting reserve £90,853. The interim dividend of 6 percent, less tax, absorbed £99,888. The final dividend of 12 percent, less tax, will absorb £199,775. The balance of £101,962 is carried forward.

Mr. John Sands, chairman, says in his report that during the year exceptionally good weather was experienced in all the districts with the result that both tea and rubber crops were the highest in the history of the Company. The average yields being 1,006 lbs an acre of tea and 549 lbs an acre of rubber tapped. Short crops in north India also helped keep up market prices for the types of tea which Malayalam Plantations produce. The net average price realised for the total crop is considerably better than might have been expected at this time last year. The chairman says that the rubber crop is outstanding due not only to favourable weather but also to the extended use of rain-gauges which reduce lost taps during the monsoon, the intensive tapping of larger areas due to replanting and "the bringing into tapping of further areas replanted with selected material." The reason for the lower average net selling price of rubber in 1960-61 than in the previous year is attributed to a proportion of crop having been sold in the form of latex. The lower price realised for latex is more than offset by the saving in the cost of manufacture, packing and transport. As for taxation, Mr. Sands says that the total which the Company has had to bear for the year ended March 1961, amounted to about £1,350,000. Dealing with the future prospects, the chairman says that a plantation company dependent on the vagaries of a tropical climate, as is experienced in south India, must have to face fluctuating fortunes concerning crops. He adds that weather conditions so far this season have been very adverse. Furthermore, there has recently been a substantial decline in the tea selling prices on the expectation that the world supply will exceed absorption. So the chairman has cautioned the shareholders about the prospect of a lower profit from tea production in 1961-62, although the intensive cultivation programme is steadily improving the Company's tea yields.

Dealing with the outlook for rubber, the chairman has struck a note of optimism. Crops are satisfactory, and the estimate of 8,438,000 lbs for the current season is likely to be exceeded. The consumption of rubber is steadily increasing in India, and a large rise is still expected in view of industrialisation and improved road communications. The replanting programme of Malayalam Plantations and the proposal to continue imports of budwood from Malaya are matters of considerable importance. The chairman, however, points out that there is one uncertain factor in any estimate of future results and that is the findings of a Wage Board appointed by the Central Government to review the wages of all plantation labour throughout India.

Transport Prospects for Coal

The urgency of improving transport facilities for increasing coal supplies to consuming industries, as well as to enable collieries to step up their output, was emphasised by Mr. D. C. Driver, chairman, while addressing the annual general meeting of the Coal Consumers Association of India in Calcutta last week. Mr. Driver did not take a hopeful view of the prospects. Sir B. P. Singh Roy, chairman of the Coal Transport Advisory Committee, has estimated the daily average requirement of wagons over the third plan period at 7,163 in 1961-62, 8,561 in 1962-63, 9,660 in 1963-64, 11,502 in 1964-65 and 12,339 in 1965-66. But the railways, Mr. Driver pointed out, can at present provide only about 5,865 wagons a day. The country has an annual manufacturing capacity of 26,000 wagons, but a considerable part of it has to re-

main unused for lack of steel and power. Mr. Driver also did not share the railway authorities' optimism that their programme to manufacture box-type wagons would materially improve the transport situation, even assuming that they are able to produce 20,000 of these heavy wagons during the current plan. The problem of manufacturing apart, there would be operational difficulties in putting the wagons into service as there is a shortage of locomotives; and existing siding facilities to bear the heavy weight of box wagons of 55-ton capacity are also grossly inadequate. Meanwhile, the steel industry is likely to increase its demand from 15 percent of the total goods traffic to 30 percent in the course of the next few years.

Referring to the various official measures to relieve the strain on railway coal transport, Mr. Driver said that such steps as carrying 2 million tons of coal by sea, setting up coal dumps in some States and the Coal Controller's plan to move some 6 million tons by road are unlikely to produce satisfactory results. Only 95 ships left Calcutta during May to August this year, against 120 ships planned, and they carried only 448,000 tons, against the target of 660,000 tons. The dump scheme is proving unpopular as carrying coal by road is more expensive, and consumers, even when they are willing to bear the cost, are not able to get coal of the size and quality they require. Precisely for this reason, the proposal to move 6 million tons by road each year during the third plan is unlikely to prove workable. Quoting a specific example of how industrial costs have risen due to industries getting their coal by road, Mr. Driver said that the Titagarh Paper Mills alone have had to incur an extra yearly charge of Rs. 12 lakhs on this account. Dealing with the prospects for higher-grade coal supplies, Mr. Driver declared that at present they are not only insufficient for such essential consumers as steel plants, but the supplies have been so erratic and the quality so uneven that blast furnace efficiency in the plants has been adversely affected. He emphasised the need for expediting the installation of washeries, and said that the McNally-Bird venture for making washing machinery and auxiliary equipment would greatly help coal-washing plants.

It is worth enquiring how much loss has been caused to industry by the coal shortage, Mr. Driver said. It is estimated that against allocations, there is an average shortage in supplies to the extent of 25 percent or 30 percent due to the lack of wagons. Supplies to new industries are often less than 50 percent of their requirements. It is ironical that the Government should have appointed an organisation to advise industries about the economical and efficient use of coal, while there is no assurance of coal supplies in the right quantity and grades. Mr. Driver suggested that a commission should be appointed to consider how oil can be economically substituted for coal not only in western India alone, but in the entire country, as the fuel crisis is likely to worsen during the third plan. Several leading engineering firms in the Calcutta area have already switched to oil. The commission could enquire "with what economy they have substituted oil for coal at the present-day high price of oil."

Recording Tapes from E.M.T.

The Eastern Machinery and Trading Company, Bombay, has applied to the Government of India for setting up a plant near Kalyan (Maharashtra State) for manufacturing magnetic recording tapes. E.M.T. of the U.K. is likely to collaborate in the venture. A new enterprise known as the E.M.T. and Manufacturing Company is being formed to implement the project. It is estimated to cost about Rs. 15 lakhs. Magnetic recording tapes are not yet being produced in India, and the entire demand is being met through imports. Only one scheme has so far been sanctioned for manufacturing these tapes with an annual production capacity of 12,000 reels of 1,200 feet each. The plant, which is proposed to be set up by the Eastern Machinery and Trading Company, will have an annual production capacity of 35 million feet in the initial stages to be increased progressively to 120 million feet. The Company may start with a bigger plant having an annual capacity of 100 million feet to be raised later to 300 million feet. The factory is likely to go into production in 1962. The value of imported plant and equipment is estimated around Rs. 7 lakhs—Rs. 2 lakhs from the sterling area and Rs. 5 lakhs from the dollar area. In addition, the Company will need to import plastic films and coating material of the value of Rs. 4.95 lakhs a year. The Government of India's sanction is expected soon.

Cotton Futures Rise Despite Margin

On 13th November, the Forward Markets Commission sanctioned the imposition of special margins on "long" positions in cotton futures in all the recognised Indian markets—Bombay, Ahmedabad, Akola and Ujjain—to check the rising trend

in prices. But next day, cotton futures (March contract) in Bombay closed above the margin line of Rs. 645.50 a three quintals and the rate touched a new high of Rs. 658.50 a three quintals two days later. Corrective profit-taking brought down the rate to Rs. 650 on 18th November. Prices rose in spite of the margin, although the latter is fairly heavy. The free limit has been done away with, and bulls are called upon to pay a margin of Rs. 3,000 a unit of trading (30 candies of three quintals each). This margin is to be doubled when the closing price is above Rs. 665.50. That cotton futures should have continued to advance in spite of the heavy margin will surprise only a few because of the remarkable strength in the spot material. Almost all varieties of cotton are now quoted well above the ceiling rates, with premiums ranging from Rs. 10 to Rs. 60 a candy. While ready cotton prices have pierced the statutory ceilings, the hedge contract is still quoted substantially below the ceiling rate of Rs. 693 fixed for Moglai fine cotton stapling 25/32in. The heavy discount on the hedge contract is not due merely to the fact that the contract has still nearly three-and-a-half months to go before the delivery period is reached. The discount is due essentially to the uncertainty about the Commission's attitude towards futures prices. In the past, it is known to have taken measures with utter indifference to the sanctity of contract. The most recent instance is that of groundnut futures. It is unfair to allow the contract to start at Rs. 225 and then to fix a ceiling at Rs. 215. Margins can prove useful only when speculation seems to have taken an unhealthy turn. But this is certainly not the case with cotton futures. With spot cottons being quoted well above the ceilings, it is idle to expect that special margins can at all check the rise in futures. If the demand and supply position warrants a rise (or fall) in the price of a commodity, there is little that the Commission can do to check it. New Delhi alone is competent to take measures which have a direct impact on the spot material. Yarn is made from ready cotton and not out of the hedge contract. The Commission's concern over futures prices seems quite unwarranted when almost all varieties of cotton are known to be enjoying sizeable premiums. A smaller crop, delayed arrivals and the rising mill consumption account for the marked strength in spot cotton prices. The values might ease when the crop movement gathers pace in January, but few observers expect the prices to fall substantially below the ceiling and stay at the lower levels for long. New Delhi's announcement on 18th November to reintroduce the compulsory survey system is timely. When the prices tend to keep well above the ceilings, it becomes necessary to enforce compulsory survey through regional committees in different areas. Compulsory survey will perhaps need to be supported by tighter distribution control and the requisitioning of stocks. Whether or not cotton prices should be controlled is another matter but surely there is no sense in fixing ceilings if the control over prices cannot be enforced.

Making Heavy Electrical Equipment

The Government of India is said to have received a number of applications for starting the manufacture of heavy electrical equipment, such as large power transformers, high tension switchgears of 11 kV and above, large industrial motors and hydraulic and steam turbines. So far, these items were reserved for the heavy electrical equipment factory in Bhopal as these items come under Schedule A of the Industrial Policy Resolution of 1956. Under this resolution, the future development of industries in this category will be the exclusive responsibility of the State. So all units, except where their establishment in the private sector has already been approved, will be set up by the State. This does not, however, preclude the expansion of the existing units privately owned or the possibility of the State securing the co-operation of private enterprise for the establishment of new units if national interests require. The course to be adopted in disposing of the applications received by the Government was discussed at length at a recent meeting where representatives of various Ministries were present. The Government, it is understood, has now agreed to allow the expansion and diversification of the existing units in the field, subject to certain conditions.

In examining the applications for expansion schemes, the Development Wing will strictly scrutinise the need for additional equipment, e.g., cranes, ovens and testing equipment in order to avoid wasteful expenditure since there exist substantial testing facilities in Bhopal. The authorities would also bear in mind the possibility of spreading this investment over a period of years and also the feasibility of prescribing an obligation to export in the industrial licence asked for by the applicant. The Licensing Committee has already approved the application of Hindustan Electric Company, Bombay, for manufacturing heavy electrical equipment in collaboration with Brown Boveri of Switzerland. The Committee's decision

on the scheme submitted by the Government electric factory, Bangalore, the Kirloskar Electric Company of Bangalore, the English Electric Company of Madras and Jyoti Ltd of Baroda is expected soon. The Government electric factory proposes to expand the manufacture of transformers up to 132 kV, switchgears and controlgears, and electric motors in collaboration with A.E.G. of West Germany. Kirloskar Electric also proposes to make transformers up to 132 kV in collaboration with the Brush Electrical Engineering Company of the U.K. The English Electric Company of Madras wishes to undertake the manufacture of oil-circuit breakers and control panels. The English Electric Company of the U.K. is already working in collaboration with the Indian firm, Jyoti Ltd proposes to make 33 kV oil-circuit breakers in collaboration with the West German firm of Calor Emag.

New Venture to Make Suede Material

Mr. Ishwar N. Modi of Bombay proposes to set up a new industrial undertaking in Maharashtra for manufacturing rubberised adhesives—suede material—from cotton and rayon waste and rubber and solvents. The proposed plant will have an annual production capacity of 360,000 yards of suede for which raw material requirements are estimated around 50 tons of cotton and rayon waste and 100 tons of rubber and solvents. The project is estimated to cost Rs. 20 lakhs. While all the raw materials will be available within India, the Company will need to spend about Rs. 8 lakhs on plant and machinery, of which Rs. 7.50 lakhs will be on imported equipment. Le Flockage, Paris, which is collaborating in the new venture is prepared to invest Rs. 2.50 lakhs in the shape of imported machinery and Rs. 1.50 lakhs towards running expenses. A royalty of 5 percent is to be paid for technical know-how in the shape of shares to the foreign collaborator by the Indian firm. Mr. Modi who has sponsored the project, has expressed his willingness to execute a bond for exporting suede amounting to Rs. 5 lakhs a year. The Hindustan Suede Manufacturing Company or Le Flockage Suede Manufacturing Company are mentioned as the probable names of the new enterprise which will implement the project. The promoter expects to save Rs. 15 lakhs worth of foreign exchange a year when the proposed plant goes into full production.

Loss in U.P. State Workshops

Four Government-owned workshops of Uttar Pradesh established in Bareilly, Roorkee, Meerut and Jhansi at a cost of several lakhs of rupees are running at a heavy loss. According to the Public Accounts Committee's report, recently placed before the State legislature, this is because most of the Government departments prefer to get their requirements from private firms. The Committee found that the workload of the workshops was only 30 percent of their capacity. Commenting on this, the Committee says that "it cannot but strongly condemn this state of affairs in view of the fact that the capital efficiency of the workshops is practically nil." At the time of their establishment, it was estimated that the annual return from the workshops would amount to more than Rs. 19 lakhs. After tracing their lengthy history and their transfer from one department to another, the Committee says that the State Government came to know that they were running at a loss in 1954. So a committee was appointed in 1955 to enquire into the question of providing proper workload for the workshops by maintaining proper liaison with indenting departments.

But even this committee could achieve nothing. According to the Public Accounts Committee: "While the workshops and the superintending engineer had been complaining of want of adequate workload, leading to under-absorption of overheads, other departments of the Government had been obtaining their requirements of material which could have been manufactured in these workshops mostly from outside sources". Pointing out that the stocks of finished goods in these workshops had risen from Rs. 1.30 lakhs in 1955-56 to Rs. 6.4 lakhs in 1959-60, the Committee says that "it could not look at the situation with equanimity". The Committee also found that stores worth Rs. 16 lakhs were lying at the workshops. But their ownership was acknowledged neither by the Agriculture Department which originally controlled the workshops nor by the Irrigation Department which now controls them.

Judgment in Provident Fund Case

A full bench of the Allahabad High Court has held that the Provident Fund Act is welfare legislation and that it would not cease to apply to any establishment to which it had once been applied

even if the number of its employees at any time fell below 50. Dismissing 15 cases arising out of the Act, the Chief Justice said that neither the enforcement of the provisions of the scheme nor the application of the fund depended upon the number of employees. There was no justification whatever for saying that the fund ceased to be administered or the scheme ceased to be in operation when the number fell below 50. The scheme and the fund were meant to be as permanent as the establishment itself. The Act might go on applying and cease to apply to a particular establishment, but the scheme remained permanent. The Act could not be said to be burdensome legislation; it was meant to be a beneficent one. If its provisions were not made applicable to an establishment employing less than 50 persons, it might be because the benefit to be obtained from applying it were not commensurate with the trouble and the expense involved.

Agreeing with the view of the Chief Justice, Mr. Justice Dwivedi observed that the correct construction of the phrase relating to the employment of 50 or more persons was that it referred to the point of time of the initial application of the Act to an establishment. If the number of employees subsequently fell below 50, the Act would not cease to apply. Sub-section 4 of Section 1 enabled the Central Government to apply the Act to an establishment if the employer and the majority of the employees had agreed that the Act should be applied to the establishment. Section 3 enabled the Central Government to apply the Act to an establishment if immediately before the application of the Act to another establishment, there existed a provident fund which was common to the employees in the two establishments. There was little doubt that the Act would permanently apply to the two establishments. If the arguments of counsel for the appellants were sound Mr. Justice Dwivedi said, then of the two establishments in Section 3, the associated establishment would continue to be subject to the Act, but the principal establishment would, if it was an establishment under Clause (a), slip out of the grip of the Act.

U.S. Aid for Kanpur Institute

The American Education Consortium, formed to help the Indian Institute of Technology in Kanpur, represents a major step towards filling a vital gap in technical education. In making the announcement, the U.S. Ambassador to India, Mr. J. K. Gilbreath, said that as a result of the link-up of the Consortium with the Institute in Kanpur, it would "really become one of the great engineering institutes in the entire world." Under the scheme, staff from the various institutes and universities of the U.S.A. would be sent for extended periods to Kanpur to advise on the teaching staff, curricula and the purchase of equipment. The expansion of technical training facilities depends on the availability of teachers and instructors of the required calibre. Two schemes were introduced in the second plan period to increase the supply of teachers. The first was the teacher-training programme under which fellowships are offered to selected graduates who are then given further training. The second is the training of teachers abroad.

On present estimates, 51,000 additional engineering graduates are required for the third plan, compared with 20,000 in the second plan. The additional requirements of diploma-holders in engineering and technology in the third plan are placed at 100,000, compared with 56,000 in the second. In the course of the third plan, the admission capacity of engineering colleges are expected to increase from 13,860 to 19,140, the corresponding increase in polytechnics being from 25,570 to 37,330. This is admittedly a slow rate of progress, but what is more distressing is that there is a wide gap between the number of admissions and the output. In 1950, there were 49 engineering colleges admitting 4,119 students but the output was only 2,198. In 1955, there were 65 colleges admitting 5,882 students but with an output of only 4,017. The performance was most disappointing in 1960 when the output was as low as 5,130, against 13,165 admissions in 97 colleges.

Licensing Money-lenders in U.P.

The State Board of Agriculture in U.P. has recommended that village money-lenders be licensed by legislation. According to a recent survey of the Board, the amount of money that cultivators in the State are able to borrow annually is about Rs. 250 crores. About 70 percent of this money is borrowed from money-lenders who charge anything from 10 percent to 50 percent as interest. Money-lenders, according to a spokesman of the Board, account for as much as 92.7 percent of the money borrowed by villagers throughout the country. In U.P. itself, Government credit to the villagers represents 3.3 percent, co-operatives 3.1 percent and commercial banks 9 percent. In order

to eliminate money-lenders from the rural areas, the Board has recommended the setting up of a State Finance Corporation for Agriculture in which the Government should hold 51 percent of the shares, provincial and district co-operative banks 25 percent, and individual farmers the remaining 24 percent. The Corporation should have a branch in every block and should advance money at rates ranging from 4½ percent to 5 percent.

According to the Indian Co-operative Union, the Indian farmer—depending on the village money-lender for his credit needs—is working on the most expensive capital in the world. But the money-lender will not be entirely eliminated from the village as long as the whole money borrowed by the agriculturist is not strictly used for agricultural purposes. The Reserve Bank's report on its second Rural Credit Follow-up Survey shows that family expenditure is one of the most important requirements for which funds are borrowed. In 1957-58, for example, borrowing for family expenditure was as high as 80 percent in the Deoria district of U.P. According to the Reserve Bank's findings, the proportion of borrowings from money-lenders rose from 18 percent of all borrowings in 1951-52 to 45 percent in 1957-58. Traders and commission agents, too, had come to occupy a high place in the latter year. Taccavi loans given by the Government have not generally benefited the small peasant, because the loans granted have reference to the asset of the applicant.

Industrial Activity

Corrected for seasonal fluctuations, Capital's Index of Industrial Activity decreased by 2.5 points during February 1961. There were declines in sugar, jute, yarn, cloth, cement, pig iron, finished steel, paper and electricity. But tea, coal, tyres, motor-cars, bicycles and railway ton-miles increased.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

Rs. 20 Dr. Rajendra Prasad, President of India.
Rs. 119 Officers of the Mercantile Bank, Calcutta.
Rs. 55 Staff of McLeod and Co. Ltd.
Rs. 30 each A. W. Figgis and Co. Private Ltd., H.M.L.W.
Rs. 25 each Anonymous (in memory of the late Mrs. Homai Mehta) W. G. Macmillan, Joshi and Co., Mr. and Mrs. Maneklal Premchand, Forbes, Ewart, and Figgis Private Ltd.
Rs. 20 each W. Mason, J.R.T.N.
Rs. 15 M. Chatterjee and Co.
Rs. 10 "M".
Total Rs. 484.
Previously acknowledged Rs. 2,452.50
Grand Total Rs. 2,936.50.

VALUE OF ADVERTISEMENT

THIS is the great advertising age. No one now-a-days dreams of being able to dispose of his wares unless he advertise, widely and well. Even Briggs could not get a single baby to open his mouth for Briggs' Infant Food, until Briggs advertised that every other baby in the universe was crying out justly for that food, and would not be satisfied until he got it. All wide-awake firms know that if they have got a good thing to dispose of, their sales are in direct proportion to the amount they spend on judicious and constant advertising. And more than that these firms know that it costs them nothing to advertise. The public pay for it all, and there is nothing that the public pay for so greedily as good advertisements. Take, for example, the case of Pears' soap. The manufacturers of that excellent commodity know their business and their public so well that they treat their worldwide customers to the best advertisements that combined literary culture, scientific ability and artistic skill can achieve. And the other year paid that enormous sum of £126,000. But who paid that enormous sum? Pears, of course, paid the bills. In the first instance, but the public at once reimbursed the whole sum, plus the cost of the soap, along with ten percent profit for their trouble. And this is the experience of every scientific advertiser. There is an irresistible fascinating power in a well-displayed advertisement that persistently meets the eye of a man every time he opens his paper. He invariably succumbs to it. The moral of these remarks is plain, and need not be more specifically stated. But he that is wise will advertise.

A Ditcher's Diary

OF ALL THE EUROPEAN COUNTRIES ON WHICH THE Red Army has during and since the war incised communist governments, Poland has somehow remained the least unfree. A film like *Ashes and Diamonds*, which I saw recently, simply could not have been made in Russia or Czechoslovakia or East Germany. It is a grim enough film, made by a grimmer perhaps by India's censors; but there are some delightful touches. The anti-communists are not explicitly condemned: some are shown as perfectly human, though "mistaken"; and there is very little crude propaganda. Technically and in dramatic performance and sensitive direction, *Ashes and Diamonds* seemed to me as good as the best made in the free world; and I was particularly interested to hear that the film was a commercial success within Poland. Most remarkable of all, the maker of this film has a sense of humour. I will not easily forget the two drunken characters at the banquet; one of them, alas, was the editor of a newspaper. Here one must concede, of course, that such a phenomenon is not unknown outside Poland. This man talks and talks and drinks and drinks; and at one point his pal, equally happy, gets hold of a fire extinguisher and "shoots" the guests down as though with a Bren-gun. In the last sequence of this episode the editor is seen, fully dressed, sitting on the lavatory and pulling the chain close to his ear, screaming, "Hullo, hullo, give me my office, please." Throughout the film is obvious a degree of tolerance, even towards "bourgeois traitors", which I had not expected in a Polish production. I gather that even in art, literature and journalism Polish artists and writers enjoy a considerable measure of freedom. This is possible, I suppose, chiefly because of the tact and independence of Mr. Gomulka. He may have learnt his lesson from Hungary, and it is to be hoped that Mr. Khrushchev has too. It is not possible to run a completely monolithic empire in Europe, and Mr. Khrushchev's name does not strike the same terror as Stalin's did.

BOTH PRESS AND PUBLIC INDULGE OCCASIONALLY IN apocryphal stories about Mr. Nehru, but this is hardly surprising for a man who has undoubtedly become a legend in his own lifetime. Few other leaders in India's long history have enjoyed Mr. Nehru's enviable success, and it is certainly not his patriotism—for there are patriots galore in this country today—which has endeared him so much to the present generation of Indians. It is probably his fiery zeal and a deep understanding of the common mind which has brought him so close to the masses. When analysing the quintessence of Mr. Nehru, Indian authors, I feel, are easily swayed by a tendency for hero worship; few, if any at all, have had the courage to portray him with an unbiased detachment. I was, therefore, doubly pleased to receive a copy of Mr. Atulananda Chakrabarti's *Nehru—His Democracy and India*, (Price Rs. 25, pages 438) which, I see, has been published by Thacker's Press and Directories Ltd, from Calcutta. Between the two great leaders of modern India, Mahatma Gandhi and Mr. Nehru, there were very few things in common, although each was greatly impressed with the other. The Mahatma, on his own admission, was proud of being a Hindu, and all too often appealed to the religious sentiments of the masses.

This kind of thing Mr. Nehru dislikes, so it was his aim to create a secular State of India when he came to power. Mr. Nehru, after all, was never the spiritual successor to Mahatma Gandhi, only the political one. Mr. Chakrabarti suggests that it is doubtful whether the Mahatma would have chosen him as a successor at all if he had been able to visualise that independence would come as early as 1947. But that is one of those historical speculations into which we need not delve. Mr. Louis Fischer has said that the outstanding qualities of Mr. Nehru are "dignity and indignation." But the latter trait has inevitably created in Indian politics a group of cowards, sycophants and inveterate yes-men who live in fear of displeasing him. It is no wonder, then, that parliamentary democracy in India is still without an effective opposition. If the latter existed, I doubt if Mr. Nehru would have been so successful in going ahead with his "scientific socialism" or his much-questioned policy of "active neutrality" in foreign affairs.

RECOGNITION OF THE NUMEROUS COMMONWEALTH Press delegates at the British Deputy High Commissioner's cocktail party the other evening was, I thought greatly simplified by the decision to adopt the wholly sensible system of label labelling. I am told this is an American idea, and although I do not much like wearing labels myself, I did reflect at the time that there was a good deal to be said for others doing so. Which reminded me that people's reactions to such things must vary pretty widely, and I have since been amusing myself by trying to identify a few characteristic label "types". So far my investigations have not gone beyond the elementary stage, but I do not mind revealing some of the results. For instance, at any party where there are labels, it is obvious that guests can be divided into two categories, wearers and non-wearers. Among wearers I have identified three main types. The first is the one who pins his label in a prominent position and makes quite sure everybody sees it. An assertive character this, but he probably tries to hide the fact by giving the impression he knows you have recognised him anyway but is eager to save you the embarrassment of having to admit that his name has just slipped your tongue. The second is the type who wears his label apologetically pinned to his breast pocket and turns his other side to you during the conversation. He is obviously the retiring kind, who feels a bit of a fool and likes to convey the impression that he would appreciate it if no names were mentioned at all. Then there is the third type who keeps his label in his pocket. A complex character this, with distinct inadequacy feelings. He can be divided into two sub-types, the one who stubbornly intends to be recognised without a label or got at all and the one who would not be seen wearing a label at any price. Among non-wearers it strikes me there is considerable scope for developing an art of "labelmanship". Here I have so far identified no less than five main types. The first is the one who talks cheerfully to label wearers and makes a great point of ignoring the label completely. Then there is the other who keeps taking surreptitious glances at the label and avoids using names until he has seen it. This type usu-

ally gets the name wrong eventually because he is apt to be more short-sighted than he suspects. The third type is the one who patronisingly remarks to label wearers how useful they are for identifying obscure personalities. This character is fairly closely related to the other who stares fixedly at all labels, then makes it quite clear in the subsequent conversations that if he had one he would not be seen dead wearing it. The fifth type I have again divided into two sub-types, the one who makes a great point of scrutinising the label carefully whenever he has to use the wearer's name, then, quite hatefully, insists on pronouncing it wrongly each time, and the one who also scrutinises carefully, then remarks on how badly they are printing such things these days. When I can find the time I intend to go into the subject a little more thoroughly; quite clearly it has infinite possibilities.

IT IS BY HIS LAW THAT PROFESSOR C. NORTHCOTE Parkinson will be remembered the longest; but I found his "The Art of Being No. 2", in *Fortune* of September, moderately diverting. The essay is not for No. 2's at all. I would recommend it rather to the No. 1's of the world who now have more need to unite than Marx's workers: the former still have their chains to loosen, for lose them they never will. Professor Parkinson's contribution is unlikely to help No. 2's because No. 1's will read it; and the next time an ambitious No. 2 says of his boss: "Gee, it is great to work under a guy like A'an Topleigh! I learn something new every day. He's a swell guy—and does he know his stuff! I guess I know when I'm lucky." I guess Mr. Topleigh is going to be distinctly suspicious. All gambits in lifemanship assume that the other party is an innocent; and the moment it ceases to be a private joke it becomes quite ineffective. If the No. 2's main job is to cease to be a No. 2 as fast as possible, Professor Parkinson lays down how to go about it. To get rid of your No. 1 you engage Dr. U.C.L. Angeles—a dig at the University of California, Los Angeles, of course—and this expert produces an interim report full of such gibberish as "Bartworthy's nonlinear extension of the optimal range with internal validity checks" and "applying a strategy of random variables, using the Stochastic Model". An old-fashioned No. 1, according to Professor Parkinson, would have reacted thus: "All this sounds to me like gobbledegook... I don't like it, don't grasp it, and won't have it." It is different today; and No. 1's are supposed to be so easily intimidated now by incomprehensible, possibly meaningless, jargon and statistics that they soon hand over to their No. 2's. Even for America such simple-mindedness in the boss seems unlikely; and I have worked under No. 1's who would have reacted in quite unprintable fashion to the Parkinson trick. The professor is correct in attributing to No. 1's a streak of ruthlessness; but then Paul Valéry put it better long ago: "To be successful you must be a little blind, a little deaf, and a little heartless". It is tough at the top; and there may be more than insincere resignation in chaps who say, "I rather like being No. 2".

THE PROFESSOR WAS CONDUCTING AN INTELLIGENT test. Suddenly he pounced on a student. "How many make a million?" he asked. "Not many," said the student. He passed.

OBJECTS OF THE COMPANY

The Company was incorporated on 12th day of June, 1961 for the purposes set out in the Memorandum of Association of the Company and in particular to establish a factory at Gauhati to manufacture Calced Petroleum Coke and Calced Anthracite Coal with an initial annual capacity of 50,000 Tons.

Calced Petroleum Coke is one of the basic materials required for production of Aluminium and other Electro-Chemical and Electro-Metallurgical products, viz., Ferro-Alloy, Ferro-Manganese, Ferro-Silicon, Calcium Carbide, etc. In Aluminium its consumption is 0.43 ton for one ton of Aluminium Ingot. At present, India is entirely dependent on imports and Five-Year Plan the requirements of Calced Petroleum Coke are estimated to be more than 70,000 Tons. The Company is the first in India to undertake the

production of Calced Petroleum Coke and Calced Anthracite Coal. The Company's first Plant at Gauhati would result in saving of foreign exchange to the extent of Rs. 120 crores to Rs. 150 crores annually and may earn some foreign exchange through export of Calced Petroleum Coke after meeting the Home demand in full, which is estimated to be as follows:—

Industry	Year Production 1962. in tons	Consumption of Calced Petroleum Coke Yearly	Consumption of Calced Anthracite Coal Yearly
Aluminium	57,500 tons.	24,750 tons app.	nil
Soderberg			
Paste for Ferro-Alloys, Ferro-Manganese, Ferro-Silicon, Electro-Pig-Iron and Calcium Carbide.	13,000 tons.	12,000 tons app.	6,000 tons and 6,000 tons app

FACTORY SITE

The Factory will be located on a plot of land measuring about 25 acres adjacent to the Gauhati Refinery from where the bulk of raw material supplies would be received through existing railway line belonging to the Gauhati Refinery. The Plant site is near the Brahmaputra River which is navigable throughout the year and is next to the main Railway Line. Ample Water, Fuel Oil and cheap Electricity are readily available at site and have been arranged for. The land is sufficient to meet the needs of future expansion.

RAW MATERIALS

50,000 tons of Raw Petroleum Coke would be available to the Company from Gauhati Refinery and supplies of their entire production have been finalised. Anthracite Coal of required quality may be available in sufficient quantities from Jammu and Kashmir Mines.

The Plant is expected to go into production before the end of 1962.

TECHNICAL AND FINANCIAL COLLABORATION. The Company has entered into an agreement with one of the largest Private Corporations of U.S.A., Messrs. Great Lakes Carbon Corporation, who are world's leaders in the production of Calced Petroleum Coke and Calced Anthracite Coal. The collaborators are participating in the Equity Capital of the Company to the extent of Rs. 16 lakhs. They will provide all the technical 'know-how' and 'show-how' for design and operation of the Plant and make available continued assistance and information to improve Product Quality, Operating Costs and Marketability. They will arrange for purchase of Plant and Equipment in U.S.A., make available experienced and qualified personnel for erection and initial operation

INDIA CARBON LIMITED—Cont'd.

of the Plant and train Indian personnel in their Plants in U.S.A. and assist in sale and export of the product.

PROFITABILITY

The Directors are of the opinion that within the first year of the working of the Company's factory, the profit will be sufficient to ensure reasonable dividend return to the Shareholders of the Company.

CAPITAL OUTLAY

The total estimated cost of the Project will be about Rs. 80,00,000 as under:—

(a)	Land and Buildings and cost of engineering, erection of Plant and Machinery as per estimates made in 1961	Rs. 62,50,000
(b)	Cost of 'know-how' and technical assistance (by issue of Equity Shares)	Rs. 4,00,000
(c)	Preliminary Expenses including underwriting commission, brokerage and other expenses of the issue	Rs. 1,15,000
(d)	Promotional Expenses incurred for technical and commercial investigations and negotiations	Rs. 2,35,000
(e)	Working Capital	Rs. 10,00,000
		Rs. 80,00,000

FINANCIAL RESOURCES

1.	SHARE CAPITAL:	
	10,000 Preference shares of Rs. 100/- each	Rs. 10,00,000
	4,00,000 Equity Shares of Rs. 10/- each	Rs. 40,00,000
2.	Loan from I.C.I.C.I. Ltd. and or EXIM Bank, Washington	Rs. 30,00,000
		Rs. 80,00,000

I.C.I.C.I. Ltd., Bombay have agreed in principle to grant Rs. 30 Lacs long-term loan in Indian Rupees and the EXIM Bank, Washington has also agreed in principle for the grant of loan of U.S. Dollars 4,75,000.

MINIMUM SUBSCRIPTIONS

The Minimum Subscription in respect of Public Issue on which the Directors will proceed to allot shares is Rs. 11,80,000. The subscription of this amount is assured by reason of the underwriting referred to herein.

BROKERAGE AND COMMISSION

Underwriting Commission at 2% of the nominal value of the Equity Shares is payable to the Underwriters.

Brokerage at the rate of 1% on the face value of the shares will be paid on allotment in respect of Application Forms bearing the stamp of the Bank or the Member of the recognised Stock Exchange.

SPECIAL BENEFITS

The Company will get the benefit of the Development Rebate and also exemption from tax under Section 151(c) of the Indian Income-Tax Act and the Shareholders will be entitled to exemption from Wealth Tax on their holdings for a period of 5 years under Section 51(1) (XX20) of Wealth Tax Act. For Corporate Bodies, it will attract provision of Section 56(a) of Indian Income-Tax Act.

INSPECTION OF DOCUMENTS

Copies of Prospectus and necessary documents mentioned therein are open for inspection at the Registered Office of the Company or at its Regional Office at Calcutta during business hours.

APPLICATION FOR SHARES

Application Forms properly completed must be lodged together with the amount payable on Application before the closing date of the subscription list with the Bankers of the Company or their main branches at Ahmedabad, Bangalore, Baroda, Bombay, Delhi, Gauhati, Hyderabad, Kanpur, Madras, Shillong and Surat.

PROSPECTUS AND APPLICATION FORMS

Copies of the Prospectus and Application Forms may be obtained from the Registered Office of the Company, Saranita, Gauhati, its Regional Office 6, Old Post Office Street, Calcutta-1, its Bankers, Brokers and Underwriters whose names are mentioned above.

"SCCO"

For removing heavy scale from large metal surfaces, such as rust, old paint, and incrustations giving the metal renewed surface for painting, etc. These cup brushes are used on high speed flexible shafts electric or pneumatic tools and can be driven at higher speeds being of sturdier construction than the lighter crimped wire types. MR. AL FOIL GOES OVERSEAS

"Westward Ho!" shouted Mr. Foil, importantly perched upon a tea chest, "I go as a Protector of Tea (Aluminium lining for tea chests and packages) and come back with foreign exchange. Busy voyage ahead, though," Mr. Foil continued shouting, "What with having to keep out the damp devil and keep in the tea flavour. But I am not worried. Have long experience in the matter of lining tea chests with aluminium foils which stand up to all sorts of ill usage like rough crossings and wet weather (the Bay of Biscay and the Channel y'know)... In fact, aluminium foil packaging keeps the tea full flavoured and factory fresh right up to the tea lover's table... to England, America or any place in the world... I, Al Foil, alumnus of aluminium, guarantee satisfaction".

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other industries.

PANYAM CEMENTS & MINERAL INDUSTRIES LTD.

CEMENT NAGAR, KURNOOL DT. A.P.

CHAIRMAN, MR. T. S. SUNDARAM'S REVIEW

Speech delivered by Mr. T. S. Sundaram, Chairman, Board of Directors of Panyam Cements & Mineral Industries Ltd., at the Sixth Annual General Meeting held on Tuesday, 14th November, 1961 at Cement Nagar.

Gentlemen,

It gives me great pleasure to welcome you to the Sixth Annual General Meeting of the Company. The Audited Statements of Accounts for the year ended 31st August, 1961, along with your Directors' Report on the affairs of the Company have been circulated to you and with your permission, I shall take them as read.

It is a matter of gratification to one and all of us that the result of the working of the Company during the year under review has been exceedingly satisfactory. As you will have noted the Profit and Loss Account shows a net profit of Rs. 11,78,934/- after providing Rs. 10,20,231/- for depreciation including extra shift depreciation. This substantial profit has enabled us to completely write off the preliminary expenses, commission and brokerage of Rs. 40,469/- and to make provision for payment of the arrears of dividends on Preference Shares of Rs. 3,72,000/- from the date of allotment to 31st August, 1960, at 6% tax-free, i.e. 8-4/7% subject to deduction of tax.

The Managing Agents have waived their remuneration for the second year in succession. I have to place on record on your behalf our sincere gratitude to the Managing Agents for their generous gesture.

Price for Portland Cement

I am glad to inform you that the Government of India, after examining the report of the Tariff Commission on the Retention Price payable to the Cement Industry, have fixed for our Company the highest price fixed for Portland Cement. Underlining the importance of the industry, the Commission had proposed prices which will help its development to achieve the capacity target fixed by the Planning Commission. Whilst right and due emphasis has been laid by the Government of India and also the Tariff Commission on improvement of efficiency and reduction in the production costs of the industry, I hope it is appreciated that the high cost of production of the units of this capital intensive industry, especially of those which have come into being in recent years, is mainly due to the steep increase in the capital costs. With the cost of coal and purchased power and Railway freight determined or influenced by Government's policies, Wages and Salaries fixed by Wage Boards, prices of inventory stores steadily rising, and the production targets getting adversely affected by unforeseen circumstances such as coal shortage or wagon shortage and power cuts, only little is left in the hands of the producers to reduce their production costs.

As you are aware, the size of the Cement Plant is one of the important factors influencing its productivity. I hope the Government, keeping in view the overall, balanced and rational development of this industry to exploit the raw material deposits in all parts of the country, will ensure by their licensing and other policies that the new units are given preference, encouragement and facilities to expand to more economic sizes.

Cement Distribution

I welcome the Government's decision to allow the State Trading Corporation to continue in the field of Cement distribution.

I am happy to inform you that work on the expansion of our Factory is progressing satisfactorily. Orders have been placed for a 300-Ton Unit with the indigenous suppliers, Messrs. ACC, Vickers, Babcock Ltd., Bombay. The equipment is due to be delivered during the second half of 1962 by which time civil construction works are also scheduled to be completed. The plant is expected to be commissioned in the second quarter of 1963.

It is proposed to enhance the Authorised Share Capital of the Company from Rs. One Crore to Rs. Two Crores. The appropriate resolutions with regard to this and the present capital issue for Rs. 46.36 Lakhs are being placed before you. I am sure we will have your enthusiastic co-operation in making this issue a success.

Budgeted Outlay

As mentioned in my last year's speech, the budgeted outlay for this expansion project is estimated at Rs. 120 Lakhs. This will be met by the proposed issue of Share Capital of Rs. 46.36 Lakhs and borrowings. You will be glad to hear that your Directors have been successful in securing a long term loan of Rs. 40 Lakhs from the Industrial Credit and Investment Corporation of India Ltd., Bombay, and a medium term loan of Rs. 20 Lakhs under the Scheme of Refinance Corporation for Industry through our Bankers, The Bank of Baroda Ltd.

I come now to the pleasant part of my duty of expressing our thanks to our Managing Agents for the care and interest evinced by them in the management of the Company and officers, members of the staff and operatives of all categories for their sense of duty and hard work willingly rendered by them.

I now have pleasure in moving that the Directors' Report and the Audited Statements of Accounts for the year ended 31st August, 1961 with the Auditors' Report attached thereto, be adopted.

Note: The above statement is not a report of the proceedings of the Annual General Meeting referred to

Money

THE CALCUTTA MONEY MARKET

CALL RATE FALLS

Wednesday, 22nd November.

ADVANCES in the Calcutta money market have increased again during the past week, but the amount is smaller than during the previous week. The jute and engineering and iron and steel industries have all increased their offtake, and the requirements of the cotton mills show a slight improvement. Demand from the sugar industry and call for accommodation against grain and seed storage are both down. Conditions have become suddenly easier in the inter-bank market due to an influx of funds from Madras and Bombay. The call rate is now between 2½ percent and 2½ percent.

There has been a sharp fall in activity in the exchange market during the past week owing to a heavy reduction in the supply of gunny bills. The supply of tea bills has been well maintained. Remittance demand has been moderate to poor. In the London market the pound has stayed firm throughout the week and closing quotations show only narrow fluctuations from previous levels.

BULLION WAS QUIET IN THE PAST WEEK ON TIRED bull liquidation. Silver declined from the previous week's level of Rs. 243.75 to Rs. 242.75, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 208.50. The London and New York prices were 80½ and 91¾ cents.

Gold was easier in the absence of support, and fell from Rs. 147.50 to Rs. 145.75. The sovereign, at Rs. 98.50, showed a gain of 25p.

DURING THE WEEK ENDED 17th NOVEMBER, Government of India Treasury bills for Rs. 74,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 21st November. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on 27th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 22nd November to 25th November at Rs. 99.391 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 15th November to 18th November amounted to Rs. 15 lakhs.

THERE WERE DECLINES OF Rs. 28.75 CRORES TO Rs. 1,936.63 crores in the total note issue and of Rs. 26.11 crores to Rs. 1,920.42 crores in active notes, according to the return of the Reserve Bank of India for the week ended 17th November, 1961. The currency contraction was covered by reducing rupee securities of the paper currency reserve by Rs. 80 crores to Rs. 1,578.84 crores. This was done by transferring securities from the Issue Department to the Banking Department in which investment rose by Rs. 29.52 crores to Rs. 180.52 crores. Deposits of the Central Government fell by Rs. 2.90 crores to Rs. 62.50 crores but other Government accounts rose by Rs. 91 lakhs to Rs. 11.13 crores. Balances of commercial banks at Rs. 82.83 crores showed a rise of Rs. 5.18 crores. Balances held abroad declined by Rs. 1.16 crores to Rs. 24.58 crores. Other loans and advances fell from Rs. 154.70 crores to Rs. 131.85 crores, of which advances to scheduled banks against usance bills amounted to Rs. 2.21 crores (Rs. 12.69 crores). Ways and means advances stood at Rs. 73.60 crores, against Rs. 65.85 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 10th November, 1961, shows Demand and Time liabilities at Rs. 836.97 crores (Rs. 16.92 crores on account of borrowings from banks) and Rs. 1,135.97 crores (Rs. 18.21 crores), compared with Rs. 842.09 crores (Rs. 18.95 crores) and Rs. 1,141.68 crores (Rs. 19.73 crores), respectively, in the previous week. Cash has increased by Rs. 4.27 crores to Rs. 55.10 crores, while balances with the Reserve Bank have decreased by Rs. 2.17 crores to Rs. 71.20 crores. There is a drop of Rs. 19.79 crores to Rs. 610.94 crores in investments. Advances and bills discounted at Rs. 1,245.31 crores show a rise of Rs. 5.99 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence,

shown at 6.4 percent and 63.1 percent, against 6.2 percent and 62.3 percent.

TREASURY BILL MATURITIES

Stocks and Shares

UPWARD TREND IN SHARES HALTED, BUT UNDERTONE REMAINS STEADY

REPORTS OF FRESH CHINESE AGGRESSION MAKE OPERATORS CAUTIOUS

Wednesday Evening.

THE stock market has closed with a steady undertone. During the past week, share prices have improved appreciably on strong support, combined with short-covering. The speculative issues have risen with the flow of good corporate news. Steel shares have been fancied because it is hoped that the Government will soon increase the retention price of steel. Since the State steel plants have started producing, it is thought that the retention price will be fixed in such a manner that their higher production costs will be adequately covered. Bears have meanwhile become cautious because they think that India will obtain sufficient financial aid from abroad for her development plans. It is argued that the U.S. business men who recently attended the Business International conference in New Delhi have been impressed by the progress of the Indian economy. The visit of the Prime Minister, Mr. Nehru, to the U.S.A. has been interpreted bullishly.

Around the week-end, a reaction set in due to two factors. The first was that share prices had risen too quickly, so a technical correction was overdue; the shake-out has probably improved the health of the market. The second factor was the news of further Chinese incursions into Indian territory. But the adverse impact of this report has been mitigated later by the thought that such incidents on India's long border are only to be expected in view of China's expansionist policy.

At the clearing on Wednesday, there has been a fair recovery on replacement buying. The moderate nature of the carry-forward charges indicates that the earlier shake-out has done a lot of good. Lyons Range hopes that the Life Insurance Corporation will extend greater support now that the Government has decided not to take over its investment functions. Although the next meeting of the stock exchange presidents is due to be held early in December, it is thought that no major restrictions are likely to be imposed. There is still little evidence of excessive speculation. The recent improvement in stock market sentiment appears to be based on favourable developments. If steps are taken to mitigate the shortage of transport, power, fuel and raw materials, industry is expected to make good progress. The decision of many companies to issue bonus of rights shares points to the satisfactory working of the corporate sector. In the circumstances, the near-term trend may not change much because holders are unwilling to book their profits, and there is a shortage of good shares.

Government securities have become easier mainly because of the absence of institutional buying. Considering that the busy season has started, the banking community is not expected to take much interest in gilt-edged for some time. To what extent banks will be forced to sell securities in order to finance the requirements of the busy season, remains to be seen. The 3 percent Conversion loan 1986 has declined to Rs. 71. The prices of State loans have also fallen. Scattered interest is being taken in good preference shares.

Interest has revived in bank shares on the belief that their profits have improved during the current year. United Commercial, Punjab National and United Bank are being bought.

After having been higher, Indian Iron have closed at Rs. 25.90. The prices of selected engineering shares have increased. Investment support has lifted Indian Standard Wagon, Burn, and Guest, Keen, Williams. Texmaco have reacted after heavy fluctuations. J. K. Steel have become steadier on producing a good report. Stray support has been extended to Jessop, Britannia Engineering, Kumardhubi and Binani Metals.

There have been many notable rises in miscellaneous shares, although top gains have not been maintained at the close due to profit-taking. Support has been forthcoming for Dunlop Rubber, Goodyear India, Metal Box, Britannia Biscuits and Alkali Chemicals. Indian Aluminium have reacted on reports that the Company will not issue rights shares for the time being. Indian Cable and Indian Copper have slipped back. Hindustan Motor are being taken on the news that the factory has resumed work after a prolonged lock-out. Rohtas have declined. Interest is being taken in Hindustan Twyford and Isaac Holden. Schrader, Scovill Duncan, newly listed, have been fancied, and Phillips Carbon Black have enjoyed influential buying. Hindustan Aluminium, British Paints, Associated Battery and J. K. Synthetics are being taken. Among managing agency shares, Martin Burn and Jardine Henderson have been bought. Union Carbide and Rallis are steady. Cement shares have reacted on profit-taking. Jaipur Udyog and Ashoka Cement have declined. Tobacco shares are quiet and Imperial Tobacco have fallen. Scattered interest is being taken in electric company shares and Calcutta Electric are steady. Paper shares have enjoyed support. Orient, Tita-

ghur, Seshasayee, Ballarpur and Sirpur have gained.

The prices of jute shares have declined at the close due to the predominance of sellers. The lack of foreign demand for gunnies has induced caution. Birla, India, Megna, Ganges, New Central and Howrah have reacted. Scattered interest is being taken in Northbrook, Gourepore and India. Barnagore are being sold on reducing the dividend.

Coal shares have become sluggish and their prices have fluctuated narrowly. Burrakur, Bengal, New Beerbhoom, East Indian and Central have been transacted.

Bowreah have been a smart feature in the cotton mill section due to favourable corporate rumours. Dunbar have also gained. J. K. Rayon, Bharat Commerce and Jay Shree Textiles have fallen on profit-taking.

Reports of a further decline in the auction prices have reduced support for tea shares. Stray buying has been reported in Teroore, Hantapara, Hasimara, Bishnauth and Dibrugarh.

Chundeecherra Tea

After providing Rs. 59,679 (against Rs. 60,339) for depreciation, the Chundeecherra Tea Co. Ltd. has earned a profit of Rs. 35,316 (against Rs. 2,93).

Here is an opportunity for expanding existing connections and building up new ones in your overseas trade. Your enquiries will receive individual and prompt attention.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 900 offices waiting to offer you complete banking facilities for overseas trade.

STATE BANK OF INDIA
INDIA'S LEADING BANK

lakhs) for the year ended December 1960. The dividend has been passed. Reserve for development rebate gets Rs. 32,010 (against Rs. 2,030). Making all other adjustments, there remains a balance of Rs. 8,28,078, which is to be carried forward, against Rs. 8,48,371 brought in. A crop of 164,340 kilograms was manufactured, against 286,271 kilograms. The average sale price realised was Rs. 5.14, compared with Rs. 5.57 a kilogram. The estimates for the 1961 season provide for a crop of 290,300 kilograms at a cost of Rs. 9.37 lakhs.

Lingia Tea

The net profit made by the Lingia Tea Co. Ltd has increased from Rs. 94,491 to Rs. 1.78 lakhs for the year ended December 1960. An ordinary dividend of 15 percent, subject to tax, has been declared, against 12 percent, taxable. Taxation absorbs Rs. 1.16 lakhs (against Rs. 1.02 lakhs). Building reserve is allocated Rs. 25,000 (against nil). After making other adjustments, there is a carry-forward of Rs. 52,732, against Rs. 41,950 brought in. The crop amounted to 303,781 kilograms (against 293,887 kilograms), and the average sale price was Rs. 6.79 (against Rs. 6.46) a kilogram. The estimates for 1961 provide for a crop of 312,760 kilograms of tea at a cost of Rs. 5.53 a kilogram.

Bombay Market

SENTIMENT IMPROVES AFTER MILD PROFIT-TAKING GOOD SUPPORT FOR STEELS AND COTTON TEXTILES

Wednesday Noon.

EXCEPT for a mild reaction on profit-taking around the week-end, the Bombay stock market was steady. Share prices were boosted on renewed support, backed by short-covering, during the past week. Sentiment improved on the belief that the authorities would not adopt any measure in the form of special deposits or hawala prices to restrain buying because the shake-out had improved the technical position. Support was inspired by good corporate news. The report that the Tata Iron and Steel Co. had been permitted to install an oxygen plant helped improve sentiment in steel shares. Cotton mill shares were bought on the view that the output of cloth had risen. It was also believed that the working results of mills would show a considerable improvement in 1961. Official measures to ensure adequate supplies of raw cotton had a good effect. The decision of Asian Cables to issue rights ordinary shares in the proportion of two new shares for each one held at par was welcomed. The proposal of some companies to pay higher dividends and to issue bonus shares was interpreted bullishly.

Tata Steel closed at Rs. 150 and Indian Iron were quoted at Rs. 25.75 on support from Lyons Range. Engineering shares were bought at higher prices. Alcock Ashdown rose to Rs. 326 and Premier Construction were quoted higher at Rs. 200. Larsen and Toubro improved to Rs. 39.10 and Mukand Iron gained at Rs. 29. Tata Locomotive were a strong feature due to replacement buying and rose to Rs. 373. Motor shares were steady and Hindustan Motors were quoted at Rs. 21.32. Premier Automobile came to hand at Rs. 161.50 on the prospect of a rights issue.

Cotton mill shares rose. Century were taken up to Rs. 609 and Bombay Dyeing to Rs. 69.40. Khatau were fancied at Rs. 478.75 and Kohinoor were taken at Rs. 324. Morarji came to hand at Rs. 365. Shree Niwas at Rs. 296 and Gokak at Rs. 205. Business passed in India United ordinary at Rs. 15.90.

Cement shares were steady in the miscellaneous section. Associated Cement rose to Rs. 169.50 and Digvijay to Rs. 200. Sugar shares were quiet and Belapur were sold at Rs. 275.50. Phaltan were indicated at Rs. 129 and Walehandnagar Industries were quoted at Rs. 167. Mining shares were steady and Shivrajpur Syndicate were bought at Rs. 46. Steamship company shares recovered on replacement buying. Scindia hardened to Rs. 13.16 on dividend prospects and Great Eastern Shipping were placed at Rs. 13.36. Chemical shares were steady and Tata Chemicals were bought up to Rs. 29.56. Synthetics and Chemicals improved to Rs. 231 and business was done in Polychem at Rs. 215. Colours-Chem came to hand at Rs. 402.50. Bombay Burmah spurted to Rs. 697 on talk of bonus shares. Rayon shares met with support and National Rayon rose to Rs. 593. Gevaliot Rayon were transacted at Rs. 50 and Indian Rayon were done at Rs. 89. Voltas gained at Rs. 312 on talk of a higher dividend.

Bank shares were steady but turnover was limited. Bank of India were done at Rs. 130 and Central Bank came to hand at Rs. 62.80. Bank of Baroda were placed at Rs. 105. Insurance shares were quietly steady and New India Assurance were in demand at Rs. 60.

Electric company shares were bought selectively. Support was extended to Ahmedabad Electric

at Rs. 93. Tata Power were taken at Rs. 1,100 and Bombay Suburban were dealt in at Rs. 104.

Madras Market

GOOD CORPORATE NEWS HELPS SENTIMENT COFFEE SHARES EASE

Tuesday Evening.

SENTIMENT improved considerably in the Madras stock market during the past week. The prices of selected shares rose to new highs on fresh support. There was also evidence of buying from outside centres. Good corporate news and the decision of some companies to expand their production capacities further helped. But operators appeared to ignore the possibility of power shortages in the near future. Reports of an improvement in exports during the current year, combined with moves to promote them further through tax concessions, inspired confidence. Government securities were dull and prices of Central and State loans declined. Bank shares were selectively bought on prospects of bigger profits. Scattered support was forthcoming for good public utilities. Sugar shares fell out of favour due to reports of a decline in the price of the commodity. Tea and rubber issues were in demand but coffee shares were sold freely on fears that it would be difficult to dispose of the entire output at remunerative prices. Cotton mill shares were fancied on hopes that the mills would make bigger profits in 1961 than in 1960. Miscellaneous industrials were bought selectively due to favourable corporate reports.

Among bank shares, Canara Banking were dealt in at Rs. 80.50 and Indian Overseas at Rs. 194. Indian came to hand at Rs. 181 and Punjab National were transacted at Rs. 20.40. Among public utilities, Karaikkal came to hand at Rs. 9.80 and Negapatnam were placed at Rs. 10.60. South Madras were bought at Rs. 10.25 and Vellore were done at Rs. 14.12.

In the sugar section, Cauvery were quiet at Rs. 123 in spite of paying a higher taxable ordinary dividend of 8 percent. Deccan were sold at Rs. 12.22 and E.I.D. reacted to Rs. 37.50. Jeypore were quoted at Rs. 16.25 on declaring a taxable ordinary dividend of 15 percent. K.C.P. were placed at Rs. 24 on paying a taxable ordinary dividend of 15 percent. Mysore were steady at Rs. 56.50 but United Breweries declined to Rs. 101.55.

Among planting shares, Blue Mountain reacted to Rs. 2.90 on paying a taxable ordinary dividend of 10 percent. Chandramalai were quoted at Rs. 2.74 on declaring a taxable ordinary dividend of 10 percent. Consolidated Coffee met with support at Rs. 21.50 on paying a taxable ordinary dividend of 20 percent. Coffee Lands were quiet at Rs. 17.50 on declaring a taxable ordinary dividend of 12 percent. Kil Kotagiri were placed at Rs. 5.08 and Lucky Valley were dealt in at Rs. 11.65. Mysore Coffee were offered at Rs. 5.19 and Nilgiri were bought at Rs. 8.55. Oosoor were transacted at Rs. 3.15 and Oucherlony were done at Rs. 3.73. Parkside were steady at Rs. 28.50 and Peermade were in demand at Rs. 22.64. Periakaramalai were transacted at Rs. 3.75 and Rajagiri were sold down to Rs. 20.85. Swinton came to hand at Rs. 2.92 and Teckoy were quoted at Rs. 5.05.

In the textile group, Bangalore Woollen hardened to Rs. 246, and Buckingham to Rs. 256. Cannanore were bought up to Rs. 181 on the payment of an interim dividend of 10 percent, taxable. Lakshmi improved to Rs. 169.50 and Madura to Rs. 42.15. Metturu were steady at Rs. 393 and Kothari were taken at Rs. 13.72. Rajalakshmi were bought at Rs. 49 and Rayalaseema were taken at Rs. 161. Travancore Rayon reacted to Rs. 46 after having been higher, and business passed in South India Viscose at Rs. 188. Anglo-French were taken at Rs. 145 and Adoni were placed at Rs. 13.

Among miscellaneous industrials, Aluminium Industries were steady at Rs. 23.70 and Ashok Leyland were bought at Rs. 9.30. India Cement improved to Rs. 6.63 and Madras Rubber hardened to Rs. 21.90 on reports that the pilot plant had started producing. Mandya National Paper were taken at Rs. 8.50 on the prospect that production would start soon. Madras Aluminium were placed at Rs. 24 and F.A.C.T. were done at Rs. 9.12. Parry's Confectionery were dealt with at Rs. 4.72 and Seshasayee Paper were transacted at Rs. 6.45. Spencer were placed at Rs. 24.25 and Mysore Paper were in demand at Rs. 14.16. Standard Motors were quoted at Rs. 16.37 and Textol were steady at Rs. 190. Tube Investments were steady at Rs. 295 and Kirloskar Electric improved to Rs. 15.75. Enfield came to hand at Rs. 11.65 but Orate Glass were sold down to Rs. 5.50.

THE WEEK'S TRANSACTIONS

In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week, lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The best price is shown in parentheses and will be given where such a quotation is not available.

LEGISLATIVE BUSINESS FOR THE WINTER SESSION OF PARLIAMENT

CENTRAL INDUSTRY MINISTRY PRESSING FOR INCREASE IN CEMENT TARGET

(FROM OUR NEW DELHI CORRESPONDENT)

THE 20-day winter session of Parliament, which began on 20th November, is scheduled to have 20 sittings. Four and a half days have been allotted for private members' business, including two and a half days for non-official resolutions. Some 210 resolutions have so far been admitted, covering a wide field of governmental activities. There are resolutions demanding the nationalisation of banking, sugar, the film industry, the oil industry, the iron and steel industry, the jute industry, foreign trade in general and the export trade and that in jute goods in particular. Another set of resolutions seek to channelise the entire foreign assistance to Indian industries through the Government of India, to enquire into the economy and political consequences of increased foreign private investment in various industries; and to enquire into the sources and uses of the large funds received by various foreign and Indian missionary societies.

Two members from Uttar Pradesh and Bihar would like the Government to fix the price for sugarcane at Rs. 2 and Rs. 2.5 a maund, respectively. Communist and socialist members through joint resolutions have urged the reinstatement of Government employees dismissed for participation in the July 1960 strike. There is a demand for more wage boards, for banning the production of *vanaspati*, for starting a newspaper in the public sector, for postponing the establishment of the fourth steel plant until the existing three in the public sector are completed, for stabilising the prices of essential commodities, for an enquiry into the working of the community development projects and of the Air-India International and the Indian Airlines Corporation, and for effective steps to check the increasing birth rate.

As a result of the ballot held on 9th November, six resolutions were admitted for discussion on 24th November, the first place having been given to a resolution which asks the Government to give a final ultimatum to the Portuguese Government to withdraw from Goa, Daman and Diu. This leaves another half a day for which another resolution will have to be chosen through the medium of the ballot box. In addition, notices have been tabled for 63 "no-day-yet-named" motions.

Government Business

As for the Government's legislative business, three Bills, as passed by the Rajya Sabha, one Bill, as reported on by the Select Committee, another Bill in the Select Committee stage and eight others are pending before the Lok Sabha for disposal. In addition, 20 Bills have so far been put down on the order paper for enactment. They are as follows:

(1) *The Sugar (Regulation of Production) Bill.* It replaces the Sugar (Regulation of Production) Ordinance, 1961.

(2) *The Institute of Technology Bill.* It seeks to constitute each of the Indian Institutes of Technologies, Kharagpur, Bombay, Madras and Kanpur, as a body corporate and to make provision for co-ordinating their activities.

(3) *The Indian School of Mines (Dhanbad) Bill.* It similarly seeks to declare the Indian School of Mines, Dhanbad, as an institution of national importance and to provide for its incorporation and matters connected therewith.

(4) *The Telegraph Wires (Unlawful Possession) Amendment Bill.* It provides for a minimum punishment under the Act for the second and subsequent offences committed by the same set of persons.

(5) *The Indian Railways (Second Amendment) Bill.* It increases the maximum amount from Rs. 10,000 to Rs. 20,000 payable to victims of passenger train accidents and to provide deterrent penalties against those found guilty of attempting at train wrecking.

(6) *The Reserve Bank of India (Amendment) Bill.* It amends the parent Act to permit the establishment of a credit information bureau and for certain other purposes.

(7) *The Wealth Tax (Amendment) Bill.* It seeks to effect necessary amendments in the parent Act consequent on the passing of the Income Tax Act, 1961.

(8) *The Gift Tax (Amendment) Bill.* It will bring the provisions of assessment, penalty and recovery, etcetera, in the parent Act in line with that of the Income Tax Act, 1961, and to make some clarificatory amendments.

(9) *The Expenditure Tax (Amendment) Bill.* It will similarly bring the provisions of assessment, penalty and recovery, etcetera, in the parent Act in line with that of the Income Tax Act, 1961, and to make some clarificatory amendments.

(10) *The Duties and Powers of the Comptroller and Auditor-General of India Bill.* It defines the

duties and powers of the Comptroller and Auditor-General of India.

(11) *The State Financial Corporations (Amendment) Bill.* It amends the parent Act to remove certain difficulties experienced in the working of the State Financial Corporations.

(12) *The Criminal Law Amendment Bill.* It makes the production, circulation, etcetera, of documents resembling currency notes an offence under the law.

(13) *The Indian Succession (Amendment) Bill.* It amends the parent Act for the purpose of placing the Parsis on par with Hindus, Buddhists and others in the matter of obtaining succession certificates.

(14) *The Indian Tariff (Amendment) Bill.* It will empower the Government to continue or discontinue protection to certain industries.

(15) *The Iron Ore Labour Welfare Fund Bill.* It provides for the levy of a cess on iron ore produced in India for the financing of activities to promote the welfare of labour employed in the iron ore mining industry.

(16) *The Drugs (Amendment) Bill.* It brings cosmetics within the purview of the parent Act.

(17) *The Air Corporations (Amendment) Bill.* It amends Section 30 of the parent Act in order to give power to the Central Government to wind up and reconstitute the Air Transport Council as and when necessary and for carrying out certain other incidental changes.

(18) *The Atomic Energy Bill.* It replaces the existing Atomic Energy Act, 1948.

(19) *The Delhi University (Amendment) Bill.* It facilitates the introduction of correspondence courses under the aegis of University of Delhi.

(20) *The Visva-Bharati University (Amendment) Bill.* It enables the University to administer wills, deeds, etcetera, executed by the Visva-Bharati Society and to provide for certain other matters.

Efforts to Raise Cement Capacity

The Central Ministry of Commerce and Industry is planning to renew its efforts to step up the installed capacity for the manufacture of cement in India from 16.5 million tons to 18 million tons a year. The Ministry is apparently on a strong bat, because by 1964, India will be manufacturing eight cement-making plants a year. There are three undertakings so far licensed to manufacture cement-making machinery, namely, A.C.C. in collaboration with the British consortium, K.V.B., which is setting up its plant in Durgapur, K.C.B., in collaboration with French firm, Fives Lille, and Sahu-Jain, in collaboration with the Danish firm, F.L. Smith. In addition, Skoda of Czechoslovakia and Krupp of West Germany have shown interest in cement machine-making projects. The third five year plan target for cement manufacture is placed at 15 million tons. The views of the Tariff Commission on this subject are worth quoting. In its report published last month, it says: "The present position is that there are six units with an annual rated capacity of less than 100,000 tonnes each, four with a capacity ranging between 100,001 tonnes and 200,000 tonnes, 11 between 200,001 tonnes and 300,000 tonnes, ten between 300,001 tonnes and 500,000 tonnes and three units with a capacity above 500,000 tonnes each. The biggest unit is Jaipur Udyog with an annual rated capacity of 855,000 tonnes, while the smallest unit is Travancore Cements Ltd with a capacity of 52,000 tonnes a year. From the information available at the time of the last tariff enquiry in 1958, it was to be anticipated that 16 factories then existing would have expanded their capacities and 16 new factories would be established by the end of 1960. When these developments took place, the total annual rated capacity of the industry, it was estimated, would rise from 6.43 million tonnes in 1957 to 12.22 million tonnes in 1960. The actual position today is however different. Only ten old factories have increased their capacities, six new factories have come up and the total rated capacity of the industry has risen to 9.50 million tonnes only. The old factories which failed to expand their capacities as originally planned are Lakheri and Dwarka of A.C.C. group, Kalyanpur, Orissa Cement, Mysore Iron and U.P. Government factory. Of these, A.C.C. has surrendered the licence for expansion of its factory in Lakheri and the expansion of its Dwarka factory, it is expected, will be completed by July 1963. Kalyanpur Lime and Cement Works Ltd has attributed its failure to implement its expansion scheme to lack of finance, while Orissa Cement Ltd has stated that as its expansion will be for the production of slag cement, its implementation must await the installation of the slag granulating plant of the Hindustan Steel Ltd in Rourkela. The Mysore Iron and Steel Works has already installed its slag granulat-

ing and grinding plant and is expected to commence commercial production of blast furnace slag cement shortly. The expansion project of the U.P. Government factory is also expected to be commissioned shortly. As for the ten new factories which did not come up by the end of 1960, A.C.C. expects to complete its drug unit and India Cements its Visakhapatnam unit before the end of 1963. Another unit, namely, Assam Cements Ltd. is expected to go into production in 1963. The other concerns did not take any effective steps for the implementation of their schemes and their licences were revoked.

Future Expansion

"The target of capacity fixed for the cement industry in the third five year plan is 15 million tons. Information has been obtained from the Ministry of Commerce and Industry concerning licences granted for increasing the capacities of the existing cement factories and also for the establishment of new cement factories either by the existing units or by new-comers. If all the schemes materialise as scheduled, the additional capacity likely to be established by the middle of 1964, would be of the order of 2.06 million tonnes. This will be achieved by expansion in nine of the existing factories and by the establishment of eight new factories. The following statement indicates the position of the cement industry at present and in future:

	Additional annual capacity likely to be established (Million tonnes)	Total annual capacity (Million tonnes)	Number of cement factories
"As at the end of April 1961	—	9.50	34
"During July 1961 to June 1962	0.63	10.13	37
"During July 1962 to June 1963	0.36	10.49	39
"During July 1963 to June 1964	1.07	11.56	42
	2.06		

According to the data furnished by the industry and the Development Wing, additional capacity of the order of 2.41 million tonnes is likely to be established after June 1964. Further, schemes for the manufacture of portland blast furnace slag cement by five of the existing factories (Sindri and Drug of A.C.C. group, Orissa Cement, Sone Valley and Rohtas) have been licensed, but progress has been held up for want of details concerning the composition and availability of slag from the steel plants.

Demand Estimate

"The Planning Commission has estimated the demand for cement at 13 million tons (13.20 million tonnes) in 1965-66, and to meet this, fixed a target of 15 million tons (15.24 million tonnes) of capacity to be achieved by the end of the third five year plan period. Among the manufacturers of cement, A.C.C. has estimated the demand at 9.13 million tonnes for 1961, 10.04 million tonnes for 1962, and 11.05 million tons for 1963. It has based its estimates on a consumption figure of 7.02 million tonnes in 1960, plus an unsatisfied demand of about 1.28 million tons and has assumed an annual increase of 10 percent (cumulative) in the demand. Other manufacturers have furnished divergent figures as estimates of demand. Such estimates range from 8 million tons to 11 million tons for 1961; 9.28 million tons to 13 million tons for 1962; and 10.56 million tons to 13 million tonnes for 1963. The S. T. C. has also furnished data relating to the actual despatches of cement during 1958, 1959 and 1960 which are as follows:

	(Million tonnes)
1958	6.04
1959	6.70
1960	7.64

"The figures of demand estimates given above and despatches made during the last three years, were discussed at the public enquiry. The consensus of opinion was that the unsatisfied demand in 1960 was less than 10 percent of the despatches of cement during that year. According to this view, the potential demand for 1960 was about 8 million tonnes. As for the future, it was agreed that taking into consideration the increased tempo of industrial development and constructional activity in both the public and the private sectors for the third plan period, it would not be wrong to assume a cumulative annual increase of 12½ percent in future demand. It is difficult, however, to make an accurate forecast of the demand which might actually develop by 1964; but considering the promise of generous assistance by friendly countries in the implementation of the third five year plan and the size of capital expenditure on plant projects, it would not be unreasonable to accept as fair the estimates made during discussions at the public enquiry. It is to be estimated, therefore, that the demand for 1961 would be of the order of 9 million tonnes, and that it would rise by 12½ percent a year to 12.8 million tonnes in 1964.

Extra Production Capacity

"The next point that arises is what productive capacity should be established for meeting the growing potential demand in the country. If all the plans of the cement industry for additional capacity materialise according to the present schedules, the aggregate annual capacity would be 11.56 million tonnes at the end of June 1964. As against this, the demand during 1964 is estimated at 12.80 million tonnes. Considering the

condition of the existing plants, difficulties concerning the quality and transport of coal, etcetera, the maximum use of capacity cannot be expected to go beyond 90 percent to 95 percent overall. On this basis, production in 1964 is not likely to exceed 10.40 million tonnes or 10.98 million tonnes. In other words, a shortfall in the supply of cement that year would be of the order of 1.8 million tonnes. This indicates the urgent need for licensing additional capacity for cement manufacture and also for taking active steps to ensure that such capacity is actually installed and commissioned progressively by 1964. The latest orders of the Government are that licences to establish cement factories would in future be granted as far as possible to new entrepreneurs, that is, persons or groups of persons who do not hold any licence for a cement factory. An exception has been provided in favour of such existing cement manufacturers as apply for diversification or expansion of existing units or units already licensed and such diversification or expansion is necessary in order to make the units economic, or for increasing exports. In the course of preliminary studies on the third plan, the tentative target of capacity suggested for the cement industry for 1970-71 is 24 to 26 million tons, namely, over 10 million tons above the 1965-66 target. It would be unreasonable to expect that the present capacity of 9.5 million tons could be raised by more than one-and-a-half times within the next ten years solely by the efforts of new entrepreneurs who may start with a small scheme and expand gradually. The building of modern cement works takes both time and considerable capital resources. With an expansion plan such as this, the Government should adopt a flexible policy concerning the licensing of additional capacity and ensure that established producers having resources and know-how are not discouraged or prevented from implementing their schemes of establishing new cement units, or adding to existing capacity.

Gestation Period

"Further, a new cement plant takes about two years to start production from the date of placing firm orders with the suppliers of machinery. It appears, therefore, that the present near-famine conditions for cement are likely to persist for some time, unless vigorous steps are taken side by side urgently to step up the prevailing low percentage of using installed capacity in many units. From the analysis in the previous paragraphs, it appears that production during 1961 is at the rate of 8.19 million tons, against an estimated demand of 9 million tons. The current shortage of cement

is, therefore, of the order of 1 million tons. The present scramble for cement is partially due to physical shortages which actually exist and also to the psychology of scarcity which leads to an inflation of demands. As has been indicated earlier, production at present is running at the rate of 86.2 percent of the rated capacity; but given adequate supplies of coal, output could be stepped up quickly by another 5 percent, namely, by about 500,000 tons a year. Further, Government departments and projects consume nearly 45 percent to 50 percent of the indigenous production of cement. If as a temporary measure, the use of alternative building materials such as lime-mortar in the construction of residential buildings is encouraged (the Government may set an example in this matter), it might be possible to effect some economy in the consumption of cement during a situation of shortage."

It will be thus seen that even the capacity licensed does not guarantee the availability of supply. The time-lag between licensing a unit and its going to full capacity production has also been emphasised. With the drain on foreign exchange being eliminated by the setting up of cement machinery-making units, there should be no difficulty in planning for production on the lines visualised by the Central Ministry of Commerce and Industry. It could be argued that even if additional capacity were licensed for a target of 18 million tons, in the light of past experience, the actual production by 1966 may not exceed 15 million tons. In other words, to reach a target of 15 million tons, an 18 million tons capacity should be licensed. As already reported, the Ministry of Mines and Fuel has raised a similar demand for coal and oil. Transport is the only snag. In fact, the Planning Commission has postponed the re-opening of the question of the revision of the cement target mainly because of the opposition from the railways. But if the railways are in a position to export wagons, as the chairman says they are, then transport should present no serious problem. The only difficulty then would be the line capacity, which should be improved and expanded as expeditiously as possible. The Central Ministry of Commerce and Industry hopes to renew its demand for stepping up the cement target by the end of 1961, or six months earlier than desired by the Planning Commission.

Coal by Canal

Talking of transport, when the multi-purpose planning of river projects was in fashion, the Damodar Valley Corporation was to provide a navigation canal to transport 2 million tons of

coal a year. The canal, as now planned, runs some miles away from the coalfields. A metre-gauge railway or a ropeway will be needed to bring coal to the canal's banks. Barges will be required to carry coal. The planners have been so busy otherwise, say, on producing beautiful essays on the *panchayat raj* that they have had no time to create some machinery to tackle these humdrum problems. So the canal, like the famous bridge in Hiraikund, would soon be ready to become a showpiece for the foreign visitors. The coal will remain at the pitheads.

Exports by Compulsion

According to reports, the Central Ministry of Commerce has been giving final touches to its plan to mobilise exports by "compulsion". Legislation to give effect to the plan is being discussed. Mr. Andrew Shonfield, who cannot be accused of any unfriendliness towards India, is not very hopeful of India's export drive. In his book, *The Attack on World Poverty*, he devotes a chapter on Indian exports, in the course of which he says: "My conclusion is that since India is, after all, an undeveloped country and not some kind of commercial Hercules, the task of pushing up exports—or alternatively of cutting back imports of essentials by making these things at home—at this speed during the crucial stage of an investment programme is just not a practical proposition. It is not merely that it would be difficult to force the Indian people to forgo the benefits of their increased production altogether, so that enough resources were set aside to sustain both the high investment programme and the massive increase in exports. That is another moot point, but it is not the point at issue here. Even if the Indians did go without consumer goods and services, it is very questionable whether the resources so released could, within the next five years, be converted into a mass of articles of equivalent value which they could sell in export markets. No doubt, by denying people at home bicycles, sewing machines and refrigerators, steel could be released for making more of these and other products for export. The Indians have already made an entry into foreign markets with such products as electric fans and sewing machines, as well as a few simple machine tools. But this type of export still produces only a tiny fraction of India's foreign exchange earnings today, and no one on the spot seriously believes that the amount sold abroad can be quickly multiplied very many times. India's staple exports like jute, tea and cotton textiles seem unlikely to expand very much; so that the whole weight of the new export drive will have to be borne by the newer industries, mainly, in the engineering field."

"There is, in addition, a useful Indian trade with the communist bloc countries in cheap consumer goods, notably shoes. This could conceivably develop into something much bigger, if the Russians decided one day to use international trade purposefully to raise their own standard of living. The Russians and the undeveloped countries are in many ways ideally complementary as trading partners. All the evidence suggests that Russian industry can make capital goods cheaply and efficiently, while it is much less competent at making simple consumer goods, which have been neglected during long years of austerity. Now the Russians have the opportunity to take advantage of the products of cheap labour in the undeveloped countries, and in return they would be able to sell the surplus output of the more highly paid Russian workers in heavy industry."

Reorientation in Trade

"This would require a willingness on the part of India to undertake a profound reorientation of her trade, which would make her dependent on Russia for a large part of her capital goods and spare parts. Even assuming that the Indians are ready to take the risks inherent in such a decision, they would still be left with a serious practical problem about fulfilling their undertaking to supply consumer goods of a standard quality to their Russian customers. Quality is bound to be a major problem when an attempt is made to mobilise the primitive handicrafts sector of an undeveloped economy for an export drive. The Japanese were able to do it, as a result of a triumph of organisation and discipline; but it took even them a long time. The Indians do not start off with the peculiar cultural background which gave Japan unusual advantages for an export drive of this kind."

"The foregoing argument about the earning capacity of undeveloped countries does not ignore the importance of the 'will to export'. The fact is, however, that the will by itself is not enough to produce results quickly, if a country which is not subject to totalitarian controls is also trying to build up new capital goods industries to meet home requirements and raise agricultural output at the same time. In theory, it can restrict consumption to the point where both the needs of the domestic programme and of the export drive are met. This is what China appears to be able to do. But in India and other low-income countries which are not communist, it is impossible to operate full-scale control over all aspects of consumer behaviour without at the same time stifling private enterprise. Here is indeed one of the disabilities of the private enterprise system in the earliest stage of economic development. The communists have the definite advantage at this stage, when the industrial objectives are simple and clear-cut and the flexibility associated with the multiple initiatives of private enterprise is less important than it later becomes. The political choice means that the achievement of economic independence in a country like India is

bound to take a longer time than in China. Specifically, it seems unlikely that even if India gets all the capital that she requires from abroad to carry her through her third and fourth five year plans, the deficit on her balance of payments will be eliminated before 1970."

New Capital Issues Sanctioned

Of the eight companies which have been authorised to make new capital issues, four will issue bonus shares and the other four equities. The consent of the Controller of Capital Issues for all the issues is valid for 12 months. The following are the details:

Glaxo Laboratories: Glaxo Laboratories (India) Private Ltd, Bombay, has been accorded permission to the issue of further capital of Rs. 1 crore in 1,000,000 equity shares of Rs. 10 each, to be issued as bonus shares on the capitalisation of reserves.

Gammon India: Gammon India Private Ltd, Bombay, incorporated in 1922 and engaged in the business as civil engineers and contractors, has been given consent to the issue of 250,000 equity shares of Rs. 10 each, as fully paid-up bonus shares on the capitalisation of its reserves to the extent of Rs. 25 lakhs. The Company's existing paid-up capital is Rs. 30 lakhs. It will issue five bonus shares to the holders of six shares.

New Commercial Mills: New Commercial Mills Company Ltd, Ahmedabad, has been granted consent to the issue of bonus capital of Rs. 14,31,750, divided into 5,772 equity shares of Rs. 250 each. The bonus shares will be issued to the existing equity shareholders of the Company in the ratio of one bonus share for every five equity shares held, on the capitalisation of the share premium account of the Company.

Devashola (Nilgiri) Tea Estates: The Devashola (Nilgiri) Tea Estates Company Ltd, Madras, has been granted consent to issue equity bonus shares of the value of Rs. 2,40,000 on the capitalisation of the Company's reserves to a like extent. The bonus shares will be issued in proportion of two bonus shares for every five held by the existing shareholders.

Seshasayee Industries: Seshasayee Industries Ltd, Madras, has been granted consent to issue a further capital of Rs. 40 lakhs in the form of equity shares of Rs. 10 each for cash at par. The proceeds of the issue will be used for the manufacture of H.T. and L.T. porcelain insulators, transformer bushings, etcetera.

Simco Meters: Simco Meters Ltd, Madras, has been granted consent to issue capital of Rs. 35 lakhs consisting of equity shares worth Rs. 32 lakhs and 9 percent preference shares of Rs. 3 lakhs for cash at par. The proceeds will be used for the manufacture of house service electricity meters, in collaboration with Denis Ferranti Meters Ltd, U.K.

Southern Brick Works: Southern Brick Works (Private) Ltd, Madras, has been granted consent to issue equity capital of Rs. 25 lakhs for cash at par privately. The proceeds of the issue will be used for starting a factory in Madras for the manufacture of bricks and tiles.

Perfect Pottery Company: The Perfect Pottery Company Ltd, Jabalpur, Madhya Pradesh, having a paid-up capital of Rs. 22,32,400 has been accorded consent to the issue of further capital of Rs. 5,93,850, divided into 11,877 equity shares of Rs. 50 each to the existing equity shareholders in the ratio of one new share for three held, for cash at par. The proceeds of the issue will be used for establishing a new works in Bharatpur for the manufacture of 7,200 tons of Stoneware Pipes and 7,200 tons of refractory firebricks annually.

Settling Commercial Disputes

Facilities for the settlement of commercial disputes arising between parties in India and Russia are now available as a result of the agreement entered into between the Arbitration Tribunal of the Federation of Indian Chambers of Commerce and Industry and the All Union Chamber of Commerce, Russia. The arbitration clause to be included in contracts between the Russian foreign trade organisations, on one side, and the Indian parties, on the other, runs as follows: "Any dispute or claim which may arise out of the present contract or in connection with the same is to be referred to the exclusion of the jurisdiction of the ordinary courts, to decision by arbitration. If the defendant in such dispute or claim is a Russian foreign trade organisation, the arbitration will be conducted in Foreign Trade Arbitration Commission under the Russian Chamber of Commerce, Moscow, in accordance with rules of procedure of the said Commission. If the defendant in such dispute or claim is an Indian physical or juridical party, the arbitration will be conducted by the Arbitration Tribunal of the Federation of Indian Chambers of Commerce and Industry, New Delhi, in accordance with the rules of procedure of the said Tribunal. The award of the respective arbitrations will be binding upon both parties." The agreement also provides for periodical meetings between the competent representatives of the Foreign Arbitration Commission of the Russian Chamber of Commerce and the Arbitration Tribunal of the Federation of Indian Chambers of Commerce and Industry relating to the fulfilment of the present agreement. This is the fourth agreement in the field of international commercial arbitration to be entered into by the Federation with commercial organisations of foreign countries. The first three agreements were signed with the bodies in Japan, the U.S.A. and East Germany.

MORE PIPES
to meet the
nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

Improved MOIST-O-GRAPH
measures regain...
controls automatically

The electronic Moist-O-Graph takes the guesswork out of regain control. In addition to measuring regain for fibres and filament, regardless of blends or sizes, it provides automatic control that helps speed up production and improve quality in the slasher room; increase efficiency in the weaving room.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Honeywell

First in Control

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings. Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry. Precision electronic instruments and control systems for aircraft and missiles.

OUTLOOK FOR U.K. EXPORTS BETTER, SAYS CHANCELLOR BUT OFFICIAL TRADE FIGURES SHOW NO CLEAR TREND

(FROM OUR LONDON CORRESPONDENT)

THE days of the credit squeeze may be numbered. Of this, the Chancellor of the Exchequer gave the first hint last week. Having first taken a hopeful view of export opportunities, he said: "There is likely, therefore, to be a favourable opportunity for us to be moving on from emergency or crisis steps, to the shaping and development of longer term policies." Mr. Lloyd was speaking at the annual luncheon of the National Union of Manufacturers (rechristened the National Association of British Manufacturers). The Chancellor forcibly reminded his audience that exports are the dominating consideration. The Government did not want to get a current account surplus by cutting exports. He continued: "The increase in export is the growth-leader. Growth from internal demand, while we remain in the external balance of payments deficit, is a false growth, a mushroom growth."

The Chancellor must be in possession of more information than has yet been vouchsafed the general public, for his confidence is hardly justified by the more obvious pointers. The Board of Trade figures of U.K. exports and imports last month showed little evidence of a continuing improvement in the country's overseas trading balance. Although the October trade "gap" is well below last year's average, exports do not seem to be gaining on recent levels, and there are signs that the fall in imports is ending. On the "crude" basis of values recorded at the ports, last month's "gap" of £46.6 million was a considerable improvement on the September figure of £71.1 million. But after allowance for seasonal variations, the October performance looks less good. Adjusted figures show last month's gap at £56 million, compared with £49 million in September and only £22 million in August. On the seasonally adjusted basis, October exports and reexports totalled £323 million and imports £379 million. For the three

months August-October, exports were 2 percent, and imports 1 percent higher than in the previous quarter. Over the first ten months of this year, exports showed a gain of 4 percent, and imports a fall of 2½ percent, compared with average rates in 1960. The general impression is that exports are holding the higher rate achieved earlier this year, but are showing little tendency to rise further, while imports may also be flattening out, at a level somewhat below last year's. Nevertheless, it is difficult to judge a trend on one month's figures. The full figures, when they are made available, may furnish an explanation, but at present, the general picture presented appears to be one which scarcely encourages hope of any early relaxation of the official restraints on home demand. All the indications are that progress towards a better underlying balance of payments is still painfully slow.

Retail Sales Lower

Retail sales probably fell in October again, although only by a small margin. According to the Board of Trade, "the indications available at the provisional stage are not sufficiently firm" to justify anything more than a tentative estimate of 116 to 115 for the seasonally adjusted index. The index was 116 for September and 117 for both August and July. Retail sales in July and August were higher than they had ever been. It was not until September that the Chancellor's July restrictions began to bite into business. Last month, trade was generally quieter with durable goods shops probably suffering a further fall in business. The movement of the seasonally adjusted index has now brought it back practically to the level of last May. There was a dip in June to 114 before the strong upward trend in business during the summer months. The unadjusted index for October is provisionally 117 to 116, which is 3 percent higher than it was a year ago. Almost the

whole of this rise is accounted for by higher prices, and only a small part by increased volume. In August, the rise in the value of sales, compared with the previous August, was 6 percent.

Challenge of the Common Market

Britain's entry into the European Economic Community will be "unsettling but challenging and exciting," Mr. Selwyn Lloyd said at a conference of bankers organised in London by the Exchequer Movement. The Chancellor of the Exchequer said that a large unified market would present new opportunities to a number of industries, and this alone should provide a stimulus to new development and expansion. But few parts of industry would escape the need for some change of attitude. The mere act of joining would certainly not be enough. "Our future, in the Common Market or out of it, would depend on whether we were competitive in price or quality," Mr. Lloyd then gave a warning not often heard before: "The penalties for failure, as well as the rewards for success, are greater if we join than if we stay out." So far, whenever British industry failed to remain competitive the effect had been felt largely in the export markets.

Mr. Lloyd said that provided the Commonwealth's essential economic interests could be protected, there would be real political benefits for it from the closer links with Europe. Britain would be stronger inside an expanding European group than outside. With a new community, liberal and outward looking, there should be opportunities for increased trade. The unique system of Commonwealth consultation built up over the years would continue. At the same time, there was nothing incompatible between the Treaty of Rome and the sterling system. To the extent that Britain would share in the growing prosperity of the Common Market, sterling would be strengthened, and its usefulness as an international trading and reserve currency would be increased.

The main speaker from the Common Market, M. Louis Camu, president of the Bank of Brussels, said that the greatest importance was being attached to the moral, political and economic strength of the Commonwealth. Every effort would be made to avoid any damage to links. But the Six would not agree to any concession which would weaken the cohesion of the Community. Solutions would have to be found through a series of separate commercial agreements with Commonwealth countries. Mr. Camu urged Britain to make sterling safe so that it could in due course become "the key currency of the enlarged Common Market."

Chances for Britain in Japan

Britain is not obtaining anything like its possible share of technical agreements with Japan on research and "know-how." So small is the U.K.'s share of this market that Japanese are sceptical that Britain has much technology to sell. This is one of the conclusions of Sir Norman Kipping, director-general of the Federation of British Industries, after a three-week tour of Japan. In a report published, he says that Britain is missing a valuable potential income. Figures of approved technical agreements with other countries show that the U.S.A. has the lion's share of such Japanese trade, but Britain is well behind West Germany and Switzerland. "Japanese companies tend to regard British companies as being generally unwilling to enter into licence or know-how agreements with them. In consequence, there is a general scepticism of Britain having much in the way of technology to sell. Other countries, above all the United States, have reaped the advantage of a wide familiarity in Japanese industry with their plant. If there is any idea that withholding of know-how can retard the development of Japanese competition, it is, we are sure, an illusion. It is also increasingly being found that know-how agreements are not a one-way traffic. Japan often has know-how to sell." Given liberalisation of trade, the main market for British goods would be Japanese industry itself, especially for engineering goods.

"There is a general ignorance of British engineering products and achievements. The very success of such British items as Scotch whisky, woollens and confectionery has perhaps contributed to a quite false picture that we are strong only in consumer goods. Persistent salesmanship and promotion will be needed to correct this. And most of all, far more visiting of each other by business men of both countries which alone can break down the prevailing ignorance."

Experts for Foreign Aid Schemes

The first step in enlisting British experts to give technical assistance overseas has just been announced by the Department of Technical Co-operation. The Minister in charge of the department, Mr. Dennis Vosper, has appointed an advisory committee on agriculture, forestry, and fisheries, to help him decide what assistance Britain can offer in these fields to under-developed countries inside and outside the Commonwealth. The chairman will be Mr. F. C. Bawden, director of the Rothamsted Experimental Station. The members include two dons, Sir Joseph Hutchinson, who holds the chair of agriculture at Cambridge, and Professor M. V. Laurie, Professor of Forestry at Oxford. The other members will be Dr. E. G. Cox, Mr. Arthur Gaitskell, Sir John Ritchie, Dr. H. G. Sanders, and Professor C. M. Yonge. The committee will look particularly at the potential supply of experts who might go overseas; facilities for advising representatives of other countries coming here; and the possibilities of training students and administrators from under-developed countries.

Jute

FIBRE PRICES FALL AS ARRIVALS INCREASE UPCOUNTRY MARKETS WEAKEN DUE TO TRANSPORT DIFFICULTIES

THE jute and gunny markets have been fairly quiet during the past week, although prices have been fluctuating, generally in a downward direction. Everyone is wondering when a big price will occur, and conditions during the past days appear to indicate that the time may not be far distant. Prices are all so low already that it appears to be little hope of any sharp fall. On the other hand, conditions do not favour any advance either, since raw material supplies are abundant and the demand for jute goods is very moderate. Arrivals of raw jute into Calcutta and upcountry agencies are larger than ever this season, and it is apparent that sellers might have to rid of these at any cost.

The competition for business in all trades means that so keen that overhead expenses have to be reduced to the minimum, and jute cloth, which has been termed "the world's wrapping paper," is now virtually placed by some in the category of "overhead expenses." Such buyers are not slow to pay more for gunnies. There was a time when mills specialised in producing particular qualities for particular buyers, and had no difficulty in selling their output, since the buyers would automatically come along for supplies when they were required. Nowadays, only a few mills belong to this category, and manufacturers are gradually finding it necessary to produce the commoner varieties in order to compete with their neighbours. As competition is keener, those who do sit back and wait for orders to come in are finding that they must go out in search of business if they wish to keep going at all. The advice of substitutes, particularly during the past year, has reduced the potentialities of the jute trade, and it is doubtful if many of these markets can be recaptured, as large sums of money have been spent on research for substitutes.

Poor Quality

As often happens, the improvement in raw material supplies has not necessarily meant an improvement in the quality of arrivals. The quality of recent arrivals, at both mills and baling centres, has much to be desired. Naturally the large flux of jute has brought down prices, but this only true of the common grades. High-grade jute is very scarce, and premium prices are being paid for "special jute", much of which does not meet up to the required standard. This has further reduced the already low standard of current arrivals. Balers are pulling out any fibre which can be termed high-grade, to the detriment of the ordinary assortment of jute.

Another factor contributing to the weakness in the jute market is the transport situation in the upcountry areas. Shipment by river, which only short while ago was breaking all records in terms of speed, has now sharply deteriorated. Bottlenecks have developed, particularly in the Dhubri and Gauhati stations. Stocks are piling up at these places and delivery dates have had to be extended. Towing power also appears to be limited, and consignments are taking longer to arrive at their destination, perhaps because of the larger ships the steamers are asked to tow in an attempt to reduce the backlog. Rail transport is very scarce. Bookings from many stations, particularly in the Bihar and Desal areas, have been restricted, and wagon allocations bear no relation to the applications. Some stations have closed bookings altogether. The same story holds good for road transport. It is understood that, in many districts, all lorries have been commandeered by government authorities for the movement of essential commodities, mainly rice. Any lorries that are available are "cashing in" on the shortage and making twice or thrice the normal rate. This, of course, is prohibitive for the seller, whose margin of profit at current rates is very slender anyway.

Mill Buying

The fall in raw jute prices, especially in the upcountry markets, has been causing concern to the government. Mills have bought on a fairly substantial scale since the week-end, when rates dropped rapidly, but as business was poor in the previous weeks, this has made very little difference. The Indian Jute Mills Association's appeal to its members to support the market and keep up raw jute prices has led to some discussion. The question has been asked as to how long mills will be able to do this since they cannot go on buying all the time unless they can unload their gunnies. It is scarcely to be expected that mills would wish to increase their holdings. Current prices show a favourable return in the ready position, particularly for hessians. But, for forward business, goods prices are so low that simultaneous business cannot be done at a profit, except in some classes of hessian goods. Mills are fairly well sold for the near positions, but many are still blank on forward sales except for token commitments.

Two choices are left. If foreign buyers do not show more interest, and the Government still wants mills to support the fibre market, then it has to give some relief by taking up gunnies. Mills will always be prepared to buy jute, provided they can sell the manufactured goods at a fair price.

Alternatively, the Government will have to buy jute or introduce a buffer stock whereby the jute is released to the mills at a later date as and when gunny sales are made. The snag here is that the holding price may not be favourable to the mills at the time sales are concluded, and if the open market price is lower than the holding price, then mills will be reluctant to take up the buffer stock. It has been generally known for some time that the Indian Jute Mills Association committee has been actively concentrating on the preparation of an agreed policy for future working. It is only natural that little is known about the nature and scope of the schemes discussed, but it is a reasonable conclusion that the evolution of a practical system must be founded on facts which command the unanimous approval of all interests in the trade.

Raw Jute Arrivals

Raw jute arrivals in Calcutta and mill stations during October 1961 amounted to 669,400 bales, made up of 60,500 bales from Pakistan and 608,900 bales from India. The total was 140,300 bales higher than in September. Total arrivals for the period from July to October 1961 now amount to 1,709,000 bales, of which 137,400 bales came from Pakistan and 1,571,600 bales from India. Compared with the 1960-61 season, when there was an acute shortage, arrivals in October were up by 65,500 bales. The total increase over the July-October 1960 period is 296,600 bales. Arrivals from India showed an increase of 332,250 bales, but this was offset by a drop of 35,650 bales in arrivals from

Pakistan. Current arrivals compare favourably with previous normal seasons.

THE JUTE MARKETS

Manufactured Goods: Once again, the goods market was extremely dull. With the futures market closed during the early part of the past week due to the settling of differences there was little activity. As overseas buyers showed a complete lack of interest, prices tended to sag. B Twills opened Re. 1 lower in the near position to be called over last Thursday morning at Rs. 139.50. The forward position was slightly better and January-March shipment advanced by 50nP to Rs. 126.50. Hessians remained virtually unchanged with 40in. 100z standing at Rs. 51 for November shipment and Rs. 46.35 for January-March. In the absence of overseas business, conditions remained depressed and sacking fell steadily to Rs. 137.25, but only minor changes were seen in hessians. After the opening of the futures market, activity was restricted, and prices continued to fall in sacking, while hessians remained comparatively steady. By Tuesday morning, ready B Twills were down to Rs. 135.75, a drop of Rs. 3.75 from the opening rates; 40in. 100z hessians, on the other hand, dropped by only 15nP due mainly to some demand from the U.S.A.

Opening quotations on Wednesday morning were as follows:

	November	December	Jan.-March
40in. 7joz.	38.25	36.25	34.00
40in. 8oz.	41.25	38.75	36.50
40in. 100z.	50.50	47.50	45.50
B Twills	135.25	127.50	123.00
Heavy Cees (Plain)	134.00	127.50	123.00
A Twills	144.00	136.50	130.00
Liverpools	155.00	146.50	140.00
Corn sacks	134.50	128.50	125.00

Raw Jute: The fibre market was very quiet at the opening, with sellers keen for business and mills showing little interest. Only scattered lots were purchased under contract, but jetty purchases of Daissee and mesta were reported to be

fairly heavy. Accumulation of stocks at both rail and steamer stations upcountry caused a certain amount of anxiety, and some sellers began to offer at cut rates. Assam quotations dropped to Rs. 32, and thereafter fell by 50p on both Friday and Saturday. Over the week-end, selling pressure was heavy and Monday morning saw prices falling to Rs. 30. This was the level at which many mills had indicated they would be buyers, and during the day purchases of about 250,000 maunds of jute were reported. Contrary to expectations, this had little effect on the market, due mainly to the weak goods section, and on Tuesday there was no alteration in quotations. Wagon arrivals at Cossipore were better than in the previous week, but at 52s they were very much below normal for the time of year.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills Basis Bottoms	Rs. a 100 kilos	Rs. a md.	Shipment

THE PAKISTANI JUTE MARKETS

ARRIVALS DECREASE AS FIBRE FALLS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE market jumped during the past week to prices above the E.P.C. level and then subsequently came down to that of the previous week. The main difference, however, is that in spite of the lower rates at the close, there was considerably more

buying interest. With lower rates, arrivals continued to fall off, and when the overseas markets suddenly showed a keen interest over the week-end, it was very difficult to buy jute as very little fibre was coming into the baling centres. This drop in arrivals is not only due to the lower prices prevailing for fibre, but due to paddy harvesting also. Meanwhile, what jute is available is very much sought after and the outlook is actually bullish. The rates are already considerably higher than in either the pucca bale market in Narayanganj or the overseas market. Shortly before the rise at the end of the week, certain balers came in to buy large quantities of Export Hearts, which had reached a level of £80 c.i.f. Continent. There was a fairly heavy transaction in Cuttings. Reasonable business was also reported in Dundee Tossa 4 and Export Lightnings. When the spurt of buying died down overseas, the market had an equally sharp reaction both in Hearts and Cuttings. Interest in Tossa and Export Lightnings has been maintained at about E.P.C. levels and it is becoming more and more difficult to buy Dundee Tossa-4, of which several balers are reported to be short.

A pattern is emerging in this season's market fluctuations. It is becoming apparent that after a spurt of buying which raises prices all round, foreign buyers sit out. The overseas market becomes weak, but the local market remains steady as balers cover. Unfortunately, buyers have invariably been buying on a hand-to-mouth basis so that instead of buying a little each week, they have been buying all at once but only for the ready month shipment. When balers have covered their commitments in the market sold, they are invariably long of other marks, which they are keen to sell especially since the financial barrier this year does not permit a bull to maintain his position for long. This keenness to sell excess grades while the local market is strong to one overseas where there are no buyers, invariably results in lower prices, both locally and overseas. This encourages the growers to withdraw, by which time the buyers are ready to cover their next month's requirements, and once again, demand appears and prices rise. If buyers would spread their purchasing over the whole month and buy ahead rather than merely for the ready position there would be a far more stable market.

It is reported that exports during October exceeded 500,000 bales and almost the same figure may be expected during November. Estimating the crop at between 6.5 million bales and 7 million bales, it is almost certain that 50 percent of the crop has been marketed. During the recent increased demand period, E.P.C. prices for long jute were not changed, but the price for cuttings was increased by £2 a ton.

THE FOREIGN JUTE MARKETS

FIBRE FALLS BUT BUYERS HOLD OFF

(FROM OUR DUNDEE CORRESPONDENT)

THE Dundee jute market last week was in a state of weakness, and sellers were more anxious to do business at cheaper prices. Most buyers, however, were inclined to hold off, so little fresh business was transacted, especially for distant delivery. As for the raw material, shippers are reducing their terms by 10s to £1 a ton, but prices are not coming down fast enough, although buyers have been expecting that the values would slump this season since there is so much jute available in the upcountry markets. The holders of raw jute are apparently unwilling to allow prices to decline, but they must realise that they cannot go on getting the high rates they received when there was a scarcity of jute. The spinners and weavers always do their bit to cheapen prices for their customers, many of whom have no wish to switch over to substitutes. At the moment, market circles believe that prices will come down when the weight of the crop is felt and that those who are holding off supplies for higher prices will be forced to unload. The growers have had a long spell of good prices, and they are no doubt strong enough to hold off. But as a long-term policy, this is foolish.

Raw jute has fallen £1 or £2 a ton, Mill Firsts being offered at £155, Mill Lightnings from £231 and Mill Hearts £103, and Grade Hearts £84 10s, while Grade Tossa-2/3 is quoted at from £141, four from £126 and Continental Tossa-2/3 £109, c.i.f. U.K.-Continent, December shipment. Although other countries were reported to be buying more freely during the past week, spinners in the U.K. bought very little.

An adjustment has been made in the prices for jute yarns and cloth to counter changes in the rates in Pakistan and variations in manufacturing costs. Medium yarns are down by about £2 a ton, but the values of jute cloth have fallen by about £5 a ton. Hessian yarns are now at 18.07d a lb for 8 lbs C.H.W. cops and 19.21d a lb for 8 lbs J.C.H. warp, but C.H.W. warps are now available at 18.07d a lb in a lower batch. Hessians are quoted at 15.25d a yard for 40in. 10oz. and 12.90d for 8oz. Heavy goods remain unchanged.

Calcutta goods were quite strong for a time, but the position has weakened again to 77s 6d for 40in. 10oz. Hessians and 58s 9d for 74oz. November, 73s 3d and 55s 6d December, 70s and 52s 6d January-March and 68s 9d and 31s 9d April-June, with B Twills at 21s 3d, 19s, 19s 3d and 19s for the respective positions of shipment, all f.o.b., Calcutta.

GOOD PROSPECTS FOR RAISING COFFEE EXPORTS TO EUROPE SCOPE FOR LARGER SHIPMENTS OF ARABICA TO FRANCE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE chairman and the chief coffee marketing officer of the Coffee Board have returned from their foreign tour with the impression that the prospects for Indian coffee in the Continent and the United Kingdom are really bright. The object of their tour was to explore the ways and means of raising coffee exports to the overseas markets and to examine the difficulties of importers. Indian coffee has made a good impression on such countries as the U.K., France, Italy, West Germany, the Netherlands and Switzerland which the delegation visited during their tour. It held discussions with the leading coffee dealers, roasters and representatives of the chambers of commerce. Indian coffee has been acclaimed in these countries as very useful for blending. The well-organised coffee trade in the U.K. strongly advocated the release of Indian coffee through normal trade channels and resented the system of barter and direct sales, the Coffee Board chairman, Mr. Sitarama Reddy, said at a Press conference.

According to the delegation, there is great scope for increasing the exports of Arabicas to France, and a beginning has been made this year. The quantity exported so far has gone up to 1,000 tons. France, where the import of Arabicas is restricted and no Robustas other than those grown by its colonies are allowed to be imported, has been consuming the poor quality Robustas. So there exists a potential market for high quality Indian Robustas, once the restrictions are relaxed, which would be a matter of time.

International Agreement

The International Coffee Agreement has been renewed for another term with 28 producing countries participating in it, but with the marked absence of active support from the major consuming countries. The agreement involves a slight downward modification in the quota allotment. The world coffee output is expected to be lower during the current production year. In spite of this, the world stock will continue to grow. The current stock is sufficient to meet two years' world demand, so a temporary fall in production will not affect the supply situation. Brazil has recently announced a plan to eliminate non-productive trees and divert the acreage to other crops or to high-yielding plants. But this is viewed with scepticism by the trade. The unsteady political and economic conditions in many producing countries add to the uncertainty in the world coffee market which is already in the doldrums. The world price of coffee has been falling for quite some time now, and there is no sign of an immediate improvement.

New Season for Black Pepper

The new season for Malabar black pepper has started on a discouraging note. In spite of the sizeable export and a fair off-take by the home market during the season ended October 1961, Indian pepper has received virtually no buying support from abroad. The present behaviour of the market shows that the buyers are confident of adequate supplies. New York is the largest buyer of Indian pepper. After a small and selective buying, importers there are now reported to be sitting on the fence watching the developments in the markets of origin. The situation in Singapore is rather intriguing. Although the greater part of the stock is in strong hands and the production of Lampung has been lower according to recent reports, the Singapore pepper market is relatively easier. One of the explanations for this paradoxical behaviour of that market is that most of the Chinese traders, who were holding a monopoly in the pepper trade, are annoyed over the entry of an Indonesian firm and are now manoeuvring to cut the ground under its feet. Another depressing factor is the 10 percent increase in the freight rates on pepper by the Far Eastern Conference Line. The Indonesian trading agency, it is reported, is trying to negotiate deals with Russia and other east European countries. If these negotiations materialise, there will be stiff competition between Indonesia and India in coming months in selling pepper to the communist countries.

