DANGERS OF THE GOLD EXCHANGE STANDARD

IN the debate that has gone on for over a year about reform of the international monetary system, and in particular, revision of the gold-exchange standard, few contributions have made so marked an impression as the articles published towards the end of June by Mr. Jacques Rueff in *Fortune*, *The Times* and *Le Monde*. Well placed in those three organs to capture the attention of financial opinion in every part of the world, these essays benefited first from the prestige of their author, for the son-in-law of Marshal Pétain was the principal technician of the Poincaré stabilisation of the franc in 1926, of the de Gaulle stabilisation in 1958 and of Franco's stabilisation operation of 1959 in favour of the peseta. More to the point, M. Rueff, in criticising the gold-exchange standard, was demonstrating the dangers of precisely the sort of successful monetary reforms in which he has had a hand. His observations, therefore, were in a different class from the more or less brilliant plans put forward by professors of economics and I.M.F. officials, people who have played no direct rôle in running the gold-exchange system but have decided that it is all wrong. On the contrary, M. Rueff was saying that the gold-exchange standard works well enough except when, in unusual circumstances, someone like himself comes along and has the good luck to put through (with the backing of a great politician like Poincaré or de Gaulle) a completely successful monetary reform—whereupon the gold-exchange standard can become the instrument of a dangerous world inflation.

This was no shaft from the ivory tower. What carried it home to a wider audience than has been affected by previous sallies against the gold-exchange standard was that M. Rueff put his finger on the point of greatest danger: the western stock markets. Probably for the first time, many people saw that the weaknesses of the present world monetary system do not concern only exchange bankers and such specialists; they could impinge on all economic activities, through the mechanism of a stock market crash. Though M. Rueff put forward no precise practical "plan" to remedy this danger, it is a tribute to the practicality of his remarks that the Paris share market, at least, took a nervous dip a few hours after his first article was published in that city.

These are the aspects of the gold-exchange standard that have so far received attention, and they are enough by themselves to warrant reform of that system. However, M. Rueff has focussed on another aspect, which can cause not simply awkward problems and dilemmas but an actual crisis of world proportions. When the Continental nations win a surplus of dollars and sterling to-day this shows up in their own credit system as an increase in private bank balances, because their central banks buy those moneys against their own currency: there is a net credit creation. Yet the dollars and sterling they buy, they immediately re-invest in New York and London, as interest-bearing deposits—so that it is just as though those sums of dollars and sterling had never left their place of origin. They continue to be part of the American and British credit system.

"Entering into the credit system of the creditor country but remaining in the credit system of the debtor country, the currencies that represent the deficit have really been doubled...The working of the international monetary system is thus reduced to a silly children's game where it is agreed to give back their stake, at the end of each game of marbles, to those who lost".

M. Rueff demonstrates this with the figures President Kennedy has given on the U.S. payments deficit. Between the end of 1950 and the end of 1960, the U.S. payments deficit was \$18,100 million. Yet the U.S. gold reserves fell in the same period only from \$22,800 million to \$17,500 million. That was because in that time creditor central banks, while creating in their national currencies the equivalent of the U.S. deficit, had re-invested about two-thirds of that sum on the American market; foreign holdings of dollars in New York grew by \$13,000 million. To that extent, the U.S.A. had incurred a payments deficit without making any payment to foreigners and everything had happened in the monetary sphere as though the deficit did not exist. "It was thus that the gold-exchange standard had accomplished the immense revolution of giving to countries whose money had international prestige the secret of a deficit without tears that enables one to lend without borrowing, to give without taking and to acquire without paying...It is the product of a prodigious collective error which will be for history, when it realises it, the object of stupor and scandal".

This system has little effect on the world's supply of purchasing power as long as international payments are more or less balanced, and no effect when the Continent and the rest of the world is struggling with the dollar shortage. It becomes the means for a world inflation when there is a vast capital migration out of the U.S.A. This happened first in the 1920's, soon after the gold-exchange standard was set up. An outstanding feature of the unprecedented boom of 1926-29 was the massive movement of capital out of the U.S.A. and the U.K., first towards Germany after the Dawes plan reform of 1924 and then towards France after the Poincaré stabilisation of 1928-29. That capital created extra credit in the two Continental countries, but it never really left the credit system of the U.S.A. and Britain. It was this veritable doubling of the same sum in two credit pyramids that was responsible for the exceptional proportions of the 1926-29 boom—and for the terrible nature of the 1929 slump. Something the same has happened in 1958-61. A large amount of capital has moved out of the U.S.A. and Britain and, by the same mechanism, it has produced a doubling of credit which, M. Rueff considers, is responsible for the abnormal price

TRADE PROMOTION

...is our business

Australia, New Zealand, and Fiji offer opportunities to exporters and importers and the International Division of the Bank of New South Wales can help those interested.

The Bank's complete banking service includes such specialized facilities as trade and industrial enquiries, economic and trade information, and a complete travel service. The Bank, through more than 1,000 branches and agencies, is closely and constantly in touch with industry, business, and agriculture in the areas it serves.

Enquiries may be made through your own bankers or direct to

BANK OF NEW SOUTH WALES
INTERNATIONAL DIVISION
John W. McEwen, Chief Manager
HEAD OFFICE: SYDNEY, AUSTRALIA

First and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with branches in London.

Whether or not the menace is as imminent as he said, his reasoning on this point—the connection between the gold-exchange standard and the over-valuation of shares on both sides of the Atlantic—seems to be irrefutable. He could be mistaken, and no doubt ardently hopes he is, in hinting that today's share market boom could go the way of 1929's, but he is no doubt correct in showing a disturbing similarity between the situation now and that of the late 'twenties. The core of his argument is that many share purchases and other credit-financed operations in the U.S.A., on the one hand, and on the Continent, on the other, are being put through with credit that is based on the identical security. The one and the same security, a certain quantity of gold, is producing two parallel and separate credit structures, one in the countries with a payments surplus like West Germany, France and Italy, and another in countries with a large payments deficit like the U.S.A. and Britain. As every banker knows who has ever seen a case of over-lending, two credit pyramids can stand on the one base for a long time—until someone notices, whereupon disaster is inevitable.

How does this happen and how is it the fault of the gold-exchange standard? Consider what used to happen when the dollar and sterling were on the gold standard. If the U.S.A. or Britain incurred a payments deficit, their creditors, who were in the main Continental central banks,

level of shares in Frankfurt, Paris and Milan, as well as in New York. The reflux of funds from their refuge in the U.S.A. to the rehabilitated economies of the Continent, at a time when there is a boom in Europe and no real depression in the U.S.A., is financing a powerful wave of expansion whose foundation is purely inflationary.

To correct this situation, M. Rueff does not propose any firm plan besides calling for an international monetary conference to undo the work of the 1922 conference which set up the gold-exchange standard. He rejects in advance several well-known solutions. A simple return to the gold standard, by annulling the reserves now held in the form of dollars and sterling, would leave the world with too little liquidities for its ordinary transactions. The value of those liquidities could be increased by raising their price, i.e., lifting the price of gold well above the present \$35 an ounce, but M. Rueff considers this method imprudent and hazardous. Franklin Roosevelt chose the figure of \$35 by tossing a coin in the air and no one has yet suggested any other way to change it. There remain the plans for a money of international settlements (put forward today by Professor Triffin, modernising Keynes) which would replace dollars and sterling, but the fears of inflation that led to rejection of Keynes's plan still apply to the Triffin scheme. Moreover, the international money will have to be run by somebody—it will be the

western world's managed currency—and that somebody would then have the power, by issuing more or less currency, to impose capital-levies on member economies.

The monetary conference that M. Rueff suggests would have the choice between amendments of these, and other, proposals, but its ultimate aim must be to replace the current system by another that does not serve to encourage and maintain the payments deficit of countries whose money is accepted by others as being as good as gold. If the problem is really as urgent as M. Rueff says, such a conference will no doubt be held because negotiations now going on to patch up the gold-exchange standards are making no headway—largely because of objections of principle from the Continental countries to the very basis of the gold-exchange standard. To some small extent, perhaps, Continental criticism—including M. Rueff's case—is an expression of the Common Market's resentment of a monetary system that elevates the U.S.A. and Britain to the rôle of bankers—bankers who today must go begging Continental support to keep the system on its feet. This does not invalidate their arguments, but it serves to remind us that a certain consequence of any of the plans to replace the gold-exchange standard will be Britain's deterioration from the position of banker and probable liquidation of the sterling area.

ECONOMIC DEVELOPMENT IN ASIA

ECONOMIC development has become the dominant goal of public policy in Asia. Almost all Governments in the area have ambitious plans for raising the standard of living of their peoples through vast investment programmes. These are requiring resources much in excess of what their own economies can provide, but the present conflict between East and West has to a large extent come to their rescue. Quite naturally, this has led to much careless and extravagant planning. Vital economic principles have all too often been sacrificed for unattainable political goals. Prudence is rarely exercised in the making of choices. The spectacular rather than the economically sound is preferred, and no thought is spared for opportunity costs when making public investment decisions. This is broadly the background to the economic events in 1960 which have been lucidly analysed by the E.C.A.F.E. in its latest annual survey.

As so many Asian Governments are not familiar with the problems of economic growth, and are not willing to learn from others' examples, they try to marry immediately the two incompatibles of quick development with the socialistic goal of income redistribution and welfare. This has resulted in the fixing of wrong priorities and the pursuing of policies which are mutually inconsistent. The job of balancing the economic objectives has, therefore, become an extremely difficult one. As the Survey points out, remedying internal instability by an import surplus creates problems of external unbalance; cutting imports to save the balance of payments strengthens domestic inflation. The search for greater equality aggravates the already high propensities to consume at the expense of saving. "The Governments even differ as to the degree of emphasis to be placed on common objectives of their fiscal and other policies, as well as to the methods of attaining them".

One point on which they are all agreed, however, is that a leading rôle in economic development should be assigned to the public sector. The Survey agrees that the public sector should have an important, or even leading, part to play, especially in the building of the infra-structure of the economies, which private capital would not be in a position to undertake, but while deciding on the vast volumes of expenditure, the Governments should weigh carefully all alternative means of promoting public good. This is what is generally not being done. The scale of public expenditure keeps rising and no steps are being taken to see that the growth of revenue keeps pace with it. The authorities, far from reorganising their tax systems on more scientific lines and making their tax collection machinery more efficient, have taken the easy way out of deficit budgeting, when they are unable to raise the levels of direct and indirect taxes. The authors, therefore, have felt the need to add several chapters on post-war fiscal developments in the E.C.A.F.E. region, which is a special feature of this Survey. Expenditure and revenue policies of the various Governments have been elaborately dealt with, which makes these chapters most interesting. One of the depressing findings is that a good deal of Government expenditure for current purposes has taken place by diverting investible funds from private hands, and to that extent, investment in the aggregate has been affected.

While emphasising the point that it is important to remodel the revenue systems so as to

make them progressively more in line with national income, the Survey is careful to add that if taxing the rich has not yielded either the revenue or the net increase in national saving which is required for economic growth, it is because most of these Governments have no knowledge as to where exactly the rise in national income has occurred, to whom the benefits have gone and in what proportion. "Current knowledge of the changes in the distribution of income and wealth in the newly developing countries of Asia, and of the volume and patterns of saving in the various income or occupational groups, is mostly in general descriptive terms instead of being based on sound statistics".

BRITAIN'S "INVISIBLE" INCOME

BRITISH bankers feel sometimes that statements by the Chancellor of the Exchequer (whoever he may be) miss the essential financial facts. This criticism could not apply to remarks by Mr. Selwyn Lloyd in a recent address to the Association of British Chambers of Commerce in London. Particularly important were his comments on the U.K.'s net "invisible" income—a subject on which most Chancellors of the Exchequer are curiously uninformed. The U.K.'s net earnings on "invisibles", said Mr. Lloyd, were reduced by more than £200 million between 1958 and 1960. The main factors in this deterioration were reductions in net interest and dividends by £82 million and in net earnings from shipping by £47 million and an increase in the Government's expenditure abroad by £53 million. The present unsatisfactory state of the U.K.'s external payments is attributable mainly to this deterioration. Over many generations deficits on "visible" trade have been balanced by net "invisible" income, and it has provided in most years a surplus for investment abroad. There was no surplus but an overall deficit last year, and there is no sign of improvement in the "invisible" account this year.

Now, indeed, for the first time since the 18th century, the "invisible" account itself is moving into deficit. This change in the nation's finances demands a basic reconsideration of policy. If possible, net "invisible" income must be restored. If it is not possible, the economic mode of living that was compatible with that income must be adjusted. The Government is, apparently, preparing to reduce its own spending abroad. "We have spent money out of all proportion to our resources since the war to hold the free line throughout the world", said Mr. Lloyd. "We are trying to do too much". There is not much that the Government can do directly to increase the "invisible" earnings of the private sector, but an earlier statement in Parliament by Sir Edward Boyle, Financial Secretary to the Treasury, implied that it was dissatisfied with companies' use of the tax-saving facilities provided by Mr. Peter Thorneycroft, then Chancellor of the Exchequer, in 1957. Companies classified as Overseas Trading Corporations can save tax on profits earned abroad if they do not remit these profits to Britain, and the consequent curtailment of remittances has seriously reduced net income from investment abroad. The concession will probably be amended.

Restrictions on foreign investment in Britain would be contrary to the Government's policy, but

tical foundations". The deficiency has to be rectified. India is attempting to do this by setting up an investigating body to collect the necessary information in a dependable way.

By far the greatest economic danger is posed by the rapid population growth. Population is growing at an explosive rate in many of the countries reviewed, especially India, with the result that in spite of record harvests over the past two years, the per capita availability of food has been barely maintained even with substantial imports. Heavy food purchases from overseas are a regular source of pressure on the balance of payments of many countries. The Survey therefore, stresses the need for rapid improvement in agricultural techniques so that the region as a whole, as well as individual countries, can be self-sufficient or as nearly self-sufficient as possible in their food supplies. This, of course, is not to minimise the importance of industrialisation, but to emphasise the need for co-ordinated industrial and agricultural development. The E.C.A.F.E. region, especially in the case of some of the member countries such as India, is making rapid industrial progress. Since the industrial development programmes are geared to predetermined targets, often high and more often unrealistic, the process has involved serious balance of payments difficulties. Exports are still largely of primary goods which are extremely vulnerable to fluctuations in economic activity in industrially advanced countries, and earnings are usually insufficient to provide a surplus for development. India, for example, has not been in the midst of such a crisis for the past several years, and precisely for this reason. In the circumstances, these developing countries are constantly having to fall back on the generosity of the richer western nations, and that new institutional source of international capital, the World Bank and its affiliates. By pinpointing the many failures and inadequacies of economic planning in the region, the Survey obviously implies that in the interest of sound growth, these countries concerned must redraw their plans on more realistic lines, reorder their priorities correctly, and finally, must acquire a clear notion of what actually the requirements of quick development are so that the pursuing of so many mutually contradictory objectives all at the same time can be avoided.

It must be admitted that American participation in British industry is causing some anxiety. The motor and chemical and domestic-appliance and office-machinery industries and many others in Britain have been developed with the aid of American capital and technique, and many of the American-owned companies are important exporters; but the remittance of profits on these companies' operations is an increasingly adverse factor in the "invisible" account. Many of the goods—toll preparations and manufactured foods are examples—which are made not less efficiently by British firms. If it were possible to regulate foreign investment without offence to principles it would be better to select for development such foreign activities as could positively strengthen the economy. This is a policy that other countries apply to foreign financial activities and to foreign shipping, whether by direct restraint on foreign operations or by preferential treatment of domestic interests. However it may be regretted in the City of London, the fact remains that countries where not many years ago possibilities of expanding business are developing their own facilities and relying less on London's. Similarly, the "younger" commercial countries are establishing their own shipping services and treating them preferentially.

It has often been remarked that in developed countries rising living standards are reflected more in multiplicity of services than in consumption of goods. On the international plane, by contrast, development tends rather to diminish the "export" of services. Many services for consumers are by their nature local; others, such as insurance, and many governments prefer that they should be. The trend does not favour Britain's financial and commercial services on the international plane. In trade matters the trend is more favourable to British oil companies' activities abroad; the trade in crude oil and in refined oil-products is expanding. But the remittable profits of the companies are not expanding proportionately; profits are not easily earned, and the costs of development are high, and the countries whose oil is being exploited are demanding a bigger share of the proceeds.

As it is difficult to increase "invisible" earnings, there is a natural inclination to reduce "invisible" spending. The British Government's spending abroad has nearly doubled in the last decade (to

some £330 million a year), and it can be reduced by an act of policy. But to restrict such important (and increasing) items as tourists' spending abroad would be essentially regressive, and the Government would resort to such restriction only in a serious emergency. It is realistic to assume that the U.K. cannot regain the net "invisible" income of more than £300 million a year that she earned in the early 1950s, nor ever, probably, the level of some £200 million a year to which the figure had been reduced by the late 1950s. If she

is to continue to fulfil her function as an exporter of capital she must increase her "visible" exports, economise her "visible" imports (by producing more efficiently), and (in any ways that do not conflict with accepted policy) reduce her "invisible" spending. If only to economise the cost of servicing the sterling balances, the Chancellor of the Exchequer and the Governor of the Bank of England must, it seems, turn their thoughts away from a high Bank rate as a means of correcting overstrain in the economy.

United Wire Ropes Prospectus

The United Wire Ropes Ltd will set up a factory at Thana, near Bombay, for producing steel wires and wire ropes. There is good demand for these products, and, at the moment, a large portion of the domestic requirements is being met by imports. So United Wire Ropes should find no difficulty in selling all its products. It is estimated that the demand for these products may rise from 25,000 tons at present to 40,000 tons a year at the end of 1966. The capacity of the United Wire Ropes factory will be 3,600 tons a year at the beginning. The Company has also applied to the Government of India for a licence to produce 2,100 tons of high tensile steel wires.

The estimated cost of the project is Rs. 97 lakhs to which the Industrial Credit and Investment Corporation will contribute Rs. 30 lakhs in the form of a foreign exchange loan. In order to raise finance, United Wire Ropes has issued 45,000 ordinary shares of Rs. 100 each and 10,000 cumulative redeemable preference shares of Rs. 100 each carrying a fixed dividend of 9.5 percent, free of income tax payable by the Company, but subject to the usual tax deduction at source. Four hundred and twenty ordinary shares have already been subscribed. The directors and their friends have agreed to take up ordinary shares worth Rs. 17.08 lakhs. The Life Insurance Corporation will subscribe for 5,000 ordinary shares and 5,000 preference shares. The remaining 22,500 ordinary shares and 5,000 preference shares are being offered to the public for subscription at par. The list opens on 17th July, 1961, and applications for shares must be for a minimum of five shares or multiples thereof. (Further details are being printed on another page in this week's Capital.)

The directors consider the prospect optimistic and hope to pay dividends within a short period. The Company will enjoy the usual tax exemption permitted to new undertakings. Technical collaboration has been arranged with Messrs Lepage Consulting Engineers of Antwerp (Belgium). An important feature of the collaboration agreement is that a substantial portion of the remuneration to be paid to the foreign collaborators will be invested by them in the ordinary share capital of United Wire Ropes.

National Tannery: Sales and Output Up

Speaking at the annual general meeting of the National Tannery Co. Ltd in Calcutta last week, Mr. Sanjoy Sen, chairman, said that sales and production of the Company had risen by 23 percent and 40 percent, respectively, over the previous year's figures. (A fuller version of the speech appears on a later page in this week's issue of Capital.) The rise in production has mostly been in the sphere of industrial leather, and the demand for both saddle and mill stores leather "continues unabated". National Tannery has introduced a new type of shrunk grain leather which is suitable for upholstery purposes, and it is expected to have a good market. The Company closed the year with a profit which is slightly lower than in the previous year; this is partly due to higher raw hide prices and partly to higher depreciation allowed in accordance with the provisions of the Companies (Amendment) Act of 1960. National Tannery, Mr. Sen said, was able to absorb higher raw material costs by increasing productivity, although it was not possible to maintain exactly the same profit level. "I feel the worst has passed, and there is a levelling trend of hide prices at the present moment slightly lower than last year, but we do not see any chance of a return to the previous low due to an overall world shortage." If the tempo of demand continues, the chairman said, National Tannery would be in a position to keep on expanding its production in the coming year, although the availability of foreign exchange would determine to a large extent the Company's progress in future. A redeeming feature of the leather industry is that imports of raw materials are only a fraction of total leather exports. The

chairman, therefore, hoped that import licences would be readily granted in future.

National Tannery, Mr. Sen said, has been able to implement the necessary changes in its vegetable tanning section. Part of the additional plant has already been installed, and the balance is expected by "the middle of this year." The Company has already been sanctioned a loan of Rs. 5 lakhs by the West Bengal Financial Corporation, and it will shortly be in a position to execute the necessary documents for using the funds. It is planning to extend substantially the present floor area of the vegetable tanning section. Mr. Sen welcomed the restrictions imposed on leather belting imports under the new import control announcement. He was confident that this would give an added impetus to National Tannery's subsidiary leather belting unit. A significant feature of the leather industry, Mr. Sen said, is the increase in export earnings of leather, leather goods and footwear to Rs. 42 crores from Rs. 32 crores in 1959. A large contribution to this increase has been made by shoes and leather goods. But it is a matter of deep regret, the chairman said, that the Planning Commission has turned down the request of the Development Council for increasing the leather footwear capacity to 150 million pairs at the end of the next quinquennium on the ground that this would necessitate further imports of raw hides. An increase in the production of footwear, Mr. Sen said, would enable the industry to make larger exports, thereby earning valuable foreign exchange for the country. The export earnings can be further enhanced by larger production and exports of finished leather.

But this will require the systematic and scientific development of the chrome tanning industry, since all the basic raw materials are available indigenously. "With the inferior raw hide available in India, modern plant installation assumes an important feature as a number of corrective processes have to be adopted to obtain the best utilisation of our raw material." National Tannery, therefore, has thought it wise to use modern techniques for manufacturing corrected grain chrome tanned leather for which Indian hides are most suitable. It has been successful in obtaining import licences for the latest plant and machinery. The Company, the chairman said, has already placed orders for a paste drying unit and a fully automatic spraying and drying unit to supplement the rest of the plant which has already been imported. It hopes to enter the market for this type of "upper leather" shortly.

Shree Vallabh Glass Share Offer

Shree Vallabh Glass Works Ltd is offering 37,255 equity shares of Rs. 100 each at par to the public. The subscription list will close on 15th July or earlier but not before 8th July. (The announcement is published elsewhere in this issue of Capital.) Out of the authorised capital of Rs. 1 crore in equity shares of Rs. 100 each, Rs. 72 lakhs is being issued at present. Of this, 27,745 shares have been taken up by the directors and their friends and 7,000 shares by the Industrial Credit and Investment Corporation of India. The balance of 37,255 shares is now being offered to the public. The entire public issue has been underwritten by the Central Bank of India and Bank of Baroda. The Company has licences to manufacture 27.2 million square feet of sheet glass a year, 800,000 pieces of glass building blocks, 300,000 pieces of pavement glass tiles, 400,000 pieces of glass roofing tiles and 450 tons a month of rolled and figured glass and wired cast glass. The Tariff Commission estimated the total demand for sheet glass in India at about 110 million square feet in 1960. The present production is placed around 85 million square feet. The demand is expected to rise further with the expansion in the construction industry, and it will considerably outstrip the installed capacity. The market for the Company's goods is assured, and the promoters of the project, Messrs Tribhovandas Maneklal Taktawala, have a network of efficient sales organisation throughout the country. Shree Vallabh

Glass Works Ltd was a private limited Company before being converted into a public limited one on 8th June. The new Company has taken over the "Tufex" glass plant in Andheri which has been in production for the past three years and is doing well. The old Company has been acquired at its book value. In addition, the Andheri plant has two licences in hand, one for importing machinery to manufacture laminated safety glass and the other for importing machinery to produce bent toughened glass. The import licences for raw materials have also been granted to the Company. Shree Vallabh Glass Works has secured the technical collaboration of Messrs Industrieoefen and Maschinen, g.m.b.H., Garmisch-Partenkirchen, West Germany, for the supply of machinery and equipment as well as technical know-how for the new project. The I.C.I.C.I. has agreed in principle to grant a foreign exchange loan equivalent to Rs. 37.19 lakhs to meet the cost of imported machinery and capital equipment. The factory will be located near Anand in Gujarat. Negotiations for acquiring land have been finalised. The Company expects to start production by the end of 1962. The capital outlay on the project is estimated around Rs. 1.15 crores including Rs. 23 lakhs as working capital and Rs. 2 lakhs as expenses of the issue. The foreign exchange loan from the I.C.I.C.I. and the share capital will cover more than Rs. 1.13 crores and bank borrowings will amount to hardly Rs. 1.78 lakhs.

A Better Year for Dalmia Cement

In his chairman's address (a full text of which is published elsewhere in this week's Capital) at the annual general meeting of Dalmia Cement (Bharat) Ltd, held in Dalmiapuram, Madras State, last week, Mr. V. H. Dalmia commented on the satisfactory results for the year ended December 1960. He also explained how it had been possible, after a long time, to transfer Rs. 2 lakhs to general reserve after paying the dividends during the year under report. During the past five years, nearly Rs. 20 lakhs have had to be drawn from dividend equalisation reserve and general reserve in order to pay dividends to the shareholders. In spite of higher production of cement, the profitability has been held down by the unremunerative price as fixed by the Government.

Although the installed capacity of the cement industry is now 8.70 million tons, the annual output amounts to only 7.84 million tons. The shortfall is largely due to shortages of transport and raw materials. The supplies of proper grades of coal are inadequate. It may be recalled that in fixing the ex-works retention prices of the commodity, the Tariff Commission made its estimates on the basis of the installed capacity. As the annual output has fallen behind the former, the Tariff Commission's calculations have become unrealistic. Meanwhile, production costs have been boosted further by increases in railway freight, coal prices and costs of various other items. As a result, the profitability of the industry has been seriously squeezed. It is hoped that the Tariff Commission, which is now investigating the cost structure of the industry, will soon recommend new retention prices in line with present circumstances.

The iron ore business of Dalmia Cement is making good progress. Steps have been taken to introduce further mechanisation in mining and transport operations. Mr. Dalmia assesses the prospects of the Dalmia Magnesite Corporation optimistically. In this concern, Dalmia Cement is a partner. The demand for magnesite is expected to improve in the near future following the expansion in the steel and refractory industries. The directors of Dalmia Cement, therefore, are considering doubling the production capacity of the Salem works.

Bengal Potteries to Expand

Bengal Potteries Ltd has produced satisfactory results during the year ended December 1960. Sales rose by Rs. 27 lakhs to Rs. 1.93 crores. There has been a steady rise in production and the directors think that with the installation of another gas generator, the output will improve considerably. A technical collaboration agreement has been entered into with the firm of Messrs Rosenthal-Isolator-GmbH, Selb/Bavaria, in order to accelerate the production of high tension and low tension insulators. The demand for these products is likely to increase in future. The directors, nevertheless, express concern about the increased excise duties on crockery and insulators.

The profit has improved from Rs. 17.19 lakhs in 1959 to Rs. 23.99 lakhs in 1960, after increasing depreciation from Rs. 10.67 lakhs to Rs. 11.22 lakhs, and transferring Rs. 48,070 (against Rs. 3.40 lakhs) to development rebate reserve. The ordinary taxable dividend has been increased from 14.25 percent to 15 percent. It is covered more than two-and-a-half times and works out to a yield of

5.3 percent at the present price of Rs. 7.12 a share. General reserve is allocated Rs. 3.80 lakhs (against Rs. 2 lakhs) and taxation Rs. 11.03 lakhs (against Rs. 7.16 lakhs). There is a carry-forward of Rs. 1,703, against Rs. 14,572 brought in.

Rights Issue from S.S.C. Ltd

The expansion programme of the Selected Satgram Collieries Ltd. has been outlined by Mr. S. D. Shethia in his chairman's address (a full text of the speech is printed elsewhere in this issue of Capital) at the annual general meeting held in Calcutta last week. It is proposed to reach an output target of about 74,000 tons a month during the third plan. In order to finance the expansion, it is proposed to issue rights ordinary shares at par in the proportion of one new share for every one already held. The directors are also considering buying a colliery in Maharashtra State, which may raise about 30,000 tons a month.

Selected Satgram Collieries increased raisings by 23 percent during the year ended December 1960, compared with 1959. The profit has also improved from Rs. 4.55 lakhs to Rs. 5.18 lakhs. The ordinary dividend has been maintained at 16 percent gross, including a final of 8 percent. The Company has also declared an interim taxable ordinary dividend of 8 percent for the current year. Mr. Shethia mentioned the development work undertaken in the collieries. The output of the New Satgram Colliery has been interrupted by technical difficulties which have now largely been overcome. He referred to the shortage of transport which has caused accumulation of stocks at pitheads. If collieries are to increase their output without interruption, it is necessary to improve the transport position as quickly as possible. Mr. Shethia hopes that the Government will fix coal prices on a more realistic basis in order to promote expansion.

Hindustan Wired Glass Issue

Hindustan Wired Glass Manufacturing Co. Ltd., which is setting up a plant near Baroda for manufacturing wired, figured and rolled glass, proposes to offer at par for public subscription 23,520 equity shares of Rs. 100 each. The subscription list will open on 14th July and close on 21st July or earlier at the discretion of the directors, but not before 17th July. A sum of Rs. 25 a share is payable on application and Rs. 25 a share on allotment, the balance being payable as and when called. The Company has been licensed to manufacture 300 tons of wired and figured glass a month and 500 tons of plate glass a month. While figured glass is being manufactured in the country in a small quantity, it is stated, wired glass and plate glass are not being manufactured at present. There is considerable demand in India for wired, figured and plate glass, and this is likely to increase further with industrial development in future. The raw materials required for manufacturing glass are said to be available in sufficient quantities from places near Baroda where the factory is to be located. A suitable site has already been acquired for the factory within the Baroda municipal limits, and negotiations are being carried on for acquiring more land in order to make further expansion possible when considered necessary. The Company has obtained the technical and financial collaboration of the reputed U.S. firm of Mississippi Glass Company. Besides providing technical know-how and assisting in securing suitable plant

and machinery for the project, the U.S. firm is participating in the equity capital to the tune of Rs. 12 lakhs.

The Company's authorised capital is Rs. 1 crore in equity shares of Rs. 100 each and the issued capital is Rs. 60 lakhs. The capital already subscribed amounts to Rs. 10 lakhs. The foreign collaborators are taking up shares worth Rs. 12 lakhs, the directors and their friends Rs. 9.48 lakhs and the Industrial Credit and Investment Corporation of India has agreed to take up shares of the value of Rs. 5 lakhs. The balance of Rs. 23.52 lakhs is to be offered for public subscription. The capital outlay on the project is estimated at Rs. 91 lakhs, of which Rs. 58.52 lakhs will be spent on plant and machinery, including Rs. 25 lakhs of equipment from abroad. Share capital will provide Rs. 60 lakhs; the I.C.I.C.I. is providing a loan of Rs. 24 lakhs, and the balance is proposed to be met from bank borrowings. The Government has approved the Company's foreign exchange requirements of Rs. 25 lakhs and has sanctioned foreign exchange for Rs. 14.20 lakhs from the U.S. Development Loan Fund. The balance is being met from the U.S. collaborators' subscription to the Company's equity capital. The promoters expect plant and machinery to start arriving in February. The plant is likely to be commissioned before the end of 1962.

Expansion of Shaw Wallace

The ordinary shares of Shaw Wallace and Co. Ltd. are steady around Rs. 24.60 on the prospect that the activities of the Company are likely to increase in future. There has been a substantial rise in the production of superphosphate and sulphuric acid. The output of the former rose from 26,349 tons in 1959 to 71,545 tons in 1960 and that of acid from 9,429 tons to 24,150 tons. In spite of many difficulties, the production of glue improved from 20,124 tons to 23,525 tons. The Tin Plate Co. of India Ltd. produced 73,528 tons in 1960, against 67,900 tons in 1959. It is proposed to modernise this unit. The working of the managed tea, coal and flour companies has produced satisfactory results. The shipping department has done well and expansion in this line is foreseen because Shaw Wallace has got servicing offices in almost all ports of India, Pakistan and Ceylon. The production of Bengal Distilleries has increased by nearly 15 percent. The output of insecticides and fungicides has increased by 22.5 percent. A new factory in Madras is producing agricultural spraying and dusting equipment. It started full production from April 1960.

The profit has improved by Rs. 5.04 lakhs to Rs. 82.34 lakhs during the year ended December 1960, after increasing depreciation from Rs. 12.49 lakhs in 1959 to Rs. 17.38 lakhs in 1960. The ordinary taxable dividend has been maintained at 15 percent. It is covered more than seven times and offers a yield of 6.1 percent at the present price. Taxation provision receives Rs. 42.98 lakhs (against Rs. 37.45 lakhs) and general reserve Rs. 10.50 lakhs (against Rs. 10 lakhs). A sum of Rs. 5 lakhs has been written off investments (against Rs. 3 lakhs) and development rebate reserve is allocated Rs. 1.08 lakhs (against Rs. 5.32 lakhs). The carry-forward is Rs. 7,01,003, against Rs. 5,14,701 brought in.

Hindustan Motors Results

The Hindustan Motors Ltd. has produced satisfactory results during the year ended March 1961. Although the production of cars and trucks has been interrupted by shortages of raw materials and components, total production rose to a figure of 2,027 in March 1961. In order to increase the production of components of cars and trucks, the Company's application for the import of capital goods has been forwarded by the Government of India to the Development Loan Fund of the U.S.A. The Government of India has permitted Hindustan Motors to manufacture Bedford diesel engines, but these cannot be fitted until the Company produces at least 30 percent of the components. The project will be undertaken as soon as the licence for capital goods is received. In order to expand activities further in the motor business, the Company has approached the Government for import licences to bring in capital goods. The Company could not make further progress in the production of shovels, bulldozers, scrapers, dumpers, tractor components, cranes and other engineering products in the absence of import licences. An application for capital goods required for the production of shovels has been forwarded by the Government of India to the American lending authority.

After increasing depreciation from Rs. 51.80 lakhs in 1958-59 to Rs. 63.07 lakhs in 1959-60 and development rebate reserve from Rs. 30 lakhs to Rs. 36 lakhs, the profit has increased from Rs. 1.37 crores to Rs. 2.50 crores following higher sales at

Rs. 30.45 crores (against Rs. 21.77 crores). The ordinary dividend has been increased from 9 percent to 12 percent, taxable. It is covered more than four times and works out to a yield of 5.4 percent at a price of Rs. 22.37 a share. General reserve is allocated Rs. 50 lakhs and taxation Rs. 1.14 crores (against Rs. 68 lakhs). The carry-forward is Rs. 2,75,652, against Rs. 3,63,217 brought in.

Plea for Oilseeds Export Council

In his speech at the annual general meeting of the Bombay Oilseeds and Oils Exchange last week, the president, Mr. Ramdas Kilachand, urged the Government to establish an Export Promotion Council for oilseeds. Of course, this is not the first time that this point has been made. The need for measures to stimulate the export of oilseeds, oils and oilcakes can scarcely be overemphasised in view of the sharp setback in exports in 1960 and an even more disappointing performance this year. When the growing pressure of the internal demands tends to keep domestic prices substantially above world parity, it would be idle to expect any spectacular results from an Export Promotion Council. But such a body could certainly prove useful by providing a forum for discussing specific problems and day-to-day difficulties confronting the oilseeds export trade. Mr. Kilachand is not satisfied with the way the export incentive scheme for groundnut oil has been operated. He said that these schemes should be implemented in a manner beneficial to all exporters and the case of established exporters—who by their experience and specialised knowledge had built up the export trade—should not go by default.

Mr. Kilachand pleaded that groundnut oil exporters should be offered the same incentive as the exporters of *vanaspathi*. He also urged the Government to consider the measures followed by such economically advanced countries as West Germany and Japan for boosting their export trade. These measures include relief in direct taxes and schemes of foreign exchange retention. Mr. Kilachand reiterated his demand for the abolition of the deferred system in freight which had proved to be a serious handicap to exports. He also requested the Government to examine the recent freight pool scheme before making it permanent and urged it to consult exporters at the time of reviewing the position. Referring to the subject of hedge trading, Mr. Kilachand said that margins—ordinary or special—have reduced the efficiency and utility of forward markets. He was happy that the Forward Markets Commission had at long last removed the margins and the ceiling for new crop contracts. He referred to the objectionable features of the Forward Contracts (Regulation) Act which has recently been amended. But he added that the Central Commerce Minister had assured him that genuine traders need not have any apprehensions concerning the new provisions. The Commission would use the extraordinary powers only in very abnormal circumstances and that too very judiciously. One can only hope that trade's fears will prove to be unfounded.

Prospects for Digvijay Cement

While the outlook for cement shares depends largely on the outcome of the present enquiry by the Tariff Commission into fair prices of cement, which are due for revision from 1st July, Mr. G. D. Somani has struck an optimistic note about the prospects for Shree Digvijay Cement. Presiding over the annual general meeting (the chairman, Mr. G. L. Bangur was absent) in Sikka last week, Mr. Somani said that he expected better prospects for the current year. The likely increase in the cement price should bring substantial relief to the Company. He considered it reasonably safe to assume that the benefit of the new price structure would become available from 1st July, although the actual announcement about the revised prices might be made much later. The plant and machinery for the proposed asbestos sheet and high pressure pipe project have started arriving and production is likely to commence early next year. The directors have been negotiating with a renowned American corporation for the project. The negotiations, Mr. Somani said, have now reached an advanced stage, and efforts are being made to finalise the deal. He referred to the strenuous efforts being made to obtain the import licence for plant and machinery required for the expansion programme and to secure cement machinery from the same suppliers who had already sent all the three units now under production. Mr. Somani seemed confident of securing the Government's approval at an early date when orders for plant and machinery would be placed. It is expected that the increased production capacity would be reached by the end of next year or early 1963. Mr. Somani said that out of the total exports of 141,000 tons of cement from India last year, Digvijay Cement supplied 76,000 tons. The Company has

earned foreign exchange amounting to Rs. 1 crore during the past three years. Mr. Somani had some good observations to make about West Coast Paper. The latter has been able to maintain its output well above the rated capacity. The actual production for the year ended June 1961 is likely to exceed 25,000 tons, against 22,110 tons in the previous year and its rated capacity of 18,000 tons. The directors of West Coast Paper are actively considering an integrated scheme to expand the production capacity of pulp and paper and to install a rayon-grade pulp plant and a caustic soda and chlorine plant. The future of the paper industry is bright, Mr. Somani said, and Digvijay Cement can look forward to substantial benefits from its investment in West Coast Paper.

Mr. Somani devoted the major part of his speech to the question of cement prices. The profits of the cement industry—on the basis of the price structure fixed by the Government—are far from adequate. Mr. Somani said that the Tariff Commission's practice of estimating production on the basis of licensed or installed capacity is unjustified because it is difficult to maintain full production due to various factors over which the industry has no control. For calculating costs, the estimate of production should be made on the average of output as achieved in the past three years with a margin of 10 percent to cover unforeseen contingencies. Mr. Somani said that the rate of return allowed by the Tariff Commission is absolutely inadequate, since it leaves an extremely meagre margin for dividend distribution to shareholders after meeting obligations concerning interest on borrowings, taxation, managing agents' commission, bonus and gratuity. He pleaded for a substantial increase in prices in order to enable the industry to expand the production capacity from 9.02 million to 15 million tons, as proposed in the third plan, requiring about Rs. 70 crores to be raised by fresh capital issues as well as retained profits. The present return of 10 percent to 12 percent on employed capital has proved to be totally inadequate. This is evident from the fact that in spite of the steady progress in production and despatches, Digvijay Cement had to withdraw as much as Rs. 16.57 lakhs in the past three years to declare a 9 percent, taxable, dividend.

Lathes from South Bend

The Principal of the Coimbatore Institute of Technology, Mr. P. R. Ramakrishna, who has wide interests in engineering and textile industries in south India, has sponsored a big project for manufacturing machine tools in collaboration with the U.S. firm of South Bend of Illinois. The project proposes to manufacture low-priced lathes on a mass scale comprising the complete range of South Bend products. The types of equipment to be produced here will be suitable for small-scale industries because of the low costs. The Company which will operate the project takes its name after the U.S. firm and will be known as South Bend (India) Ltd. Its authorised capital will be Rs. 2.5 crores, of which Rs. 50 lakhs is likely to be issued for the present. The U.S. firm will have a 45-percent interest in the Indian Company. The factory, which will be located near Coimbatore, initially plans to manufacture 300 medium-priced lathes a month, besides drilling machines, grinders, etcetera. Imported special steel required for the project is expected to be covered by exports of finished products. The collaboration agreement—which has been approved by the Government of India—lays down that the foreign firm should surrender all its exports to the Indian counterpart as soon as production starts here, which will be about the middle of next year.

Bagalkot Cement Profit Up

The working of Bagalkot Cement Co. Ltd. for 1960 indicates that the directors have been obliged to skip over the dividend because of the heavy burden of depreciation and statutory development rebate reserve which add up to Rs. 39.26 lakhs in 1960, against Rs. 7.61 lakhs in 1959. The Company has fared much better than in the previous year. Production and despatches recorded considerable improvement, and sales rose from Rs. 74 lakhs to Rs. 1.01 crores. The gross profit rose by Rs. 5.04 lakhs from Rs. 17.19 lakhs to Rs. 22.23 lakhs. After providing Rs. 20.59 lakhs (against Rs. 7.37 lakhs) for depreciation and Rs. 18.67 lakhs (against Rs. 24,000) for statutory development rebate reserve and allowing for minor adjustments, a debit balance of Rs. 17.34 lakhs has been carried forward, against Rs. 1,652 brought in. In 1959, Bagalkot Cement paid a taxable dividend of 8 percent, absorbing Rs. 6.76 lakhs. The Company has refunded to the Government of Maharashtra all the money received from it to make payment to shareholders under the minimum dividend agreement for five years, and the two Government directors have ceased to operate on the Company's

board. The production of clinker and cement during the year amounted to 134,645 tons and 134,901 tons, respectively. Despatches of cement totalled 132,231 tons. The directors state that the second kiln came into operation in May 1960 but the increased production capacity could not be fully used on account of the coal shortage, which has also affected the output during the first few months of the current year. Bagalkot Cement has been licensed to double its annual production capacity to 400,000 tons. But the directors state that as the existing capacity is not being fully used due to the coal shortage, they have informed the Government to defer the implementation of the additional capacity until the coal supply becomes easier, and until the Company receives power supply from the Sharavathi power project which is due towards the end of 1963. The Rs. 10-paid shares of the Company are currently quoted around Rs. 8.48.

New India Assurance Fares Well

The New India Assurance Co. Ltd. has reported satisfactory results for 1960. The net premium income is up by about 22.7 percent from Rs. 8.86 crores in 1959 to Rs. 10.87 crores in 1960. The progress looks impressive, compared with the premium income of Rs. 5.23 crores four years ago. The results for 1960 would have been still better but for the rise in the claims ratio from 50.2 percent to 52.6 percent. The expense ratio is slightly down from 36.4 percent to 36.2 percent. The premium income from fire business rose by Rs. 60 lakhs to Rs. 4.07 crores, that from miscellaneous business by Rs. 1.27 crores to Rs. 4.70 crores and that from marine business by Rs. 14 lakhs to Rs. 2.10 crores. There was a sharp increase in the claims ratio of the fire department from 34.6 percent to 43.4 percent due to unfavourable results of the Company's reinsurance acceptance from the U.K. and the Continent. The claims ratio of the miscellaneous department is also up from 50.7 percent to 55.5 percent. But there is a significant decline in the claims ratio of the marine department from 76.7 percent to 63.7 percent. The expense ratio of the fire department is up from 42.7 percent to 43.9 percent but that of the miscellaneous and marine departments has declined from 35 percent and 27.6 percent to 34.2 percent and 26 percent, respectively. The profit of the fire department is down from Rs. 66.2 lakhs to Rs. 29 lakhs and that of the miscellaneous department from Rs. 7.91 lakhs to Rs. 1.2 lakhs. But the marine department has done well, and has earned a profit of Rs. 15.2 lakhs, against a loss of Rs. 1.2 lakhs in 1959. After transferring Rs. 1 crore to departmental reserves, against Rs. 67 lakhs in 1959, the Company has made a profit of Rs. 45.37 lakhs from the fire, marine and miscellaneous departments, against Rs. 72.9 lakhs in 1959. In addition, New India has earned Rs. 11.78 lakhs (against Rs. 12.14 lakhs) by way of investment income on capital and reserves and Rs. 15.14 lakhs (against Rs. 9.61 lakhs) as profit on the sale of investments. After making other adjustments, the profit for 1960 is down by Rs. 23.07 lakhs from Rs. 92.81 lakhs to Rs. 69.74 lakhs. The directors have provided Rs. 10.72 lakhs (against Rs. 37.75 lakhs) for taxation and have added Rs. 15 lakhs to dividend equalisation reserve. Last year, while no provision was made for dividend equalisation reserve, the directors had appropriated Rs. 10 lakhs to various reserves—doubtful debts, exchange reserve and investment reserve. The dividend has been maintained at Rs. 5.70 a share, taxable, which includes Rs. 1.20 a share by way of bonus to be paid out of capital reserve.

The year's operations have augmented the Company's total funds by Rs. 1.05 crores to Rs. 11.19 crores. The funds in the three departments amount to Rs. 7.03 crores which are matched by investments standing at Rs. 7.25 crores. Other assets amount to Rs. 4.11 crores. The share capital is Rs. 1.42 crores and the reserves, including capital reserve and the premium on shares, stand at Rs. 2.82 crores. During the year, New India acquired the assets and liabilities of the Indian Globe Insurance Company. The book value of the assets amounts to Rs. 11.36 crores which is less than the market value by Rs. 63 lakhs. The ordinary shares of New India Assurance is currently quoted around Rs. 61.50 cum-dividend, offering a gross yield of about 10.2 percent.

Tata Oil Repeats but Profit Down

The shares of Tata Oil Mills, which reached a high of Rs. 86.80 in March, are now available around Rs. 74.50 which is only a little higher than the January low of Rs. 72. Persistent selling in these shares, which led to the fall in their prices in an otherwise firm market, was based on reports that the Company had not fared well during the year ended March 1961. Reports about Tata Oil's poor performance have proved to be well founded. In spite of a substantial improvement in sales from Rs. 8.31 crores to Rs. 10.02 crores, the profit—after

providing for depreciation—is down by about 23 percent from Rs. 52.47 lakhs to Rs. 40.27 lakhs. The preliminary figures, released along with the dividend announcement, do not contain any explanation for the marked setback in profits. But it would appear that the profit margin has been squeezed by the sharp rise in the cost of raw materials. Shareholders can, however, derive some comfort from the directors' decision to maintain the dividend at Rs. 5.75 a share, less tax (this works out to 23 percent gross), although the profits are substantially lower. The provision for taxation has been reduced from Rs. 25.75 lakhs to Rs. 17.10 lakhs, but the transfer to development rebate reserve is a little higher at Rs. 2.85 lakhs, against Rs. 2 lakhs in the previous year. General reserve gets Rs. 53,000, against Rs. 1 lakh and the allocation to plant modernisation and development reserve has been reduced from Rs. 5 lakhs to Rs. 2.50 lakhs. A dividend of 4.5 percent, subject to tax, has been recommended on the preference shares and this, together with the proposed distribution on ordinary shares, will absorb Rs. 17.46 lakhs, leaving a balance of Rs. 28,609 to be carried forward, against Rs. 46,303 brought in. At the current cum-dividend price of Rs. 74.50, the shares of the Company offer a tax-free yield of about 5.7 percent.

Bombay Financial Corporation

The chairman of the Bombay State Financial Corporation, Mr. Purushottam Kanji, hinted at the annual meeting in Bombay last week that the Corporation might have to enter the market in the near future for additional funds required for its pending commitments of Rs. 1.78 crores, against which it has liquid resources of Rs. 1.19 crores. It has now disbursed its entire share capital of Rs. 2 crores as well as the sum of Rs. 1.13 crores raised through bonds and debentures and has started re-lending from the funds which are being repaid. The total repayment at the end of March 1961 amounted to Rs. 1.27 crores. Referring to the Corporation's activities, Mr. Kanji said that total loans sanctioned during the year amounted to Rs. 1.76 crores, to 126 concerns. A large number of applications from small-scale industrial units for low-interest loans were sanctioned under the agency agreement with the State Government. But such loans could not be disbursed as the funds allocated by the Government were exhausted by December. The Government of Bombay has since advised the Corporation to finance such advances to small-scale units out of its own funds. Since the Corporation lends its funds at 6½ percent, the small-scale units cannot now obtain low-interest loans as they did under the earlier agency agreement. Mr. Kanji said that the accumulated subvention from the State Government amounted to Rs. 27.59 lakhs on 31st March, 1961.

In order to check the increase in subvention liability, the Corporation paid its guaranteed dividend from its own resources in 1960-61 by making a lower provision for taxation and by tapping reserves. The chairman said that "this is the first year since its inception that the Corporation had been able to meet its dividend liability entirely from its own resources. It is understood that the Corporation is the first among State Financial Corporations to meet its dividend liability from its own resources." But Mr. Kanji added that the Corporation could not dispense with subvention altogether until either the Corporation's capital structure was reorganised or the volume of its advances exceeded Rs. 4 crores. He suggested the setting up of an industrial bank by commercial

banks and other credit institutions to provide medium and long-term finance to industries. He cited the example of the U.K. where certain banks, insurance companies and other financial institutions have set up two such industrial banks—the Financial Corporation for Industry and the Industrial and Commercial Financial Corporation.

Margins in Seeds and Bullion Relaxed

The Forward Markets Commission has relaxed the margin rules for trading in new oilseeds and bullion contracts. It is unlikely that cotton for which the Commission has still to announce its policy will meet a different treatment. In oilseeds, the system of special deposits has been done away with and the ceiling on groundnut and groundnut oil abolished. A limit has, however, been placed on the range of daily fluctuations in groundnut, groundnut oil and cottonseed. The daily rise in the prices of new crop contracts in groundnut in Bombay will be restricted to Rs. 4 when the contract rises above Rs. 225 a 250 kilos and Rs. 3 when the price crosses the Rs. 250 mark. Corresponding limits on daily fluctuations have been fixed for groundnut and groundnut oil traded in other markets. In cottonseed futures, the daily rise would be limited to Rs. 2 a 250 kilos whenever the price of the contract goes above Rs. 105. Trading in castorseed and linseed will not be subjected to any restriction.

In bullion, the Commission has already permitted trading in a three-monthly contract and has modified the margin rules as well. The free limit for the application of the special margin has been raised from 160 bars to 320 bars of silver and from 30 kilograms to 60 kilograms of gold. Besides, the special margin will be levied only on the quantity which is in excess of the free limit. Under the old rules, special margin was leviable on the total outstanding position if the "long" interest exceeded the free limit even by a narrow margin. The Commission has, however, stipulated that the benefit of the free limit will not be allowed and special margin will become payable on the total net long position if the same exceeds 400 bars in silver and 90 kilograms in gold. The margin line has been raised from Rs. 187 to Rs. 195 for silver and from Rs. 112 to Rs. 115 for gold. The introduction of a three-monthly contract is itself a big concession, and the trade feels that the relaxation of margin restrictions will go a long way in increasing turnover which has shrunk to modest proportions.

The Commission's decision to relax margins will be widely welcomed. Freedom from restrictions of margin and ceiling will enable forward markets to function efficiently. If past experience is any guide, margins have made the markets thin and anaemic without helping to check the rising trend in prices. Furthermore, ceilings on futures have not made the spot material less costlier. Against the ceiling of Rs. 220 a 250 kilos for futures, spot groundnut were bid up recently to an all-time high of Rs. 290. The turnover in forward markets has dwindled appreciably since the Commission started exercising control over them. If its latest decision on margin and ceiling is an indication of a change in its basic approach to the problem of organised speculation, commodity exchanges can look forward to a period of increased activity. But while announcing the relaxation of margin rules, the Commission has informed the trade that the concessions have been agreed to on a purely experimental basis and that it will not hesitate to resort to more stringent restrictions if it becomes necessary.

Travancore Rayons Expands

The shares of Travancore Rayons, which could be bought around Rs. 32.50 early in the current year, are now quoted around Rs. 40 which is well above the 1960 high of Rs. 36.25. Investors' confidence in these shares appears to be fully justified. The Company did well in 1960 but the directors have maintained the dividend in order to conserve resources for financing the expansion programme. Shareholders have every reason to feel happy over what their chairman, Mr. A. R. Ramanathan, told them at the annual meeting last week. In October last, the Company commissioned its third plant for the production of cellulose film, raising the capacity from 5 tons to 10 tons a day. The chairman seems confident that Travancore Rayons

can not only meet the entire demand of the country for cellulose film but also export some quantity. The sulphuric acid plant, which was commissioned over a year ago, has helped the Company to become self-sufficient in its requirement of sulphuric acid, leaving also a surplus for sale. Travancore Rayons is seriously considering the establishment of an export market for cellulose, although it may mean an initial loss on account of severe competition from foreign producers. The Company has been licensed to increase its rayon yarn capacity by 5 tons a day, and negotiations are being carried on for implementing the scheme. The increase in production capacity is expected to take effect only from the end of 1962 or early 1963. With this increase, the total production capacity for rayon yarn will rise to 136 tons a day. The cotton linter plant is scheduled to go into production by the latter half of 1962. To start with, production will be 3,600 tons of linter pulp a year, but provision is being made to increase output to 7,200 tons. The chairman said that the project would reduce the Company's dependence on imports save foreign exchange for the country and yield superior quality pulp to facilitate the production of better quality yarn and film. He added that in order to meet the rupee funds required for the expansion schemes, the directors were considering the issue of further capital, but they had not yet come to any definite decision.

Coimbatore Kamala Mills Pay Again

The net profit of the Coimbatore Kamala Mills Ltd for the year ended December 1960, has sharply increased to Rs. 7,20,761, from Rs. 2,12,649 of the previous year, after deducting all working expenses and after providing Rs. 60,418 for depreciation (against Rs. 65,393). Deducting from the year's profit the carried-forward loss of Rs. 2,76,297, and making other adjustments, there is a balance of Rs. 4,29,542. From this amount, the dividend on preference shares for 1959 and 1960 amounting to Rs. 57,179 has already been declared by the board as interim dividend in February 1961, leaving a balance of profit of Rs. 3,72,363. Out of this amount, the directors have transferred a sum of Rs. 1,25,000 to general reserve. The provision for taxation comes to Rs. 100,000 and development rebate reserve gets Rs. 8,603. The proposed dividend of 10 percent on ordinary shares will absorb Rs. 61,215. The balance of Rs. 5,545 is carried forward to next year. In their report, the directors state that the levy of excise duty on yarn from March 1961 may affect the working results of the mills for the current year.

Rajeswari Mills Expanding

For the year ended December 1960, Rajeswari Mills Ltd has made a net profit of Rs. 6,34,135, after deducting all working expenses and after providing depreciation of Rs. 1,94,460.73 (against Rs. 1,57,957 for depreciation in the previous year). With the amount brought forward, the total available for appropriation comes to Rs. 6,34,510.54. Out of this, the provision for taxation is Rs. 3,15,500 (against 1,42,000), development rebate reserve gets Rs. 27,000 (against Rs. 36,600), and a sum of Rs. 35,000 is transferred to dividend equalisation fund (against Rs. 10,000). A sum of Rs. 50,000 goes to reserve for building and machinery (replacement), against nil. Reserve for gratuity gets Rs. 5,000 (against nil). A dividend of 10 percent is recommended and this will absorb Rs. 1,92,850. The balance of Rs. 2,160,54 is carried forward. The directors state that the balance of 400 spindles pending against their order have been received and are being constructed. The Company is now applying for additional 6,000 spindles and the mill is now working with 14,000 spindles.

Lakshmi Mills Repeat

The directors of Lakshmi Mills Ltd have now announced a dividend of 20 percent (same as in the previous year), in addition to a jubilee bonus of 10 percent paid in May last. Pending the publication of the balance-sheet, and according to advance information, the Company has made a profit of Rs. 71,93,831, before taxation, for the year ended March 1961, against the previous year's profit of Rs. 49,92,298. The provision for taxation is Rs. 31 lakhs, against Rs. 20 lakhs.

Incentives for Foreign Investors

In an interesting brochure entitled *Indian Tax Laws and Foreigners Having Investments in India or Having Business Connections in or with India*, recently compiled by G. Basu and Company, there is a discussion on the incentives provided

for increasing the flow of foreign investments to this country. The publication says that the tax holiday for a new industrial undertaking is a substantial concession. "Neither income tax nor super-tax is payable on profits for the first five years of its business equal to 6 percent of the capital employed." The only important condition is that the undertaking should not be formed by splitting up the existing business. A new unit set up by an already established undertaking in India is entitled to enjoy the tax holiday. The brochure adds that dividends declared by a company "which may be either a foreign company operating in India or a subsidiary thereof or any other Indian company engaged in a new industry", will also be exempt from tax in the hands of the shareholders. Besides, dividends received by a company—which may be either a foreign company or an Indian company—from an Indian company (including a subsidiary of a foreign company) will be exempt from company super-tax if it is engaged in specified basic industries.

As for new buildings and new plant and machinery, there is provision for additional depreciation equal to normal depreciation which is allowed for five years. Furthermore the development rebate of 20 percent (for ships—40 percent) which is not taken into account in arriving at the written-down value on which depreciation is allowed, enables companies to save tax on extra 20 percent (for ships—40 percent) of the actual cost of plant and machinery. The brochure adds that interest payable by an industrial undertaking in India on moneys borrowed by it under a loan agreement entered into with any financial institution in a foreign country—as may be approved by the Government of India by a general or special order—is not taxable. Similarly, interest payable by an industrial undertaking in India on any moneys borrowed or debt incurred by it in a foreign country for the purchase of capital plant and machinery outside India—where the loan or debt is approved by the Government of India—is not taxable. Such approval is usually given when the terms of repayment are somewhat liberal.

The brochure points out that capital expenditure on scientific research are allowed to be deducted in computing the taxable income spread over a period of five years. This concession is also available for contributions to approved scientific institutes. Besides, from 1960, all companies are completely exempt from wealth tax. Formerly super-tax was payable by public companies where the dividends distributed exceeded 6 percent of the dividends has been completely withdrawn from 1960. Super-tax was levied on bonus issues by companies in 1956 when the effective rate was 12.5 percent. It was raised to 30 percent in 1957. The latest Central Budget has reduced it again to 12.5 percent. Besides, royalties payable by an Indian concern to a foreign company (which does not declare dividends in India) is normally taxable at the full income-tax rate of 20 percent as well as the super-tax rate of 43 percent. The latest Central Budget has reduced the super-tax on such royalty payments to 30 percent. But concessions for foreign investors, the brochure does not consider the disincentives which are retarding the flow of foreign investment in India.

WASTEFUL EXPENDITURE

THE Government of India apparently thinks that it will not be enough to have the King Emperor's head stamped upon the currency, "they have bethought them," we read in *The Pioneer*, "that some other method of familiarising the population with His Majesty's features is desirable." They propose, therefore, to provide all official residences and buildings with a "suitable" portrait of the King. The cost of these portraits is to be graduated according to the style and importance of the buildings. In the case of a High Court or a Durbar Hall a three-quarter length portrait of His Majesty at a cost of from £50 to £75 is contemplated. Political residences in Native States are to rest content with a smaller expanse of canvas upon spent. While the common or garden cutchery lithograph or an engraving. It is not expressly stated who is to pay for these portraits, but it may be fairly assumed that the cost will be met out of public funds. In that case the proposal seems to us a senseless and uncalled-for piece of extravagance. If the Government wish to make the millions of India acquainted with His Majesty's features—and the wish is highly to be commended—let them take a leaf from the almanac from time to time with a likeness of the King thereon. We dare say the lithographs or engravings could be got for a reasonable cost, considerable sum to the purchase of indifferent portraits in oils will surely be an unwise and wasteful expenditure.

A Ditcher's Diary

WHAT IT IS AMONG PEOPLE WHICH MAKES THEM begrudge their elected rulers the ordinary comforts and facilities which they would have themselves if they could afford them. I have never quite been able to understand. Perhaps it is the fact that they have to provide the money. Or more likely it is that commonest of human emotions, jealousy. I am all for a broader view myself. Whether it is a case of the British Government before Independence spending its summers in Simla, or Dr. Beeching being paid £24,000 to run British Railways, or the West Bengal Government deciding to air-condition its Ministers' bedrooms, the test in my opinion is simply whether or not it is a sound investment. And in most cases it is. Legislators do not necessarily work better after spending an uncomfortable night any more than business men do after drawing a meagre pay cheque. Without surrounding our rulers with costly and wasteful trappings, intended to impress rather than improve, I see no reason why Ministers should not have their air-conditioners. The question is will they be better at their jobs if they do? There is a good chance that they might. But there is an even better one that in future they will be less grudging of other people's comfort and convenience. There is far too much of the feeling in governing circles at the moment that the only path to ultimate prosperity is through self-denial and austerity: reward and incentive count for scarcely anything at all. The late Henry Ford once said that the best cure for socialism was a car in every garage; I wonder what, in India's case, an air-conditioner in every bedroom might achieve. One suspects a Minister who sleeps in air-conditioning will never be quite the same dogmatically austere soul again. Which is a good thing, because the official attitude towards the things which make life worth living and work worth while these days is at complete variance with the expressed aim of creating a fuller life for all.

IN HIS OWN INIMITABLE WAY, SIR WINSTON Churchill once described Stalin's Russia as "a riddle wrapped up in an enigma". That may not necessarily fit the present-day Russia, although the thinking of the men in the Kremlin is just about as dark and unpredictable as it ever was. What we know a little more about these days, of course, is the Russian economy; at least enough to conclude that it is expanding, is on the brink of new experiments in consumer orientation, and ought in future to provide a promising market for those countries who find they can sell to it. The recorded impressions I have been reading from important business men who have been to Russia lately have told me nothing I did not learn myself from a visit I made there three years ago—except, of course, that excellent article by Mr. Paul Chambers, the chairman of I.C.I., which appeared in the *London Financial Times* recently. Since then I have read Mr. C. D. Birla's views as published in the *Hindustan Times* of New Delhi. Mr. Birla has obviously made an effort to understand Russia's current problems, but there appear to have been two things he could not overlook—the rather low standard of living of the common people despite all the achievements in space, and the Russians' suspicion of the foreigner, which appears to have been bred in them in an obvious effort to isolate

them mentally from the rest of humanity. He might have mentioned the contrast between Mr. Khrushchev's boasts about the inevitable triumph of socialism and the increasing extent to which the economy is having to resort to the capitalistic devices of the price mechanism, monetary incentives and decentralisation to overcome the rigidities and inflexibilities which are hampering its further development. Mr. Birla is right, though, when he talks about increasing trade with Russia. Much to my surprise, India's Attorney General, Mr. M. C. Setalvad, who was in the Soviet Union recently as a State guest, did not seem to notice the less attractive side of the communist rule there. He appears to have returned full of praise for the "workers' paradise"—what rot—and, even more remarkable, of the Soviet system of justice. But then, least I can say is that I am disappointed. But then, Mr. Setalvad was only conducted by his hosts round the usual tourist attractions, and I have known State guests in this country be just as flatteringly uncritical when treated in a similar way.

IT STRIKES ME THAT WHEN MR. NEHRU, JUSTIFIED though such criticism may be, castigates Britain for her attitude towards Portugal's deplorable behaviour in Angola, he is creating for himself a very dangerous precedent indeed. Moral indignation has never enjoyed a particularly honoured place in international relations; it has always been recognised that a nation's primary duty is to its own interests, and it appears the British Government, perhaps wrongly, regards it as being in Britain's interests not to embarrass a country which has acquired the distinction of being her oldest ally. It is simply not the established practice for one country to endanger its good relations with another just because it is indulging in oppression, injustice or even mass murder. Mr. Nehru himself, very wisely, did not risk India's friendship with the Soviet Union by loudly condemning the aggression on Hungary and the massacre of Budapest. Nor has he rashly endangered his country's relations with communist China by condemning the genocide being committed in Tibet—an example of deliberate mass murder which the Portuguese are still far from matching. Indeed, it was only after extreme provocation on the Indian frontier, and certainly not as any gesture of sympathy with the persecuted Tibetan people, that India ceased actively to sponsor China's entry into the United Nations. Mr. Nehru was undoubtedly wise not to let his indignation at such atrocities interfere with what he considers to be in India's interests. But by blaming the British Government for doing the same thing he is surely inviting the rest of the world to consider that he too should not retain his friendships with oppressors and murderers simply because it is sound policy to do so.

IT SEEMS A MATTER OF BUT LIMITED INTEREST whether Ernest Hemingway died accidentally or just decided to kill himself. The fact is that a writer of uncommon gifts is dead. I do not know whether he would have written anything greater if he had lived longer; it is possible to doubt that he would. On the other hand, during his writing life he often took many unexpected turns. Indeed, I had never expected him to write the poetical

little near-classic *The Old Man and the Sea*. The overdone sex and violence in his earlier work I did not always like; although there was never any denying his talent for the staccato surprise, for the vernacular (in Mr. Cyril Connolly's sense) virginity of his prose which has been imitated by many but successfully by few. As Mr. Connolly has pointed out, this idiom has severe limitations; it is not really the vehicle of abstract thought; even in the expression of primary emotions and elemental urges, paper currency like Hemingway's gets soiled too quickly. But in the hands of the master the idiom was supremely effective for the limited purposes he set himself. I cannot claim to have shared his passion for hunting or the bull-fight ring; and I distrust the cult some people make of such activities. But through these symbols he did succeed in destroying the anaemic Mandarin of English writing set in fashion by Walter Pater and others. It may well be that the possibilities of his idiom have been exhausted in English, thanks to imitators and film dialogue. But a friend suggests to me that some of the Indian languages could profit immensely from Hemingway's method and style. There is certainly a widespread tendency to use twenty words when two will do; and what in film jargon is called "cutting" is unknown in most writing. There is also too much genteel prose. In that brittle China shop the "dumb ox" (as Wyndham Lewis once called Hemingway) could bring a little needed vigour and bad manners—with advantage.

FROM "THE DUMB OX" TO BULLS IN WHOM, TOGETHER with bears, I am professionally obliged to take a sustained interest. Bulls may at the moment be found more in the Bombay and other share markets; but the stray bulls of Calcutta seem at last to have begun to worry the West Bengal Government. Although old Calcutta hands well know that such schemes for the removal of these majestic animals from the streets have been heard before, and that once again nothing may be the only upshot, it makes pleasant reading that the city's bulls will be transferred to Bally, Dankuni and other places for rehabilitation. But I see trouble. Will the bulls take this lying down? With assured Leftist support, they can easily form an association. They may then demand rehabilitation within the confines of Calcutta; and if the Government of West Bengal should plead that there is no land to spare I can see Mr. Jyoti Basu protest in indignation that this is one more proof of the Congress Government's cruel callousness to a species much revered by the electorate. But if the Government ignores these protests and insists on sending the bulls to their own Dandakaranya, why not a massive demonstration? The police will perhaps stop the demonstrators somewhere near Raj Bhavan or the Assembly. The next course is so easily predictable; the bulls simply squat in the streets and stay there. Motorists will perhaps not notice the difference; but I dare the police to do anything so drastic as opening fire. Casualties at Hailakandi or Bagjola are one thing; bulls another. I can see a country-wide revolution, led not indeed by Mr. Jyoti Basu, but most willingly by far more important and influential public figures. In the *Panchatantra* there are rich tales of talking, argumentative animals; and I have often wondered why nobody has yet written an *Animal Farm* in an Indian language. Pigs will not do; but bulls, monkeys, donkeys, goats and others could provide an excellent cast.

DALMIA CEMENT (BHARAT) LIMITED

CHAIRMAN, MR. V. H. DALMIA'S
SPEECH

Speech of the Chairman, Mr. V. H. Dalmia, delivered at the Ninth Annual General Meeting of the Company held at Dalmiapuram (Madras State) on Thursday, the 29th day of June, 1961.

Gentlemen:

I am happy to welcome you to Dalmiapuram on the occasion of the Ninth Annual General Meeting of your Company. We are meeting somewhat earlier this year than in the past and this is how it will be in the years to follow because under the Company Law as recently amended, the Annual Accounts are required to be presented within six months from the close of the financial year of the Company.

The accounts of your Company for the year 1960 have been with you for some time now. In the Directors' Report, which has also been circulated, the working results for the year under report have been discussed and information has been given on the salient features of the operations of your Company. During the last 5 years, approximately Rs. 20 lakhs have been drawn from the dividend equalisation reserve and General Reserve to enable payment of the dividend to the shareholders. This year, for the first time since 1956, it has been possible to make a small allocation of Rs. 2 lakhs to the General Reserve. As mentioned in the Directors' Report, despite the substantial expansion in cement production and despatches following the installation at heavy cost of the third Kiln, profit from the cement business has remained at the 1959 level. I hope that the position will be better during the current year and more so in the following years. If the ex-works price of the cement produced by your Company is increased adequately as a result of the enquiry which is being made now into the price question by the Tariff Commission, I shall come to this again later when I deal with the subject of price fixation.

It has been mentioned in the Report of the Directors that a portion of the dividend would be exempt from tax deduction as the Company was entitled to the benefit of tax exemption on a portion of its income pursuant to Section 15C of the Indian Income Tax Act. A preliminary estimate of the exemption has been made by the Income-tax Officer, assessing the Company and deduction is required to be made on 88% of the dividend amount. This means that as against 30% deduction ordinarily to be made from the dividends, the deduction in the case of your Company out of the dividend for the year 1960 would amount to 26.4%. A notice to this effect was inserted in the Annual Accounts as the determination for the tax exemption was obtained just before the despatch of the accounts.

Shortage of Cement

Since last year, acute shortage of cement is being experienced almost all over the Country, despite the fact that the annual installed capacity of the cement industry has touched 8.70 million tons and there are now 35 factories spread in all parts of the country manufacturing cement. Most people carry the impression that cement industry is enjoying boom conditions and making huge profits. Nothing can be farther from the truth. Paradoxically, quite opposite is the case. As against the annual installed capacity of 8.70 million tons, due largely to inadequate supply of raw materials and also inadequate altitudes of wagons for both the supply of raw materials and despatch of finished products, the actual production of the industry in 1960 was only 7.84 million tons. In

other words, the actual production has lagged behind the installed capacity by about 10% or about 8.6 lakh tons. The ex-works retention prices for the cement industry were fixed in the last price examination on the basis of production of the cement factories being equal to their installed capacities. Lower production has, therefore, hit the industry hard in that its costs have gone up and the profit margin, already meagre, has been further squeezed. Besides, there have been increases in costs all round with the rise in railway freights, increase in coal price and several other factors. The difficulties of the industry and the un-economic retention prices have, to a large extent, retarded the growth of the industry and slowed down the tempo of expansion. The ex-works prices payable to the cement producers are due for revision with effect from the first of July and the Tariff Commission is now engaged in a study of the production costs of the different units. Next month the Commission will hold a public enquiry and I hope they will take a sympathetic view while recommending the revised ex-works prices. This would strengthen the position of the industry and enable it to play its expected role in the development programmes of the Third Plan.

I am glad to inform you that the Indian Standards Institution has granted a licence to your Company to use the ISI certification mark which carries with it the assurance to the users that our cement conforms to the standard specifications and is of the highest quality. The certification mark is being placed on each and every bag which goes out from the factory. This will further strengthen the confidence of the cement users in the quality of the cement manufactured by your Company.

Iron Ore Business

Your Company's iron ore business has made satisfactory progress and it is hoped that it will continue to do so. Tremendous expansions in the Steel Industry are being planned and are being projected on a global basis during the present decade. Concurrently, several new sources of iron ore for the steel industry are being discovered and exploited, notably in Africa, while supplies of ore from many traditional sources, such as South America, are being expanded further. The consequent varying patterns of demand and supply are reflected in the increased complexity of negotiations on an international level for large scale sales and purchases of iron ore. The State Trading Corporation of India Limited are to be congratulated on their notable success in concluding agreements with various countries for large exports of iron ore. It is hoped that the State Trading Corporation of India Limited will continue to pursue its policy of entering into long term agreements for the supply of Indian iron ore to the foreign buyers and your Company will be given fresh contracts for the supply of high grade iron ore on a long term basis. Such an arrangement would allow of more extensive introduction by your Company of mechanisation in their mining and transport operations. The resources of the Indian Railways are heavily overtaxed by the need of meeting the increasing demands of the country's expanding economy and at the same time of finding movement capacity for export. The hoped-for increase in the railway movement available for iron ore has therefore not come up to expectations although there has been a slight improvement which it is hoped will be accelerated later in the Third Five Year Plan as a result of measures which the authorities have taken and are taking, when your Company may also look forward to increased exports of their

iron ore and thus to making still greater contribution to the earnings of foreign exchange.

Dalmia Magnesite Corporation

The results achieved for their last financial year by Messrs. Dalmia Magnesite Corporation, in which your Company is a partner, augur well for the future of the deadburnt magnesite industry. Apart from the anticipated very substantial increase in the demand for this material from the indigenous consumers, such as the Steel Industry and the Refractory Industry, about which I had spoken last year, there is a possibility of an export market in view of the world-wide expansion in the Steel Industry. These developments are being followed with very close interest and in the meantime the proposal to double the production capacity at Salem Works is being processed further.

I am glad to say that increasing emphasis is being laid now on improving the skills not only of the operatives in industry but also of the supervisors and managers who are responsible for the efficient working of our industries and businesses. A large number of training programmes is being organised by the productivity councils and management associations for different levels of management. Selected trainees are being sent abroad for advanced training. Your company is taking advantage of these facilities and our Executives have participated in the various programmes with advantage. I consider that the development of competent executives in adequate numbers is of the highest importance for the success of our plans for industrial development. Our Minister of Industries, Shri Manubhai Shah, with his usual foresight, was quick to realise that the shortage of trained personnel may well become a major obstacle to the rapid development of our industries and that a low level of productivity would, sooner or later, price out our exports from the highly competitive world markets. It was at his initiative that the National Productivity Council was established. Under the dynamic Presidentship of Shri Manubhai Shah, the National Productivity Council has, in a short span of time, created a large degree of enthusiasm for better management practices and higher productivity. Both the National Productivity Council and the All-India Management Association deserve our appreciation of the excellent work they are doing in educating and training the men who are Incharge of the industries. Your Company is rendering its fullest cooperation and assistance to the local Productivity Councils and Management Associations. I would like to add that it is our constant endeavour to develop and encourage our employees and provide them with fullest opportunity for progress in the Company. Mr. L. Swaroop, a senior officer of your Company, is shortly going to U.S.A. and the Continent as a Member of the Productivity Team sponsored by the National Productivity Council for study of the Cement Industry in those countries.

I am glad to say that our relations with our staff and workers continued to be cordial both at the works and offices. I would like to express our appreciation of the services rendered to the Company by all the executives, staff and workers. I wish to mention in particular, the devoted and capable way in which the affairs at your Dalmiapuram Works have been managed by Mr. R. N. Roy, who is retiring on grounds of health from the post of Works Manager after nearly 20 years of service in our Organisation. His advice and guidance will, however, continue to be available to the Company as he will from now on hold charge of the office at Madras where the work does not call for so much exertion. Shri B. V. Raju, our Chief Engineer, will take over from Mr. Roy as Works Manager.

We may now take up consideration of the annual accounts and other subjects on the agenda of the meeting.

N.B. The above extract of the Speech does not purport to be the report of the proceedings of the Ninth Annual General Meeting of the Company held on the 29th June, 1961.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS. APPLICATIONS FOR SHARES ARE INVITED ON THE BASIS OF PROSPECTUS.

A copy of the Prospectus together with the documents required to be attached thereto by Section 60 of the Companies Act, 1956 has been duly filed with the Registrar of Companies, Maharashtra for registration.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking for the manufacture of steel wire ropes (black and galvanized) with a rated capacity of 3,000 tons per annum (working on two-shift basis).

An application will be made to the Stock Exchange, Bombay for permission to deal in the shares now offered and in due course for an official quotation.

UNITED WIRE ROPES LIMITED

(Incorporated on 19th October, 1960 under the Companies Act, 1956).

AUTHORISED CAPITAL: 1,00,000 Shares of Rs. 100/- each	Rs. 1,00,00,000
ISSUED CAPITAL: 45,000 Equity Shares of Rs. 100/- each	Rs. 45,00,000
10,000 9.5% Cumulative Redeemable Preference Shares of Rs. 100/- each (free of Company's Income-Tax but subject to deduction of taxes at source at the prescribed rates)	Rs. 10,00,000
Total	Rs. 55,00,000
Shares already issued to and subscribed by the signatories to the Memorandum of Association and taken up by Directors as Qualification Shares: 420 Equity Shares of Rs. 100/- each fully paid-up	Rs. 42,000
CAPITAL AGREED TO BE TAKEN UP:	
A. By Promoters, Directors, Friends and Associates	Rs. 17,08,000
B. By Life Insurance Corporation of India 5,000 Equity Shares of Rs. 100/- each 5,000 9.5% (free of Company's Income-Tax but subject to deduction of taxes at source at the prescribed rates)	Rs. 5,00,000
Total	Rs. 22,50,000
NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION:	
22,500 Equity Shares of Rs. 100/- each	Rs. 22,50,000
5,000 9.5% Cumulative Redeemable Preference Shares of Rs. 100/- each (free of Company's Income-Tax but subject to deduction of taxes at source at the prescribed rates)	Rs. 5,00,000
Total	Rs. 27,50,000

The 44,580 Equity Shares and 10,000 Preference Shares being issued will be payable as under:
On application Rs. 25 per share
On allotment Rs. 25 per share

The balance of Rs. 50 per share is payable in two calls of Rs. 25 each the first of such calls to be made not earlier than 3 months after the date of allotment and the second call to be made not earlier than 3 months from the date of payment of the first call.

The Calls on Equity and Preference Shares shall be made simultaneously and proportionately.

APPLICATION FOR SHARES

Application for Equity and Preference Shares should be made on the printed form accompanying the Prospectus. Applications must be for a minimum of 5 shares or multiples thereof.

BOARD OF DIRECTORS

UNDERWRITING COMMISSION

The Underwriters will each be paid an underwriting commission of 2% on the face value of all the shares underwritten by them respectively besides a charge of 1% on shares allotted on application bearing their stamp.

BROKERAGE

Brokerage at the rate of 1% will be paid on all allotment made in respect of applications bearing the stamp of a Bank or a recognised Broker. Brokerage on the same basis is payable to the Underwriters in addition to the underwriting commission on all allotment in respect of applications made or procured by them and bearing their rubber stamp.

OBJECTS OF THE COMPANY

The Company was incorporated on the 19th October, 1960 for carrying on all or any of the objects and purposes mentioned in the Memorandum of Association including in particular to manufacture steel wires and wire ropes (both black and galvanized).

COMMENCEMENT OF BUSINESS

The Company has obtained a Certificate to Commence Business bearing No. 1181 dated 22nd December, 1960 from the Registrar of Companies, Maharashtra.

PROSPECTS

Steel wire ropes are a specialised product and are used in various industries such as mines and mining, cranes and for other haulage purposes. The major portion of India's domestic requirement of wire ropes is at present met through imports with the resultant continuous drain on the country's foreign exchange. With the increasing tempo of industrialisation envisaged in the successive Five-Year Plans the demand for wire ropes is likely to increase. Plans the demand near future. According to estimates of the Planning Commission the country's requirement of wire ropes at the end of the Second Plan will be about 25,000 tons a year which is expected to rise to approximately 35,000 tons per year at the end of the Third Plan. This ever increasing demand leaves a wide gap between the supply and demand and thus assures this will eventually assist the country's foreign exchange position.

The Company's plant will be most up-to-date in design and technique of production of steel wires and ropes of the best quality and will have an initial capacity of 3,000 tons per annum. At a nominal additional capital cost it is also proposed to manufacture High Tensile steel wire for use in prestressed concrete construction and an application has already been made to the Government of India for issue of a Licence for an annual production capacity of 2,100 tons.

ESTIMATE OF PROFITS

On the basis of the existing prices the Directors are of the opinion that in the absence of any unforeseen circumstances, the Company should be in a position to pay reasonable dividends on Equity Shares.

TAX BENEFITS

The Company will enjoy the special benefits under the Indian Income-tax Act, 1922 as regards development rebate, in addition to the new industrial undertaking, it will enjoy exemption from Income-tax for profits upto 6% on the capital employed for the first five years of the Company's operation.

Shareholders of the Company would also be exempt from Wealth-tax on their holdings for a period of five years under the Wealth-tax Act and may also be exempt from tax on such dividend paid from the Company's profit exempted from tax under Section 15C of the Indian Income-tax Act.

FOREIGN COLLABORATION

With the approval of the Government of India the Company has entered into a (1) Technical Services Agreement and (2) Assistance to the Management Contract with Messrs. Lepage Consulting Engineers of Antwerp (Belgium) who have been working as specialist consultants in the field of wire and rope ropes for over 20 years. Under the Technical Services Agreement the consultants will provide all technical know-how layout and other engineering and the plant will be erected under their supervision. They will advise the Company in respect of machinery, raw materials and staff necessary for operation of the plant and will train the Company's technicians in Europe and India. This Agreement expires when the plant is installed and the quantity and quality of products are proved. For these services the consultants will be paid a remuneration of £223,520.

The Assistance to the Management Contract comes into force immediately after the expiry of the Technical Services Agreement. As per the Contract Messrs. Lepage Consulting Engineers will provide their expertise to look after the various processes of manufacture from the start-up. For these services called "technical assistance in the management of the plant" the consultants will be paid at the rate of Rs. 75,000 per year.

Thus the Company has been assured of continuous availability of technical know-how and assistance in the production of wire ropes. A beneficial feature of the collaboration agreements with Messrs. Lepage

UNITED WIRE ROPES LIMITED—Cont'd.

Consulting Engineers is that about 70% (Rs. 4,85,000) of the payments to be made to them as stated above will be invested by them in the equity capital of the Company.

LOCATION

The factory is to be located at Thana, near Bombay, where all facilities like transport, power, water, etc. are adequately available.

START OF PRODUCTION

The plant is expected to go into production late in the year 1962.

CAPITAL OUTLAY AND SOURCES

Capital outlay and working capital: The estimate of requirements is as follows:

(a) Land, buildings, roads, etc.	Rs. 11,00,000
(b) Plant and machinery, imported and indigenous, including import duty, transport to site and erection charges	Rs. 56,85,000
(c) Cost of technical services and know-how	Rs. 3,15,000
(d) Pre-operating expenses	Rs. 4,15,000
(e) Preliminary Expenses including Underwriting Commission, Brokerage and Issue Expenses	Rs. 2,45,000
(f) Working capital	Rs. 19,40,000
Total	Rs. 97,00,000

The above requirements will be met from the following sources:

(a) Equity Capital	Rs. 45,00,000
(b) Preference Capital	Rs. 10,00,000
(c) Foreign exchange loan from the Industrial Credit and Investment Corporation of India Ltd.	Rs. 30,00,000
(d) Loan from Company's Bankers and from other sources	Rs. 12,00,000
Total	Rs. 97,00,000

LOAN IN FOREIGN CURRENCIES FOR IMPORT OF MACHINERY

The Industrial Credit and Investment Corporation of India Ltd. Bombay have agreed in principle, subject to the approval of the International Bank for Reconstruction and Development, to lend to the Company an amount in foreign currencies equivalent to U.S. \$630,000 (approximately Rs. 30 lakhs) to pay for the cost of imported machinery and capital equipment. The loan will bear interest at 7 1/2% per annum and is repayable in 15 half-yearly instalments commencing from November 1963 and ending in November 1970. The loan will be secured by a first legal mortgage of the Company's present and future assets subject to the hypothecation of moveables to secure bank borrowings for working capital. So long as the loan or any

part thereof is outstanding ICICI shall be entitled to appoint a Director who shall not be liable to retire by rotation nor shall be required to hold qualification shares.

PAYMENT TO PROMOTERS

No payment is to be made to Messrs. C. H. Gandhi & Sons, Promoters of the Company, except for the reimbursement of the actual out-of-pocket expenses incurred by them and no profit or benefit has been given to any other person as promoter of the Company.

MANAGING AGENTS

The Government of India by their letter No. 9531-C.II/60 dated 2nd June, 1961 have given their approval to the appointment of Messrs. C. H. Gandhi & Sons Private Limited as the Managing Agents of the Company for a period of 10 years from 2nd June, 1961.

MINIMUM SUBSCRIPTION

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 27,50,000. Subscription of the amount is assured as the entire public issue has been underwritten.

REDEMPTION OF PREFERENCE SHARES

The Redeemable Cumulative Preference Shares of the face value of Rs. 10 lakhs being issued under this Prospectus shall be redeemed by the Company at par at the expiry of 10 years from the date of issue.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON THE 17TH JULY 1961 AND WILL CLOSE AT THE CLOSING OF BANKING HOURS ON THE 24TH JULY 1961 OR EARLIER BUT NOT BEFORE THE 19TH JULY 1961.

SELECTED SATGRAM COLLIERIES LIMITED

CHAIRMAN, MR. S. D. SHETHIA'S REVIEW

Speech of the Chairman, Mr. S. D. Shethia, delivered at the Sixteenth Annual General Meeting of the Company held in Calcutta on the 28th June, 1961.

Ladies and Gentlemen,

I take pleasure in welcoming you to the Sixteenth Annual General Meeting of the Company. May I have your permission in taking as read the Audited Statement of Accounts and the Directors' Report for the year ended 31st December, 1960.

At the very outset I have to make a sad announcement of the demise of Shri L. Hirji, a Director of your Company for a very long time, whose services would be ever remembered.

Trading and Production

Raisings during the year under review were 2,83,851 tons, nearly 23% increase in the previous year's output, as against 10% increase in the country's output. This was achieved by scientific planning and efficient execution in the face of heavy odds. Despatches have come up by 43,161 tons to 2,63,931 tons—a record figure so far. This manifests in higher sales figures and ultimate increase in trading results. The profit before taxation being Rs. 5,17,915/- against Rs. 4,54,758/- last year. The ratio of profit to raising is slightly lower, for the reasons I shall deal with later in my speech. After providing Rs. 1,89,000/- for taxation and transferring Rs. 1,03,000/- to reserves, your Directors have recommended a final dividend of Rs. 8/- per share on 13,000 old ordinary shares and *pro rata* Rs. 2/62 on 6,500 newly issued ordinary shares, i.e. 16% gross dividend as declared last year on increased capital.

Contingent liabilities in the shape of tax matters mentioned in the accounts of last year have been removed, owing to your Company's appeal being upheld in the Income Tax Tribunal.

Development Work

The raising in the collieries in 1960 was obtained by Development Work requiring continued dose of capital investment resulting in comparatively higher cost. In New Satgram Colliery expectations were not fully realised owing to Satgram Seam being declared gassy by the Dept. of Mines towards the end of the year. More expenditure, both of Revenue and Capital nature, had to be incurred in taking extra precaution as required by the Mines Act. The reflection of this in the cost was apparent. In Sripur Seam, one level stone drift through the faults, which, as had reported last time, was stopped by the Dept. of Mines, has now been taken up. After couple of months on its completion, the output there would go up. This year Sripur seams might also be entitled to Coal Board's subsidy of Re. 0.60 per ton similar to Satgram Seam.

Electricity had come to South Joyramdanga colliery towards the end of 1960 when the increase in output recorded a new level. In last two months of the year 5,000 tons were raised, as against that

6,500 tons on an average have been raised from January 1961. The coal was upgraded from Gr. II to Gr. I resulting in an increase of Re. 1/- in the sale price approximately per ton.

Manoharabahal Seam has been fitted with required machinery and is capable of yielding 6,000 to 7,000 tons per month, subject to pilot capacity and transport position. An application for grading this coal was made to the Coal Board on 5th September, 1960 and their decision is awaited. Loading accommodation and every effort is being made to increase the pilot capacity from 65 wagons to 83 wagons.

The workings of the New Jamuria colliery during the year under review, I am afraid, did not yield expected results owing to the thinness of the seam and extremely bad roof conditions. The machine mining having not succeeded resulting in high cost, pick mining method has been adopted. This Colliery is also entitled to Coal Board's subsidy of Re. 0.50 per ton on its output.

The output per man shift of our group of collieries is .91 as against .72 of the All-India figure. We are making every attempt to improve this.

Housing and Amenities

Most of the construction work taken in hand during last year have now been completed. Having obtained further sanction for 100 more houses at all our collieries, the construction has been started in the face of the shortage of construction personnel. Houses under cheap housing scheme have been sanctioned for New Jamuria Colliery. The co-operation received from the Housing Board and the Office of the Labour Welfare Commissioner has been spontaneous and now to some extent acute accommodation problem has been solved. Adult Education Centre, Canteen, Creche, Pithead Bath and Multi-purpose Co-operative Society, Open Air Cinemas are showing satisfactory results. Distribution of sweets to labourers and special confectioneries to children under seven years is also continued.

In field of sports, your Company has maintained its standard and New Satgram Colliery has again retained its Zonal Championship, stood well in the Raniganj Central Sports and participated actively in the All India Coalfield events.

In honour of Shri Jagan, your Company's old and loyal Sardar of the surface trammers who retired during the year under review, Pit No. 1 at New Satgram Colliery has been named after him as 'Jagan Pit'.

At New Satgram colliery the residential colony is fast coming up and it has been decided to name it Devchand-Nagar to commemorate the sacrifices and services of Late Shri Devchand D. Shethia, J.P., the first Chairman of your Company, who guided it capably during his tenure.

Labour Management Relations, despite the labour unrest in the neighbourhood have remained cordial.

Transport Situation—a Baffling Problem

The Second Five Year Plan target of 60 million tons about which I had expressed my doubts has fallen short by 8 million tons, the share of the private and public sectors in the shortfall, according to figures available being 8 Million tons and 7.2 Million tons respectively. However, one must say, there has been tremendous efforts on the part of the Industry as a whole to come up near to the target level. Little those who were behind this herculean task realised that a most critical situation would develop in the country due to acute transport shortage. One wonders whether this was the reward for all sacrifices and tightening of the belts. As against the total daily requirement of 6,000 wagons for coal loading in Bengal/Bihar coalfields and 5,000 wagons committed by the Railways only 4,694 wagons on an

average are loaded from January, 1961 causing shortfall and short supply of 1,306 and 306 wagons per day respectively. The accumulation of pithead stocks amounts to over 5 million tons, locking up a huge capital. A high power committee was appointed by the Union Government to find out the solution. Change in the allotment system, more movements by rail-

cum-sea routes, increased use of road transport, two tons extra loading in wagons and proposed increase in above Mughalsara movement, are expected to somewhat relieve the acute shortage. Further, suggestion has been made to find out the possibility of movement of coal to Down Country by Durgapur Canal. It would not be out of place to suggest the expeditious construction of the proposed Express Highway between Durgapur and Calcutta, and taking of coal by road by all priority consumers within 100 miles radius to further relieve the bottleneck. This movement might also be subsidised from the increased Excise Duty recently imposed. In any case, I am glad that this acute problem is receiving the attention it deserves by all concerned and with efforts made in all spheres it should not be incapable of solution.

With all the force at one's command, efforts must be made to relieve the bottlenecks mentioned above to prevent consumers from hand-to-mouth stock position and ultimate closures, and to reduce ever increasing heavy accumulation of pithead stocks exposed to quality deterioration and spontaneous combustion. This might otherwise be a main obstacle in the coal production.

Third Five Year Plan for the Industry

The target fixed by the Third Five Year Plan of 97 Million tons is no less ambitious than the Second Five Year Plan's target and to fulfil it very careful planning in all its spheres and its expeditious execution with frequent reviews from time to time would be necessary. Our experience for all these years, particularly for the last five years must be carefully remembered. The target of the Private Sector can be achieved with unstinted support of the Government in removing all the obstacles.

A Few Obstacles

As is well known the correct dose of finance supported by realistic price policy for which the Industry had been clamouring, the condition precedent to the achievement. Recent increase in coal price from 1st June, 1961 by Re. 0.06 p per tonne against the Industry's demand of Re. 0.40 p per tonne has been made to meet the increased incidence of labour wages. An appeal has been made to the Government in this connection by the Industry.

The foreign exchange requirement of the private sector for the Third Five Year Plan period is estimated at Rs. 28 crores. The Government as well as the Joint Working Committee of the Industry are sending a delegation to finalise the World Bank Loan. The word 'Loan' I must, however, point out, is a misnomer for the Industry as this loan is to the Government and not to individual collieries.

Our Next Five Year Plan

The Company's target is 44,000 tons per month from the existing units excluding Dishegarh Seam which has finally been explored and is expected to yield Selected Grade of blendable coal of good use with foreign experts for its final exploration. Between 25/30,000 tons per month can be obtained from this mine. Thus the total target fixed would be at least 7,00,000 tons annually. This substantial increase has necessitated increasing our authorised capital from Rs. 50,00,000 to Rs. 100 lakhs and subscribed capital from Rs. 19,50 lakhs to Rs. 40 lakhs. Necessary permission has been obtained from the Government for this purpose. Your Directors are considering a proposal for purchase of a colliery in Chanda Coalfield in Maharashtra State presently persistent demand. This Colliery consists of 40 lakhs tons of coal, out of which approximately 12 lakhs tons would be able to raise about 30,000 tons per month during the Third Five Year Plan. The proposal for Engineering Works referred to in my last speech specifically provided for in the object clause of the year Directors.

The last issue of 6,500 ordinary shares was over-subscribed manifesting the confidence of the public over the Company's management.

Your Company's staff, both at the Collieries headed by Shri J. Singh, General Manager of the Collieries, and its Registered Office has shown a good deal of efforts and commendable earnestness to cope up with problems arising out of the expansion work by the foreign technicians and short courses organised by the Productivity Council and British Institutes are affording both the technical and administrative staff with opportunity for enhancement of ideas and their practical applicability. I take this opportunity in according our sincere appreciation to them and arranged for much required finance during this year and for successfully negotiating for enhancement of credit facility for supply of machinery and equipment.

Last, but in no way the least, mention must be made for the very able and mature guidance given by the Board of Directors from time to time who have, I am sure, our hearty thanks. Let us hope we shall have their continued assistance and co-operation in future.

With your permission I now propose that the Audited Statement of Accounts and the Reports of the Directors for the year ended 31st December, 1960 be hereby approved and adopted.

Note: The aforesaid note does not purport to be a record of the proceedings of the Annual General Meeting. It is merely an abstract from the Chairman's speech. The detailed speech is available at the Company's Registered Office.

THE NATIONAL TANNERY COMPANY LIMITED

CHAIRMAN, MR. SANJOY SEN'S ADDRESS

Following is the Chairman's address delivered by Mr. Sanjoy Sen at the Annual General Meeting on 29th June, 1961.

It is with great pleasure that I welcome you to this Annual General Meeting. The Directors' Report and the Statement of Accounts for the year ending December 31, 1960 have been circulated and with your approval, I shall take these as read.

Our sales and production continue to rise being 23% and 40% respectively over the last year's figures. I am happy to report that the increase of production has mostly been in the sphere of industrial leather and the demand for both saddle and mill stores leather continues unabated. We have also been able to introduce a new type of Shrunken Grain Leather suitable for upholstery purposes and I feel we shall have a good market for this line.

The substantial rise in our finished stocks this year is explained by our larger activity in industrial lines which calls for imported raw material and requires a wider variety in stock of all types and sizes of such leather. If the tempo of demands continues, we shall be in a position to keep on expanding our production in the coming year. Foreign exchange is, however, a dominating factor and the future availability of foreign exchange will determine to a large extent our development during the coming years. We would, however, like to thank the Ministry of Commerce and Industry for their continued help during these very difficult periods in granting us import licences for raw materials, consumable stores, plant and machinery and essential spares. We have always received their fullest co-operation and assistance in covering our requirements. A redeeming feature in the Leather Industry is that imports of raw materials are only a fraction of the total export of leather and it is, therefore, hoped that the import licence position will not deteriorate to any large extent in the near future.

Vegetable Tanning Section

Last year I touched on the future plans of our Company and I would like to record that we have been able to implement the necessary change in our Vegetable Tanning Section as contemplated for the year. Part of the additional plant has already been installed and the balance is due to arrive by the middle of this year. Sanction for a loan of Rs. 5 lacs from the West Bengal Financial Corporation has already been obtained by us and we shall shortly be in a position to execute the necessary documents and utilise the funds. We are planning to extend the present floor area of the Vegetable Tanning Section substantially to enable us to work on a line flow on receipt of this money and extend our sole and belting leather capacity to meet new demands. We welcome the restriction imposed on leather belting import under the new Import Control announcement and I feel confident this will give an added impetus to our subsidiary leather belting unit.

In keeping with the depressed conditions prevailing in the Leather Industry all over the world, we have closed the year with a profit which is slightly lower than the last. This is partly due to the absorption of increased raw hide prices prevailing during this period and in our particular case, also for the higher depreciation allowed in accordance with the provisions of the Companies (Amendment) Act of 1960. In the last Directors' Report we had foreseen the implications of higher prices and I am happy that we were able to absorb higher material costs by increasing productivity though it was not possible to maintain exactly the same profit level. I feel the worst has passed and there is a levelling trend of hide prices at the present moment slightly lower than last year but we do not see any chance of a return to the previous low due to an overall world shortage.

Rise in Export Earnings

The Third Five Year Plan aims at bridging a large foreign exchange gap through friendly foreign assistance. Whilst this may be forthcoming, it would be worth-while studying the export angle of every industry in an effort to exploit new export potential. A significant feature for the Leather Industry is the increase in export earnings of leather, leather goods and footwear to Rs. 42 crores from Rs. 32 crores in 1959. A large contribution to this increase has been made by shoes and leather goods. In my opinion the shoe making capacity of a country should be the measure of its Leather Industry. In this respect, it is a matter of deep regret that the Planning Commission has turned down the request of the Development Council for increasing the leather footwear capacity in the country to 150 million pairs at the end of the Plan on the grounds that this would necessitate further imports of raw hides. There must have been some misunderstanding as the only raw hides imported into our country are for industrial leather production and such imports inevitably have to grow to keep pace with increasing industrialisation. Further an increase in the production of footwear would enable larger exports and foreign exchange earnings despite decreased E.I. tanned leather export and I would request the Planning Commission to keep a free and open mind in this matter. Our export earnings can be further enhanced by larger production and export of finished leather.

This means systematic and scientific development of our Chrome Tanning Industry as all the basic raw materials are available indigenously. With the installation of modern plant in India, modern plant installation assumes an important feature as a number of corrective processes have to be adopted to obtain

national wastage, but also helping in bringing a solution to our acute food problem generally.

Due to the limited availability of raw hides, it is imperative that during the Third Five Year Plan period more stress be placed on rehabilitating the existing units be it in the large scale, small or the village and cottage scale rather than on building up new capacities.

At the present moment the majority of the tanning capacity in the country lies idle due to non-availability of raw material. It is, therefore, not advisable to allow fresh capacities to develop in any sector and what is really necessary is to find out ways and means of fully utilising the installed capacity. The large scale sector should be encouraged to utilise their existing capacities for finished leather and further encouraged to finish more of the semi-finished leather, whereas the cottage and the village tanners should be rehabilitated by affording them proper marketing facilities and also allowing them the benefit of mechanised retanning and finishing centres. Great stress should be given to the best utilisation of the basic raw material and this is only possible by an overall education of tanners in general in our country.

Your Company has been very fortunate in arranging training for one of its Tanning Assistants in the very large and modern tannery of M/s. Christian Schaeffer at Plammersheim in W. Germany. We would like to thank them and M/s. Badische Maschinenfabrik A. G. Durlach, W. Germany for arranging this training for us on practically all the machines they are supplying us. As we have bought most of our plant from Badische Maschinenfabrik A. G., I feel this opportunity will greatly benefit your Company in the future.

Judicious Buying

Our ability to buy our raw hide cheaply reflects largely on the profits we are able to make. We have, therefore, experimented during the year with supplies from a large number of European and American countries. We hope that by judiciously buying from the different countries, it will be possible for us to cut down our raw material cost. We are also looking into the possibility of utilising shoulders for tanning as these are relatively cheap compared to croupions.

With increasing production the problem of supervision and chemical control assumes an important role. In this, the College of Leather Technology, next door to us, should play an important part in fulfilling the requirements of the Industry. I strongly feel that the present standard of training and education at the College is inadequate to cope with the requirements of the modern Leather Industry and is also not drawing material of the right calibre. I would call upon the Industries Department of this State to take immediate steps in improving the existing facilities. This should include modernisation of the experimental tannery and introduction of Chemical Engineering Courses in order that the students of this Institute may find a place in industry.

The relation with the staff and labour was congenial and all incentive schemes are successfully operating to the mutual satisfaction of the employees and the Company. I feel that the incentive schemes have played a large part in effectively increasing our production as a result of labour productivity.

The recent power cut in the Calcutta area has affected our production considerably and we hope that the Government and the C. E. S. C. will find a quick and lasting solution to this disrupting problem which we have never experienced before. We can ill afford to work below capacity for long without accumulating losses.

Before I close, it is my pleasant duty to thank my colleagues the staff and the workers of the Company and our customers for another year of unfailing support to the Company.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

CHAIRMAN, MR. R. H. KAMANI'S

REVIEW

Speech by the Chairman, Mr. R. H. Kamani, at the 15th Annual General Meeting of the Shareholders on the 29th June, 1961.

It gives me great pleasure in extending to you all a cordial welcome on behalf of my colleagues and myself to this 15th Annual General Meeting of your Company.

The Directors' report, audited profit and loss account and balance sheet for the year ended 30th September, 1960 have been in your hands for some time and with your permission, I propose to take them as read.

The net earnings of the Company before providing for Managing Agents' remuneration, Taxation and Depreciation for the year under review has reached a record figure of Rs. 20.89 lacs against Rs. 19.49 lacs in the previous year. The amount set aside for depreciation is Rs. 4.89 lacs and for taxation Rs. 6.70 lacs. The balance of Lahore Assets amounting to Rs. 2.88 lacs has been written off completely in this year's account. In spite of this, rate of ordinary dividend has been slightly raised from 7.75% taxable to 8% taxable. You will please observe that the Company is now in a more sound position since all the arrears of depreciation and the whole of the Lahore Assets have been fully recouped.

Rise in Production

All previous records of Factory Production have been broken. Production during the year under review was 13,485 Metric Tons, over 30% higher than the previous year's production. This trend of higher production is being maintained during the current year and effort is being made to increase it still further provided raw materials like steel, zinc, bolts and nuts are available in time.

Having presented to you a brief picture of the financial and production achievements of the year

under review and the production trends of the current year, I would like to take this opportunity of conveying to you some of the highlights of important events of the current year. In doing so, I am limiting myself only to the achievements during the current year, as the important achievements for the year under review have already been included in the Directors' Report.

Agency Business booked during the current year upto now is satisfactory and the value of orders secured is about 60% higher than the orders secured in the corresponding period of the year under review. This includes an additional order for the Third Thermal Power Station and an order for a complete Hydro Electric Plant of 9 M.W. capacity for the Trisuli Project for Nepal.

The Company is also fortunate to secure the orders over Rs. 6 Crores from the Government of India placed on their Principals in Europe for supply of Railway materials on which the Company would earn substantial commission.

Export Business

Our entry into the Export Market under global competition has been quite encouraging. As stated in the Directors' Report, apart from Canada, West Indies and Thailand, sizable orders for 1100 tons of Transmission Line Towers from the New Zealand Electricity Department and further 650 tons of Transmission Line Towers from the Government of Nigeria have been secured. There are other much larger orders under negotiations from other countries which your Company is hopeful of receiving during the current year.

Regular production and sales for the newly developed Mark II Kamani-Twose Tractamount Road Roller have been undertaken and the department is progressing well.

The total outlay of expected expenditure for the Power Projects of the Third Five Year Plan amounts to about Rs. 1,000 Crores including about Rs. 220 Crores of the continuing schemes of the previous plan. The above figures include an outlay of Rs. 190 Crores for Transmission and Distribution Lines and about Rs. 110 Crores for Rural Electrification. Your Company is keenly interested in participating in the above national developments to the maximum possible extent by (a) supply of Power Plant requirements of the various projects and (b) supply and erection of transmission and distribution lines and supply of equipments for Rural Electrification Schemes. Plans are being prepared for equipping your Company to achieve the above objective.

Technical Experts

During the current year the Company was fortunate in having as visitors several management and technical experts who, besides commending the methods and procedures of the production department, gave valuable advice for improving further the methods of production to render high production at lower cost with minor addition to the existing plant facilities. The Research & Development Department specially set up for studying these suggestions and planning to implement them has done considerable work, the benefits of which would be realised in the coming years. Besides the newly appointed Technical Advisory Board under the able Chairmanship of Shri N. N. Jengar, (B.E.) M.I.E.E., Ex-Chairman of the Central Water and Power Commission has made very valuable recommendations which, when implemented, will further improve the manufacturing and considerable economy in cost of production making our products highly competitive in the home and international markets.

Our present achievements and hopes for brighter future are a result of good efforts and co-operation of workers and staff of your Company and the encouragement and backing that your Company has received from all of you from time to time, for which I sincerely thank one and all.

N.B. This does not purport to be a Report of the proceedings of the General Meeting.

Money

THE CALCUTTA MONEY MARKET

SHARP FALL IN SUPPLY OF BILLS

Wednesday, 5th July.

ADVANCES have again fallen in the Calcutta money market during the past week, but the amount has tended to be small. Of the main sources of demand, the sugar mills have increased their requirements slightly, as have the engineering and iron and steel industries. This has been chiefly counter-balanced by a fall in call for accommodation against foodgrains and seeds storage. Demand from the cotton and jute industries has remained about the same. Conditions have become tighter in the interbank market and the call rate has increased to 4½ percent.

There has been a sharp fall in the supply of gunny and tea bills in the exchange market during the past week. Demand for remittance has improved considerably. In the London money market, the pound is weaker on continued uncertainty about the possibility of credit restrictions in the U.K. economy. Closing losses were registered against all major currencies with the exception of the Canadian dollar.

BULLION WAS QUIET IN THE PAST WEEK DUE TO LONG LIQUIDATION. Silver dropped from the previous week's level of Rs. 235.50 to Rs. 233.50, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 199.50. The London and New York prices were 79½ and 91.375 cents.

In spite of a fall in silver, gold was steady on lack of supplies and the price rose from Rs. 141.50 to Rs. 143.50. The sovereign at Rs. 96.25 showed a gain of 25nP.

DURING THE WEEK ENDED 30TH JUNE, GOVERNMENT of India Treasury bills for Rs. 95,65,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 4th July. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.335 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.650 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 10th July.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 5th July to 8th July at Rs. 99.356 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 28th June to 1st July.

DECLINES OF RS. 12.34 CRORES TO RS. 1,933 CRORES in active notes and of Rs. 8.93 crores to Rs. 1,978.22 crores in the total note issue were notable features of the return of the Reserve Bank of India during the week ended 30th June, 1961. The currency contraction was adjusted by reducing foreign securities by Rs. 5 crores to Rs. 103.01 crores and rupee securities by Rs. 4.98 crores to Rs. 1,639.93 crores in the paper currency reserve. Deposits of the Government of India declined by Rs. 22.57 crores to Rs. 59.68 crores, but other Government accounts rose by Rs. 55 lakhs to Rs. 15.18 crores. Balances of commercial banks at Rs. 94.73 crores showed a rise of Rs. 14.36 crores. Balances held abroad declined further by Rs. 1.87 crores to Rs. 10.78 crores in spite of a transfer of securities from the Issue Department to the Banking Department. Investments fell by Rs. 33.60 crores to Rs. 189.49 crores. Other loans and advances rose from Rs. 115.71 crores to Rs. 130.41 crores, of which advances to scheduled banks against usance bills advanced by the Reserve Bank increased from Rs. 8.48 crores to Rs. 10.50 crores. Ways and means advances to Governments stood at Rs. 34.30 crores, against Rs. 77.43 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 23rd June, 1961, shows a rise of Rs. 2.10 crores to Rs. 522.27 crores in total deposits. Investments in Government securities are up by Rs. 16.99 crores to Rs. 219.61 crores, while other investments remain unchanged at Rs. 9.30 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 4.67 crores to Rs. 262.48 crores. Cash and balances are, in consequence, shown at Rs. 22.81 crores or Rs. 9.66 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED BANKS for the week ended 23rd June, 1961, shows Demand and Time liabilities at Rs. 837.53 crores (Rs. 31.62 crores on account of borrowings from banks) and Rs. 1,122.71 crores (Rs. 18.11 crores), compared with Rs. 835.15 crores (Rs. 31.55 crores) and Rs. 1,114.11 crores (Rs. 17.41 crores), respectively, in the previous week. Cash has risen by

Rs. 48 lakhs to Rs. 47.62 crores, while balances with the Reserve Bank have declined by Rs. 8 crores to Rs. 73.64 crores. There is a rise of Rs. 16.48 crores to Rs. 545.39 crores in investments. Advances and bills discounted at Rs. 1,274.23 crores show a drop of Rs. 10.06 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 65.0 percent, against 6.6 percent and 65.9 percent.

Key to Planning & Prosperity

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

offers complete banking service

One who did not waver...

Jamshedpur's latest blast furnace needed a 'big bell'—a 20-ton component requiring highly skilled casting and machining. A difficult operation even if the right machine tools were available, but in 1958 they were not, and import seemed the only solution to all but one determined and resourceful young engineer, N. P. Naik.

Working on this problem in his leisure hours, Naik gradually crystallised his ideas into mathematical formulae and blue-prints. He developed, at the same time, a new machine tool to do the job by remodelling a small boring machine, stage by stage. Then started the casting and intricate machining, until, in a short time, Naik and his colleagues succeeded in producing a

'big bell', fully meeting the technical specifications to the last detail. As a tribute to Naik's fine endeavour, Tata Steel gave him an award of Rs. 10,000, the highest made under a ten-year old scheme to encourage initiative from the shop floor.

Men like Naik are carrying forward a fine Jamshedpur tradition, recalling Jamsetji Tata's exhortation: "Let the Indian learn to do things for himself."

SHARE CAPITAL

MACHINERY & TECHNICAL COLLABORATION

The Company has finalised negotiations to supply the machinery and technical know-how with Messrs. Industrieteilen & Maschinen G.M.B.H. Garmisch-Partenkirchen, West Germany, who has wide experience in glass technology, and has designed similar plants all over the world, which to the Company's information are functioning satisfactorily.

REGISTERED OFFICE OF THE COMPANY

TAKTAWALA HOUSE,
Gandhi Road, Ahmedabad.

CONSENT

The letters giving the consent in writing of the Auditors, Bankers, Brokers and Solicitors to the Company to act in their respective capacities have been obtained, and the same are filed with the Registrar of Companies, Gujarat, Ahmedabad. None of them have withdrawn their consent so given.

OBJECTS AND HISTORY OF THE COMPANY

The Company was incorporated as a private limited company on 24th December 1957 to carry on all or any of the objects of purposes mentioned in the Memorandum of Association and more particularly to carry on the business as manufacturers and dealers in sheet, wired and figured glasses, glass building blocks and all sorts of glass and glassware. The Company was promoted by Messrs. Tribhovandas Maneklal Taktawala who are in the business of import and distribution of glass since last 70 years. The Company had installed a plant at Andheri, Bombay and commenced production on 1st April, 1959.

The Company is being managed by Managing Directors, Shri J. A. Taktawala and Shri M. J. Taktawala since 13-2-1958, who are connected with glass business since 20 years and has considerable experience in the line.

The present capacity of the plant of the Company at Andheri is of processing of about 1,00,000 sq. ft. of 50,000 sq. ft. of mirrors per month and about the capacity of processing per month 10,000 pieces of sight glasses and 10,000 pieces of protector glasses used in ship and furnaces.

At present the Company is processing the famous "Turex" brand toughened safety glass which are widely used by the Automobile Manufacturers, Bus body Builders, State Transport, P.W.D. vehicles etc. The Government has granted Import Licences for the value of Rs. 1,95,000/- for the import of machinery for the manufacture of laminated safety glasses and for the manufacture of bent toughened glasses. This will increase the activities of the present works of the Company situated at Andheri.

SCOPE OF THE INDUSTRY

The Tariff Commission has estimated the total demand of sheet glasses in the country at about 110 million sq. ft. in 1960. The present production is round about 85 million sq. ft. The present production and building programme and there will be sufficient demand for sheet glass. At present, all plants in India to that of the Company are situated near about Calcutta. There is no similar plant in Western India. The cost of transport of their finished products is about 20% of their sale price. Western India is an important market for the consumption of items which the Company proposes to manufacture. During the period of Second Five-Year Plan, the demand of glass has also been increased at a rate faster than envisaged. During the period of Third Five-Year Plan it is estimated that the demand will be considerably higher than the present installed capacity in the country and the Company believes that there is adequate market for the type of sheet glasses proposed to be manufactured by the Company. Furthermore, Com-which most probably at present are not being manufactured from abroad. This project will perhaps be the first of its kind simultaneously making sheet glass and wired glasses in India.

ESTIMATE OF PROFITS

The Directors have estimated the costs of production of glasses of all types on liberal basis. They are may be available on the basis of normal selling price of glass.

SITE

Keeping in view the availability of power, water, raw materials, labour, Transport facilities, etc. arrangements have been made to obtain by way of purchase about 1 lakh sq. yards or more of land near about Anand.

MACHINERY & TECHNICAL COLLABORATION

The Company has finalised negotiations to supply the machinery and technical know-how with Messrs. Industrieteilen & Maschinen G.M.B.H. Garmisch-Partenkirchen, West Germany, who has wide experience in glass technology, and has designed similar plants all over the world, which to the Company's information are functioning satisfactorily.

The said foreign firm has agreed in principle to assist the Company in the manufacture of sheet glass plants and will render necessary assistance in the layout of the plant and in the designing of the layout of the plant satisfactorily. Moreover, the said foreign firm, has agreed to arrange for the theoretical and practical training of qualified persons of the Company with regard to the manufacture of glass.

FOREIGN EXCHANGE REQUIREMENTS
The Industrial Credit and Investment Corporation of India Ltd. Bombay have agreed in principle to the reconstruction and Development of the Company to pay an amount in foreign currencies equivalent to U.S. \$7,31,000 (about Rs. 37,19,000/-) to pay for the cost of imported machinery and capital equipment.

CAPITAL OUTLAY

The capital estimated to be required to commence production will be as follows:—

(1) Land, Building and power installation	Rs. 35,00,000
(2) Complete cost of plant and machinery including designing, engineering fees, transport and erection	Rs. 55,00,000
(3) Working capital	Rs. 23,00,000
(4) Expenses of issue	Rs. 2,00,000
	Rs. 1,15,00,000

Out of total project of Rs. 1,15,00,000/- the Company is raising additional capital of about Rs. 72,00,000/- in equity capital. The Company has an existing equity capital of Rs. 4,03,000/- as regards the balance of about Rs. 39,00,000/- the same will be met by way of foreign exchange loan from the Industrial Credit & Investment Corporation of India Ltd. and by way of borrowing from Banks.

EXPENSES OF THE ISSUE

The estimated amount of the expenses of the issue is Rs. 2,00,000/-.

DIVIDEND

(Subject to details in Prospectus)

In respect of the first two periods, no dividend was paid by the Company. Interim dividend has been paid at the rate of 5% (Subject to deduction of tax) on 4,030 Equity Shares in respect of the profits of the year ending 31st March, 1961. The final dividend at the rate of 5% (subject to deduction of tax) on the Equity Shares has been proposed in respect of the year ending 31st March, 1961. The above dividends have been paid and proposed respectively out of the profits of the Company for the year ending 31st March, 1961.

INSPECTION OF DOCUMENTS

Copies of prospectus and documents mentioned therein are open for inspection at the Registered Office of the Company during office hours till the subscription list is closed.

APPLICATION FOR SHARES

Application for shares must be made on the printed form. Application forms duly filled in along with remittance must reach either the brokers or Bankers of the Company for this issue at their Head Office in Bombay, Amritsar, Bangalore, Baroda, Anand, Allahabad, Bhopal, Bikaner, Calcutta, Coimbatore, Delhi, New Delhi, Gwalior, Hyderabad, Indore, Jaipur, Kanpur, Lucknow, Madras, Madurai, Mehsana, Nagpur, Nadiad, Poon, Rajkot, Surat, Sialpur, Trivandrum, Chequre and drafts should be drawn in favour of "The Central Bank of India Ltd." A/c, "Shree Vallabh Glass Works Ltd." or "The Bank of Baroda Ltd." A/c.

Copies of the Prospectus and Forms of Application may be obtained from the Registered Office of the Company or at the Office of Brokers and Bankers to the issue.

The share certificates will be issued within 4 months from the date of the last allotment.

Stocks and Shares

PRICES STEADIER ON HIGHER STEEL DIVIDEND HOPES

MODERATE CARRY-FORWARD CHARGES INDICATE GOOD TECHNICAL POSITION

Wednesday Evening.

THE stock market has produced divergent trends during the past week. Turnover has been sensitive, uncertain and thin in speculative shares. In view of today's settlement, operators have proceeded cautiously, but moderate carry-forward charges appear to indicate a healthier technical position. The price of Indian Iron shares has closed at a settlement price of Rs. 27.90. A striking feature is the absence of selling pressure because the news background appears encouraging. There is hope that the Government will soon announce the new steel retention prices in order to make it more convenient for the steel companies to close their annual accounts for the year ended March 1961. In any case, the steel companies are expected to announce their dividends for this period within a short time. The stock market believes that the managements of the Tata Iron and Steel Co. and the Indian Iron and Steel Co. may decide to pass a portion of the beneficial effects of the expansion programmes on to the shareholders in the form of increased dividends.

The pressure in Indian Irons has also abated due to the publication of higher production and despatch figures by the Company for June. The output of steel ingots has increased from 70,912 tons in May to 74,228 tons in June. The production of saleable steel has improved from 42,165 tons to 50,089 tons, to which semis have contributed 13,576 tons, against 11,065 tons, and finished 36,513 tons, against 31,100 tons. The production of pig iron has declined from 100,815 tons to 96,921 tons. Despatches have improved from 39,812 tons to 51,410 tons.

There has been a substantial improvement in the prices of selected scrip, but support is slow and discriminating because it is difficult to take a constructive view at the present time against the background of mixed news. With the return of funds into the banking system due to the slackening of the busy season demand, doubts have arisen as to whether the Reserve Bank will now take steps to restrain credit supplies. A Press report states that commercial banks may be asked to increase their capital funds consisting of share capital and reserves in order to bring them into greater balance with deposits.

The move itself is unexceptional because there has been a remarkable rise in deposits during recent years, although the share capital of banks has increased relatively less. If banks are also forced to transfer a bigger portion of their profits to reserves, resources will be immobilised further. This would not only hamper the profitability of banks, but the dividend outlook, at least for the time being, could be damaged.

Among engineering shares, Binani Metals, newly enlisted, are in demand. Texmacos have re-ly covered on short-covering. Scattered interest is being taken in Guest, Keen, Williams, Britannia Engineering and Indian Standard Wagon. Burn have improved on producing good results. Jessops are sluggish. Indian Oxygen and Braithwaites have maintained their previous gains.

Coal shares have met with selective buying. Bengal, Raneeunge and New Beerboom have improved on prospects of foreign loans for expansion. Burrakur have fluctuated narrowly and interest has been taken in Western Bengal on hopes of expansion. Routine business is being transacted in Central India, East Indian, Equitable and Amalgamated.

There is scattered interest in jute shares on the view that new crop arrivals will increase soon. Business has been done in Birla, National, New Central, Megna, Anglo-India, Ganges and Union.

The miscellaneous section has produced many bright features. Indian Copper and Dunlop Rubber have gained on hopes of bonus share issues. There is sustained interest in British Paints and Isaac Holdens. Alkali Chemicals are fancied on expansion prospects. Indian Aluminium, Hindustan Motors and Indian Cables have improved on replacement buying. National Tobacco are steady on producing good results. Electric Construction have improved on influential support. Sirsik are higher on talk of modernisation. National Insulated Cables and Hindustan Aluminium have met with support. Union Carbide and Rallis are steady. Shaw Wallace are being bought on diversification prospects and Martin Burn are in demand on good working reports. Britannia Biscuits are firm on talk of a bonus share issue. Paper shares have recovered on replacement buying. Titagur and Orient are quotably higher, but Sirpur Paper have declined on pressure.

Cotton mill shares are firm on reports of good cloth offtake. Kesoram have improved on expansion prospects. Interest has been taken in Bharat Commerce, J. K. Rayon and Dunbar.

Sugar shares are sluggish on uncertainties concerning exports. Routine business has been

transacted in Carew, Belsund, Ramnugger and S.K.G.

The decision of some Assam gardens to issue bonus shares and pay higher dividends for 1960, has induced support for selected scrip. Basmatia, Jay Shree, Tezpora, Hantapara and Banarhat are being bought.

Government securities are quietly steady. The 3 percent conversion loan 1960 has recovered to Rs. 72.25. Business has been difficult to negotiate in short-dated stocks in the absence of declared sellers.

Bateli Tea

Providing Rs. 39,289 (against Rs. 54,217) for depreciation, the profit of Bateli Tea Co. Ltd has fallen from Rs. 3,52 lakhs to Rs. 2,94 lakhs for the year ended December 1960. The dividend has been maintained at 30 percent, subject to tax, which absorbs Rs. 1,49 lakhs. Taxation is allocated Rs. 1.15 lakhs (against Rs. 1.45 lakhs) and development reserve gets Rs. 1,770 (against Rs. 3,716). After making various adjustments, a sum of Rs. 43,193 is carried forward against Rs. 56,445 brought in. Crop was 335,928 kilograms (against 385,329 kilograms). The average sale price realised was Rs. 4.25 (against Rs. 4.34) a kilogram. Estimates for the current year provide for an expenditure of Rs. 13,50 lakhs on a total crop of 375,000 kilograms.

Bokakhat Tea

The Bokakhat Tea Co. Ltd has incurred a loss of Rs. 19,624 for the year ended December 1960, against a profit of Rs. 86,164, after providing Rs. 13,500 (against Rs. 46,000) for taxation and

Rs. 42,172 (against Rs. 34,833) for depreciation. The dividend has been passed. After making necessary adjustments, an amount of Rs. 47,841 is carried forward, against Rs. 38,457 brought in. A crop of 154,572 kilograms was produced, against 176,720 kilograms. The average sale price was Rs. 6.30, against Rs. 6.42 a kilogram. Estimates for 1961 provide for a crop of 195,952 kilograms at a cost of Rs. 9.39 lakhs.

Bombay Market

UNCERTAINTIES CAUSE WEAKER TREND

HIGHER T.I.S.C.O. DIVIDEND HOPE

Wednesday Noon.

THE Bombay stock market has closed the past week in a chastened mood. Turnover declined considerably and follow-up support was conspicuous by its absence. Operators were cautious in view of many uncertainties. The question of tightening up margin regulations further on pressure from the Stock Exchange Directorate, is still being debated. The disturbed international situation has caused concern. A Press report that India's foreign exchange reserves have declined to Rs. 115 crores called for caution, because it was feared that imports might be restricted further. Earlier, sentiment deteriorated on the fear that the Reserve Bank might take further steps to restrict credit supplies as soon as banking resources start increasing due to the return of funds.

Tata Steel closed at Rs. 162.50; operators are hoping that the Company will pay a higher dividend for the year ended March 1961. Indian Iron were quiet at Rs. 27.85 on pressure from Lyons Range. Tata Locomotive lost at Rs. 376 on a report that the Company would issue debentures worth Rs. 5 crores for financing expansion. It is thought that the Company may not issue rights ordinary shares for the time being. Later, sentiment improved on the news that a higher dividend has been announced. Premier Construction declined to Rs. 195 and Larsen and Toubro were sold down to Rs. 41.25. Mukand Iron lost at Rs. 29 on maintaining the ordinary dividend. Alcock Ashdown were offered freely at Rs. 287. Motor shares were quiet, and Hindustan Motors declined to Rs. 22.26. Business was done in Premier Automobiles at Rs. 168.25.

Cotton mill shares closed lower on balance after wide fluctuations. Century recovered to Rs. 691 at the close due to short-covering. Bombay Dyeing were done at Rs. 68.60. Morarji were steady at Rs. 446 on hopes of a further share issue. Kohinoor met with support up to Rs. 316, but Simplex were sold at Rs. 211.50. Tata Mills were steady at Rs. 67.70, as were Svadeshi at Rs. 278. Khatau were bought up to Rs. 583.75, but Finlay were easier at Rs. 329. India United Ordinaries were quoted at Rs. 15.12 and sellers predominated in Apollo at Rs. 1.74.

Prices of miscellaneous shares declined in line with the general trend. Among sugar shares, Belapur were quiet at Rs. 263 and Phalton lost at Rs. 131.50. Walchandnagar Industries met with scattered interest up to Rs. 172. Cement shares were quietly steady, and Associated Cement were bought at Rs. 166 on hopes of a bonus share issue. Digvijay were in demand up to Rs. 154 on prospects of a better dividend. Among steamship company shares, Scindia Steam reacted to Rs. 14.44 on profit-taking, but Great Eastern Shipping attracted support at a lower price of Rs. 14.52. Mining shares were firm, and Shivrampur Syndicate improved to Rs. 74.50. Bombay Burmah reacted to Rs. 613 on pressure, but National Rayon recovered to Rs. 554 on short-covering.

Baroda Rayon were done at Rs. 139 and Gwalior Rayon declined to Rs. 51.50. Chemical shares were quiet, and Tata Chemical were sold down to Rs. 19.64. Polychem slipped back to Rs. 206.25 and Indian Dyestuff were available at Rs. 525. Colour-Chem were quietly steady at Rs. 370 and Synthetics and Chemicals improved to Rs. 188 on a report that production may begin at the end of 1962. Ceat Tyre were quiet at Rs. 210, but Voltas attracted scattered interest up to Rs. 288. Tata Oil were steady at Rs. 75.

Turnover was limited in banking shares and fluctuations were narrow. Business passed in Bank of India at Rs. 126 and in Central Bank at Rs. 59. Bank of Baroda came to hand at Rs. 101.50. Insurance shares were quiet, and New India Assurance were available at Rs. 61.70.

Electric company shares turned soft, and Ahmedabad were placed at Rs. 85.80. Tata Hydro came to hand at Rs. 106.50 and Bombay Suburban were indicated at Rs. 92.50.

Madras Market

TURNOVER RESTRICTED BUT UNDERTONE STEADY DEMAND FOR SELECTED STATE LOANS

Tuesday Evening.

THE Madras stock market closed the past week in a steady mood, but business was done on a small scale. Professional support declined due to lower advices from the Calcutta and Bombay stock markets. A sharp decline in India's foreign exchange reserves called for caution. Government securities were quiet and scattered business was done in selected State loans. Banking shares turned quiet on the fear that the Reserve Bank might impose further controls concerning the share capital and reserves of commercial banks. Sugar shares were hesitant on the apprehension that factories would incur substantial losses on exports. In the planting section, selected tea shares were supported on crop reports, but coffee shares were sold on uncertain marketing prospects. Rubber shares were quietly steady. In the textile group, selected shares in demand on reports of good sales of piecegoods. Interest declined in miscellaneous shares, but selected chemical scrip were supported on expansion prospects.

Among banks, Indian were done at Rs. 172 and Indian Overseas at Rs. 186. Punjab National changed hands at Rs. 22.25 and Andhra were transacted up to Rs. 100. Among public utilities, South Madras were bought at Rs. 10 on declaring a final ordinary dividend of 4 percent, taxable. Elore came to hand at Rs. 17.25 and Vellore were done at Rs. 13.35.

In the sugar section, Deccan were placed at Rs. 13.85 and E.T.D. declined to Rs. 43. United Breweries were sold down to Rs. 104, but Mysore were steady at Rs. 57.75. Business passed in K.C.P. at Rs. 23.62, but Kothari were quiet at Rs. 9.

In the planting section, Blue Mountain were transacted at Rs. 3.25 and Cochin Malabar changed hands at Rs. 7.82. Consolidated Coffee were placed at Rs. 21.75 and Ouchterlony were done at Rs. 3.75. Periakaramalai were dealt in at Rs. 3.86 and Peermade were in demand up to Rs. 22.48. Bababudin came to hand at Rs. 8 and Devon were sold down to Rs. 14.50. Nilgiri were steady at Rs. 8.55 and Nonsuch were transacted at Rs. 28.20. Kil Kotagiri were taken at Rs. 4.85 and Lucky Valley were done at Rs. 12.40. Malankara were quiet at Rs. 18.75 and Mysore Coffee were soft at Rs. 5.45. Peninsular were supported up to Rs. 21.40 and Swinton were offered freely down to Rs. 3.12. Thirumbadi were quiet at Rs. 1.60, as were Udayadiri at Rs. 21.25 on paying a taxable ordinary dividend of 1 percent.

Among textile shares, Lakshmi were steady at Rs. 169 on paying a taxable ordinary dividend of 20 percent. Business was done in Madura at Rs. 38.70 and Travancore Rayon reacted to Rs. 39.75 on profit-taking. South India Viscose hardened to Rs. 187 on a report that production will start soon. Premier changed hands at Rs. 12.69 on paying a taxable ordinary dividend of 24 percent. Rajapalayam were placed at Rs. 141 on declaring a taxable ordinary dividend of 16 percent. Sarada came to hand at Rs. 67 and Bangalore Woollen were sluggish at Rs. 205.50. Buckingham were steady at Rs. 225, as were Anglo-French at Rs. 143. Palarama Varma were in demand up to Rs. 87.70 and Dhanaalakshmi were wanted up to Rs. 239.

In the miscellaneous section, Aluminium Industries were quiet at Rs. 23.40 and Ashok Leyland lost at Rs. 9.26. India Cement gained at Rs. 6.55 on reports of buying by the Life Insurance Corporation. F.A.C.T. were steady at Rs. 10.55 and Jeewanlal were placed at Rs. 7.66. Binny were in demand up to Rs. 213 and Enfield were supported at Rs. 13.50. General Papers were quiet at Rs. 10.40, but Madras Cement improved to Rs. 91. Business was done in Tube Investment at Rs. 265 and Textool were supported up to Rs. 182. Standard Motors were dealt in at Rs. 16.75 and Spencer were quoted at Rs. 22.50. Seshasayee Paper declined further to Rs. 6.05, but Parry's Confectionery were bought at Rs. 4.90. Ogale Glass lost at Rs. 5.44, but Mysore Lamp were steady at Rs. 28.50. Metturr Chemical were done at Rs. 14.55 and Travancore Cements were bought up to Rs. 7.68.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

DESIGN...

for finest performance

Of all aspects of industrial endeavour the most intriguing is thermodynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story... a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is *tailor-made* to give optimum performance under varying local conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities of waste material in the form of bagasse for fuel; again, in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digestors in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will *tailor-make* not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

...a Powerful Partnership for Progress

proving most unhelpful while the threat at home of new "regulating" measures to correct the economic situation is keeping buyers away. There is now a general disposition to await the Chancellor's action which is expected after the Finance Bill becomes law later this month. The somewhat less brighter outlook for equities is causing investors to take more interest in gilt-edged securities which offer yields greater than ever before, and consequently, prices have taken a turn for the better after their recent slide to new all-time low levels. Foreign bonds have provided little of interest, but dollar stocks have made steady progress in spite of the absence of a lead from Wall Street. Industrial equities have steadily drifted lower, but actual selling has been light and the fall has been due mainly to lack of support. Steel shares have been depressed by the appearance of a new large rights issue by Colvilles, while elsewhere sentiment has been affected by the daily reference to contracting profit margins and there has been some disappointing dividend statements. Most of the leaders have lost ground. With business almost non-existent, gold shares have just drifted and there has been little movement in coppers, although Chartereds (British South Africa Company) were wanted following favourable comment. Tins have been active and have made good progress. Oils have been overshadowed by the Kuwait affair and prices are easier. Teas have moved irregularly, but rubbers have held fairly steady with one or two leaders meeting a demand at one time.

SHELLAC STEADY

During the week ended 4th July, the market was steady. The range of quotations was as follows:

Superior Lemon	Rs. 170, 174	buyers, 170
Light Pure Buttonlac	Rs. 170, 174	buyers, 170
Standard Pure Buttonlac	Rs. 158, 164	buyers, 160
Lemon No. 1 Shellac	Rs. 158, 164	buyers, 160
Lemon No. 2 Shellac	Rs. 148, 154	buyers, 150
F.O. Superfine Shellac	Rs. 134, 142	buyers, 138
Standard One Shellac	Rs. 130, 138	buyers, 134
TN Pure Shellac	Rs. 112, 124	buyers, 120
ITN 3% Shellac	Rs. 100, 108	buyers, 104
ITN 4% Shellac	Rs. 90, 98	buyers, 94
Golden Kusmi Seedlac	Rs. 148, 156	buyers, 150
Kusmi Seedlac No. 1	Rs. 138, 144	buyers, 140
Golden Bysack Seedlac	Rs. 128, 134	buyers, 130
One B Seedlac	Rs. 118, 124	buyers, 120
Two B Seedlac	Rs. 102, 108	buyers, 104
Manbhum Fine Seedlac	Rs. 110, 112	buyers, 108
Fine Bysack Seedlac	Rs. 104, 108	buyers, 104
Genuine Bysack Seedlac	Rs. 94, 100	buyers, 96
Shipments during June until the 26th were 17,126 packages.

INADEQUACIES AND FAILURES OF INDIAN PLANNING

FERTILISER PRODUCTION DURING PAST QUINQUENNIAL FAR BELOW TARGET

(FROM OUR NEW DELHI CORRESPONDENT)

THE third five year plan report has reached its printing stage. It is expected to be published early in August. The Prime Minister, according to reports, has redrafted the chapter entitled "Objectives of the Plan", bringing in Mahatma Gandhi and his ideology, among the usual other things of which he is specially fond. The Congress Ministers use the Mahatma's name conveniently when it suits their purpose, but are not as eager to follow his precepts faithfully. Had he been living and had he been allowed a decisive voice in the policies and objectives underlying Indian planning, he would most certainly have disapproved of them.

It is interesting to note the following exercise in introspection, gleaned from a chapter in the third plan under the caption "administrative tasks." "As the second five year plan progressed from year to year, it was seen that with greater anticipation and more accurate statistical and economic intelligence, some of the problems might have been dealt with differently. In the first phase of the plan, the decline in foreign exchange reserves might have been spread over a longer period, and the consequent reductions in foreign exchange allocations might have been less drastic in relation to power development and the production of fertilisers. The considerable lags which occurred in the utilisation of irrigation from large and medium irrigation projects could have been reduced. The shortages and lack of balance recently reflected in the difficulties of coal transport could have been countered in advance to a greater extent. Finally, the intensity of fluctuations and the rise in prices during the past two years might have been moderated. These are instances of the interdependence between the balance of payments and the internal price levels, of the scheme of investments and the resulting outputs, and of developments in the related sectors of industry, transport and power. They point to the larger dimensions of the problems of management, planning and implementation which are inherent in the design, structure and phasing of the third five year plan.

Burden on Administration

"As large burdens are thrown on the administrative structure, it grows in size; as its size increases, it becomes slower in its functioning. Delays occur and affect operations at every stage and the expected outputs are further deferred. New tasks become difficult to accomplish if the management of those in hand is open to just criticism. In these circumstances, there is need for far-reaching changes in procedures and approach for re-examination of prevalent methods and attitudes. As pointed out both in the first and the second plans, Central Ministries and perhaps Secretariat Departments in the States have tended to assume responsibility for an increasing amount of original work. This has reduced the initiative of the executive departments and their ability to function of their own. The main preoccupation of Ministries and Secretariat departments should be with matters of policy, general supervision and enforcement of standards, and executive tasks should be left to be carried out by departments and authorities specially designated for the purpose.

"Attention has been sometimes drawn to the fact that in the present system of administration, incentives are not given an adequate rôle. It is obvious that incentives, whether for individuals or for groups, help to build morale. A pre-requisite for a scheme of incentives is the ability to work out performance standards in an effective manner. The directions in which, within any specific area, an incentive scheme is likely to prove beneficial would need to be studied. For instance, in industrial undertakings, in the present circumstances, incentive schemes might assist greatly if they were directed to objects such as the following: (a) reduction in construction costs; (b) reduction in the foreign exchange; (c) improvement in methods of maintenance; (d) use of substitutes and by-products; and (e) simplification of work procedures.

"Material incentives are, of course, important; with these there should also be increasing scope for the development of non-material incentives, especially various forms of appreciation and recognition of worth, a sense of partnership in a common endeavour and human relationships based on mutual respect and friendliness. In the field of industrial and mineral development, unlike the more familiar fields of irrigation and power and transport, the existing technical organisations are not always adequate. To the extent to which this may be due to lack of experienced personnel, for some years at any rate, there should be readiness to associate selected experts from abroad. It is suggested that the Central Ministries concerned in this field should take early steps to organise well-equipped technical planning cells. These should be maintained as permanent nuclei and should be

supplemented by additional personnel according to the requirements of projects which are to be studied. They might also consider maintaining panels of technical consultants for selected industries, so that the growing technical knowledge and experience available within the country itself could be readily utilised in developing the public sector. Major State undertakings should take steps to strengthen and, where necessary, to set up suitable design and research units. Wherever feasible, the preparation of new projects should be one of their primary responsibilities. This would enable technical planning cells in the Ministries to concentrate on the broader technical and economic aspects of the projects with which they are concerned and on the study of different stages of execution and of the various related steps which require co-ordination.

"Management of projects is a relatively new and important part of administrative practice, of which the special features are that there are definite targets and time schedules, costs have to be reckoned strictly at each stage, a great deal of initiative and resourcefulness in execution are called for, and there must be special encouragement for technical planning. Without advance planning and accurate estimate of costs, the success of a project cannot be assured. It is also essential that programming techniques should be improved continuously so as to secure the maximum benefit from the outlays incurred and to achieve the targets within the budgeted time and resources.

"In large projects under the small overall management, there is need for special units to assist the management in keeping down costs, raising productivity, setting norms and checking performance. This will ensure that the physical assets created and the results achieved are commensurate with the investments made, the original estimates are not exceeded without adequate reason, time schedules are maintained and the responsible authorities are in a position to enforce efficiency, economy and integrity. It is suggested, therefore, that the Central Ministries as well as States concerned with large industrial and other projects should review the existing arrangements for achieving the objects mentioned above, and should provide for suitable units for evaluation and review of progress which will function under the control of the top management authorities, without being involved of course in day-to-day operations.

"Work in projects as well as in important programmes has frequently suffered because of rapid transfers of officials. For tasks of any importance, it is essential that the responsible officials should not only be selected with care and suitably trained, but should also remain long enough to grow to the full measure of their responsibility. In any major key assignment, a period of less than five to ten years is rarely sufficient for producing large results. Frequently, in service transfers, the factors which are taken into consideration are not of the first importance from the standpoint of public interest or the success of the undertaking. Transfers tend to injure both continuity of operations and the morale of organisations whose work at the present stage of development is nearly always of a difficult and pioneering character. There should be no hesitation in assuring the reasonable expectations of promotions of persons who are required to continue on the jobs held by them in pursuance of public policy."

I.D.A. Credit for Roads

Further details are now available of the International Development Association credit amounting to the equivalent of \$60 million extended to India for highway development. The credit will finance half the amount which will be spent on the national highways during the first three and a half years of the third five year plan which began on 1st April, 1961. The funds will be used mainly for the construction of about 660 miles of highways, including 19 major bridges, which will open up some of the less developed parts of India, improve connections between important agricultural and industrial centres, and relieve traffic congestion in the vicinities of the two principal cities and ports, Calcutta and Bombay. This credit constitutes part of the funds which will be provided by the I.D.A. to help meet the external financial requirements of the third five year plan. It is for a term of 50 years, interest-free. It is repayable in foreign exchange, amortisation starting after a ten-year period of grace. Thus, the first payment will be due on 15th August, 1971. Thereafter, 1 percent of the principal will be repayable annually for ten years and 3 percent will be repayable annually for each of the final 30 years. A service charge of 1 of 1 percent annually on the amounts disbursed and outstanding will be made to meet the I.D.A.'s administrative costs.

At present, India has 393,000 miles of roads consisting of national highways, State, district and

village roads. The 15,000 miles of national highways constitute a network of main roads connecting the centres of population. About 80 percent of the national highways are one-lane roads built to standards which require heavy maintenance. Numerous unbridged river crossings, congestion around cities, and the poor condition of many of these roads hamper efficient road transport.

The road works for which the I.D.A. credit is being extended will eliminate some of the major deficiencies in the national highways system. All the works are located in the region of the Gangetic plains in northern India, and in coastal areas around Calcutta and Bombay where the density of population is the highest and which account for 40 percent of India's total vehicle registration. The congested approaches from the two main roads into Calcutta will be completely re-located outside the thickly populated suburban areas and a new access will be opened from their point of junction at Jyotpurbeel to the Vivekananda bridge into Calcutta. Complementary works will provide improved connections between Calcutta and neighbouring industrial centres. A new highway will be built to serve the fertile coastal area of West Bengal which up to now has been without road connection with neighbouring Calcutta and to link Calcutta with the rapidly growing industrial centres in Jamshedpur and Ranchi. A new road will run from Calcutta south to Cuttack in the State of Orissa, filling in a missing link in the east coast highway running south from Calcutta through Madras; this road will cross an under-developed area where one of the retarding factors has been the absence of adequate trunk roads. Construction of a bridge across the Sone river will fill in the one remaining gap in the Grand Trunk Road which runs from Calcutta westwards all the way across northern India.

In north Bihar, the works include two new roads under construction in a densely populated area which, until a bridge was built over the Ganges two years ago, was entirely cut off from direct communications southwards to the rest of the country. Two roads to be built in and around Bombay will relieve serious traffic congestion. One of them will be an expressway running east out of the city and the other will provide a new connection north along the coast towards Ahmedabad, opening in the immediate vicinity of Bombay a new area for industrial and agricultural development. In view of the traffic congestion in some parts of Bombay, a small part of the I.D.A. credit will finance a study of this problem by foreign consultants.

The Jyotpurbeel-Vivekananda Bridge access road into Calcutta and the Eastern Expressway in Bombay will be four-lane highways. All the rest of the roads will be of two lanes. Improved construction standards will result in lower maintenance costs than is usual in India.

U.S. Aid for Power Projects

The U.S. Ambassador, Professor John Kenneth Galbraith, has said that the United States will increase her assistance to India's power projects during the third five year plan. "To date, the U.S.A. has given assistance totalling \$486.6 million (Rs. 251.6 crores) for the development of India's power resources. This includes both dollar and rupee loans and grants. Eight projects with a total installed capacity of about 1.2 million kW are being entirely financed by the U.S.A. Thirteen projects producing a total of over 1.6 million kW are financed in part by the U.S.A. "The eight projects financed entirely by the U.S.A. include thermal power stations in Chandrapura, Durgapur, Barauni and Talcher; and the hydro-electric projects in Barapani and Sharavathi (stage II). We are also participating in the projects in Delhi (thermal), Rihand, Chambal, Hirakud and others. India's third five year plan will witness increasing participation by the United States in hydro-electric and thermal power projects."

Tea, Output and Exports Fall

Final figures for 1960 show that production (649 million lbs) and exports (valued at £90 million) of tea during the year were both down, compared with 1959. The tea industry was disappointed with the increase in excise duties on loose tea (announced in the 1961-62 Budget), arguing that it would counteract the relief in duty proposed for export teas. The president of the Indian Tea Association said that the industry would be unlikely to fulfil the third plan production target, unless the supply of fertilisers were better than in 1960. Moreover, the effect of an increase of 150 million lbs in production by 1966 on the world market had also to be considered. (According to an F.A.O. report, if present trends continue, there is likely to be a world surplus by then.)

Indian Shipping Tonnage

In spite of the acquisition of several new vessels during the quarter January-March 1961, India's shipping fleet totalled only 885,850 gross registered tons on 31st March—14,150 gross registered tons below the second plan target. Both the publicly-owned Eastern and Western Shipping Corporations, since amalgamated into the "Shipping Corporation of India", and many private companies have plans to purchase new vessels and to expand their services. Shipment of goods (including machine tools) financed under the Export-Import Bank programme can now be made only in U.S. or Indian ships.

The mission, which recently visited Italy, under the leadership of Mr. N. Kanungo, the Central Commerce Minister, has made a very useful report to the Government of India. It found two major difficulties in the way of large-scale Indo-Italian collaboration for the development of chemi-

cal, engineering and machine-making industries. Firstly, there was a continuous unbalance in trade between India and Italy, which, in the absence of any suitable alternative long-term arrangements, presented a serious impediment to greater economic co-operation. Side by side, India has not yet made any serious attempt to create the requisite climate for sympathetic understanding of the Indian economic situation by the Italians.

The mission, however, made it clear that due to her critical foreign exchange situation, it would be impossible for India to continue even the existing level of imports from Italy, unless some long-term arrangements were made. Italians were equally candid. While the legislation for deferred payment facilities, at present under discussion by the Italian Parliament, could slightly ease the situation, they said, there was little possibility for any long-term credit to be given by Italy to India. As far as private investments are concerned, it is difficult for Italy to break away from certain countries of Europe, Latin America and north Africa. There could, however, be some investment by the war-created and State-controlled I.R.I. This is a Government-controlled organisation. During the depression and the banking crisis in Italy in the 1930s, the Government extended financial assistance to several industrial and banking units, which were in difficulties and whose stability was essential to the economy. This was achieved by State participation in the capital structure of the individual units, the extent ranging from a dominant majority to one of minority holding. The

structure of the companies and their internal management were not altered. Connected units of industries were brought together under different groups, for purposes of financial guidance. There are several such group companies. Finsider (Fin indicating financial) controls the State steel units, which account for a substantial portion of steel production in Italy. Finmeccanica, dealing with mechanical industries (which includes the Alfa Romeo motor-vehicle factory); Flinelttrica, dealing with electrical industries; and Fincantieri, dealing with shipyards are among the others, which include also certain non-industrial groups, such as Fimmare, dealing with shipping; Alitalia Airways; telephones; and radio and television. These group companies are, in turn, under a single holding company, the Institute for Industrial Reconstruction, which deals directly with the banking companies, in which it has interest. The E.N.I. group dealing with oil, gas and petrochemicals, and the State Railways are outside the I.R.I. Governmental guidance is secured by the Ministry of State's participation.

The mission made a specific request to the Director-General of Foreign Trade and the officials of Italian Government to use their good offices to induce I.R.I. and its subsidiaries to consider the possibilities of collaboration and investment in India. The fields in which the I.R.I. group of industries are engaged, such as heavy machinery, electrical machinery, machine tools, marine engines, compressors, etcetera, are exactly those having particular significance to India's develop-

ing economy, whether in the public or in the private sector. The mission is of the view that the matter should be further pursued at Governmental level. An important step for encouraging greater collaboration and investment is the need to finalise the double taxation relief agreement with Italy at an early date, it is urged.

On the trade side, the mission has recommended the establishment of joint bureaux at important centres like Milan, Rome, Bombay and Calcutta, with the co-operation of the respective federations of industry and commerce of Italy and India. The mission, in this connection, repeatedly heard from Italian importers and institutions that, apart from the question of price and quality, Indian exports to Italy did not pick up mainly because Indian exporters had not shown the necessary degree of aggressiveness as against those of other countries. This was particularly mentioned about tea. The mission was told that to the extent that Italy imported tea, Ceylon tea found a better market in that country mainly because of better publicity and salesmanship. Another point made by some Italian importers is that the supply of certain commodities from India had been on somewhat sporadic basis, and was not on a sustained and adequate scale. The mission also gained the impression that there was scope for Italian industry purchasing semi-finished items from India such as castings, etcetera, especially where there was also collaboration between the Italian and Indian parties. Here again, much would depend on the initiative that the Indian exporter is prepared to take in surveying the market and specific needs of the consumer. The Italians showed a preference for barter and link deals; the mission, in its report, expects that such deals would be considered by the Indian Government.

Loans for Coal Industry

Following the Washington meeting of the Aid India consortium, a number of negotiations for loans are in progress with the World Bank and with the International Development Association. A mission has left for Washington to negotiate a loan of \$20 million for the coal industry in the private sector, during the first two years of the third plan. The five-year requirements are placed at \$56 million. This is the first loan of its kind. The Government of India will be the guarantor of the loan and will also set up the machinery for the allocation of the amount to various colliery owners in the private sector. Another loan of \$20 million is being negotiated for the development of Calcutta port. Negotiations are also in progress with the International Development Association for loans to finance a tube-well project in U.P., Orissa and a drainage project in Gujarat, and the World Bank is also showing great interest in the development of hydro-electric power in India. One expert is already working with the D. V. C. and another is expected to study the Koyana project.

Fertiliser Target and Production

At 31st March, 1961 (the close of the second plan), both the installed capacity and actual output of nitrogenous and phosphatic fertilisers fell far below the plan targets. In nitrogenous fertilisers, the installed capacity (in terms of nitrogen) was 248,000 tons (against a target of 382,000 tons) and output was 105,000 tons (290,000 tons); the shortfall was said to be due partly to production difficulties in Sindri and the delayed opening of Nangal (80,000 tons capacity) which began production only in February. Arrangements have been made for increased fertiliser imports in 1961 and approval has been given to the construction of several new factories for producing nitrogenous fertilisers, namely, Nahorkatiya, British firms only have been invited to tender; for which Corakhpur, U.P. (public sector, 80,000 tons), possibly to be financed from the Japanese credit; Visakhapatnam, Andhra Pradesh, (private sector; 80,000 tons), for which a U.S. consortium is colonizing; Kothagudem, Andhra Pradesh (80,000 tons); Hanumangarh (80,000 tons); and Madhya Pradesh (50,000 tons), all the last three being in the private sector. The third plan target is 1 million tons of nitrogenous and 400,000 tons of phosphatic fertilisers.

Foreign Collaboration Agreements

During the quarter, January-March 1961, 101 foreign collaboration agreements were formally approved, ranging over a wide field of industry from heavy machinery and electrical apparatus to textile processes and manufacture of ball-point pens. The countrywise breakdown of these agreements is U.K. 30; West Germany 24; the U.S.A. 14; Switzerland ten; Japan seven; Russian bloc countries five; others 11. The schemes in which the U.K. is collaborating include the manufacture of sugar machinery, coal-cutting machines, railway wagons, electrical apparatus, chemicals and iron and steel products. Among the schemes announced by Indian companies during the quarter are those for paper-making machinery (in collaboration with three Scottish firms); cables (two U.K. firms); textile accessories (Armstrong Cork Company Ltd.); machine tools and control gears (two Swedish and American collaboration); several paper-making units (American, French and Japanese); electrical machinery and goods (American and Hungarian); tyre yarn and cord pumps, mechanical handling equipment, timepieces and steel products. A zinc smelter (18,000 tons output a year) is to be set up with French collaboration.

London

U.K. CHANCELLOR URGES CUT IN OVERSEAS AID AND MILITARY EXPENDITURE

NEED TO SLOW DOWN CAPITAL INVESTMENT PROGRAMMES STRESSED

(FROM OUR LONDON CORRESPONDENT)

LITTLE satisfaction can be had from the fact that Bank rate continues unchanged, for it is obvious that the U.K. Government still takes a rave view of the economic situation. This was demonstrated by the tone of the speech Mr. Selwyn Lloyd delivered to the Association of British Chambers of Commerce the other day. He indicated that overseas expenditure for military purposes must be cut and overseas aid limited. He also gave a strong hint that the capital investment programmes of the Government and the nationalised industries would soon have to be re-examined once again. On sterling, the U.K. Chancellor reiterated the Government's intention of maintaining the pound at its present parity. Having regard to our reserves, to our drawing rights on the International Monetary Fund, and to our overseas assets," he said, "we are in a strong position to do so." Nevertheless, he was concerned about certain trends in the U.K. economy; the persistent difficulty with the balance of payments and the tendency of costs and prices to rise. This brought him to the domestic position, where he found demand excessive so that Britain's resources were under pressure. This is bad for the U.K.'s balance of payments and bad for her competitive position because it affects wages and costs.

In Westminster circles, the speech is interpreted as suggesting three early moves to improve the economic situation. First, the imposition before the end of July of a surcharge of up to 10 per cent on purchase tax and other revenue duties; secondly, instructions to Government departments, nationalised industries and local authorities to slow down their capital investment programmes; and thirdly, cuts in overseas spending, particularly the cost of maintaining British troops in West Germany. Meantime, steps are being taken to speed up the passage of the Finance Bill, and the "Big Five" banks have been instructed to be more selective concerning their lending policy, concentrating on loans judged to be most in the national interest.

E.F.T.A. and the Common Market

Ministers from the seven E.F.T.A. countries now meeting in London have been given an assurance by Mr. Heath, Lord Privy Seal, that Britain has not yet decided whether to join the European Common Market or not. It will be necessary to wait until the present consultations with the Commonwealth are over. When that would be, he was unable to say. As a result of the discussions, the representatives of the "seven" agreed on the ways for Britain to start negotiations for entering the European Common Market. To achieve an integrated European market, the "seven" declared themselves willing to undertake obligations beyond those accepted in the Stockholm Treaty, on which E.F.T.A. is based. "Some modification of policy on all sides," it was agreed, was needed in a new effort to end the split between the "six" and the "seven". It was also announced at the meeting that the agreement whereby Finland becomes associated with E.F.T.A. came into force at the beginning of last week. By the end of the week, Finnish tariffs with other E.F.T.A. countries were cut by 30 per cent.

Junior Ministerial Reshuffle

Eight ministerial appointments—including promotion for two back-benchers in the Commons and one in the Lords—were announced from the Prime Minister's office last week. This can hardly be called a reshuffle, as most of the changes originate from two unconnected events. These were the Government's decision to set up a new Department of Technical Co-operation and the resignation of Mr. Ormsby-Gore, now Ambassador designate to the United States.

Mr. Dennis Vosper, who has been Minister of Health at the Home Office, has been appointed Secretary of the new Department of Technical Co-operation. It was widely believed that this new post was reserved for Sir Edward Boyle, Financial Secretary to the U.K. Treasury, but he is said to be very happy where he is and also to be still rather a junior Minister. Mr. Vosper was formerly Minister of Health, but had to give up the post when he was seriously ill. He has since made a good recovery. The new Minister of State for Foreign Affairs, to fill the vacancy caused by the resignation of Mr. David Ormsby-Gore, is Mr. J. B. Godber, Under-Secretary for Foreign Affairs, whose promotion had been forecast. His successor as Under-Secretary will be Mr. P. J. M. Thomas, who has been Parliamentary Secretary to the Ministry of Labour. Mr. Alan Green, the Member for Preston South, will take Mr. Thomas's place at the U.K. Ministry of Labour and thus enters the Government for the first time. Mr. Green's promotion could scarcely have occurred at a more testing moment when the motor-car industry is in trouble. Mr. Hare is visiting Commonwealth countries in connection with the

cent up. Growth in output in recent months has been confined to production of capital goods, mainly in the mechanical engineering sector. The electrical engineering output has fallen mainly because of the reduced production of consumer goods.

Motor-car Output Rises

The British motor-car industry's output increased in May, but was still only two-thirds as high as in May last year. Exports again drifted downwards to well below half their level a year ago. U.K. Board of Trade figures show that passenger-car production totalled 90,302 in May, compared with 77,404 in April and 136,544 in May 1960. Commercial-vehicle production, which was little influenced by the recession, amounted to 37,406 units, approximately 1,000 more than in April this year and in May 1960.

This modest recovery trend has followed the easing of hire-purchase restrictions earlier this year. Since the spring weather brought out fresh demand, motor-car companies have been rebuilding their labour forces and reporting distinctly improved business. The latest figures show, however, that the industry still has a long way to go before it regains the prosperity of early 1960. The main trouble now is clearly the export demand. Overseas sales of motor-cars fell last month to 29,827 vehicles, compared with 31,784 in April and 70,273 a year before. Chiefly responsible for this decline is the sharp recession in the U.S. demand, which shows little sign of ending. U.K. Board of Trade figures, just issued, show that total exports to the United States, in which motor-cars used to play a large part, were 37 per cent less in May than 12 months earlier.

Car Insurance Premiums Raised

The revision of private motor-car premiums, which has been announced by the Accident Offices Association, arises from a long-term investigation of claims in different parts of the U.K. Premiums already depend where the car is garaged, motorists in large cities and other congested areas paying more than those in country districts, where the chances of accidents are fewer. The tariff insurance companies which are the members of the Accident Offices Association, started the system of district premium rating in 1934, and they have found that claims experience varies considerably according to district.

The claims experienced in congested areas are much heavier than in country areas. In some districts, the claims cost is so high that the business is running at a loss. It is in these districts that premiums have been increased. The companies consider that it would not be fair to impose a flat increase all over the country, since many motorists in country districts where claims are few, would be subsidising those in districts where claims are much higher. They consider that premiums should be adjusted according to their experience of different geographical classes of motorists. The tariff companies intend that in future each district will contribute its fair share of premiums.

Brevities

There were 266,705 unemployed people in Britain on 12th June, according to provisional figures published by the U.K. Ministry of Labour. This was 32,571 fewer than on 15th May. The total represents 1.2 per cent of the country's working population and compares with 1.3 per cent in May of this year and 1.4 per cent in June 1960.

Mr. Henry George Nelson, managing director of the English Electric Co. Ltd., has been appointed a director of the Bank of England. He replaces the Earl of Cromer, who has become Governor of the Bank from 1st July.

Sir Donald Anderson, chairman and managing director of the Peninsular and Oriental Steam Navigation Company, has been elected to the presidency of the Institute of Export in succession to Sir Charles Fittion.

Higher freight rates have been agreed by various shipping conferences. Conference lines engaged in east-bound trades from the United Kingdom and Europe to India and Pakistan will charge more from October: the Conference of Malle and Alexandria Companies more from 1st September (the average rise is estimated at about 10 per cent); and the Western India, India, and Pakistan Conference of Genoa more from 1st October. Freight rates for Australian exports will be maintained at their present levels.

Jute

GUNNY PRICES RISE DUE MOSTLY TO SPECULATIVE BUYING

HEAVY SHIPMENT OF GOODS REPORTED IN JUNE

THE question of the purchase of new crop jute by the Calcutta mills has been the subject of lively discussion for some weeks past. Probably, the prospects of no previous crop in the history of the industry have been so eagerly canvassed as those of the current one. It is usual at this time of year, and even earlier, for the mills to make forward purchases of new crop jute and, at the same time, to make sales of their manufactures for forward delivery. Under the present system of quotas and restrictions on trading this is not possible, however much the mills may wish to enter into double business. The I.J.M.A. has this past week issued quotas for the purchase of new crop jute, but the issue is for an insignificant quantity. All quotas still in the mills' hands before the issue of the present one can only be used in the purchase of old crop jute, and it is understood that a time limit has now been imposed on their validity. Future quotas may be used for the purchase of either old and/or new crop fibre, but only as specified by the I.J.M.A. In other words, the choice is not with the mills.

It is felt in many quarters that although, as far as possible, the procedure should continue and be designed to facilitate the easy and equitable flow of jute to the mills, the opinion is strongly expressed that there is now no need for such stringent measures of control. It is also strongly recommended that there be a return to a greater freedom of trade for new crop jute in the form of more liberal quotas in the new season. It is not suggested that the quota system be abolished; while there is a general desire for the removal of controls and the reversion to completely unrestricted trade as soon as possible, it is also realised that the quota system has been one of the saving graces of the industry, and is likely to remain for a considerable period. However, within the general framework of the quota system, the mills' freedom should not be limited to the extent where they cannot take advantage of what, to them, may be an attractive offer. Such restriction may prevent them from making a profit on a particular transaction—although these days simultaneous business at a profit is only possible on certain classes of specialities.

Mill Quotas

The fact that some mills still have large quotas in hand is mystifying at a time when mill stocks are supposed to be so low. Various explanations have been put forward for this apparent anomaly. One of them is the difficulty of financing heavy purchases at the current high price levels which are out of proportion to the prices of manufactures. This puts a heavy strain on the mills' resources, and it is natural that they should hesitate to add to their stocks of old crop at current prices when there is a prospect of buying new crop for forward shipment at lower rates. It now appears however that unless this backlog is soon taken up, these quotas may be lost to the mills as there is not, as yet, any consideration of replacing them with new crop quotas. Another deterrent to the further purchase of old crop jute is the fact that considerable quantities already purchased have not yet arrived, in spite of bills of lading being issued some time ago. It is understood that in some cases, steamer companies have stood that in some cases, steamer companies have delayed the shipment of large flats until a full load has been accumulated which has often necessitated a hold-up of several weeks. Thus those consignments which were loaded first had bills of lading issued, the dates of which bore no reality to the actual date of sailing.

In spite of the recent reductions in the price of both raw jute and goods, conditions in the market are still a matter of some concern to the industry. It was forcibly driven home during the past jute year that the high prices of gunnies were causing a serious contraction of demand for them and that competitors and substitutes were making rapid headway at the expense of jute. The high price of the raw material, increased labour costs and heavy taxation raised prices to such an extent that jute goods ceased to become competitive and the mills could not market their goods except at heavy losses. Due to the curtailing of production in the hope that the raw material price would fall, the tendency is for the price of manufactures to rise, placing the mills at a still greater disadvantage against competitors. The only other way is to increase the supplies of manufactures available and that can be done only if the mills raise their production, which again is not feasible in the light of the current jute shortage. Any increase in production would probably be followed by a rise in the price of raw jute even if the price of manufactures fell. It seems, therefore, to move in a vicious circle and the possibility of the mills making a profit on simultaneous business continues to be in jeopardy, or is very remote.

The mill stock position for jute goods at the end of June is eagerly awaited. In spite of the

reported that shipping during last month was the heaviest for some time. When the I.J.M.A. decided to close the mills for one week each month, it stated that there were sufficient stocks of goods available to meet any foreseeable overseas demand. Theoretically, this was undoubtedly correct as proved by the gradual rise of stock figures over the past three months. There has been quite an appreciable amount of buying recently, and it will be interesting to see what effect this has had on stocks. Now that the speculative markets are again open, it is difficult, if not impossible, to judge how much of the demand is genuine buying on account of overseas consumers and how much is emanating from local speculators. And it must be borne in mind that the bulk of those goods shipped in June must have been bought some time earlier and that the shipments were not the result of alarm caused by production curtailment. If a large proportion of recent buying has been on account of genuine demand and is followed by shipments on the same scale as last month, then there will be a further drop in stocks, which are already low. This will again have the tendency to push up prices to the detriment of the industry.

Favourable Crop Reports

New crop reports from all districts continue to indicate that prospects are very bright. Small imports continue to arrive at the receiving centres, and on the whole, the quality is reported to be good. Some agencies report low quality, but this is where the jute is immature having been cut too soon. All districts report heavy moisture which is usual at this time of year. Most centres have indicated that the preparation of cut jute is being held up by the lack of steeping water. In some places harvesting has even been stopped on this account. It will not require much rain however for this difficulty to be overcome as river levels are rising and the land has now reached

the saturation point. The delay will not in any way affect the crop, the prospects of which continue to be better than for many years.

THE JUTE MARKETS

Manufactured Goods: Further scattered buying of hessian for the U.S.A. was noticed during the week. Demand is chiefly for early shipment and the scarcity of goods for the shipments stipulated has forced buyers to concede higher prices. This was particularly apparent towards the end of the month when covering against shipment by scheduled steamers saw prices rise rapidly. The heavy goods market has been active, but much of the business concluded has been of a speculative nature. Whenever there is enquiry for a particular make of goods, premium prices are at once demanded. At the time of writing, the market is very steady and prices are quoted higher all round, but at the opening last Thursday, quiet conditions prevailed with sacking dropping Rs. 2.50 for B Twills to be quoted at Rs. 152 for ready shipment, which was a premium of Rs. 18 over the October-December shipment. Hessians lost about 50nP for 40in. 10oz. to rule at Rs. 47.50 which was Rs. 2 more than the forward section. Friday was a holiday, but the undertone of the market improved, and it was not long before the early losses were made up. By Monday morning, ready B Twills had moved up to Rs. 153.50 and 10oz. hessian to Rs. 48.50, and a further advance of Rs. 1.50 in heavy goods and 50nP in hessians created very steady conditions. Only small genuine overseas enquiries were received, so the bulk of the business was credited to speculators.

Opening quotations on Wednesday morning were as follows:

	Ready	July	July-Sept.	Oct.-Dec.
40in. 7oz.	36.50	36.35	36.25	35.25
40in. 8oz.	42.75	41.50	41.25	38.00
40in. 10oz.	49.40	49.75	49.75	48.00
B Twills	156.50	157.00	154.50	137.75
Heavy Cees (Plain)	156.50	157.00	154.00	137.75
A Twills	184.00	185.00	184.00	168.00
Liverpools	179.00	179.00	176.50	166.00
Cornacks	160.00	160.00	156.00	141.00

Raw Jute: The raw jute markets this week can be divided into two distinct phases—before the week-end when prices tended to decline and old crop jute was fairly freely on offer, and after the week-end when old crop jute all but disap-

Broken — but certainly not useless

THE LAGAN JUTE MACHINERY CO. PRIVATE LTD

peared, except at heavy premiums, and a rising tendency developed. The issue of small quotas over the week-end for new crop jute may have had something to do with this, but much of the rise was in sympathy with the finished goods market. Reports from upcountry indicate that markets there are rising as there is little old crop jute left, and arrivals of new crop are still only small. Most of the Calcutta sellers were reserved and were not prepared to offer. Prices before the week-end ranged between Rs. 45 and Rs. 47 for old crop, and Rs. 43 to Rs. 45 for new crop jute. After the week-end, old crop rates rose to Rs. 48 and new crop to Rs. 46. Wagon arrivals in Cossipore amounted to 190 wagons which was slightly higher than in the previous week.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms)		Shipment
	Rs a 100 kilos	Rs a md.	
Assam	131.25	49.00	July
Northern	131.25	49.00	"

THE FOREIGN JUTE MARKETS

FIBRE PRICES TENDING DEARER

(FROM OUR DUNDEE CORRESPONDENT)

THE outlook for the Dundee jute industry is still uncertain, and buyers are hesitant in making purchases. From an easier trend, the prices for raw jute are tending dearer again, against the general expectations of dealers in the markets. A bumper crop is expected for the next season, yet shippers are reluctant to offer at cheaper prices than the rates they quoted three or four weeks ago. Apparently, the needs of a few Continental countries, which have come into the market for early supplies, are sufficient to maintain a firm trend in prices, in spite of the fact that the available reports concerning the new crop continue to be favourable.

During the earlier part of last week, values were falling to more reasonable levels, and the buyers of jute commodities were prepared to see a return to the level ruling, say, in April last year. But prices rose later, culminating in the highest quotations for some years past. Meanwhile, lots of customers have been lost, and probably some of those who still remain will be forced to use some substitutes due to the uncertainty which prevails in the markets concerning the future course of prices.

Offers of jute to the Dundee market have declined. The lowest price for Mill Lightnings has risen from £147 to £153 and for Mill Hearts from £142 to £148 for July shipment, to £141 and £136, respectively, for July-August, £132 and £127 for August-September and £128 and £123 for September-October, with Grade Tossa-2/3 quoted at £142 and fours £131 for September-October, all c.i.f., U.K.-Continent.

The Calcutta goods market ruled irregular during the past week, and on occasions, it was depressed. The Indian jute mills cannot go on losing money as they have been doing. They were closed last week, but prices are actually lower and the supply position has not apparently caused any trouble to buyers. Hessians have declined to 72s 3d for 40in. 10oz, and 56s 9d for 71oz. June, 72s 9d and 56s 6d July, 72s and 56s 6d August-September and 70s and 52s 6d October-December, with B Twills 22s 9d, 22s 3d, 21s and 19s 3d for the respective positions of shipment, all f.o.b., Calcutta.

Dundee yarns and cloth are quiet, and prices remain unchanged.

THE PAKISTANI JUTE MARKETS

FIBRE RISES ON SHORT COVERING

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE vagaries of the weather continue to play an important part in the jute market. During the past week, most of East Pakistan has enjoyed bright sunny weather. Although beneficial for the crop in so far as it encourages healthy and speedy growth of the plants, this weather is delaying harvesting. The reason for this is that the growers have decided to wait a bit longer to harvest the lowland crop since the sun will give their crop a better yield. What is particularly surprising is that the river levels have now started to fall. This will mean that some of the lowland crop will have mossy roots. This is very unusual and undesirable in early jute. Furthermore, the water in the steeping tanks will be insufficient. With the large crop which is expected, this is particularly unfortunate since the lack of steeping water can result in overmature jute through the growers having to wait too long to harvest, and following this an even later crop. The lack of steeping water can also result in reducing the quality since shallow steeping tanks naturally produce dirty and stained fibre which cannot be put in the higher markets.

The market has naturally reacted very strongly, particularly in the upcountry areas. Rises in prices of as much as £8 or £9 a day are reported, although these reports have not been reflected quite so much in the pucca bale market or in the overseas market. Until these rises began, jute was available in small quantities at prices well below overseas parities. In the upcountry, prices are about on a level with overseas parities for ready shipment, but these show signs of rising even more. This, as explained last week, is due to short covering by sellers of early shipment goods. It must be remembered, however, that prices have reached their present level without the entry of either the Pakistani or Indian mills into the market. If, which is unlikely, they stay out of the market for next two or three weeks, their entry will not be so noticeable because by then a much larger quantity of jute will be arriving. If they come into the market before the arrivals of jute increase, one may well find parities in Pakistan well above overseas prices since buyers in Europe cannot afford prices much higher than the current ones. At present, the steady market in East Pakistan appears to be purely a local affair, caused by the crop coming in later than expected. This is confirmed by the fact that the Calcutta goods market has not reacted at all to the steadiness in Pakistani raw jute. The next two or three weeks will be rather important since very high prices in the Pakistani raw jute export prices at the beginning of the season may well have disastrous results.

Plantation Topics

TAX BURDEN ON PLANTATIONS RESENTED

WAGE BOARDS URGED TO TAKE A REALISTIC ATTITUDE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE progress of Kerala's plantation industry is being hampered by the "excessive weight of taxation", according to Mr. R. Storey Dickson, chairman of the Association of Planters of Kerala. Heavy taxation not only stands in the way of proper maintenance of the properties and the building up of adequate reserves for present and future commitments, but also runs counter to the policy of export promotion and the earning of maximum foreign exchange for financing the development schemes under the five year plans. The plantation industry in Kerala contributes a substantial amount to the State and Central revenues. In spite of this, it is forced to shoulder ever-increasing burdens, the chairman said at the annual general meeting of the Association held in Kottayam last week. It will be recalled that a similar complaint was made by the chairman of the Central Travancore Planters Association some three weeks ago. He said that a major planting Company in central Travancore, whose production last year was 164 per cent of what it was ten years ago, had to pay in all Rs. 326 to the State Government, Rs. 256 to the Centre, Rs. 211 as labour benefits and bonus an acre, leaving a balance of only Rs. 58 an acre for distribution among investors. This indicates what a meagre share is left to the planters to distribute as dividends and to augment their working capital which is of vital necessity to increase production.

Need for Objectivity

Mr. Dickson stressed the need for objectivity in the approach to the plantation industry's problems. This should be the attitude of the various wage boards which are bent on raising the wages of plantation labour. The wage boards, the chairman said, have not been sufficiently objective in their approach. If both labour and management could be objective and impartial, and if the recommendations of the wage boards were realistic, then the criticisms against them would lose their points. The same is true of the Bonus Commission: the chairman hoped that hard realities would carry weight in the deliberations of that body. "It goes into its task with all the goodwill of the industry behind it, for there has been no greater source of trouble than the determination of bonus, and an objectively-based realistic formula, applied impartially, would go a long way to avoid the battles and arguments which have been often needlessly engaged and prolonged on this score", Mr. Dickson said.

Tripertite Committees

Referring to various tripartite committees in Kerala, such as the Plantation Labour Committee and the Housing Advisory Committee, Mr. Dickson said that all of them were characterised by a "doctrinaire and impractical" approach to the problems which they were called upon to solve. From his own personal experience, he felt that the problems were "previewed" from the point of view of the department concerned, labour reactions and assessed and the solutions perhaps adjusted, and then the matter was taken to the committee in the hope of persuading the employers' representatives to fall in line. This type of approach inevitably tends to destroy the very objectives which it seeks to achieve. Mr. Dickson said that "to survive in a strongly competitive world, we must not only have the resources to maintain our present level of production and enterprise, we must also be in a position to develop and progress, and this can only be achieved by leaving in the hands of the industry not only sufficient funds to meet our current commitments and pay a reasonable dividend to our shareholders, it must also leave us with funds for development and research, through which alone our competitive position in the world markets can be assured for the future." The chairman expressed his appreciation of the co-operation extended by Kerala Ministers in dealing with the problems affecting the industry. "Perwith the most encouraging sign is the much more realistic approach which has recently been evident: matters are looked at more objectively, and we hope that this tendency will grow and be nourished by positive action", he added.

Labour Problems

Mr. Dickson dealt at length with labour problems. The relations with the major trade unions, he admitted, are on the whole reasonably good. Since wages and bonus have been taken up at high levels, the unions have had to concentrate on trying to improve the position of their members, in the less obviously remunerative spheres, the Amenities and "fringe benefits" have been the most obvious targets, and these demands have been pressed through the Plantation Labour Committee and the Industrial Relations Board, although little progress has been made so far. This is not entirely due—as many trade union leaders apparently think—to the intransigence of employers and their determination to avoid giving any benefits to their workers. It is rather due to the "extreme refusal of the demands" made and the persistent refusal to consider all the problems involved in a truly objective spirit. There is a limit to what the management can do for its workers—a limit set

by economic factors over many of which it has little or no control, Mr. Dickson said. While the chairman appreciated the emphasis on voluntary settlement of disputes, he said there must be safeguards that if voluntary methods failed, normal industrial law of the land should be allowed to take its course. Work, meanwhile, should proceed unhampered, and there should be no indiscipline and undue pressures from labour.

Commodity Boards

Dealing with commodity boards, Mr. Dickson deplored the "complete lack of reality" in their proceedings. The aim of the boards is presumably to promote the growth and well-being of the vital industries in India. In the case of tea and coffee, the accent is on the necessity to expand the export markets. But too often planning and arrangements appear to be based on statistical niceties rather than on hard realities of the situation. Referring to rubber, Mr. Dickson said that there is no danger of overproduction of the commodity as far as the requirements of this country could be ascertained. Under the circumstances, one would have expected the Rubber Board to concentrate its efforts on ensuring the rapid expansion of production as well as the improvement of the quality of products. "This is unfortunately not always the case" Mr. Dickson referred to the unsuccessful efforts made by some planters to obtain permits for the import of suitable budwood from Malaya, since the Indian Rubber Board demanded certificates from the Malayan authorities that the budwood was free from odium.

Plantation Products

As for plantation products, rubber at the moment is enjoying brighter prospects, thanks to the fruits of scientific management in the shape of higher yields and assistance for replanting as a result of the recent recommendations of the Tariff Commission. As the commodity is in short supply for the internal needs of the country, it is still under Government control. The coffee industry is facing a slump. It is, in fact, placed in a difficult position in Kerala due to the lack of proper marketing procedures and the large accumulation of robusta stocks. As far as tea is concerned, crops have been good, but the weight of the crop alone will not ensure prosperity.

Foreign Demand for Cashew Kernels Falls

The cashew processors who hoped that the foreign buyer would take cashew kernels at the high rates of 58 to 60 (U.S.) cents are greatly disappointed. The foreign buyer is not offering more than 51 cents a lb, against 54 or 55 cents in early May. In fact, there is no active demand from abroad. The quotation of 51 cents is only nominal, according to a section of cashew exporters. The lack of foreign demand is attributed to the realisation by both processors here and buyers abroad that the supply of raw nut this year would be larger than anticipated earlier. The present estimate is that the total supply would amount to 200,000 tons—140,000 tons from Africa and 60,000 tons from India. This will be 20,000 to 30,000 tons more than last year's supply, yielding kernels of 2 million cases of 50 lbs each. But one has to allow some margin to these estimates, because they are prepared in a haphazard manner by the trade here and in Africa. The prices have, however, come down to Rs. 790 a ton for African nuts and Rs. 200 a candy for Indian nuts from Rs. 950 and Rs. 250, respectively, in May. Present stocks of both raw nuts and processed kernels with factories in Kerala are said to be substantial.

Hire-purchase in Tea Gardens

The hire-purchase system sponsored by the Tea Board to help tea garden owners to renovate their factories is too rigidly administered and is not likely to benefit those who need this assistance, according to Mr. P. R. Subramanyam, chairman of the Haileybury Tea Estates Ltd. In his address at the recent annual general meeting Mr. Subramanyam said that plantation companies are finding it more and more difficult to get the finance they need from banks or from the capital market, so he urged that the hire-purchase system be "sympathetically" administered. He also pleaded for timely help for replanting.

High-grown Tea Prices Fall

The high-grown teas of south India are failing to realise as good a price as they did last year. The average for the first six months of the current year is Re 1 less a kilogram, compared with that of the corresponding period of 1960. The chairman of the Nilgiri Planters Association, Mr. N. Bhagwandas, also pointed out that the high-grown teas are not fetching the price they should. Their satisfactory performance last year was aided to a considerable extent by the fall in the north Indian tea output and Russian purchases. The first half of 1961 indicates that there is no room for satisfaction but only for deepening apprehension for the producers of high-grown teas.

COCHIN TEA SALES

At Sale No. 27, 564,000 kilograms of tea were on offer. There was a strong and active demand. Plain low mediums and mediums were 10nP to 15nP dearer while good mediums were 5nP to 10nP higher. Nilgiris were fully firm and dearer, depending on quality.

At Dust Sale 26, 274,000 kilograms of tea were on offer. There was a strong general demand. Low mediums and mediums were 10nP dearer. Residuals were the strongest feature of the sale and were sometimes 20nP to 30nP dearer.

Commodity Markets

THE ABNORMAL RISE IN TIN RATES

RESOURCES OF I.T.C. PROVED TOO INADEQUATE

THE London metal market's attention in the past month has been focussed on tin. The metal's price had risen £100 a ton in four and a half months to reach the level of £890, at which the manager of the buffer stock was obliged to stabilise it by selling. After a brief period of stability thus enforced, came the dramatic announcement that the buffer stock was exhausted. The price jumped to £900, then soared far above that line. Thus at the beginning of the new agreement (1st July), it was demonstrated that the International Tin Council, conceived to stabilise the market in an imagined state of surplus, was not appropriate to a state of scarcity. (It is relevant to mention, however, that when tin was temporarily in surplus in 1958, the buffer stock's purchases exhausted the available money. Which ever way the market might turn, the scheme was too modest.) Operators are now bewildered. There was a strong speculative element in the buying that pushed up the price, and spasmodic profit-taking has caused temporary weakness. But there seem always to be buyers awaiting opportunities. In due time, presumably, high-cost mines will be brought back into operation; but the quantity of tin which can be got from them is problematical. A high price will promote the use of substitutes; but tin has in the past been priced above £1,000 a ton and suffered little from substitution.

There is a large deficiency of tin this year, and there seems to be no influence which can appreciably reduce the price other than substantial releases—by a laborious process—from the huge strategic stockpile of the United States. The deficiency of supplies this year is estimated at 15,000 tons; the U.S. strategic stockpile comprises about 300,000 tons. A reversal of the upward trend of the price of copper seems to have been caused partly by the rush for tin: some money, it was thought, was taken out of copper to be put into tin. At lower levels, copper has been erratic. In spite of the recent labour troubles in Chile, supplies of the metal seem quite adequate. But the market is sensitive to labour troubles which may erupt in Rhodesia, the U.S.A. and Chile, so that the price is now generally firm. In any case, the underlying position of the metal looks sound. There is no longer an obvious surplus; and consumption will increase if the advance of the U.S. economy continues. U.S. influences have helped lead and zinc. Both metals have been stimulated by talk of supplementary stockpiles—financed by sales of surplus U.S. farm produce—which would absorb all U.S. surpluses of lead and zinc.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) fell by 0.2 percent to 124.9 during the week ended 3rd June, compared with 125.1 (revised) for the previous week. The index was lower by 0.5 percent when compared with the corresponding week of the previous month, but was higher by 1.4 percent than that of a year ago.

STRONG GENERAL DEMAND AT
TEA EXPORT SALE

RISING TREND IN DUSTS

AT Sale No. 5, held on 3rd and 5th July, the 18,347 chests on offer at the Export auction met with a strong general demand. Prices for orthodox descriptions could be generally quoted as firm to dearer with keen competition for any teas with improved quality. Best C.T.C. descriptions were irregular and sometimes easier. Medium and poorer kinds, however, met with strong demand and generally sold at enhanced rates. Legg-cut descriptions were also dearer. Whole-leaf grades met with good support, while tippy teas sold readily at about last rates. Darjeelings were again very irregular. The several invoices on offer with flavour received good support at or above last rates, but the remainder were generally easier and at times difficult of sale.

Quotations

	1961
	Rs. a kilo
Clean Plain Pekoe	5.20 to 5.30
Plain B.P.	4.75 to 4.85
Plain Fannings	4.70 to 4.75

(Quotations are inclusive of excise duty).

At the Internal Sale, there was a strong and active demand at dearer rates for the 7,633 packages of Dusts on offer. C.T.C. teas, especially the brighter lines, were keenly competed for at considerably enhanced prices. Orthodox Dusts were readily absorbed and were generally 10p to 15p deater, and a few small coloury ones showed a greater rise. Legg-cut teas were a strong feature and were taken up at much dearer rates.

Quotations

	1961
	Rs. a kilo
Plain Orthodox Dust	4.35 to 4.50
Medium Assam Dust	4.30 to 5.00
Legg-cut Dust	4.60 to 5.20
Medium Assam C.T.C. Dust	6.00 to 6.50
Good Assam C.T.C. Dust	6.50 to 7.30

(Quotations are inclusive of excise duty.)

The 28 packages of internal Leaf on offer sold at irregular rates.

LINSEED FIRM

The market was firm in the past week due to shortages of supplies. Only small local business was reported with buyers and sellers reserved. The oil market was steady; prices showed little change. Enquiries were limited, only small transactions being done. The oilcake market was steady because of good local demand and small stocks with millers. The latest quotation is as follows: Ready July delivery, Rs. 30.25 a maund.

HIDES AND SKINS STEADY

The market in skins was steady. Stocks of hides were higher, but those of skins were less than in the previous week.

Bazaar Sales

(Between 27th June and 3rd July)

Cowhides: Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 8.12 to Rs. 13; wet salted (Slaughtered) 20,500 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee, Kustia) on the basis of Rs. 250 to Rs. 275, Rs. 300 to Rs. 330 and Rs. 375 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.75 a piece; Assam-Dinajpur 10,500 pcs. on the basis of Rs. 280 to Rs. 315; Purneah-Kissenganj 9,000 pcs. on the basis of Rs. 310 to Rs. 325 and Rs. 330 to Rs. 340; Patna-Mozufferpore 19,600 pcs. on the basis of Rs. 285 to Rs. 280 and Rs. 320 to Rs. 335.

Bazaar Stocks

(3rd July)

Cowhides: Wet salted 122,800 pcs
Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 51,500 pcs.; Assam-Dinajpur 45,000 pcs.; Mozufferpore-Patna-Pakur-Purneah-Kissenganj 238,500 pcs.

NAMES AND DATES

Mr R. Fell, an assistant secretary in the Tariff and Import Policy Division of the Board of Trade in London, has been appointed U.K. Trade Commissioner in New Delhi in succession to Mr R. D. McIntosh. He is expected to arrive in New Delhi some time in August.

COMPANY AND PUBLIC NOTICES

WESTERN BENGAL COALFIELDS LIMITED

NOTICE is hereby given that the Annual General Meeting of the shareholders of the Company will be held at the Registered Office of the company at 8, India Exchange Place, Calcutta on Monday, the 7th August, 1961 at 3 P.M. for the following purposes:—

- To consider and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March, 1961.
- To consider declaration of dividend.
- To elect directors in place of Raja B. N. Ray Chowdhury and Shri S. R. Daga who retire by rotation but being eligible, offer themselves for re-election.
- To appoint auditors for the current year and to fix their remuneration. Messrs. Singhi & Co., the retiring auditors being eligible, offer themselves for re-appointment.
- As special business to consider and if thought fit, to pass, with or without modification the following resolutions:

As Ordinary Resolutions

- "Resolved that Sri D. N. Bhattacharjee be and is hereby appointed a Director of the Company."
- "Resolved that the Board of Directors of the company be and are hereby authorised to borrow from time to time moneys for the purposes of the company upto a maximum of Rs. 75 lakhs outstanding at any time on account of principal notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the company (excluding temporary loans taken from Banks in the ordinary course of business) will exceed the aggregate of the paid-up capital of the company and its free reserves, that is to say, reserves not set apart for any specific purpose."
- "Resolved that the Board of Directors be and are hereby authorised to contribute and/or subscribe to any institution or fund for any national, charitable, benevolent, public or general purposes, not directly relating to the business of the company or to the welfare of its employees from time to time such amounts upto a total of Rs. 50,000/- in any financial year notwithstanding that such amounts in any financial year will exceed Rs. 25,000/- or 5% of the company's average net profits as determined in accordance with the provisions of the Companies Act 1956 during the three financial years immediately preceding whichever is greater."

As Special Resolution

- "Resolved that the company do hereby approve of and authorise the payment of commission @ 1% of the net profits of the company computed in accordance with the provisions of the Companies Act, 1956 to the directors of the Company for the year ending on 31.3.61 and all subsequent years provided such payment is approved by the Central Government."
- To transact any other business which may be brought forward at the meeting with the permission of the Chairman.

The Register of Members will remain closed from the 22nd July 1961 to the 7th August 1961 both days inclusive.

By Order of the Board,

HINDUSTHAN INVESTMENT CORPORATION LTD.

R. K. CHHAOCHHARIA,
Managing Director,
Managing Agents.

8, India Exchange Place,
Calcutta 1.
Dated the 27th June, 1961.

- Note: (i) The dividends, if declared at the meeting, will be posted to the Registered addresses of the shareholders whose names appear on the company's register on the 7th August 1961 or to their order or to their bankers.
- (ii) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE ABOVE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.
- (iii) The instrument appointing a proxy shall be deposited at the Registered Office of the company not less than 48 hours before the time for holding the aforesaid meeting.

EXPLANATORY STATEMENT WITH REGARD TO THE SPECIAL BUSINESS:—

- Item 5(a)—Sri D. N. Bhattacharjee was appointed an Additional Director of the Company by the Board of Directors in terms of Article No. 126(a) of the

Articles of Association of the Company. As per the provisions of Sec. 280 of the Companies Act 1956 Sri Bhattacharjee vacates office at the next Annual General Meeting. The Company has, however, received a notice from a member under Sec. 257 of the Companies Act 1956 regarding Sri Bhattacharjee's appointment to the Board at the next Annual General Meeting.

Item 5(b)—As per the provisions of Sec. 293 of the Companies Act 1956, as amended by the Companies (Amendment) Act 1960 the directors of the Company can borrow moneys in excess of the Paid-up Capital and Free Reserves of the Company only if they are authorised in that behalf by the Company in General Meeting by resolution which specifies the limit for such borrowings. In view of the development programmes of the Company the directors may have to borrow moneys upto the limit specified in the Resolution.

Item 5(c)—Sec. 293 of the Companies Act 1956 as amended by the Companies (Amendment) Act 1960 further provided that the directors can contribute to charitable or other institutions in excess of Rs. 25,000/- or 5% of the Companies average net profits computed as mentioned in the Resolution only if authorised by the Company in general meeting by resolution which specifies the limit for such contributions. The resolution is proposed in view of this provision.

Item 5(d)—Article No. 117 of the Articles of Association of the company provides for payment of commission to the directors of the company upto 1% of the net profits in each year. As per section 309 and 310 of the Companies Act 1956, the approval of the Companies in General Meeting by special resolution and also approval of the Central Government are required for making such payment.

The company meetings and dividends table appears on page 24

OCTAVIUS STEEL & CO., LIMITED

NOTICE is hereby given that the Fortieth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office, No. 14, Old Court House Street, Calcutta, on Friday, the 21st July, 1961 at 12 noon for the following purposes:—

- To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1960.
- To confirm the dividend paid on Preference shares and to declare a dividend on Ordinary Shares.
- To elect a Director in place of the retiring Director.
- To elect Auditors for the ensuing year and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 14th July, 1961 to 21st July, 1961, both days inclusive.

By Order of the Board,
B. GHOSH,
Secretary.

14, Old Court House Street,
Calcutta, 29th June, 1961.

Note:—A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself and the proxy need not be a member.

SHAW WALLACE & COMPANY LIMITED

Dividend on Preference Shares

THE Directors have declared in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 an Interim Dividend of Rs. 2.664 per share subject to deduction of Tax under Section 18(3) (D) of the Income Tax, 1922, on the Company's Preference Shares in respect of the year ending 31st December, 1961, payable to Members whose names appear in the Preference Shares Register of the Company on the 15th July, 1961. Warrants will be posted on or after the aforesaid date to the addresses or in accordance with the instructions recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 8th to the 15th July, 1961, both days inclusive.

By Order of the Board,
D. A. ROUGHTON,
Calcutta Director & Secretary.

4, Bankshall Street,
Calcutta 1.
29th June, 1961.

THE HATTIKHIRA TEA CO. LTD.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14 Old Court House Street, Calcutta, on Friday, the 28th day of July, 1961 at 3 P.M. for the following purposes:—

- To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1960.
 - To elect a Director in place of the retiring Director.
- In this connection Special Notice is hereby given of the intention to move the Special Resolution at the meeting that is to say:—
- "That Mr J. R. Hollander who retires by rotation be and is hereby appointed a Director of the Company."

(3) To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 21st July, 1961 to 28th July, 1961, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,
I. P. GOENKA,
Managing Director,
Managing Agents.

Calcutta, 5th July 1961.

Note:—(i) A Member of the Company entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

(ii) In connection with the business to be transacted under Item 2 of this Notice, please see the undernoted Explanatory Statement.

Explanatory Statement

In the Special Notice given by the Company to Shareholders, under Item 2 of the annexed notice for Annual General Meeting, intimation has been given of intention to move a Special Resolution for the re-appointment of Mr. J. R. Hollander who will retire in rotation at the meeting. Special notice of such intention has also been given to the Company. Since Mr. Hollander is also a Director of Messrs. J. Thomas & Co. Private Ltd. who act as brokers of the Company for the sale of their tea, it is considered desirable that he should be appointed to the Board by Special Resolution.

BURN AND COMPANY LIMITED
NOTICE

NOTICE is hereby given that the Annual General Meeting (being the sixty-seventh Ordinary General Meeting) of the Company will be held on Friday, the 28th July, 1961, at 11 a.m. at the Registered Office, 12 Mission Row, Calcutta, to transact the following business:—

- To receive and adopt the audited accounts for the year ended 30th April, 1961, and the Directors' and Auditors' Reports thereon.
- To declare a dividend on the ordinary shares. The dividend, if declared, will be paid on or after the 7th August, 1961, to the Shareholders whose names are on the Company's Register on the 28th July, 1961, or to their mandates.
- To appoint a Director in place of the retiring Director, Mr. T. C. Hornby.
- To appoint auditors and fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass the following resolutions as Special Resolutions.

5. Special Resolution No. 1.

That Article 114 be deleted and the following substituted therefor.

"114. Unless otherwise determined by the Company in general meeting each Director shall receive the sum of Rs. 250/- for every meeting of the Board of Directors attended by him. The Board of Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Board of Directors may be held and who shall come to that place for the purpose of attending such meeting such sum as the Board of Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the meeting in addition to his remuneration as specified above."

6. Special Resolution No. 2.

That subject to the approval of the Central Government pursuant to Section 380 of the Companies Act, 1956, the Company do hereby approve of a contract between the Company of the one part and Mr. Sitendu Gupta, an associate of Martin Burn Limited, the Managing Agents of the Company, within the meaning of the Companies Act, 1956, of the other part the material terms of which are:

- Mr. Sitendu Gupta, who is an Assistant of the Company, at Howrah Works, shall continue to be such assistant for a period of five years with effect from

the 1st December, 1960; during this period he shall enjoy the same privileges, amenities and perquisites and be subject to the same liabilities and obligations as are applicable to other assistants of the Company in the same grade of employment and with the same status.

- Mr. Sitendu Gupta's basic monthly salary will be on the scale Rs. 900-1000-1100-1200-1300 during the first and successive years of service, plus dearness allowance at the rate allowable under the Company's rules from time to time, medical expenses and, at the discretion of the Company, an annual bonus.

He will be entitled to two months leave on full pay and will be paid return railway fares for himself and his wife after completing the second and fourth year of his contract of service.

The Ordinary Share Register of the Company will be closed from the 20th July, 1961 to the 28th July, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA,
Managing Director,
Managing Agents.

Calcutta,
1st July, 1961.

An Explanatory Statement as required under the Companies Act, 1956 has been forwarded to the members of the Company.

KUMARDHUBI ENGINEERING WORKS
LIMITED

THE Directors of the above Company have decided to recommend the payment of dividends for the year ended 30th November, 1960, subject to deduction of tax as under:—

On Cumulative Pref. Shares—@ 6.5% p.a.
On Ordinary Shares @ 30 p.p. per Share

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

THE BENGAL PAPER MILL COMPANY LTD.

NOTICE is hereby given that the Annual General Meeting of the Company (being the One hundred and thirty-seventh Ordinary General Meeting) will be held at the Registered Office of the Company, 14, Netaji Subhas Road, Calcutta, on Monday, the 31st July, 1961, at 3-30 p.m. for the following purposes.

- To receive and consider the Report of the Directors and to adopt the audited accounts of the Company for the year ended 31st December, 1960.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

73rd YEAR OF ISSUE

CALCUTTA, 13th JULY, 1961.

Vol. CXXXVII No. 3668

A NEW THREAT TO THE SHARE MARKETS

THE Calcutta stock market seems to have entered on another period of uncertainty. Recent good corporate news, continued inflation, a general shortage of first-class scrip, and the numerous other bull factors which might have been expected to bolster present sentiment, do not appear to be sufficient to spark off the upsurge of prices which is fairly usual at this time of year. Why this should be so during a period when money is becoming easier and new issues are restricted is not easy to understand. The market is improving slowly, but by no stretch of the imagination could the movement be regarded as a boom, or as having much staying power in it. Perhaps the main reason is partly the fear that the Central Government will soon insist on new restrictions to curb speculative trading, and partly the suspicion that the Reserve Bank has in mind to make credit supplies less easily available. Up to now the Stock Exchanges have resisted the official move towards restricting speculation mainly on the grounds that it is unnecessary at the present time, and that any attempt to force such measures on a hesitant market will do more damage to the normal growth of legitimate trading than it is ever likely to do to speculation. There is much to be said for this attitude. On the whole, speculative activity in official markets has been much restrained of late; and about speculation in kurb markets, neither the Government nor any other body seems able to do anything at all. It is easy to show that the improvement in equity prices since the beginning of the year, although slightly more rapid than during the same period in 1960, is by no means too large bearing in mind the economic factors involved, and that the increase in Calcutta particularly is well below the all-India average.

Before taking steps to curb the present moderate volume of speculation the Government would do well to remember that some speculative activity is essential for a healthy stock market, and that without a healthy market the private sector will be unable to meet its investment targets for the third plan. By 24th June, 1961, the all-India index number of variable-dividend industrial security prices had reached the level of 183.8, compared with 165.4 (1952-53=100) on 1st January. This represents a rise of 11.1 percent. For the same period last year, the improvement in the index was 9.6 percent. For the Calcutta market alone, the corresponding increases were 8.9 percent and 7.5 percent. These figures do not indicate that the boom has got out of hand, or that the rise this year is any more pronounced than in previous years, considering that the 1961-62 Budget contained a number of mildly bullish features. It is usual for the share markets to be fairly quiet in the second half of the year. This was true of 1960, and it promises to be even more so of 1961. It is difficult to understand, therefore, why the Government should be contemplating such measures as the abolition of free margins and the fixing of minimum brokerage, if these are designed to slow down the markets' progress. The fact is that India's stock markets have been remarkably restrained in the past six months, and the Calcutta market especially so. The introduction of restrictions at this stage might only hasten a process which appears by now to be fairly well established—the gradual decline of the Calcutta share market in both vigour and importance.

If the Government is willing to consider reasons for holding its hand, it need do no more than ponder the difficulties which are at present facing the share markets, and which may be expected to dominate sentiment completely in the next few months. Perhaps the most important uncertainty is the coming general elections. There need be no doubt about the overall outcome of these, but the promises that are likely to be made to the electorate from various platforms, and the appearance of Party manifestos, will all help to frighten investors and speculators alike. Furthermore, it would be an optimist indeed who did not expect the new-

ly-returned Government to introduce a severe Budget once it is certain of its majority. Thus, the prospects for the later half of this year and the beginning of next can quite confidently be expected to be entirely dominated by election and Budget considerations. It would be a determined market that went ahead under such circumstances.

Added to these factors, of course, are the numerous difficulties facing industry in general and individual industries in particular. The present shortage of foreign exchange, necessitating as it may a further reduction in the statutory backing of the rupee, is not exactly encouraging for those industries which have to rely on imported raw materials. There is a general shortage of power, which may arise in more acute form next year or even earlier. Transport resources, especially railway freight capacity, threatens to be in chronic short supply and may well set a definite limit to industrial expansion under the third plan. And now the prospects of Britain joining the European Common Market are seen to hold serious consequences for a number of India's export industries. There is nothing in this picture to encourage the view that the share markets are due to get out of hand during the next few months, or that speculation will drive up prices to the point where they cannot be sustained by economic considerations. If, in the case of the Calcutta market, there is added to this impressive list of bear factors the present difficulties in the jute industry, it can be seen that there is little justification for supposing that investors and speculators can look forward to a sustained boom. The Government's own borrowing programme is due to take fresh resources from the market soon, and no doubt the recent spate of new issues will be resumed when this is out of the way. In other words, there is every reason to suppose that the markets are in for a period of protracted difficulties rather than one in which restrictions will be required to keep optimism in check.

The risk the Government is running in seeking to introduce new restrictions at the present time is the serious one of causing a severe slump in the country's share markets. If it should contrive to do this, it is as well to remember that speculators, who make their money on price fluctuations, will be the last to suffer. Indeed, it is the usual fate of the Government's moves against speculators generally that they are apt to benefit one type of speculator—the bear—at the expense of the other.

MARKETS FOR EN

INDIAN engineering goods now provide a new and promising line of export. There has been a steady increase in the value and range of these goods exported, as more and more markets have been systematically explored. The Engineering Export Promotion Council, the body formed for the purpose of helping the industry to expand its overseas sales, has been organising a steady flow of intelligence covering foreign markets to Indian exporters through its various publications. This work is considerably reinforced by the sending out of delegations to different parts of the world to study market conditions on the spot and examine the possibilities which may exist for selling engineering goods there. Eight such delegations have already been sent, the latest to western Asian and some European countries. Those visited were Iran, Greece, Yugoslavia, Italy, the U.K., Spain, the United Arab Republic and the Lebanon.

The report which this delegation submitted on its return contains many useful suggestions as to how best to promote the export of engineering goods to the countries visited. Some of these

Many a discomfited bear has the Government to thank for coming to his rescue with some ill-considered move or other during the past few years. It is time the authorities considered carefully whether it is in the country's or the markets' true interests to favour the type of speculator whose activities make the least contribution to encouraging investment in the national economy. Rather than spend its time dreaming up new restrictions, the Government could usefully turn its attention to devising measures to maintain the volume of new investment during the coming months of uncertainty. Once slacker conditions set in, prices could slide disastrously, and it might take a long time for confidence to be regained. The share markets have done a remarkable job in maintaining their buoyancy over the past six months and absorbing such a large quantity of new issues. If conditions become quiet, great difficulty may be experienced in persuading the markets to accept the volume of new issues expected for the future. First-class shares of the kind which the Goodyear Company offered some time ago, will always receive a ready response. But others may not be so lucky; and indeed there are numerous examples, even during the past few months of buoyant conditions, of new issues being left partly with their underwriters. If the markets are to play their proper part in raising private-sector resources for the third plan they will have to be retained in a moderately healthy condition. For this, a certain amount of speculation is not only unavoidable but desirable. There is no room for excessive manipulation, but there is certainly no evidence of this at the moment, nor can over-optimistic speculators be in doubt, after the experiences of the past few years, that the Government will let their activities get out of hand.

Now that money is returning, or has already returned, to the banks, and the Government continues to insist on borrowing at artificially low rates of interest, it may be necessary in the near future for the Reserve Bank to introduce credit curbs in the same way as it did last year. This is in addition, of course, to the new capital, reserve and liquidity requirements already foreshadowed. Without going into the technical merits of the steps likely to be taken, it can be said that they will probably have at least the same dampening effect on market sentiment as they had last time. Even the growth of direct financing, which to some extent sustained speculative activity, was not sufficient to prevent the markets from turning quiet and losing much of the steam they had raised in the first half of the year. If the Government is eager to see restrictions placed on the markets it can rely on these to do all that is needed. Otherwise, there is quite sufficient doubt in the economic situation as seen at the moment to keep activity in check.

MARKETS FOR ENGINEERING GOODS

INDIAN engineering goods now provide a new and promising line of export. There has been a steady increase in the value and range of these goods exported, as more and more markets have been systematically explored. The Engineering Export Promotion Council, the body formed for the purpose of helping the industry to expand its overseas sales, has been organising a steady flow of intelligence covering foreign markets to Indian exporters through its various publications. This work is considerably reinforced by the sending out of delegations to different parts of the world to study market conditions on the spot and examine the possibilities which may exist for selling engineering goods there. Eight such delegations have already been sent, the latest to western Asian and some European countries. Those visited were Iran, Greece, Yugoslavia, Italy, the U.K., Spain, the United Arab Republic and the Lebanon.

The report which this delegation submitted on

could be applied with profit to export trade as a whole. For example, the suggestion for setting up export houses which will "offer new products to new markets" and also provide financial guarantees and market research facilities for the smaller clients. These houses provide a valuable economic service in the U.K. In India, this kind of institution has not grown at all, although moves to start one have been made from time to time by some trade bodies and specialist institutions like the Indian Council of Foreign Trade. Another suggestion underlines the need for the Indian Government to extend longer-term export credit facilities. This, of course, is probably not possible for India at present due to her balance of payments difficulties. But with the increasing competition in international trade, more and more countries now make it one of their main instruments of export promotion. If India is to establish herself as an exporter of manufactured goods it is difficult to see how she can avoid adopting this method before long.

Otherwise a fairly balanced document, the report, however, omits to make any reference to the

(Continued on previous page)

quality of Indian goods compared with those supplied by the more experienced manufacturers. It can be argued that the fact that exports have been rising steadily even to very much more industrially advanced countries like the U.S.A. and the U.K., should indicate that the Indian goods have been found of acceptable quality by consumers there. This is presumably the case, but it would have been reassuring to hear from the delegation what it has found for itself. It is not clear why the delegation did not also visit West Germany, France and other industrialised countries of Europe, but simply hopped over to the U.K. from Italy. It is fairly hopeful of seizing opportunities in the U.K. market, especially in some categories of goods such as castings. But it does not look very far ahead. Indian exports are now considerably helped by the U.K.'s policy of duty-free imports from this country as well as other members of the Commonwealth, but since it is possible Britain will be forced by circumstances to join the European Common Market, it may then not be easy for Indian goods, engineering goods in particular, to sell there in competition with West European manufacturers. This criticism, however, is not meant to belittle the usefulness of the delegation's work. Its report provides considerable market information on the countries visited which should prove valuable to all engineering exporters in approaching the right sources or even widening their existing contacts.

It seems that a particularly promising market for Indian engineering goods lies in the United Arab Republic, particularly in the Egypt region. That country has embarked on a programme of economic development which should offer sufficient scope for increasing engineering exports. What is equally important, there is a fund of goodwill there towards India and her trading community, although it is possible that the reverse could just as easily be the case if there were a "shift in the political situation." The delegation thinks

that from the present level of around Rs. 50 lakhs, engineering goods exports can be increased several times if suitable efforts are made. The products which offer good prospects are of a wide range, including irrigation equipment and agricultural implements, diesel engines, pumping sets, transmission line towers, cables, railway track and signalling materials, wagons and wagon components, steam locomotives, weigh-bridges, machine castings and machine tools. Consumer goods such as electric fans, sewing machines, dry batteries, cast iron products and bicycles can be sold in large quantities. An immediate opportunity is offered by sugar plant and machinery. The sugar plants in both Syria and Egypt are old and require replacement and renewal, and there is now a big demand for sugar machinery worth about £5 million. But India cannot supply the full requirement, as there is no suitable consortium of suppliers to undertake such a big export contract; the most that can be conveniently handled is one worth £100,000 a year. Among other countries visited, Yugoslavia and Italy also offer scope for expanding engineering goods sales. These could be interested in a wide range of products if the right approach were made, and it is held that the prospects of trade with Yugoslavia are particularly favourable.

The delegation lists a fairly large number of handicaps which stand in the way of effective sales promotion and the main ones, in its opinion, are the high shipping freight from Indian ports to Europe, inadequate publicity and propaganda effort and the absence of bilateral trade agreements. It does not examine the Indian Government's export promotion policy, and how far the high cost structure of the industry is hindering the export drive. Nor does its report mention the incentives which are offered by rival countries to their exporters. It would have been instructive if this had been done.

INVESTMENT IN COMMON MARKET

WHEN Imperial Chemical Industries announced recently a plan to invest £100 million in the next decade in a new chemical complex in Rotterdam it was said that Rotterdam was chosen primarily because it was the biggest oil port outside the U.S.A. When India and other major customers are building plants to make heavy chemicals for themselves, the British chemical industry sees more scope for expanding trade in the more sophisticated chemicals, such as those made from petroleum, and the facilities for developing petroleum chemicals in Britain are not unlimited. Yet nobody was convinced that Rotterdam's position in the European Common Market was an unimportant factor in I.C.I.'s selection of the site. The British industry must expand its markets. Its exports are not increasing as much as the world trade in chemicals, and the tariffs surrounding the Common Market will severely restrict exports to a market that is growing faster than any other in the world. A necessary alternative to exporting is manufacturing within that market's territory.

Many other British industries are now in a similar position—and in a similar predicament. For some of them, indeed, the predicament is worse. The chemical industry may be convinced that it ought to expand production abroad as well as at home—though a study of all the plans for Europe (particularly American firms') suggests that a surplus of chemical-producing capacity will arise there within the next few years. Other industries may have surplus capacity at home, may have no reason to expand on the Continent other than the difficulty of selling their home-produced goods over the Common Market's tariff, and may be reluctant to invest in the Common Market because they believe that Britain will eventually be a part of it and able, therefore, to export to the other member countries across a diminishing tariff. There are probably many provisional British plans for investment in the Common Market that are in abeyance because the British Gov-

ernment is trying to find a mutually acceptable method of associating Britain with the Common Market. But it is surprising how many British firms have established or are negotiating manufacturing facilities behind that tariff wall, on the assumption that Britain will be permanently on the wrong side of it. Their efforts will not, of course, have been wasted if Britain becomes associated with the European Economic Community closely enough to enable her to trade in the Common Market as an equal, but it must be assumed that most of these firms would prefer to make their goods at home and to export them.

For the sake of the companies that are delaying their plans, and for the sake of those that are, perhaps, expanding their overall capacity more than is necessary, or are expanding it abroad when they might more advantageously expand it at home, it is urgently necessary to establish whether Britain will eventually join the Community or must remain permanently outside it. The British plan that Mr. Edward Heath, Minister for European Affairs, outlined in Paris at the end of February is complex, and it may, therefore, be regarded as fresh evidence that the British Government is trying by every means to work out a compromise that will be acceptable by the three groups, besides Britain, that are mainly concerned—the European Economic Community, the European Free Trade Association, and the British Commonwealth. But the members of these groups do not all think alike. In the E.E.C. particularly there are interests that oppose the whole idea of compromise in this matter; and in the Commonwealth there are interests that oppose the whole idea of association with the Common Market, even by compromise. The least of the problems is, apparently, E.F.T.A.: as it is a loose and not an exclusive organisation, its members can make independent arrangements with E.E.C., as the Britain is trying to do now—though the British Government hopes that its plan might serve as a model for other E.F.T.A. members, in so far as it is relevant to them.

Britain's idea of a "harmonised" tariff is very different from E.E.C.'s idea of a common external tariff. Mr. Heath proposed that Britain's external tariff should be related to E.E.C.'s in respect of raw materials and manufactures exported from countries other than the Commonwealth and E.F.T.A. As far as Britain is concerned, the only major trading countries to which the common tariff would apply are the U.S.A. and Japan; and it may be thought that two countries, however important, are not a wide enough basis for a compromise. The Commonwealth is reserved as a "special case" so that the system of preferential tariffs on the Commonwealth countries' exports can be retained. But Mr. Heath offered an important concession, that Britain would relinquish her right to reciprocal preferences, so that E.E.C.

could negotiate with the Commonwealth countries a tariff on manufactures that would be the same for British as for Common Market goods. Since in most trades Britain competes with E.E.C. countries in Commonwealth markets much more than Commonwealth countries compete with E.E.C. countries in the British market, this arrangement offers a possible solution of the problem of Commonwealth preference, which has hitherto prevented agreement between Britain and E.E.C. but it should be observed that Britain's preferential treatment of Commonwealth goods will become increasingly important as the Commonwealth's production expands: the mass-scale export of manufactures from the Asian countries of the Commonwealth to Britain will not be confined to cotton-textiles.

Another problem that has prevented agreement in the past is agriculture, and in this respect Britain has, apparently, no new ideas to put forward. Internally the problem concerns the subsidies that enable British food-growers to keep their prices relatively low; externally it concerns the Commonwealth producers' quest for markets. The country most disturbed by Britain's associations with the Continent (actual or proposed) is New Zealand, whose Prime Minister, the Rt. Hon. K. J. Holyoake, said recently in an article in the London Times that the extension to the U.K. of the agricultural provisions of the Treaty of Rome "would be for us a disaster"; he hopes for a more flexible system that will allow New Zealand to participate in "a vigorous and expanding European market." But many problems remain to be solved before a European arrangement satisfactory to all concerned can be concluded.

INDIAN MANGANESE EXPORTS

ALTHOUGH many blue-prints have been drawn up in recent years for promoting Indian exports, none has so far brought about any considerable measure of improvement. This is perhaps because the difficulties do not appear to have been tackled on a pragmatic basis. In numerous traditional lines, this country has lost ground steadily, in many cases due to official bungling. Experience shows how the export business has declined in manganese ore since the Government of India decided to participate in it through the agency of the State Trading Corporation. Now a large portion of the trade has been reserved for the Corporation and private trade is being left to encounter other difficulties of one kind or another. As a result, there has been a substantial decline in total trade causing considerable losses of foreign exchange. During the past few years the Corporation has not succeeded in handling the business in manganese ore allocated to it. In a recent study, the Economist Intelligence Unit, London, said that the State Trading Corporation has been strikingly unreliable in its deliveries, failing to ship ore as promised, shipping it where and when it pleased, holding up loading for no adequate reason, and so on. It has insisted on terms in excess of normal commercial ones in such matters as credits, port charges, etcetera. It is suspected of attempting to play off one firm against another, dealers against users, and has been known to treat its contractual obligations lightly if an opportunity arose to squeeze an extra advantage out of a deal already negotiated. In spite of the poor performance of the Corporation, the Government of India has decided to canalise the entire manganese trade through this institution during the next three years.

In 1957, India earned foreign exchange worth Rs. 32 crores from manganese exports, but the earnings declined to Rs. 13 crores in 1959 and Rs. 14 crores in 1960. Exports fell from 1,715,000 tons in 1957 to 960,000 tons in 1958. India's exports to the U.S.A. came down from 792,000 tons in 1957 to 379,000 tons in 1958 and to 380,000 tons in 1959. They showed a small increase to 441,000 tons in 1960. Although the loss in the American market is partly due to bigger supplies from Brazil, there is evidence to show that the U.S.A. is reluctant to trade with a State-owned organisation. Japan is the second biggest market for Indian manganese, but exports to that country have increased relatively less than those of competitive producers. Exports to the U.K., France, West Germany and other countries have declined during recent years. India's production has also dropped. It fell from 897,000 tons in 1953 to 545,000 tons in 1958. The decline is attributed to the unhelpful official policy which reserves more profitable areas for the public sector to work leaving the uneconomic for the private sector. As the renewal of mining leases is largely left to the discretion of the Central and State Governments, producers are discouraged.

In a brochure entitled *Markets for Manganese Ore*, issued by the World Trade Department of the Indian Chamber of Commerce, it is stated, the

the stagnation in the manganese export trade can be relieved provided private trading is encouraged. The State Trading Corporation should confine its activities to communist countries and to barter deals between one Government and another. In the light of the fact that Indian manganese is being priced out of world markets, it is suggested that steps be taken to reduce the price by cuts

in railway freight, port charges and royalty rates. Mine-owners should be permitted to import machinery and spare parts more liberally against their earnings of foreign exchange from manganese ore exports. The decision of the Government of India to allow 5 percent of the export earnings for importing mining machinery is considered inadequate.

Current News and Comment

McNally-Bird to Make Coal Washeries

McNally-Bird Engineering Company Private Ltd is a joint Indo-British-American collaboration. A licence was issued on 11th May, 1961, to Bird and Company (Private) Ltd to set up a Company in collaboration with McNally Pittsburg Manufacturing Corporation, Pittsburg, Kansas, U.S.A., for the manufacture of coal washeries and coal handling plants. McNally-Bird Engineering Company Private Ltd will have an authorised capital of Rs. 2 crores, and the first call up of Rs. 50 lakhs has already been sanctioned by the Controller of Capital Issues. The major portion of the finance will be provided by the U.S. partners. The American firm is a well-known designer and manufacturer of coal preparation equipment. It is at present engaged in setting up a coal washery in Dugda in Bihar, which is the biggest plant built so far in India. Its collaboration with Bird and Company (Private) Ltd will bring to India several decades of experience in coal handling systems, and under the technical aid agreement Indian personnel will be trained by American experts in all fields including engineering design, manufacturing techniques and shop know-how. American personnel will also be available to India to provide customers a consultant service and assist in the operations of complex basic industries. The technical aid agreement provides for the training of Indian personnel in the United States as well, where the McNallys organisation will make available its drawing office and shop facilities. A design and drawing office is to be set up in India to enable the Indian Company to offer customers a full and complete service from the inception of any scheme to the actual operation of a plant. The manufacturing facilities will also enable the Indian Company to offer a complete line of spare parts. From the very beginning, it is proposed to manufacture 70 percent of a coal washery in India and in about five years' time, it is expected, depending on the equipment which can be purchased locally, to manufacture washeries almost entirely in the country. This will save valuable foreign exchange as all the washeries required in the third plan could now be manufactured in India. (It is estimated that the saving in foreign exchange could be of the order of Rs. 45 crores over the third plan period.) In addition to this advantage, this new undertaking will provide opportunities for employment and training. Since the Company will also undertake erection work and will be interested in building up reliable sources of supply, this venture will, both inside and outside the organisation, generate considerable employment potential.

The plant will be located in Kumardhubi in Bihar, where all the facilities of the existing industrial complex will be available to the new Company. With American know-how and engineering skill, the plant will be capable of serving basic industries with a variety of engineering services. Material handling equipment, crushers, screening plants, speed reducers, belt carriers, bins, dryers, car hauls, car retarders, chain conveyors, coal breakers, conveyors of all types, drives, elevator buckets, gates, gears, pulleys, screens, sprockets, structurals and tipplers, etcetera will be manufactured in this country. McNallys will in the initial stages provide all the drawings and engineering designs for such equipment. The plant is expected to go into production in about a year's time and will have a manufacturing capacity equivalent to producing coal washeries aggregating 1,000 tons an hour. Colliery owners, steel mills, thermal power plants and other coal consumers needing coal washeries and coal handling equipment ranging from 25 to 1,000 tons an hour can obtain their requirements from here.

Higher Dividend from Bengal Potteries

Mr. M. G. Bhagat presided at the annual general meeting of the Bengal Potteries Ltd held on 29th June, 1961, in the absence of Sir Shri Ram, chairman of the Company. In view of the developments which are taking place to increase and diversify the activities of the Company, Mr. Bhagat takes a fairly optimistic view about the outlook in his statement (a full text of the speech is published elsewhere in this issue of *Capital*). Production has

been hampered by shortages of gas, but the directors expect to install another gas producer soon. When gas supplies improve, the output is expected to increase considerably. The Company has entered into a technical collaboration agreement with M/S Rosenthal-Isolator GmbH of selb. West Germany, in order to increase the manufacture of high tension and low tension insulators. The expansion programme is expected to be completed by the end of 1962. The directors think the demand for insulators will increase steadily with electric development. Efforts are being made to seek technical collaboration for improving the quality of table ware production. The Company has also received a licence from the Government of India for the production of high class translucent china. In order to meet the foreign exchange requirements, the Industrial Credit and Investment Corporation of India has agreed to grant loans to the Company in rupees and foreign exchange.

Mr. Bhagat pointed to the high excise duty on the products of Bengal Potteries and it is feared that sales might be affected by increased prices. Meanwhile, the Company has taken steps to increase exports. During the year ended December 1960, the directors have increased the taxable ordinary dividend to 15 percent.

Progress of East Anglia Plastics

The East Anglia Plastics (India) Ltd has made considerable progress in setting up its factory at Dum Dum, near Calcutta, for producing acetate moulding powders and P.V.C. compounds. The factory may start production before the end of the current year. East India Plastics has not only obtained permission of the Government of India to produce cellulose acetate moulding powders and P.V.C. compounds, it also has received an industrial licence to set up a new industrial undertaking in Andhra Pradesh for the manufacture of cellulose acetate flakes which are the raw materials for acetate moulding compounds, acetate fibres and raw film. The licence includes the production of organic chemicals such as acetic acid and acetic anhydride required for the manufacture of acetate flakes. The expansion scheme may cost Rs. 5 crores. Foreign collaboration has been arranged for this project.

Same Dividend from National Tobacco

Presenting their report for the year ended December 1960, the directors of the National Tobacco Co. of India Ltd take a cautious view about the current prospect. Fresh tax impositions on cigarettes in the last Central Budget are, it is feared, likely to affect the profitability of National Tobacco. As one major competitor has not thought it fit to pass the burdens of the increased duties on

to smokers in the case of those grades of cigarettes which are largely produced by National Tobacco, the latter Company also cannot increase the prices under present circumstances. The directors mention the increased competition and this is why National Tobacco has found it difficult to gain further ground in the market. Sales increased from Rs. 9.35 crores to Rs. 9.64 crores only.

The profit of National Tobacco has amounted to Rs. 59.06 lakhs in 1960, against Rs. 57.22 lakhs in 1959, after reducing depreciation from Rs. 6.01 lakhs to Rs. 5.91 lakhs. The ordinary dividend has been maintained at 16 percent, taxable. It is covered more than four-and-a-half times and works out to a yield of 7.7 percent at the present price of Rs. 21.44 a share. Development rebate reserve receives Rs. 3 lakhs (against Rs. 1.56 lakhs), taxation provision Rs. 25.38 lakhs (against Rs. 26.27 lakhs). Capital expenditure reserve gets Rs. 10 lakhs (against Rs. 15 lakhs) and general reserve Rs. 2.83 lakhs (against Rs. 5 lakhs). There is a carry-forward of Rs. 9,33,725, against Rs. 7,07,850 brought in.

The Company has installed the Molins mark cigarette-making machine. It is claimed that the machine incorporates an exclusively new process of cigarette manufacture. So the quality of products is expected to improve. Other up-to-date equipment has been installed to improve operational efficiency. The production of filter cigarettes has been interrupted by shortages of imported filters following difficulties of foreign exchange.

Cheviot Mills Pass a Dividend

The Cheviot Mills Co. Ltd—a jute mill in the Andrew Yule group—has made a profit of Rs. 1.51 lakhs during the year ended November 1960, against Rs. 4.58 lakhs in 1958-59, after increasing depreciation from Rs. 1,07 lakhs to Rs. 2.64 lakhs. The usual preference dividends have been paid but the ordinary dividends have been passed. Development rebate reserve is allocated Rs. 1.47 lakhs (against Rs. 4.26) and the carry-forward is Rs. 6,533, against Rs. 20,473 brought in. The adverse trading results are due to unfavourable prices of fibre in comparison with those of jute goods. Although new crop prospects are encouraging, the good effects of bigger supplies of raw jute will not be felt until the latter part of 1961, when, it is hoped, raw jute and manufacturing goods prices will achieve a better balance.

Under these circumstances, the directors consider current prospects unfavourable. There is no doubt that substantial economies will be effected by rationalisation and modernisation, but these are likely to be offset by higher production costs following reduced output and the payment of lay-off compensation to workers due to the block closure. Costs have also been inflated by the payments of Rs. 6,000 a month to the Orient Mills' permanent workers as compensation for transfer to a new place of employment more than three miles distant. This liability extends for 12 months from the date of the Orient closure. It may be observed that the Orient Jute Mills Co. Ltd has been amalgamated with Cheviot Mills, so the ordinary share capital of the latter Company has increased from Rs. 15.95 lakhs to Rs. 38.56 lakhs. As a result of closing down the Orient Mills and transferring the working to Cheviot Mills, considerable economies are likely to be obtained. The Orient Mills with the land have been sold to the Government of India for Rs. 34 lakhs and the finances of Cheviot Mills are expected to be substantially strengthened to this extent. Modern drawing and spinning machi-

nery to supply light yarns for 87½ percent of the Cheviot Mills' complement of looms was installed at a cost of Rs. 17.36 lakhs. The installation of similar machinery for the Orient complement of looms has also been completed. Machinery to supply 60 percent of the heavy weft yarns will be installed soon.

Good Results for Burn & Co.

The ordinary shares of Burn and Co. Ltd have been steady around Rs. 521 for some time and investors' confidence has been reinforced by the good results produced during the year ended April 1961—the report of which has just been published. The outlook appears to be encouraging, although the working has been interrupted by shortages of raw materials and electric power. The Howrah works has its order-book well filled. The reconstruction and modernisation of the refractory works in the Raniganj and Gulfbari group have made progress. When these schemes are completed, considerable improvement should take place in the working. The Jabalpur works has done well. The Salem mines have produced fair quantities, but steps have been taken to improve production further when the new magnesite brick-making factory starts producing.

Although sales of Burn and Co. declined from Rs. 11.42 crores to Rs. 9.47 crores, it is not unusual in a manufacturing concern because sales represent work finished as distinct from bills presented. It is worth observing that work-in-progress has improved from Rs. 2.36 crores to Rs. 3.07 crores. The profit has increased by Rs. 10 lakhs to Rs. 1.06 crores and an ordinary dividend of 28.5 percent, taxable, has been maintained. It is covered more than four times and works out to a yield of 5.5 percent at the present price. The profit figure has been arrived at after increasing depreciation from Rs. 17.74 lakhs to Rs. 23.73 lakhs. Taxation is allocated Rs. 57.75 lakhs (against Rs. 63.15 lakhs), statutory development rebate reserve Rs. 2.54 lakhs (against Rs. 2.46 lakhs), works reconstruction and expansion reserve Rs. 5 lakhs (against Rs. 2.75 lakhs) and Salem project reserve Rs. 14.54 lakhs (against Rs. 2.24 lakhs). There is a carry-forward of Rs. 26,28,514, against Rs. 26,14,452 brought in.

Higher Profit for Indian Copper

Total ore reserves for all mines of the Indian Copper Corporation Ltd showed a rise of 88,695 short tons to 4,292,242 short tons at the end of December 1960, compared with 4,203,547 tons a year ago. But there has been a further decline of 35,633 short tons in the ore reserves of the Badia section to 500,263 short tons.

During the year ended December 1960—the report for which has just been published—8,769 long tons of refined copper were produced, against 7,553 long tons in 1959. The output of rolled products was 10,923 tons, against 9,419 tons. In spite of a steady demand for brass sheets and strip, production has been restricted by the availability of zinc against import licences. Sales amounted to 11,192 tons, against 11,041 tons and the average selling prices of copper ingots, rolled brass and other products showed increases. Sales of Kyanite increased by 5,096 tons to 21,317 tons. The Company's appeal to the Supreme Court against the judgment of the Patna High Court in two civil suits with the Bihar Government, remains to be decided.

The directors state that the design of the new electrolytic refinery has advanced and construction will begin during the current year. The profit of Indian Copper Corporation has amounted to £1,307,982 in 1960, against £1,202,259. The ordinary dividend has been maintained at 27 percent, taxable, absorbing £370,251. The dividend yield is 6.3 percent at the present price of Rs. 5.73 a share. General reserve receives £200,000 (against £125,000) and taxation £500,477 (against £439,949), development rebate reserve £50,625 (against £56,250) and depreciation £175,000 (against the same). The carry-forward is £118,750, against £107,121 brought in.

Crisis in Shellac Trade

The outlook for the shellac trade at the moment appears to be gloomy. Exports are running well below average, as the offtake from consuming countries continues to be poor. Prices in internal markets are also low, as floating stocks are unduly large. Explaining the circumstances leading to the crisis, Mr. H. P. Lohia, vice-president of the Indian Lac Exporters' Association, said at the latest annual general meeting of the body, held last week in Calcutta, that export sales during April-June 1961 could be provisionally placed at only 50,000 packages, compared with 89,618 packages during the same period in 1960, and 89,833 packages in 1959. Exports to the U.S.A.,

the chief importing country, were only 11,000 packages during the second quarter, compared with 30,156 packages, and 35,057 packages in the same periods of 1960 and 1959. The communist countries have taken very little during this quarter, while exports to other traditional markets have been running at a low level. In the circumstances, no upward change in the price trend is to be expected in the near future. The trade had recently to liquidate at low prices its large stocks which it had been holding in anticipation of a lower Bysakhy crop this year. "Alarmingly low levels were reached some time back and although there has been a slight recovery, the price situation is still very far from comfortable," Mr. Lohia said.

Discussing the activities of the Association, which was formed with the express object of achieving a measure of price stabilisation in the export trade, Mr. Lohia said: "Serious administrative and organisational weaknesses have become apparent in our set-up, and the buffer stock scheme had to suspend operations at a juncture when its need was most pressing." The situation at present has worsened further. There have been examples of unfair trade practices and breach of the common agreement, which call for disciplinary action by the Association, but Government interference has seriously undermined the body's power to take effective disciplinary measures. These have had extremely bad repercussions on the entire set-up. The price programme still remains the "heart and core" of the Association's work. The price policy for October-March has already come up for discussion. Mr. Lohia outlined the following "basic concepts" on which the price programme should be based in order to overcome the present crisis as well as to bring lasting benefits to the trade. (i) The price of Indian lac should be competitive in relation to Siamese lac, plastics and synthetics, and must be considered reasonable and acceptable to consumers; the price trends of these competing goods are now moving downwards. (ii) The price should enable the grower to receive a fair return, and the manufacturer, stockist and exporter fair profits. There must also be a margin for the development needs of the industry. (iii) The price programme must cover the entire export trade in lac "without discrimination, exception or privilege"; the procedural restrictions to be imposed and taxes to be levied must be equally applicable to all. (iv) The Association must be able to secure fair observance of the above programme, through the use of its disciplinary provisions, with the backing of the Government whenever needed. Finally, the price programme, in order to work successfully, must require a degree of internal price stabilisation and this could be possible only with the revival and proper working of the buffer stock scheme.

Ferro Alloys Expansion Plans

Ferro Alloys Corporation Ltd of Andhra Pradesh is embarking on an ambitious programme to raise its production of ferro-manganese and diversify its activities for manufacturing ferro-silicon and ferro-chrome. The entire programme is estimated to cost about Rs. 1.10 crores. The Company has three furnaces—one open and two closed. The installed capacity of the factory is 45,000 tons of standard-grade high-carbon ferro-manganese containing 75 percent manganese. Production which totalled 35,000 tons in 1960 is expected to exceed 40,000 tons this year. The Company wants this to be raised to 45,000 tons, which is about one-fourth of the ferro-manganese output in India. It proposes to set up a plant for manufacturing electrolytic manganese from low-grade manganese. It is also proposed to manufacture manganese sulphate, manganese chloride and manganese dioxide in the same plant. The project is estimated to cost about Rs. 50 lakhs and the plant will have a daily capacity of 5 tons. The Company has successfully produced good quality electrolytic manganese at its pilot plant and further tests are being carried out for manufacturing electrolytic manganese out of slag obtained from high carbon ferro-manganese. At present, this slag goes to waste.

Ferro Alloys Corporation has plans to manufacture silico-manganese in one of the existing furnaces and put up an arc furnace for making low carbon ferro-manganese by the silico thermic reduction process. The domestic demand for low carbon ferro-manganese, which is required as a raw material for manufacturing alloy steels, is expected to rise appreciably with the setting up of alloy steel plants. This project is estimated to cost Rs. 35 lakhs and the plant will have an installed capacity of 25 tons a day. The Company paration plant for crushing, sorting, screening and pre-sizing. Apart from saving a considerable labour cost, the plant is expected to improve the quality of ferro-manganese. The capital cost of the scheme is estimated around Rs. 25 lakhs to Rs. 30 lakhs. The Company has already on hand plans for the diversion of one or two furnaces for the production of ferro-silicon and ferro-chrome. The capa-

city of ferro-silicon will be 700 tons a month and that of ferro-chrome 850 tons a month. Trial production is likely to start before the end of the year. Ferro Alloys Corporation has made appreciable progress over the past three years. In 1958, the Company went into production. Sales that year totalled only Rs. 3.62 lakhs. In 1960, sales totalled Rs. 3.26 crores, and the Company made a net profit of Rs. 30.41 lakhs which enabled it to wipe out the major portion of its accumulated losses, leaving a balance of Rs. 5.54 lakhs. Ferro Alloys Corporation has put in Rs. 14.50 lakhs for development rebate reserve. The Rs. 100-paid shares of the Company are quoted around Rs. 152.

Outlook for Indian Shipping

The progress of Indian shipping during the second plan might be considered satisfactory, since the target of 900,000 g.r.t. has nearly been reached. The tonnage in operation at the end of March 1961 was about 875,000 g.r.t. and in addition 60,000 g.r.t. was under construction. But the tempo of development cannot be maintained because of the meagre financial allocation for shipping in the third plan. In his presidential address at the recent meeting of the National Shipping Board—it was the first meeting of the reconstituted Board—Mr. G. L. Mehta criticised the Planning Commission's decision to allocate only Rs. 55 crores for shipping in the third plan whereas the National Shipping Board recommended an outlay of Rs. 104 crores in order to expand the tonnage at the modest rate of 100,000 g.r.t. a year. In official pronouncements, the Board has been described as "the highest policy-making body" on shipping, Mr. Mehta said. Yet its recommendations have been completely disregarded. The Commission has not responded to the Board's plea for raising the financial allocation for shipping. Referring to coastal shipping, Mr. Mehta said that the shortage of tonnage following the decision to transport 2 million tons of coal by sea clearly underlines the inadequacy of coastal fleet. But coastal shipowners could embark on modernisation and expansion of their fleet only if policies were adopted for the diversion of suitable cargoes in adequate quantities to coastal shipping.

Mr. Mehta pleaded for the development of tramp shipping and tanker trade. He also urged the compilation of essential statistics relating to the payment of freight and the transport of cargoes in national and foreign ships. As for the relationship between the public and private sectors in shipping, Mr. Mehta said that there is room for substantial expansion for both as Indian shipping accounts for only 10 percent of the country's foreign trade. But the entry of Government Corporation in the remunerative routes, where private sector companies are already operating, should be secured by supplementing rather than displacing the existing tonnage of shipping companies. Referring to the Indo-U.S. deal for the import of foodgrains, Mr. Mehta said that national sentiment and economic interests demand the participation of Indian shipping in transporting foodgrains from the U.S.A. to India. The absence of return cargoes from India to the U.S.A. presents a serious handicap. He, therefore, suggested that Indian shipping should be compensated for "ballast" one-way voyage to the U.S.A. The National Shipping Board has appointed a committee under the chairmanship of Mr. Ramaswami Mudaliar to examine the question of freight rate for the transport of foodgrains from the U.S.A. to India in Indian ships. The committee will also examine the question of adequacy of coastal tonnage and the allocation of coal and other cargo to coastal shipping. Another committee has been appointed to consider and recommend the policy to be followed by the Government concerning shipping in the public sector *vis-à-vis* shipping in the private.

Billets Shortage Hits Re-rollers

The re-rolling industry in India, which has a capital investment of about Rs. 15 crores and employs over 30,000 persons in the 93 units spread over the country, is passing through a crisis due to the shortage of billets during the last two months. Mills in Uttar Pradesh, Punjab, Gujarat, Maharashtra and Madras are said to be the major sufferers, although units in the eastern region are slightly better off. Most mills have been forced to curtail their production while quite a few are threatened with temporary closure. The Batal Engineering Company in Punjab has already closed down its rolling mills. Mukand Iron Works, which has one of the largest rolling mills in the country, was able to maintain its production at barely 50 percent of the capacity during the April-June quarter because of the shortage of billets. The receipts during May and June were less than 55 percent of average receipts during the year ended March 1961. It is reported that other mills in Bombay such as National Steel Works, Taj Iron and Krishna Steel, have all been

seriously affected by the shortage of billets. The shortage is attributed to the failure of the steel plants in the private and public sectors to achieve their plan target. The monthly requirements of the re-rolling mills are estimated around 70,000 tons. Official sources maintain that the sharp decline in the production of billets during April and May this year is the main cause of the shortage. Production which had risen to 106,000 tons in March, declined to 72,000 tons in April and further to 68,000 tons in May. The Durgapur steel works and Tata Steel more or less maintained their production but there was a marked fall in the output of the Bhilai steel works and Indian Iron. The re-rolling industry is reported to have appealed to the Government of India to arrange for the immediate import of billets from the U.S.A. under the loan assistance programme as well as from Russia and other members of the Eastern bloc with which India has rupee payment arrangements. The industry has also urged the Government to appoint an expert committee to reassess its requirements of raw materials.

T.E.L.C.O. Profit Up: Pays More

The decision of the directors of the Tata Engineering and Locomotive Co. Ltd to raise the gross dividend for the year ended March 1961 more than fulfils the market's expectations. The net dividend works out to Rs. 10.15 a share, against Rs. 8.75 a share in 1959-60, both subject to relief under Section 15C of the Income Tax Act. The shareholders stand a chance of getting a higher net return provided the anticipated tax relief under Section 15C is made available to the Company. In 1959-60, the net dividend of Rs. 8.75 a share actually amounted to Rs. 9.06 a share following the tax relief under Section 15C. The preliminary figures about the Company's working results, which have been released along with the dividend announcement, more than justify the increase in the dividend. The gross turnover has recorded an impressive rise from Rs. 28.26 crores to Rs. 37.55 crores. After deducting the excise duty, the net turnover shows a rise of about 21.2 percent from Rs. 28.04 crores to Rs. 34.27 crores. While the net turnover is up by 21.2 percent, the profit before providing for taxation and development rebate has risen by about 41 percent from Rs. 2.22 crores to Rs. 3.13 crores.

The provision for taxation has been raised from Rs. 93.30 lakhs to Rs. 1.22 crores and development rebate reserve gets Rs. 44.88 lakhs, against Rs. 14.04 lakhs in the previous year. In spite of these larger allocations, the net profit shows a rise from Rs. 1.14 crores to Rs. 1.46 crores. With Rs. 2.24 lakhs brought forward from the previous year and another Rs. 10.55 lakhs (against nil) out of Section 15C tax-free profits included in the revenue reserves of past years, the amount available for distribution is Rs. 1.58 crores, against Rs. 1.16 crores in the previous year. The distribution on the ordinary shares will require Rs. 1.16 crores and the preference dividend will take up another Rs. 8.88 lakhs. Of the amount provided for the ordinary dividend, Rs. 31.25 lakhs are to be paid out of Section 15C tax-free profits made up of Rs. 10.55 lakhs for past years and Rs. 20.70 lakhs for the year ended March 1961. The directors have transferred Rs. 20.99 lakhs and Rs. 0.75 lakhs to general reserve No. 1 and 2, respectively, against nil in both cases in the previous year. The allocation to deferred taxation reserve amounts to Rs. 8.40 lakhs, against Rs. 6 lakhs in 1959-60. This leaves Rs. 3.35 lakhs to be carried forward, against Rs. 2.24 lakhs brought in. The shares of the Company rose sharply from Rs. 366 to Rs. 382, following the announcement of a higher dividend and the encouraging working results. Corrective profit-taking brought down the quotation to around Rs. 365 cum-dividend at which price the gross yield works out to around 4 percent. The yield is not attractive, but the shares continue to be popular with investors because of the Company's growth prospects.

Minerva Mills Fare Well

The Minerva Mills Ltd has reported satisfactory results for the year ended December 1960. Apparently, the steps taken to improve the working of the mills by changing the pattern of production and the introduction of a scheme of modernisation and rationalisation have begun to yield results. The Company has earned a gross profit of Rs. 7.26 lakhs in 1960, against only Rs. 29.391 in the previous year. The sales, including premium, are down from Rs. 1.36 crores in 1959 to Rs. 1.29 crores in 1960, but the difference between the opening and closing stocks takes the figures to Rs. 1.66 crores for 1960, against Rs. 1.36 crores in 1959. The directors have set aside Rs. 6.37 lakhs for depreciation, against Rs. 3.676 in 1959. The managing agents' remuneration is maintained at Rs. 40,000, leaving a surplus of Rs. 49,447, against a loss of Rs. 14,285, in the previous year. The dividend has been skinned.

The directors state that after taking credit for the refund of income tax amounting to Rs. 6,531 and transferring Rs. 1.09 lakhs from general reserve and Rs. 60,000 from investment reserve, the total comes to Rs. 2.25 lakhs which has been used against arrears of octroi duty and bonus to clerical staff. The Company realised a capital profit of Rs. 5.57 lakhs from the sale of the bleach and dye house block. After making provision for capital gains tax, wiping out the loss on the sale of Minerva Mills investments and writing off the balance of debenture issue expenses, the surplus of Rs. 3.53 lakhs has been carried to capital reserve. The directors add that recently the National Industrial Development Corporation has sanctioned a loan of Rs. 35 lakhs for implementing the second phase of the Company's modernisation programme which is estimated to cost about Rs. 52.48 lakhs. The scheme is well under way and orders for some of the new machinery have already been placed. Out of the 144 automatic looms of the American type, ordered for replacement, 132 looms have been shipped and are expected to be erected shortly. The Company has made arrangements for getting its cloth processed and printed at a new bleach and dye house developed by its sister mill, Mysore Spinning. The Rs. 100-paid share of Minerva Mills is currently being quoted around Rs. 80. The book value of the share works out to Rs. 122.

Project for Monitoring System

Solartron (India) Ltd is a new Company which has been formed to undertake the manufacture of equipment for the monitoring system. The project, estimated to cost Rs. 10 lakhs, has been sponsored by J. N. Marshall and Company with technical and financial collaboration from Solartron of the U.K. It is stated that the monitoring system, which will be produced for the first time in India, can be used for control of various types of machinery and equipment. It includes a wide range of equipment such as radar stimulators, data-handling computers and the machines for dynamic analysis. The factory will be located in Pimpree, near Poona. The production of components of the monitoring system will start from October. In the initial stages, the output will be of the value of about Rs. 6 lakhs a year. J. N. Marshall and Company has formed another enterprise known as Cambridge Instruments (India) Ltd with technical and financial collaboration from the British firm of Cambridge Instruments. The Company will manufacture new types of industrial instruments. Marshalls are already making industrial instruments of the value of about Rs. 9 lakhs a year; this is likely to increase to around Rs. 16 lakhs in the first year of production under new collaboration arrangements.

Mukand Iron Maintains

The shares of Mukand Iron, which were bid up to an all-time high of Rs. 33.50 on 27th June, were sold down to Rs. 28.50 on 3rd July. The sharp decline reflected the market's disappointment over the Company's decision to maintain the dividend for the year ended March 1961, at 12 percent, less tax. But Mukand Iron has done very well indeed, and although the dividend has only been maintained, it has cost the Company an additional Rs. 2.41 lakhs because of the increased capital. Preliminary figures indicate that the gross profit, after providing for depreciation and before taxation, is substantially higher at Rs. 46.68 lakhs, against Rs. 31.49 lakhs in the previous year. Taxation absorbs Rs. 25 lakhs (against Rs. 13.25 lakhs), development rebate reserve Rs. 1.70 lakhs (against Rs. 2.50 lakhs) and general reserve Rs. 10 lakhs (against Rs. 8 lakhs). The proposed dividend, although maintained at Rs. 1.20 a share, less tax, absorbs Rs. 10.39 lakhs, against Rs. 7.98 lakhs in 1959-60. The carry-forward is nil, against Rs. 3,253 brought in. Capital redemption reserve at Rs. 10 lakhs (against nil) consists of part of the profits and of the amount collected by the Company out of the redemption of preference shares during the year. After being marked down to Rs. 23.50, the Company's shares have steadied around Rs. 29.75 but prospects of any marked and sustained recovery in the immediate future are generally discounted, since the Company, which has one of the largest rolling mills in India, is facing an acute shortage of billets. The supply of the latter during the April-June quarter was hardly sufficient to maintain production at 50 percent of the capacity. Besides, receipts of billets in May and June are said to be less than 55 percent of average receipts during 1960-61.

Anglo-French Textiles Profit Up

The shares of Anglo-French Textiles, which could be bought around Rs. 113 early in the year, are now quoted around Rs. 147. Investors' optimism which has brought about the rise in the share price is reflected in the fact that the interim dividend will absorb Rs. 2 lakhs, leaving

justified by the Company's working results for 1960. The dividend has been raised from Rs. 11 to Rs. 15 a share, free of the French-Indian income tax. The gross profit of Rs. 36.75 lakhs shows a rise of 80 percent over the 1959 figure of Rs. 20.61 lakhs. Provision for depreciation amounts to Rs. 7.64 lakhs (against Rs. 6.25 lakhs) and taxation is higher at Rs. 3.34 lakhs (against Rs. 1.73 lakhs). Bonus for employees has absorbed as much as Rs. 10.40 lakhs (against Rs. 3.90 lakhs). General reserve claims Rs. 5 lakhs (against Rs. 2 lakhs). The proposed dividend absorbs Rs. 4.50 lakhs, leaving Rs. 21.374 to be carried forward, against Rs. 17,224 brought in.

In his statement to shareholders accompanying the Company's annual report, the chairman, Mr. R. M. King, states that the results for the year are encouraging in refreshing contrast to the gloom at the beginning of the year. But the position in the current year is again causing concern to the directors as Britain's offtake has been reduced by an adjustment of importers' quotas of Indian cloth. Sales in west Africa, Indo-China and Australia have suffered a setback. The Company's modernisation programme has made considerable progress, involving an outlay of over Rs. 54.48 lakhs. It is expected that by the end of 1962, the spinning department will be completely renovated and a further programme of renewals will follow with the installation of automatic looms. The chairman says that the Company has benefited considerably by the export incentive scheme and that sales in the home market have also increased in spite of strenuous competition. Mr. King has given a hint that Anglo-French Textiles is not going to redeem for some years the 6-percent cumulative preference shares which are currently quoted around Rs. 72. At the current price of Rs. 147 cum-dividend, the ordinary shares of the Company offer a gross yield of 11.2 percent.

Globe Auto Electricals

Globe Auto Electricals Ltd is a new enterprise which has been formed to undertake the manufacture of a wide range of motor-car ancillary equipment such as windshield wipers with motors, ignition coils, voltage regulators, ignition distributors, breakers for horns, condensers, breakers for regulators and distributors. The project, which has been sponsored by Mr. Ratilal Zataki, chairman of the Globe Industries Private Ltd, is estimated to cost about Rs. 30 lakhs, of which the foreign exchange component will be around Rs. 8 lakhs. The cost of imported machinery is proposed to be met by a loan from the Industrial Credit and Investment Corporation of India for which the Company has already submitted an application. The latter has entered into technical collaboration on a royalty basis with Magneti Marelli of Italy. The Marelli electrical equipment is incorporated as original equipment in the Fiat cars produced in India. The issued capital of the Company will be Rs. 17 lakhs in equity shares of Rs. 100 each, of which Rs. 10 lakhs will be offered to the public. The entire issue has been underwritten by Messrs R. R. Nabar and Company, managing brokers to the issue. The Company is expected to enter the market for raising capital some time next month. The factory will be located in Greater Bombay. The Maharashtra Government has assured the Company land and power required for the factory. The plant is expected to go into production by the end of next year. Its production initially will be around Rs. 30 lakhs a year and it will be raised in stages to Rs. 50 lakhs a year. The project will save about Rs. 25 lakhs of foreign exchange a year in the initial stages. Total imports of motor-car electrical equipment in the country at present are valued around Rs. 1 crore a year.

Dena Bank Pays More

Bank shares have been in the limelight for quite a long time and have recorded impressive gains since the beginning of the current year. Bank of Baroda have risen from Rs. 80.50 to Rs. 102, Bank of India from Rs. 97 to Rs. 123, Central Bank from Rs. 47 to Rs. 62.30, Dena Bank from Rs. 52 to Rs. 61, Punjab National Bank from Rs. 19.28 to Rs. 22.64 and United Commercial Bank from Rs. 67 to Rs. 91.50. Sustained support for these shares is based on a favourable assessment of the prospects for the industry in view of the growing demand for credit and high lending rates. The increase in interest rates on deposits from April is unlikely to have much effect on banks' profits. Meanwhile, the list of half-yearly bank results has opened on a promising note. The net profit of Devkar Nanjee Banking Co. Ltd for the half-year ended June 1961, amounts to Rs. 15.10 lakhs, against Rs. 10.18 lakhs in the corresponding period of last year—a rise of about 50 percent. The directors have recommended an interim dividend of Rs. 2 a share (Rs. 50 paid) against Rs. 1.50 a share paid for the half-year ended June 1960. The interim dividend will absorb Rs. 2 lakhs, leaving

The BEHAR FIREBRICKS & POTTERIES LTD.
22, STRAND ROAD, CALCUTTA-1

Rs. 20.96 lakhs, which includes Rs. 7.86 lakhs brought in from the previous year's accounts, to be carried forward to the next half-year.

Bank of India Interim Up

The Bank of India—one of the "Big Five"—has also good news for its shareholders. The interim dividend for the half-year ended June 1961, has been raised to Rs. 4 a share, taxable, against Rs. 3.75 a share, taxable, paid for the first half of 1960. The bank has earned a net profit of Rs. 47.85 lakhs during January-June 1961, against Rs. 42.65 lakhs in the corresponding six months of 1960. The increase is rather small, but since the profit has been arrived at "after marking the usual provisions for contingencies," it is difficult to say how the bank has actually fared. The interim dividend absorbs Rs. 24 lakhs (against Rs. 22.50 lakhs), leaving Rs. 36.70 lakhs (subject to taxation) to be carried forward to the next half-year, including Rs. 12.85 lakhs brought in from last year's accounts.

Sri Ramakrishna Earns Less, Pays Same

Sri Ramakrishna Mills (Coimbatore) Ltd report a lower profit for the year ended March 1961, but the dividend is maintained at the last year's rate of 23 percent. The net profit for the year amounts to Rs. 9,82,482, after meeting all expenses and interest and after providing Rs. 4,79,646 for depreciation. The net profit for the previous year was Rs. 14,55,475, after providing Rs. 4,19,969 for depreciation. Adding a sum of Rs. 18,944 which was the provision for contingencies and now transferred to the profit and loss account, the total available for appropriation comes to Rs. 10,01,426. After providing Rs. 74,894 (against Rs. 94,017) for development rebate reserve, Rs. 64,939 for general reserve (against nil), Rs. 3,85,000 for taxes (against Rs. 6,00,000), Rs. 3,53,485 for a dividend of 23 percent, taxable (same as in the previous year), and making other adjustments, a sum of Rs. 3,718 is carried forward to the next year. The directors state that the steady rise in cotton prices during the year, coupled with a fall in the yarn prices of the particular counts spun by this mill, and the increase in wages consequent on the Wage Board award, have resulted in the reduction of the Company's profits. During the year, the Company started installing American-made Whitin combers. Arrangements are being made to complete the erection and to commission the same at an early date.

Pankaja Mills Earn a Profit

The working of the Pankaja Mills Ltd for the year ended December 1960, has resulted in a net profit of Rs. 6,54,450, after providing Rs. 1,37,839 for depreciation. After adjusting certain income and expenses relating to 1959 which have been accounted this year, and deducting Rs. 451 being the donations paid this year, the profit comes to Rs. 6,67,234. The directors recommend to use this sum towards reducing the losses of previous years. In view of the carried forward losses, the directors are not in a position to recommend any dividend, and they declare that no dividend would be declared until past losses are wiped out. After adjusting the year's profit against the previous years' losses, the balance of loss now carried forward to the account comes to Rs. 25,12,214.

Cauvery Spinning Raises Dividend

For the year ended March 1961, the Cauvery Spinning and Weaving Mills Ltd show a higher profit and pay a better dividend of 15 percent. The net profit amounts to Rs. 6,77,832.25, after providing Rs. 4,16,075.53 for depreciation, as against the previous year's Rs. 5,61,182, of which the allocation for depreciation was Rs. 3,39,801. Adding to the year's profit a sum of Rs. 15,033.76 brought forward, and also a sum of Rs. 17,580.20 being the excess provision for taxation, the total available for appropriation comes to Rs. 7,10,446.21. Out of this, a sum of Rs. 11,000 is transferred to development rebate reserve (against Rs. 1,30,000). Provision for taxation comes to Rs. 2,43,000 (against Rs. 1,70,000). A sum of Rs. 65,000 is transferred to general reserve (against nil). The preference dividend at 8.93 percent, subject to tax, amounts for Rs. 58,259.32. A dividend of 15 percent, taxable,

CORRECTION

On page 928 of the issue of Capital dated 15th June, in the paragraph entitled "Coffee Prices and Marketing", the chairman of the Coffee Board was referring to the payment of Rs. 2.23 a point for 1959-60. His view was that the payment for the 1960-61 crop would be lower than the payment for the year. As the final payment for 1959-60 has not yet been made, it cannot be said with certainty at what rate the payment will be made. These clarifications are made to allay any misunderstanding of his statement.

is recommended on the ordinary shares (against 13 percent). This dividend will absorb Rs. 1,40,484. The balance of Rs. 16,719.35 is carried forward. The directors mention that the Company has now on order three combers and two high-speed drawing frames. These are expected to be delivered shortly. They are expected to be commissioned before the end of August this year, and will enable the Company to produce combed yarn of superfine counts, which are in good demand. The Company has also embarked on a renovation programme of the old unit and an order for 14 ring frames has already been placed for delivery in 1962.

Land Ceilings and Mechanised Farms

An agency message giving the gist of the final draft of the third plan, as far as land ceilings are concerned, says: "The plan draws attention to the fact that while making laws for ceilings, some States like Maharashtra and Uttar Pradesh have not exempted efficiently managed sugarcane farms attached to factories and also efficiently managed general farms. The plan is believed to have recommended that where a State has not exempted such farms, it should ensure that the integrity of the farms should be maintained and that their levels of efficiency are not impaired. In the case of sugar factory farms, satisfactory and continuous supply of sugarcane to the factory concerned should be secured." While the Maharashtra Bill has only recently received the assent of the President, in Uttar Pradesh—where the Ceiling Act has been on the Statute Book for about a year—the State Government is already having second thoughts on this issue.

Mr. C. B. Gupta, the new U.P. Chief Minister, has publicly questioned the wisdom of the previous Cabinet's decision against exempting large-scale farms from the mischief of the Ceilings Act. According to him, it is not only against the previous recommendations of the Planning Commission, but is also against the aim of improved efficiency and increased production. He said that the Government would accordingly bring forward a suitable amendment to the Act. The ex-Chief Minister, Dr. Sampurnanand, lost no time in joining issue with Mr. Gupta. Dr. Sampurnanand's main argument was that the proposal to bring large farms also under the Ceilings Act had the specific approval of the Prime Minister, Mr. Nehru. The latter was also credited with being the author of the formula for maintaining the integrity of the large farms by handing over their management to co-operatives. If this was not possible, they were to be run directly by the Government. Whether or not it was Uttar Pradesh's questionable example which encouraged Maharashtra to follow suit, it is not possible to say. But it would appear that in both States, political considerations have influenced policy decisions. The Planning Commission would also seem to be helpless in enforcing its edicts on the States which are bent on pursuing their own policy concerning land reform.

TEA IMPORTS INTO U.S.A.

THE Treasury at Washington has just issued to all the Officers of Customs and others concerned a copy of "An Act to prevent the importation of impure and unwholesome Tea" into the United States. Under the provisions of the said Act a board, consisting of seven tea experts, is called into being whose duty it is to prepare and submit to the Secretary of the Treasury standard samples of tea of all kinds imported into the States. These samples shall exhibit the standards of purity, quality, and fitness for consumption of all tea or "merchandise described as tea", that will be allowed to be imported. These standard samples will be deposited at the Custom Houses at the various ports, and all importers and dealers can have duplicate samples by paying for them. The rules for the examination of imports, as laid down by the Act, are of the most stringent order, and provide that in all cases the tea shall be tested "according to the usages and customs of all trade, including the testing of an infusion of the same in boiling water, and, if necessary, chemical analysis." The tea which, after examination, or re-examination by the customs expert, is found not up to the standard sample deposited in the Custom House, will not be allowed entrance into the United States for consumption, and will be held under a special tea bond until it is either destroyed or exported according to law. If any tea, which has been rejected and exported, shall again be reimported into the United States, it will be seized and forfeited by the Customs authorities. The provisions under this Act came into force on the 1st of May last, but all teas shipped prior to that date will be governed by the old standards. It will be seen, therefore, that our great American customer will have nothing but good tea, and this ought to be an additional incentive to the Indian planter to make quality the first and foremost aim in the production of the commodity.

FROM
CAPITAL,

A Ditcher's Diary

IT IS ENTIRELY RIGHT THAT AFFAIRS IN THE ARMY are not widely discussed in public for few know much about them. Mr. Nehru must know that his rather casual explanation of why it was that General Thimaya submitted his resignation did not convince many; and his recent remarks on greater political consciousness in the armed forces were only a feeble response to serious allegations made by Acharya Kripalani and others. In an intelligent army political consciousness is inevitable and not at all a bad thing. But let us see the nature of the politics of which officers and men are now awed more conscious. We may be sure that abstract political principles stir but few. Is it then the average Indian politician's politics that engage the minds of India's defenders? This seems more than probable; and what those politics are composed of Mr. Nehru knows better than anyone else. Nobody has deplored more eloquently and bitterly that they generally consist of regional or caste loyalties, and petty intrigues for self-advancement at the expense of the institution one is supposed to serve. Promotions now do not go to good officers as a matter of course; and so many senior officers have left the army for one reason or another that in the public mind misgivings have of late multiplied. I have heard the most disturbing stories about cliques in officers' messes, about General Such-and-Such being Minister So-and-So's favourite or eyesore. Many stories are probably exaggerated by the frustrated; but there are enough of them about to make Mr. Nehru take another look at the state of the country's armed forces. His routine defence of Mr. Krishna Menon is all right, I suppose, in less serious matters; but in the armed forces, once here is any loss of confidence in the Government's fairness, anything can happen. Much has happened already in neighbouring countries; and it is no use saying it cannot happen here. It can.

WHILE ON THE SUBJECT OF THE ARMY, IT HAS puzzled me for some time why it should be necessary to prevent the public from seeing how it plays its golf. I am talking about the high hedge which has been grown round the army's Maidan course, or at least that part of it which fronts the tram track and the main road. What has reminded me of this is that the hedge has just been trimmed and I have been able to catch my first sight of Fort William from this particular angle in over a year. Now one of Calcutta's few attractive features is the extent of the view across the Maidan, and to reduce the horizon with a high hedge is to deprive long-suffering ditchers of a valuable amenity. I have been trying to imagine why the army should do it. Are its gallant officers, always confident enough on parade, so diffident about their golfing prowess that they have to discourage the gaze of an inquisitive public? If so, then I suggest they take courage from the ladies who play on the course across the road. Is it that their play is so bad that a barrier is necessary to stop wandering golf balls? If this is the truth then perhaps the loss of a few balls would be an incentive to a better performance. Or is it simply that, as with their housebuilding on the Ellenborough Maidan, the army just did not consider the interests of the general public when going about

its own affairs? I regret to say I suspect the latter explanation, although in this the army is behaving no more selfishly than other official bodies in this city. May I suggest to the powers that be up at the Fort that the hedge be kept trimmed, at least to the level which seems to be observed fairly conscientiously by other sports clubs on the Maidan. That way people travelling on the trams, or by car along the road, will be able to enjoy once again one of Calcutta's pleasanter views.