Size of New Crop

Trade circles in India no more seem to believe that the size of the new pepper crop has been reduced by the heavy floods of June and July. Some traders were holding the view that the standing crop had been seriously affected by the floods and that it would be down by as much as 25 percent. Now many of them think that their original apprehension was rather unfounded and the crop would exceed the previous estimates. The trade has apparently changed its opinion due largely to the softening of the growers' attitude. The latter, who were unwilling to part with their stocks earlier, were anxious sellers in a declining market towards the end of the season. The last season's crop amounted to about 25,000 tons which was almost fully absorbed by the internal and export markets. There have been no forward sales in Malabar black pepper to cushion the impact of new arrivals which have started. New arrivals of Lampung are pressing the Singapore market. So the prospects for pepper look rather gloomy.

GROWING POPULARITY OF COFFEE IN THE U.S.A. STEADY RISE IN CONSUMPTION FORECAST

(BY A SPECIAL CORRESPONDENT)

ALTHOUGH the original European population of the U.S.A. was largely Anglo-Saxon, there has since been a considerable addition of Continental people from Scandinavia, Ireland, Italy, Greece, etcetera. These Europeans were mostly coffee drinkers, and the majority knew how to make good coffee. So it is not surprising that this beverage has a strong hold on the American people which tea is finding it difficult to compete against. Those who remember the U.S. Army tins of coffee will not be surprised about the hold this tonic has on the population. Writing from memory, this correspondent's recollection of the U.S. "Army blend" was a strong tasty mixture absolutely full of pep, a breakfast cup of which literally knocked the roof off the mouth and stimulated heart and brain to action. It is not known if caffeine alone gave this exhilarating effect, but that was how it affected this correspondent. So before tea can oust coffee, it will have to prove that it can tickle the American palate and can reinvigorate in a like degree. The Americans use good coffee, sealed in vacuum cans or tins guaranteed to keep the air out. Besides, their roasting plants are constantly being improved.

Popularity of Instant Coffee

While "instant tea" is in its infancy, "instant coffee" is established throughout the world and has made considerable progress in the past five years—except in Denmark—whereas in Holland almost next door, its use is reported to have risen from 6 percent in 1957 to 12 percent in 1960. In old countries like the U.K., "instant" leads over the regular brew. The U.S.A. is now marketing a new coffee creaming "instant" reported to pour freely and with a good taste and aroma. It works out at a servicing cost of under one cent a cup. Consumers in the U.S.A. also enjoy the latest automatic methods for making the best coffee.

Rising Consumption

It is estimated that U.S. consumption will increase from 21 million bags to 24.5 million bags by 1965 because of the rising personal income, expanding population and the relatively stable price. Americans drink 400 million cups of coffee daily or 16 lbs a head annually. (The postwar record was placed at 20.1 lbs for 1946). The consumption this

year is estimated at 11,000 million cups. These figures should be compared with tea consumption in the U.K. at 9½ lbs or 10 lbs a head a year. It will be seen that the drink-more-tea-campaign is up against a serious proposition. In spite of this, the American Tea Council proposes to tackle this problem, and the Indian Tea Board will undoubtedly add its weight to improving the consumption of Indian tea in all markets as this season's output is already at a dangerous level.

The weight of the tea being offered continues to exceed the demand, as the crop figures from the major producing countries will show: 1,123.8 million lbs. compared with 1,035 million lbs in 1960 and 1,028.7 million lbs in 1959. This year north India heads the increase up to end-October with 529.5 million lbs against 461.6 million lbs last year. On the above showing, one would expect to see rising exports, but actual figures of tea shipments from 1st July to 7th November from north India are 174.6 million lbs in 1961-62, 141.6 million lbs in 1960-61 and 179.8 million lbs in 1959-60. It will be seen that over the three-year period, total exports remain below 1959-60. This tendency in exports is confirmed by trade figures for absorption by non-producing countries. These show that in 1957 1,197.1 million lbs were shipped, in 1958 1,218.3 million lbs, in 1959 1,152 million lbs and in 1960 1,100.8 million lbs (estimated). But the total absorption of 1,720.2 million lbs in 1958 showed a fall to 1,612.8 million lbs in 1960. Meanwhile, India, Pakistan and Ceylon are all set to produce more tea before making sure that the consuming markets can absorb the output. India's plan for replanting looks a reasonable proposition, but there is clearly something that needs correction, and the Indian cost of production (after taxation) is obviously one of the causes for her losing the export markets.

Tea Auctions in Pandu

The proposal to establish tea auctions in Pandu has come under further notice. The Chief Minister of West Bengal is reported to have told the Chief Minister of Assam that "the right solution of the problem concerning common tea would be to improve its quality". May one ask how? Quality depends on climate and soil and perhaps in a minor degree on the use of chemicals on the bush and in the factory. But, at present, the majority of tea estates cannot produce quality teas. Does it not stand to reason that if the planters could improve quality, they would do so in order to secure higher prices and bigger commissions. Half of Assam, most of the Dooars and Terai as well as Cachar and Sylhet gardens just cannot produce quality teas except for an occasional fluke invoice.

"LIC appear to be growing very rapidly!"

"They are among the largest insurers in the world!"

PEOPLE ARE TALKING ABOUT LIC

The LIC is winning favourable notice everywhere. And with reason. In 1960, the LIC achieved Rs 496 crores in "new business". This was an increase of 91% since Life Insurance was nationalized only a few years ago.

Consider also the value of the total policies in force. By 1960 it had spiralled to Rs 2285 crores or nearly double the pre-LIC level.

The rapid strides made by the LIC have created a new confidence in the insuring public—a growing trust in the LIC's business initiative and sense of social mission.

ASHLIC-67

hamare bhai
ko le jao

It happened some years ago in the steel melting shops at the Jamshedpur works. A large ladle, carrying 75 tons of molten iron, suddenly crashed to the ground with a deafening noise from an overhead crane. The spattering sparks and red-hot metal seriously injured a number of brick-layers working at what seemed to be a safe distance. The air was rent with the frenzied shouts of the men and the hissing of steam.

The first ambulance could remove only five of the injured to the hospital. General Manager Keenan could take only three more in his car. He chose the three who had a better chance of survival than the rest. One of these men, a Hindu worker, however, re-

fused to go. "Do not take me away," he said. "Disregarding his own agony, he feebly nodded towards a half-burnt Muslim colleague, and said: 'Hamare bhai ko le jao.' As Keenan recalls, 'The Hindu who was in pain and danger of death remembered, not that the Mohammedan was of a different faith, but that he was his brother.'

This feeling of comradeship, born of the common bond of labour, is the spirit that characterises Jamshedpur, where industry is not merely a source of livelihood but a way of life.

JAMSHEDPUR
THE STEEL CITY

a modest
achievement...

pilot plant
production

- The name is Mansfield. The pilot plant to manufacture Mansfield truck and car tyres, at the Madras Rubber Factory, will now commence production.
- This is a modest achievement, compared to the time taken to commission this plant.
- Licenses to import machinery were received and orders placed and confirmed only three months back.
- This performance is mainly due to the valuable support, cooperation and encouragement of our great partners and collaborators, Mansfield Tyre and Rubber Co., one of the biggest tyre manufacturers in the United States.
- We feel this is a good beginning. The plant which will manufacture 30 tyres a day, will give our workers, technicians and chemists extra experience, when the factory goes into full production by the middle of 1962.
- Everybody at the Madras Rubber Factory is working hard to hasten the day when the factory will produce daily 1,000 tyres and tubes.
- Plans are also complete to expand the present capacity of MRF camelback, which commands the highest sales in India.
- MRF camelback is also exported to 14 countries.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.2 percent to 124.9 during the week ended 4th November, 1961, compared with 124.7 (revised) for the earlier week. The index was higher by 1.1 percent when compared with the corresponding week of the previous month, but was lower by 1.4 percent than that of a year ago.

PLANT SET UP IN EAST PAKISTAN TO USE JUTE WASTES

For the first time in Pakistan, a plant has been set up to use jute wastes for manufacturing rexin handbags and table coverings and P.V.C. coated felts for upholstery and rubber-coated moisture-proof felts for flooring and placing below carpets. The plant set up in Chittagong will produce all varieties of items valued around Rs. 1 crore a year, while another plant will be set up soon in Narayanganj to produce processed felts of 5,000 tons annually, exclusively for export, valued at about Rs. 50 lakhs. Showing the plant to newsmen in Chittagong which has gone into production, Mr. Blake, director of Amin Oldfield Ltd, said that both these projects would cost about Rs. 25 lakhs only with British capital participation of 20 percent. Being fully automatic, only 15 men, would work in both the plants in Chittagong and Narayanganj. Two Pakistanis have already been trained at L. W. Oldfields in London and one more is under training. Mr. Blake and Mr. Sindall, who are representatives of Oldfields, London, and directors in Amin Oldfields, said that Oldfields, London, would continue supplying all information concerning inventions of new materials and methods of manufacturing technique of all items produced from jute waste. The installation of this plant would not only enable Pakistan to make use of her jute waste, which was being thrown away so long, but would also help earn and save foreign exchange by exporting processed felts and consuming various other essential items which Pakistan otherwise had to import. Mr. Abdul Jalil, managing director of Amin Oldfields, said that they were experimenting on the manufacturing of plain and corrugated asbestos type sheets from jute waste for roofing and partition walls. A plant would also be established shortly for this purpose. He also has another venture where woollen carpets with jute hessian grounds were in the process of manufacture.

NEW MACHINE FOR STEEL PIPES EXHIBITED AT INDUSTRIES FAIR

A new machine for making steel pipes is being shown at the Indian Industries Fair in New Delhi. The compact Driam pipe mill can manufacture from 1/2 in. to 120 in. diameter, high quality steel pipe, at well below present costs. Built by the International Driam organisation, the mill exhibited costs around \$250,000. It is claimed that the savings achieved in manufacturing pipe by the Driam spiral weld process are such that a machine can be paid for in about 12 months out of these savings. Driam pipe mills are made as factory units, or can be mounted on trailers, which enables pipe to be made right on the work site. These are running in 22 countries at present. Driam pipe is now in use in Europe and the U.S.A. for oil, natural gas and water transmission, and for piling and containers.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Index of Industrial Activity (Base: 1953) has now been brought up to February 1961. Compared with the preceding month, there were decreases in sugar 36.70 points, jute 12.43 points,

yarn 7.57 points, cloth 6.96 points, cement 10.47 points, pig iron 21.22 points, finished steel 19.23 points, paper 2.50 points and electricity 14.90 points, while increases occurred in tea 2.92 points, coal 2.04 points, tyres 5.77 points, motor-cars 8.53 points,

bicycles 18.19 points and railway ton-miles 4.19 points.

Combining all the factors, the Capital Index of Indian Industrial Activity declined by 2.5 points during February 1961.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued In 000's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 22-11-61 Rs.	Year of Issue	NAMES	Amount Issued In 000's Rs.	Rate per cent	Paid-up per Share Rs. TEA COMPANIES

O., Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE INDIAN FINANCIAL REVIEW

CALCUTTA, 30th NOVEMBER, 1961.

Vol. CXXXVII No. 3687

TOWARDS COMPETITION FOR BETTER TRANSPORT

THREE main factors are responsible for the transport crisis in India today. The first is that the essential part which transport plays in economic progress has not been recognised by the planners, so expansion programmes for this sector of the economy have been starved of financial as well as administrative support. The second is that most of the expansion has been reserved for the railways, since they are a Government-owned monopoly; the possibility of competition from other forms of transport has thus been deliberately squashed. The third is that, partly because of the jealousy of the railways and partly because of the rapacity of State Governments eager to secure more revenue, the development of road transport has been intentionally hampered. The result is that the shortage of transport facilities, which has been growing predictably for years, has now reached the stage where the progress of the economy as a whole is seriously threatened. In no part of the country today are the facilities available cheap, efficient and also reliable. Important projects, both in the public and in the private sector, are suffering delays because the materials and equipment necessary for them are not being moved in time. Many established industries are forced to use much less than their installed capacity because they cannot find transport for the coal or the raw materials they need. The inadequacy of the railways has from time to time led to localised shortages of essential commodities like food and sugar; more serious and widespread crises in this sphere have been averted only because of good luck with the monsoon.

Against this background, thoughts have been turning to the possibility of developing other forms of transport more vigorously. Faced with strong criticism, the railways have frankly confessed that they neither are, nor will be, able to cope with all the traffic they are offered. On the contrary, the shortage of their carrying capacity, in relation to the demand, is likely to grow. The main alternatives which exist are road transport and coastal shipping. But since their development has been neglected, they are in no position suddenly to be able to carry all the traffic the railways choose to refuse. Meanwhile, the Neogy Committee on Transport Policy and Co-ordination, which has been appointed to look into the problem, continues its leisurely enquiries. Set up nearly two-and-a-half years ago, it produced a "preliminary report" in February this year. The outstanding feature of the report was that it asked more questions than it answered; and to the extent that any questions were answered, the replies were couched in verbiage of ambivalent vacuity. To help the Committee along in its labours, the Indian Roads and Transport Development Association has now issued a long memorandum pointing out the scope, and the need, for developing road transport more rapidly. In the process, it has exploded a number of myths concerning the virtues of the railways, to which the Neogy Committee had appeared to subscribe a little too readily.

Among the first of these myths is the claim that the facilities offered by the railways are usually better and cheaper than those offered by road transport. The I.R.T.D.A. points out that roads can provide more extensive geographical coverage than the railways; road transport is also more flexible in operation. As for costs, the initial expenditure on building a two-lane national highway is about Rs. 3 lakhs a mile; the corresponding expenditure on a broad-gauge railway track is Rs. 10 lakhs a mile. At present, admittedly, road transport is frequently more expensive for users; the average road rate is about 15nP a ton-mile for a six-ton lorry, as against which the average railway rate for revenue-earning traffic was 6.1nP a ton-mile in 1959-60. But, by using lorry-trailer and semi-trailer combinations, the former could be reduced to about 9nP for a nine-tonner, 6.4nP

for a 12-tonner, 5.1nP for a 15-tonner and 3.5nP for a 22-tonner. The use of vehicle combinations carrying larger loads could thus make road transport even cheaper than the railways. Less steel is required for road construction than for railway construction, which is important at a time when that commodity is in short supply. It is also arguable that, in general, the foreign exchange expenditure on the former would be less. The I.R.T.D.A. makes an important point when it shows that whereas India's railway capacity is being intensively used, her road capacity is not. Unless it is, the vast investment in the latter will be wasted to the extent it is left unexploited, and road transport charges will not come down. More intensive use of road transport capacity could also increase employment and provide more revenue for the Exchequer.

The I.R.T.D.A.'s comments on railway freight policy, however, are rather controversial. It is justified in arguing that "the present disproportionate development of the railways is due to the fact that the concessional freight is cheaper than road transport for carrying certain commodities like coal and raw materials for industrial plants." But it cannot be said that the concessions are unduly large and will, therefore, have to be reduced in course of time if the financial stability of the railways is to be maintained. To the extent that railway freights for bulk commodities are based on the principle of charging what the traffic can bear, they are not unduly low, and it is up to road transport to offer competition in whatever manner it can. For carrying coal, at least, the so-called "subsidy" or "concession" given by the railways is much less than is generally supposed. It may be, therefore, correct to assume that, as the proportion of coal and low-rated traffic on the railways rises in the years to come, the effect on railway finances will be as disastrous as the I.R.T.D.A. thinks. The I.R.T.D.A. appears to imply that since the railways charge 3.3nP a ton-mile for carrying coal (in 1959-60), as against an average of 6.1nP a ton-mile for all revenue-earning traffic, the difference of 2.7nP a ton-mile represents the "subsidy" given to coal traffic. But this is incorrect, for there is no reason why the coal freight should

correspond to the average for all revenue-earning traffic. Freight rates necessarily have to be high for some commodities and low for others. Lorries may be carrying bulk commodities in other countries, but in India it will be some time before they can do the same cheaply enough. Even then, there will be many kinds of traffic left for which the railways are inherently better suited.

The fairest approach to the problem of competitive superiority, as between the roads and the railways, is to shear both of unnecessary restrictions and handicaps. In its preliminary report, the Neogy Committee shirked the idea of trying to equalise the terms of competition between various forms of transport on the excuse that it would "present numerous problems." But the excuse is baseless, for this is the primary dilemma the Committee ought to be tackling. If it is reluctant to do so, there are good reasons why its enquiry should be handed over to a new body which can show a greater sense of realism and urgency. The methods of equalising competition, between the roads and the railways in the first instance, are by no means as difficult as the Neogy Committee pretends. The railways complain their main handicap is that they are forced to bear a number of uneconomic obligations in the general interests of the country; but obligations of this nature which have been imposed on them could quite easily be offset by open and direct subsidies. The handicaps which road transport has to suffer, as the I.R.T.D.A. memorandum shows, are much more serious, so, correspondingly, greater energy is necessary in removing them. The biggest handicap, perhaps, is that the basic facilities are lacking which it is the Government's duty to provide: more roads have to be built, missing links joined, bridges constructed, and surfaces improved. Licensing restrictions have to be removed so that lorries can carry bigger loads over longer distances, and thus reduce their costs of operation. Finally, the taxation on road transport, now believed to be heavier in India than anywhere else in the world, has to be rationalised and reduced. The I.R.T.D.A. may be right in thinking that to achieve these aims it is necessary to establish a Road Board, which could also be a sort of counter-weight to the Railway Board. But if the former were to be run by the same timid deities as now preside over the Transport Ministry, it is hard to see what useful purpose it will serve. The first need is that, instead of dithering and shilly-shallying, bodies like the Neogy Committee should come out with categorical recommendations favouring the freer growth of all forms of transport.

SPOON-FEEDING CO-OPERATIVE BANKS

THE co-operative movement has made encouraging progress during the past decade. The progress has been particularly rapid since the integrated scheme of rural credit was initiated in 1955-56 following the recommendations of the All-India Rural Credit Survey Report. The third five year plan proposes to give a further boost to the movement by raising the total of short and medium-term credit to Rs. 530 crores. The credit disbursed through co-operative institutions amounted to nearly Rs. 205 crores until 1960-61. Considering the ambitious target set for co-operation, the study appearing in the latest *Reserve Bank of India Bulletin* concerning the finances of the State and central co-operative banks for the period from 1951-52 to 1959-60 is of great interest. It examines the progress and weaknesses of the co-operative movement so that appropriate measures can be formulated for the future. The importance of the State and central co-operative banks lies in the fact that they constitute the pivot of the co-operative structure.

Such banks have made steady progress in recent years. Their working capital has increased, and so have their loans and advances. The proportion of overdue and debts has generally been kept within reasonable limits, although in some States, including West Bengal, it is still high. But a number of weaknesses remain. One is that the increase in the working capital of State and central

co-operative banks has been facilitated mainly by generous credit supplies from the Reserve Bank. As part of the integrated scheme of rural credit proposed by the All-India Rural Credit Survey Committee, the Reserve Bank created two funds—the National Agricultural Credit (Long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund—about six years ago. The former is used for lending money to various State Governments up to a maximum period of 20 years in order to enable them to subscribe for the share capital of co-operative credit institutions. It is also used for giving medium-term loans to State co-operative banks for agricultural purposes.

As a result of the increased borrowing by these banks, the proportion of their owned funds (including share capital, statutory reserves and other funds) to the total working capital has suffered. In the case of State co-operative banks, owned funds contributed 11 percent of the total working capital in 1960, compared with 12 percent in 1952; deposits contributed 34 percent, against 38 percent, and other borrowing 54 percent, against 31 percent. It is necessary to bear in mind that the share capital has been subscribed mostly of the State Governments, the contribution of co-operative societies and individuals being small. The trend indicates that the co-operative movement has flourished on official spoon-feeding. This

is regrettable because the basic need, if co-operation is to be successful, is that the movement must "grow from within." The reason why co-operative banks have grown on outside support is that adequate measures have not been taken to improve the performance of the primary credit and marketing societies—which constitute the base of the co-operative structure—by inculcating the spirit of co-operation among the masses.

From the banking point of view, there is need for streamlining the working of the State and central co-operative banks before they can be expected to perform efficiently the pivotal functions assigned to them. In spite of the impressive rise in working capital, the increase in their owned resources and deposits has been much less than in their loans and advances. From 1951-52 to 1959-60, the paid-up share capital of the State co-operative banks rose from Rs. 2 crores to Rs. 15 crores, reserves from Rs. 2 crores to Rs. 5 crores, deposits from Rs. 21 crores to Rs. 60 crores, other borrowings from Rs. 11 crores to Rs. 95 crores, and outstanding loans and advances from Rs. 20 crores to Rs. 130 crores. In central co-operative banks, the share capital rose from Rs. 5 crores to Rs. 31 crores, reserves from Rs. 5 crores to Rs. 10 crores, deposits from Rs. 38 crores to Rs. 95 crores, other

borrowings from Rs. 12 crores to Rs. 110 crores, and outstanding loans and advances from Rs. 36 crores to Rs. 176 crores. A disturbing feature is that some central banks have not ploughed back sufficient sums into reserves from the profits they have made.

The deposit pattern too is disappointing. The proportion of deposits to the total working capital of State co-operative banks declined from 58 percent in 1951-52 to 34 percent in 1959-60, while borrowings rose from 31 percent to 54 percent. In the case of central co-operative banks, deposits declined from 64 percent to 39 percent, but borrowings rose from 20 percent to 45 percent. It looks as if the liberal credit supplies coming from the Reserve Bank have prevented these institutions from exerting themselves to increase deposits. But it is essential that steps be taken to increase deposits in line with loans and advances. An important factor which may have hampered the growth of deposits is that the interest paid is too low. Co-operative banks have to compete for deposits with other financial institutions, including commercial banks. They may, therefore, have to make their deposit rate structure more attractive in the interests of future progress.

PLANNING EUROPEAN GROWTH

It is interesting to consider some of the reasons why the American proposal that members of the Organisation for Economic Co-operation and Development should plan an average economic growth of 50 percent by 1970 was not, on the whole, received enthusiastically by the members. The annual growth-rate envisaged at that stage of the proceedings was 4.6 percent, and the British Government is not confident of achieving such a rate without inflation. The German Government (in particular, Vice-Chancellor Erhard) is not sure that a planned target is compatible with a free-market economy. The French Government, on the other hand, already has a planned target, and it is considerably higher than 4.6 percent. The proposal has raised again the whole question whether it is practicable to plan growth in a system of free enterprise, and whether, if such planning is practicable in general,

it is practicable in particular circumstances such as Britain's. The United States, like Britain, is responsible for an international currency, which restricts freedom to experiment in economic affairs. Unlike Britain, she has a substantial reserve of unemployed labour, which, put into employment, should be able to increase production without inflation. Yet anxiety regarding the dollar persists. Britain has no appreciable reserve of labour; and her monetary reserve is, of course, relatively as well as absolutely, much smaller than the U.S.A.'s. It is understandable that the British Government is reluctant to commit itself to any grandiose scheme that might be dangerous.

The American scheme does not require each individual member of O.E.C.D. to achieve a specified growth-rate, but if Britain left the task to

others her position would be, to say the least, undignified. She must be always aware, however, of the responsibilities involved in managing her currency. To safeguard it she must ensure that her exports increase more than her economy grows. The Chancellor of the Exchequer, Mr. Selwyn Lloyd, has said (earlier this year) that the U.K. needs a growth-rate of 6 percent in exports to support a growth-rate of 3 percent in the economy. Whatever rate may be agreed as appropriate, there remains the task of achieving it. The U.S. Administration believes that (in the words of the Under-Secretary of State for Economic Affairs, Mr. George Ball) "an empirical mixture of public and private enterprise is better than any other system", and the British Government is now trying to establish a planning organisation. But any planning organisation in a free-enterprise economy must function in an advisory rather than an executive capacity. No technique for planning growth in such a society has been proved.

The British Government must make anxious decisions during the next few months. The economy is suffering a mild recession, which may be accentuated if present policies are not relaxed. In this situation, discussions on growth are appropriate; yet they are meaningless if the Government feels that no relaxation is permissible. The Chancellor of the Exchequer has in recent weeks made numerous speeches on various occasions, but they have not clarified his general policy. In one sentence he seems to imply that, in his view, the economy has reached a stage where restraints can be eased; in another he emphasises the need to maintain rigid monetary discipline until the whole economic basis has been strengthened. He has foreseen vigorous expansive forces next year, but it is not apparent whether they will be stimulated or restrained by the Government. The London Stock Exchange has been at times encouraged by his statements, but the British business community in general is confused.

The crux of the matter is that the Government has failed to devise a method of achieving orderly growth. Experience suggests that such growth must be based on an orderly expansion of bank credit; but bank credit is at present severely curtailed. The authorities are reluctant to direct the banks precisely on the manner of using their resources, and the banks, naturally, resent official interference. But it may be that rational planning involves closer control of bank credit, so that ample resources may be made available for desirable development (and, naturally, for exports) while credit for unnecessary purposes is restricted. When the Radcliffe Committee investigated such problems a few years ago economic planning was still a vague concept. The Committee emphasised the importance of the supply of money, of the liquidity of the financial system as a whole; but planning seems to require a more selective treatment.

The Government cannot clarify its ideas on technique until it clarifies its ideas on planning. Some official statements imply that the principal merit of planning is restrictive: incomes must be regulated to accord with productivity. Other official statements seem to envisage a steady rate of growth in an "empirically planned" society. The idea that expansion and restraint can, and should, operate together is not yet officially accepted. If it is so difficult to organise planning on the national plane, the possibilities of organising it in a 29-nation community are not promising. It may be that the only practicable method is frequent consultation on national policies, to prevent conflicts and to exchange information on individual countries' experiences in their attempts to plan growth. A concerted growth-rate may be unattainable within the present organisation.

THE TEA AUCTION CENTENARY

THIS week-end the Prime Minister will watch a ceremonial tea auction to be held at the New Mart, 8 Mission Row, to mark the centenary of tea auctions in Calcutta. Mr. Nehru's presence will highlight the importance of a system of tea sales which has done much to expand India's export trade in the commodity over the past 100 years. As a market mechanism it has ensured both speed and flexibility, which are most essential in the disposal of a large volume of tea within a limited period of time. Its value to both buyers and sellers alike is proved by the fact that since 1938, the volume of tea handled annually by the Calcutta tea auctions has more than doubled, while north Indian tea output has increased by only 42 percent. At present, nearly 60 percent of the total north Indian production, or well over 140 million kilograms of tea, are sold at these auctions, now held during the first three days of every week with nearly 4 million kilograms of tea sold in as many as 4,000 to 5,000 lots. Both the auctioneers who are members of the broking firms, as well as 150 or more buyers representing the various firms of exporters, blenders and internal traders who regu-

larly attend the auctions, are so highly specialised that it is possible to dispose of up to five or six lots a minute.

The rules under which the auctions are conducted are by now well established, although there is no record of those under which the first auction was conducted in 1861. It may well have been that the firm of general auctioneers, Messrs Mackenzie Lyall, which conducted it, did so under the rules applicable at that time to other commodities. The second auction was conducted by another firm, William Moran and Company, which devised certain rules for the purpose. These formed the nucleus of the later rules formulated by the Calcutta Tea Brokers Association. This latter body was dissolved immediately after the second world war, and since 1947, the Calcutta Tea Traders Association representing all sections of the trade, has been running these auctions. The history of tea marketing in India until well after the second world war practically revolves round the activities of four broking firms—Messrs. R. Thomas and Company (predecessors of the present J. Thomas and Company), Messrs. W. Moran and Company which later amalgamated with Messrs. Carritt and Company and became known as Messrs. Carritt Moran and Company, Messrs. W. S. Cresswell and Messrs. A. W. Figgis and Company. In the post-war years, two more broking firms have come into the field. The former four have so systematically and smoothly developed the auction system over the years, that it has by now acquired a firm and stable foundation. As it is now planned to increase tea output considerably during the third five year plan, the auctions will prove progressively more useful in stepping up the sales of tea.

Before the auction system was introduced, that is roughly for the first 25 years of the Indian tea

planting industry, the produce was shipped direct to London for sale by auction there. The first consignment of Indian tea was shipped to London in 1838. With the establishment of this market, now the mainstay of India's tea industry, the cultivation of the commodity expanded. India's pioneering tea planting concern, the Assam Company, was formed in 1839, and tea was gradually introduced to new areas near Chittagong, Dehra Dun, Cachar and Darjeeling and Sylhet. With this rapid rise in output, the producers formed themselves into an association, called the Indian Tea Association, in 1894. This body took the first major initiative in the propagation and promotion of tea sales abroad. An Indian pavilion at the Chicago exhibition was organised. Since then the industry has passed through fluctuating fortunes. The depressions of the 'twenties and early 'thirties had a crippling effect on the economy, but it is interesting to find that it was during those fateful years that a revolutionary machine for tea making was introduced. This was the C.T.C. machine, and it is now considered the single most important revolutionary development in the history of the industry so far. The export outlook at the moment is by no means very promising. The International Tea Agreement has a scanty chance of revival, and world competition is increasing with greater production. Rising costs together with ever increasing Government imposts at the Central and State level are doing excellent promotional work for rival quality producers such as Ceylon and the low-cost ones such as the East African countries. These adverse developments have in no way affected the importance of the auction system of tea marketing, which is likely to be carried on more vigorously in the new auction building, the foundation of which will be laid by Prime Minister Nehru on the day he will watch the ceremonial tea auction at 8 Mission Row.

planting activities overseas, the chairman said that in Tanganyika the year generally was one of reappraisal and consolidation for the Usambaras branch. The first tea factory has been erected and trial runs have been reasonably satisfactory. Further planting there will go forward slowly. Results will not be rapid but present indications are promising. In north Borneo, Bombay Burmah is engaged in two ventures, cocoa and palm oil. First results in cocoa have been encouraging but it would be some time before income could be earned. Indications in relation to palm oil are promising and over the next six or seven years, the venture is expected to grow into a large-scale and profitable enterprise. Bombay Burmah continued to work rubber estates in Indonesia through its subsidiary and in spite of the rising costs, the estates have been kept in good condition and have shown a profit on the year's working. On the industrial side, the results have not so far been as bright as the management would wish but progress is being made and, in particular, the asbestos cement plant has proved itself to be a profitable venture. The results of North Borneo Timber Company have been encouraging.

Great Eastern Shipping Results

The preliminary figures about the working of the Great Eastern Shipping Co. Ltd for the year ended June 1961, released along with the dividend announcement, showed that the Company had not fared well. This was not, however, unexpected because of the difficulties of the shipping industry. The gross profit fell from Rs. 83.58 lakhs to Rs. 69.49 lakhs, and the directors were obliged to reduce the dividend from 10 percent to 7.8 percent. The actual distribution to the shareholders amounted to 7.2 percent, against 10 percent, because of the varying incidence of Section 15C. In their full report, the directors attribute the fall in the profit to the decline in the deadweight tonnage under operation and the drop in the freight and charter-hire earnings. The gross freight and charter-hire earnings declined from Rs. 3.30 crores to Rs. 2.84 crores, that is, by about 14 percent. The deadweight tonnage decreased by 13 percent from 132,265 tons to 115,294 tons. The directors point out that while the worst is over as far as the overseas tramp market is concerned, the sad state of affairs on the coast has further deteriorated, so the losses in coastal operations are increasing every month. Coastal shipping is said to be virtually on its last legs. Great Eastern's overseas ships fared better than its coastal ships. The decline in the freight tonnage under operation on the coast was 9 percent and in the overseas trade 16 percent. But in spite of the steep fall of 16 percent in the overseas tonnage, the freight and charter-hire earnings fell by only 2 percent. On the coast, however, the 9 percent fall in tonnage led to a decline of 20 percent in freight and charter-hire earnings.

The directors say that no ships were acquired during the year. *Jag Janani*, which was purchased at Rs. 42.15 lakhs (the written-down value is Rs. 23.66 lakhs), had to be scrapped because she was grounded in the river Hooghly and badly damaged. The vessel was sold to the breaker for Rs. 9.75 lakhs. The insurers of the vessel paid Rs. 8.50 lakhs to the Company. The two ships which are being constructed at the Innoshima Shipyard in Japan at a cost of about Rs. 2.27 crores, will be delivered to the Company early next year. Great Eastern has a paid-up capital of Rs. 90 lakhs, which is supported by reserves and surplus amounting to Rs. 2.10 crores. The value of the fleet at Rs. 8.09 crores has been written down to

Current News and Comment

Bombay Burmah to Diversify

The Bombay Burmah Trading Corporation Ltd did well in the year ended May 1961, with gross adding receipts rising from Rs. 4.93 crores to Rs. 5.59 crores and the gross profit from Rs. 1.41 crores to Rs. 1.59 crores. The dividend has been raised from 30 percent to 33 percent, both taxable. But the shares (Rs. 125 paid) which touched a high of Rs. 713 last week, could be bought round Rs. 635 after the release of the directors' report by about the end of October. Two months earlier, the shares had recorded a low of Rs. 571. Alas, of a bonus issue might have helped, but stained buying, which lifted the shares from Rs. 635 to Rs. 713 since the beginning of November, is based mainly on the diversification prospects of the Corporation's activities. The market's speculations concerning this have not been unjustified. In his speech at the annual general meeting last week, the chairman, Mr. Protapsinh Mathura, stated that "various proposals are under detailed examination and it is hoped that fairly soon, the studies undertaken will result in fresh and worthwhile developments." Replying to shareholders' questions, the chairman said that Bombay Burmah had almost finalised arrangements for setting up a Rs. 1-crore project for manufacturing laminated plastics in collaboration with Formica International of Italy, a member of the famous La Rue group of the U.K. All that the Company is now waiting for is the Government of India's sanction. Bombay Burmah had also had talks with Tata Chemicals for developing the auxite mines in Saurashtra which had been recently acquired by the latter. But since these negotiations are in a preliminary and exploratory stage, the chairman cautioned shareholders against drawing any optimistic conclusions. The shareholders strongly criticised the Corporation's slow progress in diversifying its activities. They pointed out that although the Corporation had built up large reserves, it continued to concentrate on plantation activities and that too outside the country. Nearly two-thirds of the trading receipts came from investments abroad. Anticipating this criticism, the chairman had drawn the shareholders' attention to his speech discussing the setbacks suffered by the Corporation during the last years and after. It has taken some years to build up its fortunes again by entering and developing new undertakings. The board's policy has been directed towards achieving a steady and adequate dividend level which can be sustained. Now that this point has been reached, it has been possible for the management to look into the more immediate prospects of fresh development. Mr. Mathura assured the shareholders that the board fully appreciated the need for a balanced diversification in industrial undertakings. Most shareholders pleaded for a bonus issue but the chairman pointed out that the question of bonus shares could

be taken up only after the reorganisation of the capital structure. He assured them that the directors were trying hard to evolve a formula which would work in the best interests of the Corporation as a whole.

Bombay Burmah's activities cover a wide range comprising tea, coffee, cocoa, hardwoods, rubber, palm oil, tapioca starch, boat building and repairs, asbestos cement and concrete products manufacture. Referring to the current and future prospects of the Corporation's existing ventures, the chairman said that the tea prospects are reasonably fair but the outlook for coffee is less encouraging. The tea crop is at present running roughly at last year's level and the prices, while already adversely affected by the heavy production from north India and Ceylon, should not drop too far. The coffee crop in 1961-62 will be well below last year's figure, and the world excess of supplies plus the overall increase in the planted acreage and yields within India, are bound to depress the level of selling prices for some time to come. There are also the problems of rising labour costs. To this has to be added the weight of taxation carried by the plantation industry and the increasing costs of capital replacement. These charges are being met by attempted improvements in the crop output and quality, but there is a limit to what can be achieved, so the industry faces a difficult period of readjustment, with the profit margins shrinking steadily. In an account of the Corporation's plant-

Rs. 5.56 crores. The Rs. 10-paid shares of the company are currently quoted around Rs. 13.36.

Progress of Mandya National Paper

The annual report and balance-sheet of the Mandya National Paper Mills Ltd for the year ended June 1961, have been submitted to the shareholders. As all the transactions during the year are of a non-revenue nature representing expenditure incurred during the period of construction, the profit and loss account has not been drawn up. Expenditure during the year amounted to Rs. 6.68 lakhs and the total expenditure from the inception to Rs. 12.61 lakhs. The directors say in their report that the construction of the factory building is practically complete and the entire plant and machinery, except for a small consignment, has been received at the site. The erection of the machinery, it is reported, will be over shortly, and production is expected to commence before the end of 1961. The directors are confident that the mills will produce the highest grades of writing and printing paper since the most modern machinery has been installed in the mills. On the basis of negotiations with the Mysore Government in the initial stages, the directors were given to understand that electric power would be made available to the mills. But it appears that full power requirements may not be met when the mills go into production due to the delay in completing the Government's power-generating projects. So Mandya National Paper has purchased a generator set which is now being installed rapidly.

The present production capacity of the mills is 35 tons a day. It has now been decided to increase the capacity to 70 tons a day. The Industrial Finance Corporation has already sanctioned a loan of Rs. 1.20 crores to implement the expansion project. In addition, a further amount of Rs. 80 lakhs will be raised in the form of equity shares from the shareholders. For this, the sanction of the Controller of Capital Issues has been received. The directors expect to make the capital issue early next year. The mills, it is expected, will go into production before the middle of 1963.

Expansion of West Coast Paper

In their report for the year ended June 1961, the directors of the West Coast Paper Mills Ltd state that in addition to the licence for manufacturing 90 tons of rayon-grade pulp and paper a day, the Company has received a licence for manufacturing caustic soda and chlorine with a rated capacity of 9,000 tons and 7,200 tons, respectively, a year. Caustic soda and chlorine produced by West Coast Paper will be first used for its own consumption and the surplus will be sold in the market. The Company has received the report from its technical consultants—Sandwell International Ltd, Canada—that it is possible to manufacture rayon-grade pulp from bamboo as raw material. In order to ensure an adequate supply of raw material before undertaking the expansion programme, the directors have approached the Mysore Government for additional areas. The latter has told the Company that this could be done only if it brought the royalty paid on its existing ranges at par with that paid by similar units in the State. Negotiations are going on with the authorities to ensure that before the increased royalty becomes effective, a proper agreement is entered into for making additional areas available around the existing ranges. Meanwhile, West Coast Paper is making efforts to increase the resources by alternative raw materials such as lops and tops, bagasse and rags so that production may not be hampered due to the gregarious flowering of bamboos in the forest areas. Besides, it has already started a plantation programme of eucalyptus, paper mulberry and other quick growing species of hardwoods in addition to bamboos not usually grown in the Dandeli forests. The directors expect that the successful completion of the integrated expansion scheme will result in overall economies. The working of West Coast Paper in 1960-61 showed a setback in the gross profit from Rs. 1.12 crores to Rs. 1.06 crores in spite of an increase in the production of paper from 22,461 metric tons to 25,771 metric tons. Sales rose from Rs. 3.58 crores to Rs. 3.83 crores but the profits were squeezed by the all-round increase in manufacturing expenses and the uneconomic paper prices. The dividend has, however, been raised from 6 percent to 7.50 percent, both taxable. The Rs. 100-paid shares of the Company are currently quoted around Rs. 183. It recorded a high of Rs. 228 in March and was sold down to a low of Rs. 167.50 in August.

Progress of Seshasayee Paper

The first annual report of the Seshasayee Paper and Boards Ltd for the year ended March 1961 has been submitted to the shareholders. The

profit and loss account for this period shows a small surplus of Rs. 32,042. This net income has mainly been obtained from the Company's current accounts and deposits, after making adequate provision for depreciation and income tax. The amount is carried forward to next year.

The directors' report says that contracts have been awarded for the construction of factory buildings and water works on the basis of detailed plans and drawings furnished by Parsons and Whittemore South Asia Co. Inc., New York, which has undertaken the complete planning. It will also supply the plant as well as erect the mill. Good progress, it is said, is being made in this work. Parsons and Whittemore has already shipped nearly 60 percent of the plant and machinery required for the project. It will complete shipping the balance before the end of the current year. Local plant, comprising mainly of electrical equipment, handling conveyors, etcetera, and steel fabrications have all been ordered with deliveries to match imports. With this time schedule, the erection of the plant is expected to show good progress by April 1962 and is likely to be completed by June 1962. It is reported that the Government of Madras has also assured the Company that it will deliver the required quantity of bamboo from the State's reserve forests. Arrangements have been completed with Parry and Co. Ltd for the delivery of bagasse from the factory of Deccan Sugar and Abkhari Co. Ltd.

K. C. P. Maintains

The directors of K.C.P. Ltd have announced a dividend of 15 percent, subject to deduction of tax, against 15 percent for the previous year. The dividend is subject to the I.F.C.'s permission. According to the preliminary figures, the net profit for the year ended June 1961, amounts to Rs. 45.27 lakhs, after providing for depreciation. The previous year's net profit was Rs. 37.84 lakhs. The amount brought forward from the previous year is Rs. 23,450. The excess provision for taxation in previous years credited back, amounts to Rs. 10 lakhs. The excess provision for dividends made in 1959-60 credited back, is Rs. 63. Adding the amounts to the net profit of the year, the total surplus available for appropriation is Rs. 55.68 lakhs. Out of this, provision for bonus payable to sugarcane growers comes to Rs. 10.07 lakhs (against Rs. 5.80 lakhs). Development rebate reserve gets Rs. 10.74 lakhs (against Rs. 3 lakhs). Provision for taxation amounts to Rs. 10.50 lakhs, including tax on bonus shares (against Rs. 24.75 lakhs). General reserve gets Rs. 10 lakhs (against nil). After providing for the preference and ordinary dividends, the balance of Rs. 17,070 is carried forward.

Consolidated Coffee Repeats

The Consolidated Coffee Estates Ltd has maintained the dividend at 20 percent, subject to deduction of tax, for the year ended June 1961. But the profits for the year are impressive, compared with the previous year. According to the preliminary figures, the net profit amounts to Rs. 21.93 lakhs, against Rs. 13.08 lakhs. With Rs. 60,720 brought forward from the previous year, the total surplus available for appropriation is Rs. 22.54 lakhs. Out of this, the directors have declared an additional dividend at 24nP percent on the preference shares for 1959-60 according to the Dividend Regulation Act, and this has absorbed Rs. 4,500. The preference dividend for the year accounts for Rs. 1.17 lakhs. A sum of Rs. 4.75 lakhs is transferred to general reserve. The proposed dividend of 20 percent, subject to tax, will absorb Rs. 14.31 lakhs. The balance of Rs. 2.27 lakhs is carried forward.

Parkside Estate Earns Less

The working of the Parkside (Neilgherry Hills) Estate Co. Ltd for the year ended June 1961, shows a profit of Rs. 7.40 lakhs, after providing for depreciation. The previous year's profit was Rs. 9.02 lakhs. Out of the gross profit provision for taxation amounts to Rs. 3.55 lakhs (against Rs. 4.30 lakhs). With Rs. 47,411 brought forward from the previous year and Rs. 19,217 being the excess provision for taxation in previous years, the total surplus available for appropriation is Rs. 4.52 lakhs. Out of this, the interim dividend of 7½ percent, subject to deduction of tax, absorbed Rs. 2.23 lakhs. A sum of Rs. 1,074 (against Rs. 6,790) is transferred to development rebate reserve and Rs. 75,000 (against Rs. 1 lakh) to general reserve. The balance of Rs. 40,696 is carried forward.

Parkside Estate has had another successful season with a record crop of 845,700 lbs of made tea, against 819,500 lbs for the previous year. In spite of the record crop, the profits were lower

due to the fall in auction prices at the Cochin market. So total sale prices are about Rs. 2 lakhs lower. The total dividend for the year amounts to 22½ percent, against 27½ percent for the previous year. The directors' report points out that the dividend for this year is paid on the increased capital resulting from the issue of bonus shares made during the year. It is stated that the prospects for the current season are promising. The estate cost of production during the year was Rs. 1.27 a lb, against Rs. 1.32 a lb in the previous year. The lower cost of production is mainly due to the increased crop. The average sale price of tea for the season was Rs. 2.68 a lb, compared with Rs. 2.98 a lb last year. The 1961-62 tea crop is estimated at 675,000 lbs of made tea to cost 147nP a lb, inclusive of 17.14nP a lb for manuring.

Coffee Lands Pays More

The directors of the Coffee Lands and Industries Ltd have announced a dividend of 12 percent, subject to tax, for the year ended June 1961, against 6 percent for the previous year. But in spite of the increase in the dividend, the market was not apparently impressed by it. The net profit for the year amounts to Rs. 5.73 lakhs, against Rs. 2.04 lakhs for the previous year. With Rs. 92,379 brought in, the total surplus available for appropriation is Rs. 6.66 lakhs. Out of this, the directors have paid an additional dividend of 31 percent on the preference shares, and this has absorbed Rs. 3,226. The preference dividend, subject to deduction of tax, according to the Preference Shares Regulation Act, will absorb Rs. 55,256. A sum of Rs. 531 is transferred to development rebate reserve and Rs. 1.50 lakhs to general reserve. The proposed ordinary dividend of 12 percent will absorb Rs. 2.70 lakhs. The balance of Rs. 1.87 lakhs is carried forward.

More from Kirloskar Electric

The directors of the Kirloskar Electric Co. Ltd have announced a higher dividend of 11 percent, subject to deduction of tax, for the year ended June 1961, against 9 percent for the previous year. The higher dividend follows the substantial increase in the profit. According to the preliminary figures, the net profit amounts to Rs. 29.76 lakhs, after providing Rs. 7.36 lakhs for depreciation. The previous year's net profit was Rs. 16.84 lakhs, after providing Rs. 5.98 lakhs for depreciation. With Rs. 2,982 brought forward from the previous year, the total surplus available for appropriation is Rs. 29.79 lakhs. Out of this, provision for taxation amounts to Rs. 12.88 lakhs (against Rs. 7.20 lakhs). Development rebate reserve gets Rs. 2.51 lakhs (against Rs. 2.65 lakhs). A sum of Rs. 5.47 lakhs (against Rs. 16.863) is transferred to general reserve, Rs. 1 lakh (against Rs. 90,000) to loan redemption reserve, Rs. 2.10 lakhs (against nil) to dividend equalisation reserve, Rs. 50,000 (against Rs. 200,000) to reserve for rehabilitation and modernisation. The proposed dividend of 11 percent will absorb Rs. 4.81 lakhs, against Rs. 3.93 lakhs. The balance of Rs. 1,709 is carried forward.

Investment Corporation Earns More

In his statement to the shareholders circulated along with the directors' report on the working of the Investment Corporation of India Ltd for the year ended June 1961, the chairman, Mr. J. R. D. Tata, has expressed disappointment over the lack of interest in shares of Indian investment companies. He says that he is unable to understand the reason for this apathy. In foreign countries, the shares of sound and well-run investment companies are bought by investors. In some cases, shares of such companies are quoted at higher prices than their break-up value. The shares of prudently-run investment companies may not offer speculative opportunities for quick capital appreciation as do the shares of manufacturing companies with an exceptionally favourable growth potential. But they do offer—particularly to the small investor—a valuable opportunity of participation in a highly diversified portfolio, covering a wide range of industries and combining safety with scope for capital appreciation which he could not achieve on his own. In a rapidly developing economy, the investment of funds is a complicated business and the average investor is handicapped by the lack of specialised knowledge of Stock Exchange operations. These he automatically secures when he buys shares of a sound and well-managed investment company. This, Mr. Tata says, does not seem to have been yet fully appreciated in India, where the market quotation of investment company shares is usually much below their intrinsic values. Mr. Tata has, however, expressed the hope that there will be better appreciation of the value and attractiveness of the shares of good investment companies in the years to come.

It is surprising that Mr. Tata should feel unable to understand the reasons for the lack of interest

in investment company shares. At a time when the inflationary psychology and expansionary impulses in the economy are quite strong, investors are bound to be attracted more by the prospects of capital appreciation than by yield considerations. It is precisely this factor which has led to the emergence of a reverse yield gap—equities yielding less than gilt-edged securities—in many countries. When capital appreciation is the main consideration with investors, shares of banks, insurance companies, electricity undertakings and investment trusts cannot be expected to be popular. Besides, the working results of investment companies in India are not so encouraging as to attract investors' attention. Tata's own Investment Corporation has the reputation of being better managed than other investment companies. In the year ended June 1961, it earned Rs. 27.07 lakhs from dividends on shares and interest on securities on its investment portfolio of Rs. 5.05 crores, against Rs. 20.15 lakhs on Rs. 4.61 crores, yielding 5.36 percent net, against 4.37 percent net in the previous year. The investments as on 30th June, 1961, showed an appreciation of 10.6 percent and the net surplus on the sale of investments, after providing for capital gains tax, amounted to Rs. 6.74 lakhs. In an established bull market, these results cannot be considered very encouraging. This apart, the Corporation's investment portfolio contains shares of as many as 422 companies, of which 167 companies are not listed on any of the Indian Stock Exchanges. Investments in unlisted securities amount to Rs. 1.67 crores—nearly a third of the total investment in ordinary shares. Among the unlisted securities, 124 investments are in foreign companies. This is diversification with a vengeance. It may not be difficult to pick up many shares even from the listed securities which might not qualify as sound investment. It is, therefore, no wonder that the shares of Investment Corporation (Rs. 100 paid) are still quoted around Rs. 115.50. If these shares are not quoted much higher, it is because even at the current price the gross yield on a dividend of Rs. 8.50 a share, taxable, works out to 7.7 percent. It is possible to find many industrial shares which give that much yield and offer better scope for capital appreciation. The benefits of participation in a highly diversified portfolio covering a wide range of industries by buying shares of investment companies can be easily exaggerated. This is, of course, not to belittle the significant rôle that scientifically managed investment trusts can play in mobilising savings.

Mysore Kirloskar Does Well

The Mysore Kirloskar Company Ltd has reported satisfactory results for the year ended June 1961. Sales of manufactured goods increased from Rs. 1.41 crores to Rs. 1.57 crores. Sales of stores fetched Rs. 6.05 lakhs, against Rs. 5.85 lakhs. The gross profit is up from Rs. 35.40 lakhs to Rs. 39.39 lakhs, although the net profit has been slightly reduced due to larger depreciation. After providing Rs. 9.34 lakhs (against Rs. 6.80 lakhs) for depreciation and Rs. 11.80 lakhs (against Rs. 10.50 lakhs) for taxation, the net profit amounts to Rs. 15.03 lakhs, against Rs. 15.07 lakhs. After taking into account Rs. 2.25 lakhs being the excess provisions made in previous years, the disposable surplus amounts to Rs. 17.28 lakhs. The allocations include development rebate reserve Rs. 4.09 lakhs (against Rs. 2.43 lakhs), debt redemption fund Rs. 2 lakhs (the same), replacement and rehabilitation reserve Rs. 3.50 lakhs (against Rs. 3 lakhs) and general reserve Rs. 1.70 lakhs (against Rs. 3 lakhs). No provision has been made for dividend equalisation reserve which received Rs. 54,000 in the previous year. The dividend has been maintained at 12 percent, taxable, but it absorbs Rs. 6 lakhs, against Rs. 4.24 lakhs, being on the increased capital. The directors report steady progress in the manufacture of existing lines as well as new lines. Mysore Kirloskar has decided to open a branch factory in Hooghly, and the construction of the factory is progressing. Reliable reports indicate that the Company is negotiating with Swedish firms for undertaking the manufacture of precision instruments. The Rs. 100-paid share of the Company is quoted around Rs. 180 cum dividend, offering a gross yield of a little over 7 percent.

B.R. Cotton Turns the Corner

Although the directors of the B.R. Cotton Mills Ltd, Bombay, have passed the dividend for the tenth year in succession, the shareholders can get considerable satisfaction from the directors' report on the Company's working for the year ended March 1961. B.R. Cotton did fairly well last year, with the gross profit up from Rs. 2.30 lakhs to Rs. 10.44 lakhs. Sales rose from Rs. 1.72 crores to Rs. 1.90 crores and realisations from process work done for outside parties totalled Rs. 9.91 lakhs, against Rs. 1.59 lakhs. The directors state that the working during the current year has so far been encouraging. Sales for the year ended March 1961

turned the corner and may look forward to better results in the future. The work of modernisation and rehabilitation of the plant has been taken on hand. During 1960-61, S.K.F. peridium-arm-high-drafting equipment was installed on 23 ring frames and further 15 frames have been converted in the current year. The work of humidification of the spinning department has also been completed on one floor and that on the second floor is expected to be completed before next summer. Orders have been placed for machinery of the value of Rs. 21.80 lakhs. Deliveries are expected during the current year and next year. B.R. Cotton hopes to be able to finance the modernisation programme from its own resources, and this is the main reason why the directors have decided to pass the dividend. From the year's gross profit of Rs. 10.44 lakhs, the directors have set aside Rs. 11,860 for development rebate, Rs. 4.94 lakhs for the arrears of depreciation up to March 1960 and another Rs. 3.38 lakhs for depreciation for 1960-61. This leaves Rs. 2 lakhs. Adding Rs. 99,428 brought forward from the previous year, the surplus amounts to Rs. 2.99 lakhs, which is being carried forward. The Rs. 100-paid shares of the Company, which were marked down to a low of Rs. 21 early in the year, recorded an impressive rise from Rs. 44 to Rs. 63 over the past fortnight on influential support based on a favourable assessment of the Company's prospects.

Hyderabad Laminated Profit Up

The working of the Hyderabad Laminated Products Ltd for the year ended June 1961, shows a substantial improvement over the previous year's performance. Sales have increased by about 36 percent from Rs. 51.75 lakhs to Rs. 70.32 lakhs. The gross profit of Rs. 18.99 shows an equally impressive rise of 37 percent over the previous year's figure of Rs. 13.84 lakhs. After providing Rs. 53,270 (against Rs. 36,180) for depreciation and Rs. 7.75 lakhs (against Rs. 5.50 lakhs) for taxation, the net profit amounts to Rs. 8.59 lakhs, against Rs. 6.41 lakhs in the previous year. The allocation to general reserve has been raised from Rs. 5.25 lakhs to Rs. 7.25 lakhs. The dividend has been slightly increased from Rs. 6.429 to Rs. 6.857 a share, subject to deduction of tax. After providing for the proposed dividend which absorbs Rs. 1.37 lakhs (against Rs. 1.28 lakhs), there remains a balance of Rs. 16,753 which is being carried forward, against Rs. 2,176 brought in.

The directors state that the expansion of production of laminates has been delayed by about two months because of the delay in the delivery of plant and equipment. The expansion of phenolic and polyester resins and moulding materials will become operative by the end of the current year. The directors report a substantial increase in the cost of imported machinery from the originally estimated figure of Rs. 22 lakhs to Rs. 31 lakhs because of the rise in prices and enhanced import duty. Hyderabad Laminated proposes to issue bonus as well as rights shares. It is proposed that the issued capital be increased and converted from Rs. 10 lakhs (Osmania currency) divided into 20,000 equity shares of Rs. 50 (Osmania currency) each to Rs. 10 lakhs (India Government currency) in 20,000 equity shares of Rs. 50 (India Government currency) each. As such increase and conversion make the shares paid-up only to the extent of Rs. 42,8572 (India Government currency), against their revised face value of Rs. 50 (India Government currency), it is proposed to capitalise a sum of Rs. 1.43 lakhs from general reserve in order to make the shares fully paid to the extent of Rs. 50 (India Government currency) each. The directors also propose to issue bonus shares in the ratio of one share for every one held by capitalising Rs. 10 lakhs from the reserve. With the proposed distribution and bonus shares, the Company will have a paid-up capital of Rs. 20 lakhs. In order to strengthen further the capital base, the directors propose to issue rights shares to the tune of Rs. 17.50 lakhs. Capital distribution, the bonus and rights issues are all subjects to the sanction of the Controller of Capital Issues.

Shree Bharati Pulp Share Offer

A new enterprise known as Shree Bharati Pulp and Paper Products Ltd has been promoted by a group of leading industrialists and business men to undertake the manufacture of small capacity paper-making plants and also to run a paper mill for manufacturing writing and printing paper. The promoters have already received an industrial licence to manufacture four paper-making plants of a daily production capacity of 5 to 10 tons and also 1,000 tons of spare parts for the existing mills of 5 to 100 tons' capacity. Another licence for manufacturing 1,500 tons of writing and printing paper has also been received. The project is estimated to cost about Rs. 50 lakhs. The new Company is likely to have an issued capital of Rs. 25 lakhs in equity shares of Rs. 100 each. The West

venture will supply machine tools, prototype plant and technical know-how. The collaborators, it is stated, have guaranteed the quality and quantity of production. Shree Bharati Pulp has acquired about 200,000 square yards of land about six miles away from Ahmedabad. The promoters expect the paper mill to be commissioned by March 1963 while the paper-making plant is likely to be ready by the end of 1963. The Company is expected to enter the market for raising capital towards the end of January 1962.

Rights from Motor and General Finance

The Motor and General Finance Ltd has reported satisfactory results for the year ended June 1961. The Company advanced during the year Rs. 2.37 crores against hire-purchase business, the previous year's figure being Rs. 2.34 crores. Total outstandings, including hire-purchase charges against business at the end of the year, amounted to Rs. 3.58 crores, against Rs. 2.78 crores in the previous year. The profit suffered a slight setback as a result of the loss on vehicle sales. The gross profit is down from Rs. 32.27 lakhs to Rs. 30.81 lakhs. After providing Rs. 56,000 (against Rs. 36,000) for depreciation and Rs. 12.80 lakhs (against Rs. 13 lakhs) for taxation, the net profit amounts to Rs. 14.76 lakhs, against Rs. 15.78 lakhs in 1959-60. With Rs. 45,799 brought forward from the previous year, the disposable surplus amounts to Rs. 15.22 lakhs. From this, Rs. 24,556 has been provided for super tax for 1955-56. The allocation to general reserve has been slightly reduced from Rs. 5 lakhs to Rs. 4.54 lakhs. The dividend has been maintained at Rs. 4, taxable, a share of Rs. 10, and this absorbs Rs. 9.60 lakhs, leaving Rs. 10,100 to be carried forward. The directors propose to increase the paid-up capital from Rs. 24 lakhs to Rs. 32 lakhs by issuing rights shares in the ratio of one share for every three held. The rights shares will rank *pari passu* with the existing shares for the dividend for 1961-62.

Smith Stanistreet to Expand

The ordinary shares of the Smith Stanistreet and Co. Ltd have been steady around Rs. 15.46 because of satisfactory results for the year ended June 1961. The confidence is being reinforced by the fact that Smith Stanistreet proposes to go in for further expansion. It has been divided to manufacture important basic chemicals, some of which have already been produced on a pilot scale. The factory's operational efficiency has improved due to useful researches which are being made. Sales have increased by 14 percent to Rs. 1.95 crores during 1960-61, compared with 1959-60. The profit has increased from Rs. 10.88 lakhs to Rs. 12.63 lakhs, after providing Rs. 1.17 lakhs (against Rs. 92,730) for depreciation. The taxable ordinary dividend has been maintained at 25 percent, but the ordinary share capital has, meanwhile, been increased from Rs. 15 lakhs to Rs. 19.91 lakhs by the issue of ordinary rights shares at par. The dividend is covered more than twice and offers a yield of 8.1 percent at the present price. Taxation is allocated Rs. 5.72 lakhs (against Rs. 4.90 lakhs), development rebate reserve Rs. 25,000 (against Rs. 37,000), general reserve Rs. 65,000 (against Rs. 50,000) and bad debts provision Rs. 25,000 (against Rs. 50,000). There is a carry-forward of Rs. 1.23 lakhs, against Rs. 98,591, brought in.

J.K. Steel Pays the Same

J. K. Steel Ltd has decided to increase its authorised share capital from Rs. 50 lakhs to Rs. 1.50 crores by creating 20,000 cumulative redeemable preference shares of Rs. 100 each carrying 7 percent, tax-free, interest and 800,000 ordinary shares of Rs. 10 each. The ordinary share capital was doubled to Rs. 40 lakhs a few months ago by issuing bonus shares in the ratio of one new share for each one held. The Company's project for the manufacture of chain blocks and electric hoists is making progress; production is expected to start early in 1962. It is proposed to double the production capacity of the wire rope plant by installing an electric furnace for the production of steel. The Company has also obtained a licence to produce seamless pipes. The directors propose to acquire J. K. Business Machines Ltd as a subsidiary company by investing not more than Rs. 100 lakhs. J. K. Machines was formerly known as Blackwoods India Ltd, and is engaged in producing business equipment, such as portable typewriters, duplicators and addressing machines.

During the year ended June 1961, J. K. Steel has increased its profit to Rs. 26.12 lakhs, from Rs. 21.27 lakhs in 1960-60, after increasing depreciation to Rs. 7.49 lakhs, from 6.02 lakhs. The taxable ordinary dividend has been maintained at 20 percent. It is covered more than five times and offers a yield of 8.9 percent at the present price.

receives Rs. 30,500 (against Rs. 18,000), taxation provision Rs. 9.85 lakhs (against Rs. 7.30 lakhs) and general reserve Rs. 11 lakhs (against Rs. 14.30 lakhs). There is a carry-forward of Rs. 96,487, against Rs. 91,460 brought in.

New Aluminium Plant in Maharashtra

Plans for setting up an aluminium plant in Koyana with German collaboration are understood to have reached an advanced stage. The plant, which is proposed to be located in Jaygad in the Ratnagiri district of Maharashtra, will have an initial production capacity of 20,000 tons a year. Three senior directors of the Government-owned German aluminium concern, V.A.W., which is collaborating in the venture, are now in New Delhi to discuss the collaboration arrangements approved by the Government of India. The project is estimated to cost about Rs. 18 crores and the foreign exchange component is placed around Rs. 6 crores. A significant feature of the project is the self-financing nature of its foreign exchange requirements. The loans from the German manufacturers and banks will be repaid by exporting aluminium to Germany. The German collaborators will supply machinery, equipment and technical know-how. German banks are expected to give a loan amounting to Rs. 5 crores. The project will be an integrated one with facilities for mining, refining, smelting and fabrication of the metal. The Maharashtra Government is reported to have agreed to supply 52,000 kilowatts of power for the project. The plant is expected to go into production before the end of 1964. The new enterprise is likely to enter the market for raising capital in April 1962.

Developing Forest Resources

The Government of India has announced its decision to confer university status on the Forest Research Institute in Dehra Dun. The Institute came into being in 1906 as an adjunct to the Imperial Forest College. In the course of half a century, the Institute and its colleges have come to occupy a prominent position as indicated by the recognition extended to it by the Food and Agriculture Organisation as a centre for training in forestry for south-east Asia. The education wing of the Institute comprising three colleges—one of which is situated in Coimbatore in the south—trains recruits of the State Governments to their gazetted forest services. Although it is the official goal to have at least a third of the total land area in the country under forests, the actual proportion today is only 21.8 percent. Most of the forests are concentrated in a few States only, namely, Assam, Madhya Pradesh, Orissa and a few Union territories.

Indiscriminate cutting down of forests has destroyed vast stretches of the forest area. The shortage of firewood, which is at present said to be 60 million tons, is estimated to rise to 100 million tons by 1975. But in productive areas in well-maintained forests, yields of about 2.75 tons an acre a year are obtained for sal, 4.10 tons for lodhar and 1.30 tons for chir pine. The third plan provides an outlay of Rs. 51 crores for various development programmes in the States and Union territories. The programme for new large-scale plantations includes 210,000 acres for teak, 40,000 acres for bamboo, 60,000 acres for matchwood, 22,000 acres for wattle, and 46,000 acres for fuel wood. It is also estimated that 480 officers and 1,520 rangers will be required for the State Forest Departments and, accordingly, the rate of admissions to the officers' course in Dehra Dun is to be raised from 85 to 100 and to the forest rangers' course from 200 to 300. The successful implementation of any forest policy is bound up with the soil conservation schemes, and an outlay of Rs. 72 crores has been provided for the purpose in the third plan. As for flood control, it is interesting to note that the Central Flood Control Board has expressed itself against the Government passing on the cost of the schemes to the general taxpayer to benefit a few. Instead, the Board has suggested that the Government itself should meet a portion of the maintenance as well as capital cost. Since the Government has no money of its own (except the taxpayers' money), it would appear that beneficiaries alone must bear the cost.

Brighter Picture for Photography

Speaking at the annual general meeting of the East India Photographic Traders Association in Calcutta on Saturday, Mr. C. C. Saha, president, said that although Agfa, Geva and Zena box-cameras are being produced in India, they are not being manufactured in sufficient quantities to meet the country's requirements. L. C. Sett and Co. Private Ltd has promised to supply the famous Ensign range of cameras, the manufacture of which will shortly commence in West Bengal. Meanwhile, Libra Photographic Industries of Coimbatore is supplying photographic papers. Mr. Saha said

that several new brands of photographic papers would be manufactured in India, some of which are shortly expected in the market, including "Address" from West Bengal. Meanwhile, the Hindustan Photo Films Manufacturing Co. Ltd has started erecting its plant for manufacturing photographic sensitised materials in Ootacamund in technical collaboration with the French firm of Bauchet et Cie. India has also made a beginning in the manufacture of photographic chemicals and flash bulbs. It is reported that 17 firms have been licensed to manufacture fine chemicals, including photographic chemicals, and three firms have received licences under the Industries (Development and Regulation) Act for manufacturing photographic printing paper. Discussing the Government's import policy, Mr. Saha said that the "saintlike austerity" in importing cameras and other instruments, apparatus and appliances has checked the growth of the profession and the trade.

CORRESPONDENCE

GROWTH OF INSURANCE IN INDIA

(TO THE EDITOR OF "CAPITAL")

Sir,

Mr. R. K. Seth, in his letter published in Capital on 2nd November, 1961, himself admits the preponderance of contributions from medium and large-sized industry and trade to general insurance business in India. As to the propriety of a comparison between the index of general insurance business and the index of industrial production, doubted by him, it was the intention, quite obvious in my article, to show the standard of performance achieved in general insurance business against the record of development in the most important of the factors generally accepted to influence the former one. Industrial production is merely part of the gross national income. A comparison between the indices of general insurance business and gross national income would not only inflate the lag in insurance business, but also confuse and blur the issue. We have to remember here that under the present planned, tightly-controlled and capital-industry-biased economy, general insurance business is expected to get almost the entire impetus from the effects of growth in industrial production, as long as we do not have a well-balanced and prosperous economy, with all its various sectors well-developed. Again, if we consider that industrialisation is the mother of increasing purchasing power, which ultimately should, and does help in the growth of general insurance business in the form of personal insurance, the phenomenon would not appear as "paradoxical".

It is a great pity that we have not been given the benefits of Mr. Seth's wise counsel as to why the suggested changes in the matter of expense ratios should prove "impracticable". Instead, we find only the bureaucratic suggestion of a locational change and consequential expansion in the administrative set-up of the government machinery, which, however, he criticises for excessive costs. A more careful examination of the relevant portion of my article would surely bring out the cornerstone of my suggestions, namely, while the magnitude of the various ratios must be a matter of consideration for the Government and the industry, the reform should start with the segregation of expenses into the several categories mentioned and viewing each category of expense from a different standpoint as suggested in my article. Only when we have had collected the expenses of all the insurers under the various categories for a sufficient number of years, shall we be able to prepare the ground for a proper and realistic consideration of "an agreed and practicable formula".

The solvency test is applied to judge a company's financial competence, in terms of net worth, to shoulder its underwriting burdens. It cannot, therefore, in any way be an alternative to expense ratios, which are the criteria for its efficiency in economical operation. Both are indispensable.

As to the ten-year cycle apprehended by Mr. Seth, the answer is that, firstly, only the initial "expenses on training, both theoretical and practical, of new entrants in the field service up to two years from the date of their appointment" has been sought to be separated from current developmental expenses and viewed over a span of (say) ten years; secondly, the intention behind this suggestion is to avoid the heterogeneity of the ratio of "total" developmental expenses (initial training expenses plus current direct selling expenses) to current business; thirdly, these training expenses, etcetera, although charged to current account, should be viewed over a ten-year period against business procured over such a period, maybe within a different expense ratio limit, but in terms of ten-year moving average ratios rather

than annual ratios. (But the exceptionally heavy initial expenses consequent on the formation or reorganisation, being of rare and abnormal incidence, should be deferred and charged to accounts over a number of years.)

It is interesting to note that Mr. Seth counted the number of Assistant Managers and Deputy Managers required from the illustrative organisational chart in my article, and also completely lost sight of the relevant clause in the section "Merits of Compactness", namely, "the mere addition of the adequate number of cells to meet the growth-needs of the branch would obviate the defects of a large-scale organisation". The present shortage of trained personnel is one of the cardinal problems that the industry has to solve if it is to live and grow. But it is only through working in such an organisational set-up that personnel could be realistically trained in the business of general insurance. While I am glad to note that Mr. Seth has very rightly taken up for elaboration my advocacy of amalgamation of smaller companies, I do not share his view that "take-overs and mergers lately common in the U.K. are not practicable here". Because, whether insurance companies are owned by industrial groups or not, a firm agreement relating to "tied accounts" may always be the precondition of all take-over bids—in India as in the U.K.

Yours etcetera,
G. C. BHATTACHARYA

Calcutta, 20th November.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations.

- Rs. 50 Governor of Orissa.
Rs. 164 Staff of the Imperial Tobacco Co. of India Ltd. Calcutta.
Rs. 120 Manager and the officers of the Chartered Bank, Calcutta.
Rs. 100 Anonymous.
Rs. 80 D. Hackney.
Rs. 50 each G. D. B., Anonymous.
Rs. 20 A.C.
Rs. 10 each A.J.D., J.G., D.A.L., S.P., J.B.S., J.G.S., S.C. Boucher, Krishna Kumar.
Rs. 5 each F.S.C., D.C.H., K.S.I., J.M., D.W.M.L., A.L.P., G.P.S.
Total Rs. 749
Previously acknowledged Rs. 2,936.50
Grand Total Rs. 3,685.50

OCTROI DUTIES

IN our issue of 7th February, we commented on the apparently unaccountable delay that had occurred in giving effect to the Government of India Resolution of 24th April 1899, relating to octroi duties. This Resolution empowered municipalities to do what they seem to have been for years doing unauthorisedly, i.e., levy octroi on all goods imported by sea on which import duty has been paid, or which had been relieved from such duty, except salt, opium, excise articles and the materials used in their manufacture, and mineral oils. A restriction was imposed, however, viz., that the octroi duties so imposed should not exceed Rs. 1-9-0 per Rs. 100, saving that this limit might be extended as far as Rs. 3-2-0 per Rs. 100 in the case of ghee, timber, and tobacco; and subject to the condition that the corresponding indigenous articles should be assessed in all cases to the same rate of octroi. It was further provided that the Local Governments concerned should examine the circumstances of each municipality in their provinces to ascertain whether the rates levied on articles for which sea customs duty had been paid and the corresponding indigenous articles, were higher than prescribed as above. The rates of octroi duty, which this action of Government should have had the effect of modifying, were in some cases so high as to constitute a serious impediment to the expansion of trade. In the instance of one article of large, every day consumption, in value about Rs. 8 a maund, it ranged as high as 8as, 12as, 14as, Re. 1 and even Rs. 1-8 per maund.

A Ditcher's Diary

SIR BIJOY PRASAD SINGH ROY, K.C.I.E., Kt., M.A. never spent a day in a British gaol; and I suppose some would argue that was enough to make him less than a patriot. He was a Minister during the 'thirties; and that, for some, would make him a collaborator and downright traitor. For me, Sir Bijooy represented a kind of patriotism which might or might not have brought freedom in August 1947. In the ifs and buts of history my interest is limited; and it is not for me to challenge the Congress Party's claim that it was the only begetter of Indian independence. What I do know is that, when it came to running free India, the administration would have profited immensely if the services of such natural and experienced leaders of men as Sir Bijooy could somehow have been utilised. The liberals—and they were Liberals too—lost their leadership as the Congress became a mass organisation and politics itself acquired a different, harsher, tone. The voice of persuasion was silenced and that of coercion took over; and since successive British Governments declined to be persuaded until after the war, the voice of persuasion perhaps simply had to go. But Sir Bijooy and his colleagues set standards of integrity, probity, hard work and real administrative ability which have not been upheld by all the successor politicians who have been Ministers since. Sir Tej Bahadur Sapru, Sir Bijooy and men like them were perhaps aloof from the masses. In does not follow that the interests of the masses were not on that account their main consideration although, admittedly, the masses got fewer lectures from them—they preferred to apply themselves to the concrete problems of economic and social advance. With their political careers abruptly ended in 1934, Sir Bijooy and many of the discarded liberal leaders turned their talents and spirit of service to industry, and brought to it the same efficiency and honesty as they had shown in the administration. Who am I to say that the man who quietly runs a large shipping line, in addition to directing a dozen other companies, is a lesser Indian than those men whose service to the country consists mainly of a dozen speeches a day and half-a-dozen signatures on files prepared by head assistants and secretaries?

CRIMES OF PASSION ALWAYS HIT HEADLINES; so the protracted case of Commander Nanavati was assured of the fullest publicity. And in some places at least public sympathy expressed itself beyond permissible limits, with the assistance of a section of the sensational Press. What raised the case to the status of a constitutional and moral issue was the extraordinary behaviour of the executive in which were involved a Governor, the Defence Minister and the Prime Minister himself. The original sessions court judge, who declared the verdict of the jury perverse, spoke for many when he suggested a brief sentence for Nanavati, guilty of murder though he was held. In the event the Commander has got a life sentence; and although I would not dream of suggesting that the Supreme Court was in any unjudicial manner influenced by the extraneous developments surrounding the two appeals, there may well be a public feeling that Commander Nanavati's ill-advised patrons and friends only made things worse for the harassed,

and obviously wronged, man. There seems little doubt that he took the law into his own hands, which he had no right to do without attracting the consequences prescribed by the law of the land. Has the executive now been put in its place? Will Mr. Krishna Menon never again spring to the defence of anyone in defiance of the judiciary? Will Mr. Nehru never again telephone Chief Ministers and Governors on the hasty advice of men with scant respect for the judiciary? We shall see what we shall see. Meantime, on the suggestion of a friend I have been wondering about the laws of marriage and divorce in this country. To murder one's wife's unscrupulous paramour is, of course, all wrong. But what other remedies are there for a husband whose wife has been unfaithful to him? What penalties, civil and criminal, for the seducer? Are existing laws sufficiently severe on the man who entices another man's wife and will not then honourably face the consequences? What, in short, are the laws relating to adultery? Even if the laws are adequate, which I doubt, there seems no way of escaping the ordeals of a long and expensive trial which besmirches many reputations. I have also been wondering about the effects of such a trial on the unfortunate children who have done nothing to deserve them. A closer look at the statute book seems warranted.

IF I AM INVITED TO THE CIVIC RECEPTION IN HONOUR of Major Yuri Gagarin, and my own crowded programme permits, I shall attend if only to make my personal tribute to a gallant young man who is not to blame for the fact that his brave and memorable deed is now being debased to the level of a propaganda advantage in the cold war. But I should like to recommend the warning Mr. Biman Mitra, of the Calcutta Corporation, gave to his colleagues the other day about such receptions not being without a certain amount of risk in these uncertain times. How right. Calcutta is going to look very foolish indeed if the 23rd Congress denounces Major Gagarin as a member of the anti-Party group—or whatever the fashionable opprobrium might then be—and it is decided that he never orbited the earth at all. This is not as improbable as it sounds. Much greater Soviet heroes than he have been tumbling all over the place recently, and the surprising thing is that many of them can number their appearance in India as among their last abroad. Mr. Bulganin, for instance, dropped out of the limelight soon after India had spent a great deal of money welcoming him and Mr. Khrushchev in 1955. Marshal Zhukov went home from India to oblivion. Mr. Voroshilov was here only a short time ago when Mr. Khrushchev was so ostentatiously disassociating himself from the Chinese aggression on India's frontiers; now we learn that he was a Stalinist and worse, and it has just been rumoured that he has committed suicide. If I remember rightly he was accompanied by Mrs. Furtseva, whose star was then in the ascendant, but who has since been conspicuously absent from the line-up of top brass on important occasions in Moscow. Look at it how you like, India just has not been lucky for Soviet notables in recent years, and if all the money wasted on welcoming them were added together it would now amount to a considerable sum. I think the Calcutta

Corporation would be well within its rights to demand that the Soviet Union pay all the expenses for Major Gagarin's reception—perhaps refundable if he is still in favour in, say, ten years' time—especially when the visit is for Russia's own propaganda advantage. Has anybody thought of the effect of all this adulation on Calcutta's electorate so near a general election, I wonder.

A CENTENARY IS CERTAINLY A MATTER FOR congratulations, and I hereby extend mine to the Calcutta police who are celebrating their hundredth anniversary this week. I have always been numbered among the more severe critics of the force, especially over its substantial contribution to the traffic chaos which exists in this city; but after pondering the somewhat left-handed compliment paid to it by Mr. Kalipada Mookerjee last Sunday, I can more easily appreciate the kind of emotional conflict with which it still has to contend. A weight of guilt cannot be good for morale or efficiency, and I thought Mr. Mookerjee less than tactful in mentioning the rôle played by the police before independence. As I see it, their responsibility for the law ended with enforcing it, which they did rather better perhaps than they do now for the very good reason—and Mr. Mookerjee might remember this—that they had more support from the authorities. One often suspects that this feeling of guilt, of being less than honourable in doing one's duty, is being deliberately kept alive among the police for political reasons. Political interference has been greater since independence than it was before, and this only serves to confuse the true values for which any police force must stand. These are loyalty, integrity and devotion to duty, and they remain the same whatever the government in power. In future, when I have occasion to criticise the Calcutta police I shall try to bear this in mind; which may or may not make me less critical. I suppose it is too easy in a place like Calcutta to make the police a convenient scapegoat for most of the city's ills. One is more apt to fume about the unlit police vehicle with which one nearly collides on a dark night, or the stupid slovenliness of the constable who waves an ineffectual paw and expects the traffic to obey him, than to reflect on the fact that at least one can reasonably expect not to be murdered in one's bed. With a hundred years behind it, the force has accumulated a number of excellent traditions which one hopes to hear more of in future. These days too much emphasis is placed on change and too little on the more permanent values. Yet these are things which no police force can afford to neglect.

THE PUBLICATION OF COMPANY CHAIRMEN'S SPEECHES now represents a substantial part of Capital's annual income, so I am not really advocating the idea recently adopted by an American manufacturer of gramophone records—I am sure they must call them phonograph discs. It seems this company, Liberty Records, has presented its latest annual report in the form of a record to be played on shareholders' gramophones. An orchestral fanfare introduces the main theme (bigger and better profits) and the hard facts and figures which follow are interspersed with snatches from the company's latest hits, chit-chat with its recording stars and more musical interpolations. Since Liberty's gross income has bounded from \$197,000 in 1955 to \$5,750,000, its report must be one of the jolliest numbers on the financial hit parade.

THE DITCHER

symbol of security!

Bank vaults are always made of steel... because steel is so dependable!

Through the years Steel has come to be considered the symbol of security... not merely physical security, but economic security as well! The larger the amount of steel a country produces, the higher the rung she occupies on the ladder of economically stable countries... the greater her credit in the international market. And that is why India today is striving so hard to raise her output of steel — Steel that will endorse her claim to economic stability... Steel that she can hold up to the world as a symbol of her security.

DESIGN... for finest performance

Of all aspects of industrial endeavour the most intriguing is thermodynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story... a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is *tailor-made* to give optimum performance under varying *local* conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities of waste material in the form of bagasse for fuel; again, in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digestors in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will *tailor-make* not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

...a Powerful Partnership for Progress

Money

THE CALCUTTA MONEY MARKET

INTER-BANK FUNDS EASIER

Wednesday, 29th November.

THERE has been a slight drop in the level of advances in the Calcutta money market during the past week. Demand from the jute mills has increased, but the requirements of the sugar industry are down and there has been a slight reduction in the call for accommodation against grain and food storage. Demand from the cotton mills and the iron and steel and engineering industries remain about the same. There is nothing in current developments in the money market to suggest that the annual busy season has begun. In the inter-bank market funds are extremely plentiful and business done down to 14 percent.

The exchange market has been active during the past week due to a substantial increase in the supply of both tea and gunny bills. Remittance demand has been keen. In the London money market, the pound closed a shade weaker and closing quotations were marked down against most major currencies.

BULLION WAS STEADY ON REPLACEMENT BUYING during the past week. Silver advanced from the previous week's level of Rs. 242.75 to Rs. 243.50, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 208.72. The London and New York prices were 80½d and 91.375 cents.

Gold reacted at the close on profit-taking. The price declined from Rs. 145.75 to Rs. 144.50. The sovereign at Rs. 98.25 lost 25nP.

DURING THE WEEK ENDED 24TH NOVEMBER, Government of India Treasury bills for Rs. 25,61,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 28th November. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.37 percent were allotted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 4th December.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 29th November to 2nd December at Rs. 99.391 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 22nd to 25th November amounted to Rs. 22 lakhs.

THERE WERE DECLINES OF RS. 18.51 CRORES TO RS. 1,918.12 crores in the total note issue and of Rs. 17.75 crores to Rs. 1,902.67 crores in active notes, according to the return of the Reserve Bank of India for the week ended 24th November, 1961. The currency contraction was adjusted by reducing rupee securities of the paper currency reserve by Rs. 20 crores to Rs. 1,558.84 crores. This was done by transferring securities to the Banking Department in which investments rose by Rs. 24.67 crores to Rs. 205.19 crores. Deposits of the Government of India fell by Rs. 13.11 crores to Rs. 49.39 crores, but other Government accounts rose by Rs. 11.21 crores to Rs. 22.34 crores. Balances of commercial banks at Rs. 84.12 crores showed a rise of Rs. 1.29 crores. Balances held abroad improved by Rs. 4.40 crores to Rs. 28.98 crores. Other loans and advances declined from Rs. 131.85 crores to Rs. 129.58 crores, of which advances to scheduled banks against usance bills amounted to Rs. 25 lakhs (Rs. 2.21 crores). Ways and means advances stood at Rs. 66.46 crores, against Rs. 73.60 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 17th November, 1961, shows a rise of Rs. 1.17 crores to Rs. 527.62 crores in total deposits. Investments in Government securities are down by Rs. 1.55 crores to Rs. 250.13 crores, while other investments remain unchanged at Rs. 9.24 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 3.68 crores to Rs. 242.19 crores. Cash and balances are, in consequence, shown at Rs. 27.79 crores, or Rs. 1.56 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 17th November, 1961, shows Demand and Time liabilities at Rs. 841.97 crores (Rs. 20.20 crores on account of borrowings from banks) and Rs. 1,145.40 crores (Rs. 19.12 crores), compared with Rs. 836.97 crores (Rs. 16.92 crores) and Rs. 1,135.97 crores (Rs. 18.21 crores), respectively, in the previous week. Cash has declined by Rs. 4.39 crores to Rs. 50.71 crores, while balances with the Reserve Bank have increased by Rs. 5.49 crores to Rs. 76.69 crores. There is a drop of Rs. 3.78 crores to Rs. 607.16 crores in investments. Advances and bills discounted at Rs. 1,236.73 crores show a drop of Rs. 8.58 crores. The ratios to total liabilities of cash and balances, and of advances

and discounts are, in consequence, shown at 6.4 percent and 82.2 percent, against 6.4 percent and 63.1 percent.

STEEL PRODUCTION SOARS BY 425% AT MUKAND

We reckon our production in 1960-61 to be 69,552 tonnes of rolled products and 5,624 tonnes of castings. In other words a rise of 48% over the previous year.

In 1951-52 MUKAND employed 1,064; in April 1961—2,306. Over the past ten years production figures have soared—13,615 tonnes of rolled products and 704 tonnes of castings in 1951-52; and 425% more in 1960-61.

	57/58	58/59	59/60	60/61
	(Rs. in lacs)			
CAPITAL	51	51	71	61
Depreciation provided to date	32	36	41	50
Profits retained in business to date	25	35	45	57
Profit for the year	19	30	31	53
Dividend for the year	5	5	8	19

MUKAND manufactures high grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing flux of big orders—like the one placed by the Railways with MUKAND in October 1961 for 4,862 sets of Centre Buffer Couplers valued at Rs. 1,14,00,000.

MUKAND provides India's new and growing industries with the quality components that they must have.

MUKAND IS STEEL

"Here are five ways

BOAC Air Cargo can help your business!"

- ★ **Fast** BOAC jetliners slash transit time by hours.
- ★ **Direct** BOAC city-to-city freighting cuts out time-wasting journeys to and from docks.
- ★ **Simple** (cheap) packaging is all that's needed with careful BOAC handling.
- ★ **Safe**, efficient BOAC freighting means lower insurance costs, wider coverage.
- ★ **Experienced** BOAC staff give all goods individual attention all the way.

We deliver your goods in hours, instead of days or weeks! And that's only one of the things you gain. Speed alone may not be enough for you—but BOAC Air Cargo gives more and more successful businessmen these extra advantages...advantages that can help and benefit your business!

Stocks and Shares

PROSPECT OF AUTOMATIC MARGINS INDUCES HEAVY BEAR-SELLING

MODEST RECOVERY TOWARDS THE CLOSE

Wednesday Evening.

THE undertone of the stock market has suddenly deteriorated during the past week. On Monday, prices broke sharply on heavy selling pressure induced by easier advices from Dalal Street. Bombay interests, it is believed, have sold heavily in Lyons Range also. Although the stampede has been caused mainly by short-selling, holders have become nervous and have reduced their commitments. The bear spree has been sparked off by reports that margin regulations on the Stock Exchanges will be tightened in order to restrain speculation. The nervousness has been accentuated by the statement made by Mr. Morarji Desai, Central Finance Minister. He has told Parliament that the scheme of automatic margins approved by the committee of Stock Exchange presidents will soon become effective in all the stock markets. Under the scheme, margin deposits, at sliding scales ranging from 2 percent to 30 percent, will be imposed on the business of every member which remains outstanding at each settlement.

It is difficult, however, to understand why operators should have become so nervous. The proposal for margins has been publicly known for a long time, and as such should have been discounted by now. There is no doubt that the margin regulations will help curb speculation. Turnover is also likely to decline. But the strong point about the proposed reform is that it will ensure more orderly trading in the stock markets. Hence, no genuine investor is likely to regret the adoption of the new system.

The adverse impact appears to have been accentuated by a number of unfavourable developments. Reports of fresh incursions into Indian territory by China have created a great deal of concern. The trouble with the Portuguese near Goa has also disturbed sentiment. But, towards the close, a modest recovery has taken place due to short-covering and replacement buying. Lyons Range seems to be veering round to the view that the new margin regulations, when enforced uniformly in all the stock markets, may do a great deal of good.

On Monday, the Calcutta Stock Exchange authorities imposed margins at the rate of Rs. 2 a share on purchases of Dunlop Rubber and Orient Paper ordinary shares because speculation in these two counters is believed to have been excessive. The shake-out at the time was confined mainly to the speculative issues. Although other shares were marked down in sympathy, there was little selling pressure in their case. Since then, selected engineering, miscellaneous and tea shares have recovered rapidly. The trend is not surprising considering that there is a shortage of good shares and holders are reluctant to sell while company news continues to be satisfactory. Meanwhile, attention has been diverted to some new issues in which substantial funds are likely to be invested.

Indian Iron have recovered to Rs. 25.62 after touching a low of Rs. 25.28. Among engineering shares, Texmaco have rallied sharply due to influential support. Scattered interest has been taken in Indian Standard Wagon, Guest, Keen, Williams, Burn and Braithwaite, Jay Engineering and Britannia Engineering have been steady.

The prices of selected miscellaneous industrials have closed below their best levels. Goodyear India, Metal Box, Alkali Chemical, Britannia Biscuits, Indian Aluminium and Indian Copper have become steadier. Support has been extended to Rohtas and Indian Cable. Hindustan Motors have become hesitant on fresh reports of labour trouble at the factory. Among tobacco shares, Imperial Tobacco have been steady. Interest is being taken in Hindustan Twyford and Schrader-Scovill Duncan. Among managing agency shares, Jardine Henderson have recovered on replacement buying. Martin Burn are steady on dividend prospects. Philips India and Philips Carbon Black have been bought. Jay Shree Tea and Industries have recovered. Hindustan Aluminium and Sirsik have enjoyed knowledgeable support. Dunlop Rubber have reacted on profit-taking.

The absence of foreign enquiries for gunnies, and the efforts to maintain a minimum price for raw jute, have disturbed investors in jute shares. Birla, New Central, Howrah and Nuddea have reacted. Gourpore and Fort Gloster have been about steady. Megna, Ganges and India have declined on pressure.

In the cotton mill section, Bowreah and Dunbar have been supported on favourable corporate rumours. Elgin have lost on profit-taking. J. K. Rayon and Bharat Commerce have reacted. Jay Shree Textile have been supported on the prospect of a rights issue.

Coal shares have been sluggish in spite of the news that collieries will be permitted to obtain loans against the security of mining leases. Scattered interest has been taken in Burrakur, Bengal, Amalgamated, Central India and New Beerbhoom.

Paper shares have become steadier on hopes that the price of the commodity will be increased.

soon. Orient have recovered after an earlier fall. Titaghur, Sirpur, Ballarpur and Seshasayee have been in demand.

The report that the U.S.A. has restored the export quota cut for Indian sugar has had little effect on sugar shares. Sellers predominate in Carew, S.K.G. and Belsund. Dyer Meakin Breweries have been steady on hopes of a bonus issue.

Scattered support has been forthcoming for bank shares on the belief that profits will be higher during the current year. United Commercial, Punjab National and United Bank have been taken. Electric company shares have been steady on the prospect that the standard return allowed to the industry might be increased in the near future. Calcutta Electric have been supported.

In spite of a further decline in auction prices in Calcutta this week, selected Assam and Dooars tea company shares have become steadier on the belief that the good gardens will do well during the current year. Support has been extended to Brooke Bond, Bishnauth, Tezapore, Hasimara and Hantapara.

Government securities have been quiet and turnover has been reduced to almost a trickle. Institutional buying has been negligible. The 3 percent Conversion loan 1986 is being quoted at Rs. 71. The prices of State loans have eased.

North-Western Cachar Tea

The profit earned by the North-Western Cachar Tea Co. Ltd has fallen from Rs. 6.65 lakhs to Rs. 1.52 lakhs for the year ended December 1960, after allocating Rs. 1.13 crores (against Rs. 78,101) for depreciation. A dividend of 30 percent, subject to tax, has been maintained, and it absorbs Rs. 2.10 lakhs. Taxation is allocated Rs. 67,500 (against Rs. 2.56 lakhs). After making all neces-

CUT AIR CONDITIONING COSTS

with **BLUE STAR-WORTHINGTON**

Packaged Air Conditioners

5, 7½, 10 tons

Now made in India

Here's how BLUE STAR-WORTHINGTON Packaged Air Conditioners offer you a four-way saving in air conditioning costs.

CUT COSTS on tonnage. Single units range from 5 to 10 tons, operate independently.

CUT COSTS on installation. Units can operate without ductwork.

CUT COSTS on subsequent expansion. Single units connect up into multiple systems with minimum alterations.

CUT COSTS on operation and maintenance.

Every unit is engineered, built and individually performance-tested in BLUE STAR'S own plant to WORTHINGTON specifications.

For a better air conditioning job, call in BLUE STAR

sary adjustments, there remains a balance of Rs. 9,117, which is carried forward, against Rs. 1,37,903 brought in. The total crop amounted to 12,800 maunds, against 16,761 maunds and the average sale price was Rs. 4.48 a kilogram. Estimates for 1961 provide for a crop of 17,000 maunds at an estimated outlay of Rs. 17.50 lakhs.

Ethelbari Tea

The Ethelbari Tea Co. (1932) Ltd has made a profit of Rs. 87,029 for the year ended December 1960, after providing Rs. 32,693 (against Rs. 37,145) for depreciation. An ordinary dividend of 5 percent (against nil), subject to tax, has been declared, absorbing Rs. 24,500. With other adjustments, there is a carry-forward of Rs. 4,520. A crop of 218,696 kilograms was manufactured against 230,480 kilograms.

Bombay Market

STIFFER BUDLA CHARGES DEPRESS SPECULATIVES

POLITICAL DEVELOPMENTS CAUSE ANXIETY

Wednesday Noon.

THE Bombay stock market closed in a subdued mood. There was a sharp decline in share prices during the past week due to heavy selling combined with nervous liquidation by bulls. Sentiment was affected by the stiff carry-forward budla at the last settlement. The higher budlas took operators by surprise because money conditions were reported to be much easier. It looked as if there was a shortage of budla financing facilities. Sentiment was adversely affected on the view that the higher carry-forward charges indicated an over-bought position. Operators were unnerved by the adverse political developments along the Indian borders. Reports of further Chinese incursions into Indian territory called for caution. The news of various incidents off the Goa coast caused a great deal of concern.

Tata Steel closed lower at Rs. 145.75 and Indian Iron declined to Rs. 25.60. Engineering shares

eased. Alcock Ashdown fell to Rs. 320 and Tata Locomotive were sold at Rs. 363. Premier Construction were offered at Rs. 193 and Larsen and Toubro were quoted lower at Rs. 38.25. Mukand Iron were indicated at Rs. 28.90. Among motor-vehicle shares, Premier Automobiles fell to Rs. 162.50, and Hindustan Motors were shaded at Rs. 20.92.

Cotton mill shares declined after an earlier rise. Century moved down to Rs. 595.50 and Bombay Dyeing were offered at Rs. 67.30. Sellers predominated in Kohinoor at Rs. 313.50 and in Swadeshi at Rs. 273. Simplex came to hand at Rs. 164 and Morarji were sold at Rs. 380. Khatau were placed at Rs. 477.50 and India United ordinary were dealt in at Rs. 15.56. Standard met with scattered support at Rs. 1,122 on hopes of diversification of activity. Finlay were down to Rs. 328 and Shree Niwas were transacted at Rs. 295.

The prices of miscellaneous shares moved down in sympathy with the general trend. In the sugar section, Belapur declined to Rs. 277 on reducing the dividend. Phaltan were quoted at Rs. 125.50 and Walchandnagar Industries were dealt in at Rs. 167. Cement shares were quoted lower and Digvijay were bought at Rs. 203.50 by informed quarters. Mining shares were quiet and business passed in Shivrajpur Syndicate at Rs. 47. Steamship company shares eased, with Scindia Steam down to Rs. 12.84 and Great Eastern Shipping to Rs. 13.12. Bombay Burmah reacted to Rs. 663 after an earlier improvement. The Company is expected to participate in a bauxite project with Tata Chemical, which is believed to have acquired a mineral company. Chemical shares were quiet. Tata Chemical reacted to Rs. 21.20. Synthetics and Chemicals were taken at Rs. 233 and Colour-Chem were placed at Rs. 402.50. Polychem were indicated at Rs. 206.25. Rayon shares reacted on profit-taking and National Rayon were available at Rs. 574. Gwalior Rayon lost at Rs. 49.50 and Baroda Rayon were sold at Rs. 159. Ceat Tyres declined to Rs. 216.25. Scattered interest was taken in Hindustan Lever at Rs. 57 and in Voltas at Rs. 311.

Bank shares were steady but turnover was limited. Bank of India were taken at Rs. 128.50 and Central Bank were quoted at Rs. 62. Bank of Baroda were placed at Rs. 105. Insurance shares were steady and business was done in New India at Rs. 59.50. Vulcan changed hands at Rs. 16.47.

Electric company issues were steady and Tata Power were bought up to Rs. 1,090. Ahmedabad Electric were dealt in at Rs. 92.80 and Bombay Suburban were indicated at Rs. 103.50.

Madras Market

SPECULATIVES DECLINE ON SELLING PRESSURE

OPERATORS WORRIED ABOUT MARGIN REGULATIONS

Tuesday Evening.

THE Madras stock market turned quiet during the past week in sympathy with the trend in Bombay and Calcutta. Clearing shares declined considerably on selling pressure. Operators were nervous as they awaited the imposition of new margin regulations. The Prime Minister's statement about fresh Chinese incursions into Indian territory caused anxiety. There was also evidence of a decline in investment support due to buying orders being transferred to outside centres.

Government securities were quiet and business was limited. The prices of State loans were marked lower. Scattered support was evident in bank shares. Good public utility issues were quiet. Sugar shares eased on fears that sugar companies would incur losses due to the large accumulation of stocks. In the planting group, tea shares were steady, but rubbers turned quiet on reports of a decline in the price of the commodity. Coffee shares were softer due to fears of excessive supplies. The earlier support for cotton mill shares was not maintained at the close and prices reacted on profit-taking. Miscellaneous industrials closed lower in the absence of interest.

In the banking group, Indian were dealt in at Rs. 181 and Indian Overseas were transacted at Rs. 191. Punjab National came to hand at Rs. 20.40 and State Bank of Travancore were done at Rs. 125. Among public utilities, South Madras were transacted at Rs. 10.25 and Vellore at Rs. 14.12. West Coast came to hand at Rs. 14 and Kumbakonam were taken at Rs. 10.78.

In the sugar section, Deccan declined to Rs. 12.15 on paying a taxable final ordinary dividend of 131 percent. E.I.D. reacted to Rs. 37.25 and K.C.P. were sold down to Rs. 24 on declaring a taxable ordinary dividend of 15 percent. United Breweries were transacted at Rs. 101.55 on issuing rights ordinary shares. Mysore declined to Rs. 56.50 and Cauvery to Rs. 120.

Among planting shares, Blue Mountain were quiet at Rs. 290 and Consolidated Coffee declined to Rs. 20.75 on paying a taxable ordinary dividend of 20 percent. Coffee Lands were easier at Rs. 17 on the payment of a taxable ordinary dividend of 12 percent. Chandramalai were bought at Rs. 2.74

on declaring a taxable ordinary dividend of 10 percent. Kil Kotagiri were done at Rs. 5.25 and Lucky Valley were dealt in at Rs. 11.50. Mysore Coffee came to hand at Rs. 5.19 and Nilgiri at Rs. 8.55. Nonsuch were transacted at Rs. 27.55 and Oucherlony at Rs. 3.55. Parkside were steady at Rs. 28.50 and Peermade were in demand up to Rs. 22.75. Periakarmalai were quiet at Rs. 3.65 and Teekoy declined to Rs. 5.05.

In the textile group, Bangalore Woollen lost at Rs. 242 and Buckingham at Rs. 260. Adoni were taken at Rs. 13.15 and Asher came to hand at Rs. 229. Cauvery Spinning were placed at Rs. 16 and Kothari were transacted at Rs. 13.87. K. Rajendra were steady at Rs. 74.50. Lakshmi reacted to Rs. 169.50 and Madura to Rs. 42.10. Mettur were in demand at Rs. 393 and Premier were bought at Rs. 320. Ramakrishna were supported up to Rs. 250 and Ranga Vilas were indicated at Rs. 55. Travancore Rayon lost at Rs. 44.87, but South India Viscose were bought at Rs. 182.

In the miscellaneous section, Aluminium Industries were quiet at Rs. 23.65 and Ashok Leyland were sold at Rs. 9.30. Binny were offered at Rs. 311 and Enfield at Rs. 12.10. F.A.C.T. were quiet at Rs. 9 and India Cement were sold down to Rs. 6.55. Kirloskar Electric were wanted at Rs. 15.75 and Madras Rubber rose to Rs. 22.37. Mandya National Paper were bought at Rs. 8.60 on the prospect of a rights issue and Seshasayee Paper hardened to Rs. 8.55 on reports of progress in the installation of the factory. Mysore Paper were bought at Rs. 15.20 and Parry's Confectionery improved to Rs. 4.72. Spencer were in demand at Rs. 24.25 on declaring a taxable final ordinary dividend of 12 percent. Standard Motor were steady at Rs. 16.37 and Textool were placed at Rs. 186. Tube Investments were bought at Rs. 290 but United Electricals were easier at Rs. 9.50.

INVEST WISELY AND WELL

You may be prudent enough to save a portion of your income, but perhaps you are hesitant to decide on a safe investment.

Let this not disturb you. The State Bank is in touch with the leading brokers and will make their expert advice available to you quickly and without charge.

The State Bank will also keep your investments in safe custody and collect and credit to your account interest and dividends as and when they fall due.

It does not matter where you reside—the State Bank has a net-work of offices through which it offers to place these and other services at your disposal.

Why not talk things over with our nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than nine hundred offices waiting to serve you throughout India.

Far from the madding crowd, yet not far from Calcutta, lies a spot where reign peace and tranquillity—and a home there is just ideal for anyone. Kalyani has all the modern amenities—electricity, school, hospital, underground sewerage, filtered water and a few things more—green parks, fresh air and open roads.

for your own home of tomorrow

in Kalyani

Issued by the Government of West Bengal

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

London Market

STOCK MARKET UNCERTAIN

ECONOMIC OUTLOOK DISCOURAGING

London, 29th November.

THE U.K. economic situation was a major influence on sentiment in the stock market over the past week, and after gaining some encouragement in the previous week from the success of the Electric Power workers in their claim for more money, buyers have been restrained since the reiteration by leading Government Ministers that the pay pause must continue. Each day has brought its statements from company chairmen on narrowing profit margins and in some cases, there have been warnings from leading companies concerning future dividends.

Equities have been an erratic market with buyers preferring to remain liquid for the present, while selling has been on the small side. Electrical Equipments were upset by the hint from English Electric that the final dividend might be cut. Most leading stocks lost ground, but Unilevers were supported at one time in anticipation of the shares being dealt in on New York early next month. Gold shares have been favoured at times on growing hopes that the South African currency restrictions would soon be eased. The first move has already taken place, and this encouraged buyers to some extent. Sentiment was also influenced by the biggest-ever transfer of gold from the United States which encouraged those people who think that the United States will raise the gold price. Coppers were subdued and tins drifted lower. Oils were quiet and fluctuated narrowly. Rubbers and teas continued to move against holders.

New Delhi

LIBERAL LICENSING PROCEDURE FOR ENGINEERING INDUSTRIES

BUFFER STOCK AGENCY BEING SET UP FOR STABILISING RAW JUTE PRICES

(FROM OUR NEW DELHI CORRESPONDENT)

THE following are some of the engineering industries for which licences will be granted without reference to the Licensing Committee. The Central Ministry of Industry has of late been publishing the lists of such industries in order to save time and cut the correspondence which might have otherwise to be entertained: A.C.S.R. and all aluminium conductors; agricultural tractors; motor-vehicle instruments; bare copper strips; antimony; automatic pin winding machines; bearings—thin-walled; bifurcated rivets; calculating machines; conduit pipes; coated abrasives; crawler tractors; dumpers and scrapers; earth-moving machines; electric fans; expanded metals; high carbon steel blades; hosiery needles; jute cutting knives; machine screws, set screws and coach screws; mild steel bright bars and bars and shaftings; radiators; railway points and crossings; railway wagons and railway wagon parts; road rollers except expansions; sewing machines; shovels; telephone relays; twist drills; washing machines and drying machines; wire ropes; gelatine, technical, edible and photographic; hollow-ware including table and pressedware and glass bottles made on semi-automatic machines; hard board; insecticidal formulations (other than B.H.C. and D.D.T.); methanol; pesticidal formulations; polyvinyl acetate; rayon and staple fibre (other than acetate filament yarn and acetate and viscose staple fibre); boilers and steam generating plant; boats and crafts for the fishing industry; conveyors, chain belt and screws; construction machinery; electrical motors above 20 h.p. and special motors above 20 h.p. E.O.T. crane and wharf cranes; fabricated structural; industrial machinery; machine tools; precision industrial instruments; small tools such as cutters, and cutting tools (except saws of all types); sluice gates and bearings; structural ropeways; transformers above 33 kV; tungsten carbide brazing of tips; and winches (land marine).

British Mining Mission

A high-powered British 17-man mining mission is arriving in Calcutta early in December to participate in a mining symposium in Dhanbad, beginning from 6th December. It is headed by

Rs. 12.5 crores for the mining and concentration of the ore in Khetri and Daribo and for smelting the concentrates at a smelter which is being established in Khetri. The reserves which occur at Rangpo, although richer in grade, are comparatively small in size. These are to be exploited by the Sikkim Mining Corporation, a joint venture of the Sikkim Durbar and the Government of India. The ore mined will be concentrated at the mine and then transmitted to one of the smelters in the country. The project is estimated to cost Rs. 2.5 crores. India imported 164,000 tons of copper, lead and zinc in 1960, against 128,000 tons in the previous year. There is only one copper producing unit in the country—the Indian Copper Corporation's plant in Ghatsila—where the production is more or less stagnant around 8,000 tons a year. Copper consumption has been estimated at 180,000 tons by the end of the third plan period. Although India's per capita consumption of copper is only .02 lbs at present, it is expected to be raised to 4 lbs by the end of the third plan period. In the U.S.A., the per capita consumption is 17 lbs while in Europe it is 5 lbs.