OF THE VARIOUS EXPERT SUGGESTIONS FOR IMPROVING Calcutta, the one that has frightened me most is that the city be "built upwards". Without going too deeply into all the dismal facts about the shortage of housing and office accommodation and the need to economise on valuable space, I think I can claim to appreciate most of the advantages of the proposal. But it is the disadvantages which persist in exercising my imagination. I can picture the city as a mass of skyscrapers, but what mercifully does escape my grasp is the exquisite degree of discomfort which is likely to be felt in the streets when all breezes are excluded and all smells and exhaust fumes sealed in. If the planners' idea is to make Calcutta into some imitation of Manhattan, then I would plead with them to think of what they would be doing. This is not a temperate city; it is most decidedly a tropical one. In Calcutta it not only gets hot, as I believe it does in New York, but it stays that way for the better—or should it be the worse?—part of the year. Already the summer heat is just about unbearable in all except air-conditioned offices and motor-cars. If it gets any worse, as it would by shutting out all the moving air, then productivity might fall even lower than it is now. Tempers become more easily inflamed, and the purpose of modernisation be defeated. No doubt conditions could be improved by spacing the high buildings far enough apart and interspersing them with gardens and parks. But that would negate the space-saving advantages of building upwards, and besides, Calcutta has simply not yet learned how to look after and cultivate its open spaces. The alternative might be to air-condition the streets, but I doubt if that is practicable in the foreseeable future. Artificial wind-making, by means of giant fans, could be more of a proposition. Frankly the whole idea dismays me. And if anybody does not feel the same way, may I ask him how he thinks he will feel struggling up to his office on the umpteenth floor on that hottest day of the year when, as usually happens in Calcutta, the lifts have all broken down at once.

THERE IS CAUSE ENOUGH TO BE WORRIED ABOUT THE divisive forces which are in the ascendant in the country; but I am not on that account disposed to take the Congress Party's concern over it at its face value. Little has been done about the report of the National Integration Committee, presided over by Mrs. Indira Gandhi; and I expect less from the Chief Ministers' conference Mr. Nehru has suggested for next month. Mrs. Gandhi's latest idea that dynamic patriotism be inculcated through text-books made me laugh; when I stopped

I began to wonder whether this was not, after all, her admission that nothing much could be done with the erring elders. Then let me tell her that she is unlikely to succeed with the children either who, in our time, do not believe a word they read in their text-books—often rightly. And when the Union Ministry of Education, whose failure in improving anything it ever touched is writ large throughout the country, is asked to undertake the task, I wonder if current text-books will ever be taken seriously by anybody. The one concrete suggestion discussed this week in Delhi was that there might be a cadre of educational service "with a wide and all-India outlook". Reviving the old Indian Educational Service? Could be; or perhaps just "jobs for the boys". But, surely, Mr. Nehru knows that every suggestion made on these lines by the States Reorganisation Commission has been resisted by the State Governments—all Congress controlled. The fact is that the all-India outlook is simply not wanted in the States; and in this they have been allowed to have their way by the Centre. Nor is the reason for this tolerance very obscure. But whatever the origin, the fact is that the Congress will not enforce such all-India outlook as it may possess in the higher reaches until the elections are out of the way; and during the elections so many commitments have been made on caste or other parochial considerations that the consequent integration will be negligible.

THE ASTONISHING BOOM WHICH HAS BEEN GOING ON for the past few years in the international prices of works of art owes very little, one must regretfully admit, to any increase in the level of world artistic appreciation. The reason for it is quite simply the constant search for hedges against inflation. The trend has been accentuated lately because Americans are losing faith in their dollar, and some of the prices which are now being offered for collectors' pieces are reaching astronomical proportions. I see from the July issue of *Pick's World Currency Report*, that recognised authority on international currency devaluations, that Leonardo da Vinci's *Head of a Woman* was recently bid up to \$2 million after being offered at no less than \$5 million. This year, Goya's small portrait of the Duke of Wellington fetched \$392,000 at Sotheby's in London. French Impressionist and Post-Impressionist paintings are still in great demand. Renoir's *L'Enfance* has changed hands at \$168,000. Toulouse-Lautrec's *Danseuse* was sold this year for \$80,000; Picasso's *Fernande* \$75,000. Manuscript and old books continue to fetch huge sums. A 15th century manuscript *Herbal and Bestiary* was sold in London recently for \$92,400; the first four Shakespeare folios brought \$50,400, while in New York the first edition of *Don Quixote* drew \$44,000—probably more money than Cervantes ever saw in a lifetime. French 17th and 18th century furniture remains in good demand, and—a fact which should gladden the hearts of penurious English gentry, whose houses are often full of the stuff—Chippendale is now fetching increasing prices. In Paris, a small Louis XVI table recently changed hands for \$48,000, while a Louis XIV desk reached \$32,000. For those who see in all this, a way of getting rich quickly it is only fair to point out that it is a highly specialised game, and certainly not one for beginners. Perhaps that is why there is still such a good international demand for gold, although nowadays that is only holding its own as a hedge in countries where the value of the currency is deteriorating rapidly, as apparently, in India.

MR. M. G. BHAGAT'S REVIEW

Speech delivered by the Chairman of the meeting Mr. M. G. Bhagat, M.A., B.Sc., at the Forty-ninth Annual General Meeting of the Shareholders of Bengal Potteries Limited on Thursday, the 29th June, 1961.

Gentlemen,

I am delighted to welcome you to the Forty-ninth Annual General Meeting of the Company.

The audited accounts and the Report of the Company's Directors have already been circulated, and I hope I have your permission to take these as read.

Before I express my views with regard to the working results of the Company for the year ending 31st December, 1960, I would like to inform you that our Chairman, Sir Shri Ram, on account of being rather unwell, has been unable to attend today's meeting. I need hardly add the great services rendered by Sir Shri Ram to this Company. You fully know how extremely fortunate we are in having his valuable advice for guiding our policies during the last several years. I am sure I am voicing your good wishes, to which I add my own, for a speedy recovery to normal health of Sir Shri Ram.

The audited accounts for the year under review have been before you for some time now. I would like to state that the Company has been making a steady improvement in all spheres of its activities. Our sales have increased by Rs. 27 lacs as compared to the year before. We have maintained the prices of our goods at the same level throughout. As a matter of fact in certain items we have reduced our prices. However, the cost to the Company of all raw materials and stores has increased considerably. Naturally this has affected to some extent, the working results of your Company.

The Directors have recommended the transfer of Rs. 3,80,000 to General Reserves besides the transfer of Rs. 48,070 to Development Reserve which, as you know, under statutory provisions, has to be made for the purpose of replacement of machinery and equipment. Although the Directors have recommended a dividend of 15%, which is slightly higher than what was paid last year, on account of the new procedure of statutory deduction of tax the net result will be 10.5% tax free dividend.

Production

Our production in Factory No. 1 has increased, although the equipment and the firing capacity in this factory remained the same. Unfortunately on account of the miscalculation of our gas producer suppliers, our Factory No. 2 is still running below capacity for want of adequate gas supply for our furnaces. However, the production of this factory is higher for the year under review than the year before.

I am glad to inform you that after nearly one and a half years of great effort, we have succeeded in getting an import license for importing an extra capacity of larger capacity. According to the present available information, we feel that this gas producer will be in operation within the first half of 1962. It will then be possible to increase the production of Factory No. 2 considerably.

You have been informed that the Company has signed an Agreement for technical collaboration with the well-known firm of M/s. Rosenthal-Isolatoren GmbH of Selb, West Germany, in order to increase the manufacture of high tension and low tension insulators. I am glad to say that the Technical Director of this German firm along with two of his technical colleagues joined the Company on the 2nd April 1961, and they have already started work on planning a new type of layout in our Factory No. 2, to improve the quality and increase the quantity of our high tension and low tension insulator production. We have had to import extra equipment, in addition to the gas producer already mentioned above in connection with increasing this capacity. Some of the equipment has already arrived in Calcutta, and the rest is expected before the end of this year. It is my belief that when the plans for this increased production have been completed, which I hope we shall be able to accomplish by the end of 1962, your Company will be one of the largest producers of electrical porcelain in the world. It

will surely be by far the largest in this Country. The demand for high tension insulators, on account of the great impetus given to electrical power production in the third five-year Plan, is considered to be very large. Further, the demand of the Post & Telegraphs Department for low tension insulators is also increasing considerably, and your Company has made adequate arrangements for meeting the increased demand of this Department.

In addition to the improvements which we have planned for our insulators, we are seeking technical collaboration for improving the quality of our tableware production, and to reduce our production losses. It is my belief that in next year's report we may be able to give you some definite results of our present efforts towards this end. I am also glad to inform you that we have received from the Central Government, a license for the production of high class translucent china. Your Directors are constantly making efforts to improve and enlarge the scope of your concern.

Sales

I am glad to state that our sole selling Agents, M/s. Allied Distributors & Co. have increased the number of Depots and dealers for retailing our tableware. It is a matter of great satisfaction that the products of your Company are at present available in all parts of the Country at uniform and controlled prices, through the efforts of our Selling Agents.

Excise Duty

On the 1st of March this year, the Central Government imposed an Excise Duty on our products. All production of Tableware after 1st March, 1961, has been levied an Ad Valorem duty of 15% on our prices, and all insulators an Ad Valorem duty of 10%. This has naturally increased the retail prices of these commodities by an amount equivalent to the Duties levied in each case. We cannot say as yet how this increase in prices is going to affect the sale of our products in the years to come, but we feel that the rate of Excise Duty levied on crockery and insulators is extremely high. This is a young industry, and it is quite possible that while it is growing to maturity, such a heavy burden of taxation may affect its growth. We are making efforts to persuade the Central Government to reduce the quantum of Excise Duty.

Loans from I.C.I.C.I.

To meet the Foreign Exchange requirements for the purchase of the new equipment for our development plans, and other finances, we have obtained foreign exchange & Rupee loans from the Industrial Credit & Investment Corporation of India Ltd., Bombay. We are hoping that the amount of the loans will be made available to us by the end of July.

Export

We have been exporting our goods on a small scale, but we expect that in the year 1961, we shall be able to export a fairly large amount of our products. I may inform you that the prices available to us in Foreign Countries for our products are lower, and we have to export our products at a loss, but in order that we perform our duty for the maintenance of Export Targets fixed by our Government, we have undertaken this Export.

Labour Relations

Our Labour relations, I am glad to say, with our employees have been very satisfactory. For the work of the year 1960, we have paid 5½ months Bonus calculated on basic salary to our employees. The Elected members of the workers are constantly consulted in framing the labour policies of the Company.

I will now take this opportunity of conveying my own and the Board's appreciation of the excellent work done by all our employees.

I thank you very much indeed for giving me a patient hearing and for the courtesy extended to me, Calcutta.

29th June, 1961.

Note—This does not purport to be a record of the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

CALL RATE FALLS

Wednesday, 12th July.

THE seasonal fall in bank advances has continued in the Calcutta money market during the past week. Slight increases have been recorded in demand from the engineering and iron and steel industries and against foodgrains and seeds storage. The other main sources of demand have, however, reduced their offtake, including the jute, sugar and cotton industries. In the interbank market, conditions have become slack and the call rate is down to between 3½ and 3¼ percent.

There has been some improvement in the supply of exchange documents during the past week, mainly because of an increase in the supply of gunny bills. The supply of tea bills has been moderate. Remittance demand has remained strong. In the London money market, the pound has weakened further on the news that Britain's foreign exchange reserves dropped by another £47 million during June. Against the U.S. dollar the pound has recorded its lowest level in recent years. Closing quotations showed considerable losses against all important currencies.

BULLION WAS QUIET IN THE PAST WEEK DUE TO THE lack of support. Silver declined from the previous week's level of Rs. 233.50 to Rs. 233, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 199.25. The London and New York prices were 79½d and 91.375 cents.

Gold was quiet in sympathy with silver and the price fell from Rs. 143.50 to Rs. 142.50. The sovereign at Rs. 95.75 showed a loss of 50P.

DURING THE WEEK ENDED 7TH JULY, GOVERNMENT of India Treasury bills for Rs. 7,53,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 11th July. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.335 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.650 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 17th July.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 12th July to 15th July at Rs. 99.356 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 5th July to 8th July amounted to Rs. 3,50,00,000.

ACTIVE NOTES ROSE BY RS. 15.86 CRORES TO RS. 1,949.27 crores, according to the return of the Reserve Bank of India during the week ended 7th July, 1961. The total note issue was Rs. 1,50 crores smaller at Rs. 1,976.72 crores. Foreign securities of the paper currency reserve were reduced by Rs. 10 crores to Rs. 93.01 crores, while rupee securities were increased by an equivalent amount to Rs. 1,646.93 crores. These changes were reflected in the Banking Department by transfer of securities. Balances held abroad rose by Rs. 5.76 crores to Rs. 16.54 crores only, but investments declined by Rs. 5.93 crores to Rs. 183.56 crores. Deposits of the Government of India fell by Rs. 5.17 crores to Rs. 54.51 crores, as did other Government accounts by Rs. 6.22 crores to Rs. 8.96 crores. Balances of commercial banks at Rs. 91.69 crores showed a decline of Rs. 3.04 crores. Other loans and advances declined from Rs. 130.41 crores to Rs. 123.79 crores, of which advances to scheduled banks against usance bills amounted to Rs. 6.54 crores (Rs. 10.50 crores). Ways and means advances stood at Rs. 37.16 crores, against Rs. 34.30 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 30th June, 1961, shows a rise of Rs. 7.45 crores to Rs. 529.72 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 5.98 crores and Rs. 5 lakhs to Rs. 225.59 crores and Rs. 9.95 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 1.75 crores to Rs. 260.73 crores. Cash and balances are, in consequence, shown at Rs. 31.77 crores, or Rs. 8.96 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 30th June, 1961, shows Demand and Time liabilities at Rs. 862.49 crores (Rs. 29.74 crores on account of borrowings from banks) and Rs. 1,114.42 crores (Rs. 20.04 crores), compared with Rs. 837.53 crores (Rs. 31.62 crores) and Rs. 1,122.71 crores (Rs. 18.11 crores), respectively. Cash and balances with the Reserve Bank have increased by Rs. 6.94 crores and Rs. 13.98 crores to Rs. 54.56 crores and Rs. 87.62 crores. There is a rise of Rs. 3.62 crores to Rs. 549.01 crores in investments. Advances and bills discounted at Rs. 1,275.96 crores show an increase of Rs. 1.73 crores. The ratios to total liabilities of cash and

balances, and of advances and discounts are, in consequence, shown at 7.2 percent and 64.5 percent, against 5.7 percent and 65 percent.

Carrier gets star billing at Shanti Theatre, Madras

We're star performers here and at many other leading theatres. Not exactly show people. We're not seen. Not even heard! But we're there all the same. Keeping audiences cool and comfortable throughout the year.

We're air conditioning people. Play to packed houses. Add to box office receipts. Get rave notices about our sound performance. About our dependable Carrier equipment. The way Voltas engineers install and service every project. No need for press agents! Theatre managers (nice people!) often wax eloquent about us. "Carrier and Voltas," they say, "are the people who know air conditioning best".

Some other cinemas air conditioned by us:

Elite, Calcutta • Eros, Bombay
Filmstan, Delhi • Liberty, Bombay
Lighthouse, Calcutta • Metro, Bombay
Minerva, Madras • Naaz, Bombay
Radha, Calcutta • Relief, Ahmedabad

Stocks and Shares

SENTIMENT WEAKENS ON NEW RESTRICTION FEARS

NEW GOVERNMENT LOAN EXPECTED SOON

Wednesday Evening.

SENTIMENT has weakened in speculative shares during the past week. Lyons Range is worried by rumours that the Stock Exchange Directorate of the Finance Ministry may press the market authorities to impose further controls in the form of margin regulations and minimum brokerage. A Press report indicates that the Bombay stock market is closely examining the Government's suggestions. In spite of the decision of the Bombay stock market to maintain the status quo under present conditions, it seems doubtful that the directives of the Government will be ignored in the long run.

A sharp decline to Rs. 109.55 crores in the foreign exchange holding of the Reserve Bank has caused a great deal of concern. As these reserves now stand near the minimum figure which has to be maintained for backing the currency, it is wondered whether the Government will empower the Reserve Bank to cut its currency backing further in order to meet the current deficits on the foreign account. Considering that India is entitled to draw more credit from the International Monetary Fund, it is possible that this source of finance may be used for the time being. Anyway, some such measures will be needed because the foreign aid promised by the Aid-India Club countries is not likely to be available until the end of the current year. It is also not known how much of the coming financial assistance will be available for meeting the deficit on current account. Meanwhile, concern is being felt about maintaining the necessary imports which are essential for using the industrial capacity already installed.

Reports of widespread floods in different parts of the country are being examined carefully. If agricultural production is hampered, there could be a further boost to inflation.

A striking feature is that in spite of the weakening of speculative shares, prices of selected miscellaneous, coal and cotton mill shares have been well maintained. Holders are not inclined to sell in view of the improved corporate outlook. There is evidence of a shortage of good scrip, so any small support tends to inflate prices out of proportion to the volume transacted.

Money conditions have become easier, but it remains to be seen whether any portion of banking resources will be diverted into stocks and shares. As banks are not permitted to advance money against shares to the extent of more than 50 percent of the value of securities, further restrictions on the flow of banking credit into the stock markets are not foreseen.

Steel shares are quiet, mainly due to lower advices from Dalal Street. A Press report says that the application of the Tata Iron and Steel Co. to the Government of India for a further increase in steel retention prices for 1955-60, does not appear to have met with warm response. So Bombay interests fear that the coming dividends of the Tata Iron and Steel Co. may not show any further improvement. Indian Iron shares have closed lower at Rs. 27.70 on fears that the carry-forward charges will be substantially higher in the next settlement because the books of the Indian Iron and Steel Co. will close on 5th August for the purpose of dividends.

Engineering shares have been subdued partly in sympathy with steel shares and partly due to shortages of raw materials and electric power. Scattered interest has been taken in Texmaco, J. K. Engineering, Guest, Keen, Williams and Braithwaite at lower prices. Binani Metals have declined on profit-taking, but Burn are steady on producing a satisfactory report. Indian Oxygen have been steady due to investment support.

The miscellaneous section has produced many bright features, although the top levels were shaded at the close on profit-taking. Dunlop Rubbers have been steady on talk of a bonus share issue, but the price is now lower. Interest has been sustained in Isaac Holdens. Associated Battery, Britannia Biscuits and Metal Box. Alkali Chemicals have hardened on fresh support. Indian Aluminium, Rohtas and Hindustan Motors have reacted on profit-taking. Indian Coppers have slipped back on an authoritative report that the Company will not issue any further share for the time being. Goodyear India met with better support as soon as they were listed a few days ago. Hindustan Aluminium are being fancied on growth prospects. Union Carbide are steady and National Insulated Cable have improved on rumours of a higher dividend. Among electric shares, Calcutta Electric are in demand. Tobacco shares are quiet and National Tobacco have lost, as have Imperial Tobacco. Cement shares have been quiet, but fluctuations are narrow. Paper

scrip are neglected and prices of Orient and Titagarh have declined on balance.

Business has been limited in coal shares, but prices of selected scrip have hardened further. Bengal and Burrakur have improved. Katras Jheriah have risen on producing a good report. Interest has been taken in East Indian, Amalgamated and Western Bengal. The Raneeunge Coal Association Ltd has declared an interim dividend of 17 percent, taxable, for the year ended March 1961, but this dividend is to be regarded also as the final payment for the period. The Company has also decided to issue rights ordinary shares at par in the proportion of two new shares for every five held.

There has been a bigger turnover in jute shares, but investors are still hesitant on the view that most of the mills will show substantial losses during the current year. Business has been done in New Central, Birla, Anglo-India, Megna, Ganges, Union and Howrah.

Cotton mill shares are firm on prospects of higher production following more abundant supplies of raw cotton. Kesoram have improved on producing a satisfactory report and J. K. Rayon are in demand on good working reports. Business has been done in Jay Shree, Dunbar and Elgin.

Interest has been subdued in sugar shares in view of the losses on exports. Business passed in Carew, Ramnugger, Belsund and S.K.G.

An improvement in auction sales held in Calcutta on Monday helped to harden the prices of selected tea shares. Support has been extended to Bishnauth, Tezpor, Jay Shree, Hasimara, Hantapara and Basmatia.

Government securities are steady, but business has been restricted due to two factors. The first is that sellers are reserved; the second that the

MORE PIPES
to meet the
nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

Reserve Bank has stopped open market sales during the past couple of days. It is, therefore, thought that the Government may soon announce its second tranche of loans. The 3 percent conversion loan 1986 has improved to Rs. 72.90.

Indian Trade and General Insurance

The Indian Trade and General Insurance Co. Ltd. has earned a profit of Rs. 1.25 lakhs for the year ended December 1960. The directors have recommended a dividend of Rs. 2 a share, less tax. After making various adjustments, it is proposed to carry forward the balance of Rs. 33,746 to the next account. Net premiums of five department amounted to Rs. 38.07 lakhs, and those of marine department totalled Rs. 20.67 lakhs.

Tata Steel Output

Messrs Tata Industries Private Ltd. managing agents for the Tata Iron and Steel Company Ltd. report that the total approximate production of iron and steel at the steel works in Jamshedpur during June was: pig iron 131,800 tons; steel ingots 124,700 tons; semis for sale 30,600 tons and finished steel 70,600 tons.

Bombay Market

PRICES FALL ON NERVOUS LIQUIDATION

STEEL SHARES DECLINE

Wednesday Noon.

THE Bombay stock market has been quiet during the past week and share prices have declined on a broad front due to nervous long liquidation, combined with short-selling. Operators were disturbed on the view that the Government would force the stock market authorities to impose further restrictions on trading. It is reported that a sub-committee of the stock market is examining the views of the Government concerning minimum brokerage and margin regulations. Bulls were inclined to cut their commitments in view of this week's settlement.

Sentiment deteriorated in steel shares on a Press report that the application of the Tata Iron and Steel Company to the Government of India for further increases in steel retention prices for 1955-60, has not met with approval, although the Company may be permitted to have increased prices for some special products. The lower production of the Company during June also affected sentiment. Operators were depressed in the belief that the Company might under present circumstances find it difficult to increase the dividend for the year ended March 1961. A sharp decline

in India's foreign exchange reserves and wide-spread floods in many parts of the country called for caution. The possibility of the U.K. joining the European Common Market was being interpreted bearishly, because it was feared that many of India's exports might suffer. Rumours of fresh controls on banking funds also circulated.

Tata Steel declined to Rs. 161.50 and Indian Iron were lowered to Rs. 27.60 on weaker advices from Lyons Range. Prices of engineering shares declined all round. Tata Locomotive were available at a lower price of Rs. 364 and Premier Construction were sold down to Rs. 192. Mukand Iron lost at Rs. 27.25 and Alcock Ashdown were offered freely at Rs. 279. Larsen and Toubro lost at Rs. 40.25 and Mahindra and Mahindra were sold at Rs. 19.64. Motor shares were quiet, and Hindustan Motors slipped back to Rs. 22.40 on pressure. Premier Automobiles were dealt in at Rs. 165.50.

There were widespread losses in the cotton mill group. Century declined to Rs. 678, and Bombay Dyeing to Rs. 67.60. Khatau were about steady at Rs. 560 on influential buying. Interest was taken in Morarji around Rs. 427. Kohinoor weakened to Rs. 307, as did Simplex to Rs. 214. Finlay were transacted at Rs. 326 and Svadeshi were sold down to Rs. 272. Tata Mills were offered at Rs. 67.50 and business passed in India United Ordinaries at Rs. 15.28. Apollo were offered freely down to Rs. 1.72 without attracting support.

Prices of miscellaneous shares moved down in sympathy with the general trend. In sugar shares, Belapur lost at Rs. 255 and Phalton were quoted lower at Rs. 125. Walchandnagar Industries were quietly steady at Rs. 165. Mining shares were steady, and business passed in Shivrajpur Syndicate at Rs. 75.50. Steamship company shares were quiet, and Scindia Steam were available at Rs. 14.32. Business was done in Great Eastern Shipping at Rs. 14.32. Cement shares were steady, and Associated Cement were bought at Rs. 163 on hope of a bonus share issue. Digvijay were transacted at Rs. 157. National Rayon were done at Rs. 560 and Gwalior Rayon reacted to Rs. 51. Baroda Rayon were transacted at Rs. 133. Bombay Burnham reacted to Rs. 608 on pressure. Chemical shares were quiet and Tata Chemical were sold down to Rs. 19.40. Indian Dyestuff declined to Rs. 450 on disappointment over the maintenance of the ordinary dividend. Polychem were transacted at Rs. 215 and Colour-Chem were dealt in at Rs. 367.50. Voltas attracted support around Rs. 292 and Tata Oil were bought up to Rs. 74.80. Coat Tyre were quiet at Rs. 222.50, but Synthetics and Chemicals were steady at Rs. 197 on talk of an ordinary rights share issue.

Banking shares improved in the belief that the results of commercial banks for the half-year ended June 1961 would be satisfactory. Central Bank hardened to Rs. 60.30, and Bank of India to Rs. 131. Insurance shares were steady, and New India Assurance improved to Rs. 62.50. Business passed in Vulcan around Rs. 16.48.

Scattered interest was taken in electric company shares, and Ahmedabad were quoted at

Rs. 85.50. Bombay Suburban were placed at Rs. 55.30 and Tata Power came to hand at Rs. 1,075.

Madras Market

PRICES TURN SOFTER AFTER EARLY STEADINESS

SUPPORT FOR BANKING SHARES

Tuesday Evening.

THE Madras stock market has been steady during the past week. Support broadened on professional and investment accounts due to reports of good corporate working. Towards the close, the trend turned softer because operators became cautious due to weaker advices from Calcutta and Bombay.

Business declined in Government securities in the belief that the Government of India would soon float its second tranche of loans. Support increased in banking shares due to the publication of some good results for the half-year ended June 1961. Selected electric scrip were in demand, but sugar shares weakened on concern about exports. In the planting group, good tea shares met with interest due to improved auction prices. Rubber shares were steady on reports that the demand for the commodity has increased. Coffee shares were neglected and sellers predominated at lower prices. Cotton mill shares were selectively bought on reports of good working. In the miscellaneous group, interest increased in chemical, cement and fertiliser shares.

In the banking group, India were done at Rs. 174 and Indian Overseas at Rs. 190. Business passed in Cauvery at Rs. 88.50 and in Punjab National at Rs. 22.50. Among public utilities, Kumbakonam were transacted at Rs. 10.50 and Salem-Erode were bought up to Rs. 12.87. Business was done in Vellore at Rs. 13.35 and in West Coast at Rs. 14.50.

"Here are five ways

BOAC Air Cargo can help your business!"

- ★ Fast BOAC jetliners slash transit time by hours.
- ★ Direct BOAC city-to-city freighting cuts out time-wasting journeys to and from docks.
- ★ Simple (cheap) packaging is all that's needed with careful BOAC handling.
- ★ Safe, efficient BOAC freighting means lower insurance costs, wider coverage.
- ★ Experienced BOAC staff give all goods individual attention all the way.

We deliver your goods in hours, instead of days or weeks! And that's only one of the things you gain. Speed alone may not be enough for you—but BOAC Air Cargo gives more and more successful businessmen these extra advantages...advantages that can help and benefit your business!

U.K. MINISTER SEEKS INDIAN VIEWS ON COMMON MARKET ISSUE

OFFICIAL MEASURES LIKELY TO CURB STOCK MARKET SPECULATION

(FROM OUR NEW DELHI CORRESPONDENT)

THE U.K. Minister, Mr. P. Thorneycroft, has arrived to elicit India's viewpoint concerning the U.K. joining the European Common Market. The Government of India as well as the business community have been marshalling their forces, not so much against the U.K. joining the European Common Market, as to safeguard India's position as an exporter, in case Britain joins the E.C.M. But the technique which is being adopted is more moral than economic or even political. It was recently said that largely due to a realisation of their moral obligations to help under-developed countries, the western nations have begun increasing the volume of their aid to the latter, and are beginning to relax trade restrictions with a view to assisting the under-developed countries to export their goods, either in the form of raw materials or semi or fully-processed manufactured goods. On a similar process of reasoning, it is now said that if the United Kingdom joins the European Common Market, and India's exports suffer in consequence, then this country's third five year plan which is of crucial importance at the present stage of the country's economic development, would be difficult to implement in full. But would that be automatically ensured if the U.K. did not join the Common Market? Would the Government of India give a guarantee to the aid-giving countries that its import bill would not be increased by launching projects which are not already included in the third five year plan? As already reported, no such guarantee will be given. On the contrary, there is every intention to launch new projects.

The demand for industrial raw materials has been going up from Rs. 122 crores in 1958-59 to Rs. 146 crores in 1959-60 and to Rs. 209 crores in 1960-61. It is claimed that India has enjoyed an export market in the U.K. for over 50 years, which is free from all duties and quantitative controls. So had the U.K. in India until the policy of protection was introduced by the British themselves. Moreover, India has recently issued directives to import industrial raw materials from the U.S.A. to the exclusion of other countries for 42 items including the following, their imports for 11 months ended February 1961 being:

Carbon black	U.K.	Rs. 10,872,998
	U.S.A.	Rs. 3,829,742
Substitute rubber	U.K.	Rs. 630,898
	U.S.A.	Rs. 99,764
Synthetic rubber	U.K.	Rs. 21,574,053
	U.S.A.	Rs. 197,230
Sulphur	U.K.	Rs. 21,574,053
	U.S.A.	Rs. 197,230
Tyre yarn	West Germany	Rs. 14,653,219
	U.S.A.	Rs. 2,021,556
	Italy	Rs. 1,689,316
	Japan	Rs. 1,423,872
	Netherlands	Rs. 1,483,959
	U.K.	Rs. 1,156,402

In other words, imports from the U.K. will be shut out in favour of the U.S.A. This is not to criticise the Indian Government's policy but to point out that circumstances have their own logic. If India can change her free trade policy to one of a total ban on a large number of goods, there is no justification for her to criticise the U.K., if that country had to do the same to suit its present conditions. For the United Kingdom, the alternative to export is to perish. She has naturally to adjust her import policy should her present economic conditions so require. The United Kingdom has so long kept out of the European Common Market by forming the "Outer Seven" in association with other European countries not belonging to the "Six", as a defensive measure against the Treaty of Rome. If Britain is now seriously contemplating to join the European Common Market, there must be some weighty reasons for it. The economic instability and widening trade gap are, prima facie, the reasons for these second thoughts. It is claimed that the volume of the U.K.'s trade with the Commonwealth is bigger than that with the countries of the European Common Market and that the stability of the pound sterling largely depends on the U.K.-Commonwealth trade. If the Commonwealth is regarded as a club, it is high time that there was more mutual appreciation of each other's difficulties.

By joining the European Common Market as a full member, the U.K. will be obliged to adopt the following policies: (1) to abolish gradually tariffs on the imports of all goods from the Common Market countries of the European Economic Community; (2) to adopt a common external tariff against all third countries (including the Commonwealth which so far enjoys unrestricted entry in the British market). India would suffer on two counts, if this were to happen: (1) she would have to face a tariff wall in the U.K. where there was none before; and (2) her competitors in the Common Market countries would enjoy duty-free

entry into the British market instead of having to face a tariff.

In living memory, India was a monopoly market for Lancashire textiles. But textiles are now imported from India, Pakistan and Hongkong into the U.K. Even Britain has written off this once flourishing industry. Similarly, India will have to face the realities, not only in Britain but in other countries, which have been her traditional customers.

Curbing Speculation on Stock Exchanges

Some measures to curb "unhealthy" speculation on the country's stock exchanges are likely to be announced by the Government soon.

World Bank Loan for Calcutta Port

The World Bank has approved a loan equivalent to \$21 million to the Commissioners of the port of Calcutta. The loan will help to finance the purchase of dredgers and other floating craft to maintain navigation on the Hooghly river approach to Calcutta, and equipment and works to improve the efficiency of the port. It will also finance the foreign exchange cost of a hydraulic silting problem in the river and to determine the feasibility of establishing a deepwater satellite port further down the river in Haldia to accommodate bulk cargo vessels. The loan is for a term of 25 years, and bears interest at the rate of 5 1/2 per cent a year including the 1 per cent commission which accrues to the Bank's special reserve. Amortisation will begin on 15th May, 1966. The loan is guaranteed by the Indian Government. Calcutta as a port is vital to the economy of India since the hinterland it serves is India's largest industrialised region. It is also the centre of the tea and jute trades, which together account for over one-third of India's export earnings, and is rising in importance as a centre for the manufacture of engineering and metal goods. The volume of cargo handled by the port is now 10 million tons a year, which is expected to increase by about 3 million tons over the next four years. Because of its location, some 120 miles from the Bay of Bengal on a changing and treacherous river, the port needs a large fleet of dredging and navigational craft. Access to the port is hampered by sandbanks in the estuary and 11 large sandbars in the meandering river stretches. Furthermore, shipping in the river is subjected to hazardous bore tides during most of the year. Due to increased silting, navigation for ships drawing 26 feet has been severely restricted on most days of the year in the last three years; thus, modern ships of 10,000 deadweight tons or more cannot enter the port when fully loaded. Part of the proceeds of a \$29 million loan made by the World Bank in June 1958 for various improvements at the port was used to purchase additional dredgers required to alleviate acute silting.

The greater part of the current World Bank loan will be used for the purchase of about 20 floating craft, of which four will be large dredgers and six auxiliary dredging vessels. With this addition to their dredging fleet, the Commissioners should be able to achieve their objective of maintaining access to the port the year round for vessels of 26-foot draft. The works to be undertaken to improve the port itself include the extension of the western arm in King George's dock to provide holding space for four ships and four dolphin berths for ships undergoing repairs; the installation of a water recirculation scheme in the Kidderpore docks to help eliminate the silting problem in the docks; and the replacement of a 70-year old swing bridge. Cranes, fork-lift trucks, tractors and trailers will be added to the mechanical cargo-handling equipment of the port. Repair and maintenance facilities are to be improved by the installation of modern plant and machinery in the port's workshops and shipyards.

Great importance is attached to the hydraulic studies to be undertaken of the Hooghly river. In order to assure that these studies are promptly initiated and carried out on a continuing basis, the Commissioners will establish a Hydraulic Study Department manned by Indian hydrologists and assisted by highly qualified foreign experts supported by the leading hydraulic laboratories abroad. The total cost of the equipment, the study and works included in the project, is estimated at the equivalent of \$31 million. The World Bank loan will cover the foreign exchange requirements and the local currency costs will be provided by the Commissioners of the port of Calcutta. Equipment to be financed by the Bank loan will be procured on the basis of international competitive bidding.

Joint Indo-U.S. Private Ventures

The U.S. Government has announced the approval of loans totalling Rs. 47.5 lakhs to three joint Indo-U.S. private ventures in the fields of

manufacture of shock absorbers, air-conditioning equipment and motor-vehicle and bicycle tyres and tubes. The loans are being made from the Cooley Amendment Fund, to which is credited a part of the rupees generated by the sale of agricultural commodities supplied to India under U.S. Public Law 480. The U.S. Export-Import Bank administers the Cooley Amendment Fund, whose principal object is to facilitate the investment of U.S. capital in India and other countries receiving commodities under U.S. Public Law 480. The biggest of the loans announced is to Carrier Air-Conditioning and Refrigeration Private Ltd, which has been formed by the U.S. firm of Carrier Corporation and the Indian firms of Voltas and J. Stone and Company (India) Private Ltd. The new Company is establishing a plant outside Bombay to produce refrigeration and air-conditioning equipment. It has been given a loan of Rs. 37.5 lakhs. Madras Rubber Factory Ltd is the recipient of a Rs. 5-lakh loan to help in building a factory for the manufacture of motor-vehicle and bicycle tyres and tubes. Mansfield Rubber Company of Ohio, U.S.A., is collaborating in the new factory by furnishing machinery and know-how. Another loan of Rs. 5 lakhs goes to Gabriel India Private Ltd, which is a joint-venture between D. C. Anand and Associates and the Gabriel Company of Cleveland, Ohio. A new factory, it is planned, will be erected in Mulund near Bombay. It will produce 120,000 motor-vehicle shock absorber units a year. So far, 13 loans totalling Rs. 11.5 crores have been granted to joint Indo-U.S. ventures from the Cooley Amendment Fund.

Motor-cycle and Scooter Engine Manufacture

Some of the products of the Villiers Engineering Company of Wolverhampton, England, are to be made under licence in India. Villiers are the world's biggest producers of bicycle freewheels, and also manufacture air-cooled petrol and diesel engines for a variety of agricultural and industrial purposes. As a result of agreements recently concluded, Enfield India Ltd is to make villiers two-stroke motor-cycle or scooter engines at a factory in Tiruvottiyur, Madras; and Cycle Equipment (Private) Limited of Okhla, Delhi, is to produce Villiers freewheels. A spokesman for the British Company said that negotiations were going on with the Indian Government with the aim of giving permission to Enfield India to manufacture the full range of Villiers agricultural and industrial engines. Mr. David Hardisty, Villiers production engineer, has been in India advising Cycle Equipment on plant installation and production problems. On the engine side, Villiers have been training two Indian technicians from Enfields. "We have sent several technicians out to India over the past 15 months to give help in various ways," the spokesman said. Villiers' assembly superintendent has helped to build the assembly-line at the Madras plant, and the chief tester of the British firm has paid three visits to iron out snags which have arisen. Villiers have been making freewheels for bicycles since 1904, and their output has topped 70 million. Production of engines for a wide variety of uses runs at about 2 million a year.

Making Sanitaryware

Twyford Ltd, the well-known British firm of sanitaryware producers and engineers of Stoke-on-Trent, Staffordshire, is to be associated in the establishment of a factory in India which is expected to be in production next year. The factory will be built in Delhi by Hindustan Twyford Ltd. The British firm will have a 26 per cent interest in the new factory. Twyford's contribution will include the providing of technical know-how and the training of Indian nationals in Britain. The training programme is already under way.

Foreign Collaboration in Indian Projects

U.K. firms are well to the fore in proposals for the manufacture of mining machinery and equipment in Dhanbad, Bihar (Cobmin Ltd-Meameco Ltd); carbon paper and stationery products in Bombay (Caribonum Limited-Killick Nixon); non-ferrous pipes and tubes in Bombay (Yorkshire Imperial Metals Ltd-Kamani Tubes); electric motors in Calcutta (Morley Electric Engineering-Motor and Machinery Manufacturers); sugar machinery, steam turbines and other heavy industrial machinery near Allahabad (Booker Bros-Triveni Engineering Works); gears and geared motors in Bombay (Moss Engineering-Essential Engineering Company); switchgear, starters and fuses in Bombay (Midland Electric-Kerson Manufacturers Company); and for power tillers, textile machinery, diamond drill bits, refractories, wire ropes and sports goods. U.S. collaboration is being obtained from Phillips Petroleum Corporation for the manufacture of synthetic rubber, polyethylene and carbon black (Dunham Brothers in Assam); for the manufacture of aluminium products (Kaisors-Hindustan Aluminium Corporation); P.V.C. in Madras (Goodrich Chemical-India Cements); pulp and paper in Uttar Pradesh; synthetic resins, chemicals, electric lamps, syringes, glass, rubber belting, spun pipes, tube-well drills, tyre tube valves and textile finishes. The West Bengal Government proposes to collaborate with Krebs of France to set up a chemical industry in Durgapur. West German firms will collaborate in the manufacture of chemicals (near Calcutta, Dr. Paul Lohmann Limited); electrical insulations (Basant Pray of Calcutta); H.T. and L.T. insulators (Bengal Pottery Ltd); textile machinery, steel pipes and tubes, scientific instruments, photographic printing paper and refractories. The first dyestuff plant in eastern India near Calcutta will be set up with Japanese collaboration, which

is also being obtained for the manufacture of steel wire, transistor radios, water and electric meters and cameras. Swiss collaborators are active in the field of chemicals and plastics, chemical plant, electrical equipment, synthetic fibres, textile machinery, diesel engines and aluminium. Swedish firms are to help in the manufacture of primus burners (Krudd Industries, Calcutta), saws (Steel and Allied Products, Calcutta), ball and roller bearings and petrol-kerosene engines. Other countries which are also collaborating are Italy, Norway, Finland, Belgium, East Germany, Czechoslovakia, Poland and Hungary.

Energy Production and Needs

According to the Planning Commission, the total production of energy in India during 1960-61 was roughly of the order of 165 million tons of coal equivalent. The commercial sources of energy are coal, petroleum and electricity. Nearly 61 percent of the energy comes from non-commercial sources, such as cattle dung, wood, charcoal, farm wastes, etcetera, as will be apparent from the following table. Among the non-commercial sources of energy, that from animal effort has not been taken into account. This has been estimated to be equivalent to 76 million tons of coal a year.

Source	Energy consumption (1959-60) (million tons of coal equivalent)	Percentage of total (commercial plus non-commercial)	Percentage of commercial
Coal	54.60	33.00	84.00
Oil	9.50	5.80	14.60
Water	0.90	0.60	1.40
Total:			
Commercial	65.00	39.40	100.00
Cattle dung	46.00	27.90	
Fuel wood	35.00	21.20	
Agricultural wastes	19.00	11.50	
Total: non-commercial	100.00	60.60	
Total:	165.00	100.00	

Non-commercial sources of energy: Dried cattle dung is the main source of energy for

cooking and heating throughout the rural area and in many urban households as well. It has been estimated that the amount of cattle dung annually available is 1,200 million tons (wet weight), of which 400 million tons are used as fuel and 215 million tons as manure, the balance being simply wasted. On the basis of energy content, 400 million tons of dung is equivalent to 46 million tons of coal. Wood is used as fuel both for domestic purposes as well as by some industries either directly or in the form of charcoal. The fuelwood consumption of the country is estimated to be of the order of 60 million tons, which in terms of energy equivalent would be equal to roughly 35 million tons of coal.

Electric power: The average production costs of one unit of electricity from coal-fired, diesel, hydel and nuclear stations are of the order of 3p, 35p, 12p and 4p, respectively. Large quantities of low-grade coal and middlings will be available at collieries and washeries. These locations are, therefore, well suited for coal-fired stations. Hydel stations take a long time to set up, involve relatively larger outlays and are, by their very nature, located in relatively remote localities from which the power has to be transmitted over long distances. These are, however, the cheapest source of power. The break-up of generating capacity among different types of plants is indicated below:

	1951	1956	1961	1966
Hydel plant	0.56	0.94	2.10	5.08
Coal	1.60	2.27	3.45	7.06
Oil	0.15	0.21	0.25	0.36
Nuclear	—	—	—	0.15
Total	2.31	3.42	5.80	12.65

Currently, the electric energy consumption in India is about 45 KWH a head of population. By 1965-66, this is expected to increase to about 95 KWH a head. This rate of increase will need to be maintained for a long period. Compared with other countries, India's consumption is extremely low. In Japan, the per capita consumption a year rose from 455 KWH per capita in 1947 to 930 KWH in 1958; in Italy during the same period, it rose from 454 KWH to 928 KWH.

Water power: The ultimate potential of water power is estimated to be about 41 million KW distributed as shown below:

	(Million kW)
West-flowing south Indian rivers	4.35
East-flowing south Indian rivers	8.63
Central Indian rivers	4.29
Rivers of Ganga basin	4.83
Rivers of Indus basin	6.58
Brahmaputra and others	12.49
Total	41.17

Coffee and Rubber Wage Boards

The Central Government has constituted, by a resolution, two Central wage boards—one for the coffee plantation industry and the other for the rubber plantation industry. Mr. L. P. Dave is the chairman of both the wage boards and the two independent members common to both the boards are: Mr. T. Manan, M.P. and Dr. R. Balakrishna. Employers' representatives on the wage board for coffee are: Mr. U. K. Lakshman Gowda and Mr. M. B. Cariappa. Mr. M. C. Narasimhan, M.L.A., and Mr. P. Vriddhagiri are workers' representatives. Members of the two organisations on the wage board for the rubber plantation industry are Mr. M. M. Varghese and Mr. C. H. S. London (employers' representatives) and Mr. B. K. Nair and Mr. P. Ramalingam (workers' representatives). The terms of reference of the wage boards are "to work out the wage structure based on the principles of fair wages as set forth in the report of the Committee on Fair Wages as far as practicable." In evolving a wage structure, the Board would, in addition to the considerations relating to fair wages, also take into account the needs of the industry in a developing economy, system of payment by results, special characteristics of the industry in various regions and areas, categories of workers to be covered (according to the definition of workmen in the Industrial Disputes Act) and working hours in the industry. Whenever applying the system of payment by results, the Board will keep in view the need for fixing a minimum (fall-back) wage, and also to safeguard against overwork and undue speed. The headquarters of the Board will be in Calcutta.

London

U.K. GOVERNMENT WORRIED ABOUT ECONOMIC PROSPECTS

ANNOUNCEMENT OF REMEDIAL MEASURES EXPECTED SOON

(FROM OUR LONDON CORRESPONDENT)

THE economic situation is being viewed with growing concern by the U.K. Government, as the Chancellor of the Exchequer has made it clear in Parliament last week. An announcement of remedial measures before the House rises on 4th August for the summer recess is now regarded as certain. The form these should take is still being examined urgently at Cabinet level, but they are expected to be coupled with an appeal to the unions for the utmost moderation in wage claims. To maintain the stability of the pound and counter inflation, it is believed that the Government will even be prepared to consider physical controls, although as a start Mr. Selwyn Lloyd will probably see what effect his Budget "regulators"—the increase in purchase tax and other revenue duties by up to 10 percent and the payroll tax—will have.

The latest economic indicators show that the Government must act fairly soon. Measures to curtail spending at home and restore some semblance of balance to Britain's foreign trade and payments accounts are called for by the sharp fall in the sterling area's gold and convertible currencies reserve in June. In view of the pressure on sterling noticeable in the exchange market, a further loss of gold was anticipated, but the actual fall of £47 million was heavier than was expected. Even allowing for the £7 million of special out-payments, the remaining figure of £40 million was substantially larger than the average of the two preceding months. With the situation now complicated by the stockpiling of depressed currencies by European central banks under the Basle Agreement, the City is well aware that the comparison of gold reserves from month to month can easily be misleading. It is no doubt, however, that the June figure is discouraging, even if it is mainly attributable to further withdrawal of mobile funds. This year's losses from the reserves now total £164 million. In the first half of last year, they gained £74 million, and in the whole of 1960 £177 million. The reserves now total only £990 million.

Labour and Productivity

Equally discouraging is the position concerning production. Between the first quarters of 1960 and 1961, the index of industrial production rose by just under 1 percent, but the numbers employed in the relevant industries increased by about 2 percent. Production a head has thus fallen by about 1 percent. Mentioning these figures in the House of Commons, Mr. Selwyn Lloyd agreed with his questioner that he thought the problem was exceedingly serious and said that it was lamentable production had not increased more.

Meantime, labour shortages are becoming serious in many areas and in many industries. Latest returns from the U.K. Ministry of Labour show that unemployment fell in almost every industry during the four weeks ended mid-June. The total number of unemployed, 265,912, was the lowest for the time of year since 1957. Altogether 11,900 were taken back into employment in the manufacturing industries. Unfilled vacancies increased in all industries and services. They were 3,400 up in engineering and electrical and 6,300 up in the distributive trades. Nearly 35 percent of the unemployed have been out of work for more than two months, and many of these are unemployable. In almost all areas, unemployment is down to less than 1 percent of the employed population.

Bank Figures and Hire-purchase

A further surprising increase in advances and another reduction in holdings of gilt-edged stocks are the features of the June statements of the London clearing banks. Between 17th May and 21st June, the banks realised £21.9 million of gilt-edged, which brought their total holdings down to £1,084.2 million. This was £292 million less than in June of last year. Advances—excluding transit items—are shown to have risen by £51.5 million to £3,619.3 million, a record, and £361.6 million above that of June 1960. The latest increase is attributed partly to the crediting of half-yearly interest on deposit accounts but mainly to some wide fluctuations on the large accounts in individual banks. The average liquidity ratio for the 11 clearing banks works out to 32.18 percent, compared with 31.48 percent in May and with 31.44 percent a year ago.

The value of hire-purchase business, which the U.K. Treasury forecast would rise this year, is rising. But in May the rise was largely seasonal. The index of new credit extended by finance houses rose to 220 (190 in April and 201 in May last year) and the index for shops went up from 102 in April to 106 (105 in May last year). The outstanding debt owed to finance houses rose to £643 million in May from £631 million in April, but the debt owed to shops fell by £2 million to £306 million. The total debt outstanding went

up by £10 million to £949 million, whereas it is £3 million lower than the figure for May last year. Higher motor-car sales were chiefly responsible for the rise in credit given by finance houses. The index for new motor-cars in May was 21 percent more than in May last year, when business fell sharply after the reimposition of hire-purchase controls in the previous month. In fact, credit business in both new and second-hand motor-cars in May was higher than it has ever been, except in March and April of last year. The composition of the shops hire-purchase business did not change much in May, compared with a year earlier.

Colombo Plan Anniversary

The tenth anniversary of the Colombo Plan was celebrated by a number of functions last week. It is an event on which the West can look back with some pride in its relations with the East. Western assistance has been on a generous scale in most other undeveloped countries of the world, but it has not on the whole evoked quite the same feelings of friendliness and mutual respect as is evident here. The Colombo Plan is less a plan than the sum total of a co-operative effort on the part of recipient and donor countries. Nor is it in any sense the exclusive instrument of economic advance in the area. What it has done is to provide a framework within which development within the area can be harnessed to the possibilities of outside assistance and mutual self-help. Its strength lies in the fact that no strings attach to its activities, and there seems little doubt that the economic development of the area would have been more uneven and halting without the Colombo Plan.

Progress has been slow enough in all conscience, and that not altogether for want of liberality. These Asian countries have been offered over £2,800 million in capital assistance over the past decade, not counting some £340 million in loans from the International Bank. Over the same decade, however, the population has risen by about 100 million, so that the rise in the standards of living has been hardly perceptible. Much of the investment has necessarily gone to provide the base for expanding economies. At the same time, the urge to industrialise quickly has created demands for capital exceeding all earlier expectations. India's third five year plan, which accounts for the lion's share of the total aid, is a case in point. And, as industrialisation proceeds planning becomes increasingly complicated in a way that is not often fully understood by Asian planners.

The effectiveness of outside aid depends in the last resort on the extent and quality of native organisation. This is primarily a matter of technical training and professional skill. Here the Colombo Plan is seen to promise a rewarding return in terms of trained engineers, chemists and agriculturists from a relatively modest expenditure on technical assistance.

Challenge of South-east Asian Markets

The need for a new up-to-date approach to the south-east Asian markets by British firms is stressed in the report of a recent trade mission led by Sir Edward Thompson. The mission saw the present stage of economic development as an opportunity for suppliers to establish their position before future trade patterns were set. British firms, the report says, cannot afford to be even second in involvement in the formative stages of this development. "If our efforts are too little now, that will be too late." Success for the future depends, in the mission's view, on a change in the attitude so that Asia can be satisfied with goods designed for western tastes and left over from western markets. American, West German, Italian, and Swiss supplies are solving this problem, but some British companies lag behind, the report says.

Specific suggestions include a recommendation for much more generous technical help, both initial and continuing, with the sale of engineering plant. The mission thinks established co-operation here as essential in winning future markets. To advance sales of other goods and keep in touch with the demand, there is a proposal for resident or touring representatives, perhaps shared among several firms. The mission, which was sponsored by the U.K. Board of Trade and the Federation of British Industries, covered eight countries of which the report includes separate studies.

Hongkong Textile Export Quotas

The British Government has asked the Hongkong textile industry to extend for 11 months—to 31st December, 1962—its undertaking to restrict its exports of certain types of cotton goods for retention in the United Kingdom, with some modifications. The Government has pointed out that the agreements which India and Pakistan made

with Lancashire would expire on 31st January 1962, if Hongkong's undertaking is not extended beyond that date. The Hongkong Government has advised the textile industry to accede to the request. Modifications of the undertaking suggested by the British Government include an increase in the total or basic quota to the equivalent of 185 million square yards a year. Of this 100 million square yards would be in the form of piecegoods and 65 million square yards representing the cloth content of garments, leaving 21 million square yards to be used at the discretion of the Hongkong industry. Arrangements would be made, it was proposed, for a periodic review with Government participation to agree on supplementary quotas for piecegoods whenever the state of the British import trade warranted them.

Commenting on the news Lord Rochdale, chairman of the U.K. Cotton Board, said: "Clearly at this state, one can only make some rather general observations. It will be common knowledge that for some long time discussions have been taking place between the Government of Hongkong and the industry to see if the Hongkong industry would be prepared to negotiate with Lancashire with a view to renewing the present undertaking which expires at the end of January 1962. It has also been obvious from Press reports that these discussions have not been very fruitful. Of course, in the light of international discussions due to be held in Geneva in July to consider the whole question of world trade in cotton textiles and as long as a decision by the United Kingdom concerning the Common Market is still awaited, one can perhaps understand Hongkong's reluctance to have discussions just at this moment on any long-term agreement with Lancashire. Nevertheless, I have left the Government in no doubt whatever that as a result of the growing uncertainty as to what may happen next year when the Hongkong understanding is due to end, which would mean the ending of the Indian and Pakistan agreements also, trade for the future is being most seriously affected and equally important, the whole success of the Government's re-equipment scheme is dangerously in the balance. Against this background, I welcome the Government's proposals because I am convinced that this interim measure should engender the confidence which is now so lacking and which would be further sustained by a subsequent long-term understanding on the lines, foreshadowed in the statement from the Hongkong Government."

Bank Lifts the Veil

In its latest quarterly bulletin, the Bank of England lifts, at least partially, the veil which has covered the large-scale speculative and other operations immediately following the revaluation of the Deutschmark on 4th March. In the face of heavy pressure against sterling, the Bank of England entered the market as a strong buyer and on occasion was able to force the rate up. With the same objective of restoring confidence in exchange stability, the Swiss National Bank announced that it was a ready buyer of American dollars, also under pressure, at a point above its normal purchasing level.

Referring to the Basle Agreement, the Bank of England goes out of its way to point out that co-operation of this kind can only attain limited objectives. While it can enable a currency to withstand large disturbances of a purely short-term character, it cannot correct the basic disorders which have caused or contributed to the speculative movement. As for prospects for Britain's balance of payments, the Bank takes the view that some improvement can be expected during this year but that exports must be increased. Pressures making for a rising trend in industrial costs must be kept under control and industrial capacity improved and expanded.

RAIN AND FLOODS AFFECT
PLANTATION CROPSDAMAGE TO SOUTH INDIAN
ESTATES REPORTED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE thunder showers and floods in Kerala, Madras and Mysore have badly affected the production and distribution of the plantation and other crops in the three States. Reports from flood-affected areas indicate substantial damage to crops and properties. Plucking operations had to be suspended in several tea estates in the High Ranges, Annamalais and the Nilgiris. Due to heavy landslides and floods, communication was dislocated in the High Ranges of Kerala, so the transport of tea and other products to shipping and marketing points became impossible. The Munnar area was practically isolated, and it appeared at a certain time that the supply of foodgrains and other essential articles might have to be airdropped to this area. The tapping of rubber trees had to be suspended in the estates where protective measures against rain were absent. Agricultural operations were almost fully suspended in estates and farms. Minor crops like pepper, ginger and lemongrass oil have also been affected. In the absence of adequate data, it is not possible to make an accurate estimate of the extent of damage. But one can unhesitatingly say that the current floods are as serious as any in the past and the damage done by them will be the worst in living memory.

The rubber planters have now recognised the usefulness of rainguards. As a result of trial and error, alkathene rainguards have come to stay in

Kerala rubber estates. There is little doubt that in areas where valuable tapping days are lost due to excessive rainfall, the rainguards will help ensure a substantial improvement in the harvest.

Bright Future

The rubber growing industry has a bright future in India, according to Mr. K. L. Kershaw, chairman of the Mundakayam Planters Association. Incidentally, Mundakayam is the largest rubber planting district in India. Addressing the recent annual general meeting of the Association, Mr. Kershaw said that the rubber planting industry is no more the "Cinderella of the three industries". The industry, the chairman said, has an "assured indigenous market on our doorstep ready to absorb all the rubber we can produce and as fast as our efforts can stimulate production". In India's integrated economy, the rubber industry enjoys a very favourable position. The country has an old-established plantation industry side by side with a young, vigorous, rapidly expanding, indigenous manufacturing industry. The natural rubber requirements of the manufacturing industry have far outstripped anything the planters could produce, Mr. Kershaw said.

Shortage of Natural Rubber

In 1960, the consumption of natural rubber amounted to 45,218 tons, while the output was 24,795 tons. The shortage of natural rubber in 1960—which had to be made up by imports—amounted to 20,423 tons, representing 82 percent of the indigenous output. The Working Group for Rubber appointed by the Planning Commission has estimated that the manufacturers' requirement of natural rubber will increase to 54,300 tons in 1965, to 107,000 tons in 1970 and to 173,000 tons in 1975. Rubber growers, therefore, need have no apprehension about overproduction or a decline in the consumer demand. On the contrary, the distur-

bing feature of the Working Group's assessment is the heavy drain on India's foreign exchange resources in the years ahead if the industry does not increase output to meet the growing demand for the commodity. Rubber growers in India have, therefore, a vital rôle to play as producers of a raw material of strategic and national importance.

Traditional Method of Spraying

A major hindrance to enhanced production is phytophthora which affects the health and vitality of the rubber tree and its yielding capacity. Mr. Kershaw said that the traditional method of "Bordeaux spraying," which dates back to 1925, is fast becoming outmoded due to a variety of reasons, including the shortage of manpower and water as well as exorbitant costs. The planters are searching for an effective alternative since 1950. Meanwhile, the problem is aggravated as the areas to be protected increase year by year in keeping with the rise in the tempo of rehabilitation and new planting. Mr. Kershaw said that 11,788 acres of rubber in Kerala were sprayed last year by helicopters with oil-based formulations as a trial operation. But it is far too early to make any assessment of the results. Nevertheless, leaf retention in the sprayed areas in comparison with the unprotected areas is significant and certainly justifies optimism. The main inference to be drawn at the moment is that aerial spraying is a perfectly feasible method of applying fungicide to the rubber canopy, Mr. Kershaw said.

Statutory Rubber Price

The major problem which faces the industry is one of increased production. There is a dire need to rehabilitate the old-distressed seedling areas. The Tariff Commission's 1960 report, which was accepted by the Central Government last year, led to no change in the statutory rubber price. Nevertheless, the Commission made two important recommendations. The first of these was the inclusion of Rs 9 a 100 lbs in the price structure, free of tax as a depreciation allowance. The recommendation that the allowance should be free of tax has been accepted by the Central Government, but has yet to be implemented by the State Government. Secondly, the Commission appreciated the fact that the Rubber Board's subsidised rehabilitation scheme, which was introduced in 1957, had proved abortive, since it failed to provide the incentive required to make rehabilitation worth while. The Commission wisely provided for a more liberal subsidy amounting to Rs. 1,000 an acre which would hold good until 1966-67. The producer will respond to the incentive that has now been offered. The increased tempo of rehabilitation in the Mundakayam district alone indicates that planters have readily responded to this gesture.

Interplanted Rubber

In the Mundakayam area, uneconomic tea holdings are being converted into rubber estates. The growth of interplanted rubber is far in advance of rubber of the same age in replanted and new planted areas. The reason for this advanced growth, according to Mr. Kershaw, is the conservation of soil moisture in the dry weather as a result of the shading of the soil by the existing tea canopy which permits the rubber plant to continue to grow at a time when it normally lies dormant. Three hundred acres have been interplanted to date in the district. Mr. Kershaw suggested that the Rubber Board should consider extending the new planting loans. It has under consideration to these uneconomic tea estates in Mundakayam and other areas which could usefully be converted into rubber estates to help increase the production of rubber.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for June 1961:

Upper Assam: Weather seasonable except in mally hot; rainfall has been deficient; crop prospects fair to good; outturn normal; immediate prospects fair.

Central Assam: Weather hot; good rain has fallen in Golaghat and Moran; crop prospects fair; outturn good; in Moran, the outturn to-date is considerably over last year; immediate prospects fair; red spider diminishing.

Lower Assam: Weather hot but seasonable; crop prospects good; outturn poor; immediate prospects fair to good.

North Cachar: Excessive hot weather is interfering with outturn; outturn poor to normal; in Lakhimpur, the outturn to-date is considerably over last year; immediate prospects poor to fair; red spider blight lifting; black rot prevalent.

South Cachar: Weather seasonable; outturn good; in Longai, the outturn to-date is considerably over last year; crop prospects are generally favourable; lifting.

Eastern Doorgas: Weather hot; rainfall deficient; crop prospects favourable; outturn normal; immediate prospects fair.

Central Doorgas: Weather seasonable; outturn about normal; immediate prospects fair; red spider blight lifting.

Western Doorgas: Weather seasonable; outturn is about the same as last year; immediate prospects fair to good; red spider blight severe in Chalsa.

Darjeeling: Weather abnormally wet; outturn poor; immediate prospects fair; red spider blight severe; thrips prevalent in some districts.

Teral: Weather seasonable; crop normal; immediate prospects fair; red spider blight severe.

Jute

REPORTED DEAL WITH RUSSIA AND OFFICIAL
TENDER LIFT SACKING RATESUNEXPECTED RISE IN FIBRE DUE TO DELAY
IN NEW CROP ARRIVALS

THE position of the jute industry is very perplexing, and the uncertainty concerning the future is disturbing buyers and sellers alike. The recent rise in the raw material price just when it seemed that the industry had succeeded in weathering the storm of a fibre price inflation, and saw prospects of cheaper jute, has made the outlook very dark. The developments which have recently arisen to obscure the outlook of the manufacturing branch of the industry has brought the question of basic costs well to the fore, and the old margin of profit, as between simultaneous prices of jute and the manufactured product, has been replaced by a profitless prospect. Can spinners and manufacturers go on paying high prices for raw jute and sell cloth and bags at low prices—that is, prices lower than their manufacturers' cost? Trade has been decidedly slack during the past three months on account of the consumers' reluctance to pay the high prices demanded for finished goods, and producers have been compelled to accept prices which have resulted in even heavier losses simply to keep their mills running. This is not the plight of only India, but also of all countries where jute goods are produced.

In the future, economy must be the watchword. It is an open secret that there is a greater disposition these days on the part of the Calcutta mills to cater for business in specialties than was the case formerly. This marks a genuine endeavour to recapture some of the trade which has been lost over a period of years, during which prosperity too easily secured, has been exacting its toll in the shape of markets lost. There can be little doubt that a cheaper price level will tend to increase the volume of demand for jute fabrics. But quite a big factor in the future will be the discouragement of the second-hand bag trade, although the re-use of jute bags has always been one of the major selling points. The second-hand bag trade, when prices are high, flourishes throughout the world as a useful means of general economic utility. Those mills who did not take up previous quotas issued by the I.J.M.A. in the hope of a price fall are now paying the penalty. During the week, there was another sharp rise in fatka and in market quotations; in fact, indications rose by nearly Rs. 10 a maund. The usual stories of jute rising in sympathy with gunnies or vice versa were prevalent, and speculative operations were stated to be the cause of the advance. The fact of the matter, however, is that there is a genuine demand from the mills for quick shipment jute, and such is the plight of many that they have had to pay premium prices—or run the risk of closing down involuntarily for lack of fibre. The emphasis continues to be for old crop jute, but in many of the offers submitted, the assortment is not right for the mills who are interested in the lower grades. At this stage, there is very little the seller can do about this, as all offers are now for stock jute against which he is most unlikely to accept any counter-suggestions on assortment, unless, of course, his purchase price is well below current levels and he can see a profit in it. The amount of jute available, however, is very small, as imports are now negligible.

A further bullish sentiment developed on reports that the industry is seeking permission to close the mills for a week in August, and possibly a week in September also. The first block closure of the mills took place during the last week in June, and the second phase will begin later this month. The necessity for a further cut in production has been brought about by the fact that the arrivals of new crop jute in any strength will be delayed for two to three weeks because of the shortage of steeping water in most districts. Good rain over the past week has relieved the situation, and work has again started, but the delay could not have come at a worse time. The situation does not seem to be any better in Pakistan, and during the week it was rumoured that the mills there also may have to close down for a short period to conserve stocks. It appears that these rumours were without foundation, but as propaganda value they served their purpose as the Indian markets were swift to react to the news.

I.J.M.A. Stocks of Manufactures

Although the publication of the mill stock figures for jute goods for June showed a fall of 15,300 tons from the previous month, it did not leave the anticipated effect on the market. Operators expected a much larger fall than that, as the week's closure should have made a substantial reduction, and on top of that, shipping during last month was reported to be very heavy. Consequently, the figures were a disappointment to the market, and had the effect of causing a temporary quieter undertone. The actual stocks of the mills reporting to the I.J.M.A. during June were 76,700 tons, against 92,000 tons in May. These were made up of 28,800 tons of hessian (37.5 percent),

36,500 tons of sacking (47.6 percent) and 11,400 tons of other goods (14.9 percent). In June 1960, stocks were 82,000 tons in the proportions of 43.2 percent hessian, 44.1 percent sacking and 12.7 percent other goods.

Crop Reports

Favourable weather conditions have continued, and the condition of the crop is very satisfactory and healthy. There are signs of a rise in the river levels and steeping water is becoming more plentiful, although in some districts, the cutting of the crop is still suspended because of the lack of steeping water. Estimates from all areas indicate a large increase over the last year's crop, not only in the neighbourhood of the agencies but from further afield also. Small imports are reported daily from the principal Assam and northern agencies, but all arrivals contain heavy moisture. The quality is reported to be good, although more immature jute than expected has been finding its way into baling centres.

THE JUTE MARKETS

Manufactured Goods: The goods market remained firm throughout the week with occasional lapses. Hessians appeared to be in good demand, and although the business concluded was small, there were plenty of enquiries. At one stage, hessian prices moved up by Re. 1 during a single day, and mill sellers demanded full market prices. The demand has been met only to a moderate extent, however, as in many cases, the mills are picking and choosing buyers, concentrating on those who will take the wider varieties of cloth and refusing to include the customary options, particularly for narrow cloth. This has been done in order that they may take up as large a tonnage as possible. Heavy goods were very steady throughout the week, and due

to speculative activity, prices fluctuated as much as Rs. 4 in one day. Early delivery sacking was in good demand, with buyers paying high prices for the more popular fabrics.

Sacking prices opened last Thursday unchanged from the previous day and ready B Twills were quoted at Rs. 156, and forward shipment at Rs. 138. Hessian 40in. 100z. was slightly better at Rs. 49.50 for ready shipment as was October-December shipment at Rs. 47. Rumours of business with Russia, and also an Indian Government order for July B Twills, caused prices to soar, and sacking rates raced to Rs. 160. Covering business in hessian caused that section to move up by Rs. 1.25, and this was followed the following day by increased speculative activity which pushed prices up further in both sections. This sentiment continued, and by Saturday, ready B Twills had risen to Rs. 162.50, Rs. 6 more than the opening quotations. Hessians were about Rs. 2 higher than those at the opening and the general outlook of operators was exceedingly bullish. During the week-end, prices again soared and on Monday, B Twills rose to Rs. 10 above the week's opening, with Hessians moving up by another Rs. 1.75. Operators appeared to pause at this stage and the inevitable reaction after a too quick rise developed due to propped-taking at the higher levels. Sacking rates dropped about Rs. 2, but hessian prices remained fairly stable. Towards the close, they again firmed up and the market closed very steady.

Opening quotations on Wednesday morning were as follows:

	July	August	September	Oct.-Dec.
40in. 70z.	41.00	41.00	40.25	37.00
40in. 80z.	45.00	44.50	43.50	40.00
40in. 100z.	54.00	54.00	52.00	48.00
B Twills	162.50	161.00	158.00	144.00
Heavy Ceers				
(Plain)	164.00	164.00	158.00	144.00
A Twills	164.50	164.00	158.50	146.00
Liverpools	168.00	168.00	161.00	145.00
Cornsacks	176.50	169.00	164.00	148.00

Raw Jute: The reopening of forward business in raw jute by the East India Jute and Hessian Exchange Ltd. brought out more offers of new crop jute during the week. The mills' main interest, however, continued to be for old crop jute. There was very little of this available, and to get their requirements, the mills were forced to pay higher prices. The scarcity of jute and the possibility of a delay in the arrival of new crop jute in quantity caused mills to think about further block closures in the months of August and September. Although this would mean that the

I.J.M.A. STOCK FIGURES FOR JUNE

The Indian Jute Mills Association reports the total stocks of jute goods at the end of June as follows:

Description	30th June, 1961		31st May, 1961		Increase over (+) or decrease from (-)		30th June, 1960	
	Lakh Yds. (000 Metres)	030 Tons (000 Metric Tons)	Lakh Yds. (000 Metres)	030 Tons (000 Metric Tons)	Last month	June 1961	Lakh Yds. (000 Metres)	030 Tons (000 Metric Tons)
Hessian cloth and bag	19.25 (9,37.47)	28.8 (29.3)	12.21 (11.15.70)	34.5 (35.1)	-1.96 (-1.79.23)	-5.7 (-5.8)	13.10 (11.98.08)	35.2 (35.8)
Sacking cloth and bag	8.53 (7.39.65)	36.5 (37.0)	10.53 (9.63.27)	44.2 (44.9)	-1.80 (-1.74.22)	-7.7 (-7.9)	8.59 (7.85.61)	36.5 (37.1)
Others	11.4 (11.6)		13.3 (13.5)		-1.9 (-1.9)			10.3 (10.5)
Grand Total	76.7 (77.3)		92.0 (93.5)		-15.3 (-15.6)			82.0 (83.4)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalghai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures are more precise.

mills would use less jute, the sentiment of the market was such that this only helped to push fibre prices higher. Assam quotations opened at Rs. 49.50 for July shipment, and new crop at a Rs. 2 discount. Prices rose rapidly after the opening and by Saturday rates were up to Rs. 52. Over the week-end, a further Rs. 2.50 was added, the feature of the week being that business was concluded at each rise. Sellers' ideas were very firm and before the close, old crop moved up to Rs. 55. Small business was recorded in new crop jute up to 15th August and also full August. Wagon arrivals in Cossipore showed an improvement during the week, and a total of 245 were recorded. Opening quotations on Wednesday morning were as follows:

Description	Landed at Mills (Basis Bottoms)		Shipment
	Rs. a 100 kts.	Rs. a md.	
Assam	147.25	55.00	July

I.J.M.A. PRODUCTION FIGURES FOR JUNE

The Indian Jute Mills Association reports the total production of jute goods for June as follows:

Description	Quantity	
	1961	1960
1. Gunny Bags		
(a) Hessian	4,773 tons (4,850 metric tons)	
	1,416 lakh yds (1,32,26 thousand metres)	
	78.1 lakh nos	
(b) Sacking	30,235 tons (30,720 metric tons)	
	7,07,6 lakh yds (6,47,00 thousand metres)	
	3,21.8 lakh nos	
2. Gunny Cloth		
(a) Hessian	19,504 tons (19,817 metric tons)	
	7,45,4 lakh yds (6,81,61 thousand metres)	
	497 tons (505 metric tons)	
(b) Sacking	19,6 lakh yds (9,73 thousand metres)	

3. Other Manufactures	11,179 tons (11,338 metric tons)
4. Total Production (All kinds)	66,188 tons (67,250 metric tons)

Description	Summary (00,000 yds and 000 metric tons)			Summary (000 tons and metric tons)		
	June 1961	May 1961	June 1960	June 1961	May 1961	June 1960
Hessian	8.90 (8,13.87)	10.54 (9,63.58)	13.79 (12,60.86)	24.3 (24.7)	28.5 (28.9)	37.4 (38.5)
Sacking	7.18 (6,56.79)	9.00 (8,23.28)	9.71 (8,87.86)	30.7 (31.2)	38.2 (38.8)	42.1 (42.8)
Others				11.2 (11.4)	11.6 (11.9)	9.6 (9.3)
Grand Total				66.2 (67.3)	78.3 (79.6)	89.1 (90.6)
Hours worked	144.5	178.5	200.0			

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalghai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures are more precise.

THE FOREIGN JUTE MARKETS

RISING TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan has been displaying a firmer trend, so shippers have raised their terms to the Dundee market where spinners have recently shown a tendency to purchase more fibre. For near shipment position, there is still a scarcity of raw jute, although there are many buyers for July-August despatches. If conditions continued as they were expected to do, there would probably have been a plenty of jute to meet the heavy demand, but since rains have prevented cutting and have adversely affected transport, the supply of jute is not adequate. It is unfortunate that sellers have raised their prices again, but if this necessitates the raising of jute yarn and cloth prices, all buying in the Dundee market will virtually come to a stand-still. Good business has been done in various manufactures during the past week. As a result, spinners and

manufacturers are much more comfortably placed with orders over the next two months or so. The mills and factories will be closed for two weeks from 21st July, reopening on 7th August for the annual holidays. Buyers now find that it is not easy to book business for quick delivery as it has been for many months.

There is still, however, considerable irregularity and uncertainty concerning the future. Everybody knows that prices will come down some day, but nobody can say when. Nevertheless, many buyers are taking the bull by the horns and placing fair orders for July and August delivery, but they are not so keen to go further ahead.

THE PAKISTANI JUTE MARKETS

FIBRE STEADIER ON LOWER ARRIVALS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

WHATEVER may be the actual reason, an extensive survey of the jute crop shows that little or no cutting and retting is going on in the main jute growing areas. As it takes three weeks for raw jute to reach the main baling centres after it has been cut, any improvement in arrivals can be expected only by the end of this month. This, combined with very keen buying by the Pakistani mills, is responsible for the steadier market, which prevails at present. In the area immediately around Dacca-Marayanganj, there is a little more cutting going on than in other parts of the country, so a slight increase in imports from that port may be expected within the next week or so. This may well reduce prices in the Narayanganj market, which is the barometer for world jute prices, but it is not likely to have much effect upcountry where the shortage of imports is very real and the growers and sellers are taking full advantage of the situation. Some outstations inspected have produced extremely wet jute with weak fibre. The grower is not to blame for this since this is the jute which was harvested early and stored. Unfortunately, the early monsoon made it impossible for the grower to dry his jute properly and it has, therefore, been stored damp with disastrous effects. Except for the delay in harvesting, the crop seems to be growing extremely well, and although the lowland may not produce the high qualities expected, the midland and highland crop look very healthy and extensive. Rivers continue at a rather low level for this time of year, but there does not appear to be the shortage of steeping water about which the growers have been complaining. The rains continue to be heavy, but this is seasonal.

Because the Pakistani mills are short of jute and so keen to get anything they can lay their hands on, the market is steadier than ever. They have tried to buy as inconspicuously as possible, but in this market, any purchase, even 100 bales at a time, is noticeable. What is even more noticeable is that the mills are accepting practically any price asked. Business is reported done in the Narayanganj market at £158 a ton c.i.f. Continent Firsts are quoted at £170. These parties are well above what overseas buyers are prepared to pay even for ready shipment and this only serves to accentuate the fact that the Pakistani mills will buy practically anything at any price.

Commodity Markets

RISE IN PRODUCTION OF OILS AND FATS FORECAST

WORLD EXPORTS EXPECTED TO INCREASE

UNILEVER'S chief buyer of oils and fats, Mr. J. C. A. Faure, gave his customary annual forecast of world production and exports to the International Association of Seed Crushers which met in Stockholm recently. He estimated the 1961 world output of all edible oils and fats at 32,595,000 tons—a rise of 500,000 tons over 1960. World exports could rise by 143,000 tons to 8,419,000 tons this year, although actual shipments will be influenced by the level of prices. Increased exports are expected in copra and coconut oil, tallow, whale oil and butter; while lower exports are likely in soya beans and soya oil. Chinese exports of soya beans are being halved and U.S. exports reduced. In 1960, western Europe imported 4,956,000 tons, far exceeding what was needed for consumption. The difference of over 400,000 tons was added to stocks. European buyers clearly took advantage of the low prices ruling last year to add to their stocks.

An excess of supplies of butter present an acute problem. Mr. Faure said that, at the beginning of 1961, European butter stocks were some 80,000 tons higher than a year ago, and production was running at an even higher level than in 1960. With such heavy supplies, prices had dropped. Specific measures to avoid a butter crisis are being discussed at the General Agreement on Tariffs and Trade. In any case, European butter consumption will probably rise this year and, to some extent, reduce demand for other oils and fats. In the United Kingdom, the consumption trend will probably be as follows:

	(In 1,000 tons)		
	1959	1960	1961
Butter	434	435	459
Margarine	361	364	356

There will be no shortage of oils and fats in the world this year. The shortfall in China has been offset by increased supplies elsewhere. In 1962, there may be a rise in world production of between 1 and 2 million tons; Mr. Faure indicated that it should not be difficult for the world to absorb an increase of this size, both for consumption and for the rebuilding of stocks. The following table summarises the world production and export trend, and shows that the output has barely kept pace with the growth in population.

EDIBLE OILS AND FATS—WORLD STATISTICS (In terms of oil or fat)	1960			1961 Forecast
	Pre-war	1959	Preliminary	
World supply				
World production—metric tons (000)	21,590	31,610	32,105	32,595
World population (millions)	2,130	2,905	2,955	3,005
World per capita (Ls)	22.3	24.0	24.0	23.9
Total world exports				
World exports—metric tons (000)	5,830	7,850	8,276	8,419
of which—				
The U.S.A.—metric tons (000)	100	2,365	2,607	2,601
Other countries—metric tons (000)	5,730	5,485	5,669	5,818

* Per capita figures are calculated from production and do not necessarily reflect actual consumption in the years stated.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) fell by 0.3 percent to 124.5 during the week ended 10th June, when compared with 124.9 for the earlier week. The index was lower by 1.0 percent when compared with the corresponding week of the previous month, but was higher by 1.3 percent than that of a year ago.

STRONG GENERAL DEMAND AT TEA EXPORT SALE

IRREGULAR TREND IN DUSTS

AT Sale No. 6, held on 10th and 12th July, there were 29,665 chests on offer at the Export auction which met with a strong and good general demand. Orthodox teas met with strong competition and prices for the better liquoring kinds were generally dearer. Better liquoring C.T.C.'s sold readily, but were irregular and generally tended easier, while the medium and poorer types were again strong and generally sold at firm to dearer rates. Darjeelings received good support and there was better demand for those from the medium and lower elevations where quality showed an improving tendency. The best again sold well at rates according to quality. Whole leaf grades received good support, while there was good enquiry for the increased quantity of tippy teas.

	Quotations	
	1961	1960
	Rs. a kilo	Rs. a kilo
Clean Plain Pekoe	5.25 to 5.35	5.20 to 5.40
Plain B.P.	4.85 to 4.95	4.50 to 4.70
Plain Fannings	4.70 to 4.80	4.35 to 4.45
Medium Assam C.T.C. B.P.	6.40 to 6.80	not available
Medium Assam C.T.C. Fgs.	6.50 to 7.00	"
Best Assam C.T.C. B.P.	7.50 to 7.80	7.50 to 8.00
Best Assam C.T.C. Fannings	7.70 to 8.50	8.00 to 9.00

(Quotations are inclusive of excise duty.)

At the Internal Sale, there were 9,458 packages of Dusts on offer which met with a strong general demand. Orthodox descriptions received good enquiry and sold at about last rates with the bright liquoring descriptions selling well. Legg-cut Dooras Dusts came in for keen competition and sold at considerably dearer rates. Medium C.T.C.'s were irregular, the better sorts declining by up to 20p while the poorer kinds were generally dearer. Good C.T.C.'s were irregular and generally easier. The few lines of flavoury Darjeelings on offer realised extremely useful prices.

	Quotations	
	1961	1960
	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	4.45 to 4.60	4.30 to 4.45
Medium Assam Dust	4.60 to 5.30	4.50 to 4.80
Legg-cut Dust	4.75 to 5.30	"
Medium Assam C.T.C. Dust	6.10 to 6.40	5.60 to 6.00
Good Assam C.T.C. Dust	6.60 to 7.10	6.20 to 6.50

(Quotations are inclusive of excise duty.)

The 86 chests of Leaf on offer sold at irregular rates.

FREIGHT RATES FALL

A PART from time charter, there was falling off in activities in the leading trades in the freight markets in the past fortnight and shipowners are accepting lower rates. Foodgrains from North Pacific to East Coast of India paid 62s 6d when Australian-E.C. India paid 42s. Bagged fertilisers from Rostock to Madras have been fixed at 67s 6d f.i.o. stowed. A small vessel of 3,100 d.w. has been fixed with logs and sawn timber from the Andamans at 82s 6d f.i.o. stowed. Charterers are in the market for tonnage for 60,000 tons of ore from Marmugoa-Japan where a recent fixture has been concluded at the steady rate of 50s f.i.o. and trimmed. Berthing position in Madras has again deteriorated. Hooghly river draft forecast for July has been reduced by 15 inches, which is causing anxiety to the owners of the bulk cargo carriers from Calcutta. Coastal coal shipment achieved maximum success and reached a record figure of daily shipment since 1952. Local port authorities expect they would be able to maintain the present speed of loading coal, subject to the railways supplying wagons. The State Trading Corporation is contemplating to resume loading of iron ore at Krishnapatnam, where the shippers have now a lighter fleet of 20 with which they expect to maintain the minimum loading rate of 800 tons a day.

LINSEED QUIET

The market was quiet in the past week. Prices declined to some extent in sympathy with other oil markets although arrivals from the centres were small. Millers were daily buyers for forward deliveries, but sellers were hesitant at lower prices. The oil market was quiet. Some business was done by second-hand sellers at lower prices for ready delivery, but millers were not inclined to do this as the supplies of seeds were not good. The oilcake prices were firm. Local buyers were in the market daily and foreign prices firmed up, but local quotations were out of parity. The latest quotation is as follows: ready July delivery, Rs. 29.75 a maund.

COMPANY AND PUBLIC NOTICES

THE MANDYA NATIONAL PAPER MILLS LIMITED

Amendment to the Notice of the Extraordinary General Body Meeting to be held on 28th July, 1961
Issue of 8 lakh Equity Shares of Rs. 10/- each at Par

In accordance with the Notice dated 9th June 1961 for convening the General Meeting of the Company on the 28th July 1961, already circulated to the Members it was proposed that new Equity Shares shall be offered to the Shareholders whose names appear in the Company's Register of Members on the 28th July 1961. According to the advice of the Stock Exchange, Bombay, it has been decided that the Transfer Books will be closed for the purpose of new issue only after the proposed issue has been approved by the Shareholders and the shares will be offered to such persons whose names appear in the Company's Register of Members on such day as may be fixed by the Directors.

Accordingly in para (i) of the First Resolution, as proposed, the words 'such day as may be fixed by the Directors' will be substituted for 'the 28th July 1961'. The Share Transfer Register of the Company will now be closed from the 24th July 1961 (instead of 12th July) to 28th July 1961.

Yours faithfully,

S. W. G. OLPHERTS FORRESTER,
Secretary.

14, Palace Road,
Bangalore-1.
21st June, 1961.

THE INDIAN IRON & STEEL COMPANY LIMITED

NOTICE

THE Ordinary Share Register and Transfer Books of the Company will be closed from Saturday the 5th August, 1961, to Monday the 28th August, 1961, both days inclusive for the purpose of payment in due course of dividend on Ordinary Shares in the Company for the year ended 31st March, 1961. The dividend when declared will be paid to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 28th August, 1961, or to their mandatees.

TEA COMPANIES

O. Po and Dd indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Provided export prices are kept down and a progressive attitude is maintained towards the opportunities an expanded E.C.M. has to offer, there is no reason why, in a few years' time, India should not be deriving great benefit from Britain's move. Fortunately this appears to have been realised in New Delhi. A U.K. market growing at the same rate as prevails among the present "Six" ("Seven" now that Greece has joined) should soon compensate most of the Commonwealth trading partners for what they lose in the short run. A richer trading area will be more able to supply aid to developing countries. The importance of this point is underlined by the prevailing difficulties in the U.K. economy, which might well now lead to some slowing down of aid from that country. India's aim should be to expand to the maximum possible extent the markets available to her in Europe, and this can best be done through the U.K. Provided the expanded E.C.M. is as liberally inclined as it professes to be, there is no reason why it should not be possible—provided India's prices remain competitive that is. The problem at the moment is a complicated one and it would not be surprising if India were not indeed most frightened and bewildered than in fact she has shown herself. But certain basic facts must be borne in mind in all discussions on Britain's entry into the E.C.M. These are that the U.K. economy is not growing at the speed it ought to and anything which can ensure that it does, given reasonable intelligence and goodwill on all sides, must eventually benefit Britain's trading partners; that unless the Commonwealth can guarantee British exports a rapidly expanding market, then the U.K. has no choice but to join the E.C.M.; that all Britain's trading partners should eventually benefit from easier access to the world's potentially largest and fastest growing market; and that guarantees from Britain are no substitute for low export prices and an aggressive outlook towards export promotion.

new in this field of business, Indian shipping is likely to find the going hard, at least for a considerable time to come.

This apart, Indian shipping has been handicapped by many difficulties of its own. Indian port conditions are far from congenial. Ships are subjected to inordinate delays in foreign ports. As a result, the turn-round of vessels has been hampered and overhead costs inflated. Along the coast, ships cannot be run economically because adequate tonnage is not ensured. Bearing these factors in mind, investors find it difficult to take an optimistic view of the outlook. Under the circumstances the progress made by Indian shipping during the past few years is remarkable. During the second plan period a tonnage target of 900,000 g.r.t. was nearly achieved. Tonnage increased to 857,000 g.r.t., but Indian shipping companies had under construction ships of about 60,000 g.r.t. by the end of the plan. During the latter part of the second plan, the pace

Practically the whole range of India's exports will be affected by Britain's joining the E.C.M. to an extent depending on what external tariff is adopted, whether or not quota restrictions are introduced, and the size of the concessions which can be secured for Commonwealth countries. The three main items will probably be cotton textiles, sea and jute goods, and in that order. Cotton textiles promise to be the worst headache. At the moment these are entering Britain duty free. If they have to negotiate a tariff wall in future they will become more expensive compared with British-

of expansion was kept up and the rate of acquisition reached a record figure of more than 100,000 g.r.t. a year. During this period, several other achievements were recorded in the field of shipping. A second shipping Corporation was established in the public sector. The Government of India acquired the majority of shares in the Mogul Line. A nucleus tanker fleet was set up and shipping services were established on new routes such as India-Black Sea, India-Poland, India-U.S.A. and India-South America.

In order to maintain the momentum gained by the end of 1960-61, the National Shipping Board has recommended that Indian shipping should continue to increase at the rate of about 100,000 gross tons a year. A financial outlay in the region of Rs. 104 crores would need to be provided in the third plan to achieve this target. In addition, private shipping companies would provide a further Rs. 14 crores from their own resources. If this recommendation of the Board were accepted, the total tonnage would rise to 1.4 million tons at the end of 1966. But the Planning Commission has allocated only Rs. 55 crores for the development of shipping during the third plan. After providing for the replacement of the old tonnage, these funds would be adequate only for a net addition of a little less than 200,000 g.r.t., against 500,000 g.r.t. as proposed by the Board.

Although the physical target as set by the Board may not look too ambitious by itself, considering the inadequate development of Indian shipping, it is difficult to oppose the decision of the Planning Commission under present circumstances. Not only have the overall resources during the third plan had to be allocated according to strict priorities, but investment in the Indian shipping industry needs to proceed cautiously at the present time in view of the difficult conditions prevailing in world shipping. Unless the supplies of world tonnage are brought more in line with available freight, funds invested are not likely to be remunerative.

It is probably more appropriate that the Indian industry concentrates its attention on consolidating the progress made so far. There are many things which can be done to improve the working of the shipping industry. In his chairman's address at the ninth meeting of the National Shipping Board held recently, Mr. G. L. Mehta pointed to the necessity for improving coastal

shipping. There is no denying the fact that an adequate and efficient coastal fleet is a necessary adjunct to the inland transport system. An important factor holding down the growth of coastal shipping is the inadequacy of cargoes. Coastal shippers will be encouraged to go ahead with expansion and modernisation provided they are assured of profitable working, which is possible if adequate cargoes are available. The decision of the Government of India to divert an additional one million tons of coal cargo to coastal shipping, has been welcomed. But this traffic is believed to have been hampered by tonnage shortages. This does not explain fully why the additional coal transport has not made sufficient progress as yet. Experience shows how coastal coal movements have in the past been interrupted by wagon shortages. Unless there is closer co-ordination between the railways and other relevant authorities, the idea of carrying additional coal by ships will not work successfully. There are nevertheless good grounds for supporting the view that coastal shipping must be provided with adequate cargoes if it is to expand further. Mr. Mehta, therefore, thinks that suitable policies should be adopted for diverting sufficient cargoes to the coastal fleet.

Referring to the relationship between the public and private sectors in shipping, Mr. Mehta claims that the public Corporations should operate on the more remunerative routes on which private

ships are already running by supplementing rather than displacing the tonnage of the existing private companies. Considering that not even 10 percent of India's foreign trade is carried in national bottoms, there is sufficient scope for expansion of the two sectors. Wasteful competition can be avoided by careful co-ordination. There is no doubt that India is represented in international shipping in a very small way. Whatever little progress has been made is confined mainly to liner trades. India's share of the tramp trade is virtually negligible. In view of the fact that competition in tramp is much keener, it is doubtful whether Indian tramps can be run profitably in this line of business, at least in the near future.

Whether Indian shipping will take advantage of the transport of foodgrains from abroad is being debated. The absence of return cargoes from India to the U.S.A. has so far prevented the employment of more Indian ships. Even if Indian ships were to carry sugar from this country to the U.S.A., the problem of return cargoes would not be overcome in any considerable measure because sugar exports are likely to be on a small-scale. As for increasing exports of other Indian commodities to the U.S.A. at the present time, the prospect does not appear to be promising. The scope for obtaining a bigger share in the transport of foodgrains, therefore, seems difficult under present circumstances.

FLEXIBLE EXCHANGE RATES

IT is well known that the International Monetary Fund is opposed to the principle of flexible exchange rates. It is equally well known in financial circles in Britain that Professor J. E. Meade, Professor of Political Economy at the University of Cambridge, disagrees with the I.M.F. on this issue. In the present turmoil of controversy surrounding the whole problem of currencies, Professor Meade has intervened with a new plea for flexible exchange rates in the June issue of *The Three Banks Review*. He has not convinced all his readers, but he has at least helped to clarify the problem. Disequilibrium in the exchanges is caused by chronic surpluses in some countries, chronic deficits in others, rapid changes from surplus to deficit or

from deficit to surplus and—combining or conflicting with these national influences—international movements of short-term funds. It is not surprising that fixed parities are often strained. Various expedients, such as the central bankers' "Bastie Agreement" to hold weak currencies are in use, and more permanent arrangements, such as the "internationalisation" of national reserves, are proposed to ease the strains. But the strains are partly fundamental: nobody supposes that all currencies are perfectly aligned, or that if they were they would remain so indefinitely.

Some economists believe that exchange parities should be sacrosanct and that national policies should be adapted accordingly. In the era of the gold standard the process of adaption, in the countries adhering to that standard, was automatic; now it must be deliberate. But some of the techniques employed are discredited—particularly the manipulation of interest-rates, because it causes big and disturbing movements of short-term funds. Taxation and credit-control are favoured by some governments, regulation of imports by others, with the general intention of regulating the balance of payments. It is this "tyranny" of the balance of payments that Professor Meade opposes. He believes that every country should be free to develop its economy, to raise its living standards, to maintain full employment of its labour: that currencies should be subordinate to social aspirations; that international trade should not be impeded by national monetary problems.

Professor Meade's new plan includes the idea of a world-wide monetary system. The I.M.F. would be reorganised: national reserves would be transferred to it, and "gold certificates" would be issued in exchange for them. This supranational bank (as the I.M.F. would have become) would buy and sell national currencies and thereby moderate fluctuations in exchange rates, and the currencies could thus be freed from their fixed parities. What the professor envisages, then, is a system of currencies that would be flexible and at the same time orderly. His is not the orthodox idea of "floating" currencies, varying their rates by the free play of supply and demand, in accordance with changes in relative price levels. It is a world-scale system of currencies that would be, in effect, managed by the I.M.F.

This is a stimulating idea, but immediately it raises questions. Should national currencies be managed by a supranational authority? How would the policy of such an authority harmonise with the policies of national governments? How would it know when it should intervene? If free movement of rates is impermissible, would it not be better to retain fixed parities? Or, if flexibility is permissible, why not leave rates free to find their "natural" levels? The intervention of the I.M.F. would not necessarily be positive: national currencies might fluctuate freely against the supranational unit unless some abnormal influence was distorting their value. We should then have the advantages of flexible exchange rates and avoid at least some of their disadvantages. The essence of the argument for flexible exchanges is that it is easier to adapt currencies to national economies than to adapt national economies to currencies. The essence of the argument against flexible exchanges is that it is too easy to adapt currencies—or to allow them to adapt themselves. Canada has shown (in former years) that a "float-

ing" currency can be a strong currency, but if all currencies were freed from fixed parities some might persistently decline. Therefore, some advocates of flexibility envisage "floating" rates as a temporary expedient, whose purpose is to allow currencies to establish their "natural" relative values so that they can be fixed realistically. But values that are realistic when fixed will not necessarily remain realistic for long.

Frequent adjustment of exchange rates, by means of the flexible system (whether periodic or continuous) or by direct moves from one fixed rate to another, is unsettling and confusing. The situation in which international trade can flourish best is a situation where the values of currencies are

Current News and Comment

Bright Prospects for T.E.L.C.O.

Preliminary figures about the working results of the Tata Engineering and Locomotive Company for the year ended March 1961 released at the time of dividend announcement clearly indicated that the proposed increase in distribution from 12.5 percent to 14.5 percent, both gross, was fully justified. The gross revenue of the Company increased from Rs. 28.85 crores in 1959-60 to Rs. 38.30 crores in 1960-61 and the total turnover excluding excise duty showed a rise of 22.3 percent at Rs. 34.27 crores. Against this, the Company's gross profit rose by nearly 28 percent from Rs. 3.83 crores to Rs. 4.93 crores. The directors have been able to recommend an increase of 16 percent in the rate of distribution after providing an additional Rs. 19.33 lakhs for depreciation, Rs. 30.80 lakhs for development rebate and Rs. 28.93 lakhs for taxation. The net profit is up by 27.4 percent at Rs. 1.46 crores; this is attributable to the increase in the sales of Tata-Mercedes-Benz vehicles and spare parts. The working results for 1960-61 are indeed impressive and the chairman's statement to shareholders which has been released along with the directors' report contains sufficient indications to encourage the hope that still better results might be expected in coming years. The Company, says Mr. J. R. D. Tata, chairman, has reached a stage of self-sustaining growth. (A fuller version of Mr. Tata's speech appears on a later page of this week's issue of *Capital*.) With the demand for Tata-Mercedes-Benz vehicles continuing greatly to exceed the Company's capacity to produce them even after expanding the output to 1,000 units a month, the Company has embarked on a further expansion programme. The Government has approved the proposal to double the plant capacity and initial steps have already been taken to implement this project which is estimated to cost about Rs. 18 crores, including its share of the expansion of capacity for castings, forgings and other components. The chairman says that the expansion programme will be completed over a period of 34 years, during which production and the percentage of indigenous content will be progressively increased each year. The agreement between the Railway Board and the Company for the supply of locomotives expired in May 1961 but the Company has readily agreed to meet the Railway Board's further requirements on an *ad hoc* basis, and has received orders for the supply of about 65 locomotives a year, on an average, for the next five years at a price, which, while yielding only a small profit, will enable the country to secure its requirements of meter-gauge steam locomotives more cheaply than the Railway Board could secure from any other source. The project for the manufacture of excavators and similar equipment under licence from Messrs Harnischfeger of Milwaukee, U.S.A., has got into its stride and is being energetically pursued. The Company will soon be in regular production of these heavy machines essential to mining, heavy construction and other industries.

The Company is now manufacturing and selling a substantial and growing volume of spare parts of P and H power shovels. It has also started the production of industrial shunters of its own design and export prospects for these shunters are considered to be good. The Company hopes to receive the first substantial order for paper and pulp-making machinery in the course of the next few months. Meanwhile, work is in progress for the manufacture of transport pumps, chippers, chipper discs and other similar equipment against orders received during the current year. The directors report considerable improvement in the output and efficiency of the forge and smithy. Besides manufacturing forgings for the locomotive division, the forge and smithy has developed the manufacture of a large number and variety of forgings and stampings for motor-vehicles and excavators. The heavy forging section has also supplied special forgings for the machine tool and sugar industries. With a view to meeting the entire requirements of forgings to manufacture 24,000 Tata-Mercedes-Benz vehicles

stable, and known to be stable—because they are realistic. Yet one cannot so easily refute the arguments of Professor Meade and those who think as he does. The present situation is obviously unsatisfactory, for nobody really believes that the revaluation of the German mark and the Dutch florin this year has relieved all the stresses in the exchange structure and that all the present parities are realistic. The possibility of major changes in fixed parities can be more unsettling than the certainty of minor changes in flexible rates. Which ever way we look at them, currencies are a problem, and none of the various plans offers a complete solution of it. We can improve the international monetary system, but we cannot hope to perfect it.

The return on official borrowing. The long-dated loan is being offered at Rs. 1.40 lower than the market value of the existing 4 percent loan 1950. It offers a running yield of 4.06 percent and a redemption yield of 4.11 percent. Instead of increasing the rate of interest directly, a higher yield has been ensured by offering the loan at a substantial discount on the market price. As a result, the prices of the existing securities are expected to drift downwards in order to assume parity with the new loans. Although the Reserve Bank has recently extended its support to some State loans, their prices may also decline because it is wondered whether the State Governments will themselves borrow at higher rates of interest in the coming months. Anyway, the long-dated loan is expected to meet with substantial support from the Life Insurance Corporation and provident funds.

The medium-dated loan offer is in line with market standards. It is being issued with the main object of attracting bank support. In view of the fact that the banking community has reduced its investment portfolio considerably during the past year or so, it is thought that it may now replenish its Government securities further. The present easier money conditions should be of great help. If banking support is not extended on a large scale, a portion of this loan is likely to be taken up by the Reserve Bank itself. The latter should be able to sell it later to banks on tap.

The two loans can be subscribed in cash or by offering the 2 percent loan 1961 or the 3 percent Hyderabad loan 1951-61 for conversion. The Government of India borrowed nearly Rs. 93.57 crores a month ago by offering a second tranche of the 3½ percent loan 1967 for conversion of the 3½ percent loan 1961, the 2½ percent loan 1961 and the 3 percent Hyderabad loan 1951-61. When the two new loans are subscribed for Rs. 100 crores, the Government will have obtained about Rs. 194 crores during the current year. This figure falls short by Rs. 41 crores or so of the amount fixed in the Budget for market borrowing during 1961-62. It is too early yet to say whether the Government of India will come to the market for loans again later in order to make good the shortfall.

Fresh Capital for Bengal Paper

The Bengal Paper Mill Co. Ltd. proposes to obtain fresh capital for modernisation and expansion in the near future. The output capacity is likely to be increased to 100 tons a day and fair progress has already been made in the expansion scheme. Equipment worth Rs. 36 lakhs has been installed, which has improved the caustic recovery. Orders for a new paper machine have been placed. Negotiations for buying machinery from the U.S.A. will be finalised as soon as the approval of the Development Loan Fund of the U.S.A. is received to the Company's dollar loan application as sanctioned by the Industrial Finance Corporation.

The profit of Bengal Paper has amounted to Rs. 22.62 lakhs during the year ended December 1960, against Rs. 25.73 lakhs in 1959, after transferring Rs. 10.05 lakhs (against Rs. 4.84 lakhs) to depreciation and Rs. 18.17 lakhs (against Rs. 18.48 lakhs) to taxation. The taxable ordinary dividend has been maintained at 32 percent. It is covered more than two-and-a-half times and offers a yield of 8.9 percent at a price of Rs. 90 a share. General reserve—Rs. 4 lakhs (against Rs. 7 lakhs) and development rebate reserve Rs. 2.69 lakhs

Two New Government Loans

The decision of the Government of India to issue on 24th July, 1961, two cash-cum-conversion loans—a 3½ percent loan 1969 at an issue price of Rs. 98.40 and a 4 percent loan 1981 at an issue price of Rs. 98.50—for a total amount of Rs. 100 crores has been welcomed because the Government appears to have realised the need for improving

The mighty roll of the drums seethes to the climax of a wild rhythm... and the dancing Wapis have danced their traditional Fish Dance, cleansing themselves of the anger of the Great Fish of the river.

BINNY'S fabrics are shipped to this exciting land of New Guinea to help the people discover the wonderful new world of modern clothes.

BINNY'S fabrics are exported to 49 other countries, too. Superb materials made only from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control* ensures maximum durability and perfect finish.

Quality Control:
Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

From palm leaves to TUSSORES

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirting: Khaki Drills, Bleached & Dyed Drills
Towels: C. Anticrease, Suitings: Tussore
Union Fabrics: Silk Sarons etc. etc.

BINNY-
a great name in textiles

(against Rs. 2.10 lakhs). The carry-forward is Rs. 1,43,838, compared with Rs. 1,35,498 brought in.

Rights Issue from Kesoram Cotton

Kesoram Cotton Mills Ltd have decided to issue rights ordinary shares at par in the proportion of one new share for every four held. The resources will be used for financing the expansion and modernisation schemes. The Company has made satisfactory progress in modernising the textile unit and more equipment is likely to be installed in the coming months. The textile section now has 75,040 spindles and 1,991 looms. The spinning plant of Bharat Kala Bhandar Ltd, a subsidiary, is expected to go into production before the middle of 1962. The rayon unit is at present producing seven tons a day, but in 1962 this section may have 48 spinning machines with an installed capacity of 1½ tons a day. The first transparent paper casting machine has been erected and production will start soon. The second machine is expected to begin production during the next few months. This unit will have an installed capacity of about 7½ tons a day.

The directors are considering expanding and diversifying activities further. The Company is hoping soon to obtain an import licence to set up a steel tubes project. Efforts are being made to obtain the necessary import licence for bringing equipment for a spun pipe project. In view of these developments, the prospects are considered optimistically. The ordinary shares of Kesoram have recently improved by more than Rs. 3 to Rs. 37.65.

During the year ended March 1961, the profit increased from Rs. 47.11 lakhs in 1959-60 to Rs. 96.64 lakhs, after providing Rs. 71.51 lakhs (against Rs. 2.17 lakhs) for depreciation and Rs. 6.67 lakhs for taxation liabilities incurred for the previous years. The ordinary dividend has been increased from 5 percent, taxable, to 12 percent, taxable. It is covered more than five times and works out to a yield of 3.2 percent at the present price. Development rebate reserve is allocated Rs. 3.47 lakhs (against Rs. 47.20 lakhs). General reserve receives Rs. 51 lakhs. The carry-forward is Rs. 2,44,919, against Rs. 67,607 brought in. The directors state that the Company did not provide for any depreciation on fixed assets during the year ended March 1958 and inadequate depreciation was provided in 1958-59 and 1959-60. The arrears of depreciation, they state, will be made good in future because the amount of depreciation required to be provided under Section 205 of the Companies Act, 1956, is higher than what is required by the Income Tax Act.

New Window Glass Factory

Window Glass Ltd, a new Company, proposes to build a factory near Calcutta for the production of wired and figured glass. The initial capacity is expected to be 900 tons a month. An agreement has been made with Messrs Cekop, Poland, for the supply of plant and machinery on deferred payment terms. The foreign collaborators will also provide technical help. It is reliably learnt that Window Glass has obtained an industrial licence from the Government of India. The Industrial Finance Corporation is believed to have sanctioned a loan of Rs. 25 lakhs to the Company. The factory is likely to start producing at the beginning of 1963. Window Glass is expected to raise funds from the market in the near future.

Bhartia Electric Steel Dividend Falls

The ordinary shares of Bhartia Electric Steel Co., Ltd have declined from Rs. 15.62 to Rs. 11.81 during the past year or so and investors cannot be blamed for holding a cautious view following the publication of the unsatisfactory results achieved during the year ended December 1960. The directors say that the adverse results are mainly due to the lack of orders for steel castings, but the order-book has now improved. The Company has also received repeat orders for old C.R.-type wagon parts. The manufacture of centre buffer automatic couplers and draft gears has been finalised and delivery has started on a small scale in collaboration with American Steel Foundries Inc. This section is expected to improve on a longer view. The directors have taken steps to modernise the equipment and new machinery is being installed. Heavy and costly equipment has been installed in the machine shop for producing roller bearing axle boxes.

During the year ended December 1960, the profit has declined from Rs. 10.57 lakhs in 1959 to Rs. 49,017, after reducing depreciation from Rs. 6 lakhs to Rs. 3.49 lakhs, development rebate reserve from Rs. 2.97 lakhs to Rs. 2.05 lakhs and taxation

provision from Rs. 9 lakhs to nil. Sales also fell from Rs. 2.89 crores to Rs. 74.74 lakhs. The taxable ordinary dividend has been reduced from 15 percent to 10 percent, absorbing Rs. 5 lakhs. At the present price, the yield is 8.5 percent. The carry-forward is Rs. 496, against Rs. 1,10,479 brought in, after transferring Rs. 1 lakh from general reserve.

Good Results from Katras Jherriah

The ordinary shares of Katras Jherriah Coal Co. Ltd have improved from Rs. 40.75 to Rs. 49 during the past month or so. The confidence is vindicated by the satisfactory results produced during the year ended January 1961. The profit has improved from Rs. 11.36 lakhs in 1959-60 to Rs. 12.01 lakhs in 1960-61, after providing Rs. 1.39 lakhs (against Rs. 1.24 lakhs) for depreciation. An ordinary dividend of 40 percent, including an interim of 15 percent, taxable, has been declared. It is covered twice over and offers a yield of 8.2 percent at the present price. The ordinary share capital has, meanwhile, been increased from Rs. 5 lakhs to Rs. 14.88 lakhs by the issue of bonus shares. Taxation is allocated Rs. 6.01 lakhs (against Rs. 5.52 lakhs) and development rebate reserve Rs. 57,118 (against Rs. 21,945). The carry-forward is Rs. 1,38,677, against Rs. 1,31,658 brought in.

Raisings increased from 342,468 tons in 1959-60 to 353,536 tons in 1960-61 and despatches from 352,528 tons to 360,222 tons. Raisings at the Seepore colliery declined, but there was an increase in the production of the Laikdih deep colliery. During the year under report, Katras Jherriah received dividends worth Rs. 87,500 from its investment in the subsidiary Company, the Kalapahari Coal Co. Ltd. The sinking to the Nega seam at the Damra colliery is continuing satisfactorily.

Tariff Enquiry into Cement Prices

The outcome of the present enquiry into the question of cement price revision will be awaited with keen interest because on this will depend the attainment of the target set for cement production in the third plan. Opening the public enquiry in Bombay on 11th July, Mr. K. R. P. Aiyangar, chairman of the Tariff Commission, stated that the Commission was conscious of the fact that the price it would recommend would have an important bearing on the attainment of the plan target. But he added that in a planned economy, the price policy by itself would not achieve the desired result. There have been reports of forced stoppages and shut-downs in factories for lack of coal, power and sufficient wagons for moving the raw materials. The Government appears to be seized of these difficulties fully, which is why it has asked the Commission to undertake a comprehensive review of the industry in all its aspects such as production, prices, distribution and development. The Commission has also been requested to make recommendations on the procedure for determining packing charges for cement if the present practice requires any change.

The cement industry made considerable progress between 1953 and 1960, with the rated capacity rising from 4.37 million tonnes to 8.85 million tonnes, and production from 3.83 million tonnes to 7.60 million tonnes. This represents an increase of 103 percent in capacity and 98 percent in production over a period of seven years. The performance looks impressive, but the progress has slowed down appreciably since 1958. There were 28 factories in 1958 with an aggregate capacity of 6.43 million tonnes. It was then expected that by the end of 1960, 16 existing factories would expand their capacity and 16 new units would come into being, bringing the total capacity to 12.03 million tonnes. But rated capacity at the end of 1960 totalled only 8.65 million tonnes, because out of the 16 factories marked for expansion only ten had responded and of the 16 new units licensed, only six had come into existence. According to the present expansion programme, there would be 44 factories with a total annual capacity of 11.76 million tonnes by the end of June 1964, and when all sanctioned schemes have been implemented, the number of factories is expected to increase to 49 and the capacity to 14.62 million tonnes. Considering the disappointing progress since 1958, it is doubtful whether the third plan target can be realised unless effective measures are taken to accelerate the pace of development. It is apparent that the current price system with fair retention prices has not contributed to the development of new units and to the effective utilisation of capacity by the existing ones.

The spokesmen of the industry contend that the industry has had a rough deal following the enquiry in 1958. Costs have increased, but the industry had been denied the opportunity of fair prices. It has always been critical of the Commission's practice of estimating production on the

basis of installed or licensed capacity for the simple reason that it is difficult to maintain full production due to various factors over which the industry has no control. Costs of production calculated by the Commission are usually on the low side, actual production being much less than the assumed figure. The rate of return allowed by the Commission is also considered inadequate. This is amply borne out by the working results of the Associated Cement Companies, which account for about 45 percent of the total cement output. During the five years, 1955-56 to 1959-60, the profits of A.C.C. continued to decline in spite of the increase in capital, fixed assets and sales. The behaviour of cement shares over the past few years is another pointer in the same direction. Against an increase of nearly 37 percent in the Reserve Bank's all-India index for variable dividend securities over the past three years, the index for cement shares has recorded a rise of only about 14 percent. Cement companies' chairmen have repeatedly pointed out that the rate of return allowed by the Tariff Commission is quite inadequate since it leaves an extremely meagre margin for dividend distribution to shareholders after meeting obligations concerning interest on borrowings, taxation, managing agents' commission, bonus and gratuity.

Mr. N. Dandekar of the A.C.C. pleaded before the Commission that the cement industry should be allowed a net return of 9 percent on capital employed which cannot be considered unreasonable, in as much as the public sector companies and oil companies have been allowed a return of 13 to 15 percent. He urged the Commission to recommend a rehabilitation allowance at the rate of Rs. 2 a tonne and suggested that this should be fixed after taking into account the basic optimum life span of the plant and machinery used by the industry. Over and above this, the development rebate should be treated as an additional depreciation allowance. The industry strongly criticised the policy of fixing packing charges, and accused the State Trading Corporation of making huge profits (Rs. 13 crores) at the cost of the industry and the consumer, without offering any useful service. The individual ex-works prices currently payable by the S.T.C. to cement producers for naked cement vary from Rs. 55.54 a tonne to Rs. 82.16 a tonne, whereas the present f.o.r. destination selling price for naked cement is 104.60 a tonne. Packing charges are Rs. 19 a tonne for the current quarter. The retail prices of cement vary from State to State, as these are fixed by State Governments after adding incidental charges. Production has failed to catch up with demand and there is an acute shortage at present in wide areas. It is reported that cement is being sold in the market at more than double the controlled price. Demand, it is expected, will appreciably increase with the improvement in the supply of steel. This underlines the need for a realistic price policy aimed at encouraging the industry to increase its production. The comprehensive nature of the present enquiry holds out the hope that the Commission will view the industry's requirements in a wider perspective and recommend fair prices which will cover all costs enabling the full growth of the industry, while providing incentives to investors.

Bonus Issue by Shivrajpur

The shares of Shivrajpur Syndicate Ltd which went down to Rs. 69.50 in the last week of June, had rallied to Rs. 76 by 14th July and shot up to Rs. 90 in kerb dealings the next day. The rise occurred in spite of the pronounced weakness in the rest of the market. Bears who had built up a huge interest in these shares over the past few months rushed for a cover when the news came that the directors had decided at their meeting on 14th July to issue bonus shares in the ratio of one share for every one held, subject to the sanction of the Controller of Capital Issues. In taking this decision, the directors have merely accepted the strong plea made by the shareholders at the Company's annual meeting to issue bonus shares because of the serious unbalance in the capital structure. Against its present paid-up capital of Rs. 10.46 lakhs, the Company's reserves total nearly Rs. 71.20 lakhs. The proposed issue will raise the ordinary capital to Rs. 20.92 lakhs. Whether the Company will be able to maintain the dividend on increased capital is difficult to say, because much depends on the outlook for the export of manganese ore which is far from encouraging.

Maiden from Colour-Chem

Shareholders of Colour-Chem have good news from the Company. The directors have proposed a maiden dividend of Rs. 8 a share for the year ended March 1961, and this dividend is likely to be free of tax as it is to be paid out of a special reserve created out of profits exempt under Section 15(C) of the Income Tax Act. An applica-

tion is being made to the income tax authorities under Section 18(31) of the Act to certify this figure for exemption. Preliminary figures released along with the announcement of the maiden dividend indicate that the Company has indeed fared very well in 1960-61, the first year of its full working. The gross profit has recorded a four-fold increase from Rs. 11.61 lakhs in 1959-60 to Rs. 46.54 lakhs in 1960-61. After providing Rs. 10.63 lakhs (against Rs. 4.67 lakhs) for depreciation, Rs. 7.82 lakhs (against Rs. 6 lakhs) for development rebate reserve and Rs. 9.50 lakhs (against nil) for taxation, the net profit for the year amounts to 18.59 lakhs, against Rs. 91,391 in 1959-60. Adding Rs. 1.22 lakhs, being the previous year's excess provision for development rebate reserve and deducting the carried forward loss of Rs. 39,983, the net surplus available amounts to Rs. 19.41 lakhs. From this, the directors have transferred Rs. 8.11 lakhs to a separate reserve to be known as "special reserve—profits exempt under Section 15(C)." The proposed dividend is to be paid out of this reserve. A sum of Rs. 9 lakhs has been allocated to general reserve and another Rs. 2 lakhs have been taken to dividend equalisation reserve. After providing Rs. 8 lakhs for dividend, there remains a balance of Rs. 30,076, which is being carried forward. The shares of Colour-Chem, which had risen from Rs. 287.50 to Rs. 410, have recently eased to Rs. 355 in sympathy with the general decline in equity prices over the past few weeks.

New Project for Polysterene

Shree Ram Mills of Bombay have received an industrial licence to set up a factory for the manufacture of 10,000 tons a year of styrene monomer and 7,500 tons a year of polystyrene. The proposed factory is likely to be located in Visakhapatnam. The Andhra Government, it is said, has assured the supply of alcohol and other facilities for the project. The Company will soon start negotiations for securing foreign collaboration. The project which is estimated to cost nearly Rs. 5 crores, will be undertaken by a new Company to be known as Hindustan Polymer Ltd.

Black Wire Ropes Plant

H.K. Industries Private Ltd, Bombay, has secured an industrial licence for the manufacture of 3,000 tons of galvanised and black wire ropes. The factory will be located in Kanpur, near Bombay, and the plant, it is expected, will go into production by the end of 1962. The Company, which was incorporated in March 1959, has an authorised capital of Rs. 25 lakhs at present and it is stated that application is being made to increase it to Rs. 1 crore. It has secured the collaboration of Messrs Seigfried Schumacher K.G. of West Germany, which, apart from providing the technical know-how for the project, will also participate in the share capital of the Company to the extent of Rs. 12.50 lakhs. The total capital outlay involved in the project is estimated around Rs. 80 lakhs, of which the foreign exchange component is valued around Rs. 35 lakhs. The import licence for the plant and equipment, it is expected, will be received soon.

Bonus Issue from Simplex

The shares of Simplex Mills, which could be bought around Rs. 160 in January, rose to Rs. 216 in the third week of June. In spite of the marked weakness in the rest of the market, Simplex had continued to hold remarkably firm over the past few weeks on sustained influential support based on reports that the Company had done well during the year ended March 1961 and that it would make a bonus issue in addition to the dividend. But on 13th July, the shares dropped sharply from Rs. 210 to Rs. 192 to recover later to around Rs. 200. Selling was prompted by the decision of the directors to issue bonus shares in the ratio of one share for every five held as well as to skip over the dividend. This step has apparently been taken to bring about a healthy relationship between the Company's capital and its block. On 31st March, 1960, Simplex Mills' gross block stood at Rs. 2.17 crores, it had been written down to Rs. 1.26 crores. Against this, it had a paid-up capital of Rs. 50.40 lakhs and the shareholders' reserves totalled Rs. 16.50 lakhs. For the proposed bonus issue, the Company will capitalise reserves to the extent of Rs. 10.08 lakhs. It has had to plough back Rs. 12 lakhs from the 1960-61 profits to general reserve in order to adhere to the regulation that the reserves after the bonus issue should not be less than 20 percent of the increased capital.

While the directors' decision to issue bonus shares in lieu of the dividend has caused some disappointment in the market, the preliminary figures released along with the bonus issue

announcement indicate that the Company has done well during the year ended March 1961. Although sales are up by only Rs. 3 lakhs from Rs. 3.29 crores to Rs. 3.32 crores, the gross profit has trebled from Rs. 11.69 lakhs to Rs. 34.78 lakhs. The improvement in the profit margin is apparently due to a change in the Company's production pattern and the modernisation of equipment. Depreciation has been raised from Rs. 12 lakhs to Rs. 16.20 lakhs. Development rebate reserve gets Rs. 2.80 lakhs, against nil in the previous year. A sum of Rs. 12 lakhs has been transferred to general reserve. After providing Rs. 3.39 lakhs to offset previous losses, a sum of Rs. 39,000 has been carried forward. The current working of Simplex Mills is said to be even better than in 1960-61. The directors say that the Company will continue to enjoy freedom from tax liability up to a gross profit of Rs. 50 lakhs during 1961-62. Its spindle capacity is due to be increased by 7,000 to 50,000, and the additional spindles are likely to be commissioned in December.

Prospects for Tata Group Mills

The Svadeshi Mills earned a gross profit of Rs. 67.65 lakhs in 1960, against Rs. 44.32 lakhs in 1959. The dividend has been raised from 14 percent to 17 percent, both taxable. Tata Mills' gross profit rose by over 100 percent from Rs. 20.62 lakhs to Rs. 44.22 lakhs, and the dividend has been raised from Rs. 2.50 a share (Rs. 25 paid) to Rs. 5 a share, both taxable. The gross profit of Ahmedabad Advance Mills for the half-year ended December 1960 at Rs. 14.92 lakhs compares with Rs. 29.11 lakhs for the year ended June 1960. The dividend for the half-year has been proposed at Rs. 6 a share, taxable, against Rs. 10 a share, taxable, paid in 1959-60. In his advance statement to the shareholders, Mr. N. H. Tata, chairman, says that there is no reason why future dividends cannot be maintained around these figures, given reasonably satisfactory trading conditions and a stable fiscal policy free from inequitable imposts of excise duty and taxation. He, however, tempers his optimism with caution because the textile industry is looked upon as a highly fluctuating industry throughout the world. Among other things, its profitability depends on the degree of flexibility of operations which a textile unit can effect to adapt its production to fast changing trends. To counteract this unfavourable feature, a number of textile units are engaged in numerous "non-textile activities" which often account for their high profitability during adverse trading conditions in cotton piecegoods. Many textile units have already taken up new remunerative lines, but this diversification is now discouraged by the Government. The Tata group of mills are not among the "lucky few" which have diversified their activities after fully equipping their textile plants, Mr. Tata said. In any case, the profitability of the mills depends on the versatility of their plant and equipment and their capacity to produce the type of cloth most in demand at a particular time. This calls for great flexibility in production, with complete balancing of the spinning and weaving sections and a complete range of processing to manufacture cloth in several varieties.

But against the long-standing application by Svadeshi Mills to install 25,000 additional spindles to balance its plant, the Government has sanctioned only 3,800 spindles. The position of Tata Mills is no better. The Company had asked for permission to install 20,000 spindles; the Government has sanctioned only 3,600 spindles. So the spindles sanctioned by the Government are quite inadequate to rectify the lack of balance between the spinning and weaving sections of the mills. The Companies are, therefore, unable to reach the full productive capacity, which is so badly needed to relieve the cloth shortage in the country. In view of the shortage of foreign exchange, Mr. Tata has questioned the wisdom of permitting new units to be set up merely to satisfy regional considerations when the existing units are capable of supplying a substantial part of the additional 800 million yards envisaged in the third plan through multiple-shift working and additional equipment. The shareholders will be pleased to learn that the sanforizing machine, which Svadeshi Mills installed in April, is now working satisfactorily. This has led to higher realisation on fabrics which are sanforized. Sanforized cloth is being marketed for the first time in the history of the Tata group of mills. Ahmedabad Advance and Tata Mills will also soon become the registered users of the "sanforized" trade mark, since the necessary agreements with the U.S. firm of Cluett and Peabody have been finalised. The finishing plant of Ahmedabad Advance is expected to be received "without much delay." The shares of Svadeshi Mills, which touched a high of Rs. 287 about the middle of June, have recently declined to Rs. 264 in sympathy with the general weakness in the market. Tata Mills have declined from Rs. 71.20 to Rs. 66. Early this year, Svadeshi were available around Rs. 219 and Tata Mills

around Rs. 39. Ahmedabad Advance are, however, still quoted around their year's high of Rs. 193. In January, the shares were quoted around Rs. 154.

Indian Dyestuff Repeats

The shares of Indian Dyestuff Industries Ltd, which were quoted around Rs. 530 on 10th July, were sold down to Rs. 450 the following day, reflecting the market's disappointment over the bare maintenance of the dividend at 6 percent, subject to tax, for the year ended March 1961. But even the maintenance of the dividend has cost the Company an additional Rs. 5.59 lakhs because of the substantial increase in the capital following the rights issue of nine shares for one in 1959-60 which raised the number of equity shares from 15,000 to 149,982. Against the actual distribution of Rs. 3.40 lakhs on ordinary shares in 1959-60, the proposed dividend will absorb Rs. 8.99 lakhs. The preliminary figures about Indian Dyestuff's working results released along with the dividend announcement indicate it has done reasonably well in 1960-61. The turnover has risen by about 24.3 percent from Rs. 1.52 crores to Rs. 1.89 crores. The gross profit, however, shows only a small increase from Rs. 54.23 lakhs to Rs. 60.75 lakhs. The ratio of gross profit to sales has declined from 35.6 percent to 32 percent. Depreciation absorbs Rs. 3.22 lakhs (against Rs. 2.95 lakhs) and taxation accounts for Rs. 24 lakhs (against Rs. 20 lakhs). These provisions bring down the net profit to Rs. 27.83 lakhs, against Rs. 26.15 lakhs in 1959-60. Allocation to the development rebate reserve has been pruned from Rs. 1.88 lakhs to Rs. 71.119 and Rs. 16 lakhs (against Rs. 15 lakhs) has been transferred to reserves. After providing for the proposed dividends, there remains Rs. 75,823 to be carried forward, against Rs. 62,385 brought in. The preference dividend absorbs Rs. 1.99 lakhs, against Rs. 5.04 lakhs distributed last year which included arrears for previous years, from May 1954. The gross block of the Company at the end of the year stood at Rs. 43.84 lakhs which has been written down to Rs. 26.29 lakhs. At the current quotation of Rs. 475, the shares of Indian Dyestuff offer a gross yield of only 1.26 percent.

Bombay Suburban Fares Well

The Bombay Suburban Electric Supply Ltd has reported satisfactory results for the year ended March 1961. Sales of energy recorded a rise of 19.42 percent at 144,823,892 kilowatt hours. The gross earnings from the sale of energy rose by about 17.9 percent from Rs. 1.22 crores to Rs. 1.44 crores while the cost of energy increased by about 23.7 percent from Rs. 53.58 lakhs to Rs. 66.29 lakhs. The gross profit for 1960-61 at Rs. 51.21 lakhs was 15.2 percent higher than the previous year's figure of Rs. 44.46 lakhs. After providing Rs. 13.04 lakhs (against Rs. 11.59 lakhs) for depreciation, Rs. 6.87 lakhs (against Rs. 7.38 lakhs) for taxation, and Rs. 1.39 lakhs (against Rs. 93,545) for retiring gratuity reserve, the net profit amounts to Rs. 26.11 lakhs, against Rs. 21.53 lakhs in 1959-60. With Rs. 1.46 lakhs, being the adjustments to consumers' benefit for previous years and Rs. 1,957 brought in, the disposable profit amounts to Rs. 27.59 lakhs. Appropriations include Rs. 1.42 lakhs (against Rs. 1.01 lakhs) to contingencies reserve, Rs. 1.02 lakhs (against nil) to tariff and dividends control reserve, Rs. 89,970 (against Rs. 4.44 lakhs) to consumers' benefit reserve, Rs. 6.54 lakhs (against Rs. 6.32 lakhs) to development reserve, Rs. 1.04 lakhs (against nil) to reserve to augment production facilities and Rs. 1.65 lakhs (against Rs. 2.50 lakhs) to dividend equalisation reserve. The proposed dividends absorb Rs. 14.87 lakhs (against Rs. 14 lakhs), leaving Rs. 4,522 to be carried forward.

The directors state that the sale of energy for lights and fans and for general purposes increased by 8.80 percent and that for motive power by 27.81 percent. The transmission and the distribution systems of the Company were maintained in good order. There were 214 miles of high-tension mains and 284 miles of low-tension mains on Bombay Suburban's system at the close of the year. New connections given during the year totalled 11,567, raising the total number of consumers to 91,966. With the addition of 23 new sub-stations and with the increase in the transformer capacity of the existing 19 sub-stations, there has been a considerable increase in the Company's area of supply. Bombay Suburban has an ordinary capital of Rs. 1.75 crores and its reserves total Rs. 99.13 lakhs. At the current price of Rs. 96, the share of the Company offers a gross yield of about 9.7 percent.

Sanitaryware by Macneill and Barry

Recent reports indicate that Macneill and Barry Ltd of Calcutta has applied to the Central

Government for its permission to set up a factory in West Bengal for manufacturing 5,460 tons a year of sanitaryware, 240 tons of electrical insulators, 60,000 pieces of toilet seats and 324 tons of metal fittings. The project is estimated to involve a total capital investment of Rs. 2.60 crores. The foreign exchange component is valued around Rs. 65 lakhs. American Radio and Standard Sanitary Corporation of New York, which will be collaborating in the venture is said to insist on taking up 60 percent of the capital. In addition to this majority holding, the foreign collaborator is to be paid a continuing service fee of 2½ percent on net sales—about Rs. 6.75 lakhs—for the use of trade marks, technical service, research and patents. The terms of foreign collaboration, it is understood, have not been approved by the Development Wing. But the Company is said to have informed the Government that it is trying to persuade the American firm to agree to a minority shareholding. Since there exists scope for creating additional production capacity for sanitaryware and glazed tiles, Macneill and Barry's application may be approved provided the terms of foreign collaboration are settled to the Government's satisfaction.

The total indigenous production of sanitaryware and glazed tiles is about 10,000 tons a year, against the installed capacity of 16,790 tons. But production is totally inadequate to meet domestic requirements. The existing installed capacity consists of 8,760 tons of sanitaryware and 8,030 tons of glazed tiles a year. The additional capacity sponsored so far comprises 33,648 tons of sanitaryware and 22,380 tons of glazed tiles. Of this, the capacity which has been covered by foreign exchange allocations for importing plant and machinery or which otherwise has shown substantial progress to indicate the certainty of implementation consists of 8,928 tons of sanitaryware and 900 tons of glazed tiles. Thinking that the additional capacity already sponsored would be implemented in view of the increasing domestic requirements, the Government decided, some time ago, not to consider any fresh applications till August 1961. But since out of the additional sponsored capacity, a capacity of 24,720 tons for sanitaryware and 21,480 tons of glazed tiles may not be fully implemented, the Government is now reported to be willing to consider pending applications on merits.