Firms to Make Dairy Equipment

The following four firms have been granted licences by the Ministry of Commerce and Industry under the Industries (Development and Regulation) Act, 1951, for the manufacture of various types of dairy equipment in collaboration with foreign manufacturers:

Name of the firm	Annual capacity (In lakhs of Rs.)
Messrs Larsen and Tourbo Ltd, Bombay	106
Messrs A. P. V. Engineering Co. (P) Ltd, Calcutta	47

SOUTHERN BANK LTD.

(SCHEDULED BANK)

Head Office:

24, NETAJI SUBHAS ROAD, CALCUTTA.

Phone: 22-5988, 22-5989.

BRANCHES: BURRABAZAR, SHYAMBAZAR, SHOWANIPUR, BASIRHAT & KHULNA.

LOAN GRANTED ON APPROVED SECURITIES
All Sorts of Banking Business Transacted
S. N. BANERJEE, M.A., General Manager.

Messrs Vulcan Trading Co. (P) Ltd, Bombay ... 26
Messrs Alfa Laval (I) Private Ltd, Bombay ... 78

Messrs Larsen and Tourbo and Messrs A. P. V. Engineering Company are already manufacturing a few items of dairy equipment while Messrs Vulcan Trading Company and Messrs Alfa Laval are expected to go into production by the middle of 1962.

Garden Reach Workshops

Garden Reach Workshops Ltd, a Company functioning under the Defence Ministry, has submitted an application for a licence under the Industries (Development and Regulation) Act, 1951, for the manufacture of scrapers, dumpers, etcetera. There are several other schemes in the private sector also for the manufacture of these items.

Another Watch-making Venture

The Government has recently approved a co-ordinated scheme for the manufacture of watches by four small Ludhiana firms in collaboration with a West German firm. The combined capacity of the four firms will be around 72,000 watches a year. The production of watches is expected to begin next year.

Andhra Enterprise for Glass-making

As a result of the discussions held between the Indian and Hungarian experts on the proposal of the Andhra Government for setting up an integrated glass factory in Hyderabad, the Andhra Pradesh Industries Development Corporation Ltd, Hyderabad, which is a Government corporation, has submitted an application for the grant of a licence under the Industries (Development and Regulation) Act, 1951, for the establishment of a new undertaking in Hyderabad for the manufacture of 12,500 tons of sheet and plate glass a year, 12,000 tons of glass holloware a year, 1,800 tons of glass shells and tubes a year, and 1,500 tons of crystal glass a year. The proposal involves the installation of capital equipment worth Rs. 1.34 crores, out of which about Rs. 80 lakhs would be the value of imported equipment. The details of the scheme are awaited from the Hungarian organisations.

London Experts to Help Calcutta Port

Two officials from the Port of London Authority are due to arrive in Calcutta this week to advise on the new dock in Haldia, 65 miles from Calcutta down the Hooghly. They are Mr. G. A. Wilson, the Authority's chief engineer, and Mr. G. T. Johnson, senior dock superintendent, who is responsible for the Royal docks system in London.

A development plan for the Haldia dock has been produced by the Calcutta Port Commission and given to Messrs Rendel, Palmer and Tritton, a British firm of consulting engineers, for the preparation of the final scheme. The Calcutta Port Commissioners asked the Port of London Authority if it could help by way of expert advice. The Authority immediately agreed to release Mr. Wilson and Mr. Johnson, who will spend two weeks in India.

Irrigation by D.V.C.

Replying to a question in Parliament, the Deputy Minister of Irrigation and Power last week said: "The Damodar Valley Corporation scheme visualises the irrigation of an area of 973,000 acres under kharif on full development and 100,000 acres under rabi. The actual irrigation during kharif 1960 was 639,234 acres and under rabi 1959-60, 11,156 acres. The actual irrigation has not been as fast as originally anticipated for the following reasons: (1) absence of water courses—the Damodar Valley Corporation was entrusted with the responsibility of constructing water courses only recently and necessary provision has been made for this purpose in the third five year plan. (2) Absence of field channels: The Government of West Bengal has recently been requested to make arrangements for the construction of the field channels. (3) Interference by villagers in the canal system by raising cross bunds, thereby obstructing the flow of water. It will be thus seen that although the Damodar Valley Corporation was the first river valley project, planned on the T.V.A. model, the responsibility for constructing the water courses and field canals, according to the Government's own admission, had been entrusted to the Damodar Valley Corporation and to the West Bengal Government, 'only recently'.

Sugar Exports

The Deputy Minister of Food told the Lok Sabha last week that 238,000 metric tons of sugar were shipped from 1st January to 12th November, 1961, including 148,000 metric tons to the U.S.A. The amount of foreign exchange, which it is claimed was earned, was placed at Rs. 11.6 crores. These exports involved a subsidy of about Rs. 5.5 crores by the Government during the current year. The Deputy Minister did not disclose the amount of excise duty which had to be waived on these exports. What will be the exact amount of net earnings after the subsidy and the loss of excise duty, therefore, remains to be seen.

U.S. Imports of Indian Sugar

The U.S. Ambassador to India, Mr. J. K. Galbraith, said at a Press Conference last week: "When Washington announced reductions in sugar imports from India, Brazil and Taiwan, they also announced that special efforts would be made to restore these import reductions early in 1962. After lengthy discussions between the representatives of the Government of India and the United States Government, the Government of India, following suggestions of officials in Washington, has decided to resume shipments of Indian sugar to the United States. This decision was based on the belief that the question of an import quota for India in the first half of 1962 would be resolved before the sugar actually reaches the United States and that the decision will be favourable to India. In the event Indian sugar arriving in the United States before the import quota question is resolved, the United States importers have stated they will store the sugar in bond to United States Customs until the import quota question can be settled. In discussing the sugar problem with Government of India officials, they state that if the above plan works out satisfactorily, the only remaining question is to resolve the problems created by cancellation of three scheduled shipments of sugar from India to the United States."

International Rice Commission Meeting

Delegates from about 30 countries, it is expected, will attend the meetings of two working parties of the International Rice Commission in New Delhi next month. One working party will deal with rice production and protection and the other with soils, water and fertiliser practices. The countries which will be represented at the meetings are Australia, Burma, Cambodia, Ceylon, Cuba, the Dominican Republic, Ecuador, France, India, Indonesia, Iran, Italy, Japan, Korea, Laos, Malaya, Mexico, the Netherlands, Pakistan, Paraguay, Portugal, the Philippines, Thailand, the United Arab Republic, the U.K., the U.S.A. and Viet-Nam. The working parties will discuss a number of subjects, such as reduction in the number of rice varieties and intensified breeding of varieties with wide adaptability; large-scale distribution of recommended seed varieties to farmers; steps to fight insect pests of paddy; better storage practices for paddy and rice; training programmes for storage personnel; efficacy of different fertiliser materials as well as methods of application and soil analysis. There will also be a discussion on the preliminary report of the survey of the fertiliser economy of the Asia and Far East region.

Indo-East German Trade

Trade talks between the Government of India and a delegation from East Germany began here last week. The delegations reviewed the progress of trade between India and East Germany. There will be further discussions for finalising the trade arrangements for 1962. The trade between India and East Germany is governed by the three-year trade and payments arrangement which will be in force until the end of 1962.

London

U.K. PRIME MINISTER DEFENDS PAY PAUSE POLICY

BUT T.U.C. CRITICISES OFFICIAL ATTITUDE

(FROM OUR LONDON CORRESPONDENT)

UNCERTAINTY about the U.K. Government's intentions concerning the pay pause policy has arisen as a result of some rather inept handling of recent developments. Recently, Mr. Selwyn Lloyd said that industrial recovery was just around the corner. When the Electricity Council agreed to a pay rise last week, the end of the "pause" was generally expected. In the House of Commons, however, Mr. Macmillan disowned all responsibility, reaffirmed the maintenance of the pay pause policy, but instead of acting firmly compromised with "I must urge all concerned to make every effort to maintain a policy of restraint over wages, salaries and dividends." And again: "I am convinced the right way is to trust, to influence, to suggest efforts to get general understanding." To cap it all "The Government will not abandon its policy because it has had a setback in a particular instance."

The effect on markets has been most unfortunate. Even more serious, however, has been its effect on trade union leaders. The T.U.C. General Council has dealt a sharp rebuke to the Prime Minister for his statement on the wages pause by refusing to endorse its economic committee's recommendation to enter the new Government planning machinery. At the moment, the majority on the General Council still wants, eventually, to accept the six seats the U.K. Chancellor has offered the T.U.C. on his National Economic Development Council. But unless he can give new assurances at a meeting with the T.U.C. economic committee, and so melt the new freeze in Government-union relations, the danger is that the T.U.C.'s deliberations will drag out interminably and wreck the whole planning concept.

The Trades Union Congress has asked Mr. Selwyn Lloyd, Chancellor of the Exchequer, to abandon the wages pause and reduce the 10 percent surcharge on indirect taxes. It describes the pause as "not only destructive of good industrial relations, but positively harmful in the present economic situation." A letter which the T.U.C. economic committee has sent to the Chancellor says "The Government was in error in asserting that the economy was under undue pressure in the middle of the year, and fundamentally wrong in imposing the wages pause." It goes on: "During the first eight months of this year, hourly wage rates rose by about 2 percent, compared with a 3-percent rise in productivity; in manufacturing industry, they rose by about 1 percent, compared with a 5-percent productivity increase. In the same period, dividends increased by about 14 percent. Nor have the Government's policies been justified by their effect on the balance of trade: exports in the third quarter were barely above the second quarter and imports barely less. Imports of manufactured goods have risen sharply. Indeed, the only positive result of the measures—a reversal of the movement of short-term money—appears to have been on a scale which has embarrassed the Government to the point at which it has been compelled to reduce Bank rate." The T.U.C.'s letter concludes with the demand that the Government forthwith take steps "to prevent a further weakening of Britain's economic position in the period which must elapse before more extensive measures to tackle the fundamental problems facing the country can be introduced."

October Trade Analysis

Only a chink of fresh light on the recent rise in imports appears in the full overseas trade figures for October. The U.K. Board of Trade has pointed out that comparison between the last three months and the previous four months (April to July) shows an increase of 1½ percent. All of this increase can be explained by the 5-percent rise in imports of food, beverages and tobacco. In the autumn of each of the previous three years, there had been a similar increase in this group. There was little change in the rate of imports of industrial materials following the substantial reduction earlier this year. On the export side, the encouraging features were the continued growth in sales to western Europe and to the United States. Exports to these markets were still running, however, well below the level of the first half of last year. There has been no improvement in exports to Canada. For the third successive month, Britain's terms of trade—measured by the relation between import and export prices—were unchanged in October. While the import price index (1954 equals 100) rose by 1 point, with the index of export prices unchanged, this was not sufficient to affect the terms of trade. Here the index held steady at 85—the same level as in August and September.

Setback in Industrial Output

An unmistakable reversal in the production trend of industry is shown in the latest output figures published by the U.K. Treasury. The seasonally adjusted index of total production, which was at first thought to have levelled off in

August at July's peak rate of 125 (1954 equals 100), is now known to have dropped back a point in August and to have fallen a further two points in September to 122. Developments in the manufacturing branch of industry probably go far to account for the new trend: the adjusted index for this branch shows a two-point fall in August from the June-July record of 127, and a similar drop again in September.

The new September figure for industry as a whole is only one point (for less than 1 percent) below its level in September last year. A steady rate of increase (with only a small setback in May) had carried the index up from 120 in January to 125 in July. But instead of settling on a high plateau, the trend of production has gone sharply in reverse. The recession fears, which could have been conjured up by these figures, may help explain the pains Ministers have lately taken to dismiss the spectre of an impending slump. Without the assurance recently given by the U.K. Chancellor that strong expansionary forces would be at work next year, there might well have been wide concern at the trend now disclosed.

Cost of Living Up

The index of retail prices rose by one point to 116 (January 1956 equals 100) in the five weeks ended 17th October, reversing a fall in the previous month. Prices are nearly 5 percent higher than a year ago. The increase on the month is smaller than the figures suggest because calculated to one decimal the October index was 115.7, compared with 115.5 in September.

Basic Materials Cheaper

The U.K. Board of Trade's latest index of wholesale prices shows that British manufacturers were able to obtain a wide range of basic materials at lower prices in October. The index is now more than 2 percent below the level reached in the April-May peak. Lower prices of materials used in the food-processing industries accounted for much of the fall, but there were marked declines over a wide range of non-food items. The index of prices for goods produced by manufacturers was unchanged in October, following only a slight rise in September.

Ordinary Dividends Up

Ordinary dividends declared in the first half of 1961 were 15 percent higher than in the same period of 1960. Mr. Selwyn Lloyd, Chancellor of the Exchequer, gave this information in the House of Commons the other day while replying to Mr. Ted Leather. The Chancellor also said that according to the best estimate he could make, capital employed had risen by about 2 percent as a result of new capital issues and roughly 5 percent to 6 percent through the ploughing back of profits.

Export Contrasts

Some striking contrasts between the extra contributions to export business made by different industries over the last few years are brought out in an article published in the *Board of Trade Journal*. The survey also shows that, in terms of volume, imports of finished goods more than doubled between 1954 and 1960 while exports of such goods rose by only 24 percent during the six years. To put the matter in perspective, it should be said that Britain's imports of manufactured goods were in the third quarter of 1961 still less than half the size of exports of similar goods. At 1954 prices, finished goods imports in the three months were worth £321 million out of an import total of £1,079 million, while exports of comparable goods were valued at £655 million. The direct effect on the payments balance of the greater growth in imports of these goods is partly cushioned by the larger increase (by 12 percent) in export prices than in import prices (6 percent) between 1954 and the third quarter of 1961.

Index figures carried up to the September quarter of this year enable a comparison to be made between the changed volume of exports by 23 different manufacturing industries. The highest volume figure on this comparison is 205 for the ships and boats group (a very volatile item whose 1960 level was only 93). At the other extreme come railway vehicles with a fall to only 19 (54 in 1960). The largest export increase by a major group is from the chemical industry with a recent volume level of 193 (181 last year). Two smaller groups come next—non-ferrous metal goods at 158 (159) and scientific instruments and watches 142 (128). Non-electric machinery ranks just lower at 135 (129), followed by iron and steel 132 (144) and electrical machinery 121 (126). Road vehicles rate 119 (147) but this level should now be improving. Industries just about maintaining their export volume include clothing 102 (101) and non-metallic mineral goods 100 (106).

Effect of Higher Taxes on Industry

The most likely effect of higher company taxation is to curb new investment or raise prices.

This is one of the main conclusions drawn by Aims of Industry from a survey of taxation which the organisation has conducted among member companies. Another conclusion was that high profits tax has already caused difficulties for exporters, and a payroll tax would not reduce overemployment of scarce labour. The survey was prompted by the rise in profits tax from 12½ percent to 15 percent last April. Profits retained for investment in modernisation and expansion were said by 70 percent of firms in the survey to be the first "casualties" of the increased tax. Only 10 percent said its first effect would be to cause them to reduce dividends. If company taxation were lowered, 94 percent of the firms would give first priority to increasing investment. Only 1 percent said the result would be increased dividends. Most companies said a payroll tax would cut profits or raise prices. Fewer than 13 percent said it would compel them to reduce their labour force.

Of exporting companies, 62 percent thought that the profits tax increase would not impair their export efforts. But among the 35 percent who said it would, were many smaller firms. The main results are based on replies of 280 companies with turnovers totalling £1,570 million. The figures on exporters are drawn from a slightly different assortment of companies, including 224 exporting firms with a combined total turnover of £1,632 million.

The City and Europe

If Britain joins the European Common Market, the City of London may become the centre of the short-term money market for the whole of western Europe. This conclusion is reached by a Belgian writer, M. Raymond Larrier, in the current issue of *Moorgate and Wall Street*—a review published by Philip Hill in London and Harriman Ripley in New York. M. Larrier suggests that at first nothing more startling will happen than increased portfolio investment and more direct investment by companies. In the longer run, the greater technical ability and highly specialised equipment of London and the large volume of its financial transactions must give it an important place.

Traditionally Continental industry has relied almost entirely on the banks for its outside finance. "Most industrial companies would like to free themselves from this over-dependence on the banks, and their tremendous capital requirements render this increasingly important" writes M. Larrier. But the high interest rates current in London will prevent any considerable borrowing or the issuing of securities in London for a long time. Indeed, some British companies are more likely to go to the Continent for capital. But if monetary co-ordination improved and a wider money market centred on London developed, Europeans might be encouraged to use the London market for borrowing on long-term as well. Before this can happen, the restrictions on capital movements will have to go. Meanwhile, the City might apply its technique to improve Continental methods of raising long-term capital from private investors.

Anglo-Japanese Trade

The U.K. Board of Trade has announced in London that, pending completion of the trade negotiations now taking place between Britain and Japan, the two Governments have agreed to issue import licences on an interim basis for all goods for which there were quotas under the trade arrangements which expired on 30th September. Quotas on both sides will generally be half of those provided for under the 1960-61 trade arrangements, but there will be adjustments in a few cases to cater for the seasonal trade. If quotas are increased as a result of the current negotiations, additional licences will be issued later. Meanwhile, the Japanese Government might ask the International Monetary Fund and the Export-Import Bank of Washington for help to tide over the present balance-of-payments difficulties, a spokesman for the Japanese Ministry of Finance said in Tokyo. The Government is also seeking a new loan of \$200 million from three commercial banks in the United States, he said.

Credits from I.D.A.

The International Development Association has extended three development credits to India amounting to \$22.5 million for projects to increase agricultural production. The I.D.A. is also giving a development credit equivalent to \$2 million to Pakistan to help finance the first phase of a programme to improve the inland water transport system of East Pakistan.

TELL US YOUR JOB—

AND WE'LL GIVE YOU THE TOOLS

The size, shape or complexity of a project doesn't overawe us. We have the tools to help build it with a minimum of time, labour and cost. For nearly 70 years, BATLIBOI have supplied Industry and Trade in India with goods ranging from complete power plants to hacksaw blades. We represent internationally known manufacturers from the United

Kingdom, U.S.A. Czechoslovakia, France, Germany, Japan and many other countries. BATLIBOI also represent some of India's leading manufacturers of Machine Tools, Diesel Engines and various other types of machinery. Industry and Trade are vitally connected with the economic growth of any country, and BATLIBOI are vitally connected with Industry and Trade in India.

BRITISH TEXTILE REVIEW

RISE IN IMPORTS DISCUSSED
AT HARROGATE MEETING

LEADERS of the U.K. cotton industry recently assembled in Harrogate for their annual conference in very sombre circumstances. The plan to re-equip the industry was not progressing well, and it seemed inevitable that much more plant than was envisaged in the redundancy scheme would have to be eliminated. Imports have gained a larger share of the U.K. market than even the pessimist expected, and the loss of a large part of the prewar export trade is obviously permanent. The scheme which was intended to adjust the productive capacity to demand has so distorted the market that it seems to have aggravated the problem it was intended to solve. The cotton textile trade seems peculiarly prone to errors of judgment. The mistiming of the redundancy scheme was, therefore, peculiarly unfortunate. The withdrawal of machinery coincided with an upsurge of demand. Buyers could not satisfy their requirements at home, so they turned to outside sources; not only to Commonwealth countries, whose exports were so controversial, but also to almost every foreign country where cotton cloth was made. In a plea last month for adequate protection, Sir Alfred Roberts, general secretary of the Cardroom Workers Amalgamation, listed as many as 38 countries as suppliers to the U.K. market—some of which, Sir Alfred claimed, used unfair methods of competition.

The result of the expansion of imports—while the industry at home produced as much as possible—was a huge stock of cloth in warehouses; and the inevitable result of the accumulation of stock was curtailment of buying. In recent months, some mills have been closed; many others are working short-time. Yet there are still others whose output is restricted not by deficiency of orders but by the shortage of labour. In the period of strong demand, many countries, which had never before supplied appreciable quantities of cloth to the U.K., gained a firm foothold in this market, which has become, the protectionists assert, the dumping ground for any country with surplus cloth. Some of the industry's leaders believe that an overall import quota, covering both Commonwealth and foreign goods, is the only effective means of dealing with the problem. Others believe that equilibrium would be restored if Britain joined the European Common Market; the assumption being that other members of the Market would then absorb much of the supplies from the Commonwealth. This is still, of course, the strongest disturbing factor for the U.K. market.

Technique and Equipment

The director of the Cotton, Silk and Man-made Fibres Research Association, Dr. D. W. Hill, said last month that research at the Shirley Institute, Manchester, had given Britain a lead over her competitors in textile techniques, and that if the textile industry took advantage of all the techniques that the Institute had made available, it would be at least as good as any in the world. But on the industry's re-equipment, Lord Rochdale, chairman of the U.K. Cotton Board, spoke sombrely at the Harrogate conference. Applications to the Board up to mid-October amounted to (approximate figures) £17 million for spinning, £750,000 for doubling, £14,750,000 for weaving, £250,000 for finishing: a total of £32,750,000. "These figures scarcely represent more than one would expect from an already up-to-date industry for its normal development", commented the chairman. The industry's tardy response to the re-equipment scheme does not distress the textile machinery industry as much as one might suppose, for exports of textile machinery are expanding. The value of these exports was £46,750,000 in the first three-quarters of this year, compared with £37,750,000 in the same period of last year, and some big orders booked recently suggest that the figures will continue to rise. One particularly significant idea implying a substantial export of machinery is that U.K. cotton textile firms, reluctantly convinced that the industry here will gradually succumb to high costs, will set up mills in the East, where they can gain the benefits of their advanced techniques with the aid of abundant low-cost labour.

At home, however, the industry is adapting itself by changing the emphasis of its production. At the International Knitting Machinery Exhibition in Manchester last month (where more than half the total of some 300 exhibitors were from abroad, particularly from West Germany and Italy), some of the biggest orders came from firms traditionally engaged in spinning, weaving, dyeing, or finishing—or a combination of these activities. Some of these firms, apparently, are devoting to knitting machinery all the capital they have for equipment.

WHOLESALE PRICE INDEX
FALLS

THE official wholesale price index (base: year ended March 1953=100) declined by 0.5 percent to 124.2 during the week ended 11th November, 1961, compared with 124.8 (revised) for the previous week. The index was lower by 0.3 percent and 1.7 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago.

SPECIAL MEASURES TAKEN TO SUPPORT RAW
JUTE PRICESEAST INDIA EXCHANGE FIXES FLOOR RATES: I.J.M.A.
TO INTRODUCE MINIMUM PURCHASE QUOTAS

RECENTLY, there has come to notice a letter which was written in 1931 when the annual report of the jute experimental section of the Dacca farm was issued. It advocated breeding plants which would produce more fibre. It had been reported that the experimental farm had during that year produced a plant the yield of which was 74 percent of fibre, against an average of about 5 percent. There is nothing on record to show whether any efforts were made to develop this strain, but subsequent enquiries indicated that although the yield was high, the quality was poor. It is understood that after the establishment of the Indian Central Jute Committee, a similar plant was grown in India. But in spite of pressure to develop it, little more was heard on the subject, possibly for the same reason. Admittedly, the development of strains yielding more green fibre a plant is a long-term policy, and one which has frequently been advocated in these columns. But if it had been persevered with in 1931, what might the position be now? As far as the yield a plant is concerned, no great progress seems to have been made since 1931; the average yield in India is still only about 5 percent, although in Pakistan it is a little higher. One wonders what the position will be 30 years hence.

Quality of New Crop

Most reports so far this season about the new crop indicate that the quality of the jute is generally poor, and that good quality fibre is available only at a premium. This situation is not new. Experience shows that the season following a short crop usually produces a bumper crop, and when the yield is good, quality suffers. Much has been written about expanding jute cultivation in India and the urgent need for increasing yields. This part of the problem appears to have been effectively settled, at least for the current season, but the quality remains to be improved. It must be admitted that much of the jute grown in some parts of India, particularly Bihar, is of inferior quality. The exception is Daissee, but it too has its limitations, mainly because of colour which makes most of it unsuitable for use in the manufacture of good hessians. As for the jungli districts, it is generally assumed that the inferior quality of the jute grown there is due to soil conditions. But a lot of good jute is grown in Bihar, and frequently one finds that parcels coming from exactly the same areas, grown under exactly the same conditions, differ widely in quality.

It seems that one of the main problems to be tackled is the use of better seeds. Growers are averse to buying seeds and mostly use those which they themselves have saved. Unfortunately, the usual practice seems to be to leave the worst plants to go to seed instead of the best. The result is a steady degeneration. In view of the urgency of increasing the crop, and at the same time producing better fibre, it is essential that seeds of the best strains should be supplied, free of cost if necessary. The Government has set up seed farms and multiplication stations. But there is an urgent need to grow seeds on a scale which would provide sufficient supplies and have a widespread influence on the quantity and quality of the crop within the next year or two.

Fibre Prices Fall

Over the past few weeks, the fall in the price of raw jute has been occupying the attention of the Government and the industry. If the price falls to such an extent as to become unremunerative to the grower, then the next season might yield another short crop. In spite of constant pleas to fix a floor price for raw jute, the Government was reluctant to do so while prices remained high. But when rates fell to Rs. 30 and there was reason to believe that a further fall might be imminent (taking into consideration the large unsold stocks in sellers' hands), official circles acted promptly. The East India Jute and Hessian Exchange issued an order, effective from 24th November, fixing minimum prices on the basis of Assam Bottoms at Rs. 30 a maund. The step was recommended by the Forward Markets Commission to prevent the growth of speculative pressure to depress fibre prices. Immediately after the announcement, the raw jute market firmed up. Although sellers were previously prepared to sell at a discount, all offers were now on the basis of Rs. 30 for Assam Bottoms. Business was conducted at this level, but the order referred only to T.S.D. contracts and hedge contracts. It is understood that jute purchases and agency business continued at lower rates.

Purchase Quotas

To supplement the effort to stop raw jute prices from falling, the Indian Jute Mills Association decided to reconstitute the jute quota sub-committee for the purpose of laying down minimum quotas of jute to be purchased by member-mills within a prescribed period. Although the minimum quota scheme was addressed only to its own members, the I.J.M.A. expressed the hope that

non-members would co-operate to support the market. The introduction of such a scheme carries with it many problems, a major one being finance. It is understood that this has been taken up at a high level, and it is hoped that banks may grant more liberal credit facilities.

U.S. Burlap Consumption

During October 1961, U.S. burlap consumption amounted to 65 million yards. Although this was one million yards more than in the previous month, it constituted a new low for the month of October, just as the September consumption was a new low for that month. Total consumption during the period from January to October 1961 was 639 million yards, giving a monthly average of 63.9 million yards. The total was 74 million yards less than in the corresponding period of 1960. U.S. burlap stocks in October increased by 2 million yards to 205 million yards—89 million yards being spot stocks and 116 million yards afloat. Here, again, new low levels were recorded both for the October figure and for the spot stocks. The very low consumption figure is causing concern to the industry, as it indicates the market lost to substitutes.

THE JUTE MARKETS

Manufactured Goods: Heavy selling pressure from speculative interests, combined with weaker rates for raw jute, caused goods prices to fall. At the opening of the market last Thursday, ready B Twills stood at Rs. 133.25 and 40in. 10oz. hessians at Rs. 49.85. All the business was confined to local bazaar activity and no fresh foreign business was reported. During the day, prices fell rapidly, and B Twills dropped by Rs. 3. The fixing of a floor

price for raw jute lent some stability to the goods market, and rates showed a small recovery before the week-end. Reports of small overseas business, particularly in hessians, encouraged the rise, so on Monday, ready B Twills were back at Rs. 132.50 and hessians at Rs. 50. There was no interest in forward business, and transactions were confined to the near positions. Towards the close, prices hardened due to the nearness of due date. A squeeze developed in B Twills for ready shipment and due date goods commanded substantial premiums. Speculative activity was renewed and nervous covering forced prices up still further.

Opening quotations on Wednesday morning were as follows:

	November	December	Jan.-March
40in. 7oz.	39.25	37.25	35.00
40in. 8oz.	42.50	40.25	37.50
40in. 10oz.	51.50	48.75	46.00
B Twills	126.50	129.00	123.75
Heavy Cees (Plain)	134.50	129.00	123.75
A Twills	163.50	159.00	151.00
Liverpools	155.00	148.00	141.00
Corn sacks	135.25	131.00	126.75

Raw Jute: The market was weak at the opening. Sellers were keen for business and scattered sales were made, mainly for near deliveries. Heavy arrivals upcountry caused anxiety among the sellers, as their godowns were full and they had few sales on their books. Consequently, they began to offer at lower prices. This brought swift action from the Forward Markets Commission, which feared that prices would fall to unremunerative levels if the market was flooded with jute. Through the East India Jute and Hessian Exchange, it imposed a minimum price for transactions in raw jute, based on Rs. 30 a maund for Assam Bottoms. Shortly afterwards, the I.J.M.A. announced that it would issue minimum quotas to their members for the purchase of jute. It was obvious that some time would elapse before plans could be finalised, so most mills withdrew from the market to await their quotas. Raw jute prices responded with Assam rates moving up to Rs. 30. Small business was done at this level, but in general mills remained out of the market. Towards the close, steadier conditions prevailed in sympathy with the goods market, which developed an upward tendency with the approach of due date. There was little change in

THE FOREIGN JUTE MARKETS

FIBRE FALLS ON HIGHER CROP PROSPECTS

(FROM OUR DUNDEE CORRESPONDENT)

ALL sections of the jute industry in Dundee are complaining of the lack of business. With fibre prices continuing to show a certain amount of weakness each day, buyers feel sure that the longer they hold off, the cheaper they will be able to buy. Raw jute sellers are not, however, happy about the steadily declining tendency, and they are trying to resist the fall, so the drop to a lower level is very slow indeed.

According to the latest estimate of this season's jute crop in Pakistan, the output is expected to be about 7 million bales. The local mills will require about 2 million bales and another 4 million bales will be exported to various consuming countries. Stocks in the hands of consumers were brought down to a low level at the end of last season. The production this season could easily be absorbed by the trade if prices were reasonable enough to induce spinners to purchase freely to bring stocks back to a normal level. It is argued by some people that if prices were to fall to any great extent, it might prejudice growers against sowing enough during the next season to meet requirements. This might be repeated in the following

season unless prices were pushed up due to another scarcity.

Values have declined by about £3 to £4 a ton since last week. Offers are made of Mill Firsts around £151 a ton, Mill Lightnings £126, Mill Hearts £101 and Grade Hearts £83, while Grade Tossa-2/3 is being fairly well maintained at £139, fairs at £124 and Continental Tossa-2/3 at £107 for December shipment, c.i.f. U.K.-Continent. Spinners in Dundee have bought extremely little so far.

The demand for jute yarns is now very meagre. Buyers are awaiting deliveries of the new grade of warp named C.H.W., which is being sold at the same rate as C.H.W. weft, namely, 18.07d a lb. Business is still being done in the J.C.H. warp at 19.21d a lb for 8 lbs. Cloth and bags are dull, and little fresh business has taken place. Indeed, the whole of the jute market is idle, with no sign of any improvement in the near future. The price ruling now for 40in. 10oz. hessians is 15.25d and for 8oz. 12.90d a yard.

THE PAKISTANI JUTE MARKETS

FIBRE CONTINUES TO FALL

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE downward trend reported during the previous week has continued, over the past week, buying interest has declined and the arrivals of raw jute in the baling centres are, if anything, even smaller. The market is weak and prices remain low. It has been hoped by some that the poor prospect of the rice crop might force sellers into releasing more jute for sale. This has not been the case, and the strong financial position of the growers is proved by the fact that they continue to resist falling prices. Small arrivals in the previous week produced high prices locally, which were well above overseas parities. At present, so many balers have withdrawn that the local fibre prices are almost on a parity with overseas prices.

In the pucca bale markets, there has been a certain amount of activity but at discount prices. Two of the large balers have been selling freely and the mills have also been buying. The sales have been largely of Export Hearts which give every indication of being in good demand. The

standard of Export Hearts is high, and there is every likelihood that more interest will be shown in this mark when fair quantities have been seen on the Continent. Cuttings maintained their strength at about £53 until the end of the week, when one of the larger balers came out to sell at a cheap price in the region of about £50 a ton, which is even lower than overseas parity. The bearish trend of raw jute in India makes it unlikely that more cuttings will be bought by her.

Overseas buyers have completely withdrawn and the London market is dull and lifeless. Cheap sellers have been reported of Export Lightnings at £99 with no buyers, and Output Tossa 3 was reported done at as low as £104. For Export Firsts, of which the standard is low, buyers are hard to find. Dundee Tossa 4s are a better mark than last year, and at £12 below Export Firsts, they are a bargain. Furthermore, there is a shortage of Dundee Tossa-4 which might become more acute. Output Tossas at £104 are certainly cheap, but it is not likely that there will be a shortage of this mark just yet.

With the approach of the end of the month, one would expect a certain amount of steadiness through short-covering. This is not likely to happen this month except in Tossa, since most balers are long. The January position, however, is as yet not very well covered, so another rise may be expected in the market when buyers come in for this position. Buyers are eager to purchase only at the bottom of the market, although at current values there is a considerable profit in simultaneous business for practically all European mills.

E.P.C. registrations during the first half of November were comparatively high at 315,493 bales, bringing the total registrations to 1,977,039 bales, some 42,000 bales higher than the last season. Shipments up to the end of October are some 64,000 bales higher than last year in spite of the fact that India has bought about 80,000 bales less than last year. The biggest buyer of this fortnight was India with 36,105 bales, which probably accounts for the rise in cuttings earlier in the month. The U.K. and South Africa both bought over 30,000 bales. Belgium bought 20,000 bales, France 13,000 bales, the U.S.A. 12,000 bales and Germany 11,000 bales. Japan bought 9,500 bales and Spain 8,126 bales.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in October, compared with that of the same month a year ago, reflected little change in bag cut-up, but piecegoods deliveries were lower. Last month's bag cut-up was 49.4 million yards and piecegoods deliveries were 15.7 million yards, compared with 49.9 million yards and 17.3 million yards, respectively, in October 1960. The total estimated consumption for the first ten months of the current year is 74 million yards lower than that for the same period of last year—a decline of 10½ percent. U.S. burlap stocks at the end of last month rose by 3 million yards. At 206 million yards, 90 million yards were spots and 116 million yards were afloats. Appearing below are the two tables which include the October figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

F.A.O. MEETING ON COCONUTS OPENS IN KERALA

MEASURES TO CHECK DISEASES DISCUSSED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE F.A.O. conference on coconuts, which is now being held in Trivandrum, is giving top priority consideration to the diseases of undetermined causes like the root (wilt) diseases of Kerala, the Candang-Candang of Philippines, Kaincope of west Africa and the lethal yellowing of West Indies. These diseases have become a serious menace to coconut cultivation in these major producing areas. Unfortunately, the experts have not been able to suggest any effective remedies for these mysterious diseases. The technical working party set up by the F.A.O. will consider these problems. It will also discuss such problems as coconut breeding and the supply of seeds, coconut pests and diseases, management of coconut groves, nutrition and inter-cropping, processing and storage. The Kerala Governor, Mr. V. V. Giri, inaugurated on 27th November the session of the technical working party on coconut production, protection and processing. Delegations from New Zealand, the U.K., the U.S.A., Ceylon, Malaya, Ecuador, Vietnam, Peru, Pakistan, Sarawak, Fiji, Western Pacific Islands and India are taking part in the session.

World Supply and Demand

The F.A.O. Group on Coconut and Coconut Products will be inaugurated on 4th December by Mr. V. Shankar, Special Secretary to the Central Ministry of Food and Agriculture. This will be the fourth session of the group since its inception in 1957. At its forthcoming session, the group will review the world supply and demand situation for coconuts and coconut products and consider such subjects as the forecast of production and exports from the rainfall data, copra and coconut oil marketing in producing countries, trends in import markets, implications of the European Common Market, copra quality and contract rules and marketing costs. Delegations from countries like the Philippines, Ceylon, Malaya, Ecuador, Viet-Nam, Pakistan, the U.K., the U.S.A. and India will be attending the session. The conference will end on 9th December. The initiative for holding these international conferences in India was taken by the Indian Central Coconut Committee which felt that a study of the root (wilt) disease of Kerala by international experts may provide some solution to the problem. The delegates to the conference will be visiting the Central Coconut Research Station in Kayamkulam on 3rd December to study its working.

Official Estimates

According to official estimates, as many as 7 million coconut trees of Kerala are affected by the wilt disease. Cultivation has been affected in an area over 100,000 acres. The growth of the disease is rather a slow process. Its outward sign is blackening, shrivelling and the drying up of the leaves. This brings about a significant reduction of the yield. On account of this disease, the yield from the coconut gardens of south and central Kerala has gone down substantially. The yield an acre, which was 3,000 to 5,000 nuts some ten to 15 years ago, has gone down to 1,000 nuts. The loss in terms of money would come to Rs. 2 crores a year. Experiments carried out in the Coconut Committee's research station have shown that the spraying of the coconut crown with judicious combination of fungicides and insecticides thrice a year for a period of five years will help control the root and leaf diseases which are presently threatening the very existence of coconut trees in Kerala.

Coconut Cultivation

Kerala accounts for 70 percent of the coconut cultivation in India. India has an acreage of 1.58 million under coconut cultivation. The annual output of coconuts in India is placed at 4,131 million nuts. This is not sufficient to meet her requirements. The country has been importing coconut oil and copra worth about Rs. 15 crores a year. Unless the root and leaf diseases in Kerala are checked, India's efforts to reach self-sufficiency would be frustrated. Realising the magnitude of the problem, a comprehensive spraying scheme was started in Kerala under the joint auspices of the Kerala Government and the Indian Central Coconut Committee. Over a thousand sprayers were employed for mass spraying of the trees and the cost was shared by the Government and growers on a 50:50 basis. According to official estimates, at least 5,000 sprayers have to be put into regular operation to cover the entire affected area and the cost would be Rs. 50 lakhs a year. Spraying has to be done at regular intervals for five years, so it means that the Government would have to spend Rs. 250 crores on the spraying scheme. But unfortunately, even spraying is not an absolute remedy for the disease.

Regular Manuring

It is said that to get better results, spraying has to be supplemented with regular and liberal manuring of the trees. Besides, an adequate supply of manure is essential for improving the yield. Application of 2 to 3 lbs. of ammonium sulphate

per tree a year would be a suitable dosage for an adult tree, according to the Indian Central Coconut Committee. Both the difficulty in getting the manures in adequate quantities and the paucity of funds at the disposal of growers are standing in the way of proper manuring. The Kerala Government has recently announced a scheme for giving financial assistance to growers for manuring their trees. It is also trying to ensure adequate supply of manures.

Rubber Price Falls

The sharp fall in the world price and heavy imports of raw rubber have had their repercussions on the Indian rubber market. Raw rubber which was selling at a premium some time ago, has not enough buyers now at the statutory prices. Against the controlled minimum of Rs. 148.50 a 100 lbs, the price is now Rs. 145 in the unofficial market in Kottayam. This is reported to be the lowest price in recent years, so the rubber growers are now getting anxious over this new turn of the market. It is stated that heavy imports are largely responsible for this development and once the import licences are exhausted, the prices are likely to go back to their normal level. Neither has the indigenous output increased substantially nor has the demand for rubber slackened. The Rubber Board is watching this development, and it might enter the market if the prices continue to fall and growers lose the benefit of an insulated price system.

Cashew Kernel Exports Rise

Exports of cashew kernel increased during the first nine months of the current year. During this period, India exported about 1,420,000 casks of cashew kernels (one case contains 50 lbs), representing a rise of about 75,000 cases over exports of the previous corresponding period. According to the chairman of the Cashew Export Promotion Council, Mr. A. V. Thomas, Indian cashew kernel exports during 1961 would be better than those of the previous year. But in spite of an increase in shipments, the export performance is not commensurate with the rise in raw nut supplies. The supply from east Africa this year was unusually large because of a bumper crop there. While the United States maintained her imports from India almost at the previous year's level, there was an appreciable increase in the exports to other traditional markets like the U.K., Australia and Canada. Ever since the appearance of Russian dealers in the cashew kernel market, there has been a continuous increase in her offtake except in 1959. But during January-September 1961, Russian purchases were comparatively low. Poland which is a new-comer took 31,000 cases during the period. East Germany took less while West Germany maintained her offtake. Exports to Japan and France showed some improvement.

Cashew shell oil exports showed an upward trend during the period. India exported about 4,800 tons of oil worth Rs. 46 lakhs during January-September 1961, against 4,040 tons worth Rs. 35 lakhs in the corresponding period of 1960. The U.K. was the principal destination of exports, followed by the U.S.A., Japan and West Germany. The 1961 export performance of cashew shell oil would be better than that of 1960, according to Mr. Thomas.

REDUCING TAXES TO RAISE TEA EXPORTS

INCREASE IN WORLD OUTPUT FORECAST

(BY A SPECIAL CORRESPONDENT)

MARKET circles have welcomed Press reports that the Government of India contemplates encouraging exports by giving tax concessions. This should help tea producers. Levies on tea during July 1961 are estimated at Rs. 2.18 crores and are more than double the corresponding figure last year. Export duties realised about Rs. 10 lakhs less for the April-July period while the tea cess collection was up by about Rs. 2 lakhs. The Indian tea trade earns about Rs. 140 crores a year in foreign exchange. It will probably exceed this figure this year because India is already producing too much tea. Coffee is also in excess, both internally and in the world market. On the other hand, rubber is scarce. But recently, some official encouragement for replanting has been reported, although it is not clear why replanting should be given preference to more planting. Since there appears likely to be an acute shortage of natural rubber in India for many years to come, an increase in the price would seem to be the most satisfactory solution, for it would help raise the output of raw rubber and thereby save foreign exchange. Reports are current that the Government is considering enhanced subsidies over a long period of time to established estates.

New Colombo Tea House in Brighton

Coming back to tea, a Colombo Tea House was opened on 17th October in Brighton, and more will follow in other towns, if successful. The Ceylon Tea House established in Cairo has helped promote exports to Egypt. India's exports to Italy are reported to be down by 3 percent while Colombo shipments are up by about 5 percent.

World Output

Tea statistics for 1961 are as follows: Brokers

producing countries and consuming markets built up over the past 60 or 70 years. In past years, the crop figures from British East Africa, together with estimates from other African areas, were included. Comments were also made on supplies from China and Russia where large crops are now being harvested. These statistics have given the world output to-date around 1,900 million or 2,000 million lbs with world absorption by non-producing countries at about 1,675 million lbs. As the producing countries are expected to take 300 million or 400 million lbs, supply and demand looked fairly well balanced until recently but the U.S. Foreign Agricultural Service estimates that production in 1961 will be around 2,125 million lbs due to greater output from South America since a significant increase is expected from Argentina, Brazil, and Peru.

Tea Auction Centre in Pandu

The establishment of a new tea auction centre in Pandu is still being discussed. The Assam Government has appointed a high-powered commission to investigate the economy of Cachar tea gardens and examine the proposal for an alternative tea auction centre in Pandu. The appointment of the commission resulted from the West Bengal Government's refusal to abolish the octroi on Assam tea sent to Calcutta for auction and export. The Assam Government asked for the exemption of Cachar tea from the octroi in view of the distressing economy of Cachar gardens. Cachar gets hit all round as the area cannot make quality tea nor can it, generally speaking, produce in quantity, so costs remain comparatively high. Besides, taxation has imposed a very heavy burden on some of the old estates.

Third Plan Target

Speaking at the annual general meeting of the Assam Branch of the Indian Tea Association in Tezpur recently, Mr. J. P. Hannay said that the tea production target set in the third plan could not be reached if any of the four factors, namely, money, materials, management and manpower, proved inadequate. The Assam Branch, he explained, represented nearly 250,000 acres under tea—about one-third of the total area under tea in the whole of India. The chairman pointed out that the labour position remains difficult since a three or four-hour working day, combined with much absenteeism, is not good for plantations. In spite of labour agreements, strikes have continued and the unions' control over the members is not effective. Mr. Hannay said that the industry's need of adequate reserves for maintenance, rehabilitation, extension and re-planting should be borne in mind. The increase in excise duty varying from 5.5nP in Cachar to 8nP a kilogram in upper Assam is a direct and heavy charge on the producer and has increased the cost of production. Moreover, *panchayats* with ambitious tax-collecting targets have posed some problems. Members in some areas have also been called upon by town committees to pay new taxes on their factories and buildings.

Allocation of Fertilisers

The industry was gratified to know that a more generous allocation of fertilisers was expected. If adequate quantities of sulphate of ammonia could not be applied in time, mere verbal exhortations by those in high places would not induce tea bushes to grow. Tea garden managers should be given more time to move about in fields and factories. They should be relieved of some of the burdensome paper chains that bind them to their office desks. In the so-called good old days, a planter's time was almost exclusively devoted to factory and outdoor work, for it was said that "good tea" is made on the *telas* (plucking areas).

CALCUTTA TEA AUCTIONS IN OCTOBER

DEMAND IMPROVES FOR QUALITY GRADES

ONLY three export sales were held in October on account of the Puja holidays, and total export offerings amounted to 214,053 packages. There was a strong demand during the month—particularly for the better and medium orthodox broken grades—although these were often irregular, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. Plain brokers and fannings, which improved by some 15nP in the first sale, declined by 10nP to 15nP in each of the subsequent auctions. C.T.C.s showed the greatest irregularity in price and tended easier, with buyers discriminating against any teas with fibre. In the face of local demand, poorer and medium broken were dearer than fannings, while the best category fannings generally fetched a premium. The large weight of off-grades was absorbed at lower rates. Legg-cut teas met with a selective enquiry and were easier. Darjeelings were well supported with prices irregular and tending dearer for top grades. Broken and whole teas with poor style and fannings were easier. The demand for whole leaf improved, mainly for the cheaper varieties, which were firm to dearer. Tips met with a restricted enquiry and prices were irregular.

Standard of tea quality is being maintained rather than lowered, say tea brokers.

ASHOK LEYLAND COMETS

hold aloft the life-line for man and industry

INDIAN OXYGEN LIMITED
HEAD OFFICE
46/1, DIAMOND HARBOUR ROAD,
CALCUTTA-22.

Dear Sirs,

We operate 4 Nos. of Leyland Comet trucks and have ordered two more chassis. The Comets are used for the carriage of liquid oxygen from the producing factories for local distribution as well as for supplying to depots remote from the factory. As an operator of a large number of trucks, our main considerations are reliability of transport consistent with economy of operation and Leyland Comets have met these requirements to our satisfaction.

Yours faithfully,
T. P. L. S. N. S. N.
Production Manager

9/12/60

ASHOK LEYLAND LIMITED
Bengaluru Madras

ASHOK LEYLAND COMET
— precision-built to give lasting service.

lower grades were generally loosely twisted. Quality was mainly of a rain description. On the whole, leaf appearance of orthodox teas from Assam was about average for the time of year. Some stalk and fibre were noticeable in the lower grades. C.T.C.s were generally rather brownish, and more fibre was present than last month. There was a high proportion of off-grades and dusts. Liquors were of a rains description, but could be described as about average. The leaf appearance of orthodox teas from Doars and Terai was about average for the time of year, but the lower grades contained stalk and fibre. Legg-cut and C.T.C. manufacture continued to be rather brown with crushed stalk and fibre present. Liquors were of rains description with only a few bright invoices being produced. The standard of leaf appearance of teas from Cachar and Tripura was about average, and the lower grades contained stalk and fibre. Liquors were generally sweet in character.

The Internal Market

The 784 chests of leaf teas on offer in the three internal sales were absorbed at irregular rates. The 96 packages of green teas offered in the second auction sold well. A total of 72,872 packages of dusts was offered in the three sales. There was a good general demand in the first auction, but a weakening was seen in the second with demand strengthening at the close. C.T.C. varieties met with keen competition in the opening sale, although in the subsequent auction they declined in

value as much as 40nP and sometimes more. In the last auction, however, C.T.C.s met with an improved market and the better types were keenly sought after and tended dearer. The fibrous teas in this category were, however, considerably weaker and difficult to sell. Orthodox dusts opened strongly, particularly the small powdery types, which sold at a premium, but in the second auction they followed a trend similar to the C.T.C.s and registered drops of up to 30nP. They closed with the demand being fairly good, although prices were about 10nP lower. Legg-cut types were well supported throughout the month, although they declined in value in the second auction. At the close of the month, there was a good enquiry for this variety with the bright lines selling well.

(Inclusive of zonal excise duty)

Export sales up to and including Sale No. 19 totalled 890,493 chests at an average price of Rs. 5.26, compared with 777,015 chests at an average price of Rs. 5.85 for the same period of the previous season. Internal sales at 2,760 chests of leaf and 325,228 chests of dusts (average prices Rs. 4.42 and Rs. 5) go against 4,660 chests and 263,687 chests, respectively (against Rs. 4.38 and Rs. 5.31) of the corresponding period of the previous season.

Arrivals (in chests) in Calcutta warehouses during the period 1st October to 31st October, 1961, with the corresponding figures of the previous year in parentheses were: by steamer 432,789 (438,018), by rail 191,207 (167,602) and by air 16,439 (17,518), making a total of 640,435 (623,138) chests. From the beginning of the season 1st April, 1961 to 31st October, 1961, arrivals have been: by steamer 1,815,727 (1,559,728), by rail 831,498 (689,070), and by air 89,463 (63,827), making a total of 2,736,688 (2,332,625) chests.

COCHIN TEA SALES

At Sale No. 48, 586,000 kilograms of tea were on offer. There was less demand. Best quality high-grown teas were irregular while good mediums were 20nP to 30nP easier. Plain and low medium fannings were 30nP to 40nP down. Similar B.O.P.s were neglected and withdrawals were heavy. Unorthodox manufactures remained steady.

Books

PROBLEMS AND PROSPECTS OF CO-OPERATIVE FARMS

The Problem of Co-operative Farming in India. By A. M. Khuroo and A. N. Agarwal. (Published by Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 6.50, pages 140.)

The jacket blurb informs the readers that the learned authors have tried to allay the fears of small peasants in discussing the more positive aspects of co-operative farming. Encouraged by this promise, the present reviewer made an effort to read the book carefully, but he was disappointed to find that it was in no way different from others. The element of voluntary association is stressed almost as a slogan, but there is a lengthy dissertation on the need for the "subordination of the individual urge to the community urge". The authors say that productivity can be increased by the provision of the "where-withal of cultivation or by capital formation in agriculture." If so, how is it that productivity has not increased in community development and multi-purpose project areas?

The authors say that many of the problems of backward agriculture cannot be effectively tackled by peasant farming as the small agriculturists do not have adequate resources in capital and organisation. But this reviewer knows that the small sugarcane farmers of south Arcot and Trichy districts thrive well all the same. A large British-managed sugar factory provides the "where-withal in cultivation and organisation" to the mutual benefit of the factory and the peasants. The authors, instead of getting inspiration from Wladyslaw Gomułka, might fix up an appointment with Mr. Noel Tod of Madras concerning the efficient extension work done by his Company with the help of small farmers.

It is said that "on grounds of employment and social desirability, the mode of capitalist or estate farming fails to commend itself." It is difficult to subscribe to that conclusion. The tea output an acre in Madras plantations (which come under estate farming) has increased substantially. Is such a thing socially undesirable? The Government is not opposed to the idea of State capitalism, for it has organised many capitalist ventures in the industrial field. If it had purchased a 5,000-acre farm in the Tanjore district and asked the Madras Agricultural Department to run it, it would have been a success, of course. It is necessary to examine these conclusions because the authors say that they keep the interests of the small farmers in their minds. But when one reads the sweeping generalisations and the cut-and-dried prescriptions in the book, one is forced to admit that there is a fall in the academic standard, not only among the students but also among the professors.

CO-OPERATIVE AUDIT

The Principles and Practice of Co-operative Audit. By O. R. Krishnaswami. (Published by Maraimalai Publishing House, 35 Mannarsami Koil Street, Madras 13. Price Rs. 5.50, pages 282+XXXIV.)

Co-operative organisations have been assigned an important role for carrying out the objectives of the second and third five year plans. The State Governments are taking steps to revitalise the movement and to organise new types of societies for increasing production in both agricultural and industrial sectors. The proper maintenance of accounts in the societies is, however, essential if they are to achieve rapid progress in future. Large staff is employed in the societies, in the Government departments and in financing banks to attend to the work relating to the maintenance of accounts, supervision and the auditing of societies. Mr. Krishnaswami's book will prove to be a useful guide to this class of employees.

While following the general principles of audit, the author explains, in simple language, the manner in which the accounts should be maintained in various types of societies as well as how they have to be checked while auditing. The position relating to co-operative audit in Madras is based on the provisions in the Act, rules and by-laws in force in the State and the instructions issued by the Registrar of Co-operative Societies. But the publication will be useful as a guide to societies and staff in most other States as well, since the principles and practices followed by co-operative societies are broadly similar throughout India.

LABOUR ECONOMICS

Labour Economics. Edited by Kasturchand Lalwani. (Published by Artha Vanijya Gabesana Mandir, 12 Duff Street, Calcutta 6. Price Rs. 6.25, pages 240.)

This book may be described as one belonging to the popular category of "notes", containing synopses of various topics for the benefit of those who do not have the facility or time to consult more detailed books on the subject. There are ten chapters discussing the various aspects of labour economics.

Calcutta Markets

FAIR DEMAND AT TEA EXPORT SALE

QUALITY DUSTS RISE

AT Sale No. 25, held on 27th and 29th November, the 74,063 chests on offer at the Export sale met with a fair general demand at generally lower rates. Plain broken and fannings were 15nP to 30nP easier while B.O.P.s in the same category were mostly 30nP lower, and sometimes more. Good liquoring Assam B.O.P.s met with a keen enquiry and were at times dearer. Assam O.F.s., however, were irregular. The best C.T.C. teas were well supported, and some selected lines sold at dearer rates. The medium and poorer C.T.C.s along with secondary grades, however, were very irregular. Non-wither teas were readily taken up at sometimes dearer rates. Stylish whole leaf grades were rather difficult to sell and declined by 30nP, while the lower-priced kinds mostly sold 10nP to 15nP below last rates. There was a fair enquiry for Darjeelings, while tippy descriptions were easier.

Quotations

	1961	1960
	Rs. a kilo	Rs. a kilo
Clean Plain Pekoe	3.75 to 3.95	5.30 to 5.60

Medium Assam C.T.C. Fgs.	4.10 to 4.50	5.00 to 5.30
Best Assam C.T.C. B.P.	4.80 to 5.40	5.80 to 6.20
Best Assam C.T.C. Fgs.	4.90 to 5.50	6.10 to 6.60

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a much improved demand for the 25,169 packages of Dusts on offer. C.T.C.s came to a strong market and were taken up at rates which were 20nP to 30nP above last rates. The fibrous teas, although irregular, were in better demand than in recent weeks. Plain orthodox types declined in value by up to 10nP, but the better liquoring Dusts were generally firm to dearer. Non-wither Legg-cut teas were in good demand and were generally dearer except for the plainer types which were irregular.

Quotations

	1961	1960
	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	3.70 to 4.00	4.65 to 5.00
Medium Assam Dust	4.00 to 4.20	4.80 to 5.10
Legg-cut Dust	4.30 to 4.70	
Medium Assam C.T.C. Dust	5.70 to 6.00	5.60 to 5.75
Good Assam C.T.C. Dust	6.30 to 6.70	6.10 to 6.40

(Quotations are inclusive of excise duty.)

The 380 chests of Leaf teas on offer at the Internal Sale were absorbed at irregular rates.

LINSEED FIRM

The market was firm in the past week. Prices were well maintained. Small business was reported with neither buyers nor sellers showing much interest. Arrivals from upcountry fell. The oil market was steady. Prices showed little change. Small local business was done. The oilcake market was quiet. Local business was done at slightly lower rates due to some linseed cake arrivals from upcountry. The latest quotation is as follows ready-December Rs. 31.50 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 21st November and 27th November, 1961)

Cowhides Wet salted (Ord.) 3,700 pcs. on the basis of Rs. 9.50 to Rs. 15.12; wet salted (slaughtered) 14,500 pcs. on the basis of Rs. 12.50 to Rs. 16.50 and Rs. 13 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 76,300 pcs. on the basis of Rs. 325 to Rs. 350, Rs. 350 to Rs. 390 and Rs. 460 to Rs. 490; wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 a piece; Assam-Dinaipur-Murshidabad 32,600 pcs. on the basis of Rs. 280 to Rs. 300, Rs. 325 to Rs. 340 and Rs. 375; Purneah-Rs. 350; Patna-Pakur 5,900 pcs. on the basis of Rs. 200 to Rs. 225; Patna-Muzaffarpore 10,400 pcs. on the basis of Rs. 280 to Rs. 310, Rs. 330 to Rs. 340 and Rs. 360; Purneah-Kissanganj 2,500 pcs. on the basis of Rs. 500 to Rs. 515.

Bazaar Stocks

(27th November, 1961)

Cowhides: Wet salted 76,500 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 25,000 pcs.; Assam-Dinaipur 30,000 pcs.; Muzaffarpore-Patna-Pakur - Purneah - Kissanganj 144,000 pcs.

COMPANY AND PUBLIC NOTICES

THE BURRAKUR COAL COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of THE BURRAKUR COAL COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday the 29th December, 1961, at 10-30 A.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company, for the year ended 30th June, 1961 and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

As a Special Business

5. To consider and, if thought fit, to pass the following resolution which will be proposed as a special resolution:

"That in conformity with Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act, 1956, authority be and is hereby accorded to the continuance of a payment to the Directors of the Company of a Commission (to be divided between them in such manner as they shall from time to time determine) of 1% of the net profits of the Company in each financial year over the period of five years extending up to and including the financial year of the Company ending on 30th June, 1956."

The Share Transfer Registers of the Company will be closed from 14th December, 1961, to the 29th December, 1961, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,

Managing Agents.

Calcutta, 27th November, 1961.

Note:

- (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.
- (b) The relative Explanatory statements pursuant to section 173 of the Companies Act, 1956 in respect of the Special Business set out above are being sent to Shareholders.
- (c) The Dividends, if declared, will be paid on or after 17th January, 1962 to those members so entitled, whose names appear in the Company's books on the 29th December 1961 or to their mandates. No application for Dividend Warrants will be necessary.

BIRDS are stepping up it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

MUNICIPAL LOANS

These notes refer to the Debentures on the next page.

(a) Option to extend the redemption period for further 10 years.

(b) at any time after.

(c) on or after 1-1-61.

(d) option to redeem at 2 1/2% Prem. after 14-5-64 and before 15-5-69.

Option to repay on 6 months notice—

(e) at any time after 30-6-61 at 10 1/2%.

(f) at 10 1/2% between 1-1-60 & 31-12-64.

(g) at 10 1/2% after 30-6-59 but before 30-6-64.

(h) at any time after 30-6-65 at 10 1/2%.

Option to repay on 3 months notice—

(i) at any time at 3% Premium.

(j) at 1% Prem. after 1-3-64 but before 1-3-67 and 1% Prem. on or after 1-3-67.

(k) at any time at par.

(l) at any time after 31-3-62 at the rate of 1% Premium.

(m) redeemable at 103% on 31-12-64 with option to redeem on any interest date at same premium after 30-6-59.

(n) at any time on two months notice—

(o) to be redeemed at a premium of 10% Rs 70,000 to be redeemed annually by drawing on 3 months notice with option to redeem all after 6 years from date of issue on 6 months notice. Option not exercised repayment to be made after full term.

Option to repay.

(p) at par after September 1960.

(q) at par on or after 1-12-59.

(r) with option to redeem at 10 1/2% after 10 years or at 100% after 12 years.

(s) Rs. 1 lac Debentures to be redeemed annually by drawing from 1-6-56 with option to redeem at 100/8% between 1-6-57 to 1-6-60 and at 10 1/2% afterwards.

(t) with option to redeem at Rs 10 1/2% after 10 years or at 100/8% after 12 years.

(u) with option to redeem all or any of the Debts at 10 1/2% at any time after 31-3-64 and at 100/8% at any time after 31-3-66.

(v) Rs 80,000 are being redeemed annually repayment of Debentures commencing serially from No. 1 to No. 80 or 31-12-48.

(w) Redeemable at any time at 5 per cent premium (a) on 6 months notice by the Company or (b) in the event of the security becoming enforceable or at par if the Corporation of Calcutta or Howrah purchase the undertaking on 1st January, 1945 or every seventh year thereafter.

(x) At par all or any of the Debts on 31st December, 1960 or on any subsequent interest date.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

A Weekly Journal of Commerce, Industry and Finance
WITH WHICH IS INCORPORATED
THE INDIAN FINANCIAL REVIEW

Vol. CXXXVII No. 3688

jute goods market after the events of last June and July should obscure the fact that the long-term threat to the expansion, or indeed the maintenance, of India's gunny markets, is the growth of Pakistani competition. Unless the mills are able to do with their weaving process what they have already done with spinning, they have little hope of expanding their markets in the teeth of competition from the modern, and more officially favoured, mills in East Bengal. The tea industry's problems are perhaps easier to solve. They consist largely of a reduction in taxation so as to improve India's competitive position in world markets. This year may see the problem raised in an acute form, because the world tea crop threatens to be so large that prices of Indian teas will be forced down. It might then be a case of internal taxes being levied purely at the expense of foreign exchange earnings. It should be interesting to see what the Government's reaction to this will be.

The President did right to lay stress on the problems of the newer export industries, and to underline the importance of the price factor. He neatly demolished a classical and mistaken theory which seems to be as widespread here at the moment as it is in Britain—where its results have virtually brought the growth of the economy to a standstill—that in order to encourage exports it is necessary to discourage internal consumption. This is simply not true, except in purely limited cases of temporary emergency. The industries which export best in an industrial economy are those with the largest internal markets. Not only does the home market help to keep down unit costs by guaranteeing the volume of output, it also permits losses to be carried on exports when these are necessary to hold on to markets which may have been acquired only at extreme cost in promotional expenditure. It is, of course, appreciated that where production for the external market and production for the internal market compete for scarce raw materials, there may be a case for discouraging one in order to foster the other. But generally speaking the best way of strengthening the export potential of manufacturing industry is to permit maximum expansion commensurate with internal demand. It would be a pity if India were to wait until Britain grasped this fact before accepting it herself.

His comments on exporting were perhaps the most valuable part of Mr. Stenhouse's speech. The mention of the potentialities of the Common Market as an export field for Indian industry was both timely and accurate. India's attitude to-

wards the Common Market has been too diffident in the past, although it has avoided some of the extremes of gloom exhibited by a number of other Commonwealth members. The establishment of a separate Ministry for Exports, as the President appears to suggest, might help to stabilise attitudes on this question, as it would certainly help in the task of putting exports on a high-priority basis. Finally, there is the heart-felt cry, which will be echoed by all exporters, for less fuss over licences and applications and more incentive to export. In the past year the Government has gone some way towards conceding the case for incentives; before the next Assocham annual general meeting it is to be hoped that it has been decided to introduce them.

The second of the three points raised, the shortage of transport, is yet another example of error in general principles. If the Government had not been so keen to shield the railways from competition, largely because it owns them, the country might today have a road transport system adequate to its needs. As things are, it is difficult to understand why, when it claims to be pragmatic in its approach to such problems, the Government should still be hanging back from developing roads and road transport to the degree required. There is a case here for a radical change in plan priorities, otherwise development is bound to be slowed down and those projects to which priority has been assigned will be held up anyway. In this matter the Government would be well advised not to wait for the recommendations of the Transport Committee. On present showing these cannot be expected for some time yet, and the need for action is now urgent. There is room for the rapid expansion of both rail and road traffic in the country today, and it must remain a mystery why it should be taking the Government so long to appreciate the employment potential of road building. This is a form of development which requires little foreign exchange, yet there seems a surprising reluctance to go ahead with building the new roads which are certainly required. Even the urgently necessary Durgapur Expressway now seems to have been postponed indefinitely, despite the fact that traffic on the Grand Trunk Road may come to a complete standstill at any time.

The President was voicing the fears of all industrialists on this side of India when he mentioned the growing threat of power shortage. Here again is another example, at least so far as West Bengal is concerned, of a disastrous application of the principle of giving the public-sector priority in power installation. It is interesting that within three days of the President making his plea, and within three months of the end of the monsoon, power cuts have again been experienced in Calcutta. If this can happen now, then the prospects for March, April and May of next year are grim indeed. If Mr. Nehru did not intend the hint he dropped about a possible revision of power

Leaders

[illegible]

An excellent example of the above contention is the first of the three points on which the President concentrated. The reason for the chronic nature of the present foreign exchange shortage is the inability of India to export sufficient to pay for her imports, and this in turn is because the emphasis on public-sector investment and social welfare is creating inflation in the internal economy. Once this fact is grasped, and the necessary lesson is drawn from it that the situation cannot be changed fundamentally until such emphasis is abandoned, or radically adjusted, it is useful to consider carefully the points Mr. Stenhouse raised. Pleas for the modernisation of the cotton and jute industries are not particularly new, but especially in the case of jute events in the past year have added a new urgency. No partial recovery in the

plans to be taken seriously, then the Government will have to be prepared to face the consequences of declining industrial output, extensive economic disorganisation and a slow rate of progress on the plan. The coming year promises to be the critical one where power matters are concerned. It may be impossible at this stage to avert a crisis, but there is still time for the Government to be seen for once to be doing something about it before the event instead of after. In all-too-short a time Mr. Stenhouse may be proved right in his claim that the most serious single obstacle to development today is the shortage of power. Yet, to quote only the case of West Bengal, the promised Bandel power station is still no more than a mark on the ground, and even when it is completed it is difficult to see how it can be kept supplied with coal given the present condition of road and rail transport in this State.

The President paid little attention this time to those hardy perennials, taxation and labour relations. Statements on such matters in recent years have not received much attention in official circles

AUTOMATIC MARGINS IN SHARES

EQUITY prices have fallen sharply in the stock markets during the past ten days. To some extent, the fall is a corrective to the rapid rise which took place a little earlier. But the reaction has gone far beyond what a mere technical adjustment would have prescribed, as bulls have been liquidating their holdings, bears have been selling heavily and the general undertone is panicky. The decline originally started in the speculative issues. Operators said that the committee of stock exchange presidents, which was set up in September to evolve proposals for stock market reform, would be meeting soon and would introduce measures to check speculation. A few days later, the Central Finance Minister, Mr. Morarji Desai, replying to a question in Parliament, confirmed that the system of automatic margins framed by the committee two months ago would be enforced shortly in all the stock markets. The announcement sparked off a new wave of selling because operators had not thought that the move to introduce the automatic margin system had advanced so far; the general assumption was that the question would not be finalised until early in the New Year. The downtrend in prices was assisted by the news of fresh Chinese incursions into Indian territory. More recently, the deterioration in the Goa situation has had a sharp impact; reports that train services between Delhi and Bombay have been disrupted in the interests of military traffic have given the impression that an armed conflict may be imminent.

Political developments apart, to the extent that the stock markets are worried about the automatic margin system, their fears seem to be greatly exaggerated. The proposed system consists of two main parts. The first is that if the price of a share rises or falls by more than 10 percent from one settlement to the next, an automatic margin of 50 percent will have to be deposited on purchases or sales, as the case may be. Secondly, members will have to pay margins ranging from 2 percent to 30 percent if at any settlement their *outstanding business exceeds the free limits* they are allowed. On the face of it, these regulations do not appear to be unnecessarily harsh. The market has interpreted them as operating against the bulls, but in fact they operate against both bulls and bears. It is worth remembering that

and it is probably as well to emphasise more urgent topics. But the coming year will contain a post-election Budget, and if the example of 1957 is any guide, it is going to be the most severe of the present plan period. Industry may be misleading itself if it considers that the entire effort will be in the form of indirect taxes; rather ominously, Mr. Morarji Desai announced only a few weeks ago that he did not consider the point of diminishing returns had been reached in direct taxes, despite all the evidence to the contrary. Here again principles are involved with inevitable cost in economic terms. There are indeed many things wrong with the current pattern of development other than "imbalances". These are, in fact, merely the contemporary evidence of past errors which admittedly are being corrected gradually, but which in future will have to be changed much more rapidly if the economic progress of the country is to be accelerated. Perhaps the gentle, good-humoured reasonableness shown by Mr. Nehru last Saturday is some indication that this is in prospect.

only rarely do share prices fluctuate by more than 10 percent from one settlement to the next. The 10 percent variation on either side which is allowed without attracting the margin penalties is thus large enough not to penalise speculative activity in normal circumstances. Many stock exchange authorities have in the recent past been known to fix "making-up" prices, or collect *havala* deposits, for smaller fluctuations.

As for the second measure—the margin on members' outstanding business—it need not prove unduly oppressive. If turnover remains within reasonable limits, the deposit requirements can be easily met. But, if turnover becomes excessive, the ways open for evading margin restrictions are many and devious; and the stock exchanges have yet to prove that they can tackle offenders effectively. In this country, it is a major weakness of the futures markets, not only in shares but also in commodities, that the official ones function alongside unofficial ones. The *kerb* markets, which fall in the latter category, are subject to very few restrictions; the moment, therefore, controls are imposed on the official markets, business moves to the unofficial ones. The market authorities usually say that they can do very little

about this; it is a job for the police or the Government. But the time has come when the stock exchanges should seriously consider disciplining their members, particularly those who move out to the *kerb* markets whenever it suits them. The *fatka* centres, after all, are nourished not by part-time amateurs but by professional operators who patronise the regular markets too.

Unless these operators can be shown that they are risking their membership of the official markets whenever they operate in the unofficial ones, compliance with any regulations the stock exchanges introduce will be incomplete. This is particularly true of the automatic margin regulations such as the stock exchanges now propose to enforce. By promoting stability and preventing over-speculation, the regulations can be of genuine help to investors. Therefore, contrary to what operators now say, they are to be welcomed rather than feared. In one way at least, they represent a clear gain. It is that hitherto, often when a stock exchange has proposed action to check speculators, a lucky few have got wind of the news before the others. Big speculative profits have thus sometimes been made in the process of checking speculation. The automatic nature of the margins now proposed should help prevent profiteering by influential operators having access to special sources of information.

It is unlikely that, in their present extremely bearish frame of mind, the stock markets will cheerfully accept the new automatic margin system. But, in course of time, depending on how conscientiously the system is worked, the benefits may be seen more clearly. Meanwhile, it is understandable that operators should be seriously worried about the implications of the border troubles, with the Chinese in the north and with the Portuguese in Goa. The stock markets have apparently moved a long way since the days when a deteriorating international situation was counted as a bullish factor, on the ground that it would accelerate rearmament and commodity stockpiling. There is no doubt that the economic consequences of a possible conflict, especially one near India's borders, could be extremely adverse. The stock markets are to be complimented on their greater maturity in realising this, but it cannot be said that the recent sharp marking down of prices in anticipation of trouble ahead is necessarily justified. Three weeks ago, it looked as if the bulls would have to be checked. Now, it looks as if the bears might be due for a penalty. Automatic margins or not, it seems the Indian stock markets still have some way to go before they acquire the intrinsic stability many have been hoping for

OPPOSING A DEVALUED POUND

IT was presumably by coincidence, not by intention, that the European Economic Community formed the idea of protecting sterling about the time when the British Government's plan to stabilise wages seemed to be disintegrating. Sterling was not, in any case, immediately threatened; but London imagined, or feared that other financial centres would imagine, that if the increase in wages were resumed Britain could not compete with the European countries at the present exchange-rates and the pound would necessarily be devalued if Britain entered the Community. The idea of "the wage pause" belongs to the restrictive policy (an old policy in a new form) introduced by the British Government in July, not to the expansive policy introduced through the Organisation for Economic Co-operation and Development in November. The British Government's insistence on stability of wages is an admission of failure. Wages have risen more this year in some other European countries, but the movement has not caused anxiety in these countries, because the productivity of labour has increased there. In Britain it has decreased: the number of workers employed has risen, but their aggregate production has been virtually static.

However, the European countries are concerned with the facts of trade. They are not, apparently, convinced that British prices, in general are above the Continental level; and they can fairly argue that if British prices are tending to move out of line, the British Government has time enough to correct the tendency without altering the value of the currency. But the British Government is not confident that British industry can make the profound adjustments that would be necessary without devaluation of the currency, and the City of London was until recently discussing the matter as though devaluation would be almost a matter of course if Britain entered the Community. The Continent's opposition to any such monetary move has modified the City's opinions. It has brought under consideration the serious possible consequences of devaluation. Britain's obligations to her partners in the Commonwealth are not directly the Community's concern, but all countries involved in the negotiations between Britain and

the Six must consider any likely cause of dispute between Britain and the Commonwealth countries arising from Britain's move towards Europe. The Commonwealth countries hold a large proportion of the sterling balances in London, and they would naturally resent any devaluation of sterling. So would the United States, for a different reason: the dollar is certainly not under-valued in relation to sterling, and if sterling were devalued speculation against the dollar would probably be stronger than any American efforts to maintain its value. The position of the continental European countries would become, to say the least, precarious.

A powerful argument against devaluing sterling is that such a move would throw the whole international monetary system into confusion. It would be a high price to pay for Britain's participation in the Common Market, and the Community's interest in stabilising sterling is appreciated. The main question is whether, if the occasion arises, the Six will be able to devise an effective system for the purpose. Essentially, though not necessarily directly, they would be required to make some of their reserves available for the U.K.'s use, but such action is a function of the International Monetary Fund, and it is questionable whether regional duplication of the Fund is desirable. Some such arrangement for holding surplus currency as was agreed in Basle last March might be reinstituted; but the central banks that accumulated abnormal quantities of sterling seemed glad to be relieved of their commitment as soon as possible. A firm assurance on Britain's part that sterling would in no circumstances be devalued would presumably overcome the Continental countries' reluctance to hold sterling, but it is not certain that the British authorities are willing to give such an assurance. Whatever assistance the Continental countries were able to provide would be by nature temporary: they could not permanently support the currency of a partner country if it were over-valued. The British authorities themselves must be sure that sterling is competitively valued before they undertake to maintain its value.

Reports that the British authorities have been considering the idea of "floating" the pound have

strengthened the belief that they are not firmly resolved to maintain the present exchange rates. They have presumably reasoned that a downward drift to a level established by the forces of the market would be less damaging than an outright devaluation; also that the forces of the market, given time, could establish a "natural" level, whereas rates fixed arbitrarily might be unrealistic. The British authorities have not until recently shown any interest in the idea of "floating" rates, and if they are willing to consider the idea now—although it conflicts with the policy of the International Monetary Fund—we must assume that they are troubled by the question whether the pound is realistically valued. But their acceptance of the principle of "floating" rates would not necessarily mean that they intended to devalue

the currency, unobtrusively. They would, in fact, probably, assert themselves very strongly to support a "floating" pound, so that, at least, its value would not be forced down by speculation. Effective long-term support would imply a radical strengthening of the economy. Economists and bankers who oppose the principle of "floating" rates argue that if the economy can be radically strengthened there is no need to consider any change in the present exchange rates. The discussion will probably cause some anxiety from time to time during the negotiations between Britain and the Six. There are many difficulties in these negotiations already, and the intrusion of this problem of sterling, though inevitable, is unwelcome.

Current News and Comment

Shivrajpur Syndicate Cuts Output

The shares of Shivrajpur Syndicate Ltd, which were quoted around Rs 55 by about the middle of November, were sold down to Rs. 39.50 in *kerb* dealings on 2nd December. Persistent selling in these shares over the past few weeks had been based on reports that the working results for the year ended November 1961, were likely to show a setback and that Company would have to curtail production because of the huge accumulation of manganese ore stocks. The market's worst fears were confirmed by the chairman, Mr. A. N. Haksar when on 2nd December he told Press men that the Company had decided to cut the production of manganese ore by about 50 percent. Shivrajpur Syndicate had been forced to take the decision which would involve the retrenchment of about 1,800 workers because of the accumulation of about 80,000 tons of manganese ore at the Company's mines as a result of the disappointing export performance. The accumulated stock represents nearly a full year's production of Shivrajpur Syndicate. The Company's Bamankua mine had already stopped working. Underground operations in the Pani mine and in Shivrajpur are expected to stop after a few weeks. These measures are intended to reduce the output to about 3,000 tons a month from the normal quantity of 6,000 tons to 7,000 tons. Mr. Haksar indicated the possibility of a total closure if the foreign demand for the ore did not pick up appreciably and the Government did not take any remedial measures in the immediate future. This was the first major crisis faced by the Company in the last two decades, the chairman said. The Company's exports during the year ended November 1961 were substantially lower than in any of the past five years and its outstanding export sales were also poor. This would naturally affect the profits and the dividend outlook.

Shivrajpur's troubles only underline the difficulties of the manganese ore industry. Over the five-year period, 1956-60, exports of manganese ore from India averaged 1,204,000 tons a year, realising approximately Rs. 19 crores, that is, an average of Rs. 154 a ton. Against this, exports during the first half of 1961 totalled only 318,000 tons valued at Rs. 3.15 crores which works out to about Rs. 100 a ton. Mr. Haksar blamed Government policy for the prevailing crisis in the industry, although some of the difficulties were due to circumstances beyond the country's control. He rightly complained that in spite of the recommendations by official and non-official bodies, the Government has not cared so far to provide even some of the long overdue reliefs such as the reduction in railway freight. The Central Railway Minister's announcement of 50 percent reduction in freight on manganese ore had not been implemented. On the other hand, the Government had discontinued barter transactions in spite of the fact that it was only due to barter and link deals that India could make such exports as it did in the past two or three years. The chairman urged the Government to take immediate action to tide over the crisis facing the manganese ore industry. His suggestions include the reduction in railway freight, revival of barter and link deals, cut in royalties, export incentives in terms of import entitlement and the waiving of preshipment analysis by the Government.

Tata Chemicals Bauxite Project

The interest of shareholders at the annual general meeting of Tata Chemical Ltd on 1st December centred mainly on the bauxite project resulting from the likely acquisition of the Bombay Mineral Supply Company which owns extensive bauxite deposits in Saurashtra. Negotiations for the purchase of the latter Company took place after the release of the chairman's statement along

with the directors' report for 1960-61. The chairman, Mr. J. R. D. Tata, told shareholders that, according to the proposal, Tata Chemical was to acquire the Bombay Mineral Supply Company in exchange for 520,000 Tata Chemicals shares (Rs. 10 paid) to be issued at par to the owners of that Company. The deal is, however, subject to the management of Tata Chemicals satisfying itself about the quantity and quality of bauxite available in the deposits and also ensuring that the deposits are capable of being profitably exploited. Mr. Tata said that the Bombay Mineral Supply Company had earned a profit of about Rs. 10 lakhs in the Samvat year 2017 and that its assets are worth about Rs 9 lakhs to Rs. 10 lakhs in addition to various leases. The firm now exports bauxite, and it has already entered into forward contracts for 175,000 tons up to October 1963. If the present negotiations to acquire the Company prove successful, the benefit of the outstanding contracts will accrue to Tata Chemicals from November 1961 onwards. Mr. Tata confirmed that tentative and exploratory discussions had taken place between Tata Chemicals and the Bombay Burmah Trading Corporation concerning the formation of a partnership for the acquisition of the Bombay Mineral Supply Company and the exploitation of its bauxite deposits on a 50:50 basis. Further consideration of the matter had been deferred until the deposits had been proved. Tata Chemicals had secured a preliminary technical-cum-economic survey of the industrial potentialities of the project. This is expected to be available in two or three months. Mr. Tata said that the Company planned to undertake the manufacture of alumina—a raw material required for the production of aluminium. He made it clear that the Company has no intention of setting up an aluminium project. Replying to shareholders' questions, the chairman said that during the first four months of the current year, the production of soda ash exceeded 300 tons a day. The production target for the current year had been fixed at 100,000 tons and the output was expected to be raised to around 400 tons a day some time next year. Tata Chemicals will have to buy about 100,000 tons of salt this year because of the serious damage to its own salt works by heavy floods. This is likely to cost an extra Rs. 15 lakhs or Rs. 20 lakhs. The Company had asked for the Government's permission to issue fresh equity shares at par. Official consent has not been received so far. Mr. Tata said that the management would have to reconsider the whole question if the Government insisted on equity shares being issued at a premium. The board would consider the suggestion for issuing debentures in case the Government fixed a high premium for the rights issue. The possibility of issuing convertible debentures was ruled out.

Sirpur Paper to Expand

The Sirpur Paper Mills Ltd has reported satisfactory results for the year ended June 1961. Production was nearly the same as in the previous year but the Company manufactured increased quantities of finer varieties of paper. Sirpur Paper had to bear the impact of reduced paper prices for the full year. Even so, the gross profit has risen from Rs. 75.20 lakhs to Rs. 90.12 lakhs, although sales are slightly down from Rs. 4.33 crores to Rs. 4.30 crores. But of the increase of Rs. 14.92 lakhs in the gross profit, Rs. 13.13 lakhs represent the income from fire claims for stores, raw materials, damage to machinery, etcetera. After providing Rs. 52.81 lakhs (against Rs. 46.82 lakhs) for depreciation and Rs. 1 lakh (against Rs. 6 lakhs) for development rebate, the net profit amounts to Rs. 33.34 lakhs, against Rs. 19.50 lakhs in the previous year. A sum of Rs. 5 lakhs has been provided for contingency reserve, and general reserve, which received nothing in the previous year, gets Rs. 3.52 lakhs. The dividend has been raised from 65nP to 85nP, both taxable, a share of Rs. 10 paid.

This absorbs Rs. 18.57 lakhs, against Rs. 14.20 lakhs in 1959-60. The preference dividend accounts for Rs. 5.53 lakhs (against Rs. 5.45 lakhs), leaving Rs. 99,727 to be carried forward, against Rs. 34,582 brought in.

The directors state that Sirpur Paper has entered into a technical and financial collaboration agreement with Kimberley Clark of Wisconsin of the U.S.A. for carrying out the modernisation and expansion programmes, including the installation of plant for manufacturing special varieties of papers in accordance with the development licence already granted to the Company. Some formalities, however, yet remain to be completed before the agreement can become effective. The Rs. 10-paid share, which touched a high of Rs. 19.12 in March, was sold down to Rs. 13.40 in August. It improved to Rs. 17.72 early in November and after easing to around Rs. 16.84, it is up again at Rs. 17.50 offering a gross yield of 5.1 percent. Sirpur Paper has a paid-up capital of Rs. 2.90 crores, of which equity capital accounts for Rs. 2.19 crores and is supplemented by free reserves and surplus amounting to Rs. 73.10 lakhs.

Central India Spinning Makes Profit

The decision of the directors of the Central India Spinning, Weaving and Manufacturing Co. Ltd to skip the dividend on ordinary and preference shares for the year ended June 1961, in spite of a substantial improvement in the working results, has not come as a surprise because the Company is known to be burdened with huge liabilities. Losses brought forward from the previous years totalled Rs. 90.17 lakhs at the end of June 1960. The arrears of depreciation amounted to Rs. 76.33 lakhs and the liability for the preference dividend for the five years ended June 1961 comes to Rs. 13.50 lakhs. The ordinary shareholders, who have gone without a dividend for six years, will have to wait for quite some years before the shares return to the dividend paying list. But the shareholders can derive some comfort from the working results for 1960-61 which indicate that Central India Spinning has really turned the corner. Sales have recorded an impressive rise from Rs. 4.27 crores to Rs. 5.48 crores, and the Company has made a gross profit of Rs. 33.84 lakhs, compared with a loss of Rs. 8.93 lakhs in 1959-60, and of Rs. 52.69 lakhs in 1958-59. Out of the year's profit, Rs. 13.33 lakhs has been set aside for depreciation. The profit for 1960-61 is the highest earned by Central India Spinning during the past decade. The directors' full report on the working results will be awaited with interest to know the progress concerning the modernisation programme. The Rs. 100-paid share of the Company, which could be bought around Rs. 95 early in the year, is currently quoted around Rs. 134.

Hindustan Construction Does Well

The Hindustan Construction Co. Ltd.—a subsidiary of Premier Construction—has reported encouraging results for the year ended August 1961. Its work bills amounted to Rs. 10.49 crores, against Rs. 9.55 crores in the previous year, showing an increase of about 9.8 percent. The gross profit has risen by about 12.3 percent from Rs. 1.09 crores to Rs. 1.20 crores. After providing Rs. 35.33 lakhs (against 35.61 lakhs) for depreciation and Rs. 44 lakhs (against Rs. 31 lakhs) for taxation, the net profit amounts to Rs. 34.68 lakhs, against Rs. 34.90 lakhs in 1959-60. Adding Rs. 10.67 lakhs, being provisions made in previous years no longer required, and Rs. 1.23 lakhs brought forward from 1959-60, the disposable surplus amounts to Rs. 46.58 lakhs. Allocations include development rebate Rs. 3.59 lakhs (against Rs. 3.02 lakhs), special depreciation reserve Rs. 5 lakhs (against Rs. 20 lakhs), general reserve Rs. 20 lakhs (against Rs. 2.46 lakhs), contingency reserve Rs. 2 lakhs (against Rs. 3 lakhs) and dividend equalisation reserve Rs. 1 lakh (against Rs. 2 lakhs). The ordinary dividend has been maintained at 20 percent, absorbing Rs. 7.20 lakhs. The preference dividend accounts for another Rs. 1.56 lakhs, leaving Rs. 1.21 lakhs to be carried forward, against Rs. 1.23 lakhs, brought in.

The directors state that Hindustan Construction received during the year major contracts amounting to Rs 10.56 crores. After the close of the financial year, it has further secured major contracts amounting to Rs. 7.48 crores for constructing the Sabarigiri tunnel and surge shaft for the Kerala State Electricity Board and for the Sabarigiri dam. The Company has also submitted important tenders for the civil engineering works connected with the construction of the nuclear power station in Tarapur for the Atomic Energy Department in collaboration with leading British firms. The bids for the global tender are said to be under evaluation. Hindustan Construction's works in Bhilai and Rihand and the construction of the Brahmaputra bridge have been completed ahead of schedule. The Bhadra tunnel works have

early been completed: the work on the first stage of the Koyna project has been completed and the work on the second stage is proceeding satisfactorily.

Good Results from Godavari Sugar

The working of the Godavari Sugar Mills Ltd for the year ended May 1961, shows a substantial improvement over the previous year's performance. Sales have increased by 18 percent from Rs. 2.84 crores to Rs. 3.36 crores. The gross profit is up by about 14 percent from Rs. 85 lakhs to Rs. 97.09 lakhs. After providing Rs. 9.41 lakhs (against Rs. 7.84 lakhs) for depreciation and Rs. 30 lakhs (against Rs. 25 lakhs) for taxation, the net profit amounts to Rs. 51.76 lakhs, against Rs. 44.60 lakhs in 1959-60. The directors have transferred Rs. 15 lakhs from preference share redemption reserve and Rs. 6 lakhs from housing reserve. A sum of Rs. 2.75 lakhs, representing the excess provisions written back, has been added to the net profit. The disposable surplus amounts to Rs. 75.51 lakhs. Appropriations include general reserve Rs. 50 lakhs (against Rs. 28 lakhs), development rebate reserve Rs. 47,433 (against Rs. 1.36 lakhs), gratuity Rs. 25,000 (the same), bonus to employees relating to previous years Rs. 4.01 lakhs (against Rs. 3.08 lakhs) and the reimbursement on loss of Narmaha farms Rs. 1.03 lakhs (against Rs. 34,822). The ordinary dividend, which has been raised from 35 percent to 42½ percent, taxable, absorbs Rs. 17 lakhs. The preference dividend absorbs Rs. 1.45 lakhs, against Rs. 1.32 lakhs. After making all these provisions, there remains a balance of Rs. 3.48 lakhs to be carried forward, against Rs. 2.18 lakhs brought in.

The directors state that the crop for 1960-61 was better than in the previous year. The sugarcane crop available for the 1961-62 crushing season extends to about 2,939 acres. A subsidiary enterprise named Somaiya Organo-Chemicals Ltd was formed during the year to which distillery machinery and acetic acid plant have been transferred. The Captainganj distillery, owned by the Company, worked only intermittently due to the shortage of coal. The directors have thought it necessary to expand it, so a new plant has been ordered which is likely to be ready next year.

Cauvery Sugar Profit Down

Although the directors of the Cauvery Sugars and Chemicals Ltd have proposed to increase the dividend from 6 percent to 8 percent, subject to deduction of tax, the working results for the year ended June 1961, indicate that the Company has not done as well as in the previous year. Sales have recorded an impressive rise from Rs. 1.36 crores to Rs. 1.73 crores and both cane crushed and sugar produced set new records. But the gross profit is down, slightly though, from Rs. 19.86 lakhs to Rs. 19.14 lakhs. The ratio of gross profit to sales has declined from 14.6 percent to 11 percent. After providing Rs. 4.86 lakhs (against Rs. 4.80 lakhs) for depreciation and Rs. 6.18 lakhs (against Rs. 1.96 lakhs) for taxation, the net profit amounts to Rs. 7.28 lakhs, against Rs. 12.17 lakhs in the previous year. The allocation to development rebate reserve has been cut down from Rs. 6.05 lakhs to only Rs. 21,000. The directors have written off Rs. 2 lakhs (the same) as preliminary expenses. The preference dividend accounts for Rs. 1.20 lakhs. The ordinary dividend absorbs Rs. 3.20 lakhs, against Rs. 2.40 lakhs. The carry-forward amounts to Rs. 1.41 lakhs, against Rs. 73,721 brought in.

The directors state that the 1960-61 main season started on 20th December and finished on 20th June. A quantity of 131,688 tonnes of sugarcane was crushed, yielding 11,993 tonnes of sugar at an average recovery of 9.11 percent. The corresponding figures for the previous season were 68,895 tonnes of cane, 6,411 tonnes of sugar and 9.31 percent recovery. The lower recovery is attributed mainly to the extended period of the season. The special season lasted from 27th July, 1960 to 15th November, 1960, during which period 73,699 tonnes of sugarcane were crushed, yielding 6,697 tonnes of sugar at an average recovery of 9.09 percent. The corresponding figures for the previous season were 47,753 tonnes of cane, 4,393 tonnes of sugar and 9.20 percent recovery. The lower recovery is mainly due to the long duration of the special season. The Rs. 100-paid share of the Company is currently quoted around Rs. 118 cum dividend, offering a gross yield of about 7.2 percent.

New Swadeshi Sugar Maintains

Although the dividend has been maintained at 29 percent, subject to deduction of tax, the working of the New Swadeshi Sugar Mills Ltd for the year ended June 1961, shows a sharp decline in

profit. Sales are down by about 32 percent from Rs. 1.76 crores to Rs. 1.20 crores while the gross profit has declined by as much as 60 percent from Rs. 26.80 lakhs to Rs. 11.70 lakhs. After providing Rs. 2.06 lakhs (against Rs. 1.46 lakhs) for depreciation, Rs. 95,000 (against Rs. 17,000) for development rebate and Rs. 2.75 lakhs (against Rs. 10.35 lakhs) for taxation, the net profit amounts to Rs. 5.16 lakhs, against Rs. 12.29 lakhs in 1959-60. The provision for general reserve has been reduced from Rs. 8.50 lakhs to Rs. 1.15 lakhs. The ordinary dividend absorbs Rs. 3.94 lakhs, leaving Rs. 34,000 to be carried forward, against Rs. 21,000 brought in.

The directors state that during the year, the factory worked for 187 days and crushed 5,090,000 maunds of sugarcane but the recovery was slightly lower at 9.58 percent. During the current year, the Company expects to crush about 5 million maunds of sugarcane. Efforts are being made to get the sugar factories in Bihar excluded from the provisions of the Government's enactment which fixed the sugar quota by reducing the quantity by 10 percent of the output in the previous year. The Company's distillery went into operation on 19th October. Production could not be started earlier due to the delay in the supply of plant and machinery and other materials. The fruits and vegetables canning factory in Allahabad, which went into production last year, has now been approved by the Government for supply to the Army Purchase Organisation. The balance-sheet shows a strong financial position. Against the total paid-up capital of Rs. 13.59 lakhs (all in equity shares), New Swadeshi Sugar's free reserves amount to Rs. 66.18 lakhs. The Rs. 100-paid share of the Company is currently quoted around Rs. 350 cum dividend offering a gross yield of about 9 percent.

Dewan Bahadur Mills Profit Up

The Dewan Bahadur Ramgopal Mills Ltd has reported encouraging results for the year ended June 1961. Sales have risen by about 12.8 percent from Rs. 93.57 lakhs to Rs. 1.06 crores, and the gross profit has shot up by about 93 percent from Rs. 6.05 lakhs to Rs. 11.70 lakhs. The ratio of gross profit to sales has risen from 6.4 percent to 11 percent. After providing Rs. 4.55 lakhs (against Rs. 1 lakh) for depreciation, the net profit amounts to Rs. 6.58 lakhs, against Rs. 4.69 lakhs in the previous year. Including the previous year's carry-forward of Rs. 4,635 and deducting Rs. 22,698, being the sales tax relating to the previous years, the disposable surplus amounts to Rs. 6.40 lakhs. From this the directors have set apart Rs. 3.44 lakhs for the arrears of depreciation, Rs. 1 lakh for dividend equalisation reserve, Rs. 1 lakh for debenture redemption reserve and Rs. 30,000 for general reserve. No provision had been made under these heads in the previous year. A sum of Rs. 65,117 has been carried forward.

The directors state in their report that in view of the increased demand for processed goods, steps are being taken to increase their production. The Company's exports suffered a slight setback during the year. As for the auditors' remarks in their report concerning non-compliance of the provisions of the Companies Act relating to the provident fund, the directors state that due to adverse trading conditions during 1957-58, Dewan Bahadur Ramgopal Mills could not pay the provident fund contributions regularly during that period. But the monthly instalments towards arrears have been regularly paid in addition to the contributions for the year. The Rs. 100-paid share of the company is currently quoted around Rs. 103. The gross block valued at Rs. 1.01 crores has been written down to Rs. 57.21 lakhs.

A Good Year for Gillanders

Gillanders Arbuthnot and Co. Ltd has been successful in maintaining its income during the year ended March 1961, in spite of the fact that there has been no relaxation in the official policy on import restrictions. The turnover has risen due to the increased sale of indigenous products. There has been an improvement in the income from the managed and agency Companies. Gillanders Arbuthnot has also made a capital profit of Rs. 5.83 lakhs, as a result of the sale of its shareholding in the Selimbong Tea Co. Ltd. The sum has been transferred to capital reserve.

The ordinary dividend has been increased from 10 percent to 11 percent, tax-free. It is covered more than twice and offers a yield of 7.2 percent at the present price of Rs. 15.25 a share. The trading profit has declined slightly from Rs. 26.68 lakhs to Rs. 25.77 lakhs, after providing Rs. 2.11 lakhs (against Rs. 2.23 lakhs) for depreciation. Taxation absorbs Rs. 10.11 lakhs (against Rs. 10.94 lakhs) and general reserve Rs. 3 lakhs (the same). The carry-forward is Rs. 1.93 lakhs, against Rs. 1.71 lakhs brought in. Among the managed companies, the Indian Copper Corporation Ltd has improved its working considerably.

The Corporation has made progress in its expansion scheme which includes the installation of a refinery and a foundry for producing electrolytic copper. A crushing plant, a smelter and a contraction plant will also be set up. Substantial orders for rope-ways have been received from the private and public sectors.

Gillanders Arbuthnot has taken active steps to diversify its activities. The Adequate Weighers (India) Ltd has nearly completed its factory to produce a special type of automatic weighing machine. Production may start early in 1962. In collaboration with the British United Shoe Machinery Corporation Ltd, the Indian Tack and Nail Co. Ltd, a new Company, has completed a factory in Konnagar, near Calcutta, for manufacturing shoe tacks and grindery. Production is expected to begin soon. Recondo Ltd and E. W. Stevens and Co. Ltd have made satisfactory progress. The directors of Gillanders Arbuthnot say that they propose to start a new enterprise in order to produce a wide range of specialised chemicals. Gillanders' total investments amount to Rs. 1.22 crores. The market value of the quoted security is about Rs. 37 lakhs higher than the book value. The directors say that none of the unquoted security has been overvalued in the books.

Phosphate Pays Less

The ordinary shares of the Phosphate Co. Ltd have been quiet around Rs. 329 because the taxable ordinary dividend has been cut from 35 percent to 25 percent for the year ended June 1961. It is covered more than twice and offers a yield of 7.6 percent at the present price. The profit has declined to Rs. 4.65 lakhs from Rs. 10.65 lakhs in 1959-60, after providing Rs. 1.48 lakhs (against Rs. 1.13 lakhs) for depreciation. Development rebate receives Rs. 20,756 (against Rs. 49,428), taxation Rs. 4.90 lakhs (against Rs. 6.90 lakhs) and general reserve Rs. 1.75 lakhs (against Rs. 2 lakhs). The carry-forward is Rs. 2.10 lakhs, against Rs. 2.05 lakhs brought in.

Although the turnover has increased from Rs. 77.54 lakhs to Rs. 80.50 lakhs, the profitability has been affected by higher production costs. The price increase of Rs. 5 a ton permitted by the Government is considered inadequate to compensate for the rising cost. The directors have taken over the distribution of fertilisers in Bihar. Although this line of business is not so profitable, it should help increase the sale of superphosphate. Arrangements have been made for further expansion. The Industrial Credit and Investment Corporation has agreed to provide the foreign exchange requirements for the expansion schemes. It is hoped that the increased production will materialise early in 1962.

Stanes Amalgamated Cuts Dividend

The working of the Stanes Amalgamated Estates Ltd for the year ended June 1961, shows a net profit of Rs. 2.33 lakhs, after meeting all expenses and after providing for depreciation. The profit is much lower than the previous year's Rs. 4.14 lakhs. The dividend for the year is reduced to 10 percent, against 17 percent for the previous year. Adding to the net profit Rs. 3,199 being the balance brought forward from the previous year, and also Rs. 8,964 being the excess provision for sales tax in previous years no longer required, the total surplus available for appropriation amounts to Rs. 2.45 lakhs. Out of this, provision for taxation gets Rs. 1.28 lakhs (against Rs. 2.11 lakhs). A sum of Rs. 1,653 (against Rs. 4,187) is transferred to development rebate reserve, Rs. 10,000 (against Rs. 25,000) to general reserve, and Rs. 11,423 to reserve for the redemption of debentures. The proposed dividend of 10 percent will absorb Rs. 90,000. The balance of Rs. 4,140 is carried forward.

The tea crop for the year amounted to 3,42,839 kilograms from the Company's own estates and in addition 10,580 kilograms were manufactured from bought leaf. The total tea crop amounted to 353,419 kilograms, against 362,427 kilograms. The average sale price was Rs. 4.43 a kilogram, against Rs. 4.18 a kilogram. The coffee crop was lower at 24 tonnes, against 152 tonnes. The directors' report says that the loss on coffee was Rs. 96,483. In addition, Rs. 9,813 was spent on replanting and Rs. 34,692 on the maintenance of over 100 acres of young coffee. The 1961-62 coffee crop is estimated at 80 tonnes and that of tea at 350,000 tons.

Calcutta Steam Skips Dividend

The working of the Calcutta Steam Navigation Co. Ltd during the year ended June 1961 has been adversely affected by the shortage of lighterage freight. To surmount the difficulty, extensive fleet reorganisation measures have been adopted.

The directors hope to see an improvement in the near future. Calcutta Steam has incurred a loss of Rs. 1.79 lakhs. Bringing in a credit balance of Rs. 1.09 lakhs and transferring Rs. 12,053 from fleet reserve, a debit balance of Rs. 71,119 has been carried forward. The dividends have been passed.

More from Nelliampathy Tea

During the year ended June 1961, the Nelliampathy Tea and Produce Co. Ltd has earned a higher net profit of Rs. 6.05 lakhs, compared with Rs. 3.69 lakhs in the previous year. With Rs. 5,656 brought forward from the previous year, the total comes to Rs. 6.11 lakhs. Out of this the directors have provided Rs. 3 lakhs (against Rs. 1.80 lakhs) for taxation. A sum of Rs. 66,000 (against nil) is transferred to dividend equalisation reserve, and Rs. 700 (against Rs. 800) to reserve for development rebate. The additional dividend for 1959-59 and 1959-60 on the preference shares, according to the Preference Shares (Regulation of Dividends) Act, 1960, absorbs Rs. 6,210. The proposed dividend for 1960-61 on the preference shares at 6 percent (6.69 percent gross) accounts for Rs. 30,105. The proposed ordinary dividend of 15 percent, subject to deduction of tax (against 13 percent) will absorb Rs. 180 lakhs. The balance of Rs. 27,999 is carried forward.

The tea crop for the year has been in excess of the estimate, but it has fallen short of the previous year's crop by 34,391 kilograms. The yield an acre works out to 636 kilograms against 687 kilograms. The cost of production is Rs. 2.75 a kilogram, against an estimate of Rs. 2.70 a kilogram, while the corresponding figures for the previous year were Rs. 2.64 and Rs. 2.58 a kilogram, respectively. The average sale price was Rs. 4.63 a kilogram, against Rs. 4.25 a kilogram. A portion of the crop has been shipped to the U.K. and the U.S.A. as in the previous years. The total tea crop for the year amounted to 427,456 kilograms, against 461,847 kilograms for the previous year. The coffee crop for the year amounted to 39,497 kilograms, against 38,038 kilograms. The directors are considering how best to use the coffee acreage and whether or not it would be advisable to convert a portion of it into cardamom plantation, retaining for coffee a compact and effective acreage. As for cardamom, the additional 300 acres planted in 1955-57 have come into full bearing. During the year, the Company harvested 16,522 kilograms of cardamom which was above the estimate. With the increase in acreage, the current year's crop has been estimated at 20,412 kilograms. The 1961-62 tea crop is estimated at 430,070 kilograms at a cost of Rs. 2.73 a kilogram. The coffee crop is estimated at 50,802 kilograms.

Hemalatha Textiles Profit Up

The directors of the Hemalatha Textiles Ltd have raised the dividend to 8 percent for the year ended June 1961 from the previous year's level of 4½ percent. This is due to the higher profit earned for the year. The net profit amounts to Rs. 4.42 lakhs, against the previous year's Rs. 1.14 lakhs. Adding to the net profit Rs. 4,097 being the profit on sale of assets, the total comes to Rs. 4.46 lakhs. Deducting from this Rs. 17,578 being the bonus relating to the previous year, there is a balance of Rs. 4.29 lakhs. With Rs. 21,617 brought forward from the previous year, the available surplus for appropriation is Rs. 4.50 lakhs. The additional preference dividend amounts to Rs. 6,459. Provision for taxation is allocated Rs. 1.75 lakhs (against nil), plant replacement reserve Rs. 1 lakh (against Rs. 30,000) and development rebate reserve Rs. 80. The preference dividend at 6½ percent (subject to tax), will absorb Rs. 27,969. The proposed ordinary dividend at 8 percent (subject to tax), will absorb Rs. 1.20 lakhs. The balance of Rs. 20,839 is carried forward. The directors state that with the improvement in cotton supplies, trading conditions improved during the year.

Neelamalai Tea Repeats

The Neelamalai Tea and Coffee Estates Ltd has reported an impressive rise in the profit for the year ended June 1961, although the dividend on ordinary shares has been maintained at 7½ percent. The net profit for the year amounts to Rs. 10.98 lakhs, after meeting all expenses and providing Rs. 7.09 lakhs for depreciation. The previous year's net profit was Rs. 6.45 lakhs, after providing Rs. 1.01 lakhs for depreciation. With Rs. 5,225 brought forward from the previous year, the total available for appropriation is Rs. 11.03 lakhs. Out of this, the directors have provided Rs. 4.45 lakhs for taxation. The 5-percent dividend on preference shares for 1960-61 (5½ percent gross) absorbs Rs. 99,000. The proposed ordinary dividend of 7½ percent, subject to deduction of tax (against 7½ percent), will absorb Rs. 2.70 lakhs. A sum of Rs. 1.48 lakhs is transferred to dividend

equalisation reserve and Rs. 1.25 lakhs to general reserve. The balance of Rs. 16,319 is carried forward.

The total tea crop for the year amounted to 7,47,772 kilograms, against 648,727 kilograms. The yield an acre works out to 434 kilograms. The tea crop harvested exceeded the estimate by 273,554 lbs. The total cost of production amounted to Rs. 1.62 a lb, against Rs. 1.75 a lb for the previous year. The lower cost of production is due to the higher yield an acre. The average sale price was Rs. 2.52 a lb, against Rs. 2.54 a lb. The directors' report says that the tea market for high-grown, both in the internal market and outside India, was irregular during the season. The Company continued to ship part of its tea to the U.K. and the U.S.A. The total coffee crop for the year amounted to 5,110.90 cwt, which was substantially higher than the previous year's 1,668.67 cwt, due to favourable weather conditions and good blossom showers. Woolgooly Estate was able to harvest a record crop of 5,110.90 cwt, and the entire crop was delivered to the coffee pool, as usual. The directors say that coffee prices were not satisfactory during the year. For the 1959-60 season, against the valuation of Rs. 2.37 a point, Rs. 2.24 a point had only been realised. For the 1960-61 season, the crop has been valued at Rs. 2 a point, and it is hoped that this price will be realised. Due to the heavy crop during the 1960-61 season, the crop for 1961-62 will be below average and it has been estimated at 102 tonnes. The 1961-62 tea crop has been estimated at 667,200 kilograms.

Spencer Pays the Same

The working of Spencer and Co. Ltd during the year ended June 1961, shows a profit of Rs. 28.42 lakhs before providing for depreciation and taxation, against Rs. 23.65 lakhs in the previous year. Out of this, the directors have provided Rs. 3.89 lakhs (against Rs. 3.56 lakhs) for depreciation and Rs. 10.75 lakhs (against Rs. 8.50 lakhs) for taxation. After making the above provisions, the net profit amounts to Rs. 13.79 lakhs (against Rs. 11.59 lakhs). With Rs. 7.56 lakhs brought forward from the previous year, the total available surplus is Rs. 21.35 lakhs. Out of this, the total dividend on A and B preference shares absorbs Rs. 4.17 lakhs. The interim ordinary dividend of 6 percent, subject to deduction of tax, absorbed Rs. 2.40 lakhs. The proposed final dividend of 12 percent, subject to deduction of tax, will absorb Rs. 4.80 lakhs. The total ordinary dividend has been maintained at 18 percent. A sum of Rs. 40,000 (against Rs. 71,000) has been transferred to development rebate reserve. The balance of Rs. 9.57 lakhs has been carried forward.

The directors say in their report that the dividends on shares of the Park Davis (India) Ltd for the financial years 1959 and 1960 were received during the year and included in the year's accounts. The net dividends, at the rate of 22 percent and 30 percent, respectively, totalled Rs. 3.64 lakhs. Between 30th June, 1961, and 25th November, 1961, the Company paid Rs. 1.25 lakhs being the first call on 50,000 shares in Kelvinator of India Ltd, leaving an uncalled liability of Rs. 2.50 a share. Spencer's general reserve amounts to Rs. 56.05 lakhs and dividend equalisation reserve to Rs. 10 lakhs.

Investment Trust Earns More

During the year ended September 1961, the Investment Trust of India Ltd has earned a profit of Rs. 75,190, against Rs. 46,253. Adding to the profit Rs. 3,897 brought forward from the previous year, the total available for appropriation is Rs. 79,087. From this, the directors have transferred Rs. 10,000 to general reserve. An ordinary dividend of 6 percent (against 5 percent) is recommended, absorbing Rs. 60,000. The balance of Rs. 9,087 is carried forward. The total market value of investments held by Investment Trust as on 30th September, 1961, was about 25 percent higher than the book value. Investments in ordinary shares amount to 93 percent of the total and preference shares and debentures to 7 percent. Industrywise investments of the Company are 26 percent in textiles, 38 percent in plantations and 36 percent in banking, sugar, engineering and other shares.

Rajagiri Rubber Earns More

The working of the Rajagiri Rubber and Produce Co. Ltd during the year ended June 1961, shows a profit of Rs. 9.84 lakhs, against Rs. 7.80 lakhs in the previous year. Adding to the profit Rs. 19,045 brought forward from the previous year and also Rs. 65,000 transferred from dividend equalisation reserve the total available surplus comes to Rs. 10.68 lakhs. From this, provision for taxation gets Rs. 6.54 lakhs (against Rs. 4 lakhs). The interim dividend of 10 percent on ordinary shares, subject to deduction of tax, absorbed Rs. 1.35 lakhs. The proposed final dividend of 10 percent, subject to deduction of tax, on the ordinary shares will

absorb Rs. 1.35 lakhs. The additional dividend for 1959-59 and 1959-60 on the preference shares according to the Preference Shares (Regulation of Dividends) Act, 1960, subject to deduction of tax, accounts for Rs. 3,615. The preference dividend of 6 percent (6.08 percent gross) absorbs Rs. 1.37 lakhs. The balance of Rs. 2,730 is carried forward. The total dividend on ordinary shares is maintained at 20 percent.

The total rubber crop for the year amounted to 798,333 kilograms, against 672,054 kilograms for the previous year. The average estate cost of production was Rs. 1.78 a kilogram, against Rs. 1.85 a kilogram. The average sale price remained unchanged at Rs. 3.30 a kilogram. The 1961-62 rubber crop is estimated at 816,466 kilograms, at an estate cost of Rs. 1.71 a kilogram. In accordance with the Preference Shares (Regulation of Dividends) Act, 1960, the directors have decided to revise the rate of preference dividend to 6.8 percent. Accordingly, they are paying this dividend for 1960-61.

Better Results from Model Mills

The working of the Model Mills Nagpur Ltd for the year ended June 1961, shows considerable improvement over the previous accounting period, 18th July, 1959 to 30th June, 1960. Sales have recorded an impressive rise from Rs. 1.18 crores to Rs. 3.20 crores and the closing stock is down by Rs. 5.28 lakhs. The gross profit is up from Rs. 8.12 lakhs to Rs. 29.54 lakhs. After providing full depreciation of Rs. 3.49 lakhs (against Rs. 2.15 lakhs) and a further amount of Rs. 30,156, being depreciation short provided in the previous year, the profit amounts to Rs. 26.15 lakhs, against Rs. 5.97 lakhs. After adding 16,299 which is an excess provision for implementing the Central Wage Board increases in 1959-60 written back and Rs. 97,088 brought in, the profit stands at Rs. 27.28 lakhs. Appropriations include Rs. 4.32 lakhs for *ex gratia* payments to employees and Rs. 1.80 lakhs for interest on debentures issued against cash and as collateral security by the old management. The balance of Rs. 21.45 lakhs has been carried forward in order to increase the working capital and to lower the adverse balance of the adjustment account. The Authorised Controller states in his report that additions to capital assets during the year amounted to Rs. 4.18 lakhs, including Rs. 1.67 lakhs being capital work in progress. The work of humidification and ventilation of the spinning department is expected to be completed shortly. This will considerably improve working conditions. The Controller's report adds that the petition filed by Gannon Dunkerly and others for winding up the Company is pending before the High Court. The Controller hopes to present shortly to the High Court a scheme for settling the liabilities of the old Company. The Rs. 250-paid share of Model Mills, which were sold down to a low of Rs. 35 early in the year, is currently quoted around Rs. 117.

Barium Chemicals Project

The Barium Chemicals Ltd proposes to set up a factory in Tirupur in south India for manufacturing barium salts like sulphide, chloride, nitrate, carbonate, etcetera. The project, which is claimed to be the first of its kind in India, is estimated to cost about Rs. 50 lakhs. The Company has secured the technical collaboration of L. A. Mitchell and Company of the U.K., which will also supply the plant and machinery. The plant is expected to go into production early in 1963. When in full production, it will effect considerable saving in foreign exchange. Annual imports of barium salts are placed around Rs. 28 lakhs. Since all the raw materials required for manufacturing barium salts are available within the country, the project does not involve any recurring foreign exchange expenditure.

The Tea Auction Centenary

The Calcutta tea auction centenary was celebrated at an attractive function attended by Mr. Nehru last Saturday. Buyers' response at the ceremonial auction held to raise money for the Prime Minister's National Relief Fund was liberal; the proceeds, totalling Rs. 138,000, exceeded all expectations. The Prime Minister distributed small replicas of tea chests to each of the successful bidders. Addressing the large gathering at the auction, Mr. G. A. Whitaker, chairman, said that the Calcutta Tea Traders Association had decided "there could be no better way of marking the centenary than by raising a sum of money, to be donated to the Prime Minister's National Relief Fund." All sections of the trade have promised their support, and Mr. Whitaker felt certain that the target of Rs. 3 lakhs set for this purpose would be achieved, if not exceeded. It is proposed to raise the sum in two ways: first, by the auction of donated tea, which was held last Saturday. (Mr. Whitaker pointed out that the response to the Association's request for donating tea was so

tremendous that it became necessary to draw for "the honour of being included in the Special Centenary Catalogue".) Secondly, a special charity auction will be held on 18th December, at which sellers, buyers and brokers have been invited to donate to the Fund at the rate of Re. 1 a chest of tea. Inviting the Prime Minister to lay the foundation stone of the new auction room at 8, Mission Row, which is to be built in an up-to-date style, Mr. Whitaker recalled that the first public auction in December 1861 in Calcutta was held under the auspices of R. Thomas and Company, at a place not far from where the ceremonial auction was being held. The second public auction was held at 8, Mission Row, and the sales have continued there ever since. But the existing auction room has become too small for present-day requirements, so a new one is necessary.

A total of seven lots were offered at the ceremonial auction—one each by the broking firms of J. Thomas and Company, Carritt Moran and Company, W. S. Cresswell and Company, A. W. Figgis and Company, Sudhir Chatterjee and Company, S. K. Chakraverty and Company and Tea Brokers Private Ltd. The highest bid of Rs. 35,000 for the first lot, the auction for which was conducted by J. Thomas and Company, came from Davenport and Company, whose 75th foundation anniversary coincided with the centenary of the Calcutta tea auctions. Davenport is a well-known agency house, which was founded in 1886 as a company to manage a group of concerns—seven tea companies and the Behar Tramways Company Ltd—in succession to Lloyd and Company Ltd. One of the largest group of tea gardens managed by Davenport is Hasimara Industries Ltd. Among the tea lots ceremonially auctioned last Saturday, six chests of golden flowery orange pekoe came from Hasimara.

Competition in Gunny Exports

In his address from the chair at the annual general meeting of the Gunny Trades Association in Calcutta last week, Dr. B. P. Kedia emphasised the increasing danger of competition to India's jute goods industry from other manufacturing countries, especially Pakistan, and from substitute packaging materials. The crisis arising from the fibre shortage has passed, but export prospects have not improved correspondingly. Pakistan has become a large exporter of sacking, so Indian sacking exports have been falling. A large slice of the Australian business in cornsacks has been lost to Pakistan, and she has also gained a foothold in Cuba, Africa, Burma and other markets which were once the sole preserves of the Indian industry. Pakistan has abundant, cheap and better quality fibre, which, together with the relatively low wages and the export bonus scheme, give her an enormous cost advantage. She now has 8,000 looms in operation, and is planning to install an additional 6,000 looms. Dr. Kedia suggested that the Indian authorities should concentrate their attention on three main problems. Firstly, self-sufficiency in raw jute should be achieved by raising the yield rather than the acreage. Secondly, fibre prices should be stabilised by operating the buffer stock scheme. Thirdly, an export bonus scheme of the sort now in force in Pakistan should be introduced.

U.S. Business Conditions

The reports on U.S. business in October and early November suggest that the "lull" is over and that the economy is back on an upward path, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Production and trade, hampered by strikes and adverse weather in September, are probing ahead again, slowly but on a board front. Detroit is encouraged by the favourable initial reception of the new 1962 model passenger cars and is hopeful that its sales next year will exceed 6½ million cars. If realised, this would make 1962 the second best year in the industry's history. Merchants generally have been cheered by apparent revival of consumers' willingness to spend. Government outlays continue on a rising course, although business men, held back by the pinch on profit margins and the abundance of present capacity, remain cautious in scheduling additions to outlays for plant and equipment. Industrial production, as measured by the Federal Reserve index (seasonally adjusted, 1957 equals 100), which had dipped to 111.5 in September under the influence of the General Motors strike and hurricane Carla, recovered in October to 113, the level recorded for August. Strikes incident to the negotiation of new wage contracts had held back motor-vehicle production in early October, but in November the industry was able to push production close to 30,000 cars, the highest monthly total since March 1960. Other consumer goods, non-durable as well as durable, scored gains in October and also apparently in November. Helped by foreign orders,

production of business capital equipment set a record in October.

The flow of new orders at steel mills is picking up, as officials of steel-consuming industries ponder the possibility of another strike when the present steel wage contract expires in June 1962. The steel companies report active enquiries for metal to be delivered early next year. It seems clear that the first half of 1962 will be a period of accelerated steel production as demands for inventory building are super-imposed upon heavy consumption requirements. Steel magazine estimates that as much as 9 million tons of finished steel—nearly one-fifth of all steel shipments forecast for the first half of 1962—will go to build inventories. The other aspect of the matter is that some of this first-half business will be borrowed from the third quarter of 1962 when, strike or no strike, a let-up in steel activity would seem foreordained. There could be a way out of this distortion of the prospective 1962 business pattern, through agreement on a steel contract months ahead of termination date, but this kind of economic statesmanship has had no precedent in steel wage negotiations. Anticipation of increased demand for steel has not yet had any visible influence on mill production. The peak output for the year was reached in the last week of September, equivalent to 111 million tons a year. Since then, pourings have tended to decline

NOTICE

With the weekly issue of CAPITAL which is to appear on 21st December, it is proposed to issue a supplement of approximately 160 pages the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries such as jute, tea, cotton textiles and sugar, the Review will contain exclusive articles by well-known authors. Sir Theodore Gregory will write about the third five year plan, and Mr. C. D. Deshmukh will discuss the problems of educational progress in India. Mr. G. L. Mehta will describe the activities of the Indian Investment Centre; Mr. G. D. Birla will show how high production costs are retarding Indian exports; and Professor B. R. Shenoy will examine the implications of deficit financing in the third plan. Mr. Geoffrey Tyson will write about Indian business in the U.K., and Dr. P. S. Lokanathan will discuss the defects of plan models for economic growth. Professor C. N. Vakil and Mr. A. N. Bhasat will show how India's exports are likely to be affected if Britain joins the European Common Market, while Mr. Neil McInnes will discuss how capitalism is adjusting itself to meet the communist challenge. Particular aspects of the third plan will be discussed in detail, Professor P. C. Jain writing on the problem of raising resources, Mr. G. M. Laud on how socialist planning has hampered the growth of the private sector and Professor R. J. Taraporevala on reforms in the tax structure. There will be an article on road transport by Mr. M. R. Masani, on the Durgapur steel project by Mr. D. J. Bell, and on advertising by Mr. G. H. Gates-Reed. Mrs. M. Sui will write about the recent trends in labour relations, while Dr. N. Das will discuss the concept of fair wages for industrial workers. Other articles will review the past year's experience in such sectors of the Indian economy as life insurance, general insurance, banking, the stock markets and the freight markets. The supplement will be distributed free to all registered subscribers. Additional copies at Rs. 5 each, plus postage, may be obtained from the Manager, Capital, 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

moderately under seasonal influences, although it now seems likely that total production for the year will fall only nominally short of the 99 million tons in 1960.

CORRESPONDENCE

SPOON-FEEDING CO-OPERATIVE BANKS

(TO THE EDITOR OF "CAPITAL")

Sir,

I have read with interest your leader "Spoon-feeding Co-operative Banks" in the issue of Capital dated 30th November, 1961. Broadly speaking, it is true as you have surmised, that liberal credit supplies coming from the Reserve Bank have prevented the co-operative institutions from exerting themselves to increase deposits. But there is also another factor which, to a great extent seems responsible for making the co-operative institutions look forward to credit supplies from the Reserve Bank rather than from the general public. It is the shape of the co-operative structure itself. This structure is three-tiered, with the State co-operative bank at the apex, the central co-operative banks at the intermediate stage and the primary societies at the base level. In the result, the co-operative institutions have to look for sources of borrowing at a rate cheaper than what obtains in the open market, in order to enable the institutions

at each level to earn a reasonable margin to cover their working expenses and at the same time at least a small margin of profit to build up reserves, if not to give dividends to the shareholders. By force of circumstances, therefore, they have to fall back upon the Reserve Bank of India, which supplies credit to them for agricultural purposes at 2 percent below Bank rate.

From the banking point of view, however, it is necessary that they should improve their deposit pattern. This they can only do, as you have suggested, by competing with other financial institutions, including commercial banks, and by making their deposit rate structure more attractive than at present. In order to do so, they will also have to increase their present lending rate, which will mean that the burden on the ultimate borrower—the agriculturist in the rural areas—will be heavier than what it is now. Political and public opinion, for obvious reasons, will in that case turn against the co-operative institutions, thereby making their existence rather precarious. This is problem No. 1 before the co-operative banking institutions, to which no satisfactory solution has yet been offered from any quarter. Could you or any of your knowledgeable readers kindly suggest any?

Yours etcetera,

S. C. SEN GUPTA

Secretary,

West Bengal Provincial Co-operative Bank Ltd.

Calcutta, 1st December.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipts of the following donations:

- Rs. 73 Staff of Octavius Steel and Co. Ltd.
Rs. 57 Staff of the Imperial Tobacco Co. of India Ltd, Bangalore.
Rs. 30 Sinclair and Co.
Rs. 25 From a sincere admirer in fond memory of the late Mrs. Homai Mehta, M.B.E., a lover of children and a lady who worked unselfishly for their welfare.
Rs. 20 G.B.
Rs. 15 J.W.B.
Rs. 10 each Central News Agency, J.H.H.R.
Total Rs. 215
Previously acknowledged Rs. 3,685.50
Grand Total Rs. 3,900.50.

THE LONDON GOLD RESERVE

ALL who are interested in fixity of sterling exchange will be pleased to see, from a recent announcement in the Government Gazette, that £1,000,000 in gold was transferred on the 25th November from the Paper Currency Reserve to the Gold Reserve, and that the latter fund now amounts to £3,440,544. The gold and sterling securities in the Gold Reserve are a more reliable check to a fall in exchange, than the gold in the Paper Currency Reserve, because the former will be kept solely for use in checking a fall in exchange, whereas the sovereigns in the Paper Currency Reserve are available for the use of goldsmiths, hoarders, for circulation and for other objects, all of which exercise no influence whatever upon the course of exchange. Besides the Gold Reserve fund yields interest when invested in sterling securities, and it is difficult to understand why our financial authorities have been so dilatory in reaping the double benefit derived from the transfer of gold from the one reserve to the other. Sir Edward Law cannot be blind to the advantages of the London Gold Reserve which he has created, and we can only infer that some wisacre in the India Office objected to the prompt transfer of the gold on the ground that the Exchange bankers will place greater confidence in a reserve of which the amount is published weekly, than in a reserve of which the magnitude is known only to Government. This excuse for delay has now ceased to be valid, as, in compliance with a request of the Bengal Chamber of Commerce, full particulars of both reserves will be published regularly in future and the public will be in a position to see that, just as each addition to the paper currency is promptly covered by an addition to the Paper Currency Reserve, so each addition to the rupee currency will be promptly supported by an addition to the Gold Reserve, and it will be their duty to guard against any violation in future of the recommendations in this respect by the Indian Currency Committee.

A Ditcher's Diary

THIS YEAR'S ASSOCHAM MEETING MAY NOT GO DOWN in history as memorable for the excellence of its oratorical performances, but it will certainly be remembered by me as the most good humoured I have attended for many a year. The speech given by the President, Mr. N. Stenhouse, must somehow have met with far more than the Prime Minister's customary measure of approval. That is perhaps not surprising because, apart from being among the most workmanlike on record, it continued successfully the tradition which has been developing in recent years of dealing with detail rather than principle. It was also relatively devoid of any tinge of the neurotic anxiety which has occasionally—though not without good reason—crept into the addresses of his predecessors, and which always seems to put the Government's back up however justified it might be. I am not myself an advocate of elaborate exercises in diplomacy made in public, but no doubt a good case can be made out for this approach on the part of business men today who, after all, are among the chief beneficiaries of the inflationary effects of Government economic policy. And it is especially to be recommended when dealing with such unpredictable personalities as Mr. Nehru. The Prime Minister seemed in rare good spirits, which was something I did not suspect when he first approached the microphone and revealed that the cold and bad throat he brought back from the United States had not yet left him. I suppose it was a measure of his benevolent good humour that he refused to spare himself more. I cannot claim that I understood all he said—which gives me food for thought because he delivered much the same speech later in the afternoon before an audience whose powers of appreciation I would not have expected to be as high as mine. But his words did reveal a commendable state of self-questioning on all important aspects of Government policy: for once Mr. Nehru and I seemed to share a similar set of doubts. What surprised me more is that we appear to have the same ideas about the importance of concentrating on human material in the race for development. I hope this expression of the Prime Minister's mind heralds a change in emphasis from socialist to humanist planning; that way progress would be more rapid. But was this really what Mr. Nehru meant when he talked about education and the importance of changing age-old habits and ways of thinking? Quite frankly I do not know: it is always so difficult to understand exactly what the Prime Minister does mean. Better to console myself that for once at a meeting of important business men, he was in a mood to spare a scolding.

IT HAS OFTEN SEEMED TO ME THAT, AMONG ALL OF India's political Parties, the Congress alone has a vested interest in seeing to it that no agreement is reached on the question of using radio facilities for election broadcasts. It is the Party in power, and many of its leaders are Central or State Ministers; as such, they are in the fortunate position of being able to exploit the Government's propaganda organs for the constant, sometimes direct, benefit of themselves and their Party. Why, therefore, should the Congress facilitate an accord which would open a powerful medium like broadcasting

for use by rival Parties? Dr. Keskar has said, rather grudgingly it appears, that the Government has no objection "in principle" to election broadcasts over All India Radio. But the formula which the Election Commission has suggested—that the time allowed to a particular Party should depend on how many seats it has in the Lok Sabha or the State Assembly, and on how many it intends to fight for—strikes me as rather discriminatory; and I am not surprised that the opposition Parties are insisting that it be changed. It seems fairly obvious that under this formula, the spokesmen of the Congress would get more time on the radio than anybody else, when, I should have thought, there was a fair case for giving them the least. The mere fact that a Party has won the largest number of seats in the last general election, and has the financial and other resources for putting up the largest number of candidates for the coming one, is no reason for adding to its already substantial advantages. For building a strong and healthy opposition, it is, on the contrary, necessary to equalise the terms of competition for votes, and, in this context, that means that the time fixed for election broadcasts should be divided equally between all the recognised Parties. I do not accept the argument that a Party with a relatively small following cannot be given the same facilities as another with a relatively big one: the democratic assumption after all is that voters and Parties, once they are recognised as having the requisite qualifications, should all be equal before the ballot-box. If A.I.R. had been more independent than we know it to be, it might conceivably have been entrusted with the task of allocating judiciously the time available for electioneering over the radio. But since it is not, I can see no fairer alternative than to give all Parties an equal chance over what is after all public, not Congress, property.

SOMEWHERE, I RECENTLY SAW A DERISIVE REFERENCE to books mostly in English and written by Englishmen on India. Oh yes, that was Mr. Nirad C. Chaudhuri pointing out the inadequacy of Mr. Nehru's discovery of India. This, surely, is bile. I seem to remember that in his *Autobiography* Mr. Chaudhuri says somewhere that his direct contacts with men were few, that his knowledge of most men and affairs had been derived from the reading of books. He does not, therefore, claim that real knowledge, whatever that may be, is gained only through experience. Is there, then, something wrong with the books on India written by Englishmen? The British Council's excellent exhibition of British books on India is, I submit, the complete answer to Mr. Chaudhuri's summary dismissal of an immense library, mostly the labour of love. Little did I know, before seeing the exhibition, that so many British administrators had taken so much scholastic interest in the history, culture, flora and fauna, art and so many other endeavours of this country and its gifted people. The contribution of the Germans to Indology is said to be considerable. So it may be. But the British administrators came into daily contact with a number of people not always easy to understand; and while the less

earnest administrators concerned themselves only with local problems as they arose, their more serious colleagues sought a glimpse of the background that made contemporary India what she was. I have occasionally consulted an old *District Gazetteer* or two. Always mines of information, they were frequently readable; and I have heard Indian friends complain of their virtual discontinuance. I will not accept the plea that the administration today is no longer at that leisurely pace, that today's district officers would write comparable works if only they had the time. They simply do not have the same range of interests, the same curiosity, the same respect for the unknown. With the disappearance of British rule has ended the traditional estrangement between the British administrator and the British merchant; but I think I am right in believing that fewer business men wrote than administrators. (Although I can easily think of exceptions; Sir Paul Benthall's work on trees around Calcutta, for instance.) As I walked through the fascinating exhibition I thought how much has been written on the Indo-British connection. I immediately wondered: how much more remains to be written.

NO EXPERIENCED JOURNALIST WRITES DISPARAGINGLY of other people's misprints. Your printer sees to it that your sarcasm soon comes home to roost. But in a contemporary the other day I discovered two interesting things in the same not very long item. Some journalist in a "free" African country—it must have been Ghana—had been accused of sending "tendacious" and "abnoxious" dispatches. "Tendacious", I take it, is an unwitting invention, combining "mendacious" and "tendentious". "Abnoxious", similarly, may be the child of "abnormal" and "obnoxious". Whatever the Fowlers may think, I feel that the English language has use for these two new words. The possibilities of exploration on these lines seem infinite. "Baggage" and "luggage" I frequently find pluralised. Why not "buggage" for a change? James Joyce was, of course, a master of such portmanteau words; and I was interested to read Paul Jennings's recent piece in the *Observer*: an exchange between Joyce and his private secretary for some time, none other than Samuel Beckett, the celebrated author of *Waiting for Godot*. Jennings's inventions should amuse fellow-scribes, for he attributes to Joyce such coinages as herald-tribulation, chronicletimes, mirrormail, and the editor of the defunct *Horizon* becomes Cyril con a lea. What about the editorial-writers? Jennings thinks Lord Beaverbrook might call them liederwriters. We had earlier heard of such papers as the *Daily Wail* and the *Sunday Depress*. (I am fully conscious of the possibilities on *Capital* or even "The Ditcher"; but the nastier variations you must think up for yourself with no aid from me.) The word game is not all childish either. Think of the platitudes clever politicians reel off by the hundred to mean things very different from, sometimes contrary to, their accepted connotations. There is not a little of this in journalism, especially in that of the anonymous kind. And, of course, the greatest enemy of words is their inflation; the very currency gets debased beyond redemption. This too is frequently deliberate. When the communists speak of New or People's Democracies they deceive few; but the use of the terms does incalculable damage to the genuine article of democracy.

THE DECCAN SUGAR AND ABKHARI COMPANY LIMITED

CHAIRMAN, MR. C. R. SRINIVASAN'S REVIEW

Before commencing the proceedings of the Sixty-fifth Annual General Meeting of the Shareholders of the Company held on 27th November, 1961, Mr. C. R. Srinivasan, Chairman, made the following statement and requested Shareholders to observe 2 minutes silence in memory of Mr. H. I. Wunfor, a past Chairman and Director of the Company.

"Before commencing the proceedings of the meeting, it is my melancholy duty to convey to you a most distressing piece of news. I refer to the untimely and altogether unexpected death of Mr. H. I. Wunfor on Friday morning. He arrived from England for consultations on many matters of business on Thursday noon. I found him in very good spirits and I was talking to him till 4 p.m. Next morning I heard the tragic news that he had died in his sleep. I believe all of you know him or heard of him as one of the prime architects of the new deal in the Parry Group of Companies. Personally, I have moved with him in close intimacy for the last 25 years and with every passing year our friendship has found fresh points of contact and concord. He was a friend of this country in the fullest sense of the word and had faith abundant in its destiny. It almost looks as though he came to die in the land of his adoption where he had spent the greater part of his fruitful life. May God rest his soul in peace. I will ask you to stand up and observe 2 minutes silence in memory of a great Britisher who has served this country as well as any Indian could have, and in doing so, served his own country also."

In his review of the working of the Company the Chairman said:

"It gives me pleasure to welcome you to the Sixty-fifth Annual General Meeting of this Company."

The Accounts for the year ended 31st May 1961 and the Report of the Directors thereon have been in your hands for the statutory period and with your permission I shall take them as read.

The results contained therein reflect the position that was forecast in my statement at the last Annual General Meeting, namely that stocks at our factories would build up due to the increase in the all-India sugar production. Releases of sugar for sale by Government were severely restricted and this accounts for the drop in turnover of not less than Rs. 86 lakhs compared with the previous year.

Fall in Net Profit

This is the major reason for the reduction of Rs. 8.50 lakhs in our Net Profit before Taxation. I

would mention that although the Company received a bonus in the shape of a rebate of Excise Duty of some Rs. 4 lakhs for increased production, this was more than offset by the contributions of not less than Rs. 6.50 lakhs that had to be made towards Sugar Export losses.

Thus, bearing in mind the need to conserve the resources of the Company, your Directors have been reluctantly forced to recommend a lower final dividend of 13½% for the year under review as against 18½% paid for the last year, thus making the total for the year 21% against 25½% last year.

In other respects I consider that the printed Accounts and the Notes thereon are self-explanatory and do not require further specific comment; but I shall, of course, welcome any questions thereon at the conclusion of my speech.

As you may have seen from the Report before you, the quantity of cane crushed and sugar produced during the year at Samalkot and Pugalur constitute a record for both factories. While this achievement, by itself, is gratifying, the immediate benefit was, as I have just said largely lost by reason of smaller releases of sugar from both factories. The policy of the Government of India is to release every month a fixed percentage of the production of each factory, the total quantity released being the estimated all-India consumption for the month, excluding exports for which special releases are made from time to time. The effect of this policy is to make available in the States of U.P. and Bihar a much larger quantity than can be consumed in those States. Under controlled conditions, much of this surplus was allotted to other States including Madras and Kerala in spite of the fact that the Southern Region as a whole is self-sufficient and has no need to import anything like the quantities allotted by Government during the control period.

Now that decontrol has come in the wake of over-production, with uncertain prospects as to the size of exports, we are entering a period of unstable prices and selling pressure. Already prices have come down by about Rs. 20 per tonne. We can only hope that they will become stabilised at a level which would not have serious repercussions on all sugar manufacturers.

Rehabilitation of Samalkot Factory

The rehabilitation and consolidation of Samalkot Factory to which I referred in my speech last year

is proceeding. The suppliers of the fourth mill are expecting shortly the licence to import the foreign components. All going well, it is hoped to instal the mill in time for the 1963/64 season.

I stated in my speech last year that orders had been placed for almost all the equipment required for the expansion of Pugalur Factory from 1,000 tons to 1,250 tons cane per day, at an estimated cost of between Rs. 25 lakhs and Rs. 30 lakhs. The advantages of expansion need no emphasis. A lower cost of manufacture from higher output enhances the ability of a unit to withstand competition in times of abundance of supplies, but considering the position in which the industry is today, it would be wise to review decisions taken under somewhat different conditions a year or so ago. Your Directors, after careful consideration, have come to the conclusion that it would do no harm to go a little slow with the expansion scheme. Accordingly, the proposed extension originally scheduled to be completed before the 1962/63 season will be delayed probably by another year. These considerations however do not apply to the Samalkot factory where the more urgent need is rehabilitation and not expansion.

An interesting development in connection with Pugalur Factory is an agreement made with Seshasayee Paper & Boards Limited whereby they will supply the factory with two oil-fired boilers and the necessary oil fuel to burn in them, and in return take all the bagasse produced in the factory for the manufacture of paper in their new factory near Erode. No capital expenditure will be incurred by the Company, and while no monetary remuneration will be received for the bagasse, it is hoped that the oil-fired boilers will provide steadier working conditions with a constant steam pressure, thus resulting in slightly reduced working costs. In the interests of the industrial development of the country this is a welcome step and I am sure our co-operation will be appreciated. The present position is that an application for an import licence for the two boilers made by Seshasayee Paper & Boards Limited is pending with the Government of India.

Price-linking Formula

The Tariff Commission's Report on the Price Linking Formula is still under consideration of the Government of India. We continue to be in the unhappy position of not knowing the final price for cane for the years 1958/59, 1959/60 and 1960/61. Reasonable provision has been made in the Accounts for these years, and some interim payments have been made to the growers.

The distillery at Samalkot is not doing very well. Our main market is West Bengal where competition is keen. To add to our difficulties, the Government of India have fixed a very low ex-distillery price under the Ethyl Alcohol Price Control Order 1961. If we sold at this price, we would be making a considerable loss. Representations have been made to Government to consider the question of price for smaller distilleries after an examination of the actual costs. It is to be hoped that the Price Control Order will not be enforced in the meantime.

Sales of Carbonic Acid Gas were not unsatisfactory but, here again, there is severe competition in a restricted field. Nevertheless, this section of the factory makes a useful contribution to Overheads.

Our relations with Labour and Staff during the course of the year have remained satisfactory. The Sugar Wage Board recommendations have been published and accepted by Government, and preliminary arrangements have now been made for negotiations with Staff and Labour, both at Samalkot and Pugalur, with a view to arriving at a long-term agreement on future terms of service. It is hoped we shall be able to conclude a settlement with the Unions on suitable lines.

State of Over-production

Now you will expect me to say something about future prospects. In my speech a year last year I stressed that a state of over-production was being reached and, in the event, the present position is worse than I envisaged at that time.

The sugar year 1960/61 started with a carry forward of 5½ lakh tons which is generous but not unduly so. 5 lakh tons is generally considered the carry forward required to take care of any unexpected shortfall in production. Production for the year 1960/61 reached the record figure of only just short of 30 lakh tons against which internal consumption has amounted to only 21 lakh tons and in addition 2.7 lakh tons have been, or are to be, exported by the 31st December, 1961.

You will see, therefore that we started the current sugar year 1961/62 with a stock of 11.8 lakh tons and, 6.8 lakh tons surplus. As you all know, Government is trying to adjust the position by stipulating that factories shall only produce ninety per cent of their highest production in the preceding two years; various exemptions however are being made in favour of new factories and those with a small output and minimum production in 1959/60 and 1960/61. In the result I therefore fear that we must look forward to a production of very nearly 30 lakh tons again during the current year. I sounded a note of warning last year when I said that the bulk of next year's sugar crop is already in the ground. It is very difficult to see how factories which have registered cane for their full requirements are going to deal with their excess production. In the case of our two factories, I am glad to say that as production last year reached record figures, we are unlikely to exceed the ninety per cent target this year, and I therefore, hope that the question of payment of the penal excise duty will not arise. Other factories are not so fortunately placed and there must be considerable hardship in those areas where there is no jaggery industry to take up the surplus if factories refuse to crush all the cane offered. Even if the surplus cane is used to produce jaggery, or khandsari sugar, this is likely to be offered at give away prices which Government have still not the offake of factory sugar. Government have still not made any announcement regarding sugar cane prices for the 1962/63 season, and with all the earnestness I can command I would urge Government to set at rest without delay the anxiety of growers and millers.

Ministers have admitted in Parliament that the current sugarcane price is attractive compared with the realization from other crops, and if it were not, how is the increase of over 8 lakhs acres under sugarcane during the last two seasons, mostly in U.P., to be explained? The simplest and most efficacious way of reducing the production of sugar in the country is an adjustment of cane prices by an emphasis on payment for quality, and I take this opportunity of pleading once again for a floor price which will cover growers' out-of-pocket expenses, the balance to be paid on the basis of quality. This I consider one of the most important aspects of the problem, both to meet the immediate situation and to build up an industry which may stand a chance of competing in the world markets in the future. As long as cane is paid for on the basis of weight irrespective of quality, I fear that India will be priced out of the export market.

Other steps which might be taken to remedy the situation are to cancel a number of licences for additional factories already granted, but for which no effective steps have yet been taken. Government have announced that they will not license any further new factories, but this does not go far enough. There may be difficulties in the way of cancelling licences already granted, but it is fair to allow factories to go into production with little chance of operating profitably, to the detriment of the interests of shareholders. There is general agreement that the demand for sugar in the country must be stimulated to mop up the surplus production and there is no reason why this should not be done. The average annual consumption per capita of the population in India is 5.5 kg. compared with 47 kg. in U.S.A. and 55 kg. in U.K. The significant fact is that the annual consumption in 1957 was 20 lakh tons and in that year the then Finance Minister doubled the excise duty on sugar with a view, as he said, to restrict consumption and to make sugar available for export. How well he succeeded in the first part of his intention is shown in the offtake for subsequent years.

1958	...	20.5 lakh tons
1959	...	20.7 lakh tons
1960	...	20.2 lakh tons
1961	...	21.0 lakh tons (estimated)

It is significant that offtake should have remained static over this period despite the increase in the population, and surely this is evidence enough that the decision of 1957 should be reversed and the excise duty reduced by fifty per cent. Our people want sugar, but at a price they can afford to pay.

Exporting Surplus Production

There has been much talk about exporting our surplus production and earning valuable foreign exchange, but even if the Government were to do this, and the growers are prepared to subsidize exports, such exports can only absorb a small part of India's surplus production. India has become a member of the International Sugar Agreement, a step which was necessary to enable her to take advantage of the American quota, and her rights under this Agreement are not likely to exceed 1,50,000 tons per annum. What our quota will be from America this year is anyone's guess, but we well know what happened to the initial quota of 2,25,000 tons which, overnight, was cut by 50,000 tons. It would be wise to realise that U.S.A. has her own problems and we cannot expect her to accommodate us at all costs. Efforts are also being made for a quota for supply to Great Britain under the Commonwealth Sugar Agreement, but the latest information is that this is not likely to materialise. It is, therefore, unlikely that India's exports will reach 5,00,000 tons, and this only at a loss of rebate of excise duty, cane cess, etc. We doubtless need foreign exchange, but some may ask whether it cannot be bought at too high a price.

Andhra State is already surplus in the production of sugar and Madras State is approaching that condition. As long as Government maintain the system of monthly releases adjusted to the approximate offtake of the markets, I think a price level can be held which will give a reasonable margin of profit, but I would be failing in my duty if I did not warn you that the industry is passing through a most difficult time and I wonder if we have seen the worst yet. Stocks are moving, but not as fast as they are accumulating, and this is a situation which cannot go on indefinitely. There are two difficulties to be faced, one, financial; and the other, physical. By the time our two factories stop crushing in April next, we expect to be holding stocks amounting to 23,000 tons and valued at Rs. 1.84 crores. That is a heavy enough burden to carry financially. Any further addition will be a severe strain. The purely physical problem needs no explanation from me. No Company can go on building godowns indefinitely to store unwanted stocks, nor does sugar quality improve through storage. I therefore, fear that a further and probably more drastic restriction of production may have to be enforced during the 1962/63 season.

In my opinion, the crisis in the industry, and it is a crisis although the Food Minister denied this at the last annual general meeting of the Indian Sugar Mills Association, cannot be met by exports. Exports can only be made at a substantial loss which the industry cannot afford to bear. The solution lies in increasing national consumption, and this can be done by paying for cane on the basis of quality, and also reducing the excise duty on sugar which will make sugar available at cheaper rates. Should consumption then rise faster than expected the capacity is available, and it should be easy to match increased consumption with increased production.

New Outlet

And now, may I strike a personal note before I close. I joined the Board of this Company in 1943 and have functioned as its Chairman from 1956. The Company is in fine fettle and during the past few years in particular, shareholders have gathered a rich harvest in dividends. At the moment the outlook may not be quite so promising, but there is no need to take a pessimistic view. I have indicated some of the correctives the situation calls for and I have no doubt Government will give serious thought to the problems posed, once the General Elections in the offing are over. The malaise affects the whole industry and not a particular unit and sugar represents too large an investment in our national economy to be ignored. We have been dealing with problems of sugar so far only in terms of internal and external

consumption as edible sugar—sugar as a detergent is coming into the picture and if expectations are not belied, quite a new outlet for sugar may perhaps enter our calculations. So let us wait and hope for the best; and in that confident hope let me bid you farewell. This is the last meeting of the general body that I shall preside over. A few weeks back when I had occasion to address the shareholders of Parrys Confectionery Limited, I told them that I have decided to retire from all active work and from the Boards of all Companies I have been associated with, as soon as convenient, for reasons of health. I regret I have to say the same thing to you. I have carried a heavy burden on my shoulders these fifty years and need rest. I am sure you will not begrudge it. My best wishes are with the companies I have lived and worked for—God bless you."

The Report and Accounts for the year ended 31st May 1961 were adopted and a final dividend for that year at the rate of 13.5%, subject to deduction of tax, on the Company's Ordinary Share Capital was declared payable on the 28th November 1961.

The retiring Directors, Sir T. S. Venkataraman and Kumararajah M.A.M. Muthiah Chettiar of Chettinad, were re-elected and the retiring Auditors, Messrs. Lovelock and Lewes, were re-appointed.

Mr. G. N. Noel-Tod, in proposing a vote of thanks to the Chairman, said:

"At this Meeting, which Mr. Srinivasan has said is the last over which he will preside as Chairman, it is fitting that I, who have been associated with him on the Board since 1954, should propose a vote of thanks.

It is difficult for me to realise that my association with Mr. Srinivasan in this Company will before long

terminate. It has been a great experience for me to have worked for these years with, and under the guidance of, Mr. Srinivasan.

Mr. Srinivasan has pointed out that of recent years Shareholders have consistently enjoyed good dividends and I can assure you that the build-up of the Company to its present level of prosperity has been, in no small measure, due to Mr. Srinivasan's leadership as Chairman of the Board. It would be idle for me to attempt to disguise the fact that there have in the past been differences of opinion between the Board and certain Shareholders. Such differences of opinion must inevitably arise from time to time, and do in fact arise in other companies. Nor in this Company are they unique to the time of Mr. Srinivasan's Chairmanship. I remember well the apprehensions of Shareholders as to the conduct of the affairs of the Company by the Board and the Managing Agents in the early fifties when, due to disease in the cane, the Pugalur factory had temporarily to be closed. Consistently, however, this Board has always had as its objective the achievement of maximum prosperity for the Company. Equally, I do not doubt that Shareholders have the same objective, the differences of opinion relate only to the methods adopted to achieve this end.

I would like on your behalf to thank Mr. Srinivasan for his services to the Company over the past 18 years and to wish him many happy years in retirement."

On behalf of the Shareholders, Mr. S. Srinivasan Iyer, desired it to be recorded that the Company greatly appreciated the services of the Chairman and this was carried with acclamation.

N.B.—This does not purport to be a report of the proceedings of the Annual General Meeting.

MR. AL FOIL WRAPS CONFECTIONS TO PERFECTION

"Why not say it 'sweetly' Sir," said Mr. Foil helping out the worried gentleman. "Delicious chocolates and toffees to tempt sweet sixteen, soft candies to please Grand-Ma and ice-cream or biscuits to delight the kids at home... your choice in sweet presents is wide. Only be sure that they are all foil wrapped. Confectionery protected by aluminium foil looks attractive and tastes wonderful as only fresh sweetmeats do... because foil packing keeps in the tasty goodness while keeping out dirt, damp and dangerous contamination."

Long and extensive experience as Manufacturers of Aluminium Foils for packing goods in Cigarette, Pharmaceutical, Confectionery, Tea and many other industries.

Money

THE CALCUTTA MONEY MARKET

ADVANCES DECLINE

Wednesday, 6th December.

THERE has again been a fall in the level of advances outstanding in the Calcutta money market during the past week. The requirements of the sugar mills and the engineering and iron and steel industries are both down and the offtake of the cotton textile mills also shows a slight decrease. Demand from the jute industry and call for accommodation against food and grain storage are both slightly up. In the inter-bank market conditions became tighter and the call rate increased to 3½ percent. But there was a sharp reversal at the close, when the rate fell below 2½ percent and there were no borrowers.

The exchange market has been extremely quiet during the past week due to a marked decline in the supply of bills mainly on account of gunnies. Remittance demand has been very poor. In the London market, the pound fell sharply early in the week due to a revival of doubts about the future of sterling among Continental operators. There was a slight recovery, however, and closing quotations showed only minor losses against all the important currencies.

BULLION IMPROVED ON FRESH SUPPORT INDUCED by political developments concerning Goa and China. Silver advanced from the previous week's level of Rs. 243.50 to Rs. 245.50, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 209.60. The London and New York prices were 80½d and 91 3/8d cents.

Gold was steady in sympathy with silver and the price rose from Rs. 144.50 to Rs. 144.75. The sovereign at Rs. 99.25 showed a rise of 75nP.

DURING THE WEEK ENDED 1ST DECEMBER, Government of India Treasury bills for Rs. 24,82,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 5th December. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 11th December.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 6th December to 9th December at Rs. 99.391 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 29th November to 2nd December amounted to Rs. 1,45,50,000.

A RISE OF RS. 5.75 CRORES TO RS. 1,908.42 CRORES in active notes was an outstanding feature of the return of the Reserve Bank of India for the week ended 1st December, 1961. The total note issue was Rs. 33 lakhs smaller at Rs. 1,917.79 crores. Notes held in the Banking Department consequently fell by Rs. 6.06 crores to Rs. 9.38 crores. Deposits of the Central Government increased by Rs. 4.03 crores to Rs. 53.42 crores, while other Government accounts fell by Rs. 7 crores to Rs. 15.34 crores. Balances of commercial banks at Rs. 78.16 crores, showed a decline of Rs. 5.96 crores. Balances held abroad fell by Rs. 16 lakhs to Rs. 28.82 crores. Investments increased by Rs. 9.44 crores to Rs. 214.63 crores. Other loans and advances rose from Rs. 129.58 crores to Rs. 131.03 crores, of which advances to scheduled banks against usance bills were Rs. 20 lakhs (Rs. 25 lakhs). Ways and means advances stood at Rs. 66.17 crores, against Rs. 66.46 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 24th November, 1961, shows a rise of Rs. 1.40 crores to Rs. 529.02 crores in total deposits. Investments in Government securities are up by Rs. 12.01 crores to Rs. 262.14 crores, while other authorised investments remain unchanged at Rs. 9.24 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have dropped by Rs. 1.29 crores to Rs. 240.90 crores. Cash and balances are, in consequence, shown at Rs. 23.57 crores, or Rs. 4.13 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 24th November, 1961, shows Demand and Time Liabilities at Rs. 852.15 crores (Rs. 23.59 crores on account of borrowings from banks) and Rs. 1,148.32 crores (Rs. 20.70 crores), compared with Rs. 841.97 crores (Rs. 20.20 crores) and Rs. 1,145.40 crores (Rs. 19.12 crores), respectively, in the previous week. Cash has declined by Rs. 1.84 crores to Rs. 48.87 crores, while balances with the Reserve Bank have increased by Rs. 3.12 crores to Rs. 79.81 crores. There is a rise of Rs. 11.62 crores to Rs. 618.88 crores in investments. Advances and bills discounted at Rs. 1,233.79 crores, show a drop of Rs. 2.94 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.4 percent and 61.7 percent, against 6.4 percent and 62.2 percent.

AN OFFICE OF THE EXCHANGE CONTROL DEPARTMENT of the Reserve Bank was opened in Ahmedabad on 1st December, at the Bank of India New Building in Bhadra. All persons and firms resident in Gujarat State should make all their references and file returns relating to exchange control to the Assistant Controller, Exchange Control Department of the Reserve Bank, stationed there.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 8-12-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

TELL US YOUR JOB—

AND WE'LL GIVE YOU THE TOOLS

The size, shape or complexity of a project doesn't overawe us. We have the tools to help build it with a minimum of time, labour and cost. For nearly 70 years, BATLIBOI have supplied Industry and Trade in India with goods ranging from complete power plants to hacksaw blades. We represent internationally known manufacturers from the United Kingdom, U.S.A. Czechoslovakia, France, Germany, Japan and many other countries. BATLIBOI also represent some of India's leading manufacturers of Machine Tools, Diesel Engines and various other types of machinery. Industry and Trade are vitally connected with the economic growth of any country, and BATLIBOI are vitally connected with Industry and Trade in India.

VISIT OUR PAVILION AT THE INDIAN INDUSTRIES FAIR — NEW DELHI

MEETING OF ASSOCIATED CHAMBERS

TEXT OF RESOLUTIONS ADOPTED

AT the annual general meeting of the Associated Chambers of Commerce of India in Calcutta last week, the following five resolutions were adopted unanimously:

Exports—Madras Chamber of Commerce, appreciating that the successful implementation of the third five year plan and India's continued industrial development rest in great measure on the material expansion of the country's exports, the Associated Chambers are perturbed by the inhibiting effect on exports of the high cost of industrial production. They, therefore, consider it of primary importance (a) that the capacity of existing industry should be fully used, and every possible encouragement be given to units which have export potential to modernise and expand their productive capacity, thereby reducing costs and strengthening India's competitive position in world markets; (b) that increases in labour rates be conditional upon increased productivity; and (c) that goods for export be freed of all Central and local levies.

Power—Bengal Chamber of Commerce and Industry. The Associated Chambers consider that the investment in electric power generation and distribution provided for in the third plan is insufficient for the country's industrial needs and that, even if the projected targets are achieved, a serious power shortage will remain. Critical and persistent shortages have resulted in industrial plants having to shut down or to stagger their working hours; industrial efficiency has consequently been impaired; and the continuing power shortage must seriously inhibit the expansion of industry. The Chambers, therefore, urge that immediate consideration be given to an upward and realistic revision of power targets and that the highest priority be given to the implementation of existing expansion plans.

Transport and Communications—Punjab and Delhi Chamber of Commerce. The Associated Chambers, while acknowledging the efforts made by the Government to improve transport and communications of all sorts, would emphasise the need for continued and intensified efforts to expand and improve the capacity and efficiency of the railways, roads, ports, coastal shipping and the inland water and air transport systems of the country, to meet not only the requirements of existing traffic but also the demands arising from the third five year plan. They would further emphasise the need to improve the efficiency of the various administrations and to provide for a more effective delegation of authority.

Coal—Upper India Chamber of Commerce. The Associated Chambers are greatly disturbed about (a) the shortage of coal in many consuming centres, where on occasions industrial units have been closed for protracted periods due to the shortage of coal; (b) the high cost of movement of coal by road; and (c) the inferior quality of coal that is being allocated to many industries because the higher quality coals are reserved for specified purposes. The Chambers, therefore, urge that the highest priority be given to the increase of transport facilities both by rail and sea and that all possible steps be taken to achieve the beneficiation of coal.

Payment Delays—Bombay Chamber of Commerce and Industry. The Associated Chambers view with grave concern the very large sums of money which are tied up with the Government, due to delays in the payment for goods and services and in the settlement of claims and refunds,

and they are perturbed by the serious effects of these outstandings on the financing of trade and industry. They consider that the prime cause of these delays is the Government's system of passing and paying these bills and urge that immediate consideration be given to the reorganisation of the system in order that it may be able to cope efficiently with the vast increase in the size and number of contracts placed by the Government and, in particular, by the new large-scale public sector industries.

DISCUSSION ON ASSOCHAM RESOLUTIONS

FEWER resolutions were moved at the Assocham meeting this year, but that does not mean that the business worries which such resolutions usually reflect have been any the less in 1961. The growing shortages of power, coal and transport were the subject of three separate resolutions. Exports were discussed in one resolution, and another dealt with the delays in getting payments from Government bodies.

Introducing the resolution on exports, Mr. R. M. King (Madras Chamber) declared that industrial costs in India are too high to enable her to compete effectively in world markets. The Government does not attach enough importance to the economies of large-scale production. Instead of having small new units, the emphasis should be on expanding the existing ones which have proved their ability to organise production on sound lines. Modernisation has to be encouraged and labour costs kept down. "We are today competing in world markets, with protection only for our trade with the United Kingdom, and that for so long only as Britain remains outside the European Economic Community. We are competing against automation, modern equipment, rationalised manufacture in units of prodigious size; we are competing with exporters of proven capacity, proven quality and a long export history." Mr. N. M. Wagle (Bombay Chamber), who seconded the resolution, said that the volume of exports will depend on the quality and price of the goods exported. If development is to be economic, and the export potential is to be increased, existing units have to be encouraged to produce goods more efficiently and cheaply. This can only be done by giving them priority in the allocation of foreign exchange for raw materials, spares and components. Supporting the resolution, Mr. A. I. Muri-son (Bengal Chamber) suggested that the taxes on exportable commodities should be reduced.

The resolution on power was moved by Mr. A. R. Foster (Bengal Chamber), who said that the power shortage has been causing serious anxiety. "Poor planning, under-estimation of requirements and the omission of certain power projects from the core of the second plan at a time of acute foreign exchange crisis are primarily responsible for the present overall shortage." As against a target of 6.9 million kilowatts, production at the end of the second plan was only 5.7 million kilowatts. The third plan proposes an increase in the installed capacity from 5.7 million kilowatts to 13.4 million kilowatts, of which 12.7 million kilowatts are expected to be in commercial operation by 1965-66. Mr. Foster stated that the target may appear satisfactory, but in fact its phasing lags behind demand. Only about one-third of the additional capacity planned will be generated in the first three years. Industrial development in the initial stages of the plan will, therefore, continue to be hampered by the shortage of power in most parts of the country. Mr. S. Srinivasan (Punjab and Delhi Chamber), seconding the resolution, stated that because of the Bhakra dam, people might think that Punjab is a region of plentiful power supply. But nothing can be farther from the truth. The power shortage

in north India is far more acute than in some other parts of the country. Mr. B. B. Dodd (Madras Chamber) also spoke on the resolution.

Moving the resolution on transport and communications, Mr. F. C. Badhwar (Punjab and Delhi Chamber) said that the shortage of transport facilities has become serious. Larger quantities of goods are being immobilised each year, and it is estimated that in 1961, about 20 million tons of various kinds of originating traffic have not been able to find carrying capacity; this represents almost 11 percent of the total traffic offering. It is, therefore, necessary to speed up the growth of road transport, coastal shipping and inland waterways. Mr. H. Mackay Tallack (Bengal Chamber), seconding the resolution, declared that transport services to Assam—primarily the railways and inland water transport—are under heavy strain. Although an ambitious development programme has been drawn up for that State, not even 50 percent of the industrial expansion will actually take place unless there is an immediate increase in transport capacity.

Introducing the resolution on coal, Mr. K. M. Wilcox (Upper India Chamber) said that the coal industry should be in a position to cope with the demands of rapid industrialisation. But it appears instead to be heading for a serious crisis. The position concerning the supply and movement of coal is causing grave concern to those engaged in implementing India's industrialisation programme. The Central and State Governments, too, are now seriously worried. Coal production at the end of the second plan was at least 10 percent below the target of 60 million tons a year, although the private sector practically achieved its prescribed target. At present, coal is not being produced in large enough quantities for the industrialisation programme, and the amount that is being produced is either immobile or not being transported rapidly enough to consuming centres. Industries in all parts of the country are consequently being forced to slow down production, or in some cases even to close down, due to the lack of coal. The resolution was seconded by Mr. S. P. Virmani (Punjab and Delhi Chamber) who said that supply and movement of coal have suffered because of faulty planning.

Moving the resolution on payment delays, Mr. F. E. H. Goddard (Bombay Chamber) said that there has been a considerable improvement in the time taken by the D.G.S. and D. authorities to make payments in connection with Government purchases. Nevertheless, Government purchases are not confined to those arranged through the D.G.S. and D. procedure. Purchases are also made by State Governments, P.W.D. organisations and municipalities which buy under their own procedures. Even more important are the purchases now being made by large new industrial organisations in the public sector, notably the chemical and fertiliser plants, the defence organisations and the steel plants. Mr. Goddard said that "a clear advantage" would accrue to the Government if payment delays could be avoided because sellers would be freed from the necessity of allowing for the likelihood of their money being tied for extended periods. Seconding the resolution, Mr. P. K. Sahgal (Upper India Chamber) said that it is contrary to national interests that large sums of money should remain blocked on account of the delay in receiving payments from Government departments.

NAMES AND DATES

The Ambassador of West Germany to India, Herr Georg Ferdinand Duckwitz, will visit Calcutta this week-end. After a brief stay in the city on 9th December, the Ambassador will proceed to Rourkela and Jamshedpur, and will return to Calcutta on 12th December.

MARKET COLLAPSES AS CHINA THREATENS FURTHER AGGRESSION

DECLINE STEMMED BY IMPOSING MARGINS AGAINST BEARS

Wednesday Evening.

THERE has been a veritable collapse in the stock market during the past week, the decline in share prices having been the worst for a long time. At first, weakness developed due to fears that the system of automatic margins would be introduced very soon. Since then, operators' panic has arisen from political developments. News of the Goa troubles caused jitters on Monday. Later, nervousness spread following reports that civilian railway transport between Delhi and Bombay has been disrupted because of troop movements. Serious anxiety has arisen over the statement of the Prime Minister, Mr. Nehru, that China has threatened to cross the McMahon Line.

When these adverse developments took place, the market had not recovered from the earlier shake-out caused by an over-bought position. So share prices have tumbled down on a broad front on nervous bull liquidation and aggressive bear-selling. To reduce the selling pressure, the Stock Exchange committee has revoked the margin of Rs. 2 a share imposed on purchases of Dunlop Rubber and Orient Paper. It has instead levied new margins on sales of all clearing shares. Indian Iron, Dunlop Rubber, Indian Aluminium, Indian Cable and Orient Paper have been subjected to a margin of Rs. 3 a share. The margin on Burrakur Coal, Howrah Jute, Textile Machinery, Shree Gopal Paper, Hindustan Motors and Rohtas is Rs. 2 a share; and on Indian Copper it is 50p a share. In spite of the margins, selling pressure continues. At today's settlement, sentiment has been subdued and bulls have not been inclined to carry-forward their commitments, although the bull charges are moderate. The concern is the greater because money conditions are expected to become tighter at the turn of the year.

The trend thus remains uncertain and it is difficult to say whether the bottom has been reached. In any case, a recovery, when it starts, will take time to gather momentum because the hangover of the latest collapse will persist for a long time. The longer-term outlook, however, is not as bleak as it looks now. The economic situation has not changed. Company reports show that many industries are increasing their turnover and profits. Although investment shares have moved down in sympathy with the general trend, there is little evidence of selling pressure in their case. They are tightly held and are not likely to be subject to panicky selling.

Indian Iron have closed at Rs. 23.65. The production and despatch figures of the Company for November are fairly satisfactory. The output of pig iron has amounted to 103,823 tons, against 105,823 tons in October. The production of steel ingots is 81,209 tons, against 81,969 tons, and that of salable steel 62,119 tons, against 61,921 tons. Despatches have totalled 60,837 tons, against 66,257 tons. The management says that 5,600 tons of finished materials could not be despatched due to the shortage of wagons. Among the engineering shares which have fallen are Texmaco, Guest, Keen, Williams, Burn, Braithwaite and Jessop.

Miscellaneous shares have declined considerably. Notable losses have been shown by Dunlop Rubber, Indian Cable, Indian Aluminium, Rohtas and Indian Copper. Hindustan Motors have been sold freely on reports that the labour trouble still continues. Scattered interest has been taken in Britannia Biscuits and Metal Box on favourable corporate rumours. Alkali Chemicals, Union Carbide and Goodyear India have reacted on profit-taking. Associated Battery, British Paints and Rallis have declined. Profit-taking has reduced Schrader-Scovill Duncan and Hindustan Twyford. Jarline Henderson have improved on replacement buying and support has been extended to Martin Burn on dividend prospects.

Cement shares have been quiet due to the predominance of sellers. Jaipur Udyog, Ashoka Cement and Some Valley have declined. Electric companies have met with scattered support and business has passed in Calcutta Electric. Paper shares have reacted on pressure. Orient, Titagarh and Sirpur have declined. Seshasayee Paper are steady on the prospect of an early installation of the factory. Ballarpur have been bought by informed quarters on a good report.

Jute shares have weakened further because investors are disturbed by the poor demand for gunnies. Birla, New Central, Howrah, India, Megna, Ganges and Union have been sold at lower prices.

Coal shares have fallen, although turnover is restricted. Scattered interest is being taken in Bengal and Amalgamated. But Burrakur, Central India and Western Bengal have become weaker.

Cotton mill shares have declined on a broad front. J. K. Rayon, Bharat Commerce and Elgin

have been offered at lower prices. Dunbar and Bowreah have been quietly steady on influential support.

Sugar shares have been offered freely but buyers are cautious. The outlook is considered discouraging due to the slow offtake of the commodity. Carew, Belsund, Ramnugger Cane and S.K.G. are being sold at lower prices. Dyer Meakin Breweries have become steadier on talk of a bonus issue.

Tea shares have reacted in sympathy with the general trend. Scattered support has, nevertheless, been forthcoming for good gardens due to an improvement in the auction prices of quality grades this week. Business has passed in Hasimara, Bishnauth, Tezpur, Dhekhakhat, Brooke Bond and Dibrugah.

Bank shares have been quietly steady. United Commercial Bank and United Bank are being bought. Scattered interest has been taken in high-yielding preference shares, but sellers are fewer.

Government securities have been quiet and turnover is restricted. The prices of all dated loans have declined fractionally. The 3 percent Conversion loan 1986 is quoted at Rs. 71. There is virtually no interest in State Government loans. Holders are ready to discount current prices if they get firm buying indications.

Hoograjuli (Assam) Tea

The net profit earned by Hoograjuli (Assam) Tea Co Ltd has declined from Rs. 3.05 lakhs to Rs. 2.93 lakhs for the year ended December 1960, after providing Rs. 47,852 (against Rs. 37,194) for depreciation. A dividend of Rs. 2 a share, subject to tax, has been declared, against Rs. 2.50 a share, taxable, in the previous year. Taxation absorbs Rs. 1.35 lakhs (against Rs. 1.60 lakhs), and general

reserve gets Rs. 1 lakh (the same). After making all adjustments, there is a carry-forward of Rs. 22,702, against Rs. 14,368 brought in. A crop of 307,199 kilograms was secured, against 311,248 kilograms.

Seeyok Tea

The Seeyok Tea Co. Ltd has made a profit of Rs. 1.04 lakhs for the year ended December 1960, against Rs. 1.03 lakhs. A dividend of 15 percent, taxable, has been maintained, and it absorbs Rs. 45,000. Taxation is allocated Rs. 39,690 (against Rs. 42,000), and capital reserve receives Rs. 13,000 (against nil). With other adjustments, there remains a balance of Rs. 853, which is to be carried forward, against Rs. 2,934 brought in. The crop amounted to 101,790 kilograms, against 94,462 kilograms. The average selling price was Rs. 6.41 (against Rs. 6.47) a kilogram.

Tata Steel Output

Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during November 1961 was: pig iron 125,500 tons; steel ingots 128,800 tons; semi-finished for sale 27,800 tons and finished steel 74,000 tons.

Bombay Market

PRICES SLUMP DUE TO POLITICAL ANXIETIES SPECULATIVE ISSUES SOLD HEAVILY

Wednesday Noon.

SHARE prices in the Bombay stock market crashed due to heavy selling pressure during the past week. Operators became nervous after the Prime Minister, Mr. Nehru, told the Lok Sabha that China had threatened further intrusions into Indian territory. Reports about the dislocation of railway services due to troop movements towards the Goa border increased the general anxiety. Holders sold in panic and bears were aggressive, taking full advantage of the weakness. As the market had become vulnerable earlier due to an over-bought position, there was hardly any sign of resistance to the pressure. It was said that the period of the next account would be four weeks due to the Christmas holidays, so carry-forward charges would be higher.

Tata Steel declined to Rs. 157.50 and Indian Iron to Rs. 23.72. Engineering shares fell sharply. Tata Locomotives were sold down to Rs. 332 and Alcock Ashdown declined to Rs. 305. Business passed in Premier Construction at Rs. 181 and in Mukand Iron at Rs. 26.40. Motor-vehicle shares turned weaker and Hindustan Motors declined to Rs. 19.36, while Premier Automobiles were easily available at Rs. 151.

Cotton mill shares showed considerable losses all along the line. Century moved down to Rs. 561 and Bombay Dyeing to Rs. 65. Kohinoor were freely sold at Rs. 286 and Swadeshi were quoted lower at Rs. 267. Standard were available at Rs. 1,030 and Morarji were dealt in at Rs. 370. Khatau were sold down to Rs. 460 and Finlay were offered at Rs. 316. India United ordinary were indicated at Rs. 15.12 and Apollo at Rs. 2.

Miscellaneous shares moved down in sympathy with the general trend. In the cement group, Associated Cement declined to Rs. 158.50 and Digvijay to Rs. 192. Mining shares were subdued and Shivrampur Syndicate lost at Rs. 40 on reports that the Company has cut production substantially. Among shipping shares, Scindia Steam were down to Rs. 12.52 in spite of maintaining the dividend under difficult conditions. Great Eastern Shipping weakened further to Rs. 12.76. Sugar shares were not fancied and Belapur fell to Rs. 270 on reducing the ordinary dividend. Phalton were dealt in at Rs. 124. Bombay Burmah reacted to Rs. 609 as the news about the diversification of activity had no effect. Among rayon shares, National were sold at Rs. 535, Gwalior at Rs. 47 and Baroda at Rs. 152. Sellers predominated in chemical shares and Tata Chemicals were offered down to Rs. 19.32. The decision of the Company to issue rights shares at par and to acquire a mineral company with large bauxite deposits had no effect. Synthetics and Chemicals were sold at Rs. 218 and Colour-Chem declined to Rs. 412.50. Pressure was heavy in cash scrip and Voltas were offered at Rs. 282. Business was done in Ceat Tyres at Rs. 215 and Tata Oil were quoted at Rs. 77.

Bank shares were quietly steady in limited turnover. Central Bank were indicated at Rs. 62.50 and Bank of India at Rs. 131. Insurance shares showed little change. Business was done in New India at Rs. 59 and in Vulcan at Rs. 16.48.

Scattered support was extended to electric company shares at lower prices. Ahmedabad Electric were placed at Rs. 92.50, Bombay Suburban at Rs. 103.50 and Tata Hydro at Rs. 109.

Madras Market

SHARE PRICES DROP IN QUIET TRADING

NERVOUSNESS OVER FALL IN CALCUTTA AND BOMBAY

Tuesday Evening.

THE Madras stock market was quiet during the past week. At first, sentiment deteriorated on the news that the system of automatic margins would soon be introduced in all stock markets. Towards the close, selling pressure increased and holders were inclined to sell freely due to easier advices from Calcutta and Bombay. The pressure was particularly strong in Calcutta shares and operators were reluctant to carry-forward business due to the higher *budda* charges. Nervousness was caused by political developments concerning Goa and China.

Government securities were quiet, with sellers predominating. Support was forthcoming for selected bank shares and public utilities. Sugars were sold freely on pessimism concerning the outlook for the industry. In the planting section, tea shares were subdued due to the decline in the auction prices of the commodity. Rubber shares were not fancied because of the fall in rubber prices. Coffee shares were sold freely. Textiles reacted on pressure and miscellaneous industrials moved down in sympathy with general trend.

In the banking group, business was done in Canara Industrial and Banking Syndicate at Rs. 212.50. Indian were dealt in at Rs. 182 and Indian Overseas at Rs. 189.50. Business was done in State Bank of Mysore at Rs. 170. Among public utility shares, South Madras were quoted at Rs. 10.25 and Kumbakonam at Rs. 10.78. Vellore came to Rs. 14.25 and Ellore at Rs. 20.25.

In the sugar section, Deccan declined to Rs. 11.65 and E.L.D. to Rs. 36.25. United Breweries were transacted at Rs. 101.55 and Mysore reacted to Rs. 56.50. K.C.P. were dealt in at Rs. 24 and Tezpure were taken at Rs. 16.25.

Among planting shares, Blue Mountain were quiet at Rs. 2.87 and Cochin Malabar at Rs. 7.43. Consolidated Coffee declined to Rs. 20.50 and Coffee Lands to Rs. 17. Mercara were done at Rs. 8.80 on paying a taxable ordinary dividend of 20 percent. Business passed in Kil Kotagiri at Rs. 5.20 and in Lucky Valley at Rs. 11.35. Mysore Coffee were sold down to Rs. 5.19 and Nilgiri were transacted at Rs. 8.50. Nonsuch came to hand at Rs. 26 and Ossoor were done at Rs. 2.70. Ouchterlony were placed at Rs. 3.55 and Periakaramalai at Rs. 3.65. Peermade were available at Rs. 23 and Parkside at Rs. 27.

In the textile group, Anglo-French reacted to Rs. 126 on rumours that with the merger of Pondicherry, the dividend would be subject to the usual tax deduction. Asher were dealt in at Rs. 229. Bangalore Woollen were steady at Rs. 242 and Buckingham at Rs. 259.50. Cauvery Spinning came to hand at Rs. 16 and Dhanalakshmi were transacted at Rs. 255. Kothari were quoted at Rs. 13.50 and K. Rajendra were offered at Rs. 74.50. Lakshmi declined to Rs. 169.50 and Madura to Rs. 41.10. Mettur were steady at Rs. 394 and Premier were quoted at Rs. 305. Travancore Rayon reacted to Rs. 44.75 on pressure and South India Viscose were placed at Rs. 177.

In the miscellaneous section, Aluminium Industries were quiet at Rs. 23.25 and Ashok Leyland at Rs. 9.10. Binny moved down to Rs. 310 and Enfield to Rs. 12.25. F.A.C.T. turned softer at Rs. 9 and India Cement were quiet at Rs. 6.42. Kirloskar Electric were quietly steady at Rs. 16.65, but Madras Rubber declined to Rs. 22.45 on profit-taking.

Parry's Confectionery fell to Rs. 4.56 and Ruby Rubber were transacted at Rs. 5 on declaring a taxable ordinary dividend of 41 percent. Seshasayee Industries were quiet at Rs. 19 but Seshasayee Paper were supported up to Rs. 8.60. Spencer lost at Rs. 24.37 and Standard Motors at Rs. 16.37. Textool were indicated at Rs. 154 and Tube Investments were dealt in at Rs. 291.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. AID-INDIA CONSORTIUM TO MEET NEXT JANUARY

MORE RESOURCES AND TRANSPORT FACILITIES NEEDED TO REACH COAL TARGET

(FROM OUR NEW DELHI CORRESPONDENT)

THE consortium of Governments and institutions interested in providing development assistance to India, called the Aid-India Club, is expected to meet in Washington on 29th and 30th January next year. The last meeting held in Washington on 31st May this year was attended by representatives of the Governments of Canada, West Germany, Japan, the U.K. and the U.S.A. and the representatives of the World Bank and International Development Association. France joined the consortium as a member during the meeting. The Governments of Austria, Denmark, Norway and Sweden and the International Monetary Fund sent observers. The following commitments were indicated at the meeting to finance the projects coming up during the first two years of the third five year plan:

	(\$ million)
Canada	56
France	30
Germany	364
Japan	80
U. K.	250
U. S. A.	1,045
I.B.R.D. and I.D.A.	400
Total	2,225

It was understood that the commitment indicated for the U.S.A. in 1962-63 was related to the prospects for additional aid commitments by other countries which are already members—or might subsequently become members—of the consortium, in amounts which would raise the total contributions of these countries in that year to a level comparable with the proposed U.S. contribution. Accordingly, it was agreed that the member Governments and institutions, together with such other Governments as might be prepared to participate, should meet again towards the end of 1961 to review the position and to consider what further resources might be made available.

The total commitments for 1962-63 amount to \$930 million, made up of the following contributions:

	(\$ million)
U.S.A.	500
I.B.R.D. and I.D.A.	150
Others	280
Total	930

According to an understanding, the existing or prospective Government members of the consortium should contribute \$220 million to make their aid comparable to that of the U.S.A. India's requirements for the first two years were, however, placed at \$2,500 million, of which only \$2,225 million has been committed in May last. This leaves a gap of \$275 million. It may be added that the West German commitment includes \$61 million for the 1961-63 period. Three new countries are expected to join the consortium. They are Italy, Austria and Sweden.

U.K. Investments in India

Fuller details are now available of the Indo-British collaboration in the industrial development of India. The cases of collaboration rose from 27 in 1957 to 43 in 1958, 51 in 1959, 137 in 1960 and 63 in six months, April-September 1961. The following country-wise breakdown of the four members of the Aid-India Club will show how British investment compares with those of the other countries:

	U.K.	West Germany	U.S.A.	Japan	Others
1959	51	29	27	15	49
1960	137	85	69	38	99
1961 (April-September)	63	37	42	14	45

Adequacy of Coal Target

The Planning Commission has decided that the coal target of 97.5 million tons by the end of the third plan does not mean a rate of production of this order, but the actual physical quantity to be produced by that time. The question was also raised separately whether the target of 97.5 million tons would be adequate to meet the requirements of the industrial expansion programme in the third plan. Both these points have been examined in detail and the Planning Commission has been requested to consider the following points:

(1) that the present coal target of 97.5 million tons for the third plan is inadequate, but even for the fulfilment of this target in terms of actual production as indicated by the Planning Commission, the following conditions have to be fulfilled:

- additional resources must be provided for the coal production programme;
- the rail transport capacity for coal should be for movement of the order of 100 million tons a year;
- power must be made available from now on to meet the full requirements of the coal industry, and the power availability must

cope progressively with the expansion programme of coal production; and

- additional resources must be provided also to the railways and the Irrigation and Power Ministry on the analogy drawn from the expansion of coal production,

(2) that it would be advisable to revise the coal target to 110 million tons, and if this is agreed to, further increased provision would have to be made for a target of 110 million tons.

Meanwhile, the National Coal Development Corporation is taking suitable steps to reach the target laid down in the third five year plan.

FOREIGN EXCHANGE ALLOCATION FOR OCTOBER 1961 to MARCH 1962

(a) National Coal Development Corporation Ltd	
(i) against the second Export-Import Bank credit	Rs. 50 lakhs
(ii) West German credit	Rs. 30 lakhs
(iii) from rupee payment arrangement	Rs. 268 lakhs
(iv) from free resources for maintenance and replacement	Rs. 54 lakhs
second plan project	Rs. 48 lakhs
third plan scheme	Rs. 6 lakhs
	Rs. 402 lakhs, or Rs. 4.02 crores
(b) Singareni Collieries Company Ltd	
(i) From free resources	Rs. 8 lakhs
(ii) From rupee payment countries	Rs. 53.36 lakhs
(iii) Against West German credit	Rs. 10 lakhs
	Rs. 71.36 lakhs

There are at present three West German experts one British and one supplied by T.C.M., assisting the National Coal Development Corporation in the implementation of its production programme. Further experts are, it is intended, will be obtained from the U.S.A. under the T.C.M. programme from France under the Indo-French technical co-operation programme and from the U.K. under the Colombo Plan. Certain experts will also come from Russia and Poland to work on the development projects under the credit agreements entered into with these countries. The exact number of experts in each case will depend on the requirements of each project and will be settled by further negotiations. Of three West German experts, two are engaged in washeries and one in workshop practices. They will advise the Corporation for a period of three years. Mr. Elliott is the British expert. He is the Deputy Director General of Coal Production and Reconstruction in the National Coal Board. He is advising the Corporation on developing mines in the Jarangdi area and also of the reopening of gassy mines in Jarangdi, which had been abandoned earlier. The British National Coal Board has offered the services of four more experts in connection with the development of deep mines in Jarangdi, Kathara and Swang. Mr. H. W. Collins, the Member for Production, British National Coal Board, who visited India in August-September this year has made his report, recommending further development of the Bokaro coalfields. As a result of the discussions with the first team of French experts, who visited India in July last, three stages for developing the steeply inclined thick seams of Karanpura have been agreed to by the Corporation. In the first stage, mining engineers of the Corporation will go to France to study the technique of depillaring steeply inclined thick seams. A second team of French experts is expected here to prepare a project report for the depillaring of the mines in Karanpura.

The T.C.M. authorities have offered the services of Mr. John Marshall, president of Pierce Management Company as the team leader for the Ramgarh project. The Polish Government has agreed to set up the Karanpura washery. A team of Polish experts which will shortly come out to India in connection with the preparation of the project report for the Sudamdih mines will include a washery expert, who will hold discussions with the Corporation on the subject. Two underground mines, one in Surakachar and the other in Banki in the Korba coalfields with a total capacity of 1.7 million tons of coal a year are being developed with Russian assistance under the 112.5 million roubles credit agreement in accordance with the project report prepared by the Russian experts. In this connection, the Corporation has entered into an agreement with Tajshpromexport of Moscow for the preparation of the working drawings and designs for the exploitation of these two mines.

The revised project report for setting up of the Central Workshop at the Korba coalfields has been approved by the Government. Russia will supply workshop machinery and equipment, and the actual

construction of the workshop will be undertaken by the National Coal Development Corporation Ltd. The establishment of the workshop has to be synchronised with the commissioning of the Surakachar and Banki underground and Korba open-cast mines in this area in order to ensure the full utilisation of the capacity of the workshop. According to present indications, the workshop may be expected to start functioning in 1964.

Functions of S. T. C.

The Central Minister of Commerce, Mr. Nityanand Kanungo, in a statement made in the Lok Sabha defined the functions and activities of the State Trading Corporation of India as follows: (a) to undertake trading generally with State trading countries as well as other countries in commodities entrusted to it; (b) to explore new markets for the traditional items of export and to develop the exports of new items with a view to diversifying and expanding the export trade; (c) to undertake at the instance of the Government import and/or internal distribution of any commodities in short supply with a view to stabilising prices and rationalising distribution; and (d) generally to implement such special arrangements for import, export or internal distribution of particular commodities as the Government may adopt in public interest. The main objects clause incorporated in the memorandum of association of the State Trading Corporation is being suitably amended to include the above functions.

Consent to Capital Issues

Four companies have been granted consent for the issue of capital by the Controller of Capital Issues. Of this, one company will issue debentures and the other three equity shares. The consent in all cases is valid for 12 months. The following are the details:

ACC-Vickers-Babcock: ACC-Vickers-Babcock Ltd, Bombay, has been accorded consent to the issue of debentures of the total value of Rs. 6.65 crores in units of Rs. 10 lakhs each for cash at par. The first and second mortgage debentures of the total value, respectively of Rs. 3.30 crores redeemable after ten years and Rs. 1.33 crores redeemable between seven and ten years, will bear a rate of interest of 6 percent a year while the third series of the value of Rs. 2.02 crores will carry a rate of 7 percent a year and will be redeemable after 20 years. The proceeds will be used for the Company's project of manufacturing cement-making, coal mining and other general machinery and complete range of steam raising plant.

Heavy Electricals: Heavy Electricals Ltd, Bhopal, a wholly owned Central Government undertaking engaged in the manufacture of heavy electrical equipment and having a paid-up capital of Rs. 21.95 crores, has been accorded consent to issue further capital of Rs. 1.67 crores in equity shares of Rs. 1,000 each, for cash at par.

Hindustan Photo Films: Hindustan Photo Films Manufacturing Company Ltd, Madras, wholly owned by the Central Government engaged in the manufacture of raw films for cinema industry, X-ray and roll films and photographic paper and having a paid-up capital of Rs. 15 lakhs, has been accorded consent to issue capital of Rs. 45 lakhs in equity shares of Rs. 1,000 each to be subscribed by the Central Government for cash at par.

Bolani Ores: Bolani Ores Ltd, Calcutta, engaged in the business of raising and supplying iron and other allied minerals to the steel works sponsored by the Government of India, has been granted consent to the issue of capital of Rs. 30 lakhs in 30,000 equity shares of Rs. 100 each for cash at par. The share capital is held by the Government of India and the Orissa Mineral Development Company Ltd. The existing paid-up capital is Rs. 70 lakhs.

Recruitment of Gorakhpuri Labour

The Government of India has reorganised the set-up relating to the recruitment and employment of Gorakhpuri labour engaged in the coal-mining industry. The aim is to remove all forms of control, regulation and regimentation exercised so far over the Gorakhpuri labour. Under the reorganised system, there would now be no distinction between Gorakhpuri labour and other workers in the coal-mining industry. Facilities previously enjoyed by the Gorakhpuri labour under the Coalfields Recruitment Organisation will now be available to all workers. All recruitment would be channelised either through the local employment exchange or the Labour Depot in Gorakhpur. Continuity of employment would be ensured to all workers—local as well as Gorakhpuri. The reorganisation of Gorakhpuri labour in the coal-mining industry has been made on the recommendations of the Committee of Members of Parliament on Gorakhpuri labour and in consultation with the representatives of colliery owners' and workers' organisations. Besides recruitment facilities and better conditions of employment, the reorganised set-up provides for improved facilities for medical care, banking and lodging in miners' hostels.

I.F.C. to Lend to Hotel Industry

A Bill to amend the Industrial Finance Corporation was introduced in Parliament last week. The Bill will empower the Corporation to advance loans to hotel and transport industries and to industrial estates. It will also enable the Corporation to guarantee loans raised by industrial concerns from scheduled, State and co-operative banks.

guarantee deferred payments and underwrite shares.

Value of Mineral Output

The provisional estimates made by the Indian Bureau of Mines place the total value of mineral production in India in 1960 at Rs. 159 crores, compared with Rs. 140.9 crores in 1959. The increase of Rs. 18.1 crores or nearly 13 percent over the total value in the previous year, was mainly due to the increase in the output of coal, iron ore, bauxite, copper ore, china clay, dolomite, limestone and salt and the higher prices of gold bullion. Coal with an output of 52.6 million tonnes, was the leading commodity and was valued at Rs. 108.9 crores which is about 68 percent of the total value of mineral output. The share of the public sector, namely, the National Coal Development Corporation and Singareni Collieries, in the total coal production was 8.5 million tonnes, while the remaining 44.1 million tonnes were produced by private collieries. Next in order of value were manganese ore (Rs. 8.2 crores), iron ore (Rs. 7.7 crores), salt (Rs. 6.7 crores), gold (Rs. 5.7 crores), limestone (Rs. 5.5 crores), mica (Rs. 2.5 crores), copper ore (Rs. 2.4 crores) and ilmenite (Rs. 1.5 crores).

Higher Volume

In terms of physical volume also, there was a marked increase in mineral production during the year, as indicated by the Quantity Index of Mineral Production which stood at 136.6 in 1960 (base 1951=100), compared with 126.6 in 1959. The increase in the index was shared by all the groups. The index concerning coal increased by 13.5 points, that of metallic minerals by 4.2 points, and non-metallic minerals by 6.4 points. The production of metallic minerals valued at Rs. 27 crores accounted for 17 percent of the total value of mineral production in 1960. Of this, the total value of the ferrous group of minerals accounted for Rs. 16.4 crores and the non-ferrous group for Rs. 10.6 crores. Among the metallic minerals, there was the record output of iron ore and bauxite. The production of iron ore reached a peak figure of 10.68 million tonnes during 1960. This marked increase in output was due to the higher internal and external demand. The despatches of iron ore for consumption in the domestic iron and steel plants rose to 7.23 million tonnes, recording an increase of 27 percent, compared with the despatches of 5.68 million tonnes during 1959. As a result of the large expansion in the domestic aluminium, refractory and chemical industries as well as higher overseas demand, the output of bauxite reached the all-time peak of 384,000 tonnes, representing an increase of 75 percent over the output in the preceding year. There was also a slight increase in the output of copper ore. The production of chromite crossed the 100,000 tonnes mark while the output of gold, ilmenite, lead and zinc concentrates showed a decline. The output of manganese ore in 1960 was 1.18 million tonnes, which is almost the same as in 1959.

Non-metallic Minerals

The total value of non-metallic minerals produced was Rs. 230 million, which is about 13 percent of the total value of mineral production in 1960. Compared with 1959, the value of non-metallic minerals was higher by Rs. 2.60 crores, of which salt alone accounted for an increase of about Rs. 80 lakhs. The output of salt at 3.44 million tonnes and crude mica at 29,003 tonnes was higher than that of the preceding year. Consistent with the increase in the internal demand, the output of limestone, dolomite and gypsum reached new peaks. The output of limestone was 12.7 million tonnes, recording an increase of 18 percent over the previous year. In the case of dolomite, there was an increase of 96 percent in output, while the output of gypsum was higher by 16 percent, compared with that of 1959.

A Statewise analysis of mineral production indicates that Bihar was the leading State, and produced minerals valued at Rs. 56.9 crores, which is 36 percent of the total value of mineral production in 1960. Next in order of value of mineral output, were West Bengal and Madhya Pradesh, their shares in the total value of mineral production in India being 21 percent and 12 percent, respectively. The increase in mineral production in 1960 over 1959 was mainly accounted for by the States of Bihar, West Bengal, Madhya Pradesh, Orissa, Andhra Pradesh, Mysore, Rajasthan, Maharashtra, Gujarat and Madras. West Bengal and Bihar alone accounted for an increase of Rs. 10.2 crores or nearly 57 percent of the total increase. This was the result of a significant increase in the output of coal in West Bengal and iron ore and coal in Bihar.

The total value of metal production in India during 1960 was estimated at Rs. 144.8 crores, against Rs. 153.4 crores in 1959, recording an increase of nearly 25 percent. The increase was mainly due to the higher production of ferrous metals, which recorded an increase of Rs. 38.4 crores or 27 percent, compared with 1959. The output of pig iron, steel ingots and finished steel reached an all-time peak. The production of finished steel increased from 1.8 million tonnes in 1959 to 2.2 million tonnes in 1960. The production of pig iron was 4.2 million tonnes, an increase of 35 percent over the preceding year. The output of ferro-manganese at 86,000 tonnes was higher by 26,000 tonnes compared with 1959. A new ferro-manganese plant in Kahan near Nagpur was commissioned on 17th November, 1960. The output of ferro-silicon was 7,118 tonnes in 1960, compared with 7,459 tonnes in 1959. In the case of non-ferrous metals, the year was marked by

a record output of aluminium, antimony and copper.

Foreign Exchange Earnings

The total foreign exchange earned by the export of minerals and ores during 1960 was Rs. 51.1 crores, against Rs. 47 crores in 1959. In terms of foreign exchange earnings, iron ore led the list of the minerals exported from India. The exports of iron ore during 1960 were 3.4 million tonnes, valued at Rs. 17.3 crores, compared with the export of 2.5 million tonnes, valued at Rs. 12.9 crores in 1959. Japan and Czechoslovakia which are the principal buyers of Indian iron ore accounted for 58 percent and 23 percent, respectively, of total exports from India. The exports of manganese ore totalled 1,160,000 tonnes, which was higher by 175,000 tonnes than those of 1959. The exports of mica at 30,000 tonnes, although higher quantitatively by 6,000 tonnes compared with 1959, fell by Rs. 50 lakhs in value due to a lesser offtake of block mica by the U.S.A.

The principal markets for Indian minerals were Japan, the U.S.A., the U.K., Czechoslovakia, Pakistan, West Germany, France and Italy. A countrywise analysis of India's mineral exports indicate that the share of Japan was 31 percent, the U.S.A. 17 percent, the U.K. 10 percent, Czechoslovakia 9 percent and Pakistan 8 percent. The total value of exports of metals and alloys (excluding silver) increased from Rs. 7.30 crores in 1959 to Rs. 14.2 crores in 1960. The value of ferrous metal exports was Rs. 13.8 crores, an increase of Rs. 7 crores over the preceding year. The export of ferro-alloys recorded a five-fold increase, while the export of pig and sponge iron increased by more than 50 percent. Except for copper, the exports of all the non-ferrous metals (mostly in the form of utensils and scrap) showed a decline during the year.

The total value of mineral imports during 1960 was Rs. 10.8 crores, compared with Rs. 10.2 crores in 1959. The increase of Rs. 60 lakhs in the value was mainly due to larger imports of sulphur, apatite, abrasives, china clay, emeralds, diamonds and cryolite. The total value of imports of metals and alloys increased from Rs. 123 crores in 1959 to Rs. 157.8 crores in 1960. The imports of ferrous metals at Rs. 103.7 crores recorded an increase of Rs. 23.4 crores as a result of higher imports of ferro-alloys and iron and steel materials. The imports of non-ferrous metals totalled Rs. 49.1 crores and they were higher by Rs. 11.4 crores or 30 percent, compared with the preceding year. Copper led the list of non-ferrous metals imported into India and was responsible for 44 percent of the total foreign exchange spent on this group. There was a considerable increase in the import of aluminium, brass and bronze, copper, silver and zinc. The imports of lead and nickel were slightly higher, while there was a considerable decline in the imports of antimony.

Oré Prices

The prices of manganese ore were steady during the first three quarters of 1960. After a slight fall in the month of October, the prices of various grades of manganese ore remained unchanged in the subsequent months. Prices of iron ore maintained the same level as in the year 1959. There was a decline in the prices of chromite as a result of low demand in foreign markets. There was a slight increase in the price of chemical grade bauxite, calcined magnesite and sillimanite in 1960, while that of ilmenite, rutile, burnt and unburnt fire clay and white and off-colour barytes remained unchanged. There was a general increase in the f.o.b. prices of various types of mica due to a rise in the demand from European markets.

The outstanding features of the Indian metal market during the year 1960 were the firmness in the prices of zinc, easy stock position of lead and sufficiency in the supply of virgin copper metal for the actual users. There was a persistent rise in the market prices of zinc during the first three quarters of the year. As a result of the considerable increase in the stocks of lead metal under moderate demand, there was a decline in the price of lead ingot. The prices of aluminium scrap and copper metal showed an upward trend. The average prices of gold and silver also recorded an increase during the year. There was, however, no change in the prices of pig iron and steel fixed by the Iron and Steel Controller.

Bauxite Production

The production of bauxite during 1960 reached the all-time peak of 384,000 tonnes. This represents an increase of about 75 percent, compared with the output of 218,000 tonnes in the preceding year. The sharp increase in the production of bauxite was due to large expansion in the domestic aluminium, refractory and chemical industries as well as substantial demand in the overseas market. Gujarat was the leading producing State accounting for about 57 percent of the total output of bauxite in India. The production in this State increased from 101,000 tonnes in 1959 to 218,000 tonnes in 1960. The output in the Halar (Jamnagar) district of Gujarat State which is the chief producing area registered a more than two-fold increase to meet the growing demand especially in the foreign market. Almost the entire quantity of bauxite produced from this area was of high grade containing 58 to 60 percent alumina. The production in Kaira district was also stepped up by the Associated Cement Company Ltd to meet the requirements for cement manufacture. Bihar which is the other major producing State reported an output of 108,000 tonnes, an increase of 31,000 tonnes or 40 percent,

compared with the preceding year. The Indian Aluminium Company Ltd increased the rated capacity of its mines to 60,000 tonnes a year to meet the additional requirements of its alumina plant in Muri in Bihar. The other principal producers have also expanded the mining activities. The Minerals and Metals Ltd has already entered into a contract with the Hindustan Aluminium Corporation Ltd for the large-scale supply of bauxite from its mines in the Lohardaga area in Ranchi district. The bauxite produced from Bihar State is of high grade, containing 52 and higher percentages of Al₂O₃ and is mainly used in the aluminium industry. The production in Madhya Pradesh increased from 38,000 tons in 1959 to 48,000 tons in 1960. The output of bauxite in Maharashtra at 7,225 tons and Mysore at 2,249 tonnes was also substantially higher than that of the preceding year. The production in Madras State, however, fell from 1,276 tons in 1959 to 789 tonnes in 1960. There is a programme to develop the bauxite mines in Salem district of Madras State in view of the visualised expansion of the local emery plant and setting up of an aluminium plant in the State during the third five year plan.

During the year, about 74,000 tonnes of bauxite were consumed in the manufacture of 26,145 tonnes of calcined alumina. The export of bauxite increased sharply from 24,000 tonnes in 1959 to 76,000 tonnes in 1960. Japan was the principal buyer of bauxite and imported about 46,000 tonnes from India during 1960.

Chromite Output Rises

The output of chromite crossed the 100,000 tonnes mark during 1960, recording an increase of about 4,000 tonnes, when compared with the preceding year. There was an increase in production in all the producing States. The bulk of the increase in output came from Cuttack district in Orissa. The production from Bihar and Maharashtra was higher by 1,000 tonnes each, while the production was almost static in Mysore. During the year, about 70,000 tonnes, or 70 percent of the total output, was of high grade (above 47 percent Cr₂O₃). The bulk of the production of high-grade chromite was from the State of Orissa. The average pit's mouth value of chromite in 1960 was Rs. 57.27 a ton, compared with Rs. 58.11 during 1959. Chromite exports during 1960 totalled 41,000 tonnes, which were just one-half of the total in 1959.

The output of dolomite which has been on the increase since 1955, registered a marked rise of 90 percent in 1960, and reached an all-time record of 650,000 tonnes. Almost the entire increase in production was accounted for by Orissa and Madhya Pradesh, which are the principal producing States. Orissa State alone accounted for 71 percent of the total production in 1960. The output from Orissa was higher by 47 percent, while there was a nine-fold increase in the production from Madhya Pradesh. Bihar, Maharashtra and Mysore also reported higher production, while there was no output from Rajasthan and Uttar Pradesh, where a small quantity of dolomite was produced in 1959. During 1960, the production of dolomite was also reported from Baroda district of Gujarat State.

The higher output of dolomite during 1960 was due to the increased demand from the iron and steel industry. The expansion and development programmes of the Bisra Stone Lime Co. Ltd, which is the principal producer in Sundergarh district of Orissa State, have been making progress and the production from the Company's mines was stepped up to meet the requirements of the iron and steel plants in the private and public sectors. The higher production in Madhya Pradesh was accounted for by the Hindustan Steel Ltd which stepped up the output from their Hirri dolomite mines in order to meet the increased requirements of the Bhilai steel plant.

Lead-zinc Ore Production

The output of lead-zinc ores during 1960 was 152,000 tons, compared with 162,000 tons in 1959. The Metal Corporation of India Ltd which is the only producer of lead-zinc ores in India has reported that the output of ore was matched to the mill feed, and the dumping of excess ore on surface was avoided during 1960, which resulted in a shortfall of about 10,000 tonnes in the output of ore. In 1960, an aggregate of 147,000 tonnes of ore was treated, compared with 145,000 tonnes in the preceding year. The recovery of lead and zinc concentrates totalled 6,245 tonnes and 9,787 tonnes, respectively, in 1959. The slight fall in the production of lead and zinc concentrates was due to the lower metal content of the ore fed into the mill during 1960. The average metal content of the ore treated dropped from 8.19 percent (3.66 percent Pb and 4.53 percent Zn) in 1959 to 7.84 percent (3.32 percent Pb and 4.32 percent Zn) in 1960. During the year, more low grade ore was mined in wider slopes so as to increase the ore reserves of the mines. The average analysis of the concentrates produced during 1960 was 72.5 percent Pb and 5.7 percent Zn of the lead concentrates and 55 percent Zn and 1.09 percent Pb of the zinc concentrates.

The Metal Corporation of India Ltd has a plan to double the present mining and milling capacity of the Zawar mines in view of the proposed installation of a zinc smelter in Udaipur in Rajasthan and the higher level of output of lead and silver is visualised during the third five year plan. The lead concentrates produced are sent to the lessee's smelter in Tundoo in Bihar State for extraction of lead and silver, while the zinc concentrates are shipped to Japan for the smelting.

of zinc, as there is no zinc smelter in India at present. During 1960, a quantity of 9,301 tonnes of zinc concentrates was despatched to Japan for extraction of metal on a toll basis. The indigenous production of lead metal during 1960 was 3,730 tonnes.

During the year, the production of limestone reached an all-time record of 12.7 million tonnes registering an increase of 18 percent over the previous year's output of 10.8 million tonnes. Bihar continued to be the leading producing State, accounting for 2.05 million tonnes, or 16 percent of the total output followed by Madhya Pradesh and Orissa which contributed 1.99 million tonnes and 1.77 million tonnes, respectively. All the principal producing States recorded higher output during the year and the increase was particularly marked in the case of Madhya Pradesh, Madras and Bihar. These three States together accounted for nearly two-thirds of the overall increase in the output. The increase of 41 percent in the output from Madhya Pradesh was on account of the higher output from the Nandini mine in Drug district, the mechanisation of which was completed by the Hindustan Steel Ltd in June 1960. The higher production in Madras State was reported from Tirunelveli and Thiruchirappalli districts and that in Bihar State from Singhbhum and Shahabad districts. Limestone produced from these States is mostly for consumption in the cement industry. There has also been a substantial increase in the output from Sundergarh district of Orissa State where considerable development and mechanisation have been carried out by the Bisra Stone Lime Company in its mines in this district. The expansion of cement plants and mechanisation of quarries have also been reported from other States.

The general increase in the output of limestone has been brought about by the expanding demand from the cement and iron and steel industries. The higher output in the case of Orissa and Madhya Pradesh was to a great extent for consumption in the iron and steel plants. The average pit's mouth value of limestone during 1960 was Rs. 4.42 a ton, compared with Rs. 4.22 a ton during 1959. Increased demand, higher wage rates as a result of the implementation of the recommendations of the Central Wage Board for the cement industry, higher cost of stores and explosives and increasing thickness of over-burden have been reported by some of the principal producers as factors contributing to the higher cost of production and the pit's mouth value.

Pool Fertiliser Prices Cut

The Central Minister for Food and Agriculture Mr. S. K. Patil, has decided to cut "Pool" fertiliser prices. This reduction has become effective from 1st December, 1961. The old and the new prices are as follows:

	Old price (a metric ton)	Revised price (a metric ton)
Ammonium sulphate	Rs. 344.50	Rs. 330
Urea	Rs. 684.10	Rs. 670
Ammonium sulphate nitrate	Rs. 408.50	Rs. 400
Calcium ammonium nitrate	Rs. 324.80	Rs. 310

A spokesman of the Central Ministry of Food and Agriculture pointed out that as a result of these reductions in the pool prices, cultivators even after paying the usual "distribution margin", will benefit to the extent of Rs. 14.50 a metric ton of ammonium sulphate, Rs. 14.10 a metric ton of urea, Rs. 8.50 a metric ton of ammonium sulphate nitrate and Rs. 12.80 a metric ton of calcium ammonium nitrate.

I.F.C. Credits in Foreign Currencies

The Industrial Finance Corporation of India has been exploring the possibility of obtaining credits in foreign currencies other than dollars. The Government has recently agreed to the Kreditanstalt (German Bank of Reconstruction) extending a credit of 15 million deutschmarks (Rs. 1.8 crores) to the Corporation, the agreement for which is yet to be finalised.

Steel Requirements

An estimate of the requirements of steel by the end of the third five year plan has been made, of which the category-wise break-up is as follows:

End-product of steel	Estimated annual demand by 1965-66 (in thousands tons)
Heavy rails and fish plates	400
Heavy structurals and broad-flanged beams	550
Sleepers and crossing sleepers	200
Medium and light structurals	550
Round and flats, including rounds for nuts, bolts and screws	2,200
Thinplate	300
Plates $\frac{1}{2}$ in. and up	650
Wires including wire ropes	400
Hoops and box strapping	50
Sheets	1,200
Strips and skelp for tubes	400
Forging blooms and billets	300
Wheels, tyres and axles	100
Total:	7,300
Pig iron for sale	1,500

It is difficult to give precise information about imports. Some items may be surplus to require-

ments at a particular time and there may be shortages in others. There will be both exports and imports depending on the availability and requirements. The effort in planning has been to cut foreign exchange expenditure on steel imports as much as possible.

Orissa Mining Corporation

The Government of India has agreed to allow the Orissa Government to acquire the interests of the Centre in the Orissa Mining Corporation. The Corporation was set up in May 1956, as a joint venture of the Central and Orissa State Governments with an authorised capital of Rs. 50 lakhs, held in equal proportions between the two Governments. It is at present working three iron ore mines—Maharajpur and Khandadera in Mayurbhanj district and Sakradhihi in Keonjhar district. It has also acquired mining leases and prospecting licences over additional areas for iron ore, manganese and chromite. A programme of development by the Corporation during the third plan period has been drawn up, involving a capital investment of Rs. 86 lakhs and visualising a production of 800,000 tons of iron ore, 25,000 tons of chromite and 20,000 tons of manganese by the end of the third plan. There are also possibilities of acquiring more leases and raising the targeted production. The State Government has also formulated a scheme to develop iron ore mines through the Corporation in the Sukinda area to export 2 million tons of iron ore by 1964-65.

Foreign Exchange for Motor-car Makers

For the 12 months, October 1960 to September 1961, the foreign exchange allotted to the motor-vehicle manufacturers and vehicular diesel engine manufacturers for the import of motor-vehicle parts required for the manufacture of vehicles and engines is Rs. 31.28 crores. In addition, foreign exchange is also allotted every half-year to the established importers, actual users and the motor-vehicle manufacturers for the import of motor-vehicle components as spare parts according to the Import Trade Control Policy published for each half-yearly licensing period. Motor-vehicle parts, which are allowed to be imported by the manufacturers for the manufacture of vehicles according to their phased manufacturing programme, are those not being made in India. It is expected that in about two years time, most of the major components of motor-vehicles now being imported, will be manufactured in the country with the exception of a few proprietary items.

Another State Machine Tool Factory

It has been decided to set up a machine tool factory in the public sector in Pinjore, Punjab. The Hindustan Machine Tools Ltd, Bangalore, has been entrusted with the task of setting up the factory. The total expenditure is estimated at Rs. 7.5 crores. The present capacity is estimated at about 1,000 machine tools a year, and is being so designed as to produce 2,000 machine tools in the course of a few years. The factory, it is expected, will be completed by about the end of 1962.

Precision Instruments Factory in Kerala

The exact site for the location of the precision instruments factory in Kerala will be selected in consultation with the Russian experts who have been invited for the purpose. This plant is for the manufacture of pneumatic, hydraulic and mechanical instruments, and is estimated to cost about Rs. 6 crores. The recommendations of the Russian experts on the nomenclature of production, output, etcetera, are awaited. The factory, it is expected, will go into production during the latter half of the third plan.

Indo-Norwegian Fisheries Project

The Indo-Norwegian fisheries project, until now confined to Kerala, is being extended to the adjoining States of Mysore and Madras. The general conditions of fisheries in the latter are more or less similar to those tackled in Kerala, and hence they are being taken up first. Subsequently, the project can be extended to other maritime States as well, where mechanised fishing programmes are introduced under the third plan. The Norwegians will assist in setting up boat-building yards and also shore installations like cold storage plants, etcetera. The whole project will be administered by the Government of India in consultation with the State Governments concerned, and the representative of the board of directors of the Norwegian-India Foundation. Under the recent agreement signed in New Delhi between the Governments of Norway and India and the U.N., the activities of the project will also be extended to areas within Kerala, not covered

by previous agreements. Among other things, a new fisheries station will be established in Cochin to conduct marine research and experimental fishing along the coast of India with boats and gears of different sizes and types. An oceanographic research vessel constructed in Norway has already been commissioned for this purpose, and other suitable vessels will be procured to form a fleet. The Cochin station will also train personnel in fishing operations, manufacture and maintenance of fishing gear, processing, marketing, etcetera. As the project has to concentrate on these new activities in Cochin, its headquarters will be moved to Cochin from Neendakara, Quilon.

The expanded activities of the Indo-Norwegian project generally will be co-ordinated with the fisheries development programmes of the Government of India within the framework of the third plan. For instance, the programme of the project's fisheries station in Cochin will be co-ordinated with that of the operatives' training institute, which the Centre proposed to set up in Cochin to train fisheries engineers and other technicians. The Norwegian-India Foundation will provide the necessary equipment and personnel for the expansion of the project. In addition to the contribution of Rs. 1.68 crores, already agreed to under two earlier agreements of 1952 and 1956, the Foundation had given Rs. 87 lakhs up to 31st March, 1961, for implementing the activities undertaken under the previous agreements. Appreciating the need for fulfilling the fisheries programmes under India's third plan, the Foundation has now agreed to provide Rs. 66 lakhs for the completion of the remaining capital investments under the previous agreements, and in addition, Rs. 33 lakhs a year, for financing the new activities.

Planning Rural Industries

The Government of India has a proposal to set up a high level Rural Industries Planning Committee. An announcement about its constitution and functions will be made shortly.

Textile Mill Closures

The Government of India has set up a committee to enquire into the causes of textile mill closures in the country. The task assigned to the committee is to undertake an examination of the causes of such closure and "sickness" of textile mills, and suggest timely remedial action.

Indo-Polish Economic Co-operation

An economic mission sponsored by the Polish Ministry of Foreign Trade which has been discussing with the officials of the Centre, the possibilities of economic co-operation between India and Poland, concluded its discussions here last week. During these discussions on the long-term possibilities of Indo-Polish economic co-operation it was felt that a fair measure of advance planning of economic co-operation between the two countries was feasible in several sectors, particularly in the field of coalmining and zinc smelting. It was also agreed to continue the study concerning the possibilities of long-term arrangements in trade relations.

Doom Dooma Tea Take-over

For some time, there was considerable speculation for the £1-unit stock of Doom Dooma Tea Company on the London Stock Exchange. Finally, it has been reported that Brooke Bond and Company Ltd, London, a U.K. tea concern, by raising its initial offer of 45s a £1 stock to 60s a share has been successful in persuading the board of directors of the Doom Dooma Tea Company to advise the shareholders to sell their shares at 60s. It is understood that Brooke Bonds in agreeing to increase their offer to 60s a share were anxious to avoid "the break up of the old established Doom Dooma Tea Company". It was reported in the Press during the protracted take-over bid that one Indian concern was willing to pay the equivalent of 35s a share only for three of the five tea estates of the Company. No official confirmation is, however, available.

DEFICIT IN U.K. BALANCE OF PAYMENTS PREDICTED FOR NEXT YEAR

NO RECESSION IN ECONOMIC ACTIVITY EXPECTED

(FROM OUR LONDON CORRESPONDENT)

WHILE sterling continues to gain strength and the U.K. Treasury is repaying another £50 million of the August credit to the International Monetary Fund, the general economic prospect for Britain is described in gloomy tones in the latest *Economic Review* issued by the National Institute of Economic and Social Research. Briefly, the writers think that exports will not rise as much as the Government hopes, while imports must soon be expected to start rising again. So the outlook for the U.K. balance of payments is "less favourable" than has recently been suggested. The best they can predict is that the account will remain throughout 1962 in approximate balance on current account—with an overall deficit.