T.I.S.C.O. Dividend Disappoints

The shares of the Tata Iron and Steel Company, which rose from Rs. 160.25 to Rs. 167 between 3rd July and 7th July, were sold down to Rs. 158 on 14th July. Apart from the prevailing dull trend in the market, the recent decline in Tata Steel reflects disappointment over the dividend for the year ended March 1961. Net distribution for equity shareholders has been raised to Rs. 7.25 a share in 1960-61 from Rs. 6.80 a share in 1959-60. The overall distribution does not fall much below general expectations. Even so, the market is disappointed because the higher distribution is made up of a dividend of Rs. 6.80 and a bonus of 45p a share. The ordinary dividend of Rs. 6.80 a share is to be paid out of the past taxed reserves (reserve no. 1) while bonus will come out of the concession given to dividend payments out of the taxed reserves under Section 49BB(1) of the Income Tax Act which Tata Steel obtained in 1959-60, but did not pass on to the shareholders. This relief is said to amount to about Rs. 33 lakhs. The overall distribution of Rs. 7.25 net a share and the adjustments concerning the preference shares are said to have cost the Company an additional Rs. 88 lakhs. Cash bonus of 45p a share accounts for about Rs. 23.6 lakhs. The maintenance of the ordinary dividend at Rs. 6.80 a share has involved an additional burden of about Rs. 43.8 lakhs, since the 601,681 new shares have participated in the full year's profits, against a quarter in 1959-60. Adjustments in preference dividends, together with the full dividend payable on 370,054 "A" second preference shares, have accounted for an additional burden of about Rs. 20.82 lakhs. The proposed dividends have thus imposed a substantial burden on Tata Steel. The working results are awaited with keen interest, because they alone can provide a good basis for assessing the outlook for the Company's shares which around their current cum-dividend quotation of Rs. 158.25 offer a tax-free yield of about 4.8 percent.

Central Pays More, Baroda Repeats

The working of the Central Bank of India and the Bank of Baroda for the half-year ended June 1961 is in conformity with the general pattern of bank profits. The former's profit at Rs. 86.68 lakhs—an all-time record—is 33.3 percent higher than the January-June 1960 figure of Rs. 65.05 lakhs. The Bank of Baroda's profit has increased from Rs. 17.23 lakhs in the six months ended June 1960 to Rs. 25.11 lakhs in the half-year ended June

1961—a rise of 45.7 percent. The Central Bank has raised its interim dividend to Rs. 2.40 a share, subject to tax, from Rs. 2.10 a share, taxable, paid for the half-year ended June 1960 and Rs. 1.90 a share, taxable, paid for January-June 1959. Including Rs. 18.61 lakhs brought in, the profit for January-June 1961, subject to audit, is placed at about Rs. 1.05 crores (against Rs. 83.87 lakhs), including Rs. 18.82 brought in, for the half-year ended June 1960. The proposed interim dividend absorbs Rs. 30.24 lakhs, leaving Rs. 75.05 lakhs to be carried forward, subject to provision for taxation.

The Bank of Baroda has decided to maintain the interim dividend at 14 percent, i.e., Rs. 3.50 a share, subject to tax, in spite of an increase of 45.7 percent in its profit. But since the dividend is on the increased capital, it absorbs Rs. 10.50 lakhs, against Rs. 8.75 lakhs during the half-year ended June 1960. Including Rs. 1.09 lakhs brought forward from the previous year, the amount available for disposal is Rs. 26.20 lakhs, against Rs. 18.26 lakhs during the half-year ended June 1960. After providing for the proposed interim dividend, Rs. 15.70 lakhs has been carried forward, against Rs. 9.51 lakhs in the corresponding period of the previous year. The shares of Bank of Baroda have gradually improved from Rs. 81 to Rs. 103 since the beginning of the year. Central Bank shares (Rs. 25 paid) which are now quoted around Rs. 60, could be bought around Rs. 47 in January.

Relieving the U.P. Power Crisis

The U.P. Government has announced plans to relieve the present power shortage in the State within the next few months. Under the scheme, a block of about 1,500 kW would immediately become available in Lucknow and Bareilly. Allahabad and Varanasi would get about 500 kW each before December this year. The provisions of the Electricity Supply Act which entitle every consumer to get an electric load were suspended more than a year ago, and electricity connections are now being given by the State Government. The Bareilly Electricity Company has now been permitted to run its stand-by plant regularly to meet pending load requirements. The Company has been assured that in the event of a break-down, it would receive power from the Sarda-Ganga grid. As for Allahabad and Varanasi, the State Government has ordered the construction of temporary transmission lines to take power from Rihand to these places. Under the existing plan, there is provision to carry the Rihand load up to Moghalsara. Although the Rihand project was originally expected to be commissioned only in March 1962, it has been decided to commission at least one turbine earlier. Negotiations are in progress with the aluminium factory in Pipri to use at least 25,000 kW to enable the economic utilisation of the power generated by this one turbine. If the factory agrees to take this power, it would leave another 25,000 kW to be distributed in Allahabad, Moghalsara and Varanasi. The Rihand turbines, it is reported, will be given a trial run by the end of this month and a test pond is to be erected for the purpose as the energy generated cannot be put to any profitable use. According to U.P.'s Chief Minister, the Centre has issued an import licence to Messrs Martin Burn and Co for the import of a thermal plant of 10 MW capacity for Lucknow. U.P.'s Electricity Board would advance the necessary loan to the Company to finance the project, which is expected to be completed within two years. A sum of Rs. 1,15,00,000 has been sanctioned for investigating and surveying the Himalayan and Vindhyaal regions with a view to establishing a chain of power stations. The possibility of a big dam on the Ganga near Deoprayag, on the lines of the Bhakra dam, is also being investigated.

Industrial Activity Index

Corrected for seasonal fluctuations, Capital's Index of Industrial Activity increased by 96 points during November 1960. There were rises in sugar, jute, yarn, cloth, coal, pig iron, finished steel tyres, motor-cars, bicycles and railway ton-miles but tea, cement, paper and electricity declined.

CORRESPONDENCE

PROPOSED INCREASE IN I.A.C. FARES

(TO THE EDITOR OF "CAPITAL")

Sir,

Comments have recently appeared in the Press on the proposed increase of fares on the I.A.C. Most of these have bracketed the proposal with the increased wage bill since the I.A.C.'s pay scales

were revised. What seems to have been generally ignored is the fact that the cost of operations and maintenance has been rising as well. For years now, the Corporation has been doing its best within the limitations of extraordinarily high fuel costs (possibly, the highest paid by any airline) and a fare structure that is about the lowest in the world. Normal increases in expenditure can be, and are, offset by increasing revenues due to increased traffic, but even here the I.A.C. is faced by the limiting factor of the near-maximum capacity already offered. The I.A.C.'s revenue-earning potential is now levelling off, while unavoidable expenditure continues to rise.

Since 1957, the price of aviation turbine fuel used by *Viscounts* and *Friendships* has gone up by about 4.5 percent, and that of high octane gasoline consumed by piston-engined aircraft by nearly 17 percent. The impact of the latter increase is very considerable as the I.A.C. fleet is made up largely of piston-engined aircraft. Fuel alone accounts for nearly one-third of our total expenditure. Aircraft and engine spares have also been going up in price. Items: (1) *Dakotas*: The main source of supply for *Dakota* spares has been the war surplus market in the U.S.A. The pool of unused spares manufactured years ago has almost dried up and whatever is available sells at a higher price. In the last five years alone, *Dakota* spares have gone up by over 150 percent on an average, with some regularly replaceable parts costing five times as much. As the spares position becomes more difficult, we are forced to buy newly manufactured parts which cost a lot more. (2) *Viscounts*: Modern though the *Viscount* is, the prices of its engine and aircraft spares have gone up by varying degrees in the last four years. Aircraft spares now cost at least 18 percent more, and vendor items (such as radio equipment) between 4 percent and 50 percent more. Engine spares which are changed at every overhaul have gone up by nearly 97 percent. To these must be added higher duties on some items, increased cost of freight and the increased incidence of sales taxes on local purchases. In spite of all these added costs, the fares and freight rates on the I.A.C. have been static since 1958, out for a few minor adjustments. Even with the proposed increase the I.A.C. will continue to offer fares which are lower than almost anywhere else in the world.

Yours etc.

P C LAL,

General Manager,

Indian Airlines Corporation

New Delhi, 12th July.

THE SHARE MARKET

THE Share oasis this week has been mostly engaged on Government Paper, which has been undergoing a series of fluctuations since the announcement of the New Loan of one crore of rupees. The quotation of the 3½ percents went up about one percent in the early part of the week, out since then it has been feeling its way downwards and the closing rate this afternoon is 95.9. The rather startling news comes from London today that the 3 percent Indian Sterling Loan for 3 millions has been withdrawn, the applications being inadequate. The failure of the loan is said to be attributed to the tightness of money and also to the depression in Consols and other gilt-edged securities. On Monday, in London, Consols touched 91½ but the quotation by wire this morning is 92.7/16. The failure of the loan is a new and a somewhat humiliating experience for the Government of Great Britain.

There is one feature in share operations at present which deserves a note of caution, and that is the eagerness with which people have been running after the ten rupee scrip in some of the new Coal Companies. The coal trade may be all right, and the Managing Agents of the concern entirely above suspicion, as I believe them to be, but surely it is hardly wise to run after new shares and buy them at from 36 to 50 percent premium, in cases where the payments of dividends must still of necessity be in the remote future. The coal trade is good and the possibilities in the future are undoubtedly great, but for all that it is quite possible to pay too much for coal shares today, especially in the face of falling market at home, and the certainty of keen competition by America in our export markets. Caution, therefore, is the word. Coals and Government Paper have so monopolised the market that Jute shares have been comparatively neglected. They are, however, biding their time. The half-yearly reports coming out are distinctly encouraging. The Seehore Mill with a profit of Rs. 2,03,000, is to give the ordinary shares a dividend of 5 percent and place Rs. 80,000 to Depreciation. The Gondolporah Mill has made Rs. 1,15,000, and the Hooghly, Rs. 2,23,000 out of which the ordinary shareholders will likely receive a small dividend.

FROM

CAPITAL,
18th July, 1961

A Ditcher's Diary

BRITAIN MUST BE FLATTERED, AND NOT A LITTLE surprised, to find how indispensable she has suddenly become to all her Commonwealth partners. Countries which only a short time ago were eagerly threatening to sever relations if Britain did anything remotely imperialistic, or hinted for one moment that she did not support their pet grievances, have now that Britain has proposed she join the Common Market, miraculously discovered how vitally important their ties with the Commonwealth are. Or would it be more correct to say with the British market? Anyway, it is clear enough that whatever may be accepted among Commonwealth countries about being free and equal partners, none of them seriously believes that Britain does not carry a disproportionately heavy responsibility towards all the others. As one who has always regarded the Commonwealth with as much astonishment as admiration, I am now wondering what its fate will be if Britain joins the Common Market. I cannot see many of the countries which have just been claiming so loudly that their present Commonwealth ties are indispensable continuing to find them so if no longer backed by solid economic advantages. Britain has proved her concern for the Commonwealth by guaranteeing to the best of her ability that members' trading interests will not suffer if she joins the Common Market. Other countries have shown their loyalty in the past by supporting Britain in two world wars. But recently one older member showed contempt for what the Commonwealth represents by leaving it on the paltry excuse that its internal policies were being attacked. Now perhaps we shall have the opportunity of finding out whether or not the adherence of the remainder is anything more than cupboard love.

LONDON, I AM SURE, HAD THE BETTER OF THE bargain in the recent exchange of V.I.P.s with Moscow. Prince Monolulu, 80-year-old Abyssinian-born tipster who believes peace can be preserved through horseracing, must have amused many in the Kremlin. Major Gagarin, all accounts agree, took London by storm. That latter city has been cool to many great men: West Germany's ex-President Heuss thought most people had lined up to see the horses and the Queen and only a few to watch him; but the world's first cosmonaut was a different proposition altogether. Especially with the young, brought up on a diet of space fiction, Major Gagarin must have been an easy winner. Scientists and philosophers are not the only ones to have longed for centuries to have a look at the world from outside. It was all very well for Cassius to tell dear Brutus that the fault is not in our stars; to reach for them is a desire confined neither to the R.A.F. nor to Shelley's moth. Some people think it unfair that Major Gagarin should be the recipient of so much publicity when we do not know even the names of the backroom boys, the scientists and technologists who made the trip possible; but that is the way of the modern world. For every million picturegoers who are familiar with the vital statistics of this or that dumb blonde star there may not be a hundred who know the name of her director or photographer, whose contribution to her glamour may well be greater than her own. In my profession, columnists and

other prima donnas are far better known than leader-writers and editors. Whether between them Prince Monolulu and Major Gagarin have brought the world any nearer peace I am not sure. One of the Richards offered to stake his whole kingdom for a horse—not for peace but to make war. Major Gagarin fools himself if he thinks he was sent out into space at tremendous cost for such tawdry things as adventure and scientific knowledge.

WHATEVER CONSOLATIONS THE POLICE CHOOSE TO derive from officially-compiled statistics, the number of street accidents in Calcutta is still increasing. One can scarcely look through a newspaper nowadays without seeing some report about an old woman being run over by a lorry, or a child being mangled under the wheels of a State bus, or a taxi colliding with an over-loaded *gharry* and injuring all the occupants. I grant that the carelessness of pedestrians is partly responsible, but the chief blame is certainly the deplorable standard of driving which prevails in this city. This is particularly true where State buses are concerned. A friend who regularly travels by State bus tells me that neither drivers nor conductors concern themselves with the safety of their passengers, especially in the peak hours of traffic. At these times, not only must they put up with rudeness from conductors, but they are also given insufficient time to board and alight. How long the vehicle remains at a bus stop is a matter for the driver or the conductor's whim, and depends not at all on the convenience of the passengers, even when these are women, children or old people. Such behaviour has already resulted in numerous accidents. This friend had an experience of his own the other day when a State bus from which he was about to alight on to a busy thoroughfare suddenly drove off literally flinging him on to the road. Fortunately he is comparatively young and nimble, nevertheless he was injured. But the worst part of the story is that the conductor, and those passengers on the bus who had seen what happened, made no effort to stop the vehicle. In fact, it accomplished such a quick getaway that by the time my friend recovered sufficiently to look for the number it was already out of sight.

IF REPORTED CORRECTLY, PROFESSOR MAHALANOBIS has said in London that in 1952 the U.S.A. refused to help India put up a steel plant, but that when the Soviet Union began to give aid in 1954, the attitude changed. Now that just goes to show how easy it is to create a false impression abroad by stating only half the facts. What the Professor should have said was that the U.S.A. declined to join the *Indian Government* in setting up a steel plant in 1952. As for the second part of the statement, it seems to me that the first real interest the U.S.A. has taken since 1954 in helping India with steel has been in 1961, when the prospects of aid for the fourth public-sector plant at Bokaro have been discussed. What has prompted me to challenge Professor Mahalanobis's words is the fact that I have just finished reading *Merchant in a Mirror* by Wilfred Russell, one time director of A.C.C. and

later of Killicks, Bombay. In one section of this book Russell describes how, round about 1952, his firm became interested in putting up a steel plant in the private sector, and how he went to the U.S.A., using private contacts, to secure aid for it. There his delegation crossed with one from the Indian Government and at a business men's lunch in Pittsburgh where the project was to be discussed, he was politely invited by the Indian Ambassador to stay away. He goes on to say that the Government delegation failed miserably, but that he was given every hope, including a promise of a visit to India by his U.S. sponsors, that the support would be forthcoming for his project. When he got back to India, however, it was to find that steel had been irrevocably reserved for the public sector. So the idea had to be dropped and the private U.S. interests took the snub and kept their wallets in their pockets. So it was not the U.S.A. who was to blame for the fact India did not get a steel plant in 1952, it was the Indian Government's ideologically inspired policy. Which too, I maintain, is responsible for the absence today of so much of the capacity which India requires for development. Coal is a case in point; oil will soon be another.

WHEN AT A MAN'S OWN REQUEST HIS DEATH IS announced two days after the cremation, you may be sure there are very good reasons for it, although you may not know what they are. Whittaker Chambers, who died on 10th July, was once a fairly established journalist; but his fame came from being a witness not from writing a book called *Witness*. Both in its severity and its laxness American justice can be fantastic; and when the offence is political and the time 1948, anything can happen. To this day many who made it their business to study the Alger Hiss case in great detail are not sure whether that once distinguished student of law at Harvard and later a State Department official, was guilty. The amount of evidence produced by Chambers was certainly impressive; perhaps a little too much so to be wholly convincing. Yet, Hiss—who now sells stationery in an obscure shop in New York—never admitted that he had passed on State secrets to communist agents; and many others believe him to have been the victim of a conspiracy. While many concede that communists did infiltrate the successive Roosevelt Administrations, with some well-meaning liberals unknowingly helping them, the witch-hunt that plagued the Truman Administration and made McCarthy immortal must have covered many an innocent person with calumny. Mr. Alis's Cooke of the *Guardian*, who perhaps knows more about the Hiss case than most people, recently reminded us that McCarthy was not the only man to have profited from anti-communist crusades. It was Richard M. Nixon, later Vice-President, who took the Hiss case to the courts; and he owed his later prominence in the political scene of the U.S.A. to the publicity he gained in handling it. Going back to Whittaker Chambers, why did he confess his communist past and involve so many in the process? He did not have to; he volunteered. I can well believe it that with him it was a matter of conscience, that he owed it to himself to expose his unpatriotic crime although he had not been caught. Mr. E. M. Forster once wrote that if he had to choose between betraying his country and his friend he would betray his country. Most of us are lucky not to be confronted with the terrible choice.

Stocks and Shares

MARKET TURNS EASIER IN SYMPATHY
WITH STEEL SHARESOPERATORS HOPE FOR HIGHER INDIAN
IRON DIVIDEND

Wednesday Evening.

AT the settlement on Wednesday, trading was cautious and prices were slightly marked down in sympathy with steel scrip. The carry-forward charges in Indian iron shares is high in view of the Company's book closing from 5th August for the payment of dividends. After an earlier shake-out following easier advices from Dalal Street, sentiment has recovered in Lyons Range due to the hope that the dividend of the Indian Iron and Steel Co. for the year ended March 1961, will be increased in line with that of the Tata Iron and Steel Co. There is little logic in this kind of thinking because the conditions of the two Companies are not similar. The Tata Iron and Steel Co. has actually paid more in the form of a bonus out of tax refunds. If Indian Iron were to increase the ordinary dividend, the additional money would have to be obtained out of profit. There is little doubt that, due to higher production, the Company will produce a better report for the year ended March 1961, than it did during 1959-60. But there are many uncertainties which cannot be ignored. Indications are that the Government may not announce the new steel retention prices before the year ended March 1961. Considering that the expansion schemes of the Indian Iron and Steel Co. have cost a great deal of money, the need for ploughing back resources into the business cannot be exaggerated. As the Company increased the ordinary dividend from the year 1959-60, it is rather optimistic to think that it will again be raised for the year ended March 1961.

Operators are inclined to take a complacent view that the Government may not press the stock markets to introduce further reforms, at least for the time being. The news that India has obtained a standby credit from the International Monetary Fund has been welcomed. The finance should help the country overcome the payments difficulties until the foreign aid promised by the "Aid-India-Club" countries for the first two years of the third plan, begins to arrive. At the same time, it is necessary to take vigorous steps in order to improve the foreign trading account. Unless exports are substantially increased, India may eventually find difficulty in financing maintenance imports.

There is growing concern about the possibility of further restrictions on credit as money conditions become easier. It looks as if New Delhi is not in favour of extending bank credit to big industrial units on the present scale. Anyway, it is almost certain that the authorities will try to make credit dearer. The decision of the Government of India to offer higher yields on its borrowing, as evident from the two cash-cum-conversion loans just announced, is a pointer to dearer money trends. In the circumstances, the professionals will find it more expensive to finance their trading in the stock markets.

Support has been forthcoming for selected miscellaneous shares due to good corporate news. Production, sales and profits of many units have increased and are likely to go on doing so in future. There is also evidence of shortages of floating stocks. It remains to be seen how the shortage is relieved by the various new share issues.

The directors of J. K. Synthetics Ltd have allocated 523,750 ordinary shares recently offered in the following manner: applicants for 50 and below 100 shares obtain 15 shares; for 100 and below 150, 25 shares; for 150 to 250, 50 shares; for 250 to 350, 75 shares; for 350 to 450, 100 shares; for 450 to 550, 125 shares; for 550 to 650, 150 shares; for 650 to 750, 175 shares; for 750 to 850, 200 shares; for 850 to 950, 225 shares; for 950 to 1,000, 250 shares; for 1,000 to 1,500, 350 shares; for 1,500 to 2,000, 500 shares; for 2,000 to 2,500, 750 shares; for 2,500 to 3,000, 1,000 shares; for 3,000 to 5,000, 1,250 shares; for 5,000 to 10,000, 2,500 shares. An interesting feature is that all applicants whose cheques have not been dishonoured are allotted shares.

The price of Indian Iron shares has closed at Rs. 27.85. Jessop have met with scattered support in the engineering section. Texmaco fluctuated on speculative manipulation. Guest, Keen, Williams, J. K. Steel and Jay Engineering are quotably lower. Burn have improved on a good report. Indian Oxygen are steady on expansion prospects. Braithwaite are being bought on good working reports. Britannia Engineering have been taken by knowledgeable quarters.

The miscellaneous section has produced many bright features. Britannia Biscuits are firm on paying a higher dividend. Dunlop Rubbers are steady on hope of a bonus share issue. Indian Aluminium have improved on speculative support. Rohtas have recovered, as have Hindustan Motors, on replacement buying. Alkali Chemicals have increased on expansion prospects. Indian Cables are steady and Metal Box are being supported at the present price. Hindustan Aluminium have been bought on expansion prospects. National

Insulated Cables have improved on rumours of a higher dividend. Scattered interest has been taken in electric companies and Calcutta Electric are quotably higher. Cement shares are neglected on the fear that the decision concerning a rise in the price of the commodity may be delayed. Paper shares have recovered on replacement buying. Prominent scrip are Orient, Titagurh and Sirpur.

Turnover has declined in coal shares, but prices have been well maintained. Interest is being taken in Bengal, Burrakur, Amalgamated, East Indian and Central India. Raneeunge have reacted on profit-taking. Western Bengal are being supported on expansion hopes.

Cotton mill shares are firm. Kesoram have gained on producing a good report. Interest has been sustained in J. K. Rayon. Bharat Commerce have improved on diversification prospects.

Enquiries have broadened in selected jute shares at current prices. New Central have gained on replacement buying. Support has been extended to Birla, Anglo-India, Ganges and Megna.

Sugar shares have been subdued on the fear that substantial losses will be incurred on exports. Routine business has been transacted in Belsund, Ramnugger and S.K.G.

An improvement in Calcutta auction prices has helped broaden support for selected tea shares. Jay Shree, Bishnauth, Tezpor and Hantapara are being wanted.

Government securities are dull, but business is restricted in view of the new loans which are being offered by the Government of India. Prices

of dated-stocks have been marked down in line with the terms and conditions of the new issues. The 3 percent conversion loan 1966 has reacted to Rs. 12.70.

National Screw and Wire Products

An ordinary dividend of 15 percent, (same as in the previous year), subject to tax, has been declared by the National Screw and Wire Products Ltd for the year ended December 1960. The profit has declined from Rs. 5.62 lakhs to Rs. 3.34 lakhs, after raising the depreciation from Rs. 49,532 to Rs. 60,626. Taxation absorbs Rs. 46,900 (against Rs. 2.54 lakhs), and development rebate reserve gets Rs. 1.50 lakhs (against Rs. 2,244). Dividend equalisation reserve receives Rs. 1.24 lakhs (against nil). Bringing in Rs. 91,162, transferring Rs. 1.96 lakhs from excess provision for taxation and making other adjustments, an amount of Rs. 1,314 is carried forward.

Hoare Miller

The profit of Hoare Miller and Co. Ltd has declined from Rs. 4.07 lakhs to Rs. 3.84 lakhs for the year ended December 1960, after providing Rs. 57,498, against Rs. 62,553 for depreciation. The dividend has been maintained at 6 percent, subject to tax, and it absorbs Rs. 2.11 lakhs. Taxation is allocated Rs. 1.30 lakhs (against Rs. 1.40 lakhs). After making necessary adjustments, there is a carry-forward of Rs. 50,732, against Rs. 16,790 brought in. Sales amounted to Rs. 9.68 crores (against Rs. 7.27 crores).

Choonabhutti Tea

The working of the Choonabhutti Tea Co. Ltd has resulted in a profit of Rs. 6.08 lakhs for the year ended December 1960, against the profit of Rs. 5.62 lakhs in the preceding year, after providing Rs. 1.02 lakhs (against Rs. 74,409) for depreciation. A taxable ordinary dividend of 32½ percent has been declared, against 30 percent taxable. Taxation absorbs Rs. 2.42 lakhs (against Rs. 2.36 lakhs). General reserve receives Rs. 50,000 (against same). After making other adjustments, and bringing in Rs. 98,628, there is a carry-forward of Rs. 96,041. The crop was 5,333 quintals (against 4,994 quintals) and the average sale price realised was Rs. 5.15 (against Rs. 4.83) a kilogram. Estimates for the current season have been framed for a crop of 5,260 quintals.

Bombay Market

NEW ACCOUNT OPENS ON CHEERFUL NOTE

SENTIMENT HELPED BY T.E.L.C.O. CHAIRMAN'S STATEMENT

Wednesday Evening.

THE Bombay stock market started the new account in a cheerful mood. The earlier shake-out helped to abate the selling pressure and the technical position is believed to have improved a great deal. There was evidence of replacement buying inspired by good corporate news. An encouraging statement made by Mr. J. R. D. Tata, chairman of the Tata Engineering and Locomotive Company, was interpreted bullishly. He pointed to the expansion prospects of the Company. Laxmi Starch has published a good report. It has issued rights ordinary shares at par in the proportion of one new share for every two held and the ordinary dividend has been maintained. Reports of good cloth offtake induced support for cotton mill shares. Operators were relieved by the news that the International Monetary Fund has granted a standby credit to India in order to help meet payments difficulties. Dalal Street thought that the Government would not proceed with the stock market reforms for the time being. Money conditions were easier and it was believed that the stock market would benefit from the flow of bigger funds for investment in stocks and shares.

Tata Steel were quoted at Rs. 159.50 and Indian Iron improved to Rs. 28.15 on support from Lyons Range Engineering shares recovered, and Tata Locomotive improved to Rs. 67. Business was done in Premier Construction at Rs. 188 and in Mukund Iron at Rs. 28.10. Alcock Ashdown were placed at Rs. 272 and Larsen and Toubro were taken at Rs. 39.75. Motor shares were quietly steady, and Premier Automobiles were dealt in at Rs. 163.25. Hindustan Motors recovered to Rs. 22.48 on short-covering.

In the cotton mill group, Century were prominent and improved to Rs. 684 on replacement buying. Interest was taken in Khatau at Rs. 567.50 and in Morari at Rs. 438. Kohinoor came to hand at Rs. 297 and Bombay Dyeing realised Rs. 67. Simplex were transacted at Rs. 198 and India United Ordinaries were placed at Rs. 15.28. Finlay were quoted at Rs. 325, but Apollo were sold freely at Rs. 174.

Prices of miscellaneous shares improved in line with the general trend. Sugar shares were quietly

steady, and business was done in Belapur at Rs. 246. Phalton came to hand at Rs. 127 and Walchandnagar Industries were bought at Rs. 167 by knowledgeable quarters. Cement shares were steady, and Associated Cement made Rs. 163.50. Digvijay were dealt in at Rs. 155. Mining shares were firm, and Shivrajpur Syndicate rose sharply to Rs. 89 on the decision to issue bonus shares, in the proportion of one new share for every one held, by capitalising reserves. Steamship company shares were quiet, and Scindia Steam were sold down to Rs. 14.08. Great Eastern Shipping were offered freely at Rs. 13.88. Chemical shares were steady and Tata Chemicals improved to Rs. 19 on replacement buying. Colour-Chem were quoted at Rs. 345 on ex-rights basis. Indian Dye-stuff were placed at Rs. 470 and Polychem came to hand at Rs. 217.50. National Rayon recovered to Rs. 548. Gwalior Rayon improved to Rs. 51.50, but Baroda Rayon were quiet at Rs. 138. Bombay Burmah were higher at Rs. 596 on short-covering. Voltas were supported up to Rs. 289 and business was done in Tata Oil at Rs. 74.50. Synthetics and Chemicals were steady at Rs. 200, as were Ceat Tyre at Rs. 217.50. Laxmi Starch were done at Rs. 208.75.

Bank shares improved on balance, and Central Bank rose to Rs. 62.30. Bank of India were done at a higher price of Rs. 132. Insurance shares improved, and New India Assurance were bought up to Rs. 62.50.

There was scattered interest in electric company shares, and Ahmedabad were indicated at Rs. 85.50. Bombay Suburban were transacted at Rs. 96 and Tata Power were taken at Rs. 1,075.

Madras Market

CAUTIOUS MOOD FOLLOWS EARLY BRISKNESS

GOOD DEMAND FOR TEXTILE SHARES

Tuesday Evening.

THE Madras stock market closed the past week in a cautious mood after an earlier steady spell of activities. Professional and investment support increased due to good corporate news. Sentiment improved on a report that India has been granted a standby credit by the International Monetary Fund. Support increased for bank shares on the view that the working of commercial banks during the half-year ended June has improved. Sugar shares lacked interest due to reports of excessive accumulations of stocks. In the planting group, interest was taken in selected tea shares on encouraging auction advice. Rubber shares were steady, but coffee shares were sold freely. In the textile group, the publication of good dividends by some companies helped broaden support for selected scrip. In the miscellaneous section, chemical shares were favoured.

The announcement of the new Central loans subdued interest in Government securities. Among bank shares, support was forthcoming for Indian at Rs. 174 and for Indian Overseas at Rs. 197. Punjab National hardened to Rs. 23 and Andhra Madras were done at Rs. 100. In public utilities, South Madras were done at Rs. 10. In ordinary dividend of 4½ percent, taxable. Business was done in Cochin at Rs. 12 and in Salem-Erode at Rs. 12.87. Vellore came to hand at Rs. 13.35.

Sugar shares were neglected and prices declined on balance. E.I.D. declined to Rs. 41.25, as did Deccan to Rs. 13.80. Kothari were sold down to Rs. 8.90, but Mysore were quietly steady at Rs. 57.75. Indian Breweries were quiet at Rs. 104 and Travancore were offered freely down to Rs. 10.25.

Among planting shares, Blue Mountain were steady at Rs. 3.17 and Consolidated Coffee were transacted at Rs. 21.35. Business was done in Ouchterlony at Rs. 3.65 and Periakaramalai were placed at Rs. 3.95. Chembra were bought up to Rs. 3.92 on paying a taxable ordinary dividend of 20 percent. Cochin Malabar were done at Rs. 7.75 on paying a final ordinary dividend of 11 percent, taxable. Coffee Lands were sold down to Rs. 18.60, but Devashola were supported up to Rs. 39.05. Kailas were indicated at Rs. 5.30 on declaring a final ordinary dividend of 15 percent, taxable. Kil Kotagiri were steady at Rs. 4.80 and Midland were done at Rs. 11.80. Nigiri were in demand at Rs. 8.65 and Parkside were quoted at Rs. 29.57. Peermade reached Rs. 22.72 and Rajagiri were indicated at Rs. 18. Udayagiri were quoted at Rs. 21.25 on declaring a taxable ordinary dividend of 1 percent.

In the textile group, Buckingham hardened to Rs. 231, but Bangalore Woollen were quiet at Rs. 205. Coimbatore Murugan improved to Rs. 130 and Premier were bought up to Rs. 287 on paying a taxable ordinary dividend of 24 percent. Lakshmi were steady at Rs. 172, as were Madura on paying a taxable ordinary dividend of 16 percent. Travancore Rayon reacted to Rs. 38.45 on profit-taking, but South India Viscose were steady at Rs. 192. Sarada were transacted at Rs. 67 and Tirupati were dealt in at Rs. 11.50.

In the miscellaneous section, Aluminium Industries were quiet at Rs. 23.55 and Ashok

Leyland reacted to Rs. 9. Andhra Cement were done at Rs. 9.95 and India Cement were steady at Rs. 6.60. Forest Industries were dealt in at Rs. 2.95 on paying a taxable ordinary dividend of 12 percent. Kiosk Electric came to hand at Rs. 13 and Madras Aluminium were placed at Rs. 23.75. Mandya National Paper were quiet at Rs. 8.40, but Binny were in demand up to Rs. 213. Mysore Stonewares were steady at Rs. 15 on declaring a taxable ordinary dividend of 12 percent. Thakur Paper declined to Rs. 10 on passing the dividend, but Travancore Chemical Mfg. attracted support up to Rs. 18.65 on the payment of a taxable final ordinary dividend of 12 percent. Standard Motors were done at Rs. 16.12 and Spencer were quoted at Rs. 22.75. Business passed in Tube Investment at Rs. 263 and Textool were quoted at Rs. 182.

are you a victim of executive fatigue?

at the end of a working day
are you tired, listless,
completely done-in?

If so, you are possibly a victim of executive fatigue and you need Smiths **SUPER FORTE**—the tonic that fights executive fatigue. An exhausting day's work uses up more vitamins than your daily food intake can restore. **SUPER FORTE's** 10 vitamins and 9 minerals adjust this deficiency.

What results can you expect of **SUPER FORTE**? Nothing dramatic. It wouldn't be fair to suggest that **SUPER FORTE** works wonders overnight. But take two tablets daily for 30 days and you'll get results—added vitality, strength, staying power—all the additional physical reserves you need to cope with the stress and strain of modern business.

New Delhi

U.K. TO CONSIDER COMMONWEALTH INTERESTS IN MAKING COMMON MARKET DECISION

DECLARATION BY MR. THORNEYCROFT AFTER
NEW DELHI CONSULTATIONS

(FROM OUR NEW DELHI CORRESPONDENT)

THE U.K. Aviation Minister, Mr. P. Thorneycroft, cleared and explained a number of points during his discussions on the Common Market issue with the Indian officials and at a Press conference he held before his departure. The Prime Minister of India had said that the Commonwealth would become weaker if the U.K. joined the Common Market. Mr. Thorneycroft's answer was both "yes and no". All big changes, he said, had the possibility of weakening or strengthening organisations. For example, the independence of India, far from weakening the Commonwealth of nations has actually strengthened it, as has the independence of many other countries which were formerly British colonies or dependencies. Mr. Thorneycroft also reminded India that its ruling Party, when in opposition, was dead set against the Ottawa preferences, embodied in the Indo-British trade agreement. After 30 years, the Congress wants the provisions of the agreement to continue unaltered. In fact, that agreement is now the basis of India's opposition to the U.K. joining the European Common Market. Mr. Thorneycroft admitted that the U.K. had been a free market for Indian goods for over 30 years, but a great many changes had taken place during this comparatively long period.

At his Press conference, Mr. Thorneycroft said that one dominant impression he was carrying from the countries he was deputed to visit was that the decision to join the European Common Market was the sole responsibility of the U.K. and that no country was opposed to the U.K. opening negotiations with the Common Market in order to take this decision. But each country would have its own trading problems if the U.K. took that decision, and their views, the U.K. Minister declared, would be examined and given due weight before a final decision is reached. One principal consideration before Britain was whether it would be a bigger market and stronger investor, by signing the Rome Treaty. Two other points were made by him in this connection. He said that Britain is a part of Europe and that no British industry deserves to survive, if it is unable to withstand, say, West German competition. Mr. Thorneycroft asserted that there was no such thing as safeguards. What was needed was to maintain and provide larger trading opportunities to Commonwealth goods. He was on firmer ground when he said that the U.K. would join in, if she is convinced that the European Common Market is a growing and expanding organisation. He was sure that there was no danger to India if the British economy was stronger and Indian industries were "efficient". Replying to a question that the British entry into the Common Market might divert Indian trade to the communist bloc, particularly to Russia, Mr. Thorneycroft said that Britain stood for the expansion of trade and would welcome, if India, for example, succeeded in persuading Russia to drink as much Indian tea as Britain did against cash payment. In conclusion, he said that it would be an illusion to imagine that Britain's entry into the European Common Market would not be accompanied by all the obligations laid down by the Treaty of Rome. It may be added here that the best safeguard for India's export trade would be the competitive cost structure of its products, accompanied by equally competitive durability and quality of goods. A subsidy of Rs. 200 a ton on the export of sugar is an unhealthy beginning for the sugar trade. Instead of opposing a greater economic integration of Europe, India needs a freer and competitive internal market.

Communiqué on Talks

The following joint communiqué was issued on the Desai-Thorneycroft talks: "Mr. Morarji Desai, the Minister for Finance, Mr. K. C. Reddy, Minister for Commerce and Industry, and other Indian Ministers held discussions on 12th, 13th and 14th July with the British Minister of Aviation, the Rt. Hon. Peter Thorneycroft, about the issues involved in any negotiation by the British Government to join the European Economic Community. Mr. Thorneycroft had also a brief discussion on the main policy matters arising out of this question with the Prime Minister of India on 13th July. Mr. Thorneycroft explained that although the British Government had reached no decision, they were concerned about the economic division of Europe which was emerging; and they were, therefore, examining carefully the problems that would arise if they decided to join. He drew attention to the economic consequences of continued division and to the importance of maintaining an expanding European economy, both as a market for the products of developing countries and as a source of investment funds for them. On the other hand, acceptance of a common tariff would inevitably give rise to the question how far the traditional facilities of duty-free entry into the United Kingdom and the system of preferences

could be maintained in favour of India and other Commonwealth countries.

"It was recognised that the question whether Britain should enter into negotiations with a view to acceding to the Treaty of Rome was primarily a matter for Britain; and the British Government alone could take a decision on it. Indian Ministers suggested that the accession of the United Kingdom to the Treaty of Rome might weaken existing Commonwealth links and injure the economies of the developing countries of the Commonwealth in particular. They drew attention to the importance of avoiding further differences and complications in areas outside Europe. Indian Ministers and officials emphasised the serious damage which was likely to be caused to India's export trade if the United Kingdom were to join the Community without securing agreement on special measures necessary adequately to safeguard it. They pointed out that the principal exports of India as well as of many other developing countries were subjected to high tariffs, internal taxes and quantitative restrictions of a discriminatory character in some of the countries of the European Economic Community, while these products were being admitted duty-free and without restrictions to the United Kingdom. If the United Kingdom joined the European Economic Community without suitable provisions for the future trade of the Commonwealth, with special emphasis on the types of products which come from the developing countries, India and other developing Commonwealth countries would find it extremely difficult to maintain and expand their export trade. This is a matter of vital concern to developing countries like India since the earnings of their export trade provide the external resources for their economic development.

"It was common ground that the credits which India was receiving from the United Kingdom as well as other countries could only be repaid through an expansion of India's exports. The Ministers examined in detail the exports which might be affected and the wider commercial policy implications of any change in the present position. They attached great importance to the maintenance and expansion of intra-Commonwealth Trade. Mr. Thorneycroft assured the Indian Ministers that the interests of India as they had been explained to him would be kept fully in mind in any negotiations for entry into the European Economic Community. If negotiations were embarked upon, the British Government would keep in the closest touch with the Government of India in all matters affecting their interests. The Ministers agreed that arrangements should be made for such consultations and for further discussion between the two Governments before the British Government took any decision to join the Community."

Indo-West German Collaboration for Coal

An Indo-West German agreement for stepping up coal production in the public sector, it is expected, will be signed here shortly, under which West Germany will place three coal experts under the State-owned National Coal Development Corporation, for setting up coal washeries in selected areas. Coal mining development agreements have already been signed with Poland and the U.S.A. and the agreement with the United Kingdom is expected to be signed shortly. The World Bank is also making \$20 million available to the private sector for a similar object.

India Joins World Sugar Agreement

India's instrument of association to the International Sugar Agreement now signed by the President, has been deposited with the U.K. Government as required by the Agreement. This, while limiting exports to the general international market to the quotas fixed under the Agreement, makes it possible for the U.S.A. and other member-countries of the Agreement to buy sugar from India. The present International Sugar Agreement, which was negotiated in 1958, is operative for five years from 1st January, 1959, but export quotas were laid down for various countries for only the first three years. It is expected that quotas for the fourth and fifth years, that is, 1962 and 1963, will be decided at the International Sugar Conference to be held in Geneva in September next.

New Indian Finance Act

Some elucidation is now available of the new structure of the Indian Finance Act of 1961. The Act has made the following changes in the super tax rate for dividends received by the companies: (i) Dividends received by any company (Indian or foreign) from an Indian subsidiary company formed before 1st April, 1961, will continue to be charged to super tax at the rate of 10 percent, but dividends received by any company (Indian or foreign) from an Indian subsidiary company formed and registered on or after 1st April,

1961, will be charged to super tax at the rate of 20 percent.

(ii) Dividends received from any Indian company (other than a subsidiary) formed and registered before 1st April, 1959, will continue to be taxed to super tax as before, i.e., at the rate of 20 percent in the case of an Indian company in which the public are substantially interested and whose total income does not exceed Rs. 25,000; at the rate of 25 percent in the case of any other Indian company and at the rate of 43 percent in the case of a foreign company which has not made the prescribed arrangements for the declaration and payment of dividends in India.

(iii) Dividends received from an Indian company (other than a subsidiary) formed and registered on or after 1st April, 1959, will be taxed to super tax at the uniform rate of 20 percent in the case of all companies. It will be noticed that dividends paid by an Indian company (subsidiary or non-subsidiary) which is formed and registered on or after 1st April, 1961, will be charged to super tax at the uniform rate of 20 percent in the case of all recipient companies.

The Finance Act, 1961, has also prescribed a reduced rate of super tax for royalties received by a foreign company (i.e., a company which has not made the prescribed arrangements for the declaration and payment of dividends in India) from an Indian concern in pursuance of an agreement made with the latter on or after 1st April, 1961, and which has been approved by the Central Government. The reduced rate is 30 percent, so that such royalties will be taxable at the overall rate of 50 percent (income tax 20 percent and super tax 30 percent). For royalties received (even after 1st April, 1961) in pursuance of agreements made before 1st April, 1961, whether with or without the approval of the Central Government, or in pursuance of agreements made on or after 1st April, 1961, but which are not approved by the Central Government for this purpose, the aggregate rate of tax would continue to be 63 percent (income tax 20 percent and super tax 43 percent) as before. A suitable procedure for approving royalty agreements for the purposes of this provision is being evolved in consultation with the Ministry of Commerce and Industry. The reduced supertax rate of 30 percent should not be applied to any royalty income unless the income tax officer is in receipt of the Central Ministry of Finance (Department of Revenue's) approval of the relevant royalty agreement.

Super Tax on Bonus Issues

The rate of super tax payable by companies with reference to bonus issues has been reduced from 30 percent to 12½ percent on the amount of such issues. This reduced rate will apply to bonus issues made during the previous year relevant to the assessment year 1961-62.

There is no change in the rates for deduction of tax at source during 1960-61 except that in the case of dividends and certain royalties payable to such foreign companies as do not declare their dividends in India. Changes have been made for this purpose corresponding to the changes made in the effective rates of tax applicable to such companies for assessment. The proposed rates for deduction of tax at source during the financial year 1961-62 in the case of such foreign companies are summarised in the following statement:

RATES FOR TAX DEDUCTION AT SOURCE FROM INCOMES OF FOREIGN COMPANIES WHICH DO NOT DECLARE THEIR DIVIDENDS IN INDIA

	Income tax	Super tax	Total
(1) On interest on any security of the Central Government issued or declared to be income tax-free	—	43	43
(2) On dividends from an Indian company referred to in Section 56A of the Income Tax Act	20	—	20
(3) On dividends from a subsidiary Indian company formed and registered before 1st April, 1961	20	10	30
(4) On dividends from a company (not being a subsidiary) formed and registered before 1st April, 1959	20	43	63
(5) On dividends from any other Indian company formed and registered on or after 1st April, 1959, i.e.,			
(i) any Indian company, other than a subsidiary, formed and registered on or after 1st April, 1959; and	20	20	40
(ii) a subsidiary Indian company formed and registered on or after 1st April, 1961			
(6) On royalties received from an Indian concern in pursuance of an agreement made with it on or after 1st April, 1961, which has been approved by the Central Government	20	30	50
(7) On any other income	20	43	63

At present, a foreign technician whose contract of service is approved by the Central Government before the commencement of his service in India, is exempt from tax on his income under the head "salaries" for the financial year of his arrival and the two subsequent financial years. Depending on the date of his arrival in India, the exemption may extend for a period varying from 24 months to 36 months. The second proviso to Section 4(3) (xiva) has been amended to secure that the exemption will be available in all cases for a uniform period not exceeding 36 months from the date of the arrival of the technician in India.

It has further been provided that if the technician continues to remain in employment in India after the said period of 36 months and the employer pays tax on the technician's income chargeable under the head "salaries" for a period not exceeding 24 months following the expiry of the said 36 months, such tax shall not be treated as the income of the technician. In the absence of such a provision, if the technician were to be paid a tax-free salary, i.e., if the tax on the salary of the technician were to be borne by the employer, it would have had to be calculated on tax-on-tax basis. Now, the employer will have to pay only the tax on the salary itself and the tax so paid by the employer will not be regarded as the income of the technician.

The benefits of both the concessions (mentioned above) will apply to technicians whose contracts have been approved under the existing regulations. Thus, the benefit of the first concession will be available in the case of such technicians who are already serving in India for the salary for such part of the period of the said 36 months as falls after 31st March, 1960. For example, if such a technician came to India on 1st October, 1957, his salary income up to 31st March, 1960, only would have been exempt under the second provision to Section 4(3) (xiva) before its amendment by the Finance Act, 1961. By virtue of the present amendment, the salary income from 1st April, 1960, to 30th September, 1960, also would become entitled to exemption. Similarly, the benefit of the exemption for the period of 24 months following the said period of 36 months, will be available to those technicians who are already serving in India under contracts of service which have received the prior approval of the Central Government. No further approval of the Central Government will be required for the availability of these two concessions, provided, of course, the technician continues to serve under the same employer and under the same conditions of service as were initially approved by the Government.

Interest Payments to World Bank

Section 4(3)(xvi) of the Income Tax Act has been amended so as to extend to the Development Loan Fund of the U.S.A. the exemption now available in the case of the World Bank on the interest on, or premium on the redemption of, any bonds issued by the Central Government under a loan agreement between it and the said Fund, or by any industrial undertaking or financial corporation in India under a loan agreement with the said Fund which is guaranteed by the Central Government except where the holder of such a bond is a person resident in India.

It has been provided that retiring gratuity payable to members of Defence Services received after 1st June, 1953, under the New Pension Code applicable to them would be exempt from tax in the same manner as the payment of death-cum-retirement gratuity received by a Central Government servant under the Revised Pension Rules. The amendment has been given retrospective effect and, as such, if any such gratuity has already been taxed in the hands of any assessee, the relevant assessment should be revised under Section 33A (1) and necessary refund allowed to the assessee on receipt of an application from him for this purpose. The time limit under Section 33A may be waived in such cases. It should, however, be noted in this connection that the exemption applies only to such retiring gratuity as is paid to the Defence Services officers under the New Pension Code, which came into effect on 1st June, 1953. Any retiring gratuity paid otherwise than under the New Pension Code would not be exempt from tax under this provision.

Low-income Group Housing

In order to encourage the construction of residential buildings for persons in low-income brackets, a concession has been provided for any new building the erection of which is begun and completed after 1st April, 1961. In computing the income assessable under Section 9 concerning such a building, its annual value will be reduced by the following manner:

- for each residential unit (comprised in the building) whose annual value does not exceed Rs. 600, the amount of such annual value; and

- for each residential unit (comprised in the building) whose annual value exceeds Rs. 600, an amount of Rs. 600.

The exemption applies for a period of three years from the date of completion of the building. The following points should be carefully noted:

- The concession will apply only to those buildings the erection of which is begun and completed after 1st April, 1961. It will not apply at all to buildings the construction of which was completed before 1st April, 1961, or the construction of which was initiated before 1st April, 1961.

- The reduction in the annual value is to be made for a period of three calendar years (i.e., 36 months) from the date of the completion of the building. This may fall for consideration in four assessment years. Thus, if a building is completed on 1st December, 1961, the annual value for the period 1st December, 1961, to 30th November, 1964, will have to be reduced in the manner provided and this will affect the calculation of annual value for the assessment years 1962-63, 1963-64, 1964-65 and 1965-66.

- The reduction in the annual value of the property is to be made with reference to each residential unit comprised in the building. A portion of a building should be regarded as a separate residential unit if it is meant for being occupied by, and is rented separately to a tenant. The income tax officers are required to be vigilant to see that no unintended concession is allowed to the assessee through any attempt at an artificial division of a building into small units which cannot be regarded as separate and self-contained residential units in the sense referred to above.

This concession is subject to two limits. First, it has been provided that in no case the computation of income for any residential unit should result in a loss. If it does, the loss will be ignored and the net income will be taken at nil. Secondly, it has been provided in the "explanation" to the new proviso that where the residential unit is in occupation of the owner of the property for the purpose of his own residence, the computation of the annual value of such a unit in the hands of the owner would be made in accordance with the first proviso to Section 9(2) as if the newly added proviso did not exist, i.e., the method followed hitherto for self-occupied houses would continue to apply and the concession provided by the new proviso will not be available for such houses.

An amendment has been made to clause (vi) of Section 10(2) to the effect that an initial depreciation allowance of an amount equal to 20 percent of the actual cost will be allowed for the following types of buildings to an assessee in the computation of his business income for the previous year of erection of the building:

- buildings newly erected after 31st March, 1961 (i.e., whose construction is initiated and completed after 31st March, 1961), by a person carrying on a business and used solely for the purpose of residence of the person employed in the business and drawing remuneration not exceeding Rs. 200 a month; and

- buildings newly erected after 31st March, 1961 (i.e., whose construction is initiated and completed after 31st March, 1961) by a person carrying on a business and used solely or mainly for the welfare requirements of the said employees in the form of hospitals, canteens, schools, libraries, recreational centres, shelters, rest rooms and lunch rooms.

The initial depreciation so allowed will not be deducted for determining the written-down value for the purpose of allowing normal depreciation on such buildings from year to year. However, such initial depreciation will be taken into account for the purpose of determining the written-down value for other purposes of the Act, such as computing the terminal allowance or charge under Section 10(2) (vii). It will also be taken into account for computing the total depreciation allowed for such buildings for the purpose of clause (c) of the proviso to Section 10(2) (vi).

Occupied Houses

Income tax officers should consult instructions at page 447 of the Income Tax Manual, Part III, 10th Edition, in which it is laid down that buildings belonging to the owner of a business and used by him in order to house his employees are to be regarded as buildings used for the purpose of business where the occupation by the employer who carries on a business is subservient to and necessary for the performance of the employees' duties. Before a building can be said to have been used for the purpose of business, and hence entitled to depreciation, it is necessary that the said condition should be fulfilled. However, in the case of buildings described at (i) and (ii) above, the income tax officers need not insist on a strict compliance with this condition. Such buildings should be regarded as having been used for the purpose of business carried on by the assessee and, therefore:

- income from such buildings should be computed under Section 10 and not under Section 9. It should be noted that the deductions admissible under Section 9 (including the new concession referred to above) will not be applicable to such buildings; and

- depreciation according to the provisions of Section 10(2) (vi)—(including the new allowance for initial depreciation referred to in the preceding paragraph) should be allowed for such buildings.

The following further points should be noted in this connection: (i) Any part of a building even though newly erected after 31st March, 1961, which is used for the purpose of residence of (a) persons not employed in the business, or (b) persons employed in the business but whose remuneration exceeds Rs. 200 a month, should not be regarded as used for the purpose of business unless in the case of (b) the condition referred to above is satisfied. Income from such parts of any building should be computed under Section 9, and not under Section 10.

- Buildings which are used for welfare purposes need not be exclusively used for the

welfare of business employees drawing a remuneration not exceeding Rs. 200 a month. The initial depreciation should be allowed even if they are mainly used for this purpose. But if a building is meant mainly for catering to the welfare needs of the employees drawing a remuneration of more than Rs. 200 a month (such as a club or rest house for the senior officers of the business), such a building will not be given the benefit of the new concession.

- The term "remuneration" should be regarded as comprised of the pay and salary, dearness allowance and fixed bonus or commission and exclusive of variable bonus or commission or any other benefit or perquisite.

- This concession applies only to buildings used for the above-mentioned purposes by persons carrying on a business. It does not apply to persons carrying on a profession or vocation.

The rate of development rebate concerning machinery or plant installed after 31st March, 1961, has not been prescribed at 20 percent of the actual cost, against 25 percent for machinery or plant installed before 1st April, 1961. There is, however, no change concerning ships acquired by an assessee, the rate of development rebate for which continues at 40 percent of the actual cost.

A new clause (xix) has been added to Section 10(2) of the Income Tax Act, 1961, to preserve the benefits of development rebate when plant and machinery is transferred in the course of the amalgamation of companies and the succession to the business of a firm by a private limited company if certain conditions are satisfied. Corresponding amendments have also been made in the proviso to Section 10(2) (vib) and Section 35 (ii), vide Section 6(ii) (2) and Section 9 of the Finance Act.

Under the existing proviso to Section 10(2) (vib) read with Section 35(11), development rebate already granted to an assessee is withdrawn in a case where the asset on which the rebate was allowed is sold or otherwise transferred by the assessee to any person other than the Government at any time before the expiry of ten years from the end of the previous year in which it was acquired or installed. Accordingly, where a company is amalgamated with another company or where a firm is converted into a private limited company, within the above period, the assets of the amalgamating company or of the firm would fall to be treated as having been sold or transferred to the successor company and any development rebate allowed to the former would stand to be withdrawn. Further, the successor company would not be entitled to set off against its profits any portion of the development rebate remaining unabsorbed in the hands of the amalgamated company or the firm due to paucity of profits.

Amalgamated Companies

The amendments referred to above provide that where an amalgamation of companies takes place, the development rebate already allowed to the amalgamating company or companies will not be withdrawn and any balance of development rebate still outstanding to the amalgamating company or companies on the date of amalgamation will be carried forward and allowed in the assessments of the successor company in accordance with "explanation I and II" of Section 10(2) (vib), subject to the restriction that the total period for which the balance of the development rebate will be carried forward both in the hands of the successor and the predecessor will not exceed the period of eight years as specified in "explanation I" to Section 10(2) (vib). Thus, for example, where a company is amalgamated with another company at the end of four years from the expiry of the previous year of the acquisition of a particular asset and the whole or a part of the development rebate concerning the asset is still outstanding to it, the amalgamated company would be allowed to carry forward the outstanding rebate for a further period of four years only.

It has been provided that this benefit will be admissible only if the amalgamated company continues to comply with the obligations placed by the first proviso to Section 10(2) (vib) on the amalgamating company, had it continued to exist. Thus, the amalgamated company should continue to maintain the reserve as required by clause (b) of the proviso to Section 10(2) (vib). Similarly, it should not sell or otherwise transfer the asset to any person other than the Government at any time before the expiry of ten years from the end of the previous year in which it was acquired by the amalgamating company. If it violates any of these obligations, the provisions of Section 35(11) will be attracted and it has been specifically provided that the tax resulting from the recomputation of the total income of the amalgamating company for the relevant previous year in which the development rebate was originally allowed, will be payable by the amalgamated company. The rights, liabilities and obligations of the amalgamating company have thus been transferred to the amalgamated company for the development rebate on the assets transferred to the latter in the course of amalgamation.

It should be noted that: (i) this concession does not apply to all situations where assets transferred by one company to another but only where an amalgamation or merger of companies takes place so that all the property, liabilities, and shareholders of the former companies immediately before the amalgamation become, respectively, the property, liabilities, and shareholders of the

successor company. For this purpose, the term "amalgamation" has been specifically defined in the "explanation" to Section 10(2) (vic) (i). The benefit of this concession should, however, be given also in a case where a wholly owned subsidiary company is merged with its parent company if all the conditions other than that mentioned in clause (c) of the "explanation" to Section 10(2) (vic) (i) are satisfied. Further, the definition covers only two types of cases: (a) where two companies (A) and (B) amalgamate to form a new company (C) and (b) where one company (X) amalgamates with another company (Y). (ii) The definition excludes cases of mere acquisition of property of one company by another pursuant to the purchase of such property by the other company or as a result of distribution of such property to the other company after the winding up of the first one.

Section 10 (2) (vic) (ii) of the Income Tax Act newly introduced by Section 6 (iii) of the Finance Act provides that the benefits which are allowed in the case of amalgamation of companies as mentioned above will also be allowed in the case where a firm is succeeded to by a private company in the business carried on by it and the firm sells or otherwise transfers any ship, machinery or plant to the company as a result of such succession, subject to the same conditions *mutatis mutandis*.

It should be noted that this concession in the case of succession to a firm will be available only where the firm is succeeded to by a private company (as defined in the Companies Act, 1956) and not where an individual transfers his business to a private or a public company or where a firm is succeeded to by a public company. Further, though the provision does not specifically mention so, the intention is that the benefit of this concession should be available only where all the shareholders of the company hold the shares in exactly or nearly the same ratio as the interest of the partners in the quondam firm. If this benefit is claimed in a case where this condition is satisfied, the facts of the case should be reported to the Board.

A new clause (xiva) has been added to Section 10 (2) to provide that a financial corporation which is engaged in providing long-term finance for industrial development in India, may claim as a deduction an amount carried to any special reserve created by it, not exceeding 10 percent of the total income as computed before making a deduction for such a reserve. The allowance is, however, subject to the restriction that where the aggregate of the amounts carried to such a reserve account from time to time exceeds the paid-up share capital of the Corporation, no further deduction will be allowed under this clause. For this purpose, any amount capitalised from reserves has to be excluded from the paid-up capital.

It has further been provided that only the financial corporations which are approved by the Central Government for this purpose will be allowed this concession. A list of such institutions will be issued in due course. It will be noticed that, unlike the development rebate reserve, there are no restrictions placed on the manner in which such a reserve may be used by the corporation. If, however, the reserve is used for a purpose totally unconnected with the business of providing long-term industrial finance in India, the facts of the case should be brought to the notice of the board. It should be noted carefully that it is not the amount standing to the credit of the reserve account at the end of the relevant previous year but the total amount carried to such reserve account from year to year which will determine the question whether any further appropriations to the reserve account should be allowed as a deduction. A statement of the amounts carried (or appropriated) to such a reserve account from year to year should be maintained in the permanent record and when the aggregate of such amounts becomes equal to the paid-up capital (as at the end of the relevant year), no further appropriations to such a reserve account should be allowed as a deduction. Any amounts which may be written back from the reserve account to the profit and loss appropriation account or to any other account having the effect of reducing the amount standing to the credit of the reserve account at any point of time, should be ignored for this purpose.

Entertainment Expenditure

A proviso has been added to clause (xv) of Section 10(2) prescribing certain limitations to the amount of entertainment expenses which may be allowed in the assessment of a company. It is needless to say that before any entertainment expenditure can at all be allowed as a deduction, the income tax officer must be satisfied that it is genuine business expenditure laid out or expended wholly and exclusively for the purpose of the business. But even after the expenditure has passed this test, its admissibility is restricted to certain maximum limits mentioned in the new proviso to Section 10(2) (xv). The maximum amount that can be allowed in a particular case depends on the amount of the profits and gains (computed in the manner laid down in Section 10 but before allowing any development rebate or any entertainment expenses) of the business in connection with which the expenditure has been incurred and not the total profits and gains assessable under Section 10 concerning all the business carried on by the assessee. The maximum allow-

ance which can be made on account of entertainment expenses in any case is Rs. 1 lakh. Any entertainment expenses in excess of this amount should, therefore, in any case be added back to the company's assessable profits.

It will be seen that if the profits and gains of the company from the relevant business, computed in the manner indicated above, do not exceed Rs. 10,00,000 or the company has incurred a loss, it is entitled to a deduction of 1 percent of the amount of such profits or Rs. 5,000 whichever is higher. Thus a minimum limit has also been prescribed which will be operative where the profits, computed as aforesaid, are less than Rs. 5,00,000 or where there is a net loss, similarly computed. In such cases, the actual amount of entertainment expenditure incurred or Rs. 5,000 whichever is less, will be admissible as deduction. The Central Board of Revenue desires that where the entertainment expenditure incurred and claimed by an assessee company does not exceed Rs. 5,000, the income tax officer need not be meticulous about putting it to strict proof and such expenditure should be allowed after a broad check to ensure that expenditure totally unconnected with the business or patently inadmissible on other grounds is not claimed in the garb of entertainment expenditure.

It is difficult to lay down precisely in this context as to what expenses should be treated as covered by the term "entertainment expenditure". Each case will have to be decided on its own facts. Different expense accounts of the company should be carefully scrutinised to safeguard against any attempt to pass off entertainment expense through other accounts. It should, however, be noted in this connection that where any entertainment allowance as such is paid to any employee of the company as a part of his remuneration, the amount of such allowances should not be included in the entertainment expenses for the purpose of the new proviso to Section 10(2) (xv) if it is subjected to tax in the hands of the employee. Where instead of being paid an allowance as a part of his remuneration, an employee is allowed to operate an expense account for the purpose of entertainment of the customers of the company, the expenses through such an account should be included in the entertainment expenses of the company for this purpose.

It should further be noted that while the law has been changed on the admissibility of entertainment expenses in the cases of companies, no change has been made in the matter of allowance of such expenses in the hands of assesses other than companies, in whose cases such expenses will continue to be allowed in the same manner as before. Income tax officers are, however, required to be more vigilant and should scrutinise the accounts carefully to ensure that no expenses which are not wholly and exclusively laid out for the purposes of the business and, in particular, no expenses of a personal nature, are allowed to be deducted.

The income tax officers have to maintain a record of the cases in which entertainment expenses are disallowed by them under the new proviso to Section 10(2) (xv). At the end of the current financial year, the Commissioners will have to send a consolidated report to the Board of Revenue concerning their charges showing the number of such cases, the amount of such expenditure disallowed and the tax demand attributable to them.

Concession for New Hotels

Amendments have been made to Section 15C of the Act to provide a tax holiday for new hotels in the same manner as in the case of new industrial undertakings. The exemption will apply to the profits of the hotel for five assessment years starting with the assessment for the previous year in which it starts functioning. The benefit of exemption under Section 15C(4) in the hands of shareholders concerning the dividends attributable to the exempt profits will also apply to the dividends declared by a company running such a hotel.

The conditions which a hotel must satisfy for becoming entitled to this exemption have been specified in the new sub-section (2A) of Section 15C. These are self-explanatory. It will be noted that these conditions are somewhat different from those applicable to industrial undertakings for the purpose of Section 15C. Thus, whereas any other industrial undertaking need not necessarily be run and owned by a company, a hotel must be owned and run by a company registered in the taxable territories and with a paid-up capital of not less than Rs. 5,00,000. The condition that the hotel must be run in the premises owned by the company is also peculiar to hotels. The hotel has also to satisfy the condition concerning the number of type of guest rooms and the amenities that should be provided by it; these are to be prescribed having regard to the population and the tourist importance of the place in which the hotel is located. The rules for this purpose are being separately framed. The most important condition which has to be noted is that the hotel must be approved by the Central Government for this purpose and no exemption should be allowed either to the hotel or the shareholders unless the Central Government has accorded its approval of the hotel for this purpose.

It will be noted that an explanation has also been added to sub-section (4) of Section 15C to

the effect that rules may be prescribed by the Central Board of Revenue for the computation of the amount of dividend for which tax is not payable by the shareholders under the said sub-section. The rules for this purpose are being separately framed and when finalised will apply to dividends distributed not only by an industrial undertaking but also by a hotel covered under Section 15C.

A new clause (iii) has been inserted in Section 23A(1) to provide that where at least 75 percent of the share capital of a company has been beneficially held throughout the relevant previous year by charitable institutions or funds the income of which is exempt under Section 4 (3) (i), the provisions of Section 23A (i) will not be applied to such a company. In fact, till the financial year 1959-60, the provisions of Section 23A (1) were not, in view of the existing clause (ii) of that section, applicable to the companies whose share capital was held mostly by charitable institutions or trusts, as in their cases, the result of a distribution of a dividend or a larger dividend by the companies would have been a net refund to the shareholders and, therefore, a loss to revenue. As under the new scheme of taxation of dividends, the question of grossing up the dividend and deeming the tax paid by the shareholder does not arise, clause (ii) has become ineffective to safeguard the cases of such companies from the operation of Section 23A. Hence, the present amendment. Further, the amendment has been given retrospective effect from 1st April, 1960, and, as such, if in the case of any such company an order under Section 23A (1) has been passed for the assessment year 1960-61, the same should be rectified under Section 35 and necessary refund, if any, should be allowed to the company.

I.M.F. Credit for India

The I.M.F. has agreed to provide \$250 million (Rs. 119.04 crores) to the Government of India in six foreign currencies, namely, \$110 million (Rs. 52.38 crores) in U.S. dollars, \$60 million (Rs. 28.57 crores) in pounds sterling, \$45 million (Rs. 21.43 crores) in Deutschmarks, \$15 million (Rs. 7.14 crores) in French francs, \$15 million (Rs. 7.14 crores) in Italian lira and \$5 million (Rs. 2.38 crores) in Japanese yen. This is the first occasion when drawings in yen are being made by a member from the Fund. Although the Fund's agreement for the provision of \$250 million (Rs. 119.04 crores) in foreign currencies has been announced, the actual credit would be received only on 1st August, 1961. The Reserve Bank of India has already made arrangements with the central banks of the countries concerned for receiving the credit. India's quota in the Fund amounts to \$600 million (Rs. 285.71 crores), of which \$77.5 million (Rs. 37.90 crores) has been paid in gold and the rest in Indian currency. This is not the first occasion that India has sought assistance from the Fund to meet her short-term balance of payments difficulties. In 1948-49, India drew \$100 million (Rs. 47.62 crores) from the Fund. This amount was repaid by April 1956. Subsequently, in 1957, India made a straight drawal of \$127.5 million (Rs. 60.71 crores) from the Fund and another \$72.5 million (Rs. 34.59 crores) as "stand-by" credit. While the "stand-by" credit was fully repaid within three years, namely, by June 1960, the straight drawal of \$127.5 million (Rs. 60.71 crores) was repaid to the extent of \$64.25 million (Rs. 30.60 crores) on 26th June, 1961. The balance of \$63.25 million (Rs. 30.11 crores) is expected to be repaid in the near future.

Aerial Ropeways for Collieries Project

The Coal Board's aerial ropeways project to step up stowing operations in the Jharia and Raniganj coalfields may be delayed by a year, it is learned. Originally scheduled to be completed by March 1963, the project, according to present calculations, will not be ready before February 1964. The two principal reasons which may delay the completion of the project are: (a) the final alignment surveys in some cases which could not be completed in time as alternative routes had to be selected; and (b) prospective tenderers have asked for an extension of time in the case of three ropeways. The Coal Board has accordingly submitted for the approval of the Government a revised time-schedule for the completion of the project. The project visualises the construction of four bicable ropeways in the Jharia fields and three bicable ropeways in Raniganj. Each of these seven ropeways will have a carrying capacity of 1.5 million tons of sand a year. Sand will be extracted from the rivers Damodar and Ajay, and transported by the ropeways to central sand dumps for subsequent distribution to collieries.

Lok Sabha Session in August

The Lok Sabha will begin its session here on 7th August. As planned at present, it will be a 25-day session. There are 13 official Bills pending, including Income tax Act (Amendment) Bill. The Finance Minister, it is expected, will make a statement on the western aid to finance India's third five year plan and on the implications of the U.K. joining the European Common Market.

NAMES AND DATES

The 28th annual general meeting of the Indian Sugar Mills Association, Calcutta, will be held on Monday, 31st July, 1961, at 3 p.m. in the Ball Room of the Hotel Imperial, Janpath, New Delhi. Mr. D. D. Puri, president of the Association, will pre-

London

U.K. CABINET DISCUSSES PLANS TO SOLVE ECONOMIC PROBLEMS

SHARP FALL IN INVISIBLE EXPORTS CAUSES CONCERN

(FROM OUR LONDON CORRESPONDENT)

THE plans now being drawn up by the U.K. Chancellor of the Exchequer, Mr. Selwyn Lloyd, for dealing with the economic situation have been considered at Cabinet level several times recently. The statement by the Chancellor on the special measures he intends to introduce was considered by Mr. Macmillan and other Ministers. Later, it was decided that Mr. Lloyd would make a major statement to Parliament on Tuesday, immediately the Finance Bill, which begins its final stage in the Lords on Monday, becomes law. Also under consideration by Mr. Macmillan is the question of a T.V. broadcast to the nation on the economic prospects. Meantime, the Labour Opposition debated the U.K. economic situation on Tuesday, on a Supply Day, when it has the right to choose the subject.

The economic situation was described by Mr. R. A. Butler, Home Secretary and chairman of the Conservative Party Organisation, in Harrogate recently. "In the economic field the outlook looks darker," he said. "Last year we had a deficit on our balance of payments of £300 million. One had hoped that this was largely due to the once-for-all business of building up stocks. Yet the adverse position continues. While our exports have shown some rise, the increase in imports has been much the greater. The position has worsened because our invisible exports have dwindled away. Another disturbing feature is that prices are beginning to rise again. The situation provides full justification for the restraining measures so far taken and for the Chancellor's decision to arm himself with further powers for use, if necessary. If we are to face up to the Common Market problem, we must certainly do so from strength." He added that "our people" might have to make sacrifices in the interests of the value of sterling.

Consumer Spending

Mr. Lloyd is expected to use his surcharge "regulator" as soon as the Finance Bill is enacted which would permit him to check "the steady in-

crease in consumer spending"—to which Mr. Butler referred in Harrogate—by stiffening hire-purchase terms. It is possible, too, that Mr. Lloyd may experiment with the payroll "regulator," although it has been so widely criticised and although he has had to exclude Ulster from its operation. The "regulators" were commended to the House by Mr. Lloyd as a means of enabling the Government to act between Budgets. He should, therefore, not have to rely on a formal autumn Budget; his new proposals may virtually amount to one. It seems certain that he will do all in his power to limit or stop increases in wages and to restrict capital investment in the public sector. He refused the other day to reintroduce building controls in the private sector and explained that his object there was not to cut investment, but to limit its rate of growth.

One cannot altogether rule out that a rise in Bank rate from 5 percent to 6 percent might form part of the retrenchment measures. Fiscal measures—mainly the excise surcharge—will undoubtedly carry the main weight. But it seems that the Government regards the economic situation as serious enough to justify a whole set of remedies. Interest rates are probably the least useful weapon in the present situation. But as a rise in Bank rate is the conventional signal which tells foreign bankers that things are being tackled, it may well be brought into use eventually. Sterling remains under persistent pressure, although the adverse season has not yet set in. The balance of payments on current account is believed to be still in deficit, contrary to earlier hopes that it might go from red to black by about mid-year. Britain can hardly hope to get through without a large drawing and standby credit from the I.M.F. In any case, the European central banks, which are giving temporary assistance to sterling, expect to have their positions largely cleared before the autumn out of the Fund's resources. But Britain cannot draw on the Fund beyond the first or gold tranche unless she can first satisfy it that she has launched

effective measures to correct the fundamental lack of balance.

In the monetary field, the most likely action is a request to banks and insurance companies to curb finance for building. Although the U.K. Chancellor's fiscal "regulators" were supposed to take the place of hire-purchase restrictions, the need for a broad-based attack is believed to be such that hire-purchase credit may once again come under some restraint. Everyone knows that it is not much good to take a large amount of purchasing power out of the system if it is promptly put back again by wage increases. The Government is believed to be thinking hard about this dilemma, but there is no indication yet as to what solution, if any, it has found.

Steel Output Falls

Steel production in June was at the rate of 447,500 tons a week, the Iron and Steel Board has announced. This compared with 466,100 tons a week in May and 466,400 tons in June last year. Production in the first six months of this year was 12,220,000 tons—"rather less than expected." The fall in output, compared with the first half of 1960, was 11 percent. Exports of steel increased in spite of strong and growing competition from abroad. The figure for May, 293,000 tons, was the highest since October 1959, when there was a strike in the U.S. steel industry.

Credit Facilities for Exports

The several recent changes in facilities offered by the Export Credits Guarantee Department are described in the Credit Insurance Association's July bulletin as representing a "far-reaching plan to help British exporters by cutting their costs." Introducing a survey of the changes, the bulletin says credit insurance has a greatly different appearance from what it had two or three years ago. Costs have declined and Board of Trade figures are quoted to show that the average cost of insurance a £100 covered declined from 11s 8d in 1954-55 to 8s 6d in 1960-61. This saving reflects cuts of around 25 percent in premium rates over the seven years, in which sales to the less secure markets have lately benefited most.

The bulletin comments that many will feel it is a pity that these cuts "have not been accompanied by a plan to reduce the cost of financing exports." It adds optimistically that such a saving must wait on a cut in Bank rate. Measures surveyed include the scheme for guaranteeing long-term loans for major projects, lengthening of cover to match competition, insurance for "invisible" exports, and new venture policies.

In a summary of the Export Credits Guarantee Department's results over the past seven years, the bulletin says that from the premium income of £36 million, £33 million was paid in claims, of which some 70 percent was later recovered. The Department's reserves of £28 million are described as very small on normal insurance standards in relation to potential liabilities of £639 million, so that the whole system rests ultimately on Government backing should that ever be necessary.

Machine Tool Orders Down

The figures of machine tool orders for the first four months of the current year have moved erratically, but it is now apparent that the trend during this period has been downwards. The value of net new orders received was 17 percent less than in the same period of last year, when the inflow was exceptionally high. Export orders are 13 percent below last year's figures. Nevertheless, new orders have exceeded deliveries this year, and the industry's order-books went on lengthening, although at a slower pace than in 1960.

Deliveries have gone up: in April they were 46 percent higher in value than in April last year (which included the Easter holiday) and in the first four months, they have risen by 31 percent. Deliveries to the home market, where demands have been particularly pressing, have risen much faster than those to foreign customers this year. Last year the positions were reversed.

Department of Technical Co-operation

Details of the organisation of the new Department of Technical Co-operation were published the other day in a Civil Supplementary Estimate for its financial needs. The supplementary estimate totals £18 million, but almost the whole of this sum has already been covered by deductions from the Votes of the Departments from which duties have been transferred to the new Department. The supplementary estimate will provide £166,485 more than the sum of the deductions.

The Department is to be organised into a headquarters staff, of which Sir Andrew Cohen will be director-general at a salary of £3,450 (compared with £2,580 to be paid to the Secretary for Technical Co-operation, Mr. Vosper), and Overseas Services Resettlement Bureau, with a director at a salary of £1,400; and a Middle East Development Division Overseas, whose head will be paid £2,320. Agencies to be aided by the Department will include various funds of the United Nations, Colombo Plan schemes, assistance plans for Africa, technical assistance under C.E.N.T.O., assistance to members of S.E.A.T.O., schemes of Commonwealth educational co-operation, and the British Government's overseas services.

GUNNY PRICES MOVE HIGHER ON FOREIGN BUYING IN HESSIAN

FIBRE SCARCITY AND RUMOURS OF MORE BLOCK CLOSURES ENCOURAGE SPECULATORS

SUBSTANTIAL business with foreign buyers in the hessian section over this past week was mainly responsible for the rise in gunny prices. Exporters, however, continue to maintain that overseas support is not sufficient to justify the firmness, as much of the fresh business is mainly confined to goods outside the standard makes. In the mills market, a number of mills have been content to be spectators, so the volume of business has been small. In spite of this, the general tendency in all sections has been towards higher levels and the undertone is firm.

Two factors are given as the reason. First, the usual speculative activity, which continues to dominate the markets. Since the rumour started that the mills were considering closing for a further week in August, speculation has been on the increase. Any further closures would definitely cause short supply of goods, which would naturally lead to higher prices. Many speculators took the opportunity of buying at the current levels, which, they maintain, will appear attractive in the near future. Certainly, some overseas buyers seem to be taking this view, as it is reported that the Argentine is interested in covering its next three months' requirements. As a result of this, the goods section is very firm as all speculative elements have been buyers with a bullish outlook. Whether it is in the interests of the future of the trade or not, speculators are determined that prices shall be maintained for their own ends. The growing volume of evidence that the present high prices are checking the demand for jute goods does not worry them, and they even ridicule the suggestion that substitutes are making inroads into the preserves of jute goods.

The second factor from which the bulls have derived encouragement is the scarcity of jute. Nearly all mills are looking for quick shipment jute, preferably old crop, but there are very few sellers except for small lots. Statistically, there is some justification for the bullish outlook as many mills have only a very small actual physical stock. Some mills still have old crop quotas in hand, so much so that the L.J.M.A. has now stopped issuing quotas against the 1960-61 crop, as in its opinion, existing outstanding quotas are enough to take up the balance of old crop. The issue of quotas against new crop jute was again negligible, and proved a disappointment to those buying against special orders.

The shipment of jute to the mills continues to occupy attention. The time-gap between the shipping of jute in the main centres and its arrival in the mills, seems to be lengthening. It is a common occurrence for jute to take as long as six to eight weeks to arrive at the mill after the date of the bill of lading which formerly commanded a premium, as the jute used to be in the mill after about 14 days—or 21 days, at the maximum. Admittedly, the shipping companies have had hazards to overcome in the form of cyclone damages, etcetera, over which they have no control, but some speeding up of the process should be maintained in a period of shortages when managers are literally standing on the end of the jetty looking for the next consignment.

It would appear that there are too many companies operating for the slack season. Obviously, it is economically unwise to despatch a steamer only half full of jute, and in their own interests, companies wait for a full load before despatching. But the situation has often arisen that boats of two or perhaps three different companies have been lying side by side, all half full, waiting for cargo before sailing. If these consignments had been consolidated in one load then in the majority of cases, the shipping period would have been cut down by half, and the acute supply position of fibre to the mills relieved. The industry should negotiate an arrangement with the steamer companies, whereby in the off-season, shipping delays are minimised by some sort of pooling system. In a normal season, these delays would have very little effect, but to safeguard themselves for the future, this problem should be tackled now. The new crop reports from most districts continue to be favourable, although the position of the floods is being watched closely in Assam and northern Bengal. So far only minor flooding has been reported in the jute fields causing little or no damage as it has been confined to the low-lying areas in which most of the crops have already been harvested. If the extent of the floods increases, however, then there may be some damage. Latest reports indicate that the floods are now receding. The problem of steeping water has now been alleviated, and work is in progress in all agencies.

L.J.M.A. Production Figures

The production of the mills reporting to the L.J.M.A. during June amounted to 66,200 tons, which was 12,100 tons less than in the previous month. Hessian production was 24,300 tons (36.7

percent), sacking output 30,700 tons (46.4 percent) and that of other goods amounted to 11,200 tons (16.9 percent). Hours worked during the month were 144 which was 341 less than in the previous month. The market expected a greater drop in production due to the shorter hours, but did not reckon that the workers' efficiency would rise to 459.8 tons an hour, an increase of over 20 tons an hour. The total production for the period July 1960-June 1961 was 10,063,600 tons, and this was produced in 2,259 hours, which gives an average of 445.4 tons an hour. The total production was made up of 365,000 tons of hessian (36.4 percent), 524,300 tons of sacking (52.1 percent) and 116,000 tons of other goods (11.5 percent). In the 1959-60 season, total production was 1,074,200 tons, at an average of 436.8 tons an hour. Sacking production was 449,400 tons (41.8 percent), hessian 530,700 tons (49.5 percent) and other goods 94,100 tons (8.7 percent).

Raw Jute Arrivals

Raw jute arrivals in Calcutta and mill stations during June amounted to 185,950 bales. This was made up of 7,600 bales from Pakistan, and 178,350 bales from India. Total arrivals for the complete season July 1960-June 1961, are now 4,911,250 bales, consisting of 410,050 bales from Pakistan, and 4,501,200 bales from Indian stations. Total arrivals during the season just completed were nearly 900,000 bales less than in the previous season; arrivals from Pakistan were down by 200,000 bales, and those from India by 700,000 bales. The total arrivals are very much less than the estimated consumption for the same period, which is in the region of 5.8 million bales. Thus the shortage is nearly 900,000 bales.

These figures demonstrate the difficulties with which the mills have had to contend over the past few months and the genuine seriousness of the raw jute position. In all the long history of the raw jute trade, it is believed that this is the first time that the mills have had really to shut down due to a shortage of jute, although on many occasions previously, they have had to resort to short-time working to conserve jute stocks. It seems inevitable that the industry will have to endure further block closures before the difficulties are overcome. The mills are all closing for another week again next week, and closures during both August and September are visualised.

THE JUTE MARKETS

Manufactured Goods: There has been a fair amount of business in hessian for shipment within the next two months, but a large portion was taken up by the bazaar as the mills have very little to sell for these periods, and mainly held a watching brief. In heavy goods, there has also been business in Twills and C's for July and August shipments and some small business in Cornsacks for the season. The steadiness of the market, however, stems mainly from speculative activity. All operators are buyers for all constructions, and this, combined with the genuine business, has been enough to instill confidence. The uncertainty concerning the future operation of the mills in view of the rumoured block closures in August and September is naturally limiting business for forward shipment, as it is not likely that manufacturers will overcommit themselves beyond fairly near positions, particularly when for a long time now, the nearer positions have consistently commanded such high premiums over forward shipments.

Heavy speculative profit-taking towards the end of last week caused gunny prices to slump, and on Thursday morning, ready B Twills had fallen back to Rs. 160, and 40in. 100z. hessian to Rs. 52.75. Following a quiet opening session, shipment revived on rumours of further block closures of the mills and speculative buying on this count brought an improvement of Rs. 2.50 in sacking and Rs. 1.50 in hessian. Similar advances were recorded on Friday, and by the week-end, ready B Twills stood at Rs. 163.50 and ready 11-100z. hessian at Rs. 56. Very little overseas business was recorded during this period, although there were some enquiries for hessian. A natural reaction followed this fast rise, and on Monday, the undertone was easier, but the market became fully steady again on Tuesday when heavy goods moved up by Rs. 2 and hessians by Rs. 1. The steadiness continued right up to the close, and opening quotations on Wednesday morning were as follows:

	July	August	September	Oct.-Dec.
40in. 71oz.	44.50	44.00	42.75	57.25
40in. 80z.	49.25	48.00	43.25	40.25
40in. 100z.	56.25	56.35	54.50	49.50
B Twills	167.00	165.50	158.50	144.50
Heavy Cees (Plain)	164.50	165.00	158.50	144.50
A Twills	210.00	210.00	191.00	177.00
Liverpools	189.00	187.00	180.00	165.00
Cornsacks	173.50	175.00	168.50	138.00

Raw Jute: Although no great quantities have been transacted, buyers have shown more interest in the past week, and the accumulated business was heavier than for some time. Interest centred on old crop jute, and although rates have not shown a very great rise, the undertone was steady with sellers resisting all attempts by the mills to discount. Old crop jute rates are still quoted above new crop rates, because it is only in old crop jute that any substantial interest is being shown. It is generally known that there are a lot of unused quotas for old crop, and with the time limit placed on their validity, although still some time ahead, mills are anxious to lay in stocks. Interest in new crop jute was limited, much of it being "lucky day business" for the Rath Jatra. Daissee white jute is in demand, but initial imports have now all been delivered to the mills as sample lots. Furthermore, since mill agents started buying in the agencies, jute prices have advanced rapidly, giving no profit to the ordinary operator.

There has been little change in the price of old crop jute, prices remaining at about Rs. 54.50 for Assam Bottoms throughout the week. Some lots on ready bills of lading with steamers nearing Calcutta commanded a 50mP premium, but these were isolated cases. New crop rates were between Rs. 52.50 and Rs. 53 a maund for Assam Bottoms, but only small business has been recorded. Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms)		Shipment
	Rs. + 100 kilos	Rs. a md	
Assam	146.00	54.50	July
Northern	143.25	53.50	"
Purnea Desal	140.75	52.50	"
Assam Tossa	147.25	55.00	"
Mesta:			
Assam-Northern	139.25	52.00	"
Desal	139.25	52.00	"
Daissee	139.25	52.00	"
Pakistani Cuttings	240.00	a bale	"

reasonable level. According to available reports, the current raw jute crop may turn out to be a record one. It is even suggested that sellers will probably compete among themselves to sell fibre after a month. Meanwhile, weather conditions have been exceptionally good in Pakistan. It is reported that the quality of the jute crop this season is excellent.

Last week, raw jute sellers raised their prices for July-August shipment, and an advance of as much as £20 a ton was recorded from 16th June—the date on which the last change in prices for jute yarns and cloth took place in the U.K. It became palpably clear that a rise in the values of manufactures was overdue. Besides, consumers of both yarns and cloth were purchasing quite freely. Both spinners and manufacturers were satisfied with the volume of trade, which enabled them to book sufficient orders to keep them busy over the next two months or so. These two months include the holiday period, when all the works will be closed from Friday evening, 22nd July until Monday morning, 7th August. The market is still uncertain, and many buyers are getting tired of the manner in which prices are changing. They are unable to predict about the immediate future and a good number of them have been changing to substitutes. But if a good supply of raw jute comes along, it might help steady the prices for a long time to come.

Mill Lightnings are quoted at £165 and Mill Hearts £160 for July shipment, £146 and £141 July-August, £141 and £136 August-September and £130 and £125 September-October, with Grade Tossa-2/3 £145, four at £139 and Continental Tossa-2/3 £135, September-October, and £136 for four and £131 for Continental 2/3 October-Novem-

ber, c.i.f. U.K.-Continent. Little business is being transacted at present.

The Calcutta goods market has fluctuated a good deal, with 40in. 10oz. down to 80s and 7½oz. 62s for July and August, 78s 6d and 60s 9d September and 74s and 35s 9d October-December, with B Twills at 246s 9d, 245s 3d, 237s 9d and 215s for the respective positions of shipment, all f.o.b. Calcutta.

From 11th July, prices for jute yarns and cloth in the U.K. were raised by £10 a ton. Cops were advanced to 21.16d a lb and spools to 22.31d a lb, with 40in. 10oz. hessians now 17.53d and 8oz. 14.73d a yard.

THE PAKISTANI JUTE MARKETS

ARRIVALS STILL LOW; FIBRE PRICES REMAIN STEADY

(FROM OUR EAST PAKISTAN CORRESPONDENT)

UNFORTUNATELY, there has been little or no improvement in river levels in spite of reports of floods in the Indian jute-growing areas. Because of this, there is no improvement in the steeping water position. The Tipperah area around Chandpur has been particularly affected, and no harvesting is reported there. The same applies to the Faridpur area where very little harvesting is going on, barely sufficient to keep baling stations supplied at high prices. In the area all round Dacca-Narayanganj, there is more steeping water and harvesting is proceeding at an almost normal rate so that imports from this area should gradually improve. Going north along the eastern bank of the Jamuna right up to and past

Sarisabari, there is a fair amount of cutting going on, certainly more than what was seen in the previous week, and it may, therefore, be expected that arrivals from this area will increase before the end of the month. The whole of the Pabna, Bogra and Rangpur areas, that is, the soft district, and the northern area are now the scene of feverish cutting. From these areas there should be heavy imports and, therefore, lower prices may be expected by the end of the month. Reports from the eastern Jat and Mymensingh areas will be available next week.

The heavy cutting and retting now going on in the soft district and northern and western Mymensingh areas, may not be good for the current jute crop. The steeping water position in these areas is still poor and normally the growers would not be cutting the jute. They have, however, to do so because the time has come for them to transplant their paddy crop and while it is possible to do some kind of retting even in the shallow water, it is not possible to postpone rice replanting any longer. Unless, therefore, the river levels rise very quickly, a poor quality outturn in these areas is to be expected. The condition of the highland and midland crop, however, continues to look very good, and it is rather too early to make any comments about the quantity of steeping water which will be available when these crops are harvested. There have been reports of very high river levels in Assam, which should raise the levels of at least one of the East Pakistani rivers, improving the position of steeping water.

In the Narayanganj market, loose jute prices have increased considerably and the condition of the jute is almost as bad as it was last year. It would appear when prices rise, the percentage of moisture in the jute also customarily rises. There is very little to be done about this other than to force down the price of the fibre. Very high prices have been paid for cuttings up to an equivalent of £110 a ton, c.i.f. Continent. Of course, these are quoted as the market price, but in fact, very isolated business is being done at these rates. The position is that in spite of very high quotations by sellers, there are very few buyers. The mills continue short of raw jute, but are doing everything possible to keep out of the market, or at least to buy discreetly and quietly. So the market continues steady, although the undertone is quieter.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in June declined to the lowest level seen in many years under peacetime conditions. For the last three months, it has averaged only 57 million yards and seems to reflect a declining use of burlap as a result of the excessively high prices which prevailed last year and early this year. Compared with a year ago, bag cut-up decline by 5 million yards with piecegoods deliveries down by 11 million yards. For the first six months this year, the total estimated consumption is 57 million yards or 12½ percent lower than last year. U.S. burlap stocks increased by 2 million yards. At 220 million yards, 120 million yards were spots and 100 million yards were floats. Appearing below are two tables which include the June figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

WORLD COTTON YARN OUTPUT REACHES PEAK LEVEL

TRADE IN PIECEGOODS MAINTAINED

THE expansion in the rate of output of cotton yarn in the non-communist world clearly reached and passed a peak some time last year, according to the U.K. Cotton Board's latest *Quarterly Statistical Review*. In the first quarter of the current year, the cotton yarn output in those countries for which regular figures are available—including all the major cotton textile exporting countries—was about 3 percent less than in the first quarter of 1960. The 12-percent reduction in the United States' yarn output was more than enough by itself to account for this decline. Production in the U.K. and, probably, Belgium, was also less than a year earlier, but the output in Japan, India and most of the other main producing countries showed some increase. After its notable expansion in 1959 and 1960, the world trade in cotton piecegoods in the first quarter of the current year seems to have been much the same in total as in the corresponding period of last year. Exports from Japan, Italy, Spain and probably, Hongkong, were greater than a year earlier, but shipments from the U.K., India, Pakistan and Switzerland were smaller. The level of exports from the U.S.A. was virtually unchanged, compared with the first quarter of 1960.

The slight recovery in world trade in man-made fibre fabrics seems to have continued in the first quarter of this year, when total exports were probably somewhat greater than in the same period of 1960. Exports from Japan, Italy and the Netherlands were greater than a year earlier, but there were reductions in shipments from the U.K. and the U.S.A.

Labour Shortage in the U.K.

The rate of output a working day in the U.K. cotton industry improved appreciably in March and April in comparison with the first two months of the current year, when production was abnormally depressed because of sickness among the operatives. Compared with the peak rates of output reached in the autumn of 1960, however, yarn production in May and cloth production in April showed reductions of 5 percent and 3 percent, respectively the reason being the cut in the standard working week. In spinning, the main feature was the continued low level of output in the man-made fibre section where the trade in the coarse yarns for tufted carpets remained depressed. In the weaving section, the chief features of interest have also been on the man-made fibres side, e.g., the fall in the output of tyre fabric, synthetic fibre fabrics and spun fabrics, and the marked expansion in the output of filament rayon fabrics. In the doubling section, which has been hard hit by imports of doubled yarn, the position has continued to deteriorate. A disturbing feature of the situation is the fall in the industry's labour force, which has been continuous since last November. The rate of decline increased more recently, the net loss of workers between the end of January and the end of April being about 5,000. About half of these were in the finishing section, where works have been closed as a result of the reorganisation scheme. Otherwise, the decline in the doubling section's labour force has been relatively the heaviest.

With the notable exception of the doubling section, the output of the industry's products has been in general satisfactory. The rate of ordering has been very slow, however, and order books have been shortening week by week, although they still remain adequate on the whole to ensure full-time working in the immediate future. The home market demand for clothing remains high. On a seasonally adjusted basis, it looks as if the pronounced increase in retail sales of clothing (corrected for price changes), which was a feature of 1959 and 1960, may have flattened out this year, but the level in the first four months of the year was about 4 percent up, compared with the same period of last year. Unfortunately, the reasonably healthy state of final demand has been more than offset by the rapid increase in imports of yarn, cloth and apparel. This, coupled with uncertainty about the future of the ceilings on Commonwealth imports, has helped to cause the marked slowing down in the rate of ordering and also a tendency to postpone decisions about whether or not to participate in the re-equipment phase of the reorganisation schemes. The inevitable reaction to the building up of stocks during the boom conditions of the last two years is another major influence of the state of trade at present.

Imports of Cotton Piecegoods

Imports of cotton piecegoods expanded yet again to reach a new record level of 225 million square yards in the first quarter of the current year. Imports from Spain were slightly less than in the preceding quarter, as also were arrivals from Hongkong and Pakistan, but increases were recorded in imports from India and also from Portugal, Yugoslavia, Formosa, the U.S.A. and Canada, all of whom are now sending considerable quantities of cloth to Britain. Imports in April and May totalled 127 million square yards, a moderate reduction from the first quarter level. A feature of the import trade has been the very

big increase in imports of finished piecegoods. Imports of man-made fibre fabrics also increased further in the first quarter of the year, as also did imports of cotton yarn, where India has now replaced Spain as the chief source of supply. Interest is now centred on the prospects for a renewal of the Hongkong "undertaking", which is due to expire in January 1962. It is obvious that President Kennedy's proposals for a global solution of the problem of imports from low-wage countries and the possibility of Britain joining the European Common Market have an important bearing on the situation.

U.K. exports of cotton yarn, cotton piecegoods and man-made fibre piecegoods in the first quarter

were all marginally greater than in the preceding quarter but less than in the first quarter of 1960. Compared with a year earlier, shipments of cotton piecegoods to a large number of markets showed reductions, notably South Africa, Rhodesia, the Congo, Australia, Burma, the U.S.A., Canada and Scandinavia, but exports to British West Africa, French Africa and the Irish Republic were greater. The principal decreases in exports of man-made fibre fabrics were in trade with South Africa and Rhodesia.

Japanese Production Rising

For the fourth successive quarter, the cotton yarn output in Japan exceeded 300 million lbs in

PARTNERS IN PROGRESS AROUND THE WORLD

Industrial growth of a country depends on its ability to manufacture products for its requirements. And products require plants to manufacture them.

To this end, Simon-Carves' contribution is truly impressive. The above map shows only some of the plants designed and engineered by Simon-Carves. The total capacity of coke oven plants installed by Simon-Carves is approximately two-thirds of the entire carbonisation capacity of the country. Likewise the

total capacity of sulphuric acid plants built to Simon-Carves design is about half the entire acid production of the country. Apart from the specialities, some of which are shown on the map, Simon-Carves engineers and builds plants based on clients' know-how.

At any industrial centre in India, be it Jamshedpur, Burnpur, Durgapur or Ennore, to mention only a few, Simon-Carves is there—helping India attain self-sufficiency.

CONSTIPATION AND PILES

Habitual constipation can cause piles or haemorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well known German pile remedy contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

WHY LOSE MONEY?

A machine out of action is losing money—YOUR money. Efficient servicing is absolutely essential to keep equipment fully operational. We at Machine Tools (India) Private Ltd., place particular emphasis on our 'AFTER-SALES-SERVICE'. Our staff of factory trained engineers are constantly on the move throughout India, ensuring that equipment sold by us will never let you down.

MACHINE TOOLS (INDIA) PRIVATE LTD.

CALCUTTA BOMBAY BANGALORE
Box 585 Box 522 Box 497

the first quarter of 1961. Compared with the first quarter of 1960, it showed an increase of 3 percent. The production of spun synthetic yarn was 12 percent greater than a year earlier, but the spun rayon yarn output was 4 percent less. The output in the weaving section also continued to run at high levels in the first quarter when the output of cotton cloth was 9 percent greater, of filament rayon cloth 4 percent and of synthetic fibre cloth 69 percent up than a year earlier. The production of spun rayon cloth was, however, about 1 percent less. There are reports of signs of some slackening in activity with a reduced retail offtake of clothing and mounting stocks in the pipeline. On the raw material side, rayon staple manufacturers are planning to cut production in the second quarter. It is hoped to open raw cotton exchanges, closed since the second World War, before the end of the year; at first trading will be confined to U.S. White Middling 15-16in. Japanese spinning mills are now widely extending their overseas interests and providing capital, machinery and technical assistance for mills in Hongkong, Malaya, Sudan and Kenya.

Exports of cotton cloth totalled about 320 million square yards in the first quarter of the year, much less than the exceptionally large figure of 463 million square yards recorded in the preceding quarter but greater than the 302 million square yards exported in the first quarter of last year. Compared with a year earlier, shipments to British West Africa, Ceylon and Indo-China appear to have increased, but exports to Hongkong and Venezuela were much smaller. The current year is the final year of the present five-year programme of voluntary restrictions on Japanese exports to the U.S.A., and the industry is now pressing the Government to fix higher ceilings for future years. Exports of rayon piecegoods totalled 219 million square yards in the first quarter, compared with 301 million square yards in the previous quarter and 211 million square yards a year earlier. Exports of synthetic fibre piecegoods in the first quarter were also rather smaller than in the preceding quarter, but a comparison with the corresponding period of last year suggests that the rapid expansion in this trade is still continuing.

Rayon Production in India

Mill production of cotton yarn in India in the first quarter was about 6 percent greater than in the corresponding period of 1960 and mill production of cloth was about 3 percent up. Exports of cotton piecegoods in the first quarter are understood to have been much the same as in the preceding quarter and rather less than in the first quarter of 1960. It is reported that the Government has accepted the main recommendations of the Working Group for the Cotton Textile Industry, including a modernisation plan costing £135 million and the establishment of a standing advisory committee to examine the causes of mill closures, losses and the like. Meanwhile, it has modified for the industry's benefit the excise duty on cotton yarn used by integrated mills and has made concessions concerning the duty on cloth woven on automatic looms. It is also expected that the Government will modify the third five year plan for the benefit of the mill sector of the cotton industry; presumably this is being done in the light of the fact that the per capita availability of cotton cloth is no greater now than it was in 1940.

The rayon industry in India is growing at a rapid pace. The total number of rayon weaving units known to exist is nearly 3,900, with some 50,000 powerlooms. There are also 45,000 handlooms said to be exclusively weaving man-made fibre fabrics and another 51,000 stated to be producing mixture fabrics. Mill production of man-made fibre fabrics has increased rapidly since 1955 and now amounts to well over 400 million yards a year. Between 1955 and 1960, the output of filament yarn more than trebled and the production of staple fibre almost quadrupled. Exports of man-made fibre cloth have also expanded markedly, from about 3 million yards in 1956 to about 40 million yards in 1960. Afghanistan, Singapore and Ceylon are the main markets.

Western Europe Wants More Orders

The cotton yarn output in continental western Europe as a whole in the first quarter was probably marginally greater than in the corresponding period of last year, which was itself a boom period. Only Belgium appears to have produced noticeably less than a year earlier, possibly because of the loss of purchasing power as a result of the strike last winter. Production of cotton yarn in the Netherlands, Austria, Portugal and France was almost certainly above last year's first quarter level, while the output in the other countries was probably about the same as a year earlier. The majority of countries, however, report a much reduced inflow of new orders.

The rapid expansion in exports of cotton piecegoods from the continental west European countries may have come to a halt for the time being, since the first quarter total was almost certainly less than that of the preceding quarter and was no greater than the level reached a year earlier. It seems that exports from Spain, Italy and the Netherlands were greater than in the first quarter of last year, but Swiss and Portuguese exports were less. Exports of man-made fibre piecegoods were probably marginally greater than a year earlier principally because of increased shipments from Italy, the Netherlands and Switzerland.

Plantation Topics

COIR OUTPUT AND EXPORTS RISING STEADILY

INTERNAL CONSUMPTION ALSO INCREASES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE popular notion that the coir industry is always in the grip of a crisis is wrong, according to the chairman of the Indian Coir Board. On the basis of figures relating to production, exports and internal consumption compiled by the Board, he said that production and internal consumption are rising. The coir industry in India is mostly a cottage and rural industry spread over the coastal belt of Kerala. It is not easy to estimate the number of workers solely employed in the industry, nor can an accurate assessment be made of the average number of days during which the labourers get work in a year. In the hand-spinning sector, the daily output of a worker varies from 2 lbs to 6 lbs or 8 lbs of yarn a day. Under the circumstances, it is difficult to make an estimate of production by consulting the production centres. But it might be possible to make estimates if information concerning the quantity of husks retted is made available. The required information will be available if the retters are licensed and if they submit returns concerning the purchase and retting of husks. This, however, is a long way off, the chairman told the recent meeting of the Coir Board.

Average Annual Exports

There are other ways by which the health and growth of the industry can be assessed, namely, by studying the figures of exports, of shipment from Kerala ports to other Indian ports, movement of goods by rail, road, etcetera. In the nature of things, exports cannot be expected to be steady or uniform every year, so a study of figures over a range of years alone would give a correct picture. According to the chairman, the average annual exports of coir yarn and coir products from Kerala ports were about 1,297,000 cwt. during the quinquennium 1935-36 to 1939-40. During the next quinquennium, exports fell to 620,000 cwt. The sharp fall was due to shipping difficulties during the war years. During the period 1945-46 to 1949-50, the average annual exports rose to 1,172,000 cwt. Exports rose steadily and touched 1,456,000 cwt in the quinquennium ended 1959-60. After a study of these figures, it cannot be concluded that coir exports are dwindling, the chairman said.

Internal Consumption

Shipments to other Indian ports, which were obviously for internal consumption, rose from 251,000 cwt. (the annual average of the five-year period 1936-40) to 326,000 cwt. in the quinquennium of 1956-60. Considerable quantities are also moved by rail to other parts of India. Here also the figures collected by the Board show a steady increase. The chairman, therefore, comes to the conclusion that internal consumption of coir is steadily increasing, and there has been no decline in production. But the position is not so happy in the manufacturing sector. There has been a serious fall in the production of matting, rugs and carpets, but this loss seems to have been made up by a rise in the production of mats. Total shipments and the movement by rail of coir products, excluding ropes, have increased from 398,000 cwt. in 1955-56 to 405,000 cwt. in 1959-60. There has been a slight fall in exports, but this seems to have been made up by an increase in internal consumption.

Displacement of Labour

This does not mean that all is well with the coir industry. The chairman admitted that there is "great unrest and displacement" of labour employed in the manufacturing sector of the industry, namely, the coir factories engaged in the manufacture of mats, matting, rugs, etcetera. The main cause of this unrest is that the organised units—the big coir industrial establishments in Alleppey—are gradually disintegrating. So business in coir products is being slowly shifted from these establishments to small rural factories. The shift in business is gaining in tempo. But there has not been "any serious fall or deterioration in the quantum of employment as a whole in the manufacturing sector," the chairman said. True, small rural factories are providing employment for labour, but the employment of fresh workers in Shertallai and other places, where new factories are being established, is no consolation or relief to those who are being displaced in Alleppey. The restlessness and unemployment is bound to worsen if the organised units are allowed to disintegrate.

Shift in Business

The chairman tried to find out the extent of the shift in business from organised units to rural factories. Indian exports of coir mats and matting are about 375,000 cwt. a year. The first ten manufacturers-cum-exporters exported 183,103 cwt. in 1959 and 181,646 cwt. in 1960. Of these, the quantities purchased by them from rural factories for export amounted to 56,731 cwt. and 57,994 cwt. in 1959 and 1960, respectively. This does not, however, reveal the whole story. According to the chairman, there is evidence to believe that another 60,000 cwt. had also been purchased from rural factories; thereafter, they

were slightly processed in big units and then exported. If these figures of additional purchases are taken into account, it would appear that over two-thirds of the exports of the ten manufacturers are purchased from rural factories. In other words, their manufacturing activities have declined by 66 percent and, in consequence, they may have to disband their labour force. The shift of business to rural factories is, therefore, increasing. It is necessary that the leaders of the industry and labour should put their heads together to evolve ways for arresting this tendency.

It seems to be the practice for every person who is not employed to profess to be a coir worker, since in the coastal area of Kerala there is no other avenue of employment besides agriculture. The number of people looking to the coir industry for a living is increasing progressively along with the rise in population, the impression being that the coir industry should absorb more and more people who cannot make a living elsewhere. But an industry which is concerned with the use of a by-product does not hold out large potentialities for offering employment, the chairman said.

CALCUTTA TEA AUCTIONS IN JUNE

QUALITY GRADES RECEIVE BETTER SUPPORT

THERE was a good general demand in both export sales in June, with the weakest feature being medium and low-grown Darjeelings. Any Darjeelings with good quality sold well at or above valuation, but the remainder were easier and some invoices were difficult to sell, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. Orthodox descriptions came in for more competition and prices advanced with quality, broken, fannings and whole leaf grades all being well supported by exporters. C.T.C. descriptions showed some irregularity. Where quality improved, the better liquoring kinds were sold at dearer rates. The medium and poorer kinds also met with good support for both export and internal markets. B.P.s generally fetching prices above their fannings. Legg-cut descriptions were in demand at firm to dearer rates, while tippy grades also came in for good support. Although the leaf appearance of Darjeeling teas continued to maintain a satisfactory standard with a fair show of tip in a number of the G.F.O.P. grades, the quality of liquors was generally disappointing and below the standard of last year. A few second-flush invoices were auctioned but the quality was hardly "fine". Leaf appearance of Assam teas has been of a satisfactory standard with some attractive sippy grades on offer. C.T.C. teas were generally of a good leaf appearance and free from fibre. Liquors showed an improvement with some attractive early second-flush C.T.C. teas on offer. Leaf appearance of the orthodox grades of Dooars and Terai teas was of a fair average standard but the legg-cut teas were generally rather brownish with fibre present. Liquors were about average. Teas from Cachar and Tripura were about average in both leaf and liquor.

The Internal Market

The 333 packages of leaf teas on offer in the three internal sales sold at irregular rates, but in the last auction they met with a good market

and were readily absorbed. During the month, three dust sales were held, and offerings totalled 61,575 packages, of which 24,672 were of new season's manufacture. In the first sale of the month, only old season's dusts were on offer. There was a good general demand. Medium C.T.C.s were irregular but where leaf was clean, they were generally firm. Fibrous descriptions, although fairly well supported, were easier, while good C.T.C.s generally sold at a discount. Orthodox dusts were irregular but those with a clean leaf appearance sold well. Legg-cuts, however, met with an easier market. The subsequent sale was the first for new season's teas and although there was a good demand, all descriptions except Darjeelings were easier with the non-wither legg-cut types selling well below brokers' expectations. The old season's dusts in the same sale also followed the general trend and were easier. The last auction mainly comprised new season's teas, and these met with a good general demand. C.T.C. descriptions were keenly competed for and were often dearer. Orthodox varieties opened on an easier note, but closed fully firm to dearer. Legg-cuts were irregular with the brighter lines realising satisfactory prices, while flavoury Darjeelings sold at enhanced rates.

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 4 totalled 95,088 chests at an average price of Rs. 5.60, compared with 71,920 chests at an average price of Rs. 5.71 for the same period of the previous season. Internal sales at 208 chests of leaf and 21,685 chests of dusts (average prices Rs. 4.58 and Rs. 4.61) go against 194 chests and 11,410 chests, respectively (against Rs. 4.35 and Rs. 4.61) of the corresponding period of the previous season.

The estimated north-Indian crop up to the end of May 1961 was 22.57 million kilograms (49.77 million lbs), compared with 17.02 million kilograms (37.52 million lbs) up to the same date of last year. The average figure at this date for the three years 1958-60 was 22.17 million kilograms (48.87 million lbs).

June opened with a little business being done at 3nP which was the sellers' quotation. On 23rd June, however, the price of export quota fell to 2nP, although sellers were still quoting 3nP. On 27th June, the sellers' quotations dropped to 2nP, and on the following day the price fell to 2nP, at which rate business was transacted. The market closed for the month at 2nP, which is also the sellers' quotation.

Arrivals (in chests) in Calcutta warehouses during the period 1st June to 30th June, 1961, with the corresponding figures of the previous year in parentheses, were: by steamer 112,432 (111,648), by rail 35,790 (45,458), by road 29,120 (13,827), by air 8,784 (9,470) chests, making a total of 186,126 (180,403) chests. From the beginning of the season 1st April 1961 to 30th June, 1961, arrivals have been: by steamer 140,639 (122,607), by rail 54,607 (83,969), by road 69,244 (45,967), by air 18,404 (17,837), making a total of 282,894 (270,380) chests.

COCHIN TEA SALES

At Sale No. 29, 590,000 kilograms of tea were on offer. There was a fair demand. Plain and low medium broken were about steady. Similar fannings were slightly easier. Black leaf grades were strong and dearer while the improved quality of mediums and good mediums were fully firm to slightly dearer. Similar fannings were steady. High-grown teas were irregularly dearer with quality. Orthodox types were fully firm to dearer.

Millions of hands like this are reaching eagerly every day for a glass of cool water. ACCOOLER water cooler has the proud privilege of supplying them plenty of cool water—as a matter of fact, as much as they need.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Index of Industrial Activity (Base: 1953) has now been brought up to November 1960. Compared with the preceding month, there were increases in sugar 185.88 points, jute 1.94 points.

yarn 6.13 points, cloth 4.61 points, coal 10.01 points, pig iron 6.49 points, finished steel 24.86 points, tyres 66.43 points, motor-cars 57.24 points, bicycles 93.64 points and railway ton-miles 3.35 points. While decreases occurred in tea 84.76 points, cement

14.57 points, paper 8.41 points and electricity 9.92 points. Combining all the factors, the Capital Index of Indian Industrial Activity rose by 9.6 points during November 1960.

COMPANY AND PUBLIC NOTICES

THE BIRLA JUTE MANUFACTURING COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta, on Wednesday the 23rd August, 1961 at 3-30 p.m. for the following purposes:—

- (1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1961.
- (2) To declare dividends on Preference, Second Preference and Ordinary Shares.
- (3) To elect Directors in place of Shri H. L. Somany and Shri J. M. Goenka who retire by rotation, but being eligible, offer themselves for re-election.
- (4) To appoint Auditors and to fix their remuneration.
- (5) As special business to consider and if thought fit, to pass with or without modification, the following resolutions:

(i) As Ordinary Resolution:

"RESOLVED that the appointment on the 16th September, 1960, of Sir B. P. Singh Roy who had attained the age of 66, as a Director of the Company under Article 123(a) of the Company's Articles of Association be and is hereby approved and that he be re-appointed a Director of the Company and it is specifically declared that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

(ii) As Ordinary Resolution:

"RESOLVED that the consent of the Company be and is hereby given to the Board of Directors to contribute and/or to subscribe from time to time to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the Company or the welfare of its employees, such amounts up to a total sum of Rs. 3 lacs in any financial year as may be considered proper by the Board notwithstanding that such amounts in any financial year may exceed Rs. 25,000 or 5% of the Company's average net profits, as determined in accordance with the provisions of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater. Provided, however, that contributions to any political party or for any political purpose to any individual or body, will be subject to the restrictions imposed by Sec. 293A of the Companies Act, 1956."

(iii) As Ordinary Resolution:

"RESOLVED that the consent of the Company be and is hereby accorded to the Board of Directors borrowing monies, in excess of paid-up capital and free reserves of the Company, that is to say, reserves not set apart for any specific purpose, to a sum not exceeding in aggregate Rs. 3 crores outstanding at any one time and that such borrowings shall be exclusive of the temporary loans obtained or to be obtained by the Company from its Bankers in the ordinary course of business."

(iv) As Special Resolution:

"RESOLVED that the Article 134 of the Company's Articles of Association be

deleted and the following new Article be substituted therefor—

"134 (1) The Board may elect a Chairman of its meetings and determine the period for which he is to hold office.

(2) If no such Chairman is elected or if at any meeting the Chairman is not present within five minutes after the time appointed for holding the meeting, the Directors present may choose one of their number to be the Chairman of the Meeting."

(v) As Special Resolution:

"RESOLVED that the Company do hereby approve of contracts entered into or to be entered into with the following Associates of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company for the supply from the said associates of machinery, plants, stores and other goods and sales to them of machinery, plants stores and other goods by this company in such quantities and in the manner as may be agreed upon between the parties from time to time on the terms that the rates charged will not be less favourable to the parties than the market rates or which are otherwise reasonable and that the payment will be made within one month from the date of respective supplies:

1. M/s. Gwalior Rayon & Silk Mfg. (Wvg.) Co. Ltd., Birlagram, Nagda.
2. Century Spg. & Mfg. Co. Ltd., Industry House, 159, Churchgate Reclamation, Bombay 1.
3. Jayshree Textiles Ltd., P.O. Rishra.
4. Jay Shree Tea & Industries Ltd., India Exchange, India Exchange Place, Calcutta."

The Register of Members and Share Transfer Books of the Company will remain closed from the 9th August, 1961 to 23rd August, 1961, both days inclusive.

By Order of the Board,

Per Pro BIRLA BROTHERS PRIVATE LIMITED,
G. MAKHARIA,
Managing Agents.

8 India Exchange Place,
Calcutta 1.
Dated, the 12th July, 1961.

N.B. (i) The Directors have recommended the following dividends for the year subject to deduction of tax under Section 18 (3D) of the I. T. Act—

On Preference Shares @ 7.5% per annum (increased by 11% under the Preference Shares (Regulation of Dividends) Act, 1960 and after deducting Company's income-tax.)

Second Preference Shares @ 7.86% per annum

Ordinary Shares (issued prior to 13th May, 1961) @ Rs. 1.50nP per share

If dividends on shares as recommended by the Directors are approved at the Meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 23rd August, 1961, or to their order or to their Bankers. No application need be sent for dividends, as relative Dividend Warrants will be posted to such shareholders by the 30th September, 1961.

(ii) A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) AN EXPLANATORY STATEMENT IN RESPECT OF ITEMS OF ABOVE SPECIAL BUSINESS HAS BEEN FORWARDED TO THE MEMBERS OF THE COMPANY.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE is hereby given that the One Hundred and Fourth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta at 11-30 a.m. on Wednesday, 23rd August, 1961 for the following purposes:

- (1) To receive and consider the Audited Accounts for the year ended 31st March, 1961 and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To appoint a Director in place of one retiring and in this connection to consider the following resolution which will be proposed as a special resolution:

"That Mr. John Valentine Jardine Paterson, an Associate of the Managing Agent of the Company, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation."

Special notice of the intention to move this resolution as a special resolution in conformity with the provisions of sections 190 and 261 of the Companies Act, 1956 indicating that Mr. J. V. Jardine Paterson is an associate of the Managing Agent by reason of his being a Director of the Managing Agent's Company, has been received by the Company.

- (3) To appoint Auditors and to fix their remuneration.
- (4) (As special business) To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution, viz:—

"(a) That the action of the Board in having agreed on 29th May, 1961 to dispose of, under the Working Time Agreement of the Indian Jute Mills Association, 6,417½ current loom hours per week to Howrah Mills Co. Ltd., 16,235 current loom hours per week to Kamarhaty Co. Ltd., 23,630 current loom hours per week to Kanknarrah Co. Ltd. and 1,445 current loom hours per week to The Barnagore Jute Factory Co. Ltd., in each case on payment by the Company of 25 naya Paise per current loom hour, for a period of 17 weeks ending on 30th September, 1961 be and the same is hereby approved and confirmed.

(b) That the Board be and is hereby authorised to extend the foregoing arrangement for a further period not exceeding 14 weeks from the date of its expiry, viz. 30th September, 1961, provided that the sum of the compensation to be paid by the Company shall not exceed the amount of lay-off compensation estimated to be payable to the Company's workpeople in respect of that period if the loom hours are not worked.

(c) That the authority previously conferred on the Board by special resolution adopted by the Company in general meeting on 4th July, 1958, whereby the Board was empowered to sell current loom hours to Howrah Mills Company, Limited, Kamarhaty Company, Limited and Kanknarrah Company, Limited pursuant to the Working Time Agreement of the Indian Jute Mills Association on the basis set out in the said special resolution be and the same is hereby confirmed and further that the Board be and is hereby authorised similarly to sell current loom hours to The Barnagore Jute Factory Company, Limited on the same terms and conditions."

NOTICE is also given that the Share Transfer Books of the Company will be closed from the 9th August to the 23rd August, 1961, both days inclusive.

A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, Clive Row,
Calcutta 1.
7th July, 1961.

Note: Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all Members.

HOWRAH MILLS COMPANY LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE is hereby given that the One Hundred and Thirty-sixth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta at 12 o'clock noon on Wednesday, 23rd August, 1961 for the following purposes:

- (1) To receive and consider the Audited Accounts for the year ended 31st March, 1961 and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To declare dividends.
- (3) To appoint a Director in place of one retiring.
- (4) To appoint Auditors and to fix their remuneration.
- (5) (As special business) To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution, viz:

"That pursuant to the provisions of Section 370 of the Companies Act, 1956 approval be and is hereby given to the making of such contributions which the Company has made or may make towards partnership capital in the firm styled "Jardines Mills Agencies"; provided always that the net balance of partnership capital as contributed by the Company shall not at any time exceed Rupees thirty lacs."

- (6) (As special business) To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution, viz:—

"(a) That the action of the Board in having undertaken on 29th May, 1961 to work under the Working Time Agreement of the Indian Jute Mills Association 6,417½ current loom hours per week on behalf of The Reliance Jute Mills Co. Ltd. (Managing Agents: Jardine Henderson, Ltd.) in consideration of a payment to be made by the said The Reliance Jute Mills Co. Ltd. on the basis of 25 Naye Paise per current loom hour, payment of which to be received by the Company within one month of the first working day of the week to which the hours worked relate, for a period of 17 weeks ending on 30th September, 1961 be and the same is hereby approved and confirmed.

(b) That the Board be and is hereby authorised to extend the foregoing arrangement for a further period not exceeding 14 weeks from the date of its expiry, viz. 30th September, 1961, provided that the rate of compensation to be received by the Company will provide a sum which is not less than any loss or, as the case may be, any additional loss which in the opinion of the Directors is likely to be incurred by the Company as a result of working the additional loom hours which are the subject of the said arrangement.

(c) That the authority previously conferred on the Board by special resolution adopted by the Company in general meeting on 4th July, 1958, whereby the Board was empowered to purchase current loom hours from The Reliance Jute Mills Company Limited pursuant to the Working Time Agreement of the Indian Jute Mills Association on the basis set out in the said special resolution be and the same is hereby confirmed."

Notice is also given that the Share Transfer Books of the Company will be closed from the 9th August to the 23rd August, 1961, both days inclusive.

A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

Genuine Bysack Seedlac	Rs. 98 buyers; Rs. 102 sellers.

Shipments during July until the 15th were 12,002 packages.

JAPANESE PIECEGOODS EXPORTS TO ASIAN MARKETS INCREASING

A comparison of cotton piecegoods exports of Japan and India during the first nine months of 1960 shows that nearly half of Japanese exports are now concentrated in the Asian markets, which absorb approximately one-fourth of total Indian exports. Japanese exports during the period amounted to 962.11 million square yards of which 428.11 million square yards went to Asian markets. Exports from India totalled 518.70 million yards, of which 126.05 million yards were shipped to Asian countries. The total of Japanese exports increased by 59.32 million square yards while those of India declined by 2.97 million yards in January-September 1960, compared with the corresponding period of the previous year. Burma and Indonesia are the two Asian markets steadily shifting to Japanese cotton piecegoods. Shipments of Japanese textiles to the Burmese markets rose by nearly 6 million square yards during the period. The high level of prices of Indian cotton piecegoods—attributed to the raw cotton shortage—acted as a damper in the off-take by Indonesia. Exports of Indian cotton piecegoods to Malaya and Singapore were fairly well maintained. Japan, however, increased her shipments to this market, particularly in finished goods. In Europe, Indian cotton piecegoods exports increased by some 49 million yards and Japanese exports by 17 million square yards. A significant feature of Indian exports is that there is a huge gap in the off-take between the first and second most important markets. Imports into the U.K. were 154.43 million yards while the next most important market, British

a Japanese competitor has to sell in Britain over a 25 percent tariff wall and on the Continent over the same 20 percent tariff wall. Our example is imaginary but cases could be found; for non-Commonwealth goods, Britain is more protectionist than the Common Market. With Britain in the Common Market, the external tariff might be 10 percent or 12 percent; no one can say yet, this being just the sort of thing that has to be negotiated. In that case, it would be hard to show that the Indian exporter had lost and he may well have gained, but what the alarmists are agitating about is the fact that, gain or lose, he will be on an equal footing with the Japanese. This is a remarkably unadventurous attitude and if it were general India's export future would be gloomy indeed, no matter how the Europeans disposed themselves. Exporters who preferred to cling to a fixed share of the virtually stagnant British market, safe from Japanese competition, rather than attack the vast and expanding market that would be constituted by the Common Market plus Britain, on equal terms with the Japanese, would never be able to solve India's trade problem. In reality, such fears cannot be general because

Not only are such calculations irrelevant; they are spurious. On any showing, they demonstrate that for many items India's trade will not be affected while for others there will be loss and for others still there will be gain. No one can pretend to know the net result, on balance, of these divergent (and purely hypothetical) trends. Moreover, all the reckonings we have seen proceed on the assumption that if and when Britain joins the Common Market she will adopt that association's common external tariff, as it is now defined. Yet the common tariff is the arithmetic average of the various national tariffs, and if Britain's effective tariffs are included (i.e. the low or zero duties imposed on Commonwealth goods as well as the normal tariff), that average must fall. Britain's negotiators would have to be of a singular incompetence to allow the Continentals to argue that, the average having been struck for six members—several of them notoriously high-tariff countries—it has to be accepted by a seventh recruit whose tariffs were lower. Obviously, this will be one of the objects of bargaining between Britain and the Six, while if other low-tariff countries like Denmark and Norway follow Britain's lead, the European average (and hence the common external tariff) must fall further still. Commonwealth capitals that have panicked and painted a black picture of their trade future if Britain joins the Continent are

The most that one can say for certain about European tariffs on Indian exports is that they will be changed in various directions if Britain joins the Common Market. They were already being changed by the formation of the six-nation Common Market, and this process will be extended if that association is broadened. By and large, all the changes that have occurred in recent years, both as to quotas and tariffs, have been in a sense favourable to India—the Continent trades much

more freely today than in 1958. This liberalisation is proceeding, quite apart from the question of Britain's approach to the Continent. The Six have been becoming more conscious of the necessity to accept more manufactures from the developing countries: witness the Lisbon conference of the Continental jute industries, and the Geneva conference of the textile industries in July, not to mention such significant innovations as the granting of the first French quota for Indian textiles this spring. Britain's entry into the association could only speed this trend. At a time when one Continental country after another is joining the "Aid India Club", it would be absurd to pretend that western Europe was ill disposed towards this country, or likely to forget its need to earn exchange by exporting. With Britain taking part in their association, the Europeans would be even less liable to such forgetfulness. What they may well expect of India is that she accept the challenge of totally new marketing conditions in Europe, brought about by the necessity for Britain to join her neighbours if she is to survive in the world of economic super-powers.

That challenge implies, for individual firms, both opportunities and risks, but for the Indian economy as a whole it cannot imply danger, given that India cannot hope to progress on her present or foreseeable export earnings but must rely on the aid now pledged by the Europeans and Americans. As for the risks created for individual firms, or even whole industries, they are coming in any event, no matter what trade blocs Europe forms. Technology (e.g. the displacement of leather by plastic footwear) and the rise of other developing nations (e.g. Pakistan for jute goods) are constantly revolutionising the conditions in which Indian firms trade abroad, and more considerably than tariff changes do. When we sometimes evoke the distant prospect of India one day paying her own way with her exports, does anybody seriously imagine that this will be done with the same old exports—tea, grey cloth and a fixed quota of jute goods? Plainly, if even an industrialised India is to become a solvent trader it will be thanks to a transformation of her export catalogue more momentous than the impact of minor foreign tariff changes.

In any case, the day when India can hope to achieve a consistent trade balance is very distant indeed and what matters meantime is the flow of aid from the West. Britain today is in such a perilous economic condition that it is rumoured that one of the measures the Chancellor must take soon is to reduce her assistance to developing nations. Since, whether we like it or not, aid is more immediately important to India than trade, it is preferable that Britain take such dispositions as will strengthen her economy to the point where she can manage to continue her assistance. The present Government is probably correct in think-

[illegible]

at this involves joining the Common Market, doing so Britain not only repairs her own my but creates a larger Common Market a more liberal view of the need to aid development, India will quickly benefit. It is important in this connection that the Common Market is simply a Customs union but a monetary union as well, i.e. it has rules that prevent members raiding each other's reserves and fixing each other's currency. It is exactly such and such attacks that have obliged both the A. and now Britain to limit their aid to development; neither country has become so poor it cannot afford to give development aid shyly, but they could not go on helping backward nations while other western nations were lining their reserves. Hence the quest for new international monetary arrangements that will serve their rearguard in the West while they give p in Asia, Africa and Latin America. To date, y one such monetary arrangement exists in rking order, and that is the Common Market.

Though mistaken in detail, current prophecies the damage India will suffer if Britain and the continent set up a common tariff may have served

COMPANY DIRECTORS IN INDIA

THE importance of the corporate sector in India has grown rapidly during the past decade or so under the stimulus of planned development. This is because the majority of economic undertakings have been launched in company form, public and private. Along with the growth of companies, the position of directors—who constitute the highest policy-making body of a company—has increased in importance. But in spite of the key role directors now play in the socio-economic life of this country, it is unfortunate that there is little reliable information available about them. From this point of view, the paper dealing with the pattern of company directorships in India, published by the Research and Statistics Division of the Department of Company Law Administration, is of considerable interest because it is the first study of its kind in this country. For the present, its authors have decided to limit their sample study to the boards of directors of big companies having a paid-up capital of Rs. 50 lakhs or more. The survey covers 345 companies. The first phase of the study—which has now been published—concerns itself with the collection of data relating to the directors of 117 large-sized companies having their registered offices in the western region.

A reassuring feature about the pattern of directorships is that so far it has moved along healthy lines and resembles closely those prevailing in the U.K. and the U.S.A. On an average, a board of directors covered in the survey comprises eight members. The size of the board, therefore, is slightly smaller than the average in the U.S.A., but closely resembles that in the large-sized British companies. As long as the size is kept to the present moderate level, it is expected that not only will economic management be fostered, but business decisions can be made more expeditiously. If a board is too large, not only do many directors tend to become so in name only—they are commonly called *gunica pig directors*—but board meetings can turn into debating clubs. An important factor is that the number of the nominee directors of the managing agents concerned has been heavily restricted. On an average, out of a board consisting of eight directors, two directors are generally the nominees or

a useful purpose. They will remind the world that this country is not reconciled to the situation into which she has fallen, where her first thought must be for foreign aid, but that she takes seriously the question of earning her living by exporting. Secondly, in juggling with the trade figures many people must have noticed that a moderate (though at present impossible) expansion of India's exports would suffice to replace all the aid she is receiving. A French cabinet minister told the Development Aid Group in Tokyo lately that a 5 percent increase in the exports of the developing countries would bring them as much as all the international assistance now given them. The problem is how to achieve this, without abruptly wiping out many ancient western industries. Duty-free entry into the single British market could not achieve it, even if Britain were ready to sacrifice Lancashire and Dundee next week. A generous trade policy on the part of a vast west European economic unit covering Britain, the Six and perhaps others, could go some way towards doing it, especially if a new division of labour inside a prosperous Europe made the contraction of all the western Dundee's and Lancashire's a less painful process.

the representatives of the managing agents concerned. It may be observed that the Companies Act 1956 imposes restrictions on the number of directors a managing agent of a company can have—generally not more than two directors where the total number exceeds five and one where the total number does not exceed five.

A striking feature is that some large-sized companies managed by foreign managing agencies usually take few foreign nationals in their boards. Out of the 117 companies studied, only 43 companies have foreigners as directors. The total number of directorships held by foreigners is 133 against 226 held by Indian nationals in these companies. The ratio between the Indian and foreign directors works out at two to one in the case of these 43 companies. An interesting feature is that the presence of women on boards is rather rare. Out of 117 companies, only seven have women directors. In the U.S.A. and the U.K., intimate ties are often maintained between separate large corporate bodies by means of interlocking directorships and plural directorships.

TRADING WITH ALL COUNTRIES

IT is the exhibit of space-exploration, presented imaginatively and with powerful effect against a darkened panoramic "sky", that attracts most attention at the Soviet Exhibition in London. But the sponsors of this exhibition (7th July to 29th July) and of the preceding British Trade Fair in Moscow (19th May to 4th June) have never concealed the primary purpose of the dual operation—to increase trade. The importance attached to it on the Soviet side is evident in the fact that, although it is the first Soviet exhibition ever presented in London, it is one of the biggest Soviet exhibitions ever presented in a foreign country; and the British Government demonstrated its assessment of the occasion by including not only the President of the Board of Trade but also the Prime Minister himself among the important personages attending the opening ceremony. It happened that a few days before the Soviet Exhibition began, an American Trade Centre had been opened in London. It is, of course, much smaller; but it is permanent, and it will present to potential traders or agents in Britain an unending succession of American products (beginning with household goods and including eventually all categories of consumer or capital goods in which substantial trade with Britain may be possible). This Trade Centre is specially significant, as it is the first that the U.S. Government has opened in a foreign country. But to the British Government it is not as important as the British and Soviet exhibitions, because (although the U.S. Commercial Attaché in London explained diplomatically that the intention was to expand trade both ways) it is not directly relevant to British exports.