There are two reasons for doubting that the scope for British exports next year is going to be as large as the U.K. Chancellor has been telling the country. One is that expansion has been checked in western Europe, particularly in West Germany and Holland. The other is that, partly as a result of de-stocking in western Europe, the prices of primary products have been falling, and export earnings of the primary-producing countries "may no longer be rising". At home, Institute experts foresee no recession such as the Trades Union Congress has been predicting; but neither do they expect any lively expansion in 1962. Industrial output might possibly fall a little more than before the end of the year. Then, there should be a recovery in stock building, some increase in exports and probably in consumer expenditure following the next round of wage increases. But the expansion of output which these changes may cause is estimated at no more than 1 percent or 1½ percent above the third-quarter levels by the middle of 1962. By then, private manufacturing investment is likely to have turned down, and the rise in public investment "will probably not be sufficient to offset it."

It may be as well to keep this uninspiring background in mind when considering the present strength of sterling. It is true that Britain has just bought \$300 million worth of gold for the reserve and will repay another £50 million of the August credit to the I.M.F. Moreover, the gold and currency figures for November are expected to be satisfactory. But the strength of sterling is based mainly on short-term monetary movements. The currency still has to face its real test some time next year. Then, it will be the underlying balance of payments that will decide how strong or weak it will be.

Economic Prospects

This rather gloomy view of the immediate future is not shared by the U.K. Chancellor of the Exchequer and his colleagues in the Government. After the recent rather disappointing handling of economic publicity, all members of the Government concerned appear to be going out of their way to set things right once again. Replying to the T.U.C. which offered advice on the economic situation, the Chancellor developed his recent statement that he could see "no recession" ahead. He rejected altogether the view expressed by the T.U.C. itself and some independent economists that the expansionist forces were already weakening before the July measures were taken, or before they had time to take effect. For example, "although fixed investment in some sectors may begin to fall next year, there is no doubt that fixed investment in total was rising strongly in mid-1961, and we do not expect it to fall next year."

Mr. Lloyd conceded that the July measures had eased the pressure of demand over the economy as a whole. But the slight fall in demand is "in

accordance with our expectations and indeed our intentions." He did not accept the idea that unless the July measures were modified quickly, there would be a serious decline. Employment is still at a record level and unemployment "not very much higher" than a year ago, while overtime is still widespread. The fall in production is by no means general, and in some industries—notably building and capital goods manufacture—production has continued to rise. Looking ahead, the British Chancellor's analysis does not lead him to expect anything more than "the moderate slackening of pressure which we believe to be necessary in order to create the conditions for a really substantial growth of exports." Together with the full restatement of the case for the pay pause, Mr. Lloyd's appraisal of the economic situation is reassuring.

Pay Pause and After

Mr. Macmillan, speaking at Sheffield last week, emphasised that the pay pause was only a short-term measure to strengthen the value of wages by giving productivity time to catch up. "After the pause, our aim is to devise something more permanent and more positive." After talks with both sides of industry, the Government hoped to issue guidance to those whose actions and decisions determined costs and prices. He made these points: (1) if Britain joins the European Common Market, more research, better design, and more hard work would be needed to keep costs low; (2) unofficial strikes have to be avoided by better leadership in management and on the shop floor and by mutual trust; and (3) results of the export drive are encouraging but not yet enough. The U.K. Chancellor of the Exchequer, meantime, was meeting the Economic Committee of the Trades Union Congress and flatly refused to ease the pay pause for their benefit. It was clear that the Chancellor's meeting with the Committee, which lasted for two acrimonious hours, meant that the T.U.C. would boycott his proposed economic planning body for the time being.

Bank Loans still Falling

Outstanding bank advances declined by another £19 million in the four weeks ended mid-November after the contraction of over £300 million in the previous three months. As loans to nationalised boards increased, the reduction in the private sector was greater than this figure suggests. The trend is much as expected. After the crisis measures of late July, the banks took special steps to accelerate the repayment of overdrafts and sift new loan requests more strictly. Apart from the delayed effect of the milder squeeze which had been going on for several months, the banks received in August and September very large loan repayments as a result of the returning confidence in sterling. Exporters got delayed payments from foreign customers and were able in turn to repay bank loans.

This process could not continue indefinitely. Normally, the autumn is a period of heavy demand for bank credit. Although the slight decline in industrial production suggests a smaller need for finance in industry, the preparations of wholesalers and retailers for the Christmas season always require massive bank finance. The fact that advances were reduced at all this time shows that the credit system has remained under pressure. It is interesting that total advances have now returned almost precisely to the figure of a year ago, after rising steadily by over £300 million to mid-July and shrinking correspondingly since.

There was a further rise of £15 million in Government security holdings following a rise of

about £50 million the month before. This must be seen in conjunction with the drop of £62 million in the holdings of Treasury bills and may well include a switch from these into short gilt-edged securities by one or two of the banks. The average liquidity ratio is a fraction down at 34.69 percent, against the unusually high figure of 34.98 percent in October: a year ago, it was only 31.34 percent and the banks were then seriously concerned about their ability to stand the seasonal pressures which always arise in the first three months of the year. This time, provided the Bank of England does not call for further special deposits, the banks are reasonably confident of getting through the critical tax-paying season.

Machine Tool Export Orders

New work booked by the machine tool industry in September was worth about 6 percent less than in the same month of last year. Export orders after remaining very buoyant in the summer months—fell slightly below the previous year's level. Home orders were also down on the September 1960 figure, although the decline was less than in earlier months this year. The September export order of £2,715,000 showed a fall over the year of 6 percent against a gain of 50 percent in the previous four months' bookings compared with 1960.

The Machine Tool Trades Association, giving these figures, said that October indications confirmed the fall in new export orders. Business from the home market again fell in September, although the decline over the year was only 6 percent, against 18 percent in the first nine months of 1961. September deliveries to both home and export markets differed little from new orders, but over the first three quarters of 1961 deliveries were valued at one quarter more than in the comparable part of 1960 while export deliveries were up 17 percent. Because of buoyant export orders in earlier months, business on hand for overseas buyers rose by 31 percent in the first nine months while home orders on hand increased by 7 percent.

Fewer Cars Made but More Exported

The British motor-car industry produced fewer cars in October than in September, but exports rose sharply to the highest level for any month this year. A considerable increase in sales to the United States helped raise the export total. The U.K. Board of Trade's figures show that the month's output of cars totalled 75,372, compared with 100,907 in September, but in terms of weekly production the decline was smaller. The October rate was 18,843, against 20,181 in September (which counted as a five-week period) and 22,578 in October last year.

Brisker export business has, however, helped compensate the industry for dull conditions in the domestic market. In October, 33,799 motor-cars were sent abroad—an increase of 5,600 over the previous month's figure and of nearly 9,000, compared with October last year. Over the year, sales to the United States rose by 1,700 while exports to the European Common Market area were 4,000 higher.

Employment Gap Wider

The number of people unemployed, excluding school-leavers, rose by more than the seasonal margin between 16th October and 13th November. Moreover, the number of unfilled vacancies fell by more than is customary for October-November. The gap between the total number out of work and the number of jobs available through employment exchanges has again widened. On 13th November, there were 387,339 workless, whereas on 8th November, there were 262,915 unfilled vacancies. Unemployment as a proportion of the number employed was 1.7 percent in November, against 1.6 percent in October and 1.6 percent in November last year.

Engineering Orders Up

Net new orders received by the engineering industries in September were 5 percent higher in volume than in September 1960. Export orders showed a 4-percent rise and home orders, which had fallen during June to August, were 6 percent greater than a year earlier. The U.K. Board of Trade's figures show that in the third quarter of the year, new home orders were 2 percent less and export orders 3 percent more than in the corresponding period of 1960. With deliveries rising during September, there was little change in the orders-on-hand position. The provisional estimates show that the volume of production in the engineering and electrical goods industries in September was 11 percent more, and in the second and third quarters 8 percent and 9 percent more, respectively, than in the corresponding period of 1960. This category excludes railway equipment and certain other products.

Britain Buys U.S. Gold

Britain has bought about £100 million of gold from the United States to replenish gold reserves which were depleted during the pressure on sterling last summer. This purchase follows Britain's repayment last month of £100 million out of the £435 million credit granted by the International Monetary Fund in July. The deal marks Britain's return to a more normal reserve position, made possible by the improvement in foreign payments since July. It will not affect Britain's total foreign reserve holdings. A statement by the U.S. Federal Reserve System disclosed that America's gold stock declined by \$300 million (£107 million) during the week ended 23rd November, almost entirely because of a transfer of gold to Britain.

Jute

MINIMUM JUTE PURCHASE QUOTAS ALLOTTED TO MILLS

GROWING ANXIETY OVER GOA AND CHINA SITUATION

THERE was little fresh business in the jute goods market during the past week, and dull conditions prevailed. Overseas enquiries were few so, after the end-of-the-month scramble to cover goods and settling day activities, the market tended to be quiet. Considerable fluctuations took place in the futures market, but they were mainly attributable to speculative manipulation and had little or no relation to business conditions. The main movement near the close was towards higher levels, when the steadiness of fibre carried goods with it. Requirements for early delivery seem to have been pretty well satisfied, and buyers cannot be blamed if they hesitate to acquire additional supplies. Towards the end of the week, there are signs of nervousness among operators following rumours of impending trouble over Goa and over the Sino-Indian border. Some panicky selling has been done in a market full of rumours. The fall in the stock market is being watched anxiously by the fibre and jute goods markets.

The fact that mills have got to buy jute under the quota system has posed a problem for many. Very few like to go long in jute, but there is very little profit in doing simultaneous business for forward shipment. Up to the end of March, the parity is there, but beyond that the prospects are not bright even if buyers could be found. Many mills have jute in stock or contracted for up to the end of March 1962, so any jute bought now takes them into the April-June position as far as sales are concerned. What is needed now is a more active demand for gunnies from abroad, but the prospects of such demand developing appear remote. Such strength as there is in the market has during the past week been based on raw jute, especially on conditions in the mofussil, where imports are small. There is no real tendency to hold back jute. In fact, it is known that some stockists are eager to sell, but many have been dissuaded, since they know that if large quantities are offered at once, prices might collapse. The firmness in the mofussil markets has tended to make sellers more reserved in Calcutta, but it has been difficult to get buyers to pay higher prices, although advances have been recorded. The steadiness of raw jute has been reflected in the market for gunnies, and prices have tended to harden although there has been no great support from outside. Consumers appear to be content to restrict their purchases to immediate requirements, and if conditions do not improve, a pressing need will soon develop for mills to secure orders.

Minimum Quota Scheme

During the past week, the reconstituted jute purchase sub-committee held its first meeting, and allotted minimum quotas for mills to take up over the week ended 9th December. The total quantity involved was understood to be about 700,000 maunds. Initially, the mills were not eager to take up their quotas. But in the case of some of the business done in anticipation of quotas being issued, brokers were requested to date their contracts for 4th December. These particular buyers expected a rise in prices once mills started to take up their share, and in this way they were able to buy a little cheaper.

Prices did in fact rise on Monday and Tuesday, but this was not the result of any heavy purchases by mills, although the knowledge that mills would be in the market tended to make sellers bullish. The main reason for the rise was the fall in arrivals at the main receiving centres. Over the past 15 days, these have fallen from about 150,000 maunds daily, on an all-India basis, to about 80,000 maunds daily—or very nearly half. This is not unexpected at this time of year, as most cultivators are engaged in harvesting paddy. Calcutta markets have reacted, however, and rates have advanced by about Re. 1 above the minimum levels.

Strike in Dundee

News has been received from Dundee that there is a strike in some mills on the question of a pay rise. So far, the strike is confined to a small section of the total labour force, but as no settlement has been reached, and as the industry's counter-offer has been refused, it is feared that the strike may spread. A pay rise of 15 percent was demanded, but the Jute Wages Council offered an increase of 5 percent for men and 4 percent for women. Meanwhile, other workers have imposed a ban on overtime working until a settlement is reached.

THE JUTE MARKETS

Manufactured Goods: The market was quiet in the early part of the past week. Business was largely confined to covering and inter-bazaar transactions. Mills sold small quantities but were not able to get favourable prices for the positions that interested them. There was no change in the opening quotations, and December B Twills were recorded at Rs. 129, with April-June shipment at an Rs. 8 discount; 40in 10oz hessians were quoted at Rs. 48.75 for December and Rs. 45.50 for forward shipment. Prices fluctuated within narrow limits over the next two days. The political situation caused a steadier undertone to develop, and on Saturday heavy goods jumped by Rs. 2.50 and hessians by 50nP. Over the week-end, there was an improvement in the fibre market and this helped maintain goods rates at the higher level. On Monday and Tuesday, a squeeze developed for ready delivery goods and B Twills advanced to Rs. 133, but the demand was soon satisfied and prices were kept up only by the strength of the raw jute section. Overseas buyers remained out of the market. Towards the close, uneasiness developed with the news about Goa and China, and prices fluctuated erratically.

Opening quotations on Wednesday morning were as follows:

	December	Jan.-March	Apr.-June
40in. 7oz.	38.50	35.75	34.75
40in. 8oz.	41.50	38.50	37.25
40in. 10oz.	50.75	47.35	46.25
B Twills	130.25	124.25	121.25
Heavy Cees (Plain)	129.50	124.25	121.25
A Twills	161.00	152.50	148.00
Liverpools	149.50	142.50	138.00
Cornsacks	133.00	126.25	123.25

Raw Jute: The fibre market was quiet at the opening last Thursday, quotations being stationary at the minimum rate of Rs. 30 for Assam Bottoms. Mills showed very little interest, as they anticipated quotas being issued by the jute quota sub-committee. But some small business was done and towards the week-end, the tendency was towards a rise. Imports upcountry showed a distinct decline and sellers increased their rates by 50nP after the week-end. Very little business was reported against quotas under contract, although agency and jetty purchases increased.

On Tuesday, rates were increased to Rs. 31, and small business was reported at this level, but buyers in general were looking for lower prices. In the knowledge that mills had to buy, sellers were reluctant to reduce their rates, but the political situation soon altered this; with rumours rife about Goa and China, and the share market recording a substantial fall, sellers' ideas changed and prices were cut. Still, only small business was recorded, but offers were plentiful.

The market was unchanged on Wednesday morning and opening quotations were as follows:

	Landed at Mills Basis Bottoms	Rs. a 100 kilos.	Rs. a md.	Shipment.
Assam	81.72	30.50		Dec.-Jan.
Northern	80.38	30.00		"
Purnea Desal	75.00	28.00		"
Daissee Selected	87.07	32.50		"
Assam Tossa	84.39	31.50		"
Mesta:				
Assam-Northern	73.68	27.50		"
Daissee	73.68	27.50		"
Desal	75.02	28.00		"
Jungli	68.32	25.50		"
Pakistani N. C.	107.00	a bale		"

THE FOREIGN JUTE MARKETS

FIBRE PRICES UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

CONSIDERABLE uncertainty prevails in the Dundee jute markets concerning the future trend of prices. Meanwhile, fibre values are being fairly well maintained, fluctuating only slightly from day to day, so little actual change is taking place in the level over a period. Offers are not freely made yet of anything over Mill Hearts grade, and good jute appears to be still scarce. It is thought that dealers are holding off stocks in the hope of higher prices, but what the industry needs is cheaper jute to help it keep its customers for yarns and cloth.

Mill Firsts are quoted in Dundee at £155 and Mill Lightnings at from £129 to £132. Mill Hearts were sold last week at £100 to £102 for December shipment, c.i.f. U.K. while Grade Hearts changed hands at £82, December. Offers of Grade Tossa-2/3 were made at £139 to £143, and fours from £125 to £128, while interest was shown by spinners in Continental Tossa-2/3 at from £106, now lowest at £107, December c.i.f. U.K.-Continent. On the whole, spinners in Dundee and on the Continent had shown more interest because of the tendency for shippers to raise their terms.

Calcutta goods changed but little during the past week, but the prompt shipment period ruled

very firm. Shippers are now asking as much as 79s for 40in. 100z. and 59s 6d for 7½oz. Other positions are at 74s 6d and 56s 6d December, 70s and 53s 3d January-March and 68s 9d and 52s April-June, with B Twills at 211s 3d prompt, and 197s 6d, 186s 9d and 183s 9d for the respective positions of shipment, all f.o.b., Calcutta.

Jute yarns and cloth are firm, with spinners reluctant to sell. This is due to the strike in several mills, the workers being dissatisfied with the award of 5 percent increase in wages to men and 4 percent to women. They demanded a 15 percent increase.

THE PAKISTANI JUTE MARKETS

BETTER OVERSEAS ENQUIRY FOR FIBRE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

AFTER the dull and lifeless spell which lasted for a few days, there has been a revival of interest from overseas at better prices. Apparently, the amount of jute available for sale from this end is excessive, so the local prices have not improved except perhaps in the loose market. The conditions of the market upcountry remain more or less unchanged. Imports are scarce and buyers few, partly because of credit restrictions. The sellers are by no means keen to bring into the market more jute even though they will shortly have finished their paddy harvesting. The rivers are drying up, and are making communications even more difficult and, therefore, more expensive. The revived interest overseas has naturally slightly increased the buying activity locally, and the upcountry markets have steadied up somewhat.

Transactions in pucca bales have been mainly in Export Hearts at prices in the region of £79. There have been fairly large transactions in cuttings also at low prices, but simultaneously with the overseas interest one or two of the larger mills came in to buy large quantities. This has resulted not so much in higher prices as in the withdrawal of sellers. Due to the complete lack of buying interest, the London market sagged until Export Lightnings were available at £99 c.i.f. Continent. These prices were probably very near the bottom, as balers could not be expected to continue to sell so much below E.P.C.s, and there did not seem to be much chance of the E.P.C. prices being reduced. As is often the case, buying interest in one sector excited the market and prices rose practically overnight to very near the E.P.C. levels. The buying had been rather scattered so that quotations for the same mark on the same day varied by as much as £2 or £3. It would appear that overseas buyers are continuing to show some interest in named marks as opposed to standard L.J.A., and it is pleasant to note in the interests of a stable market some of the purchases are being made for the forward position rather than for merely the ready position.

In brief, therefore, there has been renewed buying interest which has affected the overseas market to some extent with very little effect locally, and it would appear that this increased activity is the normal buying spurt before the Christmas holidays. Rather dull conditions may, therefore, be expected until the middle of January. At that time, in view of the hand-to-mouth buying that has been going on and in view of the traditional after-Christmas buying and in view of the scarcity of arrivals, it would be fair to expect that the market should firm up. Throughout the country, reports are coming of more and more moisture in the jute. This has not yet reached serious proportions, and is only to be expected when the market is slightly steadier and arrivals are short, especially when the growers are in such good financial position. On the other hand, there has been a slight improvement in quality. This is caused by the appearance of raky jute, that is to say, the better jute put to one side early in the season for sale at a later date. Earlier in the week, when business was reported so far below E.P.C.s, there was expectation with good reasons that the E.P.C. figures would be reduced. Strangely enough, amendments were made on 20th November, increasing the Dundee Tossa-4 price by £3, Dacca Tossa-5 by £2, Dacca Tossa-6, Crack Tossa-4 and Crack Dacca by £1. White jute was increased and S.M.R. and Tossa cuttings were reduced by £1.

B.O.A.C. OPERATES FROM NEW PASSENGER BUILDING OF LONDON AIRPORT

On 13th November, B.O.A.C. started operations from the central area of London Airport. From that date a part of the new longhaul building, termed officially No. 3 Passenger Building, has been available for the departure of the Corporation's world-wide services. As, at this stage, only half the new building has been completed, B.O.A.C.'s arriving aircraft will continue to be handled through the international part of the existing shorthaul building in the central area, now known as Passenger Building No. 1. Inbound B.O.A.C. aircraft which have been cleared by Customs at Prestwick before reaching London will be handled through the domestic part of the shorthaul building, known as No. 2 Passenger Building.

F.A.O. MEETING DISCUSSES COCONUT PESTS

POOLING OF RESOURCES URGED FOR RESEARCH

(FROM OUR SOUTH INDIAN CORRESPONDENT)

BOTH cadang-cadang of the Philippines and the root (wilt) disease of Kerala, which are the most serious diseases affecting coconut trees, are possibly caused by some virus, according to experts participating in the F.A.O. meeting on coconuts now being held in Trivandrum. These are diseases whose causes have not yet been determined. The subject figured in the discussions last week. The two experts, Dr. K. P. V. Menon of the Indian Coconut Committee and Dr. Celino of the Philippines, said that their work indicated that some virus was responsible for the spread of the diseases. Mr. Rhind, who presided over the session, said that although the two diseases are apparently caused by viruses, they are nevertheless quite distinct as the appearance of affected palms in the two countries is different. The difficulty of finding measures to control the diseases was discussed, and the chairman gave a warning about the danger of the diseases spreading to other countries. The speakers stressed the importance of strict plant quarantine measures. The work carried out in India had shown that the root diseases might be transmitted by insects or by contaminated soil, they said.

Effective Antidotes

Pests, like the rhinoceros beetle, which have been causing considerable damage to coconut cultivation in several countries were also discussed. The possibility of using effective antidotes against the pests was discussed by delegates from various countries, especially those from India who gave an account of their experiments and the results obtained so far. The discussion on the rhinoceros beetle was led by Mr. O'Connor of the South Pacific Commission. Mr. Etershank of the Commission gave a detailed account of the new research project on the rhinoceros beetle. The project is proposed to be undertaken by the Commission under the auspices of the U.N. Special Fund extending over a period of five years or more. Mr. Etershank hoped that the project would go a long way in tackling this pest of the coconut palm.

Annual Loss

The Governor of Kerala, Mr. V. V. Giri, who inaugurated the first meeting of the Working Party of the F.A.O. on coconut production, protection and processing on 27th November, expressed his "grave concern" at the spread of the coconut disease to six out of the nine districts in Kerala resulting in an annual loss worth about Rs. 2 crores to Rs. 3 crores. He said the diseases of undetermined causes, like the wilt disease of Kerala and cadang-cadang of the Philippines which affected coconut palms in many countries, presented a real challenge to the resourcefulness of the F.A.O. experts. Mr. Giri hoped that the experts would "measure up to the challenge." He also stressed the need to stop imports and make the country self-sufficient in coconuts. Dr. A. B. Fagundus, the F.A.O. expert who addressed the conference on behalf of the Director-General of the F.A.O., said that in view of the expanding requirements of coconut, efforts should be made to produce more oil and copra a nut, more nuts a tree and higher production an acre.

Co-ordinated Research

The Kerala Chief Minister, Mr. Pattom Thanu Pillai, welcoming the gathering, hoped that the session would lay the foundation for co-ordinated research and that by the pooling of resources of the coconut-growing countries, it would be possible to undertake extensive research on coconuts in south and south-east Asia, which would be equal to the task of facing any research problem on pests. While each country would have its own problems which might baffle the local scientists and research workers, a pooling of the resources and sharing of the results of research, the Chief Minister said, were sure to provide the solutions to the problems. Referring to the coconut problems of the State, he said that coconut cultivation formed 25 percent of the total land under cultivation in Kerala. Almost one-third of the State's total agricultural income is derived from coconuts. So coconut has an important place in the economy of Kerala.

For over 75 years, the State has been facing the problem of coconut diseases. The root and leaf diseases, which have become the bane of coconut production in Kerala, were first noticed about 35 years ago in central Travancore and in spite of all the efforts to combat the diseases, they spread rapidly and are at present causing a heavy damage to coconut plantations in the State. About 10 percent of coconut trees in the State are victims of either the root or leaf disease or both. The annual loss due to this is estimated by the Chief Minister at Rs. 3 crores. This is too big a loss for the State to bear, more so for agriculturists most of whom have holdings of less than an acre. Besides the supply of quality seedlings, the State Government has arranged for loans to coconut growers with a view to assisting them in the task

of manuring their trees adequately. There is a provision of Rs. 340 crores in the third plan for this purpose, the Chief Minister said.

HIGH TAXES AFFECT TEA EXPORTS

FALL IN AUCTION PRICES CAUSES ANXIETY

(BY A SPECIAL CORRESPONDENT)

THE chairman of the Indian Tea Association, Assam Branch, speaking at the recent annual meeting in Tezpur, discussed the prospects for the tea industry. In addition to paying excise and taxes of over Rs. 193 crores during the past ten years, tea has earned foreign exchange amounting to Rs. 1,158 crores during the same period. Since independence, exports have increased in value from Rs. 60 crores to Rs. 129 crores, or by over 100 percent. But according to the chairman, taxation is slowly costing India some of her export markets, since the big buyers naturally move to the cheapest markets. So a more intensive propaganda campaign should be undertaken both in India and abroad.

The position concerning fertilisers is also somewhat anomalous, since the planting community apparently pays more for sulphate of ammonia than other agriculturists. The Central Government appears to be guided by a profit motive, although a lower price would enable poor agriculturists to buy fertilisers and gain benefits in the form of a greater production. The Government is reported to act on the view that lower prices would reduce profits of the State-owned fertiliser factories. But the hub of this argument is that State trading must show profits to help pay for the third plan. On 1st December, the Centre announced its decision to reduce "pool" prices of chemical fertilisers. The price of sulphate of ammonium will be cut by Rs. 14.50 a metric ton. Farmers will also obtain urea and calcium ammonium nitrate at cheaper rates, but it is not stated whether tea estates will also benefit from the reduction in prices. Prices are now to be as follows: ammonium sulphate Rs. 330 a metric ton; ammonium sulphate nitrate Rs. 400 a metric ton; calcium ammonium Rs. 310 a metric ton; and urea Rs. 670 a metric ton.

The chairman also referred to the difficult situation concerning the import of tea machinery and spare parts. But considering the importance of tea as a major foreign exchange earner, the Government should grant adequate foreign exchange to planters for importing machinery and spare parts.

Fall in Auction Prices

The price of tea in Calcutta auctions is causing anxiety. Although the opening sales of the current season were profitable and remunerative rates continued through July, there has been a steady decline week after week since that time and more than half of the north Indian crop remains to be disposed of. The current average price is already down to Rs. 4.16 a kilogram, against Rs. 5.19 a kilogram last year. It is some comfort to note that while teas for internal consumption also show a fall compared with last year, the commodity today is actually selling higher than the price of export teas.

Prospects for Tea Shares

There has been some nibbling at tea shares during the past week or so. In view of the steady fall in the price of the commodity, this seems surprising, but some people in the market think that at long last the Governments concerned may decide on a more workable scheme of taxation. In this context, it is interesting to note that new planting in Pakistan will be given a tax holiday for eight years. This plan is said to apply to estates established or to be established between 1st July this year and 30th June, 1965. Pakistan has a good internal demand and does not rely on exports. On the other hand, prices have been strictly controlled in recent years for the benefit of the internal consumer.

Conference in Assam

The Assam Government has called for a tea conference to be held in a few days in Shillong. Mr. Morarji Desai, Central Finance Minister, is expected to inaugurate it.

Third Plan Target

The third plan tea target of 900 million lbs. is said, will be maintained, although India's teas are steadily losing ground in overseas markets and a heavy surplus is already on hand which will create a glut in the markets. Mr. D. L. Betts, a recent president of the Indian Tea Association, Calcutta, lays stress on propaganda in the Continent, particularly in France. The American market should also be intensively explored and Near East and Africa should receive more attention. Mr. Betts also lays stress on advertising on quality teas, if new markets are to be captured. These problems are discussed in an interesting article in a recent issue of T & R Mail. The writer concludes with the comment that a mild recession in prices on all markets must be anticipated. But this does not sound too serious as the extra tea

COCHIN TEA SALES

At Dust Sale 48, 343,000 kilograms of tea were on offer. There was a good demand. Plain low mediums and residuals were irregular while better mediums met with much less enquiry. High-grown remained steady.

At Sale No. 49, 549,000 kilograms of tea were on offer. There was a better general demand. Plain and low medium broken were irregularly 20nP to 35nP lower. Similar fannings were 30nP to 40nP easier while mediums and good mediums were firm. High-grown were steady and unorthodox grades met with better demand at improved prices. The plainest grades were the weakest feature of the sale.

LONDON INSURANCE LETTER

PROBLEMS OF CO-ORDINATION IF U.K. JOINS E.C.M.

IN discussions on the U.K.'s proposed participation in the European Common Market, attention has been focussed on trade or policies, rather than finance and, in the matter of finance, on banking rather than insurance. Mr. M. H. R. King, overseas manager of the Commercial Union Assurance Company, tried to show insurance in its proper perspective in an address delivered at the Insurance Institute of London. Mr. King did not doubt that British insurance would benefit from participation; and he said that the benefit would

KUMARDHUBI FIRECLAY & SILICA WORKS LTD.Managing Agents: BIRD & COMPANY (PRIVATE) LTD. Chartered Bank Buildings, Calcutta-1
Works at: KUMARDHUBI, Dist. DHANBAD, BIHAR

JWTE 140

Pioneers in the field of Refractories, we manufacture products which are indispensable for the Steel, Glass and Sugar Industries.

50 years' experience harnessed to the most modern machinery and exhaustive research help make our products unique in reliability and uniformity.

Kumardhubi Refractories in your Furnace will reduce maintenance costs, ensure continuous, dependable operation and increase production. Recent large scale expansions at our Works enable us to offer early deliveries of Sillimanite products.

Calcutta Markets**BETTER DEMAND AT TEA
EXPORT SALE****DUST PRICES IRREGULAR**

AT Sale No. 26, held on 4th and 6th December, the offerings at the Export auction amounted to 71,957 packages. There was a better general demand than in recent weeks for all but the plainest and more fibrous orthodox descriptions. Plain broken were irregular and generally declined by 10nP to 20nP, but similar Fannings were fully firm to dearer on last rates. Orthodox Assam broken were irregular and generally easier, except for the best which sold above last rates. Similar Fannings met with useful competition and were generally dearer. Best liquoring C.T.C.'s were fully firm, while those in the medium category were generally dearer with more competition for Fannings than broken. Off-grade C.T.C.'s were irregular, those with useful liquors being generally dearer while the remainder were fully firm or sometimes a little easier. Legg-cut Doars improved in price by up to 10nP and sometimes more. Darjeelings met with good support at irregular rates with the best generally dearer. In spite of more demand, whole leaf grades were again easier with more interest for the cheaper varieties. Tips sold readily.

Quotations	1961	1960
Clean Plain Pekoe	Rs. a kilo 3.65 to 3.75	5.30 to 5.06
Plain B.P.	3.40 to 3.50	4.50 to 4.65
Plain Fannings	3.45 to 3.65	4.80 to 4.90
Medium Assam C.T.C. B.P.	4.30 to 4.60	4.70 to 4.95
Medium Assam C.T.C. Fgs.	4.40 to 4.70	4.90 to 5.20
Best Assam C.T.C. B.P.	5.00 to 5.40	5.60 to 6.00
Best Assam C.T.C. Fgs.	5.00 to 5.50	5.90 to 6.30

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a good and general demand for the 25,651 chests of Dusts on offer. C.T.C. teas with a clean leaf appearance opened fully firm to dearer but eased towards the close. Fibrous teas were, however, irregular. Orthodox descriptions declined by 5nP and sometimes 10nP except for the brighter lines which were keenly competed for. Legg-cut varieties sold well but at irregular rates, and the better liquoring sorts were a little dearer.

Quotations	1961	1960
Plain Orthodox Dust	Rs. a kilo 3.70 to 4.00	4.60 to 4.90
Medium Assam Dust	3.95 to 4.15	4.75 to 5.00
Legg-cut Dust	4.30 to 4.70	
Medium Assam C.T.C. Dust	5.60 to 6.00	5.50 to 5.65
Good Assam C.T.C. Dust	6.30 to 6.70	6.00 to 6.50

(Quotations are inclusive of excise duty.)

The 363 chests of Leaf on offer met with a fair demand.

**FREIGHT RATES FALL IN
FOODGRAINS TRADES**

THERE was a general decline in the freight rates last week. Six vessels from the Atlantic coasts with foodgrains to India have been fixed at the lower rate of 72s 6d against last paid 77s 6d for October shipments. The Far Eastern market was the most active area and Australian wheat shippers accepted vessels to the U. K. at the unchanged rate of 87s 6d. Australian coal and iron ore from the west coast of India to Japan were maintained. Some 6,000 tons 10 percent scrap from Calcutta to one port Japan paid 78s f.i.o.s., and a similar quantity is available for December shipments for which the higher rate of 80s may be obtained. Some 6,500 tons of manganese ore from two ports east coast India to Japan, December shipment has been fixed at 68s, free discharge. At Haldia two foodgrain vessels have lightened their cargo during November, and the third vessel arrived there on 5th December evening. The port authorities have signed a fresh contract with the owners of the dredger *Queen of Holland* for dredging the new alignment at Balari Bar.

HIDES AND SKINS STEADY

The market continued steady. Stocks of skins were higher, but those of hides were less than in the previous week.

Bazaar Sales

(Between 28th November, 1961, and 4th December, 1961)

Cowhides: Wet salted (Ord.) 7,700 pcs. on the basis of Rs. 9 to Rs. 12.12; Wet salted (Slaughtered) 14,600 pcs. on the basis of Rs. 9.50 to Rs. 16.50 and Rs. 18 to Rs. 28.50.

Bazaar Stocks

(4th December, 1961)

Cowhides: Wet salted 64,500 pcs.
Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 33,000 pcs.; Assam-Dinajpur 35,500 pcs.; Muzaffarpore-Patna-Pakur-Purneah-Kissen-ganj 175,500 pcs.

COMPANY AND PUBLIC NOTICES**THE BALLARPUR PAPER & STRAW BOARD
MILLS LTD.**

Registered Office: Ballarpur,
Dist. Chanda, Maharashtra.

NOTICE

NOTICE is hereby given that the next Annual General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at Ballarpur, District Chanda, Maharashtra, on Thursday, the 28th December, 1961 at 3-30 p.m. to transact the following business:

Agenda:

- To receive and adopt the Directors' Report and the audited Accounts of the Company for the year ended 30th June, 1961.
- To declare dividends for the year ended 30th June, 1961. The directors have recommended the following dividends, subject to deduction of tax:—
 - At 6.5% plus 2.5% p.a. on 5% Income-Tax free Cumulative Preference Shares;
 - At 14.50% p.a. on Ordinary shares.
- To elect directors in place of those who retire by rotation:

(a) Shri S. M. Ramakrishna Rao and Rai Bahadur Sohan Lal being longest in office, retire by rotation and being eligible, offer themselves for re-election;

(b) Shri L. M. Thapar also retires by rotation and as he is an Associate of the Managing Agents of the Company, a special notice has been received from a shareholder of the Company proposing his re-election. A notice, as such, is hereby given for passing the following resolution with or without modification as a special resolution:

Resolved:

"That pursuant to section 261 of the Companies Act, 1956, Shri L. M. Thapar, an Associate of the Managing Agents of the Company, be and is hereby re-elected as a director of the Company."

- To appoint Auditors for the current year and to fix their remuneration.

M/s. K. K. Mankeshwar & Company, Auditors of the Company, retire and are eligible for re-appointment.

- Special Business:**

To pass the following resolution with or without modification as an ordinary resolution:

Resolved:

"That in compliance with the requirement of Section 293(1)(d) of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, the Company do hereby consent to the Board of Directors of the Company borrowing moneys for and on behalf of the Company from time to time as and when required by the Company provided the moneys so borrowed (excluding temporary loans from time to time obtained by the Company from its Bankers in ordinary course of business) shall not exceed in the aggregate in any case and at any time by more than Rupees Two crores over and above the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set a part for any specific purpose, as the Board may from time to time deem necessary."

- To transact any other business that may be brought forward with the permission of the Chairman.

Note: (i) The Share Transfer Books of the Company will remain closed from the 19th December, 1961 to 28th December, 1961, both days inclusive.

(ii) A member entitled to attend and vote at the meeting, is entitled to appoint a proxy who need not be a member, to attend and vote, instead of himself.

(iii) Explanatory note pursuant to Section 173 of the Companies Act, 1956, in respect of the above resolutions, has been sent to all the shareholders along with the notices.

By Order of the Board,

KARAM CHAND THAPAR & BROS.**PRIVATE LTD.,**

Managing Agents.

Calcutta,

The 30th November, 1961.

**THE ORISSA MINERALS DEVELOPMENT CO.
LTD.**

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Friday, the 29th December, 1961, at 11-15 A.M. for the following purposes:—

- To consider and approve the Audited Accounts of the Company for the year ended 30th June, 1961, and to receive the Directors' and Auditors' Reports thereon.
- To declare the Dividend recommended by the Directors.
- To appoint a Director in the place of a retiring Director.
- To appoint Auditors and fix their remuneration.

As a Special Business

5. To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution—

"That, in conformity with Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act, 1956, authority be and is hereby accorded to the continuance of a payment to the Directors of the Company of a commission (to be divided between them in such manner as they shall from time to time determine) of 1% of the net profits of the Company in each financial year over the period of five years extending up to and including the financial year of the Company ending on 30th June, 1966."

The Share Transfer Register of the Company will be closed from 14th December, 1961 to 29th December, 1961, both days inclusive.

By Order of the Board.

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents

Chartered Bank Buildings,

Calcutta, 24th November, 1961.

Note:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 12th January, 1962, to those shareholders whose names appear in the Company's books on the 29th December, 1961, or to their mandatories. No application for Dividend Warrants will be necessary.

**Explanatory Statement for the Special Resolution—
Item No. 5 above**

The remuneration of your Directors is regulated by Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act, 1956. Each Director of your Company is entitled to be remunerated for his services by a fee of Rs. 50/- per meeting of the Board attended by him and a share in a commission of 1% of the net profits of the Company in each financial year, the latter having been permitted for five years expiring with the Company's financial year which ended on 30th June, 1961.

It is proposed that the Directors should continue to be remunerated in the manner prescribed in Article 97 of the Articles of Association of the Company, that is by way of fees for meetings attended and a commission of 1% of the net profits of the Company up to and including the financial year of the Company ending on 30th June, 1966.

Each Director of the Company is interested in the Special Resolution to the extent of the remuneration proposed to be paid to him. The Directors of your Company hold shares in the capital of your Company as hereunder:

Mr. D. L. V. Rowe holds	1 Ordinary Share.
Mr. Gopal Dass Toolsidass holds	100 Ordinary Shares.
Mr. Sachindra Chaudhuri holds	Nil Ordinary Shares.
Mr. B. P. Ray holds	Nil Ordinary Shares.

The Managing Agents of the Company may be deemed to be interested and they hold 1,600 Ordinary Shares in the capital of the Company and Mr. D. L. V. Rowe, a Director of your Company, is a Managing Director of the Managing Agents.

LINSEED DULL

The market was dull in the past week. The price showed a slight decline in sympathy with other oil markets, although sellers for forward delivery were reserved. Small arrivals came from the centres against previous sales. The oil market was slightly easier due to price drops in other vegetable oils. Business was on a very small scale for ready delivery. The oilcake market was unchanged. Small ready business was reported. The latest quotation is as follows: Ready-December Rs. 31.25 a maund.

SHELLAC STEADY

During the week ended 5th December, the tone of the market was steady. The range of quotations was as follows:

	Rs. a package of 74.40 kilos
Pure one buttonlac	158, 156, 160 buyers; 162, 164 sellers.
Lemon one shellac	158, 156, 160 buyers; 162, 164 sellers.
Lemon two shellac	146, 144 buyers; 150 sellers.
Standard I shellac	132, 130 buyers; 136 sellers.
Pure T.N. shellac	124, 126 buyers.
Golden kusmi seedlac	170 buyers.
Kusmi one seedlac	140 sellers, 140 value.
Golden Bysack seedlac	130 sellers, 130 value.
Manbhumi Fine Bysack seedlac	110 buyers; 114 sellers.
Fine Bysack seedlac	102 buyers; 106 sellers.
Genuine Bysack seedlac 5%	88 buyers; 92 sellers.
Grade One Class B seedlac	118, 116 buyers; 120 sellers.
Grade Two Class B seedlac	96 buyers; 100 sellers.

Shipments during November were 31,666 packages.

TERM-FINANCING BY THE BANKS

THE old controversy about how far banks should go in for the term-financing of industry has received fresh impetus in recent weeks. A working group appointed by the Reserve Bank in March 1960 has, in a report submitted a short while ago, criticised banks in this country for being far too conservative. Their loan operations, it is reported as saying, are for the most part dictated by "certain traditional ideas regarding liquidity of assets which need to be modified, especially by the major banks, with the changing requirements of the times." Although the criticism is old, the immediate provocation for repeating it is by no means clear, especially at a time when the lending capacity of the banks is pretty fully extended. It has been argued that the provocation lies in one main fact. It is that private enterprise will find it extremely difficult to raise the resources it is expected to invest under the third five year plan. For the current quinquennium, the planners have set an investment target of Rs. 1,350 crores for private industry (including mining). But the resources likely to be available are estimated at only Rs. 1,250 crores. The gap of Rs. 100 crores has to be filled, and it is suggested that this can partly be done if banks are encouraged to increase their term-financing activities. Others have criticised the argument by pointing out that, under the second plan, private industry (including mining) was expected to invest Rs. 620 crores, but it actually invested Rs. 850 crores; therefore, under the third plan, as against the planners' estimate of Rs. 1,350 crores, it will probably need to invest much more, and in that case the gap will increase. The shortfall, it is implied, will be so large that far-reaching changes may be necessary in the techniques and framework of the financing institutions, including the banks, if the expansion of private industry is not to suffer.

From the rather brief summaries which have been published so far, it looks as if the Reserve Bank working group has made out an excellent case for banks increasing their term-financing of industry. Unfortunately, however, the excellence of the case is marred by the fact that it is neither original nor practical in the circumstances of today. It is no doubt an illuminating thought that commercial banks in countries like West Germany, Japan and the United States—and even the U.K.—provide much medium-term credit to industrial units; and that the credit has played a major part in economic expansion. But the basic point remains that the banks in these countries have had the "surplus" resources to go in for medium-term lending. They operate in money markets which are well knit and highly organised, so they are able to compete for, and get, the deposits they want. The deposits are used first for short-term lending; only when the relatively secure base of short-term advances has been built do the banks go in for medium-term lending. By that time the institutional framework conducive to medium-term financing has also been created in the form of credit information bureaux and the like.

In India, conditions are drastically different, and the first major difference is that the deposits of the banks here are far too small. The reasons for the smallness are many and varied. Much of the money supply stays outside the organised sector, so the banks have not been able to reach it. Constant inflation has encouraged people to search for a "hedge", for which purpose commodity speculation has proved a better bet than banking deposits in the banks. Because more deposits have been brought in, the Reserve Bank, provided active discouragement by cutting down the interest rates on deposits. Finally, episodes like the Palai Central and Laxmi

Bank crashes have undermined confidence, and caused huge funds to be withdrawn. It is gratifying that the substantial fall in bank deposits which started around the middle of last year has been reversed in recent months. But, in spite of the reversal, there is no sign yet that the growth of deposits will be so vigorous in coming years as to leave the banks with a large "surplus" of lendable resources. At this time last year, scheduled banks' deposits stood at Rs. 1,932 crores and their advances at Rs. 1,120 crores, giving an advance-deposit ratio of 58 percent. Now their deposits are Rs. 2,000 crores and their advances Rs. 1,240 crores, with the result that the advance-deposit ratio has risen to 62 percent. If the State Bank's figures are excluded, on the ground that they are distorted by the influence of P.L. 480 funds, the advance-deposit ratio for the remaining commercial banks stands at 67.8 percent now, as against 66.7 percent a year ago.

The conclusion to be drawn from the statistics is that the banks are having a hard enough time already in meeting the demand for advances, the overwhelming majority of which are short-term in nature. The incentive to go in for medium-term lending on a large scale, therefore, simply does not exist. To the extent that they can manage it, the banks are undertaking a certain amount of medium-term lending. But even this, for the most part, consists of short-term advances rolled over from time to time. The reason why they are rolled over, rather than given as straightforward medium-term loans, lies at the root of the problem: the banks feel that a short-term advance, given on the tacit understanding that it will be renewed every six months for, say, the next five years, is more secure than a five-year medium-term loan. The latter could bring more interest, but the banks prefer the security. The attitude is particularly understandable at a time when the Reserve Bank is juggling about with interest rates. In fact, the present uncertainties concerning interest rate policy make it the more necessary for the banks to be very cautious in undertaking the relatively long commitments implicit in genuinely medium-term lending.

Much of the criticism against the banks ought really to be directed against the Refinance Corporation for Industry. It is said that the banks

can give medium-term loans even with their present resources, because they can immediately replenish those resources by rediscounting the loans with the Refinance Corporation. According to the critics, therefore, the banks are merely lazy or conservative, considering that they have obtained sanction for only about Rs. 11 crores from the Refinance Corporation until June 1961, when they know that they could easily have got much more. The fact, however, is that the constitution and the methods of working of the Refinance Corporation need to be reviewed. Even if the banks rediscount their loans with the Corporation, they have to continue to bear the risks; and the net earning on the operation (that is, the interest earned on the loans, minus the interest paid to the Corporation) is not always enough to make the effort worth while. It has been suggested that, apart from the Refinance Corporation, other institutions are required for drawing banking resources into the term-financing of industry. But this suggestion once again misses the point that the major deficiency at the moment is not in the number of institutions; it is in the overall supply of investible resources. If the banks had the resources, they would themselves feel the pressure to diversify their activities in the direction of industrial financing; and only then would the need for new institutions have to be seriously considered.

It is true that one reason for the banks' reluctance to give medium-term loans is that they do not have the apparatus to judge which loans would be sound, and which not. Apart from the absence of credit information bureaux, hardly any bank undertakes study and research on economic trends to the extent which would be required to make a success of term-financing. But, for the time being, this is a shortcoming of only secondary importance. If the will and the resources were there, the means for assessing the creditworthiness of medium-term borrowers would not be as desperately short as they are made out to be. After all, young institutions like the Industrial Credit and Investment Corporation of India have already established an excellent reputation for the way they assess an industrial unit's borrowing capacity. It is conceivable that, through closer co-operation, the banks could be enabled to share the I.C.I.C.I.'s facilities. Alternatively, it is also possible that the resources the banks may be able to spare for medium-term lending could be routed through the I.C.I.C.I., in whose capital structure some of the major banks already have a share. The first problem, however, is to see that the banks can gather more resources by increasing their deposits. Only thereafter can the question of finding new ways of using those resources be seriously tackled.

LIBERAL PLANNING—I

THE chairman of a European motor-car company has estimated that five and a half years elapse between the conception of a prototype of a new model and the beginning of mass production. The assembly chain on which the model will be mass-produced costs a minimum of Rs. 5 crores. If the model is successful—and success in today's motor-car industry means that a million cars of that type have to be sold within four to six years—the amortisation of the total investment can be achieved in six, eight or ten years. So when the car manufacturer sets out to build a new and better vehicle—and the price of not attempting this is that he will be forced out of the field by his competitors; about 100 well-known makes have disappeared since the war—he is undertaking a programme whose minimum length is ten years and whose cost runs into the equivalent of crores of rupees. His situation is totally different from that of the heroic pioneers, Peugeot and Morris, who founded the industry two generations ago in small workshops from whence they had no view on to the whole national economy. Today, the spirit of enterprise and a faith in one's own mechanical ability, though still necessary, would be completely inadequate. One's programme could be ruined (and ruin could mean suspension of mass-production after two years, in which time

thousands of perfectly satisfactory cars had been produced) by a host of factors, not only technological but fiscal, monetary, budgetary, cyclical, etcetera.

Peugeot "made cars" in 1889 and Peugeot still "makes cars" today, but the two activities have almost nothing in common. Before a western manufacturer launches on the ten-year job of producing a million vehicles (and there is now no other way to "make cars"), he needs to have a very good idea of what wages and material costs will be several years hence, what the price of petrol will be, how the purchase and operation of a car will be taxed, who will be buying cars and what sort of vehicle they will want, what his competitors will be doing, and even whether there will be enough roads, garages and parking lots to hold the millions of cars he and they propose to sell. He needs, in other words, a picture of virtually the whole economy at a future date. Such an advance picture is called a forward programme ("programme" means "to write before"), but it is also called, at the risk of confusion with the arbitrary method of dictating an economy's development, a national plan.

The motor-car industry in a typical western economy consumes 80 percent of the nation's

put of rubber, 20 percent of its ferrous metals, 18 percent of its paints and solvents, 35 percent of its glass and even 5 percent of its textiles. (The European has more textiles in his car than he buys for his back in a year.) So obviously any plan that the motor-car industry writes has an impact on each of those industries, not to mention the million people engaged in what is essentially its "after-sales service". Now, it happens that several of those other industries are in exactly the same situation as motor-cars as regards the length of their production cycle and the volume of capital involved. The costs and the delays of planning and building plant to make steel, alloys, synthetic rubber, plastics, solvents, synthetic fibres and petrol (including in the last case, the time and expense of discovering, exploiting, transporting, refining and marketing oil) are in every way comparable with those known to the motor-car industry. One could as well have begun with any one of them and shown how it requires a forward view of the whole economy, then mentioning motor-cars as a complicating influence whose plans cut across those of the first. Thus it would not be enough for each of these industries to write its own programme; most of the big industries will have to take account of the programmes of several other big industries, to make sure that they "fit".

Notice that it is not said that all industries have to take account of others' programmes, nor that any industry has to take account of all other industries' programmes—and much less that every industry has to know all about every other economic activity as it will be in several years' time. Any of those three unwarranted generalisations, but especially the last, would be simply false, and would constitute the first step toward the lunacy of totalitarian planning. It is neither possible nor necessary to foresee everything about an economy. And not just foresee; it is impossible to know everything about an economy *now*: no input-output table is ever complete, it always includes much guesswork and can only be prepared after at least 18 months' delay, when it is no longer relevant. All that the size and maturity-dates of present-day investments indicate is the necessity for a harmonisation of perspectives between the most influential economic agents. Far and away most economic activities may be left free to adjust to the plan of action thus achieved, and they will adjust most efficiently in response to the normal market mechanisms, aided by the publicity given to the "plan". Moreover, even in the strategic industries whose perspectives on the future have been made explicit and harmonised in the plan, much managerial action may be left free to respond to unforeseen or temporary fluctuations; there need be no attempt to plan details, and the only rigidities will be those caused by the decision to invest in certain ways with certain objectives.

Can this degree of harmonisation of perspectives be attained in a free economy, without revision of its political structure? All the governments and industries of western Europe believe so; some have already tried it and the others are proposing to do so. In listing the things that make it possible, we shall see that they do more than make it possible—they positively invite, or even oblige, private industry to write, compare and co-ordinate economic plans in consultation with the State. The recent interest in free planning within the democratic, private-enterprise framework is not just a bright idea, but the natural upshot of the development of the modern economy.

We have seen that in several industries where the costs and delays of investment have become considerable, the single firm acutely feels the need of a forward picture of the environment in which it operates. It turns first, naturally, to its competitors—and here it finds a very different situation from the one obtaining just before the war. In motor-cars, for example, there were still 30 producers in 1938 in France and probably as many in Britain and the U.S.A. In 1961, in the U.S.A. three firms produce 90 percent of motor vehicles (General Motors, Ford and Chrysler), leaving the balance to American Motors and Studebaker-Packard. In Britain, concentration is a little less marked, for it requires five firms (British Motors, Ford, Vauxhall—a General Motors subsidiary—Rootes and Standard Motors) to produce 90 percent of car output, but two of these are foreign firms whose plans are obviously co-ordinated by the parent organisations. In West Germany, five groups produce 99 percent of cars: Volkswagen, Adam Opel, Ford, Daimler-Benz (which has controlled Auto Union since 1958) and Borgward. Of these, Borgward has just disappeared, while the Ford and General Motors subsidiaries (the latter is Adam Opel) take us back once again to the big American two whom we have already met in Britain. In France, four firms (Renault, Citroën, Peugeot and Simca) produce 99 percent of cars, for Panhard is now controlled by Citroën and Ford has been forced out. One of these, Simca is an Italian-American hybrid which takes us back to Chrysler and on to Fiat. In Italy, finally, Fiat assures 88 percent of car output.

The upshot is that when the motor-car manufacturer thinks of planning, whether it be a matter

of standardisation, division of specialties or something more elaborate, he finds—not dozens of competitors ready to fight it out in ignorance of each other's intentions—but four or five firms as anxious as he is to compare views of the future. Although the contrary is sometimes alleged, there is still competition in the motor-car industry; one could argue that there is too much of it for its own good and that a specialisation on different types of vehicle by various makers would benefit everyone. However, there is no doubt that the degree of concentration attained (and it is by no means final; further fusions and disappearances are possible) invites the industry to take up planning in its own interests—so much so that governmental anti-trust legislation is everywhere necessary to ensure that planning does not go on under the influence of the belief that "what's good for General Motors is good for the U.S.A." Moreover, in West Germany, France and Italy, the State does not have to be called in to supervise planning in this industry, because it is already a member, in the shape of Volkswagen, Renault and Fiat. In short, the concentration of the industry into half a dozen firms and the intervention of the State, either as a producer, as a watchdog or, in all cases, as the fixer of petrol prices, builder of roads, etcetera, produces a small committee of directors of this branch, all of them equally anxious to compare and, where possible, co-ordinate their programmes for the next decade.

A similar demonstration could be made for other industries of comparable size, and that demonstration would gain force if we recalled that those other industries—steel, chemicals, etcetera—are the suppliers of each other and of the motor-car industry, so that their individual programmes must interlock. Chemicals, for example, is already a "planned" industry in Britain and Italy, because it is dominated by I.C.I. and Montecatini, respectively; and co-ordination is scarcely less in West Germany, where the break-up of the I. G. Farben combine could not be carried as far as trust-busters imagined, nor in France since the Pechiney-Saint Gobain marriage last year. As for steel, Britain has already had the experience of State ownership, and the subsequent denationalisation has done nothing to diminish the steel-makers' awareness of the need for long-range planning in their industry. Steel continues to be dominated by the State in Italy, while the extraordinary wave of concentration and interlocking in France since the war, and the resurrection of the German *Konzernen* have led to a situation comparable with that in chemicals and cars.

Everything, then, predisposes these key industries to plan their own future as far ahead as they can, to co-ordinate their plans with other key industries and to seek, or submit to, State co-operation in the task of forward programming. Supposing, however, that they were not inclined to do this, but chose to behave as though the economy of 1961 were still the free market of 1861 where initiative could be exercised with a limited knowledge of the economy, without leading to catastrophe. They would soon discover that the modern market, though still in important respects free, is an administered market. The unpopular and inefficient "controls" of the post-war years have largely disappeared, but the State is left with extensive powers over the volume of investment, the rate of saving and consumption, the price of credit and the level of many prices, notably agricultural prices. A firm that ignored these plain

facts while it set out to raise and invest immense capital sums for the production in several years' time of costly articles that will be bought largely on credit, would be foolhardy. Everywhere it turned, whether in the capital market, the credit market, to suppliers or consumers, it would run into big firms that were not behaving in that way, and it would run into the State. Even if this were a "liberal" State and averse from the planned economy, it would certainly have on foot its own regional or sectional development plans (for the industrialisation of a backward region such as Scotland or south Italy, for the protection of the farming community, for the promotion of favoured sorts of technical education, and so on); in some western European economies that are far from socialist, the State is the author of 50 percent of annual investments. The case for co-ordination of the forward programming of the State and the biggest capitalist enterprises becomes irresistible. That is why there is an urgent interest in planning—understood as the harmonisation of programmes already being written by all the agents that must plan their own affairs years ahead—in all the European democracies.

This tendency encounters some opposition on the grounds that planning is a socialist idea that must inevitably limit the freedom of enterprise. Indeed the notion of planning was brought into discussion by the socialists some decades ago, but in a very different form (their idea was total or totalitarian planning) and for very different reasons. The socialist contention was that the "anarchy" of capitalism required an overall direction of the economy to which entrepreneurs would have to be made to submit. The current interest in planning proceeds from precisely opposite motives. It is not the "anarchy" of capitalism but its concentration, in leading sectors, into a small number of firms operating in an administered market that makes planning desirable. And no one is offering to force capitalists to submit to planning, for the good reason that it is the biggest capitalists themselves who are demanding a plan. They are demanding a plan because the plans that the free consumer wants them to make require vast investments over long periods—motor-cars and articles made of steel and synthetics—so that they have to write plans of their own which in turn need to be co-ordinated with the similar plans of their equals and of the State. Their attitude is a logical extension of their dependence on market research in the formulation of their own programmes: they are asking that the method of market studies be enlarged to cover as wide a field as possible. Whatever socialists may understand by a plan, contemporary industrialists mean by it a set of predictions of the main currents of demand, corresponding estimates of the availability of factors of production required to meet that demand, then a co-ordination of private and public programmes that will ensure that a balance is achieved, so that what is demanded is supplied and what is produced is sold. Perhaps it is better put negatively. Socialist planning means the annihilation of initiative inside a framework handed down from above; free planning requires only the co-ordination of initiative so that it remains spontaneous while being saved from effort that is useless because isolated. What free planning seeks to avoid, for example, is the waste of investment, and the consequent unemployment, that has been caused by the chronically excess steel-making capacity of the U.S.A. in recent years.

THE MONETARY METALS

THE two precious metals that are used for monetary purposes are not always directly connected, but when the U.S. Administration suspended sales of silver, and the price of that metal rose, the price of gold rose in sympathy. Operators in the gold market had probably no clear idea why gold should respond to that move; it could even be argued that, because it was intended to make available for the U.S. coinage silver at present held as backing for silver certificates, the U.S. balance of payments would benefit, the dollar would be firmer, and gold would therefore be less desirable as an alternative to dollars. Yet the market's instinct was true: President Kennedy has virtually completed the process whereby gold is established as the only basic monetary metal. President Kennedy envisages virtual demonetisation of silver and "a broad market in silver comparable to other commodity markets." The circumstances in which that free market must operate are painfully familiar to users of the metal. The world's production of silver, mostly in America (north, south, and central), has been steady for some years at approximately 200 million ounces a year, while consumption has increased from appreciably below to appreciably above 300 million ounces a year. Releases from the U.S. uncommitted stock have filled a considerable part of the gap, but less than 30 million ounces of this "free" silver remained when sales were stopped.

As silver is almost entirely a by-product of base metals, mainly lead and zinc, and as the prices of these metals have fallen, production of silver cannot respond to the rise in its price. (Silvermining companies in the U.S.A. argued that they would produce more if the authorities stopped selling at a price that was unrealistically low, but it is unlikely that they will increase their output enough to affect the free market.) There is no reason to suppose that the photographic and electronic and other industries that have rapidly increased their consumption of silver will cease to grow, or will find satisfactory substitutes for silver. The deficiency of production must therefore be counter-balanced by withdrawals from stocks. The increase in the metal's price since the U.S. Treasury suspended sales has not been as dramatic as some observers expected. As consumers and speculators had ample time to prepare for the inevitable suspension, a big rise after the event should not have been expected. The price will, presumably, fluctuate for some time while speculators intermittently release supplies. Some of the huge hoards in the East will, doubtless, be made available to industry if the price is approximately stabilised at a high level.

It is, however, arguable that the problem of inadequate supplies cannot be satisfactorily solved, even over the medium term, unless monetary authorities abandon the extravagant practice of

using silver for coinage. When the British authorities had to find large quantities of silver to repay what they had obtained from the United States by way of lend-lease they withdrew all silver coins for melting and substituted cupro-nickel coins, which, of course, have served their purpose equally well. But in a number of other countries the tendency is to use more, not less, silver for coinage. Complete demonetisation of this metal would end a relation with money that can be traced back to antiquity. The monetary history of gold is equally long, but the pre-eminence of gold as a monetary metal must be reckoned not in thousands but in hundreds of years—and not many hundreds. Until late in the 18th century silver rather than gold was the accepted monetary standard. By the 19th century the superior merits of gold—particularly its light weight in relation to value and its stable price—were widely recognised, and the century was not far advanced when Britain, first of all countries, put her money on an absolute gold standard.

In the 20th century the gold standard has become impracticable and "reserve currencies"—much more plentiful and essentially less stable—have largely superseded gold for monetary use. Despite intense discussion of the problems over

many years, no completely satisfactory substitute for gold has been evolved, and we are now in a position where we must either advance our monetary technique or revert to the old technique in a modified form. Some financial experts have said in recent years that gold is a primitive monetary medium, too rigid for the functions of modern finance. But, because effective alternatives have not yet been devised, and because the world's monetary authorities hesitate to commit themselves to new procedures that would ease financial strains, some minds are turning back to the idea of "rehabilitating" gold. They are mostly convinced that the metal cannot perform the required functions unless its aggregate value is greatly increased. Its supply increases only slowly. Therefore, the argument runs, its price must be raised. The idea of an international conference to discuss monetary gold has received some support from President Kennedy's latest moves to complete the "commercialisation" of silver. With silver effectively demonetised, gold can at last assert itself as the only commodity in the advanced countries that can—perhaps—meet the challenge of "manufactured" money. But there are still rationalists who say that a reversion to gold would be a confession of failure to organise our financial affairs.

any remittance can be made from Pakistan in the near future.

Progress of General Tyres

Presiding at the first annual general meeting of General Tyres Ltd in Calcutta last Monday, Sir A. Ramaswami Mudaliar pointed out that the loss of Rs. 1.05 lakhs incurred during the year ended June 1961 is mainly due to the expenditure on the construction of the factory. (A full text of the speech is printed on another page in this week's *Capital*.) Considerable progress has been made, and it is hoped that the plant will start trial production in the middle of 1962. Meanwhile, the Company has asked the Government for permission to expand its production capacity and to diversify its activities. The factory will have an initial capacity to produce 15,000 tyres and 15,000 tubes each month. Sir Ramaswami took a fairly optimistic view of the outlook for the industry. The demand for tyres and tubes has increased considerably in recent years and will continue to rise in view of the expansion of motor transport. The production target for motor-vehicle tyres and tubes has been fixed at 3 million each under the third plan. This will represent a rise of more than 120 percent over the 1960-61 output. The chairman pointed out that the domestic production of rubber has fallen far short of demand, so substantial quantities of the natural and synthetic material are being imported. But several units are being set up to produce synthetic rubber, rayon cord, tyre valves, carbon black and various chemicals for the tyre industry. When these units go into production, it is hoped that India will become fairly self-sufficient in her requirements for tyre manufacture.

Prospects for Deccan Sugar

The observations made by Mr. C. R. Srinivasan in his chairman's statement at the recent annual general meeting of the Deccan Sugar and Abkhari Co. Ltd are of considerable interest. (A fuller version of the speech appeared in last week's issue of *Capital*.) The 1961-62 season has started with a carryover of 12 million tons. In spite of the decision to force factories to cut production, it is thought that the total output may amount to about 3 million tons. Many factories will not find it easy to cut production because the cane is already in the ground. This apart, whatever is not used by the factories will be diverted to the production of *khandsari* sugar. The internal consumption is now expected to exceed 2.1 million tons, and export may be difficult to increase due to the excess supplies in world markets. So the problem of overproduction may continue to affect the industry much longer than is expected. Mr. Srinivasan does not think that the worst has yet been seen. A though stocks are moving, they are not moving as fast as they are accumulating. Due to the accumulation of stocks, factories are being embarrassed in two ways. Firstly, substantial funds have been blocked in stocks. Secondly, factories are finding it difficult to get sufficient storage facilities. Unless these difficulties are removed, it is apprehended that production may have to be restricted further during the 1962-63 season.

Exports not only involve considerable losses, but are also difficult to promote under the present circumstances. Mr. Srinivasan, therefore, said the vigorous steps should be taken now to increase domestic consumption. The per capita consumption of sugar in India is very low, compared with other countries, so there is scope for promoting consumption. This can be done if the commodity

Current News and Comment

Burrakur Coal Maintains

The ordinary shares of the Burrakur Coal Co. Ltd have become hesitant around Rs. 18.25 because, in their report for the year ended June 1961, the directors point to the various difficulties which the industry is facing. The shortage of transport, electric power and explosives has hampered working, so the production of the Company was difficult to improve, although the expansion plans have been prepared and financial facilities arranged. The output of Burrakur Coal appears to have been held down by the suspension of working of the Budroochuck colliery.

After transferring Rs. 11.99 lakhs (against Rs. 12.19 lakhs) to depreciation, Rs. 13.64 lakhs (against Rs. 17.29 lakhs) to taxation, Rs. 3.62 lakhs (against Rs. 2.28 lakhs) to development rebate reserve and Rs. 1.71 lakhs (against Rs. 1.50 lakhs) to bad and doubtful debts reserve, the profit has declined from Rs. 15.03 lakhs in 1959-60 to Rs. 13.24 lakhs in 1960-61. An important factor contributing to the decline in the profit is that the increased production cost has not been compensated for by the small rise in the price of coal. The taxable ordinary dividend has been maintained at 13 percent. It is covered more than twice and offers a yield of 7.1 percent at the present price. The carry-forward is Rs. 58,154, against Rs. 1.49 lakhs brought in.

Raisings and despatches show little change at about 1.3 million tons. The Loyabad coke plant produced 99,810 tons, compared with 128,809 tons due to the breakdown of ovens. The directors do not think that it will be possible to maintain the previous rate of production when the ovens are repaired. The price of coke fixed by the Government is considered unremunerative in view of the rising production cost. Although the Government has agreed to give a subsidy to deep, difficult and gassy mines, it is hard to say what the size of the subsidy is going to be. The profitability of Burrakur Coal has been inflated during the period by the receipt of dividends from its shareholding in the Kumardubi Fireclay and Silica Works Ltd. Burrakur Coal has objected to the acquisition of the Sudamdih property, and the decision of the Central Government on this is awaited.

Orissa Minerals Pays Less

The Orissa Minerals Development Co. Ltd has reduced the taxable ordinary dividend from 30 percent to 28 percent, including an interim of 10 percent. It is covered more than three-and-a-half times and offers a yield of 6 percent at the present price of Rs. 46.62 a share. The profit has declined from Rs. 25.77 lakhs in 1959-60 to Rs. 20.69 lakhs in 1960-61, after providing Rs. 5.61 lakhs (against Rs. 3.59 lakhs) for depreciation. Taxation absorbs Rs. 9.40 lakhs (against Rs. 8.40 lakhs), general reserve Rs. 5 lakhs (against Rs. 4 lakhs), development rebate reserve Rs. 18,200 (against Rs. 2,08 lakhs) and workmen's accident compensation reserve Rs. 44,997 (against Rs. 46,479). There is a carry-forward of Rs. 1.16 lakhs, against Rs. 1.11 lakhs brought in.

The raisings of iron ore declined from 702,299 tons to 644,182 tons and despatches from 692,063 tons to 647,828 tons. The manganese ore output was 59,656 tons (against 61,285 tons). There was no production of dioxide coke because the deposit

has been exhausted. Although the demand for iron ore has been satisfactory, it is not possible to make full use of it due to the shortage of transport. The outlook for manganese ore is viewed cautiously because the Indian commodity has become uncompetitive in foreign markets. The Bolani Ores Ltd has made considerable progress. It has reached the despatch target of 1 million tons of iron ore a year for the Durgapur steel plant.

Carew Skips Dividend Again

Carew and Co. Ltd has again passed the dividend for the year ended June 1961. Although fair profits have been earned, the directors could not pay the dividend because certain formalities with the State Bank of India have not yet been completed. The profit has improved from Rs. 9.63 lakhs in 1959-60 to Rs. 15.54 lakhs in 1960-61, after providing Rs. 4.30 lakhs (against Rs. 3.50 lakhs) for depreciation. Taxation absorbs Rs. 11.42 lakhs (against Rs. 4.82 lakhs), debenture redemption reserve Rs. 1 lakh (the same), general reserve Rs. 2 lakhs (against Rs. 1 lakh) and development rebate reserve Rs. 50,000 (against Rs. 20,000). The carry-forward is Rs. 3.41 lakhs, against Rs. 2.76 lakhs brought in.

The Rosa factory in India had a cane crush of 3.1 million maunds, against 2.8 million maunds. The recovery fell from 9.66 percent to 9.63 percent. Although operational efficiency is expected to improve during the current year due to the good condition of the crop, the prospect is rather uncertain in view of sugar decontrol and increased wages. The distilleries have increased the sale of liquor but that of industrial spirit has declined. The Darsana factory in Pakistan had a cane crush of 3.1 million maunds with a recovery of 9.06 percent. The prospect for the current year is considered brighter. The directors have taken steps to form a new Pakistani company for taking over the Darsana branch. But they do not think that

is cheaper. An important factor contributing to the high cost of Indian sugar is the high price of sugarcane. It is time the cane price was adjusted more realistically and linked to quality rather than to weight. Moreover, the price is high because taxation is too high. The excise duty on sugar was increased sharply in 1957 to restrain consumption. Since then, consumption has shown only a small increase. As there is now enough sugar to meet export requirements, it is necessary to reduce the excise duty to promote domestic consumption.

In spite of a higher output, the profit of Deccan Sugar has declined during the year ended May 1961 because of the restricted despatches under Government rules. The dividend has been cut from 25½ percent, taxable, to 21 percent, taxable, including a final of 13½ percent, taxable. The rehabilitation of the Samakot factory is making progress and the renovated mill is likely to be ready for the 1963-64 season. It is proposed to proceed slowly with the expansion scheme for the Pugalur factory in view of the prevailing condition of the industry.

New India, Upper Ganges, Gobind Sugar

Presenting their reports for the year ended June 1961, the directors of the New India Sugar Mills Ltd, the Upper Ganges Sugar Mills Ltd and the Gobind Sugar Mills Ltd say that the prospects for the current year are not encouraging in view of the large sugar stocks in factories. Wages have also been increased under the recommendations of the Central Wage Board. The Companies may be allotted bigger export quotas, so they may incur heavier losses on this account. The Government has removed the production incentive scheme, but representations have been made to exempt the Companies from the production cut which has been enforced.

New India Sugar has maintained the taxable ordinary dividend at 36.5 percent. It is covered more than one-and-a-half-times and offers a yield of 11.4 percent at the present price of Rs. 32 a share. The profit has declined from Rs. 10.05 lakhs in 1959-60 to Rs. 4.09 lakhs in 1960-61, after transferring Rs. 2.50 lakhs (against Rs. 2.42 lakhs) to depreciation. Taxation is allocated Rs. 45,000 (against Rs. 4.45 lakhs) and development rebate reserve Rs. 31,977 (against Rs. 1.08 lakhs). The carry-forward is Rs. 9,995, against Rs. 34,691 brought in. The cane crush was 5.3 million maunds, against 4.3 million maunds, but recovery was lower at 9.11 percent, against 9.16 percent. The crush is estimated at 5.5 million maunds during the current year.

Upper Ganges Sugar has made a profit of Rs. 26.31 lakhs (against Rs. 12.72 lakhs), after providing Rs. 9.62 lakhs (against Rs. 9.38 lakhs) for depreciation. The taxable ordinary dividend has been maintained at 72.5 percent, which offers a yield of 9.5 percent at the present price of Rs. 76 a share. The dividend cover is four-and-a-half times. Taxation receives Rs. 8.92 lakhs (against Rs. 3.50 lakhs), general reserve Rs. 7.50 lakhs and contingency reserve Rs. 31,422 (against Rs. 12,811). The carry-forward is Rs. 49,173, against Rs. 50,655 brought in. The cane crush reached a record of 12.6 million maunds, against 11 million maunds and recovery rose from 9.62 percent to 9.65 percent. A crush of 14 million maunds is estimated during the current year. Upper Ganges Sugar has obtained a licence to expand its crushing capacity from 3,200 tons to 3,600 tons a day.

Gobind Sugar has maintained a taxable ordinary dividend of 20 percent, absorbing Rs. 1 lakh. The profit has increased from Rs. 7.21 lakhs to Rs. 17.10 lakhs, after providing Rs. 3.14 lakhs (against Rs. 2.46 lakhs) for depreciation. Development rebate reserve is allocated Rs. 2.06 lakhs (against Rs. 95,000), taxation Rs. 6.98 lakhs (against Rs. 2.86 lakhs) and reserve Rs. 6.26 lakhs (against Rs. 1.91 lakhs). There is a carry-forward of Rs. 34,550, against Rs. 3,852 brought in. The cane crush was 4.5 million maunds, against 4.4 million maunds, but recovery declined from 9.89 percent to 9.66 percent. The crush is expected to be 4.6 million maunds in the current year.

Bigger Dividend from Jeypore Sugar

The Jeypore Sugar Co. Ltd has made a substantially bigger profit during the year ended June 1961 than in the previous year. This is because it has earned more from its production of ferro-manganese. The dividend has been raised to 15 percent, from 8 percent. The net profit for 1960-61 is Rs. 15,53,441, after providing Rs. 9.33 lakhs for depreciation and after writing off Rs. 5.93 lakhs as the net value of erection expenditure in Nagaram. The net profit for the previous year was Rs. 5.02 lakhs, after providing Rs. 3.54 lakhs for depreciation. To the 1960-61 profit is added Rs. 182 brought forward from the previous year; Rs. 1.46 lakhs, being excess provision for dividends made in previous years written back; and

Rs. 4.25 lakhs being development rebate reserve provided in excess in previous years. The total available for appropriation is thus Rs. 21.25 lakhs. Out of this, development rebate reserve gets Rs. 12.25 lakhs (against Rs. 3.6 lakhs), while Rs. 2.9 lakhs (against nil) is transferred to general reserve. The dividend, subject to deduction of tax, on the 6 percent tax-free first preference shares accounts for Rs. 15,557, and the dividend on the 7 percent tax-free second preference shares absorbs Rs. 90,746. The proposed dividend of 15 percent on the ordinary shares takes Rs. 4.87 lakhs. The balance of Rs. 7,084 is carried forward.

The Company is again not assessable to income tax for 1960-61. For this reason, the substantial rebate to which Jeypore Sugar and its shareholders would have been entitled under Section 15(c) of the Income Tax Act cannot be availed of. But the benefit will be available from the next year onwards. The factory in Rayaghada crushed 30,835 tonnes of sugarcane during the season and produced 2,809 tonnes of sugar, the recovery being 9.11 percent. The factory in Chagallu, which is licensed to crush 1,250 tons of sugarcane a day, has now been completed and will shortly commence production. Sugarcane is plentiful in the area, so the factory ought to crush at least 125,000 tons during 1961-62. The sugar factory in Nagaram did not work during the year. The directors say that sugar factories in southern India are better placed in that they are able to obtain a higher price for their production than those in northern India. The factories in Chagallu and Rayaghada are exempt from the restrictions on sugar production recently imposed by the Government.

In the mining division, there was a carry-over of 12,780 tons from the previous year. About 12,144 tons of manganese ore were obtained from Jeypore Sugar's own mines, out of which 8,958 tons were used in its ferro-manganese plant. About 12,284 tons were sold abroad. A good profit was earned on the production of ferro-manganese, which totalled 16,972 tons. Some of this commodity was shipped to the U.S.A. through the State Trading Corporation, and some was sent to the steel plants in Bhilai, Rourkela and Durgapur. The despatches resulted in a profit of about Rs. 25 lakhs.

Blue Mountain Estates Suffer

Blue Mountain Estates Ltd has reported a substantial fall in its profit for the year ended June 1961, because the tea and coffee crops were smaller and the coffee price was lower. The total coffee realisation fell from Rs. 36.95 lakhs in 1959-60 to only Rs. 17.80 lakhs. So the profit during 1960-61 amounts to Rs. 6,75,897 (against Rs. 27.61 lakhs), after providing Rs. 1.52 lakhs (against Rs. 1.48 lakhs) for depreciation and Rs. 14,718 (against Rs. 23,136) for development rebate. An amount of Rs. 2,83,908 is brought forward from the previous year. The provision for taxation is Rs. 3.04 lakhs (against Rs. 12.5 lakhs). The proposed dividend of 10 percent on the 2,625,000 equity shares of Rs. 2 each will absorb Rs. 5.25 lakhs. The dividend of 5 percent on 525,000 shares of Rs. 2 each, issued as bonus shares during the year, takes Rs. 52,500. The dividend for the year is 10 percent, subject to tax (against 12½ percent). As the bonus shares are entitled to a dividend for only six months, the rate in their case is 5 percent. The balance of Rs. 78,105 is carried forward.

The tea crop was 683,558 kilograms (against 735,126 kilograms). The cost of production was Rs. 3.84 a kilogram (against Rs. 3.59). The yield an acre was 519 kilograms (against 544 kilograms). For its tea, the Company realised a price of Rs. 4.61 a kilogram (against Rs. 5.15). The coffee crop was 584,094 kilograms (against 987,381 kilograms). The all-in cost was Rs. 2.96 a kilogram (against Rs. 2.12). The estimate for the tea crop in the 1961-62 season is 750,000 kilograms at a cost of Rs. 3.70 a kilogram. The coffee crop is estimated at 622,000 kilograms, the cost being Rs. 2.80 a kilogram. The Company is arranging to install new types of machinery, like C.T.C. machines, with a view to improving its teas. It is expected that this will facilitate the production of high-quality teas throughout the year. There is also a big programme of replanting and extensions to the cultivated area.

In a statement circulated along with the report and accounts, the chairman, Mr. D. C. Kothari, discusses the outlook for plantation products, particularly tea and coffee. He points to the surplus of coffee, and the problem of marketing it. As for tea, India's commoner varieties face serious competition in the world market. So a mere increase in production, unaccompanied by suitable incentives or by a systematic campaign to increase consumption, will create greater difficulties. Discussing the diversification of Blue Mountain's activities, the chairman points out that the policy has to be appreciated against the unsteady background for plantation products. The Company's fertiliser factory project is making rapid progress, about

95 percent of the plant and machinery having already arrived at the site. It is expected that the factory will go into production in April 1962. A licence has been received for the manufacture of 44,000 tons of superphosphate and 16,500 tons of sulphuric acid a year. The factory, which is being constructed in Ennore, is estimated to cost about Rs. 41 lakhs, and Rs. 5 lakhs will be required as working capital. The additional capital of Rs. 21 lakhs obtained from shareholders, a sterling loan of £60,000 and a rupee loan of Rs. 13.7 lakhs, will meet the financial requirements.

Chandramalai Estates Earn More

During the year ended June 1961, Chandramalai Estates Ltd has made a net profit of Rs. 92,365, after providing Rs. 34,309 for depreciation, Rs. 141 for development rebate and Rs. 77,000 for taxation. The net profit in the previous year was Rs. 36,718. With Rs. 18,637 brought in, the total comes to Rs. 1,11,002. Out of this, the directors have set aside Rs. 30,163 as further provision for taxation relating to earlier years. The preference dividend of 8½ percent, subject to tax, accounts for Rs. 11,670. The ordinary dividend of 10 percent, subject to tax, is maintained, and absorbs Rs. 55,000. The balance of Rs. 14,167 is carried forward. The tea crop during the year amounted to 168,186 kilograms and the estate cost of production was Rs. 2.59 a kilogram. The average selling price was Rs. 4.30 a kilogram. The coffee crop was 26,239 kilograms and the cardamom crop 908 kilograms. The entire tea area of 350 acres is in bearing. In coffee, the area replanted in recent years totals 200 acres. The directors say that the replanted area of hybrid Arabica has developed according to expectations, and should yield a very satisfactory crop in the near future.

Waterfall Estates Profit Down

During the year ended June 1961, the Waterfall Estates Ltd earned a net profit of Rs. 5.89 lakhs, after providing Rs. 1.40 lakhs for depreciation and Rs. 88,027 for development rebate. The net profit for the previous year was Rs. 12.73 lakhs, after providing Rs. 1.20 lakhs for depreciation and Rs. 17,883 for development rebate reserve. With Rs. 1.94 lakhs brought forward from the previous year, the total available surplus is Rs. 7.83 lakhs. Out of this, taxation provision gets Rs. 2.65 lakhs (against Rs. 5.60 lakhs). The dividend on 6 percent tax-free cumulative preference shares at 6.5 percent, subject to deduction of tax, accounts for Rs. 32,500. The proposed dividend of 10 percent, subject to deduction of tax on 1,575,000 equity shares of Rs. 2 each (against 12½ percent), will absorb Rs. 3.15 lakhs. The dividend on 787,500 equity shares of Rs. 2 each, issued during the year as bonus shares, at 5 percent will absorb Rs. 78,750. After making these appropriations, there is a balance of Rs. 91,793 which is carried forward.

The total tea crop for the year amounted to 576,969 kilograms (against 550,298 kilograms). The all-in cost a kilogram increased to Rs. 3.63 from the previous year's level of Rs. 3.17. But the net price realised was higher at Rs. 4.30 a kilogram, against Rs. 4.07 a kilogram. There was also an increase in the yield an acre to 624 kilograms from 595 kilograms. The coffee crop was however, lower at 606,458 kilograms, compared with the previous year's figure of 651,740 kilograms. The all-in cost for coffee rose to Rs. 2.66 a kilogram from Rs. 2.48 a kilogram. The 1961-62 tea crop is estimated at 650,000 kilograms at a cost of Rs. 3.30 a kilogram and the coffee crop at 610,000 kilograms at Rs. 2.60 a kilogram.

The chairman says that C.T.C. teas are preferred to conventional teas which have hitherto been produced by the factory. But the demand for C.T.C. tea is limited. The directors expect to increase the tea yield by 20 percent or 25 percent by a change in the system of plucking and with other methods of irrigation. The Company is reported to be pursuing the policy of gradually extending the tea acreage in Coovercolly and Kesinurthy estates. In his chairman's speech, an advance copy of which has been sent to the shareholders along with the report and accounts, Mr. D. C. Kothari has discussed the outlook for tea and coffee. He says that the marketing of coffee has been one of the biggest problems during the past 12 months. Because of the world surplus Indian coffee exports have been sold at unsatisfactory prices. This is evident from the steady fall in the price from Rs. 2.81 a point in 1956-57 to about Rs. 2 a point in 1960-61. This is far below the cost of production which is estimated at Rs. 2.11 a point by the Coffee Board. Mr. Kothari has emphasised the need for a drastic revision of the policy of the Coffee Board by introducing the system of "open auctions" for the external and internal markets, by the sale of coffee with "estate marks" and a change in the mode of coffee release in the domestic market. As for tea, the prospects of surplus production over

consumption, the increasing competition for Indian common tea and the fixing of a high production target for India in 1965 are the compelling reasons for focussing attention on higher internal consumption and a market promotion drive abroad, according to Mr. Kothari.

Cowcoody Estates Pay the Same

The working of the Cowcoody Estates Ltd during the year ended June 1961, shows a net profit of Rs. 1.91 lakhs, against Rs. 1.56 lakhs in the previous year. With Rs. 27,670 brought in, the total surplus amounts to Rs. 2.18 lakhs. Out of this, the directors have transferred Rs. 25,000 (against Rs. 25,000) to general reserve and Rs. 56,800 (against Rs. 41,900) to taxation provision. The interim dividend of 10 percent absorbed Rs. 40,856. The directors have now recommended a final dividend of 15 percent, making a total of 25 percent for the year. The previous year's dividend was 25 percent. There is a balance of Rs. 34,416 which is carried forward.

A total coffee crop of 169,852 metric tonnes was harvested during the year and delivered to the Coffee Board. This crop compares favourably with the previous year's 99,155 metric tonnes. The estate cost of production was lower at Rs. 1.590 a tonne, against Rs. 2.395 a tonne. The 1960-61 crop is valued at Rs. 1.90 a point. The 1959-60 crop has been revalued at Rs. 2.24 a point, being the figure so far declared by the Coffee Board. The 1961-62 crop has been estimated at 107 metric tonnes. The cardamom crop for the year amounted to 307.76 kilograms and the 1961-62 crop is estimated at 317.51 kilograms. There was no damage to the Company's properties during the heavy rains in July 1961.

Bababudin Coffee Makes a Profit

The working of the Bababudin Coffee and Produce Co. Ltd shows a net profit of Rs. 69,449 for the year ended June 1961. This compares with the previous year's net loss of Rs. 47,778. With Rs. 2,437 brought in, the available surplus amounts to Rs. 71,887. The directors have decided to revise the rate of preference dividend to 6.035 percent in accordance with the Preference Shares (Regulation of Dividends) Act and are paying the additional dividend at 035 percent a year for the two seasons 1958-59 and 1959-60, both subject to deduction of tax, along with the preference dividend for 1960-61. This will absorb Rs. 18,312. The directors have recommended a dividend of 8 percent on equity shares, subject to deduction of tax (the same as in the previous year). This will absorb Rs. 32,000, leaving Rs. 21,575 to be carried forward.

The coffee crop for the year amounted to 245,843 tonnes, which was a record crop, against 2,253 cwt in the previous year. Due to unfavourable market conditions, coffee prices both for internal sales and export sales have recently been rather low. It is expected that the payment for the coffee crop for the 1960-61 season may not be more than Rs. 1.90 a point, against Rs. 2.24 a point for the previous year. The 1961-62 crop is estimated at 120 tonnes. But according to the latest indications, the crop for the ensuing season may be around 100 tonnes only.

New India Rolling Mills

Reliable reports indicate that Asian Cables Corporation, Cable Corporation of India, Insulated Cable and Wired Industries, Henley Cables and Wandleside National Conductors are joining hands to sponsor a new enterprise to be known as New India Rolling Mills. A factory is to be set up for rolling out copper and aluminium wire bars into rods required for manufacturing cables. The factory is proposed to be located in Thana—an industrial suburb of Bombay—and the plant is likely to have a production capacity of 30,000 tons of rods on a two-shift basis. An application has already been made for the required industrial licence and the Government's sanction is awaited. The project is estimated to cost Rs. 80 lakhs, of which Rs. 45 lakhs will need to be spent on imported plant and machinery. The promoters are negotiating with some foreign firms for technical and financial collaboration. The factory is expected to go into production by the middle of 1963. The Company will have an authorised capital of Rs. 2 crores.

Kamani Metals Profit Up

Kamani Metals and Alloys Ltd has reported encouraging results for the year ended June 1961. While sales have risen slightly from Rs. 1.96 crores to Rs. 2.02 crores, the gross profit has recorded an impressive rise of 45 percent from Rs. 12.49 lakhs

to Rs. 18.10 lakhs. This has enabled the directors to recommend a dividend of 7.5 percent, less tax. Kamani Metals had skipped the dividend in 1959-60. After providing Rs. 4.99 lakhs (against Rs. 3.92 lakhs) for depreciation, Rs. 90,000 (against 1.95 lakhs) for development rebate and Rs. 6.05 lakhs (against Rs. 3.92 lakhs) for taxation, the net profit amounts to Rs. 6.16 lakhs, against Rs. 3.21 lakhs in the previous year. The production of brass and copper strips for radiators, press buttons and eye-lets, etcetera, has recorded an improvement over the year. The Company has asked for the Government's permission for certain additional machinery and technical collaboration with a foreign firm in order to increase the production of copper and brass strips and nickel-silver strips to meet India's growing requirements. Kamani Metals undertook during the year the manufacture of copper plates for photo engraving. It has been able to develop export markets for its products. Exports are expected to rise after the installation of new equipment.

Same from Kirloskar Brothers

Kirloskar Brothers Ltd has done well during the year ended July 1961 in spite of the fact that it was unable to use the full production capacity due to the shortage of coke. Its sales have risen from Rs. 2.34 crores to Rs. 3.15 crores. The gross profit has increased from Rs. 31.78 lakhs to Rs. 35.77 lakhs. After providing Rs. 9.27 lakhs (against Rs. 7.82 lakhs) for depreciation, Rs. 2.15 lakhs (against Rs. 3.31 lakhs) for development rebate and Rs. 11.28 lakhs (against Rs. 11.06 lakhs) for taxation, the net profit is shown at Rs. 10.53 lakhs, against Rs. 6.99 lakhs in 1959-60. The dividend has been maintained at 10 percent, taxable, partly because of the increase in capital and partly because of the need to conserve resources in order to finance the expansion schemes. Kirloskar Brothers increased its paid-up capital in February last by issuing 60,000 equity shares of Rs. 25 each at a premium of Rs. 10 each, and the new shares will rank for dividend in the current year. Appropriations include general reserve Rs. 1 lakh (against 85,000), deferred taxation reserve Rs. 72,600 (against Rs. 1.12 lakhs), rehabilitation reserve Rs. 1.50 lakhs (against Rs. 1 lakh), dividend equalisation reserve Rs. 1.50 lakhs (against nil) and loan redemption fund Rs. 1.50 lakhs

(against nil). The proposed dividend absorbs Rs. 4.32 lakhs, leaving Rs. 11,174 to be carried forward, against Rs. 11,866 brought in.

The expansion and modernisation programme is reported to be making satisfactory progress. The construction of the building for the machine tool factory for manufacturing vertical turret lathes and horizontal boring machines was taken up during the year. All machinery from the U.S.A. has been shipped. The remaining machinery which is being imported under a loan in foreign currency from the Industrial Credit and Investment Corporation of India Ltd will be received during the year except one or two machines which are expected before the end of 1962. The first few sets of components of vertical turret lathes will be received from Ballard Company during the current year, and the first indigenously assembled 36-in. Kirloskar Ballard vertical turret is expected to be placed in the market before the close of the current financial year. The construction of the branch factory in Dewas has been taken in hand and the plant is expected to go into production during the current year. The financial position of Kirloskar Brothers is sound. Its paid-up capital of Rs. 53.52 lakhs in supplemented by reserves and surplus amounting to Rs. 95.04 lakhs.

Shama Engine Valves Share Offer

Shama Engine Valves Ltd is a new enterprise which has been formed to undertake the manufacture of valves of all types of heat engines and internal combustion engines. The factory will be located in Bhopal, Madhya Pradesh. The promoters have got an assurance from the State Government about the supply of electric power. The Company has secured the technical collaboration of Messrs Bayerisches Leichtmetallwerk K. G., Munich. The collaborators have agreed to grant exclusive rights of manufacture and sales of engine valves in India and the neighbouring countries. Valves manufactured by Shama Engine Valves will be styled as "BLW-Shama". The collaborating firm has also given exclusive rights to the Company to sell in India and the neighbouring countries valves manufactured in their factories in Germany. At present, most of India's needs for engine valves are being met through imports, since indigenous production is small. Shama Engine Valves will, therefore, have a ready mar-

ket for its goods. Its plant will be modern and will be geared to mass production. The factory is expected to go into production towards the end of 1962. Shama Engine Valves has an authorised capital of Rs. 30 lakhs, made up of Rs. 22.5 lakhs in equity shares of Rs. 10 each and Rs. 7.5 lakhs in 9.3 percent redeemable cumulative preference shares of Rs. 100 each. The issued capital consists of 112,500 equity shares and 3,750 preference shares. The promoters, directors and their friends have agreed to take 42,500 equity shares. The foreign collaborating firm has indicated an option to purchase within one year shares worth 30,000 deutsche-marks or Rs. 35,000. The Madhya Pradesh Government has agreed to subscribe for 10,000 equity shares, and these shares will be allotted in full. The balance of 60,000 equity shares of Rs. 10 each and 3,750 cumulative preference shares of Rs. 100 each are to be offered to the public. The Life Insurance Corporation has agreed to underwrite and subscribe for 10,000 equity shares and 1,000 preference shares. The Madhya Pradesh Government has underwritten 2,750 preference shares.

Andhra Scientific Earns Less

The working of the Andhra Scientific Company Ltd for the year ended June 1961, shows that it has made a slightly lower profit in spite of a small improvement in the sales. While the latter have risen from Rs. 28.03 lakhs to Rs. 30.90 lakhs, the gross profit is down from Rs. 6.59 lakhs to Rs. 6.53 lakhs. After providing Rs. 1.25 lakhs (against Rs. 88,763) for depreciation and Rs. 2 lakhs (against Rs. 2.05 lakhs) for taxation, the net profit amounts to Rs. 2.75 lakhs, against Rs. 3.06 lakhs in 1959-60. Allocations include development rebate Rs. 31,128 (against Rs. 61,000), machinery rehabilitation reserve Rs. 50,000 (against nil) and dividend equalisation reserve Rs. 29,500 (against Rs. 30,500). The ordinary dividend has been raised from 6½ percent to 20 percent, both taxable, in accordance with the provisions of Section 23A of the Income Tax Act. This absorbs Rs. 1.60 lakhs. The preference dividend accounts for another Rs. 13,000. The carry-forward amounts to Rs. 7,889, against Rs. 16,768 brought in.

The directors state in their report that the Company introduced new products during the

year. These had a good reception. In spite of increased production, Andhra Scientific could not meet the demand due to the lack of adequate machinery and building accommodation. A licence has been received for effecting substantial expansion, but import licences for machinery are awaited. Negotiations are going on with the Andhra Pradesh State Financial Corporation for a substantial loan. It is hoped that the loan will be finalised soon.

Bharat Ball Bearing Issue Soon

Bharat Ball Bearing Co. Ltd is a new enterprise of the Shri Ram group of industries which proposes to set up in Ranchi, Bihar, a factory for manufacturing ball bearings. The promoters are negotiating with a U.S. firm for technical collaboration in the proposed venture. The negotiations are expected to be completed soon. Bharat Ball Bearing will have an authorised capital of Rs. 2 crores, of which Rs. 75 lakhs, made up of Rs. 55 lakhs in equity shares of Rs. 10 each and Rs. 20 lakhs in 9.3 percent taxable preference shares of Rs. 100 each, is likely to be issued in the beginning. The Life Insurance Corporation is said to have agreed to underwrite Rs. 10 lakhs worth of preference shares. Another Rs. 10 lakhs of preference capital is being underwritten by some prominent stockbrokers. It is understood that the promoters are likely to take up 51 percent of the equity capital and the balance will be offered for public subscription some time early next year.

Diesel-engines from S. L. M. Maneklal

T. Maneklal Manufacturing Co. Ltd has promoted a new venture to undertake the manufacture of diesel-engines of 163 horse-power to 655 horse-power. The new enterprise is to be known as S. L. M. Maneklal Industries Ltd and has been registered in Gujarat. The factory will be located in Vatva, near Ahmedabad. The Company has already acquired 200,000 square yards of land and has been assured of the necessary electric power. The initial output of the factory will be 45 engines a year on a single-shift basis. This will be raised

to 70 engines a year over a period of three years. At a later stage, the Company will also manufacture rooters blowers, watering pumps and compressors. The new enterprise will have an authorised capital of Rs. 1 crore, consisting of 80,000 equity shares and 20,000 preference shares, both of Rs. 100 each. Of this, the entire equity capital is likely to be issued. The promoters, who will contribute substantially to the capital, are said to be exploring the possibility of offering shares of the new Company to the existing shareholders of T. Maneklal and Company. It is said that the Company will make a public issue some time in February. The sanction of the Controller of Capital Issues is awaited. The project is estimated to cost about Rs. 70 lakhs, of which the foreign exchange component is valued at Rs. 30 lakhs. The Company has secured the technical and financial collaboration of the Swiss Locomotive and Machine Works Ltd. The Swiss firm will be allotted 10,000 equity shares towards the payment of machinery and patents. The balance of machinery worth about Rs. 20 lakhs will be imported on a rupee-payment basis. The factory is expected to go into production before the end of 1962.

T. Maneklal Profit Spurts

T. Maneklal Manufacturing Co. Ltd proposes to raise the dividend from 18.5 percent to 27 percent, both taxable, for the year ended May 1961. It has also announced a proportionate dividend on the new ordinary shares, the capital having been increased during the year from Rs. 10 lakhs to Rs. 20 lakhs. The proposed dividend will absorb Rs. 3.46 lakhs, against Rs. 1.85 lakhs paid in the previous year. The preliminary figures about the working results, which have been released along with the dividend announcement, indicate that the rise in the dividend is well justified. T. Maneklal has fared well. Its sales have risen by about 45 percent from Rs. 56.01 lakhs to Rs. 82.61 lakhs, and the gross profit has shot up by about 87 percent from Rs. 9.61 lakhs to Rs. 17.88 lakhs. After providing Rs. 2.74 lakhs (against Rs. 1.91 lakhs) for depreciation, Rs. 63,916 (against Rs. 60,000) for development rebate and Rs. 5.96 lakhs (against Rs. 2.80 lakhs) for taxation, the net profit amounts to Rs. 7.09 lakhs, against Rs. 3.47 lakhs in 1959-60. With Rs. 17,016 brought in, the disposable income amounts to Rs. 7.26 lakhs. From this, the directors have set aside Rs. 1.50 lakhs (against nil) for general reserve and Rs. 1.60 lakhs (against Rs. 1.40 lakhs) for rehabilitation reserve. After providing for the proposed dividend, there remains Rs. 33,736 to be carried forward.

T. Maneklal has plans to undertake manufacture in new lines. It has obtained a licence for manufacturing 300 automatic silk looms a year. It has also secured a licence for manufacturing laminated decorative and industrial plastic sheets. The capacity of the plant will be 9 million square feet a year. Negotiations are in progress for securing foreign collaboration. The Company has also been licensed for manufacturing four-bowl padding mangle machines in collaboration with the Benninger Engineering Company of Switzerland. All these projects are estimated to cost about Rs. 70 lakhs. It is considered likely that T. Maneklal will raise additional capital in due course to finance its expansion schemes. The Rs. 100-paid share of the Company reacted to Rs. 670 in the recent slump but is up again around Rs. 725.

Portable Electric Tools

The Portable Electric Tools (India) Ltd is a new enterprise which has been registered in Madras to undertake the manufacture of portable electric tools like shears, grinders, drills, etcetera. The Company has received the required industrial licence and is negotiating with Black and Decker of the U.S.A. and the Czechoslovakian firm of Motokov for technical collaboration in the proposed venture. The Company will have an authorised capital of Rs. 1 crore, of which Rs. 50 lakhs is likely to be issued in the first instance. The value of plant and machinery is estimated around Rs. 40 lakhs, of which Rs. 20 lakhs will be spent on imported equipment. The factory is likely to be located either in Hosur in Mysore or in Palghat in Kerala. The plant is expected to go into production in the latter half of 1962.

Tariff Probe into Caustic Soda

While the Tariff Commission's report on the ceiling prices of caustic soda and chlorine in all forms—including bleaching powder—is awaited with keen anxiety, the industry is pleased with the Government of India's decision accepting the Commission's recommendation to continue protection for a further period of three years up to the end of December 1964. The industry has made considerable progress under the stimulus of

protection, but demand continues to outstrip production. Between 1958 and 1960, the output rose by about 67 percent from 58,311 tonnes to 97,400 tonnes. Production in the first half of 1961 was running at the annual rate of 116,000 tonnes. But the current demand for caustic soda has been estimated by the Tariff Commission at 201,800 tonnes. This is expected to rise to 319,000 tonnes in 1964. The Planning Commission has laid down for caustic soda a target of 400,000 tons for annual capacity and of 340,000 tons for annual production to be attained by the end of the third plan period. The present annual capacity is only 143,900 tonnes and additional capacity required for reaching the target is expected to be achieved partly by expanding the existing factories and partly by establishing new ones. The aggregate capacity licensed to the existing as well as new units is of the order of 190,000 metric tonnes, but the capacity expected to be established by the end of 1964 is placed around 165,000 tonnes. Since the caustic soda industry needs to be developed in a big way not only to meet the growing needs of the country, but also to find new outlets in the development of allied industries based on the use of chlorine, the withdrawal of protection at this stage would have been harmful to the industry. But while recommending the continuance of protection for a period of three years, the Commission has decided to maintain the existing rates of duty, namely, 30 percent *ad valorem* (preferential) and 40 percent *ad valorem* (standard), although on the basis of the existing tariff value a preferential rate of duty of 62.7 percent *ad valorem* is required to provide adequate protection to the industry. The Commission says that the enhancement of the rates of duty to the level indicated by the bare comparison of ex works price of indigenous caustic soda with landed cost ex duty of the imported product will have little influence on the growth of the industry or internal prices in the present context of regulated imports and releases by the State Trading Corporation. It will, on the other hand, handicap the industries which are permitted at present to import this chemical by way of incentives under the export promotion schemes. The maintenance of the existing rates of duty has also been favoured because the trend for the expansion of capacities, which could be stimulated by internal competition, should not be curbed.

Apart from the continuance of protection for three years, the Tariff Commission has made many other valuable suggestions which deserve careful consideration by the Government. These suggestions relate to the licensing of additional capacity, allotment of tank wagons for movement of liquid caustic soda, freight for bulk movement of salt and electricity rates. The present policy of the Development Wing in recommending licences for additional capacity is to build up in each State one caustic soda unit of at least 50 tonnes a day capacity in order to secure proper zonal distribution of the industry and also a fuller utilisation of chlorine which is a joint product in the electrolytic process. The Commission says that caustic soda being a basic raw material for a large number of industries with a planned programme of development, it is essential that it be made cheaper. For this purpose, proximity to the source of cheap power and salt, which account for nearly 55 percent of the total cost of production, should be given greater importance than zonal distribution. Conversion charges account for nearly 24 percent of the final cost of manufacture and their incidence diminishes as units grow bigger up to their technical optimum, around 100 tonnes a day. The Commission has, therefore, recommended that while licensing additional capacity, the existing units should be encouraged to expand their capacity to an economic size and that in licensing new units also, due attention be paid to the importance of setting up plants of large-size capacity in areas advantageously situated with power and common salt. Caustic soda produced by the electrolytic process is cheaper than that produced by the chemical process. The Commission says that this point should be borne in mind while licensing further capacity for chemical caustic soda. It thinks that it would be in the overall interests of the economy to encourage the sale of liquid caustic soda because it leads to saving in fuel for fusion and steel sheets for packing. It has, therefore, recommended that the railway authorities should take necessary steps to increase the allotment of tank wagons for movement of liquid caustic soda and also to consider the question of adjusting railway freight in such a way that the movement of liquid caustic soda over long distances is encouraged. The Commission has also recommended that the higher freight rates for the bulk movement of salt under Class 37.5-A need not be enforced if a consumer undertakes to carry out protective measures for wagons as required by the railways. It has further suggested that the railway authorities should, in consultation with the manufacturers of soda ash, evolve a workable arrangement for the bulk movement of salt in wagons and extend the facilities to cover long-

ANNOUNCEMENT THE STATE BANK OF INDIA

have pleasure in announcing the introduction
from the 1st January 1962 of

special credit transfer system

whereby any customer having a personal account with the Bank, will be enabled to use any office of the Bank for transfer of money paid in cash, for credit to his account to the extent of Rs. 1,000 in any one instance FREE OF CHARGE.

* * *

A deposit relationship with the Bank will entitle the use of the services of any of its 900 and over offices throughout the country for the free SPECIAL CREDIT TRANSFER FACILITY.

For details,
please contact any office of the State Bank
where you will always find a friend

Aluminium Cable Sheathing Press sheathing a power cable.
22 presses of this type have been sold within a few years.

Small unit: Big capacity:

SCHLOEMANN
ALUMINIUM CABLE SHEATHING PRESS

for the extrusion of cable sheaths, tubes, sections
and wire rod... in any desired length

This revolutionary double-acting, horizontal, 1600-ton installation meets a long-felt requirement of the cable industry for a press unit that is compact...easy to operate...and capable of manufacturing high quality products on a large scale.

SCHLOEMANN ALUMINIUM CABLE SHEATHING PRESS

- The wall thickness of the cable sheath is automatically kept constant over the whole cable length, also in case of unforeseen press stoppages, by a simple operation of the die adjuster
- Each operating cycle is fully automatic. Operation can also be controlled manually
- Production capacity stands in favourable ratio to size and power consumption of the press

SCHLOEMANN, the well-known German engineering company, supplies Rolling Mills, Counterblow Hammers and Hydraulic Presses for Ferrous and Non-ferrous metals. Among the many nationally important undertakings that have chosen SCHLOEMANN machinery are TISCO, Hindustan Steel at Rourkela, TELCO, The Mysore Iron & Steel Works and the Indian Steel & Wire Products Ltd.

distance movement of salt. The Commission has expressed disappointment that some of the States are not agreeable to exempt caustic soda units from the payment of electricity duty. Considering that about 4,000 units of power are required to produce one tonne of caustic soda, a rise of 1np in the electricity rate will raise the cost of production by Rs. 40 a tonne. The industry, the Commission says, requires for its sound development stable rates of electricity for a fairly long period. It has reiterated the recommendation made in the previous report that State Electricity Boards be requested not to effect increases in the existing rates during the present plan period.

F.M.C. to Check Illegal Trading

The Forward Markets Commission proposes to amend the by-laws of all recognised associations by which korb trading, trading in small units and trading at prices above the maximum and below the minimum fixed will become illegal. In its Press note, issued on 9th December, the Commission says that "under the powers vested in the Commission under Section 11(3) (aa) read with Section 12 of the Forward Contracts (Regulation) Act, 1952, as amended, the Forward Markets Commission proposes to effect amendments to the by-laws of all recognised associations for the purpose of making contracts entered into in contravention of by-laws specified in this behalf illegal under Section 15 (3A)." The draft amendments have already been gazetted and objections or suggestions, if any, will be received by the Commission up to 30th December. Few need object to measures which are aimed against illegal trading practices. But it is doubtful whether the Commission can really achieve the desired results merely by incorporating the proposed amendments in the by-laws of the associations. Options are known to be illegal. Yet this business goes on merrily in almost all the forward markets under the Commission's control. That the Cotton Control Order, which aims at checking prices from rising above the statutory ceiling rates, is honoured more in the breach than in observance is also an open secret. Many weeks ago, ready cotton prices shot through the ceiling but business continues to be transacted above the ceiling rates (this is done by passing inferior cotton as the superior one) in spite of compulsory survey. To enforce the control order under the present circumstances will imply the freezing of cotton stocks all over the country. But the authorities are unlikely to do this. To mention the two instances—options and cotton control order—is only to underline the difficulties in enforcing measures against illegal practices.