These events, from the East and the West, occur at a peculiarly difficult stage in Britain's consultations with the Commonwealth and Europe. They are relevant to those consultations, for they emphasise the multilateral character of Britain's trading policy. They tend to favour Britain's association with the European Free Trade Association rather than her proposed association with the European Common Market, because the E.F.T.A. is the looser organisation and more flexible; but if the best opportunities for expanding trade are in the Common Market, Britain is strongly drawn

As inter-locking directorates may accentuate the concentration of economic power and encourage the growth of monopolies, the Companies Act 1956 has a salient provision that no person can generally hold the office of a director in more than 20 companies at a time. This study shows that nearly 80 percent of the directors of large-sized companies are plural directors and 20 percent are single-company directors. Of the total, 20 percent hold more than ten directorships and these persons can be said to forge inter-locks among the western region and other companies registered in various parts of the country. In spite of the limitation on the number of directorships which any one person can hold, the figure of multiple directorships is higher in India than in the U.K. or the U.S.A. The trend is probably due to the shortage of qualified persons for the office of director and because of the dominance of certain business houses and managing agency firms.

The survey produces interesting information concerning the age composition of directors. The age consideration is important in so far as it helps obtain a greater balance in the board-room. In this country superannuated directors constitute 12 percent of the total number. The younger blood represented by age-groups of up to 45 years accounts for 35 percent of the total. The remaining 53 percent of directors may be classed as "matured and seasoned". It is, therefore, evident that on Indian boards a balance has been obtained between the older and the younger men. The average age of Indian directors is 49.5 years, against 55.2 years in the U.K. and 65 years in the U.S.A. The lower average age in the case of Indian directors is probably due to the lower longevity in the country and partly because of the hereditary nature of directorships. The lower average age of foreign directors in India is due to the fact that the British people of older age prefer to stay in England. It is unfortunate that the survey could not produce adequate information relating to occupational distribution of company directors. In order to have a balanced board, it is essential to ensure an equitable proportion between the executive and the non-executive directors. It is also necessary to have a proper balance between the representation of different functions and interests on a board. The survey broadly states that out of 546 directors, 441 come from business, 33 from professions such as accountancy and law, 23 from technical and special services and 49 from administrative and executive services.

towards it. A long-term policy cannot be based on short-term potentialities. It is necessary to assess the scale of potential trade with any country or group of countries not in the next two years but in the next two decades. But calculations of distant potentialities are inaccurate. Britain's present problems are attributable partly to assessments of the rate of growth of the Commonwealth countries which, as can now be seen, were too optimistic. That those countries have great potentialities of growth is not doubted, but their rate of growth is not yet possible to assess.

There are strong arguments in favour of trade with continental Europe, because the region's economic development is vigorous. There are strong arguments in favour of trade with the Commonwealth, because its various parts are at comparatively early stages of an advance that can obviously proceed a long way. The United States (although described by some observers as the greatest under-developed region of the world) is comparatively far advanced and has not been advancing fast in recent years, but its market is so big that a small share of it can be big in terms of quantity and value. Trade with the Soviet Union is in a different category, not because of differences in politics and social systems (it is generally agreed that they will cause less trouble if economic relations are strengthened) but because the U.S.S.R. is potentially almost self-sufficient and by a turn of policy foreign trade can be developed or retarded. But there is no reason to doubt the sincerity of the Soviet Ministers' repeated assertions that a big increase in trade with Britain is desired and the British Government, in its present predicament, cannot ignore the growth rate of the Soviet economy or the potentialities of the Soviet market. In a statement addressed to visitors of the Soviet Exhibition in London, Mr. Khrushchev said: "Our national economy... is developing at a rate three to five times higher than that of the United States", and the Minister of Foreign Trade, Mr. Patolichev, opening the Exhibition, spoke of the "vast untapped potentialities for even greater expansion" of trade between the U.K. and the U.S.S.R. which had already, he said, increased considerably as a

result of the trade agreement signed about two years ago.

Until recently it was assumed that increasing trade with the U.S.S.R. meant buying more primary goods from that source and selling more manufactures to that market, but that rigid classification is no longer appropriate. The exhibition in London shows a remarkable diversity of products. Traditional items of export such as timber and grain are well represented, but so, too, are scientific and industrial instruments, machinery, motor-cars, television sets, optical instruments, cameras, and other producer and consumer goods of more or less sophisticated character; and the development of Soviet fashion-wear has caused some surprise. As Britain's standard of living is

higher than that of other countries of the sterling area, Britain must evidently buy more Soviet luxuries as well as more essential goods to provide the sterling that the Soviet Union needs for a big expansion of imports from the sterling area. She cannot transform the trade balance by importing mink-trimmed coats and caviar, but even such items must be included in a well-balanced import list. Some of the instruments and machinery exhibited are certainly worth considering—though they are not all freely available to buy. The diversification of the Soviet economy will help, not hinder, foreign trade. Britain was slow to learn that the diversification of the European economy implied big opportunities for trade, and it may be hoped that the lessons learned in western Europe can be usefully applied elsewhere.

continue to be wasted in any case because of the large-scale smuggling of gold. But that can hardly be an argument for removing the ban on imports. The solution lies in putting an end to smuggling through sterner measures and an efficient and honest administrative machinery for enforcing the measures.

But there seems little sense in feeding the market with gold and silver when the need is to unearth hidden reserves of precious metals for using them for productive purposes. Besides, there is a need to devise measures which discourage fresh savings being locked up in precious metals. The other point raised by Mr. Kasturchand relates to the diversion of speculative business from Bombay to outside markets, because unlike up-country markets, trading in Bombay had long been strictly regulated by the State Government even before the Forward Markets Commission took control over it. Here again, the Government will need to give serious thought to extending the Commission's control over upcountry markets. Bombay cannot attract outside business on a large scale as long as trading in upcountry markets continues to remain unregulated. But the Bombay Bullion Association should thank the Commission for allowing it to trade on the basis of a three-monthly contract with delivery at the seller's option except at the end of the contract. The Association has also the Commission's assurance that it would recommend to the Government further relaxation of controls if the trends in forward trading were healthy.

Camphor and Allied Products

The Camphor and Allied Products Ltd., a new Company formed to undertake the manufacture of synthetic camphor, thymol and other allied products, is likely to enter the market for raising capital by about the middle of August. It has an authorised capital of Rs. 1 crore consisting of 50,000 equity shares of Rs. 100 each, 10,000 9.23 percent cumulative redeemable preference shares of Rs. 100 each, free of company income tax but subject to deduction at source and 40,000 unclassified shares of Rs. 100 each. The issued capital will be Rs. 60 lakhs made up of 50,000 equity shares and 10,000 cumulative redeemable preference shares. Out of this, the promoters, directors and their friends will take up equity shares of the value of Rs. 24.52 lakhs. Shares worth Rs. 1.92 lakhs will be subscribed by the U.S. firm of American Hydrotherm Corporation, New York, which has been given the contract to supply and erect plant and machinery. The balance of Rs. 23.56 lakhs of equity capital and the entire preference capital is to be offered for public subscription. The Company has secured the technical collaboration of the American firm of E. I. Du Pont De Nemours and Company which will be paid an initial amount of \$25,000 and a royalty for a period of eight years at the rate of 1.4 cents a lb of camphor produced. The terms of the collaboration agreement have been approved by the Government. The project is estimated to cost Rs. 1.30 crores which will be met by a capital issue of Rs. 60 lakhs, Rs. 48 lakhs by way of long-term loans and Rs. 22 lakhs by short-term borrowings from banks.

The factory, which is claimed to be the first of its kind in India, will be located in Clutterbuckganj, near Bareilly, in Uttar Pradesh. The Company has been licensed to manufacture 900 tons of synthetic camphor a year and 60 tons of thymol a year. The plant is expected to go into production by the end of 1962. When in full production, it will meet a major part of the indigenous demand for camphor which is now being met entirely through imports. The Company has been sanctioned a loan of Rs. 18 lakhs by the Industrial Finance Corporation, and negotiations are in progress for obtaining a loan of about Rs. 30 lakhs from the Industrial Credit and Investment Corporation of India. Arrangements are being made to have the entire public issue underwritten by Messrs Dalal and Jhaveri Private Ltd which will be the managing agents.

Developing Industries in Maharashtra

The development of industrial areas and estates is the main aim of the industrial policy of Maharashtra State. The pace of industrial development—particularly in its underdeveloped regions—needs to be quickened appreciably in order to achieve the progressive decentralisation of industries. To facilitate the expeditious development of such schemes, the Maharashtra Government last year set up by an executive order a Board of Industrial Development with suitable administrative and financial powers. The latter has expanded its work so fast that it has now been decided to constitute a statutory corporation. Accordingly the State Government has drafted a Bill to constitute a statutory corporation to be known as the Maharashtra Industrial Development Corporation. This will consist of officials and non-officials.

Current News and Comment

More Capital for Britannia Biscuits

There has been a sharp rise during the past year or so in the ordinary shares of the Britannia Biscuit Co. Ltd., to Rs. 60 from Rs. 39.50. Investors' confidence appears to be amply justified by the latest results published for the year ended March 1961. The growth prospects are underlined by the decision of the directors to increase the share capital because they think that the Company is now under-capitalised. It is proposed to communicate to the shareholders in the course of time the manner in which the share capital will be increased. Meanwhile, it is proposed to increase the authorised share capital to Rs. 1 crore by issuing 500,000 ordinary shares of Rs. 10 each.

During the year 1960-61, progress has been made in all directions. Production, sales and profits have improved. Sales rose from Rs. 272 crores to Rs. 3.29 crores. Rises in production costs have been partly offset by the increased turnover. As a result, the profit has increased from Rs. 41.30 lakhs in 1959-60 to Rs. 55.68 lakhs, after providing Rs. 6.71 lakhs (against Rs. 5.65 lakhs) for depreciation. The taxable ordinary dividend has been increased from 25 percent to 30 percent, of which an interim dividend of 6 percent was paid earlier and a special bonus of 5 percent is being paid. The dividend is more than four times covered and offers a yield of 5 percent at the present price. Taxation is allocated Rs. 24 lakhs (against Rs. 19.30 lakhs), development rebate reserve Rs. 2.96 lakhs (against Rs. 41,700), debenture redemption reserve Rs. 1.50 lakhs (against the same) and general reserve Rs. 12.70 lakhs (against Rs. 7 lakhs). The carry-forward is Rs. 2,84,279, against Rs. 2,13,638 brought in.

Steps have been taken to extend the production facilities of the three factories and substantial capital expenditure has been incurred. In order to implement the second phase of the plant replacement and modernisation programme, the directors are trying to get the equipment produced in this country. Under the circumstances, Britannia Biscuit should be permitted to import the necessary machinery from abroad, which is not produced in this country. Although exports of Britannia have increased, there is need for promoting them by necessary tax reliefs.

Clive Row Investment Results

The dividends received by the Clive Row Investment Holding Co. Ltd from its investments in coal, tea and miscellaneous shares have been satisfactory during the year ended December 1960, but jute investments have shown lower returns. This industry is still passing through a difficult period and dividends from these shares are likely to decline further during the current year. But the income from other sources is expected to be maintained. The Company has benefited to the extent of Rs. 65,000 due to the lower rate of tax applicable to the dividends from subsidiary companies.

The profit of Clive Row Investment has amounted to Rs. 15.97 lakhs in 1960 and a taxable ordinary dividend of 8 percent has been declared, including an interim of 2.5 percent. The dividend absorbs Rs. 11.10 lakhs and offers a yield of 9.6 percent at the present price of Rs. 8.37 a share. Taxation receives Rs. 5.51 lakhs. The carry-forward is Rs. 2,52,457, against Rs. 2,16,378 brought in. It is not possible to compare the results with those of the previous year because the previous accounts covered a period of nine months ended December 1959.

Delta Jute Absorbs Belvedere

The Belvedere Jute Mills Co. Ltd has decided that its mill should be amalgamated with the Delta

Jute Mills Co. Ltd because by concentrating the working of the two in the Delta Mill, greater economies will be secured. As soon as the necessary consents of the Calcutta High Court and the shareholders are obtained, the proposed amalgamation will be effected by issuing the shares of Delta Jute Mills to the shareholders of Belvedere Jute Mills.

Commenting on the current prospects, the directors of Belvedere Jute take a cautious view. The lower level of production following restrictions on output has increased overhead costs. Direct costs have also been raised by substantial rises in dearness allowances on the recommendations of the Wage Board. Costs will be inflated further by the loss of production as a result of the block closures and the lay-off compensations which have to be paid to the workers. Although new crop prospects are encouraging, the effect of a greater availability of raw jute will not be felt until the latter part of 1961, when it is hoped that raw jute and manufactured jute goods prices will return to more profitable levels than at present.

After providing Rs. 1.84 lakhs (against Rs. 1.85 lakhs) for depreciation, the profit of Belvedere Jute has declined from Rs. 11.93 lakhs in 1959 to Rs. 1.39 lakhs during the year ended December 1960. The taxable ordinary dividend has been reduced from 13 1/2 percent to 5 percent to absorb Rs. 1.40 lakhs. Taxation is allocated Rs. 1.15 lakhs (against Rs. 5.80 lakhs). The carry-forward is Rs. 78,247, against Rs. 48,528 brought in, but an amount of Rs. 2.04 lakhs has been transferred from dividend equalisation reserve.

Progress of Hindustan Twyford

The latest report of the Hindustan Twyford Ltd for the period from 8th February 1960 to 31st March 1961 is of interest because the Company's public offer of 145,100 ordinary shares was substantially over-subscribed a few months ago to the extent of 75 times. A plot of land has been acquired near Badargarh, Punjab, about 18 miles west of Delhi for erecting a factory. But the construction work has been interrupted by legal difficulties which the original owners of some land have presented. As soon as these difficulties are surmounted, the erection work is expected to proceed quickly. Meanwhile, the plant and equipment has started to arrive from abroad. Twyford Ltd of the U.K. has now suggested some modifications in the lay-out of the factory due to experiments carried out on Indian raw materials. It is hoped that this will increase the output capacity.

After providing Rs. 1.571 for depreciation, the profit is Rs. 1.81 lakhs, which is being carried forward. The Company earned Rs. 2.25 lakhs in the shape of interest from deposits with banks.

Freer Trade in Bullion Urged

In his presidential address at the annual general meeting of the Bombay Bullion Association last week, Mr. Chandulal Kasturchand urged the Government to sell all the gold obtained from the Mysore gold mines in the open market and also to remove the ban on the import of gold and silver. This was necessary, he said, in order to satisfy the people's growing demand for precious metals. The demand for bullion has increased because it has proved to be a good hedge against inflation. There is nothing new about Mr. Kasturchand's plea for augmenting bullion supplies. Increased supplies will undoubtedly contribute to the prosperity of the trade, and it might also help ensure the smoother functioning of the futures market. But the country cannot afford to allow the import of bullion or to release Mysore gold for sale in the open market, since its foreign exchange reserves have fallen to a critically low level. It has, however, been argued that foreign exchange will

cluding the nominees of the Maharashtra State Electricity Board and the Housing Board. The Corporation will have the power to borrow money in the open market with a view to supplementing the limited resources of the State. It will enjoy autonomy in arriving at decisions to implement industrial development schemes expeditiously. The Bill does not restrict itself to the constitution of the Corporation, but also seeks to remove certain hindrances in the way of industrial development. In particular, a quicker procedure of land acquisition in industrial areas is proposed. As the State Government is implementing a number of industrial development schemes and the Board of Industrial Development has initiated work on the schemes entrusted to it, the Bill provides for the taking over by the Corporation of the obligations and assets at these schemes.

It is proposed to invest the Corporation—at the discretion of the State Government—with the authority of a Notified Area Committee in any selected area with a view to giving it the powers of a local authority concerning town planning and development schemes and empowering it to levy local taxes. The Government will have the right to issue policy directives to the Corporation which will be binding on it. The latter has been invested with powers for the compulsory acquisition of land required not only by it but for any other *bona fide* industrial use without, however, depriving the landowners of the legitimate benefit of the reasonable increase in land values in a developing economy. The pattern of development, including the construction of buildings in any industrial area, entrusted to the Corporation will have to conform to its plans and orders. The Bill provides for measures which seek to avoid multiplicity of offices who would have to be approached by industries for various permits and licences for raw material, etcetera, in relation to industrial areas and industrial estates managed by the Corporation. The establishment of an industry in the jurisdiction of a local authority sometimes suffer from the lack of an essential amenity which the latter is unable to provide. In such cases, the Government is handicapped by the lack of authority to intervene. It is being aimed to remove this deficiency in the proposed legislation. Provision has been made to withdraw any industrial area or estate from the jurisdiction of the Corporation so that its funds are not unnecessarily locked up in any area. The Government has reserved the right to supersede and reconstitute the Corporation under some circumstances and to carry on the work in the interim period.

Tensile Steel Share Offer

The Tensile Steel Ltd. which proposes to set up a plant in Baroda for manufacturing tensile steel wires with Japanese collaboration, will enter the market for raising capital on 3rd August. C. Itoh and Company, Kobe Steel Works and Sinko Wire Company are the three Japanese firms which are collaborating in the venture. They will provide the technical know-how and design as well as manufacture and supply the plant and equipment. Besides, they will train Indian technicians. Between them, they will take up equity shares of the value of Rs. 15.60 lakhs. The Company has been licensed to manufacture 10,000 tons of tensile steel wire a year. Raw materials like high-carbon steel rods have been arranged from a leading Japanese steel manufacturing firm at world competitive prices till such time as they are available locally. The plant is expected to go into production by the end of 1962. High tensile steel wires are widely used for prestressed concrete construction, and the present requirement is being met entirely by imports. The capital outlay of the project is estimated around Rs. 88.40 lakhs, of which Rs. 77.50 lakhs account for plant and machinery. The equity issue will provide Rs. 45 lakhs, the foreign collaborators will give a deferred credit of Rs. 22.09 lakhs, the Industrial Finance Corporation is offering a loan of Rs. 20 lakhs and the balance is to be met from borrowings from banks. The authorised capital of tensile steel is Rs. 1 crore in equity shares of Rs. 100 each. The issued capital will be Rs. 45 lakhs. The promoters, directors and their friends are taking up shares worth Rs. 9,99,400. Shares of the value of Rs. 5 lakhs are to be subscribed by the Life Insurance Corporation. The Japanese firms, which are collaborating in the venture, will take up shares worth of Rs. 15.60 lakhs. The remaining 14,406 shares are being offered to the public. The entire public issue has been underwritten by the Industrial Credit and Investment Corporation of India and Dena Bank. The Japanese firms will have three nominees on the board. Messrs Shah Industrial Private Ltd will be the managing agents.

Project for Cooling Equipment

A new enterprise known as Air Control and Chemical Engineering Co. Ltd is being formed to

undertake the manufacture of a wide range of equipment for industrial air-control, refrigeration and ventilation. The factory will be located in Siddhapur, north Gujarat. Negotiations are being carried on for acquiring about 100 acres of land at the proposed site. The total outlay on the plant is estimated around Rs. 1.90 crores, of which the foreign exchange component is placed around Rs. 60 lakhs. The project has been sponsored by Mr. Surendra Maganlal Mehta of Messrs Maganlal Prabhudas, Bombay, who have a major interest in Ambica Silk Mills, Raghuvanshi Mills and Siddhapur Mills. The industrial licence obtained by Mr. Surendra Maganlal covers a wide range of goods, such as air-washers, fans and blowers, water filters, air-filters, cold storage plants for foodstuffs, air-conditioning plants, ice-making plants, condensers, air-compressors, cooling towers, etcetera. Negotiations are being carried on for securing technical and financial collaboration from abroad. Many reputed foreign firms are said to have offered their collaboration on attractive terms. While the entire project is expected to be completed by the end of 1963, the production of some of the items is likely to start by about the middle of next year. When the project is completed, the annual output is likely to be around Rs. 7 crores. It is expected to provide employment to 200 skilled engineers and about 1,000 semi-skilled and unskilled workers. The Company will have an authorised capital of Rs. 5 crores, of which Rs. 1.50 crores to Rs. 2 crores is likely to be issued in the beginning.

Bengal Chemical Maintains

The working of the Bengal Chemical and Pharmaceutical Works Ltd for the year ended March 1961 shows an increase of about Rs. 12 lakhs in sales from Rs. 1.97 crores to Rs. 2.09 crores, but the gross profit at Rs. 23.68 lakhs is only a little better than the previous year's figure of Rs. 23.36 lakhs. The provision for depreciation has been raised from Rs. 5 lakhs to Rs. 5.62 lakhs but the tax provision is lower at Rs. 6.50 lakhs, against Rs. 9.53 lakhs in 1959-60. After bringing in the surplus of Rs. 13.90 lakhs from the previous year and writing back Rs. 30,774, being the excess provision for income tax for the previous year, the disposable income amounts to Rs. 32.26 lakhs. From this, the directors have allocated Rs. 13.80 lakhs to general reserve no. 1, representing the taxed profits of the years preceding April 1960. General reserve no. 2 gets Rs. 1 lakh, against Rs. 1.30 lakhs, and debenture redemption reserve accounts for Rs. 70,000—the same as in the previous year. The dividend has been maintained at 10 percent, less tax. The ordinary and preference dividends absorb Rs. 6.67 lakhs, leaving Rs. 1.31 lakhs to be carried forward.

The directors state that the working results for the current year so far have been satisfactory. So the results for the current financial year are expected to be satisfactory provided other conditions remain unchanged. The expansion schemes for raising the productive capacity of the chemical manufacturing division have already been taken up. The financial position of Bengal Chemical is sound. Against its paid-up capital of Rs. 71.99 lakhs, it has accumulated reserves and surplus amounting to Rs. 70.15 lakhs. Borrowings and other current liabilities total Rs. 81.08 lakhs while investment and current assets amount to Rs. 1.46 crores. The gross block valued at Rs. 1.54 crores has been written down to Rs. 76.4 lakhs. The Rs. 103-paid shares of the Company are quoted around Rs. 108; the book value of the share is substantially higher around Rs. 237.50.

Trident Industries: A New Venture

The Trident Industries Ltd is a new enterprise which has been promoted by Amar Tara Industries and Messrs India Cork Mills to undertake the manufacture of various types of weighing instruments, commercial and industrial weighing machines and weighing bridges. The firm will manufacture scales used by ordinary grocers for weighing $\frac{1}{2}$ kilograms as well as cranes used for lifting a weight of 60,000 kilograms. According to the original scheme submitted to the Development Wing, the firm's total requirements of capital equipment had been placed at Rs. 10.5 lakhs, of which Rs. 4.5 lakhs were to be spent on imported machinery. But the scope of the project has been considerably widened as the Maharashtra Government has shown its willingness to participate in the venture. Negotiations between the promoters and the State Government concerning capital participation are expected to be finalised soon. The Company has secured the collaboration of the reputed West German firm of Butz and Leitz. Apart from supplying plant and machinery on a deferred payment basis, the foreign collaborators will provide the technical know-how, complete specifications, drawings, patents, etcetera, for which it will be given

a royalty of 3 percent, less income tax for a period of ten years on items manufactured indigenously. There are about eight firms in India which are at present manufacturing various types of weighing machines against specific orders. But Trident Industries, it is said, will be the biggest unit of its kind in Asia. This will probably be the first factory in this country to make spring balances. It will be located in Bombay. The Company has already acquired about five acres of land. No difficulty is anticipated in the procurement of water and electricity. The plant is expected to go into production before the end of 1962. The Company is likely to have an authorised capital of Rs. 2 crores, of which half is expected to be issued in the beginning. It will enter the market for raising capital after a month or two.

American Refrigerators Share Offer

The American Refrigerators Co. Ltd proposes to offer for public subscription 125,000 equity shares of Rs. 10 each at par some time next month. The present paid-up capital of the Company is Rs. 7.94 lakhs. Shares of the value of Rs. 4.55 lakhs will be taken up by the directors and their friends. The proposed public issue will raise the issued capital to Rs. 25 lakhs. The Company which at present manufactures and assembles air-conditioners and Bush coils under licence from Dunham Bush Inc. of the U.S.A. and also undertakes engineering work for central air-conditioning plants, recently secured licences for manufacturing deep freezers, food freezers, beverage coolers, ice-cream cabinets and packaged type air-conditioners of 5 tons to 15 tons' capacity. The Company's current production is said to be about half the licensed capacity and its monthly turnover is said to be around Rs. 60 lakhs. It has decided to increase the existing output to capacity and also to manufacture new items in order to meet the increasing demand for refrigeration products. It also proposes to expand its engineering department. The annual turnover is expected to increase to around Rs. 1.20 crores with the completion of the expansion schemes. The proposed public issue is expected to meet with a satisfactory response.

Duty on Alarm Clock Parts Cut

The Government of India has reduced, with effect from 15th July, the import duty on parts of one-day alarm clocks from 100 percent to 50 percent provided imports are made for the assembly and manufacture of these clocks. Importers will have to prove to the satisfaction of the Customs authorities that the parts are being imported for the specified purpose if they are to avail themselves of the duty concession. Apparently, the relief in duty is aimed to encourage indigenous manufacturers. The progress of the assembly industry has almost been negligible, which, however, is not surprising. Against a 100 percent duty on the import of parts, complete alarm clocks have been carrying a duty of only 50 percent. This had placed the indigenous assembly industry at a serious disadvantage. Importers preferred to import complete alarm clocks instead of their parts because of the lower duty on complete clocks. Unlike watches, alarm clocks cannot be smuggled in quantity. Their supply, therefore, remains limited. Complete alarm clocks being a "bound item" under the General Agreement on Tariffs and Trade, the import duty on them could not be raised. The Government's decision to reduce the duty on parts to the same level as that on complete clocks will be widely welcomed, although it meets the trade and industry's demand only partially. The industry has long been pleading for a much bigger relief. The parts of clocks which are at present allowed to be imported consist of balance wheel, balance staff, hair-spring, balance-bearing screws, main-spring and alarm-spring. The quota of established importers is fixed at 5 percent of their best year's imports.

T.I.S.C.O. Profit Up, Shares Down

The increase in the net distribution from Rs. 6.80 to Rs. 7.25 a share through a bonus of 45nP a share failed to please the stock market. The market's reaction to the increase in the Company's earnings as indicated by the preliminary figures has also been one of disappointment. The shares which had been sagging for some time developed considerable weakness after the announcement of the higher distribution. After staging a small rally, they were marked down to a new low of Rs. 157.25 on 22nd July when the market came to know of the preliminary figures for the year ended March 1961. And yet, neither has the dividend been poor nor are the Company's working results unencouraging. In 1960-61, it had made a gross profit of Rs. 19.59 crores, including

Rs. 3.94 crores accruing from adjustments in retention prices of non-common products for the period 1955-56 to 1959-60, compared with Rs. 14.15 crores in the previous year. Even if no account is taken of the retrospective price increases, the gross profit is up by Rs. 1.50 crores over the year. The year's production showed a rise of about 26,000 tons, and the total turnover of Rs. 79.11 crores shows a substantial improvement over the 1959-60 figure of Rs. 73.47 crores. The ratio of gross profit to sales works out to 19.8 percent, compared with 19.2 percent in the previous year. The directors have provided Rs. 9.07 crores (against Rs. 8.47 crores) for depreciation at the rate of 64 percent on the original cost. In addition, they have provided Rs. 4.85 crores (against nil) for depreciation to make up the total amount admissible under the Income Tax Act. A further sum of Rs. 58.29 lakhs (against nil) is deducted from the profits by way of loss on revaluation of the deutschemark and the Dutch guilder on the amounts borrowed in these currencies from the World Bank. After deducting all these items, there remains a balance of Rs. 5.09 crores, which is about Rs. 59 lakhs less than in 1959-60. With Rs. 8.47 lakhs brought forward from the previous year and adding Rs. 1.27 crores drawn from the general reserve No. 2, the total comes to Rs. 6.44 crores. This entire profit has been transferred to the plant rehabilitation and development reserve under the Income Tax Act and the Tariff Commission scheme. The amount transferred to these reserves in the previous year was Rs. 4.14 crores. The whole amount of Rs. 4.65 crores for the payment of proposed dividends has been drawn from the general reserve No. 1, representing taxed profits of previous years. The balance carried forward is a meagre sum of Rs. 12,000. Referring to retention prices, the directors state that the Company had made several representations to the Government for a review of the retention prices for the five-year period ended 1959-60 in view of the increases in works costs and overheads and a decline in the average prices realised, particularly for the products manufactured by that Company alone (generally referred to as non-common categories). The Government having accepted the claim for reimbursement on the fall in the average realisations on the non-common categories so as to maintain uniform average prices between the two main producers over the five-year period, had revised the retention prices of non-common categories for that period. This has resulted in an accretion to the Company's revenue of Rs. 3.94 crores which had been adjusted in the accounts for the year. Its case for higher prices from 1960-61 onwards is pending before the Tariff Commission. Investors in Tata Steel shares can derive considerable comfort from the substantial strengthening of the Company's finances in recent years. Over the past two years, the Company has ploughed back about Rs. 25 crores. As against its equity capital of Rs. 27.53 crores, the Company's reserves and surplus amount to Rs. 27.62 crores. The gross block of the Company is valued at Rs. 180 crores, and total depreciation provided against this so far amounts to Rs. 69 crores.

Plant for Terylene

Imperial Chemical Industries has promoted a new Company to be known as Chemicals and Fibres of India Ltd which will undertake the manufacture of terylene fibre, certain dyestuffs and chlorine-based products. The plant will be located in Thana, an industrial suburb of Bombay. The Company will have an authorised capital of Rs. 10 crores, of which Rs. 3 crores will be issued. Of the issued capital, only 40 percent will be offered to the public. The remaining 60 percent will be held by the I.C.I. The Company is expected to enter the market for raising capital early next year.

Outlook for Colour-Chem

Preliminary figures released along with the announcement of a maiden dividend showed that the Company had done exceedingly well in the year ended March 1961. Sales rose to Rs. 1.13 crores from a mere Rs. 36.94 lakhs in 1959-60, and the gross profit shot up from Rs. 11.61 lakhs to Rs. 46.54 lakhs. The ratio of gross profit to sales is as high as 41.45 percent. The directors state in their report that production was quite satisfactory during the year, and the Company added some more pigments to the range of items produced by it. Pigments suitable for the rubber and plastic industries were also manufactured. The directors, however, fear that production may be adversely affected during the current year due to the shortage of raw materials because of the 18 percent cut in its import licences. To meet this situation, efforts are being made to secure some of the raw materials through the State Trading Corporation on a rupee payment basis. The levy of 15 percent *ad valorem* duty on coal tar dyes has brought

pigment emulsions also within its purview and has thus placed the indigenous products at a disadvantageous position, compared with the foreign goods. The levy of excise duty on coal tar dyes has also increased the cost of certain raw materials. In order to overcome the shortage of raw materials, the Company has plans to manufacture leomine K, a cationic softening agent, modified urea formaldehyde resins and some major intermediates which are being imported at present. The Company has already received licences for the manufacture of these items. The scheme to manufacture phthalocyanine blue has been taken on hand and it is for financing this project that the Company has recently issued rights shares of the value of Rs. 25 lakhs. The financial position of the Company is sound. Within a period of four years, the Company has accumulated reserves worth Rs. 24 lakhs against its paid-up capital of Rs. 1 crore. Its fixed assets are valued at Rs. 1.11 crores, and the depreciation provided so far amounts to Rs. 15.45 lakhs. The shares of Colour-Chem have eased from Rs. 350 to Rs. 330 after being quoted ex-right on 17th July, but this compares very favourably with the *cum-right* quotation of Rs. 355 on 14th July.

Railways as Common Carriers

The Railway Freight Structure Enquiry Committee (1956-57) recommended that the responsibility of the Indian railways as carriers of animals and goods, which is at present that of a bailee, should be changed to that of a common carrier. There is also a public demand for this change. After a careful examination of the question, the Government has decided to accept the Committee's recommendation. It accordingly introduced in the last session of the Lok Sabha the Indian Railways (Amendment) Bill, 1961, with a view to amending the Indian Railways Act of 1890. Under the new Section 73, which is proposed to be inserted by Clause 13 of the Bill, the basic responsibility of the railways—which is at present that of a bailee—will be changed to that of a common carrier. In other words, the railways will be undertaking greater responsibilities and will be liable for loss of, or injury to, consignments in all cases arising in the course of transit unless such loss or injury is caused by an "Act of God" or other such excepted perils specified in that Section. It is also contemplated under the new Section 77(1) which is proposed to be inserted by Clause 13 of the Bill that the railway administration shall be responsible as a bailee for loss or injury to goods which are not "removed from the railway premises at the destination within the free time allowed therefor for a period of 30 days thereafter." Under the new Section 77B, proposed to be inserted by Clause 13 of the Bill, the parcels or packages containing articles of special value will be carried at the risk of the railway concerned without payment of any additional charge when the value of such article in a parcel or package does not exceed Rs. 500, instead of Rs. 300 as at present. The above provisions would involve expenditure from the Consolidated Fund of India. It is estimated that the additional expenditure, which the railways will have to incur, may amount to about Rs. 2 crores a year.

Efforts have been made to amend the Indian Railways Act in certain other aspects as well; for example, it has been made clear that in the case of through booking of consignments over an Indian railway and a foreign railway, the responsibility of the former as a common carrier would extend only to that portion of the carriage which is over the Indian railway. These apart, amendments have been proposed in connection with the adoption of the metric system of weights and measures by the railways. Marine insurers all over India are profoundly interested in these amendments. The Railway Freight Structure Enquiry Committee conferred with the insurers before finalising its report. The insurers can, therefore, look upon the Bill with a measure of satisfaction, since all their main recommendations to convert the responsibilities of the Indian railways from that of a bailee to that of a common carrier were accepted by the Committee and have now been included in the Bill. Inland transit insurance is inextricably bound with the liabilities of the carriers. The fact that the railways, in future, will assume bigger responsibilities will enable the insurers to service their clientele more promptly. They will also possibly be able to remodel their structure of rating for carriage by rail because the railways will assume greater responsibilities in future. The position is, however, entirely different for carriage by road, although the Indian Carriers Act stipulates that road carriers are in fact common carriers. Because of the diversity of companies entrusted with the carriage of goods and the nature and character of the consignment notes issued by them, the carriers normally try to escape liabilities lawfully imposed on them, resulting in considerable hardship to numerous clients and their insurers. Since this course is obstinately pursued by road carriers these days, time may come when

in the interest of the trading public, the Central Government might have to enact further legislation whereby road carriers will have to assume the liabilities which the railways are now doing.

Expansion of U.P. Textile Industry

Addressing the recent annual general meeting of the Employers' Association of Northern India in Kanpur, Mr. Kishen Narain, president, demanded the allotment of a proportionately higher quota of the proposed expansion of the textile industry to Uttar Pradesh. The State accounts for only 6.9 percent of the looms installed in India, although it accounts for 16.4 percent of the country's population. Mr. Narain demanded representation for U.P.'s textile industry on the Cotton Textile Consultative Board "to avoid any wrong juxtaposition of its interests with those of other regions." He said that while the number of cotton mills in India had increased from 408 in 1948 to 516 in 1959, only one new mill—and that too a small spinning unit—was established in U.P. during this period. Referring to the coal crisis, the president said that it brought to the surface the serious flaws in planning, so he warned that any plan to overcome the coal shortage would defeat its objective if it made coal costlier or otherwise compelled industries to block larger finances in coal purchases. Discussing the inflationary effect of indirect taxes, he said that while computing the cost of living indices, the amount of excise duties and other indirect taxes imposed during the third plan on commodities covered by the consumer price index should be totally ignored. According to him, "this would not only mitigate the harmful effects of the inflationary pressure that would be created by the rise in dear food allowance unrelated with productivity, but would be a step nearer to an egalitarian approach to the economic problems of the country."

Three More Turbines for Kanpur

The Chief Minister of Uttar Pradesh, Mr. C. B. Gupta, has announced that the Planning Commission has agreed to allow the State Government to install in Kanpur three turbines of 50,000 kilowatts each. This is being done because the giant thermal plant in Singrauli, which is to be constructed with Russian aid, will not be completed before the end of the third plan. The three new turbines in Kanpur are to be established within a year and a half, and the expenses incurred on them would be within the plan expenditure. Because of the existing power shortage in Kanpur, cuts in supply have already been enforced on small industrial establishments in the city with effect from the first week of July. The restriction order, issued by the District Magistrate and served on 3,000 small industrial units, says that the Kanpur Electric Supply Administration finds it difficult and unsafe to continue to generate electricity at the maximum rate. The power-house is currently undertaking a maximum load of 58,000 kilowatts and a further increase may result in a breakdown of the plant. The K.E.S.A. has stopped accepting demands from new industrial establishments. The pending demand for power for industrial establishments is said to be about 35,000 kilowatts.

Cotton Cultivation in U.P.

A review of cotton cultivation in Uttar Pradesh shows that there is hardly any prospect of the State's finding a permanent place in the cotton map of India. At the moment, U.P. accounts for only 0.7 percent of the total cotton acreage in the country. The U.P. area in 1919-20 was 1.2 million acres. It fell to 500,000 acres by 1939 and in another decade, by 1950, it was reduced to barely over 100,000 acres. The development of sugarcane cultivation was generally considered to be the main reason for the gradual but steady decline. When the Centre decided in 1950 to intensify cotton cultivation in the States, U.P. agreed to it only reluctantly. Several schemes were launched in the first and second plan years, as a result of which the acreage went up to 207,000, but now it has fallen again and, according to a spokesman of the State Government, it has not been possible to achieve the annual target in any year of the plan period. In fact, the State Government would appear to be half-hearted about the whole thing, in as much as it is argued that there is no need for U.P. to achieve self-sufficiency in cotton. The total raw cotton requirements of U.P.'s textile industry ranges from 350,000 to 400,000 bales. The requirements of domestic consumption are placed around 60,000 bales. Even in the past, the mills used to get over 50 percent of their requirements from outside the State. To become self-sufficient in cotton, U.P. would have to increase the cotton area from the present 200,000 acres to 1.2 million acres and this, according to the Government, would mean a corresponding decrease in the area under sugarcane and food crops. Among

the major factors limiting the expansion of cotton cultivation in the State, are the low economic return, compared with cane or food crops, higher risks on account of cotton's susceptibility to weather hazards and pests, absence of a marketing programme, and inadequacy of irrigation water for sowing in April and May on account of the simultaneous demand for other crops. While the gross and net income from sugarcane are Rs. 600 and Rs. 300, respectively, those from cotton are only Rs. 350 and Rs. 150.

Third Plan Outlay on U.P. Industries

An outlay of Rs. 146.43 crores has been finalised for the development of industries in Uttar Pradesh during the third plan period. This includes the investment already approved for the Central and State sectors and the anticipated expenditure on non-plan schemes and the khadi and village industries programme. Of the total outlay, Rs. 95 crores will be provided exclusively by the Centre for the four heavy industrial projects to be located in the State, namely, Rs. 45 crores for heavy electricals, Rs. 25 crores for the nitrogenous fertiliser factory near Gorakhpore, Rs. 15 crores for the antibiotics plant in Rishikesh and Rs. 10 crores for the development of the Singrauli coalfields. The State's plan provides for an outlay of Rs. 26.43 crores for plan schemes, of which Rs. 5.28 crores will be contributed by the All-India Khadi and Village Industries Commission for rural industries and the rest will be shared by the Centre and the State Government. Committed items of the non-plan schemes would involve additional expenditure of Rs. 25 crores during the entire five-year period.

In the State's plan, the major allotment goes to the small-scale sector for which a sum of Rs. 16.62 crores has been earmarked. Out of this, Rs. 8.32 crores are to be spent on small-scale industries, Rs. 4 crores on industrial estates, Rs. 2.75 crores on handlooms, Rs. 90 lakhs on handicrafts, Rs. 35 lakhs on sericulture and Rs. 30 lakhs on cottage industries. Seventeen large, medium and small industrial estates, 24 rural industrial estates and ten development sites have been visualised to constitute the main plank for the promotion of small industries. The share of heavy industries has been fixed at Rs. 4.5 crores, including Rs. 5 lakhs for geological and mining operations. Under this programme, seven major schemes have been formulated to provide for a heavy industries corporation, expansion of the Government Cement Factory and the Government Precision Instruments Factory, establishment of an optical instruments factory, a refractory and a design-cum-research centre. The village industries programme visualises the establishment of 1,500 industrial co-operatives in rural areas, a village industries service institute and a number of common facility centres.

Plea for Sugar Decontrol

The *ad hoc* committee of the Federation of All-India Sugar Merchants Association which met in Kanpur under the chairmanship of Mr. Parasram Parimal of Bombay, has urged the Central Government to remove immediately the restrictions on the distribution and inter-State movement of sugar. Reviewing the sugar stock position in the country, the committee has estimated production in the current season at about 3 million tons. The carry-over stock of the last season was 595,000 tons. As against the total available supply of 3.6 million tons, sugar consumption in the current season is not expected to exceed 2.1 million tons. Providing for exports of 300,000 to 400,000 tons, there would still be a surplus of 7.1 million tons. In such changed circumstances, the committee has pointed out, the present machinery of controls which was devised in 1959 when sugar scarcity was felt throughout the country, is not only unnecessary, but positively harmful. The committee was of the opinion that in the larger interests of the sugar economy, the price factor should not be disturbed. While the control over the ex-factory price of sugar may be retained, there is no justification for restricting movement and distribution. If bottlenecks in distribution are removed, sugar stocks will have a chance of reaching remote interior areas where scarce arrivals at present are contributing to the price rise. Listing the benefits of decontrol, the committee declared that it would immediately raise consumption in the country by about 200,000 tons, besides relieving factories of a further 200,000 tons in the shape of pipeline stocks with the trade.

Palani Andavar Pays More

For the year ended December 1960, the Palani Andavar Mills Ltd reports a higher profit of Rs. 16,89,276.70, after providing Rs. 4,69,819 for depreciation, compared with the previous year's

net profit of Rs. 10,28,898, after allocating Rs. 4,38,951 to depreciation. With the amount of Rs. 2,940 brought forward from the previous year, the total surplus available for appropriation comes to Rs. 16,92,217. Various provisions include a sum of Rs. 5,801 for development rebate reserve (against Rs. 1,56,928), a sum of Rs. 2,15,000 for general reserve (against Rs. 200,000), and Rs. 7,50,000 (against Rs. 200,000) for taxes. The dividend on equity shares having a preferential right comes to Rs. 18,200. A dividend of 50 per cent is recommended on the other equity shares (against 30 per cent last year). This dividend will absorb Rs. 500,000. The balance of Rs. 1,210 is carried forward. The higher profit for the year is on account of a favourable margin of profit in the sale of medium counts. Due to the change in the basis of making provision for depreciation by applying the income tax rates to the written down values in the books, and not to the written down values computed for income tax purposes as was done previously, Rs. 98,009 has been provided in excess for depreciation, thus reducing the profit by that amount.

More from Tirupati Cotton

The working of Tirupati Cotton Mills Ltd for the year ended March 1961, has resulted in a net profit of Rs. 9,35,629, after providing Rs. 4,88,767 for depreciation, compared with the previous year's figures of Rs. 6,33,846 and Rs. 3,31,016, respectively. With the amount of Rs. 23,178 brought forward, the total available surplus comes to Rs. 9,58,807. Out of this, the provision for taxation is Rs. 75,000 (against nil). Development rebate reserve gets Rs. 3,38,585 (against nil). A sum of Rs. 1,20,000 is transferred to reserve for mortgage loan redemption (against Rs. 1,20,000). General reserve gets Rs. 100,000 (against nil). Deferred taxation reserve gets Rs. 50,000 (against nil). The balance of depreciation for 1959-60 amounts to Rs. 28,216. The dividend at 8.93 per cent, subject to tax, on the preference shares amounts to Rs. 67,145. A dividend of 12 per cent, taxable, on the ordinary shares is recommended, against 8 per cent in the previous year. This dividend will account for Rs. 1,55,440. The balance of Rs. 22,631 is carried forward. The directors consider the working for the year as quite satisfactory. The productive efficiency of the mills increased, and work on three shifts with the full complement of 12,000 spindles continued. The Company has secured a licence for the installation of a waste spinning plant at a cost of Rs. 12.56 lakhs to convert waste material into coarse counts of yarn. A portion of it is expected to be installed and put into production before the end of this year, and the balance during the next.

A Better Dividend from Premier Mills

For the year ended March 1961, the Premier Mills Ltd reports substantially higher profits, compared with the previous year. The figures are Rs. 27,60,058 (Rs. 8,02,790 for depreciation) and Rs. 18,04,426 (Rs. 7,85,865) respectively. Adding a sum of Rs. 12,594 brought forward the total comes to Rs. 27,72,652. Out of this, donations and charities account for Rs. 71,500. Development rebate reserve gets Rs. 2,75,000 (against Rs. 200,000). Provision for taxation amounts to Rs. 11,25,000 (against Rs. 7,25,000). Gratuity reserve gets Rs. 1,50,000 (against Rs. 1,50,000). A sum of Rs. 1,50,000 is transferred to dividend equalisation reserve (against Rs. 1,50,000), and Rs. 400,000 to general reserve (against Rs. 50,000). A dividend of 24 per cent is recommended, against 18 per cent for the previous year. This dividend will absorb Rs. 600,000. The balance of Rs. 1,152 is carried forward. The better working results for the year were due to the higher selling price for yarn. The Company installed during the year 18 cards, two cone winding machines, one doubler winder and eight doubling frames, which were also commissioned.

Devon Tea Cuts Dividend

The Devon Tea and Produce Co. Ltd has earned a profit of Rs. 1,36,712 for the year ended March 1961, against Rs. 43,103 for the previous year. With the amount of Rs. 4,315 brought forward, the total comes to Rs. 1,41,027. Out of this, the directors have provided Rs. 24,000 for taxes (against Rs. 24,000). Managing agents' commission comes to Rs. 12,934 (against Rs. 4,851). The 7½ per cent dividend on preference shares grossed will absorb Rs. 16,660. A dividend of 12 per cent on the old equity shares and 12 per cent for nine months on the new issue, both subject to tax is recommended by the directors (against 15 per cent for the previous year). This equity dividend will absorb Rs. 74,207. The balance of Rs. 13,226 is carried forward. The tea crop for the year amounted to 2,98,476 lbs, against the previous

year's 3,01,910 lbs. The cost was Rs. 3.58 a kilogram and the average sale price was Rs. 4.26 a kilogram.

Funds for Rural Credit

A Press note issued by the Reserve Bank of India says that the Bank had, in terms of Section 46A and 46B of the Reserve Bank of India Act, established in 1956, two funds, namely, the National Agricultural Credit (Long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund. The amounts to the credit of these funds as on 30th June, 1961, were Rs. 50 crores and Rs. 6 crores, respectively. During 1960-61, a sum of Rs. 3.75 crores (including a sanction of Rs. 9.09 lakhs, which had lapsed and was renewed during the year) was sanctioned out of the Long-term Operations Fund to 12 State Governments for contribution to the share capital of co-operative credit institutions, compared with Rs. 5.04 crores sanctioned to 13 State Governments during 1959-60. A sum of Rs. 4.78 crores was sanctioned to 12 State Co-operative Banks as medium-term loans, compared with Rs. 4.50 crores sanctioned to seven State Co-operative Banks during 1959-60. During the year, a sum of Rs. 26.71 lakhs was contributed to the rural debentures floated by three central land mortgage banks. The State Governments have drawn during the year Rs. 2.75 crores against the amount sanctioned to them, and the total amount outstanding as on 30th June, 1961, stood at Rs. 19.94 crores. Medium-term loans have been drawn by State Co-operative Banks to the extent of Rs. 5.69 crores, the outstandings as on 30th June, 1961, being Rs. 8.81 crores. The Reserve Bank's total investment in rural debentures up to 30th June, 1961 was Rs. 1.26 crores. No occasion has so far arisen for drawing on the National Agricultural Credit (Stabilisation) Fund.

Balanoor Tea and Rubber Pays Less

For the year ended March 1961, the Balanoor Tea and Rubber Co. Ltd has earned a profit of Rs. 4,11,290, compared with Rs. 1,64,097 in the previous year. With the amount of Rs. 3,842 brought forward, the total comes to Rs. 4,15,132. Out of this, the provision for taxation comes to Rs. 1,45,000 (against Rs. 40,000). Managing agents' commission comes to Rs. 37,470 (against Rs. 16,848). A sum of Rs. 50,000 is transferred to dividend equalisation reserve (against nil). General reserve gets Rs. 13,990 (against nil). The 7½ per cent dividend on preference shares grossed will absorb Rs. 20,175. The proposed 12 per cent dividend on equity shares, subject to tax (against 15 per cent), will absorb Rs. 1,31,879. The balance of Rs. 16,618 is carried forward.

Attikhan Pays a Maiden

The Attikhan (Bilgiri) Ltd has now announced a dividend of 12 per cent, subject to tax, for the year ended March 1961. The Company has earned a net profit of Rs. 2,64,347 for the year ended March 1961. From this amount, the provision for taxation comes to Rs. 89,000. The preference dividend at the rate of 9 per cent, subject to tax, amounts to Rs. 19,500. A sum of Rs. 100,000 is transferred to general reserve. The proposed 12 per cent equity dividend will absorb Rs. 48,000. The balance of Rs. 7,847 is carried forward. The period prior to 1st April 1960, showed a profit of Rs. 1,26,406 after writing off preliminary expenses in full, and this surplus has been transferred to reserves and surplus account. The total coffee crop of 210,499 tonnes harvested during the year has been delivered to the Coffee Board and has been valued in the accounts at Rs. 1.90 a point. This crop compares with one of 154,551 tonnes harvested during the previous season. The Company has since received from the Coffee Board 15nP a point towards the 1959-60 crop, making a total of Rs. 2.15 a point. The crop for 1961-62 season is estimated at only 98 tonnes. The Company was formed on 10th February 1960 to acquire the Attikhan Estate situated in the Bilgiri Rangan Hills, Mysore State.

Lakshmi Mills Pay Bigger Dividend

The Lakshmi Mills Co. Ltd, the shares of which figure in the cleared list of the Madras Stock Exchange, reports substantially higher profits for the year ended March 1961. The net profit for the year amounts to Rs. 71,93,831, after providing Rs. 18,17,911 for depreciation, compared with the previous year's figure of Rs. 49,92,398 (Rs. 16,63,659 for depreciation). With the amount of Rs. 17,876 brought forward, the total surplus available for appropriation comes to Rs. 72,11,707. Out of this amount, the directors have provided Rs. 31,00,000 for taxation (against Rs. 20,00,000). Development

rebate reserve gets Rs. 2,09,200 (against Rs. 3,75,000). The golden jubilee dividend declared by the Company on 2nd April this year was 10 per cent on equity shares, subject to tax. The proposed final dividend is 20 per cent, taxable. After making the above appropriations, there is a balance of Rs. 19,391 which is carried forward. The total dividend for the year including the golden jubilee one amounts to 30 per cent (against 20 per cent for the previous year).

In their report the directors state that in spite of a cut in selling prices and difficulties in getting adequate Indian cotton and the high level of imported cotton prices, the Company was still able to make decent profits by adopting a cautious purchase policy and spinning programmes according to the demands of the market. The Company has now a total installed capacity of 132,688 spindles in its three mill units in Coimbatore, Kovilpatti and Palladam. The Coimbatore Mill is a composite unit with 300 looms working. As for the Company's development programmes, the directors state that the construction of a staple fibre spinning unit with 24,000 spindles has been started in Palladam. Permission has also been obtained to establish a waste spinning unit. In the weaving section in Coimbatore, they expect to install another 96 automatic looms by the end of 1962 at a cost of Rs. 16.20 lakhs.

Alagappa Textiles Earns a Profit

For the year ended 31st December, 1960, the Alagappa Textiles Ltd has earned a net profit of Rs. 40,390.94, after providing Rs. 1,18,745 for depreciation, and paying Rs. 1,51,116.83 as retrenchment compensation to workers. This profit compares with the previous year's loss of Rs. 4,46,479. Depreciation for the previous year was Rs. 5,93,240. The net profit of Rs. 40,390.94 is arrived at after providing Rs. 300,000 for taxation. The retrenchment of 315 workers was effected upon the introduction of the revised workload. The profit of the year has been set off against the loss of Rs. 16,72,095.16 brought forward from the previous year, leaving a balance of loss of Rs. 16,31,704.22 which is carried to the balance-sheet.

U.S.A.: Recovery Base Broadens

The base of the business recovery continues to broaden, and forecasters are becoming bolder in projecting ahead the vigour and duration of the upswing now under way, says the First National City Bank in its latest monthly letter. Merchants report that retail trade, a conspicuous laggard in earlier months of the year, is improving. Construction expenditures are probing upwards to the best level since 1959 with the help of rising prices of residential and heavy engineering work. Meanwhile, manufacturers' orders, production, and shipments have extended their advance. However, in view of the rapid rise during April and May, it should not be surprising if the June figures of industrial production show some slowing in the rate of recovery. Spotty price cuts in certain steel, aluminium, paperboard, and plastic products, together with easiness in the stock market, serve as a reminder of the acuteness of competition and the difficulties in realising satisfactory profit margins.

The speed with which industry bounced back from the recession lows of February has led many observers to raise their sights on the business prospect for the remainder of the year. The Administration, indeed, has been bold enough to project recovery in the gross national product at a rate of \$10,000 million a quarter through the end of 1962. On 20th June, the Secretary of the Treasury, Mr. Dillon, estimated that the gross national product would rise from a seasonally adjusted annual rate of \$499,800 million in the first quarter of this year to \$530,000 million in the fourth, and then on up to \$570,000 million in the fourth quarter of 1962. Despite the Government deficits, which now are superimposed on rising curves of private expenditures, the Secretary expressed the view that excess capacity "everywhere in our land today" would eliminate danger of inflation from excessive demands. The problem of wage-price inflation, on the other hand, "is always with us" and "is greater in good times than in bad". This type of inflation, he hoped, could be resisted by restraint on the part of labour and management in their wage-price actions.

In May, new orders for durable goods rose 2 per cent further for an overall gain of 16 per cent from the recession low in January. Shipments of manufactured goods have expanded nearly as rapidly as new orders with the result that on 31st May, backlogs of unfilled orders for durables were only 0.5 per cent above their January low. The concurrent rise in orders and shipments reflects manufacturers' promptness in stepping up production, the high level of factory stocks of finished goods, and the fact that...

of orders does not yet involve a substantial proportion of capital goods and other products with a long lead time between order and delivery. The upsurge in production in May was a repeat of the April experience. In both April and May, the seasonally adjusted Federal Reserve index (1957 equals 100) rose 2.9 points with roughly one-third of the advance directly due to increased output of steel and motor-vehicles. At 108.2 in May, the index had recovered better than two-thirds of the ground lost during the recession. The industrial production index probably rose again in June, but it is unlikely the April-May rate of expansion was sustained. Steel output slackened slightly and passenger car assemblies were scheduled at about the same pace as in May. Between vacation closings of steel consumption plants and early shutdowns for motor-car model changes scheduled for July, these two key industries are unlikely to regain and surpass their recent peak levels until autumn has arrived.

If the upswing is to be sustained through the summer, the impetus must come from better than usual performance in a wide range of industries, supported by improved consumer demand. A broadening out of the recovery was already apparent in May, when the advance encompassed all major manufacturing industries. Increased output of textiles, chemicals, and paper products pushed non-durable goods to near record levels. In the durable goods group, significant production gains occurred in construction materials, industrial and commercial machinery, and farm equipment. Further increases in these industries appear likely in the second half of 1961.

CORRESPONDENCE

PROPOSED INCREASE

IN I.A.C. FARES

(TO THE EDITOR OF "CAPITAL")

Sir,

In his letter in your columns on 20th July, the general manager of the I.A.C. makes the following statement: "I.A.C.'s revenue earning potential is now levelling off." This must, I am sure, come as a surprise to many of your readers who are regular passengers on the I.A.C. trunk routes for it is usually necessary to book days in advance for a passage between Calcutta, Bombay or Delhi. Not only does this cause considerable inconvenience, but it results in loss of revenue to the I.A.C. and foreign exchange earnings to India. Of this the following are two true examples:

- Two senior American business men on a round-the-world flight, combining business with pleasure, had Calcutta as their only business call in India. Thereafter, they planned to visit Delhi, Agra and other centres before going on to the Middle East. Despite our best efforts we were quite unable to get them seats to Delhi or Agra and they, therefore, over-flew India from Calcutta to Beirut.
- We received a cable on a Saturday evening asking us to meet a visiting business man in Bombay on Monday. The first seat available was on the night airmail aircraft on Tuesday.

My personal impression gained from flying over 40,000 miles by I.A.C. Viscount services is that the

load factor is seldom less than 90 per cent and I believe that vacant seats are usually those of "no show" passengers who, uncertain of the length of their engagements, have made bookings on more than one day. Has the I.A.C. ever demonstrated to the Government the foreign exchange which it earns from overseas visitors? If each such visitor makes only two flights during the course of his visit to India, the foreign exchange must surely be at least Rs. 1 crore a year. This year (1961) is "Visit India" year, but the facilities that the I.A.C. offers to travellers are grossly inadequate. Aircraft are expensive and must be kept in the air, but in order to fly from Calcutta to Bombay or back, will we always have to put up with 4.00 a.m. rising or midnight arrivals, which are the result of an admitted shortage of aircraft? No convincing reason has been given as to why the A.I.I.'s surplus *Super Constellations* could not have been economically purchased and operated. Surely air-passenger traffic in India will continue to increase on almost all routes, but an all-over increase in fares would not seem to be the way of encouraging this. Would it be possible for Air Vice-Marshall Lall to copy the overseas system of operating coach class flights at off peak hours on trunk routes and additional first class flights at higher cost at the more convenient times?

Yours etcetera,

G. E. HOARE

Calcutta, 25th July.

CURRENT COIN

A SHORT time ago I called attention to the new storage battery for electricity which Edison has recently invented, pointing out, at that same time, the immense stride which such an invention makes towards the introduction of cheap private installations of electric light and power, and the wider range of possibilities it opens out for supplying electric energy to works of a larger nature, which are able to take advantage of wind or water to drive the dynamos. The idea seems to have caught on, for I have received a letter from a correspondent in a large Mofussil Station saying that he and his friends are prepared to harness the wind by means of an air-motor to drive a dynamo, to supply their Club with electric light and electric punkahs and he writes to ask where he can get Edison's new storage batteries.

I have no doubt that agents for the supply of electrical apparatus in Calcutta will quickly supply the information. Hitherto storage batteries have been practically of little use. They were heavy, expensive and short-lived. Although nothing like finality of perfection is yet reached, Edison claims his new invention is a battery whose characteristics are lightness, cheapness, and indestructibility. We are as yet just on the fringe of all that is capable of being accomplished by the power we call electricity. It is the most widely distributed force in nature. We are steeped in it. The problem is how to catch, store, and harness it as cheaply as possible, and every day is bringing us nearer to its solution. Cheap storage batteries filled with electricity by the aid of the natural forces of the sun, the wind, the tides and waterfalls, will work industrial wonders in the near future, and will help us to view the emptying of our coal bunkers a few centuries hence with something like equanimity.

FROM

CAPITAL,
25th July, 1961

THIS HAND KEEPS THE INDUSTRY RUNNING

Millions of hands like this are reaching eagerly every day for a glass of cool water. ACCOOLER water cooler has the proud privilege of supplying them plenty of cool water—as a matter of fact, as much as they need.

ACCOOLER WATER COOLER

- ★ Storage and instantaneous type
- ★ Hygienic and convenient
- ★ 6 to 40 gallons cooling capacity per hour
- ★ 10 to 300 gallons storage
- ★ One year guarantee

AIR CONDITIONING CORPORATION LIMITED.

A Ditcher's Diary

CALCUTTA SAW A GOOD DEAL OF PROFESSOR Galbraith in the three days he was here; he must have seen something of Calcutta too. He was not a total stranger; in fact he must have won many hearts by calling Calcutta his "home city", whatever that may mean. But it is one thing to see a city as a visiting economist, quite another to see the same place as an ambassador with considerable capacity to do something about its many problems. It may be a good idea to start with what the ambassador called Galbraith's Law: the more intelligent a city's people the less efficient its municipal administration. The point I have to make is that, on this score, Calcutta needs no aid at all from the United States. Calcutta's own university has over the years so debased the State's educational and intellectual standards that this explanation of the city's civic deficiencies is already irrelevant. What can be stated quite clearly is that, however tenable Galbraith's Law may be in its present formulation, it fails the negative test. With fewer intelligent people than ever before in the past 100 years, Calcutta's municipal administration has not improved one bit; and that is putting it mildly. But if Galbraith's Law is of doubtful validity, there are many other things the Professor has to offer, and these Calcutta needs. He can tell New Delhi, for instance, that its neglect of Calcutta will one day recoil on itself, that economic planning in India makes no sense if this city is allowed to decay and die. Then he can tell Washington that if New Delhi continues to be indifferent to the problems of Calcutta, it will be for the U.S.A. to direct the Centre's attention to it and specify the direction of American aid to this country. Calcutta does not have to be a fancy city like Chandigarh. It simply requires elementary amenities such as water, light and sanitation.

READING WHAT THE CHAIRMAN OF THE INDIAN Chamber of Commerce, Mr. S. P. Jain, had to say the other day about India's slow rate of economic growth, has given me quite a jolt. I knew that it was not as fast as it ought to be, or could be; but I had not realised that it was one of the slowest of any developing country in the world, despite the fact that Capital has for years been predicting just this result of current socialist planning. When the figure of 3 percent per annum over the past ten years is deflated by the growth of population, the record of progress is seen to be even worse. I would put it to Delhi quite frankly: does it seriously believe that an increase in per capita national income of little more than 1 percent per annum is sufficient to preserve political stability in this country? In my opinion it is not, it simply spells revolution. But Delhi seems nowadays as indifferent to the physical evidence of its blunders as it has always been to independent criticism of them. Which helps to confirm my suspicion that the building of an efficient and prosperous economy—one that is able to pay its way in the world and provide the Indian people with a high standard of living—is no longer the Government's primary aim; all it is interested in now is building socialism, because that way it can extend and strengthen its political power to the maximum. If this is not true, then what accounts for the many economic contradictions in current planning? Why are more

plants being put up in the public sector, irrespective of the cost involved, when it is impossible to run the existing ones efficiently because of lack of adequate managerial talent and experience? Why do Government spokesmen talk about the need for more exports while practically in the same breath announcing yet another Wage Board or the extension of some welfare benefit or other? And why, if the country is really short of foreign exchange, is Mr. Malaviya allowed as much as he likes just so he can go on thumbing his nose at the private oil companies? I have been wondering if Professor Galbraith has noted Mr. Jain's words, and whether he is not yet questioning the wisdom of spending so much of his country's money to help perpetuate this virtual stagnation.

THOSE WHO ARGUE, AND MANY DO, THAT NO MAN who makes a dozen speeches a day can fairly be expected to say something original or even sensible every time, should really address themselves to Mr. Nehru and not to his critics. Some of his recent pronouncements I have found more than usually puzzling. Speaking as President of the Sahitya Akademi, he said language should not be mixed up with religion or politics. I shall come to religion in a moment in connection with another of his obiter dicta; but if any Party has been responsible for making language a political issue it has been Mr. Nehru's own. And is it not rather late in the day to say that language should not be a political issue? (Whenever I hear that this or that should not be brought into politics I often wonder what the speaker considers the business of politics to be. Food is not politics, nor language, nor defence, nor foreign affairs. Politics, I suppose, is only for politicians—except at elections when the people must vote Congress and then forget all about it.) The Congress Party is in power in Maharashtra and Assam, to name no others, solely because it has made the linguistic fanatics' cause its own. In India today you cannot hope to get anything done unless the ruling party backs it—be it the decimal system, birth control or any thing else. Mr. Nehru is well aware of all this; and he himself looks at no problem except from the point of view of politics—Party politics. I do not mind adding. Now religion. In his *Autobiography*, still among the best books on India, Mr. Nehru says various things about his attitude to religion. He is something of an agnostic; and I admire him for that. He also tries to be a rationalist; he dismissed the Mahatma's explanation of the cause of the Bihar earthquake, for instance. I do not, however, know what he is talking about when he calls himself a pagan; and I have looked up more than one dictionary. Neutralism as a country's considered foreign policy may well be justified in some circumstances; and not even those with military alliances enjoy being sat upon. But, I ask you, what has all that to do with paganism? Either the newspapers have got it all wrong, or I have, or Mr. Nehru has...

THE POSSIBILITY OF BEING SUED FOR LIBEL IS A normal hazard of the journalistic profession. It has happened to most newspapers in their time, and Capital is no exception; although I am not

aware that we have ever had to pay any damages. Which is fortunate for us, because they are often heavy and have been known to cripple. I do not suppose either the *Daily Telegraph* or the *Daily Mail* will be put out of business by having to pay Mr. John Lewis and Rubber Improvement Ltd the unprecedented sum of £217,000 between them, but no doubt their shareholders will feel the blow when dividend time next comes round. The two papers, which both published reports saying that the Company was being investigated by the City of London Fraud Squad, based their case on the plea that the words were "true in their natural and ordinary meaning", which under the modern British law of libel can be accepted in defence. But the jury must have decided they were not, because the verdict was that the Company, and Mr. Lewis, its chairman, had suffered serious damage to their reputations. Hence the largest awards of damages for libel in British legal history. The *Daily Telegraph's* share has been assessed at £100,600 and the *Daily Mail's* at £117,000; the difference seems to be accounted for by the fact that the *Telegraph* had the grace and good sense to publish Mr. Lewis's disclaimer the next day. Both figures seem to me unduly high, and they might be scaled down if the cases go to appeal. But personal and business reputations have to be respected and British law, unlike that prevailing in India at the present time, can usually be relied upon to see that they are, sometimes overzealously. I am only glad that I am not in the shoes of the unfortunate reporter who filed the story, or for that matter the lawyer who read it before it went into print.

AT A FAIRLY BUSY ALIPORE ROAD INTERSECTION in the middle of last Sunday evening's "black-out", I found myself face-to-face with a car approaching rapidly from the opposite direction which I had not previously seen for the very simple reason that it had no lights. As I was blocking its way, it had to slow down and I had the opportunity of shouting to the driver that his lights were out. His somewhat fatuous reply was: "They have gone off". He then proceeded on his way with undiminished speed apparently oblivious of the fact that he was a menace to all road users. Whether he was picked up by the police later, I do not know; but I doubt it. Nobody who uses Calcutta's roads can have failed to notice what chaos vehicle lighting has been allowed to fall into. When lorries condescend to show any lights at all, they often exhibit such a profusion of them, and in such different colours, that at a distance one cannot tell whether they are coming or going. Taxis too have a habit of sporting mudguard lights, or rear spat reflectors, which can be dangerously misleading to anybody but themselves. And it is not only the drivers' urge to be different that is to blame; sometimes motor-car manufacturers are as well. The other evening I drove behind a huge American car which had no less than six rear-lights, all of which flashed something or other in the 100 yards or so I followed it: I defy anybody without the code at his disposal to know what it was all about. It is all very confusing and dangerous. I might say that it is time the police did something about it; but they have not even made a start with their own vehicles yet, because police vans and jeeps are among the worst lit as well as the worst driven of any on the roads of Calcutta today.

THE DITCHER

India today is caught up in the feverish activity of industrial advancement. Projects are planned... dams are being built... all through the night we hear the ceaseless hum of men and machines at work. In the world of today, the economic development of a nation is gauged by her machines... and the STEEL consumed by them. In dams and bridges, in the railway and automobile industry, in the manufacture of the thousands of consumer goods, STEEL is necessary—absolutely necessary! And so steel has come to be indicative of the economic development of a country, indicative of what a country is worth in cold hard cash.

As you need two hands to clap, so the country needs the combined efforts of man and machine to bring about industrial growth and prosperity.

Today, through the Five-Year Plans, the country is striving to create such a unity of effort where all will have enough.

It is our privilege to participate in this historic adventure of building a new India.

Money

THE CALCUTTA MONEY MARKET
CALL FUNDS EASIER

Wednesday, 26th July.
THERE has been a fairly sharp fall in the level of advances outstanding in the Calcutta money market during the past week. A good deal of the decline is accounted for by the lower requirements of the jute industry, although a fall in the demand from the engineering and iron and steel industries has also made a contribution. The needs of the sugar mills have declined slightly, but this has been partly offset by an increase in call for accommodation against foodgrains and seeds storage. The needs of the cotton textile industry remained about the same. In the interbank market, conditions are still very easy and the official call rate is in the region of 2½ to 3 percent.

There has been a fair showing of export documents in the exchange market during the past week, both on tea and gunny account. Remittance demand has been moderate to poor. In the London money market, the pound staged a sharp recovery on the announcement in the House of Commons of the measures to protect the present value of the currency. At the close, net gains were recorded against all major currencies.

BULLION WAS STEADY IN THE PAST WEEK DUE TO short-covering. Silver advanced from the previous week's level of Rs. 232 to Rs. 232.50, quoted today for ready and the rate for forward was quoted at Rs. 199.70. The London and New York prices were 80d and 91.375 cents.

Gold was steady in sympathy with silver and the price rose from Rs. 141.50 to Rs. 142. The sovereign gained from Rs. 95.50 to Rs. 95.75.

DURING THE WEEK ENDED 21ST JULY, GOVERNMENT of India Treasury bills for Rs. 152,22,50,000 were sold in favour of the Reserve Bank.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills sold from 19th July to 22nd July amounted to Rs. 1,50,00,000.

DECLINES OF Rs. 27.83 CRORES IN THE TOTAL NOTE issue to Rs. 1,930 crores and of Rs. 26.03 crores to Rs. 1,911.95 crores in active notes were notable features of the return of the Reserve Bank of India during the week ended 21st July, 1961. The currency contraction was adjusted by reducing rupee securities by Rs. 29.93 crores to Rs. 1,597.05 crores and by increasing rupee coins from Rs. 120.08 crores to Rs. 122.18 crores in the paper currency reserve. Deposits of the Government of India rose by Rs. 3.19 crores to Rs. 53.02 crores and those of other Governments by Rs. 17.98 crores to Rs. 31.35 crores. Balances of commercial banks at Rs. 103.46 crores showed a rise of Rs. 7.38 crores. Balances held abroad again declined by Rs. 1.42 crores to Rs. 8.47 crores. Investments increased by Rs. 35.43 crores to Rs. 248.88 crores, presumably due to a transfer of securities from the Issue Department to the Banking Department. Other loans and advances fell from Rs. 117.52 crores to Rs. 113.60 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1.01 crores (Rs. 3.42 crores). Ways and means advances stood at Rs. 40.65 crores against Rs. 41.73 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 14th July, 1961, shows a rise of Rs. 51 lakhs to Rs. 532.35 crores in total deposits. Investments in Government securities are up by Rs. 2.05 lakhs to Rs. 225.54 crores, while other authorised investments remain unchanged at Rs. 9.33 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 1.82 crores to Rs. 259.67 crores. Cash and balances are, in consequence, shown at Rs. 27.35 crores or Rs. 3.70 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the year ended 14th July, 1961, shows Demand and Time liabilities at Rs. 847.23 crores (Rs. 26.66 crores on account of borrowings from banks) and Rs. 1,130.88 crores (Rs. 19.39 crores), compared with Rs. 855.26 crores (Rs. 27.91 crores) and Rs. 1,119.82 crores (Rs. 20.39 crores), respectively, in the previous week. Cash has fallen by Rs. 2.39 crores to Rs. 47.04 crores, while balances with the Reserve Bank have risen by Rs. 4.14 crores to Rs. 90.86 crores. There is a rise of Rs. 3.51 crores to Rs. 551.06 crores in investments. Advances and bills discounted at Rs. 1,263.38 crores show a drop of Rs. 8.87 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7 percent and 63.9 percent, against 6.9 percent and 64.4 percent.

A NEW PRESTRESSED CONCRETE

The Finance Minister of Maharashtra, Mr. S. K. Wankhede, recently opened a modern factory in Bhandup, Bombay, where prestressed concrete, the latest and most economic structural material, is to be produced. The same factory is also producing bituminous waterproofing products for use in connection with prestressed concrete structures and waterproofing generally and in fact, such materials have already been exported from there. This factory has been developed by Shalimar Tar Products (1935) Ltd of Calcutta, and set up in almost record time, the site being waste-land, less than a year ago. The plant was entirely designed and fabricated in India. The prestressed members used in the construction of the factory were made at the site. In the past, waterproofing materials have had to be transported across India. It has not been economic to transport prestressed items. This new factory will, therefore, satisfy a very real need in Maharashtra and western India for materials essential to the development of new projects and the expansion and maintenance of existing establishments. Ample scope has been allowed for expansion of production capacity as demand in western India increases.

Dependable

CARRON

**Haulages
for India's
Mining
Industry**

The mining industry requires the best in haulage equipment—and CARRON haulages have been known for their dependability, heavy, continuous duty, robust construction and silent running. It is these essential qualities that make CARRON the first choice in haulage gear.

CARRON haulage equipment has been serving the Indian mining industry for many years, and now, it is backed by Voltas' nationwide sales and service organisation.

Manufacturers:

CARRON COMPANY, U.K.

Please address your enquiries regarding haulages and spares to Sole Distributors:

THE COST OF ACCIDENTS IN INDUSTRY

By Mary Sur

AT the last meeting of the Standing Committee of the Indian Labour Conference it was decided to set up a national tripartite body to consider various means of reducing industrial accidents. The committee also recommended the establishment of safety councils at the State level to make industry "safety conscious". This is the outcome of the anxiety that is felt in official circles about the rapidly rising accident rate in industry. The Union Minister has pointed out that the rate of industrial accidents has more than doubled in India in the past 20 years. Accidents for each 1,000 workers, for the country as a whole, were 43.91 in 1958, compared with 20.56 in 1939. In the highly industrialised State of West Bengal, according to a review given recently in the Assembly, the number of accidents in 1960 rose by nearly 2,000 over the 1959 figure. In the coalfields, the reports are even more distressing. In Ranigunj, in 1960, there were 81 persons killed and 1,177 seriously injured in 67 mine accidents—an increase of 45 percent in deaths and 91 percent in serious injuries, over the 1957 figures.

There is no doubt that the alarming increase in accidents is a symptom of rapid industrialisation. It is well known that a sudden intake of persons new to industry causes a rise in the accident rate out of all proportion to the numbers so employed. In the U.K. during the last war, when large numbers of women and persons new to industry were drafted into the factories, there was a steep rise in the rate of accidents for each 1,000 workers. West Bengal figures bear this out here. From 1950 to 1955, employment figures were fairly steady in the State and accidents showed only a gradual increase, which might be attributed to better reporting. But from 1955 onwards, employment figures have risen and accidents have shot up in a steep curve. As industry continues to expand in India, therefore, we have to anticipate further increases in the accident rate unless really serious steps are taken to make industry more safety conscious.

Complacent Attitude

In the past, Indian industry has been remarkably complacent about accidents. A rate of about 20 accidents for each 1,000 workers before the war was less than the rate for the U.K. in 1939. Visitors from abroad have been horrified to see in our factories such sights as a man sitting on the end of a piece of timber to steady it while it was being cut into lengths by an entirely unguarded circular saw—one of the most deadly of all machines. Remonstrance usually brought the reply from management that such machines were hard to guard, that there had never been an accident on that machine, that Indian workers were quick to save themselves and that the total acci-

dent rate was low. The position has been entirely reversed now. The U.K. has brought its accident rate below 20 and the Indian rate is now over 40 a 1,000.

The tale in terms of human suffering is appalling, but if life is still rated low, what about the loss to industry? Each injury serious enough to keep a worker away from his job means loss of production. If the absence is prolonged or the injury proves fatal, then there is the cost of replacing the worker and training a new man for the job, in addition to what has to be paid as compensation to the injured man or his dependants. In Britain, despite the close attention given to accident prevention, 20 million man-days are lost to industry through accident injuries. In the U.S.A., it is estimated that industry spends \$5 million to \$6 million a year on replacement and training as a result of accidents. Look at the problem from the opposite side and it is equally impressive. The Vauxhall Motors works in the U.K. by reducing its lost-time accident frequency rate from 1.13 to 0.81 a 100,000 man-hours worked in 1951-52, reckoned to have saved 3,625 manufacturing hours. Tata Chemicals report that after the appointment of a Safety Engineer in 1956, their lost time accident frequency rate came down within three years from 19.2 to 4.4.

Accident Prevention

The longest chapter in the Factories Act deals with accident prevention and the fencing of moving parts, prime movers, hoists, lifting tackle and revolving machinery, but to what extent is it implemented? With quite inadequate staff, the factory inspectorates cannot cope with enforcement, and even the existing staff is not always up to sanctioned strength. It was recently reported, for instance, that in West Bengal, out of 20 posts sanctioned for mechanical engineers in the technical inspectorate, seven posts had been vacant for a long time because the terms offered were not considered attractive enough by technically qualified men.

But if there is a dearth of men for the post of factory inspector, there is an even greater dearth of men qualified or experienced in accident prevention and safety training within the factory, for few firms have been sufficiently interested to set up and staff a safety section, or even to establish a safety committee. One cannot imagine tripartite bodies either at national or State level being very effective in reducing the accident rate if they have insufficient experts to guide them and no-one at factory level to carry out their recommendations. A National Mines Safety Council is to be set up for the coal and mica mines, and its activities, according to Press reports, may be financed out of contributions to the mines labour welfare funds. But

this is surely the wrong approach. Safety is as much or more the responsibility of management than of the workers. It is not merely a matter of welfare, but of production. If it is relegated to the position of a welfare measure, then little or nothing will be achieved. What is needed is properly trained factory safety officers (preferably engineers), and management backing for them in their work.

Most people seem to think that accidents are mainly caused by machines. This is not true, though admittedly the most tragic and terrifying accidents are usually caused by machinery. Actually the majority of accidents are caused by falling and by the handling of goods. In Britain, only one in six reported accidents are due to power-driven machinery: in West Bengal in 1959, one in four were so caused, and 48 percent were caused by handling and falling. Figures collected from the various Tata works show the human element as responsible for from 57 percent to 70 percent of all accidents.

It has been very rightly said that accidents do not just happen—they are caused, and so they can be prevented. Analysis of any particular accident will generally reveal two contributing factors—an unsafe condition and an unsafe act. Even the unfenced machine will not itself cause an accident unless the worker who operates it is careless and contributes the unsafe act which is the immediate cause of the accident. It is physically possible to a large extent to control the machine and so to eliminate unsafe conditions in a factory but this requires constant attention to see that guards are properly adjusted and working, and that new hazards from new machines or materials are controlled. But the control of unsafe acts is much more difficult because it involves people and human reactions which cannot always be foreseen. Proper training can prevent unsafe acts which are due to ignorance, wrong handling or some physical defect, but it is much more difficult to deal with wrong attitudes manifested in neglect to use safety devices, impatience or over-confidence, the inclination to take chances, or disregard for the safety of others. Continuous education is necessary even to prevent workers from taking such obvious risks as walking under a loaded crane or putting a hand into a running machine, and to persuade them to take the obvious precaution of applying for first aid for minor cuts and abrasions. It is the hands which are hurt most often, and it is slight injuries to hands which are so commonly neglected and lead to sepsis.

Related Factors

There are many general factors in industry which are related to accidents: health, age and experience, fatigue, atmospheric conditions, temperature and lighting. All these need to be studied in the workshop in relation to the work in progress. A safety officer, therefore, is not merely concerned with the machines and their correct handling. He may have to advise changes in working conditions or removal of certain workers to less dangerous work. As far back as 1919 the studies of the Industrial Fatigue Research Board in the U.K. established that about 80 percent of accidents happen to only 20 percent of workers, or in other words, that certain persons are "accident prone". American research has given almost the same figures. It has also been shown that 80 percent of those who have had one serious accident tend to have others, and that people with a history of numerous minor accidents are more likely to have a serious accident: yet these accident-prone people have usually good health and are neither clumsy nor dull, though they tend to be impulsive and resentful of authority. There is plenty of scientific data available on the subject of accident prevention, but it needs to be studied and applied within the factory by someone continuously on the job. An occasional accident prevention campaign is not enough. A continuous watch for unsafe conditions, unsafe acts and for the accident prone is necessary. Continuous education from the moment that a new worker is appointed is the only way to make a factory safety conscious, and the education must include management as well as workers. Indeed education of management should come first, for the worker takes his tone from his supervisor, if the latter is careless, the worker will never learn to be careful and tidy at his work.

Accident prevention is surely a subject which local Productivity Councils and existing joint bodies in various industries should tackle, rather than some new committee, however wide its representation. It will be more helpful to link the idea of accident prevention with productivity in the minds of management. And, since for any effective safety work in industry there must be co-operation from the workers, it is most important that it should form part of the regular agenda of works committees and joint management councils. It is essentially a practical subject, requiring practical knowledge of the processes and their hazards, of the employees and their reactions. The man on the job must be made to realise that talk about safety relates to him personally and not only to others. If his interest is aroused, he may have many useful suggestions to make from his day-to-day experience. As to technical assistance in such matters as guarding machinery, not many companies realise how much useful advice they can obtain from the expert knowledge of the factory inspectorate. Nor do they make sufficient use of the training offered for safety officers by the inspectorates in the industrialised States. Central and State committees on accident prevention can but stress the need: it is only within the individual industrial unit that practical work to promote safety can be carried out.

Stocks and Shares

SPECULATIVE PRICES FALL DESPITE HIGHER INDIAN IRON DIVIDEND

DECLINE DUE TO BOMBAY SELLING

Wednesday Evening.

THE stock market has behaved in a curious fashion during the past week. The price of Indian iron shares has nose-dived despite the higher dividend which has just been announced for the year ended March 1961. The directors of the Company have decided to pay an ordinary dividend of 16 percent, taxable, against 15 percent, taxable, for 1959-60. Although the size of the increase is not large in itself, it is a welcome pointer. In spite of the fact that the dividend was increased as recently as 1959-60, the directors have not hesitated to pass the benefits of the expansion schemes on to shareholders in the form of a higher dividend again in 1960-61. To this extent, the increase is considered a good pointer.

This apart, it was never seriously thought that the dividend could be very much higher because the new steel retention prices have not yet been announced by the Government. In the absence of these prices, it is not possible to know the final nature of the accounts. The preliminary results show a net profit of Rs. 2.23 crores during 1960-61, after transferring Rs. 2.95 crores to depreciation. Rs. 1.66 crores to taxation and Rs. 3.11 crores to reserves. In 1959-60, the net profit was Rs. 2.04 crores, after providing Rs. 3 crores for depreciation, Rs. 64.28 lakhs for taxation and Rs. 2.92 crores for reserves. But the balance-sheet for the year ended March 1960, discloses transfers to reserves to the extent of Rs. 4.52 crores, including an amount of Rs. 2.58 crores allocated to statutory development rebate reserve. Further clarification will be available when the fuller accounts are published. Considering that these preliminary results could not possibly take full credit for the increase in steel retention prices due to be announced in the near future, the balance-sheet figures should look more impressive when the retention prices are published. There is little doubt that these prices will have to be substantially increased, if the steel producers are to be compensated fully for their higher production costs.

An important factor is the all-round improvement in the production. The output of pig iron has risen from 1,053,612 tons in 1959-60 to 1,160,576 tons in 1960-61 and that of steel ingots from 827,072 tons to 914,159 tons. The production of saleable steel has increased from 662,113 tons to 718,684 tons. Despatches have improved from 697,648 tons to 712,181 tons.

But the price of the shares has, meanwhile, dipped to a low of Rs. 27.10. At this price, the dividend yield is attractive at 5.9 percent. The shake-out is obviously due to technical considerations. A rumour has it that an influential Bombay operator has been forced to sell in a big way. As soon as the pressure abates, there should be a rapid recovery because the technical position seems now to have improved.

As far as the rise from 5 percent to 7 percent in the U.K. Bank rate is concerned, it cannot be regarded as a particularly bearish factor. There is no doubt that India may have to pay a higher rate of interest on funds obtained from the U.K., but the money promised at the last "All-India Club" meeting is not expected to bear any higher interest than was intended previously because the donor countries are aware of India's payments difficulties. It is doubtful whether funds will flow back from India to the U.K. in any considerable measure to take advantage of the higher interest rate because this country has not got sufficient funds to spare. Anyway, the increased U.K. Bank rate is unlikely to have any impact on the Indian Bank rate. Considering that there is already a three-tier *de facto* Bank rate operating in this country, there can be no ground for changing the *de jure* Reserve Bank rate of 4 percent. The Government has no such intention either, as is clearly evident from the loans which were offered last Monday. These loans virtually carry higher interest than is available on the existing securities. Besides, conditions in this country and in the U.K. are dissimilar. In the circumstances, the question of increasing the Indian Bank rate does not arise.

In sympathy with steel shares, the prices of other shares have declined due more to the absence of support than to selling pressure. Among engineering shares, J. K. Steel continue to meet with support on the prospect of a bonus share issue. Texmaco have lost further ground on pressure. Interest has been subdued in Jessop, Guest, Keen, Williams, Indian Oxygen and Braithwaite. Burn are in demand on investment account.

The miscellaneous section has been listless and prices have slipped back all-round. Earlier gains in Britannia Biscuits, Dunlop Rubbers and Alkali Chemicals had not been maintained at the close. Pressure has reduced Hindustan Motors and Rohtas. Paper shares are quiet on the view that the existing prices of the commodity are not remunerative. The fear that an increase in the

price of cement may be delayed much longer than expected has induced sellers in the shares.

Business is restricted in coal shares and prices have generally declined. Scattered interest is being taken in Burrakur, Bengal and East Indian.

Sellers predominate in jute shares on uncertainties concerning the prospect of a third block closure of the mills in August, or some alternative to this. Business has passed in New Central, Birla, Howrah and Ganges at lower levels.

Cotton mill shares have reacted after earlier steadiness. Bharat Commerce, J. K. Rayon and Elgin are being supported at lower prices. Kesoram are now quoted ex rights.

The fact that India faces difficulties in exporting sugar to foreign countries has caused concern among investors. Beslund, S.K.G. and Ramnugger Cane are being offered at lower prices.

Quotations for selected tea shares have been maintained, although profit-taking was evident at the close. The improved prices at the Calcutta auctions held this week have helped broaden enquiries. In the Assam group, interest is taken in Tezpor, Dhelakhat, Bishnauth, Basmatia and Baghmari. Among Dooars gardens, Hantapara, Hasimara and Huldibari are in demand.

Government securities are quiet and business is nominal due to the floatation of the new Central Government loans. The 3 percent conversion loan 1986 has recovered to Rs. 72.07 on replacement buying.

Hattikhira Tea

The profit of Hattikhira Tea Co. Ltd has declined from Rs. 2.61 lakhs to Rs. 74,897 for the year ended December 1960, after allocating

BIRDS are stepping up it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

Rs. 62,657 (against Rs. 57,366) for depreciation. Dividend has been passed. Taxation absorbs Rs. 48,000 (against Rs. 86,000). With other necessary adjustments, there is a carry-forward of Rs. 42,558, against Rs. 60,217 brought in. A crop of 525,805 kilograms was manufactured, against 646,800 kilograms. The average price a kilogram realised was Rs. 4.43, compared with Rs. 4.10. Estimates for the current season provide for a crop of 653,172 kilograms at a cost of Rs. 21.91 lakhs.

Octavius Steel

After providing Rs. 61,212 (against Rs. 61,491) for depreciation, the profit of Octavius Steel and Co. Ltd has declined from Rs. 14.97 lakhs to Rs. 12.27 lakhs for the year ended December 1960. An ordinary dividend of 10 percent, subject to tax, has been declared, against 12½ percent, taxable, in the previous year. Taxation is allocated Rs. 5.24 lakhs (against Rs. 7.13 lakhs). After making other adjustments, there remains a balance of Rs. 2,77,718 which is carried forward, against Rs. 3,33,734 brought in.

Bombay Market

PRICES DECLINE ON HEAVY SELLING PRESSURE

U.K. BANK RATE RISE TAKEN BEARISHLY

Wednesday Noon.

THE Bombay market closed the past week in a quiet mood. Business in speculative shares was restricted, but scattered interest was shown in investment scrip. At the close, sentiment weakened and share prices declined on a broad front due to selling pressure. It was said that payments difficulties induced long liquidation. The rise from 5 percent to 7 percent in the U.K. Bank rate was interpreted bearishly, although it is not likely to have much effect as far as the Indian monetary situation is concerned. Bulls were not inclined to extend commitments in view of the growing tension between India and Pakis-

tan over the Kashmir problem. The preliminary results of the Tata Iron and Steel Company produced mixed reactions. A section of the market was inclined to think that the profit of the Company had fallen below expectations. In the cash section, interest was taken in some new issues.

Tata Steel were dull around Rs. 156.25 and business was mainly of a squaring-up nature. Indian Iron declined to Rs. 26.90 on nervous long liquidation in spite of a higher ordinary dividend of 16 percent, taxable, declared for the year ended March 1961, against 15 percent, taxable, in 1959-60. Among engineering shares, Premier Construction were supported at Rs. 188 on reports that the Life Insurance Corporation was interested in this scrip. Tata Locomotive lost at Rs. 358.50 on profit-taking. Alcock Ashdown were sold down to Rs. 274. Larsen and Toubro were lower at Rs. 38.50, as were Mukand Iron at Rs. 27.25. In motor shares, Hindustan Motors declined to Rs. 21.52 on pressure and Premier Automobiles were fractionally shaded at Rs. 160.50.

Prices of cotton mill shares lost on balance due to the absence of support. Bombay Dyeing declined to Rs. 67.20, as did Century to Rs. 673. There was scattered interest in Khatau around Rs. 570 and in Morarji at Rs. 409. Kohinoor were available at Rs. 290 and Svadeshi declined to Rs. 265. Simplex were done at Rs. 197, but Tata Mills attracted interest at Rs. 67.30 on prospects of modernisation. Central India were bought at Rs. 122 on expectations of better working. India United ordinaries were sold down to Rs. 15.28 and Apollo were freely offered at Rs. 1.74.

Prices of miscellaneous shares moved down in pattern with the general trend. In cement shares, Associated Cement were quiet at Rs. 159.50 and Digvijay were transacted at Rs. 154. Among mining shares, Shivrajpur Syndicate lost at Rs. 88 on profit-taking. Steamship company shares were quiet and sellers predominated. Scindia Steam were lowered to Rs. 13.80 due to distress selling. Business passed in Great Eastern Shipping around Rs. 13.88. Sugar shares were quietly steady, and Belapur came to hand at Rs. 253. Phalton lost at Rs. 128, as did Walchandnagar Industries at Rs. 167. Bombay Burmah reacted to Rs. 587 and National Rayon were quoted lower at Rs. 534.50 on pressure. Chemical shares produced mixed trends, and interest was taken in Tata Chemical at Rs. 18.88 in the hope of a higher dividend. Indian Dyestuff declined to Rs. 470 and Polychem

were sold down to Rs. 217.50. Ceat Tyre were quoted lower at Rs. 210 and Synthetics and Chemicals were shaded at Rs. 195 on profit-taking. Voltas were bought up to Rs. 286 and Tata Oil were steady at Rs. 73.80. Anil Hardboards lost at Rs. 230 on selling pressure.

Bank shares were steady and support was induced by the declaration of some higher dividends. Central Bank improved to Rs. 64 on paying a higher dividend. Bank of India were taken at Rs. 133 and Baroda Bank were indicated at Rs. 103.50. Insurance shares were quietly steady, and business passed in New India Assurance at Rs. 62.50. Vulcan were done at Rs. 16.60.

Electric company shares were quiet, and Ahmedabad were available at Rs. 87.50. Tata Power were placed at Rs. 1,077.50, but Bombay Suburban met with scattered support up to Rs. 98 on paying a higher dividend.

Madras Market

CONDITIONS SUBDUED BUT LITTLE SELLING

SELECTED BANK SHARES IN DEMAND

Tuesday Evening.

SUBDUED conditions prevailed in the Madras stock market during the past week. Business was done on a small scale in view of the decline in share prices in the Calcutta and Bombay stock markets. Operators were reluctant to do business, but selling pressure was not conspicuous. Good corporate news appears to have held sellers back. Government securities were dull because attention was concentrated on the new Central Government loans—lists of which opened last Monday. There was scattered support for bank shares in view of the good dividends declared for the half-year ended June 1961. Sugar shares were quiet due to concern about exports. In the planting group, selected tea and rubber scrip were bought on good crop reports, but coffee shares lacked interest. The decision to sell the latter commodity for exports by open tenders had no effect. Textile shares reacted on profit-taking, but selected miscellaneous shares were taken due to encouraging corporate news.

In the banking group, Indian were bought at Rs. 173 on the payment of a taxable dividend of 7½ percent, including a bonus of 2½ percent. Indian Overseas came to hand at Rs. 192 and Punjab National were transacted at Rs. 24.15. Business was done in Andhra at Rs. 100. Among public utilities, West Coast were steady at Rs. 14.15, as were Vellore at Rs. 13.35. South Madras came to hand at Rs. 10.12 and Negapatnam were transacted at Rs. 9.

In the sugar group, E.I.D. lost at Rs. 39.62 and Deccan were quoted lower at Rs. 13.75. United Breweries were quietly steady at Rs. 104, but Mysore lost at Rs. 57.75. Travancore were done at Rs. 10.42 and Kiriampudi were sold down to Rs. 77.

Among planting shares, Blue Mountain were transacted at Rs. 3.20 and Cochin Malabar were sold down to Rs. 7.50. Consolidated Coffee declined to Rs. 21.10, as did Oucherlony to Rs. 3.68. Peria-karamalai were quiet at Rs. 3.90 and Attikhan were bought at Rs. 3.05 on paying a taxable ordinary dividend of 12 percent. Balmadies were transacted at Rs. 2.45 and Kil Kotagiri were in demand up to Rs. 4.70. Lucky Valley were placed at Rs. 11.90 and Nilgiri were done at Rs. 8.90. Nonsuch came to hand at Rs. 28.20 and Peermade were steady at Rs. 22.50. Thirumbadi were quoted at Rs. 1.62 and business passed in United Nilgiri up to Rs. 26.40.

In the textile group, Anglo-French were steady at Rs. 145.50 and Balarama Varma were done at Rs. 87.70. Buckingham hardened to Rs. 232.50, but Bangalore Woollen were neglected at Rs. 205. Dhanalakshmi were placed at Rs. 240 and K. Rajendra were taken at Rs. 72 on the payment of a taxable ordinary dividend of 11 percent. Business passed in Lakshmi at Rs. 171 and in Madura at Rs. 37. Mettur were steady at Rs. 382 and Ramakrishna were in demand up to Rs. 31.65. Ranga Villas were offered at Rs. 45 and South India Viscose lost at Rs. 188. Travancore Rayon reacted to Rs. 38.15 on profit-taking.

In the miscellaneous section, Aluminium Industries were quiet at Rs. 23.55, as were Ashok Leyland at Rs. 9.05. Forest Industries were bought at Rs. 2.95 on paying a taxable ordinary dividend of 12 percent. F.A.C.T. came to hand at Rs. 10.45 and India Cement were steady up to Rs. 6.70. Madras Aluminium were quoted at Rs. 24 and Rubber were done at Rs. 91. Madras National Paper declined to Rs. 8.40. Parry's Confectionery were steady at Rs. 4.92 and Premier Paper recovered to Rs. 9.20. Seshasayee quiet at Rs. 22. Standard Motors were dealt in at Rs. 16.12 and Textool were in demand up to Rs. 183. Travancore Chemical Manufacturing were bought up to Rs. 18.50 on declaring a taxable final ordinary dividend of 12½ percent. United India Fire came to hand at Rs. 8.10 on paying a taxable ordinary dividend of 12 percent. Business was done in W.I. Plywoods at Rs. 223.50 on the payment of a taxable ordinary dividend of 12 percent.

THE WEEK'S TRANSACTIONS

People in glass houses...

Every day, more people are using more glass to modernise their homes. And for more reasons than one. Glass invites cheerful, natural light; seals out moisture, noise and unhealthy dust. It's easy to clean and keep clean, too!

Why don't you try glass? Take any room. Fit good, strong glass (HPG, to be sure) and see how spacious it looks—how wonderfully livable it becomes! Or may be you could use an elegantly functional glass partition. Why not do it?

The finest and most durable in India, HPG sheet glass is tested for unvarying quality at every stage of manufacture.

Available in a wide variety of sizes and thicknesses.

London Market

STOCK VALUES RISE BUT TURNOVER LIMITED

ECONOMIC MEASURES VIEWED CONSTRUCTIVELY

London, 26th July.

OPERATORS in the stock market have taken a very philosophical view of the Government's announcement of its measures for solving the economic crisis and the general attitude now seems to be that however serious the measures may prove, they will be to the country's benefit in the long run. This accounts for the reluctance by investors to part with good class stock so that selling has been very light, while action by a few optimistic buyers in a market short of stock has tended to push prices higher. The volume of business has been somewhat out of proportion to the gains in values. There has been some searching for shares with better-than-usual yields. There has been little doing in foreign bonds, but in rails Antofagasta stocks have made good headway. Equities have gone ahead well and certain of the leaders have recorded fairly sharp gains. Engineering shares have been in demand and steel shares have been supported. Electricals received two items of bad news, one from Hoovers and the other from G.E.C., both recording sharply lower profits. Stores have been strong on news of big sales. Shipping shares came into demand following favourable Press comment. Gold shares have had their best week for some time, and although African restrictions, prices have steadily moved up. The finance issues have been particularly favoured. Coppers have also edged ahead, but tins have moved erratically. Oil shares have seen demand for the better class rubbers.

New Delhi

ITALIAN TERMS FOR COLLABORATION IN OIL REFINING AND PROSPECTING

CENTRE RECEIVES DRAFT AGREEMENT

(FROM OUR NEW DELHI CORRESPONDENT)

THE draft of an Indo-Italian oil development agreement has just been received from E.N.I.-A.G.I.P., the State-controlled oil corporation of Italy, by the Government of India. Under the agreement, the E.N.I. will provide a 12-year credit of \$ (U.S.) 120 million to India. \$20 million of which will be earmarked for oil drilling through the Indian Government-owned Oil and Natural Gas Commission. Enquiries show that the E.N.I. would not initiate any oil prospecting on its own, but would act as agents of the Indian Oil and Natural Gas Commission on such terms as would be mutually agreed upon. The former would also supply drilling equipment. It may be mentioned here that the Indian Minister for Oil, Mr. K. D. Malaviya, during the visit of the E.N.I. chief, Sr. Enrico Mattei, to India last cold weather or during his own visit to Italy last month, proved unsuccessful in persuading the Italian State-owned oil Company to come out to undertake oil prospecting in India on his terms. Sr. Mattei has given his irreducibly minimum terms on the model of his recent agreement with Morocco. He is anxious to help India, provided he is assured of a 25 percent return, free of all taxes, on his outlay.

Reverting to the draft of the agreement, about \$33 million is provided for refinery. As credit for the three refineries—Nummati (Assam), Barauni (Bihar) and Koyali (Gujarat)—has been assured by the Rumanians and the Russians, the presumption should be that the Italian-assisted refinery will be in south India, based on imported crude, probably from Russia. Another \$33 million will finance the laying of a product pipeline from Barauni to Calcutta and from Barauni to Kanpur or Lucknow to Delhi. The balance of \$33 million will finance a gas-separation plant in Assam, a naphtha cracker project to manufacture petrochemicals and a lubricating oil plant. As a lubricating oil plant has already been included in the Russian-aided refinery project in Barauni, it is presumed that the second lubricating plant will be included in the refinery project and will produce such varieties of lubricating oil as the Barauni refinery will not be able to produce. Prima facie this would appear to be a setback to the Standard Vacuum lubricating oil project, in which the U.S. Company has offered a 50 percent share to the Government of India in the equity capital.

Contrary to the Oil Ministry's expectations, the heads of the agreement will be signed by the local representative of the E.N.I., Mr. Gasperini. Separate agreements for each project will be negotiated and signed at a later stage. It may be further explained that the Italian credit will cover the foreign exchange element of the projects; the Indian Government is financing the rupee cost from its own resources. The pipes for the product pipeline, for example, will be supplied by India, the Italian credit financing the pumping apparatus and technical know-how.

Koyali for New Refinery Site

The Oil and Natural Gas Commission has selected Koyali for the location of the two-million-ton refinery to be set up in Gujarat in the public sector. Situated at a distance of ten miles from Baroda main town, Koyali village is near Bajwa railway station and is very close to the Mahisagar river. A site selection committee, appointed in November 1960, had recommended two areas for the location of the refinery and had suggested that a technical site selection committee should be set up to go into the details and finally select the site. The technical site selection committee, with which were associated five Russian specialists, recommended three other sites in Gujarat area including Koyali. It, however, did not make a final suggestion because the additional data for water supply and effluent disposal had to be collected and certain other tests had to be made. The final selection has now been made on the basis of additional technical information supplied by the Gujarat Government. Meanwhile, according to reports current here, the going on stream of two other refineries in the public sector in Nummati and Barauni will be further delayed. As far as the Nummati refinery is concerned, an adequate supply of hume pipes to discharge its effluent 11 miles below Gauhati is not immediately available, and will take some time before they are fully procured.

Indian Tea Exports

The following figures show the average exports of Indian tea in recent years:

Exports of Indian tea in million of total Rs. crores:
 Quantity Percentage Value in
 Indian tea in million of total Rs. crores:
 lbs exports of Indian tea

U.K. 300 60 82

THE FOLLOWING INCLUDE BOTH DIRECT EXPORTS FROM INDIA AND RE-EXPORTS OF INDIAN TEA FROM BRITAIN

(Million lbs)	(percent)	(Value in Rs. crores)
France	25	.05
Italy	.55	.11
Germany	7.00	1.40
Netherlands	4.50	.90
Belgium and Luxembourg	.20	.04
	12.50	2.5
		3.41

The current position concerning tariffs is as follows:

Great Britain:	
Commonwealth tea	free
Foreign tea (Indonesia, Japan, Portuguese, East Africa, etcetera)	... 2d a lb

European Common Market:

Import duty	Internal revenue	Total
(Percent)	(Percent)	(Percent)
France	30	29
Italy	50	—
Germany	52	45
Netherlands	12	12
Belgium	12	12
Luxembourg	12	12

Imports for internal consumption:

The current position concerning imports (in million lbs) of the countries concerned is approximately as follows:

<i>United Kingdom :</i>		
from	India	300
	Ceylon	140
	British Africa	40
	Pakistan	10
	Other countries	30
Total United Kingdom :		520

The three Companies, which have foreign collaboration, are: (1) Asian Cables Corporation, (2) I. Miller (Private) Ltd and (3) United Malleable Company (Private) Ltd, the share of their collaborators being Rs. 55 lakhs, Rs. 2.50 lakhs and Rs. 4 lakhs, respectively. The Companies in which Government participation in share capital more than 50 percent and for which consent by the Controller of Capital Issues was granted during 1960 are listed in the table on the previous page.

Government Shipping Corporations to Merge

As already reported, the Eastern and Western Shipping Corporations are being amalgamated into one unit. It is expected that the new company will be incorporated on 2nd October.

Exclusive Imports from the U.S.A.

Reference was recently made in these columns to certain items, imports of which may be exclusively reserved from the U.S.A. The commodities under discussion include fertilisers, steel, non-ferrous metals, copper, zinc, aluminium, and their alloys, synthetic rubber, and compressors, ball bearings, and similar general-purpose components; tyre cord synthetic yarn, sulphur, rock phosphate, carbon black and acetylene black, pulp including rayon grade pulp, dyes, and cutting tools, small tools, abrasive grains, and various types of machine tools required by engineering industries, refractories and rollers for steel plants, lubricants, aviation spirit, newsprint, rutile titanium dioxide, styrene monomer, phenol, cellulose acetate butyrate, borax and borac acid, and penicillin (sterile

and non-sterile in bulk), crude vitamin B¹² (B¹² intermediate), 4, 7, dichloroquinoline, P-nitroacetophenone, P-acetyl aminophenol, 16-alpha-methyl-delta-1, 4, 9 (II)-pregnatrien-17-alpha-21-diol-3, 20, dione-24-lactate, 3, 11, 20 triketo 17 hydroxy-21-acetoxy-pregnane (EA ix), 5-chloro-2, 4-disulphonamide aniline, chlorothiazide in bulk, benzathiazide in bulk, and chloramphenicol in bulk, chlorpropamide in bulk, nialamide in bulk, acetosalamide in bulk, methyl isobutyl ketone, filteraid (supercel hyflo), acetyl sulphadiazine, diethyl carbamazepine in bulk, streptomycin in bulk, tetracycline and its derivatives in bulk, triamcinolone in bulk and calcined petroleum coke.

Pyrites Smelter Project

Large resources of pyrites exceeding 80 million tons have become available, and the Pyrites and Chemicals Development Corporation is carrying out investigations in association with a Norwegian firm for setting up a smelter of 400-ton a day capacity in Amjor. The experiments will take some more time, but the Corporation is taking up a programme for mining pyrites on a large scale. The programme is being so evolved that acid made from pyrites will meet at least 50 percent of India's sulphur requirements by the end of the third plan. The Pyrites and Chemicals Development Corporation has contemplated the setting up of sulphuric acid units with capacities of 400 to 500 tons a day near fertiliser factories in Durgapur and elsewhere.

Indo-Moroccan Trade

Trade talks between the four-member delegation from Morocco and Indian officials has concluded

ed here, and a protocol was last week signed bringing the trade agreement between the two countries provisionally into force from 1st August, 1961. The agreement was negotiated in September last year in Rabat. The revised arrangements provide for exchange of goods on a larger scale than previously, but on a balanced basis. Morocco is likely to offer a substantial outlet for Indian green tea. Non-traditional items like diesel engines as well as engineering and electrical equipment are also likely to be exported from India. Indian imports from Morocco consists mainly of rock phosphates, lead and cork. During 1960, India exported to Morocco goods worth Rs. 48 lakhs. Imports from Morocco amounted to Rs. 52 lakhs.

New Grain Silo with Polish Aid

An agreement was signed here between the Government of India and the Polish organisation C.E.K.O.P., under which the latter will prepare a project report for the construction of a 50,000-ton port silo either in Bombay or Madras. The report will be submitted to the Indian Government within three months. In May 1960, a credit agreement was concluded with Poland, one of the items being the construction of a silo for the bulk storage of foodgrains. Subsequently, a technical team from Poland visited this country to collect data for the preparation of a project report. India already has two silos, or grain elevators—one in Hapur, Uttar Pradesh, and the other, recently completed, in Calcutta. Each of these is of 10,000-ton capacity, but it is intended to raise the capacity of the Calcutta silo to about 20,000 tons. Both silos were constructed with aid received from the U.S. Technical Co-operation Mission.

Companies for Special Treatment

The Central Government has decided to exempt companies engaged in the promotion of art, commerce, science, religion, charity or any other "useful object", from certain provisions of the Companies Act. This step has been taken since compliance with some provisions of the Act is not as necessary in their case as in the case of the companies which have been formed with "the profit motive." In considering this question, the Government has taken into account the representations received from such companies and have been prompted by the desire to facilitate their functioning with minimum restrictions. Under the orders now issued, such companies will be able to hold their annual general meetings not only at any place within the country, but also on a public holiday and even outside the normal office hours. They need not file with the Registrar every year, along with the annual returns mentioned in Section 160 of the Act, the names of their members and the respective dates on which they became members, and the names of persons who ceased to be members since the date of the annual general meeting of the immediately preceding year. It will not be necessary for the companies to publish their names strictly in terms of Section 147 of the Act; they will be free to indicate their names in a manner suited to their needs. A notice of 14 days, instead of the 21-day notice required normally, would suffice in the case of these companies for the purpose of calling their annual general meetings. Similarly, it will hereafter be enough if such companies preserve in good order their books of accounts for four years, instead of eight years as prescribed in the Act. By virtue of another exemption, a person intending to stand for election as a director or any member intending to propose him for election as a director will not have to leave at the office of the company any notice signifying his candidature for the office or the intention of such member to propose him as a candidate for that office. For the same reason, a candidate for the office of a director in any of the companies will not be required to signify his consent in writing to act as a director, if appointed. He will, however, have to file with the Registrar, within 30 days of his appointment as director, his consent in writing to act as such. Persons who have attained the age of 65 years will henceforth not be ineligible for appointment as directors of these companies in terms of the exemptions from the provisions of Sections 280 and 282 of the Act. The boards of the companies, by whatever name called, need not meet once in three calendar months, as provided in Section 285. It would be enough if they hold at least two meetings in a year. The quorum for a board meeting for such companies has been fixed at either eight directors or one-fourth of the total strength of the board, whichever is less, provided that it must not fall below two members in any case. It will also not be necessary for these companies to notify the changes in their boards of directors, managers or secretaries at any time during the year. The names of the members of the board, managers, secretaries, etcetera, are, however, required to be filed with the Registrar once every year along with the annual returns as provided under Section 160 of the Act.

CORRECTION

On pages 1018-19 of the issue of Capital dated 28th June, in the item entitled "Manufacture of Tractors", it was stated that the Company licensed for the manufacture of 3,500 medium and large horse-power tractors is India Tractors and Implements Co. Private Ltd. Madras. The correct name of the Company is Tractors and Farm Equipment and Co. Ltd. Madras, which has been formed by Simpson and Co. Ltd. Madras, in collaboration with the Massey-Ferguson organisation for manufacturing, and marketing Massey-Ferguson tractors and farm

London

U.K. CHANCELLOR ANNOUNCES EMERGENCY ECONOMIC MEASURES

BANK RATE RAISED: SURCHARGE ON PURCHASE TAX AND CUSTOMS DUTY

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Chancellor of the Exchequer, Mr. Selwyn Lloyd, has announced his emergency measures to deal with the economic crisis facing Britain. According to his earlier promise, the disclosures were made on Tuesday. He announced in the House of Commons that Britain's Bank rate would be raised from 5 percent to 7 percent. He also imposed a 10 percent surcharge on all purchase tax and Customs and excise duties in Britain. The proposals were considered by the Cabinet at several recent meetings while Government spokesmen had taken advantage of every possible opportunity to warn as wide an audience as possible of the tough measures. The latter are apparently aimed at a long-term solution rather than the correction of short-term difficulties. It will, therefore, be difficult for the Labour Opposition to withhold its support, for amid the welter of criticism which Mr. Gaitskell and Mr. Wilson directed against the U.K. Government's handling of the economic situation during a rather disappointing debate on the subject last week, the gravamen of their charge was that a long-term solution must be found to the balance of payments problem, to meet which so many temporary correctives had been applied since the second World War without achieving any lasting result. The most hopeful feature of the debate was that speakers from all Parties now seem to be ready to agree that without far-reaching changes in economic policy, crises in Britain's balance of payments are certain to recur, and there will be little hope of arresting the country's decline as an industrial Power. Given that agreement, and a measure of co-operation to go with it, there may be some hope for the future.

During the past week, the City was busy speculating on the Government's plans. But neither Mr. Macmillan—when he dealt with his own back-benchers early in the week—nor the U.K. Chancellor of the Exchequer or the President of the Board of Trade, during the Commons debate, were prepared to hint about the new measures. It is understood that in framing his economic measures, Mr. Lloyd has made good use of the report of the Plowden Committee, which, it is expected, will be published within the next fortnight.

Trade Gap Halved in June

Britain's overseas trade showed some improvement in June. The trade gap—measured by the excess of imports over exports—was halved at £41 million, compared with £82 million in May. Exports, including re-exports, at £330.1 million rose by £17.6 million. The cost of imports, on the other hand, was reduced by £23.3 million to £371.1 million from the abnormally high level of £394.4 million reached in May. On a seasonally adjusted basis, the trade gap in June was reduced from £70 million to £20 million. This is the smallest since May 1959.

The figures probably rather overstate the recent improvement, since as a result of the spring dock strike, some exports which would have been shipped in May were delayed until June. Nevertheless, the announcement shows a brighter picture after a run of bad economic news. Seasonally adjusted, imports in June amounted to £366 million—£1 million more than in May. Exports and re-exports were £51 million higher at £346 million. The rate of exports in the first six months of this year was 4 percent more than the average for 1960 while imports in the first half-year fell by 1½ percent below last year's average. This is the trend that is needed, although the movement will have to be sustained and developed if it is to bring about the hoped-for recovery in the country's balance of payments, particularly against the recent fall in "invisible" earnings. There is, however, some prospect of improved overseas markets now that the American recession has ended.

Advice on Exporting

Reporting the June increase in exports at the opening of a factory in Yorkshire, Mr. Erroll, Minister of State of the U.K. Board of Trade, once again drew attention to Britain's need to export. He emphasised that exporting is not the business of the Government. It has to be done by industry and commerce. In fact, the whole of the economy is involved, not merely the firms who are exporting directly. The latter depend for much of their materials and components on firms further back in the chain. "I want to stress the importance which should be attached to the prompt delivery of supplies and products," he said. "Immense harm can be done by failure to deliver by the promised date. It is not only the question of jeopardising repeat orders from the disappointed customers. The general reputation of the United

Kingdom as a reliable supplier can easily be damaged by the failure of individual firms."

Industry has to adapt itself to the changing pattern of world trade. The less developed countries would not for ever be content to buy consumer goods. While they could be expected to buy as much machinery and capital goods as they could afford, they would certainly be determined to make other products themselves. But, increasing specialisation in industrial countries, Mr. Erroll said, also means continual growth of the exchange of highly complicated goods between such countries. He gave the examples of the increasing two-way trade with Germany and with the United States where, in particular, he was convinced "the potential is indeed enormous." He advised the would-be exporters to tackle one area of the United States at a time and not to appoint an agent in New York and expect him to cover it all.

Kingdom as a reliable supplier can easily be damaged by the failure of individual firms."

Fall in Industrial Building

Building schemes for which authority was issued by the U.K. Board of Trade in the second quarter of 1961 fell off heavily in the total size. These schemes had run at an abnormally high level in the first nine months of 1960; in the fourth quarter of last year, they fell back roughly to the 1950 level and remained there in the first quarter of 1961. In the second quarter, they fell back well below the 1959 average, and although exact comparisons are not possible because of statistical changes, it seems that authorisations have for the moment dropped back to the 1958 level.

While the figures for a single quarter may be deceptive, the decline is startling. In the second quarter of 1960, 640 schemes for a total area of only 13.5 million square feet were approved, compared with 630 schemes of 17.3 million square feet in the first quarter of 1961 and 1,024 schemes of 23.8 million square feet in the second quarter of 1960. This does point to industrial building activity falling off later this year, after a period of all-out boom.

Productivity at a Standstill

Meanwhile, industrial production is still showing no signs of expansion. The provisional index for May—after adjustment for seasonal factors—is 122, the same as in April and only 1 percent higher than at this time last year. In the first five months of 1961, the seasonally adjusted index averaged 121, compared with 120 in the corresponding period of 1960. Yet during May, 250,000 more people were in civil employment than a year earlier; for manufacturing industries alone the increase was 120,000. The implied reduction in overall national productivity after a period of high investment in new plant and equipment can

Bank of England Report

The Bank of England concentrates in its annual report on the new "Basle" system for temporary support to ailing currencies. The Bank stresses two things about this pact of mutual aid through temporarily suspended convertibility rights: first, that it is continuing and second that it is conditional and depends on action to correct deficits. To take the second matter first, and echoing what is clearly a theme of the Basle arrangements, the Bank says: "No schemes for international credit can alter the basic facts of economic life: it would be disastrous to allow any such schemes to obscure them." As to future co-operation, the Bank makes the confident statement that "the major currencies are now in a far stronger position than they were to withstand the pressure of short-term movements," and that the arrangements "mark a new phase in international monetary co-operation." The Bank's report will be searched for hints of Britain's economic policy. One possibility is an International Monetary Fund drawing, which the Bank specifically cites as a present help in time of trouble. Interest rate changes are dealt with more ambiguously. Rightly, the Bank recognises the limited power of higher rates to deal with a confidence crisis, and it speaks of the doubt whether countries now "feel free" to resort to this method. This may be a reference to the embarrassment which both the United States and Germany have felt in the past year through distortions caused by divergent interest rate levels. How far this would be a bar to a higher Bank rate is not clear.

F.B.I. and the Common Market

The Grand Council of the Federation of British Industries has expressed the view that Britain should not apply for membership of the European Common Market until there is a better prospect of obtaining satisfactory terms, particularly concerning the Commonwealth and the other members of the European Free Trade Association. A statement issued for the guidance of F.B.I. members leads up to the following conclusion: "A Europe-wide multilateral trading system has always been our desire and, we believe, that of the great bulk of industry in Europe. We would greatly welcome an early end to the present division. Nevertheless, a large majority of us (i.e., the Grand Council of the F.B.I. on which all affiliated trade associations are represented) are of the opinion that it is right not to become committed to formal negotiations with the 'Six' until existing differences over the problems outlined above have been so far narrowed as to offer the prospect of a satisfactory outcome."

As the statement itself points out, the Treaty of Rome—on which the European Common Market is based—provides for the negotiation of exceptions only after an application for membership has been submitted. The conclusion quoted, therefore, implies that no such application should be made at this stage. The present debate over whether the United Kingdom should apply to join the European Common Market, the F.B.I. states, is concerned basically with three questions: first, whether the "Six" will unanimously be prepared to negotiate such exceptions to the Rome Treaty as might be essential for the United Kingdom; secondly, whether the "Six" will be prepared to agree to terms which would at least prevent undue damage to Commonwealth countries and to Britain's trade with them; and, thirdly, whether they will accept the conditions needed by Britain's E.F.T.A. partners.

"Hang on friend Tubophile", shouted the Master Builder encouragingly, "hang on, for help is on the way". "How dare you say 'hang on'", roared back Mr Tubophile, now beginning to purple, "that's precisely what I am doing—hanging on—and that for dear life, from your rotten scaffoldings. By the sacred crocodiles of the Nile, never again will I undertake a building job in tubeless times. No future in it, except a chance to break your neck. Call yourself a Master Builder! The cheek of it when you haven't the wit to use safe and sound tubular steel scaffolding. Could have done the job in half the time and no risks attached. Lucky for you Master Builder, there are no Workers' Unions in your tubeless Egyptian times. Or you would have been for the high jump too. As for me, no more building without tubular steel scaffolding. Now get me down from here."

NORTH INDIAN TEA OUTPUT INCREASES

NO SHARP RISE IN WORLD PRODUCTION EXPECTED

(BY A SPECIAL CORRESPONDENT)

WHEN reporting on the working of the 1960-61 season, which ended on 31st March, 1961, two Calcutta's leading tea broking firms predicted at tea auctions for the current year, that is, 31-62, would "get off to a good start" and "that ere was every expectation that the market ould open on a note stronger than for several ars past". Up to 12th July, a total of 141,278 ckages were sold at the Calcutta auctions at s. 5.72 a kilogram, compared with 99,836 packages ld at Rs. 5.84 a kilogram last year; but up to that ite there have been six auctions this year, against ly three sales up to the corresponding date of st year. There has been a sustained demand at bsquent auctions. Teas for internal consumption ere sold around the same average rate as last year at prices are now up around Rs. 5.45 a kilogram. ists are selling well while Darjeeling teas are eing quoted around Rs. 8.25 a kilogram.

Crop Figures

In 1960, the north Indian tea crop was some 4.2 million lbs lower than that of the previous ear. This deficit was caused by drought conditions which prevailed in various tea growing listrics of north India during the first six months f 1960. It is expected that the shortfall will be ade up this year. The latest Indian crop figures how north-east India's output at 53.6 million kilo- grams in 1961, against 46 million kilograms in 1960. South India's output is shown at 32.3 million kilo- grams, against 34.1 million kilograms.

The world production figure so far available is 203.8 million kilograms in 1961, against 193.5 mill. on kilograms in 1960. Pakistan is well ahead with its output while Ceylon and Africa are likely to have a somewhat lower crop. The average Indian crop amounted to 712 million lbs for 1959 and 1960.

Raising Production

The tea agency houses in Calcutta think that with the full use of fertilisers and the new exten- sions coming into bearing, it will be possible to increase output by 15 percent by 1965-66, that is, from 712 million lbs to 818 million lbs, but this falls short of the planned target of 900 million lbs. If north India goes ahead with its output at the rate of 15 percent, south India might raise it more, say, by 20 percent. Even so, the total output would still be lower than the target figure of 900 million lbs. Against this, it is reported that the Food and Agricultural Organi- sation has estimated that there will be an increase of 15 percent in the tea output in five years' time. That body should have reliable figures to work on, so where is the surplus coming from? To add to the mildly bullish outlook for producers caused by these statistics, many feel that the potential de- mand in Europe can be explored if Britain joins the Common Market. But one cannot discount the possibility of keener competition from China and Russia where great progress has been reported in tea production.

Acreage under New Tea

An important point in estimating the future output is acreage under new tea. This has risen in India during the past ten years, principally in the south from which a larger crop has already been harvested. During the last decade, Ceylon with the planted tea acreage of over 12,000 has increased her crop considerably, from 306.2 million lbs to 424.7 million lbs. But it does not seem likely that she will be able to add much this year to the amount. The output in Indonesia has remain- ed stationary around 100 million lbs of which about 64 million or 65 million lbs are for exports. So there would not appear to be much danger from this quarter for some years to come. Mean- while, east Africa has steadily raised its planted tea acreage during the past ten years. It is now placed at 136,303 acres, of which about 53,000 acres grow young tea. About 30,000 acres may be expected to mature during the next two to four years. The latest yield figures show that east Africa produces 650 lbs an acre. Subject to 'Acts of God (or man)', another 13 million lbs or more may be expected from that country in two or three years' time.

World Output

Since the world output will not show any sub- stantial increase during the current season, it is necessary to examine the consumption prospects. In 1959, the internal consumption in India was estimated at 265 millions lbs. For 1960, the esti- mated offtake was about the same because due to high prices less tea was bought. In 1961, it is estimated that at least 275 million lbs would be re- quired for internal use. Pakistan has estimated her crop at 57 million lbs, of which 45 million lbs have been earmarked for internal consumption. The consumption in the non-producing countries

has, however, actually fallen since 1958 as the following figures show:

	1958	1959	1960
(In million lbs)			
World markets took	1,218.3	1,152	1,100.2
Producing countries consumed	501.9	525.4	512.0
Total consumption	1,720.2	1,677.4	1,612.8
Total world output	1,697.1	1,649.1	not available to date

Production short by 23.1 27.7 "

The deficits have to be set off against several surplus years during the period 1950-1960, but they suggest that the world stocks were not high at the opening of this season. The figures above indicate that the technical position of the trade is sound, but for Indian growers a profitable year depends largely on Russia who imported 42 million lbs in 1957, 56.4 million lbs in 1958, 64 million lbs in 1959, but only 23.4 million lbs in 1960. Of these totals, India supplied 16 million lbs, 25 million lbs, 26.5 million lbs, and 22 million lbs, respectively. This year Russia is again reported to be supporting the Calcutta auctions. Shipment figures for the period 1st July to 30th June, show that business was steady up to that date, but they do not include details of purchases of new season's teas. This year, the wet weather has already spoilt the Dar- jeeling first-flush teas, but useful grades are now coming under the hammer and realising good prices.

U.K. Offtake

The U. K. offtake was down by about 50 million lbs in 1957-58. Ireland shows no increase while the U.S. demand has fluctuated, although the country has not increased imports from India over the de- cade. In 1960, the U.S.A. imported 113.6 million lbs, against 110 million lbs in 1960. During the same period, Ceylon has improved its exports to the U.S.A. from 35 million lbs to over 40 million lbs and as far as Ireland is concerned from 3 million or 4 million lbs in 1952 to 43 million lbs last year. India should, therefore, launch an intensive propa- ganda campaign in export markets.

The rapid industrialisation of this country will help improve living standards, so there will be scope for increasing tea consumption. This should offset any decline in export markets. Meanwhile, there appear to be great possibilities in redeve- loping auctions in Holland to expand the European demand for Indian teas.

COFFEE BOARD TO INTRODUCE OPEN AUCTIONS NEXT YEAR

MOVE TO INCREASE FOREIGN BUYING

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Coffee Board will introduce open auctions for the exportable surplus of coffee produced in India from next year. The system of sales is now based on sealed tenders. The Board has been able to obtain the services of a cup taster, and he will assist it in classifying, grading and bulking Indian coffee according to international standards. The difficulty in getting a cup taster was the main hurdle in replacing closed tenders by open auctions—a widely felt need in the event of falling prices in the world markets. In an open auction, the chances are better for attracting buyers from abroad and for realising higher prices for the coffees put up for sale. Besides, open auctions will enable India to fall in line with other producing countries in disposing of the coffee crop.

The Coffee Board has allocated 60 percent of the exportable surplus to non-bilateral countries like Germany and the United Kingdom and 30 percent to the bilateral countries with a view to promoting exports to traditional as well as new countries. The balance of 10 percent is left to the chairman's option to offer to any country within the two groups. This new feature has been introduced this year. India will have 34,000 tons to export out of the 1960-61 season's produc- tion of 67,000 tons. Exports so far this year had doubled from 11,000 tons to 22,000 tons. All the varieties earmarked for exports this year had already been sold, according to Mr. H Sitarama Reddi, chairman of the Board. The export prices of Plantations were 10 percent lower than the internal prices and those far Robusta were 50 per- cent down. But Indian Robusta was getting a higher price in the world markets. Robusta ex- ports to Italy have been much bigger this year.

Rise in World Production

The world production of coffee has risen sharply. Brazil alone is expected to produce be- tween 40 million and 42 million bags. This is roughly equivalent to total world coffee exports. According to an estimate made by the Inter- national Coffee Agreement organisation, there were 78 million bags of coffee in the warehouses at the end of 1960. This was almost equal to two years' world supply. The sharp rise in production without an equal increase in consumption must naturally bring down the prices. But this has not been so, and during the last two years the world price of coffee has been stable. This was because the American producing countries joined together and withheld from the world markets the great bulk of their surplus. But for this the world price of coffee might have been so low

that it would have been useless to produce coffee, according to Mr. M. S. P. Rajes, chairman of the Shevaroy Planters Association.

Need for Economy

Last year, the African planters, who now produce about 14 percent of the total world coffee output, joined the Agreement and formed a separate federation of their own. The only pro- ducing countries outside of one agreement or another happen to be India, Indonesia and some small producers in Arabia. For about 12 years from 1949, the world coffee producers enjoyed a period of continuous good time with attractive prices and a very good market. The cost of pro- duction has been allowed to rise in keeping with the price trends. Recently, the prices in the world markets have fallen, so a need for economy has arisen. This has created confusion and fear among the producers. But there has also been some gains. It was during this period that coffee growing has been greatly developed, adding to the productivity of coffee acreages. The average yield even in India itself has risen—in some cases by two to three times what they were about ten years ago. In Coorg, for example, many produc- ers have been obtaining a higher yield. Besides, many new ways of dealing with pests and diseases have been found. The Indian planters have learnt a lot about how to improve the soil and the plant. "These are permanent gains. But for this increase in yields and the general improvement in the efficiency of production, the drop in prices which we have suffered would have been intolerable had it happened ten years ago", Mr Rajes said while addressing the recent annual general meet- ing of the Association.

Average Output

Against the world average output of 4.5 mil- lion tons of coffee, India's production is only about 67,000 tons. Her exports form less than 2 percent of world exports. India is not, therefore, in a position to influence the world price. Mr. Rajes said: "All what we can do is to turn out a good product and place it on the world markets as efficiently as possible". As it happens, the world market will offer Indian coffee around Rs. 2 a point calculated on the Coffee Board's price differential scale. As for Arabica Cherry, the offer will not be more than Rs. 1.76 a point and for Robusta Re. 1 a point, assuming that all the three grades are paid the same number of points. The question then is: how are the Indian growers going to cover their expenses if the bulk of their produce is sold at such prices in the world mar- kets? This raises the issue as to what is the amount of coffee required in the internal market and what price the growers can expect from it.

Internal Price

But the Indian consumer expects his coffee to be cheap and he thinks that the present prices are high. The price of coffee, Mr. Rajes said, has not increased in the internal market for the past nine years "but for the increase in the excise duty." It has been maintained almost at the same level. Yet somehow the consumer believes that the prices are too high. In a market like this, any increase in price would be resented and would not be good for business. "But with more than half of our production exported at a lower price, we no longer have the ability to subsidise the internal price as we did from 1950 to 1958", the chairman said. According to him, "the real safety" of the coffee growing industry lies in hav- ing a growing home market. In its anxiety to promote exports, the Government does not like that the internal market should be expanded, available for exports. "To my mind, the real solution lies in increasing production and sup- plying more for export as well as for the internal market. We can continue to export safely only at a certain level of prices and if it is low, the reaction is bound to reduce our total production. This will defeat the Government's purpose and, therefore, the right thing to do is to produce more, as we have been doing, and make more coffee available for both markets. That would serve the Government's purpose as well as meet the growing internal market", Mr. Rajes said.

Lemongrass Oil Price Rises

The Indian lemongrass oil is now commanding a handsome price. Last week, the commodity had buyers at the Cochin market at Rs. 217.50 a kilo. This is attributed mainly to a temporary dislocation in supplies caused by heavy rain and floods in the producing areas in Kerala. Grass cutting and distillation, it is reported, have been badly affected by rain and floods. On account of no selling pressure from exporters. On the other hand, the trade abroad is active and is raising bids for the available supplies, according to trade sources in Cochin. The situation, however, might ease with the improvement in weather. Produc- tion this year is expected to establish a fresh record because of extensive cultivation since the beginning of the current season due to attractive prices.

COCHIN TEA SALES

At Sale No. 30, 380,000 kilograms of tea were on offer. There was a fair demand. Low mediums and mediums were about steady. Good mediums were slightly easier except where quality improved. High-grown were dearer following quality.

ute

GUNNIES HESITATE PENDING OUTCOME OF NEW LOOM SEALING PROPOSAL

FIBRE PRICES DECLINE AS MILL BUYING REMAINS POOR

CONDITIONS in the markets do not show much change from those of recent weeks, but n easing of the fibre prices is an obvious fact. ellers have shown an increasing keenness to get ales of new crop jute on their books and, in me cases, have discounted current quotations 1 order to effect sales. Old crop has been eadier than new because of the scarcity of sup- lies of low assortment, which is the only thing 1 demand. Once again no old crop quota was sued by the I.J.M.A., and only a very small new rop issue was made for the current position. As any mills had made forward sales of gunnies, e I.J.M.A. departed from its normal procedure nd issued a full two weeks' quota for forward ipment to enable the mills to cover in against 1ir sales if they so desired. It is understood at these forward quotas are for jute for delivery 0 before 15th October. So far, there has been ttle rush to take up this quota, mainly due to e high prices, but several mills have indicated vels at which they may be interested. There , however, no sign of any precipitous fall in jute rices, although over the past few days, conditions ave been very much easier. Mill policy seems 3 be influenced mainly by questions of transport nd shortage. There is an open market for them 1 manufactures, and now they can sell as much s they like, very nearly as far forward as they ke, but they do not want to commit themselves 1 the uncertain circumstances in which they now nd themselves. They might have sold more eavily and bought jute in corresponding quanti- ies, but the fact is that selling has been slow and uying only moderate.

Good New Crop Outlook

The new crop outlook continues to be good. ll reports indicate that it is growing well, and arvesting is proceeding now according to plan. he steeping water position has improved with he recent rise in river levels. The late crop, it s expected, will take more time to mature and ull outturn is expected. Recent arrivals at he mills, which have only been in small quanti- ies, all contain heavy moisture, and in some ases, the standard has been poor, obviously due o poor retting. Latest arrivals in the upcountry eceiving centres, however, are said to have shown distinct improvement.

Throughout the period, the tone of both the aw jute and the goods market has been hesitan- s the trade waited anxiously for some definite ews about a further curtailment of production uring August. It was obvious to all concerned hat further cuts were inevitable, but to what xtent and manner was a matter for speculation. fter the week-end, it was understood that instead f a block closure in August, the I.J.M.A. had uggested to the Government that the mills be lowed to shut down an additional 18 percent of he looms as at 1st August, 1961, in order to tide ver the difficult raw jute supply position. No ime limit was placed on how long the looms ould be sealed, but the I.J.M.A. thought the osition should be reviewed weekly. It is understood hat the proposals were accepted in principle by he Government, but it had passed them on to the abour Department for the consideration of the ade unions.

The manufacturing capacity of the industry as had a chequered career over the past few onths. Towards the end of last year, the mills ere allowed to seal looms voluntarily according o their raw jute stock position, and in October 960, sealed looms rose to 14 percent and then in eember, this was raised a further 5 percent, aking a total of 19 percent sealed. In Novem- er 1960, this was replaced by a compulsory seal- ng of 7 percent of the looms—leaving 12 percent oluntarily sealed—while working hours were e- duced from 48 to 45 hours a week. This was again mended in February 1961, when working hours ere reduced to 42½ a week. In June, and now in uly, instead of sealing more looms, the industry eported to closing down for one week in each onth, but this still does not appear to have been ough to see the industry through the shortage risis.

Labour Opposition to Closure

The labour unions are offering strong resis- ance to any further closure, as they consider it unjustified. If the current proposals are carried hrough, then production in August will be cut y about 12,000 tons. This will bring the stocks f gunnies down to a very low figure, which will ause a squeeze later in the year. The raw jute arkets reacted to this news by falling steadily ver the week, and at the lower prices, sellers howed no inclination to do business. Nor did he mills show much interest in buying jute, and onsequently, transactions recorded were the owest for some time. As far as the gunny mar- et is concerned, heavy goods prices have luctuated through a range of about Rs. 5, the

Opening quotations on Wednesday morning were as follows:

	July	August	September	Oct.-Dec.
40in. 7½oz.	42.50	41.50	39.75	36.25
40in. 6oz.	47.50	45.50	43.25	39.25

Cornacks	166.00	167.00	161.00	144.50

Raw Jute: During the week, Calcutta mills showed less interest in raw jute than during pre- vious weeks, and with mills closed under the block closure scheme, they were content to wait for lower prices. Small business was reported daily, mainly for bills of lading both for old and new crop jute, but the quantities were small. For the first time, the I.J.M.A. issued quotas for for- ward shipment—the equivalent of about two weeks' consumption—for delivery not before 15th October. This was done because several mills had taken on gunny commitments for this period, and were interested in covering in jute. Although several enquiries were put out and indications given, there were no reports of business done as buyers' ideas were lower than sellers'. Although the Calcutta markets during the week fell from Rs. 54 for Assam Bottoms on Thursday to Rs. 51 on Tuesday, the upcountry markets were slower in their decline and many sellers withdrew from the market. A fair amount of Daissee White jute has been done on a price-to-fix basis, but this has slackened with the fall in the rates. During the week, 225 wagons arrived in Cossipore which was a slight improvement. Stocks in the local mar- kets are very small, and prices tend to be above the parity of Calcutta quotations due to the activity of mill agents. Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms)	Rs a 100 kilos	Rs a md	Shipment

THE FOREIGN JUTE MARKETS

FALL IN FIBRE PRICES EXPECTED

(FROM OUR DUNDEE CORRESPONDENT)

BUSINESS is suffering in the Dundee jute market due to the irregularity of fibre prices. The only thing that appears to be certain about the future is that raw jute prices will be lower and also, as a result, the rates for yarns and cloth will decline. During last week, there was an easier tendency in the fibre market, with sellers reducing their terms by £1 to £2 a ton almost daily. This is welcomed by the industry here, as business has been more or less at a standstill since prices for yarns and cloth were raised by about £10 a ton from 11th July. All the mills and factories in Dundee and in district are closed for two weeks from the night of 21st July. So little or no business would be done over this period. It is believed that before the resumption of work on 7th August, prices will have shed the gain of £10 or more.

The raw jute market is quiet, and sellers are doing little business. Mill Lightnings are offered for November shipments with the prices varying according to position. For July-August £147 is quoted and £142 for Mill Hearts, for August-September £135 and 130, respectively, for September-October £130 and £125 and for October-November £5 a ton less again, with Grade Hearts offered at £5 a ton less in all the positions of shipment mentioned.

Spinners are practically showing no interest, but those who spin the finer qualities of yarns are enquiring about Crack Hearts and Crack Lightnings, but there are no sellers. Surely, there must be a fair proportion of really good jute in such a large crop, but perhaps none for Dundee.

Calcutta goods are fluctuating wildly. Values were raised to 83s 6d for 40in. 10oz. hessians and 63s 9d for 12oz. July shipment, with B Twills at 256s, L.o.b. Calcutta. Last week, they were down to 83s 3d and 65s 6d for hessians and 249s 9d for B Twills. July, 83s 9d and 65s August, 80s 9d and 63s September and 74s and 50s October-December, with B Twills at 244s 9d, 246s 9d, 237s 9d

and 215s for the respective positions of shipment, all L.o.b., Calcutta.

THE PAKISTANI JUTE MARKETS

FIBRE EASIER: BIG DROP IN EXPORTS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

WHILE the harvesting of the lowland jute around Dacca-Narayanganj is over, there is that inevitable gap which is normally experienced between the harvesting of the lowland and midland jute. The area served by the Jamuna and the Brahmaputra has sufficient water and harvesting is proceeding in full swing. This is because the Brahmaputra has flooded areas in Assam and its levels have risen in Pakistan. The area around Mymensingh town particularly is now a scene of feverish cutting activities. The jute area around Bhairab and Ashuganj is also being harvested, but the rest of the area supplied by the Meghna is suffering from lack of steeping water and little or no harvesting is taking place. The Meghna has shown little or no rise in its levels.

It would appear, therefore, that the northern and district jute will be coming in in fairly large quantities and a fair amount of jat jute will also be available, but the higher quality jat jute will not be harvested and will, therefore, be overgrown. The Tipperah area which is the very earliest to be harvested will also be suffering from the same deficiency.

Since market prices everywhere have come down, the condition of the fibre has improved, that is to say, the percentage of moisture is less. This reduction in prices, however, would appear to have levelled off and at present, it would appear that the loose jute prices are stuck at a parity of approximately £147 c.i.f. Continent for Export Firsts. Already, the shortage of Export Firsts has shown itself in an increase in the difference in prices between grades. In the pucca bale market, there has been very little activity except for occasional sales in cuttings. Export Hearts are almost as difficult to sell in Narayanganj as overseas. In sympathy with the local market, E.P.C. prices have gone down by £4 and may well fall further. From overseas, little or no business is reported. Presumably, the buyers are sitting out, waiting for lower prices.

One wonders whether, in fact, they should see much lower prices just yet. The Pakistani mills undoubtedly still need a fair amount of jute, and although the bigger units have managed to find ways to buy jute quietly, thus not affecting the market, this is not possible for all of them. There are several heavy commitments among local balers for the August position. A Dundee loader at the end of August is expected to pick up 27,000 bales. Furthermore, the Calcutta mills must come in fairly soon for the cuttings. But it may not be until September before prices become attractive to overseas buyers. E.P.C. registrations for the first fortnight of July were remarkably low at 121,265 bales. Belgium was the biggest buyer with 22,500 bales. India bought 22,400 bales, almost certainly all cuttings. U.K. bought 19,000 bales, West Germany 13,300 bales, France 9,000 bales, Yugoslavia 7,000 bales, Spain 5,600 bales, Italy 5,500 bales, Czechoslovakia 3,250 bales and Portugal 2,800 bales. Most people have calculated that business done for this period is well over 200,000 bales. Export figures for the last season are now available. It would appear that including India, total exports from Pakistan amounted to 2,983,990 bales, compared with 4,718,407 bales for the previous season.

HIDES AND SKINS STEADY

The market was quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 18th July and 24th July, 1961)
Cowhides: Wet salted (Ord.) 20,000 pcs. on the basis of Rs. 8.12 to Rs. 14.82; Wet salted (slaughtered) 27,700 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 26; Wet salted (Ord.) 10,000 pcs. on the basis of 72nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 1,07,100 pcs. on the basis of Rs. 300 to Rs. 330, Rs. 275 to Rs. 300 and Rs. 375 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 3.75 and (she-killed) on the basis of Rs. 3.50 a piece; Purneah-Kissenganj 12,200 pcs. on the basis of Rs. 280 to Rs. 320; Patna-Pakur (Ord.) 19,400 pcs. on the basis of Rs. 150 to Rs. 160 and Rs. 260 to Rs. 280; Muzafferpore 13,800 pcs. on the basis of Rs. 305 to Rs. 325; Bankura 800 pcs. on the basis of Rs. 470

Bazaar Stocks

(24th July, 1961)

WORLD COTTON CONSUMPTION PROSPECTS

According to the U.S. Foreign Agricultural Service, the world total consumption of cotton is expected to continue its expansion during the next two years in response to the improvement in general economic conditions and foreign exchange positions and to the growth of population. The increase in consumption, the Service's review said, will probably not be fully reflected in international trade in the commodity because about 70 percent of world consumption is in countries which produce all or most of the fibre used by their domestic mill industries. In the current season, the world's total exports of raw cotton are expected to be about 16 million bales, which will be second only to the high record figure of 17.2 million bales achieved during the last season. Cotton production this season in the non-communist countries is expected to total 32.7 million bales, exceeding by a very comfortable margin the previous high record of 31.3 million bales reached during the last season. Total consumption, however, is expected to fall to 30.5 million bales, compared with last season's high record of 31 million bales. Commenting on the U.S. consumption figures for May, Messrs Merrill Lynch, Pierce, Fanner and Smith, of New York, say in their latest market letter that they have little doubt that the trough of the cotton textile cycle has now been passed. It points out that the daily rate of consumption in May was 33,385 bales, compared with 32,361 bales in April, and 35,519 bales in May last year. The daily rate thus rose by 1,024 bales in May, compared with that in April this year, whereas last year the corresponding increase was only 109 bales. It also draws attention to an increase in mill stocks of raw cotton. At the end of May, mill stocks were 2,064,523 bales, against 1,826,437 bales a year previously, the total being 4,000 bales more than at the end of April, whereas in 1960 there was a net decline of 138,000 bales during May. Whether this increase indicates that mill management expected a higher rate of consumption in the coming months or whether it represents their response to the price support arrangements for the next season is a debatable point.

In Canada, where, as in the United States, the recovery after the 1958 textile recession began several months before it did in Europe and where, also as in the United States, a setback started about a year ago, the trend has now become much more encouraging. Canadian mills opened with 32,938 bales of cotton in May, compared with 29,069 bales in April and with 29,269 bales in May 1960, and the total consumption for the five months ended May was 151,484 bales this year, against 143,381 bales last year. It may thus be that the expansion in north America will tend to offset any decline in total consumption caused by decreases in Europe. In the United Kingdom, consumption is already running appreciably below the high rate reached at the beginning of last year, while in many Continental countries trade has slackened somewhat in recent months. In most

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to June 1961. As compared with May, the June Indices for Food, and Fuel and Lighting show increases of 3 points and 5 points, while those for Clothing and

Miscellaneous remain unchanged at 581 and 308 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 2 points during June 1961.

Books

FIVE YEAR PLANS: DEFECTS AND LIMITATIONS

Planning in India. By V. T. Krishnamachari. (Published by Orient Longmans Ltd, 17 Chittaranjan Avenue, Calcutta 13. Price Rs. 10, pages 281.)

There is no dearth of official or unofficial literature on India's five year plans, although the majority of it—especially the official kind tries only to highlight the lofty ideals embodied in this country's efforts for economic reconstruction. Mr. Krishnamachari's book, coming as it does from a former deputy chairman of the Planning Commission, was expected to be both unbiased and critical, since because of his intimate association with the Commission, he knows more about its defects and limitations than any outside observer. But the present reviewer feels—and many unbiased readers will undoubtedly do likewise—that Mr. Krishnamachari only toes the official line and has been unable to make an unprejudiced and critical appraisal of India's five year plans. This limitation is no doubt due to the fact that the book is only a collection of essays, the majority of which were written by the author when he was holding the high office in the Planning Commission. But the publication would certainly have been more interesting if the author had made a searching scrutiny of various issues. There is no denying that the plans have proved basically inflationary, that they have not solved the unemployment problem, that they have aggravated the pressure on balance of payments and have created a chronic raw material shortage which has affected the activities of many major industries. An impartial observer should point out that many of these problems have been due to the megalomania for "gigantism" as well as the Government's doctrinaire adherence to the socialist ideology. Another limitation of Mr. Krishnamachari's book is that it does not contain an elaborate discussion of the third plan. But in spite of these defects, it does contain much descriptive information which, with better processing and a critical interpretation, would have produced a better work on the subject.

mics and laws concerning hire-purchase. The new edition has been completely revised, and it includes all up-to-date developments. It also incorporates a new section on instalment credit in the Commonwealth, the United States and Europe. Besides, the comprehensive appendices include legislation on instalment credit as well as the sample proposal form and model agreement. In fact, there is much interesting information on the principles and practices of hire-purchase in all its forms. While discussing the crucial question of State control of hire-purchase financing, the authors are apparently doubtful about the need for official action. As a defence against inflation, they argue that hire-purchase controls are neither well directed nor effective. They contend that the Government should discharge its direct responsibility for regulating the supply of money, leaving producers and consumers to accommodate themselves in the way they like. On the other hand, they urge hire-purchase companies to give serious thought to the publication of fuller financial information and a greater use of credit bureau. Besides, they are urged to exercise caution in applying commercial standards to deposit and repayment requirements.

DEMOCRATIC PLANNING

Democratic Planning: Problems and Pitfalls. By K. Santhanam. (Published by Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 9.50, pages 201.)

One of the greatest experiments in human history is taking place in India today—planning within democracy. But is it possible? According to the planners, democratic planning alone can ensure freedom. But the path—to put it mildly—

is beset with hurdles and pitfalls. The political and economic implications of democratic planning are numerous and intricate, calling for a great deal of realism and clear-sightedness on the part of the planners. This problem has been analysed from different angles by Mr. Santhanam in the 40 and odd articles collected in the book. Being originally written for newspapers, they are brief and to the point, but the style varies from the polemical to the straight-forward essay. Grouped under three broad heads, they cover a wide field, including anti-corruption measures and co-operative farming, Panch Sheel and the linguistic division of India. Many of the essays are thought-provoking, particularly those dealing with the financial problems. Here Mr. Santhanam, as the chairman of the second Finance Commission, speaks with authority. Elsewhere, his plea for adapting the plan to the people, and for "direction planning" rather than "target planning" raises fundamental issues. The author's advocacy of the middle path does not preclude austerity and sacrifices—a Minister, according to him, should not spend more than Rs. 1,000 a month! He also believes that unless "basic moral values are restored and a national discipline in the widest sense is re-established, the possibility of taking off without the danger of a crash is rather dim".

Mr. Santhanam is a fluent and forceful writer, although one cannot agree with all his views or accept his reasoning in every case. Some of the essays sound a little platitudinous; in others the policies suggested by him—as in the case of land reforms and agricultural marketing—seem to be as impracticable as those he has criticised. But such defects are probably unavoidable within the span of short essays.

UNDERWRITING OF SHARES

The New Issue Market and the Stock Exchange. By A. K. Sur. (Published by the author from Indian Institute of Social Welfare and Business Management, College Square West, Calcutta. Price Rs. 12.50, pages 179.)

The story of the growth of the new issue market in India makes interesting reading, although this country does not yet have an integrated market for new issues as in the developed western economies. Nevertheless, it is growing because of the underwriting activities of the Life Insurance Corporation, the Industrial Credit and Investment Corporation of India, the Industrial Finance Corporation and the various State Finance Corporations. Besides, the growing interest of the leading stock broking firms in the market has promoted its growth in the last decade. But the crucial problem is whether it will continue to receive the support of institutional or professional underwriters even in times of a recession in share values. This seems doubtful. The author says that it was only in 1948 when the stock market was dull and the Nepa Mills wanted to float its shares, the brokers in the Calcutta Stock Exchange were reluctant to underwrite its shares, although it was an attractive issue. Mr. Sur has not, however, elaborately discussed the effects of the proposed stock exchange legislation on the growth of the new issue market. But there is no denying that its activities will be curbed if the Government goes ahead with drastic measures to retard genuine investment activity in the name of curbing speculation. One can, however, unhesitatingly say that the boom in the new issue market last year was due to the warm support from underwriters as well as middle-class investors who have lately shown much interest in the market. Apparently, the heavy burden of corporate taxation does not allow companies to plough back profits for expansion, and there is no reason to believe that the burden will be reduced in the immediate future, thanks to India's five year plans. Being unable to fall back on self-financing, the companies will, therefore, have to rely on the new issue market for raising resources. Mr. Sur ably analyses the various problems connected with the growth of the new issue market. But some elementary chapters could have been omitted and needless repetitions avoided to improve the standard of this publication.

INSTALMENT CREDIT

Hire Purchase in a Free Society. (Published by the Institute of Economic Affairs by Hutchinson and Co. (Publishers) Ltd, 173-202 Great Portland Street, London, W.1. Price 30s, pages 319.)

When first published in 1958, the book was immediately recognised as the first systematic and authoritative discussion of the subject. It is a standard work—much used by economists, students and business men—and is often credited with influencing policy. The publication gives a comprehensive account of the history, finance, econo-

MR. AL FOIL GIVES A LIGHT

Fifty seven years' experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionary, Tea and many other industries.

"Delightfully fresh, my Lady Nicotine... just as I like her." "Naturally," replied Mr. Foil with a knowing smile, "these are the virtues of the lady in question. Think of the protection she enjoys. Snugly wrapped in aluminium foil from tip to toe, the flavour of her tobacco, the freshness and fragrance are sealed within. Her foil wrap, as decorative as mink, protects her from dirt too. Sufficient reasons you'll agree, sir," finished Mr. Foil, "for the lady to insist on a foil wrap, whether she comes to you as a pipe smoke or a slender cigarette!"

STRONG GENERAL DEMAND AT TEA EXPORT SALE

QUALITY DUSTS RISE

AT Sale No. 8. held on 24th and 26th July, there was a strong general demand at the Export auction for the 31,565 chests on offer. Orthodox descriptions, particularly the medium and plainer sorts, met with keen competition and sold well, the B.O.P.'s being the strongest feature and were generally dearer. Similar B.P.'s were fully firm to dearer, while their Fannings sold readily, but at rates a little below last week. Better and medium C.T.C. descriptions again sold well, but at slightly easier rates while the poorer sorts remained fully firm. Legg-cut descriptions were well supported and were generally fully firm to dearer. The few flavoured Darjeelings on offer generally sold at dearer rates, while the remainder, however, declined in price and a number of teas in this category were withdrawn without a bid. Stylish whole leaf grades were in good demand at about last rates, but the poorer kinds were easier. Tippy teas again met with active support at firm to dearer rates.

Quotations	1961	1960
Plain Plain Pekoe	Rs. a kilo 5.25 to 5.35	5.30 to 5.50
Plain B.P.	4.85 to 4.95	4.60 to 4.70
Plain Fannings	4.65 to 4.75	4.40 to 4.60
Medium Assam C.T.C. B.P.	6.20 to 6.60	5.00 to 5.20
Medium Assam C.T.C. Fannings	6.40 to 6.80	4.80 to 5.00
Best Assam C.T.C. B.P.	7.40 to 7.60	8.60 to 8.80
Best Assam C.T.C. Fannings	7.30 to 8.20	8.50 to 9.00

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a good general demand for the 14,659 packages of Dusts on offer. Plain orthodox descriptions were generally taken up at a discount of 10nP while the bright liquoring Assams were often dearer, particularly the small types. Legg-cut teas met with a good enquiry, and the small bright liquoring descriptions were generally dearer.

C.T.C.s were rather irregular with the brighter lines selling well.

Quotations	1961	1960
Plain Orthodox Dust	Rs. a kilo 4.40 to 4.65	4.40 to 4.70
Medium Assam Dust	4.60 to 5.40	4.50 to 5.00
Legg-cut Dust	4.70 to 5.50	
Medium Assam C.T.C. Dust	6.40 to 6.70	5.60 to 5.90
Good Assam C.T.C. Dust	6.80 to 7.20	6.10 to 6.50

(Quotations are inclusive of excise duty.)

The 24 chests of Leaf on offer sold at irregular rates.

FREIGHT MARKETS REMAIN DULL

THERE is still no sign of improvement in the freight markets. In the northern range, food-grain to the U.K. paid 40s against last paid 54s. Australian shippers concluded a fixture of wheat in bulk ex-silo from New Castle (N.S.W.) to Durban at 47s 6d with 750 discharge free and flour in bags from Sydney to one to two ports Ceylon 74s 6d with 25 6d extra for discharging at two ports. The Indian Sugar Mills Association has accepted three vessels from Calcutta for 6,000 tons each. Sugar in bulk to one port North Atlantic paid \$(U.S.) 6.50 f.i.o. and another motor vessel, 9,500 tons 5 percent sugar in bulk from Kakinada to the U.S. Atlantic or Gulf at the same rate of \$(U.S.) 6.00 f.i.o. At the same time Pakistan paid \$(U.S.) 12. f.i.o. on 10,000 tons sugar in bags from one port north or south Cuba to Karachi. A fixture for 10,000 tons 10 percent chrome concentrate in bulk Calcutta to North Korea has been concluded at 64s f.i.o. trimmed. The time charter section remained steady. A Liberty size vessel delivery Singapore for a paid 17s. Delay in berthing at Madras is continuing. Visakhapatnam port has a partial labour strike. The 3in. cut in the August draft of the Hooghly has since been restored.

LINSEED FIRM

The market was firm in the past week, but business was very restricted with both buyers and sellers pausing. Arrivals from upcountry were meagre. The oil market was dull with little activity from buyers, but sellers were generally reserved. The oilcake market was steady, local business being done daily, but supplies were limited. The U.K. market improved, but Indian prices were out of parity. The latest quotations are as follows: Ready July delivery Rs. 30.00 a maund.

COMPANY AND PUBLIC NOTICES

TEZPORE TEA COMPANY, LIMITED

NOTICE is hereby given that the Forty-third Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Friday, the 18th August, 1961, at 3-30 P.M. for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1960.
- (2) To declare Dividends.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their remuneration.
- (5) As Special Business:

To consider and if thought fit to pass with or without modification the following resolutions:—

- (i) (As a Special Resolution). "Resolved that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of the contract entered into between the Company and its Managing Agents, Shaw Wallace & Company Limited, in respect of sales of teas made by the Company to the Managing Agents during the financial year ended 31st December, 1960, at market prices amounting in aggregate to Rs. 42,849."

- (ii) (As a Special Resolution). "Resolved that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a contract (in terms of the draft placed before the meeting and initialled for identification by the Chairman of this meeting) being entered into between the Company and its Managing Agents, Shaw Wallace & Company Limited, for the period of five years therein mentioned in respect of sales by the Company to the Managing Agents of teas required by the Managing Agents not exceeding in price Rs. 1,00,000/- in the aggregate in any one year on terms that the price of each sale shall be determined on the basis of market rates and shall be payable by the Managing Agents to the Company within one month of each such sale as aforesaid."

- (iii) (As a Special Resolution). "Resolved that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and in supersession of the contract dated 15th May, 1958 the Company hereby approves of a contract being entered into between the Company and its Managing Agents, Shaw Wallace & Company Limited, effective for five years from the date of passing of this resolution, for the purchase by the Company from the Managing Agents at market rates of (1) Fertilisers (2) Hessian Cloth, (3) Fungicide, Insecticide and other chemical preparations, (4) Sprayers and sprayer parts, (5) agricultural implements (6) machinery spares and accessories, (7) stationery, stores and belting and (8) paints on the terms and conditions set out in the draft agreement placed before the meeting and initialled by the Chairman for identification."

The Transfer Register will be closed from the 10th August, 1961 to 18th August, 1961, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, dated 18th July, 1961.

MORE CAPITAL FOR THE BANKING SYSTEM

THE proposals put forward by the Reserve Bank for legislative regulation of the ratio of banks' capital funds (paid-up capital and reserves) to deposits, together with the changes suggested in cash and liquidity ratios, are no doubt conceived with the best of intentions. But it remains to be seen whether readiness to rush into legislation, however well intentioned, is the best means of attaining the desired ends. It may well happen that the measures contemplated will, if put into effect, raise a crop of new difficulties even more serious than those they are intended to overcome. There can be no doubt that banks' "own resources", as a proportion of their deposit liabilities, have deteriorated over the past several years. The decline in the proportion from 13 percent in 1939 to 9 percent in 1950 and 4 percent in 1960 is a consequence of the phenomenal increase in deposits and the inability or unwillingness of banks to increase their capital and reserves correspondingly.

It is significant that the ratio is lowest for the biggest banks. As against 4 percent for scheduled banks, non-scheduled banks make a much better showing with a ratio of 15 percent, although even in their case there has been a decline from 21 percent in 1950. There seems to be a well-established inverse relation between the volume of deposits and the ratio of "own resources" to deposits, both in the case of individual banks over time and between different banks. For the biggest banks, those with deposits of over Rs. 100 crores, the ratio is a mere 3 percent, even lower than that for scheduled banks as a whole. While it is true that the soundness of a bank depends essentially on the nature and distribution of its assets, it would be dangerous to disregard the importance of an adequate proportion of capital funds to deposits. Capital and reserves are not simply a protection for depositors in the extremity of a liquidation. They constitute the necessary basis which imparts soundness and strength to the superstructure erected on it.

The Reserve Bank is of the opinion that the minimum proportion compatible with financial soundness of capital funds to deposits is 7.5 percent. Any such judgment must inevitably be arbitrary, and the wisdom of enforcing such a ratio uniformly for all banks irrespective of other relevant considerations is open to question. How much capital and reserves a bank requires for ensuring financial stability depends not only on the volume of its deposit liabilities, but also on the soundness of its management, the degree of risk to which it is exposed, the nature of its lending activities, and above all on the magnitude of its inner or "secret" reserves. An indiscriminate rule of thumb in such a situation may do more harm than good. There is perhaps a case for prescribing a variable instead of a uniform proportion, the ratio falling as the volume of deposits increases. Legal regulation of the ratio would involve the further difficulty that as deposits rise from year to year, as they are almost certain to do, banks would be required to increase their capital and reserves continuously. Many would find it difficult, if not impracticable to do this.

The Reserve Bank recognises the difficulty of imposing the legal minimum ratio all at once. It proposes, therefore, that banks should be required to transfer to reserves each year 20 percent of profits before taxation, not only till the reserves equal paid-up capital, which is the present requirement, but until the ratio of paid-up capital and reserves equals 7.5 percent of deposits from the public at the end of the preceding year. Where the legal proportion to be attained or will not be enough to reach it because of inadequacy of profits or the rapid expansion of deposits, it is proposed that the Reserve Bank be empowered to require such banks to increase their paid-up capital either through a new issue of capital or through calls on unpaid capital, whenever the

latter is possible. The present provision in the Banking Companies Act, linking the compulsory transfer to reserves of a proportion of profits to the paid-up capital alone, is a positive disincentive to any increase of capital, since such an increase would necessitate a further transfer of profits to reserves and would consequently adversely affect dividend prospects. The proposed change would remove this anomaly and is therefore soundly conceived. What raises misgivings however is the proposal that banks be compelled to make new issues of capital. Not even the qualification that the Reserve Bank "will bear in mind the prevailing conditions on the stock market and other relevant circumstances before directing a bank" to do so, is enough reassurance that such wide and possibly destructive powers will not at some time be misused.

The power to direct banks to make a new issue of capital, if vested in the Reserve Bank, will have to be exercised with the utmost circumspection. Bank shares are by no means the favourite choice of investors, who have so many more attractive opportunities for choosing scrip with high-income as well as growth prospects. The expansion of the capital base will, in all probability, involve a decline in dividends, first because it will necessitate the building up of larger reserves and more important, because in the case of banks there is only the most tenuous relation between the increase of capital and higher profitability. It is precisely for this reason that banks showed no anxiety to increase their capital as their volume of business expanded over the years, and that the question of compelling them to do so by law has arisen. Should such an issue be made under compulsion and fail, it would have the most serious effects on public confidence and might well precipitate the sort of crisis which this proposal is designed to avoid. And yet, if the 7.5 percent ratio is to be attained, it might be necessary to increase capital somehow. It is almost certain that deposits will continue their upward trend during the next few

GROWTH FOR THE ASKING

IT is difficult to echo the congratulatory note struck by the Reserve Bank Governor, Mr. H. V. R. Iengar, when he discussed India's economic progress in his B. F. Madon Memorial Lecture given in Bombay last week. It is hardly to be expected of central bank governors that they should criticise their governments' policies publicly and at length, but Mr. Iengar's corroboration of current planning policy was such as to give the impression that he actually meant what he said. If this is so, then it is unfortunate that there is so little of the spirit of critical appraisal in this exalted quarter. Mr. Iengar's acceptance of the current hopelessly inadequate rate of growth suggests complacency, and is certainly no better for quoting in its defence the flattering utterances of foreign economists fresh from the usual Government-sponsored tourist round of dams, unfinished steel plants and machine tool factories. These are intended to impress the uninitiated; it would be a pity if Mr. Iengar swallowed the propaganda line as well. The debate on India's progress has got beyond this point, and for every compliment India receives on what progress has undoubtedly been achieved so far, there are nowadays a dozen doubts expressed as to whether this is in fact enough and whether it could not be more if different policies were adopted. Only the solid incontrovertible facts of economic growth are appropriate as evidence of whether present policies are adequate, not the words of foreign visitors or interested international institutions; and it is these facts which are the biggest indictment of all.

To claim that a 3½ percent per annum rate of economic growth is the maximum obtainable

years and, in such conditions, if profits do not rise steeply, 20 percent of profits transferred to reserves each year may be less than 7.5 percent of the increase in deposits. So the desired ratio may never be attained by the method of building up reserves also.

The calling up of uncalled capital stands on a somewhat different footing. In cases where the share capital is closely held, there may even be something to be said for treating the uncalled capital on a par with reserves for purposes of computing the ratio of capital funds to deposits. Where new issues have to be made in the form of rights shares, the chances of raising the required capital might be greater if they were permitted to be made at par rather than at a premium. The case for this is strengthened by the fact that the new capital will make little or no contribution to the earning of higher profits by the bank. Insistence on the 7.5 percent ratio of capital funds to deposits may well be misconceived because it does not take into consideration the magnitude of "secret" or inner reserves of banks. The existence of such inner reserves and the need to ensure their secrecy as a cushion of safety for banks was recognised by the Banking Companies (Amendment) Act, 1960. This Act protected banking authorities from disclosing such reserves to the authorities constituted under the Industrial Disputes Act, although empowering the latter to call for certificates from the Reserve Bank regarding the amount of such reserves as may be taken into account for the purposes of the proceedings under the Act. Perhaps the most serious objection to the insistence on the 7.5 percent ratio would be that the larger contributions to published reserves thereby necessitated would reduce the power of banks to build up such reserves and may even involve inroads on them. Measures intended to strengthen banks may thus have precisely the opposite effect. The Reserve Bank, perhaps, needs to be reminded that while its anxiety to safeguard the interests of bank depositors is justified, it is necessary to ensure that measures devised with that end in view do not do violence to the rights and interests of two other groups—the shareholders whose capital sustains the banking structure and the business community which looks to the banks to provide an adequate stream of credit without which organised economic activity will grind to a halt.

under present circumstances is to invite the retort that it is, then, about time circumstances were changed. Without necessarily contradicting Mr. Iengar when he says that India cannot hope to match the growth rates of Germany and Japan, there seems no good reason why she should not aspire to them. But more relevant than the cases of the two countries mentioned are those of nations at a comparable state of development; and in this connection it is interesting to recall the statement made recently by Mr. S. P. Jain, chairman of the Indian Chamber of Commerce, that India's rate of growth is one of the slowest of any developing country in the world. Per head of population it is probably the lowest by a substantial margin. When mis-governed, war-torn Indonesia, without anything like the same amount of foreign assistance, can set India a pace in the race to development, then it is time this uncritical acceptance of current methods was replaced by some good, healthy scepticism. This is not a problem which the glimpse of a few dams and steel plants should be allowed to obscure. There is no reason why India could not achieve rates of growth far in excess of those which prevail at the moment if a more flexible and less socialistic form of planning were adopted. That is if it is intended democratic methods should be retained. Alternatively, India might with advantage give up the whole idea of democracy and pursue development by totalitarian methods, which are anyway known to work. At the moment the country is enjoying the worst of both worlds, and growth is being retarded in consequence.

If the present 3½ percent per annum rate of growth had been achieved under conditions of

complete stability and without the stimulus of massive foreign aid, there would undoubtedly be some excuse for congratulations. But this has not in fact been the case. On Mr. Iengar's own somewhat-qualified admission, prices have been rising during the past five years at round about 6 percent per annum. This is not runaway inflation; but it is too great a rise for comfort and is one of the main reasons why India's rate of domestic saving is as low as Mr. Iengar ruefully admits it to be. The balance of payments during the past five years has been so adverse that India no longer has any sterling balances of consequence, and is now dependent on foreign aid for a proportion of even the normal import of raw materials needed to keep her industries going. Bottlenecks are already developing at vital points in the economy, such as railway transport and electric power; unemployment is rising with successive plans; labour is restive and inefficient; industrialists are chafing under the weight of high taxes, frustrating controls, and a cumbersome, all-pervading, bureaucracy. And monetary policy, as Mr. Iengar must be well aware, is in anything but satisfactory shape. As was made plain in the recent report of the Reserve Bank, the banking system is strained to the point where legislation is having to be contemplated in order to force banks into increasing their capital and reserves and improving their liquidity ratios. In no sense are the banks at present in a condition to undertake the credit expansion which will be required of them during the third plan period.

When to this list of unsatisfactory features is added the virtual stagnation of exports—on which the prospects of future foreign exchange earnings and the repayment of aid credits depend—it will be seen that India has paid a truly fantastic price for her meagre 3½ percent per annum increase in economic activity. If it is beyond the wit of man to devise an alternative to the expenditure of so much effort for such little return, then the future of the Indian people is grim indeed. Few economists would today accept Mr. Iengar's claim that this is the best that can possibly be done. In fact it is nothing of the kind, and India does not have to look very far around her to see why.

The present rate of growth is, according to Mr. Iengar, limited by the scarcity of savings.

This is one reason among many, although it is probably the most important. But it is not to be expected that savings will rise when those who save, including companies, are deprived of their surplus resources by high taxes, when it is regarded almost as immoral for an individual to draw a large income from investments, and when the common man is being deprived of a large proportion of his potential saving by rising prices. While the Government insists on financing large-scale, long-term, projects in the public sector by crippling taxes and low-cost borrowing, it is obvious that savings cannot grow at the rate required. Saving, as distinct from hoarding, is only indulged in by those who expect to enjoy some benefit from doing so. But when all benefit is appropriated by the Government for its own massive, but desperately slow-yielding, prestige projects, no incentive remains. The way to quicker growth in this country is to encourage the general

will to work and save. In a democracy this can only be done by maintaining as flexible an economy as possible and by permitting incentives to achieve what exhortations at the moment are patently failing to do. To the reminder that such incentives would mean less resources for Government investment, there is one obvious answer: cut this kind of investment, let private industry do it instead. It is no argument these days that the private sector is unable to undertake the kind of investment the country needs. It is well able to take care of all but a small portion of such investment, and is anxious to do so; but the Government is constantly revealing its socialist intentions by encroaching even on activities which private industry is already doing perfectly well. If Mr. Iengar regards this state of affairs as satisfactory, it is clear that the majority of India's savers do not, or the rate of saving in this country would be nearer the level required.

CITY DEBATES RESTRICTIONISM

THE reaction of the City of London to Mr. Selwyn Lloyd's measures to strengthen sterling was confused and in one sense disturbing. An argument for raising prices of ordinary shares was that the deflationary measures were in effect inflationary, and that their logical result would be devaluation of the pound. This brave attempt at self-interested optimism in the stock market soon collapsed when it was realised that devaluation implied another crisis, or series of crises, in the meantime, but the idea itself still lingers in the City. Basically, of course, an increase in taxes is deflationary, as it absorbs purchasing power; but an increase in the cost of living is not the most obvious way to restrain wage demands, and wage earners, mindful that the Budget last April reduced tax on higher incomes (surely a grievous psychological mistake), are now in a militant mood. The alternatives now seem to be to concede wage increases or to suffer strikes, and either way leads towards a crisis.

Some people think that there is a third alternative, and that it is the one the Chancellor has

chosen. They believe that his desperate intention is to cause a recession in domestic trade, to loosen the labour market with unemployment, and to force manufacturers to export their products by depriving them of their normal home market. The reasoning behind this idea is that Mr. Lloyd has applied indiscriminate restraints on an economy that is bulging in only a few sectors, such as the building and the machine-tool industries (and even the machine-tool trade was slackening before the restrictive measures were announced). The 10 percent surcharge on indirect taxes is not only inequitable, in that it bears most heavily on goods—such as tobacco, alcoholic drinks, petrol, cars—that were previously heavily taxed, but also irrelevant to the main problem, which is shortage of labour and rising costs in the capital industries. The further call for "special deposits"—previously 2 percent, they have been increased to 3 percent—will prevent the banks from lending more, particularly for personal consumption and property development. The increase in Bank rate—from 5 percent to 7 percent—is intended, partly, to restrain demand for credit; and it operates indiscriminately—on export trade as well as on home trade.

If the Chancellor's intention is to cause a recession in the home market, he has evidently forgotten that in the post-war era recessions have not prevented wages from rising and he has evidently ignored the warnings of all mass-producing exporting industries—particularly the motor-car and the domestic appliance industries—that they cannot reduce their unit costs if they are forced to reduce their output. If the Chancellor's intention is simply to relieve pressure he is still using the technique that has repeatedly failed to solve Britain's problems—the technique of restriction. The orthodox use of Bank rate has particularly disturbed progressive opinion in London. Mr. Lloyd's explanation was revealing: partly to restrain credit internally "and partly because of the unsettled international situation". The reference to the international situation meant, presumably, Berlin: if the crisis is accentuated, nervous holders of short-term funds may transfer them from Europe, unless high short-term rates in Europe exert a stronger pull. But in that situation Germany, the main recipient of foreign funds in recent years, would lose most; and even at 5 percent Britain's Bank rate was much above Germany's at 3 percent.

It is quite possible that last year's mistake will be repeated—and repeated deliberately. Then foreign funds flowed into London and the basic weakness in the position of sterling was apparent only to those who analysed the trends. The outflow this year has revealed the weakness even to casual observers. It may be that, in the present political situation of Europe and the present economic position of Britain, the British authorities feel incapable of stabilising sterling without recourse to the high Bank rate that was temporarily effective last year. If so we must be apprehensive of next year. The Chancellor's measures achieved, immediately, the desired improvement in sterling, but there is no evidence that fundamental confidence in the currency has been restored. The Chancellor has shown that the flexible economic regulators that he introduced proudly in his Budget speech are only variants of the old technique. The world has seen that technique fail repeatedly; how can it be confident of success this time?

British opinion is not merely divided but fragmented. It covers the whole range from the optimistic belief that the situation would soon have corrected itself if the authorities had not interfered to the pessimistic belief that devaluation is the only practicable solution of the problem of the pound. The optimistic idea is not as absurd as it may seem. It is true that the sterling area's reserve would have diminished alarmingly this year if the foreign centr

ers had not assisted sterling by holding abnormal quantities of it, but some of the factors that would have diminished it are temporary. Foreign funds cannot flow out indefinitely. The process of advancing or delaying remittances—the so-called "leads and lags"—operated in favour of sterling last year, when interest rates were high in Britain and the dollar was distrusted; so this year, if only by the lapse of time, they have operated against sterling; and this process, too, being self-adjusting, cannot continue. The American economy is expanding—it may have

entered a new phase of inflation—and will probably soon attract more imports from the sterling area. Talk of devaluation of sterling is, therefore, premature, although the Government's measures are not in themselves reassuring. Devaluation is not, anyway, the right solution of the problem if the deficiency of British exports and the excess of British imports are due to factors other than relative prices. Yet even in Britain some economists favour devaluation as the only apparent alternative to this harmful policy of restraint.

Henderson Ltd—for the year ended March 1961, just published, show how the working has been affected by high prices for fibre, compared with those of jute goods. There has been an acute shortage of raw jute and the mills have had to cut production. This has inflated production costs. The directors of the Howrah Mills Co. state that the prospect for the immediate future is far from encouraging. The working for the first three months of the current financial year has resulted in substantial losses, which may be increased further during the second quarter. At the present time there is a wide disparity between the price of raw jute and the prices at which the mills sell the finished products. Although there have been block closures of all mills for two weeks, it is not certain whether the working of the industry can run without interruption until the weight of the new crop begins to be felt from the end of September. Notwithstanding a hope that more profitable conditions may return to the industry later when adequate supplies of raw jute become available, it is too early to predict whether the profits earned then will be sufficient to offset the losses already incurred. But the directors mention that while it is inevitable that the high prices which have obtained for jute goods during the past year or so must have some effect on the future level of demand for gunnies, it is reasonable to assume that once prices have moved down to more reasonable levels, there will be a certain backlog of demand to be satisfied. Provided sufficient raw jute is available, there is a prospect that the working hours of the industry may be increased later in the year, when working costs of the mills may take a turn for the better. Efforts are being made by the directors of the Howrah Mills Co. to improve efficiency in order to mitigate the losses which are being incurred under present circumstances.

The trading profit of Howrah Mills has improved from Rs. 9.48 lakhs in 1959-60 to Rs. 15.96 lakhs in 1960-61, after providing Rs. 9.82 lakhs (against Rs. 10.94 lakhs) for depreciation. The ordinary dividend has been reduced from 12½ percent, taxable, to 10 percent, taxable. It is covered more than twice and gives a yield of 5.1 percent at the present price of Rs. 19.50 a share. General reserve receives Rs. 1.50 lakhs (against Rs. 2.50 lakhs), debenture stock sinking fund Rs. 1 lakh (against the same), taxation Rs. 5.05 lakhs (against Rs. 62.527) and development rebate reserve Rs. 17.494 (against Rs. 37.340). The carry-forward is Rs. 97,720, against Rs. 72,382 brought in.

The profit of Reliance has declined from Rs. 17.51 lakhs in 1959-60 to Rs. 5.35 lakhs in 1960-61, after providing Rs. 36,000 for depreciation. Taxation absorbs Rs. 1.27 lakhs (against Rs. 69,000) and contingencies Rs. 98,000 (against Rs. 9.32 lakhs). The dividends have again been passed and the debit balance is reduced to Rs. 28,32,381, which is being carried forward. The directors of Reliance say that at no time during the year under review was it possible for them to contemplate the re-opening of the mills, and the Company's main source of revenue was again derived from the sale of its loom hours in terms of the working time agreement of the Indian Jute Mills Association. In view of the much less satisfactory conditions obtaining in the industry as a whole for the greater part of the year, the rates at which it was possible to dispose of loom hours fell progressively, with the result that the Company's income from this source was reduced from Rs. 23,91,456 to Rs. 13,51,739. Contracts for the sale of loom hours to the Howrah Mills Co. Ltd, the Kamarhaty Co. Ltd, the Kankarnah Co. Ltd and the Barnagore Jute Factory Co. Ltd, all under

Current News and Comment

Bonus Issue by Bengal Paper

The Bengal Paper Mill Co. Ltd proposes to issue bonus shares, by capitalising reserves, in the ratio of one new share for every five held, subject to the sanction of the Controller of Capital Issues. It has also been decided to sub-divide the ordinary shares of Rs. 25 each into shares of Rs. 10 each. The expansion and modernisation schemes of the Company are making satisfactory progress. In order to finance these schemes, Bengal Paper proposes to issue rights ordinary shares and convertible loan stocks in due course. In his chairman's statement at the annual general meeting held in Calcutta last Monday Mr. N. D. Bangur stated (a full text of the statement is printed on another page of this week's *Capital*) that the brown stock washing plant has started production. The recausticising plant, the water clarification plant and other machinery, have also begun to operate. This new equipment was installed at a cost of Rs. 36 lakhs and is expected significantly to reduce the washing losses and improve the caustic recovery. An order has been placed for the sixth paper machine and shipment may begin in a few months' time. Orders for the multi-stage bleaching plant and other equipment to be obtained from the U.S.A. will be finalised on receipt of the approval of the D.L.F. loan. The expansion schemes, it is hoped, will increase the output capacity to 100 tons a day. During the year ended December 1960, the trading profit of Bengal Paper increased to Rs. 50.83 lakhs, against Rs. 49.05 lakhs in the previous year. Production rose from 15,927 tons to 18,105 tons. The taxable ordinary dividend has been maintained at 32 percent.

Commenting on the price structure of the commodity, Mr. Bangur points out how uneconomic it is. The prices which have been fixed since the beginning of 1960 were determined in order to give a return of 12 percent on the capital employed, but the return includes labour bonus, interest on debentures and loans, managing agents' remuneration, directors' remuneration, taxation, reserves and interest on working capital. As a result, not only do the shareholders obtain very little in the form of dividends, but the industry cannot plough back the necessary resources for expansion and rehabilitation. Considering that the industry has been set by the third plan a higher output target of 700,000 tons a year—which is double the production during the second plan—it is essential that the industry be permitted to obtain the necessary resources in the form of higher prices for the commodity. Mr. Bangur mentions the representations which have been made to the Government on this matter: it is now hoped that the Government will soon increase prices to a more realistic level. He also refers to the adverse effects of the increased excise duty. In order to encourage a greater use especially of cheap paper, it is necessary to make the commodity cheaper by reducing the burden of the duty.

Sugar Surplus and Production Costs

Thanks to the Central Food Ministry's production incentive scheme, sugar output in India has recorded an impressive rise over the past few years. In the 1959-60 season, the industry produced 2.42 million tons, which was an increase of 500,000 tons over the previous period, and substantially in excess of the second plan target of 2.25 million tons. Again, during the 1960-61 season, production is estimated to have risen to a record 2.98 million tons. This remarkable growth in output has not been accompanied by a corresponding increase in home consumption, and the industry is having to contend with the problem of a heavy accumulation of stocks. The president of the Indian Sugar Mills Association, Mr. D. D. Puri, in his address to the latest annual general meeting held in New Delhi last week, has described the situation as one of "deepening crisis." (A fuller version of the speech appears on a later page of this issue of *Capital*.) Sugar consumption last

year, said Mr. Puri, actually showed a slight fall to around 2 million tons, compared with the previous year's figure; and offtake during the current year has been running practically at the last year's level. Consequently, the industry had a large carry-over stock of 550,000 tons on 1st November, 1960, against only 153,000 tons a year earlier. This year, surplus stocks could well rise to 1,475,000 tons. "This huge carry-over, representing more than two-thirds of the annual consumption, is obviously an extremely heavy burden on the financial and storage resources of the country," Mr. Puri emphasised.

Discussing export prospects, Mr. Puri said that although exports held out the only solution to the problem, overseas sales are possible only at a heavy loss, as the "world market prices are much below our cost of production." The actual exports for which contracts have so far been concluded are far from satisfactory. The U.S.A. has allocated a quota of 225,000 tons for her sugar imports from India, although Washington had been approached to buy 500,000 tons. Only 100,000 tons have so far been exported to Malaya and West Asian countries. On present indications, it might be possible to export another 50,000 tons—or, in all, a total export of 350,000 tons. "This will hardly touch the fringe of the problem. After providing for a carry-over of 500,000 tons, there will be still an exportable surplus of 650,000 tons," Mr. Puri pointed out. If an outlet is not found in the meanwhile, the only alternative would be to restrict production next season. But indications are that there is going to be a bumper sugarcane crop this year, and any cut in output would, therefore, not only affect the economics of the industry adversely, but also the livelihood of millions of cane-growers. The long-term solution to the problem, therefore lay in taking positive measures to raise consumption at home, as exports could provide only short-term remedies. Referring to the fact that the high prices of sugar have been restricting domestic offtake too, Mr. Puri said that this was mostly due to the heavy taxation of the industry. Irksome official controls governing the prices and movement of sugar have been also affecting home consumption. A suitable reduction in the fiscal levies and energetic measures to raise the quality of cane would effectively assist the producers to bring down their costs and thereby sell their product at a cheaper price to the consumer.

the management of Jardine Henderson Ltd, terminated on 3rd June, 1961. At this date market conditions were so unfavourable, and the losses being incurred by mills so large that none of these companies was prepared to purchase loom hours from Reliance. The directors were, therefore, faced with the alternative of either arranging for the retrenchment of the Company's labour force or paying lay-off compensation. To adopt either course would have involved the Company in heavy liabilities which could impair the financial position. So it was arranged after negotiation that Reliance's loom hours should continue to be worked by the other companies named on the basis that Reliance made payments to these other companies in order to compensate them for the losses sustained in working the loom hours. This arrangement will remain in force until 30th September 1961, by which time it is hoped that more profitable working conditions in the industry as a whole will again render it possible for the Company to dispose of its current loom hours at a profit.

Another source of income is derived from the leases to the Government of India of the various jute and gunny godowns. Earnings from this source increased from Rs. 1,60,369 to Rs. 2,85,112. The gross monthly income on this account is now running at a level of Rs. 28,442. The position concerning the re-opening of the mills remains unchanged. "Current market conditions preclude any possibility of re-opening a mill which has not been modernised," the directors state. The Company's financial position, although it continues to improve slowly, does not justify the directors in undertaking large-scale modernisation which would be necessary in order to place the mill's working on a profitable basis.

Cochin Malabar Earns More

Despite a fall of 7.73 cents a kilogram in the average selling price of rubber, the sales of Cochin Malabar Estates Ltd for the year ended February 1961 fetched Rs. 66.92 lakhs, against Rs. 49.10 lakhs in the previous year. This was because of a substantially larger rubber crop of 1.27 million kilograms in 1960-61, compared with 979,000 kilograms in 1959-60. The larger crop led to a marked decline in the all-in cost of production from 292.76 cents a kilogram in 1959-60 to 270.15 cents a kilogram in 1960-61. Increased rubber output and a fall in the all-in cost of production enabled the Company to earn a gross profit of Rs. 22.03 lakhs in 1960-61, compared with Rs. 14.25 lakhs in the previous year. While sales are up by about 36.3 percent, the gross profit has recorded an increase of nearly 54 percent, indicating a marked improvement in the Company's profit margin in spite of lower selling prices. After providing Rs. 1.51 lakhs (against Rs. 1.36 lakhs) for depreciation, Rs. 10.46 lakhs (against Rs. 9.22 lakhs) for taxation and Rs. 1.59 lakhs (against Rs. 1.06 lakhs) for managing agents' commission, the net profit amounts to Rs. 8.46 lakhs against Rs. 2.60 lakhs in 1959-60. General reserve gets Rs. 2 lakhs and rehabilitation reserve claims another Rs. 1.50 lakhs. Dividends absorb Rs. 5.46 lakhs. The disposable surplus includes a sum of Rs. 37,780, representing excess provision for taxation in the previous years which is no longer required. The carry-forward amounts to Rs. 10,145. The dividend for 1960-61 has been stepped up from 17½ percent to 20 percent, both taxable. The Company has a paid-up capital of Rs. 28.04 lakhs and its reserves and surplus total Rs. 20.44 lakhs, which suggest that the Company's financial position is strong. Its gross block is valued at Rs. 55.28 lakhs, and it has been written down to Rs. 45.66 lakhs. The Rs. 3-paid share of the Company is currently quoted around Rs. 7.50 cum-dividend, offering a gross return of a little over 8 percent. The directors estimate the current year's rubber crop around 1.14 million kilograms compared with 1.26 million kilograms harvested in 1960-61. The all-in cost of production is placed around 293.91 cents a kilogram, against 270.15 cents a kilogram in 1960-61. If these estimates prove correct the Company's working results for the current year are likely to suffer a setback, unless the selling prices of rubber rise over the last year's figures.

Shroff Appeals to Insurers

The evil of rebating and the consequent frittering away of resources by insurers has been the biggest bane of insurance in India. The scheme of non-diversion and mutual assistance evolved by an important group of Indian insurers, including New India, is meant to provide a bridge-up from the present unfortunate position of distrust and confusion and to help insurers to practise correct standards of conduct. It would also help the industry to acquire a sound and healthy basis. In his speech at the annual general meeting of the New India Assurance Company, held

last week, the chairman, Mr. A. D. Shroff, made a strong appeal to all the Indian insurers to join this scheme. (A fuller version of Mr. Shroff's speech appears on a later page.) To those who could not do so for any special reason, he appealed at least to observe the spirit underlying it. He pointed out that the non-diversion scheme would enable an insurer to transact business on normal terms without the fear that other insurers might take it away by offering better terms. New India Assurance will contribute annually Rs. 50 lakhs to the non-diversion and mutual assistance scheme for the next three years. Commenting on the recent legislation requiring insurers to cede a maximum of 30 percent of their business to approved re-insurers in India with effect from last April, Mr. Shroff said that it was not likely to fulfil its objective of arresting the foreign exchange drain, nor of widening the base of Indian reinsurance market. The new legislation will only divert a part of the insurers' profits to the Government-controlled insurance office and weaken the medium-sized and smaller units. Referring to fire rates, Mr. Shroff expressed satisfaction that the important question of suitable adjustment of rates region-wise and industry-wise was under the consideration of the Tariff Committee. He added that the rates must be so adjusted as to reflect actual experience. He deplored the Government's indifference to the problem of rough-handling of cargo and high incidence of theft and pilferage at railway stations and ports.

Replying to shareholders' questions about the working results of the Company, Mr. Shroff stated that the Company's expense ratio compared favourably with that obtaining in the U.K. New India's expense ratio which stood at 17.5 percent in 1958-59 declined to 16.5 percent in 1959-60 and further to 15.7 percent in 1960-61. The past year had been a difficult one for general insurance, but the current year, according to Mr. Shroff, might prove to be a turning point. The decline in the Company's profits in spite of the higher net premium was unavoidable in view of the increasing strain on its resources resulting from rapid expansion. Mr. Shroff did not agree with the shareholders' suggestion to issue bonus shares out of the accumulated capital reserves. He outlined the unfortunate circumstances which compelled New India Assurance to withdraw from the revised aviation insurance scheme from last April. He discounted prospects of nationalisation of the general insurance industry.

Jaipur Metals: Sales Up, Profit Down

The working of Jaipur Metals and Electricals Ltd for 1960 does not compare favourably with its performance in 1959, for while sales are up from Rs. 1.43 crores to Rs. 1.47 crores, the gross profit is slightly down from Rs. 12.03 lakhs to Rs. 11.78 lakhs. The small decline in the profit is attributable to the setback in the working of the metals section following the cut in the import quota of raw materials. The production in the metals division amounted to 2,024 metric tons, against 2,355 metric tons in 1959. The electric meters division has, however, done fairly well, with production of meters up from 100,500 units to 134,500 units. This is the highest output recorded by the Company so far. Further efforts are being made to increase the production of meters. Jaipur Metals is at present manufacturing house-service meters on the Japanese pattern. But its scheme for manufacturing Siemens type meters in collaboration with Siemens-Schuckertwerke, A.G. of West Germany is now nearing completion. More machinery and equipment has arrived, and the construction of the new factory sheds is progressing. The Company has also received an industrial licence for manufacturing magnets for using in meters.

After providing Rs. 3.82 lakhs (against Rs. 3.67 lakhs) for depreciation and Rs. 3.58 lakhs (against Rs. 3.59 lakhs) for taxation, the net profit amounts to Rs. 3.66 lakhs, against Rs. 3.90 lakhs in the previous year. The dividend on ordinary shares is proposed to be raised from 8.5 percent, taxable, to 9 percent, taxable, and on the deferred shares from 19.9 percent to 25 percent, both taxable. Dividends—preference, ordinary and deferred—absorb Rs. 2.78 lakhs, against Rs. 2.44 lakhs in 1959. The dividends have been raised in spite of a setback in profits. The increased distribution is being made after reducing allocations to reserves. The provision for gratuity reserve has been halved to Rs. 10,000 and the transfer to development rebate reserve is down from Rs. 99,369 to Rs. 81,443. No allocation has been made to general reserve which claimed Rs. 50,000 in the previous year. Jaipur Metals redeemed during the year debentures of the value of Rs. 10 lakhs. It has obtained a further loan of Rs. 15 lakhs from the Industrial Finance Corporation for implementing the scheme for making Siemen type meters. In addition, the I.F.C. has sanctioned a loan of Rs. 4.75 lakhs in foreign currency. The Rs. 100-paid

share of the Company is quoted around Rs. 145, at which price it offers a gross return of 6.6 percent.

Good Results from Periakaramalai

The working results of the Periakaramalai Tea and Produce Company for the year ended March 1961 more than justify the proposed increase in the dividend from 13.5 percent, less tax, to 20 percent, less tax. For the gross profit for 1960-61 at Rs. 33.82 lakhs shows a rise of nearly 84.6 percent over the previous year's figure of Rs. 18.32 lakhs. Improved results are attributable to a substantially larger crop of tea and the higher prices realised by it. The Company produced 2.33 million kilograms of tea, compared with 1.99 million kilograms in 1959-60 and the all-in cost declined from Rs. 3.26 a kilogram to Rs. 3.14 a kilogram. The average price realised was higher at Rs. 4.29 a kilogram, against Rs. 4.21 a kilogram in the previous year. The coffee crop amounted to 5,907 tons and the cardamom crop amounted to 416 kilograms. The Company was allotted a quota of 1.5 million kilograms of tea for the 1960-61 season, which works out to about 65 percent of the estates' best crop. The 1961-62 tea crop is estimated at 2.32 million kilograms to be harvested at an all-in cost of Rs. 3.18 a kilogram. After providing Rs. 4.52 lakhs (against Rs. 3.41 lakhs) for depreciation, Rs. 13.35 lakhs (against Rs. 6.40 lakhs) for taxation and Rs. 2.43 lakhs (against Rs. 1.18 lakhs) for managing agents' commission, the net profit amounts to Rs. 13.52 lakhs, compared with Rs. 7.32 lakhs in 1959-60. The directors have allocated Rs. 2 lakhs (against Rs. 1 lakh) to general reserve and Rs. 7,466 (against Rs. 47,323) to the development rebate reserve. The proposed dividend absorbs Rs. 11.59 lakhs. The share of the Company (Rs. 2 paid) is currently quoted around Rs. 3.90, offering a gross yield of nearly 11 percent.

Polychem Pays More

Polychem Ltd has reported satisfactory results for the year ended March 1961. The gross profit at Rs. 48.67 lakhs is Rs. 5.49 lakhs higher than in the previous year. Net sales have been barely maintained at Rs. 1.53 crores, but the net turnover—including adjustments of stocks—is higher at Rs. 1.63 crores. Management expenses and the cost of raw materials have risen but not in the same proportion as the increase in the net turnover. This explains why the profit for 1960-61 is much better than in 1959-60. After providing Rs. 4.43 lakhs (against Rs. 4.57 lakhs) for depreciation, Rs. 17.50 lakhs (against same) for taxation and Rs. 47,347 (against Rs. 1.52 lakhs) for development rebate reserve, the net profit amounts to Rs. 25.82 lakhs, against Rs. 19.59 lakhs in the previous year. The allocation to general reserve has been reduced from Rs. 12 lakhs to Rs. 10 lakhs, but dividend equalisation reserve has been created for the first time with an allocation of Rs. 5 lakhs. The directors have transferred Rs. 7.50 lakhs to the dividend reserve fund under Section 15 (C) of the Income Tax Act. This, together with the balance of Rs. 10,000 in this account, has been withdrawn for the distribution of dividend. The dividend on ordinary shares has been raised from 11 percent to 15 percent (from Rs. 5.50 a share to Rs. 7.50 a share), both taxable. The ordinary and preference dividends absorb Rs. 9.66 lakhs, against Rs. 7.40 lakhs in 1959-60. After making all these provisions, there remains Rs. 1.54 lakhs to be carried forward.

The directors state that the Company's plant worked satisfactorily during the year, and the demand for its products continued to be good. Work on the new laboratory for research and development and also on plastic technical service was taken up last year. Polychem has finalised an agreement with the leading Swiss firm of Dow Chemie for the styrene monomer project. It has also received a licence for establishing an alcohol distillery in Nira, near Poona. Industrial alcohol will be needed for manufacturing styrene monomer. The Company has completed arrangement for a U.S. dollar loan from the Industrial Finance Corporation of India as well as the required additional rupee finance for the styrene monomer project. The 50-paid shares of the Company, which were marked up to Rs. 275 a few months ago, are now quoted around Rs. 210.

Tata Hydrel Group Dividends

Shareholders of the Tata group of power Companies—Tata Power, Andhra Valley and Tata Hydro—will get a lower return on their ordinary shares for the year ended March 1961. The dividends have been maintained but the bonus has been halved in all the three cases, from Rs. 10 to Rs. 5 for Tata Power and Andhra Valley and from Re. 1 to 50nP for Tata Hydro. Both Tata Power and Andhra Valley have declared a final dividend

of Rs. 45 plus a bonus of Rs. 5 which, together with the interim dividend of Rs. 30, raises the total distribution to Rs. 80 a share, less tax, against Rs. 85, less tax, in the previous year. Tata Hydro's final dividend of Rs. 4.50 and the bonus of 50nP with its interim dividend of Rs. 3 bring the total distribution to Rs. 8 a share, less tax, against Rs. 8.50, less tax, in 1959-60. The reduction in bonus effected in 1960-61 merely restores the original position. The Company had raised the bonus in 1959-60, presumably to mark the golden jubilee of Tata Hydro. Total revenues earned from the sale of energy show a satisfactory improvement over the previous year's performance in all cases, but while the profit, before tax, is higher for Tata Power and Andhra Valley, it is substantially lower for Tata Hydro. But none of these Companies has had to make any provision for taxation.

The preliminary figures, released along with the announcement of final dividend, indicate that the Tata Power Company's total revenue from power supply increased from Rs. 3.53 crores in 1959-60 to Rs. 4.20 crores in 1960-61. The profit, before tax, is up from Rs. 1.08 crores to Rs. 1.13 crores. No provision has been made for taxation while a sum of Rs. 20.54 lakhs was set apart for taxation in the previous year. Profit, after taxation, has therefore risen from Rs. 87.57 lakhs to Rs. 1.13 crores. With Rs. 2.08 lakhs brought forward from the previous year, the disposable surplus amounts to Rs. 1.15 crores. Appropriations include development reserve Rs. 24.05 lakhs (against Rs. 13.36 lakhs), contingency reserve Rs. 10.30 lakhs (against Rs. 4.28 lakhs), reserve for special repairs Rs. 12 lakhs (against Rs. 8 lakhs), general reserve Rs. 11.50 lakhs (against Rs. 9.30 lakhs), consumers' benefit account Rs. 4.09 lakhs (against Rs. 66,754), tariffs and dividend control reserve Rs. 4.09 lakhs (against Rs. 66,754), the write-off of intangible assets and other expenditure Rs. 98,885 (against Rs. 94,433) and arrears of depreciation Rs. 9,516 (against same). The proposed dividends and bonus, including the interim distribution, absorb Rs. 29.03 lakhs, against Rs. 31.6 lakhs in the previous year, leaving Rs. 32,081 to be carried forward, against Rs. 33,359 brought in.

The total revenue of Andhra Valley and Power Supply Company amounted to Rs. 2.33 crores, against Rs. 1.98 crores in 1959-60. No provision has been made for taxation while Rs. 36,000 was set apart for taxation in the previous year. The Company's profit, after taxation, amounts to Rs. 47.37 lakhs, against Rs. 45.75 lakhs in 1959-60. With Rs. 17,091 brought forward from the previous year—including adjustments for previous years—the disposable surplus is Rs. 47.50 lakhs (against Rs. 46.08 lakhs). Allocations include development reserve Rs. 4.97 lakhs (against Rs. 9.28 lakhs), contingencies reserve Rs. 5.81 lakhs (against Rs. 2.41 lakhs), general reserve Rs. 2.50 lakhs (against Rs. 2.40 lakhs), consumers' benefit account Rs. 2.23 lakhs (against Rs. 40,148), tariff and dividend control reserve Rs. 2.23 lakhs (against Rs. 40,148), arrears of depreciation Rs. 1.21 lakhs (against Rs. 1.24 lakhs) and the write-off of intangible assets and other expenditure Rs. 56,462, against Rs. 53,790. The proposed dividends and bonus, including the interim distribution, absorb Rs. 18,86,540, against Rs. 18,37,925, leaving Rs. 30,342 to be carried forward.

Tata Hydro-Electric Power Supply Company's revenue from power supply amounted to Rs. 1.76 crores, against Rs. 1.59 crores in the previous year. The profit, before taxation, is down from Rs. 60.57 lakhs to Rs. 50.95 lakhs. But since no provision has had to be made for taxation in 1960-61, against Rs. 20.78 lakhs in the previous year, the profit after taxation is up from Rs. 39.79 lakhs to Rs. 50.95 lakhs. With Rs. 3.62 lakhs brought forward from the previous year, the disposable profit amounts to Rs. 54.57 lakhs, against Rs. 40.08 lakhs in the previous year. Appropriations include development reserve Rs. 7.72 lakhs (against Rs. 1.90 lakhs), contingencies reserve Rs. 2.11 lakhs (against Rs. 1.75 lakhs), general reserve Rs. 8 lakhs (against Rs. 7.80 lakhs), debt redemption reserve Rs. 6.40 lakhs (against nil), consumers' benefit account Rs. 1.67 lakhs (against Rs. 22,214), tariff and dividend control reserve Rs. 1.67 lakhs (against Rs. 22,214), arrears of depreciation Rs. 37,243 (against same) and the write-off of intangible assets and other expenditure Rs. 92,740, against Rs. 90,959. The proposed dividends and bonus, including the interim distribution, absorb Rs. 15,12,480, against Rs. 16,32,480 in 1959-60, leaving Rs. 26,096 to be carried forward.

Excepting Tata Power, which have eased from Rs. 1,085 to Rs. 1,055, the shares of Tata Hydro and Andhra Valley have remained virtually unaffected by the announcement of a reduction in the bonus element and the release of preliminary figures about the working results for 1960-61; and they are quoted around Rs. 107.50 and Rs. 1,007.50, respectively. The fact that the shares of the Tata group of power Companies should be quoted almost around par reflects the lack of investors' confidence in electric shares because the return to the industry on the capital base is statutorily

fixed at unrealistic levels. That is why the Reserve Bank's index for equity shares of electricity companies is quoted around 83, against 100 in 1952-53 whereas the all-India index for variable dividend securities has risen from 100 to 182 during the same period.

Development Corporation for Rayons

At its last meeting in Bombay on 26th July, the Art Silk Advisory Committee is understood to have finally approved the scheme to set up a corporate body known as the Rayon and Synthetic Textiles Development Corporation Ltd in order to promote the export of textiles manufactured from rayon and man-made fibres of any description. The Corporation will look after the incentive scheme and the issue of licences against the export of fabrics. It will also be entrusted with the import and distribution of art silk yarn, both foreign and indigenous. The import and distribution of yarn, which is at present being handled by the State Trading Corporation, will be taken over by the new Corporation. It is said to have been made clear at the meeting of the Committee that the Corporation had no intention of taking over the business of traders; it would only supplement the efforts of the trade. The Corporation will start with a capital of Rs. 1.60 lakhs, of which Rs. 60,000 will be contributed by spinners, Rs. 60,000 by weavers, Rs. 30,000 by exporters and Rs. 10,000 by importers and traders. The board of directors will consist of 16 members, made up of six representatives each of spinners and weavers, three of exporters and one of importers and traders. The Corporation will be a non-profit making body, and its earnings from service charges will be ploughed back to promote the export of art silk fabrics. It will not distribute any dividends. Unlike the other export promotion councils, the proposed Corporation will have a much larger sphere of activity and it will be entrusted with wider powers. If the Corporation is successful in promoting the export of art silk fabrics and if it efficiently handles the distribution of yarn and the administration of the incentive scheme, it might pave the way for establishing similar corporations for several other exportable items.

Dhrangadhra Chemical Fares Well

The directors of Dhrangadhra Chemical Works have recommended an ordinary taxable dividend of 6 percent for the year ended March 1961. The preliminary figures about the Company's working indicate that it has done much better than in the previous year. Sales have recorded an impressive rise from Rs. 1.63 crores to Rs. 2.91 crores and the gross profit is up from Rs. 40.14 lakhs to Rs. 51.82 lakhs. Including Rs. 3.50 lakhs brought forward from the contingency reserve no longer required, the total profit amounts to Rs. 55.32 lakhs. The directors have set aside Rs. 53.10 lakhs for depreciation. Expenses relating to previous years claim Rs. 41,679 and the managing agents' commission takes away Rs. 50,000. After deducting these items, there remains Rs. 1.30 lakhs which, together with Rs. 2.40 lakhs brought in from the previous year, makes a total of Rs. 3.70 lakhs. The Company has drawn a sum of Rs. 5.30 lakhs from general reserve for the payment of proposed dividends which absorb Rs. 7.54 lakhs. The balance of Rs. 1.32 lakhs is being carried forward.

It is stated that the Company's liabilities concerning the loans secured from the Industrial Finance Corporation and those concerning deferred payments have been reduced appreciably. A fair amount is said to have been ploughed back in capital investment. Previously, the Company had suffered on account of the accumulation of caustic soda stocks but the situation has improved considerably, so most of these stocks have been disposed of. The expansion of the caustic soda plant in Sahapuram is expected to be completed in March 1962. The installed capacity will be raised to 50,000 tons a year from the present 30,000 tons. Orders have already been placed for plant and machinery. The Rs. 100-paid shares of the Company are currently quoted around Rs. 129.

New P. V. C. Project

The Sahu group of industries is floating a new Company to undertake the implementation of an integrated project for manufacturing P.V.C., calcium chloride and liquid chlorine. A licence has already been obtained for manufacturing 12,000 tons of chloride resins a year. This is said to be the biggest project of its kind licensed by the Government so far. Licences for manufacturing calcium carbide and liquid chlorine are still to be obtained. The whole scheme will be implemented with the technical and financial collaboration of some well-known Japanese firms. The

project is estimated to cost about Rs. 5 crores with a foreign exchange component valued around Rs. 2.85 crores. Maruben-Idda Co. Ltd of Japan will participate in the share capital of the new Company to the extent of about 20 percent of the f.o.b. value of plant and machinery and technical know-how. Kurecha Kasai and Co. Ltd will supply the technical know-how for the P.V.C. resin and liquid chlorine projects. Messrs Showa Denko K.K. will collaborate in the calcium carbide project. The promoters hope to secure a foreign exchange loan under the yen credit now being negotiated. Further steps to implement the project will be taken after obtaining the sanction of the Governments of India and Japan to the proposed collaboration agreements. Dhrangadhra Chemical Works Ltd will be closely associated with the new venture, and it will meet the entire chlorine requirements of the new project.

Road Transport Finance Corporations

The question of providing adequate credit facilities to the private sector for the development of the road transport industry has long been engaging the attention of the Central Ministry of Transport. The present system of financing road transport operators has not produced satisfactory results. The Government is said to be of the view that credit facilities to private transport operators can best be provided by Road Transport Finance Corporations in different States. Reliable reports indicate that the Central Ministry of Transport has now prepared a model scheme which has been circulated to State Governments for the setting up of such corporations. The latter will not give loans to State or public undertakings, but will endeavour to extend credit on a hire-purchase basis to needy and competent operators in the private sector. In granting credits, the corporations will try to avoid the concentration of ownership and will help small and well-organised operators and save them from falling into the hands of unscrupulous moneylenders.

Transport co-operative societies are likely to receive special attention. The authorised capital of the corporations will vary from Rs. 1 crore to Rs. 5 crores, of which only half is likely to be issued in the beginning. Fiftyone percent of the share capital, which will be in equity shares of Rs. 100 each, is to be subscribed by the State Government and/or the Reserve Bank of India, and the remaining 49 percent will be made available to the general public including scheduled banks, co-operative banks, investment corporations, insurance companies and trusts. Participation of the general public, it is thought, will help mobilise savings. According to the model scheme, the State Government concerned will guarantee a minimum dividend of 4½ percent. The shares of a corporation will be included in the approved list of securities so that shareholders can obtain loans against their shares. The corporations will charge a flat rate of 9 percent as interest on loans granted for a period up to five years and 10 percent if loans are for a period from five to eight years. The rates of interest have been kept at a high level because of the risk involved in the business but once the corporations are able to pay their way, it will be possible to reduce the interest charges. The hirer will have to deposit with a corporation 25 percent of the cost of lorries with or without body on a down payment basis, and he will be liable for insurance and taxes. Apart from the scheme to finance road transport operators, the Government of India has decided to encourage the use of truck trailer vehicles capable of carrying 15 tons each. Instructions have already been given to popularise the use of truck trailers and to strengthen bridges on roads where traffic is heavy. Permits for such vehicles will be given liberally if road conditions are considered satisfactory.

New Cotton Export Quota

The Government of India has released for export a further quantity of 60,000 bales of cotton, comprising 30,000 bales of Bengal deshi and 30,000 bales of cotton stapling 1 inch and below other than Bengal deshi. Out of this, 1,500 bales of each quantity have been reserved, as usual, for the co-operative societies in the areas growing such cotton. Licensing will be done on the presentation of shipping bills on a first-come-first-served basis, subject to a maximum of 1,425 bales a shipper from all ports. Shipping bills will be accepted from 2nd August, and they will be made valid for shipment within 15 days from the date of its passing or 31st August, whichever is earlier. The quota now released brings the total quantity allowed for export this season to 270,000 bales, of which Bengal deshi accounts for 190,000 bales. The announcement of the export quota has failed to please the trade or to cheer the market. Spot cotton prices, which were drifting lower for many weeks under the impact of a very large carry-over

and favourable weather reports from almost all the producing areas, remained unaffected after the quota announcement. Bengal deshi prices also continued to be subdued; and the futures market suffered a sizable setback, with the August contract declining from Rs. 580.75 to Rs. 568.50. It was not a case of selling on good news; the news itself was considered to be no good. The trade is disappointed partly because the quantity allowed for export falls short of its general expectations and partly because the announcement has come at a time when export prospects have deteriorated appreciably. Bengal deshi cotton which could be sold at 21d to 22d a lb a few months ago is now difficult to sell at 17.5d to 18d a lb. The trade will have to try hard to sell the cotton to the Continent and the U.S.A. because Japan—India's principal customer—is inclined to keep off the market. The trade had long been persuading the Government to release a substantial export quota, particularly for Bengal deshi because of the large exportable surplus. It reflects poorly on the Government's assessment of the demand and supply position of cotton that it should have strongly resisted the trade's demand for an export quota for many months. There is little doubt that the current season, which will end in August, is likely to close with a carry-over of 2.2 million to 2.3 million bales of 400 lbs each, against 1,393,000 bales at the close of the last season. The carry-over of Indian cotton is placed around 1,850,000 bales, against 980,000 bales. It is a sad commentary on the Government's "export or perish" slogan that it should have taken so long to release an export quota when the supply position is known to be distinctly comfortable and the country's foreign exchange reserves have declined to a dangerously low level. If the trade is unable to use the export quota now released at remunerative prices, the blame will rest on the Government.

Outlook for Tata Oil Mills

The sales of Tata Oil Mills for the year ended March 1961 rose to Rs. 10.02 crores from Rs. 8.31 crores in 1959-60, but the profit, after providing for depreciation, declined by about 23 percent from Rs. 52.47 lakhs to Rs. 40.27 lakhs. The directors attribute the setback in the profit to a substantial fall in the net commission earned on the sale of imported chemicals, a further steep rise in the prices of indigenous oil and the extra expenditure incurred during the year on the expansion of the marketing and selling organisation and the advance "staffing" of the Delhi factory. There is little chance of any improvement in the commission earned from imported chemicals because import restrictions are unlikely to be relaxed. The prospects of a fall in the prices of indigenous oils are also considered to be remote. But the shareholders who have been disappointed by the bare maintenance of the dividend at Rs. 5.75, less tax, a share and the poor working results for 1960-61 can derive some satisfaction from the chairman, Mr. J. R. D. Tata's statement that the setback in profits seems only temporary and that the sales promotion effort, which the Company has taken up at a substantial cost, will handsomely pay for itself in future years. The additional expenditure incurred on strengthening and expanding the sales and technical department must be looked upon as being of a developmental nature. The chairman advises the shareholders to be patient and asks them to wait for a year or two more before judging the soundness or failure of the programme. In addition to increasing the sales of the existing lines of manufacture, the Company proposes to enter new fields and diversify its activities. In his statement, Mr. Tata has explained how the Company proposes to avail itself of the opportunities for development and diversification in the future.

Under an arrangement with the Government of India, Tata Oil proposes to set up a plant at its Bombay factory for manufacturing groundnut flour for human consumption. The Government has transferred to the Company on a long-term repayment basis a plant supplied to it by the United Nations Children's Fund. The Company's factory will be one of the two units in the country manufacturing groundnut flour for human consumption. The plant is expected to go into production during the current year. The Government has further agreed to buy 75 percent of the flour the Company produces for distribution to flour mills on a price formula which will absorb fluctuations in the price of groundnut seeds. The remaining 25 percent will be marketed by the Company. If this experiment, which has the backing of international research, proves successful, it will open for the Company a useful new field of development. Similarly, Tata Oil has recently negotiated an agreement with the National Research Development Corporation of India for the exploitation of a process evolved by the Central Food Technological Research Institute, Mysore, for the extraction of vegetable proteins from oilseeds. The N.R.D.C. has agreed to install,

at its own cost, a semi-commercial unit at the Company's Bombay factory. If the process is found satisfactory, Tata Oil will have the option to purchase the plant and expand it. This venture is of a pioneering nature and will call for a certain amount of development work, but the chairman considers it to be of a great potential value not only to the Company but to the country as a whole. Tata Oil has also a proposal to set up a plant in Tatapuram for manufacturing fruit juices in a powder form by a process developed and in use in Japan. The Company has already applied to the Government for permission to install such a plant at a cost of Rs. 5 lakhs. This also appears to be a promising venture in view of the availability of a large variety of fruits in the country, provided, of course, the product meets with consumer acceptance.

Apart from these development activities, the Company stands to benefit from the gratifying progress of its two subsidiaries—Industrial Perfumes and Lakme Ltd. The former has been able to declare a maiden dividend of Rs. 9 a share, after making full provision for depreciation and development rebate and after transferring Rs. 50,000 to general reserves. This Company has plans to undertake the manufacture of several new aromatic chemicals at an estimated capital cost of Rs. 10 lakhs to be met to the extent of Rs. 6 lakhs by an increase in its capital and the balance being obtained from retained earnings and temporary loans. The foreign associates of this Company, Messrs Roure-Bertrand Fils and Justin Dupont, have agreed to provide plant and machinery valued at Rs. 2.40 lakhs in lieu of additional shares to be allotted to them. T.O.M.C.O. will subscribe Rs. 3.60 lakhs as its share of the additional capital and also provide Industrial Perfumes with an additional building space in Sewri for which reasonable compensation will be recovered from it. The other subsidiary, Lakme Ltd, has earned a profit exceeding Rs. 1 lakh, after providing for full depreciation and development rebate reserve. Sales of Lakme products increased by over 60 percent during the year, and the demand for its products continues to grow. This Company has entered into an agreement with Kolmar International of Milwaukee of the U.S.A. for manufacturing several new cosmetics with its technical and financial collaboration. The shares of Tata Oil, which touched a high of Rs. 86.80 in March, have gradually come down to Rs. 74.50 which is only a little higher than the year's low of Rs. 72.

Kailas Rubber Raises Dividend

For the year ended 28th February, Kailas Rubber Co. Ltd has earned a profit of Rs. 4,01,276.38, after providing for taxes, depreciation and managing agents' remuneration. This is higher than the previous year's profit of Rs. 3,60,461. Depreciation for the year amounted to Rs. 60,387.56 against Rs. 51,378. Provision for taxation amounts to Rs. 3,20,000 (against Rs. 2,25,000). Adding to the year's profit, a sum of Rs. 27,121.54, brought forward, the total comes to Rs. 4,28,397.92. From this amount, the directors have transferred a sum of Rs. 100,000 to debenture redemption fund (against Rs. 100,000). The interim dividend of 10 percent already paid, has absorbed Rs. 1,18,570. The directors have now recommended a final dividend of 15 percent on the equity shares (subject to tax), and this dividend will absorb Rs. 1,77,855. The balance of Rs. 31,972.92 is carried forward. The total dividend for the year amounted to 25 percent, against 22 1/2 percent in the previous year. The rubber crop secured during the year was 1,017,998 lbs, against an estimate of 935,000 lbs. The crop estimated for 1961-62 is 935,000 lbs. The average selling price of rubber was 171nP a lb.

Travancore Chemical Profit Doubled

The Travancore Chemical and Manufacturing Company has produced impressive results for the year ended March 1961. Sales have increased by about 53 percent from Rs. 32.82 lakhs to Rs. 50.24 lakhs, and the gross profit has shot up by nearly 92 percent from Rs. 4.85 lakhs in 1959-60 to Rs. 9.33 lakhs in 1960-61. The ratio of gross profit to sales is up from 14.8 percent to 18.6 percent. After providing Rs. 1.73 lakhs (against Rs. 1.02 lakhs) for depreciation, Rs. 41,429 (against Rs. 38,159) for development rebate reserve and Rs. 3.35 lakhs (against Rs. 1.40 lakhs) for taxation, the net profit amounts to Rs. 3.84 lakhs, compared with Rs. 2.04 lakhs in the previous year. With Rs. 72,165 brought forward from the previous year and adding Rs. 6,779, representing development rebate written back, the disposable surplus amounts to Rs. 4.63 lakhs. The dividend has been raised from 15 percent, taxable, to 20 percent, taxable. In addition, equity shares for Rs. 3 lakhs issued last year, rank for a 10 percent dividend. Ordinary and preference dividends absorb Rs. 2,56,786. The directors propose to start a preference share

capital redemption reserve with an allocation of Rs. 1.50 lakhs. After making all these appropriations, there remains a balance of Rs. 56,348 to be carried forward. The directors state that in addition to the products already taken up for manufacture, the Company has added sodium aluminate, a chemical used in water purification. The Company was unable to increase its production of extra electric power in Kundara. The extra power is, however, expected to materialise during the current year. The Company is now manufacturing copper oxychloride and derived products which are used for plant protection. The Company has repaid the entire loan taken by it from the Kerala Financial Corporation. The Rs. 10-paid share of the Company is currently quoted around Rs. 18.75 cum-dividend, offering a gross yield of about 11.9 percent.

Raw Materials for Hardware

The builders' hardware factories in India are facing an acute shortage of raw materials. At present, they get their quotas either from the Development Wing or from State Governments, but the allotment is hardly sufficient to meet 50 percent of the consuming capacity. Speaking at the annual general meeting of the Builders Hardware Industries Association of India in Calcutta last week, Mr. A. Paul, president, said that as long as the steel plants are unable to supply flat products, actual users should be allowed to import raw materials depending on the availability of foreign exchange. The last assessment of the industry's production capacity was made seven or eight years ago. Although considerable changes have taken place since then, it is a pity that the industry has been getting its raw materials on the basis of the old assessment. Mr. Paul, therefore, requested the Government to make necessary arrangements to reassess the industry's present capacity without delay. The manufacturers of builders' hardware are also facing a shortage of sheet cuttings, so the president suggested that the Iron and Steel Controller should devise a method by which each factory should get a regular monthly quota of sheet cuttings. Another difficulty facing the former is the shortage of cold rolled steel strips. Some manufacturers of hinges, Mr. Paul said, have installed automatic plants, and they are unable to use the indigenous sheets. Up to 1958, they could import their requirements freely, but in 1959, when imports were considerably reduced, they were issued import licences for some limited quantities. But since then, they have not been issued any import licences. At present, the production of such strips in India is so limited that it hardly meets 5 percent of the total requirements of the country. Since the Government has stated that the import of essential raw materials and components will be allowed to maintain the tempo of production, it should issue import licences immediately, with a view to keeping the factories going. Mr. Paul said that exports of builders' hardware had fallen in 1960 due to the shortage of raw materials.

APPOINTMENTS TO HIGH COURT

WE hear that Mr. Justice Brett, who was only recently appointed a Judge of the High Court, contemplates retiring at the end of the year on account of ill health. We are extremely sorry that the tenure of office of this learned Judge will be so short, and we think that the next time that the Government of India place a member of the Civil Service over the heads of a number of his seniors as Mr. Justice Brett was placed, they should satisfy themselves that he possesses not only a sound mind but also a sound body. The result of this violent elevation of Mr. Brett, was the resignation of many able members of the Civil Service, who not unnaturally felt that merit was not rewarded and that it was better to be the nephew of an English Judge than a deserving servant of the Government. We trust that when Mr. Justice Brett's office becomes vacant the Government will bear these remarks in mind. There should be absolutely no difficulty in supplying the High Court with able Judges, Barrister or Civilian, if the Government would only set themselves to work to eradicate nepotism from the administration and to honestly select the very best men available. In this connection, we cannot congratulate the Government upon the appointment of Mr. H. L. Stephen. The only qualification apart from being a barrister, that Mr. Stephen appears to possess, is that his father was once the Legal Member in India, and subsequently a Judge of the High Court in England. The Late Sir James Fitzjames Stephen was an extremely able man, but he had a manner which many people considered decidedly objectionable. If our information is correct the manner is the only thing that Mr. Stephen has inherited from his father. The ability may be there but it has not yet been discovered by the public.

A Ditcher's Diary

SENIOR AND RENOWNED JOURNALISTS WITHOUT A fixed newspaper assignment can be a pathetic nuisance, to the world as well as to themselves. The case of Mr. Louis Fischer is even more difficult; he is also something of a missionary. He sincerely believes that he played a part—which he calls "very small", meaning, of course, "rather big"—in the independence of India. This consists, I believe, mostly in annoying New Delhi somewhat during the trying war years. I have a notion (as Mr. Somerset Maugham would say) that Mr. Fischer feels the Indian people and the Indian Government of today are not sufficiently conscious of, or grateful for, what he feels he has done for them. This is a permissible feeling; I have come across odder claimants of credit for India's freedom; and I know only one Indian journalist who, without conceit or shame, says that he played no part at all in the struggle. In private and in public Mr. Fischer is now one of India's severest critics; and a colleague who met him in New York in 1957, soon after Hungary, quotes him as saying that "there is only one word to describe India's foreign policy, and the word is 'immoral'". Now, I do not say India may not deserve this harsh verdict. Few countries speak of their international stances in more strident moralistic tones than India used to do until recently. Not being much of a moraliser, I usually ask of a country's—to be even more specific, a Government's—foreign policy whether it is sensible or otherwise. This will not do for Mr. Fischer. The moral flame in him burns bright—a hang-over from his communist days. I suppose I have criticised the Government of India's economic and other policies at least as often as Mr. Fischer; but to say that India's sin is that she has deviated from Gandhian economics is not criticism that I would take very seriously. Such, however, is the zeal of converts; and Mr. Fischer gives me the impression that he now fancies himself as the sole and true interpreter of Gandhism, including its more obtuse economic aspects. Again, Mr. Nehru is partly to blame. He has never publicly said that he has finally and irrevocably jettisoned Gandhian economics—which, of course, he has done, sensibly.

THE WORLD HAS COME A LONG WAY SINCE KARL Marx formulated his socially explosive, and wholly incorrect, theory of surplus value; but the old image of the worker as an under-paid, over-worked and insecure wage slave still persists in many minds. The changes of the past few years are all too often ignored, which may be highly convenient for professional labour leaders but is disastrously expensive for society as a whole. In India, even knowledgeable people still cling to the sentimental 19th century attitude towards labour, a fact which helps explain the emotional overtones of the Government's policy towards it. Thanks to the high-handed behaviour of American trade unions and the often criminal activities of their leaders, this view has all but died out in the United States. But it still prevails in Britain, and the exercise there of unlimited trade union monopoly power can be blamed for much of the economic difficulty the U.K. now finds herself in. It is probably not

altogether odd that labour should behave economically like any other scarce commodity, yet seek to justify its actions purely on social grounds; life is more convenient that way. How long it will be before countries like India and Britain begin to realise the harm they are doing themselves economically by accepting labour's social projection of itself while ignoring the all-important criterion of economic efficiency, is something on which I would not care to express an opinion. The trouble is that trade unionists have votes as well as claims to society's sentimentality. I am not suggesting there is any economic benefit in paying labour less than its due; what I would like to stress is that the functions of labour should be clearly regarded in this modern world as part of the productive process and not as something entirely independent of it. If this could be achieved, then it would follow that official policy should be concerned as much with increasing the efficiency of workers as it is at present with securing better wages and conditions for them. I have just finished reading an admirable pamphlet by Professor D. J. Robertson of Glasgow University, entitled *A Market for Labour*. Professor Robertson, I am glad to see, does not consider it improper to talk about buying and selling labour in the context of normal market practice. Politically neutral, he is naturally preoccupied with the purpose of encouraging the freer function of the market by allocating labour to its most efficient uses. He points out how any and all attempts to interfere with this market mechanism, such as happens when workers are paid more than their economic worth, invariably leads to inefficiency. One might add that it leads to social injustice as well.

TO TREAT ANY ECONOMIC COMMODITY AS HAVING social significance is wasteful, although all civilised nations do so to some extent—education is an example. For years Britain has provided free false teeth and spectacles under her national health service, and the cost has been astronomical. What with subsidising food and housing, providing free medical and hospital care, and generally distorting the economy for social reasons, the U.K. has burdened herself with a load of inefficiency and waste which is one of the main reasons for the chronic weakness of the British economy since the war. But I see the Russians have announced they intend to go one better and provide free food, gas, power and public transport by 1980. Judging from the recent spread of the market mechanism in Russia, I had decided that perhaps the more wasteful aspects of communism had been abandoned for good. (The least wasteful, of course, is the communist attitude towards labour; no sentimental nonsense in that.) But if the Soviet Union intends to make Britain's mistakes on a grander scale, then so far as I am concerned she is welcome to do so; it will take her all the longer to catch up with the West. It is, of course, misleading to talk about free anything in an economy. What the Soviet Union really means is that she intends to subsidise these commodities up to the full extent of their price. But subsidies must come from somewhere; somebody will have to pay them and that somebody is

the taxpayer. The Soviet Government is always explaining that it does not levy taxes in the way capitalist countries do; it merely gets its revenue from the profits on its State-manufactured products, which, of course, is just about the most regressive and socially unjust of all methods of raising resources. No democratic electorate would stand for anything but a progressive tax system. So what the whole scheme adds up to is an uneconomic interference with the pricing system so that some commodities which the Soviet Government regards as basic necessities can be supplied for nothing while others are charged for at higher than their economic rates. In fact, just another example of a totalitarian government claiming the right to decide for its people what is best for them. But how crafty of Mr. Khrushchev to use the word free when what he is proposing will be nothing of the kind; to the starving peoples of the world the idea of free food must seem like something out of a dream. Whatever one can say about the Russian Government's grasp of economic realities, there is nothing wrong with its understanding of human nature.

WHEN INFLUENZA FIRST STRUCK MEDIAEVAL EUROPE nobody knew what this latest scourge was. (Do doctors know today?) In fact, mediaeval ignorance is enshrined in the name given to the disease; influenza simply means the influence—of the stars, no doubt. Man has for uncounted centuries believed that the distant stars affect his affairs in unpredictable ways; and so to predict them has been the business of, first, astrology and, then, astronomy. Next February, we are now told, will see a confluence of planets such as has not been known for a 100 years or more. How that will affect Russia's 20-year plan, or India's modest five-year one, I do not pretend to know. If somebody says the world will end next February, I can only say that I am sorry for Mr. Morarji Desai. Because some predictions of the end of the world in the past did not come true it cannot logically be assumed that we will all be around after February, although most of us will perhaps conduct our affairs in the belief that such will indeed be the case. Some years ago the *New Statesman* (I cannot now remember whether *Nation* had then been shed from the name) set a competition on how the different newspapers in Britain would treat the news of the end of the world in the following week. I remember the contents of one brilliant entry. *The Times*, it was suggested, would announce that, should the world end on the given day at 11 a.m., there would be a special edition of *The Times* at 3 p.m. carrying, if possible, the names of all British celebrities affected by the event. Of imperturbable self-assurance there could hardly be a better display: the world might indeed end; but there would always be *The Times* and British nobility. Let me announce here and now that, after the world has perished in February, *Capital* will bring out a special edition giving details of all official and unofficial transactions on the Calcutta stock exchange in its post-world session. I simply will not believe that our dear speculators will cease to play their game for the trivial reason that the world is no more; it would be far too good an opportunity for the bears to miss. What are the other constants in this impermanent world? I am prepared to take a small bet that the Corporation of Calcutta will meet—and promptly adjourn. For once it will not be charged with frivolity.

INDIAN SUGAR MILLS ASSOCIATION

CHAIRMAN, MR. D. D. PURI'S REVIEW

In his Presidential address at the 28th Annual General Meeting of the Indian Sugar Mills Association, held at New Delhi on the 31st July, 1961, Mr. D. D. Puri, President of the Association said:—

Record Production and Crisis of Surplus

On the sugar front, we are meeting under the shadow of deep crisis. Every day that passes deepens the shadow. We have moved far ahead of the times when scarcity of sugar was the order of the day. With the shift of emphasis in the Government policy from mere regulatory and distributive measures to maximising production, adopted last year, we have not only turned the corner so far as the availability of supplies is concerned, but paradoxically enough are now in the midst of what I have called a crisis of surplus.

Static Consumption Trend

In the current season production has almost reached the figure of 30 lakh tons. Here is the Third Plan target in the bag, five years ahead of schedule.

The consumption of sugar on the other hand has not shown the corresponding increase. In fact, contrary to the Plan premises, there was a slight fall last year. As against 20.66 lakh tons in 1958-59, consumption last year was only 20.24 lakh tons showing a decrease of more than 40,000 tons from the previous year. It was expected that this year with increased production and better availability, consumption would pick up. But these expectations have not materialised and the current rate of off-take is practically the same as last year. By the end of June, two-thirds of the current sugar season being over the off-take from factories for internal consumption has been 13.31 lakh tons against 13.28 lakh tons for the corresponding period last year.

Huge Stocks Create Problems of Storage and Finance

Increased production accompanied by lower consumption last year left the industry with a large carry over stock of 5.5 lakh tons on November 1, last, against only 153,000 tons a year earlier. Production this year has reached 29.5 lakh tons and with a further addition of about 25,000 tons before the year comes to a close, it will have reached about 29.75 lakh tons. After accounting for the off-take during the remaining part of the year, I do not expect consumption this year to exceed 20.5 lakh tons. This will leave the industry with an unmanageable stock of 11.75 lakh tons (less the quantity exported) at the time when the next crushing operations start.

Unless some satisfactory arrangement is made to solve this problem, the future prospects are indeed bleak. Obviously, at the moment export is the only solution. Exports are possible only at a heavy loss because the World Free Market prices are much below our cost of production. Exports can, therefore be effected only if adequate compensation for the loss involved is provided, and without exports I shudder to imagine the consequences.

We are thankful to Government for having appreciated this position, as a consequence of which the Food Minister announced in the Lok Sabha in April last that the losses involved in further exports would not be borne by the industry. On our part, we have agreed to share a part of the loss on exports to the U.S.A. Earlier, we had to meet the total loss on the first one lakh tons already sold for exports. Besides in response to Government's appeal, the industry agreed to implement the Wage Board Award even though both the export loss and increase in wages were not provided for in the controlled price of sugar.

Position Regarding Exports

The actual exports that we have so far been able to contract for do not, however, give much cause for comfort. We have so far exported one lakh tons to Malaya and West Asian countries. On present indications, it may be possible to export another half a lakh tons this year, besides the U.S. Quota of about 2 lakh tons, bringing the total to about 3.5 lakh tons at the outside. This will hardly touch the fringe of the problem. After providing for a carry over of 5 lakh tons, there will still be an exportable surplus of 6.5 lakh tons. This is a burden too big to be carried by the industry and is beyond its maximum financial and storage resources. Unless a sizeable portion of it finds an outlet and quickly, the survival of the industry will be in serious jeopardy. The position is getting so serious that the industry may be forced to curtail production in the next season. The next crushing season is due to start in another three months. According to the reports now available, the sowings are even better than last year's, and, if the present favourable trend continues till harvest time, we will have a bumper cane crop to take care of. And, unless a sizeable quantity of the surplus stocks is taken off from the factories through further exports, etc., it may not be possible for them to be ready to

start crushing in time. Such a development will cause grievous loss to the industry as well as to millions of cane-growers who have been increasing acreage under cane in the belief that there will be a readily available market for their produce. It will also deal a blow to the developing economy of the country.

Low Per Capita Consumption

But while exports might help in reducing excessive stocks, as a long term solution something has to be done so that the consumption rate internally moves up. It is a well-known fact that our per capita consumption is among the lowest in the World. Against 43.6 kilos in the U.K. and 43.4 kilos in the U.S.A., our per capita consumption here does not exceed 13.9 kilos. This is far short of the level achieved in other countries and is also much less than the minimum of 20.5 kilos considered necessary for a well-balanced nutritive diet for an adult person in this country. There is, therefore, considerable scope for improving the present low rate of consumption here.

While consumption did increase, though not to the estimated extent, till 1957-58, a contrary trend developed in the last two years to which I have already referred. This is due to the increase in the price of sugar occasioned by increase in the cost of cane and high taxation. That does not mean that the Indian consumer pays a higher price than is the position elsewhere. As a matter of fact the price of sugar in India is lower than in many leading sugar producing countries. The Indian prices are also lower than in most of the neighbouring countries like Pakistan, Ceylon U.A.R., Cambodia, Japan, Iran and Thailand. But the fact remains that the present prices have checked the rise in consumption and a time has come when it has become necessary to reduce taxation substantially to increase consumption. I venture to suggest that if properly handled, a substantial reduction in Excise duty would not result in loss of revenue to the extent as may appear at first sight. In a great measure it would be off-set by increase in internal consumption. I commend this suggestion for the immediate consideration of Government. Besides, there exist some irksome procedures and practices which tend to discourage consumption and create pockets of artificial scarcity in the country. The removal of these is already overdue. States are raising sizeable revenues from sugar distribution. I would respectfully submit that the time for this is also over and this practice should be stopped forthwith. Another matter demanding attention is the transport bottleneck. I urge greater attention to these problems. These matters if attended to, will improve consumption. But this will solve only a part of the problem.

Industry Needs Conditions of Stability

Another factor of major importance to the industry is stability. Prices of sugar must never be allowed to fluctuate violently, for many reasons. The most notable is that cane prices must inevitably move up and down with prices of sugar for cane is the predominant content of the sugar price. Violent fluctuations in cane prices and their effect on our rural economy are extremely undesirable. We must never forget that the cane grower has to plan his crop far ahead of its delivery to the factory. Once planted, cane yields more than one crop. So the grower, once he switches over to cane cultivation is committed to it for a number of years. Any violent fluctuations in the cane price would seriously disturb his economy. Variations in cane price should be carefully planned and announced very much in advance. Another reason for steering clear of violent fluctuations is that the industry at present is carrying heavy stocks. If prices vary by Re. 1/- per maund, it would mean a difference of about Rs. 6 crores on the present stocks alone. This may wipe out of existence many marginal factories, especially those placed in geographically weak areas.

Backward State of Cane Cultivation

With regard to cane price, this constitutes the highest single item of cost in the production of sugar. Much of its high incidence could be reduced if the present backward state of cane cultivation could be improved. Our average yield of 1.4 tons of sugar per acre makes a poor comparison with the yield of 5 to 8 tons of Hawaii, Java and Formosa. In fact, the yield in north India is about the lowest in the World and yet covers the largest area in the country and, viewing it from the human angle, involves the largest number of cane-growers. The low yields in the north can be rectified if cane development is undertaken on the requisite scale. We have urged repeatedly that the cane cess realised by the States should be spent entirely on cane development. We have been harping on this theme in season and out. We must state once again in clear and unequivocal terms that if cane development is not undertaken seriously and with all resources at our command the

industry in the North will go down and with it the millions of cane-growers who derive their sustenance from sugarcane.

Reassessment of Capacity Necessary

Along with efforts to raise internal consumption we must try to adjust our production in future to our needs so as to avoid repetition of the critical situation that the industry is presently facing. This would underline the need for re-assessing the present capacity and the targets for the future. The potential of sugar production in the World today is much greater than its consumption and a vast majority of the exporting countries, and even some of the importers, have regulated and curtailed sugar production. The largest importer of sugar, the U.S., had till recently, statutory restrictions on beet and cane acreages. As a matter of fact practically every importing country plans for self-sufficiency in sugar.

The Second Five-Year Plan estimated our consumption for the current year at 22.50 lakh tons whereas, as I have already pointed out, it would hardly reach a level of 20.5 lakh tons. Statistics for the last three years show that our consumption is static. We are now in the first year of the Third Plan, the draft outline of which mentioned a production target of 30 lakh tons. Subsequently, however, Government spokesmen stated that the target was being raised to 35 lakh tons. It came to us as a rude shock, as there have been no developments in respect of internal consumption which could justify a higher target. On the contrary, the trend of consumption would call for a lower target. This trend indicates that even 28 lakh tons consumption will not be achieved by the end of the Third Plan period. It will be sound policy to let the consumption develop before expanding capacity, because capacity when once installed has to be kept going. We have enough stocks and are likely to have them over the next 5 years, to afford a safe cushion for a sudden spurt in consumption. Furthermore, capacity for manufacture of sugar machinery exists within the country. We could instal additional capacity without undue delay or difficulty. There is therefore no need to instal capacity in a rush.

Need for Rehabilitation Allowance

In response to the request of the Industry, Government made a reference of the price question to the Tariff Commission. The Tariff Commission determined regional cost schedules which were very rigid and based on the performance of sampled factories which were above average in all the regions. On top of that the return allowed by the Commission provided, only, in the words of the Commission, "sufficient funds for each unit to meet its commitments under bonus, gratuity, interest on borrowed capital and debentures dividend on preference shares, managing agents' commission and income-tax and finally leave a residue to a large majority of units in all the regions to declare reasonable dividends". From this it is apparent that no margin was left to cover rehabilitation or to provide for reserves.

I would confine my observations here only to rehabilitation. Rehabilitation is meant to cover the difference between depreciation which is allowed as an item of cost on the original historical costs of assets and the depreciation on the present day replacement costs. After all, depreciation is allowed to enable replacement of assets on expiry of their useful life. The replacement costs have gone up many times and depreciation allowed is quite insufficient to replace useless assets. The difference between depreciation allowed and depreciation on present day costs is a legitimate item of cost and should be recognised as such in determining the price of sugar.

Rehabilitation was disallowed by the Tariff Commission on three short grounds.

- The industry had employed all available funds in expanding capacity to earn more profits.
- It was socially unjust for the consumer to be burdened with rehabilitation.
- Rehabilitation cost could be met by borrowings.

It was, however, not realised that reduction in costs achieved by expansion had been neutralised by the Commission working out the schedules with reference to actual costs in 1957-58 which included the economy effected on account of expansion. And the benefit of reduced costs on utilisation of available funds on expansion went to the consumer alone and it would have been quite in keeping with considerations of social justice, if the consumer paid for the benefit enjoyed at the cost of industry. Thirdly, if rehabilitation had to be met by borrowings, some margin should have been allowed for servicing these loans and for their repayment. I may clarify here that interest on borrowed capital and debentures allowed by the Commission does not include any additional amount to cover interest on proposed borrowings for rehabilitation.

As stated earlier, the Tariff Commission determined cost schedules on the basis of the relevant data for 1957-58. Since then there have been major increases in costs which have to be provided for while fixing fair price for sugar. Ours is essentially a controlled industry and a fair price for sugar whether statutory or notional has to be determined by Government. There is thus no escape from determination of cost of production and variations therein every now and again. Because of frequent fluctuations in costs it would not be practical to entrust this determination to the Tariff Commission every time. The Commission prepared its report with reference to the cost for 1957-58 and it was already out of date when it was submitted in 1959. I would, therefore, recommend that there should be a standing body functioning all the time presided over by a person of the status of a Supreme Court Judge which should bring the cost of production data relating to sugar up-to-date. A standing body like this would ensure upto the minute availability of costs and other relevant data by an impartial body of the highest integrity and reputation. This alone would meet the needs of the situation.

THE BENGAL PAPER MILL CO., LTD.

CHAIRMAN, MR. N. D. BANGUR'S REVIEW

Speech delivered by the Chairman, Mr. N. D. Bangur at the Annual General Meeting of The Bengal Paper Mill Co. Ltd., held in Calcutta on 31st July, 1961.

Gentlemen,

I have great pleasure to welcome you to this Annual General Meeting of the Shareholders of The Bengal Paper Mill Co., Ltd.

The Directors' Report, the Balance Sheet and the audited Accounts for the year ended 31st December, 1960 have been in your hands and with your permission, I take the same as read.

During the year, the gross profit of your Company is Rs. 50,83,093/- against Rs. 49,05,060/- for the previous year and production also increased from 15,927 tons in 1959 to 18,105 tons during the year 1960, thus the progress of the working of your Mill can be considered quite satisfactory.

Price Policy and Cost of Production

I would like to emphasize the urgent need for the Government to review the present price structure which is followed on the recommendations of the Tariff Commission. The Tariff Commission decided that 12% would constitute a fair return on the Industry's capital and stated that this return would be sufficient to cover the following items:—

- (1) Labour Bonus.
- (2) Interest on Debentures and Loans.
- (3) Managing Agents' or Secretaries and Treasurers' Remuneration.
- (4) Directors' Remuneration.
- (5) Taxation.
- (6) Reserves, including Development Rebate Reserve.
- (7) Interest on Working Capital.

After meeting the above liabilities, the surplus left with the Company will be hardly sufficient to make a reasonable return to the shareholders, and in my opinion the return of 12% allowed by the Tariff Commission is quite inadequate particularly when the new Preference Shares are being issued at 9% interest and the general tendency of the rate of interest being on the increase in the country. If the industry is to be kept in a position to meet all its liabilities and also provide for large scale expansion, modernisation and rehabilitation involving either of ploughing back of retained profits or by attracting new capital, an allowance of a fair return to it is not only desirable from the economic point of view but also essential for the Industry's very survival.

The price of manufactured goods of those industries are regulated which are of basic importance to the national economy and it does not seem logical how the development of these industries could be promoted by the enforcement of such uneconomic prices on these industries which do not allow them to have necessary saving for their Modernisation and Expansion. This matter of ensuring adequate and reasonable return to the basic industries, whose prices are controlled and regulated in the national interest, should be revised in a manner conducive to the proper growth and development of these industries.

There has been considerable increase in the cost of production due to fresh levies of excise on chemicals, viz., Soda Caustic, and Soda Ash, increase in the Railway freight, increase in the prices of raw materials and stores, and a further increase in the cost of coal by way of fresh levy. Whereas the paper price has not been allowed to be increased correspondingly and the paper industry has to absorb these increases with adverse affect on its economy. It is suggested that the Government should evolve some formula whereby an increase in the cost of production due to reasons beyond the industry's control is allowed to the industry to be added to its selling prices. I may also mention that the cases of old mills whose cost of production is higher due to old and worn out machines have not been given due consideration by the Tariff Commission. Due to old and worn out machines your Mill is adversely affected. The profit level has, however, been maintained by increase in production and renovation of the machines.

A memorandum to the Government of India has already been submitted by the Paper Industry for upward revision of the price of paper. I hope the Government will give due consideration to the Industry's difficulties in deciding the new selling prices.

Raw Materials

The year 1960 had been a difficult one as far as supplies of Raw Materials and their transportation was concerned. The widespread incidence of Bamboo flowering all over India has already affected Bamboo supply position. The supplies of Sabai Grass were also not up to expectation and due to various development work going on in the country, the cost of exploitation also increased. Inadequate Rail transport facility resulted in depletion of Raw materials stocks at your Mills and it is hoped that the Railway will improve the wagon supply position to help the Paper Industry to attain increase in production.

Because of shortage of Bamboo and Sabai Grass, bagasse is becoming exceedingly important as a raw material for paper making. I am glad to say that your Company has successfully used bagasse in large quantity during the year and I trust the Government will make alternative fuel available to the sugar industry to enable them to release more bagasse to the Paper Industry.

Sales

I would like to point out that the increase in the levy of excise duty on certain varieties of paper is excessive. The incidence of excise duty on cheap varieties of packing and wrapping paper works out

to about 32 to 35 per cent of the prices of paper. In order to improve the general pattern of packing in the country, wrapping paper has been extensively used as raw materials by the various other industries and there should not be such a heavy excise duty on the low-graded varieties of paper.

You will be glad to know that the quality of various types of paper manufactured by your Company has been enjoying good response from the market. Your Company also undertook manufacture of special quality paper of different varieties and these special varieties too have been found quite popular with the consumers. It is the constant endeavour of your Company to maintain the high standard of quality of its products and further improvement will take place when the Multi-stage Bleaching Plant will be installed under the Expansion and Modernisation Scheme.

Expansion

I have pleasure to inform you that satisfactory progress is being made in the implementation of Expansion and Modernisation Scheme of the Mill. During the year Brown Stock Washing Plant was put into commission and in the current year a Recut-tizing Plant, Water Clarification Plant and other machines also started functioning. These new additions which have been installed at a cost of Rs. 36 lacs approximately have resulted in reducing washing losses and substantially improved Caustic Recovery.

Order for the sixth paper machine has already been placed with Messrs. Walmsleys (Bury) Ltd.,

of England, shipment of which is expected to begin from the second half of 1962. Orders for Multi-stage Bleaching Plant and other equipment from the U.S.A. will be finalised on receipt of approval of the D.L.F. Loan.

The Third Plan sets the industry targets of 900,000 tons and 700,000 tons for capacity and production respectively, or exactly double the targets in the Second Plan. The rate of industrial development, the growth of literacy and proposed implementation of free and compulsory education is expected to absorb the increased production.

Fresh Issue

I am glad to inform you that your Company has decided to issue bonus shares for Rs. 9 lacs in the ratio of 1 to 5 based on the existing equity paid up capital subject to the sanction of the Controller of Capital Issue. In due course the share of Rs. 25/- paid up of your Company will be subdivided into Rs. 10/- paid up share. To finance the expansion and modernisation of the Plant additional capital will have to be arranged and further capital in the form of right shares and Convertible Loan Stock will be issued.

Messrs. Balmer Lawrie & Co., Ltd., resigned the office of Secretaries and Treasurers with effect from 28th April, 1960 and I wish to place on record the valuable services rendered by them to the Company.

Our Mill Manager Dr. J. C. Aggarwala has been selected leader of the National Productivity Team on Pulp and Paper and the team is now on a foreign tour to study the development of Pulp and Paper industry in the other countries.

The relation with the Staff and Workers remained cordial and I would like to express our appreciation of the services rendered to the Company by all of them.

THE NEW INDIA ASSURANCE COMPANY LIMITED BOMBAY

CHAIRMAN, MR. A. D. SHROFF'S REVIEW

Presiding over the Forty-second Annual General Meeting of the Shareholders of the 'New India', the Chairman, Mr. A. D. Shroff, stated that the year 1960 continued to be a difficult year for General Insurers. He expressed the hope that 1961 would be a turning point.

Commenting on the recent legislation requiring insurers in India to make fixed obligatory cessions up to a maximum of 30%, to approved reinsurers in India with effect from 1st April, 1961, Mr. Shroff said that it was not likely to fulfil its objectives of correcting the foreign exchange drain and of broadening the reinsurance market in India. Its only effect will be to impose a levy upon insurers in India by diverting a part of their profits to the Government-controlled unit, without benefiting either the national economy or the Insurance Industry. Further, it was bound to weaken the medium-sized and smaller units.

Mr. Shroff outlined the circumstances which compelled the "New India" to withdraw from the revised Aviation Insurance Scheme with effect from April 1, 1960.

Evil of Rebating

He stated that the biggest bane of insurance in India was the evil of rebating and the consequent frittering away of resources by insurers. In this connection, Mr. Shroff referred to the Scheme of Non-Diversion and Mutual Assistance evolved by a sizeable group of Indian Insurers including 'New India' for a period of three years, to begin with. This Scheme was meant to provide a bridge-up from the present unfortunate position of distrust and confusion and to help insurers in practising correct

standards of conduct, and putting the industry on a sound and healthy basis. He appealed to all Indian insurance companies to join this laudable Scheme. To those who could not do so, for one reason or the other, he appealed to at least observe the spirit of the Non-Diversion Scheme. He hoped that this would lead, ultimately, to group working, so very essential in these days of rationalisation and integration. He stressed that the Non-Diversion Agreement was meant to help insurers to switch over their business from higher commission terms to normal without the fear of any insurer who had subscribed to the Scheme diverting such business by the offer of higher than normal terms. He emphasized that it was erroneous to argue that the Scheme helps one against the other—it helps all.

Fire Rates

Referring to fire rates, Mr. Shroff expressed gratification over the fact that the important question of suitable adjustment of rates, region-wise and industry-wise, was under the active consideration of the Tariff Committee. He said that rates charged should be equated with the actual experience, and that relief be given where it was warranted. He referred to the rapidly growing market for motor insurance, and made a pointed reference to the high claims ratio in this branch. Mr. Shroff, once again, referred to the rough handling of cargo and the very high incidence of theft and pilferage at various ports and railway stations and Government's indifferent attitude to the same.

(This does not purport to be a record of the proceedings of the Meeting).

Money

THE CALCUTTA MONEY MARKET

POOR SHOWING OF BILLS

Wednesday, 3rd August.

THE seasonal fall in advances in the Calcutta money market has been rather less marked during the past week. Most of the main sources of demand show slight decreases in their requirements. The needs of the cotton, jute and sugar mills and the engineering and iron and steel industries are all slightly less, but there has been some increase in call for accommodation against food-grains and seeds storage. In the interbank market, conditions have become much tighter and there is widespread demand at the call rate of 3 percent.

The supply of export bills during the past week has been poor, both on tea and gunny account. Remittance demand, however, has been strong. In the London money market, the pound showed further marked gains against all major currencies on the news that sterling would be fully supported by the I.M.F. However, in view of the large discount at which the forward pound is quoted against the U.S. dollar, the long-term prospects for sterling continue to be unsettled.

BULLION WAS STEADY IN THE PAST WEEK ON FRESH support. Silver advanced from the previous week's level of Rs. 232.50 to Rs. 233.50, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 200.20. The London and New York prices were 80d and 91.375 cents.

Gold was steady in sympathy with silver and the price rose from Rs. 142 to Rs. 142.25. The sovereign at Rs. 96 showed a rise of 25nP.

DURING THE WEEK ENDED 28TH JULY, THE GOVERNMENT of India Treasury bills for Rs. 23,94,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 31st July. The total amount offered was Rs. 3,49,00,000. Tenders at Rs. 99.410 percent and above were accepted in full and those at Rs. 99.400 percent were allotted approximately 96 percent. Lower tenders were rejected. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,399 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 7th August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 1st August to 5th August at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 24th July to 29th July, amounted to Rs. 1,26,00,000.

DECLINES OF Rs. 21.19 CRORES TO Rs. 1,890.78 crores in active notes and of Rs. 8.08 crores to Rs. 1,921.92 crores in the total note issue were notable features of the return of the Reserve Bank of India during the week ended 28th July, 1961. The currency contraction was adjusted by reducing rupee securities of the paper currency reserve by Rs. 9.83 crores to Rs. 1,587.22 crores. Deposits of the Government of India in the Banking Department rose by Rs. 24.07 crores to Rs. 77.09 crores due to the subscriptions to the new loans and balances of commercial banks declined by Rs. 21.75 crores to Rs. 81.71 crores. Deposits of other Governments dropped by Rs. 10.79 crores to Rs. 20.56 crores. Balances held abroad again fell by Rs. 3.44 crores to Rs. 5.03 crores. The investment portfolio was Rs. 7.77 crores smaller at Rs. 241.11 crores. Other loans and advances rose from Rs. 113.60 crores to Rs. 114.80 crores, of which advances to scheduled banks against usance bills amounted to Rs. 9.16 crores (Rs. 1.01 crores). Ways and means advances stood at Rs. 40.87 crores, against Rs. 40.65 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 21st July, 1961, shows a drop of Rs. 1.04 crores to Rs. 531.31 crores in total deposits. Investments in Government securities and other securities are up by Rs. 18.01 crores and Rs. 2 lakhs to Rs. 243.55 crores and Rs. 9.35 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have dropped by Rs. 4.84 crores to Rs. 254.83 crores. Cash and balances are, in consequence, shown at Rs. 26.32 crores or Rs. 1.03 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 21st July, 1961, shows Demand and Time liabilities at Rs. 838.35 crores (Rs. 20.84 crores on account of borrowing from banks) and Rs. 1,142.57 crores (Rs. 19.27 crores), compared with Rs. 847.23 crores (Rs. 26.66 crores) and Rs. 1,130.88 crores (Rs. 19.39 crores), respectively, in the previous week. Cash has declined by Rs. 85 lakhs to Rs. 46.19 crores, while balances with the Reserve Bank have increased by Rs. 9.23 crores to Rs. 100.09 crores. There is a rise of

ANOMALIES AND INEQUITIES OF DEVELOPMENT REBATE

By K. C. Khanna

FEW other provisions of the Income Tax Act, 1922, with the possible exception of Section 23A, have had such a chequered career within a short period of their enactment as those relating to the grant of development rebate. It was in the year 1954 that the Taxation Enquiry Commission, under the able chairmanship of the late Dr. John Matthai, recommended the allowance of a development rebate at the rate of 25 percent on all investment in fixed assets in the form of plant and machinery. The Commission recognised the need for incentives to the development of productive enterprise and stated that to the extent that expansion was stimulated by the grant of development rebate, there would be in due course, be a larger flow of taxable profits and greater receipts in consequence of the allowance. It also recognised the increasing intensification of competition in the world market and, therefore, considered it necessary that the capacity of Indian industry to finance development should be reinforced.

This recommendation of the Taxation Enquiry Commission was accepted by the Government and the Finance Minister in his 1955-56 Budget speech announced the allowance of a development rebate of 25 percent of the cost of all new plant and machinery installed for business purposes, instead of the then existing initial depreciation allowance of 20 percent. The necessary amendment was made to Section 10 of the Income Tax Act by the inclusion of clause (vib) in subsection (2) of that Section, which provided, in simple language, that for all plant and machinery, which was installed after 31st March, 1954, and which was wholly used for the purposes of business carried on by the assessee, a sum by way of development rebate, for the year of installation, equivalent to 25 percent of the actual cost of such plant and machinery to the assessee would be allowed. No strings were attached to the allowance, the only condition being that the prescribed particulars of plant and machinery should be furnished by the assessee.

Official Quibbling

The grant of development rebate was widely welcomed and assessee, whether companies, partnerships or individuals, accelerated the development of their industries and business by the installation of new plant and machinery. However, when the claims for development rebate were made, the Central Board of Revenue started the usual quibbling and attempts were made to curtail or reduce the allowance even where it was permissible under the law. For instance, income tax officers refused development rebate against motor-vehicles and other conveyances used for the purpose of business on the fantastic interpretation that such vehicles, even though included in the definition of "plant", were incapable of being "installed" as they were not "fixed to the ground". It was only when several High Courts had rejected the Department's contention, that the claims of the assessee for development rebate on motor-cars and other vehicles used for the purposes of business were allowed. Such allowance was, however, short-lived and early in 1959, a proviso was added by the Taxation Laws (Amendment) Act, 1960, which stated that no allowance under clause (vib) shall be made for any machinery or plant which consisted of road transport vehicles. Thus a complete withdrawal of the rebate was made for the entire category of road transport vehicles, irrespective of the use to which such vehicles were put. When it is admitted on all sides that the railways are working under pressure and that it is imperative that the use of lorries, trailers and such other road transport vehicles for the carriage of raw materials and finished goods be developed and encouraged, the inopportunities and inequity of withdrawal of rebate on all types of road transport vehicles becomes too glaring. It is true that the Taxation Enquiry Commission had recommended that the development rebate should not be allowed for motor-cars, but disallowing was specifically limited to "such transport as may be considered by the Government to be capable of being used for private as well as for business purposes". No total ban was intended or recommended by the Commission. It would be instructive to note in this connection that even in the U.K., the investment allowance, which is analogous to development rebate, is allowed for road vehicles except those which are used as private vehicles (U.K. Finance Act, 1954). It is, therefore, apparent that a total withdrawal of development rebate for road transport vehicles is wholly unjustified; suitable exceptions must be made.

Another instance where the tax authorities unjustifiably deny grant of development rebate

For a nominal charge, "Capital's" Statistical Department can provide you with a certificate of share prices.

is one where taking advantage of certain conflict of views among some High Courts in India, they define plant or machinery as a self-contained unit which is capable of being run independently, and consequently, refuse development rebate on such items of plant or machinery which, according to them, do not strictly fall within the above definition. In a case (37 I.T.R. 142), the Bombay High Court held that an assessee who had replaced the petrol engines in his motor-lorries by diesel engines at about half the value of the lorries themselves was not entitled to the allowance of initial depreciation for the diesel engines because these did not constitute self-contained units capable of being put to use in the business. The Madras High Court dissented from the above view and held that a diesel engine was by itself "machinery" within the meaning of Section 10(2) of the Income Tax Act and continued to be machinery even after it was made an integral part of the assessee's bus (38 I.T.R. 413). With due respects to the Bombay High Court, it must be stated that the Madras view is the right one for machinery does not cease to be machinery merely because it has to be used in conjunction with one or two machines, nor merely because it is installed as part of manufacturing or industrial plant. This view finds support from a recent decision of the House of Lords in the case of Hinton vs. Maden and Ireland Ltd. The facts of that case briefly were that the taxpayers employed a number of different kinds of machines in the manufacture of shoes. One machine was given a knife and leather; it pressed down the leather and cut it with a knife to the required shape. Another machine was given the wooden last with the leather shaped round it; the machine hammered down the tacks. Neither the knives nor the lasts formed part of the respective machines. They were separate tools and the question arose whether the knives and the lasts were "plant". The House of Lords was unanimous in its opinion that the knives and lasts constituted "plant" in order to claim the investment allowance under Section 16(3) of the U.K. 1954 Finance Act. The above view, however, does not seem to find favour with the tax authorities in India and taxpayers are being deprived of a right which is theirs both in law and in equity.

Further Restrictions

The Finance Act of 1958 made a major amendment which laid down further restrictions and conditions for the allowance of development rebate, the important ones being:

(a) that an amount equal to 75 percent of the rebate actually allowed should be credited by the assessee to a reserve account which reserve should not be used for a period of ten years for distribution of profits or for remittance outside India as profits or for the creation of any asset outside India, and

(b) that the machinery or plant for which the rebate was allowed should not be sold or otherwise transferred by the assessee to any person other than the Government at any time before the expiry of ten years.

As was anticipated, the imposition of the above conditions led to further anomalies and inequities. One need not go into detail of the confusion created for the setting up of the reserve; suffice to say that elaborate administrative instructions had to be issued to clear the numerous ambiguities. The restriction on the sale of transfer of plant and machinery was, however, found to be extremely onerous and, in certain aspects, impracticable.

The Direct Taxes Administration Enquiry Committee went into these difficulties and recommended certain changes some of which have been implemented in the recent Finance Act of 1961. It has, for instance, been provided that where one company amalgamates with another or a partnership is succeeded by a private limited company, then, subject to the fulfilment of certain conditions, the sale or transfer of plant and machinery involved in such amalgamation or succession should not lead to the withdrawal of development rebate. One is, however, at a loss to understand why only these two specific instances have been provided. Why, for example, similar treatment should not be granted, under identical conditions, to the succession of a proprietary business by a private limited company? And why, if all other conditions are fulfilled, should the formation of a public instead of a private company lead to the withdrawal of development rebate? The only explanation offered is that in these instances, the identity of interests is not maintained. Further, if an individual converts his business into a partnership to expand and develop it, he commits a sin and possibly loses the development rebate; but if he purchases the share of a deceased or outgoing partner, he commits an act of piety and the development rebate is not forfeited. To sell one's plant or machinery to the Government is a virtue and the rebate is not lost; but to transfer it to another business even in the interests of better production, reorganisation or expansion is

a vice, penalised by the withdrawal of the rebate. No attempt has so far been made to clear up these anomalies; the so-called "identity of interests" is too flimsy a ground to sustain the above inequities.