Instances can be easily multiplied. This, however, is not to suggest that the authorities need not bother about enforcing stricter discipline on the market. It would probably be much better if the Commission concentrated its attention on the more basic issues. As long as speculation is quite healthy and the market is known to be liquid and solvent, there is little that the Commission has to worry about. It is its concern over price fluctuations which has led to difficulties in markets from time to time. The latest instance is that of groundnut futures. The Commission has fixed a ceiling of Rs. 215 a 250 kilograms for the hedge contract, although the contract had started around Rs. 225. This has not prevented the spot material from rising to around Rs. 238 a 250 kilograms. Such measures seriously undermine the sanctity of contract. After all, the evils of korb trading can be easily exaggerated. Longer and uniform official trading hours in recognised markets all over the country are perhaps the only effective answer to illegal korb activity. But then, the volume of business has to be sufficiently large to justify long official working hours. As for trading in smaller units, the Commission itself is largely to blame. The minimum unit of trading in recognised markets in certain commodities is much too large for the small trader. This apart, the imposition of heavy margins also drives speculators to bucket shops. So the assumption of wider powers by the Commission is unlikely to be of any great help in the matter. A fund of goodwill is needed between the Commission and the trade. Unfortunately, the Commission today is more dreaded than respected.

Difficulties of Shipping Industry

Indian merchant shipping has expanded from less than 100,000 gross tons to about 900,000 gross tons during the past decade of planning. While the progress looks satisfactory, it is inadequate to meet the country's growing requirements. Indian tonnage is still less than 1 percent of the world tonnage of 130 million; and Indian ships carry hardly 9 percent to 10 percent of the country's overseas trade which is valued around Rs. 1,600 crores. So the country has to spend foreign exchange of the order of Rs. 130 crores to Rs. 150 crores a year on shipping freight. This liability is bound to increase with the rise in the country's foreign trade

unless Indian shipping is able to take up a larger share. It is against this background that Mr. G. L. Mehta, chairman of the National Shipping Board, forcefully pleaded in this presidential address to the recent Shipping and Shipbuilding Conference in Bombay, that "even more than reasons of national security, the contribution which shipping can make to assist exports and correct or improve the balance of payments is an important consideration that justifies a positive and helpful attitude on the part of the Government towards national shipping".

Mr. Mehta pointed out that the efforts of newer countries to build their mercantile marine have met with resistance from those entrenched in shipping routes, and the charges of "flag discrimination" have been frequently made against them. But he said that while shipping is undoubtedly an international industry, its protection and promotion by a country like India which has a vast coastline and a large maritime trade cannot be legitimately objected to. It was after considering all the relevant factors and various priorities under the plan, that the National Shipping Board recommended a target of 1,422,000 tons at an estimated cost of Rs. 118 crores. The Planning Commission has, however, thought it fit to allocate only Rs. 55

NOTICE

With the weekly issue of CAPITAL which is to appear on 21st December, it is proposed to issue a supplement of approximately 160 pages, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries such as jute, tea, cotton textiles and sugar, the Review will contain exclusive articles by well-known authors. Sir Theodore Gregory will write about the third five year plan, and Mr. C. D. Deshmukh will discuss the problems of educational progress in India. Mr. G. L. Mehta will describe the activities of the Indian Investment Centre; Mr. G. D. Birla will show how high production costs are retarding Indian exports; and Professor B. R. Shenoy will examine the implications of deficit financing in the third plan. Mr. Geoffrey Tyson will write about Indian business in the U.K., and Dr. P. S. Lokanathan will discuss the defects of plan models for economic growth. Professor C. N. Vakil and Mr. A. N. Bhagat will show how India's exports are likely to be affected if Britain joins the European Common Market, while Mr. Neil McInnes will discuss how capitalism is adjusting itself to meet the communist challenge. Particular aspects of the third plan will be discussed in detail, Professor P. C. Jain writing on the problem of raising resources, Mr. G. M. Laud on how socialist planning has hampered the growth of the private sector and Professor R. J. Taraporevala on reforms in the tax structure. There will be an article on road transport by Mr. M. R. Masani, on the Durgapur steel project by Mr. D. J. Bell, and on advertising by Mr. G. H. Gates-Reed. Mrs. M. Sur will write about the recent trends in labour relations, while Dr. N. Das will discuss the concept of fair wages for industrial workers. Other articles will review the past year's experience in such sectors of the Indian economy as life insurance, general insurance, banking, the stock markets and the freight markets. The supplement will be distributed free to all registered subscribers. Additional copies at Rs. 5 each, plus postage, may be obtained from the Manager, Capital, 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

crores for building up an additional 200,000 tons. The paucity of foreign exchange is the main hurdle. While shipping is one of the best foreign exchange earners and is, in fact, a self-financing industry, the problem is one of finding the resources for the initial heavy outlay for purchasing ships. The difficulties are even greater for coastal shipping, since it does not earn any foreign exchange. If the required foreign exchange is not made available, it would not be possible to expand shipping in the overseas trade and the tonnage on the coast would be depleted, let alone replaced or expanded.

The other problem confronting Indian shipping is that of gainful employment of tonnage. Although the coastal trade has been reserved for Indian shipping, the coastal shipowner is still "at sea" in spite of the fact that his ships are perhaps not tied down to ports of loading or discharge as hitherto. Mr. Mehta said that coastal shipping has suffered through the haphazard and short-sighted policy on the carriage of coal. If coastal shipping is depleted, it will cause considerable strain on the inland transport system, particularly the railways. "It is essential to recognise that coastal shipping is an integral and complementary mode of transport". But the Government will need to devise specific measures to enable Indian ships to participate increasingly in overseas routes. Mr. Mehta referred to the meagre progress in shipbuilding. The Visakhapatnam shipyard is far from being a viable unit and the cost of construction as well

as the delivery period do not compare favourably with those of shipyards in other countries. The shipyard is still dependent on other countries for the supply of bulk materials and equipment. Mr. Mehta emphasised the need for developing ancillary industries to meet the needs of shipbuilding. He suggested that the Government should seek foreign collaboration and technical assistance for the setting up of a diesel engine factory—a proposal which had been accepted in principle but had not yet been implemented.

In his inaugural speech, Dr. Subbaroyan, Central Minister for Transport, regretted that the Planning Commission was unable to accept the target of 1,422,000 tons for the third plan suggested by the National Shipping Board because of the difficult resources position, particularly foreign exchange. But he added that even with the available financial resources, it should be possible to add tonnage costing about Rs. 75 to Rs. 80 crores. The purchase of ships could be financed on the basis of credits offered by such countries as Japan and Yugoslavia and also through deferred payments by some other countries at fairly reasonable rates of interest. The Shipping Development Fund also could be used to a greater extent than is now being done for financing the purchase of ships. The Minister also expressed the hope that "if we spend all the funds at our disposal within the next two or three years, we could go up again to the Planning Commission for more funds".

Dr. Subbaroyan urged shipping interests to pay greater attention to the purchase of ships. The types of vessels to be purchased should be conditioned by the trends in traffic as can be foreseen for ten to 20 years to come. He said that coal carriage by sea is at present a "clumsy operation" relying as it does on the old type of steamships run on coal. The challenge can be met by going in for medium-sized ships of 5,000 tons or 6,000 tons run by diesel-engines, which will be fast on the seas and quick in the turnaround. Dr. Subbaroyan referred to the frequent demand from Indian shipping interests for the revision of freight rates, particularly on the coastal routes. There is scope for economy in operation if more up-to-date ships and modern techniques of loading and unloading are resorted to on the coastal routes. Meanwhile, the question of revision of freight rates is receiving the Government's attention, the Minister said.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

Rs. 200
Staff of National and Grindlays Bank Ltd,
Lloyds Branch, 10 Parliament Street, New Delhi.

Rs. 60
Staff of International Computers and Tabulators
(India) Private Ltd, Eastern Zone, Calcutta.

Rs. 51
Anonymous.

Total Rs. 311.

Previously acknowledged Rs. 3,900.50.
Grand Total Rs. 4,211.50.

WIRELESS TELEGRAPHY

MARCONI'S system of wireless telegraphy is making rapid progress, and a big lift has been given to the Marconi International Marine Communication Co., Ltd., by Lloyds entering into an agreement with them to adopt their system to the exclusion of all others for the next fourteen years. All Lloyds' signalling stations throughout the world are to be fitted up with installations as soon as possible. All ocean vessels will be compelled to adopt the same system if they are not to be excluded from communicating with these stations, when out of sight; during the night, or in times of storm and fog when it is impossible to see the code of flag signals now in vogue. The company are fitting up a goodly number of steamers already with installations. The steamer supplies a room on board for working the instruments and also the necessary mast, and the company supply their own operators, give the ships the certain number of words to which they are entitled, and take all the money derived from sea telegraphy. It is easy to understand when this system gets developed that navigation will become much more safe. Even now a vessel at sea possessing the Marconi system is a centre of communication with similarly equipped vessels, throughout the area of a circle having a radius of 300 miles, and this radius is destined to be vastly lengthened as time goes on. By and by the ocean will be enveloped in a complete network of communication, and it will be possible to hold converse with steamers at any part of their voyages. So great an aid will wireless telegraphy eventually lend to the safety of vessels, that shipowners and merchants may reasonably look forward ere long to a substantial reduction in the cost of marine insurance.

A Ditcher's Diary

THE USE OF FORCE FOR SETTLING INTERNATIONAL disputes is a subject on which Mr. Nehru and I have never failed to disagree. I have always acknowledged that it might be necessary under certain circumstances, while the Prime Minister has earned a world-wide reputation for condemning it under all circumstances. That is why I can claim to have been years in advance of Mr. Nehru in suggesting force as a possible solution of the Goa problem; I have done so at least twice before in this diary. But I have usually followed up with the qualification "if necessary", because it seems to me that Goa is one instance where the doctrine of non-violence really makes sense: it is bound to fall to India anyway in time. So the fact that Mr. Nehru is now facing up to a military solution in Goa is a matter of some gratification for me, or would be if he had not so obviously chosen the worst possible time to take my advice. When the Chinese are hopefully suggesting to the world that Indian military activity might be a good excuse for their sending troops across the McMahon Line, it is scarcely a good idea to be making an open exhibition of such activity elsewhere on India's frontiers. It seems to give the Chinese too easy a point. Also, one cannot help questioning the military advice which supports the diversion of thousands of troops to a side-show like Goa when India is threatened with an unassessable danger along a vast and not-easily defended mountain frontier. The reaction of Pakistan, too, must be taken into consideration. For India to resort to force to settle her grievances over Goa might be taken as an excuse by Pakistan to do the same to settle hers in Kashmir; and what better time than when a sizeable section of the Indian army is tied up in the south and the Chinese are only too anxious to make trouble in the north? A war on three fronts is a prospect which a stronger country than India would find daunting. And one more question. If Portugal declared war over Goa, as she has threatened she might, would the Indian navy be able to protect Indian ships in the Atlantic and the Mediterranean? Any bombing of Delhi and Bombay would, of course, be short-lived, but it would be highly inconvenient and India could scarcely retaliate by bombing Lisbon. Those who say that such questions are hypothetical might reflect that military action frequently has consequences which are entirely unforeseeable even when—as with the United Nations in Korea—it is undertaken in a righteous cause, or when—as with Britain and France over Suez—it is launched in defence of legitimate interests.

ONE MIGHT HAVE EXPECTED MR. NEHRU TO DISAGREE with me about the use of force in Goa for at least a little longer, if only to avoid creating the impression that he himself has lost faith in the policy of patient and peaceful handling of all disputes which he has been advocating, with such benefit to peace, as a pattern for the whole world. Perhaps Mr. Nehru has decided quite rightly in my opinion, that where India's vital interests are concerned world opinion is of no consequence. But I am sure it has to be accepted as the deciding factor in the success or failure of the Prime Minister's own tireless attempts to spread the spirit of tolerance and goodwill in international relations. The

world can ill afford to see Mr. Nehru's great advocacy being quietly set aside in his own country. India is not without her enemies, and there will be no shortage of ill-wishers to point out that in talking about his "patience" being "exhausted", Mr. Nehru is unwittingly echoing two of history's most ominous words. Frankly, the possible consequences of using force in Goa now appal me, so does the fact that outside India it will be quite impossible to convince anybody, however unjustified the allegation, that the whole thing has not been cooked up to save Mr. Krishna Menon from an election defeat in north Bombay. But having been force's advocate for so long there is nothing I can do now except hope that no military mistakes will be made. Has Mr. Nehru thought, I wonder, what would happen to the Congress Party's election chances if the Portuguese managed to hold out in Goa until the middle of February? I wish the whole thing were not quite so risky.

THE WESTERN POWERS' LACK OF SURPRISE AT THE Soviet Union's breach with intrepid little Albania must have been mingled with some quiet satisfaction; and I do not see why I should conceal mine. I enjoyed James Cowley's tailpiece in his London Notebook last Sunday in the Statesman. (Chou walking in Moscow with a dog; and his reply to a query whether the dog was a Pekinese: "No it's an Albanian".) The recent 22nd Congress of the Communist Party of the Soviet Union was not a wholly open affair; but Mr. Khrushchev saw to it that what he wanted the world outside to know was adequately publicised. Among such items was Albania with its "brutal misdeeds". Mr. Enver Hoxha reacted sharply and called Mr. Khrushchev names; and China more or less explicitly rebuked the Kremlin for bringing into the open what Peking would have us believe is only a minor domestic misunderstanding. What the theoretical arguments between Moscow and Tirana are I have not cared to follow in monotonous detail; and when Peking participates in these dialectical discussions in the untranslatable Chinese tongue, the whole thing is gibberish for men like me, uninitiated in the esoteric Marxist dialectics. Nor am I sure that I miss much. If, for instance, I interpret the Moscow-Tirana row as a clash of personalities in which Big Brother Khrushchev is unprepared to stand any impertinent nonsense from tiny Hoxha, I am not at all sure that I am wide of the mark. Then there is China, of course. It must be galling for the Russians to make enormous sacrifices so that fellow-communist China may be industrially powerful—only to be told in return, with an intolerable air of superiority, that the Chinese are one up on the Russians so far as devotion to the true faith of communism is concerned. I am reminded of the arguments in the pre-Reformation years in the Christian Church, each school claiming a monopoly of Christianity at its purest. In the Sino-Russian dispute it is the younger ones that are the more orthodox. The non-communist world can confidently expect much more fun from this source.

"DO YOU THINK WE WOULD CARE ANY MORE ABOUT this dirty, noisy, suffocating Calcutta?" Who do

you think is this latest detractor of this city of ours? No, it is not an habitual Calcutta-baiter. Nor was it an irate, ignorant tourist from the United States. I have lifted the line from an advertisement underneath which is inscribed: "Issued by the Government of West Bengal". The advertisement was intended as a boost for one of those stillborn brainwaves of Bidhan Chandra Roy—Kalyani; and has been published in the Calcutta papers in the past few days. With the verdict many will be in general agreement. But, reading the advertisement, one would think that for the noise, dirt and suffocation of Calcutta the Government of West Bengal was not in the least responsible. The immediate concern is indeed Calcutta Corporation's; but the Government of West Bengal can hardly escape its own very considerable share of blame, if only because it is the same Congress Party that controls the Corporation and runs the State Government. And I am not at all surprised that things in the city are not better than they are. Nobody who knew the late Professor Dhurjati Prasad Mukherjee could help admiring that brilliant and versatile intellect. If he were alive he would, I imagine, be the first to criticise the Corporation for adjourning a councillors' meeting on the pretext of his death. (This sounds Irish, I know; but it is difficult to believe that death has for all time silenced that severe critic of hypocrisy in all its manifestations.) It is the business of a fellow journalist to inform the editorial conference of a daily newspaper every morning of the day's possible stories; and he tells me that the moment he mentions a Corporation meeting all his colleagues burst out laughing: "Why, hasn't anyone died in this big world to justify an adjournment?" The remark has even ceased to be funny; and the results never were. One still sees occasional, almost furtive, references to the metropolitan organisation. It cannot even begin to come to life until the Corporation has been buried. If Mr. Atulya Ghosh does not like this, I see no need to apologise.

IT HAS ALWAYS PUZZLED ME WHY SOME YEARS should be so much better for our Christmas Toy Fund than others. The eloquence of our appeal does not vary much, and I cannot see that economic conditions change as rapidly as all that. But whatever the explanation, it is still a great pleasure to announce that this year's collection has already proved one of the best on record. Up to 12th December it stood at Rs. 3,982.50, compared with Rs. 3,384.50 on the same date last year. When the carryover of Rs. 229 is added, the grand total comes to Rs. 4,211.50, compared with last year's final figure of Rs. 3,769.50. So we have already passed the 1960 total, the 1959 total of Rs. 3,809.50, and are within striking distance of 1958's record figure of Rs. 4,511.50. And that gives me my subject of this final appeal. With another ten days to go before Christmas it should not be impossible to raise that extra Rs. 600 or so to make 1961 the best year ever for Capital's Christmas Toy Fund. If those who have forgotten, or who had simply been putting it off, will send in their contributions right away, and make them as generous as possible, then we should do it easily. But remember, this is not just a question of hitting a target; the matter is much more serious than that. It is nothing more or less than the number of poor children to whom we can give a little happiness on Christmas morning. Please help us in this good cause if you have not already done so.

GENERAL TYRES LIMITED

TRIAL PRODUCTION BY MIDDLE OF 1962

MOVE TO EXPAND THE SCOPE OF ACTIVITIES

Chairman's address delivered by Sir A. Ramaswami Mudaliar at the First Annual General Meeting of the Company held on 11th December, 1961.

Gentlemen:

I have great pleasure in welcoming you to the First Annual General Meeting of your Company. The Directors' Report and audited Accounts for the period up to 30th June, 1961 have been in your hands for some time now and with your permission I take them as read.

You will have observed from the audited accounts that there has been a net loss of Rs. 1,05,203 during the period under review which has been carried forward. The loss is really due to necessary expenditure incurred during course of construction of the factory. In this context the provision of Rs. 8,000 for Income-tax may appear to be paradoxical, but according to existing tax law this had to be done in respect of the interest on bank deposits earned during the period to the extent of Rs. 15,000.

If the structure of share-holdings may be taken as an index, your Company has been favoured by a wide degree of public support. Subscriptions were widely distributed on a regional basis and also according to the size of applications.

I think it is desirable to review briefly the progress of the automobile tyre industry in the recent past and its prospects for the future in the light of road transport development in the country before referring to the progress made by your Company. Since the beginning of the First Plan period there has been remarkable expansion of motor transport in India and both road mileage and the number of motor vehicles have recorded substantial increase. During the decade covered by the First and Second Plans total road mileage in India increased from 1,48,500 to 3,84,000 and the number of commercial vehicles on road from 1,16,000 to 2,10,000. The automobile tyre industry fully kept pace with this development, production of tyres having increased from 9,00,000 Nos. in 1950-51 to 13,50,000 Nos. in 1960-61 representing a rise of 50%. In fact the performance of the tyre industry compares very favourably with the trend of overall industrial growth in the country; taking 1951 as the base the indices of production of tyres and tubes in July 1961 were 298.1 and 259.8 respectively as against the general index of 174.2.

Pressure on Railway Transport

In view of the great pressure on railway transport and the need for co-ordinated development of various forms of transport as anticipated for the Third Plan period, there is substantial scope for expansion of road transport and consequently the tyre industry. According to the Third Plan the number of road vehicles (including passenger cars, commercial vehicles, jeeps and station wagons, motor cycles and scooters) is expected to be 3,65,000 in 1965-66 representing an increase of about 75% over that in 1960-61. The target for the production of automobile tyres to be achieved by 1965-66 has been fixed at 3 million Nos. (against an installed capacity of 3.7 million numbers) constituting a rise of more than 120% over the production in 1960-61. It is understood that the Government of India are considering a further upward revision of the aforesaid target capacity.

The Government of India have issued licences to a number of industrial undertakings for expansion of capacity and/or setting up of new units for the production of automobile tyres and tubes within the Plan target. At present there are ten units licensed for the manufacture of automobile tyres and tubes out of which six are in operation as against only two in 1950-51. In the genuine interest of a healthy growth of the industry as a whole, the Government would, I am certain, consider the desirability of regulating their licensing policy in such a manner as to enable the new enterprises sanctioned to achieve economic production and establish themselves on a sound footing.

Tyre Plant in West Bengal

Your Company represents one of the undertakings licensed for establishing a new tyre plant in West

Bengal with a capacity of 15,000 Nos. each of tyres and tubes per month. You will have got an idea about the progress of this Company from the Directors' Report already circulated to you. Construction of the main factory building, stores and offices is fast nearing completion. Out of the Import License for Licence for plant and machinery worth Rs. 80 lakhs obtained by the Company a major portion has already been received at the factory site and further shipments are on the way. It is expected that delivery of all plant and machinery to be imported from Czechoslovakia will be completed by 1962. According to arrangements with the Technical Collaborators a team of erectors is expected to be at the factory site shortly to supervise the erection of plant and machinery. The technical personnel deputed by the Company to Czechoslovakia for training and finalisation of the Project Report have returned to India. If there is no serious hold-up in the present programme the plant at the factory will be commissioned for trial production by the middle of next year, which will be accepted as a good performance.

In order that your Company may play its proper role in the growing tyre manufacturing industry in the country your Directors have decided to expand the scope of its activities and accordingly an application has been made to the Government of India for permission to expand and diversify the Company's operations by installing further and/or fresh capacity for the manufacture of tyres and tubes for cars, trucks and buses, motor cycles and scooters, etc.

Raw Material Supplies

As regards raw materials, the cost of the principal raw material for the tyre industry, i.e. Indian rubber has increased since April 1961 due to the levy of a substantially higher rate of cess, the increase being from approximately 13 nP per Kg to 30 nP per Kg. The supply of Indian rubber has been lagging behind the requirements of the tyre and general rubber industry, being about 25,000 tons as against the consumption of about 58,000 tons during the 12 months ending September 1961. It has been necessary to meet this gap by import of natural and synthetic rubber; estimated imports thereof during 1961 would be 21,000 tons and 8,450 tons respectively.

In regard to other important raw materials also, viz., tyre cord, bead wire, valves, carbon black, the country is yet largely dependent on imports. It is, however, gratifying to note that steps are being taken to arrange for production of these items in India and it is hoped that by the end of the Third Plan period the tyre and rubber products manufacturing industry in India will be substantially self-sufficient in this regard as certain projects are likely to be implemented by that time, viz., the 20,000 tons synthetic rubber plant at Bareilly, the three units licensed with a total capacity of 34 million lbs. of rayon cord, the unit licensed for manufacture of automobile tyre valves, the carbon black plant being set up at Durgapur with a capacity of about 15,000 tons per annum and the rubber chemicals plant near Calcutta. Grant of license for the setting up of a bead wire factory is also reported to be under the active consideration of the Government of India. When all these plants licensed or to be licensed hereafter go into full production not only will there be a substantial saving in foreign exchange now being spent on import of the materials but also the tyre industry will be saved a good deal of uncertainty and delay in the matter of such imports.

Before I conclude you will, I am sure, wish to join me in expressing our warm appreciation of the co-operation and assistance received from the Technical Collaborators Messrs. Technoexport Foreign Trade Corporation of Czechoslovakia, the services rendered by the Managing Agents of the Company Messrs. National Rubber Manufacturers Ltd., and also of the loyal and devoted work of the officers, staff and workers of the Company.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

CALL FUNDS EASIER

Wednesday, 13th December.

DEMAND for advances increased in the Calcutta money market during the past week. The requirements of the jute mills, the engineering and iron and steel industries, and call for accommodation against grain and food storage, have all risen. Demand for advances from the cotton industry remains about the same, however, and there has been a slight fall in the requirements of the sugar mills. In the inter-bank market conditions are easier, and the official call rate is down to 2 percent, with no borrowers. It is, however, expected that this easiness will not last long because of the anticipated requirements for tax payments due about the end of the month.

It has been an exceptionally quiet week in the Exchange market due to a growing shortage of both tea and gunny bills. Remittance demand has been moderate. In the London market the pound developed a weak tendency and closing quotations showed losses against all major currencies with the exception of the Canadian dollar and the Dutch guilder.

BULLION WAS QUIET IN THE PAST WEEK DUE TO profit-taking. Silver declined from the previous week's level of Rs. 245.50 to Rs. 243.25, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 207.50. The London and New York prices were 86½d and 91.375 cents.

Gold also fell due to bigger arrivals. The price declined from Rs. 144.75 to Rs. 143.50. The sovereign rose from Rs. 99.25 to Rs. 99.50.

DURING THE WEEK ENDED 8TH DECEMBER, GOVERNMENT of India Treasury bills for Rs. 18,36,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 12th December. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 18th December.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 13th December to 16th December at Rs. 99.391 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 6th December to 9th December amounted to Rs. 1,39,25,000.

RISES OF RS. 42.48 CRORES TO RS. 1,960.27 CRORES in the total note issue and of Rs. 39.47 crores to Rs. 1,947.89 crores in active notes were important features of the return of the Reserve Bank of India for the week ended 8th December, 1961. The currency expansion was covered by increasing rupee securities of the paper currency reserve by Rs. 44.99 crores to Rs. 1,603.83 crores. This was done by transferring securities from the Banking Department, in which investments fell by Rs. 35 crores to Rs. 179.63 crores. Deposits of the Government of India rose by Rs. 34 lakhs to Rs. 53.76 crores, but other Government accounts fell by Rs. 5.15 crores to Rs. 10.19 crores. Balances of commercial banks at Rs. 74.33 crores showed a decline of Rs. 3.83 crores. Balances held abroad improved by Rs. 1.10 crores to Rs. 29.93 crores. Other loans and advances increased from Rs. 131.03 crores to Rs. 132.36 crores, of which advances to scheduled banks against usance bills amounted to Rs. 70 lakhs (Rs. 20 lakhs). Ways and means advances stood at Rs. 72.10 crores, against Rs. 66.17 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 1st December, 1961, shows a rise of Rs. 3.03 crores to Rs. 532.05 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 4.20 crores and Rs. 10 lakhs to Rs. 266.34 crores and Rs. 9.34 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 2.93 crores to Rs. 243.83 crores. Cash and balances are, in consequence, shown at Rs. 23.33 crores or Rs. 24 lakhs less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 1st December, 1961, shows Demand and Time liabilities at Rs. 849.13 crores (Rs. 24.36 crores on account of borrowings from banks) and Rs. 1,150.48 crores (Rs. 19.91 crores), compared with Rs. 852.15 crores (Rs. 23.59 crores) and Rs. 1,148.32 crores (Rs. 20.70 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have dropped by Rs. 2.38 crores and Rs. 4.55 crores to Rs. 46.49 crores and Rs. 75.26 crores, respectively. There is a rise of Rs. 5.81 crores to Rs. 624.49 crores in investments. Advances and bills discounted at Rs. 1,239.98 crores show an increase of Rs. 6.19 crores. The ratios to total

liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.1 percent and 62.0 percent, against 6.4 percent and 61.7 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 15-12-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

AUTOMATIC MARGIN SYSTEM HELPS STABILISE SPECULATIVES BUT POLITICAL UNCERTAINTIES RESTRAIN BULLS

Wednesday Evening.

THE undertone of the stock market has been quiet during the past week. Sentiment has improved on talk of an early rise in the retention price of steel. The hope is reinforced by reports that the management of Hindustan Steel is optimistic about the new price being higher than the current provisional price fixed some months ago. There has also been considerable short-covering since heavy margins were imposed on sales of clearing shares. The adoption of the automatic margin system by the stock exchanges has helped restore confidence.

Now that the system has been introduced, earlier fears that it would hamper activity are fading away. It is appreciated that the system will not be adverse in its effects. It operates in two ways. Firstly, margins will be imposed on the outstanding business of a member on a sliding scale if the outstanding business exceeds a specified free limit. As the free limit is generous, the system should not restrict activity unduly. Secondly, margins will be imposed if the prices of clearing shares rise or fall by more than 10 percent, compared with the prices fixed at the last clearing. The latter margin need not be too restrictive because price fluctuations to the extent of 10 percent are rare. It is a merit that the automatic margin system is being enforced in all the stock markets. The uniformity ensures that business will not escape from one stock market to another where margins do not apply. Under the previous system, each stock exchange was free to impose margins as it chose. Much uncertainty prevailed, and those who got wind of a margin move early enough could abuse their fore-knowledge.

This does not imply that the new margin system will be fool-proof. It has many loopholes, but it is hoped that corrective measures will be taken in due course. For the time being, the system will operate against both bulls and bears when they start indulging in excessive speculation. In the circumstances, the meeting of Stock Exchange presidents, due to be held in Calcutta soon, is not expected to cause much excitement.

Selling pressure in the Calcutta market has declined considerably, but fresh support is lacking. The higher carry-forward charges at the last settlement, combined with the growing stringency of credit, have held back buyers. Investors have been upset by the developments near Goa. Operators are preoccupied for the time being with the political situation. As long as the political anxieties continue, the trend is likely to remain uncertain. But considering that the prices of many good shares have come down to reasonable levels, investors might before long be attracted by the dividend yields and the growth prospects. The warm response accorded to the India Carbon issue shows that investors are willing to put their money in shares with good prospects.

Indian Iron have closed at Rs. 23.96. Support has been lacking in engineering shares due to the shortage of transport, electric power and raw materials. Texmaco have met with speculative interest. Business has been done in Guest, Keen, Williams, Indian Standard Wagon, Jessop and Burn at lower prices.

Miscellaneous shares have declined due to the absence of support. Scattered interest is being taken in Dunlop Rubber, Indian Cable and Indian Aluminium. Hindustan Motors have not maintained the gain which followed the report that the factory has resumed work after a prolonged stoppage. Scattered interest has been taken in Britannia Biscuit, which are issuing bonus shares in the proportion of one new share for every two held. Bisra Stone Lime have been steady on issuing bonus shares in the ratio of three new shares for each one held. Goodyear India, Metal Box and Union Carbide have been steady. British India Corporation have recovered on influential buying. India Steamship have been sold freely due to the uncertain outlook for the freight markets. Cement shares are quiet and Jaipur Udyog have lost further ground. Among managing agency shares, Jardine Henderson have improved. Paper shares are quietly steady on hopes that the price of the commodity will be increased in the near future.

Coal shares have fallen on reports that many collieries will find it difficult to obtain money for expansion. Meanwhile, raisings have been affected by the large accumulation of stocks at pitheads. Burrakur, Bengal, Amalgamated and Central India have been quoted lower.

The decision of the jute industry to continue the 24 percent loom unsealing for an extra month has had a bearish effect on the shares. Birla, New Central, Union and Howrah have reacted. Nuddea have been steady on favourable corporate rumours.

Except for Bowreah, which have been steady, other shares in the cotton mill section have declined on pressure. Dunbar, J. K. Rayon, Bharat Commerce and Elgin have fetched lower prices.

Mining shares have been quietly steady. Indian Copper, Orissa Minerals and Metal Corporation have met with scattered support.

Sellers predominate in sugar shares at lower prices. Investors are worried about the prospect of a further decline in the price of sugar. Carew have weakened on passing the dividend. Belsund, S.K.G. and Cawnpore have declined. Dyer Meakin Breweries are about steady on rumours of a bonus issue.

Selected tea shares have met with support due to an improvement in auction prices this week. Bishnauth, Hasimara and Dibrugarh have gained.

Bank shares have been steady on the view that the profits of banks will be higher this year. It is said that advances have increased along with lending rates, while deposit rates have been held down. United Bank, United Commercial Bank and Punjab National have been bought at steady prices. Interest has been taken in selected preference shares giving high yields.

Government securities have been quiet and turnover is restricted in the absence of buyers. There is evidence of some official support. The 3 percent Conversion loan 1936 is quoted at Rs. 71. The prices of State loans have eased.

Bengal Bonded Warehouse

The profit made by the Bengal Bonded Warehouse Association has increased from Rs. 1.51 lakhs to Rs. 1.66 lakhs for the half-year ended October 1961. A dividend of 8 percent, subject to tax, has been declared, against 6 percent, taxable, and it absorbs Rs. 1.08 lakhs. Taxation is allocated

"IT SHOULD BE LIKE THE ONE
I BOUGHT FROM YOU
LAST YEAR!"

This is one of the oldest and most commonly used of standards. But it is certainly vague. And when you use it, you are never sure of getting your exact requirements.

This is where Indian Standards come in useful. Developed by the Indian Standards Institution, each standard helps you to easily specify your requirements, ensures quality of the product and good value for the money you spend.

ISI prescribes standards for industrial and consumer goods. Under its certification marking scheme, goods produced to relevant standards qualify for carrying the ISI Certification Mark. This is a third-party guarantee of the products' continuous satisfactory performance and service. The next time you buy anything, look for the ISI mark.

INDIAN STANDARDS INSTITUTION
NEW DELHI • BOMBAY • CALCUTTA • MADRAS • KANPUR

Rs. 60,000, against Rs. 62,000. With other adjustments, there is a carry-forward of Rs. 7,663, against Rs. 2,685 brought in.

Britannia Building and Iron

The Britannia Building and Iron Co. Ltd has incurred a loss of Rs. 12.59 lakhs for the year ended March 1961, after providing Rs. 11,702 (against Rs. 14,356) for depreciation. Making other adjustments, there is a debit balance of Rs. 2,74,002, which is carried forward. Sales amounted to Rs. 1.12 crores, against Rs. 71.12 lakhs.

Bombay Market

BRIEF RALLY ON HOPES OF STEEL PRICE RISE BUT BUYERS HESITANT, SO EQUITIES AGAIN FALL

Wednesday Noon.

THE Bombay stock market closed in a subdued mood. At one time during the past week, there was a short-lived rally on rumours of an early rise in the retention price of steel. Reports of institutional support, especially from the Life Insurance Corporation, helped to restore confidence. But, towards the close, sentiment again deteriorated in the absence of buyers. Holders were unnerved by reports of disturbances near

Goa. Higher carry-forward charges at the last settlement restrained activity. The selling pressure nevertheless abated with the introduction of the automatic margin system. The havalas deposits imposed on short-selling helped to restrain the pressure. Bulls were, however, reluctant to extend their commitments due to various uncertainties. The growing tightness of credit called for caution. Many operators were also influenced by astrological considerations. It was stated that there would be a confluence of five planets early in February 1962, which was considered a bad omen.

Tata Steel closed lower at Rs. 138.50 and Indian Iron at Rs. 23.76 on pressure from Lyons Range. Engineering shares were sold freely. Tata Locomotive could not maintain their previous recovery and declined to Rs. 342. Alcock Ashdown were dealt in at Rs. 306 and Premier Construction at Rs. 183. Business passed in Larsen and Toubro at Rs. 36.50 and in Mukand Iron at Rs. 26.75. Motor-vehicle shares were quiet and Hindustan Motors declined to Rs. 19.76. Premier Automobiles were sold at Rs. 152.50.

A Press report that many cotton mills had been prevented from buying Indian cotton because they had not taken their quotas of foreign cotton subdued sentiment in the cotton textile section. Bombay Dyeing fell to Rs. 65.80 and Century to Rs. 562. Kohinoor were sold at Rs. 294 and Simplex at Rs. 161. Standard moved down to Rs. 1,012 and Morarji to Rs. 376. Sellers predominated in India United ordinary at Rs. 15.12 and in Apollo at Rs. 1.86. Gokak came to hand at Rs. 195 and Shree Niwas were sold down to Rs. 280.

Miscellaneous shares moved down in sympathy with the general trend. In the sugar group, Belapur were quiet at Rs. 264 and Phalton at Rs. 125. Walchandnagar Industries came to hand at Rs. 165.50. Steamship company shares were subbed and Scindia Steam declined to Rs. 12.60, while Great Eastern Shipping were down at Rs. 12.84. Cement shares were quietly steady and Associated Cement were dealt in at Rs. 159.50. Digvijay were available at Rs. 192. Mining shares were quiet and Shrivrajpur Syndicate fell to Rs. 44 on reports of a production cut. Bombay Burmah reacted to Rs. 622 on pressure. Rayon shares were subbed and National Rayon fell to Rs. 537. Gwalior Rayon were transacted at Rs. 46 and Baroda Rayon at Rs. 151.50. Chemical shares were sold freely at lower prices. Tata Chemicals were offered at Rs. 19.44 and Indian Dyeoils at Rs. 432.50. Business passed in Colour-Chem at Rs. 405. Voltas were available at Rs. 288 and Tata Oil at Rs. 75.50. Coat Tyres fell to Rs. 205 and Synthetics and Chemicals to Rs. 226. Business in cash scrip declined considerably.

Bank shares were about steady and Bank of India were taken at Rs. 140 on the prospect of a rights issue. Central Bank came to hand at Rs. 62.30 and Bank of Baroda at Rs. 105. Insurance shares were steady and New India were placed at Rs. 58.50.

Electric company shares declined on balance. Ahmedabad Electric were indicated at Rs. 91.80. Tata Hydro at Rs. 109 and Bombay Suburban at Rs. 103.50.

Madras Market

POLITICAL DEVELOPMENTS CAUSE ANXIETY

PRICES FALL WITH POOR TURNOVER

Tuesday Evening.

CONDITIONS deteriorated considerably in the Madras stock market during the past week. Turnover in both clearing and cash scrip was reduced to almost a trickle. Lower advices from Calcutta and Bombay, following reports of disturbances along the Sino-Indian border and near Goa, induced heavy selling pressure. The bears were restrained at the close by the introduction of the automatic margin system, but fresh support was virtually negligible. Government securities were quiet and business was nominal. Public utility issues were selectively bought. Among banks, support was induced by the prospect of rights issues. Sugar shares were freely sold due to anxiety about the outlook for the current season. In the planting section, tea and rubber shares declined further. Coffee shares were not fancied because the marketing outlook for the commodity was unfavourable. Textile shares met with pressure because of nervous liquidation. Miscellaneous industrials also declined due to the absence of support.

In the banking group, Indian were bought at Rs. 181, the Bank called Rs. 10 a share on 28,000 partly-paid shares. Indian Overseas came to hand at Rs. 190 and Punjab National at Rs. 20.24. Business passed in State Bank of Mysore at Rs. 163 and in Canara at Rs. 85.

Among public utilities, South Madras were steady at Rs. 10.25 and West Coast at Rs. 14. Kumbakonam were done at Rs. 10.87 and Negapatnam at Rs. 10.70.

Among sugar shares, E.I.D. declined to Rs. 35.60 and Deccan were dealt in at Rs. 11.20. K.C.P. were transacted at Rs. 24 on paying a taxable ordi-

nary dividend of 15 percent. Andhra were done at Rs. 22.75 and United Breweries at Rs. 101.55.

In the planting section, Blue Mountain moved down to Rs. 2.77; the name of the Company has been changed to Blue Mountain Estates and Industries Ltd. Cochín Malabar reacted to Rs. 7.15 and Consolidated Coffee to Rs. 19.35. Chembra weakened to Rs. 3.35 and Coffee Lands to Rs. 16.50. Woodcoke were sold down to Rs. 1.65 on passing the dividend. Kil Kotagiri came to hand at Rs. 4.90 and Lucky Valley were dealt in at Rs. 11.35. Nilgiri were offered at Rs. 8.50 and Nonsuch at Rs. 25.50. Ossoor were transacted at Rs. 2.70 and Ouchterlony at Rs. 3.44. Parkside were steady at Rs. 27 and Peermade at Rs. 22.75. Periakaramalai were transacted at Rs. 3.45 and Swinton were placed at Rs. 2.85.

In the textile group, Bangalore Woollen were steady at Rs. 240 and Buckingham at Rs. 254. Asher were steady at Rs. 229, but Anglo-French declined to Rs. 128. Lakshmi reacted to Rs. 164 and Madura to Rs. 39.90. Mettur were sold at Rs. 388 and Kothari at Rs. 13.30. Bhanalakshmi were indicated at Rs. 255 and Radhakrishna were done at Rs. 39. Ramakrishna came to hand at Rs. 250 and Sarada were placed at Rs. 90. South India Viscose turned softer at Rs. 173 and Travancore Rayon lost at Rs. 42.

In the miscellaneous section, Aluminium Industries were weaker at Rs. 22.55 and Ashok Leyland at Rs. 8.90. Binny lost at Rs. 310 and Enfield were quoted lower at Rs. 12.35. F.A.C.T. moved down to Rs. 8.90 and India Cement reacted to Rs. 6.33. Kirloskar Electric were steady at Rs. 16.60, but Madras Rubber declined to Rs. 20.65. Parry's Confectionery were available at Rs. 4.45 and Seshasayee Paper were quoted at Rs. 8.50. Spencer were transacted at Rs. 24.50 and Standard Motors at Rs. 16.37. Textool were placed at Rs. 185 and Tube Investments at Rs. 281. United Electricals were easier at Rs. 9.50 and Jeewanlal at Rs. 7.66.

London Market

OPERATORS CAUTIOUS IN STOCK MARKET

GILT-EDGED RISE

London, 13th December.

THE pay pause, the obscure economic outlook and disappointing statements from company chairmen, have made buyers cautious in stock markets over the past week, and now with the Christmas holiday close at hand, there can be little desire on the part of investors to extend commitments until the New Year. A major development during the past week was the Government's conversion operation involving £500 million of the existing £758 million 4½ percent conversion loan 1962. This pleased the gilt-edged market and prices which had been looking easier earlier in the week, staged a marked recovery. There is now some hope that the next cut in Bank rate will be earlier than had been generally expected. Foreign bonds which have been a lifeless market for some time have still failed to move in any definite direction although Japanese have been wanted at times. Industrials were mainly lower with company news the motivating factor. Steel shares were unsettled by some rather poor company results and elsewhere. Distillers were depressed after the interim statement with reference to conditions in the chemical side of the business. Gold shares met with a good demand at times with the cut in the South African Bank rate from 5 percent to 4½ percent an encouraging factor. Coppers were subdued and rather uncertain in view of the situation in Katanga. Tin shares were a poor market on most days. There was a welcome rally in oil shares with Shell Transport prominent. Rubber and tea share prices drifted lower in very quiet trading conditions.

AFRO-ASIAN COUNTRIES DISCUSS PROSPECTS OF ECONOMIC CO-OPERATION

IDEAS FOR A COMMON MARKET BEING DEBATED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Conference of the Afro-Asian Organisation for Economic Co-operation began its session here on 11th December, which will go on until 15th December. The provisional agenda includes the following objects: (a) arbitration arrangements in the region; (b) possibility of increasing the regional trade in specified commodities along with world trade; (c) the impact of external market groupings on the trade and economic development of Afro-Asian countries; and (d) economic development of the Afro-Asian countries through mutual aid and investment.

The Secretariat of the Organisation has prepared working papers on the following subjects: (a) schemes for conciliation and arbitration in commercial disputes within the Afro-Asian region; (b) the prospects for development of regional trade in specified commodities and products in conjunction with world trade; (c) external market groupings and their impact on the trade and economic development of Afro-Asian countries; and (d) economic development of Afro-Asian countries through mutual aid and investment.

A quotation from the paper on external market groupings gives an insight into the objectives of the Organisation. "Let there be no misunderstanding about the objectives of the Organisation. The aim is a comprehensive Afro-Asian Common Market. The opportunities are there and the benefits of achievement are stupendous. In the meantime, some countries within the area have found it expedient to promote regional grouping. The danger inherent in such an approach is to fan dissension and retard the influences of unifying forces. If in the short run a regional grouping is visualised, it must always be made accessible to other countries within the area. A false impression may have been gained from a casual observation of attempts at African and Asian groupings. Alongside purely African regions or sub-regions is the Middle East region with Egypt as its centre or focal point between Africa and Asia. The scheme for the Arab common market, under study for some time now, has recently received a new impulse. In the Asian continent, zones are already largely defined—central Asia, south-east Asia and the Far East. Each one has its centre of attraction. A south-east Asian common market has already been discussed.

Regional Groupings

"These regional or sub-regional groupings, constituted as common markets or economic groups, must not be mutually exclusive. Members of a group may belong to another. As in the south-east Asian common market, Japan may play a similar role in another formation more specifically Far Eastern; hence also the United Arab Republic, while being the hub of the future Arab common market, can also belong to the common market of the autonomous groups of Casablanca. This plurality of groupings will not be synonymous with dispersion on a regional basis. The various groups may become linked together in a federation which can give practical demonstration of full and complete Afro-Asian solidarity, thus assuring unity in diversity. The institutions and organs of such a federation may, for example, follow the general framework of the European Economic Committee with appropriate adjustments. A basic idea of the activities devolving on each group, and by greater reason on the council of such federation, is contact with world organisations other than the West or East and notably Latin America, whose conditions resemble those obtaining in the Afro-Asian States.

"The concentrated efforts to 'partition' Africa through a separatist movement are but a forced course that must be actively opposed. The 'linking' of the former metropolitan countries to African territories presents a negative aspect of the latter's progress towards complete independence. At best, it can only be regarded as a stage in economic emancipation at which they remain linked to the former metropolitan country. Sooner or later, such links will not stand up to the forces which have made independence possible."

The study further says: "The five central American States formed their common market in 1958. So far, little progress has been achieved, and the movement for integration is for all intents and purposes still dormant. In February 1960, a treaty was signed in Montevideo, creating a zone of free trade in Latin America. It came into force in June 1960. The countries which adhered to the treaty are the Argentine, Brazil, Chile, Uruguay, Paraguay, Peru and Mexico. As each signatory depends, in a high degree, on the export of a limited number of raw materials, adverse consequences may be experienced from the reduction of Customs duties. In such cases, consultation must be held by all the member States in order to authorise the member concerned to reintroduce temporary restrictions on imports as and when

there has been serious damage done to a specific sector or to the national economy or, again, when it is necessary to restore the balance of payments."

E. C. M. Associates

Side by side news came from Paris that the six Common Market countries and the 16 African States have agreed on an association which gives the African States advantages at least equal to those guaranteed by the Treaty of Rome. The Convention of Association will take effect from 1st January, 1963. A similar convention or understanding between Japan and the U.S.A. has already been reported in these columns. Then again, communist China is a member of the Organisation. In the case of that country, the "National Chamber of Commerce" means the Government. It is a well-known fact that communist China has been elbowing out India from the traditional markets of south-east Asia. The picture which emerges, is this. The highly industrialised Japan, with the active co-operation of the U.S.A., is competing with India on the one side and the communist China, with no labour costs to bother, is dumping goods on the other, in south-east Asia. As for the Middle East, Egypt is claiming her leadership. This leaves Africa. Now trade follows aid. India herself has accepted this principle. Having ignited the fires of nationalism and sovereignty, India should not grudge the newly born sovereign States of Africa, if they look to the same source, as she is looking, for raising their own standard of living through rapid industrialisation.

The Government of India, or at least its brains trust, knows that there could be no Asian common market, much less an Afro-Asian common market. The European Common Market has a history which Asia lacks. The study expresses surprise that European countries were willing to surrender a part of their sovereignty. In the first place, even in a democracy, government does encroach on personal freedom and liberty of action for the common good of society. A similar principle applies to international organisations or agreements. Under the Commonwealth scheme of preferences, each participating country has had to sacrifice a part of its sovereignty for its own ultimate good. Western Europe, in addition, is faced with the Russian menace. It will be easier to form a Customs union of India, Burma, Ceylon and Pakistan to begin with, if India realises the potentialities of the Chinese menace. In short, the *sine qua non* to a common market is not so much the identity of economic interests as the realisation of a common political danger.

Indian Imports from Argentina

A party of Argentine business men who came with their President, sounded a note of warning to India that unless she had a balanced trade with their country, Argentina would resort to using substitutes for jute. They were addressing a Press conference in which 17 Argentine business men faced seven Pressmen including an Indian Press photographer, who also acted as their public relations officer. They said that their country imported \$20 million worth of jute goods from India, who in her turn, imported particularly nothing from Argentina. Until two years ago, India did import wheat from Argentina, which, thanks to wheat imports from the U.S.A. under P.L. 480, have now stopped. Unless India revised her policy to balance trade, "Argentina will be forced to shut out Indian jute imports by using substitutes", they said. Logically, India cannot object to Argentina's attitude, she having adopted it herself. In the larger interests, the bilateral balance of trade policy is a dangerous one and is opposed to the basic principles of international trade in general, and those of G.A.T.T. in particular. What Argentine business men wanted was to use pressure against P.L. 480 imports of wheat from the U.S.A. Their protest, however, cannot be dismissed lightly. Apart from paper bags, bulk transport is changing the pattern of packing trade. Argentina, for example, is surplus in hides which are wanted by India.

More for Railways and Oil Body

The Planning Commission has revised the third five year plan within the first nine months of its inauguration. It has permitted the Railway Board to step up its development programme, using its five-year allocations of Rs. 940 crores within three years. Side by side, it has stepped up its allocations of the Oil and Natural Gas Commission from Rs. 115 crores to Rs. 202 crores, assuring that as much as 90 percent of its foreign exchange requirements would be made available to it. The original allocation of Rs. 115 crores included Rs. 53 crores in foreign exchange. This has now been raised to Rs. 71 crores. The Planning Commission has also accepted the offer of the Italian firm, E.N.I., of an additional credit of \$20 million. All these additional allocations to the Oil and Natural Gas Commission are intended for exploration in

Assam, Cachar, Jorhat, Dibrugarh and Nalbari. The Planning Commission is also considering the advisability of reopening the present licensing policy for industrial units. It is believed that it has asked the Ministry of Commerce and Industry for the total amount of foreign exchange liability it had created for which licences have been granted. According to its estimates, the Ministry has already exhausted the allocations made for five years for industries.

The development programme for industries visualised under the plan entailed an expenditure of Rs. 2,455 crores, including Rs. 1,338 crores in foreign exchange, both for the public and private sectors. Of this, the total for the private sector was Rs. 1,125 crores, including Rs. 450 crores in foreign exchange. The view of the Planning Commission is that there has been overlicensing during the first nine months of the plan, and, unless this tendency is checked in time, India might have to face another foreign exchange crisis, in spite of the voluminous aid her friends have been giving her. All industrial licences are in the case of foreign collaborations, subject to approval by the Government of the terms of the collaboration agreement. The second hurdle is the capital goods committee, which grants the import licence for capital goods. Thereafter, comes the Controller of Capital Issues, which has to sanction the raising of new capital. It may be that there has been overlicensing during the first nine months of the plan period. But, as it was recently explained, a fertiliser factory, for example, takes about two and a half years before it goes into production. The again, oil in Assam was struck some six years ago. It still lies in Assam unused, because of defective planning. It is, therefore, contended that although licences might have been issued, the overall development should be so phased as to fit into the pattern of the plan, priority having been given to the most essential items of production. There is, however, some force in the Planning Commission's contention that all licences have been granted on a single-shift basis, and there is a good deal of capacity lying idle for want of raw materials.

U.K. Shipping Lines Drop Freight Rise Move

The U.K. Conference Lines have dropped their proposal to increase the freight rates on Indian and Pakistani exports. This is in deference to the firm stand taken by the two countries. Their proposal to increase by 10 percent the freight rates on all west-bound cargo would have resulted in a loss of Rs. 5 crores of foreign exchange for India every year. The country's annual freight bill amounts to nearly Rs. 150 crores. Almost 50 percent of this is accounted for by the India-U.K. Conference Lines.

Losses of H. S. L.

The third plan has taken credit of Rs. 150 crores as surplus from industrial undertakings in the public sector. That this assumption may not materialise is indicated by the report of the Hindustan Steel Ltd. On the one side, the capital outlay of the three public sector steel plants has been further reviewed and the total cost is now expected to be of the order of Rs. 607.42 crores, excluding escalation, as against the earlier estimate of Rs. 605 crores. The steel plant proper in Rourkela will cost Rs. 177.86 crores, as against the original estimate of Rs. 170 crores, excluding escalation. The cost of all other ancillaries including township, ore mines and quarries, water supply, fees to consultants, other expenditure on the work undertaken by the project outside the perimeter and cost of the project staff and Customs duty is estimated at about Rs. 43.47 crores. In the case of Bhilai, the revised cost of the steel plant is placed at Rs. 145.57 crores, as against Rs. 131 crores originally. The cost of ancillaries and other items is estimated at Rs. 53.75 crores, as against the original estimate of Rs. 47.65 crores. According to the revised estimates, the total cost of the Durgapur steel plant including ancillaries, but excluding escalation, will be Rs. 186.77 crores, as against Rs. 165.87 crores visualised earlier. On the other side, the Company has reported a loss of Rs. 74.34 lakhs for the year ended March 1961. It is now anticipated that the Tariff Commission would raise the retention price of steel to make it possible for the Company to come up to the Planning Commission's expectations of its profitability.

Double Tax Avoidance

Discussions between India and France for the conclusion of a double taxation avoidance agreement opened on 11th December. The four-member French delegation is headed by M. Serre, a senior official of the French Treasury. The Indian delegation is led by Mr. V. V. Chari, Senior Member of the Central Board of Revenue. Indian exports to France in 1959 were valued at Rs. 8.14 crores, and French imports to India totalled Rs. 19.10 crores. Commodities exported to France include chemicals, manufactured goods in leather, textile yarns, crude minerals, metallic ores and scrap, hides, skins, timber, textile fibres and food articles such as coffee, tea and spices. French imports to India included base metals, machinery and transport equipment, medicinal and pharmaceutical products, chemicals, fertilisers, finer qualities of textile fabrics, dyeing, tanning and colouring material, etcetera. Similar agreements for the avoidance of double taxation have been concluded with Sweden, Denmark, Norway, West Germany and Japan. Agreements at Government level have been concluded with Russia and Finland.

Trade talks between Czechoslovakia and India have commenced. The delegation from Czechoslovakia is led by Mr. Josef Urban, head of the Trade Department. The delegations will finalise

When camels were customary

The year—1903. Remington opened their first office in India to sell typewriters and sometimes had to deliver them by camel.

However, you cannot keep back progress. Sales grew—so did Remington. Today, there are 30 fully staffed Remington Rand branches in strategic positions throughout India.

In 1912, the Company first started the indigenous manufacture of typewriters and record systems at their factory in Calcutta. Still sales increased, and to meet the demand Remington Rand in 1960 opened the

largest factory of this kind in Asia at Howrah.

Now 85% of the components of Remington typewriters are manufactured in India—with Indian raw materials—by Indian Staff.

Remington Rand, pioneers of the typewriter in India, have plans afoot to expand even further. Negotiations are under way to once more double production—a move which will offer employment to many hundreds more skilled and unskilled personnel—and enable the Company to meet the ever increasing demands of this growing Nation.

Remington Rand of India Limited

3 COUNCIL HOUSE STREET, CALCUTTA-1

the trade arrangements for 1962. Under the current Indo-Czech trade and payments agreement, which was signed in Prague in November 1960, trade between the two countries is to be conducted on a balanced basis and payments regulated through non-convertible Indian rupees. Trade between India and Czechoslovakia in 1960 amounted to Rs. 13.12 crores both ways. It is expected that during 1961, trade between the two countries will be of the order of approximately Rs. 20 crores.

Port Experts Visit Haldia

Mr. G. A. Wilson, Chief Engineer and Mr. G. T. Johnson, Superintendent, Royal Docks, Port of London Authority, who visited Calcutta at the request of the Calcutta Port Commissioners to advise them on the preparation of a master plan for the proposed new dock system in Haldia have returned to London. While in Calcutta, Messrs Wilson and Johnson had meetings with the Commissioners, representatives of the chambers of commerce, the Calcutta Shipping Sub-Committee, representatives of the oil trade and officers of the port. They inspected the Hooghly river models at the Central Water Power Research Station there and had discussions with the director of the Research Station. Throughout their stay in Calcutta, and also during their visit to Poona, they were accompanied by officers of the port and representatives of the consultants of the port, Messrs Rendel, Palmer and Tritton, London. Before their departure for the U.K., Messrs Wilson and Johnson gave a joint note to the chairman of the Port in which they expressed their firm opinion that it was essential to undertake construction of new docks lower down the Hooghly, together with adequate road-rail communications, as soon as possible, and that, in their view, there could be no objection to going ahead with the construction of the Haldia docks. They agreed in discussion with the chairman and other officers of the port and the director of the Poona Research Station that with the new Hydraulic Research Department which is being set up by the Port Commissioners, it would be possible to maintain the Haldia channel and counteract the tendency for deterioration of the channel, if any. They particularly emphasised that the Haldia docks should form part of Calcutta port.

Tanning and Leather Industry

Problems relating to the indigenous tanning and leather goods industry and further measures of assistance were considered here last week at a meeting of the Informal Consultative Committee of Parliament. The members were told that the

requirements of hides during the third five year plan would be of the order of 22.64 million pieces. As against this, the internal availability of hides by 1965-66, would be only about 20 million pieces or even less. The additional quantity of hides required would have to be met by taking steps to collect, preserve and process the hides indigenously available, by the import of raw hides and restricting the export of semi-processed hides. As for footwear manufacture, the members were told that the second plan production and export targets visualised at 102 million pairs and 2 million pairs, respectively, have been achieved. For the third plan period, the Development Council for Leather, Leather Goods and Picker Industry, has recommended a target of 153 million pairs. The Planning Commission had felt that a target of 125 to 128 million pairs would be more realistic. The matter is being discussed with the Commission for fixing a suitable target.

The Khadi and Village Industries Commission, it was stated, would intensify its programme of assistance for the village leather industry. It has been decided to set up 200 centres of the type of Kora Gramudiy Kendra near Bombay in various parts of the country for proper and intensive exploitation of animal corpses. The Commission has set up a ten-member advisory committee to formulate a suitable programme for the development of tanning, and the leather industry. For the third plan period, the Commission has proposed an outlay of Rs. 5.38 crores for the development of the village leather industry. In the discussion which followed, members urged the need for the modernisation of the leather industry and the more effective utilisation of the raw materials available in the country. A member stressed the need for ensuring price stabilisation for the tanning industry. He also suggested that more footwear centres in the south should be organised.

Bonus Commission Appointed

The Central Government has decided to set up a seven-man commission to study the question of bonus to workers in industrial employments and to make suitable recommendations. Mr. M. R. Meher will be the chairman of the commission which will have two independent members and two members each representing workers and employers. The independent members are Mr. M. Govinda Reddy, M.P. and Dr. B. N. Ganguli, director, Delhi School of Economics. Other members are Mr. S. R. Vasavada and Mr. S. A. Dange, M.P. (workers' representatives), and Mr. N. Dandekar and Mr. D. Sandilya (employers' representatives). The headquarters of the commission will be located in Bombay. The terms of reference will

be as follows: (1) To define the concept of bonus and to consider, in relation to industrial employments, the question of payment of bonus based on profits and recommend principles for the computation of such bonus and methods of payment. The term "industrial employments" will include employments in the private sector and in establishments in the public sector not departmentally run and which compete with establishments in the private sector.

(2) To determine the extent to which the quantum of bonus should be influenced by the prevailing level of remuneration.

(3) To determine what the prior charges should be in different circumstances and how they should be calculated.

(b) To determine conditions under which bonus payments should be made unitwise, industrywise and industry-cum-regionwise.

(4) To consider whether the bonus due to workers, beyond a specified amount, should be paid in the form of national savings certificates or in any other form.

(5) To consider whether there should be lower limits irrespective of the losses in particular establishments, and upper limits for distribution in one year and, if so, the manner of carrying forward profits and losses over a prescribed period.

(6) To suggest an appropriate machinery and method for the settlement of bonus disputes.

(7) To make such other recommendations on matters concerning bonus that might be placed before the Commission on an agreed basis by the employers' (including the public sector) and the workers' representatives.

Indirect Taxes

According to a study by the Research Unit of the Ministry of Finance in 1953-54, indirect taxes formed 3.6 percent of the consumer expenditure of all households in the country. By 1958-59, the proportion went up to 5.7 percent. The rise was mainly under Central excise duties and sales taxes and resulted from: (a) the extension of Central excise duties to 15 new commodities and the increase in the rates on several commodities bearing Central excise duties in 1953-54; (b) development of sales taxes in the areas covered by Part B and C States in 1953-54; shortening of the list of goods exempted from sales taxes and the increase in rates in almost all States, particularly on luxury and semi-luxury goods subject to sales taxes; and the levy of a Central sales tax on goods in the course of inter-State trade or commerce in place of sales or purchase taxes levied by a few States in 1953-54 on goods imported from other States; and (c) decline in the value of home-produce consumed by the household (namely, non-monetised consumption which escapes all indirect taxes) from 37 percent of consumer expenditure in 1953-54 to 32 percent in 1958-59.

Wage Awards for Plantation Workers

The recommendations of the Central Wage Board for the tea plantation industry concerning interim relief for the south Indian estates are as follows: (1) For labour employed in tea gardens in the States of Madras and Kerala, the following will be the interim increase in the rates of daily wages:

Grade I (adult male workers)	15nP
Grade II (adult women workers)	11nP
Grade III (adolescents)	0.09nP
Grade IV (children)	0.08nP

(2) For clerical employees (field, factory, medical, educational staff, etcetera) employed in tea gardens of the States of Madras, Mysore and Kerala, an increase of Rs. 10 a month a staff member will be given.

(3) For labour in the tea gardens in Mysore State, the Board has not made any recommendation, in view of the agreement in 1960.

(4) The categories, which do not come either under labour or under clerical employees, will be treated for the purpose of interim relief in the same manner as they are treated for the purpose of annual bonus.

(5) In the case of mixed estates in Madras and Kerala States, the interim increase payable to the workers and clerical employees will be according to the existing conventions and practices concerning wages and salaries. The same will apply to clerical employees in the mixed estates in Mysore State.

(6) The interim increase recommended is to take effect from 1st December, 1961.

(7) The amount of interim relief will be shown as a separate item, until the final recommendations of the Wage Board are made, and thereafter, such final recommendations will prevail.

Another Alloy, Tool Steels Plant

A project report for the setting up of an alloy and special steels plant prepared by the Director-General of Ordnance Factories, has been received and is being considered by the Government. The proposal is to set up a plant of the capacity of 50,000 tons of alloy and special steels annually.

Polypropylene Manufacture

The Government has recently received an application from an Indian firm for setting up a unit for the manufacture of polypropylene in collaboration with Messrs Montecatini of Milan. The scheme is being examined. Recently the managing director of Montecatini was in India and he discussed general matters relating to the proposed

industries for which the Italian firm has the technical know-how, in collaboration with Indian parties.

Import of Motor-vehicle Parts

The Government of India has decided to issue supplementary licences on an *ad hoc* basis to established importers for the import of motor-vehicle parts from the U.S.A. under the forthcoming D.L.F. loan, according to an Import Trade Control public notice issued last week. The licences will be issued to established importers on a quota of 5 percent, or half of their best year's imports, subject to a minimum value of Rs. 1,000 in any individual case.

Loans to Jute Industry

Loans totalling Rs. 4.997 crores have been sanctioned for modernisation of the jute industry up to 1st October, 1961. Against the sanctioned amount, the mills, however, have actually drawn Rs. 4.63 crores. The loans are advanced to the mill companies only as and when they have to make payments to their machinery suppliers. It is, therefore, presumed that the loans have been used by the borrowing mills to this extent. During the same period, loans totalling Rs. 11.26 crores have been sanctioned to 36 mills. Out of the sanctioned amount, 18 mills have been paid loans totalling Rs. 3.24 crores. In the case of the remaining companies, loans will be disbursed after legal formalities are completed.

Expansion of Rayon Capacity

Capacity for the production of 9 million lbs of rayon tyre cord yarn has been licensed and is being installed. This includes expansion of capacity—of National Rayon of Bombay from 4 million to 15 million lbs a year and of Century Rayon from 5 million to 10 million lbs a year. In addition, the Delhi Cloth and General Mills, Delhi, has been licensed to set up a factory in Kotah, Rajasthan, for 8 million lbs.

Technical Help for Praga Tools

The Praga Tools Corporation has entered into technical collaboration agreements with three U.K. firms for undertaking the manufacture of drill chucks, lathe chucks, and tool and cutter grinders. In addition, the Corporation is making arrangements to enter into technical collaboration with a U.K. firm for undertaking the manufacture of milling machines. As a result of the collaboration and diversification programmes, the value of turnover is expected to improve substantially in the near future.

Hindustan Cables Expansion

The Government has approved the expansion of the Hindustan Cables Factory for the manufacture of dry-core cables up to 2,000 miles a year, plastic-insulated switchboard cables and wires worth (Rs. 48 lakhs a year), and for the installation of a wire drawing plant (capacity 1,500 tons a year). The capital cost of this expansion is estimated at Rs. 1.8 crores (excluding township) and the necessary foreign exchange, it is proposed, will be met out of the U.K. credit. Steps are being taken for the extension of the factory, ordering of plant, etcetera, for the implementation of this expansion scheme. Plans are also being considered to take up the manufacture of paper-insulated power cables, small-sized coaxial cables, and increasing the capacity of large-sized coaxial cables up to 750 miles a year on a double-shift basis. It has also been decided that preliminary studies should be undertaken by Hindustan Cables Ltd for the setting up of another unit in the country.

Aluminium Cables and Conductors (Uttar Pradesh) Private Ltd, Calcutta, has been granted a licence under the Industries (Development and Regulation) Act, 1951, for the manufacture of paper-insulated power cables using aluminium conductors.

Machine Tool Design Research

An institute for carrying out research on the designing of machine tools and for imparting training to technicians for operating the machine tools is being set up with Czech assistance. The final project report has also been received, and action to implement the scheme is being taken. The Institute will be set up as an autonomous body under the Societies Registration Act, 1860, and will be located in Bangalore, as recommended by the expert committee appointed to scrutinise the initial Czech offer. The Institute will provide facilities for: (i) designing and developing machine tools, standardising machine tool elements and machine tool equipment and manufacturing prototypes; (ii) training of designers and designing personnel; and (iii) doing research in the methods of calculations in the design of machine tools, behaviour of machine tools, etcetera, and in metal cutting, production processes, etcetera. It will also collect and collate information and do documentation on the subject of machine tool design and technology.

The total cost of the project is estimated at Rs. 93 lakhs, of which Rs. 60 lakhs will be given as gift by Czechoslovakia in the form of capital equipment required for the Institute and in meeting the expenditure on experts. The Government of India's contribution will be Rs. 4 lakhs of foreign exchange for procuring specialised equipment from countries other than Czechoslovakia, and Rs. 29 lakhs towards the cost of land, building, services, office equipment, hostel facilities, etcetera. The recurring expenditure in the first year is anticipated to be Rs. 10 lakhs, rising to Rs. 25 lakhs during the fourth year. During the initial stages, the recurring expenditure will be met by the Government by way of a grant-in-aid to the Institute. When the Institute starts functioning, it is expected

that a substantial part of the expenditure will be met from its earnings.

National Scholarship Scheme

Under the National Scholarships Scheme, instituted to aid meritorious students, 2,400 scholarships will be awarded annually during the third plan period. The number of scholarships to be awarded each year on the results of the matriculation, high school or equivalent school-leaving examination will be 1,800, while those to be awarded on the results of the pre-university courses and intermediate examinations and graduate (first degree) examinations will be 400 and 200, respectively. These will be distributed among the States on the basis of the enrolment figures of students at the relevant stages on education in different States. The rates of the scholarships will be as follows: (1) I.Sc. or I.A., pre-university course and first year of the three-year degree course Rs. 50 a month; (2) B.Sc. or B.A. and the second and third years of three-year degree course Rs. 75 a month; (3) M.Sc. or M.A. Rs. 100 a month; (4) professional courses (first degree) Rs. 100 a month; (5) Ph.D. Rs. 200 a month. Scholarships at full rates will be given to the scholars whose parents' income is less than Rs. 500 and at half rates to those whose parents' income is between Rs. 500 and 1,000 a month. Wards of parents whose income is above Rs. 1,000 a year will not get any cash, but will enjoy the right of admission to the appropriate educational institutions for further study like the other scholars. Students staying in hostels will get an additional Rs. 10 a month. The scheme will be administered by the States according to the Central Government's policy. For this purpose, grants will be made to the States on the basis of the quota of scholarships allotted to them. A national advisory committee will also be set up to review the working of the scheme. It is estimated that the total expenditure under the scheme during the third plan period would be Rs. 389.64 lakhs, and during the current year, Rs. 16.29 lakhs.

Manpower Research

Manpower research provides an objective basis for the formulation of Government policies and programmes for promoting economic growth. Some amount of research into manpower problems has been and is being done by departmental agencies, but the scope is limited. It is, however, necessary to view these problems in an integrated way, covering not only the requirements of various Government departments, but also those of Government corporations and companies, other corporate bodies and the private sector. Considering the wide range and complexity of manpower problems and the need for research on a continuing basis

into important aspects of this problem, it has been decided to set up an "Institute of Applied Manpower Research", functioning outside the Government, but in close association with Government agencies. The broad objectives and scope of the Institute which will be a corporate body registered under the Societies Registration Act, 1860, will be as follows: (1) To advance knowledge about the nature, characteristics and use of human resources in India; (2) To provide a broad perspective of requirements of trained manpower for economic development in different fields with due regard to the probable impact of technological changes on the pattern of employment; (3) To develop improved methods and techniques for dealing with (a) training and development of the existing workforce; (b) educational preparation for employment; (c) vocational guidance; (d) identifying and developing highly talented persons; (e) forecasting demand and supply of manpower and connected matters; (4) To provide manpower research services to Government departments, public corporations and private establishments; (5) To stimulate interest in manpower problems generally and to co-operate with and assist manpower research by other agencies and institutions or professional associations engaged in manpower research and arrange for the inter-change of materials and data; and (7) To provide advanced training in professional techniques for manpower planning and administration. Estimated expenditure during 1961-62 is Rs. 50,000; recurring expenditure during subsequent years Rs. 5,00,000; and non-recurring charges Rs. 3,50,000. The Ford Foundation has indicated its willingness to meet the cost of equipment, 50 percent of the recurring expenditure for a period of five years initially, and to arrange, at its own expense, for experts and consultants whose services may be needed by the Institute in the early stages. The balance of the expenditure of the Institute will be met by grants-in-aid from the Central Government.

Mechanisation of Mines

A four-day symposium on the mechanisation of mines in India organised jointly by the Central Mining Research Station, the Indian Branch of the Association of Mining, Electrical and Mechanical Engineers and the *Journal of Mines, Metals and Fuels* was inaugurated on 9th December, 1961, in Dhanbad. The symposium is being attended by about 500 mining engineers from India and abroad including the U.S.A., Russia, the U.K., Canada, France, West Germany, Poland and New Zealand. About 70 papers covering various aspects of the mechanisation of mines will be discussed at the symposium. Four lectures on mines' mechanisation with special reference to India will be delivered by specialists.

London

U.K. EXPORTS TO EUROPE RISING STEADILY

FURTHER INCREASE EXPECTED, SAYS MR. MACMILLAN

(FROM OUR LONDON CORRESPONDENT)

THE Prime Minister and the Chancellor of the Exchequer have both had something to say on exports, in addressing meetings connected with the Export Council for Europe's convention in Eastbourne, which was attended by 600 delegates representing a wide diversity of business interests and a variety of industries. Fact, not prophecy, was how Mr. Macmillan described the recent success of British exports to Europe. In the first ten months of the current year, he said, there was a net improvement of £120 million in the balance of trade with Europe. In the first quarter of 1961, exports to western Europe were 9 percent up on the same period of last year; in the second quarter, they were 16 percent up; and in the third quarter 20 percent up. Imports rose by 2 percent.

This was a wonderful contribution to the problem of Britain's balance of payments, he added, and linked it with the work of the Export Council. Without being complacent, he thought Britain should sometimes be a little cheerful, particularly as she seems likely to do better still in the months ahead. Mr. Macmillan said that he would mention the European Common Market, not because he wanted to, but because he was expected to. He was sure that it was right to apply for membership—right politically for Europe, the Commonwealth, and the free world. It was also right economically, but not at any price. Whether Britain was in or out, however, the problems were much the same.

Hopes of the Chancellor

If Britain entered the European Economic Community, then provided Britain was competitive, the way would be open for a massive increase in exports, was Mr. Selwyn Lloyd's view. He said: "Last year the rest of the world sold 43 percent of its exports in western Europe. For us, the figure was 28 percent." The ground must be made up without slackening export efforts elsewhere. Britain could make the industrially advanced products needed in Europe. But "to succeed we must recognise we shall have to move towards a new type of economy, more competitive than we have

been." Mr. Lloyd added: "This is going to affect investment plans of all kinds and provision for training of skilled labour."

Restraint at home was emphasised by the Chancellor. Not letting incomes exceed output was a condition that must be satisfied, an "objective to which the Government and everyone else must make their full contribution." The home demand must be stopped from growing so strongly that selling at home seems an easy way out. The Government is determined to do all it can to see that the level of costs and demand is right for exports. But this must be backed by a sense of common purpose in the country. "The need for a common effort, a common purpose and a common determination is as strong now as ever it was in wartime."

Gold Reserves Rise

The sterling area's gold and currency reserves gained another £59 million in November, of which £50 million were used last Wednesday for an advance repayment of debt to the International Monetary Fund. The remaining gain announced by the U.K. Treasury was £9 million, bringing the total on 30th November to £1,270 million. The inflow of £59 million in November follows one of more than £100 million in October. It shows that foreign confidence in sterling has steadily recovered since the U.K. Chancellor's "Little Budget" of 25th July. Officials say that it still remains essential to apply the July measures firmly.

Last week's passing weakness of sterling did not go deep and left no mark. It was caused first by the impression that the pay pause had collapsed, then by reports that the U.K. Chancellor had warned the T.U.C. delegates of dangers threatening the pound, and finally by a sudden rumour late on Friday that the Italian lira might be revalued upwards. There was some speculative selling of sterling to buy dollars in order to convert them into lira. But the British control did not have to put out much money to keep the rate steady. In fact, it let it drop, as it had done earlier in the past week, in order to make it expensive for the

speculators to buy their sterling back when they found the rumours baseless. The Italian authorities promptly denied any intention of changing the value of the lira. They said that it is "neither necessary nor opportune." In Rome, a Treasury spokesman said that there is no technical reason for any revaluation. The rumours soon subsided and markets calmed. One side effect of last week's currency flurry was a revival of demand for gold. The London bullion market has had several active days but official supplies easily satisfied the demand, and the gold price was prevented from rising unduly.

Sterling Held Overseas

Between the end of June and the end of September, the overseas holdings of sterling rose by £330 million to £4,487 million. Within this three-month period, sterling came first under severe pressure culminating in the July corrective measures and subsequently benefited from the reverse flow of funds and the closing of "bear" positions. Figures now released by the U.K. Treasury show that the £330-million increase in the overall total was "much more than accounted for by a rise of £538 million in the sterling holdings of non-territorial organisations."

These holdings were up from £552 million to £1,090 million—a clear reflection of the £535-million borrowing from the International Monetary Fund. Of this amount, £150 million has already been repaid. Sterling holdings of the North American countries fell during the three months ended 30th September by £23 million to £91 million and those of western Europe by £132 million to £530 million. Taking the non-sterling countries as a whole, the total fell from £1,101 million to £893 million. The end-June total, however, included £197 million under the Basle agreement, a large part of which was repaid before the end of September.

October Retail Trade

Details of retail trade for October confirm the indications in the preliminary estimates that, although still brisk, public spending has been leveling off. After allowing for seasonal factors, the value of retail sales continued to decline in October in spite of a slight increase in volume. The seasonally adjusted index of the value of sales was 115 in October (1957 equals 100), or about half a point lower than in September and rather less than two points below the average for the third quarter. The volume index, after dropping by a full point in September to 110, rose a little in October to about the average level of the third quarter; but not to the record figure of July. Clothing and footwear shops did reasonably well, but the improvement in these sections was more than offset by a fresh fall in the sales of durable goods shops. On a seasonally adjusted basis, the index of sales in this category declined by five points in October to 102 after the eight-point decline in September and a drop of 15 points in August.

Hire-purchase Sales

The October hire-purchase figures show a seasonal increase in credit sales. But the rate of expansion may have fallen rather short of what is normal at the time of year. This is apparent from the U.K. Board of Trade's latest statement, which shows that although new hire-purchase credit provided in October was on a larger scale than in September, the rise in lending by household goods shops revealed rather less than the usual seasonal expansion, while sums advanced by finance houses increased no more than seasonally. After allowance for repayments, the total of the outstanding hire-purchase debt fell by £11 million in October to £942 million.

Hire-purchase business done by household goods shops during the month was broadly in line with the general trend of their trade, in that a gain of 4 percent in furniture sales, compared with October 1960, was offset by a slight decline in other business, leaving no net change over the year. The outstanding debt was also unchanged since September at £303 million. Credit extended direct by finance houses showed a rise of 6 percent over the September figure.

Sales of New Motor-cars

More new motor-cars were bought on hire-purchase last month than in October or in November last year. The total number of contracts in November was 9,469—an increase of 226 on the previous month and of 419 on November 1960—according to figures published by Hire-purchase Information. For used cars, however, the number of contracts fell from 47,420 in October to 44,669 last month, both totals being well below the 52,526 of November last year. Some 300 more new commercial vehicles were bought on hire-purchase than in November 1960, the total last month being 5,988, against 6,718 in October, but hire-purchase sales of used commercial vehicles were down to 8,410, compared with 8,730 in the previous month and 11,122 last year. The total of all hire-purchase agreements for motor-vehicles, including motor-cycles, scooters, and caravans, during the month was 88,020, against 96,119 in October and 104,108 in November last year.

Brevities

Mr. J. Hackney has joined the board of Hong-kong and Shanghai Banking Corporation in place of Mr. C. A. Wright, who has resigned. Mr. J. A. H. Saunders is appointed deputy chief manager.

Sales from the U.K. Board of Trade's stockpile of rubber in November totalled 745 tons for delivery as follows: November 190 tons; December 70 tons, and January 485 tons. There was 25,510 tons of rubber still available to 1961 and 14,104 tons

Jute

MINIMUM QUOTA SCHEME HELPS MAINTAIN RAW JUTE PRICES

RESEALING OF LOOMS POSTPONED UNTIL END OF JANUARY

ALL reports indicate that the member-mills of the Indian Jute Mills Association are doing their best to answer the appeal to support the raw jute market and prevent any further decline in fibre prices. During the past week, over 700,000 maunds of jute have been purchased by the industry under the minimum quota scheme, both under contract in Calcutta and in the agencies—mostly in the agencies. Values have accordingly hardened, and initially the scheme has been a success. But how long can the mills keep this up? They cannot go on buying indefinitely. It is doubtful if any circumstances will arise, with the exception of a greatly improved demand for jute goods, which will cause an advance in raw jute prices—an advance backed by some stability, and, even then, the steadiness might be difficult to maintain as long as there is an excess of fibre to meet the requirements of the trade.

At present, there are two distinct opinions in Calcutta about the future. Some say that prices will rise since the current crop will not turn out to be as large as is sometimes claimed. In their opinion, raw jute during the second quarter of 1962 may go up to Rs. 40 or Rs. 45 a maund. Consequently, they have been concentrating on buying as much fibre as they can lay their hands on for shipment during the first quarter of next year at the current rates. Others, and they are in the majority so far, do not visualise any great change, and are, if anything, inclined to be bearish. They are content to purchase only as much as their quota indicates and even that, in many cases, reluctantly. It is understood that further quotas have been issued to the mills on the same basis as last week. Successful as this scheme may be, it is the demand for goods which matters and artificial means of raising prices will rarely succeed.

Fair Return

Calcutta manufacturers have little to complain about on the production side—unless it is the poor quality of the current crop. Business up to the middle of next year is showing a fair manufacturing return. The stock figures of jute goods held by mills are invariably a barometer of the market and the returns for November have been no exception. Although there has been a small rise in stocks of hessians and other goods, it has been enough to make the market firm as sacking stocks have shown a small drop. A general improvement has followed and mills have come out as keen sellers right up to June 1962. Current stocks, both of sacking and of hessians, are much smaller than they normally are at this time of year. This has been the main cause of rumours about an impending increase in production. The market at one time thought that the I.J.M.A. intends to unseal more looms in the near future. This made fibre sellers bullish and many put their prices up. There was strong resistance to the mills' search for raw jute at the minimum price, and for the small quantities that were reported during the latter part of the week, buyers had to pay at least 50nP more than the minimum.

Scattered Demand

Overseas buyers, in spite of the scattered demand from various countries, are not taking the interest in jute goods that one normally expects them to at this time of year. It would be unfair to forecast future developments in the light of the past year of short crop and high prices. All the same, it would be wrong to ignore the increasing competition with which jute nowadays has to contend. The handling of grain crops in bulk instead of in bags, the use of containers made of paper and other substitutes instead of jute, and the efforts of various countries to use internal resources wherever possible, all tend to restrict the consumption of jute goods. In India, the Continent and Dundee, the jute industry is working below capacity and production can be increased without delay to an extent far beyond any trade requirement in sight. But if a further increase in production is contemplated, where will one find the outlet for the increase? While there is much anxiety in India about foreign competition, other producing countries are not having it all their own way. Recently, the Calcutta mills have been able to make profits, however small, but spinners and manufacturers overseas have had a very trying time and losses have been more frequent than profits. Many large orders are being accepted at prices which yield no profit.

I.J.M.A. Gunny Stock Figures

Stocks of jute goods held by member-mills reporting to the I.J.M.A. at the end of November 1961 amounted to 57,400 tons. Hessian stocks showed an increase of 700 tons to 17,700 tons (30.8 percent). Stocks of sacking dropped by 200 tons to 29,900 tons (52.1 percent) and those of other goods rose by 1,400 tons to 9,800 tons (17.1 percent). The overall increase over the previous month was, therefore, 1,900 tons. Compared with November 1960, stocks were down by 28,100 tons.

Member-mills of the I.J.M.A. reported a total production of 93,700 tons during November 1961.

there was a small increase in the heavier sacking fabrics produced. But when the figures are set against those of a year ago, which had the same number of working hours, an interesting comparison comes to light. In November 1960, the proportion of sacking produced was 55 percent—4.6 percent more than last month—and yet the production rate was only 412 tons an hour, or 38.5 tons an hour less than in November 1961. Could this be an indication that workers are at last recognising the benefits that accrue from greater labour efficiency?

At a meeting on Tuesday, the committee of the I.J.M.A. decided that there is to be no change in the present productive capacity of the industry. The working of the additional 2½ percent of the looms since 13th November, which was to be only temporary, has been extended for a further period of one month, i.e., up to the end of January 1962. The position will be reviewed again early in the New Year when the stock position of the industry at the end of December 1961 has been determined. At present, the industry is working 48 hours a week with 9½ percent of the total loomage sealed.

THE JUTE MARKETS

Manufactured Goods: At the opening of the market last Thursday, sacking was quiet, but hessians displayed a much firmer tendency due to

I.J.M.A. STOCK FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports total stocks of jute goods at the end of November as follows:

Description	30th November, 1961		31st October, 1961		Increase over (+) or decrease from (-) last month		30th November, 1960	
	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons
Hessian cloth and bag	5,76.37 (6.30)	17.7 (17.4)	5,63.34 (6.16)	17.0 (16.5)	+13.03 (+14)	+0.7 (+6.6)	10,01.38 (10.96)	30.6 (30.1)

WE IN BIRDS MEET THE DEMAND

Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products, paper, electricity, steel structural and castings. And the Birds/Heilgers group is always there to spur their production... to meet these demands. But expansion doesn't stifle achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

BIRD & CO. (PRIVATE) LTD.
AND
F. W. HEILGERS & CO. (PRIVATE) LTD.

reports of business with Britain and the U.S.A. So 40in. 10oz. prices rose by about Rs. 1.50 and were quoted at Rs. 52.25, a premium of Rs. 3.25 over forward shipment. Sacking remained unchanged, and B Twills stood at Rs. 130, which was Rs. 8 above the April-June position. At this stage, the publication of the mill stock figures for the end of November was eagerly awaited. Meanwhile, the market ruled firm, with very little business reported. The stock figures, when they came, had an immediate effect since they showed a rise of only 1,900 tons. Heavy goods reacted with a jump of Rs. 3 in B Twills due to the decline in sacking stocks, even though the decline was only 200 tons. Mills became sellers at the enhanced rates, and a fair amount of business was reported. It was obvious that most of it was absorbed in the bazaar, as overseas interest at this stage was negligible.

Towards the close, prices began to show a tendency to decline as rumour had it that the I.J.M.A. might open more looms. The rumour proved to be unfounded, but the political situation caused considerable anxiety and prices continued to fall. The fibre market also eased, and signs of panic-selling by weak holders caused a considerable drop in rates.

Opening quotations on Wednesday morning were as follows:

	December	January	Jan.-March	Apr.-June
40in. 10oz.	39.50	37.25	36.00	34.85
40in. 8oz.	42.75	40.00	38.50	37.35
40in. 10oz.	52.50	49.50	47.75	46.50
B Twills	128.75	125.00	123.25	120.75
Heavy Cees (Plain)	120.75	125.00	123.25	120.75
A Twills	150.50	153.50	151.00	148.50
Liverpools	148.00	144.00	141.00	137.50
Cornsecks	134.50	128.50	126.25	122.75

Raw Jute: In accordance with the minimum quota scheme, most mills took up their full quantity during the past week. The fact that a very large percentage of the quota was bought in the agencies meant that agency prices remained firm throughout. In Calcutta, sellers' ideas were also steady in the initial stages, and business conducted against contract was about 50nP above the minimum rate. As the week progressed, prices eased, and after the week-end, Assam Bottoms had fallen back to the minimum price of Rs. 30. Stockists came on the market at this stage and fairly large quantities were put on offer. Business was reported daily as mills took up the fresh quota for the week ended 16th December, most of which was done at the minimum price. Towards the close, there was some interest in Pakistani cuttings following a further issue of licences for delivery up to the end of March 1962. Only small business was reported, however, but the Pakistani cuttings market tended to firm up. The quality of recent arrivals showed no sign of improvement and heavy claims against many parcels, particularly in the higher grades, were reported.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills	Rs. a 100 kilos	Rs. a md.	Shipment
Assam	80.38	30.00		Dec-Jan.
Northern	79.04	29.50		"

THE FOREIGN JUTE MARKETS

FIBRE UNCHANGED, BUT EASIER TREND EXPECTED

(FROM OUR DUNDEE CORRESPONDENT)

ALL members of the jute industry in Dundee are amazed at the manner in which raw jute prices are being maintained in Pakistan. Dundee spinners are paying little attention to the daily offers, so only small business is passing. Shippers are pleased to receive even small orders. The prevailing feeling throughout the industry is that prices will shortly show signs of weakness. It is reported that fibre imports from the upcountry markets are steadily increasing, and it seems to be just a case of waiting to see how long sellers can hold off.

Labour troubles in Dundee are causing concern to employers. The last wage award is still the point at issue, and the Association of Jute Spinners and Manufacturers has stated that it cannot over-rule the decision of the Wages Council to increase the wages of men by 5 percent and women by 4 percent. At a meeting of the workers last week, it was decided to ban overtime and adopt go-slow tactics. But only by working overtime can the spinners and manufacturers complete the orders on their books according to the delivery time promised. Another meeting of the workers was held on Sunday last to discuss the matter further. Unfortunately, it is only a small per-

centage of workers who are dissatisfied with their conditions, but these few are persuading their fellow workers to disrupt the amicable relations which have existed between them and their employers for many years.

Raw jute is occasionally showing slight signs of weakness. Prices sometimes have been 10s to £1 down, but there has been little actual change on the week. Mill Firsts have been sold at £150, but the rate has risen again to £155 lowest, with Mill Lightnings at £130 and Mill Hearts from £104 and Grade Hearts at £84, December-January, c.i.f. U.K.-Continent. Grade Tossa-2/3 is steady at £141 10s. fours £124 10s and Continental Tossa-2/3 from £108 10s, same shipment. Calcutta goods have wavered a little, but with a steady undertone around 79s for 40in. 10oz. and 59s 3d for 74oz. December, 75s 6d and 56s 6d January, 72s 3d and 54s 3d February-March and 70s 9d April-June, with B Twills at 197s 6d, 193s, 189s 3d and 186s 3d for the respective positions of shipment, all f.o.b., Calcutta.

THE PAKISTANI JUTE MARKETS

FIBRE RISES SLOWLY

(FROM OUR EAST PAKISTAN CORRESPONDENT)

SLOWLY but steadily prices have risen over the past week and all markets, especially loose jute, have closed steady. With the arrivals continuing to be small, and balers' financial position somewhat improved after end-month shipments, there has been some buying interest, but no increase in the quantity available. In view of the interest being shown by overseas buyers, it is fair to say that the market would have risen much more were it not for the fact that several balers were still holding the stocks mainly of the lower grades, which were not easy to sell at E.P.C. prices and which have blocked some balers' finance. Not only have the growers successfully withstood the bearish pressure, but what little supply is coming in, is considerably worse in quality. Although some of the better jute, known as raky jute, is beginning to appear, the rest of the jute is very over-mature, full of specks and generally very difficult to assort for export grades. This applies both to white and tossa and the result is that in the lower marks, buyers will find fibre far too good for the mark with blemishes such as specks which will reduce the spinning quality of the fibre.

In the local pucca bale market, there is little to report except for some transactions in cuttings at prices slightly better than last week. There is nevertheless a large potential interest in cuttings locally, at prices slightly below what sellers are now quoting. If this buying interest decides that the market will not go down to the required level, there may well be a sudden sharp rise in cuttings. The mills have also been showing interest in kutcha bales for forward delivery, but they offer prices which sellers consider a bit low. Selective overseas interest continues on a fairly large scale, with a definite premium being paid for named marks, but buying is selective, and it is by no means a sellers' market. In spite of the current steadiness in the origin, it is probable that the Christmas holidays will help buyers to withstand the bullish tendency. E.P.C. prices have not changed, and rumour has it that the authorities do not wish to see lower E.P.C. prices, if they can possibly do so. The representatives of the U.K. Continental Conference have recently been out here in an attempt to improve the working of the pooling and rationalisation scheme. Their efforts, however, are being handicapped by troubles in the marshalling yard in Chittagong, which has been the cause of several late shipments.

I.J.M.A. PRODUCTION FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total production of jute goods for November as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	4,319 metric tons (4,250 tons)
	1,314.5 thousand metres (1,470 lakh yds.)
(b) Sacking	85.9 lakh nos.
	46,248 metric tons (45,518 tons)
	9,76,432 thousand metres (10,684 lakh yds.)
2. Gunny Cloth	
(a) Hessian	32,120 metric tons (31,613 tons)
	11,26,211 thousand metres (12,31,6 lakh yds.)
(b) Sacking	923 metric tons (908 tons)
	17,76 thousand metres (19.4 lakh yds.)
3. Other Manufactures	
	10,083 metric tons (9,924 tons)
4. Total Production (All kinds)	93,693 metric tons (92,213 tons)

	Summary	(000 metres and 10,000 yds.)	(000 metric tons and tons)
	Nov.	Oct.	Nov.
Hessian	12,60.66	10,79.32	10,81.81

RISE IN WORLD DEMAND FOR COCONUT OIL FORECAST

RECORD OUTPUT OF COPRA EXPECTED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

ACCORDING to the F.A.O. Group on Coconut and Coconut Products, there should be a moderate increase in the world demand for coconut oil. This would, however, depend on the price of coconut oil remaining in line with the rates of other competing oils. This view was officially announced soon after the conclusion of the F.A.O. Group's meeting in Trivandrum on 8th December. The meeting, which was inaugurated by Mr. V. Shankar, Special Secretary in the Central Ministry of Food and Agriculture, was attended by delegates from the major coconut producing and consuming countries.

The current year's production of copra, according to the F.A.O., would reach the peak-level of 1956-57. Exports for the year should be within 5 percent to 10 percent of the 1956-57 volume. The consumption of coconut oil in western Europe, which is the major importing region, had not recovered fully. Margarine is the main outlet for coconut oil in western Europe. The production of margarine rose rather rapidly up to 1956 but has shown little change since then. The second most important outlet for coconut oil in this region is soap production which has been adversely affected because of the competition from synthetic detergents. In the United States, the margarine industry provides only a small outlet for coconut oil. Soap which is a much more important outlet has been declining rapidly due to the competition from synthetic detergents. There has, however, been an upward trend in the use of coconut oil in products which require the special properties of coconut oil. Among other products, certain bakery goods like cakes and biscuits have absorbed increasing quantities until recent years while chemical uses other than soap have shown a constant upward trend, so they have become the leading outlet for the commodity, according to the F.A.O. A new factor has been introduced into the world coconut oil market by the rapid increase in fish oil production in recent years.

Tariff Changes in E.C.M.

The F.A.O. Group considered the implications of a plan recently placed before the European Economic Community for a common fats and oils policy for the member-countries. Some delegates expressed their apprehension that the changes in the tariff, etcetera, which the European Common Market countries might introduce would adversely affect the processing industries in producing countries. It was, however, pointed out that at present, these were only proposals and could not be considered as final arrangements. The F.A.O. would continue its studies on the policies of the European Economic Community which are likely to affect the coconut industry. The meeting discussed the effect of the U.S. Government's programme for soyabean and edible oils on the world market for copra and coconut oil. It was stated that exports under P.L. 480 were displacing coconut oil in some markets. It was emphasised that export sales under P.L. 480 were carefully planned to avoid disruption in commercial trade. It was agreed that the F.A.O. should continue to study this issue. The F.A.O. Group felt that the most practicable method was to assist technical research on the problems of the coconut industry, particularly the control of pests and diseases. The next session of the F.A.O. Group on Coconut and Coconut Products will be held at the F.A.O. headquarters in Rome in 1963.

Common Problems

The secretary of the F.A.O. Group on Coconut and Coconut Products, Mr. E. L. Burtis, claimed in his welcome address at the inaugural session on 4th December that the Group had contributed in several ways to the progress of the coconut industry. "It has provided a forum where the Governments of producing, exporting and importing countries can meet and discuss common problems. It has promoted the dissemination of information on the economic factors which affect production, utilisation and marketing and has encouraged the Governments to provide data hitherto lacking. It has been instrumental in international co-operation on production problems. In some directions, such as in achieving better understanding of certain markets for coconut products, there appears to be much more to be done", Mr. Burtis said.

Raising Domestic Production

Mr. V. Shankar in his inaugural speech gave an account of the problems India is facing concerning coconut cultivation. She ranks second among the coconut growing countries of the world and had at the beginning of the present century the largest coconut area in the world. Besides, India was an exporter of copra and coconut oil of very good quality until a few years after the first World War, but by 1927-28, due to the needs of increasing population and industrial expansion, the economy had changed and instead of being the exporter of these commodities, the country became an importer. The import of coconut and coconut products into India even under strictly controlled foreign exchange conditions, has never

fallen below Rs. 10 crores. With the wide gap in the domestic market between demand and supply, the problem of stabilising the price in the country has been a serious one. Unless India can raise her production, she may run the risk of consuming more and more of her hard-earned foreign exchange for satisfying her needs in coconut oil. The main problem for India, therefore, is that of raising production, Mr. Shankar said. So the country attempted in the second five year plan to secure an additional output of 870 million nuts, but for various reasons she had to be content with a production of only 350 million nuts. The third plan aims at an additional production of 775 million nuts. For achieving the target, Rs. 4.5 crores have been provided. Mr. Shankar hoped that India would be able to realise the production target. He also referred to the baffling problem of root (wilt) disease of coconut palms in India and said that its aetiology still remains obscure with the result that apart from certain agricultural practices which can reduce the damage, no effective measures of control and eradication have yet been devised.

Exchange of Information

The technical working group has recommended the setting up of an ad hoc advisory committee of pathologists to promote ample exchange of information on the diseases of unknown causes and strive for developing co-ordinated methods for their study.

Elephant Menace in Kerala

Elephants have become a serious menace to human life and property on the High Ranges of Kerala. There are frequent reports of wild elephants pulling down houses, destroying crops, damaging property and even killing people. Consequently, there is a feeling of insecurity on the High Ranges. Planters report that work on the estates is getting dislocated. In three planting districts of the former Travancore State, elephants have become a serious menace to estate operations. During the past three years, the planting industry has been making repeated representations to the authorities for protective measures. "These representations were first met with total indifference, and with mounting incidence of damage to life and property, with a pathetic resort to the dilatory provisions of the Forest Act which are pronouncedly concerned with the protection of elephants, and not the humans", the United Planters Association of Southern India says in a Press release. According to the Press release, the provisions relating to elephants in the Forest Act of the former Travancore State are "completely obsolete," so they require modifications to approximate to the rules which exist in the Malabar area of Kerala.

ASSAM MEETING TO DISCUSS TEA TARGET AND TAXES

PROPOSAL FOR AUCTIONS IN PANDU

(BY A SPECIAL CORRESPONDENT)

THE tea conference convened by the Assam Government is due to open on 16th December. It will discuss the third plan target as well as taxes on Assam tea. It is also likely to discuss the proposed auction mart in Pandu. The proposal, if accepted, will be a blow to Calcutta interests. But there remain many problems to solve in addition to selling tea. Warehouses and other buildings as well as money will be needed. To expect that the Government of India will provide funds for non-essential projects before the Indian economy becomes self-generating, sounds somewhat optimistic. Besides, one should consider the cost of freight from Pandu to the place of export. Nevertheless, it might be advisable for the West Bengal Government to abolish the entry tax and help keep the trade in Calcutta. It is argued that to export direct by metre-gauge rail to Kandla in Gujarat will save time and reduce cost, but surely the railway freight will remain a heavy expense, so how can costs under this head be less?

Raising Tea Consumption in U.S.A.

The Americans are confident that tea consumption will increase in their areas. They have recommended concentration on advertising to catch the young. The following are the extracts from speeches made at the annual convention of the Tea Association of the U.S.A.:

"Speaking only in terms of teenagers, from 1960 to 1970 it is estimated that their number will increase by 66 percent and their purchasing power by 80 percent. With this kind of growth anticipated, it is only natural that business generally and our trade mark particularly should increase its interest in youth.

"Practically every consumer goods industry, including the tea industry, seems to be taking a longer, harder look at young people as a special, separate market. When we talk about tea and young people, however, let us be sure of our definition. The youth market has been defined as the 13.5 million teenagers between the ages of 15 and 19, but it certainly should include the 22 million people from 20 to 29. These latter are, in many

cases, the college students or young homemakers and may be even more important as pace setters because they are looked upon by the younger ones as being closer to their physical and social prime. Together, this 35.5 million young people represent about half of the total population over 35 in the U.S.A. Considering how much longer each of these converts to tea would be drinking our product, they do, in fact, represent a bigger market for the future than all the people over 35.

"What we need in combination with our use of mass media is messages, themes and appeals that are important, moving, interesting, believable and memorable with people of all ages and both sexes, but particularly to the youth of the country." Can the Indian Tea Association or the Indian Tea Board profit from this line of reasoning?

Encouraging Exports

On 2nd December, 1961, the President of the Associated Chambers of Commerce drew attention

to the error of supposing that in order to encourage exports, it is necessary to discourage internal consumption, since a large internal demand helps lower costs and prices.

As for propaganda, it is interesting to note that the chairman of Debenham's Stores has said that his Company has tentative plans to open stores in France, Italy and possibly Germany if Britain decides to join the European Common Market. The chairman told shareholders at the recent annual general meeting that he had investigated the Italian market and planned to visit Germany in the spring to investigate the possibilities there. These moves will indirectly help tea consumption as no doubt the stores will open restaurants.

Prospects for Cocoa and Coffee

Cocoa is one of the few commodities which are not likely to show a surplus in 1962. The Food and Agriculture Organisation says that world con-

sumption is expected to exceed supply as due to drought and then heavy rains, much damage was done to crops. But the coffee crop is up by about 20 percent, according to the preliminary estimate of the U.S. Foreign Agricultural Service. World stocks are expected to increase by some 14 million bags (each bag equals 132.276 lbs.) Fortunately, India is expected to harvest a somewhat smaller crop. But this country is passing through a difficult period, so an immediate change is recommended in the present marketing method for quality Arabica coffee. Stocks of about 30,000 tons, mostly of inferior grades, could not be disposed of from the record production of 1960-61.

North Indian Tea Output Rises

The north Indian tea crop figures up to the end of November are the following: 1961 588,399,846 lbs; 1960 515,841,699 lbs and 1959-60 535,598,056 lbs. In view of the increase in production, it is interesting to note that tea prices are now steadier than in recent weeks. The producing side of the trade suggests that the bottom has been seen.

COCHIN TEA SALES

At Sale No. 50, 700,000 kilograms of tea were on offer. There was a good general demand. Plain and low mediums were irregularly 10nP to 15nP dearer. Mediums and good mediums were fully firm to dearer. Quality high-grown were irregular and unorthodox grades were barely steady.

At Dust Sale 49, 313,000 kilograms of tea were on offer. There was a better general demand at slightly lower prices. The plainest grades were irregularly 10nP to 20nP lower while others were about steady or occasionally lower. Unorthodox teas were steady.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for November 1961:

Upper Assam: Cold weather has set in and interfering with outturn in Sonari; outturn normal to good; the season has practically closed.

Central Assam: Cold weather conditions have set in; outturn good; crop prospects good; normal closing of the season is expected except in Moran where it will probably be prolonged.

Lower Assam: Weather reasonable: cold weather has set in, and the season is practically closed; outturn about normal.

North Cachar: Cold weather has set in and is checking leaf in Lakhimpur; outturn good; outturn to-date is considerably over last year; the season will close early.

South Cachar: Cold weather has set in and interfering with outturn in Hailakandi; outturn about normal; black rot and helopeltis prevalent in Chutla bheel; the close of the season in Longai will probably be a good one.

Eastern Dooars: Cold weather has set in and is checking leaf in Kalchini where immediate prospects are bad; outturn about normal; the season is practically closed.

Central Dooars: The cold weather has set in and the season is practically closed.

Western Dooars: Cold weather has set in and is checking leaf in Nagrakata; outturn about normal except in Chalsa where it was poor; the season is practically closed.

Darjeeling: Weather reasonable: cold weather has set in and the season is closed; outturn about normal; helopeltis prevalent.

Terai: Cold weather has set in and the season will close early; crop below normal for the month; helopeltis blister present.

NORTH INDIAN TEA GARDEN WORKERS DEMAND INTERIM RELIEF

The attention of the tea producer associations has been drawn to the tendentious statements of certain leaders of the I.N.T.U.C., U.T.U.C., A.I.T.U.C. and other trade union organisations in support of their plea for "interim relief" for tea garden workers in north-east India pending the final decision of the Central Wage Board for the Tea Industry. The facts of the case are the following:

(1) The wage level in the Assam valley, the dooars, Terai and Darjeeling hill districts was last fixed by the State Governments in the latter half of 1959, that in Cachar in May 1961.

(2) Since these dates, the cost of living for plantation workers as shown by Government indices has not appreciably changed.

(3) Real wages have risen considerably since 1950-52, when minimum wages were first fixed by the State Governments on established principles.

(4) Tea prices have fallen by about Re. 1 a kilogram, compared with last year.

(5) The trade union organisations concerned have all agreed at the ninth and tenth sessions of the Industrial Committee on Plantations not to agitate over wage claims until the Wage Board arrives at decisions.

NEW WAYS OF ASSESSING OIL RESERVES

By V. S. Swaminathan

NOT very long ago, the assessment of oil reserves underground was largely a matter of guesswork. Only during the past 30 years or so, has the oil operator come to understand a little more of the way in which oil behaves in a reservoir when a field is in production. A knowledge of the principles of oil drainage and of the behaviour of oil, gas and water within the reservoir, has contributed greatly to the increased recovery which is now obtained. Yet even with modern methods of control, reserve estimates are based on an average recovery of only about 20 percent. The problem of getting virtually all the oil from the reservoir is perhaps the greatest one facing the industry today. It is a goal which can be reached only by continued research on the basic problems of reservoir behaviour and control, and on the application of mathematical principles as well as of new engineering techniques.

The method universally used for estimating oil reserves is the "volumetric" one. As the name implies, it is based on a calculation of the bulk rock volume of the layers containing the oil, and computing the quantity of oil which may be recovered from this rock volume. This method presupposes the knowledge of (1) the extent of the productive area, (2) the thickness of the oil-bearing formations, (3) the available pore space containing the oil, and (4) the efficiency with which the oil can be made to flow from the wells. Hence the programme of drilling new wells is so phased that it helps in delineating the geological structure and the areal extent of the oil pool.

Production Testing

Now production testing of a formation may be carried out during drilling, or after placing the production string in position. The former combines speed with economy, while the latter consumes both time and money. The testing may be undertaken in an open hole by using a formation tester run on a regular electrical logging cable, or on drill pipes (D.S.T.). In both cases, the pay zone is isolated with the help of packers and the hydrostatic pressure of mud is reduced so as to induce the formation under test to flow. The Schlumberger formation tester belongs to the first category, and the Halliburton-Johnston tester to the second. The formation tester is used only for exploration wells, since it helps in saving rig time and money spent in casing a dry hole. The exploration (or development) wells have to be thoroughly tested by lowering a pressure gauge in a completed well. The well is then allowed to flow for a week and subsequently shut down for a comparable period. The first phase completes the draw-down test, and the second is termed build-up test.

The purpose of production testing is three-fold: (1) to indicate the nature of the formation fluids; (2) to give the rate of production of the well, and (3) to record the pressure behaviour during the testing period. At this stage, the law of Darcy is pressed into service. It states that the larger the cross-sectional area of the porous medium and the greater the pressure gradient across it, the greater is the flow of fluid through a porous medium of a given permeability. It further states that the flow will decrease with the increase in the viscosity of the fluid. The mean permeability is found by production testing. The latter can, at best, throw light on the capacity of a well to yield production for a long enough period. The modern oilfield practice is to undertake production testing on a number of carefully selected observation wells from time to time. It is only through data obtained from a series of such production tests, coupled with output records of a number of years, that a reservoir engineer can give a reasonably exact figure for the total reserves of an oilfield.

Calculating Rock Volume

The total rock volume containing oil is calculated from the production area and the thickness of the pay zones. For fields in an advanced stage of development, the information gleaned from the wells will generally enable a fairly accurate determination to be made of the limits of the productive area. In new fields, however, some approximations have to be made, and for these the results of geological investigations may be very helpful. Again, oil producing horizons occur in widely varying thicknesses ranging from a few feet to several hundreds of feet. Also, in many fields the thickness of the pay zones varies markedly. In such cases, an average thickness has to be determined for the calculation of the bulk oil-bearing rock volume.

In a typical trap, the oil occurs in the "pores" of sandstones, i.e., in the tiny spaces between the individual sand grains. Information on the pore space is obtained from laboratory analysis of "cores" (rock samples) taken in the walls when drilling through the oil zones. The pore space (or porosity) is expressed as a percentage of the rock volume, and may vary from some 15 percent or less to as high as 35 percent. However not all the pore space is filled with oil. Very often water sheaths the sand grains, and oil with dissolved gas fills the remaining spaces. The amount of oil in the reservoir rock, therefore, depends on the amount of space available and the degree of water

saturation. This so-called interstitial water occurs in quantities ranging from as low as a few percent of the pore space to 50 percent or more. The higher the porosity and the lower the percentage of interstitial water, the greater is the fraction of the sand volume filled with oil. Knowing the porosity and permeability of the reservoir rock is important for estimating oil reserves and for predicting ultimate recovery. Porosity is expressed as the percentage of pore space existing in the rock. Permeability, the capacity of the rock to transmit oil, is not necessarily proportional to porosity. It depends largely on the pores being continuous. Some highly porous rocks like pumice can be impermeable because the pores are isolated.

Production Characteristics

The amount of oil which, in fact, may be recovered from the oil-filled pores is closely related to the production characteristics of the pay zones. The basic problem involved in the efficiency of extraction is one of getting the oil to flow through the porous rocks into the bottom of the well. Three primary sources of energy for this purpose are recognised, and oil reservoirs are generally classified in accordance with the type of "drive" they have. For a proper understanding of the different types of drive, it is necessary to go back to the moment when the withdrawal of oil starts. Until then the fluids in the rock pore are undisturbed. As soon as production starts, oil moves out and the pressure in the formation begins to decline.

Now if the area in which the pores of a layer are filled with oil is bounded by an area in which the pore space is water-filled, this pressure drop may permit water to enter into the oil-bearing portion of the layer. When moving through the initially oil-filled pores, this water drives out the oil. A fairly high rate of recovery may be obtained from this "water drive," which may flush as much as 60 percent to 70 percent of the oil originally in place in the pores to the well. Another type of drive occurs in oil formations in which the crude petroleum is forced to the wells by the expansion of free gas which may occupy the pore space in the highest part of the layer (the gascap). The decline in pressure occasioned by the withdrawal of the oil in this instance results in the expansion of the gascap. This process is, as a rule, less effective than washing out by water. In addition to these two drives, there is a third and quite common

type known as "dissolved gas drive," or "depletion" type reservoir. Here when the oil starts to flow to the well some gas comes out of solution as tiny bubbles in the oil. These bubbles then expand and begin to flow to the wells carrying oil with them. The dissolved gas drive is the least efficient of all the producing methods, and recoveries as low as 20 percent to 30 percent of the oil originally in place may, in some cases, be all that can be expected. In fine, the producing characteristics of a reservoir are of great importance for deducing the amount of oil which will ultimately be recovered. And as the conditions under which an oil formation is producing can only be deduced from the production behaviour of the wells, it is obvious that some time must elapse before a clear picture of the production characteristics becomes apparent.

Reserves in Oil India Fields

Following further successful development drilling, proven and indicated petroleum reserves of Oil India Ltd in Nahorkatiya and Moran have gone up from 271.3 million barrels at the end of 1959 to 304.4 million barrels at the end of June 1961 thus:

	(In million barrels)	
	30th June, 1961	31st December, 1959
Estimated reserves	312.5	276.8
Produced up-to-date	8.1	5.5
Reserves at the end of the period	304.4	271.3
Of which proved	207.4	188.5
Of which indicated	97.0	82.8

Similarly as more extension or development wells are drilled in Cambay, Ankleshwar and Kalol areas in Gujarat by the Oil and Natural Gas Commission, and following the results obtained thereof a clearer picture of the oil reserves in these three regions will emerge. In the early days, oilfields were shallow and relatively easily found. Large numbers of wells were drilled in order to obtain production as quickly as possible, and little thought was given to efficient production methods, or means of conserving the natural energy of the reservoir. Much oil was thus left trapped underground until new methods could be found to extract it. These are known as secondary recovery techniques. Primary recovery methods use only the natural energy of the reservoir. As oil is withdrawn, this energy becomes exhausted leaving "dead" oil behind. In the secondary recovery methods, the natural energy is restored by injecting gas, air or water to maintain, or even to increase, the reservoir pressure. Thus a new lease of life is given to the field, and more oil left underground is won. In this sense, the application of secondary recovery techniques adds to the recoverable reserves of an oilfield.

Consultants and Contractors

We are not only consultants but also constructors who have been associated with the step by step building of several of the plants shown in the above map right from design stage all the way to plant commissioning.

Our highly qualified staff of experienced engineers both in U.K. and in India can translate your ideas into an actual production plant.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL: ALICE SURVEYS THE WONDERLAND

UNDER the distinguished chairmanship of Alice (of Wonderland fame), a merry debate has been going on during the past few months about whether the target for coal production under the third plan should be raised to 110 million tons a year, from the 97 million tons proposed at present. On the initiative of the Planning Commission, representatives of various ministries are due to meet in New Delhi this Saturday for a conference on the question. Christmas is a time of high hopes and good cheer, when many worthy resolutions are assiduously made and only a fortnight later equally assiduously broken; so what the particular upshot of this conference is, may be of no great importance. Part-time soothsayers emerging from previous such meetings have already forecast that there will be an introductory deluge of words, followed by speeches, statements, protestations, discussions, consultations, arguments, demands, denials, requests and pleas. At the end of it all, a communiqué may be issued announcing that the Planning Commission has "solved" the coal crisis in the country by raising the production target for the commodity. The fact that output is lagging far behind the comparatively modest target already fixed may or may not be mentioned. Nor, in all likelihood, will there be the slightest indication as to how the new targets so hopefully inscribed on paper are to be achieved in an unbroken phase of official neglect.

The failure of the Government's coal policy is epitomised by one simple fact. A production target of 60 million tons a year was fixed under the second plan, but it is highly unlikely that it will be achieved even during the first year of the third plan. From April 1960 to March 1961 (the last year of the second plan), India produced only 55.5 million tonnes of coal, or nearly 4.5 million tonnes less than the target. From April to September 1961 (the first six months of the third plan), the output was 26.36 million tonnes, or only 670,000 tonnes more than in the corresponding period of the previous year. The statistics not only show that output remains far below the levels proposed; the pace of expansion too has slowed down alarmingly. For two years, a running dogfight has been going on between the Steel, Mines and Fuel Ministry, on the one hand, and the Railway Ministry, on the other, about who is responsible for the deterioration, but nothing concrete has been done. The major factor retarding expansion is the shortage of rail transport facilities. As the chairman of the Indian Mining Association recalled in a statement read out at a Press conference in Calcutta last Thursday, it was estimated that the coal industry would need 7,183 wagons daily during 1961-62, but the present supply is only 5,997 wagons. There is an inadequacy not only of wagons but also of line capacity; in addition, the number of wagons provided varies sharply from day to day. Coal production cannot be suddenly increased or decreased to suit the wide fluctuations in wagon offerings; the transport facilities have to be assured in advance if a steady rise in output is to be achieved.

From time to time, the railways proudly announce that wagon movements have touched "an all-time record" in various sectors. The claim unfortunately means little: the more important fact is that the shortage of transport facilities today is also "an all-time record." It is true that the coal industry has in recent months been able to reduce its pithead stocks to what the I.M.A. chairman described as fairly normal levels. But the reduction has been achieved more because of the lag in coal production than because of anything the railways have done. It has been suggested that whenever transport runs short, pithead stocks can be rebuilt, and in that case production need not suffer. But, in practice, this is hardly feasible: the physical facilities for storage are lacking, the capital tied up in unsold stocks is more than most collieries can find, and the dangers of spontaneous

combustion are always serious. In any case, to pile up stocks at the collieries is pointless; the coal can be useful only if it is moved to consumers, and this is the job of the railways. Regrettably, there seems to be little hope that the transport position will improve soon. Reports from New Delhi indicate that the railways do not expect to be able to provide many more wagons for moving coal during the next six months since they are busy moving other commodities (and also much military traffic). In any case, such improvement as might take place is likely to be only brief: the railways have openly declared that it takes three years to plan for, and achieve, an increase in wagon movements. The question which remains unanswered is why the realisation did not dawn on them earlier, when they were perfectly aware of the coal production targets that had been fixed.

Apart from transport, a major factor hampering the coal industry is that it does not have the money it needs for financing expansion plans. The selling price of the commodity has been kept down, while production costs have been steadily rising. As a result, capital formation in coal-mining companies has shrunk to far less than what it is in other organised industries. When coal prices were raised some years ago, the Coal Prices Revision Committee suggested that any subsequent increase in labour costs should be fully neutralised by higher selling prices. But this has not been done. It is estimated that the cost of introducing grades and time-scales for colliery workers remains unneutralised to the extent of 34p a ton for 1960 and 1961. With the extensive down-grading of coal seams, the average weighted sales realisation is 29p a ton less now than when the Bhoothalingam Committee made its investigations in 1957. The increase in electricity charges has raised coal costs by 15p a ton. More has also to be spent on royalties, and on stores, plant and machinery. Finally, although more than Rs. 2 crores has been collected through the special cess levied for the subsidy scheme for difficult mines, barely Rs. 20 lakhs has been disbursed. No subsidy has yet been given for the periods subsequent to January 1961. In some cases, even the claims relating to the period from

LIBERAL PLANNING-II

THE private sector's interest in planning of the kind outlined in the first article in this series last week meets the State's preoccupation with the major problem of the modern advanced economy: inflation. None of the governments now in power in western Europe is inclined for ideological reasons to economic planning. Far from wishing, on doctrinaire grounds, to extend their influence over economic activity, they have sought to divest themselves of the powers they inherited from illiberal pre-war regimes, from the necessities of wartime controls and post-war penuries, and from the wave of nationalisations of the 1940's. To a very large extent, they have succeeded in liberating themselves from responsibilities they found embarrassing: they have dismantled controls, restored price freedom, withdrawn their protection from numerous industries, and even carried through certain denationalisations or, where that was not possible, they have emptied irreversible nationalisations of their socialist content (i.e., let State-owned corporations behave as though they were private). This consistent effort at de-socialisation has gone far enough, and has had such fortunate results for European prosperity, for us not to suspect any drift towards "creeping socialism" in the new concern for planning. The point is that this effort has run into two limits which have obliged governments to think of planning.

The first is that the State has not been able to divest itself of many of its inherited responsi-

September to December 1960 have not yet been settled.

There is no reason why the increase in the coal industry's costs should not be neutralised immediately. An interim increase in selling prices can be allowed while detailed investigations are made about the exact increase in production costs. But this alone will not be enough; urgent action is also necessary to make the working of the industry profitable, so that it can plough back earnings, as well as attract fresh capital from outside, for its expansion plans. For years, the railways and the coal-consuming industries have been subsidised by keeping coal prices at an artificially low level. The consequences of the distortion are now becoming steadily more dangerous in that coal production is suffering. The Government's plea that it cannot allow a suitable increase in coal prices, since in that case industrial costs as a whole would rise, is remarkable for its hypocrisy. No such solicitude for the consumer has been shown whenever the question of raising coal freight rates on the railways has been considered. Nor has any attention been paid to the fact that, in most industries, coal is a relatively small element in production costs. The worst aspect of the hypocrisy has been highlighted this year. Although it costs much more to move coal by road, the Government has told consumers to get their supplies by lorry when railway wagons are not available; yet it continues to oppose the increase in selling prices which the industry desperately needs.

Coming just before a general election, it is possible that the plea for increasing the selling price of coal may not receive the attention it deserves from the Government. Yet the increase is inescapable if the programmes for raising coal output are not to suffer. Whether or not this Saturday's meeting ratifies a higher third plan target for coal, its deliberations will be meaningless until the industry can be provided the wherewithal for expansion. Coal production has already been affected badly by the shortage of explosives, of power, and of imported spare parts and machinery. The way things are going, the position is likely to become a good deal worse before it gets better. In the circumstances, talk of producing 110 million tons of coal by 1965-66 is no more than an idle pipe-dream. It is perfectly possible that the country will need that much coal by the end of the third plan. But if the financial position of the industry is not improved, and if transport capacity is not expanded, no target—be it 97 million tons or 110 million tons—will be worth the paper it is written on.

Certain nationalisations could not be undone except at a price that even the most dogmatic liberals shrank from paying. The "welfare State" became, politically, a sacred cow that no one dared attack seriously; and anyhow, it has had numerous excellent results that no one wished to call in question. New vested interests had been created (the prime example is the farming community) and had to go on being protected by governmental intervention in free markets, by price-fixing, subsidies and the like. The normal tendency of democratic societies to level up backward regions and under-privileged sectors continued, in the shape of "little plans", of which the biggest is the Italian "Fund for the South". For these and other reasons, the liberal governments of western Europe found that, willy-nilly, they had the responsibility of spending a substantial fraction of the national revenue. Traditional budgetary procedures were unsuitable for much of this expenditure. There was a time when governments could spend from year to year, and when their 1962 estimates would be based on the 1960 actuals, i.e., on information that was two years out of date. Such methods would no longer serve when they had to allocate a good slice of the national income, some of it for long-range projects and some of it through commercial and industrial corporations (nationalised coalmines, car and plane factories, etcetera) which were obliged to plan ahead like big private corporations. Gov-

rnments had to make predictions of future developments and write plans to fit them, and then co-ordinate them with what the large private industries were doing.

The second limit is the failure of western governments to control inflation. None of them has really succeeded in this, except intermittently at the cost of stagnation, and the luckiest are those that have managed to inflate more slowly than their neighbours. The failure of liberal governments is no more striking than that of western socialist governments after the war, but by restoring price freedom and the convertibility of currencies, the liberals have prepared more terrible punishments for an economy that allows inflation to develop. The risk of inflation has been multiplied because governments urgently desire to promote expansion (a) to satisfy domestic demands for full employment amid population growth and technological change, for a rising standard of living and for a levelling up of depressed regions and unfavoured classes, (b) to keep western growth rates comparable with those of the communist world, and (c) to increase the capital surplus available for investment in the developing nations whose friendship has to be preserved. To attempt to do all these things at once without a co-ordination of efforts must lead—and has regularly led in every western economy, not excluding the U.S.A.—to inflation. Classic monetary remedies have had doubtful success, even from the purely domestic point of view, but in a world of convertible currencies they have set up tides of hot money that have shaken the solidarity of the western alliance. It was natural to think that, instead of using the credit tap (of dubious efficacy) to restrain an inflation that was already under way, one could go nearer the root of the malady by co-ordinating before the event the investments and wage demands that cause prices to soar. One may see this thought taking root in Britain just at the present moment; while still using the classic weapon of a high Bank rate (which stifles the ardently desired expansion and has uncomfortable side-effects in international money markets) the Government is seeking a long-term wages and investment policy that can be incorporated in a sort of national plan.

Since inflation has come to be recognised as the unsolved problem of public policy in the West, there have been many sophisticated theories produced about its origins. The debate about whether price-rises are cost-pushed or demand-pulled thinly conceals recrimination about who is to blame most for them, labour, capital or government. Such polemic is inconclusive, for it is plain that all these parties may be to blame, and at certain points all are. So agreement about the size and timing of public and private investments and about the size and speed of wage increases, over a period of three, four or five years ahead, would offer a way of stopping inflation. Such agreement would be a national plan. Of course, there is no guarantee that the existence of such a plan would forestall inflation; even if all parties behave as predicted, there may have been errors about how much investment is possible without inflation. Such errors have been repeatedly committed in France. But the will to face facts about how much expansion is possible can be a powerful restraint on inflation.

Two examples will suggest how. A private corporation planning a series of investments that will take five years to mature might learn in the course of discussions about the prospects for those five years that certain essential materials will be in short supply, unless something is done about it now, but that the capital market will be able to lend funds that otherwise would have been found by the inflationary method of auto-financing. If

the supplier of those essential materials (say, a manufacturer of special steels) adjusts his investment programme so that the quantities necessary will be available, and if the first corporation moderates its selling prices in the knowledge that it can raise capital by borrowing, two sources of inflation will have been tracked down in advance. Again, representatives of labour unions who are convinced, by association with the work of writing the plan, that it leaves room for a 4 percent annual increase in real wages (and a not disproportionate increase in entrepreneurial profits) may concede that this is preferable to blind pressure for immediate and excessive pay increases.

One of the reasons that the British Government has hesitated to adopt planning methods is that they involve setting "targets", and so the government in charge during the implementation of the plan is exposed to political attack if the targets are not achieved. This objection certainly holds against planning as it is practised in India and in the communist countries, but to make it against voluntary, indicative planning would show misunderstanding of the nature of targets in this latter case. A target for X or Y in a democratic plan represents the quantity of it that can be produced if other industries and activities perform as expected and the quantity of it that can be sold on the same conditions. Thus what matters is less the absolute quantity of X or Y, than the balance it represents between supply and demand; what is being aimed at is the balance between targets, rather than individual targets. To put the same fact in another way: a free plan will include built-in accelerators and brakes, so that expansion can be hastened or slowed down according to conditions (notably, the conditions of international trade), because smooth riding is more important than any particular destination. This does not rob the targets of all interest. The fact is that by being enunciated, they tend to be fulfilled, because various agents see in them the conditions on which they can remain fully employed and sell all their output. They are neither a forecast nor a promise; they are a reasonable hope which justifies itself because agents take them as the basis of their calculations and thus tend to make them the consequence of their actions. Naturally, they can work in this way only if everybody concerned is associated with their fixing in a long discussion that exhausts all the reasonable possibilities and enumerates all the compromises. A target handed down as something to be fulfilled, or proclaimed as a governmental promise is less likely to be attained, and failure then generates recrimination—or, where that is not permitted, as in Russia, subterfuge and statistical falsification. (Mr. Khrushchev accuses,

no doubt justly, Mr. Malenkov of this, but there is ample cause to believe he practises it himself.)

Differing from totalitarian planning as to its motives, its preparation and its objectives, free planning contains no threat for the liberal, capitalist economy. The country that has practised it longest, France, has seen the revival of liberal capitalism from the discredit of the wartime defeat (which was due to the debility of enterprise before the war) and from the damage of the post-war nationalisations. For the public sector, which is obliged to administer a large part of the nation's wealth on long-term considerations beyond the reach of market fluctuations, it represents a perfection of the techniques it already uses. For the big corporations, whose investment and production cycle has lengthened beyond anything known a generation ago, it represents the surety of co-ordinated effort, a quantity of reliable information that can never be obtained from the free market, and a discipline which is more easily accepted before the event than at a later stage when funds have been committed. For the rest of the economy, where decisions remain free and decentralised, it represents above all information that supplements what is learned from the market. Finally, it creates opportunities for enterprise that otherwise would not have been recognised; far from limiting initiative, which is the duty of socialist planning ("You can't do that; it's not 'in the plan'"), it encourages it by revealing where it would be most profitably directed.

If, nevertheless, anyone should maintain that the introduction of planning into a free economy constitutes a move toward the sort of economy known to the communist world, one could reply that there is just as much evidence of the communist countries moving nearer a freer and less detailed conception of planning. The ravages of excessive centralisation and detailed regulation have been admitted by Russian leaders, and a few timid steps have been taken to repair these errors. One does not have to accept the bold prophecies of some economists who foresee both Russia and the U.S.A. evolving to a fundamentally similar type of economic system, as more free and local initiative is permitted in the one, and more governmental intervention tolerated in the other. Yet it is clear that totalitarian planning has not given the results expected of it, whereas west European industry and governments are recognising the benefits of voluntary planning. This latter is less an imitation of, or approximation to, the former than a natural extension of the market-study methods of big industry. That is why it seeks its data in the evolution of free consumers' demand and in the programmes of democratically elected governments.

STOCK MARKETS OF EUROPE

LORD Ritchie of Dundee, chairman of the London Stock Exchange, foretold recently that the number of shareholders in Britain would grow from some 3 million at present to some 5 million ten to 15 years hence. Then, he said, there would be as many direct investors per head of population in Britain as there are at present in the United States, and the Stock Exchange should be established in people's minds as "an essential part—a nerve-centre—of our economic system". To prepare—not too soon—for this development, the London Stock Exchange is to be rebuilt. The main contract for the work has been awarded just recently, after finance (£6 million) had been arranged early this year. Representatives of the London Stock Exchange have visited the Basle Stock Exchange to study its television system, which, with other methods of communication, is being considered by a special committee of the London Stock Exchange.

Against this background of plans for modernisation and expansion, the principals of the stock exchanges of Europe conferred together in London in October. This gathering was particularly opportune as it was relevant to—though not primarily concerned with—Britain's application for admission to the European Economic Community. The idea of conferring on the regulations and practices of the various centres is not new. As long ago as 1930 the International Chamber of Commerce initiated an international organisation of stock exchanges; but its activities were, of course, suspended during the war, and the first post-war conference was held as late as 1957. The latest conference—the fourth in the post-war series—was probably the most important of them all, for it occurred in a period of lively discussion on the international movement of capital. The City of London was glad to see that this year's conference—at which for the first time the Scandinavian stock exchanges were represented—did not incline towards political or regional alignments. The movement of private capital across national frontiers has been in progress on a considerable scale for only a few years, and the financial centres hope to see it develop as widely as possible. But,

of course, the trend in the Common Market particularly interests London.

If Britain enters the Community she will be obliged to free not only the movement of goods but also the movement of capital. British investors already have facilities for investing in some European securities, either directly or through European investment trusts; but payment for them is made through a special security currency, which may be quoted at a considerable premium in a period of financial trouble at home. As similar systems are in operation in the Community, joining the Community would presumably involve no drastic changes in this respect on Britain's part. Free movement of companies' capital—direct investment abroad—is a more difficult problem. Some important British developments in Europe have been authorised in recent months, but the authorities have shown clearly that authorisation of plans involving export of capital from the sterling area is by no means automatic. An obligation to allow free movement of capital within the Community might be embarrassing; the more so as it would inevitably reduce the flow of capital from Britain to other sterling countries—unless Britain were able to accumulate much more capital and so increase considerably the total of her capital exported.

Another embarrassing possibility is freedom of new capital issues on an international scale. London has noted the recommendation in the first annual report of the Community's Monetary Committee that the national stock markets should allow freer access for new issues of stocks of the other nations' companies. Practice in this respect is not yet uniform in the Community, but Britain as a member could not easily maintain restrictions that have already been abolished in Germany and Holland. The authorities rather than the financial institutions of the City of London are apprehensive in such matters. The London Stock Exchange is not averse from the idea of a free European capital market. Indeed, the recent international discussions in London showed the stock exchanges generally (18 of them, from 12 countries, were

represented) to be decidedly in favour of a true common market in finance, and they are trying to make their procedures and technicalities conform as well as possible.

On the national plane, Lord Ritchie hopes that ordinary citizens will be purposefully educated in the functions of investment through the stock exchange. If they are taught early the problems of investment will seem less formidable later, when they have idle money to employ. They will then be able to play their proper part in providing

capital for industry. The behaviour of the European markets in the last few months suggests that the public has already educated itself to a fairly high level. The recovery in the Eurosyndicat index since late-September is evidence that investors were watching for opportunities. American investors saw opportunities in Europe presented by the fall in prices that began in June, and European investors were not slow in coming back into the markets as buyers. The periodical weakening of prices does not, apparently, weaken the basic confidence of investors.

tingencies and Rs. 25,000 to gratuity reserve. The ordinary dividend absorbs Rs. 3.90 lakhs, against Rs. 3.36 lakhs and the preference dividend Rs. 2.21 lakhs, against Rs. 2.01 lakhs. The carry-forward amounts to Rs. 9,319, against Rs. 12,134 brought in.

Considerable progress is reported to have been made concerning the various expansion schemes which Structural Engineering has undertaken with foreign collaboration. Machinery and drawings valued at over Rs. 7 lakhs for manufacturing prestressed concrete pipes have already been shipped. Machinery worth about Rs. 10 lakhs for making boilers and high-pressure penstocks has been received. Galvanising bath will be received by February 1962 and, thereafter, the Company will be able to execute big jobs for fabrication of transmission towers. Structural Engineering will soon set up a new factory for manufacturing reinforced concrete pipes for the duct line works of the Bombay Municipal Corporation. Sufficient orders are said to be on hand to keep the Company's establishments engaged during the year. Some difficulty is, however, being experienced concerning the laying of pipes for the Calcutta Corporation for reasons beyond the Company's control. The overall capital requirements for implementing the expansion programme are estimated around Rs. 1 crore. These are expected to be met partly by long-term borrowings and partly by an additional capital issue. The Rs. 10-paid share of the Company is currently quoted around Rs. 172—it touched a high of Rs. 235 early in the year—offering a gross yield of about 7.5 percent.

Belapur Sugar Earns Less

Although cane crushed and the production of sugar during the year ended September 1961 set new records at 217,607 tonnes and 256,733 quintal bags, respectively, the Belapur Co. Ltd. has not fared as well as in the previous year. But its performance is certainly not as bad as the cut in the gross dividend from Rs. 29 to Rs. 25 a share (Rs. 50 paid) had suggested. Investors, however, can derive little comfort from the working results since the directors take quite a pessimistic view of the future. It is stated in the directors' report that the Maharashtra Agricultural Lands (Ceilings on Holdings) Act, when enforced, will have a considerable effect on the profit-earning capacity of the Company. While the directors are unable to say to what extent the profits will be affected, they are certain that these will be substantially reduced when the Company's farms are taken over and unless the purchase price of sugarcane is brought down to a more reasonable level. They expect sugar prices to show an easier tendency which will be another contributory factor towards the lower profit margins. So the directors have proposed a cut in the dividend for 1960-61 and have created a dividend equalisation fund with an allocation of Rs. 10 lakhs to be used for bringing about a gradual reduction in the dividend to a figure which the future profits may justify rather than ask the shareholders to accept a drastic cut in any one year.

The directors state that the recovery of sugar from cane in 1960-61 was rather disappointing being only 11.76 percent which is 58 percent lower than in the previous year. This is attributed to adverse climatic conditions during the season. The additional profit which would normally have accrued from the greater production of sugar has been largely offset by a loss of income of over Rs. 6 lakhs on Belapur Company's export quota and a reduction to market rates in the valuation of closing stocks which have recorded a sub

Current News and Comment

Barnagore Jute Cuts Dividend

Presenting their report for the year ended March 1961, the directors of Barnagore Jute Factory Co. Ltd. say that substantial losses have been incurred during the first six months of the current year due to relatively higher prices of raw jute than those of jute goods. Since raw jute supplies have increased during the second half of the current year, trading conditions have become more stable. The working of Barnagore Jute during 1960-61 has been affected by the fibre shortage. The profit has declined from £258,191 to £138,828, after transferring £55,374 (against £50,773) to depreciation. The ordinary dividend has been reduced from 30 percent, less tax, to 10 percent, less tax. The dividend absorbs £16,844 and offers a yield of 5.3 percent at the present price of Rs. 126 a share. General reserve is allocated £100,000 (against £150,000) and development rebate reserve £1,983 (against £2,104). The carry-forward is £95,080, against £92,399 brought in.

Progress of Nepa Mills

As Sir A. Ramaswami Mudaliar, chairman of the National Newspaper and Paper Mills Ltd., could not attend the annual general meeting held recently, Mr. S. N. Mehta, who presided over the meeting, read the speech prepared by Sir Ramaswami. The Company has shown satisfactory results for the year ended March 1961. The output increased to 23,029 tons and the gross turnover to Rs. 2.47 lakhs. In spite of the improvement, the net profit declined to Rs. 32.94 lakhs. Sir Ramaswami attributed the fall to the rise in costs of various raw materials (a fuller version of the speech is printed on a later page in this week's issue of *Capital*). The profit has been used to reduce the debit balance to Rs. 65.68 lakhs.

The Company's financial position has improved a great deal. The interest-bearing loans of the Central and Madhya Pradesh Governments have been repaid. The outstanding interest-free loan is now Rs. 88 lakhs only. Since it has not been possible to attain a normal production target of 100 tons a day due to the shortage of raw materials such as chlorine and caustic soda, it is proposed to set up a plant to produce them. Nepa Mills has obtained the required licence to build the factory with a production capacity of 10 tons a day. The directors are investigating the possibility of increasing the newsprint production to 200 tons a day. The scheme will be undertaken as soon as the sources of raw materials are located.

Balrampur Sugar Repeats

Balrampur Sugar Co. Ltd. has maintained the taxable ordinary dividend at 8 percent on the doubled capital for the year ended June 1961. After increasing depreciation from Rs. 1.12 lakhs to Rs. 1.58 lakhs, the profit has declined from Rs. 1.89 lakhs in 1959-60 to Rs. 1.75 lakhs in 1960-61. Taxation is allocated Rs. 52,000 (against Rs. 10,000) and the carry-forward is Rs. 2,709, against Rs. 48,466 brought in. Development rebate reserve receives Rs. 56,500 (against Rs. 1.31 lakhs). The cane crush was 3.3 million maunds, against 2.6 million maunds. Balrampur Sugar has been permitted to increase the crushing capacity to 1,200 tons a day. The work of expansion and reconstruction has begun. The directors say that the production cost has increased due to higher wages which have to be paid under the Wage Board's recommendations. Referring to the loss on exports, the directors hope that some means will be found to spare the sugar companies from shouldering the entire burden of export losses.

Nil from Sitalpore Sugar

Commenting on the overproduction of sugar in their report for the year ended June 1961, the directors of the Sitalpore Sugar Works Ltd. say

Structural Engineering Pays More

The directors of Structural Engineering Works Ltd. have raised the dividend for the year ended June 1961 from 12 percent to 13 percent, both subject to deduction of tax. The proposed dividend of Rs. 7.1429 a share, subject to tax, on 5,000 5 percent cumulative preference shares and of Rs. 9.2587 a share, subject to tax, on 20,000 6½ percent redeemable cumulative preference shares have been computed so as to provide the preference shareholders with the original stipulated dividend after deduction of 30 percent. Last year, 28.48 percent of the dividends were exempted from income tax under Section 15 (C) of the Indian Income Tax Act. This year also, Structural Engineering has applied to the authorities for ascertaining the exempted portion of its dividends under the relevant section on account of the profit earned by the Calcutta factory. The increase in the dividend follows an improvement in the working results during the year. The preliminary figures indicate that after providing for taxation, depreciation and development rebate, the net profit is up from Rs. 5.76 lakhs to Rs. 7.33 lakhs. The figures for depreciation and taxation are shown at Rs. 6 lakhs and Rs. 4.10 lakhs, against Rs. 5.37 lakhs and Rs. 4 lakhs, respectively, in the previous year. Earnings from sale and work done are understood to have risen from Rs. 94.46 lakhs to Rs. 145.16 lakhs. The profit for 1960-61—Rs. 7.33 lakhs—has been supplemented by Rs. 3 lakhs, being the excess provision for liabilities made in the earlier years now written back. From this, Rs. 4.25 lakhs has been ploughed back to the various reserves, against only Rs. 40,000 in the previous year. Allocations include Rs. 1 lakh to general reserve, Rs. 3 lakhs to reserve for con-

stantial increase from Rs. 49.87 lakhs to Rs. 91.17 lakhs. Furthermore, the Company has suffered a loss of Rs. 1.04 lakhs on the sale of investments which has been taken into account in arriving at the gross profit. Sales after adjustment of stocks are up from Rs. 2.26 crores to Rs. 2.37 crores. After providing Rs. 16.65 lakhs (against Rs. 19.75 lakhs) for taxation and Rs. 3.01 lakhs (against Rs. 1.80 lakhs) for depreciation and Rs. 3,500 (against nil) for development rebate, the net profit for 1960-61 amounts to Rs. 52.26 lakhs, against Rs. 54.58 lakhs in the previous year. With Rs. 2.44 lakhs as the excess provisions written back and Rs. 82,985 brought forward, the disposable surplus amounts to Rs. 55.54 lakhs. No provision has been made for reserve fund, but Rs. 10 lakhs has been set apart for the dividend equalisation fund. The proposed dividend absorbs Rs. 35.24 lakhs (against Rs. 40.88 lakhs), leaving Rs. 10.29 lakhs to be carried forward. The Rs. 50-paid share of the Company, which touched a high of Rs. 335 early in the year, was sold down to Rs. 240 in July. The latest quotation is around Rs. 263 cum dividend, offering a gross yield of about 10.4 percent. Belapur Company has a paid-up capital of Rs. 70.49 lakhs (all in equity shares) and its reserves and surplus total Rs. 1.72 crores. The fixed assets valued at Rs. 1.66 crores have been written down to Rs. 51.84 lakhs. The directors state that the Company has received the Government's permission to expand the factory's crushing capacity to 1,200 tons of sugarcane a day. Orders for additional machinery required have also been placed. But it is doubtful—in view of the long delivery periods—whether the increased capacity will be operating from the beginning of the 1962-63 season.

Standard Batteries Profit Down

In spite of larger sales of motor-car batteries, the working of Standard Batteries Ltd for the year ended June 1961, shows a decline in turnover as well as profit. Sales have declined from Rs. 1.28 crores to Rs. 1.21 crores, and the gross profit is down from Rs. 27.13 lakhs to Rs. 21.67 lakhs. The ratio of gross profit to sales works out to 17.9 percent, against 21.2 percent in the previous year. The decline in the profit margin is attributed to lower net selling prices realised on account of keen competition, absorption in the cost of a part of the enhanced excise duty and the absence of demand for train lighting cells. After providing Rs. 7.35 lakhs (against Rs. 9.15 lakhs) for taxation, Rs. 3.73 lakhs (against Rs. 4.19 lakhs) for depreciation, and Rs. 82,404 (against Rs. 80,332) for development rebate reserve, the net profit amounts to Rs. 8.04 lakhs, which is Rs. 2.65 lakhs less than in the previous year. The dividend has been maintained at Rs. 15 a share, subject to tax, and this absorbs Rs. 5.62 lakhs. The appropriations include general reserve Rs. 35,000 (against Rs. 70,000), plant modernisation reserve Rs. 2 lakhs (the same) and bad debts reserve 10,000 (the same).

The directors state that the demand for various applications of lead acid batteries has shown an improvement in addition to the automotive and other normal types which are being produced in the factory. With increased industrial activity and the adoption of more modern handling equipment, Standard Batteries is confident of meeting any additional demand without any difficulty. The Company has standardised an automatic switch tripping unit for sub-stations and power-stations. The directors hope that this new line will bring beneficial results. The Company has undertaken the development of new types of batteries to meet the defence requirements, and a long-term programme has been prepared for this purpose. The latest type of oxide manufacturing plant which is being erected in the factory, it is stated, will further augment its manufacturing capacity.

Madhusudan Mills Profit Down

Shree Madhusudan Mills Ltd has reported a slight setback in its working results for the year ended June 1961. While realisations from the sale of cloth, yarn and waste showed a small increase from Rs. 3.98 crores to Rs. 4.04 crores, sales of the Company's departmental store in Calcutta—Hall and Anderson—fell by Rs. 20 lakhs from Rs. 2.73 crores to Rs. 2.53 crores. The combined profit of both sections declined from Rs. 37.52 lakhs to Rs. 35.07 lakhs. The provision for depreciation has been raised from Rs. 16.50 lakhs to Rs. 18.73 lakhs. General reserve gets Rs. 6 lakhs (against nil) and Rs. 6.5 lakhs (against nil) has been provided for taxation. The directors have recommended a dividend of 4½ percent cumulative preference shares for two years ended March 1950 and 1951 to be paid with an additional 30 percent in accordance with the Preference Shares (Regulation of Dividends) Act, which absorbs Rs. 3.51

lakhs. The Company has arrears of depreciation to the extent of Rs. 48.93 lakhs.

The directors state that the textile unit in Bombay could not show increased profits during the year because of tight cotton supply, high prices of cotton, cut in cloth prices and costly dyes and chemicals which pushed up production costs appreciably. The working results for 1961-62 are, however, expected to show an improvement. The directors are trying to execute a number of modernisation and renovation schemes. The Company has already replaced 39,932 spindles out of the total complement of 67,000 spindles by new ring-frames in the Bombay mills. The work of installation of the humidification plant has been taken on hand. Forty-eight automatic looms are expected to arrive soon. The additions to plant and machinery during the year amounted to Rs. 18.2 lakhs. Further orders for machinery of the value of Rs. 30 lakhs have been placed. New lines of indigenous products were introduced last year in the departmental store in Calcutta. These lines are stated to have proved popular.

Paper and Pulp Conversions Results

In spite of increased production and larger sales, the working of Paper and Pulp Conversions Ltd for the year ended July 1961, shows a small decline in the profit. Production increased from 4,202 tons to 4,684 tons and sales from Rs. 62.01 lakhs to Rs. 68.51 lakhs. The gross profit is down, slightly though, from Rs. 8.35 lakhs to Rs. 8.19 lakhs. The directors attribute the fall in profit mainly to the reduction in the selling prices of paper and the increase in cost of raw materials like waste paper, rags, chemicals and coal. After providing Rs. 3.02 lakhs (against Rs. 2.76 lakhs) for depreciation and Rs. 2.15 lakhs (against Rs. 2.60 lakhs) for taxation, the net profit amounts to Rs. 2.54 lakhs, against Rs. 2.38 lakhs in 1959-60. With Rs. 7,753 brought in and Rs. 45,000 written back from the excess development rebate provisions made in previous years, the disposable surplus amounts to Rs. 3.07 lakhs. Development rebate reserve gets Rs. 84,800 (against Rs. 1.32 lakhs) and contingency reserve Rs. 1.20 lakhs (against nil). No provision has been made for dividend equalisation reserve which received Rs. 25,000 in the previous year. The dividend, of 9 percent, subject to tax, absorbs Rs. 93,000, leaving Rs. 8,593 to be carried forward. The directors state that promotional activities will be taken up within the next two or three months in relation to the bamboo paper mill project undertaken by the Central Pulp Mills after obtaining the Government's sanction. The machinery division of the Company has entered into an agreement for the sale of one complete plant to Karnataka Paper Mills of Bangalore.

Mercara Rubbers Repeats

The working of the Mercara Rubbers Ltd during the year ended June 1961, shows a net profit of Rs. 99,726, against Rs. 1,09,582 for the previous year. With Rs. 10,168 brought in, the total amounts to Rs. 1,09,894. Out of this, taxation provision gets Rs. 20,000 and provision for bad debts Rs. 2,000. The directors have recommended a dividend of 20 percent, subject to deduction of tax, on ordinary shares, against 20 percent in the previous year. This will absorb Rs. 65,000. The dividend of 6 percent on preference shares will absorb Rs. 19,500. After making these appropriations, there remains Rs. 3,394, which is carried forward.

The total crop for the year amounts to 255,354 lbs, against 313,000 lbs. The cost of production was higher at 88.88 cents a lb, against 78.35 cents a lb. The net sale price of rubber was Rs. 156.89, against Rs. 154.20. The crop an acre amounted to 293.17 lbs, against 298.65 lbs. The cost of production rose during the year, mainly due to the increased wages and amenities. The directors' report says that in spite of the representations made to the Government of India, the price of rubber has not been raised. The 1961-62 rubber crop is estimated at 260,000 lbs.

Ruby Rubber Pays Again

The working of the Ruby Rubber Works Ltd during the year ended June 1961, shows a net profit of Rs. 1.19 lakhs, after providing Rs. 1.11 lakhs for depreciation and Rs. 65,000 for taxation. The net profit for the previous year was Rs. 50,574, after providing Rs. 98,329 for depreciation and Rs. 42,320 for taxation. With Rs. 5,869 brought in, the total amounts to Rs. 1.25 lakhs. Out of this, the proposed dividend at 10 percent on preference shares, subject to deduction of tax, amounts to Rs. 46,956. The proposed dividend of 4½ percent on equity shares, subject to deduction of tax (against nil), will absorb Rs. 40,032. Preliminary

expenses and the brokerage written off amount to Rs. 4,778. Development reserve gets Rs. 30,443 (against Rs. 825). The balance of Rs. 2,806 is carried forward.

The directors' report says that the previous year's trend of the rising cost of production on account of the increased price of raw rubber, chemicals and higher labour costs, persisted during the year. Competition was keen in the sphere of sales, particularly in bicycle tyres and tubes and tread rubber. Stocks of cycle tyres and tubes accumulated on account of an unexpected slump in the market, so the production of these items had to be provisionally suspended, as was done by some other concerns also. Since then, concerted efforts were made in exporting the products, and now the stocks of tyres have been completely cleared while the remaining lot of tubes is expected to be lifted before the end of the calendar year. Tyre production is being resumed forthwith and the production of tubes may be continued from early 1962. The expansion of the installed capacity for tread rubber has been sanctioned by the Central Government under the condition that Ruby Rubber should export its products. New sales depôts have recently been opened in Ahmedabad and Ranchi, and the directors expect good results from their sales promotion efforts.

India Forge to Expand

The first annual report and the audited accounts of India Forge and Drop Stampings Ltd for the period from 27th June, 1960 to 30th June, 1961, show a loss of Rs. 11,765. The directors say that the loss is mainly due to the expenditure incurred on work connected with the project. The report says that the Madras Government is taking steps to acquire about 25 acres for the Company. India Forge was originally licensed by the Government of India to manufacture 3,600 tons of ferrous and 120 tons of non-ferrous forgings a year. The directors have carried out extensive market research, and in view of the increased demand, an application has been submitted to the Government of India for increasing the plant capacity to 7,500 tons of steel forgings a year. Out of the total estimated cost of plant and machinery amounting to about Rs. 47.30 lakhs, equipment worth about Rs. 27 lakhs will have to be imported. Imports will be financed out of the loan sanctioned by the Industrial Credit and Investment Corporation of India Ltd, amounting to \$ (U.S.) 570,000. The shipment of machinery is expected to be completed by the suppliers by October 1962. Machinery of local origin has also been ordered with deliveries to correspond imports. It is, therefore, expected that the plant should be ready for production by the end of 1962. It is reported that carbon and mild steel billets—the principal items required—will be available from the Indian steel producers. But alloy steel will have to be imported for some years. The directors do not anticipate any difficulty in obtaining the import licences, since India Forge is one of the basic industries which would supply essential raw materials to a large number of industries.

Anapara Estates Cut Dividend

The working of the Anapara Estates Ltd during the year ended June 1961, shows a profit of Rs. 2.41 lakhs, which is lower than the previous year's Rs. 3.88 lakhs. With Rs. 34,372 brought in, the total available for appropriation is Rs. 2.76 lakhs. Out of this, the directors have transferred Rs. 85,000 to taxation reserve. A dividend of 15 percent, subject to deduction of tax, is recommended, against 20 percent for the previous year. This will absorb Rs. 1.81 lakhs. After making these appropriations, there remains Rs. 9,563 which is carried forward.

The coffee produced by the Company has been valued at Rs. 2 a point, against Rs. 2.40 a point. The fall in the profit is mainly due to lower valuation. The total coffee crop harvested during the year amounted to 134 tons of Arabica and 417 tons of Robusta. The 1961-62 coffee crop is estimated at 187 tons of Arabica and 308 tons of Robusta. The average cost of coffee a cwt stood at Rs. 78.16, against Rs. 86.48 in the previous year. The total coffee crop of 551 tons exceeded the previous year's crop which was 455 tons. The total points estimated for coffee were 664,453, against 568,092. The estate expenses have increased due to the rise in wages from 1st August, 1960. The directors state that there has been a steep fall in the export prices of coffee so the net return to growers is very much less than that of the previous year.

Loyal Textile Earns More

During the year ended June 1961, the Loyal Textile Mills Ltd, Kovilpatti, has earned a net profit of Rs. 5.99 lakhs, after providing for all

expenses, including depreciation of Rs. 6.2 lakhs and development rebate of Rs. 2.66 lakhs. The net profit for the previous year amounted to Rs. 4.15 lakhs, after providing depreciation of Rs. 4.64 lakhs. Out of the net profit, the directors have appropriated Rs. 4.44 lakhs towards development rebate on assets installed after 31st December, 1957, to be provided compulsorily under the Indian Income Tax Act, leaving Rs. 1.54 lakhs. This, together with Rs. 2.55 lakhs transferred from development rebate reserve already provided in previous years but which is not compulsory, amounts to Rs. 4.09 lakhs. Out of this, the dividend on preference shares at 6.5 percent, according to the Preference Shares (Regulation of Dividends) Act, amounts to Rs. 97,429. The additional dividend at 1.5 percent for the three half-years ended June 1959, according to the Act, has absorbed Rs. 33,725. The dividend on equity shares at 6 percent, subject to deduction of tax (against nil), accounts for Rs. 1.89 lakhs. The dividend on deferred shares at 6 percent, subject to deduction of tax, will absorb Rs. 12,000. The balance of Rs. 77,486 is set off against the previous years' losses.

Yarn and cloth prices have been voluntarily reduced from September 1960. The directors' report says that cotton prices were higher than those of the previous year. The wage bill also increased due to the implementation of the Wage Board's recommendations. In spite of these adverse factors, Loyal Textile Mills has been able to earn a higher profit than in the previous year. During the year, the Company repaid Rs. 2.30 lakhs to the Industrial Finance Corporation. The first stage of the rehabilitation scheme, which was delayed due to the difficulty in getting suitable machinery, is now reported to be progressing. The order for 28 ring-frames, comprising 11,760 spindles, has been finalised, and they are expected to arrive at the site from April 1962. All efforts are being made to complete the scheme at an early date. The 76 automatic looms for expanding the weaving section have already been received and are being erected. The Swiss automatic pirn winders have arrived and are working. Besides, a high-speed warping machine has been ordered. With the installation of these modern machinery, the directors hope to obtain still better working results.

Associated Hotels Pays Again

The Associated Hotels of India Ltd has declared a taxable ordinary dividend of 10 percent for the year ended March 1961, against nil. It is covered more than four times and offers a yield of 14.3 percent at the present price of Rs. 7 a share. The profit has increased from Rs. 3.42 lakhs to Rs. 8.62 lakhs due to a rise in turnover from Rs. 42.60 lakhs to Rs. 52.71 lakhs. Taxation absorbs Rs. 6.57 lakhs (against Rs. 5.05 lakhs). There is a carry-forward of Rs. 1.22 lakhs, against Rs. 24,435 brought in. The assets of Associated Hotels in Pakistan have been transferred to a new enterprise incorporated in Pakistan. The value of capital assets is estimated at Rs. 45.22 lakhs, and this amount has been transferred to the new Company. Associated Hotels has also received Rs. 1.63 lakhs (against Rs. 94,890) as dividend from the subsidiary Company—Chowringhee Properties Ltd.

Raymon Engineering Shows Loss

In their report for the year ended March 1961, the directors of Raymon Engineering Works Ltd say that machinery and equipment for the factory has arrived and the construction of the forge and press shops has started. The fabrication work has also been undertaken. When the forge and press shops are completed, a considerable portion of the components will be provided for the wagon-building programme of Raymon Engineering. The Company has received an order from the Railway Board for 575 broad-gauge wagons. The Industrial Finance Corporation has sanctioned a loan of Rs. 30 lakhs to Raymon Engineering. There is a loss of Rs. 10.58 lakhs, subject to a proper allocation of expenditures applicable to fixed assets.

Globe Auto to Expand

Globe Auto Electricals Ltd, Bombay, which is setting up a factory in Muland (Greater Bombay)—the construction work is likely to start next month—for manufacturing windshield wipers, ignition coils, distributors, voltage regulators, dynamos and starters in collaboration with Magneti Marelli of Italy, is starting an expansion programme. It has already secured the technical and financial collaboration of the well-known American firm of Electric Autolite Company of Toledo, Ohio. The proposed expansion envisages the manufacture of 25,000 "Prestolite" dynamos (A.C. and D.C.) and 25,000 starter motors a year on a single-shift basis. The value of the annual turnover of the new scheme is estimated at Rs. 1

crore. Fifty percent of the components will be imported initially, but the indigenous content will be increased to 85 percent or 90 percent in the third year. Globe Auto has applied to the Government of India for the licence, and the sanction is expected soon. In order to finance the new expansion scheme, the Company proposes to increase its issued capital from Rs. 20 lakhs to Rs. 50 lakhs. Of the new issue, shares worth Rs. 15 lakhs will be reserved for the U.S. firm and the balance will be offered to the existing shareholders. The new equity shares will, however, be offered to the shareholders after the pending calls are completed. The equity contribution of the U.S. firm will cover the bulk of the foreign exchange needed for the import of machinery and technical know-how fees. Equipment worth Rs. 5 lakhs might have to be imported from Europe, for which a foreign exchange loan would be sought from one of the financial institutions. The Controller of Capital Issues is being approached for the issue of fresh capital. The Rs. 50-paid share (face value Rs. 100) is currently quoted around Rs. 58.

Price Control on Cotton Textiles

In a memorandum submitted to the Tariff Commission which is holding an enquiry into the cotton textile industry, the Indian Cotton Mills Federation has strongly pleaded for a complete reshaping of the Government's textile policy. The Federation says that the curbs placed on the growth of the industry and the restrictions on its production must be removed. The policy of protecting the handloom sector has only helped the powerlooms to the detriment of the mill sector. The small powerlooms continue to exist free from the irksome factory legislation with a low wage bill and an appreciably low excise duty. The Federation has opposed the imposition of price control. Apart from the bewildering variety of qualities produced, it points out that at a time when half the supplies are free from control, such as the production of the decentralised sector and grey cloth made by mills but processed by outside processors, and are largely indistinguishable from those under control, it is impossible to make any control effective. Under price control, it is hardly possible to make a provision for adjustment, such as the fall in demand for one variety compensated by a rise in the demand for another, and this can lead to various malpractices. Another factor of great importance is the deterioration in quality and in the standard of trading practices which are brought about by linking prices to constructional particulars, regardless of the individual mill's reputation with the trade and the public on account of its individual quality standards and trading practices.

All that the controls will do is to limit, to the stipulated level, the invoice price of a mill company, without bringing any relief to the consumer. Large amounts of money will escape taxation and the only tangible result of the controls will be demoralisation and a reduction of quality standards to the lowest common denominator. But if in spite of these considerations, the Tariff Commission decides to lay down a formula for calculating the prices of cotton textiles, the Federation would like to suggest that the Commission stipulate an upper and a lower limit to the permissible deviation of prices from the fair price, within which the rates may be allowed to fluctuate without any interference. The Federation has, however, urged the Commission to exempt industrial fabrics and yarns like tyre canvas, tyre cord, filter cloth, belting duck, padding cloth and shoe canvas. Industrial consumers of such fabrics and yarn require the goods to be manufactured to their special specifications and are more interested in their quality than price.

Since the only lasting solution to the problem of textile prices is an increase in supply and a reduction in costs, the Federation says that the removal of restrictions on the industry will be a step in the right direction. The mill sector is far more amenable to adjustments in the volume and pattern of production according to requirements. With a strict control over the size of the mill industry and the growing emphasis on production of the decentralised sector, cotton mills lack elasticity in adjusting the volume and pattern of production with the result that India has to suffer from the alternate bouts of glut and scarcity. The Federation rightly points out that incentives for export promotion are not a satisfactory alternative to the improvement in quality and the reduction in costs which modernisation and rationalisation can bring about. Here the cost is formidable. The Federation has drawn the Tariff Commission's attention to the findings of the Working Group for the Cotton Textile Industry according to which a modest programme of modernisation would require about Rs. 180 crores by March 1966. Of this, about Rs. 80 crores are expected to be provided by the industry from its own resources.

The Federation has suggested that in order to bring about the speedy modernisation of the mills, they ought to be allowed a return which will enable the average unit to distribute a reasonable dividend after paying interest on loans taken for modernisation. Provision will also need to be made for the return of the loans.

As for the important problem of cotton supply to mills the Federation has made some very interesting observations. It says that 7 million bales will be required by cotton mills alone if India is to attain the third plan target of 9,300 million yards of cotton textiles. Provision has also to be made for the extra factory consumption and exports of short-staple cotton. This makes the target of 7.2 million bales of cotton look rather conservative. But past performance holds out little promise of even this target being realised. India may, therefore, have to depend more and more on cotton imports. The Federation poses an interesting question whether or not it would be advantageous to the country to diversify its production and use more of staple fibres and other man-made fibres. With a given amount of foreign exchange, it would be possible, the Federation says, to produce a greater yardage of textiles if the foreign exchange were used for importing raw materials like wood pulp for the manufacture of man-made fibres and even for the import of some fibres themselves.

The industry is not alone in opposing price control. The trade also is strongly opposed to it, which, of course, is only to be expected because control implies the restriction on freedom of activity. In its memorandum to the Tariff Commission, the Bombay Piecegoods Merchants Mahajan—the biggest representative body of the wholesale cloth trade in Bombay—says that the price stamping on cloth has done more harm than good and that any such control on cloth will adversely affect the trade as well as the economy of the country. Official assumption that price stamping enables consumers to get their requirements of cloth at fair and reasonable prices is described as "erroneous." The memorandum points out that since the implementation of the price-stamping scheme in September 1960, the mills have made radical changes in their pattern of production by introducing new varieties. Besides, they are said to have changed their pattern of sales. The trade is obliged to take unwanted varieties of cloth which it has to sell at a loss. The memorandum observes that there has never been any hue and cry for the public for price stamping whereas there is growing awareness on the part of the Government to maintain the price level. A casual survey of the public opinion would bear testimony to this statement. The Mahajan has suggested certain minimum rates of profit margin. These should be allowed to different links of the textile trade—wholesalers, semi-wholesalers, commission agents and retailers. It has also suggested the constitution of a standing committee comprising the representatives of the industry, trade, consumers and the Government to act as a watch-dog and examine the factors hampering the progress of the textile industry and the trade.

Modernising Jute Mills

The modernisation of the Indian jute industry up to the spinning stage had been virtually completed by the end of the second plan period. By 31st March, 1961, 293,970 spindles were supplying silver spun yarn (in 59 out of 82 mill companies) equivalent to 84 percent of the spinning capacity needed to match the single-shift output of the working looms. The total investment on modernisation up to the end of the second plan has been estimated at Rs. 30 crores, the bulk of it having been invested during the quinquennium. This included the use of Rs. 4.5 crores of loans from the National Industrial Development Corporation, which had altogether sanctioned Rs. 6 crores to 27 mill companies. According to the Census of Indian Manufactures, the total investment in the industry in 1955 was Rs. 71.5 crores, comprising fixed capital of Rs. 36.9 crores and working capital of Rs. 34.6 crores. In the third plan, the industry is expected to take up the modernisation of its equipment for the post-spinning stages. Old winding equipment is expected to be largely replaced by new high-speed machines. Additional pre-beaming equipment will be installed to increase the mills' productive efficiency. For the modernisation of the weaving process, the choice would be between (a) rendering the existing flat-bed looms semi-automatic by the use of cop-changers and warp-stop-motions, (b) replacement by automatic circular looms, and (c) replacement by automatic shuttle-less looms.

The leading mill groups have for some time now been experimenting with these three methods of loom automation and they are expected to be in a position to draw up their modernisation programmes by early 1962. The phasing of the modernisation, which is to be

mined in consultation with the Government, will depend on the availability of foreign exchange, the indigenous output of modern jute mill machinery and the probable impact of loom automatization on employment. Besides fine-yarn spinning frames and copwinders whose production is now well established, plans have been finalized for the indigenous production of other machines. These include coarse-yarn spinning frames, drawing-frames, core-winders, pre-beamers and cop-loaders and shuttle-less looms. Virtually the whole range of machines needed by the jute industry for modernisation is thus expected to be available from indigenous sources by the middle of the third plan. The output of spares and stores for the industry is also to be increased. The foreign exchange requirements for machinery imports till indigenous production is established, and for the import of spare parts and stores whose manufacture in India would not be economical, are estimated at Rs. 6.5 crores only for the third plan period. The estimated total investment in the jute industry in the third plan is of the order of Rs. 11.32 crores towards which the National Industrial Development Corporation may have to contribute Rs. 6.5 crores or Rs. 7 crores by way of loans.

Tea Production and Prices

Speaking at the annual general meeting of the Calcutta Tea Traders Association in Calcutta on Friday, Mr. G. A. Whitaker, chairman, said that the north Indian tea crop has shown an increase of 72 million lbs over last year. In addition, there has been an appreciable rise in the Ceylonese and Pakistani crops, resulting in an overall world increase of over 100 million lbs. The bigger supply has depressed prices on the Calcutta market to the extent of 66p a kilogram, compared with a year ago. Mr. Whitaker said that many teas are now being sold at prices near or below the production costs. Two lessons may be drawn from the experience. Firstly, an increase in production must be offset by a rise in consumption. Secondly, it has again been shown that quality is still

the all-important factor, and it will remain so long as supplies are in excess of demand. The chairman said that it would not be easy to expand overseas consumption, but it is in no way impossible. For this purpose, it will be necessary to launch a concentrated and sustained promotion campaign. Advertising, particularly in the West, is an expensive and specialised business, and large sums of money will be necessary if the campaign is to be really successful. Most of the campaign will have to be directed towards the younger generation, to whom the tea industry must look for its future customers.

Mr. Whitaker said that producers are approaching a period when the output of tea may outstrip consumption, with disastrous effects on prices. The U.N. Food and Agriculture Organisation expects that the annual surplus of production over consumption will be between 88 million and 110 million lbs from 1965 if the present trend of production continues. The threat can be met in three ways—by launching an intensive propaganda campaign, by regulating production, and by raising internal consumption. There has been a steady rise in domestic consumption over the past ten years. "It would be a great mistake to imagine this continued expansion as being in any way detrimental to the interest of the country," Mr. Whitaker said that new opportunities will be opened for the export of Indian tea if Britain joins the European Common Market. The average annual consumption of tea a head is 9.57 lbs in the United Kingdom; 0.61 lb in the U.S.A.; and only 0.25 lb in the six countries comprising the European Common Market. "Surely, here is a wonderful opportunity, and if we could only raise the consumption in these six European countries to only 1 lb a head a year, we would have an immediate market for another 135 million lbs of tea—this is too good an opportunity to miss," Mr. Whitaker said.

Golden Jubilee of Central Bank

The Central Bank of India, which is commemorating its golden jubilee today, was founded in

the days of the Swadeshi movement. Registered in Bombay on 21st December, 1911, it started in a modest way. The authorised capital was Rs. 50 lakhs, out of which Rs. 20 lakhs was issued and only Rs. 10 lakhs was paid-up. But, at the end of the first 12 months, the Bank's deposits amounted to Rs. 88 lakhs. By the time the Bank celebrated its 25th birthday (in 1936), its paid-up capital and reserves had risen to Rs. 2.5 crores and the deposits totalled over Rs. 31 crores. Today, the Central is the largest of the Indian joint-stock banks in the private sector. Its paid-up capital is Rs. 3.15 crores, while reserve and other funds stand at Rs. 4.17 crores, and deposits (as at 30th June, 1961) total nearly Rs. 210 crores. The directorate and management have been entirely Indian right from the start. The Bank now employs more than 12,000 persons at its head office and in the 338 branches it has in India and abroad.

Scrap Exports and Prices

Scrap shipments from India in November are placed at 27,442 metric tons, against 22,937 metric tons in October and 35,675 metric tons in November 1960. The increase over the previous month's figure is due essentially to the fulfilment of the previous commitments. The November figure brings total exports for the first 11 months of the year to 365,207 metric tons, against 302,454 metric tons in January-November 1960. The total quantity exported up to the end of November is nearly 5,000 metric tons more than the barter ceiling of 360,000 metric tons. Another 20,000 metric tons are expected to be shipped in December. The Iron and Steel Controller has extended the validity of July-December export quotas up to the end of March 1962, but no substantial use of these quotas is anticipated because of the poor overseas demand and the absence of barter incentive. Practically every exporter is said to have completed his barter allotment. Shippers feel that had there been a barter ceiling of 500,000 tonnes, the trade would have been able to negotiate business up to the end of March and it could have induced the foreign buyers to accept inferior Indian scrap even during the present dull period. Scrap prices have recorded a substantial fall over the past two months due to the continued poor foreign demand and the severe restriction on exports in India. The quotation for heavy melting scrap in Bombay has come down by about Rs. 15 a metric ton from Rs. 155 to Rs. 140 a metric ton. The fall is particularly pronounced in the case of No. 2 bundle grade which is currently quoted around Rs. 95, against Rs. 150 in October. Current prices are said to be the lowest since 1958. The trade does not expect any appreciable increase in the demand for scrap from exporters in the immediate future. Japan—the principal buyer of Indian scrap—continues to keep off the market. Scrap prices abroad are also reported to have declined by about £1 a ton. The prohibitive freight of 75s a metric ton has made export business all the more difficult. The Scrap Traders and Exporters Association is trying hard to persuade the Government to take measures which can stimulate exports.

Dispute on Bonus

A recent appeal to the Supreme Court concerning bonus by a small partnership firm called the Gujarat Engineering Company calls for some comment. One of the matters for appeal was the amount allowed for remuneration to the two partners of the firm in the calculation of the "available surplus" for bonus. These partners worked whole-time in the firm and Rs. 800 was claimed as the remuneration of each. But the workmen opposed this and the tribunal in its award allowed only Rs. 500 for each partner as a charge against the gross profits. Although the Supreme Court commented on the fact that because the partners worked whole-time, there was a considerable saving in expenditure which would otherwise have been incurred if they had engaged managers or sales agents, still the Court did not see fit to go into the question of how much should be allowed as partners' remuneration. It merely observed: "We shall accept the figure allowed by the tribunal for the purpose of the present appeal with this observation that this amount will be open to reconsideration in later years if there is dispute as to bonus."

When one considers the remuneration paid to non-working directors, it is surely hard to say that Rs. 800 a month for working partners is unreasonable. Obviously, the Supreme Court did not want to be drawn into taking a decision on the point. But from the point of view of the maintenance of industrial peace, which is the objective of the present machinery for industrial adjudication, what is one to make of a decision which obviously invites a further dispute and a further adjudication next year? The original tribunal award in this case is an example of such gross bias that it invited an appeal. Apart from a mistake in the award, which allowed 9 percent return on capital but calculated the available surplus on the basis of 6 percent, the

conclusion as to the amount to be paid in bonus was wholly unsupportable. On a corrected calculation, the available surplus—after the usual deductions from the gross profits—was shown as Rs. 16,611, whereas the four months consolidated wages awarded as bonus (since basic wages and dearness allowance are not separated in this firm) amounted to Rs. 13,332. No allowance was made for the half month's wages already paid by the firm as bonus and, although the point appeared in evidence, no account was taken of the fact that the firm had to pay back instalments of Rs. 5,000 a year on a Government loan—a liability which could not even be met if the four months' pay as bonus was to be given. The Supreme Court reduced the bonus award to one-and-a-half months' consolidated wages, which, with the bonus already paid, would cost the firm about Rs. 6,666, or less than half the amount awarded by the tribunal.

This case underlines the need for the Bonus Commission now sitting to give some guidance as to the amount of the available surplus which may be awarded as bonus. While in many instances, industrial tribunals have allowed about 50 percent, there are also cases such as this where almost the entire surplus has been awarded as bonus. This is strange economics and no way to encourage new and small industries.

Go-slow Tactics Condemned

Industrial courts, as a whole, have frowned on the practice of "go-slow" as trade union tactics, and even labelled it an unfair labour practice. Still in Bihar a curious situation developed because a special committee, appointed by the Bihar Central Standing Labour Advisory Board in 1951 to go into the question, recommended that "go-slow" by workers should be treated on par with strikes. It tried to regulate the practice to some extent by laying down that workers should not resort to this practice without at least seven days' notice, nor during the pendency of conciliation proceedings, but it even went to the length of recommending that "go-slow" due to malpractices by the management would be justified. The Government of Bihar accepted the recommendations of the committee, and apparently they had not been challenged until a recent appeal to the Supreme Court by the Bharat Sugar Mills Ltd. No action had been taken, in spite of the Government's views, to amend this Company's standing orders, which made deliberate delaying of production a misconduct, and the case originally arose over the question of whether or not certain workers whom the Company sought to dismiss according to standing orders were actually involved in deliberate "go-slow" action. The details of the case are not important, but the Supreme Court's comments on the practice are, and presumably they will demolish the Bihar Government's stand that "go-slow" should be treated like a strike.

"Go-slow", said the Supreme Court, "which is a picturesque description of deliberate delaying of production by workmen pretending to be engaged in the factory is one of the most pernicious practices that disconcerted or disgruntled workmen sometimes resort to. It would not be far wrong to call this dishonest. For, while thus delaying production and thereby reducing the output, the workmen claim to have remained employed and thus to be entitled to full wages. Apart from this also, 'go-slow' is likely to be much more harmful than total cessation of work by strike. For, while during a strike much of the machinery can be fully turned off, during the 'go-slow' the machinery is kept going on a reduced speed which is often extremely damaging to machinery parts. For all these reasons, 'go-slow' has always been considered a serious type of misconduct."

Regulating Cotton Textile Trade

The long-term solution to the problems in the field of cotton textiles is to be based on fair multilateralism rather than on unilaterally imposed quota restrictions. This is the conclusion reached by the committee charged by the G.A.T.T. Conference on International Trade in Cotton Textiles, held in July, to define long-term remedies. It is understood that agreement was also reached on the principle that the long-term arrangements for the cotton textile trade should broadly follow the pattern of the one-year freeze introduced as a short-term remedy and in operation since the beginning of October. It includes heavy sanctions against offenders, Britain, which on account of the Hongkong interests, has been the only one of the 16 participants at the international conference not to subscribe to the short-term arrangements, was hopeful to adhere to it shortly. An understanding appears to have been reached with the United States through diplomatic channels. It satisfies Hongkong that it will not be subjected without good cause to sanctions under the one-year freeze. However, the committee on long-range cotton textile trade seems to have been unable to move far from generalities to specific formulas.

The decisive work has been entrusted to a technical sub-committee which is to start its work in Geneva on 11th December. The full committee is to be reconvened on 29th January. Under its mandate, it has to submit recommendations for long-term solutions not later than 30th April, 1962. A statistical sub-committee has also been set up to prepare the required data for technical work. The statisticians will start working right away.

Self-help in Housing

It has been reported that a five-man U.N. mission would be visiting Lucknow in the third week of December to survey and evaluate self-help in housing methods and practices obtaining in the State. The mission is headed by Mr. Alfred Alcock, and consists of Mr. K. N. Misra, I.L.O. expert member, Mr. James Macgair, Mr. C. B. Patel and Mr. Tobosa of the World Health Organisation. The need for self-help in housing was considered by the recent Housing Ministers' Conference in Bhubaneswar. Mr. Gopala Reddy, Central Minister for Housing and Works, said that the entire housing project is founded on certain assumptions. Better housing, he said, particularly in the villages, must be a reflection of the increase in the villagers' prosperity. The capacity to invest in a house and maintain it must first be taken into account. The capacity to invest in a house must not be measured in isolation. It should be related to such considerations as whether the surplus income could not be put to more productive use on animal husbandry or more intensive use of land, for agricultural purposes. Mr. Reddy even struck a note of despair when he said that "the cold logic of cement and steel and a blithe

NOTICE

There will be no issue of CAPITAL on 28th December, 1961, as the markets will be closed for the Christmas holidays. The first issue of the New Year will be published on Thursday, 4th January, 1962.

unconsciousness of economy rob the entire project of its social and emotional content."

The truth of this is perhaps best illustrated in the subsidised industrial housing scheme. Industrial workers do not live in these houses because the rents are high, so slum clearance presents special difficulties. As Mr. Reddy said: "The fixed notion that the slum dwellings of mud and thatch must necessarily be substituted by steel and cement, that there is no alternative but to pay, the market value of the land, in spite of the fact that the market rate is high because the land has been misused for so long, are factors which will ruin the economics and take the social content out of any slum clearance project." The answer to most of these difficulties is subsidy and more subsidy. Thus, for instance, a subsidy is now proposed, in the form of a concessional rate of rent, for the housing of persons with an income of less than Rs. 1,800 a year. Building sites are proposed to be given free of cost to agricultural labourers. All these inducements, however, are a poor substitute for self-help which cannot manifest itself until the price of building materials is first substantially reduced. In other words, there is no escape in the last resort from the cold logic of cement and steel.

T.U.C. Economic Policy

Participation in Mr. Selwyn Lloyd's proposed Economic Planning Council by the Trades Union Congress may be more helpful than was originally expected. The economic thinking of the General Council has recently been given a sharp push towards realism which could make national planning a much more viable idea. This is revealed in a huge report, written by the Economic Department at Congress House, and approved by the General Council. The T.U.C. plans to use it as a kind of Economic Bible for the future. The Economic Committee began drawing it up long before the U.K. Chancellor showed his interest in planning, but this has given it even greater relevance.

It is not intended to publish the report, which is being enthusiastically discussed by union leaders, but two hard truths are set out there for the first time. One is that if economic expansion—long the cardinal point of the T.U.C. economic dogma—is really to be the first priority, workers in declining industries will have to be far more willing to change their jobs. Temporary hardship, the report says, would have to be cushioned by higher unemployment pay, compensation, and other social benefits. Secondly, higher investment in the short-term will mean a slow-down in the rate of increase in consumption. This can partly be met by higher taxation, but the unions will also have to stop for a time going all out for straight wage increases,

and devote part of their energies to winning benefits which would not put an immediate strain on consumption—pensions, sick pay and possibly deferred "rises" in the form of Government bonds.

Garhmukteswar Bridge Opened

The States of Uttar Pradesh, Delhi and Punjab will be permanently linked by road throughout the year with the inauguration of the Garhmukteswar bridge by the Prime Minister, Mr. Nehru. The project was sponsored by the Central Ministry of Transport and executed by the U.P. Public Works Department. Built at a cost of Rs. 1.15 crores, the Garhmukteswar bridge, which, incidentally, is U.P.'s longest road bridge, facilitates round the-year road communication between the three States which used to be suspended on this route from June to November. The bridge will provide the missing link in the national highway connecting Delhi with Calcutta via Moradabad, Bareilly, and Lucknow. The other three road bridges across the Ganga are in Banaras, Allahabad and Kanpur. Besides goods traffic, there will also be increased passenger traffic over the Garhmukteswar bridge. The U.P. Transport Department has plans to operate 22 roadway coach services on the route. Four of the services would be operated direct, between Delhi and Naini Tal.

Garhmukteswar is well known as a pilgrim centre where over a million devotees gather for dip in the Ganga on full moon day in November. This is also the occasion for a ten-day fair which is the biggest rural fair of its kind in north India. In order to provide safety to the pilgrims and to avoid potential impediment to fast traffic on the national highway, an under-passage has been specially constructed towards the Delhi-end of the bridge. The 13-span bridge is a prestressed concrete structure designed for the free movement of the heaviest vehicles up to 70-ton tankers. It compares with the carrying capacity of the previous boat bridge which was 3 tons. The survey work for the project was taken up in 1950 and the plan for construction finalised in 1955, but actual construction was held up till 1958 due to protracted wranglings between the Central and U.P. Governments. The latter, it is said, demanded that the responsibility of calling for tenders and accepting them must belong to it as it was executing the project, although it was sponsored by the Centre.

Checking Textile Imports into U.K.

The chairman of the Fine Spinners and Doublers group, Mr. William T. Winterbottom, said recently that if imports not only of finished goods but of yarns and cloths are not restricted, it may be necessary "to take the mills to the cheap labour." He was speaking at the annual meeting of the Calico Printers Association in Manchester. His group has already temporarily suspended the re-equipment programme pending clarification of the import position. Since then, imports from India, Pakistan and Hongkong have increased. If the position becomes untenable, the only solution would be to consider taking the mills to the cheap labour. That is the only way to compete.

Fine Spinners and Doublers is already in the Common Market in the sense that it has French mills. If it switches investment in new machinery another possibility to examine would be increased investment there. He added: "There is no immediate intention of doing anything of this sort." Mr. Roger M. Lee, chairman of the Calico Printers Association, said that the time has surely come when the Government would have to take action to curb imports of finished goods if the textile trade is to continue. Cheap imports of cotton cloths are not the only threat to the industry. Lancashire's own declining exports also need Government action. The Government should give practical help rather than exhortations for increased exports. The "Little Budget" fuel tax rise would add nearly £200,000 a year to the Association's costs.

Britain and the Common Market

The importance of expanding exports to the European Common Market countries because of possible adverse effects on Britain's balance of payments, if the U.K. joins the Community, is stressed in a booklet, *The Common Market, and the United Kingdom*, published by the Westminster Bank. Under the Community's common external tariff, duties would probably be imposed on some raw materials which now enter the United Kingdom duty-free. Such additions to costs would have unfavourable effects on exports, although British manufacturers would be able to import reduced costs of some of the semi-processed and finished goods they need. Further pressure on Britain's balance of payments would follow if

"Do LIC actually invest at the rate of Rs. 1½ million a day?"

"More! In fact they're the largest investors in the country."

PEOPLE ARE TALKING ABOUT LIC

With LIC's mounting business turnover, comes a steady increase in its premium income. A large part of this income is invested in the country's economy—averaging more than Rs. 1½ million every day.

These investments stimulate the economy, creating new wealth. By helping to finance industries LIC catalyses more jobs, more incomes and more goods.

Today there is increasing recognition everywhere of the part which LIC is playing towards domestic and national stability.

Life Insurance Corporation of India

ASPLC-24

seemed probable, the present benefits of Commonwealth preference were lost. A reduction would be suffered in exports to other Commonwealth countries and any net increases in imports from the European Common Market would cause a rise in the U.K. import bill. These changes in Britain's trade would have to be offset by a large growth in exports to Europe and elsewhere.

If Britain joined, some of her existing industries would decline or even disappear, while others would expand. "It is self-evident that unless readjustments of this kind occur in all member countries, the full benefits of the union are not being realised." The Westminster Bank feels that the steel industry, chemicals, some sectors of motor-vehicles—such as sports cars and commercial vehicles—woolens, textiles, electrical and general engineering, rubber manufactures, knitwear and clothing are likely to benefit, whereas non-ferrous metals, aircraft, oil-refining, building materials, glass, scientific instruments and sports goods are in a more doubtful position. Industries likely to lose most heavily are cotton, rayon, leather, watches and clocks, and footwear and toys. The review points out that the "European" outlook already apparent on the Continent has frequently resulted in agreements between French, German and Italian firms to share markets and to specialise in sectors of production to obtain the advantage to share markets and to specialise in sectors of production to obtain the advantages of "long runs" from manufacturing capacity. There is likely to be a spread of such arrangements to include U.K. firms. Smaller Continental firms—particularly in Belgium and Holland—would probably be interested in marketing agreements. It is not generally realised how high British tariffs were on imports of many manufactured goods, and U.K. manufacturers might have to face severe competition in what has hitherto been a well-protected home market. On the other hand, the creation of the common external tariff would, in many cases, strengthen U.K. protection against imports from other parts of the world.

Tourism in the U.K.

Although tourism is an important earner of foreign exchange for Britain, it does not play the part it should as far as the balance of payments is concerned. British tourists spent \$49 million more in other countries last year than was earned from foreign tourists in the U.K. Expenditure by British tourists overseas was \$574 million—\$90 million more than in 1959. The overseas currency earnings of the U.K. tourist industry, at \$525 million last year, were, however, \$97 million higher than in 1959, so the actual deficit on tourism in 1960 was \$7 million less than in the previous year. Earnings were enough to cover half the deficit on visible trade, but expenditure by British tourists abroad was higher than that of any other European country except West Germany (\$679 million). American tourists spent \$1,744 million in other countries, and Canadian \$632 million, of which \$194 million was jointly spent in Britain.

These figures, published in a report by the Organisation for European Economic Co-operation on tourism in Europe, show that the United Kingdom's receipts from tourism accounted for 5 per cent of the receipts from exports in 1960. Britain's income from tourism was exactly the same as that of France. Italy was the only European country to earn more, \$642 million, which represented 18 per cent of total export receipts, compared with 8 per cent for France. For Spain, the \$297 million earned by the tourist industry covered 40 per cent of export receipts. The total number of visitors to Britain last year was 1,669,300—an increase of 19.7 per cent on 1959. The average increase for all the O.E.E.C. countries was 15 per cent and this figure was exceeded in Spain (46 per cent) and Portugal (19 per cent) as well as in the U.K. The number of British subjects, who went abroad for their holidays in 1960, has been estimated at 2.7

million (excluding holidays in Ireland). U. S. residents travelling to Europe and the Mediterranean area increased by 18 per cent last year to 832,000. Of these, 602,000 crossed the Atlantic by air and 230,000 by sea. On average, foreign tourists spent more time in Britain than in any other European country. Their 33 days in the U.K. compares with 12 in Ireland, five in Australia and Italy, and four days or less in West Germany, France, Holland and Switzerland.

Fodder Research in U.P.

The U. P. Government has decided to establish a Forage Research Institute in Mathura district at an estimated cost of Rs. 7 lakhs. The Institute will consist of four sections—fodder agrostology, fodder production, fodder evaluation and fodder chemistry. An area of 400 acres has been marked out for the experimental work on indigenous grasses and foreign varieties of fodder seeds. The fodder shortage in U.P. has become acute after the abolition of zamindari which led to the indiscriminate cultivation of pasture lands. The increase in the cattle population has outstripped the available fodder supply. So the third five year plan includes several schemes for the establishment of fodder banks as well as a Forage Research Institute. It is, however, doubtful whether a policy

NOTICE

With this week's issue of CAPITAL is being issued a supplement of 168 pages, the Annual Review of Trade, Commerce and Industry. Besides essays on specific industries such as jute, tea, coal, cotton textiles and sugar, the Review contains exclusive articles by well-known authors. Sir Theodore Gregory writes about the third five year plan, and Mr. C. D. Deshmukh discusses the problems of educational progress in India. Mr. G. L. Mehta describes the activities of the Indian Investment Centre; Mr. G. D. Birla shows how high production costs are retarding Indian exports; and Professor B. R. Shenoy examines the implications of deficit financing in the third plan. Mr. Geoffrey Tyson writes about Indian business in the U.K., and Dr. P. S. Lokanathan discusses the defects of plan models for economic growth. Professor C. N. Vakil and Mr. A. N. Bhagat show how India's exports are likely to be affected if Britain joins the European Common Market, while Mr. Neil McInnes examines how capitalism is adjusting itself to meet the communist challenge. Particular aspects of the third plan are discussed in detail, Professor P. C. Jain writing on the problem of raising resources, Mr. G. M. Laud on how socialist planning has hampered the growth of the private sector and Professor R. J. Taraporevala on reforms in the tax structure. There is an article on road transport by Mr. M. R. Masani, on the Durgapur steel project by Mr. D. J. Bell, and on advertising by Mr. G. H. Gates-Reed. Mrs. M. Sur writes about the recent trends in labour relations, while Dr. N. Das discusses the concept of fair wages for industrial workers. Other articles review the past year's experience in such sectors of the Indian economy as life insurance, general insurance, banking, the stock markets and the freight markets. The supplement is being distributed free to all registered subscribers. Additional copies at Rs. 5 each, plus postage, may be obtained from the Manager, Capital, 5, Mission Row, Calcutta 1. Orders for extra copies should be placed early.

of developing fodder resources can be completely successful as long as no proper solution is found for the problem of surplus cattle. Gosadans, about 50 of which have so far been established, are saddled by heavy overhead costs. According to the 1956 Livestock Census, there were 306 million farm animals. In addition, there were 39 million sheep, 55 million goats and 8 million other animals. Apart from their low productivity, it would appear that their economic value from the point of view of hides and skins is also poor. Due to the absence of an adequate number of modern slaughter houses and abattoirs, the bulk of hides produced in India is what is known as the "fallen" type. There is also a dearth of facilities for flaying and scientific curing with the result that hides and skins exported from India are sold at low prices abroad. Nevertheless, hides and skins exports are expected to rise in the third plan period from Rs. 28 crores to Rs. 34 crores.

Implementing Sugar Wage-scales

The Central Labour Minister, Mr. G. L. Nanda, said recently that if defaulting sugar mills did not implement the recommendations of the Sugar Wage Board, the Government would have to consider taking other steps. But he expressed the hope that in due course it would be possible to get

the recommendations implemented with the consent of the mills in the same way as the textile mills were persuaded to do concerning the textile Wage Board award. It is not only in U. P. that the sugar mills have lagged behind in implementing the recommendations. In Maharashtra, according to a statement by the Central Deputy Labour Minister, Mr. Abid Ali, out of 26 mills only one had implemented the new wage-scales. Most factories in U. P. seem to have either pleaded inability or have asked for time.

Workers in sugar factories in U. P. are dissatisfied with the whole process. So a writ petition was filed in the Allahabad High Court on their behalf by the U. P. Chini Mill Mazdoor Federation and the U. P. branch of the Hind Mazdoor Sabha. The petitioners asked for the issue of a writ certiorari quashing the notification of the U. P. Government appointing a committee to adjudicate on any disputes arising between workers and mills in implementing the decisions of the Wage Board. The notification, it was contended, was null and void in as much as the State Government had no power to constitute any committee for the purpose of implementing the Wage Board's decisions. The High Court recently rejected the petition on the ground that it was premature. While it is true that the workmen addressed their employers in the matter of their "fitment and scales", it is also true that none of their applications was rejected by the employers. It was not, therefore, possible to hold that any industrial dispute existed, so there was no question yet of the Committee appointed by the State Government exercising jurisdiction in the dispute.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

- Rs. 100 each
A. B. Kingsley; Burmah-Shell Oil Storage and Distributing Co. of India Ltd.
- Rs. 51
F. F. Richardson.
- Rs. 50
Associated Electrical Industries (India) Private Ltd.
- Rs. 47
Staff of Saxby and Farmer (India) Private Ltd.
- Rs. 30
R.J.S.F.
- Rs. 20
Anonymous.
- Rs. 10 each
G.W.M., K. M. Gherda, J. Ritchie.
- Total Rs. 428.
- Previously acknowledged Rs. 4,211.50.
Grand Total Rs. 4,639.50.

INSPECTION OF MINES

WE note in the issue of our British contemporary, *The Mining Journal*, (Railway and Commercial Gazette) for November 18th, an article entitled "Report on Indian Mines in 1960". In this article there is much of interest, but the point to which we call attention is contained in the closing paragraph, viz., "this department (Mining) is constituted on a basis which is utterly inadequate to the importance which India has already assumed, and still more to that position which she is likely to reach in the future as a mineral producing country". Our contemporary may be interested to know that we ourselves in our issue of October 10th placed before the public a scheme for efficient inspection and control of the mines in India, giving our reasons in full for the proposal. A staff such as indicated by us, viz., a Chief Inspector and four Inspectors of Mines would be able to deal more or less efficiently with inspection of mines, which would be their chief and most important duty, and compile reports of interest to the public such as our contemporary desires. At present the staff is not sufficient to investigate the accidents that occur! We are at a loss to understand the delay in making Act VIII of 1901 a real working act! We submit that a permanent staff of Inspectors should be appointed, that General Rules defining the duties and responsibilities of all engaged in mining should be promptly published and that forms of returns of output, labour employed, and accidents should be prescribed. We may then expect to see efficient control of the mines, readable and interesting reports, and the Government of India may be spared the reproach of a department "utterly inadequate".

CAPITAL

19th December, 1961

A Ditcher's Diary

THIS WILL BE THE LAST ISSUE of Capital to APPEAR in 1961, and I must take the opportunity of wishing all my readers a Merry Christmas and a very Happy New Year. On the whole, I suppose, 1961 has been neither better nor worse than might have been expected, and I cannot think of much to say about it one way or the other. What is occupying my attention at the moment is the prospect for 1962. There is a good reason for this because we have planned some rather interesting changes in Capital as from our first issue in the new year. For a long time now we in this office have been well aware of the disadvantages of the present shape of the paper, this having been decided in a century when fashions ran to long columns and narrow pages, and when briefcases were not the institution they are today. It will not have escaped the dedicated reader of Capital that the general appearance of the paper has changed a great deal in the past few years. But it has not changed enough to bring our style and layout to the point where we can truthfully say we are really up to date. I am afraid that is not going to be possible for some time even with a change of shape, because in these days of import restrictions we cannot get the choice of type faces we would need for a completely modern presentation. But with our present shape we could never hope to do this even when times improve, so our next issue will be about two inches shorter than this one and just a shade wider. I hope our readers will rapidly get used to the idea and will approve of seeing our news pages in four columns instead of three. Certainly they will find their copy of Capital fits more conveniently into their pocket or briefcase, and we might even have found an answer to that complaint I frequently hear that we are not an ideal size for reading in bed. Devotees of this diary should be reasonably satisfied with the new arrangement because Ditcher will in future be a little longer; not much, perhaps just another paragraph or so.

EVEN LAST WEEK, WHEN I WAS COUNSELLING caution in the dispute between India and Portugal over Goa, I had the feeling that really the outcome was as predictable as, or so I tried to point out, the occasion was unpropitious. I also had the same feeling about the comments to be expected on the subject from Mr. Brezhnev, the latest President of the U.S.S.R. to visit India. Sure enough, Mr. Brezhnev weighed in gleefully with the usual communist line about the liquidation of colonialism—always the western variety, of course. But I wonder if he noticed that before taking action over Goa India rejected the absurd fiction that the colony was in fact a part of metropolitan Portugal, and I further wonder whether he was acute enough to draw the parallel with Russia and her own Asian possessions. Not that such a realisation would be likely to lose him a moment's sleep. As a good communist he will not see anything contradictory in condemning another country for practising what his own does on a larger, although admittedly more successful, scale. Perhaps Mr. Brezhnev would point out that while Portugal is small and weak, Russia is big and strong, so the circumstances are entirely different; and there I would agree with him wholeheartedly, because this is, in fact, the only difference between the two sets of circumstances. For instance, the relation-

ship between Portugal and Goa has an almost exact parallel with that between Russia and, say, Uzbekistan. Both Goa and Uzbekistan were acquired in the process of imperialistic expansion. Both are instances of an Asian region with a distinctive culture being forcibly subjected to a predominantly European influence. In both, Europeans still hold the positions of primary power and responsibility. Neither colony has enjoyed the fundamental right of being able to express its true sentiments about its association with the metropolitan power in free elections. Perhaps Mr. Nehru will drop the hint about all this to Mr. Brezhnev. But I doubt it because the Prime Minister is far too aware of the direction in which India's true interests lie. These are, after all, that this country should preserve the warmest possible relations with the Soviet Union to offset the weight of both Pakistan and China. And when the necessity is as great as this, straight talking is obviously completely out of place.

WHEN ALL INDIA RADIO INTRODUCED THE SARDAR Patel memorial lectures some years ago, the inspiration obviously was the Reith Lectures of the R.B.C. Not until Dr. Verrier Elwin's selection this year was the model approached in terms of quality and scholarship. I heard a part of the broadcast on Wednesday week and have since read the fairly intelligent reports in the Delhi papers. "A Philosophy of Love" seemed an unpromising title, especially when one remembered A.I.R.'s meaning Dr. Keskar's, easily inferable attitude to love. Was not the subject an invitation to a spate of platitudes? In the event Dr. Elwin produced three hours of sustained fascination. If I may say so, the entire broadcast was a work of art—and love. Dr. Elwin evaded no aspect of love but treated it all with such learned discretion that even A.I.R., I imagine, had no trouble with the script; and, of course, everyone knows that A.I.R. objects to just about everything. The immensity of Dr. Elwin's scholarship had long been known. What I admire in him most is the exceedingly light manner in which he carries his learning and understanding. In the Patel lectures is to be found a formidable array of quotations, gleaned from a lifetime of study in the philosophies and literatures of more than one continent; but never did he resort to a quotation to skirt a delicate point. It will be unfair to Dr. Elwin to suggest that he put in those bits about Mahatma Gandhi and Sardar Patel as a formality, although the latter at least is remembered for qualities other than love. In Dr. Elwin's treatment of the subject love did not become an abstraction, a mere idea; and I have seen some pretty loveless discourses on love. Nor was his manner French, like Stendhal's and André Maurois's although, inevitably, Pascal had to be quoted more than once. Dr. Elwin brought to his broadcast a rare warmth which could only come from a man who has not only read and thought about love but also experienced love in its many and sometimes mutually exclusive manifestations. I am looking forward to the publication of the lectures in book form, for I am certain that the full text will be as much a treasure as the broadcast was a listening pleasure.

IT IS NOT VERY OFTEN THAT I HAVE THE TIME TO GO to the Bengali theatre, but I am very glad I went

along the other day to see Bohurup's production of Tagore's Visarjan. The play, I understand, was written many years ago; itself an adaptation of a novel written in early youth. (I am told that the theme came to Tagore in a dream.) I will not claim that I followed much of the dialogue, mostly in verse of a sort. I probably missed a great deal for that reason. So much the greater, then, my admiration for the producer and his excellent cast, for the play was enjoyable to the highest degree even without the aid of dialogue. What appealed to me most was that, by some subtle emphasis here and there, a rather old theme has been given a tremendously contemporary impact. I am not competent to write authoritatively on the hindu dogmatism of so many years ago; but I know enough to appreciate the force of orthodoxy in Raghupati, a rôle once played by Tagore himself and now made entirely convincing by Amar Ganguly. Except for the ending, in which the rabid priest is converted to some sort of humanism, the play is superbly handled. Sombhu Mitra's Jaisingha reminded me of Hamlet, torn between one loyalty and another. The King of Tripura looked somewhat like Jesus Christ, resembling Tagore himself in youth. The barren Queen is played by Tripti Mitra, an actress of the highest order. But it is not in individual performance that Visarjan deserves the highest praise. Its claim to wider recognition is that Sombhu Mitra is doing the same kind of work on the Bengali stage as Satyajit Ray is doing on the Bengali screen; and this is not praising Sombhu Mitra too much. The importance of dialogue in most plays limits somewhat the appeal of Bohurup's productions to non-Bengali audiences; but I am happy to learn that the group's recent performances in New Delhi were a complete success. Mr. Humayun Kabir, I find, has invited plays on national integration and offered prizes for them. We may be sure that the entries will be insipid. Good plays such as Bohurup's may help integrate the country, whatever their themes. Bad plays, even on the noble subject of national integration, can only bore people.

FOR THIS YEAR'S FIRST PRIZE FOR ASININITY I should like to recommend the official notice put out by the Posts and Telegraphs Department to warn the unsuspecting that their agreement with the President of India over their telephone connection has expired. It is in three parts. The first is a warning and ends with the words "...you are hereby given notice that the contract shall stand determined with effect from the date following the date of expiry of seven days hereof." After one has sorted that out it goes on to say: "On the determination of the connection as aforesaid, your telephone is liable to be disconnected. If, however, you propose to have the telephone connection you shall (sic) have to make a fresh application for the purpose as required by rule 414 ... Nevertheless, the telegraph authorities, in relaxation of the said rule, are prepared to allow you to retain the connection, without payment of fresh installation fees, if you desire to retain the connection on the terms and conditions set out in the aforesaid rules." Then part three says: "Please note that if you do not give intimation to the undersigned to the contrary it will be assumed that you desire to continue the connection on the aforesaid terms and conditions and your telephone will not be disconnected." So now you can relax again.

THE NATIONAL NEWSPRINT & PAPER MILLS LIMITED

NEPANAGAR (M.P.)

CHAIRMAN REVIEWS PROGRESS

The Fourteenth Annual General Meeting of The National Newprint & Paper Mills, Ltd., was held at Nepanagar, M.P., on Wednesday the 6th December, 1961.

As Sir A. Ramaswami Mudaliar, Chairman, could not be present at the meeting for personal reasons, speech prepared by him was read out by Mr. S. N. Mehta, I.C.S., a Director of the Company, who was elected as Chairman of the meeting.

Gentlemen,

I have great pleasure in extending to you a cordial welcome to the 14th Annual General Meeting of the Shareholders of the National Newprint and Paper Mills Limited.

The Directors' Report, the Balance-Sheet and the Audited accounts for the year ended 31st March, 1961, along with the comments of the Comptroller and Auditor General have been in your hands for some time and with your permission I shall take them as read.

As the Balance-Sheet and Profit & Loss Account has disclosed to you, the past year may be considered to have been a reasonably satisfactory year. The output was 23,029 tons of newsprint registering a slight increase over that of the previous year. The gross turnover amounted to Rs. 246,73,923.52 and the working results show a net profit of Rs. 32,94,035/- after providing for depreciation and Development Rebate reserve. Despite an increase in the gross turnover the profit during the year is less than last year due to all round increase in cost of chemicals and raw materials and increase in cost of power and steam. This profit has been utilised to reduce the debit balance at the beginning of the year which now stands at Rs. 65,67,818.00.

With the completion of this year, the Second Five Year Plan came to a close and so I thought it fit to give in brief the performance of the Company during the last five years in a tabulated form—

	1956-57	1957-58	1958-59	1959-60	1960-61
Gross turn over	Rs. 106,67,950	Rs. 129,34,941	Rs. 228,18,599	Rs. 235,25,412	Rs. 246,73,924
Depreciation	38,11,001	35,49,803	32,41,074	31,25,322	29,02,493
Repayment of loans	Nil	Nil	10,13,752	102,73,000	25,00,000
Provision for Taxation	Nil	Nil	1,67,000	Nil	Nil
Net Profit	114,90,670	(33,38,114)	36,82,758	37,76,279	32,94,035

Financial Position Improving

You will find how the financial position of the Company has been steadily improving. Adequate provision has been made for depreciation every year. The entire interest bearing loans due to the Union and Madhya Pradesh Governments have been repaid and out of the interest free loan of Rs. 111.19 lakhs two instalments have been paid leaving a balance of Rs. 88 lakhs to be paid in 8 equal annual instalments. I trust that the shareholders will agree

that the general financial picture can be regarded as distinctly satisfactory.

Due to various factors we have still not been able to consistently attain the target of production of 100 tons per day though on several occasions it has been possible to reach the target of production of more than 100 tons a day. Efforts continue to be made in this direction to step up the production.

As I mentioned last year we are still having difficulties in the procurement of chlorine supplies which have to come from distant places like Delhi, Bombay and Ahmedabad. Your Directors therefore decided to have our own plant for the manufacture of chlorine and caustic soda. We have obtained a licence for the installation of a chlorine caustic soda plant of 10 tons capacity. The scheme has been approved and orders for the requisite plant and machinery have been placed. The work will be taken up and completed as expeditiously as possible. There is a proposal for doubling the capacity of the plant to step up production to 200 tons per day during the Third Five Year Plan. The availability of raw material has to be examined carefully before such a scheme can be launched. This is under active examination.

Rising Demand for Newsprint

The demand for newsprint has been increasing and the quantity supplied to newspapers is being gradually stepped up. During the year 13,250 tons have been supplied to the newspapers as against 9,375 tons supplied in the previous year and during the current year a quantity of 10,646 tons have already been supplied up to 31st October 1961.

Similarly supply of newsprint to the printers and publishers of text books and the books of general interest gets the next priority and the balance of production of nearly 8,841 tons was distributed as duty paid goods to dealers through our various Agents and Distributors and to Government customers. I would like to thank all the newspapers, our Agents and other customers who have put up with our shortcomings and have encouraged us by using our product.

The welfare of staff continues to be given attention by the Directors. 100 'P' type and 10 'C-2' type quarters have been completed and occupied. The Bachelors' Hostel has also been completed. An incentive award equal to a month's pay and allowances to all employees getting a basic pay of up to Rs. 500/- subject to a maximum of Rs. 325/- was given during the year. In addition the Dearness Allowance was increased by Rs. 7/- raising it from Rs. 50/- to Rs. 57/- to all the employees getting a basic wage not exceeding Rs. 250/- with effect from 1st October 1960.

There has been heavy migration of staff. Several senior and old technicians left and the burden has fallen on the others not very senior to take up their duties. They have all done well and I must take this opportunity to recognise the enthusiastic help and co-operation that has been extended by all the employees both on the factory side and in the administrative office and I should like to convey warm thanks to all of them.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 21st December, 1961.

CAPITAL, 21st December, 1961.

Money

THE CALCUTTA MONEY MARKET

CALL RATE HIGHER

Wednesday, 20th December.

THERE has been an appreciable increase in the level of advances in the Calcutta money market during the past week, chiefly due to higher demand from the jute mills. The cotton industry and the engineering and iron and steel industries have also increased their offtake, but that of the sugar mills remains about the same, and call for accommodation against grains and seeds storage has fallen slightly. In the interbank market, money has suddenly become very tight, probably due to the approach of tax payments. The official call rate is between 4½ and 4¾ percent.

The exchange market has been active during the past week, largely on account of a substantial increase in gunny bills. Remittance demand has been moderate. In the London money market, the pound weakened further owing to continued selling pressure from Continental operators. Closing quotations were worked down against all major currencies, with the exception of the Dutch guilder.

BULLION WAS QUIET IN THE PAST WEEK DUE TO political uncertainty. Silver declined from the previous week's level of Rs. 243.25 to 241.75, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 207.25. The London and New York prices were 87½ and 102.75 cents.

Gold was subdued in sympathy with silver and the price fell from Rs. 143.50 to Rs. 141.25. The sovereign at Rs. 99.25 showed a loss of 25nF.

DURING THE WEEK ENDED 15TH DECEMBER, GOVERNMENT of India Treasury bills for Rs. 1,52,70,00,000 were sold in favour of the Reserve Bank.

THE RETURN OF THE RESERVE BANK OF INDIA FOR the week ended 15th December, 1961 showed a rise of Rs. 16 lakhs to Rs. 1,960.43 crores in the total note issue, but active notes fell by Rs. 11 lakhs to Rs. 1,947.78 crores. Notes held in the Banking Department consequently rose by Rs. 27 lakhs to Rs. 12.65 crores. Deposits of the Government of India declined by Rs. 2.45 crores to Rs. 51.31 crores but other Government accounts rose by Rs. 17.13 crores to Rs. 27.42 crores. Balances of commercial banks at Rs. 77.43 crores showed a rise of Rs. 3.10 crores. Balances held abroad improved by Rs. 1.65 crores to Rs. 31.58 crores. Investments were Rs. 30.11 crores larger at Rs. 209.74 crores. Other loans and advances increased from Rs. 132.36 crores to Rs. 135.31 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1.30 crores (Rs. 70 lakhs). Ways and means advances stood at Rs. 64.66 crores, against Rs. 72.10 crores.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 19th December. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 1st January, 1962, or up to 11 a.m. on 2nd January, 1962 where the former date is a holiday.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 20th December to 29th December at Rs. 99.391 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 13th December to 16th December amounted to Rs. 15,50,000.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 8th December, 1961, shows a drop of Rs. 3.89 crores to Rs. 528.16 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 12.98 crores and Rs. 5 lakhs to Rs. 253.36 crores and Rs. 9.29 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 67 lakhs to Rs. 244.51 crores. Cash and balances are, in consequence, shown at Rs. 23.99 crores, or Rs. 66 lakhs higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 8th December, 1961, shows Demand and Time liabilities at Rs. 847.34 crores (Rs. 24.45 crores on account of borrowing from banks) and Rs. 1,152.46 crores (Rs. 18.75 crores), compared with Rs. 849.13 crores (Rs. 24.36 crores) and Rs. 1,150.48 crores (Rs. 19.91 crores), respectively, in the previous week. Cash has increased by Rs. 65 lakhs to Rs. 47.14 crores, while balances with the Reserve Bank have declined by Rs. 2.92 crores to Rs. 72.34 crores. There is a drop

Stocks and Shares

SHARE PRICES FLUCTUATE WIDELY, BUT BUSINESS REMAINS SMALL

POLITICAL UNCERTAINTIES RESTRAIN OPERATORS

Wednesday Evening.

THERE have been wide fluctuations in the stock market during the past week and the trend has become indecisive. Sentiment was subdued at first due to two factors. The first was the political situation. The second was the meeting of the committee of Stock Exchange presidents held in Calcutta just before the week-end. But Lyons Range has felt reassured since on hearing that the deliberations of the committee have been directed to improving the working of the stock markets rather than to imparting a further shock. The automatic margin system has already been introduced, and the presidents have reiterated the importance of integrating the working of the stock markets further. Steps have been discussed to bring about greater uniformity in trading practices, and the reforms are believed to have been sent to the Government for approval. It is reported that the presidents have discussed measures to restrain curb trading, but many are sceptical about this. As long as members of the stock markets are not prepared to abandon curb business themselves, the evil will not be eliminated.

The clearing today has passed off quietly. Operators are unwilling to extend their commitments, and activity has been reduced by the higher carry-forward charges. The political situation remains uncertain, so operators find it difficult to take a hopeful view. There is growing evidence of a credit shortage, and it is reliably learnt that the flow of funds from private sources has decreased. Interest charges have meanwhile risen, so the carry-forward of business has become more expensive. As the year ends, money conditions are likely to become tighter, since banks will reduce their lending and increase their liquidity for window-dressing.

Share prices have rallied at the close due to a decline in selling pressure. The speculative issues have been marked up on short-covering. Although a member is reported to have defaulted, it has not caused much nervousness because the default is considered to be a minor one. Investment business has been small, but selling pressure is also negligible. Holders are encouraged by the flow of company reports showing an increase in turnover and profits.

Indian Iron have closed at Rs. 24.15. Among engineering shares, Texmaco have fluctuated widely due to speculative manipulation. Jessop, Britannia Engineering, J. K. Steel, Indian Standard Wagon and Guest, Keen, Williams have reacted further.

Turnover in miscellaneous shares has declined considerably. At the close, prices have fallen in the absence of support. Indian Copper, Hindustan Motor, Dunlop Rubber, Indian Cable, Indian Aluminium and Rohtas have declined. Scattered support has been forthcoming for Goodyear India, Britannia Biscuits, Metal Box and Schrader-Scovill Duncan. Jardine Henderson have improved on good corporate rumours. Hindustan Aluminium and British India Corporation have met with influential support. Cement shares have become sluggish and Jaipur Udyog have been dealt in at lower prices. Tobacco shares have been sold freely and Imperial Tobacco have weakened. Paper shares have become steadier on hopes of an early rise in the price of the commodity. Orient have enjoyed influential buying on the report that the Company has been given a loan by the U.S. Export-Import Bank. Titagur are being taken on encouraging corporate rumours. Seshasayee Paper have hardened on hopes that the factory will start production soon.

Coal shares have been subdued on fears that the transport shortage will not be relieved in the near future. Talk about the production target under the third plan being increased further has had no effect. At present, many collieries cannot work up to their full capacity due to the shortages of electric power, explosives and spare parts. Burrahar have been sluggish. Bengal have met with scattered support at lower prices. Sellers predominate in Central India, Amalgamated and Western Bengal.

Prices of jute shares have declined on pressure. Barnagore are being sold freely because the Company has produced an unsatisfactory report and reduced the ordinary dividend. Nuddea are quietly steady on corporate rumours. Howrah, Birla, Union, Ganges and Megha have reacted.

The earlier steadiness of cotton mill shares has not been maintained at the close on the view that raw cotton supplies will not be adequate. Meanwhile, Indian piecegoods have become difficult to export because of increased competition in foreign markets. Bowrahar, Dunbar, J. K. Rayon, Bharat Commerce and Elgin have been quoted lower.

There has been considerable improvement in bank shares because investors think that they have good growth prospects. Some banks have decided to issue rights shares or to call further capital on their partly-paid shares. United Commercial,

United Bank of India and Punjab National have improved.

Sugar shares have reacted on a broad front and buyers are difficult to locate. Investors are worried about the prospect of a further fall in the price of the commodity due to overproduction. The breakdown of the International Sugar Agreement appears to have dimmed the prospect for exports. Carew have weakened on passing the dividend. Belsund, S.K.G. and Dyer Meakin Breweries have been sold at cheaper prices.

Tea shares have become quieter because it is feared that the profits of gardens will be much lower during the current year due to the decline in the average price of tea. Hasimara, Hantapara, Bishnauth and Tezpur have fallen.