Assurance by Finance Minister

Considerable discussion took place in Parliament before the above-mentioned restrictions were imposed. Most of the members anticipated the difficulties and they pressed the Finance Minister to make suitable amendments, for example, to provide that development rebate would not be withdrawn in those cases where the plant and machinery were transferred or sold with prior consent of the Government. The Finance Minister refused to accept any amendment, but he explained in detail the purpose for and the spirit in which development rebate was given and gave the assurance that the restrictions would not be rigidly enforced. On 23rd April, 1958, speaking in the Lok Sabha, he is reported to have stated: "We are giving this development rebate in order that our industries may advance more. This is a thing which will accrue only if they go on expanding. It is given to them as an incentive. We are quite right in insisting that it must be utilised only for the legitimate business of the concern and for furthering the cause of the concern rather than for distributing profits.... Everybody has some private interest which guides him. We are only to see that private interest does not go against the national interest and that is what we are trying to do.... If there are difficulties we shall remove them. In all legitimate purposes we want to see that impediments are not placed but we also want to see, as my friend Shri T. N. Singh says, that nothing is misused.... Therefore, we do not want to depart from the wording that has been used. But I can assure my honourable friends that there is no intention of restricting anybody beyond the spirit which is involved in this amendment. I hope, therefore, that my honourable friends will accept this assurance that if there is any impediment, we shall certainly come forward to remove it.... administratively whatever impediments can be removed, we shall remove." (Lok Sabha Debates, Vol. 16, 2nd Series, Nos. 51-61).

Reduction in Development Rebate

The above are noble thoughts with which no one can possibly have any quarrel. It is distressing to note, however, that those concerned with the administration of law have gone beyond the spirit and stuck only to the letter. Innumerable cases have been reported where, taking advantage of the legal phraseology and ignoring the assurance given by the Finance Minister, the tax authorities have either refused development rebate or withdrawn it, thus perpetuating gross inequities. Last but not least is the recent reduction of the development rebate from 25 percent to 20 percent. What are the reasons for this reduction? Has the intensity of competition in the world market diminished? Has the need for incentives for the development of Indian industry lessened? Have the replacement costs of plant and machinery gone down? No plausible explanation is forthcoming. When the Taxation Enquiry Commission recommended the allowance of development rebate at 25 percent, they also recommended that the additional depreciation allowance should be continued. It seems paradoxical, therefore, that the Government should reduce the development rebate shortly after the withdrawal of the additional depreciation allowance. There can be no justification for the inequity involved in the reduction of the rebate.

It is unfortunate that the Income Tax (Amendment) Bill, 1961, makes no attempt to remove the anomalies and inequities enumerated above. It is to be earnestly hoped that the Select Committee which is now considering the Bill will recommend to Parliament:

(a) that development rebate shall be allowed at 25 percent;

(b) that development rebate shall be allowed on all vehicles used in business, except those which are also used for private purposes;

(c) that development rebate shall be allowed on the entire capital expenditure incurred in the acquisition and installation of all items of new plant and machinery whether intended for replacement or for expansion, and

(d) that development rebate shall not be withdrawn on the sale or transfer of plant and machinery unless such sale or transfer "is made to a person or a corporation or any other taxable entity the major portion of whose business income is not subject to Indian income tax" or the said plant and machinery "is utilised for a purpose other than that for which it was acquired". (Taxation Enquiry Commission Report, Vol. II, Page 100).

Only when the above suggestions are implemented and all other restrictions on the allowance of development rebate, with the possible exception of those relating to the creation and maintenance of a reserve, are withdrawn, will the Government be giving effect to the recommendations of the Taxation Enquiry Commission, which initiated the grant of development rebate. It will also then be fulfilling the assurance given by the Finance Minister in the Lok Sabha. Its revenue will not suffer as suitable safeguards will be provided and the taxpayer will be saved unnecessary harassment and hardship.

Stocks and Shares

STEADIER CLOSING PRICES FOLLOW EARLIER SHAKE-OUT

TECHNICAL POSITION NOW REPORTED GOOD

Wednesday Evening.

THE Calcutta stock market has closed the week in a subdued mood. There has been an all-round decline in share prices due to the heavy selling pressure which has been so strikingly conspicuous in speculative stocks. The shake-out appears to be due to earlier over-trading. As a result of the substantial decline, bulls have become nervous and are not inclined to extend their support at the present time. In order to guard against payment difficulties, the authorities enforced an interim clearing last Saturday. At today's settlement, prices have recovered slightly, and the carry-forward charges are moderate following an improvement in the technical position. The recovery appears to have been helped by encouraging production and despatch figures for the Indian Iron and Steel Company for July. The output of pig iron has improved from 96,921 tons in June to 100,407 tons in July and that of steel ingots from 74,228 tons to 77,595 tons. The production of saleable steel has increased from 50,089 tons to 65,720 tons, to which semis have contributed 14,825 tons, against 13,576 tons and finished 50,895 tons, against 36,513 tons. Despatches are higher at 53,410 tons, compared with 51,410 tons.

At the close, the selling pressure had abated considerably, but fresh support was lacking due to various uncertainties. Reports indicate that the Government of India may force the various stock markets to introduce further reforms in order to restrain speculation. It is not known what new measures the Government has in mind, nor can one guess when these reforms are likely to be enforced. The uncertainty has proved a major restraining factor because in stock market trading uncertainty is always much worse than bad news. In the circumstances, it is hoped that the Government will soon make it clear what it wants to do in regard to the new measures.

Operators are also worried about the floods which are believed to have caused damage in many parts of the country. The possibility of the U.K. joining the Common Market is being interpreted bearishly in some quarters on the fear that the move might hamper India's exports.

In spite of the present gloom, an important factor is that there is little selling pressure in many good shares. Their prices appear to have declined due more to the absence of support than to pressure. In fact, the prices now have moved down to a level which is considered attractive on yield and growth considerations. Quiet investment buying is believed to have flown into some good stocks.

On a longer view, the prospect for selected equity shares is considered fairly optimistically. The final draft of the third five year plan is expected to be published in a few days' time. Considering that India has arranged to meet the foreign exchange difficulties by drawing on the International Monetary Fund until the promised foreign aid starts arriving at the end of the current year, it is hoped that the working of the corporate sector will be given a new boost by planned development.

At the same time, support is likely to be more discriminating than before in view of the difficulties some industries are at present facing. The engineering industry is believed to have been hampered by shortages of raw materials, transport and coal. Industries in and around Calcutta have been forced to cut production due to electric power shortages. The sugar industry is embarrassed by a large accumulation of stocks in the factories.

Attention has been diverted to examining the prospect for rises in the prices of many commodities. The steel retention prices are expected to be fixed by the Government at higher levels in order to compensate producers for increased production costs. When these prices are announced, the outlook for the steel industry should improve considerably. The latest results of the Tata Iron and Steel Co. and the Indian Iron and Steel Co. indicate how the good effects of the expansion schemes have begun to show. The Tariff Commission is now investigating the costs of the cement companies. The market expects that the price of the commodity will soon be increased. The paper industry is reported to have sent its representations to the Government for an increase in the price of the commodity in view of the substantial increases which have taken place in various items of costs. If the Government cares to bring prices into relation with production costs, the profitability of many industries will improve.

The price of Indian Iron shares has closed at Rs. 26.55. In the engineering section, scattered interest is being taken in J. K. Steel on the prospect of a bonus share issue. Texmaco have declined further on the view that the working has been affected by labour troubles. Interest is subdued in Braithwaite, Guest, Keen, Williams

and Jessop. Burn has been bought quietly on growth possibilities.

The prices of miscellaneous shares have declined all round and many shares appear to have become attractive investment propositions. Dunlop Rubber, Britannia Biscuits, British Paints, Metal Box, Indian Aluminium, Union Carbide and Alkali Chemicals are being closely watched. In the paper section, Bengal Paper are steady on the decision to issue ordinary bonus and rights shares. Indian Copper have declined on pressure, as have Hindustan Motors. Hindustan Tywifords have attracted support on a report that the work of the factory construction is making progress.

Routine business is being transacted in coal shares, and attention has been concentrated on Bengal, Burrakur East Indian, New Beerbhoom and Amalgamated.

Sellers predominate in jute shares and buyers are difficult to locate. Investors are cautious because the industry may have to go in for further production cuts in view of the fibre shortage. There is scattered support for Bird-Heilgers group jute mills' shares on the payment of some satisfactory dividends. Birla are quoting ex-rights—the Company has issued ordinary rights and bonus shares. New Central have met with scattered interest due to the diversification of activities.

Cotton mill shares are quietly steady and interest has been taken in Bharat Commerce, J. K. Rayon and Kesoram. Sugar shares are being freely offered at lower prices in view of the large accumulation of stocks in the factories. The export prospect for the commodity is being assessed cautiously. Carew have, nevertheless, improved on interested support.

The demand for selected tea shares has been sustained, although prices have declined slightly. The payment of some good dividends by the

**WHY
TAKE
CHANCES?**

In what you do every day, you are taking many chances. For example, take the things that you buy in the market. Are you always sure of their quality? Do you get good value for the money you spend?

And yet, you can be sure if you know that the goods you buy have been made to a given standard. Standardization benefits not only you, the consumer, but also the producer, the distributor and indeed, the country as a whole.

The Indian Standards Institution has prescribed standards for industrial as well as consumer goods. To manufacturers producing to relevant standards, ISI grants licences to apply on their goods its certification mark which is the guarantee of quality. The next time you buy anything, don't take a chance; look for the ISI mark.

INDIAN STANDARDS INSTITUTION
NEW DELHI • BOMBAY • CALCUTTA • MADRAS

Millanders group of gardens has helped broaden interest. Support is forthcoming for Betjan, futlibari, Bishnauth, Hantapara and Hasimara.

Government securities are steady and prices of short and medium-dated stocks have hardened. Business is nevertheless limited because there are not many sellers. The prices of long-dated loans have not changed much. The 3 percent conversion loan 1936 is quoted at Rs. 72.10.

Jaybirpara Tea

The ordinary dividend of 10 percent, subject to tax, has been declared by Jaybirpara (Dooars) Tea Co. Ltd. for the year ended December 1960, against 5 percent, taxable, in the previous year. The profit has declined from Rs. 1.14 lakhs to Rs. 93,016, after providing Rs. 20,876 (against Rs. 23,490) for depreciation. Taxation absorbs Rs. 12,000 (against nil). With other adjustments, there is a carry-forward of Rs. 28,515, against Rs. 17,759 brought in. The crop amounted to 2,151 quintals (against 2,435 quintals). The average sale price a kilogram was Rs. 4.91 (against Rs. 4.78). Estimates for the current season have been framed for a crop of 2,540 quintals.

Methoni Tea

The profit made by the Methoni Tea Co. Ltd. has declined from Rs. 3.72 lakhs to Rs. 67,174 for the year ended December 1960, after allocating Rs. 69,455 (against Rs. 65,557) for depreciation. The dividend of 5 percent, subject to tax, has been declared, against 15 percent, taxable in the previous year. After making necessary adjustments, there is a carry-forward of Rs. 45,981, against Rs. 70,164 brought in. A crop of 285,968 kilograms was manufactured, against 3,71,135 kilograms. The average sale price was Rs. 6, against Rs. 5.89 a kilogram. Estimates for the current year provide for a crop of 384,646 kilograms at a cost of Rs. 16.22 lakhs.

Bombay Market

NEW ACCOUNT STARTS ON SUBDUED NOTE

TURNOVER CONCENTRATED ON CASH SCRIP

Wednesday Noon.

THE Bombay stock market started the three-weekly new account in a subdued manner. There has been a marked decline in the prices of shares due to nervous long liquidation, combined with short-selling. Sentiment weakened considerably on reports of distress selling. Although the prices of many shares have now moved down to attractive levels from the yield point of view, support has been cautious. Operators were nervous about the possibility of new Government measures for restraining speculation in stocks and shares. A section of the market was disturbed by the thought that in the coming election there could be many unfavourable developments from the market point of view. In spite of the evidence of easier money conditions, it was feared that the supplies of bank credit to the stock market might be regulated more sternly. A striking feature was that turnover was largely concentrated on cash scrip rather than on forward shares.

Tata Steel declined to Rs. 155.50 and Indian Iron to Rs. 26.50 on pressure from Calcutta interests. After a short-lived rally on reports of institutional support, the price of Premier Construction closed lower at Rs. 187. Tata Locomotive declined to Rs. 356, as did Mukand Iron to Rs. 26.75. Alcock Ashdown were freely offered at Rs. 268. Motor shares were quiet, and Hindustan Motors touched a new bottom of Rs. 21.36 on selling pressure from Lyons Range. Premier Automobiles were quoted lower at Rs. 157.

Cotton mill shares showed losses all round. Century declined to Rs. 662, as did Bombay Dyeing to Rs. 66.80. At the lower price, the latter scrip attracted interested support on prospects of diversification of activities. Kohinoor were available at Rs. 287 and Svadeshi were dealt in at Rs. 250. Morarji were taken at Rs. 408 by knowledgeable quarters and Simplex were sold down to Rs. 194. Standards moved down to Rs. 1,305 and Khatau were offered at Rs. 562.50. Business passed in Finlay at Rs. 319 and India United Ordinaries were sold down to Rs. 15.12. Sellers predominated in Apollo at Rs. 1.70 and Central India were transacted at Rs. 120.

In the miscellaneous section, sugar shares were quiet, and Belapur lost at Rs. 248. Walchandnagar Industries declined to Rs. 163.50 and Phaltan were offered at Rs. 128. Cement shares were quietly steady, and Associated Cement were dealt in at Rs. 158.50. Digvijay lost at Rs. 158.50. Mining shares were subdued, and Shivrajpur Syndicate were quoted lower at Rs. 89.50. Sellers were numerous in steamship company shares and prices declined all round. Scindia Steam were available at Rs. 13.72 and business was done in Great Eastern Shipping at

Rs. 13.88. Rayon shares moved down in sympathy with the general trend. National Rayon reacted to Rs. 532, as did Baroda Rayon to Rs. 137. Gwalior Rayon were indicated at Rs. 50.50. Chemical shares turned softer, and Tata Chemicals shares were indicated at Rs. 345. Bombay Chem were quoted lower at Rs. 345. Bombay Burnmah reacted to Rs. 585 on pressure, but scattered interest was taken in Voltas at Rs. 282. Tata Oil were quietly steady at Rs. 73.50. Ceat Tyre declined to Rs. 210 and Synthetic and Chemicals lost at Rs. 195. Anil Hardboard were sold down to Rs. 252.50.

Bank shares were steady, and support was forthcoming for Central Bank at Rs. 63.80 and for Bank of India at Rs. 133.25. Bank of Baroda came to hand at Rs. 103.75. Insurance shares were quiet, and New India Assurance lost at Rs. 59. Vulcan were done at Rs. 16.12.

Report of good working of the Tata group of companies induced support for electric company shares. Tata Hydro changed hands at Rs. 108 and Tata Power were wanted up to Rs. 1,055. Ahmedabad Electric were done at Rs. 88.50 and Bombay Suburban were indicated at Rs. 97.80.

Madras Market

PRICES FALL AS BUYERS SIT OUT

FLOOD REPORTS INDUCE CAUTION

Tuesday Evening.

THERE has been only thin trading in the Madras stock market during the past week and share prices were generally lower due to selling pressure combined with short-selling. Buyers sat out on the side-lines in view of the sharp decline in prices on the Bombay and Calcutta stock markets. Reports of flood damages in many parts of the country, combined with power shortages, called for caution. Government securities were steady and interest was taken in short and medium-dated loans. Selected State loans were also in demand. Bank shares were steady on reports of good results for the half-year ended June 1961. Public utilities were steady on scattered support. Sugar shares were sold freely due to the uncertain profit outlook for the companies. In the planting section, tea shares were selectively bought on improved auction prices. Rubber shares were supported on prospects of higher production, but coffee shares were neglected on fears of excessive supplies. Textile shares were quiet on profit-taking and miscellaneous shares were sold on easier advices from outside centres.

In the banking section, business was done in Indian at Rs. 173 on the payment of an interim dividend of 7½ percent, taxable. Punjab National came to hand at Rs. 24.12 on paying an interim dividend of 10 percent, taxable. Andhra were dealt in at Rs. 100 and Indian Overseas were done at Rs. 192. Among electric companies, Kumbakonam were steady at Rs. 10.50 on paying a taxable ordinary dividend of 12 percent. Business passed in Negapatnam at Rs. 9.30 on declaring a taxable ordinary dividend of 14.2 percent. South Madras came to hand at Rs. 10.15 on declaring a final ordinary dividend of 4½ percent, taxable.

In the sugar section, Deccan reacted to Rs. 13.40 and E.I.D. lost at Rs. 38. United Breweries were quiet at Rs. 104, but Mysore were steady at Rs. 57.75. K.C.P. were done at Rs. 24.50 and Kothari were easier at Rs. 8.90.

Among planting shares, Blue Mountain came to hand at Rs. 3.07 and Cochlin Malabar were dealt in at Rs. 7.30. Consolidated Coffee reacted to Rs. 21.10 and Ouchterlony were sold down to Rs. 3.65. Amalgamated were transacted at Rs. 12.50 on paying a taxable ordinary dividend of 12 percent. Chembra were steady at Rs. 3.90 and Devon were dealt in at Rs. 14.50. Poriakaramalai weakened to Rs. 3.90, but Kil Kotagiri were steady at Rs. 4.67. Lucky Valley came to hand at Rs. 11.90. Mamallay were bought at Rs. 38.25 on paying a taxable ordinary dividend of 14 percent. Nilgiri were steady at Rs. 8.90 and business passed in Nonsuch at Rs. 28.20. Peermade were quoted at Rs. 22.70 and Peninsular were done at Rs. 20. Swinton were placed at Rs. 3 and Teckoy were done at Rs. 5.20. Sellers predominated in Thirumbadi at Rs. 1.62, but Tropical were in demand at Rs. 18.95. Velimalai were taken at Rs. 5.85 and Waterfall were transacted at Rs. 2.95.

In the textile group, Buckingham were steady at Rs. 238, but Bangalore Woollen were quiet at Rs. 207. Anglo-French were done at Rs. 129.50 and Balarama Varma were placed at Rs. 87.70. K. Rajendra were transacted at Rs. 72 on paying a taxable ordinary dividend of 11 percent. Lakshmi declined to Rs. 166.75 and Madura were sold at Rs. 36.80. New Delhi

BIG EXPANSION PLANNED FOR THE ALUMINIUM INDUSTRY

U.S. COLLABORATOR VISUALISES GOOD EXPORT PROSPECTS

(FROM OUR NEW DELHI CORRESPONDENT)

SOME firm decisions have been taken concerning the aluminium industry. The Central Ministry of Commerce and Industry, it will be recalled, some time ago set up a small committee, with the Senior Industrial Adviser, Mr. G. P. Kane, as its chairman to appraise the demand for electrical grade aluminium and to suggest a target for the metal under the third plan. The committee concluded that the total requirement of electrical grade aluminium in 1965-66 would be 55,000 tons a year, according to the break-down given below:

	Tons
(i) transmission and distribution lines	40,000
(ii) bus bars and die-castings	6,000
(iii) substitution in power cables and house wiring	5,000
(iv) miscellaneous	4,000
Total	55,000

The committee estimated the requirement of commercial grade aluminium for various industries in 1966 as follows:

	Tons
Domestic utensils, etcetera	25,000
Transport and aluminium alloys	12,000
Packing (foils)	7,000
Building construction	4,000
Food, farming, sugar industries, etcetera	4,000
Miscellaneous, including the requirements of steel industries and normal exports	8,000
Total	60,500

The total requirement of aluminium for internal uses during 1965-66 is estimated at 115,500 tons, out of which 55,000 tons should be of electrical grade and the rest of commercial grade. In the same year, a secondary aluminium metal, it is expected, will be available to the extent of 10,000 tons, therefore the requirement of new metal would be 105,500 tons. In making the above estimates, the committee had taken the following into account:

- a realistic provision has been made for substitution of copper by aluminium in electrical industries during the third plan;
- in the field of domestic utensils and other requirements, the provision for substitution of copper and brass by aluminium is only marginal; and
- the figures include only a nominal provision for export at the present level of about 1,000 tons a year. All other exports of aluminium metal, whether for the purpose of paying for the cost of imported plant and equipment for new units, or for direct earning of foreign exchange by the export of aluminium ingots or fabrications, will require additional capacity.

Reynolds Interested

It is explained that Reynolds of the U.S.A., who have shown keen interest in collaborating in the establishment of a large-sized smelter in India, have expressed the belief that the potential export market for aluminium from India will grow with time, as with the increasing application of aluminium to different purposes, the world demand for it is growing. The world aluminium export market is estimated at about 637,000 tons and 120,000 tons a year for ingots and semi-manufactures, respectively. Annual imports of countries in close proximity to India are estimated at 25,000 tons of ingots and 19,000 tons of semis. In view of the real advantage which India has in semi-fabricated products through the availability of plentiful and comparatively low-cost labour, Reynolds, through their international contracts in the auto-motive and other fields, are hopeful of being able to assist in the developments of new markets for a few of their special aluminium devices such as radiators, grills and other motor-vehicle parts having a high labour content manufactured in India.

The State-trading countries which have rupee payment arrangements with India are generally short of bauxite, and in fact, two or three of these countries have displayed definite interest in entering into long-term arrangements for meeting a part of their aluminium requirements from Indian production. Taking all the above facts into account, India should, even on a conservative estimate, be in a position to export about 30,000 tons a year by 1965-66, and with some determined effort, be able to improve substantially on this performance.

In the case of an aluminium plant the normal period of gestation—the time from when the proposal is first made to the establishment of full production—may be anything between three and five years. Making provision for the necessary power supply, exploitation of the bauxite deposits, arrangements for transport, negotiation of the terms of foreign collaboration, mobilisation of the necessary finance—internal and external—selection and preparation of site, location of suitable plant and machinery, their import and installation, civil construction, etcetera, all take time. In the case of Hindustan Aluminium, the proposal was first initiated in November 1957, and it is hoped that the plant may go into production by the end of the current year. In the case of Koyana Aluminium, the proposal appears to have been first initiated some time in May 1959. An industrial licence for a 20,000-ton smelter was issued on 3rd March, 1960, but till to-date no tangible progress in the arrangements for financing, collaboration, etcetera, has been made. In fact, it was only last week that the Government was informed by the licensee that the negotiations for collaboration with the Aluminium Company of America had fallen through and fresh avenues of collaboration with other suitable parties would have to be explored. In the case of the Indian Aluminium Company, the application for expanding the Hirakud smelter was made in January 1958 and on the present schedule, the plant is likely to go into production only in 1962. Thus, if the target of production aimed at is to be achieved, due allowances will have to be made for shortfalls in installed capacities from licensed levels, and for shortfalls in production from installed levels, and for unavoidable delays, and a cushion of the order of about 25 percent in the licensed capacity provided for.

Proposals for New Plants

The Government has had four concrete proposals for setting up new aluminium capacity. These proposals, which have yet to be worked out in full detail after the necessary studies, are briefly:

- establishment of a smelter in the public sector with a capacity of 25,000 tons a year with Hungarian collaboration, the site for which is yet to be selected, in consultation with Hungarian experts;
- the proposal of Mr. Murari J. Vaidya to set up a smelter in Mysore State with 30,000 tons capacity, based on Sharavathi power, in collaboration with Reynolds and in which the Mysore Government also intends to participate;
- the proposal of J. K. Industries to establish a 20,000-ton smelter in Annapur in Madhya Pradesh; and
- the proposal of Hindustan Aluminium Corporation for expansion of their unit in Rihand from 20,000 tons to 50,000 tons.

The Government has agreed to the expansion of the Hindustan Aluminium Corporation's plant in Rihand from 20,000 tons to 50,000 tons in collaboration with Kaiser Engineers of the U.S.A., of J. K. Industries' new 20,000-ton plant to be located in Annapur near Amarkantak or at a site near Korba in collaboration with Aluminium Industries, Aktien-Gesellschaft, Zürich, Switzerland, of Mr. Murari J. Vaidya for a new 30,000-ton plant to be located in the Hubli-Karwar region in Mysore in collaboration with Reynolds International Inc., Bermuda, and a 25,000-ton smelter in the public sector with Hungarian collaboration, the site for which is yet to be selected in consultation with Hungarian experts.

Foreign Aid for Third Plan

Details of the loans and the rate of interest which will be charged in making available \$2,225 million in the first two years of the third plan are available. The details of the U.S. assistance of \$1,045 million are not known, as Congress has not yet passed the necessary legislation. But the U.K. loan of \$250 million is repayable in 25 years, and the first payment to start after seven years and the rate of interest will be 1 percent more than the rate at which the U.K. Government borrows for similar periods. Of the West German contribution of \$364 million, \$82.5 million will be at 3 percent interest repayable in 20 years. Canada will give \$56 million. Of this, \$36 million are grants and the remaining \$20 million will be in the form of export credits which are yet to be negotiated. The French offer of \$30 million is repayable in ten years. But the rate of interest is yet to be settled. The Japanese credit of \$80 million is equally divided between the private and public sectors. It is to be repaid in 15 years, the rate of interest being

the same as the one charged by the World Bank. The World Bank and the International Development Association will contribute \$400 million.

Negotiations on Small Car Manufacture

The chairman of Renault Corporation, Mr. Pierre Dreyfus, arrived here last week for consultations with the Government of India in connection with the proposed "people's car" manufacture. A meeting of the economic secretaries also discussed the project, without reaching

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

the development of Chasallah coalfields of the Indian Iron and Steel Company. The proposal visualises the construction of a ropeway to connect the coalfields with the steel works.

Bills for Next Session of Parliament

A Bill to make the disturbance of communal harmony or promotion of enmity between classes of citizens and specific offences will be introduced in the next session of Parliament beginning on 7th August. Besides this measure, called the Indian Penal Code (Amendment) Bill, 1961, 15 other new Bills are coming up before Parliament during the next session. The Representation of the People Acts, 1950 and 1951, are to be amended through a Bill so as to remove certain lacunae experienced in the working of these two Acts. The scope of the Act on the voluntary surrender of salaries is to be extended to make it applicable to all classes of salaried employees. The High Court Judges (Conditions of Service) Amendment Bill, is being brought forward to provide for grant of death-cum-retirement gratuity, etcetera, to High Court judges in addition to pension and additional pension admissible at present. One Bill will define the duties and powers of the Comptroller and Auditor-General of India. Another, the Extradition Bill, 1961, will replace the existing Extradition Act, 1903.

The maximum amount payable to the victims of passenger train accidents will be increased from Rs. 10,000 to Rs. 20,000. The same measure, the Indian Railways (Second Amendment) Bill, 1961, will also provide for a minimum and enhanced deterrent punishment under certain sections of the parent Act. To validate the sugarcane cess levies of some States, the Sugarcane Cess (Validation) Bill, 1961, will also be introduced. The programme of training for apprentices in industry will be regulated through a Bill. Another Bill will extend the Industries (Development and Regulation) Act to the State of Jammu and Kashmir. It is sought to quicken the slum clearance work in Delhi through the Slum Areas (Improvement and Clearance) Amendment Bill, 1961. It will also give protection against eviction to *Amledars*. Another Bill will replace the existing Atomic Energy Act, 1948. Certain amendments will be effected through the Delhi Municipal Corporation (Amendment) Bill, 1961. The main purpose is to make provision for single member wards for election of municipal councillors. For holding elections on the basis of adult franchise in the Union Territory of Manipur, the Assam Municipal Act, 1956, which has been extended to the area, will be amended.

Insurance of Bank Deposits

Up to certain specific limits, the deposits of commercial banks will be insured. For this purpose, the Deposit Insurance Corporation Bill will also be introduced. The life of the Newspapers (Price and Page) Act, 1956, will also be extended for a further period. The third five year plan will also be discussed in the next session of Parliament. The other things to come up include the Second and Third Reports of the Commissioner for Linguistic Minorities and the Report of the Aligarh Muslim University Enquiry Committee. A discussion will also take place on the Tenth Annual Report of the Union Public Service Commission and on the Supplementary Demands for Grants (General), 1961-62. Further discussion will also take place on the Report of the University Grants Commission for April 1959-March 1960.

Dearness Allowance for Government Employees

For the purpose of the grant of compensatory (city) and house rent allowances to the Central Government servants, cities in India are divided into three different categories, A, B and C. Hitherto, Bombay and Calcutta were the only two cities classified as A class cities, nine cities with population exceeding 500,000 were classified as B class

cities and 64 cities with population ranging between 100,000 and 500,000 were classified as C class cities. It has now been decided by the Government that cities with a population exceeding 2 million should be classified as A class cities. On the basis of the provisional census figures, 1961, and the above population criterion, the Government has decided that Delhi, which has now a population of 2,644,058, should be upgraded from B class to A class and Agra (population 509,108) and Varanasi (population 573,558) from C class to B class. Twenty-six more cities listed below are to be included in the C class: (1) Bandar (Masulipatnam), (2) Eluru, (3) Kakinada, (4) Kurnool, (5) Nellore (Andhra Pradesh), (6) Darbhanga, (7) Muzaffarpur (Bihar), (8) Jammu (Jammu and Kashmir), (9) Raipur, (10) Sagar (Madhya Pradesh), (11) Nagercoil (12) Tuticorin (Madras), (13) Ahmednagar, (14) Akola, (15) Amravati, (16) Malegaon, (17) Nasik, (18) Ulhasnagar (Maharashtra), (19) Belgum (Mysore), (20) Patiala (Punjab), (21) Kota (Rajasthan), (22) Udaipur (Rajasthan), (23) Mirzapur (Uttar Pradesh), (24) Bally, (25) Burdwan and (26) Kamarhati (West Bengal).

This reclassification has been given effect from 1st July, 1961, but it will be subject to review when the final census figures become available. It may be pointed out that the capital of India is New Delhi, the population of which is certainly not 2,644,058. The Indian Government created a municipal corporation of Delhi, which includes rural areas of Delhi State, but excludes New Delhi. The upgrading is justified, if it is based on the principle of cost of living, which is as high if not higher than that of Calcutta or Bombay. On the population basis, the capital of India is New Delhi, whose population does not exceed 2.6 million. Even the population of Delhi minus rural areas and Shahadara does not exceed 2.6 million. On the broad basis of winning votes at the next elections, the step should be welcomed. It is wondered whether A class cities would be accompanied by A class work.

Newsprint Import from U.S.A. and Canada

The Indian Government has decided to permit newspaper establishments to use their licences valid for the import of newsprint from rupee-account countries for importing newsprint from the U.S.A. and Canada as well, up to 50 percent of the face value of the licences. This has been announced in an Import Trade Control public notice. Hitherto, newspapers, whose entitlement was 100 tons or above, were given licences to the extent approximately 33 1/3 percent for imports from free resources and the balance of 66 2/3 percent from rupee payment countries, against contracts entered into by the State Trading Corporation. The imports from the U.S.A. will be made against free foreign exchange, which will be released for the purpose. Imports from Canada will be allowed under the Colombo Plan Aid Programme. Licences for the import of newsprint from Canada will be issued to newspaper establishments or the State Trading Corporation on the c.i.f. value basis, with the endorsement on the Exchange Control copy that they will be permitted to remit exchange to the extent of 15 percent of the face value of the licences towards freight and insurance charges. The face value of the newsprint will be paid to the supplier in Canada by the Canadian Government from the Colombo Plan funds. The Indian importer will pay to the Canadian supplier only freight and insurance charges (in case insurance is not obtained through Indian companies), besides the local costs in India. An annexure to the public notice sets out the procedure for procurement of newsprint from Canada. Newspaper establishments, desirous of importing newsprint from the U.S.A. and Canada, are requested to forward the licences issued to them for import from rupee sources to the Chief Controller of Imports and Exports, New Delhi, for necessary amendments and the issue of fresh licences. The breakdown of the quality and value of newsprint which it is desired to import should be indicated separately for the U.S.A. and Canada.

Import of Giant Tyres, Tubes and Flaps

The Central Government, it is learnt, has now decided to consider applications from State transport undertakings, transport co-operative societies and owners with a fleet of at least 25 vehicles for the import of giant tyres, tubes and flaps of different sizes from rupee sources. The Controllers of Imports and Exports will entertain applications for the import of tyres, tubes or flaps of the following sizes: 8.25x20 of 10x12 ply ratings; 7.50x20 of 10x12 ply ratings; 9.00x20 of 10x12 ply ratings. The current import policy provides for the import of these items through established importers. Such imports from rupee sources have also been allowed through the State Trading Corporation of India. The supply position for giant tyres and tubes has considerably eased and adequate supplies are now available with the State Trading Corporation. With the decision of the Government to allow imports by State transport undertakings, transport co-operative societies, etcetera, it is hoped that these items will be freely available to all consumers.

Traffic Congestion in Cities

Recommendations to solve the increasing problem of traffic congestion in the cities of India were made by the Road and Inland Water Transport Advisory Committee when it met here for two days last week. The segregation of fast-moving traffic from the slow-moving traffic, provision of expressways for motor-vehicles, construction

new roads within the limits of available resources, restriction or prohibition of plying of slow-moving vehicles on busy roads during peak hours were suggested by the Committee to meet the problem of traffic congestion. Other suggestions made by the Committee were: one-way traffic, allocation of specified parking lots, and introduction of automatic light signals. The Committee felt that municipalities and municipal corporations should have cells to study traffic congestion problems and they could take the advice of the Central Road Research Institute in solving these problems. Legislation to prevent ribbon development along the roads was considered necessary both at the Centre and in the States. On the question of setting up State Transport Ministry Corporations, it was recommended that the Central Finance Ministry should amend the State Finance Corporation Act in consultation with the Central Ministries of Law and Transport to enable not only the road transport industry as such, but also organisations financing the transport industry to get financial assistance from State finance corporations. As for the prevention of boat disasters, the Committee suggested that all country boats carrying passengers should be licensed and inspected once a year and that the machinery for the enforcement of the rules and regulations should be strengthened. It was also suggested that the Central Government should frame model rules in the light of the comments of State Governments and the recommendations of the Committee which enquired into the tragedy in the Krishna river in 1960, and forward them for consideration by State Governments. It was suggested that land should be made available by the State Governments at concessional or market rates for building roadside motels.

Hire-purchase of Motor-cars

With reference to the Hire-Purchase Bill drafted by the Law Commission, the Committee recommended that provisions concerning motor-vehicles should be revised to make it possible for the financier to repossess the hired vehicles in case of default at any stage of the hire before full payment was made. It was further recommended that the hirer should not be permitted to transfer or sell the vehicle without the specific consent of the financier. On the question of the use of Devanagari script on the number-plates of motor-vehicles, the Committee recommended that it was essential, from the point of view of public safety, to retain the English script. If it was desired to use the Devanagari script, this should be in addition to the English script.

Ford Foundation Grant for Calcutta

The Ford Foundation will provide \$1,400,000 to help Calcutta cope with urban problems caused

by the vast migration to that city. In one of the two related grants announced here, \$800,000 will be offered to help formulate a vast development plan for India's largest city. It will finance a team of consultants to assist West Bengal in building a permanent metropolitan planning organisation for Calcutta. The second grant of \$600,000 will go to the Institute of Public Administration in the United States, for a programme of comparative urban research and training, based primarily on the Calcutta project. The Institute is to conduct research on housing and industrial design, urban community planning, use of regional resources, and other fields, as requested by the Foundation's consultants in Calcutta.

In explaining the background of the grants, the Foundation noted that of the 4 million migrants from East Pakistan since the partition of India in 1947, 2 million have found shelter in or around Calcutta. Hundreds of thousands more have come in from surrounding villages in search of employment. The city's population, 3 million in 1948, topped 6 million in 1960, and it is expected, will reach the 12 million mark by 1970. Plagued with deteriorating housing, and sanitary conditions, Calcutta, the country's largest port and main transport centre for India's most rapidly developing industrial area, has drawn the deep concern of the Government. Consequently, the Central Government and the State of West Bengal have decided on a massive development programme. The programme will be developed by the Calcutta Metropolitan Organisation (C.M.P.O.) with the assistance of consultants provided by the Ford Foundation. Under the grant to the Institute of Public Administration, the Calcutta project will serve as a "laboratory" for students of urban problems, the Foundation said. The Institute will organise a consortium of universities, research organisations and civil and public agencies to participate in the project and to share its experience and findings. The purpose is to stimulate research on urban problems such as design or prototype housing community planning and industrial decentralisation. The Ford Foundation has previously given assistance to help alleviate a similar situation in Delhi-New Delhi area. In 1959, the Delhi Municipal Corporation selected six neighbourhoods for a pilot project to determine, with Ford Foundation assistance, whether the principle of Government-aided, self-help programmes used successfully in rural community development would be applicable to urban slums. As a result of the Delhi-New Delhi project, the Town Planning Organisation has prepared a master plan for the area with a team of nine consultants provided by the Ford Foundation. The plans take into consideration the development of the area

through 1991 when the population, it is expected, will exceed 5 million.

Oil Companies Paying Higher Freight Rates

During five years, the Central Government has made one oil Company, namely, Standard Vacuum, to subsidise its coastal shipping, making it pay Rs. 57 lakhs in excess of the normal tanker freight rates. Similar should be the case with other oil companies, which are compelled to move their oil by the Government-owned tankers at fixed rates. The following table should indicate the relative freight rates for moving petroleum products from Bombay, on typical coastal voyages around India, on the following two bases; the first basis is the A.F.R.A. freight rate which is paid by all companies when moving products in tankers of other than Indian flag and the second basis is the equivalent cost to the charterer of an Indian coastal tanker, in this case, the m.v. *Jag Jyoti*. The A.F.R.A. freight rate basis is the same as that recognised by the Government in determining the selling prices of petroleum products in India:

Third quarter 1961	Cost to S.V.O.C.
A.F.R.A. freight rate (Rs. a ton of cargo moved)	of Indian flag tanker (Rs. a ton of cargo moved)
Bombay-Kandla	5.73 10.29
Bombay-Cochin	6.48 10.80
Bombay-Madras-Calcutta	14.99 22.74

The current time charter rate for Indian flag vessels is Rs. 21.50 a D.W.T.-month, or 32s 6d; the current open market charter rate is about 18s 6d, i.e., only 57 percent of this.

Likely Increase in Coal Prices

The coal prices during the third plan are expected to go up by at least 5 percent, it is learnt. Under the development plans for the public sector, the Government is importing open-cast mine equipment from the U.S.A. worth \$1.5 million. The U.S. credit will be channelled through the Export-Import Bank or the D.L.F. loan, which will be costlier at least by 30 percent, compared with similar equipment from the U.K. or West Germany. Equipment will be used for the development of Ranganth collieries. There are 19 projects for coal development in the public sector during the third plan, five of which have been approved. They are: South Balanda for 1 million tons of coal, Korea Nos 1 and 2 (1 million tons), Vishrampur (2.75 million tons), and Korba No. 1 (500,000 tons).

"WITH
THE
WIND"

...entreated the Ancient Mariner, "we must sail with the wind, Mr. Tubophile, or else we'll be all at sea".

"That's exactly where we are, Sir Mariner", retorted Mr. Tubophile warmly, "all at sea. I am bound for the shores of Cathay and you have sailed me to the coast of Australia. Rabbits and Kangaroos! I'll not sail with the wind, for the wind or by the wind. In fact, I'll not sail at all...not in these wind guided, wind powered galleons of tubeless times—deuced uncomfortable, destination uncertain and quite unreliable with or without the wind. I'll brave the high seas again in my own well tubed times, when marine boilers with tubes supply sure power to luxury liners which reach the right destination—wind or no wind. Sir Mariner, full steam ahead now. Rabbits and Kangaroos! I mean all sails up".

London

CITY REACTIONS TO EMERGENCY ECONOMIC MEASURES

FISCAL LEVIES EXPECTED TO RAISE COST OF LIVING

(FROM OUR LONDON CORRESPONDENT)

THE crisis measures of Mr. Selwyn Lloyd made their appearance last week, and at first glance one could be forgiven for thinking that they represent, as Mr. Grimond, the Liberal leader put it, "the dreary old weapons of increase in Bank rate and purchase tax." Closer examination, however, particularly of the follow-up which the U.K. Chancellor held back to open the two-day debate, goes to show that for all the somewhat negative approach to the need to stimulate exports and correct the balance of payments—which he believes will follow automatically once the general climate is propitious—it is at last becoming evident a tentative groping towards national planning and a Government wages policy. In the short-term, the U.K. Chancellor is content to hold the line; in the long-term, and only from that point of view can the success or failure of his overall proposals be judged, one may well have to wait until one is presented with the follow-up proposals which he is leaving over until he introduces his next Budget.

Of the measures themselves, the Bank rate jump to 7 percent was more than was expected, but the purchase-tax increase of 10 percent of the existing rate (not the addition of a further 10 percent to the existing rates) and the 10 percent surcharge on Customs duties and excise were less than had been expected. The credit squeeze should become quite effective with the banks having to add 1 percent to their deposits with the Bank of England and the new policy they are to adopt towards certain loans in future. In relief of sterling, there are to be substantial drawing on the International Monetary Fund, and defence expenditure—particularly overseas—will come under careful scrutiny. A standstill on dividends is requested as well as a halt to all tax-free dividends and, at the same time, it is suggested by the Government's action in cutting the wage increase recommended for teachers by the Burnham Committee that there should be "a pause" in wage increases until productivity has caught up. Local authorities are to have their grants and loans considerably reduced and the house-purchase scheme under the 1959 Act, which assisted the purchase of old houses, is being suspended. Finally, there is to be a critical look at the level of agricultural support in the next annual review.

The fiscal measures must not be underrated. Together they will take over £200 million of spending power out of the economy in the current year. The U.K. Chancellor's proposals will raise the cost of living by 1.5 points—not cataclysmic, perhaps, but, nevertheless, significant. This ought to effect some damper on inflation, provided wages do not rise sufficiently to wipe out the economies. As far as the City is concerned, there is an undercurrent of disappointment at the Chancellor's performance, which falls short of the dire measures he had threatened and which, given the correct leadership, the country might well have been prepared to accept. The promise of a

long-term solution of Britain's economic problems appears to be as far off as ever. The debate which followed the announcement, furnished an opportunity to dot some of the i's and cross some of the t's, and the Prime Minister's promised statement on the European Common Market this week presented the final picture. But their piecemeal handling of the crisis hardly inspires confidence.

Overseas Trade Patterns

From the detailed analysis of Britain's overseas trade covering the first two quarters of this year, the inference can be drawn that the underlying trends are not wholly discouraging. On the export side, allowing for the effects of the London dock strikes and for the sale of ships, the U.K. Board of Trade reaches the conclusion that there was very little change between the two quarters. Exports to western Europe continued to rise strongly and those to Russia and eastern Europe were well above the previous levels. Sales to North America showed some small improvement, although shipments to the United States were little changed. The black spot in the export picture was the overseas sterling area representing the primary producing countries. Exports to these markets were between 8 percent and 9 percent down in the second quarter, compared with the first quarter.

On the import side, the figures show that the underlying trend has been downwards since about the end of third quarter of last year. In the second quarter of 1961, on a seasonally adjusted basis, imports were 6 percent less than in the first quarter. A significant feature is that more than half the fall was in industrial materials, where most of the rise since 1958 had occurred. Imports of industrial materials were down by 8 percent from £495 million, seasonally adjusted in the first quarter of the current year, to £456 million in the second quarter, with the fall equally spread between basic materials and semi-manufactures.

Terms of Trade Steady

In spite of a one point decline in the import price index in June, Britain's terms of trade remained unchanged at 88 (1954 equals 100). This is the same level as in April and May, and in June last year. One point decline in June in the import price index to 98 reflected the rounding of marginal price declines in various groups, such as food and tobacco. The overall export prices remained unchanged at 112. A small increase in manufactured goods prices was more than offset by a fall in other sectors.

Trends in Industry

Meantime, news from the industrial front confirmed two major trends. Capital expenditure by the manufacturing industries in the first quarter of this year at £275 million showed a 24 percent rise on the corresponding quarter of 1960. Activity in the capital goods industries is thus con-

tinuing at a high level. Stock building by manufacturers, on the other hand, which increased substantially last year, practically ceased in the first quarter of 1961. Stocks held by wholesalers and retailers increased, but the change in the total volume of industry's stocks was smaller than in any recent quarter.

In the first quarter of 1961, manufacturing industry's capital expenditure was £275 million, or some 24 percent higher than in the same quarter of 1960. Outlay on building work rose by 26 percent, on plant and machinery by 24 percent and on vehicles by 11 percent. Capital expenditure by "other industries and services" was unchanged between the two quarters: 8 percent less was spent on new building work, 3 percent more on vehicles, and 8 percent more on plant and machinery.

More than half the rise in manufacturers' outlay was again in the metals and vehicles industries. The iron and steel industry alone spent £20 million or 60 percent more than in the same quarter of 1960. The comparable increases in other groups were: motor-vehicles nearly 80 percent, chemicals 18 percent, engineering 11 percent, and textiles 21 percent.

Labour Shortages

There was a further drop of 7,400 in the number of people unemployed during the month ended 10th July when the total was 258,500 or 1.2 percent of all employees. On the other hand, the number of unfilled vacancies rose by another 12,000 to 395,510. In the last three months, the number out of work decreased by 66,000 while vacancies have risen by 58,500. The widening of this "reverse gap" was one of the main forces driving the Government into making up its mind about economic disciplines.

There are six vacancies for every unemployed carpenter and ten for every unemployed bricklayer according to the U.K. Treasury's *Bulletin for Industry*. Capacity in the building industry is "very heavily loaded." Output in the first quarter of this year was 5 percent higher than a year earlier, although manpower went up by only 3 percent. Construction has been the main growth element in the economy, the *Bulletin* comments. The U.K. Treasury expects a further increase in output this year. But it gives a warning that "a build-up of orders leading to too much work in hand may reduce efficiency."

Motor-car Output Falls

In June, the British motor industry produced 115,960 cars, compared with 143,114 in June 1960, the U.K. Board of Trade announced the other day. Commercial road vehicle production in the month totalled 46,366, against 46,674 in June of last year. This brings the output of motor-cars to 283,666 for the second quarter of the current year, which is 30 percent below the output in the same period of last year. Commercial production shows relatively little change on the quarter at 120,087 vehicles, against 116,123 in April, May and June of 1960.

The biggest change is in exports where the figures for passenger vehicles are well down on last year. Exports of motor-cars, including taxis, in June were 31,937, against 46,241 a year earlier. This brings the number of motor-cars exported down to 93,672 in the second quarter of this year, or almost half of the 179,386 cars exported in the same period of last year.

An Importer of Ships

Britain has become the largest importer of ships, and the tonnage being built for her abroad at the end of June was a record, according to figures published by Lloyd's Register of Shipping. The tonnage being built abroad for Britain and Northern Ireland rose from 457,000 at the end of March to 693,471 at the end of June. The shipyards of West Germany are the principal beneficiaries, with 11 ships of 188,440 tons. Other foreign countries building for Britain are the Netherlands (nine of 124,731 tons); Sweden (seven of 187,600 tons); Japan (three of 70,000 tons); France (two of 60,300 tons); Belgium (one of 15,500 tons); Italy (one of 12,000 tons); Norway (one of 11,800 tons) and Spain (one of 2,100 tons). Britain still leads the world in construction, with 241 ships of 1,614,062 tons at the end of June. Japan was in second place with 1,023,911 tons, and West Germany third with 864,262 tons.

Report of Plowden Committee

Four principles of reconstruction to bring the growth of public expenditure under proper control are proposed by the Plowden Committee in a report recently presented to Parliament. The proposals are designed to strengthen the U.K. Government's organisation against wrong decision-making. The Committee says that there is most danger of waste of public funds in "the no-man's land between policy and administration." To introduce more stability into decision-making processes at this point could materially improve the control of public expenditure. The proposed reconstruction is based on the following elements: (1) regular surveys of public expenditure as a whole in relation to prospective resources, over a period of years ahead to assist decisions involving substantial future expenditure; (2) the greatest practicable stability of decisions on public expenditure when taken, to foster long-term economy and efficiency; (3) improvements in the "tools" for measuring and handling public expenditure problems; and more effective machinery for taking collective decisions and bearing collective ministerial responsibility.

THE APPLICATION OF ALLOY STEELS

By R. C. Aspland

(The Wellman Smith Owen Engineering Corporation Ltd)

STEELS are commonly classified as either carbon steels or alloy steels. The former contain carbon as the principal element controlling the physical properties together with limited and usually specified amounts of other elements such as manganese and silicon which are added to improve certain qualities, and smaller amounts of residual elements such as sulphur and phosphorus which are present in the raw materials and which cannot be eliminated in the refining process. Alloy steels are those which contain, in addition to carbon and manganese, one or more other elements in proportions sufficient to impart useful properties substantially different from those of corresponding grades of carbon steel. At one time and another, nearly half of the known 92 elements have been added to steel, but only a limited number are in regular use and this article will be confined to the more important of these.

Methods of Manufacture

Many grades of alloy steel can be made by the usual bulk manufacturing methods such as the open hearth furnace and the various pneumatic or converter processes, but if the qualities containing substantial percentages of readily oxidisable elements such as chromium, vanadium, etcetera, are to be made, then it is almost essential to use electric arc or high frequency induction furnaces, as these can provide conditions which result in high yield of these expensive materials. The open hearth furnace is perfectly suitable for the manufacture of low alloy steels, particularly those containing molybdenum, copper and nickel as these materials can be added to the furnace bath at any time, and will be fully retained in the finished product. Manganese, chromium, aluminium, vanadium, etcetera, have to be added to the ladle as the furnace is tapped into it and the amounts which can be added are limited by the melting point and solubility of the alloy.

Electric furnaces do not require the introduction of air or oxygen for the purpose of burning fuel and, therefore, the charge can be refined under reducing (oxygen-free) conditions if necessary. This fact gives the electric arc furnace great flexibility, and it can produce any quality of steel which can be made in an open hearth furnace and, in addition, many alloy steels containing high percentages of chromium, etcetera. The electric induction furnace is merely a crucible surrounded by a coiled conductor and is used for making small quantities of high alloy steels. The range of qualities which can be made is theoretically unlimited, but is restricted in practice by economics. There are certain qualities of very low carbon alloy steels which can only be made in induction furnaces. The time and method of addition of the alloying elements are determined by the rate of solution of the elements in the steel.

With the exception of aluminium, carbon, copper, lead and nickel which are used in a relatively pure form, all these additions are in the form of ferro alloys the percentages of the required element being as follows:

Manganese	80-85 percent from ferromanganese
Silicon	16-30 percent from ferro-silicon
Chromium	15-95 percent from ferro-chromium
Molybdenum	60-70 percent from ferro-molybdenum
Vanadium	46-70 percent from ferro-vanadium, etcetera
Titanium	30-55 percent from ferrovanadium
Boron	15-43 percent from ferro-titanium
	10-25 percent from ferroboron

Where alloys have to be added to the open hearth bath under conditions likely to cause a large loss from deoxidisation, the bath is previously "blocked", or deoxidised to reduce this loss. The conditions of the additions when used is important, since a bath addition must be heavy enough to penetrate the slag and a ladle, runner or mould addition must be crushed or powdered to suit its ability to enter into solution in the time available. All additions should be carefully stored to prevent deterioration. The ability of the open hearth furnace to produce steel with low sulphur and phosphorus is rather less than that of the electric furnace, the relative performances being as follows:

	Maximum S. and P.
Basic electric arc	0.025 percent
Basic open hearth	0.04 percent
Acid electric arc	0.05 percent
Acid open hearth	0.05 percent

Superiority of Electric Arc Furnace

The general superiority of the electric arc furnace for alloy steel-making arises from the absence of an oxidising fuel and the ability to use a reducing slag which will lower the sulphur residuals and the non-metallic inclusions. These qualities permit the additions of any alloying elements to the bath and ensure a high recovery

efficiency for them. The slag quality is not affected by the furnace atmosphere and, since the furnace is normally capable of tilting, the quantity of slag is easily controlled. The basic electric arc furnace is normally used for ingot production and its charge is usually supplied either by scrap only or by a proportion of iron which has been melted and sometimes pre-refined elsewhere. It is thus possible to eliminate the capital expenditure on iron-making plant by charging the arc furnace with 100 percent scrap.

The electrical power in the arc furnace is used to maintain an arc or arcs between charge and electrode. These arcs generate heat which is increased by the resistance of the bath to the passage of the current. The furnace roofs are normally removable, allowing quick replacement and rapid scrap charging. In operation, the oxidation of the charge is carried out by the oxides present with the scrap, by furnace additions of ore and/or limestone or by the injection of oxygen gas. This latter application of oxygen gas permits rapid carbon removal, thus reducing power costs. The first slag is frequently discarded so that a second reducing slag can be built up to retain the furnace additions in the melt. With large arc furnaces, an induction coil can be installed below the hearth so that the bath stirring effect obtained from the induction field can be used to prevent alloy segregation and to promote a uniform bath temperature.

Maximum Flux Utilisation

These electric arc furnaces are normally used in capacities of 3 tons to 150 tons. For smaller charges of 500 to 2,000 lbs, the high frequency induction furnace is used. This furnace utilises an external coil to induce a magnetic flux in the charge. The resistance of the charge to this flux gives the heating effect. Since the maximum flux utilisation is obtained with a full crucible it is advisable to top up the charge as it melts, and it is advisable to exclude air from the charge by keeping the lid tight—particularly since these furnaces often operate without any protecting slag. A major advantage of these furnaces derives from the strong stirring action produced by the current. This action assists melting and gives good mixing of the alloying elements. The power required is of the order of 725 kWh a ton and, since the maximum temperature is that produced in the charge, the loss of alloying elements by vapourisation is very small, compared with the electric arc furnace, where the high maximum furnace temperatures can cause a chromium loss of up to 15 percent. Power can be supplied either by a motor generator set or by a mercury arc inverter. The treatment of the alloy steel after melting depends entirely on the type and duty of the alloy, some of which are described as follows:

Stainless steels—general: In all stainless steels it is the chromium content which gives the stainless properties by providing a thin film of chromium oxide on the exposed surface. Any rupture of this film will heal provided an oxidising atmosphere is present. Where a high acid resistance is required, an addition of nickel up to 8 percent to 10 percent is made, but this element cannot be used if sulphur is present in the atmosphere. The addition of 3 percent to 4 percent molybdenum to an 18:8 steel will increase its resistance to cold H₂SO₄ by 20 percent.

Hardenable stainless steels: These are sometimes known as martensitic stainless steels. They

are magnetic at normal temperatures and have the following composition:

Cr	11-14 percent
C	0.15-0.45 percent
S	1 percent
Mn	1 percent

With these steels, the carbon content determines the hardness, and ultimate strengths of 100T/in² and 40T/in² can be obtained after hardening and tempering respectively. The hardening temperature must be above 830°C and no forging below 830°C is permissible if damage is to be avoided. The hardening is usually in air, but oil quenching can be used with temperatures of 900°C—slow cooling is required. The absence of nickel from this alloy permits its use for high temperature applications in the presence of sulphur bearing atmospheres. It is also used for tools, general engineering and for cutlery.

Stainless 18/8 steels: These are generally known as austenitic stainless steels. In comparison with the previous group, these steels are non-magnetic and cannot be hardened by quenching. A typical test result (not work hardened) is as follows:

Ultimate tensile	40T/in ²
Yield point	15.5T/in ²
Elongation	68.5%
Izod	149
Brinell No.	105 ft lbs

The material is normally ductile and malleable and is readily welded using special techniques. Any cold working will produce hardening and brittleness while raising the strength. This effect can be eliminated by heat treatment. Work hardening is also obtained when not rolling. This necessitates care when handling the hot rolled product and, if subsequent operations are to be used, an intermediate annealing is required. The greater hot hardness also implies higher power consumption for rolling and less spread of the slab when producing plate. Since the thermal conductivity of the alloy is low, care is required to avoid overheating of the surface. Due to the above qualities and also to the susceptibility of the alloy to grain growth when overheated, the optimum hot working temperature range is narrow and points to the necessity for accurate temperature control. All heating furnace atmospheres must be kept free from sulphur which would form nickel sulphide and allow surface disintegration when rolling. The strength of these alloys at high temperatures is good and at very low temperatures the strength is significantly increased—slightly at the expense of ductility.

Case hardening steels: These steels are designed to enable the product to have a hard, wear-resisting outer case combined with a relatively soft and tough core. This effect is achieved by using a normally soft and tough material and exposing its outer surface to conditions which enable this surface to absorb carbon, thus increasing its hardness and becoming more brittle. The low carbon core strength can be increased by using alloys of manganese, nickel, chromium and molybdenum, but these alloys usually slightly reduce the case hardness obtainable. Typical steels are as follows:

	C	Si	Mn	S	Ni	Cr	Mo
Carbon	0.13	0.08	0.46	0.042	—	—	—
Ni Mo.	0.24	0.15	0.45	0.035	1.9	—	0.25
Ni Cr.	0.16	0.27	0.35	0.028	3.9	1.26	—
Ni Cr Mo.	0.16	0.16	0.42	0.029	4.1	1.24	0.26

Increasing Carbon Content

The increase in case carbon content is obtained by subjecting the metal to an atmosphere of CO while at a temperature of about 900°C. The depth of carbon penetration and the concentration of surface carbon can be controlled by modifying the exposure time to the carburising gas, and a penetration of 0.01 inch an hour is normal. For any alloy, there is a maximum rate at which the carbon formed in the surface layers can diffuse into the material. If this rate is exceeded by the use of a temperature which is too high, the iron carbides will accumulate on the

Refractories for all purposes...

The Kumardhubi range of refractories is now being

increasingly used for boilers, coke ovens, ladles, high temperature fire furnaces and electric furnaces.

Backed by over 50 years of manufacturing

experience, Kumardhubi Fireclay and

Silica Works contribute a vital operational

requirement in a number of industries.

Chartered Bank Buildings, Calcutta-1

surface, causing excessive surface brittleness and the probability of flaking. After the carburising of the surface, or case, all the material is soft and has a coarse grain.

Refining the Grain

The refining of the grain is carried out by heating the material and the hardening occurs when the hot material is quenched. Refining is carried out by heating to a temperature slightly above the upper critical point. Since this temperature for the core is usually above the corresponding temperature for the case, the core refining must be carried out first, followed by case refining to a lower temperature and quenching to harden the case. The quenching medium, air, oil, or water, will be used in conjunction with the type of alloy to give the required hardness to case and core. In general, the faster cooling of water will give the harder product, but an alloy can be chosen, with 3 percent Ni and 1 percent Cr., which will give a satisfactory case hardness with air cooling, and at the same time give a strong core. After hardening, the steel is usually stress-relieved by heating to 200°C without affecting its other qualities. An alternative method of case hardening is available by using the hardness imparted by iron nitride Fe₂N. This process is known as nitriding and consists of exposing the components to the action of nitrogen at a temperature of 500°C.

The nitrogen gas is usually provided by the dissociation of ammonia gas NH₃ into hydrogen and nitrogen. Since the formation of nitrides is required, the chosen alloys usually contain aluminium, chromium or vanadium which form such nitrides readily. It is necessary also to include molybdenum in alloys containing chromium, manganese or phosphorus, to avoid the temper brittleness which is usually encountered with these elements at the required nitriding temperature. Since nitriding is carried out at much lower temperatures than normal case hardening and there is no necessity for quenching with it, there is no tendency for the distortion which can occur with the carburising process. The nitrided case is also much harder and possesses much greater wear resistance. A typical alloy composition for this process is as follows:

C	Si	Mn	Cr	Al	Mo	Ni
0.38-0.43	0.2	0.4	1.6-1.8	0.8-1.25	0.15	0.3-0.6
	0.3	0.6			0.25	

Nickel chromium steels: The addition of nickel to a chromium steel allows it to be hardened by air-cooling—thus dispensing with any quenching operation. This effect is produced by a reduction in the rate of diffusion of the alloying

elements, thus increasing the stability of the austenitic solid solution and lowering the lower critical point. Since very rapid cooling would prevent the completion of the austenite-martensite change, thus lowering the final strength, the air hardening must be slow. Excessively slow cooling will give soft steel due to the increased time allowing a greater decomposition of the austenite, and the best results are obtained with natural air-cooling from about 840°C, followed by tempering to allow the steel to be machined. The tempering temperature can be varied to suit the required final hardness.

These steels are subject to temper brittleness which can be reduced by rapid cooling in the range 600°C to 300°C or by the inclusion of about 1 percent molybdenum in the alloy. A typical alloy of the Ni—Cr. class is as follows: C—0.31 percent; Mn—0.41 percent; Ni—3.9 percent; Cr—1.37 percent.

This alloy, after air hardening from 920°C, gives a U.T.S. of 115¹/in² which can be reduced to 111¹/in² or 59¹/in², by tempering from 200°C or from 650°C, respectively. The impact value, however, has a minimum value when tempered from 330°C due to temper brittleness. This minimum value can be eliminated by the inclusion of about 0.29 percent Mo., giving a steady increase in impact value when the tempering temperature is altered from 300°C to 650°C.

Constructional alloys in steels: The inclusion of small amounts of alloys in steels for constructional work allows the sections used for this work to be materially reduced due to the increased strength and to the lower corrosion allowance necessary. The greatest application of these steels lies in the transport industry where a main objective is the reduction of deadweight. Additions of 0.25 to 1.3 percent of copper and of 0.3 to 1.0 percent of chromium impart corrosion resistance and 0.2 to 1.35 percent manganese with 0.12 to 0.25 percent carbon increase strength at the expense of ductility and weldability. It is not normally convenient to apply any quenching or tempering process and the materials are supplied in the hot rolled or cold rolled annealed and normalised condition from which they can be formed or welded with reasonable ease.

Ball bearing steels: These usually contain about 1 percent carbon and 1.2-1.6 percent chromium, a typical analysis being:

1.05% C: 0.13% Si: 0.46% Mn:
0.021% S: 0.022% P

1.35% Cr. After oil hardening from 830°C, a tensile strength of the order of 110¹/in² is developed.

loped and tempering from 200°C is usually used for stress-relieving.

One of the main characteristics required is freedom from entrapped slag or inclusions. The soaking at forging temperature must be very thorough and the annealing extended in order to ensure the required structure.

Carbon tool steels: These rely for their hardness and cutting ability on the carbon content and the heat treatment. The carbon content varies between 0.8 and 1.4 percent according to the use of the tool, the higher proportions being used for the finer and more delicate tools. Before hardening, the metal structure consists of pearlite and cementite. The degree to which the free carbide goes into solution on hardening depends on the hardening temperature and determines, to some extent, the resulting hardness. The structure is then martensitic with some iron carbide, both of which are very hard. A normal quenching temperature would be 750°C and would be followed by tempering to improve toughness and relieve stress, the tempering temperature being 220-300°C.

Use of Alloy Tool Steels

Alloy tool steels are now normally used in place of the carbon tool steels. These steels retain 0.3-0.4% C, but contain, in addition, chromium, manganese nickel, vanadium or tungsten. Where shock resistance is required, the chromium content is up to 2 percent with 2 to 3 percent of nickel and tungsten. Such steels are oil quenched from 925°C and annealed at 700-740°C. Die steels normally operate hot and must retain their strength and toughness when hot. These qualities are given by the addition of 1 to 1.5 percent nickel and 0.7 percent chromium to a 0.8 percent carbon steel. When used for high temperature forging the steel can be water quenched, using an alloy 0.27 percent C: 0.2 percent Mn: 1 percent Cr: 0.15 percent V. Such a steel would be suitable where the die suffers rapid blows; Where resistance to scaling is not important, air-cooling of the alloy 0.3 percent C: 0.3 percent Mn: 3 percent V and 10 percent W will give the required results, but if resistance to scaling is required, a better alloy is 2 percent C: 0.25 percent Mn and 13 percent Cr, for which an oil quench is preferred.

The production of master tools, gauges and dies requires a high degree of dimension stability. Volume changes usually occur in one direction with a change of pearlite to austenite and in the other direction when changing from austenite to martensite. By arranging for these two effects to balance, a high degree of dimensional stability is obtained. Two typical steels giving this effect are:

	C	Si	Mn	Ni	Cr	V	W	Mo
No. 1	1.0	0.17	0.95	—	0.75	—	0.5	—
No. 2	1.04	0.28	0.36	0.13	12.4	0.17	—	0.91

High speed steels are required to retain their cutting properties at high temperatures and for this alloys of tungsten, chromium, vanadium and cobalt are used. The chromium content is usually 4 percent, and tungsten up to 18 percent gives toughness, but can be replaced by molybdenum. Where heavy roughing cuts are taken, the addition of cobalt enables the tool to retain its hardness at the resulting high temperatures. The tools are, however, slightly more brittle and more expensive. The addition of vanadium also improves wear and hardness at high temperature and is particularly useful for finishing tools.

Brittleness of High-speed Steels

High speed steels are normally brittle when cast and must be annealed at 800-850°C and slowly cooled before forging. After forging, hardening cracks can be reduced by heating to 680-750°C and air cooling. The hardening process allows the carbide to pass into solution in the austenite and is carried out by heating to 1204-1300°C and quenching by oil or air blast. The heating must be carefully controlled, being slow up to 850°C and rapid from there to the maximum temperature. Tempering at 400°C will impart toughness with only a slight reduction in hardness and also decomposes the soft austenite into a harder product. The major differences between high speed steels and carbon steels is that the former recover their original hardness after cooling from a high temperature, but they must be hardened from higher temperatures than carbon steels, i.e., 1100°C.

Silicon steels: Silicon is added to nearly all types of carbon and alloy steels in proportions up to approximately 0.25 percent mainly as a de-oxidiser. There are also silicon-manganese steels containing from 0.5 to 2.5 percent silicon which are used mainly for springs. The term silicon steel, however, refers to steels in which silicon is the only alloying element added, and in these steels, the silicon content is varied from 0.5 to 5.0 percent to produce different magnetic properties. These steels are used in the manufacture of electrical equipment, mainly as sheets to make up the laminated core structures on which depend the performance of all electrical generators, motors and transformers. Silicon steels can be made by the open hearth, pneumatic or electric processes, but must be produced under very close chemical and metallurgical control.

Jute

GUNNY PRICES STEADY ON RUMOURS OF FRESH CLOSURE PROPOSALS

STEEPING WATER SHORTAGE HAMPERS FIBRE SUPPLY

THE rejection of the I.J.M.A.'s plea for further restrictions in production has caused considerable comment in trade circles. There seems to be a certain confusion of thought now in the minds of the Government over this matter, which is based on the erroneous assumption that India's position, now that the new crop has started to come in, is fundamentally better than it was before. This is not so. There has been a great deal of bandying about of figures, and well-prepared statistics are doubtless of great use in arriving at decisions at the policy level. But it seems that valuable as statistics of consumption, arrivals and production may be, they are, as far as raw jute is concerned, completely subordinate to certain less calculable factors today. With the general elections looming in the not-too-distant future, raw jute—along with many other commodities—has become, as never before, a pawn in the political game. But even if it is assumed that it will not be deliberately used as such, physical and economic factors are now so closely related as to create serious misgivings at just those points in the working of the industry where confidence is most needed.

Even on the most favourable interpretation of current and future crop prospects, it is clear that there is still going to be a tight squeeze for jute in the coming months, and that stocks of the Indian mills will for some time to come be at a dangerously low level. Nor is it in the cultivator's interest to be too forthcoming with his jute at the moment when his holding power is stronger than for many years, and he realises his power to put the squeeze on the consumer. The comfortable calculations which are now being made about the supply position of the new crop are based on the assumption that the current crop (i.e., 1961-62) will be marketed in its entirety, which, as anybody in the trade will admit, is a long shot indeed. If by any chance there should be a short crop next year, the consequences for India will be serious in the extreme. As it is, a conservative estimate indicates that it will take the industry two years to overcome the effects of the present crisis. The mills will be lucky if they can work through to the 1962-63 crop without recourse to further short working time, loom closures, etcetera, carrying with it the reduced capacity to meet the demand for manufactured goods in overseas markets.

Future Working Hours

The chief influence in the Calcutta markets in the past week has been speculation as to the probable outcome concerning the future working hours of the mills. It will be recalled that the I.J.M.A. proposed that instead of a further block closure of mills to conserve raw jute stocks the mills close down 18 percent of their looms, bringing the total loomage at a standstill to 30 percent. While these proposals were given a sympathetic hearing by the Government, the whole matter was referred to the Labour Minister to work out in conjunction with trade union leaders. After protracted negotiations, the labour representatives won the day, and the I.J.M.A. proposals were rejected. The need for conserving jute is as great now as it was two months ago, and in spite of the trade unions' statements that raw jute is "pouring in" from the upcountry agencies, the overall position is still giving cause for concern. It must be admitted that imports have improved considerably over the past few weeks, but these have only been compared with the arrivals in the preceding weeks. When compared with the rate of arrivals in a normal season, current figures fall very far behind.

The question of steeping water has again become a major factor in raw jute supplies. Hot dry weather over the past two or three weeks, particularly in the 24-Parganas areas, and those adjacent to Calcutta where the Daissee white harvest is in full swing—has brought retting to a standstill. For this reason, very few offers are on the market for quick delivery jute—say, before 15th August. For full August or beyond, offers are plentiful. Most mills, however, require jute before this, as in many cases, uneven distribution in quality has placed them in a difficult position.

In the meantime, the I.J.M.A.'s decision to lower the maximum prices for raw jute from Rs. 56 for Assam Bottoms to Rs. 52, came as no surprise. This aspect of the I.J.M.A.'s policy has been an unqualified success, and since March when maximum prices were fixed at Rs. 62, the deterrent has been there. At the time of writing, prices in general are about Re. 1 below the new maxima for quick shipment jute, but only small lots are available. Sellers are keen to sell forward at a discount, as the full weight of the crop is expected by the end of September when prices should fall. Buyers, however, are not keen to go into the forward positions yet, and in spite of the issue of quotas for raw jute for the last quarter

of the year—in response, it is understood, to requests from within the industry—very little business has been conducted against them. A further quota for the current period was issued over the week-end, and it is understood that this is a little larger than previous issues—about half a week's consumption—but in spite of this, business has been dull. In normal circumstances, the continued lack of demand in Calcutta, except for small lots, would have caused sellers to reduce their quotations in the hope of tempting buyers and being able to replace in the mofussil later when the mofussil markets had reacted to the fall in Calcutta. The mofussil is, however, so strong at present that sellers in Calcutta dare not discount it.

Dull Outlook

In the goods market, the week has brought forth no events of importance. Hessians ruled steadier than heavy goods due to overseas interest and local covering. Heavy goods were inclined to be depressed, the only outlet at present being the bazaar. The volume of business has, however, been small, as the mills are not much interested in forward shipment due to the lower prices prevailing for those periods. There has been no heavy fluctuations this past week and the general outlook is dull. Rumours are prevalent about fresh I.J.M.A. proposals for a cut in production. These are to the effect that the mills close down a further 9 percent of their loomage, at the same time reducing working hours from the present 42½ hours a week to 40 hours a week. In effect, these new proposals would be equivalent to sealing approximately 18 percent of the loomage.

A report in a local Calcutta daily on raw jute conditions in Pakistan has been refuted as erroneous. Well-informed circles in that country deny that imports in Narayanganj have fallen to about 5,000 maunds a day. One prominent millowner admits having bought this quantity himself daily over the jetties, and other mills are operating on a similar basis. Thus imports are nearer 25,000 maunds to 30,000 maunds a day, with possibly only about 10,000 maunds arriving in the actual receiving centres, the balance by-passing the centres and going direct to the mills and balers. This gives a considerably changed context to the report, and should be taken into account when arrival figures are calculated.

Strike in Cheviot Mill

News has been received that Cheviot Mill, under the managing agency of Messrs Andrew Yule and Co. Ltd has gone on strike over a dispute concerning double loomage. This mill is in the Budge Budge area. So far, all the other mills in the group are working.

Manufactured Goods: At the opening of the market last Thursday, conflicting rumours concerning the further sealing of looms during August had an unsettling effect and there was a general reduction in gunny rates. B Twills opened at Rs. 157.50 for ready shipment and Rs. 130 for forward shipment, while Hessians 40in. 10oz. stood at Rs. 52.25 and Rs. 47.85, respectively, for the near and forward positions. Small overseas business was reported done in Hessians which was successful in lifting prices, but in the absence of any follow-up business, the rise was short-lived, and by Saturday, rates had started to go into a decline. Due date activities after the week-end caused prices to fluctuate within narrow limits, but thereafter, the general tendency was downwards. Further rumours of sealing looms and reducing working hours caused a bullish tendency to develop towards the close, and the market became fully steady. On Wednesday morning, opening quotations were as follows:

	Ready	August	September	Oct.-Dec.
40in. 7½oz.	43.50	42.75	41.00	37.50
40in. 8oz.	47.00	46.00	44.00	40.25
40in. 10oz.	53.75	54.00	53.00	48.25
B Twills	160.00	159.00	154.50	142.50
Heavy Cees (Plain)	159.00	159.00	154.50	142.50
A Twills	195.50	196.00	190.00	175.00
Liverpools	185.00	184.00	176.00	163.00
Cornacks	165.00	165.50	161.00	146.50

Raw Jute: There was little change in the fibre markets at the opening last Thursday, and Assam levels remained around the Rs. 50 mark. Small business was conducted daily for quick shipment white jute, the majority of business being conducted on a price-to-fix basis. Prices fluctuated 50nP up or down according to demand or in sympathy with the goods market. Up-country agencies remained steady due to the shortage of steeping water and this prevented Calcutta rates from falling. Towards the week-end, some interest developed for bills of lading

for vessels nearing Calcutta, and up to Rs. 51.50 was paid in this category. Thereafter, the market was quiet with buyers showing little interest, but towards the close, fairly large business was reported for forward shipment for October-November-December at prices ranging between Rs. 38.50 and Rs. 39.50, and Daissee was also reported for September at Rs. 46.00. After this, the market developed a steadier tendency, but this was mainly in sympathy with the goods market which was strong on further rumours about the sealing of looms and shorter working hours. On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms)	Rs. 100 kilos	Rs. a md	Shipment
Old and/or new crop				
Assam	135.25	50.50		15 days
Northern	135.25	50.50		"
Purnea Desal	132.50	49.50		"
Assam Tossa	136.75	51.00		"
Old crop mesta:				
Assam-Northern	130.00	48.50		"
Desal	130.00	48.50		"
Daissee	130.00	48.50		"
Pakistani Cuttings	205.00	a bale		"

THE PAKISTANI JUTE MARKETS

RAPID FALL IN FIBRE PRICES

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE main items of interest during the past week in the East Pakistani jute markets have been the increasing scarcity of steeping water, a rapid drop in prices both in loose jute and in pucca bales, and finally the big cut in E.P.C. prices accompanied by necessary adjustments for the difference in grades. All over East Pakistan, river levels continue to fall and the effect that this will have on the quality of output may be quite serious, certainly on the lowland and midland crops. Even in the Ashuganj area and those served by the Brahmaputra, the drop has been substantial and the retting of jute will suffer. It may also be added that the cuttings on the standing crop will also be rather heavier than usual. In spite of the lack of steeping water, the cutting of the lowland crop has been completed, and in some areas, part of the midland crop has also been cut.

The Pakistani mills have withdrawn completely from the market, and at the same time, the overseas mills are buying, but as has been said before, they have been purchasing very discreetly. This has had the desired effect and prices of loose jute have come down at a remarkably rapid pace everywhere. Imports are still fairly large, but they are falling off. The drop in loose jute prices during the past fortnight has amounted to more than £20 a ton for Export Firsts, and about £30 a ton for the lower grades. The reason for this larger drop in the lower grades is that the overseas buyers are not interested in them and the low quality of the arrivals is giving an unusually high outturn of these varieties.

In the Narayanganj market, there have been no buyers for any qualities except possibly Export Firsts, and the quotations purely nominal for Export Lightnings are now some Rs. 60 a bale below Export Firsts instead of the normal Rs. 10. More recently, there has been a revival of interest in Cuttings, because there are reports that the I.J.M.A. has asked the Indian Government for an increased import licence of 200,000 bales, to make up for the fact that the August block closure recommendation has not been accepted. E.P.C. figures have been adjusted to meet the changing market. At the beginning of July, there was a difference of £5 between grades, and Export Firsts stood at £148 f.o.b. for July shipment and £134 f.o.b. for August-September. The two shipment periods have now been changed to August and September-October and Export Firsts now stand at £137 for July-August and £129 for September-October with Export Lightnings £8 cheaper and Export Hearts £3 cheaper than Lightnings. Tossas have been adjusted so that the Dundee Tossa 4s are quoted at the same price as Export Firsts; Dundee Tossa 2/3s are £8 higher and output Tossa 2/3s £8 lower.

If the E.P.C. prices are to represent the market, the levels for the lower grades must be reduced even further. At present, in spite of the slackening of imports, the purchase parity of Export Lightnings in the loose jute market is in the region of £125, c.i.f. Continent. The reduction in arrivals, although partly due to the gap between the harvesting of the lowland and midland crop, is mainly the reaction of the growers to falling prices. They are still financially very strong and do not intend to flood the market with arrivals in a declining market. By the end of August, however, the weight of the crop will be too much for the growers and arrivals should be so much as to force the market down even further. It is noteworthy that at the beginning of the season, the loose jute price of Export Hearts was approximately £6 below that of Export Lightnings. Today in the loose jute market, the difference is already £10 a ton, and might well increase further unless overseas buyers show an interest in these low prices.

PROLONGED RAINS AFFECT COFFEE CROP

FAIL IN SOUTH INDIAN TEA OUTPUT FORECAST

(FROM OUR SOUTH INDIAN CORRESPONDENT)

PLANTING circles think that the standing coffee crop will be less than the 1960-61 output which is placed by them at 67,000 tons. The prolonged and severe rains of June and July, which flooded the south twice, have done extensive damage to the standing crop, according to available reports from the producing centres like Coorg and Wynad. It is estimated that the 1961-62 crop may not exceed 50,000 tons. A smaller crop, coupled with lower prices, will aggravate the difficulties of the south Indian coffee planters.

Reports from tea estates suggest that the July crop will be substantially low since it has been badly affected by rains. It is also expected that the overall size of the 1961 crop might be reduced due to the adverse effect of excessive rains. Last year, south India had a record harvest of 169 million lbs. In spite of this, exports did not show any appreciable rise, compared with those in the previous year. It was obvious, therefore, that the internal market absorbed more of south Indian tea last year. A lower crop this year may have its reflection both on exports and internal consumption. Some south Indian estates are now experimenting pruning rotation with a view to getting a larger harvest during the September-December period.

Ginger Prices Rising

Ginger prices have been rising due to the continuous flow of orders from the Middle East and the paucity of supplies from Kerala. Within the last fortnight, bleached ginger has gained about Rs. 20 at Rs. 145 a quintal. The rise is considered significant at this time of the season when the demand is usually low. The overseas demand has apparently proved the most bullish factor. Aden and other Middle East consumers are now showing a greater interest in Indian ginger. This has happened at a time when extensive damage has been done to the fresh cultivation of ginger in Kerala by recent floods. It is, however, too early to make any forecast about the standing crop. Shipments are higher at 4,484,000 kilograms for the seven months ended May last, against 2,278,000 kilograms during the corresponding period of the previous season. One can safely say, therefore, that the unsold share of the last crop will be very much less than the stocks at this time of the last season.

Cardamom Prices Easier

The export trade is complaining that the quality of the new Indian cardamom crop is poor. The overseas buyers are, therefore, disinclined to buy the new crop at reasonable prices, according to exporters. This is said to be the reason why cardamom prices are easier in the spices market now, in spite of low stocks and larger exports.

TEA POLICY FOR PAKISTAN AWAITED

GOVERNMENT EXPECTED TO ALLOW EXPORTS

(FROM A CORRESPONDENT IN PAKISTAN)

AT the first sale of this season held on 7th May, 1961, 11,514 chests of leaf and 1,373 chests of dusts were offered. Better quality teas met with good demand, although some lots had to be withdrawn because of stalky varieties and poor liquoring. Orange fannings were in great demand, and were sold between Rs. 2.50 and Rs. 2.54 a lb. There was one consignment of green tea which sold around Rs. 3 a lb. As far as exports are concerned, the Pakistani Government's policy is still awaited. The crop is expected to be around 58 million lbs. Since this will definitely be much more than the country can consume, it is hoped that the Government will allow tea exports in order to earn foreign exchange.

COCHIN TEA SALES

At Dust Sale 30, 165,000 kilograms of tea were on offer. There was a good demand. Residuals were easier while low mediums and mediums were fully firm to dearer. High-grown were often dearer.

At Sale No. 31, 380,000 kilograms of tea were on offer. There was a good demand. Nilgiris were dearer with quality while low mediums were barely steady. Good mediums were fully firm to slightly dearer. Whole leaf grades were easier.

Commodity Markets

BRITISH TEXTILE REVIEW

THE PROBLEM OF CHEAP COTTON GOODS

WHILE the argument between Lancashire and Hongkong goes back and forth, the Lancashire cotton industry is somewhat relieved by the extension of the problem of cheap textiles to the global plane. The British attitude towards the eight-nation meeting in Washington last month was, however, somewhat sceptical: it was felt here that the Americans were trying to internationalise their own problem of cheap imports. It is recognised, however, that internationalisation could benefit Lancashire particularly, because within the framework of duty-free Commonwealth trade, Lancashire is particularly vulnerable. The essential facts are often obscured by special pleading, but Lancashire can claim with some reason that the problem of cheap textiles is focussed on the few countries which, for historical or other reasons, admit cheap textiles more or less freely. If, particularly, the countries of continental Europe can be induced to take a fair share of the Asian countries' cheap exports, the problem of these exports, as a whole, will be manageable. Restraint on the part of the exporting countries may still be necessary, but it will obviously be easier to arrange if a more liberal policy on the part of the restrictive countries broadens the total market.

The U.K. cotton industry is almost cynically frank about the advantages of participating in the European Common Market. Mr. Cyril Lord (one of the most successful textile men, in spite of the competition that he resents) stated the matter thus in the *Financial Times*: "The Common Market countries are determined to keep out sweated labour products. That is why if Great Britain joined the Common Market and the same attitude prevailed that dominates the policies of Italy, France and Germany, the textile industry of this country would benefit enormously." Lancashire regards the duty-free and quota-free entry of Commonwealth goods as an historical anachronism and is intensely critical of Hongkong because (unlike India and Pakistan) the colony does not seem to appreciate that its advantages in this market are, in a sense, fortuitous.

Technology Advances

However, the real task of the U.K. textile industry is to adapt itself to competition, not to evade it. Important developments in nylon 6, for instance, point the right way forward. News of this fibre emanated from Courtaulds and Imperial Chemical Industries almost simultaneously last month. Courtaulds, having acquired the process last year from its Italian associate, Snia Viscosa, will build a new plant with a capacity of 20-25 million lbs of nylon 6 a year. The venture is associated with a new petrochemical plant now being built in Derbyshire, which will provide the toluene to make the caprolactam from which nylon 6 is derived. I.C.I. has acquired Swiss rights to enable it to make caprolactam and nylon 6; the patents and "know-how" are from Emser Werke AG/Inventa AG and the process will be developed at I.C.I.'s Severnside chemical complex, now under construction. The source of I.C.I.'s toluene has not been stated; there are a number of coal-tar distillers that could provide it. The scale of I.C.I.'s venture looks bigger, being based on a 15,000-ton capacity caprolactam plant, compared with Courtaulds' 10,000-ton plant; but some of I.C.I.'s caprolactam will be available for general sale. Another important development of Courtaulds is an improvement in the strength and abrasion-resistance of Tricel yarns. The evolution of Tricel H, as it is called, is certainly attributable to any lack of interest in the ordinary variety: on the contrary, it has been difficult to fit in a new development while satisfying as much as possible of the demand for Tricel. The new variety is more than 20 percent stronger than the old and thus opens up new uses, particularly in men's wear—in linings and shirtings, for instance.

New Stocking Yarn

Ballito expects a very favourable response to a new-type stocking that it introduced last month called Nysil. It is made of nylon, but its texture is silky. The Company claims that a new process evolved in years of research, imparts to 15-denier nylon the special characteristics of silk-softness, absorbency, and its special type of elegance. As well, of course, Nysil has the advantages of nylon: it is quick-drying, and hard-wearing, and strongly resistant to breaking. In the early years nylon stockings were received uncritically, for they were fine and long-wearing. But women became gradually aware that they were rather cold and lacking in absorbency. Ballito thought it had solved the problem when it produced a stocking with a silk foot and a nylon leg. The customers' response was enthusiastic—until it was found that the nylon was too strong for the silk and cut the delicate threads. Other innovations, such as "crepe" nylons and "stretch" nylons, had positive advantages, but disadvantages as well. The chemists continued working on the problem, and ultimately, their solution of it was a chemical treatment to relax the surface of the nylon yarn and make it porous, and an ultrasonic-wave treatment to alter the structure of the yarn. It is too soon to pass final judgment on the product, but Ballito's claim that Nysil yarn is a major develop-

ment of nylon is not easily disputed. The product has been launched on the British market in a period of uncertainty in the hosiery trade. There is a feeling that the strength of demand in the last year or two has caused over-optimistic expansion and that the problems of over-supply that have afflicted the trade in the past will soon be apparent again.

FIRM OUTLOOK FOR LONDON METALS

COPPER STOCKS DECLINE WHILE CONSUMPTION MAY RISE

THE London metal market is always sensitive to changes in the U.K. Bank rate, mainly because they affect the cost of holding stocks. The package of restrictive measures presented on 25th July made dealers cautious for another reason, that some financial comments forecast a recession in the domestic economy. But these developments had little perceptible effect on prices, because they followed closely the announcement of the increase in U.S. military spending, in a period when U.S. business is expanding. Sentiment in the London market is, therefore, firm; but current business is not brisk. Regardless of the underlying trend, trade is dominated by holidays in this season, and buyers are content to satisfy their immediate requirements. In the case of copper immediate requirements have been small, because stocks had previously been accumulated in anticipation of a mid-year strike at the Kennecott mines in the U.S.A. and that strike was averted. Some of those stocks were surplus, and consumers have since been reducing them. However, the labour position in Chile is never peaceful for long.

U.S. Institute Figures for Copper Stocks

The U.S. Copper Institute revealed this month a decline in world stocks of copper in June, and the annual report of the British Non Ferrous Metals Federation published an estimate suggesting that world consumption of the metal would increase by 3 percent a year this decade. These trends will doubtless receive more attention when normal business is resumed after holidays. The International Tin Council's approach to the U.S. Administration to negotiate releases of tin from the U.S. strategic stockpile was welcomed here, but it is recognised that the procedure involved is cumbersome and that the move cannot relieve the shortage of tin this year. The price of the metal has lately gained strength, mainly because technical difficulties are evidently reducing supplies from Indonesian mines, but further releases from the (comparatively small) U.S. "secondary" stockpile should prevent prices from "running away". The rise of 10 percent in the U.K. price of nickel at the beginning of this month, after four and a half years at £800 a ton, caused some surprise, as nickel has become much more plentiful since the last change in price. But a "managed" price can be adjusted to the trend of costs.

WHOLESALE PRICE INDEX UNCHANGED

THE official wholesale price index (base: year ended March 1953=100) remained unchanged at its earlier week's revised level of 127.1 during the week ended 1st July 1961. The index was higher by 1.2 percent and 2.7 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: 1952-53=100)

GOOD GENERAL DEMAND AT TEA EXPORT SALE

MIXED TREND IN DUSTS

AT Sale No. 9, held on 31st July and 2nd August, there was a good general demand for the 33,877 chests on offer at the export auction. Orthodox descriptions met with keen competition, and best broken grades were generally fully firm to dearer with quality; plainer descriptions, however, were a little easier, and Fannings grades also followed the trend. The C.T.C. offerings met with a selective demand and prices were irregular, with the best grades barely steady. Where quality showed a seasonal decline, however, or where fibre was present in the leaf, prices eased by up to 50nP and sometimes more. The few Legg-cut teas on offer sold at easier rates. Best Darjeelings again met with good support around last rates but the medium and poorer kinds showed a decline in price with some teas being withdrawn without a bid. Buyers for stylish whole leaf and tippy grades were more selective, and prices in this category were generally lower.

Quotations

	1961	1960
	Rs. a kilo	Rs. a kilo
Clean Plain Pekoe	5.15 to 5.25	5.70 to 5.90
Plain B.P.	4.80 to 4.90	4.50 to 4.70
Plain Fannings	4.55 to 4.65	4.40 to 4.60
Medium Assam C.T.C. B.P.	6.00 to 6.40	5.10 to 5.30
Medium Assam C.T.C. Fgs.	6.20 to 6.60	5.00 to 5.20
Best Assam C.T.C. B.P.	7.20 to 7.40	9.00 to 9.50
Best Assam C.T.C. Fgs.	7.56 to 8.00	10.00 to 10.50

(Quotations are inclusive of excise duty.)

At the Internal Sale, there were 18,777 packages of Dust on offer, which met with a good general demand. Plain orthodox dusts were well supported, but at a discount of 10nP, while the bright Assams were strong and were much dearer with quality. Non-wither Legg-cuts were irregular, the bright types realised satisfactory prices, but the plain thin teas were generally easier. C.T.C.'s were irregular with the bright liquoring types being generally firm and sometimes dearer but the plainer sorts were often easier. Darjeelings were considerably easier and proved difficult of sale.

Quotations

	1961
	Rs. a kilo
Plain Orthodox Dust	4.35 to 4.60
Medium Assam Dust	4.90 to 5.30
Legg-cut Dust	4.70 to 5.50
Medium Assam C.T.C. Dust	6.30 to 6.70
Good Assam C.T.C. Dust	6.80 to 7.20

(Quotations are inclusive of excise duty.)

There was good demand for the 71 packages of Leaf on offer which sold at irregular rates.

LINSEED FIRM

The market was firm in the past week, and sellers were reserved. The local stock position was poor with arrivals scarce and few crushers working. The oil market was fairly steady, but business was on a small scale due to limited stocks with millers. The oilcake market was sluggish. Small business was done daily at the prevailing rates. The latest quotation is as follows: Ready-August delivery Rs. 30.25 a maund.

ORISSA CEMENT LIMITED

RAJGANGPUR

NOTICE is hereby given that the Eleventh Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at Raigangpur, on Thursday, the 21st September, 1961 at 2-30 P.M. to transact the following business:—

1. To receive and consider the audited Balance Sheet and Profit & Loss Account for the year 1960 and the report of the Directors and Auditors.
2. To declare Dividend.
3. To elect a Director in place of retiring Director Shri V. H. Dalmia.
4. To elect a Director in place of retiring Director Shri N. C. Roy.
5. To appoint Auditors for the accounting year 1961 and to fix their remuneration.
6. To consider and pass the following as Special Resolution with or without modification as thought fit:

"RESOLVED by way of Special Resolution that approval be and is hereby given to residential accommodation being made available to any Director or Officer of Dalmia Agencies Private Limited, Managing Agents of the Company who may be required to be stationed at Rajgangpur as and when requested on payment by the Managing Agents or the person concerned of the rent and other charges payable in respect of the accommodation on the scale as may be prescribed by the Board of Directors from time to time provided that payment of the rent and charges shall be made to the Company within one month of the expiry of the month for which the same are payable."

7. To consider and pass the following Special Resolution with or without modification as thought fit:

"RESOLVED by way of Special Resolution that Article 10 of the Articles of Association of the Company be amended to read as follows:

"10. If at any time the share capital of the Company is divided into different classes of shares, the Company is authorised to vary the rights attached to any class (unless otherwise provided by the terms of issue of the shares of that class) with the consent of the holders of not less than three-fourths of the issued shares of that class or with the sanction of a Special Resolution passed at a separate meeting of the holders of the issued shares of that class."

1. To consider and pass the following as Special Resolution with or without modification as thought fit:

"RESOLVED by way of Special Resolution, in partial modification of the Special Resolution passed on 28th September, 1957, that authority be and is hereby given to the Board of Directors to have a mutual loan arrangement with Dalmia Cement (Bharat) Ltd.: a Company under the same management, subject to the condition that the amount due to either Company on the loan account together with any moneys outstanding in respect of any current transactions pertaining to the supply of services, spare parts or equipment, etc. shall not at any time exceed Rupees Forty Lakhs and the Board of Directors be and is hereby authorised to determine, from time to time, the rate of interest payable on such outstanding amount due to either Company in the loan account."

Explanatory Statements for Items 6, 7 and 8 of the agenda as required under Section 173 of the Companies Act, 1956, are being forwarded to the Members of the Company by post along with the Notice of the Meeting.

The Share Transfer Books of the Company will remain closed for 20 days from Monday the 21st August to Saturday the 9th September, 1961, both days inclusive.

Every Shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a Shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 42 hours before the commencement of the Meeting.

Dividend Warrants are expected to be all posted within three or four days after declaration of the dividend at the Annual General Meeting and would be payable on or after 25th September upto 31st October, 1961.

By Order of the Board,
For ORISSA CEMENT LIMITED,
For DALMIA AGENCIES PRIVATE LIMITED,

J. DALMIA,
Director,
Managing Agents.

Dated, 23rd July, 1961.

Calcutta: 1.

CENTRAL INDIA COALFIELDS LTD.

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta, on Tuesday, the 5th September, 1961 at 3 P.M. for the following purposes:—

1. To consider and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March, 1961.
2. To consider declaration of dividend.
3. To elect Directors in place of Shri L. N. Birla and Shri N. L. Kanoria who retire by rotation but being eligible offer themselves for re-election.

Shri L. N. Birla, a director of the Company whose period of office is liable to determination by retirement by rotation, is an Officer of the Managing Agents of the Company. Since it is desirable to avail of the valuable advice of Shri L. N. Birla by retaining him as director of the Company the following special resolution as required by Section 261 of the Companies Act, 1956 will be proposed, special notice of which has been received by the Company and is also hereby given to the Shareholders:—

As Special Resolution:

"Resolved that Shri L. N. Birla an Officer of the Managing Agents of the Company under the Companies Act, 1956, be and is hereby re-elected a director of the Company."

4. To appoint auditors for the current year and to fix their remuneration. Messrs. Singhi & Co., the retiring auditors being eligible offer themselves for reappointment.

5. As Special Business to consider and if thought fit to pass with or without modification the following resolutions:—

As Ordinary Resolutions.

- (a) Resolved that Shri K. N. Mookerjee be and is hereby appointed a director of the company.
- (b) Resolved that Shri C. C. Dalmal be and is hereby appointed a director of the company.
- (c) Resolved that the Board of Directors of the Company be and are hereby authorised to borrow from time to time moneys for the purposes of the company upto a maximum of Rs. 75 lakhs outstanding at any time on account of principal notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the company (excluding temporary loans taken from Banks in the ordinary course of business) will exceed the aggregate of the paid up capital of the company and its free reserves, that is to say, reserves not set apart for any specific purpose.
- (d) Resolved that the Board of Directors be and are hereby authorised to contribute and/or subscribe to any institution or fund for any national, charitable, benevolent, public or general purposes, not directly relating to the business of the company or to the welfare of its employees from time to time such amounts upto a total of Rs. 50,000/- in any financial year notwithstanding that such amounts in any financial year will exceed Rs. 25,000/- or 5% of the company's average net profits as determined in accordance with the provisions of the Companies Act, 1956 during the three financial years immediately preceding whichever is greater.

The Register of Members will remain closed from the 21st August, 1961 to the 5th September, 1961, both days inclusive.

By Order of the Board,

HINDUSTHAN INVESTMENT CORPORATION
LIMITED,

By Mg. Director R. K. Chhaachharia,
Managing Agents.

8, India Exchange Place,
Calcutta-1,

Dated the 1st August, 1961.

Note: i. The dividends, if declared at the meeting, will be posted to the Registered addresses of the shareholders whose names appear on the company's register on the 5th September, 1961, or to their order or to their bankers.

ii. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE ABOVE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

iii. The instrument appointing a proxy shall be deposited at the Registered Office of the company not less than 48 hours before the time for holding the aforesaid meeting.

iv. Explanatory Statement with regard to the Special Business as required under Section 173 of the Companies Act, 1956 is being forwarded to the Members of the Company.

THE GROB TEA CO. LTD.

THE Directors have decided to recommend to the forthcoming Annual General Meeting of the shareholders a Dividend of 6% for Season 1960 payable after deduction of tax.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Vol. CXXXVII No. 3672

THE THIRD PLAN: BLUEPRINT FOR INFLATION

NOBODY who can find the time to study the 700-odd pages of India's third five year plan will fail to be impressed. The outline has already been known for some time, and this final official version contains nothing particularly new. But the scope and comprehensiveness of the plan in the form it has been laid before the Lok Sabha is a monument to the diligence and hard work of the planners which certainly calls for congratulation. It is also something of a tribute to their unquenchable optimism, that need not detract from the achievement. As a social and economic blueprint it has clearly benefited from the experience of the past ten years, at least as far as its statistical competence and presentation are concerned. Where it does not seem that much has been learned from the mistakes of the past is in the continued concentration on heavy, long-term projects in the public sector to be financed out of high taxes, low-cost borrowing and foreign aid. The impartial observer might have concluded that after the difficulties and strains of the past five years, most of them due to the determined pursuit of this type of Soviet-style planning, some effort would have been made to modify the policies responsible. But apparently not. A fair prediction would, therefore, appear to be that the country can now expect to go through another five-year period of chronic economic crisis, rigid control and what is perhaps worse, unnecessarily slow growth. So, while admiring the planners for their industry and thoroughness, and for their good intentions, it is not so easy to praise them for said about this plan than was said about the second five year plan in its time; and it would be surprising if, during the course of it, there were not exactly the same criticisms to be made and suggestions to be put forward. So far as the commentator on Indian economic development is concerned, the publication of the final third five year plan is exactly where he came in.

Apart from the commendable importance given to agriculture in this plan compared with its predecessor—a prominence still more verbal than financial, however—the only novel feature about it would seem to be the flexibility of the total spending target. This seems to have been devised as a convenient way of escaping the criticism of the State Governments so close to an election. As it turns out, it is also the expression of wisdom, used at every stage in the plan. For a number of important reasons, this is not going to be an easy plan to fulfil. Even more than the second plan the internal economy, recurring bottlenecks and shortages, and the unfortunate absence of any cushion against foreign exchange difficulties are represented by the sterling balances. Under such circumstances flexibility is a necessity rather than a convenience.

The main criticism of the plan is not its absolute size, although this might well prove to be its greatest drawback in the long run. It is the huge preponderance of public sector investment which constitutes the main danger to stability and threatens to impede progress. A sector which at the moment represents, on the Government's own recent admission, not more than 10 percent of the economy, is to be entrusted with remaining 90 percent. Such a decision not only puts an unnecessary strain on the wholly inadequate administrative and managerial talents available to the public sector, it also restricts savings, because the resources to implement it have to be raised in uneconomic and expensive ways when they would otherwise have been available for investment in private enterprise without anything like the same economic and social cost. This is the real economic meaning of socialism, whatever

vague defence the plan puts up for it on grounds of equality and social justice. Inflation is inherent in planning of this kind, and so are balance of payments difficulties. It is irrelevant to point out that because deficit financing is not to be as large in the third plan as it was in the second, then it is less potentially inflationary. The real impetus to inflation comes from the loss in private sector economic activity represented by the insupportable weight of taxation and borrowing required to finance development projects which will inevitably be long-term in their yield. In a democracy, this inflationary potential is extremely dangerous, as the second plan proved only too well. How the planners intend to hold it in check in this third plan is simply not clear.

The adequacy of the foreign exchange target for the third plan is something which will depend directly on whether inflation can be effectively corked down and whether exports attain the levels expected of them. The appointment of a special Minister to look after exports is unlikely in itself to answer the need. If prices rise internally, exports will fall off, Minister or no Minister, and when that happens foreign aid will increasingly have to be diverted to the import of raw material. It is seldom appreciated just what little room for manoeuvre there is in the third plan—far less than in the second—and how great a need there is for the flexibility of more liberal policies. If India is not to be a permanent pensioner on her foreign friends it is essential that the disparity in investment targets between the private sector and the public be scaled down to something more commensurate with the capabilities of each. The lesson of the coal industry during the second five year plan does not appear to have impressed many people in New Delhi. The third plan repeats all the mistakes made in the second and adds a few more for good measure. The country will be fortunate to reach the end without disaster. The goal of a self-sufficient economy is all very well, although it sounds increasingly out-dated in a world which is every day realising more acutely the inter-dependence of all countries. But the planners should not lose sight of the fact that the electorate requires something more than shortages, high prices and balance-of-payments crisis in the meantime. And as for the attainment of take-off—which the planners appear to hope will occur when the rate of domestic saving has been pushed up sufficiently high—it is only sensible to point out that when such saving is going into inefficient,

TEA PROSPECTS THIS YEAR

THERE has been a softer trend in the tea auctions held in Calcutta this week, but the decline is not surprising considering that bigger supplies are in prospect during the current season. Up to the middle of July 1961, the north Indian crop amounted to 161.2 million lbs, against 129.6 million lbs for the corresponding period of 1960. Weather conditions indicate that north India is likely to produce a much bigger crop in 1961 than it did in 1960. Although the heavy rains and floods are likely to some extent to reduce the south Indian crop during July and August, the decline is not expected to make much difference to the overall Indian production figure. It may be pointed out that July and August are usually low cropping months in south India even under normal conditions. Meanwhile, the Ceylon crop is going ahead and a substantial rise in the Pakistani crop is foreshadowed. Today, the world crop is 540.5 million lbs, against 501.5 million lbs for the corresponding period of 1960. In view of the fact that world crops appear to have been reasonably in balance during recent years, it is wondered how the increased supplies during the current year will be absorbed. There is little doubt that prices will

high-cost industries, the demand for whose products has been choked off by years of neglect of secondary industrial development, there is no guarantee of self-sustaining growth ever being a practicable proposition. In this plan India has put her feet more firmly on the road to a Soviet-type economy.

The concentration on rapid expansion of public-sector industry raises other questions about the wisdom of this third plan. How, it may be asked, do the planners expect to be able to secure the necessary technical and managerial skill? In the private sector this is being provided partly by foreign help and partly as a natural growth from existing resources nurtured by years of experience. In the public sector, where foreign help is usually restricted, when called upon at all, to the actual erection of the project and its initial running, there is little of any kind of talent and experience to draw on. The public sector is already facing a management crisis of crippling dimensions; some existing public projects are working at no more than half their capacity because of the shortage of the necessary expert knowledge to run them. This state of affairs can be expected to get worse. With its mere Rs. 4,300 crores the private sector is likely to find its talents strained to the utmost; with its Rs. 7,500 crores of investment—Rs. 8,000 crores if the “physical” target is taken—the public sector has a much greater problem on its hands. And when it proposes to solve it on the cheap, by paying its key men a fraction of what they could earn in private industry, it is difficult to have much faith in the outcome.

There is no lack of idealism in this third plan document; the statement of intentions reads like the preamble to a national constitution. But whether or not bright hopes are eventually realised depends upon concrete achievement. This is unlikely to be as high as targeted if the newly-erected projects cannot be run efficiently because insufficient managerial and technical talent is available and if raw materials cannot be imported because exports are not earning the foreign exchange to pay for them. And when the inflation which a plan of this kind must inevitably generate is added to the picture, it becomes by no means a reassuring one. India is right to set her sights high, and her goals, with some ideological exceptions, are wholly commendable. But this plan represents a most perilous attempt to build a more prosperous future simply because it chooses the wrong means. It is in its inflationary potential that its main danger lies. It was the sterling balances which saved the second plan from dissolving into inflation. There are no sterling balances this time, and the foreign aid which is intended to fill their place is seriously reduced in its effectiveness by the way in which it has been granted.

decline steadily when the weight of bigger supplies is felt, but the extent of the decline is difficult to estimate at the present stage.

As far as the Calcutta market is concerned, the outlook, at least for the next few weeks, seems reasonably favourable. There are considerable orders for orthodox teas of all descriptions and the recent buying at the auctions reflects the transfer of orders from Iran to India as a result of the failure of Ceylon and Iran to conclude a fresh trade agreement. During the next few weeks, considerable quantities of second flush teas will be arriving, so buying from many out-markets is expected before the quality of the commodity declines to a rains level. Internal buyers are also expected to take a keener interest in the Calcutta auctions as long as supplies to the Cochin auctions are interrupted by transport dislocations. It is difficult to assess the extent of the support the U.K.—the major buyer of Indian tea—will extend to the Calcutta market because the recent increase in the U.K. Bank rate may restrain that country's buying activities. This apart, direct shipments to London have been heavier so far during

range of pneumatic power hammers and drop forges. The Company has not been able to finalise an agreement with Degrag of West Germany for manufacturing their air compressors as the terms approved by the Government of India were not acceptable to the German firm. The prospects for the current year are thought to be encouraging. The Company's order-book is said to be satisfactory. The production and assembly lines for Massey pneumatic power hammers and Truzschler blow-room line will be established during the current year. The preparatory work for manufacturing electric furnaces and receivers is also expected to be completed during the current year.

In view of the various expansion and development projects of New Standard Engineering, the directors state that apart from the requirements of finance for new development, larger funds would be required for working capital to carry larger raw materials, stocks, finished products, etcetera. The directors have, therefore, decided to raise the authorised capital of the Company from Rs. 1 crore to Rs. 5 crores, and they are also seeking the shareholders' approval for increased borrowing powers. Prior to the raising of the authorised capital, the directors propose to change the present unissued 25,000 "unclassified" shares into equity shares and raise the total equity shares to 75,000. The proposed Rs. 5 crores authorised capital will comprise 500,000 shares of Rs. 100 each made up of 75,000 equity shares and 25,000 preference shares and 400,000 unclassified shares. The final decision about the further issue of capital will be taken at the appropriate time.

Standard-Vacuum Sales Up: Profit Down

The Standard-Vacuum Refining Co. of India Ltd has made a lower profit in spite of a substantial improvement in sales and a larger gross income. Sales rose by 20.4 percent from 397.5 million imperial gallons in 1959 to 478.7 million imperial gallons in 1960. Of this, 428.8 million gallons were sold in India and 49.9 million gallons consisting of motor gasoline were exported to New Zealand, Australia and the Philippines earning about Rs. 2.56 crores by way of foreign exchange. Crude oil processed in 1960 set a new record at 472.4 million imperial gallons. The Company's gross income rose from Rs. 30.07 crores to Rs. 34.41 crores, but the gross profit declined from Rs. 3.47 crores to Rs. 3.29 crores. This is attributed to a rise of more than Rs. 2 crores in excise duty and of about Rs. 2.34 crores in production costs. After providing Rs. 91.86 lakhs (against Rs. 87.12 lakhs) for depreciation and about Rs. 1.06 crores (against Rs. 1.01 crores) for taxation, the net profit amounts to about Rs. 1.31 crores, against Rs. 1.51 crores in 1959. The directors have transferred Rs. 2.25 lakhs (against Rs. 21.84 lakhs) to statutory development rebate reserve, Rs. 3.26 lakhs (against Rs. 3.07 lakhs) to self-insurance reserve and have used Rs. 52,712 to write down the debenture issue expenses. The balance of Rs. 1.23 crores has been taken to general reserve No. 2. The directors have recommended a dividend of Rs. 2.40 a share of Rs. 20 each, against nil in the previous year. The dividend on ordinary shares, which absorbs Rs. 27 lakhs, is being paid out of general reserve No. 3 which consists entirely of profits exempt under Section 15(C) of the Income Tax Act. The preference dividend absorbs Rs. 4.50 lakhs and is being paid from general reserve No. 2. The Company has surrendered duty protection on all fuel products with effect from 15th November, 1960. It is said to have effected a foreign exchange saving of Rs. 18.11 crores since the refinery went into production in 1954.

India Cements Pay More

Although the sales of India Cements Ltd for the year ended March 1961 recorded an impressive rise from Rs. 2.71 crores to Rs. 3.56 crores, the gross profit rose by a mere Rs. 3.52 lakhs from Rs. 72.26 lakhs to Rs. 75.78 lakhs. The ratio of the gross profit to sales works out to 21.3 percent, against 26.7 percent in 1959-60. The sharp decline in the profit margin is attributable to the higher cost of power and fuel, the inflated salaries bill and a marked increase in packing and other charges. The total increase under these heads works out to Rs. 63.72 lakhs from Rs. 1.22 crores to Rs. 1.86 crores. The profit, before tax, amounts to Rs. 42.47 lakhs, against Rs. 49 lakhs in 1959-60. The directors have provided Rs. 9.20 lakhs (against nil) for taxation, after transferring Rs. 24 lakhs from mortgage loan redemption reserve and writing back Rs. 9,774, being the refund of taxes. The allocation to development rebate reserve has been pruned from Rs. 33.37 lakhs to Rs. 2.74 lakhs but general reserve gets Rs. 30 lakhs, against nil in the previous year.

Tax on dividends to non-residents written off amounts to Rs. 13,196. The dividend on ordinary shares has been raised from 11 percent to 12 percent, both taxable. The directors state that the factory worked almost to rated capacity. The procurement of coal, however, caused considerable anxiety, particularly from August, so production had to be curtailed. The Company had to resort to oil firing for one of the kilns at a prohibitive cost with a view to maintaining production. Its application for setting up a cement factory in the Salem district is pending with the Government. The Rs. 5-paid share of the Company is quoted around Rs. 6.60, offering a gross yield of about 9.5 percent.

Cloth Output, Stocks and Exports

Mill cloth production in June is provisionally placed at 428 million yards, against 429 million yards in May and 421 million yards in June 1960. The June figure raises the total output during the first six months of the current year to 2,543 million yards, compared with 2,470 million yards in January-June 1960. Production of yarn in June is placed at 156 million lbs, against 152 million lbs in the previous month and 143 million lbs in June last year. The yarn output in January-June 1961 amounts to 909 million lbs which is 67 million lbs more than the corresponding figure of last year. Cloth stocks—both sold and unsold—held by mills have lately been showing a rising trend. Total stocks which had risen from 249,800 bales (1,500 yards each) at the end of April to 268,500 bales at the end of May have risen further to 317,300 bales at the end of June. Between April and June, unsold stocks have risen by 27,100 bales from 117,100 bales to 144,200 bales and "sold but delivery not taken" have increased by 40,400 bales from 132,700 bales to 173,100 bales. Apart from increased production and a setback in exports, the rise in stocks with mills is attributable to the rather sluggish conditions in the cotton piecegoods market. Enquiries with the trade indicate that several mills have started producing new varieties of cloth in order to circumvent the ill effects of voluntary price control. Although stocks with mills have recorded a substantial increase, the market is said to be experiencing a shortage of popular varieties. Heavy floods in certain parts of India and a change in market psychology resulting from the improved supply of cloth and the easier tendency in raw material prices are mentioned as the other factors which have affected the trade demand for cloth, thereby increasing the stocks held by mills. Meanwhile, the performance on the export front continues to be unsatisfactory. Cloth shipments from Bombay in July are provisionally placed at 41 million yards valued at Rs. 3.30 crores, against 51.04 million yards valued at Rs. 3.92 crores in June. The corresponding figures for July 1960 were 39.65 million yards worth Rs. 3.28 crores. The July figures bring total shipments from Bombay in the first seven months of the year to 330.82 million yards valued at Rs. 24.78 crores, against 334.04 million yards valued at Rs. 26.48 crores in January to July 1960.

Outlook for India United Mills

The shares of India United Mills Ltd have continued to hold fairly steady around Rs. 15.24 which is not much below the year's high of Rs. 15.96 recorded early in May following the dividend announcement of 8 percent after a lapse of three years. The relative steadiness in these shares reflects the return of investors' confidence because of the improved results for 1960 which enabled India United Mills not only to wipe out the deficit of Rs. 19.79 lakhs brought forward from the previous year but also clear arrears of depreciation for 1953 and 1959 amounting to Rs. 21.44 lakhs and distribute an 8 percent dividend on ordinary shares. Prospects for the current year are considered encouraging. With sales continuing to be good, stocks of cloth—both sold and unsold—have declined from 21,283 bales to 9,000 bales between 31st December, 1960, and 8th July, 1961. The Company proposes to launch a phased programme for renovation and rehabilitation of plant and machinery. It has already received a new stenter and yarn mercerising machine, and an order has been placed for one more stenter. Negotiations are going on for purchasing 100 ring-frames and four blow-room lines which will cost about Rs. 65 lakhs; and, finance permitting, India United Mills proposes to spend Rs. 1 crore on the installation and renovation of machines during the next 12 months. If the results for 1961 prove encouraging, as it is hoped, the Company is likely to introduce further modernisation. Its tax assessment in relation to earlier years has been decided in its favour, and the additional tax of Rs. 34.44 lakhs, which the Company had paid "on account" initially for the year 1919-50, has now been refunded. Since the

income tax department has preferred a reference application, this amount has been placed in contingency reserve. The appeals in relation to the years 1950 to 1953 have also been decided in the Company's favour, and a refund of Rs. 13.42 lakhs has been received. The assessments for 1954 and 1955 have been completed and appeals in certain items have been filed. The directors consider that the provisions already made for taxes are adequate to cover the liabilities. India United Mills' gross block of Rs. 5.28 crores has been written down to Rs. 1.27 crores. Against an equity capital of Rs. 2 crores and the deferred share capital of Rs. 50 lakhs, its reserves and surplus amount to Rs. 51.40 lakhs.

Chamundi Chemicals Share Offer

Chamundi Chemicals and Fertilisers Ltd which proposes to set up a factory in Muniarabad—about two miles from the Tungabhadra dam—for manufacturing fertilisers will enter the market for raising capital on 21st August. The subscription list will close on 26th August or earlier at the discretion of the directors but not before 23rd August. The Company has an authorised capital of Rs. 1 crore in equity shares of Rs. 10 each, of which Rs. 40 lakhs is to be issued at present. The directors, promoters and their friends will take up shares worth Rs. 12 lakhs. The Life Insurance Corporation and the Industrial Credit and Investment Corporation of India will each take up shares worth Rs. 4 lakhs. The balance of Rs. 20 lakhs is being offered for public subscription. A sum of Rs. 2.50 a share is payable on application and another Rs. 2.50 a share on allotment. The balance will be payable in two instalments. The entire public issue has been underwritten, and the underwriters include the Life Insurance Corporation and the Industrial Finance Corporation of India. The plant will have a daily production capacity of 125 tons of superphosphate and 50 tons of sulphuric acid. The capital cost of the project is estimated around Rs. 46 lakhs which will be met by the proposed equity issue and a foreign exchange loan of Rs. 6 lakhs which has already been agreed to by the I.C.I.C.I. The Company has entered into a technical collaboration agreement with the U.S. firm of Phosphatic Acidulating Corporation of New York. The Associated Planters Ltd, Madras, will be the managing agents of the Company.

Surat Electricity Fares Well

The working of the Surat Electricity Company for the year ended March 1961, shows that it has fared considerably better than in the previous year. The sales of energy which had recorded a rise of 11.75 percent in 1959-60 showed a further rise of 8.23 percent in 1960-61, from 52.84 million kilowatt-hours to 57.19 million kilowatt-hours. The gross earnings from the sale of energy and allied activities rose by 12.5 percent from Rs. 83.60 lakhs to Rs. 94.04 lakhs, and the miscellaneous income amounted to Rs. 48 lakhs, against Rs. 47 lakhs. Against an increase of Rs. 10.45 lakhs in earnings, the gross profit rose by Rs. 3.30 lakhs from Rs. 16.20 lakhs to Rs. 19.50 lakhs. After providing Rs. 5.01 lakhs (against Rs. 4.76 lakhs) for depreciation and Rs. 3.90 lakhs (against Rs. 4.23 lakhs) for taxation, the net profit amounts to Rs. 8.97 lakhs, against Rs. 5.64 lakhs in 1959-60. While a sum of Rs. 3.40 lakhs—being the additional tax provision made in earlier years—was written back last year to supplement the net profit, no such amount is available for 1960-61. The directors have transferred Rs. 2.05 lakhs (against Rs. 0.26 lakhs) to development reserve. Contingency reserve gets Rs. 42,972 (against Rs. 37,903) and dividend equalisation reserve Rs. 47,000 (against Rs. 1.95 lakhs). The ordinary dividend has been raised from 7.5 percent to 8 percent, both taxable. The dividends, both ordinary and preference, absorb Rs. 6.02 lakhs, against Rs. 5.59 lakhs, leaving a small surplus of Rs. 1,914 to be carried forward, against Rs. 4,844 brought in.

The Company supplied power to 1,457 new consumers during the year, bringing the total number of its customers to 30,784. Surat Electricity continued to purchase bulk power supplies from the Gujarat Electricity Board's thermal station in Utran which was supplemented by the Company's diesel plant. Four new sub-stations were added to the system. At the close of the year, there were 79.14 miles of underground and 43.66 miles of overhead mains. The new 22 kV receiver-station, built in Vertia Dehri, was commissioned in February 1961. Surat Electricity's application for extension of the licensed area of supply by including four villages has been sanctioned by the Gujarat Government, but the supply to consumers has been regulated with effect from March 1961 on account of the acute power shortage. Against an ordinary capital of Rs. 70 lakhs, the reserves total Rs. 31.28 lakhs. The

fixed assets valued at Rs. 1.72 crores have been written down to Rs. 1.16 crores. The Rs. 100-paid share of the Company is currently quoted around Rs. 98, and its book value works out to around Rs. 144.

Greaves Cotton Pays More

In spite of the reactionary trend in equity prices since about the second week of June—the Bombay stock market as a whole has lost nearly half the ground gained since the turn of the year—the shares of the Greaves Cotton and Company have continued to display a remarkable strength on sustained investment support. Early in the current year, they could be bought around Rs. 150; but last week they were bid up to Rs. 188.50—a new high for the year. Investors' optimism had not been misplaced, for the directors have raised the gross dividend on equity shares from 11 percent to 13 percent for the year ended March 1961. The net dividend works out to Rs. 9.10 a share, against Rs. 7.70 a share in 1959-60. The directors have provided for grossed-up dividends of 6.5 percent and 7.8 percent on tax-free 1st and 2nd preference shares in accordance with the Preference Shares (Regulation of Dividends) Act of 1960. The preliminary figures about Greaves Cotton's working results fully justify the proposed increase in dividend distribution. The sales are up by 33.5 percent from Rs. 4.95 crores to Rs. 6.61 crores, and the Company's investment income has increased by Rs. 2.59 lakhs to Rs. 10.49 lakhs. The profit has recorded a rise of 9.3 percent from Rs. 46.32 lakhs to Rs. 50.63 lakhs. The subsidiary and associated Companies are reported to have contributed substantially to the improved results for 1960-61. The provision for taxation has been raised from Rs. 18.50 lakhs to Rs. 20.25 lakhs, and the allocation to general reserve has been increased from Rs. 7 lakhs to Rs. 10 lakhs. Development rebate reserve gets Rs. 35 lakhs, against Rs. 68 lakhs in the previous year. The Company seems to have good growth prospects. The projects for manufacturing vertical air-cooled oil engines, reduction gears, calender bowls, steam traps and diamond drilling bits are reported to be nearing completion, and they are expected to go into production during the current financial year. When the projects are fully implemented, they will contribute substantially towards a further rise in the Company's turnover and, therefore, its profitability.

New Plans for Coal Movement

Coal occupies a pivotal position as fuel for industries as it supplies about 83 percent of commercial energy. Of late, several industries have been complaining of inadequate supplies of coal. There is a real danger that industrial production will suffer if the supply of coal, especially of coke, does not improve. But the problem has not been one of only production, but of movement to distant places from collieries as well. There are 42 consumer groups, and they have to be supplied coal according to the quality they need. This creates a new transport problem. Coal consumption in 1960 amounted to 52 million tons. With reduction this year estimated around 58 million tons and a carryover of 3 million tons, the total availability in 1960 was around 61 million tons. The Coal Controller, Mr. A. Zaman, told newsmen in Bombay last week that about 7,557 wagons were needed every day for the distribution of coal throughout India, but actual loadings worked out to around 5,890 wagons. During the April-June quarter, wagon supply had improved by 11 percent over that in April-June 1960, but coal loadings had recorded a rise of about 22 percent over the same period. If the availability of wagons did not improve higher production would lead to large pithead stocks, which, apart from being combustible, would impose a heavy financial burden on the collieries.

Discussing the supply position, Mr. Zaman said that while consumers were not getting all their requirements, the Government had kept industries going with minimum requirements, although without allowing for larger supplies required to meet new needs arising from expansion. He disclosed that the Government had devised a new system to meet the coal shortage caused by the inadequate availability of wagons. Under the organised system, coal would be transported to selected centres in each State from where supplies would be arranged to consumers. Under the direct wagon allotments, individual consumers were given railway allotments. To improve coal transit facilities, certain measures had been taken which included the use of box wagons of 55-ton capacity, compared with four wheelers of 22-ton capacity and more use of block racks which carried 50 to 75 wagons. So far, six States—Maharashtra, Gujarat, Assam, Madras, Mysore and Kerala—had agreed to the new scheme for

quicker movement of coal, but the Government hoped to persuade the other States to agree to the scheme. Mr. Zaman said that under the new scheme Maharashtra would get about 307 wagons of coke a month, compared with 270 under the existing system. Gujarat would get 202 wagons, compared with 210.

Referring to the movement of coal by sea, Mr. Zaman said that between May and July, there had been only 64 sailings from Calcutta against the schedule of 92 sailings under a programme of one sailing a day. The vessels available with them numbered 37, against a requirement of 52. Shipowners attributed the shortfall in ship movements to inadequate unloading facilities at the ports. The Coal Controller said that five more vessels were being chartered to facilitate coal movement by sea. The higher cost of coal transported by sea would be borne by the Government. The shipowners would be given subsidy from May last for coal movement and the benefit would be passed on to the consumers also. Mr. Zaman indicated that the Government proposed to move about 50 million tons of coal to various parts of the country this year. Of this, about 3 million to 4 million tons would be moved by road, 2 million tons by sea and the rest by the railways. The Coal Controller advised industries in Maharashtra and Gujarat to use more net coke from Bhilai for simple heating processes. Such a switch-over, he said, would relieve burden on the Bengal-Bihar belt. The line capacity for Bhilai to western India was not under pressure. The switch-over would help maintain supplies of soft coke. The railways consume about 15 to 17 million tons of coal, and the steel plants about 10 million tons, thus together consuming nearly half of the total supplies.

Gwalior Rayon Profit Up

The 12½ percent increase in Gwalior Rayon's gross dividend for the year ended March 1961 from Rs. 2 to Rs. 2.25 a share had failed to please the stock market. The preliminary figures about the Company's working results, which indicate considerable improvement over the previous year's performance, had also left the market cold. The shares which had suffered a sizable setback after the announcement of a higher dividend eased further last week after the release of Gwalior Rayon's working results. The news has been good, but the market's expectations had apparently been fixed higher. The turnover has risen by about 12 percent from Rs. 9.71 crores to Rs. 10.88 crores, and the gross profit is up by 8.3 percent from Rs. 3.50 crores to Rs. 3.79 crores. The ratio of the gross profit to sales is slightly lower at 35 percent, against 36 percent in 1959-60. Depreciation has been slightly reduced from Rs. 43.70 lakhs to Rs. 41.34 lakhs while the allocation to development rebate reserve has been increased from Rs. 1.12 lakhs to Rs. 7.33 lakhs. A sum of Rs. 15 lakhs has been set aside for preference shares redemption reserve, against nil in 1959-60. The directors have carried no less than Rs. 2.05 crores (against Rs. 1.65 crores) to general reserve due to the uncertainty about tax liability. The tax exemption issue is still pending in the Supreme Court. The contingent liability on this account amounts to Rs. 1.45 crores for 1960-61. If the tax question goes in favour of the Company, its reserves and surplus will total Rs. 5.10 crores, against a paid-up capital of Rs. 4.01 crores. The ordinary and preference dividends absorb Rs. 69.17 lakhs, leaving a substantial surplus of Rs. 42.11 lakhs to be carried forward, against Rs. 20.11 lakhs brought in. The construction work of the pulp plant is stated to be in full swing, and some of the machines have already been received at site. A draft agreement with foreign collaborators for the rayon machinery project, for which a licence has already been received, is awaiting the Government's approval. The shares of the Company, which rose from Rs. 38 in January to Rs. 57.50 in June, were marked down to Rs. 49 last week, and the latest quotation is a little better around Rs. 50.50.

State Bank Branch Expansion Programme

The State Bank of India and its eight subsidiaries propose to open 300 new branches during the five-year period ended June 1965, against 416 branches opened by the Bank during the five-year period ended June 1960. This is in pursuance of the recommendations made by the sub-committee of the Central Board of the State Bank which had been set up last year under the chairmanship of Professor D. G. Karve to study the effects of the expansion programme implemented by the Bank and to make suggestions for further expansion. The committee has further suggested that the new branches should be located in rural and semi-urban areas. It has recommended a phased programme of establishing new branches. Besides 80 branches likely to be opened in 1960-61,

the Bank has been urged to set up 30 new branches in 1961-62, 40 in 1962-63, 70 in 1963-64 and 80 in 1964-65. The committee says that it has deliberately recommended a lower pace during the second and third years, so that effective steps may be taken during this period to improve the organisational methods and to recruit and train the personnel which may be required to man the old as well as new branches. It is estimated that the State Bank and its subsidiaries would require about 300 supervisory staff to be in charge of the new branches, about 300 head cashiers, 600 to 700 cashiers and 600 to 700 clerks to manage the branches. Progress concerning strength, training and organisation of staff is an essential accompaniment of a programme of expansion.

Reviewing the branch expansion programme during the 4½-year period, July 1955 to December 1959, the sub-committee says that the State Bank incurred a net loss of Rs. 1.42 crores during this period. The number of losing branches increased from 17 in 1956 to 222 in 1959 and that of profit-making branches from three to 38. The total deposits of the new branches opened by the State Bank increased from Rs. 56 lakhs on 1st December, 1955 to Rs. 29.32 crores at the end of 1959. The total credit extended by the new branches increased steadily from Rs. 13 lakhs to Rs. 21.47 crores during the same period. The total remittances issued as well as encashed by the new branches increased from Rs. 6.31 crores in the second half of 1955 to Rs. 567.43 crores in 1959. The report says that while the branch expansion programme has been quantitatively satisfactory in matters of staffing and organisation reform much has yet to be done both to consolidate the present position and to prepare for a further programme of expansion. The Karve Committee's report, which was released by the chairman of the State Bank, Mr. P. C. Bhattacharyya, at a Press conference in Bombay last week does not contain the chapter of "Finance and Organisation," as it deals with the relationship between the State Bank and the Reserve Bank of India.

Mr. Bhattacharyya stated that the Central Board of the State Bank had accepted the recommendations of the sub-committee and that the expansion programme will be implemented jointly by the Bank and its eight subsidiaries in equal proportions, but the shares could be altered to suit convenience. He disclosed that already up to July 1961, the State Bank had opened 36 new branches and the subsidiaries 46 branches. In order to cope with the problem of training the staff needed for the branch expansion programme, the Bank would open a training institution in Hyderabad before the end of the year. This institution will train 30 to 40 staff assistants at a time. The Bank will also set up 15 to 20 centres in each of its four administrative circles to train clerks.

Reviewing the working results of the State Bank for the half year ended June 1961, Mr. Bhattacharyya stated that the Bank's profits had risen by 25 to 30 percent over the figure for January-June 1960. This was due to the larger bank credit and the ½ percent increase in interest rates on advances since September 1960. The interest rate on deposits was stepped up only from March this year. Advances during the last busy season ended April, rose by Rs. 61 crores from the slack season level. The present level of advances of the State Bank is around Rs. 251 crores, against Rs. 208 crores a year ago. During the current slack season, advances have declined from Rs. 280 crores to Rs. 251 crores mainly because seasonal advances during the earlier period were quite large. Advances to industry which accounted for nearly 69 percent of the total advances rose by about Rs. 51 crores in the last busy season, against a rise of Rs. 39 crores in the previous busy season. Mr. Bhattacharyya disclosed that although the Bank had been financing practically the entire public sector, advances to this sector are still substantially less than to the private sector. The maximum limit of advances to the public sector is Rs. 26 crores, whereas the outstanding advances are of the order of about Rs. 18.7 crores. The Bank's deposits now stand around Rs. 514 crores, against Rs. 612 crores a year ago. But the Bank had refunded about Rs. 144 crores out of the P.L.480 funds since July 1960, which indicates that the Bank's deposits have recorded a satisfactory improvement. The chairman revealed that the transfer of P.L.480 funds to the Reserve Bank had been stopped for the time being and the funds remaining with the State Bank totalled about Rs. 160 crores. Referring to developmental activities, Mr. Bhattacharyya said that the Bank had been assisting small-scale enterprises. During the January-June period, the number of small-scale accounts rose from 2,451 to 2,644. The limits sanctioned and in force were Rs. 9.2 crores at the end of June, against Rs. 7.8 crores at the end of December. The outstanding amount of advances was Rs. 4.5 crores, against Rs. 3.6 crores. About Rs. 2.76 crores of these advances to small-scale units are said to have been

covered by the guarantee scheme. Progress in the field of assistance to co-operative institutions has been well maintained. Total assistance to co-operatives stood around Rs. 6.8 crores at the end of May against Rs. 5.5 crores at the end of September 1960. The Bank's scheme of advances to marketing and processing societies however, has not been a success, the amount of advances outstanding at the end of May totalling no more than Rs. 49 lakhs. The chairman attributed this to the weaknesses of the societies.

New Plant for Steel Structural

A licence under the Industries (Development and Regulations) Act, 1951, has been granted by the Government of India to Messrs Amin Chand Payare Lal, Calcutta, to install a steel structural plant in Panagarh, West Bengal, to design and fabricate through the welded process, steel structurals for buildings, sheds, bridges, containers, pressure tanks, chemical industry tanks and other similar things in technical collaboration with Messrs Cekop, exporters of plant equipment and complete works, Warszawa, Poland. The plant will be installed on a land measuring about 100 acres. The initial output would be 9,000 tons of fabricated steel structurals a year. Permission has been obtained by Messrs Surrendra (Overseas) Private Ltd., Calcutta, to undertake pressing of steel sleepers to I.R.S. specifications for the Indian railways. The plant which will have an initial capacity of 60,000 tons of pressed steel sleepers a year to be increased to 100,000 tons, will be installed in Kumhari, near Bhilai in Madhya Pradesh and will be supplied by Messrs Henry Berry and Co. Ltd., Leeds, U.K., who supplied a similar plant to the Durgapur steel works of Hindustan Steel Ltd. Amin Chand Payare Lal, promoters of the structurals plant and Surrendra (Overseas) Private Ltd., promoters of the steel sleeper pressing plant, propose to incorporate a public limited company under the name of Steel Structural and Pressings (India) Ltd., with its registered office in Calcutta and having an authorised capital of Rs. 10,00,000 for the purpose of financing both the projects. Application for sanction to issue capital has already been made to the Controller of Capital Issues, New Delhi. The estimated capital outlay for both the projects will be Rs. 1,37,20,000.

Enquiry into Insurance

General insurance in India has for many months been given a higher place in the attentions of the Central Government, although the industry has no reason to feel flattered. Mr. A. D. Shroff, chairman of the New India Assurance Co. Ltd., speaking at its annual general meeting recently deplored the incursion of the public sector into the field of general insurance. He was particularly sore about the Insurance Amendment Act, 1961, which makes it obligatory for the companies to cede up to a maximum of 30 percent to the approved reinsurers which include the Indian Guarantee—a subsidiary of the L. I. C. He aired also the legitimate grievance of the private general insurers about the Government's directive to the Indian Insurance Companies Association Pool and the Indian Aviation Insurance Pool that a substantial proportion of the business handled through this pool should be given to the general insurance companies operating in the public sector. Although these companies came under the Government's control by the nationalisation of life insurance, the opportunity that was given to the Government to widen the area of public sector interests in general insurance, according to Mr. Shroff, amounts to a slow nationalisation of the industry by backdoor methods. Significantly, the Controller of Insurance, has invoked his power under Section 110C of the Insurance Act, and asked the companies to submit to him a perplexing variety of statistics covering every phase and facet of the general insurance business of every company operating in India.

The law confers on the Controller the power to demand any information relating to insurance business and "the insurer is required to comply with such requirements within such period, after receipt of notice, as may be specified." Apparently, considerable labour has been put in by the Insurance Controller in devising the method and manner in which the statistics should be submitted, both relating to the business and the nature of cover and claims. Anybody having a working knowledge of general insurance will, however, testify that the Controller of Insurance has been influenced by a theoretical bias rather than by a more desire to keep himself well informed. Surprisingly, the Controller has nowhere set out the purpose for which the statistics are required, nor the various meetings which the Tariff Committee had with the Controller could lead to any useful information about this. All the insurers could do was to

ask for a compromise on the method of collection. Negotiations are still incomplete, and the insurers are waiting in suspense for the final methodology which is likely to be eventually decided. The Tariff Committee has for many months past been collating statistics on fire insurance and it has, through the machinery of the regional councils, collected statistics concerning motor insurance. Refinements which are now required for fire and motor, not to speak of the various statistics which would be required for other classes of miscellaneous business insurance, are going to cause to insurers in India considerable cost in labour and time. The marine side has not yet been completed, but since marine insurance bristles with a wide variety of covers with different terms and conditions for different shipments, any statistical information which the Controller of Insurance may require can be produced at a heavy cost to the industry. Since the insurers are being compelled to go to the trouble and expense of collecting these statistics, they can legitimately ask the reasons for the demand, but no satisfactory answer has been given.

The chairman of the Tariff Committee in his speech at the annual general meeting said that after two or three years, detailed and accurate statistics of tariff and non-tariff business would be available with a view to assessing the adequacy or otherwise of the rates on an accurate and scientific basis. He went on to say that statistics collected thereafter would be timely and there would not be a time-lag of several years before adjustment in rates could take place. He supported the proposal of having detailed statistics concerning marine business and went on to say that India will be one of the first countries to collect such statistics on the British pattern. If the speech of the chairman of the Tariff Committee can be taken as a guide it seems that the statistics is being called for to assess the adequacy or otherwise of rates and the basis on which these have been fixed. The insurers trading in India, however, know the rates to be charged and it seems somewhat anomalous that the collation of statistics should be done by an outside body which is in no way connected with the trade. Insurance companies maintain for their own use in their own offices statistics for main classes of business, to ascertain for themselves whether the rates are adequate or otherwise. For tariff business, no statistics is needed because the rates for tariff business in fire and motor insurance are maintained by the Tariff Committee. As far as the marine section is concerned, each company has its own system of collecting the statistical material for its guidance in charging its rates. If it is the view of the Controller of Insurance that marine rates all over India with all stipulations are to be tariffed, he might be labouring under a misconception; for the marine trade being international in character, an Indian policy can be undersold if the rate charged by an Indian company is more than what can be charged by sellers or buyers. Apart from the cost, trouble, and labour-time involved in preparing the statistics required by the Controller, it would be more rational if the Controller were to direct companies to maintain their own statistics in their own ways for non-tariff business and to request the companies to submit results at the end of the year.

Problems of Motor-car Trade

In spite of the plans for railway development to cope with the growing volume of goods and passenger traffic, it is now fairly obvious that there will be more traffic during the third plan period than the railways will be able to carry. Hence the need to develop all alternate means of transport, especially that by road. Discussing the problem in his presidential address at the annual general meeting of the Motor Industries Association, held last week in Calcutta, Mr. B. P. Poddar said that the transport bottleneck is already more acute than could have been foreseen some years ago, and the railways are unable to move all the larger quantities of coal, cement and other goods now being produced in the country. Road transport has stepped into the breach, and is carrying a greater volume of goods than it did before. The number of commercial vehicles in India has increased from 110,000 in 1950-51 to 204,000 in 1960-61, but it could have been expanded more if the supply of vehicles as well as foreign exchange allocations had been more adequate, and above all, had there been no mental reservation on the part of the Central Government about the expansion of motor transport in relation to rail transport. Mr. Poddar pointed out that according to the projection made in the third plan road transport would have to carry not less than 120 percent more goods traffic, and by 1961, the expansion had to be ten-fold. In the circumstances, it is necessary to enable the indigenous motor-vehicle industry to step up output by fully using its installed capacity. This could be possible only with a more adequate quota of foreign exchange, by using a sizable portion of

the foreign aid for importing motor-vehicle components and spares. The small-car project, too, could have been entrusted to the private sector more profitably, but the Government having taken the decision in favour of the public sector, the services of the existing private distributive trade should be used for marketing the car. The "distribution of such cars should also be subjected to the same rules and regulations as the distribution of private sector cars", he added.

Dealing with the increased costs and expenses of motor-car dealers and the large amount of capital which has to be blocked because of the payment of excise duty, Mr. Poddar said if the dealer's profit margin was realistically assessed, there would be a strong case for raising the commission now allowed him. The dealers are not able to maintain effective after-sales service for lack of sufficient garage tools and parts, and Mr. Poddar suggested that import licences for these need to be issued. Referring to the proposed legislation on the hire-purchase of motor-cars, the president said that although hire-purchase was the "sheet-anchor" in the marketing of small cars, scooters, lorries and buses, any legislation on the lines of the law in the U.K. would be premature for Indian conditions.

Steel Prices and Stockists

In his address from the chair, Mr. M. D. Jindal, president, Controlled Steel Stockists Association of India, said last week that the remuneration allowed to steel stockists at Rs. 30 a ton was proving uneconomical for the main reason that the distributive trade now required to invest a much bigger sum for the same quantity of steel. When this margin was fixed in 1943, the price of steel was only Rs. 300 a ton, but it has now gone up to approximately Rs. 700 a ton. Higher costs on account of staff, godown and bank borrowing have cut into the profit margin further. He pleaded that the margin be revised. Dealing with the selling price of steel, Mr. Jindal said that under the existing policy of distribution, steel is available at one price at all railheads throughout the country, but "the price machinery as it obtains today is not producing the desired result as controlled stockists and registered stockists have to sell materials at column II and column III prices, respectively." In the years to come, the trade would have to handle increasing quantities of steel. It is, therefore, necessary that the Government evolve a price formula by which steel is sold at the same price by all classes of stockists everywhere. The remuneration of stockists could then come as "a rebate from the producers." Another factor which has contributed to the variations in the price of steel in different places is the different forms of the sales tax levied—State, inter-State and Central. The price difference becomes considerable at times. The Government has already accepted the principle of merging sales tax with excise duty; in some cases it has also been implemented. Steel being a controlled commodity and the number of producers being limited, it offers a much better field for the amalgamation of sales tax with excise, Mr. Jindal said.

JUTE MILL PROFITS

THE last of the half-yearly reports having now been issued, we are able to make the usual comparisons:—

I.—Profits.			
	No. of Looms	Gross Profit Rs.	Per loom Rs.
1. Khardah	380	2,46,921	640
2. Standard	302	1,74,584	578
3. Gourepore	919	4,33,380	472
4. Howrah	646	2,23,095	345
5. Kankannarah	564	1,85,873	329
6. Budge-Budge	782	2,56,634	328
7. Kamarhatti	508	1,59,580	314
8. Alliance	320	96,109	300
9. Union	400	1,12,578	281
10. Hooghly	829	2,30,874	278
11. Seebpore	840	2,02,843	242
12. National	310	63,649	205
13. Central	380	73,012	192
14. Fort Gloster	760	1,23,831	163

Next week we will deal with (II) Blocks.

(III) Stocks and (IV) Stores.

In the above statement of profits, it is only fair to keep in mind when comparing one result with another that while the greater number of the Mills ended their half-year on 30th June, the Budge-Budge and National closed their accounts on the 30th April and the Alliance and Fort Gloster Mills on the 31st May.

A Ditcher's Diary

A FRIEND, AN IRREPRESSIBLE PUNSTER TELLS ME that Mr. Khrushchev could not lay his hands on Marshal Tito and so he sent German Titov into orbit instead. In this matter I am as neutral as the Yugoslav President will soon tell the Belgrade conference he is in the cold war. I put it to my friend that, with a "crash programme" the United States may soon catch up. My friend says, "I would not call it a crash programme if I were a Yank, not after the loss of Grissom's capsule." We were in fact discussing Vostok II before the thing landed safely. It had been mentioned somewhere on Monday morning that Major Titov could land when and where he pleased. Immediately my friend saw visions of Titov landing in the United States and asking for asylum. But he also saw many snags. So little is his confidence in American "know how" in rocketry and space research that he had no difficulty in believing that if a message did indeed come from Titov in space some moron in the Pentagon would either shoot him dead or some helicopter pilot would drop his space cabin in the Atlantic. It may well be doubted, my friend said, whether Joe Stalin would ever have sent a man alone into space "Joe trusted nobody, nobody. Period." But think of poor Titov for a moment. Despite seven and a half hours' sleep, the trip must have had its ordeals and hazards. (By the way, what did the chaps on the ground do during those 37 minutes that Titov overslept? Would he, some must have wondered, ever wake up again?) Admittedly, Titov had two excellent meals and seems generally to have enjoyed himself as far as possible in those circumstances. Yet, yet, what a prospect Mr. Khrushchev held before him as he was hurtling round the earth! "We embrace you," said the Big Chief—with every intention of really embracing the poor fellow on his arrival in Moscow. Major Gagarin too had to be embraced by Mr. Khrushchev; but he was compensated; Miss Gina Lollobrigida kissed him a few days later. Well, I sincerely hope that Titov will survive Mr. Khrushchev's hug and live to have something of Gagarin's luck. I told my friend, incidentally, that during the war I once heard Churchill pronounce the Yugoslav President's name with a long i—"Tito." "Ah, but was he sober-o at the time?"

THE CENTRAL IRRIGATION MINISTER'S STATEMENT in the Lok Sabha on the proposed new flood control measures, and the decision of the Maharashtra Government to hold an enquiry into the Panshet dam disaster, are still a long way from inspiring the hope that this year's natural calamities will not occur in future. What requires to be explained is why it should have taken the Government so long to think out the simple steps it now claims to have devised. I see from Mr. Ibrahim's statement that one way of controlling these disasters would be to raise the height of the dams so that a greater cushion is provided for the absorption of flood water. The Minister has even gone a step further and declared that where such a cushion is provided, the Government will see to it that no encroachment is made for irrigation and power-generation purposes. Here he meets one of my old points about these dams. I

have always held the view that because irrigation and the generation of power are the main objects—as they should be to make these gigantic ventures economically or even socially worth while—it would be wiser to suspend power generation temporarily when the rivers rise menacingly high, and instead to supply power to the consumer from standby thermal plants. This way the dams could absorb a good deal more flood water than they seem able to do at present. The thermal plants need not be otherwise useless either. Considering that India's power requirements are continually rising, thermal power will have to supplement hydro-electric energy anyway, and it would be prudent planning if these resources were developed in a co-ordinated and complementary way. The Panshet dam disaster, which destroyed half of Poona city, stands, of course, on an entirely different footing. Here it was a question of an earthen dam giving way under the heavy pressure of flood water, although it is said the calamity could have been avoided if the dam had been better built and if officialdom had shown a little imagination in dealing with the affair. I doubt that the enquiry into this tragedy will reveal the true cause so close to a general election. And there might have been an even worse disaster in Orissa if Mr. Patnaik's luck had not held. While on the subject of floods and enquiries, would it be naive to ask whether there is going to be any attempt to find out what went wrong with Calcutta's drainage system last Friday afternoon? Yes, I suppose it would. Here we are so used to this kind of failure that we no longer feel any sense of outrage when it happens, and have long since given up hope of anything concrete being done about it.

INDIA IS HONOURED TO HAVE THE AUTHOR OF *The Affluent Society* as America's representative in New Delhi. Some indication of how affluence is in fact working in the U.S.A. is given in the latest issue of the bi-monthly letter of the Chase Manhattan Bank which notes that today Americans have more "discretionary" time and more discretionary income than ever before. Discretionary time means leisure, and the bank sets out to enquire what they do with it. The composition of the leisure market," says the newsletter, "has shown striking changes as Americans plan their time in an increasingly purposeful way." The largest single item in the leisure budget is travel, on which spending has doubled in the last decade. There is a preference for leisure which is active; thus admissions to spectator sports have increased only one-quarter as rapidly as total recreation outlays. Nowadays Americans spend relatively less time as spectators. But, says the Chase Manhattan Bank, "interest in cultural activities is booming all across the country." Spending on books has risen more than any other type of recreational expenditure and is two-thirds higher than it was in 1955. Tickets sold for the theatre and opera rose more than 50 percent in the same period. Incidentally, the United States has well over half the world's professional symphony orchestras. The most clearly defined pattern in recreational spending is according to residence and occupation. Farmers devote the largest share

of their recreation budget to television. City people spend half as much again as the average on theatre and other admissions. Suburbanites spend twice the average on sports equipment. As for the growing interest in culture, the rising average level of education appears to be the prime influence. But improved methods of communication have broadened horizons and also made many forms of recreation more enjoyable (hi-fi amplification, for example). So Americans, while devoting more time and money to leisure, are broadening and deepening their interests. For them, leisure is not idleness. Rather, increasing attention is paid to Benjamin Franklin's adage: "Do not squander time, for that is the stuff life is made of."

I HAVE OCCASIONALLY ARGUED ON THIS PAGE THAT Foreign Ministers had better not be too clever or too fond of new phrases, while new ideas are usually downright disastrous. I have only read Professor Trevor-Roper's note in *Encounter* on Professor Taylor's *The Origins of the Second World War*, and I am beginning to wonder whether clever historians are not dangerous too. Mr. Trevor-Roper sums up Mr. Taylor's thesis thus: "Hitler was an ordinary German statesman in the tradition of Sresemann and Brüning, differing from them not in methods (he was made Chancellor for 'solidly democratic' reasons) nor in ideas (he had no ideas) but only in the greater patience and stronger nerves with which he took advantage of the objective situation in Europe." Professor Trevor-Roper's historical refutation I find totally convincing; and I have not the least doubt that Mr. Taylor's answer, when it comes, will be yet another exercise in cleverness. Now, I do not believe that Mr. Taylor loves the Germans any more than other Britons of his age and experience; any more, in fact, than Mr. Trevor-Roper. I believe even less that Mr. Taylor loves Hitler. It cannot be that Mr. Taylor's object is to please the neo-Nazis. Why, then, this extraordinary defence of a contemptible man? The only explanation, I think, is the itch to say something new, to shock, to startle. In Paris, Diaghilev once told young Jean Cocteau: "Surprise me!" That, I think, is all right for a ballet producer and an aspiring designer. Historians have a greater responsibility; and simply because there are some people who view the recent past only through ignorance or prejudice or both, it will not do for a historian to present a villain as an innocent piece of mediocrity. I know that the Germans are Britain's allies now in N.A.T.O., that if Britain is to join the Common Market some past memories are better not played up. I doubt that any of these considerations weighed much with Professor Taylor; and some Germans who would rather forget their part, not always passive, in letting Hitler perpetrate some of the worst crimes against mankind, should love the professor. Some of my best friends are Germans. That is a very different thing from believing that their countrymen have not a lot to live down.

FATHER PRETENDED TO BE ASLEEP WHILE HIS youngsters tried their best to rouse him from a Sunday afternoon nap to take them for a promised walk. Finally, his five-year-old daughter pushed open one of his eyelids, peered carefully, then reported: "He's still in there!"

THE CALCUTTA MONEY MARKET

CALL RATE FALLS

Wednesday, 9th August.

MOST of the main sources of demand for advances in the Calcutta money market have shown a slight fall during the past week. This includes the cotton, jute and sugar industries and call for accommodation against foodgrains and seeds storage. The only main source of demand which has shown an increase in its requirements is the engineering and iron and steel industries. The total of advances outstanding shows a moderate decline. Conditions in the interbank market have become slightly easier in the past week and the call rate has fallen to between 2½ and 2¾ percent. At this level there is reported to be a steady demand.

In the exchange market, there has been an improvement in the supply of tea bills, and gunny bills have been in evidence in moderate quantities. Remittance demand has been exceptionally keen. In the London money market the pound continued to gain strength in spite of the unfavourable news about the fall in the sterling area reserves during July. The announcement that Britain is to apply for membership of the European Common Market has helped to rally sterling and closing quotations of the pound showed considerable gains against all major currencies.

BULLION WAS STEADY IN THE PAST WEEK DUE TO renewed support. Silver advanced from the previous week's level of Rs. 233.50 to Rs. 236, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 202.50. The London and New York prices were 80½d and 91 3/4 cents.

Gold was steady in sympathy with silver and the price rose from Rs. 142.25 to Rs. 143.50.

DURING THE WEEK ENDED 4TH AUGUST, GOVERNMENT of India Treasury bills for Rs. 33,70,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 8th August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.400 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.460 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to 11 a.m. on 14th August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 9th to 12th August at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 1st August to 5th August amounted to Rs. 1,47,00,000.

A RISE OF RS. 13.22 CRORES TO RS. 1,903.98 CRORES in active notes was a notable feature of the return of the Reserve Bank of India during the week ended 4th August, 1961. The total note issue was Rs. 1.06 crores smaller at Rs. 1,920.86 crores. Foreign securities of the paper currency reserve rose by Rs. 23.85 crores to Rs. 116.86 crores, presumably due to the receipt of funds from the International Monetary Fund. For the same reason, balances held abroad increased by Rs. 30.78 crores to Rs. 35.81 crores. Rupee securities were cut by Rs. 23.85 crores to Rs. 1,563.37 crores in the paper currency reserve. In the Banking Department, deposits of the Government of India declined by Rs. 23.83 crores to Rs. 53.26 crores and other Government accounts by Rs. 1.73 crores to Rs. 18.83 crores. Other deposits rose sharply from Rs. 111.61 crores to Rs. 200.75 crores, presumably due to the transfer of the Reserve Bank's profit to this account. Investments increased by Rs. 48.39 crores to Rs. 289.50 crores. Other loans and advances improved from Rs. 114.80 crores to Rs. 115.53 crores, of which advances to scheduled banks against usance bills amounted to Rs. 75.50 lakhs (Rs. 91.50 lakhs). Ways and means advances stood at Rs. 42.09 crores, against Rs. 40.87 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 28th July, 1961, shows a drop of Rs. 3.82 crores to Rs. 527.49 crores in total deposits. Investments in Government securities are down by Rs. 6.80 crores to Rs. 236.75 crores, while other authorised securities remain unchanged at Rs. 9.35 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have dropped by Rs. 4.14 crores to Rs. 250.69 crores. Cash and balances are, in consequence, shown at Rs. 26.42 crores, or Rs. 10 lakhs higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 28th July, 1961, shows Demand and Time liabilities at Rs. 832.56 crores (Rs. 21.35 crores on account of borrowings from banks) and Rs. 1,142.69 crores (Rs. 18.79 crores) compared with Rs. 838.35 crores (Rs. 20.84 crores) and Rs. 1,142.57 crores (Rs. 19.27 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 2.02 crores and Rs. 22.83 crores to Rs. 44.17 crores and Rs. 77.26 crores, respectively. There is a rise of Rs. 3.74 crores to Rs. 577.82 crores in investments. Advances and bills discounted at Rs. 1,240.81 crores show a fall of Rs. 10.95 crores.

to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.1 percent and 62.8 percent, against 7.4 percent and 63.2 percent.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 11-8-61.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
11-8-61	12-11-61	2,00.00	Rs. 2.400%
4-8-61	5-11-61	2,00.00	Rs. 2.398%
21-7-61	22-10-61	2,00.00	Rs. 2.500%
14-7-61	15-10-61	2,00.00	Rs. 2.650%
7-7-61	8-10-61	2,00.00	Rs. 2.650%
29-6-61	1-10-61	2,00.00	Rs. 2.650%
23-6-61	24-9-61	2,00.00	Rs. 2.750%
16-6-61	17-9-61	2,00.00	Rs. 2.750%

Steam...

Industry's greatest power

SINCE 1782, when the first Rotative Steam Engine enabled the use of steam power to motivate machinery, steam has played an ever increasing part in industry throughout the world.

Not only is steam today's most important source of power for the civilised world, but it must remain so for many years to come. Even atomic power is yet in its infancy and can only be applied as an alternative source of heat. Steam is indeed the real power of industry.

While this is but an outline of the extensive and continually growing part that steam plays in power generation and industry throughout the world, it indicates quite clearly the unparalleled importance of steam power in the industrial growth of India... and, therefore, the urgent need to manufacture vital steam-raising plant in this country to meet the demands of expanding industry.

This is one of the needs which has led to the formation of a new and powerful industrial group, ACC-Vickers-Babcock Limited (AVB). The vast technical knowledge and extensive practical experience available to it will enable the new company to make an important contribution to Indian industry—and help Indian engineers overcome some of the difficulties which have faced them for so long.

The new AVB plant is nearing completion on a 700-acre site at Durgapur. The workshops, designed on modern lines, will have built into the structure electric overhead travelling cranes with 70 tons lifting capacity.

All workshops have been designed to allow for progressive expansion so that it will be possible to lift 200 tons without making structural alterations. Up-to-date machine tools are being installed. When completed, they will include a 3000 ton hydraulic press capable of bending steel plates up to 5" thick for use in the manufacture of high pressure boiler drums, and pressure vessels required for the fertiliser, chemicals and oil refining industries. The new plant will make it possible to manufacture steam-raising equipment in the high pressure range—for the first time in India.

ACC-VICKERS-BABCOCK LTD. offers the industrialist his best chance to ensure a fully integrated installation comprising the boiler plant itself and a wide range of equipment from the fuel handling and preparation plant to the ash plant and dust disposal installation.

Besides, the industrialist has the confidence that he will get after-sales service of the highest quality from AVB!

...a Powerful Partnership for Progress

ACC-VICKERS-BABCOCK LTD.

Stocks and Shares

PRICES FALL ON FEARS OF PAYMENT DIFFICULTIES

THIRD PLAN TAKEN BEARISHLY

Wednesday Evening.

SENTIMENT has weakened considerably in the stock market during the past week and the price of Indian Iron shares has nose-dived to a new low of Rs. 26.14 due to nervous long liquidation. The fall appears to have taken place on the fear that there might be payment difficulties. Reliable reports, however, indicate that no default is likely to occur, but the hangover of the past over-trading continues to affect sentiment adversely. Meanwhile, the beneficial effects of the increase in the pig iron price and the move to construct a ropeway for bringing coal direct to the works of the Indian Iron and Steel Company, seem to have been ignored.

In sympathy with Indian Iron—which are the barometer of the market—the prices of other shares have also declined. The buying support has dried up and any small selling has reduced prices out of proportion. At the close, operators had become hesitant because the full implications of the third five year plan, just published, could not be assessed as yet. It is not denied that the taxation target has been fixed at a high level during the plan period, but the adverse effects should be mitigated considering that a major portion of the increased taxation will be concentrated on indirect levies. It is appreciated that direct taxation has already been extended to the utmost limit.

The stock market's concern consists mainly in the inflationary implications of the plan outlays. Considering that India has virtually no foreign exchange reserve to cushion the inflationary effects of increased domestic outlays, it is feared that inflation may be difficult to restrain. At the same time, it is evident that under the stimulus of the plan developments, the corporate sector is likely to receive a further boost. Provided adequate raw material supplies and the necessary maintenance imports are ensured, the working of industry could improve considerably. Under the circumstances, the bearish interpretation of the plan appears to have been exaggerated.

At the present time, it is difficult to take a view about the trend. There is little doubt that the technical position has improved a great deal due to the heavy shake-out. The prices of many shares have become attractive. In the light of a fair prospect for corporate working in future, it is thought that institutional support may soon flow into the stock markets.

For the time being, general support has been restrained due to the uncertainty about the possibility of Government measures for further reforms of the stock markets. Reports are that the Government may force the stock markets to introduce minimum brokerage and abolish free margins. Steps may also be taken to restrict curb trading. These measures themselves may not prove to be so bad as they are at present made out to be. What is affecting trading is the uncertainty about the Government moves. The sooner the Government decides to act one way or another the better.

There is little support for engineering shares because shortages of power, transport and raw materials are believed to have affected working. The prices of Guest, Keen, Williams, Britannia Engineering, Texmaco and Braithwaite have declined. There is scattered support for J. K. Steel on issuing bonus ordinary shares in the proportion of one new share for every one held. Indian Oxygen and Burn are steady on investment buying.

The prices of miscellaneous shares have tended to decline in sympathy with the general trend, but interest has been sustained in Metal Box and Britannia Biscuits. British Paints are steady. Jay Shree Tea and Industries have been maintained on issuing bonus ordinary shares in the ratio of one new share for every four held. Indian Aluminium, Rohas, Dunlop Rubber and Indian Cables have reacted on profit-taking. Hindustan Motors are quiet on the fear that the public sector may set up a small car project. Managing agency shares have been bought at lower levels. Interest is being taken in Martin Burn, Balmer Lawrie and Shaw Wallace. Imperial Tobacco are steady on paying a higher ordinary dividend. Routine business has been transacted in electric company shares, but fluctuations are narrow. Except for Bengal Paper, which are steady on prospects of rights and bonus ordinary shares, the prices of paper shares have declined on balance.

Sugar shares have slipped back after a short-lived rally. The earlier steadiness stemmed from optimism concerning the removal of the many restrictions on distribution. At the close, investors had become cautious due to the accumulation of large stocks in the factories. The export prospect is being assessed with caution. Business

has been done in Carew, Ramnugger, Dyer Meakin Breweries and S.K.G.

Jute shares are subdued with sellers predominating. Apart from the heavy losses the jute mills are likely to incur during the current year, the working outlook has become uncertain in the light of fibre shortages during the next few weeks. New Central, Anglo-India and Agapara have declined. Birla have met with scattered support on issuing rights and bonus ordinary shares.

The prices of cotton mill shares have been lowered because it is feared that export prospects may suffer if the U.K. decides to join the Common Market. Dunbar and Bowreah, nevertheless, have improved on influential buying. Business is being transacted in Bharat Commerce and J. K. Rayon at lower prices.

Business has been negligible in coal shares on a report that the World Bank has decided to give a loan which is much lower than expected. Bengal, Burrakur, South Karanpura, New Beerbroom and Western Bengal have declined.

Tea shares have reacted on the possibility of bigger supplies during the current year. Interest has, nevertheless, been taken in selected Assam and Doars gardens. Bishnauth, Baghmari, Tez-pore, Hantapara, Hasimara, Bejjan and Basmatia have been transacted.

Government securities are steady. Although enquiries have been made for short and medium-dated stocks, business is limited due to shortages of offers. The 3 percent conversion loan 1986 has recovered to Rs. 72.80 on replacement buying. Speculation has started about the prospect for the coming State loans. It is wondered whether the State Governments will decide to borrow by offering a higher interest of 4½ percent in line with the new Central Government loans recently subscribed. It is also thought that the maturity

WE
IN
BIRDS
MEET
THE
DEMAND

Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products, paper, electricity, steel structural and castings. And the Birds/Heilgers group is always there to spur their production... to meet these demands. But expansion doesn't stifle achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

BIRD & CO. (PRIVATE) LTD.
AND
F. W. HEILGERS & CO. (PRIVATE) LTD.

of the new State loans may be extended to a period of 11 years.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during July was: pig iron 133,900 tons; steel ingots 137,200 tons; semi-finished for sale 29,200 tons and finished steel 78,700 tons.

Hantapara Tea

A taxable ordinary dividend of 15 percent has been declared by the Hantapara Tea Co. Ltd for the year ended December 1960, against an ordinary dividend of 12½ percent, taxable, in the previous year. The profit has risen from Rs. 13.58 lakhs to Rs. 14.60 lakhs. Revenue reserve absorbs Rs. 1.50 lakhs, against Rs. 4.75 lakhs. Investment reserve receives Rs. 60,000, against Rs. 1.60 lakhs. After making other adjustments, there remains a sum of Rs. 65,181 to be carried forward, against Rs. 80,081 brought in. The crop of Hantapara amounted to 751,493 kilograms (against 753,060 kilograms) and that of Dumchhipara was 650,311 kilograms (against 662,755 kilograms). The average sale price of the former was Rs. 4.97 (against Rs. 4.87) a kilogram, while that of the latter was Rs. 5.01 (against Rs. 4.78) a kilogram. Estimates for 1961 provide for a total crop of 1,390,000 kilograms at an outlay of Rs. 53.50 lakhs.

Sutna Stone and Lime

After providing Rs. 1.27 lakhs (against Rs. 95,023) for depreciation, the profit of the Sutna Stone and Lime Co. Ltd has increased from Rs. 3.83 lakhs to Rs. 4.81 lakhs for the year ended December 1960. A dividend of 27½ percent, subject to tax, has been declared, against 20 percent, taxable, in the previous year and it absorbs Rs. 1.33 lakhs. Taxation is allocated Rs. 2.20 lakhs (against Rs. 1.72 lakhs) and development rebate reserve gets Rs. 25,000 (against Rs. 80,000). General reserve receives Rs. 50,000 (against Rs. 480). With other adjustment, there remains a carry-forward of Rs. 32,119, against Rs. 34,793 brought in.

Bombay Market

SUBDUED CLOSE FOLLOWS EARLIER STEADINESS

FUTURE TAXATION PROSPECTS ALARM OPERATORS

Wednesday Noon. THE Bombay stock market closed the past week in a subdued mood after an earlier steadiness. At the close, share prices declined on a broad front due to a heavy selling pressure induced by talk of payments difficulties in Lyons Range. Operators were inclined to take a gloomy view of the taxation prospects during the third plan period. The worry appears to have been exaggerated considering that a large portion of the tax resources is expected to be raised by indirect levies.

Steel shares turned softer on the statement made by Mr. J. R. D. Tata, chairman of the Tata Iron and Steel Company, that the Company would find difficulty in achieving the annual output target of 2 million tons in the light of inadequate retention prices and supplies of inferior raw materials. Cotton mill shares were subdued on the fear that exports of piecegoods might suffer if the U.K. were to join the European Common Market. Uncertainties concerning the Government moves for introducing stock market reforms also worried operators. The growing tension between India and Pakistan over Kashmir was interpreted bearishly.

Tata Steel declined to Rs. 155.25, as did Indian Iron to Rs. 26.15 on pressure from Lyons Range. Prices of engineering shares declined in sympathy with steel shares. Business was done in Tata Locomotive at Rs. 364 and in Premier Construction at Rs. 191. Alcock Ashdown were freely sold down to Rs. 274. Cooper Engineering attracted scattered interest at Rs. 179.50 on reports of good working. Larsen and Toubro were done at Rs. 38.50 and Mahindra and Mahindra came to hand at Rs. 18.76. Motor shares were quiet on the prospect that the public sector may begin the project for producing small cars. Hindustan Motors declined to Rs. 21.20 and Premier Automobiles were quoted lower at Rs. 159.

There were widespread losses in the cotton mill section. Century slumped to Rs. 677 and Bombay Dyeing to Rs. 68.10. Kohinoor were about steady at Rs. 295 on expectations of a higher interim dividend. Swadeshi came to hand at Rs. 254 and Simlex were available at Rs. 193. Khatau declined to Rs. 566.25 and Standard were indicated at Rs. 1,342. Finlay were done at Rs. 320 and Central India declined to Rs. 122. Tata Mills were quoted lower at Rs. 64.

In the miscellaneous section, sugar shares were quiet, and Behapur were quoted at Rs. 252.

Walchandnagar Industries were sold at Rs. 166.50 and Phalton were placed at Rs. 135. In mining shares, Shivrajpur Syndicate were dealt in at Rs. 95.50. Among cement shares, Associated Cement lost at Rs. 160.50, but Digvijay attracted influential support around Rs. 171. Steamship company shares were quiet, with sellers predominating. Scindia Steam declined to Rs. 13.76 and Great Eastern Shipping were offered freely down to Rs. 13.76. National Rayon reacted to Rs. 543 on pressure. Baroda Rayon were quoted lower at Rs. 142 and Gwalior Rayon lost at Rs. 50 in spite of declaring a higher dividend. Bombay Burmah slipped back to Rs. 596. Scattered interest was taken in Voltas at Rs. 291 and in Tata Oil at Rs. 76. Permanent Magnets were wanted at Rs. 88, but Synthetics and Chemicals declined to Rs. 193. Ceat Tyre lost at Rs. 212.50 and business was done in Wimco at Rs. 272.

Bank shares were steady, and Central Bank were bought at Rs. 63.80. Bank of India came to hand at Rs. 132 and Bank of Baroda were done at Rs. 104.50. Insurance shares were quiet, and New India Assurance lost at Rs. 58.20.

Electric company shares were steady, and business passed in Ahmedabad Electric at Rs. 90. Tata Power came to hand at Rs. 1,082.50 and Bombay Suburban were placed at Rs. 98.70.

Madras Market

PRICES STEADY BUT TURNOVER FALLS

GOOD DEMAND FOR BANK SHARES

Tuesday Evening. THE Madras stock market has been steady during the past week, although turnover declined towards the close on lower advices from the Calcutta and Bombay stock markets. Operators were inclined to think that the working of the corporate sector would improve under the stimulus of the plan developments. Business was limited in Government securities because attention was diverted to the prospect for the coming State loans. Interest was taken in short and medium-dated Central Government loans. Sentiment improved in bank shares on the publication of some good results for the half-year ended June 1961. Sugar shares were subdued on the fear that the working of factories could be hampered by the large accumulation of stocks. In the planting section, tea and rubber shares were selectively bought on crop reports. Coffee shares were hesitant on reports of heavy rains and floods. Although it has been decided to encourage exports by introducing open auctions instead of closed tenders for selling coffee, the outlook was considered uncertain. Textile shares improved on a broad front on reports of good working. Miscellaneous shares were bought selectively.

In the banking section, business was done in Indian at Rs. 174 and in Indian Overseas at Rs. 192. Punjab National were quoted at Rs. 24 and Andhra at Rs. 100. Among public utilities, South Madras were steady at Rs. 10.15 and Vellore were placed at Rs. 13.35. Ellore came to hand at Rs. 20 and Negapatnam were placed at Rs. 10.50.

Among sugar shares, Deccan lost at Rs. 13.40, but E.I.D. recovered fractionally to Rs. 39.60. United Breweries declined to Rs. 103.50, but Mysore were about steady at Rs. 57.75. K.C.P. were done at Rs. 24.50 and Kothari were quiet at Rs. 8.90.

In the planting section, Blue Mountain were steady at Rs. 3.15 and Cochin Malabar at Rs. 7.50. Consolidated Coffee attracted support up to Rs. 21.25 and Badra were done at Rs. 3.60 on paying a taxable ordinary dividend of 15 percent. Kadur were bought at Rs. 2.85 on the payment of a taxable ordinary dividend of 5 percent. Kalasa were dealt in at Rs. 5.55 on the payment of a taxable ordinary dividend of 25 percent. Business was done in Lingapur at Rs. 5.10 on the payment of a final ordinary dividend of 15 percent, taxable. Oosoor were steady at Rs. 2.75 on declaring a final ordinary dividend of 10 percent, taxable. Ouchterlony were quiet at Rs. 3.75, as were Periakaramalai at Rs. 3.93. Kil Kotagiri came to hand at Rs. 4.68 and Manimala were quoted at Rs. 8.75. Nilgiri came to hand at Rs. 8.90 and Peermade were done at Rs. 22.85. Parkside were down to Rs. 2.75 on paying a final ordinary dividend of 10 percent, taxable. Business was done in Woodland at Rs. 8 and in Thirumbadi at Rs. 1.65.

Among textile shares, Lakshmi improved to Rs. 171, as did Madura to Rs. 37.35. Travancore Rayon recovered to Rs. 39.50 and South India Viscose were quoted higher at Rs. 194. Buckingham were steady at Rs. 241 and Bangalore Woolen improved to Rs. 208. Anglo-French were done at Rs. 129 and Kothari were steady at Rs. 12.62. Mettur came to hand at Rs. 382 and Premier were dealt in at Rs. 289. Rajalakshmi were quoted at Rs. 89 and Rangavilas were done at Rs. 45.40.

In the miscellaneous section, Aluminium Industries were steady at Rs. 23.50 on paying a final ordinary dividend of 9 percent, taxable. Ashok Leyland declined to Rs. 9 on profit-taking, but Central Scientific were supported up to Rs. 67.50 on declaring a taxable ordinary dividend of 15

percent. India Cement were steady at Rs. 6.70 and Madras Aluminium were bought up to Rs. 24.50. Madras Rubber were in demand at Rs. 14.50, but Mandya National Paper weakened to Rs. 8.80. Mettur Chemical were steady at Rs. 14.75 on declaring a final ordinary dividend of 61 percent, taxable. Seshasayee Paper were sold down to Rs. 8.70, but Spencer were steady at Rs. 22.85. Standard Motors were placed at Rs. 16.12 and business was done in Textol at Rs. 181. Travancore Cement came to hand at Rs. 7.45 and Tube Investment were bought up to Rs. 260.

INCREASING FLOATATION OF NEW COMPANIES

ACCORDING to the reports of new company registrations received from the Registrars of Companies of the various States by the Department of Company Law Administration, 427 new companies were registered during the first quarter of 1961-62. Compared with the last quarter of the previous year, the number of new registrations during these three months has gone up by 26 and the annual rate of new company formation, as foreshadowed by the new registrations of the first three months of this year, works out around the last year's annual figure. There is thus sufficient evidence available that the rate of growth of the corporate enterprise in the country is well sustained at the new high peak of total annual registrations attained during the past eight years.

Of the 427 new companies registered during the quarter April-June 1961, 49, it is reported, are public companies and 378 are private companies. In the total authorised capital of all the new company formations in the quarter, namely, Rs. 105.8 crores, Rs. 50.8 crores and Rs. 55 crores were accounted for by the public and private companies, respectively. The comparable figures of new public and private companies of the third and fourth quarters of the preceding year, 1960-61, were 50 and 386 companies and 41 and 360 companies, respectively.

Geographical Distribution

A study of the geographical distribution of the new companies discloses that 115 (12 public and 103 private) have been registered in West Bengal whereas 74 companies (13 public and 61 private) were formed in Maharashtra and 71 (one public and 70 private) in the Union Territory of Delhi. Fifty-seven companies (seven public and 50 private) were registered in Madras State. Thus out of the 427 new undertakings, 317 have been formed in the four principal States of the country. Of the remaining 110, 25 have been registered in Gujarat, 22 in Punjab, 16 in Kerala and 11 in U.P. The total registrations of the four States of Gujarat, Kerala, Punjab and U.P. aggregated 72. The remaining States of Andhra Pradesh, Assam, Bihar, M.P., Mysore, Orissa and Rajasthan together accounted for 38 new companies.

The regionwise study of the new company registrations for the quarter under review shows that 126 companies were registered in the eastern region comprising the States of West Bengal, Bihar, Assam, Manipur and Tripura, whereas 103 companies were registered in the western region comprising the States of Gujarat, Maharashtra and Madhya Pradesh. The number of new company registrations in the southern region covering the States of Madras, Andhra Pradesh, Kerala and Mysore totalled 90, while those of the northern region comprising the States of Punjab, Uttar Pradesh, Delhi and Himachal Pradesh came to 108. Broadly speaking, there are no wide disparities noticeable in the new company registrations as between the four regions. The comparable figures of new registrations for the eastern, western,

southern and northern regions for the January-March quarter of last year, namely, 1960-61, are 127, 20, 116 and 78 companies, respectively. The average quarterly figures of new registrations for the four regions named above worked out on the basis of the total registrations for the entire year, 1950-51, come to 119, 108, 113 and 81, respectively.

Pre-registration Status

From the current quarter, the Research and Statistics Division of the Department has started collecting information on the pre-registration status of the newly-formed companies. In this matter, information has been collected under three broad heads: (a) if the newly formed company has been in existence as a firm before; (b) if it is a case of amalgamation, and (c) if it is a completely new company. The compilation of statistical data under these three broad groups would indicate as to what extent completely new corporate entities were being added in the corporate sector, as to whether the private corporate sector was really growing as a result of completely new companies being formed or if it was a mere transformation of some existing partnership firms, proprietary business, etcetera, into corporate bodies. The analysis for the quarter ended June 1961, discloses that, of the 427 newly registered companies, 396 are completely new bodies set up by the entrepreneurs.

Out of the total registration of 427 companies during the quarter, six are new Government com-

panies formed in the States of Delhi, Madhya Pradesh, Rajasthan, Orissa, Mysore and West Bengal. Among these six Government companies, Mysore Iron and Steel Company has been registered with an authorised capital of Rs. 20 crores, Indian Drug and Pharmaceuticals with Rs. 15 crores and Madhya Pradesh State Industries Corporation with Rs. 1.5 crores. The other three Government companies, namely, Electro Medical and Allied Industries in the State of West Bengal, Rajasthan State Industries Corporation in Rajasthan and Dipak Metal Works Ltd. in Orissa are comparatively of smaller sizes being registered with authorised capital bases of Rs. 50 lakhs, Rs. 25 lakhs and Rs. 1 lakh, respectively.

Size Pattern

A study of the size-pattern of the newly formed companies of the quarter discloses that out of the 427 companies, 332 have been registered with authorised capitals below Rs. 10 lakhs and of these, 106 were formed with authorised capitals below Rs. 1 lakh, 157 between Rs. 1 lakh and Rs. 5 lakhs, 69 between Rs. 5 lakhs and Rs. 10 lakhs. The number of big-sized and giant-sized companies registered with authorised capitals of Rs. 50 lakhs and below Rs. 1 crore and Rs. 1 crore and above were 17 and 23 companies, respectively. The big and giant-sized companies together totalled 40. Among the giant-sized companies, the biggest are the two Government companies, namely, the Mysore Iron and Steel Company and the Indian Drug and Pharmaceutical Company. Among the giant companies promoted by private entrepreneurs, the biggest newly-formed company is the National Organic Chemical Industries registered in the State of Maharashtra with an authorised capital of Rs. 10 crores and the second largest is the Associated Bearing Company registered with Rs. 7.5 crores as authorised capital, also in the State of Maharashtra.

New Delhi

FINAL THIRD PLAN REPORT PRESENTED TO THE LOK SABHA

CONTINUED EMPHASIS ON HEAVY INDUSTRIES: HIGH PRIORITY FOR AGRICULTURE

(FROM OUR NEW DELHI CORRESPONDENT)

THE third five year plan, which last week was signed by the Members of the Planning Commission, was laid on the table of the Lok Sabha on Monday, 7th August, the opening day of the monsoon session. In the scheme of development during the plan, agriculture has the first priority. As in the second, the development of basic industries such as steel, fuel and power and machine-building and chemicals is considered fundamental to rapid economic growth.

The third plan postulates a price policy which will ensure that the movements of relative prices are in keeping with the priorities and targets and that the prices of essential goods which enter into the consumption of low-income groups do not rise unduly. It will also be essential to restrain the consumption of relatively inessential goods and services. In planning the pattern of production, care must be taken to avoid the use of the limited resources available in the production of relatively inessential goods and services. These measures are important not only for securing rapid development under conditions of economic stability, but are also necessary for the mobilisation of the domestic resources and the earning of foreign exchange needed for the plan's successful implementation.

In the draft outline, the estimate of resources for the public sector was indicated at Rs. 7,250 crores, Rs. 6,050 crores at the Centre and Rs. 1,200 crores in the States. Later in the light of discussions with State Governments and a further examination of the Central Budget for 1960-61, the estimate of total resources was revised upwards to Rs. 7,453 crores—Rs. 6,107 crores at the Centre and Rs. 1,346 crores in the States. This estimate, rounded to Rs. 7,500 crores was submitted to the National Development Council in January 1961. The Council observed that considering the needs of the economy, every effort had to be made to bridge the gap between the limit of Rs. 7,500 crores for financial outlays indicated by the estimates on resources and the requirements adding up to over Rs. 8,000 crores for implementing the physical programmes visualised. It was evident that the answer to the problem depended upon how far domestic savings could be stepped up to match the larger needs. Accordingly, while the financial outlays for the plan in the public sector are at present being retained at Rs. 7,500 crores, sustained efforts will be made to improve upon this, and to diminish the gap through more effective mobilisation of savings.

Financial Resources

The scheme of financing the public sector plan which is now envisaged, is indicated in the table below. The last two columns show the estimates separately for the Centre and the States:

(ESTIMATES FOR THE SECOND AND THE THIRD PLANS)					
	(Rs. crores)		Third plan		
	Second plan	As initially estimated	As estimated now	Centre	States
(1) Balance from current revenues (excluding additional taxation)	350	(—) 50	550	410	140
(2) Contribution of railways	150	150	100	100	—
(3) Surpluses of other public enterprises	—	—	450	300	150
(4) Loans from the public (net)	700	780	800	475	325
(5) Small savings (net)	500	400	600	213	387
(6) Provident funds (net)	—	170	265	183	82
(7) Steel equalisation fund (net)	250	38	105	105	—
(8) Balance of miscellaneous capital receipts over non-plan disbursements	—	22	170	428	(—) 258
(9) Total 1 to 8	1,950	1,510	3,040	2,214	826
(10) Additional taxation including measures to increase the surpluses of public enterprises	4,508	1,052	1,710	1,100	610
(11) Budgetary receipts corresponding to external assistance	800	1,090	2,200	2,200	—
(12) Deficit financing	1,200	948	550	524	26
Total	4,800	4,600	7,500	6,038	1,462

Additional Taxation
Additional taxation visualised for the third plan is Rs. 1,710 crores—Rs. 1,100 crores at the Centre and Rs. 610 crores in the States. This order of taxation is the minimum essential, it is said. In order to realise this target, it will be necessary to increase both direct and indirect taxation and to enlarge the surpluses of public sector enterprises. Direct taxation adds to the resources of the public sector by reducing disposable incomes in the hands of the community. Indirect taxation works through reduction in the volume of goods or services which can be bought against the incomes which are spent. The choice between the two forms of taxation has to be considered pragmatically. The point to stress is that taxation should be sufficient to keep consumption down to limits consistent with the requirements of investment as visualised in the

plan. It is inevitable that the larger part of the additional taxation effort has to be put through by the Central Government; a good beginning has been made in this direction in 1961-62. It is no less important that State Governments also raise an adequate share for themselves. Taxation of the rural sector falls largely within their field. They have also to mobilise more effectively elastic sources of revenue, such as sales taxes.

Private Investment

Private investment draws on the same pool of savings as public investment. Considering the trends in the second plan period, it is felt that a total of Rs. 4,300 crores by way of private investment can probably be financed consistently with the public sector's claims on savings. The break-up of this investment along with the corresponding estimates for the second plan period (original as well as revised in the light of later studies) are set out in the following table:

INVESTMENT IN THE PRIVATE SECTOR

	(Rs. crores)		
	Second plan	Estimated investment on the revised basis	Third plan estimates
(1) Agriculture (including irrigation)	275	675	850
(2) Power	40	40	50
(3) Transport	85	135	250
(4) Village and small industries	100	225	325
(5) Large and medium industry and minerals	575	725	1,100
(6) Housing and other construction	925	1,000	1,125
(7) Inventories	400	500	600
Total	2,400	3,300	4,300

Foreign Exchange

The following table sets forth the balance of payments estimates for the third plan:

	(Rs. crores)			
	Total second plan	Total third plan	1961-62	Annual average third plan
(A) Receipts				
(1) Exports	3,053	3,700	667	740
(2) Invisibles (net) excluding official donations	420	Nil	28	Nil
(3) Capital transactions (net) (excluding receipts of official loans and private foreign investment)	(—)127	(—)550	(—)133	(—)110
(4) External assistance	972	2,600	575	520
(5) Draft on foreign exchange reserves	598	Nil	Nil	Nil
Total (1 to 5)	4,826	5,750	1,131	1,150
(B) Payments				
(1) Imports of machinery and equipment for plan projects	—	1,900	325	380
(2) Components, intermediate products, etcetera, for raising production of capital goods	4,826	200	60	40
(3) Maintenance imports	—	3,650	746	730
Total (1 to 3)	4,826	5,750	1,131	1,150

public sector projects, when in full production should be of the order of Rs. 90 crores a year. Even this target will leave large gaps in production to meet the requirements of the country, say, in 1966. The Ministry of Commerce and Industry recently made a detailed study of India's requirements for the planned production. The study disclosed gaps, particularly in the range of power transformers, 33 kV and above two million kVA, industrial motors 200 h.p. and above 880,000 million kW, static capacitors 196,000 kVAR and switchgear and control-gear Rs. 19.50 crores worth.

These estimates relate to public utility supplies and do not take into account the demand for power plants, which may arise as a result of the growing tempo of industrialisation. Availability of oil and natural gas may further increase the demand for generating equipment. It is claimed that three public sector projects are being processed to their full capacity and it would not be feasible to build up further capacity at this stage. It will not be inconsistent with the Industrial Policy Resolution to permit the private sector to meet this anticipated demand as there are firms or undertakings already in existence engaged in the manufacture of heavy electrical equipment. In the nature of things, it would be more economical to permit such firms to expand or diversify their production. Judged from the viewpoint of investment, the economy of production and access to technique, there is a very strong case in favour of the private sector.

As reported last week, the Government has approved the expansion scheme sponsored by the Government electrical factory, Bangalore, for the manufacture of transformers, switchgears, control gears and electric motors in collaboration with A.E.G. of West Germany. Another project of Hitachi of Japan for setting up manufacturing capacity in Kerala for the manufacture of transformers up to 130 kVA is under examination, while those of Kirloskar Electric Company, Bangalore,

SF CONDITIONERS for tea factories

For every tea fermenting room and rolling room there is a suitable SF TEA CONDITIONING UNIT. Available in a wide range of standard sizes, SF CONDITIONERS are designed for each individual application, taking into account such factors as heat transfers, sun radiation, machine generated heat, climatic conditions, etc.

Features:

- Ample fresh air supply for oxydizing of the tea leaf.
- Equipped with self-cleaning water spray nozzles.
- Fans with anti-corrosive aluminium alloy impellers.
- High humidifying efficiency.
- Minimum of maintenance.

SF AXIAL FLOW FAN
Heavy duty design.
Reversible air flow.
Aluminium alloy runner.
High efficiency.
Suitable for A.C. supply or belt drive.

ARVIND CORPORATION,
Aroor House, Fifth Main Rd., Malleswaram, Bangalore

English Electric Company, Madras, Mysore Electrical Industries, Bangalore, and Jyoti Ltd, Baroda, have been approved. As for turbines and generators, the schemes in collaboration with Westinghouse of the U.S.A. for the manufacture of steam turbines and generators and that of Tokyo Shibaura Electric Company of Japan for the manufacture of water turbines, are in the field.

Opposition to Low-cost Car

Reference has already been made in these columns to the opposition by the Planning Commission to the low-cost car project in the public sector. The Planning Commission has raised the following points, before it could re-examine the project, namely:

(a) How are the resources for the project, both internal and external, proposed to be found? There is already a gap in the third plan between the requirements of the projects included and the resources in sight. The long-term loan offered by the French Company cannot in practical terms be regarded as over and above the aid available from France.

(b) Would not the setting up of such a project in the public sector create psychologically an unfavourable international climate? When there are several other important projects for which India is dependent on foreign aid, how can the expenditure on such a project which caters to luxury requirements be justified?

(c) Is there any prospect of the existing manufacturers of motor-vehicles bringing down their cost of production sufficiently if they are allowed

further expansion? Can their further expansion be altogether stopped?

(d) Would not the introduction of low-priced motor-car divert savings to consumption? Is it possible to sell the motor-car at a sufficiently high price so as not to add to consumption expenditure over the level visualised in the third plan? If it is accepted that there is a large growing demand, a new car could be produced, but it should not be available to the consumer at a low price.

(e) Is the car, now proposed, technologically superior to those already in production? Could it be said that with the introduction of this car, the newest technology is being introduced in the motor-vehicle industry?

(f) Is the model of car proposed to be manufactured already becoming obsolete and is the French firm supplying machinery which is likely to be scrapped due to a change-over in production in France?

(g) Would it be possible to postpone the implementation of this project by a year or two without the risk of the offer now available from the French firm being withdrawn?

(h) What is the amount provided in the plan for the expansion of the existing units from 20,000 to 30,000 and for the import of components for this purpose? Would it be possible to use part of these provisions for the new project?

Tentative Fourth Plan Targets

In the course of preliminary studies on the third plan, the following tentative targets of capacity of

the following important items have been suggested for 1970-71:

Steel ingots	...	18 to 19 million tons
Pig iron	...	3 to 4 million tons
Aluminium	...	230,000 to 250,000 tons
Electric power	...	21 to 23 million kW
Coal	...	170 to 180 million tons
Oil refining	...	18 to 30 million tons
Nitrogenous fertilisers	...	2 to 3 million tons (N)
Cement	...	24 to 26 million tons
Machine building	...	Rs. 1,600 crores of output
Railway freight transport — long distance (originating traffic)	...	330 to 420 million tons
Foodgrains	...	135 million tons
Exports	...	Rs. 1,300 to Rs. 1,400 crores

U.K. Credit for Durgapur Plant

The Indo-British credit agreement to finance the expansion of Durgapur steel plant by 600,000 tons, it is expected will be signed shortly. Under the agreement, the British credit will be available for the purchase of equipment from the U.K. only. Soon after the agreement is signed, India will call for tenders, on the basis of a project report, already referred to in these columns. The tenders will not be confined to the members of the Indian Steelworks Construction Company (I.S.C.O.N.), but the British suppliers making extensive use of the experience and organisation of I.S.C.O.N. are not ruled out.

The West Germans are having second thoughts on the terms and conditions of their credit offered to India to finance the third five year plan in its first two years. Unlike other aid-giving countries, German credit, with the exception of the portion earmarked to finance the expansion of the Rourkela steel plant by 800,000 tons, is completely untied. India, as matters stand, can use this credit on imports from any country outside the communist bloc. As already reported, the U.S. credit has had the effect of diverting Indian imports from traditional markets to the U.S.A. in spite of the latter's higher cost. West Germany apprehends that her untied credit may further divert her long-established export trade to India to other countries with her own finances. This aspect of the question, it is expected, will be discussed when the bilateral agreement between India and West Germany is negotiated.

Project Report on Coal

The British Coal Board team consisting of Mr. H. E. Collins, Mr. J. E. Elliott and Mr. G. Armstrong arrives here on 25th August to prepare a project report for coal production during the third plan. The team's report, among other things, will indicate the extent of finances needed for developing a particular coal mine. It will, thereafter, be decided whether the British credit should be used to finance the project.

U.K.-Commonwealth Consultations on E.E.C.

The British Government has indicated that there will be day-to-day consultations with the Commonwealth countries during the U.K.'s

negotiations with the European Common Market Council for its entry into the Market. There will be ample opportunities of consultations with Commonwealth Ministers. As the British Prime Minister has stated, he is thinking of consulting the Commonwealth Prime Ministers at a conference, before the U.K.'s final decision is reached.

Prices in Second Plan

According to the Planning Commission, "the second plan was characterised by a persistent upward trend in prices though part of the rise in prices was a corrective to the earlier decline. Over the five-year period, the rise in the general index of wholesale prices has been about 30 percent. Food articles as a group have gone up by some 27 percent, industrial raw materials by 45 percent, and manufactures by over 27 percent. The major explanation of the continued upward trend in the wholesale prices in the second plan is entirely the rising pressure of demand resulting from the growth of population and money incomes. Supply factors have also played their part from time to time. The plan points out that although the production potential of the country has been strengthened considerably, both in agriculture and industry and the scheme for mobilising the financial resources required for the third plan postulates deficit financing on a strictly limited scale, the possibilities of significant and even disturbing price rise cannot be entirely eliminated. Firstly, there is the usual uncertainty about monsoons. Secondly, the various restraints on consumption implicit in the plan may not always operate to the full extent. Thirdly, while the plan envisages a

certain balance between the rates of growth in various sectors, some unbalance is almost certain to appear from time to time. It is necessary, therefore, to keep a close watch on prices and to be prepared in advance with strategy for corrective action. A major constituent of the price policy is fiscal and monetary discipline. Fiscal policy must be directed to mopping up excess purchasing power which tends to push up demands above the levels of available supplies. Public enterprises have an important rôle in enlarging public savings. They must, therefore, operate at a profit and maintain a high standard of efficiency required for their purpose. Monetary policy has to go hand in hand with fiscal policy by regulating the pace of credit creation through banks. Commercial policy can also be used to an extent to overcome domestic shortages. Without adequate fiscal and monetary discipline, other regulatory measures cannot have the desired effect. But in order to secure the right relationship between various prices or to prevent undue hardship to low and fixed income groups, it may be necessary to have physical allocations and direct control in certain sectors. The prices of what may be called basic essentials must be held reasonably stable; in commodities that could be classed as comforts or luxuries, a rise in prices may have to be tolerated. The technique of price regulation will further push from commodity to commodity. Two main objectives of price policy are: (a) to ensure that the movement of relative prices grows with the priorities and targets which are being set in the plan; and (b) any considerable rise in prices of essential goods that enter into the consumption of low income groups is prevented."

Cottons labelled 'Sanforized' will not shrink out of fit

Our technical experts keep a constant check on all mills licensed to use the internationally-known label 'Sanforized'. Such vigilance ensures that material bearing this label is up to specifications laid down by us, and that it will not shrink even after many, many washings.

Month after month and throughout the year, these experts visit the licencees, carefully examining fabrics both from the warehouses as well as off the processing machine.

From each mill, they take an extensive random sampling of various fabrics. Each must be a quality fabric before it can be stamped with the label 'Sanforized'.

These samples are catalogued; measured and submitted to rigorous wash and minimum shrinkage tests both here and in the U.S.A. in fully equipped technical laboratories.

The catalogued samples are then re-examined and re-measured. The results of our experts' findings are recorded, each mill having its own dossier.

A copy of these reports, together with their samples, are sent to the home office in New York. This multiple checking ensures that all cottons marked 'Sanforized' will not shrink out of fit.

Make certain you get the full measure of value of the material you buy—

Look for **SANFORIZED** on the label

and your clothes will never shrink out of fit!

Issued by Cloett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95 Marine Drive, Bombay 2

...And all you do is turn the key!

TURN-KEY JOBS are a speciality of LARSEN & TOUBRO LIMITED. From the design and construction of buildings to the supply, erection and commissioning of plant and equipment, L & T can do the job for you.

LARSEN & TOUBRO LIMITED represents some of the world's foremost manufacturers of plant and equipment in every branch of engineering. L & T's own manufacturing

programme at its Powai Works embraces a wide variety of equipment. The Company's qualified engineers and first-rate service stations ensure effective after-sales service.

With its ten Divisions and several subsidiary companies, LARSEN & TOUBRO LIMITED is in an excellent position to undertake turn-key jobs, including all design work, civil engineering, and the supply and erection of equipment.

CONFIDENCE IN STERLING GROWS DESPITE FALL IN RESERVES

HEAVY INFLOW OF SHORT-TERM FOREIGN MONEY EXPECTED

(FROM OUR LONDON CORRESPONDENT)

THE sterling area's gold and convertible currency reserves fell in July by £114 million—the largest loss in any month for nearly ten years. Sterling was under heavy pressure during the greater part of July. The full weight of the flight from the pound last month was known only to the U.K. Treasury and the Bank of England, and it explains the severe monetary measures taken by the Chancellor on 25th July, including the raising of Bank rate to 7 percent. From that day, the outflow of money from London ceased and foreign money began to flow back. Recently, the return flow has become so large that the Bank of England has been able to buy up a substantial amount of foreign currencies. Little of this gain came in time to benefit the reserves in July, but the tide has now definitely turned. Returning confidence in sterling has lifted the exchange rate to "par" or thereabouts, and those who had sold "short" were caught by the sudden rise.

Reports reaching the City from New York, Zürich, Frankfurt, Paris and Amsterdam are so unanimous about a change of sentiment about sterling that a further heavy inflow of short-term foreign money can be safely expected. The British decision to apply for membership of the European Common Market is said to have played some part in making people abroad think more kindly of the chances of the pound. More to the point, a colossal support operation for sterling by the International Monetary Fund is likely to be announced shortly. The danger which is so vividly illustrated by the large loss of gold in July seems to be over, but the improvement is due only to another inflow of hot money and to an imminent support credit. Both are debts to be repaid in the future. Moreover, Britain has received support on a large scale from the European central banks, and although some of these advances were repaid in July, a large balance remains to be liquidated out of the I.M.F. drawing. The underlying balance of payments position remains "in the red." The pressure that sterling has suffered in the past four months can be seen from the fact that since 1st March, the reserves have dropped by £265 million, or nearly a quarter.

Dangers in Deflation

The U.K. Chancellor's restrictive measures may stop the rise in industrial production and bring the investment boom to an end in the first half of next year. This is the view expressed in the *Economic Review* of the National Institute of Economic and Social Research. The internal measures will slow down the growth of consumption and investment demand. If the uncertainty now created also leads to a reduction in stocks, output may cease to rise during the rest of the year. While in the short run, the measures may help reduce the balance of payments deficit further, they are unlikely to solve the underlying foreign payments problem unless exports rise sharply.

the restriction goes so far that the remedy is worse than the disease."

Economic Ups and Downs

In the July issue of *Economic Trends*, the U.K. Treasury has sketched in more of the background to current official policy. There is first the contrast between a 1½ percent rise in the gross national product measured at constant prices and a 6½ percent rise measured at current prices. The figures are for the first quarter and the comparison is with the same period of last year. The second point—complementary to the first—is the much sharper rise in incomes between the fourth quarter of 1960 and the first quarter of the current year. The seasonally adjusted index of incomes rose from 114 to 118, having risen only 2 points in the previous nine months. Company profits, which had fallen in each of the three previous quarters, increased and wage and salary incomes rose after a spate of awards towards the end of 1960. The total wage and salary bill (helped by a 1½ percent rise in the numbers at work) was 8½ percent higher than a year ago.

Disposable incomes, that is, the amount left after taxes, etcetera, were up 3 percent and there was a parallel rise in spending. The latter increase is mainly accounted for by an upturn in spending on motor-cars and other durable goods, which had dropped away steeply in the second half of last year. Fixed investment, which began rising in the middle of 1959, continued to go up in the first quarter, although at a much slower rate. The curve here has been flattening since the middle of last year. Stockbuilding dropped from £116 million in the fourth quarter to £63 million in the first because manufacturing industry raised its stocks by very little. Stocks of manufacturers' finished goods actually fell slightly.

Record Bank Advances

It is obvious from the July statements of the London clearing banks that the rising trend of advances, against which the U.K. Chancellor has now pitted a call for additional special deposits, had not been arrested. At £3,675 million, the advances total on 19th July showed a rise of £55.7 million, compared with that on 21st June. Part of this increase was undoubtedly attributable to the debiting of half-yearly charges to customers' accounts and another part took the form of extra lending to the nationalised industries whose overdrafts rose by £10.1 million to £71.3 million. Loans to the private sector of the economy were up by about £42 million.

Average liquidity ratios for the 11 clearing banks work out at 32.86 percent, compared with 32.18 percent in mid-June and 31.16 percent in July of last year. The liquidity position was again protected by a further reduction in the banks' holdings of gilt-edged stocks. These fell by £35.4 million to £1,049 million, or £291 million below the level of July 1960. The Bank of England has now indicated in the clearest terms that the extra pressure to be imposed by the rise in special deposits must be met by a further stiffening of the banks' attitude towards advances.

Common Market Decision

Britain is to seek membership of the six-nation European Common Market, Mr. Macmillan duly announced in the Commons. But no agreement will be made until it has been approved by the House after talks with other Commonwealth countries. The Prime Minister emphasised that the offer to negotiate would depend on satisfactory arrangements to meet the special needs of Britain, notably agricultural interests, the Commonwealth and fellow members of the European Free Trade Association, the "Seven". Cheers and angry cries from both sides of the House greeted the announcement. Mr. Fell described Mr. Macmillan as a "national disaster" and said the best service he could do the country would be to resign. In the two-day debate which followed, it was noticeable that the majority of speakers opposed, but there was little doubt about the outcome when the vote was taken.

Britain's decision was welcomed in a communiqué issued by the other members of the "Seven" in Geneva. They said they would make co-ordinated approaches to join the "Six" in a single market of 300 million. French opposition to changes Britain will expect in the Treaty of Rome, governing the European Common Market, is the main obstacle to British membership. Mr. Macmillan plans an early meeting with President de Gaulle, probably at the end of August, when he returns from a shooting holiday. The rest of the "Six"—West Germany, Italy, Belgium, Holland and Luxembourg—appear to favour the immediate acceptance of negotiations. The National Farmers Union said that it would expect to be consulted fully on the negotiations. Sir James Hutchison, president of the British Chambers of Commerce, welcomed the Prime Minister's statement. The Federation of British Industries said that although it had hoped for a narrowing of differences by negotiation before Britain made a formal application to join the "Six", Mr. Macmillan's keen desire to find an acceptable solution said: "The Prime Minister's statement provides the minimum of safeguards as long as the Government does not proceed so far in negotiation that the promised reference to Parliament and the Commonwealth is reduced to a mere formality."

FIBRE AND GUNNIES FALL ON LACK OF BUYING INTEREST

GOODS STOCKS DOWN LESS THAN EXPECTED

THE outlook for the jute industry does not improve, and never before has it been as uncertain as it is now. Once again reports in the local Press are so completely at variance with the experience of those engaged in the production and sale of jute and jute goods, that the public is likely to form grossly wrong notions about the industry. The raw jute supply position is still uppermost in many minds, and failing to receive a more clearly defined and helpful policy from the Government on further cuts in production, the I.J.M.A. has left it to individual mills to decide their restrictions in the light of their own stock positions. Up to now the question of raw jute availability has been the main problem, but this is likely to ease in the near future. Supplies have already improved, although actual arrivals in many centres are still smaller than in previous years at this stage. The most important factor for the future, as in the past, is the relationship which raw jute prices will bear to those of gunnies. No other single factor is of equal importance to the industry, which is endeavouring to maintain its position in world trade in face of ever-increasing competition. Lower price levels would do much to dispel prevailing doubts and allow traders and manufacturers to plan ahead with confidence, instead of being confined mainly to ready business. Until there is a revival of a steady demand from overseas, which does not appear likely while the prices of the bags and fabric remain at their present levels, business is almost certain to continue on a very limited scale. The mills in turn can only be expected to buy jute to replace consumption. Any adverse effects experienced by one section of the trade would reflect on the other.

Many cultivators, encouraged by propaganda, have been under the illusion that they can hold the mills to ransom for raw jute supplies. The mills, however, have not been prepared to increase their fibre stocks in anticipation of being able to sell goods at enhanced prices and have had to rely mainly on business for ready and near delivery. Their persistence in this and the I.J.M.A. quota system which has controlled mill purchases, has at last paid dividends and towards the close, raw jute prices entered a new phase and dropped rapidly. As always happens at a time like this, some weak holders panic and sell at any price. On Tuesday, business in raw jute was reported at Rs 5 a maund below the morning's opening quotations. The larger sellers mainly withdrew at the lower prices, but those with parcels actually afloat under ready bills of lading, were naturally anxious about the position.

Fall in Prices

The fall in prices has not been confined to raw jute. There was also a sharp fall in the rates of hessian and sacking. The fall on all accounts has probably been exaggerated by the powerful "bear" element in the taika market and the weakness of "bulls". Hessians have fallen more in relation to sacking, and that is probably due to the fact that there is a general tendency in the U.S.A.—the chief market for hessian—to regard as established the change from a seller's market to a buyer's one, and to avoid holding stocks. It is too early yet to gauge the true effect of recent production cuts, but the reduction may well be offset to some extent by the fact that the mills are not well sold forward, and this weakness has been laid bare to the whole consuming world.

The stocks of jute goods held by the member mills of the I.J.M.A. at the end of July, showed that in spite of the production cuts, stocks have not dropped as far as the trade expected. Shipping last month was very poor, which bears out the fact that overseas consumers are still not taking much interest in current prices. Total stocks amounted to 70,100 tons, made up of 23,100 tons of hessian (33 percent), 37,500 tons of sacking (53.5 percent) and 9,500 tons of other goods (13.5 percent). The fall in hessian stocks was mainly the result of a good off-take by the Argentine during the month, but sacking goods have increased. The overall reduction comes to 6,500 tons, which is made up of a fall of 5,800 tons in hessians and 1,700 tons in other goods, which is partially offset by a rise of 1,200 tons in sacking goods.

Buyers—both the mill buyers of jute and the overseas buyers of goods—cannot be blamed for their hand-to-mouth purchasing in view of the fact that everything points to a falling market. In the case of the raw material, there appears to be no doubt that this year's crop from both India and Pakistan will yield sufficient to meet the requirements, but with very little to spare. The unnatural raising of goods prices caused show their displeasure at having to pay exorbitant values. They have naturally taken advantage of the many substitutes. There are many in the

paradox of having maximum and minimum prices for raw jute being imposed concurrently.

THE JUTE MARKETS

Manufactured Goods: The undertone of the market was unchanged at the opening last Thursday and B Twills remained at Rs. 159.25 for August B Twills and Rs. 54.35 for August 40in. 100z. hessians. During the day, prices fluctuated widely due to speculative activity, but by the end of the day, rates were virtually unchanged. Due to the uncertainty concerning the future working of the mills, a bearish sentiment developed and a heavy speculative selling pressure caused prices to drop. Reports circulated that the I.J.M.A. had decided to make no concerted move for a block closure to conserve jute, but left it to individual mills to decide for themselves any curtailment of production in the light of their own fibre stocks. By Saturday, B Twills had dropped to Rs. 157.50 for August shipment with October-December at Rs. 142.50. In spite of the fact that forward hessian appeared firmer due to speculative buying, the near position for 40in.

I.J.M.A. STOCK FIGURES FOR JULY

The Indian Jute Mills Association reports total stocks of jute goods at the end of July as follows:

Description	31st July, 1961		30th June, 1961		Increase over (+) or decrease from (-) last month		31st July, 1960	
	(000 Metres)	(000 Metric Tons)	(000 Metres)	(000 Metric Tons)	(000 Metres)	(000 Metric Tons)	(000 Metres)	(000 Metric Tons)
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian cloth and bag	7,38.02 (8.07)	23.4 (23.1)	9,38.14 (10.26)	29.3 (28.9)	-2,00.12 (-2.19)	-5.9 (-5.8)	10,72.98 (11.73)	32.3 (31.7)
Sacking cloth and bag	8,14.92 (8.91)	27.4 (27.5)	7,84.79 (8.58)	26.9 (26.3)	+30.13 (+33)	+1.2 (+1.2)	10,03.01 (10.97)	47.2 (46.5)
Others	9.7 (9.5)		11.4 (11.2)		-1.7 (-1.7)		10.0 (9.9)	
Grand Total	71.2 (70.1)		77.6 (76.4)		-6.4 (-6.3)		89.3 (88.1)	

N.B.—These figures are based on replies received and represent all members of the Association and Gagalghai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures, are more precise.

10oz. dropped to Rs. 53.25. After the week-end, conditions were unchanged, and in the absence of any overseas interest, prices continued to decline. On Tuesday, in sympathy with a very weak and nervous fibre market, prices slumped to Rs. 154 for August B Twills and Rs. 51.75 for hessians. Fresh low levels were recorded during the day and a heavy bear account was built up by speculators. The market was very weak at this stage and lower prices were anticipated. On Wednesday morning, opening quotations were as follows:

	August	September	Oct.-Dec.
40in. 7tozs.	41.25	39.50	36.00
40in. 8tozs.	44.25	42.25	38.50
40in. 10tozs.	51.25	51.00	47.15
B Twills	150.00	147.00	135.25
Heavy Ceas (Plain)	150.00	147.00	136.25
A Twills	186.00	181.00	169.00
Liverpools	175.00	171.00	156.50
Cornacks	152.00	152.00	139.25

Raw Jute: Throughout the week, the fibre markets have been weak with prices declining daily. Sellers at the opening were inclined to hold off offering on the basis of Rs. 50.50 for Assam Bottoms for 15 days' delivery. Bills of lading were offered at a premium of 50nP to Re. 1. Up to the week-end, prices were unchanged with only scattered business reported. On Saturday, however, prices began to fall, and with the I.J.M.A. making no block closure but leaving it to individual units to make their own decisions about production cuts, a weaker sentiment developed. Over the week-end, conditions changed rapidly and Rs. 2 was taken off quotations. Then followed a period of near panic among sellers with business reported at as low as Rs. 44 for ready bills of lading and buyers indicating Rs. 42. The volume of business done at these levels was small, and the majority of larger sellers withdrew from the market completely at the lower levels. Towards the close, there were reports that some mills had already curtailed production under the new scheme, and the undertone of the market weakened.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills Basis Bottoms Rs. a 100 kilos	Rs. a md.	Shipment
Assam	120.50	45.00	August
Northern	120.50	45.00	"
Purnea Desal	119.25	44.50	"
Assam Tossa	123.25	46.00	"

Old Crop Mesta:		
Assam-Northern	113.75	42.50
Desal	113.75	42.50
Daissee	112.50	42.00
Pakistani Cuttings	180.00	a bale

THE PAKISTANI JUTE MARKETS

FIBRE STEADIER AS ARRIVALS FALL OFF

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE outstanding event of the week in the jute market is the adjustment of E.P.C. prices. Only one price is now quoted for the whole period August to October. In spite of the fact that overseas prices range from £140 for Mill Hearts for August to as low as £120 for Mill Hearts for October, the E.P.C. prices only quote one figure for all positions which is rather strange. Even stranger is the fact that the prices are all approximately the correct price for the August position, although some are even high at that. The result is that it is very difficult to sell for September or October shipment. As it happens, this should not matter much provided it does not last, since there are not many sellers at the present moment. The market is undoubtedly firmer, both locally and overseas, due to the scarcity of arrivals in the interior and in Narayanganj. The reason for this must, of course, be the growers' holding power, since it does not need very much calculation to see that although the lowland crop has been fully harvested, less than 50 percent of it has come into the market. The balance is obviously being stored by growers to be released slowly. The recent steadiness will be followed by more interests by balers which will bring out more jute.

The river levels continue seriously low, and this is becoming a great source of worry since the scarcity of Export Firsts is likely to become acute. There are reports from various parts of the country of small rises in river levels, which may be due to heavy rains only but that will not maintain river levels. In many places, a rise of as much as 3 feet is required. The lowland crop has suffered also to some extent from this lack of steeping water. It will be disastrous if the midland and highland crops do not have a better retting condition. Cuttings which steadied up at the end of August, have eased again after the end-month covering. The demand of the Indian mills, however, continues to be very real, and it is reported that one mill paid Rs. 215 a bale for delivery within 15 days. This works out to roughly £94 a ton, c.i.f. Continent. A recent ordinance of the Pakistani Government which has raised no comments, is nevertheless interesting. It authorises the Government to impose an excise duty of Rs. 5 a bale at any time. The reasoning behind this is not clear, and the trade has had no announcement other than the Gazette. This may well be a precautionary measure to be used to finance a stockpile, if it is decided to create one. The E.P.C. figures for the second half of July are once again remarkably low at 55,788 bales. India bought 13,677 bales, the U.K. 8,655 bales, Egypt 7,840 bales, Belgium 4,375 bales, West Germany 4,120 bales, Poland 3,696 bales, Yugoslavia 3,326 bales and France 2,250 bales. The U.S.A. has not bought anything yet.

CHANGES IN THE JAPANESE TEXTILE INDUSTRY REVIEWED

When Asian competition in the cotton textile trade is being discussed, there is a growing tendency to treat Japan as a separate case and not to include it among the so-called low-cost countries which are regarded as the main cause of the problem which the forthcoming meetings in Geneva are to try to solve. There are two good reasons for making this distinction. One is widely realised—Japan was a major exporter of cotton goods for many years before the second World War while the others were not. The second reason is perhaps not fully appreciated in many quarters. It is that, although ten or 12 years ago Japan—in spite of warnings against over-expansion—exerted herself to restore her capacity to the prewar level, she has more recently recognised that there are limits to the volume of trade which she can expect to do and has accepted or adopted restrictions on her sales to certain markets with reasonably good grace. In its survey of finance and industry, the Industrial Bank of Japan recently published a well-reasoned review of the Japanese textile industry since 1945, describing the first five years of rehabilitation, the period from the Korean boom until 1956, and the later period of retrenchment after excessive capacity and over-production caused recurrent crises. In the third phase, restrictions were placed on the supply of raw cotton, on the operation of existing machinery, and on the installation of new machinery, and eventually the output was brought into balance with demand at an appreciably lower level than before. Some aspects of the changes in Japan's position on which the survey lays emphasis include the reduction of the labour supply from rural districts caused by land reform and the shorter hours, higher wages, and increased benefits which the workers have obtained. At the same time, the rising standards of living among workers in textile and other industries have greatly increased the domestic demand for cotton goods, partly offsetting the ill effects of the loss of such export markets as Manchuria and Korea where Japan at one time encountered virtually no competition.

Engineering and Transport

AIR-INDIA SUPER-CONSTELLATIONS FOR MINISTRY OF DEFENCE

INDIA TO BUY MORE BOEINGS AND FRIENDSHIPS

(FROM OUR NEW DELHI CORRESPONDENT)

AIR-INDIA International has decided to sell its entire fleet of nine Lockheed Super-Constellations, model 1049, to the Ministry of Defence. Normally, the delivery of Super-Constellations to this Ministry will be in the nature of a phased programme, the delivery to be completed as and when Air-India's own fleet of Constellations was entirely replaced by Boeings. The airline has still Super-Constellations in service on its New Delhi-Moscow and New Delhi-Sydney routes.

An air mission is shortly leaving India for Holland and the U.S.A. to finalise the deals for the purchase of five Fokker-Friendships for the Indian Airlines Corporation and two Boeings for the Air-India International.

U.S. Airlines Complain

Leading U.S. airlines have of late been complaining that their foreign rivals now carry passenger traffic much in excess of what the terms of the international air agreements concerned would allow. Pan American Airways and T.W.A., the two U.S. transatlantic carriers, have accused K.L.M. of violating the U.S.-Dutch agreement with the foreign air carrier permit. The two airlines filed complaints with the C.A.B. asking the Board to act to enforce the terms of K.L.M.'s permit. Pan American specifically requested that K.L.M. be barred from increasing its frequencies and capacities to the U.S.A. beyond those in effect in March of this year. The two airlines charge that K.L.M.'s services to and from the U.S.A. are operated primarily for the carriage of traffic between the U.S.A. and countries other than the Netherlands. Of the 116,798 passengers carried by K.L.M. on New York gateway transatlantic flights in 1960, P.A.A. has said, only 31,535 or 27 percent of the total were U.S.-Netherlands passengers. The U.S. airline has said that K.L.M.'s operations are causing "excessive and improper diversion from U.S.-flag carriers," that the Dutch airline is carrying traffic in volume far beyond that requiring transport between the Netherlands and the U.S.A. In apparent support of the two U.S. airlines, the C.A.B. chairman, Mr. Alan S. Boyd, told a Senate Committee that a new policy towards foreign airlines might be in order since more and more of these carriers are planning expanded operations. K.L.M. has categorically denied the charges and said that terms of an air agreement cannot be violated when such terms have never been spelled out. Most airline agreements are vague as to capacity and frequency of schedules, saying merely that traffic should be related to supply and demand without setting any specific limitation on volume. The U.S. C.A.B. has pointed out that a majority of foreign governments restrict U.S. airlines on capacity they can offer daily or weekly to some (but not all) foreign points. Charges and denials were made as U.S.-Dutch negotiations continued for K.L.M. rights at Los Angeles. The U.S. has tied the capacity question to the negotiations, but the Dutch only want to discuss Los Angeles.

Pan American has also charged S.A.S. with violations of its foreign air carrier permits and the bilateral air agreements between the U.S.A. and the Scandinavian countries by carrying excessive traffic between the U.S.A. and Scandinavia, particularly on flights to and from points beyond Denmark, Sweden and Norway. In reply to the Pan American's charge, the S.A.S. president, M. Tore H. Nilert, has said that the question of "violation or no violation" by S.A.S. can only be settled through discussions between the Governments of the U.S.A. and the three Scandinavian countries. T.W.A. has joined Pan American in the complaints against K.L.M. and S.A.S. Pan American has said it contemplates no further actions against non-U.S. airlines since "K.L.M. and S.A.S. are the worst offenders."

U.K. Pressure on U.S.A.

Reports from Washington show that the U.K. is bringing increased pressure to bear on the Kennedy Administration in an effort to obtain a reversal of the recent trend towards more discrimination in shipping and aviation. Mr. Erroll, Minister of State at the U.K. Board of Trade, recently told a news conference in Washington that U.S. flag preference campaigns were not "sensible." He said he wanted to find out whether these campaigns were officially inspired, or a private effort benefiting from a "wing and nod" by the U.S. Government. In fact, both processes have been at work. "Flag discrimination has long been a point of contention between the U.S.A. and the U.K. in shipping. Half of all Government-financed cargoes are by law reserved to U.S. ships, but the effective proportion has risen to almost 100 percent since the International Co-operation Administration refused to finance the transport of aid cargoes by foreign shipping. This

ruling was made under the influence of a balance of payments crisis. The same crisis atmosphere, which has now passed, led several Government departments, wanting to make their contribution to cutting the deficit, to institute fly or ship American rules. Needless to say, this idea has the whole-hearted backing of domestic shipping and aviation interests, which have been pushing similar projects on a much wider basis. In addition, the U.S.A. which has been reasonably liberal over granting new hawks to foreign airlines in the past, has in recent weeks appeared to accept the view of domestic air carriers that they already face enough competition on routes touching America."

Aeroflot and Western Airlines Compared

Aeroflot flies about 400,000 route miles, serving some 140 major airports and perhaps another 335 cities without improved airport facilities: U.S. certificated airlines fly about 300,000 route miles and serve over 700 cities. Aeroflot's passenger total for 1960 was about 10 million, according to most reliable estimates, more than any individual U.S. airline carries, but well below the 58,000,000 transported by the U.S. industry. The Russians plan to increase Aeroflot's passenger volume to 45 million and to have 95 percent of its operations in jet-powered aircraft by 1965. C.A.B. expects U.S. domestic airline traffic to total 77 million passengers by the same year. Aeroflot's fleet now consists of about 200 jet-powered aircraft and about 1600 twin-engine pistons, and uncounted hundreds of single-engine feeder-type aircraft, helicopters, ambulance aircraft and crop dusters. The U.S. certificated airline industry has about 1,800 planes including some 485 jet-powered aircraft. These are some of the comparisons drawn by Air Transport Association president, Mr. Stuart Tipton, between the U.S. and the Russian air transport industry. He notes some significant contrasts between the two. In Russia, civil aviation serves as an economic and political weapon of the State. It is owned by the State, run by the State, and operates to serve the State. The needs and interest of the people are subordinate. In the U.S.A., the primary purpose of civil aviation is to serve the people. Russia's civil aviation system is wrapped up into one Company, Aeroflot. In the U.S.A., there are 56 certificated airlines, plus air taxi operators, and supplemental carriers.

Talks on the establishment of reciprocal air service between the U.S.A. and Russia will begin soon, probably in Washington. The U.S.A. had proposed 18th July as the date for a talk following a Russian suggestion that the discussions open on 21st June. In February, the U.S. proposed the resumption of the talks held last year, but called off after the U-2 incident. No Russian reply was received until its offer early in June. But Russian interest in negotiations was indicated last week by Mr. S. Nikitin, vice-president of the Soviet travel agency Intourist, after a 15-day inspection trip of American hotel and travel facilities. Mr. Nikitin said a direct air service was essential if the U.S.A. is to attract more Russian tourists and urged the U.S.A. to advertise and publicise itself inside Russia. Intourist, he said, would be glad to assist. Last year, 3,000 Russian citizens visited the U.S.A., but not more than 1,000 of them were tourists. About 15,000 American tourists visited Russia, and about the same number are expected this year.

Making International Tourism Easy

International tourists this year will have less trouble with governmental red tape in their travels than at any time since the end of the second World War, the International Air Transport Association reports. A survey of progress in the airlines' worldwide campaign against procedural delays and paper barriers, indicates that since last year's vacation season, many governments have eased visa and passport requirements and have taken other steps to make border crossing simpler. Perhaps the world's least troubled tourists, according to International Air Transport Association, are Europeans travelling in western Europe and the U.K. Almost all their governments, individually or through such groupings as Benelux and the European Community, have now reached reciprocal agreements to permit each other's nationals to cross their borders without visas. In many cases, they have dispensed with passports and require only a card proving citizenship. North Americans are now able to travel anywhere in western Europe and the U.K., almost as easily as Europeans themselves. In most of these countries, they need no visas. Some of the most recent easements reported to International Air Transport Association's Facilitation Advisory Group by approximately 200 airline experts who work in more than 100 countries, are these: The U.K. has

**MR. TUBOPHILE
GOES
WATER DIVINING
IN TUBELESS TIMES**

"It's here, it's here", screamed the Water Diviner, all excitement, "oceans of fresh water underground... enough to cultivate this land for ever and a day. In fact," continued the Water Diviner, when he had got his breath back, "there's water, water everywhere"... "All right, all right, but meanwhile there's not a drop to drink, and I am dying of thirst in the middle of this tubeless land," retorted Mr. Tubophile, really irritated. "Look here, chum, I've had enough of your tubeless mumbo jumbo. I ask for running 'hot and cold' and you take me to a dirty water hole! Then I ask for a drink of water and you suggest I burrow underground like a rodent. The truth, Sir, is simple. No tubes, no water! In fact, life without tubes is apt to be life without water and that's no life at all."

The Indian Tube Company (1953) Ltd.
A Tata-Stewarts & Lloyds Enterprise

now waived visas for a total of about 54 nations. Effective 1st June, this exemption will apply to 16 countries in the western hemisphere, in addition to the United States, Canada, Bolivia, Cuba, Mexico and Uruguay for whom the ruling went into effect earlier. Visitors to the U.K. from France, Belgium, Luxembourg, West Germany, the Netherlands and Switzerland now no longer need passports, but can enter the country with national identity cards and special British visitors' cards. Also the U.K. has issued a new and simplified travel document for British subjects wishing to pay short visits to 13 European nations and Iceland.

Brazil became the first country in South America to accept the standard embarkation/disembarkation card for passengers. Japan has simplified entry formalities for the nationals of 16 countries by reciprocal agreements which eliminate the need for visas; she has eliminated currency declaration forms, and has simplified baggage clearance procedures. Malta no longer requires visas from Austrian, Spanish and Swedish visitors. Canadian passenger clearance documentation has been reduced to such an extent that very few travellers now have to fill out any forms at all on arrival. In the U.S.A. Congress is considering a number of recommendations for the simplification and reduction of visa requirements designed to attract foreign tourists.

Sir William P. Hildred, director general of International Air Transport Association, points out that the airlines are stepping up their assault on red tape, on their own, in conjunction with the International Civil Aviation Organisation, and in close co-operation with governments. "The best argument for less red tape is the overwhelming logic of a steadily increasing traffic," he declares. "No government agency can hope to handle the masses of tourists which we are carrying in the jet age by old-fashioned processing methods and documents which date from the days of the quill pen. Our goal is to make the only requirements for international travel a ticket, some money and simple form of identification. We have not reached it yet, but we are getting there."

**B. M. RESIDUAL CHLORINE
RECORDER**

The B.M. residual chlorine recorder, which has just been produced by the Paterson Engineering Company (India) (Private) Ltd, operates on an entirely new principle for instruments of this type. This recorder has been developed to fulfil the need for a unit which is strongly built and accurate in operation and yet requires very little maintenance. Operating on the bi-metallic cell principle, its design is considerably less complicated than that of instruments using calorimetric measurement. It employs a small perspex constant head chamber of orthodox overflow type in which the sample water is received and measured. As from this chamber, the water gravitates through the instrument, only sufficient head to deliver the water to the chamber is required, thus in most instances sampling pumps are not required. The incoming supply is controlled by a small valve manipulated from the front of the cabinet from where the flow is visible at all times. The water then passes to a larger mixing chamber, also of perspex, in which it is thoroughly mixed with a reagent by a swirling action. The reagent used is a simple buffer solution to which is added a small percentage of a specially developed compound known as B.M. 18 which prevents the formation of mould growth without affecting the chlorine residual. The solution is fed by gravity on a constant head principle through special drip valves from a vessel having sufficient capacity for an eight-day supply.

The reagent treated sample water then passes to the specially designed B.M. cell where the chlorine is measured by two electrodes of ample area which produce current proportionately to the chlorine concentration. A special feature of the operation of this cell is the continuous automatic cleaning of the electrodes, achieved by means of the sweeping action of a mild abrasive which keeps the electrode surfaces polished. The cleaning medium is retained in full in the unit.

Two wire wound drums with metallic brushes deliver the output from the electrodes, without the necessity of amplification, to an electronic indicator and recorder which incorporates a highly sensitive circuit. A circular chart calibrated from 0 to 1 part a million provides a seven-day record and a sweeping pointer gives rapid visual indication on a large peripheral scale. Adjustable contacts are fitted which operate warning lights when predetermined high or low level residuals are reached. Audible alarms and auxiliary relays can be similarly operated. In cases where a reading of the total chlorine as well as the free chlorine is required a second reagent vessel is fitted and a solution of potassium iodide is used in addition. The B.M. residual chlorine recorder is housed in an attractive reinforced glass fibre cabinet occupying a floor area of only 24in. x 24in. Installation is simple as the only requirements apart from the sample water supply are a connection to the electrical supply and access to a drain.

Books

**PRODUCTION TECHNIQUES : A
THEORETICAL MODEL**

Choice of Techniques : An Aspect of the Theory of Planned Economic Development. By Amartya Kumar Sen. (Review copy received from Macmillan and Co. Ltd, St. Martin's Street, London, W.C. 2. Price 18s, pages 122.)

This is a book for the specialist, although the subject is one which is fairly near the heart of the problem of planned economic development. One of the most difficult problems facing an underdeveloped economy attempting planned economic growth is the choice between alternative production techniques. Often the number of alternatives is large, and they vary from primitive hand-production to fully automatic manufacture. The amount of capital investment a unit of labour differs enormously from one technique to another. Most of the analysis is conducted within the framework of some restrictive assumptions relating to economic features as well as the type of planning, mainly to facilitate understanding. Thus, among the former is the assumption that the social opportunity cost of labour is nil (or negligible), and among the latter that (a) there is public ownership of the means of production in the new sector, the capital intensity of which is the object of enquiry, while the primitive rural sector is run by family-based private enterprise; (b) the plans of the different industries are co-ordinated at the centre; and (c) there is no control on consumption. Some of these and related assumptions are no doubt relaxed at later stages, but the going is still heavy. There is no denying, however, that more than one piece of elegant analysis might be found in the work, e.g., in the two tiny chapters on "time series derivation" and the "choice involving time." An appendix on the Ambar Charkha concludes that the rate of surplus a unit of fixed capital a year is about minus 276 percent, and far from creating any flow of surplus, it produces a flow of output value less than even its recurring costs and is thus inflationary in character.

SALES PROMOTION

Marketing Management. By Kaycee Jagasia. (Published by Kitab Mahal, 56A Zero Road, Allahabad. Price Rs. 8.75, pages 258.)

Training for a Business Career. By Kaycee Jagasia. (Published by Kitab Mahal, 56A Zero Road, Allahabad. Price Rs. 7.50, pages 211.)

These two books cannot be regarded as serious work on the subject, although they undoubtedly have a popular appeal and will be especially useful to those who are thinking of choosing a commercial career. But generally speaking, of the two books, Mr. Jagasia shows more insight in his *Marketing Management* where he analyses all relevant problems connected with marketing and sales promotion. There is admittedly a vast literature on the subject, but a beginner who is interested in Indian conditions will find useful material which he is unlikely to find in many advanced books on the subject written by western authors. The increase in production on the one hand and the rise in costs on the other, have created a major problem in selling various consumer goods, and the growth of competition due to the setting up of many units in the same industry will accentuate the difficulty further. The training for an efficient sales force is, therefore, a major worry for many expanding organisations. But although Mr. Jagasia shows his intimate knowledge of sales promotion and marketing, he is not equally successful when he discusses how to succeed in a business career. In his *Training for a Business Career*, he has apparently wasted much valuable space in discussing his own personal experience on which a more cautious writer would be reluctant to generalise. In making his comments, he is prone to make much use of his intuitive faculties, although he obviously lacks the ability of such successful writers as Mr. Stephen Potter in discussing how to achieve success in the workaday world. But although not all readers will care to accept Mr. Jagasia's tips in trying to be successful in a commercial career, there is no denying that his book is well arranged and systematic and will prove suitable for the layman who wishes to choose a commercial career.

COMMUNITY DEVELOPMENT

Community Development in India. By B. Mukerji. (Published by Orient Longmans Ltd, 17 Chittaranjan Avenue, Calcutta 13. Price Rs. 10, pages 312.)

The author of this book was the Joint Secretary of the Central Ministry of Community Development. He discusses the theory of community development and explains the circumstances under which the programme was introduced in India. He also discusses the objectives and the administrative set-up of community development. Mr. Mukerji says that the success of the programme has to be evaluated from the material angle of production and productivity as well as from the social and cultural angle which influences the general attitude and behaviour of the people. But in the actual work of community development, it is necessary to be careful about certain things. First, the contribution from the village is a tax on his small

savings. Secondly, the increase in the expenditure in the community development area does not necessarily lead to an expansion of the village industries there. There is usually a diversion of purchasing power from the village to urban industrial centres. Thirdly, the administrative set-up for community development has taken the form of another Government department. No wonder, Mr. C. R. Fay called the Registrar of Co-operatives as the Brahma, Vishnu and Shiva, and the Block Development Officer may also be similarly described. Community development by itself cannot, therefore, bring about the regeneration of villages. The simultaneous growth of industries will bring prosperity to agriculture, so the programme has to be drawn up with this end in view. Mr. Mukerji's book contains a realistic discussion of the problems and prospects of community development in India.

THE CHINESE ECONOMY

Communist China Today. By S. Chandrasekhar. (Published by Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 9, pages 199.)

In his brief foreword, Mr. Frank Moraes puts this work by Dr. S. Chandrasekhar—an eminent demographer—in its proper perspective. China has almost a quarter of the world population. Since population today is intimately connected with economics and politics, it greatly influences the progress of both. Dr. Chandrasekhar went to China with an open mind, to find the truth there about life under the communist Government. What he found is revealing and unpalatable: revealing where the aspirations and achievements of the communist rule are catalogued, unpalatable where the focus is on their *modus operandi* and of the way of life in such a régime. Most of this work perhaps originally appeared in articles in U.S. papers where they were acclaimed. Little wonder. A quarter of the globe's population dressed alike, regimented in thought and daily life, bombarded all their waking hours by radio blasts of practical advice and ideological exhortations, labouring as if they were a vast army of ants; it sounds like a version of George Orwell's 1984. It is not. It is China today. Dr. Chandrasekhar is of the opinion that at this rate, China is likely to double her population in 25 years. Her teeming millions—spilling over the frontiers with no emigration outlets—will constitute a threat to world peace and democracy.

Within a slim volume of 200 pages, the author covers a variety of subjects—agriculture and communes, hospitals and factories, and population—and is even able to devote two chapters to Tibet and the Sino-Indian relationship. He is, therefore, able to touch only on some aspects of what is

happening in that vast country, but he certainly whets the reader's interest for more information.

NEW PURCHASING JOURNAL

The Indian Buyer, June 1961. Edited by C. E. Key Stone. (Published by Mr. N. P. Pande from Suite 6, 220 Lower Circular Road, Calcutta 17. Annual subscription Rs. 30.)

The inaugural number of the *Indian Buyer* bids fair to be extremely popular among those who belong to the purchasing profession. As the official organ of the Purchasing Officers Association of India, the monthly, it is stated, will disseminate useful information for purchasing departments. Due to import restrictions necessitated by the foreign exchange shortage, buyers have now to fall back on indigenous sources of supply. The journal will fulfil a long-felt need if it gives a greater coverage to various local manufactures. This is apparently the aim of the publishers since they have included some interesting articles on such subjects as the production of rayon, industrial paper and boards, packaging, etcetera.

**CONSTIPATION
AND
PILES**

Habitual constipation can cause piles or haemorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well-known German pile remedy contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

EASIER TREND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 10, held on 7th and 9th August, there were 69,855 packages on offer at the Export auction, and the market opened to a poor demand which strengthened as the sale progressed. There were a number of withdrawals, and prices for all descriptions were easier. Plain orthodox broken declined by 5nP to 10nP while similar Fannings were 10nP to 15nP easier. The remaining orthodox descriptions were very irregular and generally easier, the medium B.O.P.s often selling Re. 1 below last rates. Medium and best C.T.C.s were irregular and easier by up to 50nP and sometimes more, particularly where quality showed a decline. The poorer and fibrous kinds, although generally easier, were selling only a little below last rates. The few Legg-cut Doosars teas on offer were sometimes 20nP easier. There was only a fair enquiry for Darjeelings and prices were irregular and easier with a few withdrawals in this category. The whole leaf grades were easier while tip was in demand at lower rates.

Quotations	1961 Rs. a kilo
Clean Plain Pekoe	5.05 to 5.15
Plain B.P.	4.70 to 4.80
Plain Fannings	4.45 to 4.55
Medium Assam C.T.C. B.P.	5.70 to 6.10
Medium Assam C.T.C. Fgs.	5.80 to 6.20
Best Assam C.T.C. B.P.	6.70 to 7.00
Best Assam C.T.C. Fgs.	7.00 to 7.50

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 25,906 packages of Dusts on offer met with a good general demand which strengthened as the sale progressed. C.T.C.s opened on an irregular note but steadied considerably and closed fully firm to dearer except for a few plain teas. Plain orthodox Dusts were well supported but were generally 10nP below last rates while the best Assams sold well, particularly the small types. Legg-cut descriptions were irregular but generally dearer with enquiry.

Quotations	1961 Rs. a kilo
Plain Orthodox Dust	4.35 to 4.55
Medium Assam Dust	4.90 to 5.50
Legg-cut Dust	4.85 to 5.50
Medium Assam C.T.C. Dust	6.40 to 6.80
Good Assam C.T.C. Dust	6.90 to 7.30

(Quotations are inclusive of excise duty.)

There was a good general demand for the 97 chests of Internal Leaf teas on offer.

FREIGHT MARKET ACTIVITY SHIFTS TO ATLANTIC COAST

ACTIVITY in world trading shifted from the Far East to the Atlantic coast of the United States and Canada in the freight markets last week. Although there was a good volume of business in the Far East, shipowners obtained improved rates in certain directions mainly from the Northern range to Japan with scrap. Two weeks ago, a Liberty-sized vessel was fixed for scrap at \$ (U.S.) 118,000 which is now considerably improved upon, as a August-September position vessel is asking \$ (U.S.) 130,000. Fixtures of sugar in bulk from India to the U.S.A. North Atlantic or Gulf have been concluded in Washington at \$ (U.S.) 6 f.o. stowed, which is considered to be a low rate when Pakistan paid \$ (U.S.) 13 f.o. and stowed for 6,000 tons of sugar in bags from Cuba. Ore charterers paid the steady rate of 48s f.o. trimmed, India-Japan. The S.T.C. has fixed three more vessels for September and October with iron ore from Bombay to Rotterdam at 42s 6d and 44s f.o. trimmed, respectively. The time charter section was active. Madras is still experiencing heavy congestion. Vessels have to wait seven to ten days for an unloading berth and until the monsoon is over, there is unlikely to be any improvement.

Draft forecast in the Hooghly river for August has now been reduced by 9 inches. Berthing position is quite normal. The local port authorities have recently allowed the discharge of salt on the quayline, and a vessel coming with full cargo of timber has been allotted a jetty berth, and in order to expedite discharge, logs may be accepted on the quayline.

LINSEED QUIET

The market was quiet in the past week, and prices declined a little, although arrivals were small. Crushers showed little interest as most of the mills were not working on linseed at present. The linseed oil market was sluggish. Buyers held off, hoping to see a lower price in sympathy with other oils. Stocks at the mills were negligible. Local buyers were interested in forward deliveries, but sellers were not inclined to do anything except at much higher prices as there was no parity with crushing charges on the present unchanged due to small stocks in the hands of millers. U.K. quotations were out of parity with the local prices. The latest quotation is as follows: Read-August delivery Rs. 29.50 a maund.

CASHEW PRICES FALL ON LACK OF FOREIGN DEMAND

RESTRICTION OF IMPORTS URGED BY EXPORT BODY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE cashew processing industry of India is now in the doldrums. The present difficulties are partly its own creation. The speculative elements joined hands with the sellers to give a big boost to raw nut prices earlier in the season. They spread rumours that the African production having been hit by cyclone, would be at least 25 percent down and the Indian crop, too, would be lower on account of the drought earlier this year. They created some panic among the processors who, in order to fulfil their commitments to foreign buyers and to keep their factories working, paid high prices ranging between Rs. 850 and Rs. 950 a ton of raw nuts in April-May for the available supplies. As the season progressed, it was realised that the crop was actually higher than what it was any time before. Imports from Africa so far this season has reached 123,000 tons. It is reported that another 10,000 tons or 15,000 tons still remain unsold out of the current crop. Last year, imports were less than 100,000 tons. It appears that the Indian crop will not fall below the normal size of 60,000 tons. If the entire crop reaches the factories and is processed there, the kernel supply will be at least 200,000 cases (50 lbs each) more than the normal off-take of buyers.

Unsold Stock

There is at present an unsold stock of about 300,000 cases of kernels with factory owners, and they find it extremely difficult to dispose of their stocks now. The price has gone down from 56 (U.S.) cents in May to 44 cents a lb now. Even at this price, the buyers are scarce. America has bought so far about 900,000 cases of cashew kernels from India. Her annual off-take is 1 million or 1.1 million cases. Russia has bought about 150,000 cases; this is below the normal size of her off-take for this time of year. At present, she is showing no interest in the market, although prices have gone down substantially. The processors, however, expect that both America and Russia will buy their normal quantity this year too, and for the rest of their requirement they may enter the market shortly. Meanwhile, they might be waiting for a further fall in prices. But the processors are facing a problem due to the fall in prices. It is with a view to helping them and arrest a further deterioration in kernel prices that the Cashew Export Promotion Council has recommended the restriction of raw nut imports for the rest of the current year. Any further fall in cashew prices may create such problems as non-implementation of the agreements with labour on issues like bonus and wages.

Expansion of the Plantation Industry

The National Council of Applied Economic Research has suggested that serious attention

should be given to the suitable expansion of the plantation industry in Kerala by increasing the area and raising the yields. The measures suggested by it in its report will involve an expenditure of Rs. 179.6 crores within a period of ten years. Of this, Rs. 50.6 crores would be in the public sector and the balance in the private. As there is a shortage of land in Kerala—the report is understood to have pointed out—it is essential to put the available land into more intensive use. The natural factors such as climate, soil, etcetera, in the State are ideal for growing the plantation crops, the Council says. The extension of the area under plantation crops, whenever possible and necessary even at the expense of some of the existing crops is in the best interest of the economy of the State as well as of the individual farmers. Overdue priority to food is being given in Kerala as well as in many other States. This needs to be changed in favour of high value substitutable commercial crops, the Council is understood to have urged the Government.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for July 1961:

Upper Assam: Weather seasonable; floods reported from Dibrugarh; manufacture is proceeding satisfactorily; outturn good; immediate prospects good.

Central Assam: Weather seasonable; crop prospects generally favourable; immediate prospects fair to good; heavy rain with floods reported in Moran.

Lower Assam: Weather seasonable but abnormally hot in Tezpur; immediate prospects good; outturn normal to good.

North Cachar: Weather favourable; outturn about normal; black rot prevalent; immediate prospects fair.

South Cachar: Weather favourable; outturn normal to good; red spider blight and black rot prevalent in Chutlabheel; immediate prospects good.

Eastern Doosars: Weather seasonable; Rainfall much below normal for the season to date; outturn normal to good; immediate prospects fair to good.

Central Doosars: Weather seasonable; rainfall deficient in Binnaguri; outturn good; immediate prospects fair.

Western Doosars: Weather seasonable; outturn good; immediate prospects fair to good.

Darjeeling: Outturn good; weather favourable; blister blight prevalent in some districts.

Terai: Outturn above normal; rainfall below normal; prospects fair to good.

COCHIN TEA SALES

At Sale No. 32, 341,000 kilograms of tea were on offer. There was a useful demand. Plain and low mediums were irregular and sometimes 5nP to 10nP easier. Mediums were slightly easier. Poorer high-grown were easier while the improved quality grades, particularly fannings, were dearer.

COMPANY AND PUBLIC NOTICES

THE GROB TEA COMPANY LIMITED

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Thursday, the 31st day of August, 1961, at 3-15 p.m., for the following purposes:—

- (1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1960.
- (2) To declare a dividend.
- (3) To elect a Director in place of the retiring Director. In this connection Special Notice is hereby given of the intention to move the Special Resolution at the meeting, that is to say—

"That Mr I. P. Goenka, who retires by rotation be and is hereby re-appointed a Director of the Company."

- (4) To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 25th August, 1961 to 31st August, 1961, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,

I. P. GOENKA,
Managing Director,
Managing Agents.

Calcutta, 7th August, 1961.

Note:—(i) A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.
(ii) In connection with the business to be transacted under Item 3 of this Notice, please see the undated Explanatory Statement.

EXPLANATORY STATEMENT.

In the Special Notice given by the Company to the shareholders, under Item 3 of the annexed notice for the Annual General Meeting, intimation has been given of the intention to move a Special Resolution for the re-appointment to the Board of Directors of Mr. I. P. Goenka. Special Notice of such intention has also been given to the Company. Under the provisions of Section 261(1)(f) of the Companies Act, 1956, Mr. Goenka, who is an officer of the Managing Agents of the Company can be appointed to the Board only by Special Resolution. Since he will retire in rotation at the meeting, his re-appointment for compliance with those provisions, will therefore have to be by Special Resolution.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

At a Meeting of the Directors held on 3rd August, 1961, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on 28th September, 1961, the payment of a final dividend for the year ended 31st March, 1961, of 4% (subject to tax) on the issued Ordinary shares, payable on 28th September, 1961.

The net profit for the year, after deducting all charges and expenses, and after providing for taxation amounting to Rs. 1,71,18,802, is Rs. 1,87,99,207 (previous year Rs. 1,41,62,230).

Two interim dividends, each of 2½% (subject to tax) amounting in total to Rs. 75,80,000 in respect of the year to 31st March, 1961, were paid on 24th September, 1960 and 12th April, 1961 respectively.

After paying the final dividend amounting to Rs. 60,64,000 and allocating Rs. 19,770 to Capital Reserve, Rs. 1,16,914 to Development Rebate Reserve and Rs. 48,00,000 to Fixed Asset and Stock Replacement Reserve, the amount carried forward will be Rs. 26,96,288.

The Directors also intend to declare a first interim dividend of 2½% (subject to tax) in respect of the year to 31st March, 1962, payable on 28th September, 1961.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on 28th September, 1961 and dividend warrants in respect thereof will be despatched to such shareholders or their mandataries on 27th September, 1961. The share transfer books of the Company will be closed from 4th to 26th September, 1961, both days inclusive, and transfers received in order at the registered office of the Company up to 2nd September, 1961 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
B. GRANGER PEARSON,
Secretary.

Virginia House,
37, Chowringhee,
Calcutta.
4th August, 1961.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Forty-fourth Ordinary General Meeting) of the Company will be held at the Royal Exchange Hall of the Bengal Chamber of Commerce & Industry at 6, Netaji Subhas Road, Calcutta-1, at 3 p.m., on Tuesday the 5th September, 1961, for the following purposes:—

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1961, and the Directors' & Auditors' Reports thereon.
2. To declare a dividend for the year ended 31st March, 1961, on the Ordinary Share Capital.
3. To appoint a Director in place of Maharaja-dhiraja Sir U. C. Mahtab Bahadur of Burdwan who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Maharaja Sir P. C. Bhanj Deo of Mayurbhanj who retires by rotation and is eligible for re-appointment.
5. To appoint a Director in place of Maharaja-dhiraja Sir Kameshwara Singh of Darbhanga who retires by rotation and is eligible for re-appointment.
6. To appoint Auditors and fix their remuneration.

Special Business

To consider and if thought fit to pass the following resolution as a Special Resolution.

7. Special Resolution

That pursuant to subsections (4) and (7) of Section 309 of the Companies Act, 1956 and subject to the limitation imposed by Clause 113 of the Articles of Association of the Company each of the Directors be and is hereby authorised to continue to receive in respect of each of the five financial years of the Company up to and including the financial year ending on the 31st March, 1966 a share in a commission of one per cent of the net profits of the Company computed in the manner referred to in subsection (1) of Section 198 of the said Act.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office:

12, Mission Row,
Calcutta-1.
10th August, 1961.

Note:—An Explanatory Statement is annexed to the convening notice issued to Members of the Company.

THE BENGAL PAPER MILL COMPANY, LIMITED

AN application was made by the Company to the Controller of Capital Issues for issue of Right shares at par. After negotiations, the Controller of Capital Issues has given consent to the Company for issue of 72,000 Equity shares of Rs. 25/- each at a premium of Rs. 30/- per share and to the issue of 6½% Taxable Convertible Loan Stocks of Rs. 30,00,000. The Board, however, considers it more convenient to sub-divide its equity Capital into Shares of Rs. 10/- each and with that in the view it has decided in its meeting held on 31st July, 1961 to apply to the Controller of Capital Issues for sanction to issue Bonus Equity shares of Rs. 9,00,000 to be issued to the Equity shareholders in the ratio of 1 Equity share for every 5 Equity shares held. After issue of the Bonus shares, the aforesaid sub-division will be effected and thereafter it is intended that the Right shares will be offered to the shareholders at a premium of Rs. 12/- per share in the ratio of 1 Equity Share of Rs. 10/- for every 3 Equity shares of Rs. 10/- each. Application will be made to Controller of Capital Issues for consequential modification to the aforesaid Consent order.

By Order of the Board,

KUMARDHUBI ENGINEERING WORKS LIMITED

NOTICE is hereby given that an Annual General Meeting of KUMARDHUBI ENGINEERING WORKS, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 31st August, 1961, at 3-40 P.M., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th November, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors
3. To appoint Auditors and fix their remuneration.

As Special Business.

4. To appoint a Director in place of Mr. G. L. Bangur, who retires by rotation and being over 65 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281 (2) of the Companies Act, 1956, has been received by the Company from a Shareholder which will be proposed as an Ordinary Resolution.

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956 shall not apply to Mr. G. L. Bangur, and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

The Share Transfer Registers of the Company will be closed from the 17th to the 31st August, 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 31st July, 1961.

Notes:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is annexed hereto.

(c) The Dividends, if declared, will be paid on or after 20th September, 1961, to those Shareholders so entitled whose names appear in the Company's books on the 31st August, 1961, or to their mandataries. No application for Dividend Warrants will be necessary.

Explanatory Statement.

In the special notice given to the Company of the resolution under item No. 4 of the above notice it has been stated that the services of Mr. G. L. Bangur have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

73rd YEAR OF ISSUE

CALCUTTA, 17th AUGUST, 1961.

Vol. CXXXVII No. 3673

NATURE DEFEATS CHINESE PLANNING

SEVERAL years ago it was fashionable to say that India and China were engaged in an economic competition that would decide the future, in Asia, of the rival systems of liberty and dictatorship. This newspaper protested, at the time, against any such ideological misreading of Asian problems. India and China, we pointed out, were—and still are—involved in a grim fight against famine, poverty and over-population, and only the well-fed-by-stander could make the mistake of supposing that they were competing with each other, rather than competing for their survival. Their problems were so serious that whether one or both survived could be decided by matters having little or nothing to do with ideology. Only the comfortable spectator on the shore could imagine that two shipwrecked sailors battling towards land were staging a swimming competition to decide who was the better athlete. Since then, China has been overwhelmed by a series of natural disasters which this country—for all her many tribulations at the hands of the weather—has happily been spared. The result is that China has fallen seriously behind in her development, but nothing has been proved about the relative merits of liberty and totalitarianism. Anyhow, those who are attached to liberty already had convictions about its superior value, which were not liable to be revised by a comparison of production statistics in two precarious economies.

The only sound ideological point that can be made is that meteorological cataclysms have descended without mercy on a country whose leaders began boasting in 1956 that "the forces of nature have been completely mastered". Fuller use of this contrast between men's pride and Providence's vengeance had best be left to theologians. But we are entitled to suspect that the spirit of overweening self-confidence shown in every department by the Chinese communists (including their scorn of the dangers of nuclear war) has contributed to their under-estimation of the difficulties of development in a poor country. Some American newspapers—their heart hardened and their judgement warped by hatred of Peking—go further and argue that all of China's present tragedy is the consequence of communist government, and that floods and drought are just face-saving excuses. Political passion of that sort cannot be reasoned with; no doubt if India suffered two successive crop failures, the consequent famine would be blamed on Delhi socialism.

The fact is that certain regions of north China went 300 days without rain, while in other parts of the country there was a phenomenal succession of frost, drought, hurricane and flood, followed apparently (although Peking is silent on this point) by epidemics. A conclave of meteorologists has warned that the climate of north China seems to be changing, and a further worsening of the weather there must be expected. This is beyond doubt the main cause of the present state of affairs, and only a cold determination to make political capital out of anything at all could pretend otherwise. When the rôles are reversed, of course, the communists (and none more than the Chinese communists) do just that; but our case is not as weak as theirs, and we do not need to imitate them. Once granted, however, that natural cataclysm is the main reason for China's setback, alongside which all other influences are of minor importance, one may point out that characteristic communist methods have complicated the task of coping with it. In other respects, they have also allowed the régime to use counter-measures beyond the reach of democracies—such as the mobilisation of millions of peasants in critical zones. And finally there are signs that, chastened by disaster, the régime is ready to revise some of its more unrealistic policies.

The agricultural crisis is evidently much more serious than the secretive Peking authorities will

admit to the outside world. Recent massive purchases of grain from Canada, Australia and France are only part of the measure of Chinese needs. To judge from the credit terms demanded, China lacks the convertible currencies to buy more (indeed it is a mystery in the money markets where she scraped together as much sterling as she has), and for the rest the population will simply have to go without. The fact that Peking has asked for deliveries of grain over the next 30 months is held by some to prove that the famine results from political errors that will take time to correct, rather than from one missed crop. In reality, it testifies to the profound devastation suffered by farmland, irrigation systems and transport, as well as to the exhaustion of reserves and the fear of more bad weather. Only a disaster of this magnitude could force the Peking dogmatists to retreat, as they are now doing, from their inflexible policy on the "communes", a subject where they resisted both keen Soviet criticism and internal discontent for two years. Discipline in the communes is being relaxed until they resemble the Russian collective farms. Over-centralisation and autocratic direction by Party bosses are being corrected, and there is less tendency to rely on "mass enthusiasm" and more to rely on the judgement of village elders (who, naturally, are mostly not communists). Monetary incentives, private cultivation and free marketing have all been admitted, and in Chinese jargon this means a return to a measure of "capitalism".

The ideological defeat that these concessions entail is severe, and there is no reason to dismiss as improbable rumours of a split in the Party (with a "liberal" Chou En-lai faction gaining over the Mao group), of a return to the freer atmosphere of the "Hundred Flowers", and of resignation to the global strategy of Mr Khrushchev, on whom Peking now relies for help in dire need. There is no reason, either, to accept any of these things as true, for we have no reliable information on them whatsoever. The most that we can say is that China's economic situation is grave enough to make such retreats possible, and to make her so reliant on Soviet goodwill that it is unthinkable that in Berlin, for example, Moscow is having her hand forced by tough Peking doctrinaires. Much less subject to speculation are the effects of the agricultural crisis on Chinese industry.

Obviously, industry has been hard hit and industrialisation plans slowed down. It is estimated that since last autumn 20 million people have

been abruptly transferred from factories and other urban work to rural occupations where they will remain for the next three years: all recruitment to farm labour for industrial work has been banned for that period. No enterprise may be created in rural areas that might draw hands away from the land, so naturally this is the end of the famous backyard blast furnaces. In general, industrialisation has lost the fantastic priority it had in earlier plans, and China has had to recognise, like other developing countries, that agriculture inevitably comes first even if planners put it second. This decision could not be avoided, since almost all the machinery required for industrialisation still has to be imported, and imports are paid for (as three-quarters) by exports of agricultural products. As for existing industries, their output has declined sharply; they have lost workers to the land, they lack raw materials lost in the crop failures and transport has been disorganised by natural calamity and by the emergency grain movements. Heavy industry has suffered less than light industry, being less reliant on agriculture, and it seems that targets have been attained in iron, steel, petrol, machine tools and heavy machinery. Steel production, for example, appears to have reached 18.5 million tons last year and will exceed that figure in 1961 by a comfortable margin.

It is officially claimed that industrial production is increasing at the rate of 20 per cent annually but the outside world has lost all faith in Chinese statistics—the absence of grain reserves when disaster struck shows that earlier figures on food production were not simply exaggerated but complete inventions. One does better not to seek likely figure, but to say that industrial progress after being very fast in recent years, will be slowed down considerably for an indefinite period by the agricultural crisis. During that period, substantial increases in output of basic products are still probable, but this will not prove that Chinese industrial progress continues successfully. It will only confirm that, as we knew, China has placed ever greater emphasis on basic industries than India—and this country is already guilty of too much emphasis on the "big stuff".

The task of fitting these swollen basic industries into a balanced economy (i.e., creating transformation industries, the commerce and the effective demand to use their output) will have to be faced some day if economic development is to mean anything besides statistics. The more China exaggerates the predominance of heavy industry, the more difficult this task will become since it is an illusion to think that once the basic industries are installed, the rest "looks after itself". It has not looked after itself in Russia where, a Mr. G. D. Birla lately reported, one sees the absurd consequences of hypertrophied heavy industry employing a population that, by all reasonable

(Continued on previous page)

standards, is extremely poor and ill provided for. In India, despite errors of emphasis on the part of the public sector, the private sector ensures that some degree of balance is maintained at every stage of development, so it is normal that this country will not be able to match the results achieved in heavy industry by China. That proves nothing about comparative development and thus no conclusions can be drawn from putting selected production statistics in the two countries side by side.

True in general, this is especially so at the present moment when China is passing through an agricultural crisis of a sort unknown in this coun-

try since the days of recurrent famines. Even if communist direction and the type of planning chosen have played a smaller rôle than natural misfortune in these events, we shall presumably be spared for some time both communist propaganda about Chinese progress and confused reflections on the Sino-Indian competition. Meantime, the plight of the Chinese people contains lessons for India that are none the less important for having nothing to do with ideology. The absolute precedence of agricultural improvement, and especially of food production, over more spectacular feats of industrialisation, is an axiom of national development under no matter what "system".

THE FALL IN STEEL SHARES

THERE has been a precipitate decline in the prices of steel shares in the Calcutta and Bombay stock markets during the past few weeks. Tata Steels have fallen from Rs. 164 to Rs. 152 and Indian Irons from Rs. 28.50 to Rs. 25.60. The collapse is all the more disturbing because there is as yet no sign of resistance to the pressure, although current prices appear to be more than justified by yield and growth prospects. The weakness has been accentuated by an authoritative report that the Tata Iron and Steel Company is unlikely to fulfil its target output of 2 million tons of steel ingots for at least the next couple of years, due to the serious deterioration which has occurred in the supplies of raw materials such as coal and limestone. The transport position is also far from encouraging. These adverse factors have agitated the minds of investors so much that they have started to wonder whether a serious lack of balance has not developed in the newly-integrated, expanded plant.

Due to the disappointment about the near-term outlook for Tata Iron, the good points of the Indian Iron and Steel Company appear to have been ignored. The latest report of the Company for the year ended March 1961, just published, shows how the good effects of the expansion scheme have begun to make themselves felt. The 1953 and 1955 expansion programmes have been completed, although considerable capital expenditure will continue to be necessary because in an integrated iron and steel works the need for continued improvements to plant and services, to keep abreast of modern developments, is unending. Work has already started on the modernisation of the mill stands, and this scheme may be completed before the end of the current year. In spite of the various difficulties, the performance has improved considerably during 1960-61. The production of pig iron rose from 1.07 million tons in 1959-60 to 1.16 million tons in 1960-61 and that of steel ingots and castings from 840,305 tons to 914,159 tons. The output of salable steel increased from 672,707 tons to 722,034 tons. Despatches also rose from 678,330 tons to 704,967 tons. But the working has nevertheless been hampered by the extremely high ash content of the available coke, following the poor quality and erratic supplies of metallurgical coal. The quality of limestone has also deteriorated greatly. The management is worried because unless an improvement takes place in raw material supplies meanwhile, it may be difficult even to repeat the performance during the current year.

The profit has improved from Rs. 5.61 crores in 1959-60 to Rs. 7 crores in 1960-61, after providing Rs. 2.96 crores (against Rs. 3 crores) for depreciation. The ordinary dividend has been increased from 15 percent, taxable, to 16 percent, taxable. It is covered more than three times and works out to a yield of 6.2 percent at the current price of the share. Taxation is allocated Rs. 1.66 crores (against Rs. 64.28 lakhs), plant rehabilitation reserve Rs. 51.15 lakhs (against the same), statutory development rebate reserve Rs. 1.67 crores (against Rs. 2.59 crores) and general reserve Rs. 1.75 crores (against Rs. 1.11 crores). The carry-forward is Rs. 16,41,911, against Rs. 11,49,767

brought in. In order to qualify for tax remission on the development rebate claimable on the new plant installed, a sum of Rs. 1,66,57,251 has been set aside to development rebate reserve (statutory), representing 75 percent of the amount of development rebate allowable. The actual tax remission amounts to Rs. 99,98,302. The balance of Rs. 66,58,949, compulsorily included in the allocation to the reserve, which would otherwise fall as a dead charge against available profits, has accordingly been compensated by writing back to the credit of the profit and loss account a similar amount from general development reserve. The effective and logical result thereby is a net setting aside to the development reserve of the actual saving in taxation. In view of the necessity for conservation of the resources of the Company against the repayment of the heavy indebtedness on the loan account, as also against expenditure on the extensions account and on general capital works, a sum of Rs. 1,75,00,000 out of the profits for the year under report has been set aside to general reserve.

It may be observed that the question of the steel retention prices, to apply as from 1st April, 1960, has been referred by the Government of India to the Tariff Commission. An early decision on this matter appears unlikely, but in the meantime, the Government has granted a provisional price increase. The increase varies as between the different categories of steel, and on the basis of Indian Iron's sales for 1960-61 amounts on average to approximately Rs. 51 a metric ton, which is less than circumstances warrant. The present accounts, however, have been closed taking credit only for the provisional increase actually granted. Under the circumstances, the prospect for Indian Iron shares is no doubt good. When the new steel prices are announced, the working is expected to show a further improvement because the new prices are expected to compensate the producers for increased production costs. This apart, the recent rise in the price of pig iron should be of some help. There is also a move to build ropeways in order to transport coal directly to the works from the mines.

It is evident, therefore, that the present downward slide has taken place due more to speculation than to merit rating. Bears appear to be in control of the situation because they can drop the price whenever they choose to. As a result, investors have become shy and prefer to sit out. A striking feature is that neither the Government nor the stock market authorities, always so active when prices rise sharply, are as yet concerned about the seriousness of the existing slump. Considering that steel shares are the pace-setters in the stock markets, the depression, if it is permitted to gather further momentum, could do a great deal of harm to the economy at a time when capital formation is urgently required for financing the massive developments due to take place during the third plan period. Unless vigorous steps are taken soon to restrain short-selling, any belated measure would merely amount to shutting the stable door after the horse has departed. Whether the excessive speculation will be restrained by margin regulations or by other measures, it is for the

authorities to decide. But if the authorities cannot succeed in narrowing fluctuations in the stock markets by regulating speculation, the question arises whether the institution of forward trading in shares does not raise more problems than it solves. It must not be forgotten that in spite of its proneness to speculation, forward trading has been permitted lest its abolition should hamper the growth of the investment habit. It is for the stock market authorities to prove that it can make good use of the amenity it enjoys.

At the same time, New Delhi appears to have given a long rope for short-selling. The Government has indicated its willingness to introduce new measures for reforming the stock markets. But it has not yet announced publicly what these measures are; nor is it known when they are likely to be enforced. This has created a great deal of uncertainty which has helped accentuate the nervousness. The apathy to steel shares also emanates from the step-motherly attitude of the Government towards the industry. Although retention prices of steel are adjusted from time to time in order to make good the rises in production costs, two defects underline the present policy. The first is that there is usually an inordinate delay in announcing the changes in the retention prices. Secondly, the rises when they are given invariably lead to representations for revision because they usually fall short of the actual increases in production costs. There is nevertheless a hope that the price policy may soon become more pragmatic and business-like, because the Government steel units will start normal working in the near future.

OUTLOOK FOR INDO-BRITISH TRADE

THE latest statistics on Indo-British trade compiled from the U.K. Trade and Navigation Accounts show that India's imports from the U.K. were again appreciably lower during the first half of the current year compared with the same period a year ago, while her exports to the U.K. were noticeably higher. Before getting down to an item-wise analysis of the trade figures either way, it is appropriate here to refer to the statement which India's Finance Minister, Mr. Morarji Desai, made in the Lok Sabha last week about the repercussions of the U.K.'s proposed entry into the European Common Market on the future course of Indo-British trade. The United Kingdom is India's largest single market and the immediate outlook for the latter's foreign trade will be shaped according to the manner in which India is able to sell her goods there. Hence Mr. Desai's anxiety to secure some suitable transitional arrangements under which the existing preferences will be abolished gradually. Other compensations which India seeks for the loss of her present privilege of exporting duty-free to the U.K. are a substantial liberalisation of the Common Market's import policies and the abolition of all quantitative restrictions on Indian exports to the present "Six".