Government securities have been quiet and turnover is limited. There is virtually no bank support in view of the advent of the busy season. The prices of all dated loans have declined. The 3 percent Conversion loan 1986 has been barely steady around Rs. 71 due partly to official support. State loans are being offered freely at lower prices.

Manabarrie Tea

The profit of Manabarrie Tea Company Ltd has increased from Rs. 28,487 to Rs. 1.03 lakhs for the year ended December 1960, after providing Rs. 28,635 (against Rs. 31,442) for depreciation. A dividend of 10 percent, subject to tax, has been

For those you leave behind

DO you realise that you expose those who depend on you to grave risks, by failing to make immediate arrangements for their welfare, when you are no longer there to look after them yourself?

If you haven't yet done so, please make a will — or execute a Trust in their favour — now!

The administration of estates is a highly complicated matter these days, and it would be difficult to find a better Executor or Trustee than a bank which is always accessible, and which can be depended on to act with prudence, sympathy and impartiality. A bank is human — but it never dies.

The State Bank of India accepts appointment as Executor and Trustee, solely or jointly with any other person — and its services are at your disposal.

Why not call on your nearest Bank Agent or send for a copy of the Bank's Booklet on Executor and Trustee business?

The State Bank's local head office at Calcutta, one of more than Nine hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

declared, against 5 percent, taxable, in the previous year. Taxation is allocated Rs. 43,000 (against Rs. 8,000). With other adjustments, there is a carry-forward of Rs. 7,839, against Rs. 3,318 brought in. The crop in 1960 was 244,220 kilograms, against the 1959 production of 244,668 kilograms.

Kaliti Tea

The Kaliti Tea Company Ltd has made a revenue profit of Rs. 16,099 (against Rs. 3.10 lakhs) for the year ended December 1960. The dividend has been passed. Depreciation absorbs Rs. 15,769 (against Rs. 12,409). After making all adjustments, there is a balance of Rs. 1,63,518 to be carried forward, against Rs. 1,80,198 brought in. The crop amounted to 88,302 kilograms, against 137,184 kilograms. The average price realised was Rs. 5, against Rs. 5.61 a kilogram. The estimates for the current year have been made for a crop of 119,748 kilograms at a cost of Rs. 5.75 lakhs.

Bombay Market

GOA SITUATION CAUSES ANXIETY BUT SENTIMENT IMPROVES AT THE CLOSE

Wednesday Noon.

AFTER an easier spell in the early part of the past week, the Bombay stock market closed on a steadier note. At first, share prices declined on pressure due to the political developments concerning Goa. Operators were also worried about payments difficulties, and about the possibility of further restrictions on trading. But after the meeting of the Stock Exchange presidents in

Calcutta, it was realised that there would be no further restrictions, at least for the time being.

Sentiment improved at the close due to short-covering, combined with replacement buying. Renewed support was induced by good corporate news. Some companies had decided to issue rights shares in order to finance expansion. Optimism prevailed about the prospect for increased exports. It was thought that the Government would give further incentives. The decision of the Government to permit the installation of more automatic looms in the cotton industry was welcomed.

Tata Steel closed at Rs. 141.25 and Indian Iron at Rs. 24.40. Selected engineering shares improved, and Tata Locomotive rose to Rs. 356.50 on renewed buying. Alcock Ashdown were taken Rs. 311 and Premier Construction came to hand at Rs. 186. Mukund Iron were dealt in at Rs. 27.06 and Larsen and Toubro made Rs. 37.25. Motor-vehicle shares were quietly steady, and Premier Automobiles were bought at Rs. 156 on the prospect of a rights issue. Hindustan Motors lost at Rs. 20.36 on pressure from Lyons Range.

Cotton mill shares improved at the close due to replacement buying. Century recovered to Rs. 582 and Bombay Dyeing to Rs. 66.30. Kohinoor were taken at Rs. 305 and Finlay at Rs. 321. Standard were dealt in at Rs. 1,074 and Morarjee came to hand at Rs. 380. Khatau were placed at Rs. 472.50 and Gokak at Rs. 196.50. Simplex were transacted at Rs. 160, but Apollo were sold down to Rs. 2.10. India United ordinaries were indicated at Rs. 15.48.

In the miscellaneous section, cement shares were quietly steady. In spite of a decline in the profit, Associated Cement were wanted at Rs. 162.50 on the prospect of improved working during the current year. Digvijay were done at Rs. 188.75. Mining shares were quiet, and Shivrajpur Syndicate declined to Rs. 46 on fears of a cutback in production. Steamship shares declined further, and Scindia Steam lost at Rs. 12.72. Great Eastern Shipping were freely offered down to Rs. 12.68. Sugar shares were quiet, and Belapur were available at Rs. 265. Business passed in Phalton at Rs. 126 and in Walchandnagar Industries at Rs. 165. Bombay Burmah recovered to Rs. 661 and Voltas were bought at Rs. 303. Rayon shares recovered at the close. National Rayon improved to Rs. 562 and Gwalior Rayon to Rs. 47.50. Baroda Rayon were done at Rs. 158.50. Chemical shares were quietly steady, and Tata Chemical were dealt in at Rs. 20.08. Indian Dyestuff hardened to Rs. 465 and Polychem to Rs. 210. Coat Tyre were steady at Rs. 213.75 and Synthetics and Chemicals gained at Rs. 235. Tata Oil were bought at Rs. 77.

Bank shares improved on the prospect that many banks would issue rights shares in the near future. Bank of India rose to Rs. 144 on the prospect of a rights issue. Central Bank hardened to Rs. 69 and Bank of Baroda to Rs. 118. In the insurance group, New India Assurance were steady at Rs. 59.50, but British India General reacted to Rs. 12.12.

Electric company shares were quiet, and Ahmedabad Electric declined to Rs. 92. Tata Power lost at Rs. 1,077.50 and Bombay Suburban were placed at Rs. 101.

Madras Market

FAIR RECOVERY AFTER EARLIER EASINESS RIGHTS ISSUE HOPES RAISE BANK SHARES

Tuesday Evening.

THERE was an appreciable recovery in the Madras stock market at the close of the past week. The earlier easiness was due to nervousness arising from the political situation. Operators were also unwilling to extend their commitments because the current account had been extended to four weeks. The recovery took place mainly because of an improvement in the Calcutta and Bombay stock markets. Business was nevertheless limited in view of the coming Christmas holidays. Government securities were dull and turnover was limited. Bank shares were fancied on the possibility of rights issues. Electric companies met with investment support. Sugar shares were sold freely on pessimism about the outlook. It was feared that the price of the commodity would fall further due to the pressure of supplies. In the planting section, tea and rubber shares became quieter due to reports of a decline in the price of the commodities. Coffee shares were offered freely, as it was feared that production during the current year would be smaller. Textile shares reacted on profit-taking. Interest declined in miscellaneous shares.

Among banks, Indian came to hand at Rs. 177, the Bank having decided to make a call of Rs. 10 a share on the partly-paid shares. Indian Overseas were steady at Rs. 190 and Punjab National at Rs. 20.25. State Bank of Travancore were bought at Rs. 125. Among electric companies, South Madras were steady at Rs. 10.15 and Vellore at Rs. 14.25. Ellore came to hand at Rs. 20.25 and Cochin at Rs. 12.10.

In the sugar group, Deccan lost at Rs. 11.25 and E.I.D. reacted to Rs. 36. Business passed in K.C.P.

at Rs. 24 and in Kothari at Rs. 8. Mysore were steady at Rs. 56.50, but United Breweries were quiet at Rs. 101.55.

Among planting shares, Blue Mountain declined to Rs. 2.81 and Cochín Malabar to Rs. 7.23. Consolidated Coffee were available at Rs. 20 and Coffee Land declined to Rs. 16.75. Kil Kotagiri were done at Rs. 4.90 and Lucky Valley at Rs. 11.35. Nilgiri were offered at Rs. 8.50 and Nonsuch at Rs. 25.50. Oucherlony were softer at Rs. 3.44 and Periakaramalai fell to Rs. 3.50. Parkside were steady at Rs. 27 and Peermade at Rs. 22.75. Sellers predominated in Woodcote at Rs. 1.65 on passing the dividend.

In the textile section, Bangalore Woollen were steady at Rs. 238.50 and Buckingham at Rs. 254. Anglo-French reacted to Rs. 129 and Adoni to Rs. 13. Kothari came to hand at Rs. 13.30 and K. Rajendra made Rs. 74.50. Lakshmi reacted to Rs. 161.50 and Madura to Rs. 41.10. Mettur were dealt in at Rs. 388 and Premier changed hands at Rs. 297. Ramakrishna were placed at Rs. 250 and Rangavilas at Rs. 53.50. Travancore Rayon lost at Rs. 43.12 and South India Viscose were quoted lower at Rs. 173.

Among miscellaneous industrials, Aluminium Industries were quoted at Rs. 23.10 and Ashok Leyland were done at Rs. 9.20. A. V. Thomas were steady at Rs. 21 on the decision to issue bonus shares in the ratio of one new share for each share held. India Cement were done at Rs. 6.30 and Enfield at Rs. 12.50. F.A.C.T. declined to Rs. 8.50, but Kirloskar Electric were bought at Rs. 16.60. Madras Rubber declined to Rs. 21.25 on profit-taking and Panyam Cement were transacted at Rs. 103 on issuing rights shares. Parry's Confectionery were steady at Rs. 4.52 and Seshasayee Paper hardened to Rs. 8.50. Standard Motors met with support up to Rs. 16.50 and Spencer were steady at Rs. 24.50. Textool were dealt in at Rs. 185 and Tube Investment were done at Rs. 281.

Enquiries are invited from Banks, Commercial Concerns and Tourists for information regarding Prospects, Procedure and Regulations in Nepal.

ASHOK LEYLAND COMETS

hold aloft the life-line for man and industry

INDIAN OXYGEN LIMITED
HEAD OFFICE
40/1, DIAMOND HARBOUR ROAD,
CALCUTTA-27.

Dear Sirs,

We operate 4 Nos. of Leyland Comet trucks and have ordered two more chassis. The Comets are used for the carriage of liquid oxygen from the producing factories for local distribution as well as for supplying to depots remote from the factory. As an operator of a large number of trucks, our main considerations are reliability of transport consistent with economy of operation and Leyland Comets have met these requirements to our satisfaction.

Yours faithfully,
T. N. J. (P. P. L. Singh)
Production Manager

This is one among the many letters we are receiving from satisfied users asking for more Comets. The exacting standards of precision combined with fine craftsmanship make Leyland the most wanted vehicle in over 50 countries.

ASHOK LEYLAND LIMITED
Bengaluru

ASHOK LEYLAND COMET
—precision-built to give lasting service—

THE UNION BANK of India Limited

(Estd: 1919)

Head Office:

Union Bank Building,

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research.

P.O. Box 14, Calcutta, or 5, Mission Row, Calcutta, India.

London Market

STOCK MARKET IN GOOD SHAPE

INDUSTRIALS RISE

London, 20th December.

IN spite of a very strained international situation, it has been a satisfactory period in the stock market during the past week. The industrial market gained great benefit from a very large business in Unilever issues, which followed the listing of the two stocks in New York. The demand from U.S. investors was on a considerable scale, and while they were buying on the basis that the shares were cheap by American standards, U.K. holders were willing to sell on the view that present prices were too high. The biggest item of company news came early yesterday when I.C.I. announced that it was making a bid for that other giant—Courtaulds. Many people are now asking who will be the next to merge. Courtaulds have advanced several shillings, but I.C.I. shares are easier after the announcement. Elsewhere among industrials, numerous gains were recorded. Banks and insurance shares were in demand in advance of the dividend season which commences on the first day of the New Year. Gilt-edged securities had a good following at one time, but interest dwindled later. Gold shares made good progress early in the period, but a sharp reaction followed reports of disturbances in Johannesburg. Copper shares made some headway, Rhodesian Selection Trust and Roan Antelope advancing after the merger news. Tins were an uncertain market. Oil shares went ahead in response to some buying, but best prices were not held. Indian tea shares were unsettled by events in Goa, but rubber shares encountered a good selective demand.

New Delhi

U.K. AID FOR DEVELOPMENT OF COAL MINING MACHINERY INDUSTRY

PRIVATE STEEL PRODUCERS ASKED TO FIND COKING COAL FROM THEIR OWN SOURCES

(FROM OUR NEW DELHI CORRESPONDENT)

THE British mining mission has returned home after a ten-day visit to India, during which it went to Calcutta, Ranchi, Dhanbad and New Delhi. It was led by Mr. James Anderson of Anderson Boyes and Co. Ltd., U.K., who told the Press that the Indian coal mining industry would have to be fully mechanised if it was to reach the production target of 200 million tons a year by 1971. He was happy to know that a number of British firms are collaborating with Indian companies in the manufacture in India of coalmining machinery. The advantage of this arrangement would be that the Indian concerns would get all the benefit of research and development of their British collaborators. Notwithstanding all these developments, India, according to him, will always have to import some equipment. These imports could be profitably channelled through Indian companies having a tie-up with British firms.

The coal production target by the end of the third plan (1966) has been set at 97 million tons a year, an increase of 37 million tons over that of the second plan. Some 20 million tons of this additional production, it is expected, will come from the public sector and 17 million tons from private collieries. The order of development expected of the industry during the third five year plan can be gauged by comparison with the second plan figures. In 1955, coal production was 38 million tons; between 1955 and 1960, the private sector was to increase its output by 10 million tons a year and the public sector by 12 million tons a year. The rate of increase is to be very nearly doubled during the next five years. Of the additional production of 17 million tons expected from private collieries, 4.87 million tons will be coking coal, 1.12 million tons blendable coal and 10.84 million tons non-coking coal of superior grades. The coking coal will come mainly from the Jharia fields, blendable coal and non-coking coal from Raniganj, with small quantities from the Bokaro, Karanpura and Madhya Pradesh fields. The major portion (11 million tons) will come from existing mines, and the balance from new sinkings in leasehold areas. The capital investment required to achieve this programme is expected to be Rs. 60 crores, with a foreign exchange component of Rs. 28 crores, which is to be covered by a World Bank loan.

Plant and Machinery for Private Collieries

Private collieries have estimated their demand for plant and machinery. Their plans are being screened. At an inter-departmental meeting, recently held, the position concerning the supply of coking coal to the steel plants in the third plan was reviewed. The requirements of the steel plants were examined, and it was decided that the planning for coking coal should proceed on the earlier basis of 16.14 million tons of coal, on dry basis, to be charged to blast furnaces. The equivalent of this in terms of raw coal is 27 million tons. In addition, there is a demand of 2 million tons for the merchant cokes. As for the private sector steel plants, while the Indian Iron and Steel Company is developing its collieries to meet ultimately its requirements entirely from its own sources, the Tata Iron and Steel Company is not only looking to the Government to supply 900,000 tons of washed coal from the Bhojudih washery, but is asking for more on the ground that its requirements have gone up. It is felt that with coking coal production, subject to serious delays and shortages, Tatas must find their entire requirements of coking coal from their own collieries, especially as they possess substantial reserves of coking coal which they are reluctant to work, on account of the apprehension that their raising costs would be high. It is considered possible that T.I.S.C.O. could raise the necessary coals within two, or at the most, three years. It is agreed that T.I.S.C.O. should be informed that washed coal from Bhojudih would not be available to the Company beyond 1964, and it should make arrangements to produce and beneficiate all the coals required for the Jamshedpur steel plant from the Company's own collieries.

The present indications are that as against a targeted production of 2 million tons from the Sutikdih-Sudamdih mines, only 500,000 tons are expected to be produced by the end of the third plan. In the Sutikdih-Sudamdih area in Jharia, a small area to the north-east which has been already notified is said to contain coking coal of fairly good quality. The Polish experts have confirmed during discussion that if this area could be acquired, it would be possible to obtain coking coal produced quickly and in greater quantity. It is proposed to discuss this matter with the present washeries are to be established to economise the use of metallurgical grade coal, and a public sector network of ropeways is to be constructed in the

coalfields to serve private collieries with increased facilities for sand-stowing.

Coking Coal Reserves

Reserves of coking coal are of the order of 2,800 million tons, and are low in relation to known reserves of high-grade iron ore. Steps are, therefore, necessary to conserve the comparatively limited supplies of coking coal. The capacity of washeries set up in Dugda and Bhojudih is to be doubled, two new washeries are to be set up in Kathara, two washeries in Karanpura and a further washery in the Central Jharia field, towards the end of the third five year plan. In addition, a washery is planned as an integral part of the West Bengal coke-oven plant in Durgapur. These are expected to cover the requirements of the steel development programme. Additional washeries are to be set up for non-coking coal required by the railways. Tentatively, these are to process 7 million to 8 million tons in terms of raw coal. A major project for the manufacture of coal washeries in India has recently been announced by Bird and Company in collaboration with McNally of the U.S.A.

Three non-coking coal washeries are presently being planned—one in Karanpura, with an input capacity of 2.8 million tons a year (which is a mixed washery), and the other two in Anuppur and Singrauli, each with an input capacity of 2.5 million tons a year. A project report for the Karanpura washery has been prepared by the Central Fuel Research Institute, Dhanbad. The Polish Government has agreed to set up this washery under the terms of the Economic Co-operation Agreement of May 1960, between the Governments of India and Poland. A team of Polish experts is at present in India in connection with the preparation of the detailed project report for the Sudamdih mines; the team will also discuss the Karanpura project report with the National Coal Development Corporation's experts in Ranchi.

The washery in Singrauli will be an integral part of the development of the Singrauli coalfield, which it is proposed will be entrusted to the T.C.M. authorities. One T.C.M. expert has already arrived, and is holding discussions with the National Coal Development Corporation officers. It is only after he has studied the available data that further steps for concluding an agreement with the T.C.M. authorities for the Singrauli project will be taken.

Of the 11 million tons of additional production from existing coal mines, 2 million tons is to be achieved without additional equipment by increased use of sand stowing. The Coal Board is planning to install seven ropeways in the Jharia and Raniganj fields to supply sand for stowing. The total cost of the whole project is estimated at Rs. 18 crores. The contract for the installation of the first ropeway in the Jharia field has been awarded to the British Ropeway Engineering Company Ltd. Tenders for three ropeways for the Raniganj field are being examined.

Capital Investment for State Collieries

Capital investment required for the public sector collieries over the next five years has been estimated at Rs. 103 crores. No internationally available funds have so far been allocated to this development which, as things stand at present, is, therefore, likely to be financed from tied sources of purchases to the extent that free foreign exchange is not available. A strong interest has been shown by communist countries, notably Russia and Poland, in the public sector expansion plans, and it, therefore, seems likely that substantial quantities of equipment will be purchased under rupee-payment agreements. A sum of \$35 million has been allocated to the public sector for the first two years of the third plan. It is expected that \$5 million will be spent on equipment for new mines, \$14 million for replacements, \$25 million for spare parts, and the balance on new equipment for existing mines. The World Bank has indicated that a further \$25 million will be made available later to cover the requirements of the remaining three years of the plan period.

Concerns to Manufacture Coal Machinery

The following industrial undertakings are either manufacturing or are planning to manufacture coal mining equipment: A.C.C.-Vickers-Babcock (Private) Ltd. is licensed to manufacture Rs. 1.12 crores worth of coalmining, cement, and other general machinery a year. Vickers Ltd., U.K., is collaborating for coalmining machinery. Barakar Engineering and Foundry Works Ltd. is licensed to manufacture haulages (30 h.p. to 100 h.p.) in collaboration with Clarke Chapman and Company Ltd., U.K. Production has not yet begun, and the capacity is to be determined on the basis of production to be achieved in the first year. C. Comens and Sons Ltd. has received a licence to manufacture 48 haulage gears a year and six conveyors annually, on a single-shift basis, and has

already gone into production. The factory is in Calcutta. Dynacraft Machine Company Private Ltd with its factory in Bombay is manufacturing belt conveyors, roller conveyors, bucket elevators, etcetera. Elecon Engineering Company Ltd with its factory in Goregaon, Bombay, is licensed to manufacture Rs. 12 lakhs worth of belt conveyors, screw conveyors, bucket elevators, etcetera, a year on a two-shift basis. Production has begun.

International Combustion India Private Ltd is a subsidiary of International Combustion (Holdings) Ltd, London, with a factory in Howrah, Calcutta. It has received a licence to manufacture conveyors belt troughing pulleys assorted (4,000 a year); and the fabricated steel work for conveyors, trestles, gantries, stringers, decking plates, chutes, skirt plates (100 tons a year). Jardine Henderson Ltd is collaborating with four British companies to manufacture coal-cutters and gate end boxes (Anderson Boyes and Co. Ltd.); belt, shaker and scraper chain conveyors (Mining Engineering Co. Ltd.); winders and haulage machinery (John Tinsley Ltd); and mining electric rotary drills and accessories, gate end boxes, drill bits and rods (Victor Products (Walsend) Ltd).

Kilburn and Company (Private) Ltd in collaboration with two British companies has received licences to manufacture electric and compressed air colliery haulages and two-speed colliery haulages (Austin Hopkinson and Co. Ltd.); and electrically driven open-type single and double drum, and endless rope type haulages from 46 h.p. to 150 h.p. (John Mills and Co. Ltd.). Production has begun on the electric and compressed air colliery haulages. Larsen and Toubro Ltd with a factory in Powai, North Kurla, Bombay, in collaboration with Wiegler Maschinen Bau, West Germany, is licensed to make portable belt conveyors and hand scrapers (150 tons a year on a single-shift basis.) Production has begun.

Macneil and Barry Ltd, in collaboration with Hugh Wood Ltd, U.K., is manufacturing chain conveyors in Calcutta. The licence is to the value of Rs. 21 lakhs a year. Roberts McLean and Co. Private Ltd with its factory in Tollygunge, Calcutta, has received a licence and is manufacturing industrial belt conveyors up to 48-in. width, industrial package handling elevators in different sizes; elevators in general including belt bucket types; overhead chain conveyors; and skip hoists of a value of Rs. 15 lakhs a year. Sterling (India) Co. Private Ltd is manufacturing in Calcutta, in collaboration with T.T. Works Ltd, Leicester, conveyors including mining type and incorporating electric motors.

Programme of Heavy Engineering Corporation

The Heavy Engineering Corporation Ltd, Durgapur, West Bengal, is collaborating with Promasheexport of Russia to put up a plant in Durgapur, to manufacture 45,000 tons a year of machinery valued at Rs. 24 crores. The plant is scheduled to be completed by the middle of the third plan. The project will include foundry capacity expected to produce the following tonnage of heavy castings and forgings:

Grey iron castings	11,000 tons a year
Steel castings	6,000 tons a year
Steel forgings	7,000 tons a year

The full programme of manufacture, as announced, is to include the following:

	Tons
Coal cutters	1,715
Loaders	1,371
Conveyors	22,500
Trolley and battery type electric mine locomotives	1,300
Haulages	3,816
Electric winders	1,167
Main axial fans	1,170
Booster fans	50
Pumps	945
Sand pumps	72
Safety detaching hooks	2,000
Light drill rigs for exploration drilling	25
Spare parts	25 percent of the total weight of articles.

The plant, it is expected, will go into production by the end of 1965 with the following items: centrifugal pumps, booster fans, sand pumps, scraper chain conveyors, direct and endless haulages, belt conveyors, and main axial fans. The manufacture of winding engines is expected to begin by 1965.

Prospects for Bokaro Steel

The Central Government does not expect that there will be any steel production from the fourth plant in Bokaro during the third plan period, although the target is based on a calculation of 1 million tons of steel ingots and 350,000 tons of pig iron from the Bokaro project. Earlier this month the U.S. Ambassador said that his country's collaboration with this project might be announced soon. Even if this announcement is made by the end of this month, it will take almost two years before orders for plant and machinery are placed. It will thus be seen that it has become humanly impossible for the proposed plant to go into even token production by 1968.

Indian Membership of Conference Lines

The Central Minister for Transport and Shipping, Dr. P. Subbarayan, said last week that he was not sure whether it had been wise on the part of Indian shippers to have joined the U.K. Conference Lines. He might have to ask them to get out of it at some stage, he added. Inaugurating the Maritime Law Association of India, of which he is the chief patron, he asked that Indian shipping company representatives

Sir A. Ramaswamy Mudaliar and Mrs. Sumati Morarjee, to persuade the Conference Lines' representatives "to see more sense" when dealing with India.

I. M. F. Surveying Indian Economy

The Deputy Director of the Asian Department of the International Monetary Fund, Mr. Henry Murphy, with two colleagues has arrived here for the annual survey of the Indian economy. While in Bombay, they had discussions with the Reserve Bank on monetary policy and India's balance of payments position. Discussions here will largely centre on planning, industrial policy and public finance. Mr. Murphy stated in Bombay that the question of the free convertibility of the rupee was "not on the card".

Data for Consortium Meeting

The World Bank representative, Mr. Peter Wright, left for Washington last week after collecting data for discussion by the Aid-India Consortium meeting, due to be held in Washington on 29th and 30th January. Mr. Wright also studied the economics of the Koyana project, which the World Bank proposes to finance. While in India, he also familiarised himself with the development plans of Bombay port. They were earlier studied in detail by Mr. Carmichael.

Freight Concessions for Manganese Exports

The Railway Board has decided to allow freight concession on all grades of manganese ore booked to ports for export to foreign countries from 1st January, 1962. The traffic booked from stations situated up to and including 252 kilometres from ports will be charged at the ordinary tariff rate. Traffic from stations situated between 253 kilometres and 689 kilometres, will be charged at a flat rate of Rs. 14 a ton. Traffic from stations situat-

ed at 690 kilometres and more from ports will be allowed a 50 percent reduction in the classified rate. As at present, no supplementary charges will be levied. No reduction will, however, be allowed in the additional charges leviable like siding charges, port charges, etcetera. The concessional tariff rates will apply on the consigner certifying on the forwarding note that the traffic was intended only for export to foreign countries. The new concessional rates will remain in force for a period of one year. On the introduction of these rates, the rebate on freight, allowed at present on the export traffic in medium and low-grade manganese ore, will be withdrawn.

Consent to Capital Issues

Some 258 companies were granted consent by the Controller of Capital Issues during the period from 1st April, 1961 to 30th November, 1961. The total capital to which consent was given was Rs. 160.81 crores. The companies include the following: British United Shoe Machinery Co. Ltd., U.K., P. Leiner and Sons Limited, U.K., Carrier Corporation of New York, U.S.A., Whiteley (Rishworth) Ltd., U.K., Massey Ferguson Ltd., Canada, U.K., and/or the subsidiaries, Mississippi Glass Co. Ltd., U.S.A., A. B. Svenska Fullager Fabriken, Sweden, Skefko Ball Bearing Co. Ltd. of Luton, U.K., Metallurgical Research and Development Co., Inc., U.S.A., Dr. Paul Lohmann, Chemische Fabrik, West Germany, Mitsubishi Electric Mfg. Co. Ltd., Japan, H. Miller and Co. Ltd. of Birmingham, U.K., Mr. Arthur G. Wellman (President, Nichols and Co. Inc., Boston, U.S.A.) and other individuals and companies associated with them, Hackethal-Draht-und Kabel-werke, Hanover, West Germany, International Finance Corporation, Washington, U.S.A., Reichhold Chemicals Inc., New York, U.S.A., United Malleable Manufacturing Co. of Ohio, U.S.A., McNally Pittsburgh Manufacturing Corporation of the U.S.A., A. Freidrich Flender and Co., West Germany, Siegfried Schumacher K. G. Stehldrahtwerk, West Germany, Kerabardar, West Germany, Stevens Paper Mills Inc., New York, U.S.A., E.M.P.A.C.E.L. of Paris, France, Ledoga S.P.A., Milan, Italy, Scovill Manufacturing Co., U.S.A., Tokyo Seiko Kaisha and Moritani and Co. Ltd., Japan, Joseph Lucas (Industries) Ltd., U.K., A.S.E.A., Sweden, Dr. J. D. Teja and his friends, non-resident Indians in Switzerland, Great Lakes Carbon Corporation, New York, U.S.A., Air Products Inc., Pennsylvania, U.S.A., Felten and Guillaume Carlwerk Eisen and Stahl A.G., West Germany, Thomas Mouget and Co. Ltd., Yorks, U.K., Robert Jowitt and Sons Ltd., Bradford, U.K., Alfred Wiseman and Co. Ltd., Birmingham, U.K., Robert Bosch G.m.b.H., Stuttgart, West Germany, Dow Chemie A.G., Switzerland, D. Perrie and Co. (London) Ltd., U.K., Von Kohorn International Corporation, New York, U.S.A., Phelps Dodge Copper Products International Corporation, U.S.A., Enfield Cables Ltd., U.K., Pfizer Corporation, Panama, Pisons Ltd., U.K., Bryres Berger Ltd., U.K., Raleigh Industries Ltd., of Nottingham, U.K., Powers-Samas Accounting Machine (Sales) Ltd., U.K., Gutehoffnungshütte Sterkrade A.G., Oberhausen, West Germany, Heinrich Koppers G.m.b.H., Essen, West Germany, J. M. Voith G.m.b.H., Heidenheim, West Germany, Kimberley-Clark Corporation, Klisconsin, U.S.A., Parsons and Whittemore Inc., New York, U.S.A., Commonwealth Development Finance Co. Ltd., London, Babcock and Wilcox Ltd., U.K., and Vickers Ltd., U.K.

Consortium Aid for Pakistan

The consortium of Governments and institutions interested in providing development assistance to Pakistan will meet in Washington on 24th January, 1962. (The members are Canada, West Germany, Japan, the U.K., the U.S.A., the World Bank and the International Development Association.) At an earlier meeting, the consortium members made the following commitments (in million U.S. dollars) for aid during 1961-62: Canada \$37.8; France \$10; West Germany \$62.5; Japan \$40; the U.K. \$42; the U.S.A. \$279.6; the World Bank and the I.D.A. \$17.4. In addition, the U.S.A. has already undertaken to assist Pakistan's second plan by making available surplus commodities in the amount of \$101 million, and a further amount of assistance in this category is being discussed between the two Governments. Pakistan is also receiving wheat grants from Canada. The total outlay on Pakistan's second five year plan is placed at \$4,837 million, of which nearly \$1,890 million is in foreign exchange. The consortium meeting will determine allocations for 1962-63.

Four more Pig Iron Plants

The Government of India has decided to locate four pig iron plants in Andhra and Maharashtra. The installed capacity of each plant will vary between 80,000 tons and 90,000 tons. Out of 17 applications, four parties have been selected. The announcement is expected shortly.

Economic Implications of Goa Action

The economic implications of the military action in Goa is being already under study. One is that it rules out the development of Mangalore into a first-class port, Mormugao being even a better one than Bombay. The development of Mangalore is being considered because India wants a first-class port on the west coast between Bombay and Cochin. The proposal for a 5,000-ton steel plant is also being examined. Goa has some of the best iron ore mines which have not yet been fully exploited. Japan has been the principal buyer of iron ore from Goa. Indo-Japanese collaboration for setting up this plant, which may also produce 500,000 tons of pig iron, is considered possible. The development of iron ore mines on the west coast was discussed with the Japanese Prime Minister during his recent visit to India.

London

T.U.C. GENERAL COUNCIL TO DECIDE QUESTION OF JOINING ECONOMIC DEVELOPMENT BODY

EMPLOYERS REJECT WAGE CLAIM FROM ENGINEERING WORKERS

(FROM OUR LONDON CORRESPONDENT)

THE T.U.C. economic committee has decided to leave a decision on joining the Government's proposed National Economic Development Council to the forthcoming meeting of its full General Council. The decision was taken, without a vote, in a spirit of hopeful expectation, which turns on the speech which the Chancellor of the Exchequer is to make in the Commons shortly. He is expected by some to set a limit on the wages pause, which will be replaced by a more acceptable policy of wage restraint. This would be especially helpful to the Civil Service unions, which have been the hardest hit by the pause and, as a result, have led the opposition in the T.U.C. to joining the Development Council. If the Chancellor gives an early date for its end—such as his promised review of the economic position early in the New Year—it would be enough to give an impression to the majority of union leaders in the General Council that they have stood aloof from the new body long enough. Meantime, claims for higher pay and shorter hours for 3 million engineering workers were rejected outright by the employers, who estimated the cost at £300 million. Mr. B. Macarty, director of the Engineering Employers Federation, in his reply to the unions, referred to the European Common Market and added that the first responsibility of management should be wherever possible to reduce costs so that they could become more competitive in difficult circumstances.

Steel Output Down

Steel production in November averaged 420,000 tons a week or 17 percent less than in November 1960, says the U.K. Iron and Steel Board. Total production for the year is expected to be 22,250,000 tons, compared with earlier estimates of between 24 million and 25 million tons. On the other hand, exports look like exceeding the 1960 total of just over 4 million tons. The Board comments: "It will be extremely difficult to maintain or improve upon this year's exports considering the intense competition from producers overseas."

A census has shown that during the third quarter of the current year, steel stocks in the hands of producers, users and merchants decreased by a total of 336,000 tons. Producers' stocks continued to fall in the fourth quarter. This contrasts with the third quarter of last year, when steel stocks rose by over 500,000 tons and the demand for steel was booming. The stocking cycle has gone into reverse. The industry is working at only 79 percent of capacity, and consumers can run down stocks, which at today's high interest rates are expensive to hold.

Chancellor Justifies Pay Pause

The U.K. Government's pay pause had been much more widely understood and accepted than some people would have the country believe, said Mr. Selwyn Lloyd, Chancellor of the Exchequer, in a Party political broadcast last week. Speaking on B.B.C. sound radio, he added that, although there had been exceptions to the pause, it had already "materially contributed to the feeling that we are again becoming able to meet and to beat competition overseas." The pause was "certainly not a permanent policy." But the improvement gained by "unpopular" steps taken in 1961 must not be cast away in 1962. "It must be continued and reinforced. The level of demand must still be carefully watched. We must concentrate on gaining the competitive edge for exports by keeping down costs of production."

Acceptance of the relationship between personal incomes and production was essential to success. So was "progress of the work of the National Council for Economic Development, which for some months I have been trying to set up." The pay pause is not an attack on wages or salaries or on arbitration. It is reasonable that wages and salaries should move up when production increases, but by last July they had leapt too far ahead. Mr. Lloyd stressed that he did not call for restraint in wages alone. "Profits were already falling. In addition to the credit squeeze, I asked for a pause over dividend payments, which in general has been observed." He said that he was criticised about surtax reliefs. But they are not effective until January 1963. "The changes were not made out of sympathy, but to remove the disincentive of rates of tax far higher than those of our principal competitors inflict."

Briefing on E.E.C. Negotiations

All the heads of the Commonwealth diplomatic missions in London were present for the briefing at the Foreign Office when Mr. Heath reported to them on the course of the third round of ministerial negotiations on Britain's application for membership in the European Common Market. It appears that Mr. Heath was able to report some progress in the method of approach to be adopted

by Britain and the "Six" in tackling the whole task of negotiations. For the underdeveloped Commonwealth countries, there is the so-called Deniau formula—a four-point plan to deal with the products of these countries. For the three countries of the Commonwealth—Canada, Australia and New Zealand—Mr. Heath outlined the plan for a hypothetical study of their manufactured goods, to determine the effect upon their sales in Britain by the imposition of the common external tariff of the European Economic Community. Britain has made a firm request to the "Six" for freedom of access of these goods, and although this appears to be flatly unacceptable to the present members of the E.E.C., Britain has reserved her position while suggesting the hypothetical study. Mr. Heath said. The study plan has been accepted by the "Six."

Conversion Offer

The U.K. Treasury is offering holders of the 4½-percent Conversion Stock, which matures on 15th February, a choice of two stocks into which they may convert—unless they decide to be repaid in cash. A new 6-percent Conversion Stock, 1972, is being offered up to a maximum of £300 million. This will be the first British Government stock to carry a full 6-percent interest rate. Terms are £100 new for £100 nominal plus a cash payment of £2 10s. In addition, a further £200 million of the existing 5½-percent Funding Stock, 1982-84, is being offered in exchange for the maturing stock, on the basis of £110 of the Funding Stock for each £100 nominal of the 4½-percent Conversion. This leaves £258 million of the outstanding 4½-percent stock uncovered and the total amount of Government stocks outstanding will, in fact, be reduced by that amount. The gilt-edged market was pleased by the announcement and short-dated Government bonds rose in response. It can be assumed that a substantial portion of the February maturity is already held by Government departments. The banks are also believed to be considerable holders.

Retail Sales Steady

Fears that November retail sales might continue the slightly downward trend disclosed for September and October are not confirmed by the U.K. Board of Trade's provisional estimates. These show that last month sales remained at about the same level as in October. The seasonally adjusted index of the value of sales, which had fallen by a point in both September and October, is provisionally estimated at 115 for November. The index thus remains at the same figure to which it fell in October and no significant changes are apparent in any of the main classes of retail business. Compared with a year earlier, the value of retail trade last month shows an increase of about 5 percent which is better than the rise of 3 percent in September and October. It appears that about two-thirds of the increase in the value of sales, compared with last year, can be attributed to higher prices.

Building Orders

The value of new work obtained by the construction industries in the third quarter of 1961 was £467 million—£23 million more than in the same period of last year but less than the record figures of £521 million and £492 million in the first and second quarters of the current year. After adjustment for price changes and seasonal variation, however, the flow of work shows little change over the past 12 months. On the adjusted basis, orders for public authority housing (£64 million in the third quarter) have remained virtually unchanged over the past 18 months while con-

tracts for private houses (£112 million) have continued steady over the last two quarters at about the previous year's level.

Textile Trading Plans Accepted

The President of the Board of Trade, Mr. Frederick Erroll, said in the Commons recently that the Government has decided to accept, in relation to the United Kingdom and Hongkong, the arrangements on international trade in cotton textiles negotiated in Geneva in July. The acceptance in relation to Hongkong is subject to certain understandings in the operation of the arrangements. The latter provide for increased access, as from 1st January, to certain markets at present restricted, and for bilateral negotiations between the importing and exporting countries for the avoidance of disruption in markets which are not restricted. A G.A.T.T. cotton textile committee has been established to consider a longer-term solution to the problems of international trade in cotton textiles.

Tenders for Pakistani Project

Only one British firm was found to have made an offer when international tenders for an important irrigation project in Pakistan—the Sidhna Barrage—were opened the other day at Caxton Hall. Only five tenders, ranging from £9 million to £13 million, were submitted out of an original list of 11 tenderers. The works, which are part of the Indus basin project, comprise a barrage over the river Ravi, a railway bridge, a road bridge and a regulator for a link canal. The lowest tender at £9,187,740 came from a French firm Societe Dumez, and the highest, £13,404,255, from Canal Constructors Corporation of the United States.

The only British tender, second highest at £11,533,271, was made through a French Company, Compagnie Francaise d'Enterprises, acting in consortium with Gammon Pakistan Ltd, a Pakistan-registered Company associated with the London firm of structural engineers, J. C. Gammon (England) Ltd. Coode and Partners, the London firm of consulting engineers who are responsible to the Water and Power Development Authority of west Pakistan for the design and specification of the works, was unable to explain why so few tenders had been submitted.

Brevities

Britain's official retail price index figure at 14th November was 117, it has been announced by the Ministry of Labour. This compares with 116 at 17th October, and 112 in November last year. Calculated to one decimal, the November index was 116.9, compared with 115.7 in October.

The cross-Channel cable linking the electricity systems of Britain and France was formally opened last week. The two countries will exchange current as each requires in peak periods.

The two oldest ships in the P. & O. Orient line's passenger fleet, the *Strathnaver* (22,270 tons) and *Orontes* (20,186 tons), are to be sold for breaking up. Both are to be withdrawn from service after their current voyages to Australia.

The rate of 5s percent for war risks on cargo in ships sailing to the Congo no longer includes Katanga. Until the War Risks Rating Committee of the Institute of London Underwriters fixes a rate for sailings to Katanga, underwriters will use their own discretion. The normal war risks rate on cargo is 9d percent.

J. C. Gammon (England) announces that a member of its group, Gammon Malaya, in a joint venture with two other Companies, has been awarded a contract worth £750,000 for the construction of harbour facilities in Pontianak, Kalemanton, Indonesia.

ERIC HELPS TO EXPAND EXPORT TRADE

Risks involved in exports on Credit Terms need not frighten or dishearten any Exporter.

The Export Risks Insurance Corporation which has been set up by the Government of India with the sole object of helping the Exporter offers to cover the following risks involved in exports on Credit Terms:—

- | | |
|---|---|
| (i) INSOLVENCY OF THE BUYER | (vi) ADDITIONAL EXPENSES DUE TO DIVERSION OF STEAMER. |
| (ii) NON-PAYMENT BY THE BUYER | |
| (iii) NON-TRANSFER OF FUNDS TO INDIA | (vii) RISKS DUE TO ANY OTHER CAUSE NOT BEING INHERENT IN THE NATURE OF THE GOODS AND NOT BEING WITHIN THE CONTROL OF THE EXPORTER AND/OR BUYER ETC., ETC. |
| (iv) LOSS DUE TO SUDDEN CHANGES IN IMPORT POLICY OF BUYER'S COUNTRY | |
| (v) LOSS DUE TO OCCURRENCE OF WAR/CIVIL WAR. | |

INSURANCE OF EXPORTS WITH THE CORPORATION

- is likely to make export finance facilities more readily available to the Exporter while negotiating the documents,
- will enable the Exporter to secure valuable guidance as to the standing of the buyers.

"Here are five ways

BOAC Air Cargo can help your business!"

- ★ Fast BOAC jetliners slash transit time by hours.
- ★ Direct BOAC city-to-city freighting cuts out time-wasting journeys to and from docks.
- ★ Simple (cheap) packaging is all that's needed with careful BOAC handling.
- ★ Safe, efficient BOAC freighting means lower insurance costs, wider coverage.
- ★ Experienced BOAC staff give all goods individual attention all the way.

We deliver your goods in hours, instead of days or weeks! And that's only one of the things you gain. Speed alone may not be enough for you—but BOAC Air Cargo gives more and more successful businessmen these extra advantages...advantages that can help and benefit your business!

Ask for details now—from your Forwarding Agent or BOAC offices at:

Jute

ANXIETY ABOUT GOA SITUATION CAUSES WIDE FLUCTUATIONS

OVERSEAS ORDERS STILL CONCENTRATED ON NEAR DELIVERIES

THE political situation has been affecting sentiment in the jute and gunny markets. For a few days before the entry of Indian troops into Goa, the markets were very sensitive to the slightest rumour. Often, nervousness resulted in violent fluctuations in jute goods prices. Mills were quite willing sellers and large business was done, while at the same time they made fairly extensive purchases of jute against their quota. On Monday and Tuesday, the goods market was very firm, although fluctuations at times were very erratic.

Consuming markets have not shown any anxiety to follow the rise in manufactured goods. It is noticeable that overseas buyers have confined their purchases very largely to the near deliveries, while a lot of business—probably most of that done by speculators—has been in the forward section. Indian Government orders for sacking have helped to sustain the market, and local shippers have indulged in heavy covering. Shipping does not appear to have been affected by the Goa episode, although some shippers have expressed concern about orders for certain ports, particularly Lourenco Marques.

Simultaneous Business

The rise in the price of manufactured goods, and the continued weakness of raw jute, has enabled mills to operate freely in the knowledge that simultaneous business is showing an improved profit. Fresh quotas have been issued to the mills, the amount involved on this occasion being about 1 million maunds. This is larger than the two previous quotas and indicates the concern shown by the Government—and to a certain extent shared by the industry in general—of the continued dearth of jute in the country. In a Press note issued at the time the quotas were allocated, the I.J.M.A. urged its members to take up at least 50 percent of the quantities under contract. It also requested mills with agencies in Bihar to buy as much as possible in these districts for near delivery, and, where possible, to store it in the agencies until the transport position improves.

Some districts in Bihar appear to come under the category of "distress areas" and reports of transactions at very low prices are circulating. Agartala is another agency where business is said to have been done in single figures. But many of these reports are exaggerated; observers sent to the areas say there is no indication that the rumours have any foundation whatsoever. Admittedly, low prices have been paid but not as low as the reports suggest. Mills in general have taken up their quotas, and several have purchased quantities well above their allocations. A large percentage of the business has been done in the agencies, and on the whole the quota system has worked well. Although fibre prices have not improved, at least the fall has been arrested.

Raw Jute Arrivals

Fibre arrivals, both upcountry and in Calcutta, continue to be large. Now that paddy harvesting is more or less complete, all-India arrivals have again risen to a weekly total of nearly 1 million maunds. Arrivals of raw jute in Calcutta and mill stations during November showed a distinct improvement. Those from India amounted to 785,900 bales, or 177,000 bales more than in the previous month. But arrivals from Pakistan dropped by 10,900 bales to 49,600 bales. The overall total thus was 835,500 bales, or 166,100 bales more than in the previous month. This figure is the highest for any single month since December 1958, as also is the figure for arrivals from India. Total arrivals for the period from July to November 1961 are now 2,544,500 bales, consisting of 187,000 bales from Pakistan and 2,357,500 bales from India.

Although it is fairly obvious that the quantity of jute this season will be large, it is unfortunately also obvious that the quality is poor. All arrivals are on the low side, and high-grade jute is very scarce. This is demonstrated by the premiums paid for good quality jute. Some weeks ago, premiums were about Rs 5 to Rs 8 for Tops and Special Tops, but now the gap has widened to anything up to Rs 12. There is an abundance of low-grade jute, but the demand for this type of fibre is at present limited. It is hoped that the I.J.M.A.'s request to buy more low-grade fibre may bring results.

While there is so much inferior jute in India at low rates, there does not seem to be a great deal of hope for the sale of Siamese jute to Indian mills. Reports from Bangkok indicate that the market there is very firm for quality jute. Anything yielding "A" grade is selling well internally, above overseas prices. Most of the transport from upcountry is by lorry, as it is difficult to arrange a speedy turnover. The problem of finding markets for "B" and "C" grades, also cuttings, is very real. Due to a shortage of steeping water, the quality from now on is liable to deteriorate. There

is still plenty to come forward as the crop is a month later than India's.

THE JUTE MARKETS

Manufactured Goods: Jute goods prices showed wide variations, and fairly large business was transacted. The main business appeared to be shipper covering and speculative in nature, although some genuine deals were reported in the form of Indian Government orders for sacking. Business was conducted for deliveries right up to June next year. With raw jute rates remaining low, mills were keen sellers for all deliveries. The political situation in the early part of the week caused considerable nervousness, and although at the opening last Thursday prices showed an advance, they were soon discounted. B Twills opened at Rs. 129.25 for December and Rs. 120.75 for April-June, while 40in. 100z. hessians stood at Rs. 52.50 and Rs. 46.50, respectively for the near and forward positions. Heavy goods soon fell by 50nP, but hessians only showed fractional losses. By the week-end, all the losses were again made up. The news from Goa caused the market to steady up, so on Monday morning prices rose a further 50nP in sacking and 25nP in hessians. During the day, the market became very firm and rates advanced rapidly by Rs. 3 in heavy goods and Re. 1 in hessians.

On Wednesday morning, opening quotations were as follows:

	December	January	Jan.-Mar.	Apr.-June
40in. 70z.	42.25	39.50	37.35	35.35

Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

general undertone of the market was weak, and many sellers showed willingness to sell below the minimum rates. Mills bought steadily nearly every day against quotas, which for the current week were increased to about 1 million maunds, thus being about equal to the all-India imports. Arrivals in Cossipore totalled about 600 wagons. The shortage of transport, which for the previous two weeks had been hampering the movement of jute, appeared to have eased, and during the past week there was a big improvement in imports. Good prices were paid for high-grade jute, which was in very short supply. As the full weight of the mesta crop began to be felt, sellers in this category were eager for business and offers increased. It must be a long time since so much business, in both raw jute and jute goods, was conducted in the course of a single week.

THE FOREIGN JUTE MARKETS

DUNDEE MILLS FACE LABOUR TROUBLE

(FROM OUR DUNDEE CORRESPONDENT)

THE jute trade in Dundee is facing dull prospects. Some small strikes are taking place at a few works, but workers at all other establishments in the district are adopting "go-slow" tactics. There is a ban on overtime, although all firms rely on overtime to get their orders delivered in time. As is well known, the works are all closed on Saturdays now and the opportunity is taken then of cleaning the machinery—usually done by the lowest-paid employees—who get anything up to 30s for the work. The ban on overtime has stopped all this, and the machines are cleaned on Friday afternoons, resulting in a loss of earnings by the actual spinner or weaver for the time taken. It is difficult to understand why the workers follow the instructions from their union, especially when they are losing money.

Buyers of all commodities in the trade have been placing orders in the hope of getting at least something, although late. There is a big rush to get anything available, and there is even a scramble for transport to move the material from Dundee to its destination.

Raw jute is quiet in the Dundee market, but there is little change in prices. Over the past month, the rates have moved little, and Mill Lightnings are offered at from £129 to £132, Mill Hearts from £102 to £104, Grade Hearts £84, Grade Tossa-2/3 £141 10s to £144 10s, fours from £128 to £130, and Continental Tossa-2/3 from £107 10s to £110. December-January shipment, c.i.f. U.K.-Continent. The Dundee spinners have been paying little attention to the further purchase of jute, and only some small lots have been picked up at the rates ruling from day to day. Occasionally, there is a drop of 10s a ton, which, in many cases, is recovered a day or two later.

The prices of Calcutta goods have fluctuated again, but the undertone is firm. Prices are below earlier quotations at 79s 6d for 40in. 10oz. Hessians and 60s for 74oz. December, 75s 6d and 57s January, 72s 6d and 54s February-March and 70s 3d and

THE PAKISTANI JUTE MARKETS

FIBRE RISES UPCOUNTRY

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE general undertone of the market has been quiet, although upcountry prices have risen over the past week. With more buying interest from balers, probably because of their improved financial position, primary suppliers have been encouraged to increase the quantity of their releases. The increased arrivals, however, have not satisfied buying interest, with the result that upcountry prices have remained steady. In certain parts, moisture is again appearing. The Narayanganj market has been inactive, with buyers showing interest at prices below what sellers offer.

After a certain amount of buying, overseas customers have refused to follow any advance, and at present, conditions on the Continent are lifeless. There is thus a fairly dull market with some short covering in loose jute, which typifies traditional condition in the trade just before Christmas, although last year there was an unexpected burst of buying by overseas merchants.

E.P.C. registrations for the last half of November were 250,000 bales, bringing the total to 200,000 bales more than above last year's registrations at this time. Registrations during the first half of the current month are not likely to exceed 150,000 bales, or 250,000 bales for the whole month, but most balers expect considerably more business in January. Reports indicate that overseas buyers appear to have lost interest in Export Firsts and Dundee Tossa 4s. The lack of interest in Export Firsts is understandable, first, because of the better Export Lightnings, and secondly, because the difference in prices between Export Firsts and Export Lightnings, taking into consideration the reduced standard of Export Firsts, makes it uneconomical. The lack of interest in Dundee Tossa 4s, however, is less easy to understand, as such grades are daily becoming more difficult to find.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in November improved over October, but was 2 million yards lower than November last year. Last month's bag cut-up was 49.7 million yards and piecegoods deliveries 20.2 million yards, compared with 53.2 million yards and 18.4 million yards, respectively, in November 1960. The total estimated consumption for 11 months this year is 76 million yards below the same period of last year—a decline of 9.7 percent. U.S. stocks at the end of last month increased by a further 13 million yards. At 219 million yards, 87 million yards were spots and 132 million yards were floats. Appearing below are two tables which include the November figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. burlap consumption (as reported to T.B.M.A.) (Million yards)		U.S. burlap consumption (estimated industry total) (Million yards)

AIMS OF LABOUR POLICY EXAMINED

By L. G. Smeathman

ALTHOUGH nothing spectacular emerged from the discussions at the nineteenth Indian Labour Conference, certain opinions were expressed which point clearly to the fact that industrial relations are at the cross-roads, and must either go forward guided by sound official policy or take the side turning to disension. In his opening speech, Mr. Nanda made the point that early attainment of full employment and "a rapid and radical change in the system of distribution" are considered necessary to satisfy the minimum needs of the country's population. The sentiments underlying this statement are unquestionable, as is also the acceptance that the standard of living must be increased even more, but the reference to a change in the system of distribution appears more ominous than usual, since any such increase or change must be gradual and in conformity with progress in other spheres. No statement so obviously directed to the hustings will do much to help. Mr. Nanda's statement must be put in the context of what subsequently transpired at the conference. The development of any country, and the provision of basic minima, depend upon its ability to increase industrial output; the efficiency of industrial output depends upon the atmosphere in which it takes place; thus the relationship between management and labour plays a vital rôle, and must be related directly to the Government's policies and leadership in this sphere. Mr. Nanda's Ministry can make or mar the development of India.

Some of the Government's hopes and intentions merged from the conference, as did management's—and labour's reactions to them. These reactions should influence the Government's future actions, and in this way the Conference may have achieved some positive results. It also sounded a note of warning. Mr. Dange, representing the A.I.T.U.C., opposed not only the proposed code of efficiency and welfare, but strongly advocated a reduction of working hours (admittedly on a restricted scale) and championed the cause of unrecognised unions. This reaction is to be expected from one of his political affiliations, but it does emphasise that certain elements within the country are as determined as ever to frustrate attempts at economic advancement. The Government's task is made more difficult thereby. Imaginative, original thinking and strength of leadership become increasingly essential.

Return to Investors

As further evidence of socialism (if such evidence is needed) Mr. Nanda suggested not only that the difference between the minimum and maximum levels of payments in industry should be reduced—with particular reference to what he termed "top management's share", but he advocated a reduction in recompense for the use of capital. The time when the country is seeking to encourage foreign collaboration is scarcely an appropriate one to advise limiting the return to investors. The Government must realise that remarks of this nature do the country no good, and Ministers should be restrained from such pronouncements. It was interesting to see Mr. Nanda advocating that labour should accept standards of remuneration which are in line with those prevailing throughout the country, and warning it that it cannot expect remuneration to be related to the capacity to pay of any particular employer—profitability as he put it. It seems a pity that this view cannot be brought home to labour more forcibly, and that the Government does not practise what its Minister preaches. There is no real argument to support conditions of service for the employees of more wealthy concerns being higher than those prevailing in the area, just as there is no real argument

to support the basis of regional variation. However, here again, Mr. Nanda must see that reasonable proposals are brought forward and that the policy is fairly enforced by the machinery.

Yet another example of the way in which industry is expected to shoulder more responsibility was contained in Mr. Nanda's reference to housing. The private sector is already doing more than its fair share and any further increase can only be at the expense of industrial development. In a community where the private individual cannot afford to build housing, must always be a Governmental function and to throw the responsibility on to industry at this stage, is but another brake on development. If housing is primarily a Government responsibility, so are schemes for social security which also featured in Mr. Nanda's speech. On this subject, both A.I.T.U.C. and I.N.T.U.C. rightly criticised the State Governments' slow progress in hospital construction, and labour representatives pointed out the lack of proper co-ordination in the provision of medical care. Nevertheless, it was admitted that social security, however desirable, cannot be achieved without resources and it is to be hoped that caution will be exercised, for the taxpayer is already overburdened.

Compulsory Savings

One of the matters discussed in connection with social security was the question of compulsory savings. All the employees' representatives appear to have been vehement in their opposition to this, and Mr. Naval Tata, on behalf of employers, tactfully suggested that compulsion was undesirable. There is no argument against the advantages of saving: provident funds and superannuation schemes do not and cannot make sufficient provision for retirement, and Indians have not acquired the habit of saving. It is doubtful whether they can do so while standards and wages are so low, and compulsion remains the only way. However, it is ridiculous to suggest such schemes and at the same time admit that a satisfactory basic minimum has not been reached. This is yet another example of the Government's attempt to put the cart before the horse.

In a part of his introductory speech, Mr. Nanda referred to the necessity for introducing techniques of production, which rely on the intensification of labour, so as to make the most of investment resources. He made the point that if this was to be achieved, collaboration between management and labour must in its turn be intensified. This presumably is the intention behind the proposed code of efficiency and welfare. In this part of his speech, Mr. Nanda came near to making a valuable point. Indian industry generally is still sadly lacking in an appreciation of the proper use of man-power, and too many of the old practices still remain. These result in a waste of labour, with the consequent increase in overheads and loss of efficiency. Presumably, what Mr. Nanda was referring to is the proper application of work study and other incentive schemes to streamline production and achieve the greatest possible output a man. Some employers—all too few in number—have been successful in introducing schemes of this nature while others, who have such schemes in embryo, have been blocked by union intransigence. In this, most unions are short-sighted, and disclose to the full their disruptive policies. The introduction of these schemes can only increase the reward paid to labour by increasing output, preserve capital for investment and thus raise the standards of the country. This is a field in which the Government must give a strong lead, and where a wealth of experience is available to it.

Opinion was divided as to the desirability of the code of efficiency and welfare, and the effectiveness of the Government's latest proposals. Employers were strongly against it, although their objections were based on the results of the working of the code of discipline rather than the rejection of the principles involved. Mr. Nanda was firmly of the opinion that collaboration at plant level was essential if efficiency was to be increased and that the code would help to achieve this. The I.N.T.U.C. supported the code, but Mr. Dange came out strongly against it, basing his objection on the argument that it would benefit employers, and not labour. In this, he is short-sighted, but no doubt it provides a convenient peg on which to hang the communist hat. If properly conceived, such a code could do much good, but a prerequisite is goodwill and acceptance on both sides. The employers are justified in their fears; if the Government is serious in its professions—as it appears to be—it should take steps to make the schemes, already introduced, work efficiently and thus convince managements of the efficacy of the "code" method. Only in this way can it get management's wholehearted co-operation and assistance.

The question of unrecognised labour unions was little discussed. This is a serious problem and one that Mr. Dange obviously intends to exploit to the full. It is wrong that an unrecognised union should be able to upset awards and agreements properly negotiated, and although it is admitted that there is scope for the less scrupulous employer to pick and choose the union he recognises, nevertheless, the disturbances which arise are unfortunate from every point of view. The solution lies with labour itself, who must be shown where its interests really lie and the necessary education must come from within the movement; this is where the I.N.T.U.C. could be most useful if it were prepared to spend the money and set up the necessary organisation.

Labour Appellate Tribunals

Lastly, the age-old problem of the labour appellate tribunal was discussed. There is a great deal to be said for having an institution to co-ordinate practice and law throughout the country and the old tribunal performed this effectively. Its abolition has left a gap which is still felt and which has retarded progress towards industrial peace. The representatives of labour agreed to its reintroduction, but with a reservation as to further appeal, which employers could not accept. Here management is wrong, for disputes over labour matters must stop somewhere, and the high courts and the Supreme Court were not intended to be a forum for such matters. In effect, there is little benefit in appealing to the superior courts except where matters of constitutional importance are concerned, for by the time a decision is reached, so many years have elapsed that it is of little real benefit to either party. It must be in management's interests to see the tribunal re-established in proper form, since it can check the depredations of State tribunals and ensure the standardisation and stabilisation of conditions generally; to this end, management should concede the point of further appeal.

Time was too short to enable the Conference to do more than briefly discuss those matters remaining on the agenda: social security, technical staff unions, contract labour and amendments to the Industrial Disputes Act were considered and some progress seems to have been made. The chief advantage stemming from the Conference is that the Government has now garnered the views of both sides on its policies and can proceed with its planning. The Government must remember that it cannot expect either management or labour to welcome legislation or codes, unless some consideration is given to their views and some concessions made. If this result is achieved by these conferences, then they serve a useful purpose and should be continued. This latest Conference is particular has given the Government a great deal to think about, and industry and foreign investor will await the results with interest.

For dependable distribution down the line...

VOLTAS IS THERE

The need may be for pharmaceuticals in an outlying village, or construction equipment in a remote town, or textile machinery in a big city...but whatever the demand and wherever it stems from, it is always answered because Voltas is there with its effective distributive system. Take pharmaceuticals—the Voltas Pharmaceutical Division has 7 sales offices with a 50 strong sales force covering nearly a thousand towns and villages all over the country. Stocked in air-conditioned warehouses, the pharmaceuticals reach chemist and consumer promptly, efficiently, regularly. And the same creed of service underlies Voltas' distribution in all 10 Divisions... all down the line!

Briefly, Voltas' activities comprise:

- **Marketing and Distribution of goods:**
Representing leading manufacturers, both foreign and Indian, Voltas supplies a wide range of goods—Electrical, Mechanical, Air Conditioning and Refrigeration, Textile and Paper Machinery, Agricultural and Construction Equipment, Machine Tools, Pharmaceuticals, Chemicals, Bulk Vitamins, Plastic Raw Materials, Processed Foods.
- **Manufacture and Development:**
Air Conditioners, Water Coolers, Switchgear, Farm Implements, Drilling Machinery...and the list is growing!
- **Service**
Voltas after-sales service is a by-word in India. Voltas sales are fully backed by its nation-wide service and spare parts organisation.

Engineering and Transport

OPERATING EXPENSES OF AIR-INDIA INCREASE

ADVANTAGES OF THE ARRANGEMENTS FOR POOLING TRAFFIC

THE annual reports for 1960-61 of the two Indian airlines, Air-India International and the Indian Airlines Corporation, do not show a rosy picture. The total capacity offered by the former during the year recorded an increase of 72.7 percent over that offered in the previous year. As was to be expected, the traffic actually carried did not keep pace with this increase. Although it increased by 41.2 percent, the overall load factor fell from 58.2 percent in 1959-60 to 47.3 percent in 1960-61. The operating revenue for 1960-61 was Rs. 1.19 a tonne-kilometre, against Rs. 1.35 a tonne-kilometre in the previous year. With the expansion in the volume of operations with the jets, the aggregate operating expense for the year increased substantially by 45.1 percent over that of the previous year, but the cost a unit, namely, for each available tonne-kilometre fell from Rs. 1.33 in 1959-60 to Rs. 1.13 in 1960-61, that is, by 15 percent.

Pool partnerships are now a common feature of airline operations. Air-India has such a partnership with Aeroflot on the Delhi-Moscow sector and with the Czechoslovakia Airlines on the Bombay-Prague route. Just before the beginning of the current year, a major partnership agreement was reached with B.O.A.C. and Qantas on all routes of B.O.A.C. from New York to Tokyo and Sydney.

The basic principle of revenue pools is the sharing of common traffic rights between two points. This is a fairly simple matter where there are no intermediate points of call in third countries such as, for example, in the case of Delhi-Moscow service where the total revenues can be shared simply in proportion to the capacity that each partner operates on the route. In the case of the tripartite pool agreement between Air-India, B.O.A.C. and Qantas, the application of a pooling arrangement becomes more complicated, although the basic principles remain the same.

Pool Arrangements with B.O.A.C. and Qantas
The tripartite pool partnership came into being on 1st April, 1960, and this, therefore, was the first year of its operation. Air-India and its two partners plan their services so as to complement rather than to compete with one another's operations. This enables the three airlines to give jointly much better service to the travelling public because the days of operation and points of call can be spread to meet the requirements of traffic. The public has, under such a scheme, a greater choice of services and the airlines have a greater chance of improving their traffic and also of effecting certain economies. The services of all three partners are freely sold by each partner. Under the pool arrangement, it is not important on which partner's airline the traffic is carried, since the revenues collected by the three partners are all pooled and shared according to pre-determined ratios resulting from the application of basic principles.

The effect of the tripartite partnership during the year was to obtain for the partners a greater share of the total available traffic in the face of severe international competition further enhanced since the introduction of large jet aircraft on competing services and the creation among some of them of partnership arrangements and consortia of their own. An important benefit of the tripartite partnership to Air-India is that it enabled it to extend its services to New York almost simultaneously with the introduction of Boeing jet aircraft on existing routes. If it had continued to operate on its own, it would not have attempted two such important tasks at the same time and the extension to New York would have been postponed by a year.

I.A.C. Traffic

During the year, the total capacity offered by the Indian Airlines Corporation rose from 110,979 million tonne-kilometres in 1959-60 to 113,049 million tonne-kilometres in 1960-61, an increase of 2,070 million tonne-kilometres or 1.9 percent. The traffic carried increased by 6 percent during the same period, going up from 78,485 million tonne-kilometres to 83,199 million tonne-kilometres. As a result, the overall load factor increased from 70.7 percent to 73.6 percent. Both because of the restricted capacity and growth of traffic, the load factor on the principal trunk routes (Bombay-Delhi, Bombay-Calcutta and Delhi-Calcutta) reached an average of 83 percent, which is indicative of extreme congestion on such services and considerable inconvenience to passengers. The Corporation is seeking the Government's sanction for the acquisition of two more Viscounts, in addition to the two already on order. A fleet of 14 Viscounts is necessary to cope with the anticipated traffic in 1961-62 and 1962-63. It should be a matter for some concern that no foreign exchange has been made available to the Indian Airline Corporation to equip its fleet with modern aircraft, such as Caravelles.

More Jets in Service

On the third anniversary of the jet air age,

with 23 airlines, and they have flown about 373 million miles. Boeing has orders for 446 707s, 720s and 727s and has delivered 237 aircraft. The Company turned over five jets in the first half of November, the fifth and sixth of 15 720s to Eastern, the two 720Bs ordered by Avianca, and the eighth of nine 720Bs to Northwest. Pan American Airways, which introduced the jet age to the U.S.A. in October 1958, enters its fourth year of jet service, during which it carried almost 2 million passengers by these aircraft. Pan American Airways jets—26 Boeing-Intercontinentals, six 701-120s and 20 DC-8s—serve 85 cities round the world. Five extra long-range 707-321Bs are on order. The Trans World Airlines completed introducing jets to its international routes on 28th October. In two years, T.W.A.'s 707s have flown 1,650 million revenue passenger miles, serving 14 countries.

B.O.A.C. to Cut North Atlantic Services

B.O.A.C. has confirmed plans to cut capacity on north Atlantic services next summer because of poor load factors experienced by itself and other airlines in summer 1961. Next spring, the Corporation will shift some 707s to its Far Eastern routes and twice-weekly 707 service to Teheran will be extended to Hongkong to link up with transpacific flights and provide single-aircraft-round-the-world service. In October 1962, B.O.A.C. will shift more 707s to fly the twice weekly London-Sydney Kangaroo service and Comets released from these routes will be used to build up services to west and east Africa, replacing Britannia 102s by November 1962.

Syrian Arab Airlines

Reorganised Syrian Arab Airlines now has a fleet of three DC-6Bs, two DC-4s and three DC-3s. One of the DC-6Bs is in Cairo, but it is reported that it will be returned to Syria soon. The airline

plans to begin shortly once-weekly round-trip DC-6B service Damascus-Baghdad-Teheran and Damascus-Athens-Rome. Syrian Arab is not now operating any flights to Cairo, but a Damascus-Cairo link is provided by Iraqi Airways with a once weekly roundtrip Viscount flight Baghdad-Damascus-Cairo. Iraqi Airways also plans a once-weekly Viking service Baghdad-Mosul-Aleppo.

Moscow-Djakarta Air Agreement

Russia and Indonesia have signed an agreement providing for direct air service between Moscow and Djakarta.

Turkish Restrictions on Foreign Airlines

Reports from Turkey show further restrictions against foreign airlines operating through the country. B.O.A.C. has been limited to one weekly flight between Istanbul and Frankfurt, but is holding out for three. B.E.A. has been requested to change all schedules which conflict with those of the Turkish airline. Middle East Airlines' rights between Istanbul and Vienna have been withdrawn. S.A.S. and Sabena are no longer operating into Ankara.

China Interested in Viscounts

A potential Viscount order for China's Airline C.A.A.C. will probably cover at least ten aircraft, and possibly as many as 15 or 20, according to London reports reaching Interavia. B.A.C. representatives have been in Peking for two or three months and a Rolls Royce group went to China early in November.

Attention EXPORTERS

For effective ADVERTISING in any overseas country, especially in the countries of Middle East, East & West Africa, Persian/Arabian Gulf States, Burma, Ceylon, Malaya, Mauritius etc. please write stating the names of countries, commodities etc. Leading newspapers, Trade Directories, Journals of International repute. Also inviting enquiries on "The Arab Directory"—Beirut, "Sells International Register"—London, "Burma Echo"—Rangoon, "East Africa & Nigeria Trade Directory" etc., etc.

BIRDS
are
it
stepping

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

FALL IN TEA PRICES CAUSES ANXIETY

EXPORTS RISE BUT LARGER HOME CONSUMPTION NEEDED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

SOUTH Indian producers are getting anxious about the progressive reduction in the sale price of tea. The Cochin sale average has gone down to Rs. 3.82 a kilogram. The corresponding sale average for 1960 was Rs. 5.14 a kilogram. Common teas have been worst hit by this depression. Low mediums fetched a price of about Rs. 3 a kilogram in the latest Cochin sale, against Rs. 5 a kilogram in the corresponding sale of 1960. If this trend continues, many south Indian estates will face serious difficulties. The current prices for common teas are not remunerative to producers. It was in 1954 that south Indian gardens found themselves in a similar predicament, but it was then a year of world slump. It does not appear that the decline in prices will soon be arrested, since the world output shows a substantial increase over last year's. The production is ahead of last year's by 110 million lbs, according to the latest available crop figures. The Indian contribution towards this surplus is 65 million lbs. South India's production was down by 3 million lbs at 139 million lbs during the first ten months of 1961—the latest period for which figures are now available—but the north Indian crop at 529 million lbs was 68 million lbs higher than the 1960 output up to the end of October.

It is pointed out that the 100-million-lb increase in world production need not frighten anybody. Last year, the world supply and demand were in close balance around 2,000 million lbs. One has to take into account the possible increase in consumption, especially in countries like India. The Indian consumption of tea in 1960 was estimated around 300 million lbs. Tea interests think that the annual increase in production is to the tune of 10 percent or 15 percent. The lower price at which tea is available should encourage consumption. Out of the possible increase of 60 million to 65 million lbs this year, the internal market may have to absorb about 40 million lbs, the rest going to the export market. There has already been an increase of 22 million lbs in exports, compared with those of last year. A normal increase in home consumption would help absorb 40 million lbs. Therefore, a section of the trade thinks that there is not sufficient ground for being pessimistic about a slump in tea prices. The present débacle is largely the result of buyers' feeling that world production will be much more than what is required to meet the demand for tea, according to this section.

U.S.A. to Purchase Indian Pepper

There is a hint from a responsible American source that U.S. buyers may again start purchasing Indian pepper. This country used to be the main supplier to the U.S.A. until a few years ago. Since then, Indonesian and Sarawak pepper replaced Indian pepper on a progressive scale. But the position is again changing in India's favour. The reasons are the growing uncertainty concerning supplies from Indonesia either due to a fall in production or due to the shift in the Indonesian Government's policy or the improvement in Indo-American relations. The hint is that if India is in a position to supply pepper at reasonable prices, the U.S. importers will certainly buy from India rather than from Indonesia.

Since the beginning of the new season in November 1961, the pepper market in India has remained dull. The principal reason for this is a change in the buying pattern of major buyers. Both American and Russian buyers, who between themselves take the bulk of Indian pepper, are not asking for long positions. They are interested in current and near shipment positions, so Indian exporters get no clear idea of the foreign demand sufficiently in advance. It was not the case previously when they used to get some indication of the foreign buyers' requirements through long-term forward transactions. So they could build up stocks which helped minimise the weight of floating stocks on the market. Now the exporters generally buy only that quantity which is required to meet their immediate requirements. Therefore, the grower is compelled to part with his stocks for prices which need not be the best he can expect. The present price of just over Rs. 300 a quintal is the lowest for two years on the Cochin market. The price for January shipment is going Rs. 3 less a quintal. In the past, the prices of forward positions used to go up at this time of year. This is taken as an indication of the lack of confidence of exporters on the future trend of prices. New crop is reaching the market in substantial quantities. The weight of arrivals as well as the lack of confidence of exporters are weakening the market.

Export Prospects for Cassia and Nutmeg

Chances are also brighter for expanding India's trade with America in other spices like cassia and nutmeg. Indonesia is the main supplier of these spices now. The quality of the Indian produce is said to be not as good as the Indonesian one. In spite of this, if India can offer these spices at reasonable prices, there are possibilities that she can get a good market there, but India is not in a position at the present moment to offer

any substantial quantity to the export market. There is scope for expanding the cultivation of these spices in India.

Assam Produces Exportable Dry Ginger

Assam has joined Kerala as a producer of dry ginger of exportable quality. The Indian Pepper and Spice Trade Association in Cochin has been informed by some producers' interests in Assam that they are in a position to offer exportable dry ginger amounting to a few hundred tons. Kerala has been enjoying a monopoly in the production of dry ginger of exportable quality among the Indian States so far. The export of dry ginger from India during the first 11 months of the 1960-61 season amounted to 5,930 tons, representing an increase of about 2,000 tons more than those during the corresponding period of the previous season.

Lemongrass Oil Prices Rise

Lemongrass oil prices have become prohibitively high, according to the export trade in Cochin. It is now selling at Rs. 300 a 10 kilos, against the highest price of Rs. 200 last year. The rise in demand from foreign countries for a relatively limited supply was responsible for the price boom in the lemongrass oil market. India which is the chief world supplier of this essential oil produced 1,100 tons to 1,200 tons this year, against 1,250 tons in the previous year. Although more land was brought under cultivation, excessive rains damaged the crop extensively this year. Consequently, there was a scramble for the limited supply and that resulted in prices ruling at a higher level throughout the year. The demand continues to be good but it is checked by high prices. At present prices, production will be higher because the growers will bring more land under cultivation. It is doubtful whether present prices will continue for long because high prices will compel the consuming industries to look for substitutes, including synthetics.

NORTH INDIAN TEA OUTPUT RISES

EXPORTS TO THE U.K. FALL

(BY A SPECIAL CORRESPONDENT)

THE North Indian crop figures up to the end of November are given as 588.4 million lbs, compared with 518.8 million lbs last year. The season has practically closed, so the December output is not likely to exceed 8 million or 10 million lbs, totalling, say, 598 million lbs for the year, against 533.5 million lbs in 1960 and 561 million lbs in 1959. The crop figures from the major producing countries show world production at 1,245 million lbs. Production amounted to 1,139.4 million lbs in 1960 and 1,144.6 million lbs in 1959. So there has been an increase of around 100.4 million lbs over three seasons or 9 percent during the period. Faced with this increase, there is no doubt that the trade is increasing world propaganda in favour of tea drinking. But the export figures so far available for north Indian tea show provisional estimates of tea shipped to the U.K. this season at 142.4 million lbs, compared with 149 million lbs in 1959-60. Meanwhile, world exports are provisionally estimated at 219 million lbs, against 221.8 million lbs. At first sight, this is not encouraging, but it could also mean that buyers from outmarkets have refrained from building up stocks on a falling market and may have to come in later to purchase more freely.

Tea Stocks

The 1961 results depend on the possibility of an upturn in the prices. Besides, the overall fall will be compensated to some extent by cheaper costs of production from the larger output. Another interesting point is stocks in Calcutta as the following figures show:

Public warehouses	1961	1960	1959	Average of last three years
Tea warehouse	223,960	190,769	249,650	221,543
Hide Road	127,907	122,200	139,684	132,176
King Georges docks	47,827		98,252	54,327
Kantapukur sheds	122,019	98,515	178,116	166,242
Tea transit sheds, King Georges docks, P. C. transit sheds, and U.K. teas	126,910	133,623	107,561	164,673
Private warehouses	638,962	545,107	863,263	740,013
Total chests	296,115	329,912	370,153	331,561
Teas afloat	1,044,777	875,025	1,233,418	1,071,604
	16,677	56,476	11,110	36,558

It will be seen from the above table that although stocks in Calcutta are higher than last year, they are well below the 1959 level as well as below the average of the past three years.

Supply of Fertilisers

The position concerning fertilisers remains puzzling although the Government calls for increased tea production to realise the third plan target of 900 million lbs. The industry says that this output would be possible by forcing growth with fertilisers which the Government appears unable to provide. In any case, there appears to be too much tea in the world markets already. It has been reported that the industry approached

the World Bank in order to secure foreign exchange to pay for additional imports of fertilisers.

Raising Home Consumption

Most of the news and statistics relating to tea are made available from tea brokers' reports, the Indian Tea Association and occasionally, the Tea Board. It is, therefore, interesting to note the observations of the president of the Calcutta Tea Traders Association urging measures to increase consumption since a study of this year's market shows clearly that a rise in production must be offset by an increase in consumption. In order to cope with the greater supply of tea, the weekly offerings around 75,000 chests for export and another 25,000 chests in dust catalogues have been allowed, since the Association wishes to dispose of the 1961 crop without undue delay.

River Transport from Assam

In September, due to the shortage of river transport facilities from Assam, despatches had to be restricted to 400,000 packages a month—about 85 percent of the quota. There was also some delay in October due to floods, but despatches from the Surma Valley came through without difficulty. Rail despatches were also quite good up to September. Thereafter, congestion developed in up-country areas. So Mr. G. A. Whitaker drew attention to the immediate danger to users of the Hooghly unless more river dredging is taken up at once.

On the question of supply and demand, Mr. Whitaker refers to the Food and Agriculture Organisation's estimate that if the present trend continues, from 1965 tea production will exceed consumption by between 88 million and 100 million lbs a year. He suggested it would not be prudent for the Government to consider the holding of a meeting of producer countries to examine the situation and to determine whether it would be advisable to renew the International Tea Agreement, not with the object of its immediate application, but rather with that of keeping the machinery in readiness lest the apprehensions of the F.A.O. should prove correct. Tea producers must take advantage of the changing pattern of the trade. If Britain entered the European Common Market, tremendous new opportunities would be opened for the export of Indian tea and as pointed out by this correspondent, intensive propaganda should be taken in hand with this object in view.

Reducing Taxes

About taxation on tea, it is understood that tea producers are making representations to the Government and are suggesting a certain degree of consolidation and reduction in the taxes. "The present export duty of 44p a kilogram served as a subsidy to other producers. This was probably the main reason why common teas were being priced out of the export market because, as recently as 1945-46, India and Ceylon had a virtual monopoly of the world's tea trade and the Government then took the opportunity to impose an export duty. Today Africa is a growing competitor in world markets, whereas India, while keeping her exports at a constant level, had not taken its full share of the increase in the world trade." Actually, India appears to be losing ground to Ceylon.

Tea Producers Meet in Shillong

Mr. K. P. Tripathi, Assam's Minister for Industries, emphasised the need for finance for tea gardens to enable them to expand production. Advances on the basis of hypothecation, he said, is all right for maintaining the existing production but not for expanding it. The sum of Rs. 5 crores earmarked for replanting should be increased. Mr. Desai, Central Finance Minister, said that tea increases India's capacity to buy capital goods and industrial raw materials from the industrially advanced countries. These are required for the economic growth of the country. "In the second plan, no specific production target was laid down for tea. It was expected that through the normal process of development, production would increase to 700 million lbs. I understand that from the present trends, production during the entire year of 1961 may reach an all-time record of 760 million lbs. The Central Government is convinced that unless we produce in larger quantities, we cannot step up our exports as well as satisfy our rising internal requirements." Mr. Desai continued: "Coming to exports, I understand that the sharp decline in 1960, compared with the previous year, was mainly due to the shortfall in production during that year. Exports so far during 1961 have, however, been satisfactory." (Note: only by comparison with last year.)

"The problem of finance for the industry has been engaging our attention and a scheme provided for the supply of machinery and equipment by the Tea Board to tea gardens and factories at a total expenditure of Rs. 2 crores on a hire-purchase basis has been put into operation," Mr. Desai said.

Tea Board Survey

Meanwhile, it is reported that the Tea Board is to start a campaign in the U.K., particularly in Scotland. In recent months, this correspondent has constantly urged that there is scope for raising internal tea consumption in India. A survey carried out last year by the Tea Board is said to have shown that there are great variations in regional tea consumption; for example, West Bengal with its factories and urban areas is said to consume 16 percent more a head than Bihar. The same trend was noticeable at Giridih, compared with Gaya. Tea consumption and industrial

employment appear to be correlated. One interesting result of the finding is that the sharpest increase in consumption was noted among people in the lower income groups. Surely, here is a field to explore, so why not allot an equal sum for propaganda in this area as is to be spent in the U.K. and compare results?

CALCUTTA TEA AUCTIONS IN NOVEMBER

EASIER TREND IN PRICES

During November, four export sales were held, in which 292,861 chests were catalogued. There was generally rather less demand than in the previous month, and prices for all descriptions ruled easier, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. A noticeable feature of the sales was the poor prices obtained for any teas containing excessive stalk or fibre, some of the teas being difficult to sell. Plain broken and fannings free from fibre showed a steady decline throughout the month, generally easing by up to 20p in each sale and sometimes more. Any teas in this category containing stalk and fibre were more heavily discounted. Although there was good support for orthodox Assams, prices again showed a general decline, although buyers were generally more interested in quality teas than the medium or poorer descriptions. Teas in this category were often irregular. The demand for C.T.C. teas was regular. Selected lines of better liquoring C.T.C.s were well supported and in some sales, prices were well above the last rates. Medium and poorer sorts, however, generally showed a decline, while secondary grades with poor liquors fell sharply, although there was quite a useful demand for teas of this type with good liquors. Legg-cut teas during the first three sales showed a sharp decline in price, but in the last sale of the month, there was a better demand and prices recovered slightly. Darjeelings received fair support at easier rates according to quality. The weakest feature of each sale was whole leaf grades, particularly for the more stylish descriptions, and prices for these declined heavily.

The standard of both leaf and liquor of Darjeeling teas was rather similar to last month's. Leaf appearance of Assam teas was of an average standard for the time of year. Orthodox teas were generally a little open in style with stalk and fibre often present in the lower grades. C.T.C.s, on the whole, were rather brownish, and there were a number of invoices containing fibre. There was quite a high proportion of offgrades, many of these being extremely fibrous. Liquors on the whole, were of an average standard and those offered towards the end of the month showed a slight improvement in quality. There was quite a fair standard of leaf appearance of Dooars and Terai teas which was about average for the time of year, although there was stalk and fibre present in the whole leaf and lower grades. C.T.C. manufacture maintained quite a useful standard of leaf appearance but that of legg-cut manufacturing gardens was inferior to the previous month, with more fibre present. Liquors were of rather an ordinary description, with few bright invoices. The standard of leaf appearance of Cachar and Tripura teas was rather similar to the previous month's with stalk and fibres present in many of the lower grades. A number of sweet liquoring invoices were sold, but on the whole quality was generally rather plain.

The Internal Market

The 1,743 packages of leaf teas on offer in the four sales were absorbed at irregular rates. The few green teas sold well. Dust offerings in the four sales totalled 104,136 packages. Although the demand in the opening auction was good and general, there was considerable strengthening in the two closing sales. C.T.C.s received good support throughout and closed well above the opening rates. The better liquoring descriptions came in for keen competition, but the fibrous teas were generally neglected except in the last sale when demand for this type improved. Plain orthodox dusts were seen to decline steadily but the Assam varieties with improving liquors were well supported at generally firm to dearer rates. Legg-cut teas found ready buyers at irregular rates. The few selected invoices were, however, dearer.

Sale No.	Tea	B.P.	1961-62		1960-61	
			A kilo	A lb	A kilo	A lb
Sale No. 21	Clean Plain Dust		3.65	4.63		
	Medium Assam C.T.C. Dust		5.40	6.10		
Sale No. 23	Clean Plain Dust		3.85	4.88		
	Medium Assam C.T.C. Dust		5.40	5.90		
Sale No. 24	Clean Plain Dust		3.90	4.85		
	Medium Assam C.T.C. Dust		5.60	5.78		
Sale No. 25	Clean Plain Dust		3.85	4.83		
	Medium Assam C.T.C. Dust		5.85	5.68		

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 25 totalled 1,254,998 chests at an average price of Rs. 4.98, compared with 1,122,198 chests at an average price of Rs. 5.67 for the same period of

the previous season. Internal sales at 4,606 chests of leaf and 443,176 chests of dusts (average prices Rs. 4.14 and Rs. 4.86) go against 7,820 chests and 378,304 chests, respectively (against Rs. 4.43 and Rs. 5.33) of the corresponding period of the previous season.

The estimated north Indian crop up to the end of October 1961, was 240.14 million kilograms (529.42 million lbs.) compared with 209.37 million kilograms (461.59 million lbs) up to the same date of last year. The average figure at this date for the three years 1958-60 was 217.89 million kilograms (480.35 million lbs.).

On 19th November, the Government of India announced the abolition of export quota with immediate effect. All tea exporters will now have to apply for an export licence directly to the Tea Board prior to the despatch of teas outside the country.

Arrivals (in chests) in Calcutta warehouses during the period 1st November to 30th November, 1961, with the corresponding figures of the previous year in parentheses were: by steamer 459,679 (477,673), by rail 191,620 (242,264), by road 33,810 (30,408) and by air 19,554 (19,591), making a total of 704,663 (769,936) chests. From the beginning of the season 1st April, 1961 to 30th November, 1961, arrivals have been: by steamer 2,275,406 (2,037,401), by rail 1,023,118 (911,334), by road 257,651 (156,539) and by air 109,017 (103,418), making a total of 3,665,192 (3,208,692) chests.

COCHIN TEA SALES

At Sale No. 51, 575,000 kilograms of tea were on offer. There was a strong general demand, and prices advanced irregularly by 10p to 20p for plain and low medium descriptions. Mediums were steady while good mediums were dearer de-

pending on quality. High-grown teas were irregular and whole leaf grades were strong and dearer. The unorthodox types were fully firm.

DR. HAROLD HART MANN

The death of Dr. H. H. Mann, formerly of the Indian Tea Association, at the age of 89, has ended a career in scientific research that was remarkable for its diversity and for its duration. His exceptionally wide interests and great physical vigour were displayed over a working life of more than 66 years. Harold Hart Mann, born 16th October, 1872, graduated in chemistry from Yorkshire College (later the University of Leeds) in 1892. He came to India in 1900 and was the first scientific officer to accept an appointment with the Indian Tea Association. His work on the cultivation of tea and its pests and diseases revolutionised its culture and made him the accepted authority on the crop. He became Principal of the Agricultural College in Poona and Agricultural Chemist to the Bombay Government in 1907, posts he held until 1918, when he was appointed Director of Agriculture for the Bombay Presidency.

MEDICINE MAN MR. AL FOIL F.G.S.P.P. ...

"... Fellow of the Grand Society for the Protection of Pills" said Mr. Foil, greatly impressing the awed Chemist who had never heard of the degree before. "That is just one of many honours conferred on me", continued Mr. Foil modestly, "by Pharmacists for having rendered valuable packaging service to the medicine manufacturing industry. Whatever the pharmaceutical product, be it pills or potions, aluminium foil wrapping safely seals in the prophylactic and curative properties for long periods and effectively protects them from contamination, moisture and dirt ... And that," finished Mr. Foil, "is just what the doctor ordered."

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other industries

VENESTA FOILS LTD.

KAMARHATI, 24 PARGANAS, WEST BENGAL

Selling Agents: Tea Chest Linings: WILLIAMSON, MAGOR & CO. LTD., Calcutta.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to October 1961. As compared with September, the October indices for Government securities and preference shares show drops of 0.2 and 0.1 point, respectively.

There were decreases in banks 1.3 points, engineering 13.2 points, papers 21.2 points and sugars 2.0 points, while increases occurred in cottons 7.1 points, coals 0.5 points, jutes 1.6 points, minings

and oils 4.0 points, cements 1.8 points, teas 11.1 points and miscellaneous 6.2 points.

Combining all the factors, the Capital variable yield securities index declined by 1.2 points during October 1961.

RAISING ALUMINIUM OUTPUT IN THIRD PLAN

By A. L. Sabharwal

THE projected development of the aluminium industry in India is truly remarkable, if not spectacular. According to the plans so far drawn up, there will be a more than sixfold increase in capacity at the end of the third plan period from the existing level of annual production of about 18,000 tons. So far all the estimates made have been a guessing game, but since the publication of the third plan targets, one is now on more firm ground. This is evident from the fact that towards the end of 1959, an estimate of annual demand of 64,000 tons was produced, which was subsequently raised to 80,000 tons in 1960, while the present figure—as worked out by the Development Council for Non-ferrous Metals—is 120,000 tons. The one single factor which has radically altered the picture is the policy decision taken by the Central Ministry of Commerce and Industry for the substitution of copper by aluminium in the electrical field. This single industry is expected to consume 50,000 tons out of a total of 120,000 tons by 1965-66. It is a revolutionary step not even contemplated on such a sweeping scale by the most industrially developed countries, except possibly France. This bold experiment will be watched with interest. To meet this demand, the industry must expand. In the following paragraphs, an attempt has been made to indicate what the pattern of expansion should be.

Current Demand

The present demand for aluminium in all forms is around 50,000 tons a year. Table I shows the industrywise analysis of this total. Also shown in the table are the estimated figures for 1965-66 and the percentage of increase, compared with 1960-61.

TABLE I
CONSUMPTION OF ALUMINIUM
(in long tons)

Industry	Tonnage		Percentage Increase
	1960-61	1965-66	
Electrical	20,000	50,000	150
Transportation	5,300	15,000	183
Packaging (foil)	2,500	7,500	200
Building and construction	1,200	4,000	233
Food, farming, sugar and canning	1,100	4,000	264
Steel	800	4,500	463
Miscellaneous	1,100	10,000	809
Domestic utensils and other commercial supplies	13,000	25,000	92
	45,000*	120,000**	167

* Includes scrap at about 5,000 tons

** Includes scrap at about 10,000 tons

It will be noted that the actual virgin metal required for conversion into various forms to meet the demand in 1965-66 is about 110,000 tons and that about half of this is required by the electrical industry. The estimates for this industry have been worked out on the assumption that wherever possible, aluminium will be substituted for copper, and includes the demand for transmission and distribution lines, bus bars, power cables and house wiring.

Against an estimated need for 110,000 tons of primary capacity by 1965-66, India now has an installed capacity of 28,000 tons, while the total capacity licensed, as given in the third five year plan, so far amounts to 87,500 tons. The picture is as shown in Table II.

In addition to the above, recent Press reports indicate that Bharat Aluminium has been sanctioned a licence to put up a 30,000-ton unit in Mysore. It is further gathered that two more proposals from the private sector and one in the public sector are being considered by the Government of India.

Wide Dispersal of Capacity

The aluminium industry is one of the few key industries in India which meets the criteria of (a) wide dispersal and (b) regional development. As at present located and planned, there are two plants in the east (Orissa and West Bengal), one in the north (Uttar Pradesh), one in the south (Madras) and two in the west (Kerala and Maharashtra). The smelters must be located near the source of power as about 2.52 kilowatts a year of power are required to produce one ton of aluminium, but offer little in the way of employment. The bulk of labour is to be found in the rolling and fabricating plants. It will, therefore, be advisable to disperse them to the more populated areas. This will have a two-fold advantage: (a) satisfy regional aspirations and (b) save transport costs which form an important element of the price structure. It is estimated that a smelter employs only one-sixth of the labour for each ton of production, compared with a rolling mill. Still

more labour is required in the case of manufacturing plants such as utensil factories.

Prices and Costs

Price has been and is one of the most important factors in determining aluminium's growth in competition with other metals and materials over a period of years. Aluminium at present costs 30 percent to 37 percent more in India than in the important aluminium producing countries of the world as Table III will show:

TABLE III
VIRGIN ALUMINIUM PRICES

Country	Price in Rs. a ton	Indian price higher by %
India	3,280	
Norway	2,471	33
Canada	2,516	31
U.K.	2,471	33
West Germany	2,490	32
France	2,395	37
U.S.A.	2,763	19

Export Possibilities

Great stress is being laid on the export possibilities of aluminium to the South East and Middle East Asian countries. While, no doubt, export possibilities exist, the prices prevailing in these areas are most competitive and with India's existing cost structure, place her in a very disadvantageous position. The following figures will illustrate how fierce the competition is:

A. Ingot is being offered at Rs. 2,356 a ton, c.i.f., against India's internal price of Rs. 3,280.

B. Rolled products are being offered between Rs. 3,280 and Rs. 3,410 a ton, c.i.f., against India's internal price of Rs. 4,700.

Some years ago, India had a substantial export business in utensils but this has now declined drastically. The reasons for it are twofold: (a) Most of these countries have now established their own factories; and (b) this area has started attracting all the largest producers of aluminium in the world, who are using it as a dumping ground for their excess capacity.

New Process of Production

As a result of research in the past decade in the smelting field, one can now predict that within a few years a new and more economic process for producing aluminium will be in the early stages of commercial exploitation. This work is simultaneously proceeding in France and Canada, but at this juncture no one can be sure what success any particular process will have. Reproduced below is an extract from a speech recently delivered by the president of one of the largest producers of aluminium in the world:

"The new process employs, as its principal raw material, bauxite of roughly similar grades to that required for the conventional methods. The process does not appreciably reduce the large power requirements of the existing process but it does give promise of substantial savings in other elements of production cost and of capital cost."

"The Company has under construction an experimental production unit capable of producing 6,000 tons to 8,00

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) declined by 1 percent to 123.2 during the week ended 25th November, 1961, compared with 124.5 (revised) for the previous week. The index was also lower by 1.2 percent and 1.7 percent, respectively, when compared with the corresponding week of the earlier month and that of a year ago. The monthly average for November 1961 worked out to 124.2, against 124.4 (revised) for October 1961 and 125.9 for November 1960.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 25-11-61	18-11-61	26-11-60

Books

ORIGIN OF CASTES: FACTS
DISPUTED

Origin and Development of Caste. By G. K. Pillai. (Published by Kitab Mahal, Allahabad. Price Rs. 5, pages 272.)

The jacket blurb says that this is Book 3 of the publisher's series "India without misrepresentation" but cannot, on any account, be called a fair representation. The author makes such wild generalisations as: "The Brahmana-cum-Kashatriya rule impoverished the peasantry, harassed the craftsmen and traders. Heavy extractions kept the Brahmanas in luxury, enriched the temples under their management, and kings themselves consumed the rest. Public interests were neglected and public works became palace works. For the impoverishment of the people, the Mohammedan autocrats and the British bureaucrats are invariably blamed, but they appear to have only followed the custom of the country, although with greater intensity in some cases." (Page 255). Indian history up to 1,200 A.D. is thus disposed of by the author. "It is usual to say that the chief objection to inter-dining with lower castes is their dirty or unclean habits, but the truth of it will be seen when the Hindus refuse to eat with the Europeans and Americans who are far superior to the Hindus in cleanliness and sanitary habits". (Page 238).

The author's thesis seems to be as follows: the Aryans never came to India and, therefore, the development of caste on the political basis is disputed. He also disputes the divine origin of caste. Caste is based on totemism. Formerly, the Sudras were not inferior to the Brahmins who were priests. But soon the Brahmins got wealth and power. Their priestly arrogance grew with their political power. They took full advantage of the literary upheaval which took place during the prosperous reign of the Gupta emperors. They used the classical Sanskrit of the Gupta period as a medium of propaganda. They suppressed the Vedas which were inimical to their pretensions of superiority. They rewrote the Puranas with additions and alterations. They depicted the Puranic heroes and heroines—the favourites of the common people—as washing the feet of the Brahmins. The master stroke of their diplomacy was the creation of the new orders of Kshatriyas, by Dwija baptism, from the barbarians who came to India and from the indigenous Sudras. *Manu Smriti* was revised and new clauses were added to give a legal status to the new relationship between the priest and the

king. Since then, the Brahmins became the *de facto* rulers of India. The author has given a number of customs common to the aborigines and Brahmins. He has dealt thoroughly with the conditions obtaining in Kerala from where he appears to hail. But a better title to the book would have been "A Defence of the Sudras." Part of the book reads like a publication of the D.M.K. movement in south India.

MANAGEMENT TECHNIQUES

Management Game. By Varanasy S. Murty. (Published by the Business Management Section, Department of Economics, University of Bombay. Review copy received from Vora and Co. Publishers Private Limited, 3 Round Building, Bombay 2. Price Rs. 5.50, pages 101.)

During the postwar years, in addition to its demands for a vast increase in the number of scientists and technologists, Indian industry has been persistent in its search for a better training for its managers. Due to the strong non-vocational traditions of Indian universities, so far many a development in this field has taken place outside them. The Business Management Section of the Department of Economics, University of Bombay, deserves congratulations for introducing successfully in India a significant new development in the science of industrial management through the technique termed "management game", which is also described as a multi-stage, multi-person, business game. It is explained how the technique helps strengthen the decision-making powers of managers. The chief objective of "management game" is to teach the technique of assessing why certain decisions are appropriate while others are not. The book contains a report of the "management game" and gives the reader the game programme, information about the participants, the information centre, a critic session and extracts from the convocation address delivered by the Rector.

ENGINEERING SURVEY

Survey of Engineering Industry in India, 1958-59. (Compiled by the Engineering Association of India, Research Department, India Exchange, Calcutta 1. Price Rs. 10, pages 160.)

This useful publication, fully supported by statistical tables, gives a bird's eye view of the engineering industry and brings to the fore many of its achievements and features. The State of Bombay has the largest number of engineering factories, it is claimed. The industry's progress in Punjab has been steady and remarkable. But in spite of the declared policy of the Government that the undeveloped regions in the country will be rapidly developed and that industries will be as evenly distributed as possible, the success achieved so far is not apparently satisfactory. Meanwhile, the largest number of industrial licences has been issued for Bombay and West Bengal. Those issued to firms to be located in such underdeveloped States as Rajasthan, Himachal Pradesh, Orissa and Madras, are almost negligible. There is a marked trend in favour of joint-stock companies owning engineering factories. Many components, which were formerly imported, are now being locally manufactured. No significant progress has been made in developing small-scale units as ancillary to large scale ones (the sub-contracting system) in bringing about the dispersal of industries and in working out common production programmes. The publication clearly brings out the problems of the small-scale industries.

INDIAN PARLIAMENT

Practice and Procedure of Indian Parliament. By S. S. More. (Published by Thacker and Co. Ltd, Rampart Row, Bombay. Price Rs. 27.50, pages 568.)

Sir Eskine May's *Parliamentary Practice* is deservedly held in high esteem by legislators in all countries which have a Parliament inspired by the Mother of Parliaments. Indian legislators, therefore, try to seek light and practical guidance from that book. But May's treatise cannot answer all the questions peculiar to the Indian Legislature. The recent instance of the editor of *Blitz*, who was made to appear before Parliament, is an instance in point. Mr. More's book is, therefore, most welcome and opportune. Divided into 16 chapters, it traces the evolution of parliamentary practices and procedures in India, points to the material changes in the composition and function of the Legislatures from time to time, giving suitable comparisons from the practices obtaining in Britain and other Dominions. He has rightly adopted the historical approach and has clearly explained how and why the present links of the procedural chain came to be forged. The Vice-President aptly says in his introduction: "Mr. More's important book as the *Practice and Procedure of Indian Parliament* written with vast learning and large experience of Indian parliamentary institutions, is a valuable guide to all students of our public life."

NAMES AND DATES

Mr. F. E. H. Goddard, manager, Chartered Bank, Bombay, has been elected president of the Bombay Chamber of Commerce and Industry for the year 1962-63.

Calcutta Markets

STRONG GENERAL DEMAND AT
SECOND CENTENARY SALE

DUST PRICES RISE

AT Sale No. 28, held on 18th and 20th December, the Export auction commenced with a short ceremony in which Mr. A. S. Bam, chairman, Tea Board, auctioned the first lot from each broker's catalogue. He used the Blackthorn gavel presented to the Calcutta Tea Traders Association by the Wholesale Tea Dealers Association of Ireland on the occasion of the centenary of the Calcutta tea auctions. There was a strong general demand for the 74,765 packages on offer. The market opened at fully firm to dearer rates, but prices eased slightly in the second half of the sale. Plain brokens were generally firm to dearer, but similar Fannings were barely steady. There was keen competition for "tea for price" which sold readily. Better liquoring orthodox Assam brokens and Fannings were generally dearer with quality, while medium descriptions in this category were fully firm. C.T.C.'s sold at firm to dearer rates. Any secondary grades with useful liquors were dearer, but there was less support for the plainer liquoring offerings. Legg-cut teas were generally dearer. Darjeelings met with quite good support around last rates, while tip was dearer. Whole leaf grades were in demand, particularly the cheaper varieties, and prices were generally dearer.

Quotations	1961	1960
Clean Plain Pekoe	3.90 to 4.10	5.30 to 5.45
Plain B.P.	3.50 to 3.65	4.50 to 4.65
Plain Fannings	3.50 to 3.70	4.80 to 4.95
Medium Assam C.T.C. B.P.	4.80 to 5.10	4.70 to 4.90
Medium Assam C.T.C. Fgs.	4.60 to 5.00	4.85 to 5.15
Best Assam C.T.C. B.P.	5.40 to 5.70	5.40 to 5.80
Best Assam C.T.C. Fgs.	5.40 to 5.80	5.70 to 6.20

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a strong and general demand for the 24,651 chests of Dusts on offer. C.T.C. teas sold irregularly but well, and the smaller and brighter descriptions were often dearer. Fibrous kinds were also well supported. Orthodox varieties, although a little easier for the poorer sorts, met with a useful enquiry and those with bright liquors sold at generally enhanced rates. Legg-cut teas were also in demand and were dearer.

Quotations	1961
Plain Orthodox Dust	2.55 to 4.00
Medium Assam Dust	3.85 to 4.20
Legg-cut Dust	4.30 to 4.60
Medium Assam C.T.C. Dust	5.50 to 6.00
Good Assam C.T.C. Dust	5.40 to 5.90

(Quotations are inclusive of excise duty.)

The 312 chests of Leaf tea on offer met with a fair demand. The 42 chests of green tea were, however, a little easier.

FREIGHT RATES GENERALLY
UNCHANGED

THERE was little change in the general state of the freight markets last week, and several January vessels (American flag) were fixed with wheat from the North Pacific to India at \$ (U.S.) 25.25 with 1,000 tons discharge free. The fixture of 9,500 tons 10 percent phosphate from Aquaba to Madras and Calcutta has been reported at 52s 6d f.i.o., stowed. Burma rice charterers paid 41s 6d f.i.o., with 500 load/600 discharge for 9,500 tons of bagged rice to Ceylon. Some 4,500 tons of coal from Calcutta to Colombo December shipment has been fixed at 40s f.i.o., and trimmed 750 of 500. To move coastal coal, the Central Government is inviting offers from foreign flag vessels on voyage charter, and a vessel for 4,000 tons with two consecutive voyages from Calcutta to Madras has been fixed at 40s f.o.b. the vessel paying for trimming and discharge. Two lots of sugar in bulk of 10,000 tons 10 percent each from India to one port Northern Range or Gulf have paid \$ (U.S.) 7 f.i.o. stowed. The fixture of 7,000 tons 10 percent pig iron from Visakhapatnam to one port Japan, December shipment has been concluded at 46s f.i.o. stowed. Due to labour strike, there is heavy congestion in Colmbo. In Madras, there is no congestion on the ore loading berths, but vessels on import and export berths with general cargo or fertilisers are awaiting two to three days. The fourth foodgrain vessel at the Haldia anchorage is expected to arrive on 21st December and the lightning of foodgrain at the said anchorage is being carried out smoothly.

LINSEED QUIET

The market was quiet in the past week. In the absence of buyers at higher prices for forward positions, linseed was quiet in sympathy with groundnut and mustard seeds. Arrivals were small and stocks were limited in the hands of millers. The oil market was quiet as the local offtake was small and due to weakness in other edible oils. Mills were not keen to do business at lower rates and operated on a very restricted scale. The oilcake market was dull. Small business was reported at lower rates. The latest quotation is as follows: Ready-December Rs. 31 a maund.

COMPANY AND PUBLIC NOTICES

THE CHURULIA COAL COMPANY LIMITED

NOTICE is hereby given that the Scheme of Arrangement as approved by the members at a meeting convened by the High Court at Calcutta and held on November 24, 1961, is presently before that Court. The Share Transfer Register and Register of Members of the Company shall remain closed from 1st January, 1962 to 30th January, 1962, both days inclusive, the Company having petitioned the Court that the order effecting the amalgamation with the Sendra Coal Company Limited (and dissolution of the Company) shall be made effective on 1st January, 1962.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FIT
Firestone
BE SAFER FOR LONGER

There is no economy in driving on worn-down tyres. There is only DANGER—from skids, from blow-outs and from the lack of braking control.

You and your family are no safer than the tyres on your car!

Buy Firestone and you get—

- The still exclusive Firestone Safety Tread with its thousands of non-skid angles to ensure the utmost in braking control.
- Long-service, wear-resistant Firestone rubber formulated to keep you safer—for longer.
- The same engineering skill in tyre construction that World Motor Racing Champions depend on for their lives.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

CONSTIPATION
AND
PILES

Habitual constipation can cause piles or haemorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well known German pile remedy contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

ECONOMIC RESEARCH is an essential part of modern commerce. But it is not always easy to obtain. The ordinary business house does not usually possess the records, statistics and archives which are the raw material of research. CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT has a long record of service to Chambers of Commerce, Industrial Associations and private business concerns. It does not undertake trade inquiries, but its facilities and advice are available for all kinds of research proper into the problems of Indian commerce and industry.

CAPITAL RESEARCH & STATISTICAL DEPARTMENT has constructed and maintains a number of cost of living indices for various classes and communities in India and Pakistan. It offers the industrial and business houses its experience in economic
